Issues his Warrant committing the Honorable Member for West Macquarie, Mr. Crick, to the custody of the Sergeant-at-Arms, 442.		
Directs Sergeant-at-Arms to bring Mr. Crick to the Bar, and an apology having been offered, directs his release from Custody, 450.		
Calls attention to nature of amendments made by Legislative Council in Crown Lands Bill, 393.		
Calls attention to nature of amendments made by Legislative Council in Parliamentary Representatives Allowance Bill (No. 2), 396.		
Calls attention to nature of amendments made by Legislative Council in Sydney Water Supply (Partial Distribution) Bill, which he considered should be disagreed to, 411.		
Calls attention to nature of amendments made by the Legislative Council in the Wollongong Harbour Trust Bill, and regrets that the necessity for calling attention to such matters was growing in frequency, 419.		
RULINGS OF—		
That no debate should take place on the subject of a Petition on the motion for its reception; motion made to dissent from and withdrawn, 101.		
That the motion for the adjournment of a debate having been negatived, and a speech on the main question having intervened, the same motion may be again made, 102.		
That the motion having been carried that all the words stand in an original motion no amendment could be made except by way of additions thereto, 104.		
That amendment proposed to be inserted in Committee in the Public Works Act Amendment Bill was inadmissible, being outside the order of leave and the scope of the Bill, 119.		
That on the motion for the adjournment of the House a discussion on the conduct of a Judge was not irregular provided the language was not disrepectful to the Judge, 125.		
That Wentworth Irrigation Bill does not create an expenditure from the Consolidated Revenue Fund, 229.		
That Blackfriars and Shepherd's Nursery Estates Bill was properly introduced as a Public Bill, 291.		
That Bathurst Cattle Sale-yards Bill was within the Order of Leave, 292.		
That Parliamentary Representatives Allowance Bill (No. 2) was not in contravention of the Constitution Act and Amendment Act in consequence of Members holding offices of profit under the Crown, 296.		
That Inland Waters Conservation Bill imposed a penalty, and was therefore beyond the Order of leave, 320.		
That Fuel Bill was not outside the Order of leave by reason of the imposition of penalties in clause 4 and 6, 320.		
That Sheep District Boards (Powers Restoration) Bill did not require to be covered by a Message, 342.		
That Illawarra Harbour and Land Corporation Bill was not properly before the House, its provisions not being authorized by the Order of Leave, nor the notices in the *Gazette*, 372.		
That Coal Mines Regulation Bill was not beyond the Order of Leave, 374.		
That amendment proposed in Committee of the Whole on Council's amendment was not admissible, as being beyond the scope of and irrelevant to the amendment, 397.		
That a Member using offensive words in Committee, and having withdrawn them, the Member to whom the words were used could not demand an apology, 429.		
That amendment was in order to refer a rival route with proposed Railway to Parliamentary Standing Committee on Public Works, 435.		
That Member could not discuss the import of words taken down in Committee of the Whole on which a motion to refer to the House had been made, 442.		
That in urgent cases of disorder in Committee Speaker could resume Chair to restore order at the request of the Chairman or otherwise, 442.		
SPECIAL ADJOURNMENT :—		
Motion made for, and passed, 18, 79 (*Easter*), 91, 139 (*Queen's Birthday*), 221, 413, 417 425, 455.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS.

(SPECIAL AREAS MADE UNDER THE ACT OF 1884.)

Ordered by the Legislative Assembly to be printed, 6 *August*, 1889.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 16th April, 1889, That there be laid upon the Table of this House,—

"A Return showing the Special Areas made under the Land Act of 1884, "specifying each the date on which it was made, the locality, the area, "the upset price for residence selections, the area selected, the date when "offered at auction, the auction upset price, the area purchased at auction, "with the price realized, and the balance remaining unsold."

(Mr. Barbour.)

No. 1.

Application by Mary Ann Porter.

[Lease Application 348, 11th February, 1878.]

[Occupation Act, 1861, and Lands Acts Amendment Act, 1875.]

To be used in claiming to lease adjoining lands under Pre-emptive Right.

District of Wentworth.

Received this 25th day of January, 1878, at 10·15 o'clock, together with the sum of £6,—

P. F. RICHARDSON,

Land Agent.

Sir, Wentworth, 25 January, 1878.

In pursuance of the provisions of the Crown Lands Occupation Act of 1861, and the Lands Acts Amendment Act, 1875, and Regulations thereunder, I, Mary Ann Porter, do hereby apply to be allowed to lease the sections or portions of Crown lands hereunder described, at the fixed rent of £2 per section, which I hereby tender.

The land in virtue of which I claim to exercise a right of pre-emption, is situated as follows, and is now in my possession, viz.:—County of Perry, parish of Pooncarie, situated on the southern boundary of Pooncarie Village Reserve, containing 640 acres, being conditional purchase, on the 24th day of January, 1878, by myself, at Wentworth, registered as lot 39.

I have, &c.,

To the Land Agent for the District of Wentworth. M. A. PORTER.

Description of the sections or portion applied for.

Commencing at the north-east corner of my conditional purchase above mentioned, and extending easterly 3 miles, southerly 1 mile, and west to the south-east corner of said conditional purchase to include 1,920 acres.

78–3–640 plan, and 78–28,316. 1,920 acres gazetted, 17/5/78. Applicant and Agent informed, 7/8/78. Charted 1,920 acres, Wentworth.—W.H.H., 16/12/79. *Tracing to Agent, and applicant informed, 23/12/79. Regazetted at 1,100 acres, 25/3/84; *vide* 84–2,245, Leases. Conditional lease, clause 52, Crown Lands Act, 1884, No. 4,342, *Government Gazette*, 16/4/86.

*See Appendix A

No. 2.

No. 2.

Mr. J. L. Phelps to The Secretary for Lands.

Sir, Tarcoola, Wentworth, 6 August, 1880.

I have the honor to make application for the survey of all reserves comprised within the leases of the runs Pooncarie and Tarcoola, held under lease by me, and numbered 4–9–10B, 11A, 12, and 13, 14, 15, 16 in list of "Reserves from sale and lease, pastoral district of The Darling" for 1879.

I have, &c.,
MICHAEL DARCHY
(*Pro* J. L. PHELPS).

Mr. Surveyor M'Donald is requested to mark reserve No. 4, and as much of reserves 9A, 10B, 11A, 12, 13, 14, 15, and 16, as he considers necessary.—G. LEWIS (for the Surveyor-General), 26/8/80. Mr. Surveyor M'Donald.

No. 197 returned for reissue, in consequence of my appointment to the Hunter District.—R. M'DONALD, Surveyor, Hay, 29/12/80. Transferred to Mr. District-Surveyor Bolton, Surveyor-General's Office, 11/3/81. Transferred to Mr. Surveyor Conolly, 2/5/81.—C. F. BOLTON, District Surveyor. Received.—T.W.C., 13/15/81.

Transferred to Mr. Licensed-Surveyor Tarrant, who will be good enough to mark reserves Nos. 4 and 10B, the latter reserve to be marked in the form shown on accompanying tracing with a view to its renotification.—T. W. CONOLLY, Surveyor, 7/9/81.

Returned to the Surveyor-General with my letter No. 82-24.—JOSEPH TARRANT, Licensed Surveyor, 1/5/82.

No. 3.

Mr. C. W. Porter to The Under Secretary for Lands.

Extract from 80-49,915, C.S.

Sir, Wondenbro, Pooncarie, River Darling, 19 November, 1880.

* * * * * * * * * *

I am also anxious to know if the prelease 2 of 1878 (taken up in virtue of conditional purchase of Mary Ann Porter) has been registered in my name. An early reply will much oblige. Wentworth, 78-2; 640 acres.

I have, &c.,
C. W. PORTER,

The lease stands as originally gazetted in name of Mary Ann Porter.—F.W., 2/12/80. Mr. Wilson. Mr. Porter, 8/12/80. Put away.

No. 4.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 8 December, 1880.

In reply to the inquiry contained in your letter of the 19th ultimo, I am directed to inform you that the prelease, quoted in the margin, stands on the books of the Department in the name of Mary A. Porter, as originally gazetted. Wentworth, 78-2; 640 acres. Mary A. Porter.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 5.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, near Pooncarie, River Darling, 17 December, 1880.

In reply to your letter of the 8th December, the copies of letters herewith will best explain the reason of inquiry as to prelease, contained in my letter of 19th November:—

Sir, Department of Lands, Conditional Sales Division, Sydney, 16 September, 1880.

With reference to the conditional purchase at Wentworth, on the 24th January, 1878, by your wife Mary Ann Porter, I am directed to inform you that no married woman can hold a conditional purchase, consequently the above is liable to cancellation, but the Minister for Lands, in consideration of the length of time she has held the purchase without question, has consented to allow you the option of having it registered in your name, subject to the fulfilment by you of the conditions. Your early reply is requested. Wentworth, 78-3; 640 acres.

Mr. C. W. Porter, Pooncarie, Wentworth.

I have, &c.,
WM. BLACKMAN
(For the Chief Commissioner).

Sir, Wondenbro, River Darling, 27 September, 1880.

I have the honor to acknowledge the receipt of your letter of the 16th September instant, referring to the conditional purchase at Wentworth, on the 24th January, 1878, by my wife, Mary Ann Porter, and request that the same may be registered in my name in accordance with the terms mentioned therein.

The Chief Commissioner, Conditional Purchases, Sydney.

I have, &c.,
CHAS. WM. PORTER.

The 24th January, 1881, is not far distant, and the declaration as to residence and improvements having then to be made, I am most anxious to have official information of the alterations in registers of prelease and conditional purchase.

I have, &c.,
CHAS. WM. PORTER.

Submitted that the prelease be also transferred to the name of Mr. C. W. Porter.—F.H.W., 5/1/81. Yes.—C.O., 5/1/81. Mr. Boot, 5/1/81. Transfer noted in Register. Land Agent and parties informed.—C.H., 27/4/81. Put away.

No. 6.

No. 6.

The Under Secretary for Lands to The Crown Lands Agent, Wentworth.

Department of Lands, Sydney, 27 April, 1881.

Sir,

Annexed is a schedule of leases held by Mrs. Mary A. Porter, which have been transferred to Mr. C. W. Porter, which transfer you are requested to note in the records of your office, and then return the schedule to me, duly dated and signed by you.

I have, &c.,
F. H. WILSON
(*Pro* Under Secretary).

SCHEDULE of leases transferred from Mrs. Mary Ann Porter to Mr. C. W. Porter:—

County, Perry; abstract numbers, 78-2; date of sale or prenotice, 17th May, 1878; prelease; 1,920 acres; rent, £6.

Noted.—W.H.H., 4/7/81.

I hereby certify that I have duly noted the transfer above referred to in the records of this office.

P. F. RICHARDSON,
Agent for the Sale of Crown Lands.

Crown Lands Office, Wentworth, 18th June, 1881.

No. 7.

Mr. C. W. Porter to The Secretary for Mines.

Wondenbro, Pooncarie, River Darling, 27 June, 1881.

Sir,

I have the honor to apply for permission to ringbark box timber only on my prelease, No. 2, of 1878, district of Wentworth.

I have, &c.,
C. W. PORTER.

Inform in terms of instructions on 81-1,261 M. Informed, 12/7/81.

[*Enclosure.*]

*Tracing.

*See Appendix B.

No. 8.

Office Memorandum.

THE lease referred to in the enclosed application stands in the name of the applicant, C. W. Porter, and has been renewed up to the end of the current year. Lease application, 78-348; leases, 80-4,809 required. Messrs. Ferris and Linsley.—E.H.S., 31/3/82. Lease application, 78-348 herewith.—H.P.F., 4/4/82. Mr. Gale.

---

11 April, 1882.

Mr. Hall,

Forwarded to you with a request that you will be good enough to examine the maps, &c., and state whether they suggest any objection to a compliance with the application. If the lease comprises any part of an existing or a forfeited lease, or any part of a reserve from sale or from lease, or is situated within a gold-field reserved from conditional sale, the fact should be mentioned and necessary particulars furnished, and if the lease might now, having regard to recent decisions and opinions, be looked upon as invalid or objectionable, attention should be drawn to the situation of the case. If the lease includes any measured portions or parts of measured portions, their respective areas should be stated, and their positions delineated. Tracings should be made and returned with the papers. Lease, 78-2, Wentworth.

H.C.

No. 9.

Mr. Licensed-Surveyor J. Tarrant to The Surveyor-General.

Reserve.

Wentworth, 1 May, 1882.

Sir,

I have the honor to transmit herewith the plan of water reserve No. 10B, parish of Timpunga, county of Perry, containing 2,372 acres, and measured in accordance with instruction, No. 197, of 26th August, 1880, to Mr. Surveyor M'Donald; papers Ms. 80-11,498.

I found the old marked tree mentioned in description marked broad-arrow over 10B, which I made my starting point (marked K on my plan).

The country for the most part is polygnum swamp with box forest, high ground, with scrub at back.

I found improvements to the value of £70, viz., hut, £30, and fence, £40, erected as shown on plan.

This reserve has been modified in accordance with memo. on instructions.

I have, &c.,
JOSEPH TARRANT,
Licensed Surveyor.

Roll plan D 190-1,834, papers Ms. 80-11,498, and plan herewith. Received 2nd May. Forwarded to Surveyor-General. As reserve 10B is described, it does not wholly reach the outside main road from Wentworth to Menindie. The reserve is one which will be permanently useful to the travelling public for access to water. It is submitted that extension be notified and survey accepted.—T. W. CONOLLY, Surveyor, Wentworth, 2 May, 1882.

Reserve Branch, 20 May, 1882.

Mr.

Mr. Conolly has not stated any reason why this instruction should not be fully complied with, and Mr. Licensed-Surveyor Tarrant seems to have overlooked that part of his instruction having reference to reserve No. 4. He has also omitted the reference to the south-west corner of portion 3. Mr. Conolly will be good enough to explain.—G. Lewis (for the Surveyor-General), 17/6/82. Mr. Surveyor Conolly.

Received.—T.W.C., 26/6/82. Memo. to Mr. Tarrant, 11/7/82. Plan of reserve No. 4 not yet to hand.—T.W.C. No reply from Mr. Tarrant. Now forwarded to Surveyor-General with my report, No. 82-55 of 25th July.—T. W. Conolly, Surveyor.

No. 10.

Office Memorandum.

Mr. Curry,—

Upon examination it is found that the prelease in its present form is objectionable as the run boundary has been ignored, it not being shown on the maps at the time the lease was granted. Prelease 78-2, Wentworth.

It is submitted that the lease be charted as shown by blue lines on the accompanying tracing, which will absorb all the available land on Pooncarie Run, and then cancel 720 acres of Letheroe Run.

The position of the travelling stock reserve 381 has also been altered since date of approval of prelease.

Tracing attached showing the present and proposed forms of the prelease.

W.H.H., 17/5/82.

The lease may, it is submitted, be amended as designed.—H.C., 25/5/82. Yes.—C.O., 29/5/83.

Mr. Curry,—Tracing herewith for the Land Agent; also one for the ranger. There are no alienations or unalienated measurements within the lease. About 960 acres of travelling stock reserve 381, notified 19th May, 1878, fall within the lease. The maps disclose no other objection to a compliance with the request.—W.H.H., 7/6/82.

Amended tracing to land agent, and lessee informed 10th June. Mr. Curry,—The case may now, perhaps, be referred to the Department of Mines.—C.H., 10/6/82. May be asked to indicate the position of the land.—H.C., 17/6/82. Applicant with tracing, 22nd June. In a month. Applicant reminded, also to pay fee, £3 (form attached), 31st July, 1882. End of month. Any reply?—C.H., 8/9/82. Mr. Helm,—Cannot trace.—J.P.C., 11/9/82. In a month.—C.H., 18/9/82. Any reply or report of payment.—C.H., 18/11/82. Records. No trace.—J.P.C., 22/11/82. Mr. Freeman may perhaps be asked to return the tracing* and reminded as to fee.—C.H., 6/12/82. It is hardly worth while to ask for the return of the tracing sent to applicant for the purpose of marking the area desired to be rung.—S.F., 15/12/82. May be put away? Put away.—C.O., 16/12/82. *See Appendix C.

No. 11.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 10 June, 1882.

I am directed to inform you that the original boundaries of your pre-emptive lease, No. 78-2, lot of 1,920 acres, in the district of Wentworth, county of Perry, notified as approved in the *Government Gazette* of the 17th May, 1878, have been amended; and that a tracing has been forwarded to the local Crown Lands Agent, which shows approximately the position now occupied by the lease, and which you, therefore, will find it very desirable to inspect.

The action taken was found necessary, as in its original position it extended across the boundary between Pooncarie and Letheroe Runs, leaving land available in Pooncarie Run. It has now been charted in accordance with the regulations, so as to absorb all available land in Pooncarie Run, then extending into Letheroe Run to the extent of about 720 acres.

I have, &c.,
H. CURRY
(For the Under Secretary).

No. 12.

Mr. Surveyor Conolly to The Surveyor-General.

Sir, Wentworth, 25 July, 1882.

Adverting to your B.C. instructions, No. 82-87, of 20th June, I have the honor most respectfully to state that I inadvertently omitted to explain that my report was being kept in abeyance awaiting Mr. Licensed-Surveyor Tarrant's plans of reserve 4 and of several subdivisions of land adjacent to the reserves in question, I desire now most respectfully to submit the following report on each case:— Misc. 82-7,427, Misc. 81-11,473, and tracing herewith.

2. Water reserve 9A.—This reserve as at present notified divides water, the whole of which, with sufficient access thereto, it is most advisable to reserve from sale. After high floods in the Darling River this water remains permanent for a considerable length of time, and almost every year the water is permanent during the greater part thereof. Situated close to the road from Pooncarie to Euston, this reserve is of great service to travelling stock in addition to its local use. I would therefore recommend the extension shown on my tracing by red tint, upon approval of this extension. I would advise the permanent marking of all unmarked boundaries of this reserve.

3. Water reserve 10B has been surveyed and plan transmitted by Mr. Tarrant.

4. Water reserve 11A lies in low flooded country out of the line of traffic, and its marking would not be of any public service.

5. Water reserves 12 and 13.—These are very close to each other, and I am of opinion that a reserve in the position indicated on my tracing by red tint would meet all public requirements; it has this advantage also to recommend it, that the approaches to the river Darling are good at any height of water, and banks firm and shelving. Within water reserves 12 and 13, for the most part, the banks are high

high and steep. In view of my proposal being adopted, Mr. District-Surveyor Bolton has approved of design for subdivision of land adjoining. By these adjacent measurements the proposed reserve will be sufficiently marked for easy identification.

6. Water reserves 14, 15, and 16 are now sufficiently marked by recent adjacent surveys for identification by the public.

7. Referring to the latter part of your B.C. instructions, I desire most respectfully to state that I sent a memorandum to Mr. Tarrant on 11th July instant, requesting him to forward his plan* of reserve 4 as early as possible, explaining cause of delay; also to supply reference to corner of portion 3 omitted. No reply has yet reached this office.

* See Appendix D.

When Mr. Tarrant's plan of reserve 10B was passing through this office I noted in pencil on the plan the omission referred to, but not considering the oversight of one detail justified me in returning his plan, sent it on at once that advance on survey might be paid without delay, leaving the omission to be dealt with by head office.

Postal communication in this district is slow and unfrequent, and very often a fortnight at least elapses ere a reply can be received.

I have, &c.,

T. W. CONOLLY.

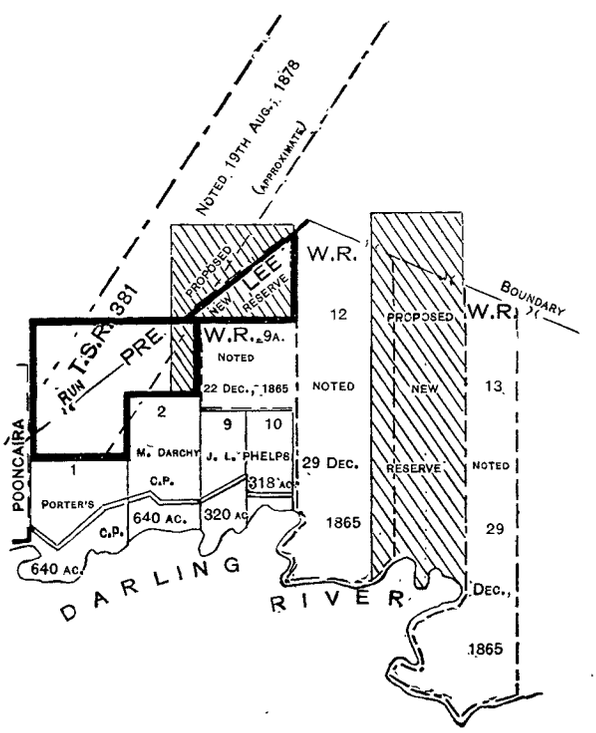
No. 13.

Mr. F. W. Rutter to The Under Secretary for Lands.

Sir, 14A, Exchange, Sydney, 8 September, 1882.

I have the honor on behalf of my client (Charles W. Porter, of Wondenbro, Pooncarie, Darling River) to protest against the proclamation of the reserve from sale (I presume proposed for notification in lieu of Nos. 12 and 13, south) of my client's conditional purchase, portion 1, of the parish of Pooncarie, county of Perry.

Upon reference to the map (from which is a sketch herewith) it will be seen that the proclamation of that reserve is fraught with danger to my client. As the next step may be the withdrawal from lease of the area so proposed, which covers nearly the whole of his prelease of 1,920 acres adjacent to his conditional purchase, and thus prevent and put an end to a right obtained under the law.



Portions 2, 9, *and* 10 *tinted red on original.*

It will further be seen that in consequence of the Pooncarie Village Reserve and of the proximity of the Travelling Stock Reserve, that there would be no other land open for him to prelease.

It is a remarkable circumstance that the portions tinted red are, I believe, held in the squatter's interest and that he will largely benefit by the revocation from reservation of the reserves 12 and 13 referred to, which are near the purchases in his lands, and so situated as to be unapproachable to my client if the new reserve be made, as it would intercept him from acquiring any part of the land so revoked.

The surveyor, in making this recommendation, has lost sight of what might be the result of his action if endorsed by you. Moreover, any accidental forgetfulness to pay the rent (which may occur to the best intentioned man) may cause the forfeiture of his prelease and refusal by the Department to its restoration in order to give effect to the reserve (if that be possible under the law) now proposed.

I have, &c.,

FRED. WILLIAM RUTTER.

Send to Survey Office in connection with other papers.—C.O., 11/9/82. Reserve Branch, 11th September, 1882.

No. 14.

No. 14.

The Surveyor-General to The Under Secretary for Lands.

14 September, 1882.

Land District of Wentworth.

In reporting on reserves near the village of Pooncarie, parish of Pooncarie, county of Perry, Mr. Surveyor Conolly has suggested several modifications and extensions, which, for reasons advanced by him, it is considered advisable to adopt.

Reserve No. 10B has been recently marked by Mr. Licensed-Surveyor Tarrant with an extension, as shown in red on tracing. This extension is endorsed by Mr. Surveyor Conolly, and is deemed advisable, both in the public interest, and as ensuring symmetry of design. It is proposed to cancel the old reserve—reserve 10B—and notify anew with the extension referred to.

For revocation, 1,920 acres.
For notification, 2,372 acres.
1,172 ,,
2,560 ,,

Water reserve No. 9A is also proposed to be extended, as shown in red on tracing. As at present this reserve is insufficient in area. It is also desirable that the extension proposed be carried out, as after high floods in the Darling River this reserve is covered with water, which remains permanent for a lengthened period, and it is of great importance that access to it be secured from the adjacent stock route, from Euston to Pooncarie, which is greatly used.

Respecting the objection to this extension raised by Mr. F. W. Rutter on behalf of Chas. W. Porter (objection enclosed), it is pointed out that the proposed extension will not cancel Porter's prelease, except on failure of renewal.

Water reserves 12 and 13, situated close together, one proposed for cancellation, and in lieu thereof the area shown in red is proposed for notification. This area is considered ample for all public requirements, and is a decided improvement on Nos. 12 and 13, inasmuch as whilst it is of far smaller area, it embraces in its frontage good approaches to the river at any height of water, and the banks at this are firm and shelving, whereas in the reserves proposed for cancellation the banks are high and steep.

It is therefore submitted that reserve 10B be cancelled, and that in lieu thereof an area of 2,372 acres be reserved for water supply and access; also, that the extension of water reserve 9A, notified 22nd December, 1865, being an area of 1,172 acres, be notified as proposed. Further, that water reserves 12 and 13 be cancelled after subdivision, as being no longer required in the public interest, and that in lieu thereof the area of 2,560 acres, as shown in red on tracing, be notified for water supply under the provisions of the 4th clause of the Lands Act of 1861.

Descriptions are enclosed for the notification of reserves recommended, and for the revocation of water reserve 10B.

I have, &c.,
G. LEWIS
(For Surveyor-General).

Submitted for approval.—F.H.W., 25/9/82. It appears that portion of the proposed extension of 9A is already in the travelling stock reserve; if so, why reserve a second time?—C.O., 3/11/82. Found to-day with the Newcastle pasturage papers just returned from Reserve Branch.—F.H.W., 4/12/82. Mr. G. Lewis.

The position of the track is shown approximately, not having been determined by survey, and it is deemed advisable to secure access from the Euston Road to the land against possible modification or alteration of the travelling stock reserve.—G. Lewis (for the Surveyor-General), 20/12/82. The Under Secretary for Lands.

Submitted.—F.H.W., 22/12/82. May be approved, but the position of the stock route should be determined.—C.O., 22/12/82. Approved.—John R., 22/12/82. Executive Council Minute:—Gazetted 15/1/83. Land Agent informed, 15/1/83. Charted, &c., on county of Perry, and traced for Land Agent, 30/1/83.

No. 15.

Mr. C. W. Porter to E. Quin, Esq., M.P.

Wondenbro, 13 October, 1882.

Dear Sir,

Many thanks for your kind attention to my somewhat abrupt request. I am never a polished letter-writer, and having to write as I had, and hurry to post my effusion, I am afraid, I exceeded my usual abruptness.

I send you a very rough sketch, showing the object of the reserve asked for. That portion marked 2 is a selection of M. Darchy, and no road has been surveyed through it from Pan Pan to station. Should such road be now granted I shall have the whole of the back country sheep through my prelease every shearing, without the Darchys having to drive their sheep a less distance than they have to now, consequently I look upon it as an attempt to injure me solely.

When the surveyor was going to apply for a reserve, why not have consulted me, it being on my land. Since 1878 the Darchys have been having a peck at my unfortunate holding. I think it about time the matter was settled.

The commoners are anxious to know when the common will be gazetted, as they wish to fence. Can you kindly supply the information?

I trust all the electors in your large district do not trouble you as I have done.

Yours faithfully,
CHAS. WM. PORTER.

Executive Council, 28/12/82. Inform Mr. Rutter, *vide* decision on 82-14,705, Misc.—J.D.D., 9/3/83. F. W. Rutter informed, 9/3/83.

No. 18.

Minute Paper for the Executive Council.

Recommending revocation of reserves and reservation of other Crown lands.

Department of Lands, Sydney, 28 December, 1882.

IT is recommended to His Excellency the Governor and the Executive Council that the temporary reservation of the portions of land within described and particularized in a schedule annexed, be now revoked, under the 6th section of the Crown Lands Alienation Act of 1861—the revocation to take effect at the expiration of thirty clear days from the date of notification in the *Government Gazette*.

It is further recommended that the portions of land also within described and particularized in a schedule annexed, be reserved from sale, under the 4th section of the Act quoted.

JOHN ROBERTSON.

His Excellency the Governor and the Executive Council.

The Executive Council advise that the course recommended in each case, be approved as herein set forth.—ALEX. C. BUDGE, Clerk of the Council. Minute 82-60, 28/12/82. Approved.—A.L., 28/12/82. Confirmed, 2/1/83. Gazetted, 15/1/83.

SCHEDULE of reserves to be revoked.

Number of papers, Ms. 82-14,705; number of reserve, 106; county of Perry; area to revoke, about 3 square miles.

Schedule of reserves to be proclaimed.

Number of papers, Ms. 82-14,705; number of reserve, 9A Extension; county of Perry; about 1,172 acres; purpose of reservation, for water supply.

Number of papers, Ms. 82-14,705; number of reserve, 526; county of Perry; about 2,372 acres; purpose of reservation, for water supply.

REVOCATION OF TEMPORARY RESERVES.

Department of Lands, Sydney, 15 January, 1883.

IT is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to revoke under the 6th section of the Crown Lands Alienation Act of 1861, the temporary reservation from sale of the portions of land hereinafter described,—the revocation to take effect at the expiration of thirty clear days from this date.

JAMES S. FARNELL.

Darling District.

No. 106. County of Perry, Pooncarie Run, Coloungina, 3 square miles; Commencing at a blazed tree at a point of the Darling River, about ¼ of a mile north of a point known as Wealwulla; and bounded on the south by a line running east to the back line of the run, about ¾ mile wide, northerly, the northern boundary line being the southern boundary line of Coloungina pre-emptive purchase.

Reserve No. 526, notified this day, is in lieu of the above.

[Ms. 82-14,705.]

No. 23.

Mr. C. W. Porter to E. Quin, Esq., M.P.

Dear Sir,

Wondenbro, 22 January, 1883.

You were kind enough when in Pooncarie last December to interest yourself in the matter of the travelling stock reserve through my prelease. I now forward you the following facts, so that you may lay them before the Lands Department:—Prelease was applied for in January, 1878, to be immediately east of conditional purchase, and was gazetted on the 17th May following. On the 19th August, 1878, I received official notice thereof. You will perceive, on referring to tracing A, that the travelling stock reserve was only gazetted on that date, three months after prelease gazetted. Trusting to *Gazette* notice, I fenced in such part of prelease as I then required for my stock, and heard nothing further in the matter until the 23rd December, 1879, when I received notice that a plan of prelease had been forwarded to the Local Office for public inspection. On obtaining a copy of such tracing (marked B*), * See Appendix H.

I wrote to the Lands Office asking for my prelease to be granted when applied for, stating, to the best of my ability, the hardship it would cause me to have to remove my fence, and the injury it would be to the lessees of Tarcoola, by shutting the station in. On the 23rd July, 1880, I received a letter stating, "I am directed to inform you that the Minister of Lands has decided in this and in other cases that where there is other available land, the prelease must be in a modified manner, so as to preserve intact the travelling stock reserve. Your request cannot be complied with." I then employed Mr. F. W. Rutter to act for me and to explain the matter fully to the Department, and received the letter, dated 10th June, 1882, with the tracing marked 'A. You will notice that the prelease has the objectionable feature perpetuated of coming at the back of Tarcoola head station, which is on blocks 9 and 10, and that the travelling stock reserve runs through the remainder of prelease. I think you will agree with me that as to the three-cornered piece, it would be but little violation of the regulations to have the same quantity of land given me east where marked in pencil, and that the travelling stock reserve, which only commences on the boundary of common and prelease, may be removed outside of my land. There might be some difficulty about this if my land was situated some miles from the starting point of reserve. I should think but little objection can be made to it as it is. I also think that conditional purchasers should not be made to find land for travelling stock reserves, which are not used by them, when other land is available. There is another stock route talked about from Menindie to Wentworth. This could also join the present stock reserve on the east of prelease, and also east of the Pooncarie Common. Should it come through the frontage a very ordinary flood would render it impassable. I also enclose the evidence of a case heard before the Bench on Tuesday last. I summoned the defendant for not travelling the direct road from Berlundy to Menindie. I argued that the travelling stock reserve was a good road for stock going between here and Euston, and that defendant had no right to use that road, his route lying up the river, and that Darchy was not justified in giving the permission to cross from one road to the other, to the injury of self, and that the sheep could have been drafted at Darchy's wool-shed yards, which are alongside the inside and direct road. Defendant, according to my time, was five hours on my prelease with 13,000 sheep, eating off what little feed I had, leaving my sheep to starve. Darchy also uses the travelling stock reserve when mustering his paddocks north of the station and in moving his sheep from one paddock to another. All this is a most decided loss to me, rendering the fully stocking of my land an impossibility, for should I do so, either travelling stock or station sheep may, as the law seems to be here, come through my prelease and eat off everything. Your knowledge of this country will tell you that to get a living off 640 acres by grazing in this part is an impossibility, and without the prelease a conditional purchase would be nearly worthless. You also saw sufficient of Wondenbro to show that I have spent considerable money in improving the land.

There is a track through prelease used in time of flood. If this were made a 1-chain road it would meet all requirements of traffic, as in flood time the mail and a few horsemen are the only users of the track. If the road is undefined, stock would still claim to use it.

I have no faith in surveyors. They invariably survey against settlement. Mr. Conolly, the district surveyor, Wentworth, has quite recently caused some other part of my prelease to be reserved. I am quite ignorant where this is, not being yet gazetted, or for what purpose it is required. I can only judge that it is at the wish of Mr. Darchy, for some purpose of his own.

I do not know if I have made my wants intelligible. What I mean is, the same quantity of land contained in three-cornered piece to be given to me at the east of prelease, so that it may contain 1,920 acres, the travelling stock reserve leading to Euston and the projected one (if granted) to Wentworth to be placed east of prelease, and a 1-chain road leading along the track used in time of flood. With the stock roads immediately east of this track 1 chain would be quite sufficient.

Whatever may be the result, I feel quite confident you will do your best for me.

Yours, &c.,
CHAS. WM. PORTER.

[*Enclosure.*]

BEFORE W. L. Richardson, P.M., and W. J. Gould, J.P.

Pooncarie Police Court, 16 January, 1883.

Information:—Thos. Rhodes, in charge of 13,000 sheep, did unlawfully travel with the said sheep other than the direct road, to the injury of C. W. Porter.

C. W. Porter, sworn, deposed:—I am a grazier, residing at Wondenbro; on 7th January I received notice from the defendant that he would pass through my property on the following day; the notice given told me the sheep were at the white gate at the lower end of Darchy's ram paddock, and would be at Monulta yards that night; the gate in question is on the river on the inside road; I told the defendant before he left the yards on the morning of the 8th that he had no business there, and that I should summon him; I produce plan showing the position of the roads.

N. M'Leod, sworn, deposed:—I am a selector, residing near Pooncarie; I am a long resident in this district; I have lived on the Tarcoola Station; altogether I have been about fifteen years about here; I know the white gate at the bottom of Darchy's ram paddock; I also know the Monulta yards; there is no road from the white gate to those yards; from the white gate on the inside road to the outside road is from 2½ to 3 miles; if I were at the white gate and wished to come to Pooncarie, I should not go by the Monulta yards; it would be 4 or 5 miles farther to come to Pooncarie by that route.

Thos. Rhodes, sworn, deposed:—I am a drover; on Monday the 8th, I came on the outside road with about 13,000 sheep; I was in charge of those sheep; I received permission from Mr. Darchy to water at the white gate, and went out back again; on coming in to water, my sheep got boxed with the Tarcoola sheep, and Mr. Darchy requested me to go to the Monulta yards to draft them, which I did, and then took the travelling stock road from those yards and entered Mr. Porter's prelease at quarter to 7 on the morning of the 8th, and was on Pooncarie at quarter to 11 on the same day; Mr. Darchy gave me permission to travel where I liked for water.

By the Plaintiff: I camped at M'Caughey's hut, on the inside road, the night before I camped at Monulta.

Michael Darchy, sworn, deposed:—I am a sheep farmer, and owner of Tarcoola; I gave defendant permission to come in from the outside road to water; I insisted on defendant's going to the Monulta yards, as my sheep were boxed with his.

By the Plaintiff: I have a drafting-yard at the Woolshed; by his camping his sheep at M'Caughey's hut he would be on the inside road.

Case dismissed, the Bench stating that, as defendant had Mr. Darchy's permission to go from one road to the other, he was justified in using the Travelling Stock Road from Pooncarie to Euston.

No. 24.

The Surveyor-General to The Under Secretary for Lands.

A tracing is enclosed*, showing water reserves 9A extension, Pooncarie and Letheroe Runs, and No. 527 Tarcoola and Letheroe Runs, both notified 15th January, 1883, county of Perry, parish of Pooncarie, for the information of the Crown Lands Agent at Wentworth. *See Appendix J.

A tracing is also enclosed showing water reserve 526, notified 15th January, 1883, in lieu of water reserve 10B, cancelled same day, parish of Timpunga, county of Perry, for the land agent at Wentworth.

G. LEWIS
(For the Surveyor-General).

To be returned to Reserves Branch after informing land agent, whose attention should probably be drawn to the fact that reserve 10B was erroneously called reserve 106 in the cancellation notice. His attention should also be invited to the fact that the cancellation of reserve 10B does not throw open any additional land to selection, 1/2/83.

Land agent with tracings, 7/2/83. Mr. G. Lewis.—J.D.D., 8/2/83.

Mr. Surveyor Conolly is requested to determine the position of travelling stock reserve 381, in accordance with ministerial direction herein. He will also be good enough to furnish a sketch of same.—G. LEWIS (for Surveyor-General), 5/3/83. Mr. Surveyor Conolly.

Received.—T.W.C., 19/3/83.

Transferred to Mr. Licensed-Surveyor Tarrant, who is requested to traverse the Pooncarie and Euston Road from the gate, or Pooncarie Temporary Common, to south boundary of water reserve 9A, notified 22nd December, 1865, or a point in a line with the prolongation of the south boundary of the said water reserve 9A. Marks to be inserted at the terminal points and intermediate mile trees or posts marked in course of survey.—T. W. CONOLLY, surveyor, Wentworth, 9/4/83.

Returned to the Surveyor-General with my letter, No. 83-14, 10th May, 1883.—J. TARRANT, Licensed Surveyor.

No. 25.

Telegram from Mr. C. W. Porter to The Under Secretary for Lands.

6 February, 1883.

PART of my prelease selected three weeks since. Have wired land agent for information, and have been refused. Is this correct?

Mr. Curry.—C.O., 7/2/83.

This telegram may be taken to mean that the lessee is aware that part of his lease has been selected, but has sought further information from the land agent. Both Mr. Porter and the land agent may be asked by letter for further information.—H.C., 7/2/83.

Yes, 8/2/83. Land Agent, Wentworth, C. W. Porter, 9/2/83. In a month.

No. 26.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir,

Department of Lands, Sydney, 9 February, 1883.

I have the honor to acknowledge the receipt of your telegram of the 6th instant, respecting your pre-emptive lease, specified in the margin, and to inform you that the local Crown Lands Agent has been communicated with, and requested to forward to this Department whatever information he may possess respecting the conditional purchase which, it is understood from your statement, has been made in the lease. Upon receipt of his reply you will be further communicated with. 78-2, 1,920 acres, Wentworth.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 27.

The Crown Lands Agent, Wentworth, to The Under Secretary for Lands.

Sir,

Crown Lands Office, Wentworth, 16 February, 1883.

Replying to your letter of number and date, as per margin, I have the honor to state as follows:— 83-1,851, 9th February.

So far as I am aware no selection has been made upon Mr. Porter's prelease, unless he claims that the gazetted addition to water reserve 9A or the stock route be upon that prelease.

On the 18th January a Mr. Richardson selected 326 acres, and I informed him, as per memorandum sent with his application, that he had selected partly on intended addition to water reserve 9A, and partly on the travelling stock route, as marked upon my plan.

I did not, therefore, inform Mr. Porter of such selection, as I could not be aware of his being in any way affected.

I have, &c.,
HY. HIBBLE,
Crown Land Agent.

No. 28.

No. 28.

Office Memorandum.

Reserve Branch, No. 4.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of water reserve No. 526 (10B), parish of Timpunga, county of Perry, transmitted by Mr. Tarrant's, letter, No. 82-24, of 1st May, 1882. Instructions issued to Mr. M'Donald on 26th August, No. 80-197, and on which Mr. Tarrant's report in explanation is requested.

Subject.	Report.
In connecting the north west corner of the reserve with the south-west corner of portion No. 3 A. Nicholls' conditional purchase of 300 acres Mr. Tarrant gives on his plan a reference letter to the latter corner, but in the table opposite that letter is a blank.—G. LEWIS (for Surveyor-General), 5/3/83. Forest Clerk, Surveyor-General's Office, 8/3/83, (per Mr. Surveyor Conolly). Received, 19/3/83. Forwarded to Mr. Licensed-surveyor Tarrant, with my memo. of this date.—T. W. CONOLLY, Surveyor. Wentworth, 19/3/83. Received.—J.T., 20/3/83.	Corner 90° 00′ (approximate), 5 links. Gum. The line being covered with heavy brush fence it is impossible to obtain reference with any degree of accuracy.—JOSEPH TARRANT, 21/3/83. Received.—T.W.C., 27/3/83. Now forwarded to Surveyor-General. I have not a copy of original survey of portion 3 to check this reply by.—T. W. CONOLLY, Surveyor, 27/3/83. Plan noted. Place with papers.—J.T.K., 13.

No. 29.

Office Memorandum.

8 March, 1883.

THIS is a request to amend the form of a prelease No. 2 of 78, and to make a deviation of travelling stock reserve No. 381, so that it will not embrace any part of the lease.

I would point out, that as the lease stands at present, the form is objectionable, as it was not till the Further Amendment Act of 1880 was passed that provision was made for the extension of a prelease across a run boundary to make up the area applied for after absorbing all the available land in the run in which the conditional purchase was situated.

Therefore, if the strictly legal course be pursued, the area of the prelease should be reduced to 1,300 acres, that being the area west of the run boundary; then the reserve might perhaps be diverted to follow the run boundary, as shown by firm red lines on tracing, although this proposal would involve the loss of 620 acres, still the greater security that the lessee would enjoy, so far as the balance of the lease is concerned, and the freedom from annoyance or hardship by travelling stock, and would more than compensate for this loss of area. J.B.

Urgent. Strictly speaking (as the Act of 1875 precludes the crossing of a lease into a second run when any vacant land exists in the first), the lease shall be restricted.

The question however in which the lessee is most interested is the shifting of the travelling stock reserve, and it may be thought desirable to refer the case to the District Surveyor for report.—H.C., 8/3/83.

It would perhaps be well to have a report. Refer for the purpose to the Surveyor-General.—C.O., 9/3/83. E. Quin, Esq., M.P., informed, 13/3/83. The Surveyor-General, 13/3/83. Mr. Burt, 16/3/83.

Mr. G. Lewis. The action indicated should perhaps be done through the Reserve Branch.—J.B., 29/3/83. Mr. Surveyor Conolly for consideration and report accordingly.—G. LEWIS, (for the Surveyor-General), 17/4/83. Mr. Quin, M.P., informed, 23/4/83.

Mr. Landers, 23/4/83. Received.—T.W.C., 7/5/83. Telegram to Mr. Licensed-Surveyor Tarrant to expedite plan and report required by B.C. 83-40, 5th March.—T.W.C., 8/5/83.

Now placed with Mr. Licensed-Surveyor Tarrant's letter 83-14, 10th May, *vide* my B.C. thereon dealing with this matter.—T. W. CONOLLY, Surveyor, 25/5/83.

No. 30.

The Under Secretary for Lands to Mr. F. W. Rutter.

Sir, Department of Lands, Sydney, 10 March, 1883.

In reference to your letter of the 28th November last, respecting your protest on behalf of Mr. C. W. Porter against the reservation of an area in lieu of reserves Nos. 12 and 13, in the parish of Pooncarie, county of Perry, I am directed to inform you that the Secretary for Lands has approved of the reserves in question being cancelled after subdivision, and an area of 2,560 acres reserved in lieu thereof.

I am to add that your client's pre-emptive lease will not be cancelled by the reservation, except on failure of renewal.

I have, &c.,
CHAS. OLIVER,
Under Secretary.

No. 31.

Memo. from Mr. Surveyor Conolly to Mr. Licensed-Surveyor J. Tarrant.

Wentworth, 19 March, 1883.

Charting Branch Memo. of 5th March, 1883, to Licensed-Surveyor Tarrant.

Mr. Licensed-Surveyor Tarrant's attention was directed to the omission referred to in the above memorandum on the 11th July, 1882.

An explanation requested as to why the information has not been supplied.

T. W. CONOLLY,
Surveyor.

Herewith I have returned memo. *re* corner of Nicholls' conditional purchase. I retook corner some time ago, but omitted to send result.—J. Tarrant, Licensed Surveyor, 21/3/83.

No. 33.

Telegram from Mr. C. W. Porter to The Under Secretary for Lands.

18 April, 1883.

Surveyor Tarrant now defining travelling stock road through my prelease, 2-78. Understood was to have been reported on first. Surveyor states would be no difficulty in making alteration required. Reply.

C. W. PORTER.

Urgent.—C.O., 18/4/83. Mr. Surveyor Conolly instructed to report on proposed deviation of stock route on papers Misc. 83-2,449, on 17th April.—Wm. M'F., 18/4/83. Perhaps the Surveyor-General will specially instruct Mr. Conolly to send the further papers to Surveyor Tarrant at once.—C.O., 18/4/83. Mr. M'Lean, for copy of instructions, if you please. Immediate.—G.L., 19/4/83. Not issued from this branch (Geographical division, No. 9).—M.A.M'L., 19/4/83. Ask Mr. Conolly to report upon a proposed deviation at once. Inform him that Mr. Tarrant is on the ground. Mr. Landers,—Telegraph the above.—G.L., 19/4/83.

No. 34.

Telegram from Mr. Surveyor Conolly to Mr. Licensed-Surveyor J. Tarrant.

18 May, 1883.

Your survey of track from Pooncarie towards Ariunpe urgently required. Please state in your report if any modification of that part of travelling stock reserve 3-81 practicable; and, if so, whether in public interest advisable.

T. W. CONOLLY, Surveyor,
Wentworth.

No. 35.

Mr. Licensed-Surveyor J. Tarrant to The Surveyor-General.

Sir, Wentworth, 10 May, 1883.

I have the honor to transmit herewith plan of traverse of part of main track from Pooncarie to Euston, starting at south boundary of reserve No. 6, at village of Pooncarie, and ending at the south-east corner of extension of water reserve 9A, notified 15th January, 1883, also survey of south boundary of water reserve 9A to its extension, county of Perry.

I would recommend that travelling stock reserve No. 381, notified 19th August, 1878, instead of being half a mile of each side of track, should be notified so as to extend only to the eastward, the country being much better adapted to the wants of travelling stock.

As plan was urgently required I have not had time to obtain original tracings of portions 2, 9, and 10, so that these portions are only charted approximately.

I have, &c.,
JOSEPH TARRANT,
Licensed Surveyor.

Roll plan D 21-1,834; plan and papers Misc. 82-19,725, with instruction; No. 40 of the 5th May, 1883, herewith. Received.—T.W.C., 17/5/83.

Plan traced, 25/5/83; forwarded to Surveyor-General; Misc. 83-2,449, and copy of telegram now herewith. I know of no objection to the extension of this part of travelling stock reserve 381, as herein proposed, viz.:—That the reserve should be placed wholly on the north-east side of track; but the proposed travelling stock reserve from Wentworth to Menindie embraces some of the land which, in C. W. Porter's interest, it is proposed to release by modifying travelling stock reserve 381, and I think the public convenience would hardly be fairly considered were the two stock routes made to join south of the

the point where the outside road from Wentworth meets the Euston road to Pooncarie. The modification proposed by Mr. Tarrant is preferable to that shown by red lines on tracing with Misc. 83-2,449, inasmuch as by the latter drovers would be very liable to trespass were the lessee to have his land unfenced. To modify travelling stock reserve 381, as shown by brown tint, would be most inconvenient to the public. Attached is tracing, showing the correct position of travelling stock reserve 381 as notified, and the furthest point south that the proposed travelling stock reserve from Wentworth to Menindie should be made to meet the Euston and Pooncarie road.—T. W. Conolly, Surveyor, 25/5/83.

For Mr. George Lewis,—Plan herewith, 18/6/73. Memorandum to surveyor *re* closes, folio 374, on 13th July, 1883. Memorandum returned, 28th September, 1883, now with papers. Charted and examined.—W. M. Gordon, 9/7/83.

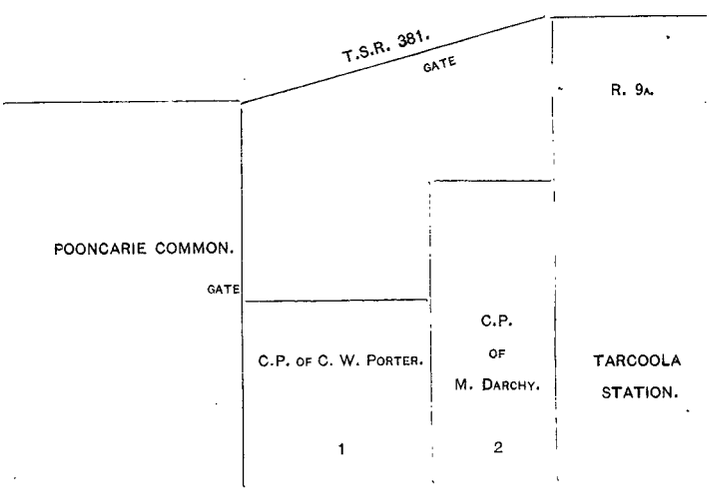
No. 36.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, Pooncarie, 15 June, 1883.

I have the honor to enclose letters received from Mr. Conolly and Mr. Surveyor Tarrant, also your own letter to Mr. Quin, M.L.A. I can in no way reconcile Mr. Tarrant's letter as following the instructions that would most probably be sent by you to Mr. Tarrant, and as that gentleman did not think it worth while to see me before sending his report, my views of the matter remain as a sealed book to him. When he was measuring the road through prelease he distinctly told me he could not see any reason why travelling stock reserve 381 should not run at the back of prelease. I suppose however, that as he was afterwards the guest of the Tarcoola manager he found this would not cramp me up sufficiently. I have no faith in any action taken by surveyors, they always work against settlement.

I have now the honor to submit the following plan for your consideration, and as the increase in distance would be only about two hundred yards, I hope it may be granted without surveyors reporting on the case.



Travelling stock reserve 381 to start from south-east corner of Pooncarie Common, thence south until it joins travelling stock reserve as placed by Mr. Tarrant, the remainder of my acreage to be contained between the dotted lines, the triangular portion lying at the east of the old reserve 9A being also just behind the Tarcoola Station would be thus done away with, should I have to fence it off it would be a great nuisance to the station and very expensive for me to fence.

The travelling stock route from Menindie to Wentworth could also go by 381 until it clears the east side of the lake, it being impossible for stock to travel by any other way, the lake joining the south-east corner of conditional purchase 2.

By granting this request I shall have one paddock free from travelling stock, and the land to the east through which the travelling stock reserve will run. I shall have to make some little use of it in wet weather.

I have also the honor to draw your attention to the fact, that when my prelease was gazetted as granted in May, 1878, the travelling stock reserve was not known, so that the remainder of prelease cannot be supposed to be taken out of a reserve, but the reserve out of prelease. I am quite aware that stock must have roads defined for them, at the same time where such a very slight deviation is asked for, as in my case, I think the stock ought to give way to the *bonâ fide* selector.

Mr. Tarrant, by some strange reasoning, concludes that I want prelease on the west side of travelling stock reserve as reported on by him, how he arrives at such a conclusion is a mystery to me, my various letters to the Department for Lands will show the reverse to be the case.

I have, &c.,
CHAS. WM. PORTER.

[*Enclosures.*]

Sir, Wentworth, 8 May, 1883.

The instructions for report upon your application for modification of travelling stock reserve 381 have come to hand and will be attended to as early as possible.

If you place yourself in communication with Mr. Tarrant, he will consider and report upon your views, as he has now been requested to say whether any modification is advisable in the public interest.

I have, &c.,
T. W. CONOLLY,
Surveyor.

Mr. C. W. Porter.

Sir

Sir,

Department of Lands, Sydney, 13 March, 1883.

I have the honor to state for your information that the letter addressed to you by Mr. C. W. Porter, respecting the pre-emptive lease specified in the margin, and forwarded by you to the Department on the 15th February last, has, together with the other papers in the case, been referred to the District Surveyor for report.

73-2, 1,920 acres, Wentworth.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

E. Quin, Esq., M.P., Legislative Assembly, Sydney.

Dear Sir,

Wentworth, 20 May, 1883.

Your note of the 14th instant to hand, and in reply I have to inform you that I have reported on the travelling stock reserve adjoining your selection. I did not see any objection to a modification of reserve, so as to allow of your prelease to stand good, and reported that, in my opinion, reserve should be renotified 1 mile on east side of track, and not as at present, half a mile on each side. I shall in all probability be coming down the river in the course of the week, when, if I can make it convenient, I will call and see you.

I have, &c.,
JOSEPH TARRANT,
Licensed Surveyor.

C. W. Porter, Esq., Wondenbro.

No. 37.
The Surveyor-General to The Under Secretary for Lands.
Darling District.

28 September, 1883.

SUBMITTED for the consideration of the Secretary for Lands:—That the defined area enumerated in the margin, and situate in the county of Perry, in the parish of Pooncarie, be reserved from sale for travelling stock, under the provisions of the 4th clause of the Crown Lands Act of 1861.

Land District of Wentworth; area for reservation, about 3½ square miles; for cancellation, about 3½ square miles of travelling stock reserve 381, and about 3 square miles of travelling stock reserve 537.

It is further submitted that the portions of travelling stock reserve 381 (notified 19th August, 1878), and of travelling stock reserve 537 (notified 25th April, 1883), shown on tracing "A" by red and blue hatching respectively, be cancelled under the provisions of the 6th clause of Crown Lands Alienation Act of 1861.

An alteration in the form of these reserves is necessary in order to allow of the amendment of C. W. Porter's prelease 78-2, shown on tracing "C" enclosed, and Mr. Surveyor Conolly has reported that there is no objection in the public interest to the modification proposed, which consists in the revocation of the portions of travelling stock reserves 381 and 357 herein described, and the renotification of an area common to both travelling stock reserves (shown by green hatching), and confined to the outside of the track and maintaining the original width.

G. LEWIS
(For the Surveyor-General).

Submmitted for approval.—J.G.B., 4/10/83.

Before taking action on this recommendation, it is submitted that a report be obtained from the Department of Mines as to whether there is any objection to the proposed alteration of the travelling stock reserves.—F.H.W., 4/10/83.

The alteration is so slight, the reference may, I think, be dispensed with before carrying it out.—C.O., 5/10/83. Approved.—J. P. ABBOTT, 10/10/83. Gazetted, 29/10/83. Executive Council minute, and Land Agent informed, 29/10/83.

No. 38.
Minute Paper for the Executive Council.
Recommending revocation of reserves and reservation of other Crown lands.

Department of Lands, Sydney, 16 October, 1883.

IT is recommended to His Excellency the Governor and the Executive Council that the temporary reservations of the portions of land within described and particularized in a schedule annexed, be now revoked, under the 6th section of the Crown Lands Alienation Act of 1861—the revocation to take effect at the expiration of thirty clear days from the date of notification in the *Government Gazette*.

It is further recommended that the portions of land also within described and particularized in a schedule annexed be reserved from sale under the 4th section of the Act quoted.

JAMES S. FARNELL.

His Excellency the Governor and the Executive Council.

The Executive Council advise that the course herein recommended be approved.—ALEX. C. BUDGE, Clerk of the Council. Minute 83-43, 16/10/83. Approved.—A.L., 16/10/83. Confirmed, 23/10/83. Gazetted, 20/10/83.

SCHEDULE of reserves to be revoked.

Number of papers, Ms. 83-19,190; number of reserve, part of 537; county of Perry; area to revoke, about 3 square miles; when notified, 25th April, 1883.

Number of papers, Ms. 83-19,190; number of reserve, part of 381; county of Perry; area to revoke, about 3½ square miles; when notified, 19 August, 1878.

SCHEDULE of reserve to be proclaimed.

Number of papers, Ms. 83-19,190; number of reserve, 381 Extension; county of Perry; area, about 3½ square miles; purpose of reservation, for travelling stock.

No. 39.
Gazette Notice.

REVOCATION OF TEMPORARY RESERVES.

Department of Lands, Sydney, 29 October, 1883.

IT is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to revoke, under the 6th section of the Crown Lands Alienation Act of 1861, the temporary reservation from sale of the portions of land hereinafter described, the revocation to take effect at the expiration of thirty clear days from this date.

JAMES S. FARNELL.

Darling

Darling District.

Part of travelling stock reserve No. 381, notified 19th August, 1878, county of Perry, parish of Pooncarie, area about 3½ square miles: Commencing at the north-east corner of portion No. 1, parish of Pooncarie; and bounded thence on the north by part of the south boundary of Pooncarie temporary common east to its south-east corner; thence by the eastern boundary of travelling stock reserve No. 381 aforesaid, south-easterly to the point of its intersection with the east boundary of water reserve No. 9A extension, notified 15th January, 1883; thence by part of the east boundary of that water reserve to its south-east corner; thence on the south by the south boundary of that water reserve west to its intersection with the western boundary of water reserve No. 381 aforesaid; thence by part of the western boundary of the last-named travelling stock reserve north-easterly to the east boundary of portion No. 1 aforesaid; and thence by part of that east boundary north, to the point of commencement.

Travelling stock reserve No. 381 extension, notified this day, in lieu of the above.

[Ms. 83-19,190.]

Part of travelling stock reserve No. 537, notified 25th April, 1883, county of Perry, parish of Pooncarie, area about 3 square miles: Commencing at the north-east corner of portion No. 1; and bounded thence on the north by part of the south boundary of Pooncarie temporary common east to its south-east corner; thence by part of the eastern boundary of travelling stock reserve No. 537, south-easterly and south to a point 40 chains south of the north-east corner of water reserve No. 9A, notified 22nd December, 1865; thence by a line bearing south-westerly to a point east of and about 30 chains distant from the south-east corner of portion No. 10; thence by a line east to that corner; and thence by part of the westerly boundary of travelling stock reserve No. 537 aforesaid, to the point of commencement.

Travelling stock reserve extension, No. 381, notified this day, in lieu of the above.

[Ms. 83-19,190.]

No. 40.

Gazette Notice.

RESERVES FROM SALE FOR TRAVELLING STOCK.

Department of Lands, Sydney, 29 October, 1883.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that, in pursuance of the provisions of the 4th section of the Crown Lands Alienation Act of 1861, the land specified in the Schedule appended hereto shall be reserved from sale for travelling stock.

JAMES S. FARNELL.

Darling District.

No. 381 extension. County of Perry, parish of Pooncarie, Tarcoola and Letheroe Runs, area about 3½ square miles. The Crown lands within the following boundaries: Commencing at the point of intersection of the north boundary of water reserve No. 527, notified 15th January, 1883, with the east boundary of travelling stock reserve No. 537, notified 25th April, 1883; and bounded thence on the south-east by a line bearing north-easterly to the south-east corner of water reserve No. 9A extension, notified 15th January, 1883; thence on the east by the east boundary of that water reserve north to its north-east corner; thence by a line parallel to and distant 1 mile from the track from Pooncarie to Euston, forming the centre of travelling stock reserve No. 281, notified 19th August, 1878, north-westerly to the east boundary of Pooncarie temporary common; thence by part of the east boundary of that common south to its south-east corner; thence by the south boundary of that common west to the track from Pooncarie to Euston, forming the centre of travelling stock reserve No. 381 aforesaid; thence by that track to its intersection with the north boundary of water reserve No. 9A extension aforesaid; thence by a line south to the north-east corner of water reserve No. 9A, notified 22nd December, 1865; thence by the east boundary of that reserve and the east boundary of water reserve No. 12, notified 29th December, 1865, to the point of commencement.

The above is in lieu of those parts of travelling stock reserves Nos. 381 and 537, cancelled this day.

[Ms. 83-19,190.]

No. 41.

Gazette Notice.

RESERVE FROM SALE FOR TRAVELLING STOCK.

Department of Lands, Sydney, 14 November, 1883.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the 4th section of the Crown Lands Alienation Act of 1861, the land specified in the Schedule appended hereto shall be reserved from sale for travelling stock.

JAMES S. FARNELL.

Darling District.

No. 381 extension. County of Perry, parish of Pooncarie, Tarcoola and Letheroe Runs, area about 3½ square miles. The Crown lands within the following boundaries: Commencing at the point of intersection of the north boundary of water reserve No. 527, notified 15th January, 1883, with the east boundary of travelling stock reserve No. 537, notified 25th April, 1883; and bounded thence on the south-east by a line bearing north-easterly to the south-east corner of water reserve No. 9A extension, notified 15th January, 1883; thence on the east by the east boundary of that water reserve north to its north-east corner; thence by a line parallel to and distant 1 mile from the track from Pooncarie to Euston, forming the centre of travelling stock reserve No. 381, notified 19th August, 1878, north-westerly to the east boundary of Pooncarie temporary common; thence by part of the east boundary of that common south to its south-east corner; thence by the south boundary of that common west to the track from Pooncarie to

Euston

Euston, forming the centre of travelling stock reserve No. 381 aforesaid; thence by that track to its intersection with the north boundary of water reserve No. 9A extension aforesaid; thence by a line south to the north-east corner of water reserve No. 9A, notified 22nd December, 1865; thence by the east boundary of that reserve and its southern prolongation south to the point of commencement

The above is in lieu of those parts of travelling stock reserves Nos. 381 and 357, cancelled 29th October, 1883.

This notice is in lieu of that published in *Government Gazette* of 29th October, 1883.

[Ms. 83-19,190.]

No. 42.

The Surveyor-General to The Under Secretary for Lands.

4 December, 1883.

A TRACING is enclosed, showing extension of travelling stock reserve 381, notified 14th November, 1883; also, revocation of parts travelling stock reserves 537 and 381, on the same date, county of Perry, parish of Pooncarie, for the information of the Crown Lands Agent at Wentworth. Duplicate tracing enclosed for Stock Branch, Department of Mines.

G. LEWIS
(For the Surveyor-General).

Dealt with in Reserve Branch. Submitted that after the Land Agent has been informed these papers be sent to Lease Branch, Survey Office. It is submitted that the Department of Mines be also informed. Land Agent, with tracing, 7/12/83.

Forward tracing.—J.D.D. (for J. G. BLAXLAND), 7/12/83. Under Secretary for Mines, with tracing, &c., 11/12/83. Lease Branch, 11/12/83. Mr. Burt, 13/12/83. See later action.

Mr. Curry,—The deviation of travelling stock reserve, as recommended by the surveyor, has been approved of in the position shown by green edging on accompanying tracing. The question as to the restriction of prelease No. 78-2 (see your minute on Misc. 83-2,419, within) to the same run in which the purchase is situated, as shown in red hatching on tracing, should now, probably, be taken into consideration.—J.B., 19/1/84.

Mr. Curry, 21/1/84.

Lease 78-2 may be amended and reduced as shown by red hatching. Rent, as difference, may be refunded from date of regazette. As the lease was applied for before the passing of the Act of 1880, it should not extend across the run boundary.—H.C., 30/1/84.

F.H.W., 31/1/84. C.O., 2/2/84. Approved.—J.S.F., 7/2/84. Mr. Burt., 7/2/84. See regazette cover, dated 3/3/84.

Wentworth.—Area of lease 78-2 reduced from 1,920 to 1,100 acres. Treasury to refund £1 19s. 2d. Land Agent, with tracing, and C. W. Porter informed, 4/4/84. No. of voucher, 4,532.—Original rent, £6; future rent, £3 8s 9d.; difference, £2 11s. 3d. Amount calculated for 280 days, £1 19s. 2d.

No. 43.

Office Memorandum.

Lease to be regazetted.

3 March, 1884.

THE lease particularized in the following schedule has now been charted on the office maps in accordance with decision on Misc. 83-24,342. Tracing enclosed, for transmission to the Land Agent at Wentworth, in which district the lease is situated.

J. BURT.

No. of lease, 2 of 78; county of Perry; parish of Pooncarie; No. of conditional purchase or portions on which lease now rests, 78-3; present area, 1,920 acres; future area, 1,100 acres; present rent, £6; future rent, £3 8s. 9d.

Lease 78-2 stands in the name of C. W. Porter, and rent has been paid to 31st December, 1884. Regazetted 25th March, 1884. Mr. Burt, 28/3/84. Mr. Curry,—Regazette noted.—J.B., 31/3/84.

No. 44.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 4 April, 1884.

I am directed to inform you that the area of your pre-emptive lease, No. 78-2, in the district of Wentworth, approved on the 17th May, 1878, was, by notice in the *Government Gazette* of the 25th March, 1884, reduced from 1,920 to 1,100 acres; that a tracing showing approximately the present boundaries of the lease has been forwarded for public inspection to the local Crown Lands Agent; and that the Under Secretary for Finance and Trade (to whom any communication respecting the money should be addressed) has been requested to refund to you the sum of £1 19s. 2d., being the amount of rent in excess consequent upon the reduction in area that has now been made.

I am to explain that the action taken was found necessary in order that the lease should not extend into an adjoining run.

I have, &c.,
H. CURRY
(For the Under Secretary).

No. 45.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, Pooncarie, 14 April, 1884.

I have the honor to acknowledge receipt of your communication of 4th April last, wherein you state that my prelease has been reduced from 1,920 to 1,100 acres; and that this was found necessary so that the lease should not extend into an adjoining run. I beg to draw your attention to a letter from the Department to me, dated 10th June, 1882, wherein my prelease is defined, and the extraordinary shape accounted for by the fact that it was necessary to first absorb all the available land of the run on which the conditional purchase is, and then to take the remainder out of the adjoining run, this being in accordance with both Land Act and Regulations.

I cannot see anything either in Act or Regulations allowing a Minister to set aside the action of his predecessor in office, and, with all deference to your Department, I shall require something more than your letter and the *Gazette* notice to oust me from my holding.

Hoping to hear soon that the defined prelease of June, 1882, has been overlooked by you, and that my lease is still to stand as therein mentioned,

I have, &c.,
CHAS. WM. PORTER.

P.S.—I am unable to give the marginal reference to letter of 10th June, 1882, being now in the hands of Mr. Quin, M.P. for this district. I have written for it, and when received will forward the numbers.

Mr. Burt,—How much vacant land is there beyond the present lease?—H.C., 30/5/84. About 210 acres, situate between the run boundary and travelling stock reserve 381 (extension).—J.B., 2/6/84. Mr. Curry.

The writer may be informed that the action cannot be disturbed, but if he makes a fresh application to the land agent for any available land between the lease and the reserve it will be dealt with on its merits.—H.C., 4/6/84. Yes.—C.O., 10/6/84. C. W. Porter, 10/6/84.

(A letter to Mr. Quin, M.P., with illustrative tracing).

No. 46.

Mr. C. W. Porter to E. Quin, Esq., M.P.

Dear Sir, Wondenbro, Pooncarie, 18 April, 1884.

When I wrote you some time since about my prelease I enclosed a letter from the Lands Office, dated 10th June, 1882, defining said lease, also plan of lease. Will you be kind enough to return them to me when you can lay your hands on them. By a letter from the Under Secretary, of 4th April, 1884, I am told that my lease has been reduced from 1,920 to 1,100 acres, and that £1 19s. 2d. will be refunded me. The explanation is couched in the following words, "I am to explain that the action taken was found necessary in order that the lease should not extend into an adjoining run." You can fancy this notice came on me like a thunderbolt. I know that Darchy has just returned from Sydney, and feel quite sure that some gross misrepresentation has been made to the Minister to induce him to attempt to commit such an injustice. I wrote immediately on receipt of letter, and could only give the date of the letter, 10th June, 1882, and not the reference. This is why I require it. I have fully made up my mind not to let the lease stand at 1,100 acres, it being both against Land Act and Regulations, and if at last I should have to eat humble pie, the most of my fencing will have to be shifted. If you will take the trouble to look at the plan you have, the division of the runs is marked on it.

The Local Land Board would put a stop to all such one-sided decisions. When will they be established or a Land Bill passed?

I beg to apologize for the trouble I am giving you.

Yours, &c.,
CHAS. WM. PORTER.

Presented by Mr. Quin, M.P.

No. 47.

Mr. C. W. Porter to E. Quin, Esq., M.P.

Dear Sir, Wondenbro, Pooncarie, 9 May, 1884.

Many thanks for your offer of seeing the Minister for Lands *re* my prelease. I forward you the last previous communication from the Lands Office, so that the one of the 10th June can be compared with it. My own opinion of the matter is, that some gross misstatement has been made to the Lands officials to induce them to alter the boundaries. I have no faith in Darchy's truthfulness. I hear that he induced one of his contractors to give him a receipt for £130 for about five days' work for two men in moving a small hut (a wood-cutter's residence) on to the prelease of Mr. Nicholls, so that he could make a claim for improvements; and the man further states that this is his usual practice for all work done on the station. Should such be the fact, how can I help doubting his *bona fides*.

It is quite struggle enough to live on the 2,560 acres, and the loss of 820 acres of the very best of the land would cause me to give in altogether, and to own to being licked is very repugnant to me.

A very nice rain is now falling, with every appearance of continuing. I hope you are having the like at Tarella.

Yours, &c.,
CHAS. WM. PORTER.

No. 48.

No. 48.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 10 June, 1884.

With respect to your letter of the 14th April last, I have the honor to inform you that your pre-emptive lease, 78–2 of 1,100 acres, in the district of Wentworth, was reduced to comprise land in the run in which your conditional purchase is situated, and having regard to the 35th clause of the Lands Act Amendment Act of 1875, the action taken cannot be altered. If, however, you make to the local Crown Lands Agent an application for a pre-emptive lease of any available land between your present lease and travelling stock reserve extension 381, it, on receipt in this Department, will be dealt with on its merits.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 49.

E. Quin, Esq., M.P., to The Under Secretary for Lands.

Sir, Parliament House, Sydney, 3 July, 1884.

I have the honor to enclose a letter from C. W. Porter, which I shall feel obliged if you will read, and then if you can see your way to giving him the benefit of his prelease, which he has had fenced for many years and occupied, I shall be grateful.

I certainly think the case one of peculiar hardship if he is dispossessed of land which he took up in good faith, and which has been interfered with by reserves created since he took it up.

I have, &c.,
EDWARD QUIN.

Urgent.—C.O., 3/7/84. Mr. Thomas, 3/7/84. Lease application 78–348, Ls. 84–36–36, place herewith, please, and register this paper.—C.W.T., 4/7/84. Reserves.

The lease was applied for before the Act of 1880 came into operation, and the provisions of the Act of 1875 are, that if there is any land in the first run the boundary cannot be crossed. It is this that has led to the reduction of the lease, and the existence of the travelling stock reserve prevents, in its present position, any more liberal proposal.—H.C., 4/7/84.

To amend the lease and increase the area to 1,920 acres would involve the temporary cancellation of part of the travelling stock reserve. The applicant might then reapply for a full extension of area under a new application, and when the lease was granted the reserve might be reinstated.—H.C., 4/7/84.

Perhaps the stock route might be slightly deviated in area to permit of Mr. Porter obtaining his full area as desired. I should not suggest this course were it not for the fact that lease was originally charted without question, and it was only after a lapse of considerable time that the reduction in area was made.—C.O., 4/7/84.

Approved.—J.S.F., 8/7/84. Mr. G. Lewis, 9/7/84.

Mr. Burt,—Will you kindly show distinctly the position of the prelease as desired by applicant, in order that the deviation of the stock route may be described, *vide* Ministerial approval.—G. Lewis, 29/7/84.

Mr. Lewis,—I have shown by red lines on the enclosed tracing* (registered as an enclosure to leases 84–5,692), the original form of the prelease. According to the lessee's statement he has fenced in the north and east boundaries of the lease as originally gazetted. It is therefore presumed that the deviation in the stock route will be effected, so as to cause no interference with the fencing.—J.B., 5/8/84.

* See Appendix K.

[*Enclosure.*]

Sir, Wondenbro, Pooncarie, 17 June, 1884.

I enclose tracing showing the measurement of my fencing on the north and east sides of my prelease, the exact measurements of the zig-zag line I have not, the lines will serve to show that the corners are connected—the irregular line of fence is due to a now dry lake, filled only at high floods, it will be useful in paddock when fenced in. East of present fence, the south sides are all fenced and the conditional purchase.

I notice in the plan forwarded the date of gazetting reserve 381 is given as 19th August, 1878. The gazetting of my prelease, 17th May, 1878, is conspicuous by its absence, thus ignoring my prior right. In the regulations applying to preleases, No. 2 states, "The leasehold will include only such Crown land as may be open to and not already under prelease or notified as a reserve," thus showing that in January, 1878, when the application in due form was made, and on 17 May, 1878, when it was gazetted, the land now in question was open for pre-emptive lease. The 9th regulation states, "But no portion of any run so adjoining will be granted as a lease until all the available land within the pastoral lease in which the conditional purchase is situated shall be first exhausted."

I cannot read clause 35 of Act 1875 as applying to cancellation.

The whole question appears to me to resolve itself as occurring on the 17th May, 1878, the date of *Gazette* notice, at which time there is not any doubt as to the land being available, and had the lease been charted at that time, as perhaps it should have been, it would have been so done as in the letter of June, 1882, is described, for, although my application was for land immediately east of conditional purchase according to regulation 9, I must first exhaust the land in the run purchase is selected—of course, the Lands Department can gazette a travelling stock reserve through a prelease the same as through a pastoral lease; but why take the land from the first to give it to the second as in this case—would the travelling stock benefit by the change? My experience says no.

Without a doubt it would have been of great benefit both to myself and the owners of Tarcoola, if the same acreage as is contained in the triangular piece forming the south-east corner of Pooncarie run had been placed to the east of line as notified in letter of 2nd June, 1882. Had I not have been waiting for this change to be made my fencing would long ere this have been completed; unfortunately for myself I see too late that, according to the regulations, this cannot be done, and I attribute a great part of my losses in stock last year to not having fenced according to my existing lease.

Hogarth has described "the curved line to be the line of beauty," now, I, looking at the curved line in travelling stock reserve 381 extension, can only see something a good deal off the square. A tank has been sunk outside the south-east corner of the common where I have made a cross on plan, and as this has been made since 29th October, the date of notification, and there being no reason why the road should not have been direct, I cannot help thinking it being a fishy affair, or that some ultimate dodge is to be worked.

I must tell you that Darchy has built a house on his run for Mr. Surveyor Tarrant (which edifice is looked upon by the selectors as a real valuable improvement and of real use in the working of the station), but how the rent is paid, in cash or curved lines is a secret. If ever I build a house for a surveyor, I shall expect my lines to fall in pleasant places.

Conditional

Conditional purchasers on the Darling look on that purchase as a purchase of a right to lease three times the amount of their land, and in no other way. We were willing to risk these leases being conditionally purchases knowing that away from the river it would only be by station dummies, and we think we could bowl them over.

For myself I can say that with 2,560 acres I can live comfortably; should I, however, lose 820 acres of the very pick of the lot, I could not grow sufficient wool and stock to pay the rent alone. You can guess I am very anxious.

Yours, &c.,

E. Quin, Esq., M.L.A., Sydney. CHAS. WM. PORTER.

No. 49A.

Minute Paper for the Executive Council.

Recommending revocation of reserve and reservation of other Crown lands.

Department of Lands, Sydney, 2 October, 1884.

It is recommended to His Excellency the Governor, and the Executive Council, that the temporary reservation of the portion of land within described, and particularized in a schedule annexed, be now revoked, under the 6th section of the Crown Lands Alienation Act of 1861, the revocation to take effect at the expiration of thirty clear days from the date of notification in the *Government Gazette*.

It is further recommended that the portion of land also within described and particularized in a schedule annexed, be reserved from sale under the 4th section of the Act quoted.

J. S. FARNELL.

The Executive Council advise that the recommendation in each case, herein set forth, be approved.—Alex. C. Budge, Clerk of the Council. Min. 84–44, 7/10/84. Approved.—A.L., 7/10/84. Confirmed, 14/10/84. Land Agent informed, 20/10/84. Gazetted, 20/10/84.

Schedule of reserves to be revoked.

Number of papers, leases 84–5,693; number of reserve, 381 extension; county Perry; area to revoke, about 3½ square miles; when notified, 14 November, 1883.

Schedule of reserves to be proclaimed.

Number of papers, leases 84–5,692; number of reserve, 381 extension; county, Perry; area, about 2,368 acres; purposes of reservation, for travelling stock.

No. 50.

The Surveyor-General to The Under Secretary for Lands.

5 October, 1884.

A tracing is enclosed showing, by red hatching, travelling stock reserve 381 extension, cancelled 20th October, 1884, and by green tinting, travelling stock reserve 381 extension, notified same date in lieu.

County of Perry, parish of Pooncarie—for the information of the Crown Lands Agent at Wentworth.

G. LEWIS

(For the Surveyor-General).

It is submitted that after the land agent has been informed, these papers be returned to Mr. Burt, Lease Branch. Land agent with tracing, 7/11/84.

Mr. Curry,—Travelling stock reserve 381 extension has now been charted, so as to admit of C. W. Porter increasing the area of prelease 2, of 78, across the run boundary. A fresh application will be required for 820 acres.—J.B., 17/12/84.

May be advised by telegram.—H.C., 17/12/84. Yes.—F.H.W. (for the Under Secretary), 17/12/84. Telegram to C. W. Porter, 17/12/84.

No. 51.

Gazette Notice.

Revocation of Temporary Reserves.

Department of Lands, Sydney, 20 October, 1884.

It is hereby notified, for general information, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to revoke, under the 6th section of the Crown Lands Alienation Act of 1861, the temporary reservation from sale of the portions of land hereinafter described,—the revocation to take effect at the expiration of thirty clear days from this date.

JAMES S. FARNELL.

Darling District.

No. 381 extension. County of Perry, parish of Pooncarie, Tarcoola and Letheroe Runs, area about 3½ square miles. The Crown lands within the following boundaries: Commencing at the point of intersection of the north boundary of water reserve No. 527, notified 15th January, 1883, with the east boundary of travelling stock reserve No. 537, notified 25th April, 1883; and bounded thence on the south-east by a line bearing north-easterly to the south-east corner of water reserve No. 9A extension, notified 15th January, 1883; thence on the east by the east boundary of that water reserve north to its north-east corner; thence by a line parallel to and distant 1 mile from the track from Pooncarie to Euston, forming the centre of travelling stock reserve No. 381, notified 19th August, 1878, north-westerly to the east boundary of Pooncarie temporary common; thence by part of the east boundary of that common south to its south-east corner; thence by the south boundary of that common west to the track from Pooncarie to Euston, forming the centre of travelling stock reserve No. 381 aforesaid; thence by that track to its intersection with the north boundary of water reserve No. 9A extension aforesaid; thence by a line south to the north-east corner of water reserve No. 9A, notified 22nd December, 1865; thence by the east boundary of that reserve and its southern prolongation south, to the point of commencement.

The above was notified on 14th November, 1883, as travelling stock reserve.

Travelling stock reserve No. 381 extension, notified this day, is in lieu of the above.

No. 52.

Gazette Notice.

RESERVES FROM SALE FOR TRAVELLING STOCK.

Department of Lands, Sydney, 20 October, 1884.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that in pursuance of the provisions of the 4th section of the Crown Lands Alienation Act of 1861, the land specified in the schedule appended hereto shall be reserved from sale for travelling stock.

JAMES S. FARNELL.

Darling District.

No. 381 extension. County of Perry, parish of Pooncarie, Letheroe Run, area about 2,368 acres. The Crown lands within the following boundaries: Commencing on the east boundary of the Pooncarie temporary common, at the south-west corner of portion No. 36; and bounded thence on part of the west by part of that boundary of the common south to its south-east corner; thence on part of the south by part of the north boundary of Porter's pre-emptive lease No. 2 of No. 78, bearing east to its north-east corner; thence by its east and north-east boundaries south and south-east to the south boundary of water reserve No. 9A extension, notified 15th January, 1883; thence by part of the south boundary of that reserve east and a line partly forming its east boundary north to its intersection with the north-east boundary of travelling stock reserve No. 381, notified 19th August, 1878; thence by part of the north-east boundary of that travelling stock reserve bearing south-easterly to its intersection with a line parallel to and 1 mile in a direct line east of the east boundary of Porter's pre-emptive lease aforesaid; thence on the east by that line, and its prolongation north to a point east of the point of commencement; and thence on the north by a line west partly forming the south boundaries of portions Nos. 38, 37, and 36 to that point.

The above is in lieu of travelling stock reserve No. 381 extension, cancelled this day.

[Ls. 84-5,692.]

No. 53.

Mr. C. W. Porter to The Under Secretary for Lands.

Wondenbro, Pooncarie, 9 December, 1884.

Sir,

I have the honor to request that a tracing of my prelease, 2 of 78, district of Wentworth, may be at once forwarded to the Local Land Office for public inspection. I notice that travelling stock reserve, No. 381, was altered on 20th October last, and judging from the description in the *Gazette*, my prelease has been returned to its prior form.

I have paid £6 as usual for the full prelease, and have the Land Agent's receipt.

I have, &c.,

CHAS. WM. PORTER.

Prelease, 78-2, of 1,920 acres, county Perry, gazetted 17th May, 1878, renewed for 1884 in the name of C. W. Porter.

No. 54.

Telegram from The Under Secretary for Lands to Mr. C. W. Porter.

17 December, 1884.

IF application be at once made to Crown Lands Agent, and rent paid for prelease for about 820 acres adjoining your prelease, 78-2, of 1,100 acres, it will, if received here in time, be dealt with on its merits.

H. CURRY
(For the Under Secretary).

No. 55.

Telegram from Mr. C. W. Porter to The Under Secretary for Lands.

18 December, 1884.

EIGHT hundred and twenty acres applied for. Rent paid.

CHAS. WM. PORTER.

Application in provisional *Gazette*.—J.P.C., 31/12/84. Mr. Curry. Design for lease No. 84-18 attached to lease application 84-15.—J.B., 17/2/85.

No. 56.

Application by Mr. C. W. Porter.

M.

[Occupation Act, 1861, and Lands Act Amendment Act, 1875.]

To be used in claiming to lease adjoining lands under pre-emptive right.

District of Wentworth.

RECEIVED this 23rd day of December, 1884, at — o'clock, together with the sum of £1 5s. 8d.

A. N. BARNETT,
Land Agent.

Sir,

Sir, Wentworth, 23 December, 1884.

In pursuance of the provisions of the Crown Lands Occupation Act of 1861, and the Lands Acts Amendment Act, 1875, and Regulations thereunder, I, Charles William Porter, do hereby apply to be allowed to lease the sections or portion of Crown lands hereunder described, at the fixed rent of £2 per section, which I hereby tender.

The land in virtue of which I claim to exercise a right of pre-emption, is situated as follows, and is now in my possession, viz.:—County of Perry, parish of Pooncarie, situated near the village of Pooncarie, containing 640 acres, being portion 2, conditional purchase 78-3, on the 24th day of January, 1878, by Mary Ann Porter, at Wentworth (standing in the name of Charles William Porter).

I am, &c.,
C. W. PORTER
(*Per* N. DEWHURST).

To the Land Agent for the District of Wentworth.

Description of the section or portions applied for.

About 820 acres, county of Perry, parish of Pooncarie:—Commencing at the south boundary of the village Pooncarie, at the north-east corner of my prelease No. 2, of 1878, and bounded thence by lines east and south to the north-eastern boundary of the aforesaid prelease; and by that boundary north-westerly, to the point of commencement.

Applicant was duly warned that the area applied for appeared to come within travelling stock reserve 381, and that a prelease, No. 2, of 1878, had been already granted in virtue of his conditional purchase, portion 1, parish of Pooncarie.—A.N.B., 23/12/84.

Provisionally gazetted. Approved, 31/12/84. Conditional lease, No. 4,342, gazetted under clause 52, Crown Lands Act of 1884, 16/4/86.

No. 57.

Office Memorandum.

Prelease application No. 15, District of Wentworth.

THE enclosed prelease application is forwarded to Mr. Brown for the following purposes:—

1. In order that its number may be quoted against each of the conditional purchases in virtue of which it has been made.
2. That particulars, as indicated by the headings of the columns of the following schedule, may be furnished of the conditional purchases.
3. That the number of any prior lease application made in virtue of any of the purchases may be stated.
4. That the selections may be classified according to series or groups.
5. That there may be furnished a copy of the application relating to any of the conditional purchases not yet measured.

W.H.H., 29/12/84.

Number conditional purchase, 78-3; section under which made, 13; area, 640 acres; present holder and date of transfer, Chas. Wm. Porter; state of conditional purchase, good; catalogue number of plan or registration number of surveyor's report, P 26-2,092; number of previous lease applications, 78-348.

All action, as indicated above, has been taken. The different series or groups of conditional purchases are shown by distinguishing brackets. Mr. for copies of applications of conditional purchases.—HERBERT CROFT, 8/1/85. Copies herewith.

Prelease Branch,—Mr. Burt, 9/1/85.

No. 58.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, Pooncarie, 10 February, 1885.

In forwarding my application for conditional lease, I have the honor to inform you that travelling stock reserve 537, through my prelease, has never been used for the last fourteen years to my recollection, all stock going out to where travelling stock reserve 381 now is, and so round to the river. Water reserve 9A extension has been without water since gazetted. The Local Land Board, however, will advise you as to the uses of both.

I have, &c.,
CHAS. WM. PORTER.

[*Enclosure.*]

[Crown Lands Act of 1884—Part III, section 52.]

Application for the conversion of a pre-emptive lease into a conditional lease within the Division.

Pooncarie, 10 February, 1885.

IN accordance with the provisions of the Crown Lands Act of 1884, I, Charles William Porter, being the holder of the pre-emptive lease specified in the annexed schedule, hereby apply to convert the available Crown land within the same into a conditional lease of 1,920 acres, in virtue of my conditional purchase also specified hereunder; and I hereby agree to pay any sum that may be demanded upon the determination of the rental of such conditional lease.

I am the absolute owner of the conditional purchase by virtue of which this application is made.

CHAS. WM. PORTER.

To the Under Secretary for Lands.

SCHEDULE.

Pre-emptive Leases.

No. of lot, 39; No. of prelease, 78-2; date of Gazettal, May 17th, 1878; district Gazetted, Wentwroth; name of original lessee, C. W. Porter; county, Perry; area, 1,920 acres. Conditional

Conditional Purchases

No. of conditional purchase, 78–3; land district, Wentworth; date of application, January 24th, 1878; area, 640 acres.

No. of conditional purchase, 78–3; district, Wentworth; area, 640 acres; date of purchase, January 24th; state of purchase, good; name of present holder, Mary Ann Porter, now Chas. William Porter by Ministerial approval on Charting Branch. Explanation attached to 80–42,962,

O.B., 23/3/85.

C.S. Branch, 13/3/85. Mr. Burt, 24/3/85. Alienation, &c., noted on tracing.—T.T., 31/3/85. Mr. Curry. Water reserve No. 9A, notified 15/1/83, embraces part of the prelease. Dealt with in Lease Branch.—J.B., 7/4/85.

C. S. Branch. Was not the conditional lease transferred to C. W. Porter?—H.C., 9/4/85. Yes; *vide* schedule.—O.B., 2/5/85. Lease Branch. Mr. Burt.—T.W., 6/5/85.

No. 59.

Office Memorandum.

Preemptive lease No. 78–2; Gazetted 17th May, 1878; nominal area, 1,100 acres; county of Perry, parish of Pooncarie; Division, Western; district, Wentworth; in the name of C. W. Porter (from Mary A. Porter) and renewed for 1884.

W.H.H., 17/11/84.

The above pre-emptive lease was granted in virtue of the following portions. Such of the portions as represent conditional purchases are distinguished from those of a different character.

No. of portion, 1; area, 640; parish, Pooncarie; No. of conditional purchase and character of purchases, C.P. 78–3.

J.B., 17/2/85.

The enclosed tracing shows the present position of the lease, together with a design for a conditional lease, which appears to recommend itself, confining the applicant to vacant land within the pre-emptive lease.

No. 60.

Office Memorandum.

6 May, 1885.

Mr. C. W. Porter has applied to convert prelease 78–2 into a conditional lease. He has described it as containing 1,920 acres. It however contains only 1,100 acres.

The lease was reduced in area, and after much correspondence an arrangement was made to cancel part of a reserve which stood in the way of an extension of area, and afford Mr. Porter an opportunity of obtaining a lease of an additional area. The arrangements were carried out, Mr. Porter was advised, and upon his putting forward a formal application, a lease of 820 acres was at the end of last year provisionally gazetted. It is submitted whether it would be competent for the Board to accept the application under consideration as applying to both leases, should the supposition that Mr. Porter intended it to embrace both be found correct.

H.C.

There does not appear to be any objection to the course proposed, and if the Board recommends the granting of 1,920 acres, the lease will have to be shown by tracing.—J.R.E (for the Under Secretary), 7/5/85.

No. 61.

Mr. Surveyor Conolly to The District Surveyor, at Hay.

Sir,

Sydney, 10 June, 1885.

In compliance with your memorandum of instructions, dated 4th June, 1885, I have the honor most respectfully to report on application by C. W. Porter for conversion of prelease No. 78-2, gazetted 17th May, 1878, parish of Pooncarie, county of Perry, into a condition lease, in so far as travelling stock reserve 381, notified 19th August, 1878, and water reserve 9A extension, notified 15th January, 1883, would be thereby affected. *Tracing herewith. See Appendix L. See Appendix M.

I am of opinion travelling stock reserve 381 should not be curtailed, nor water reserve 9A extension be reduced, both being necessary for travelling stock. The application does not appear, however, objectionable on this account. Section 108, Victoria 48 No. 11, and section 10, 48 Victoria No. 18.

I have, &c.,
T. W. CONOLLY,
Government Surveyor.

Forwarded to the Chairman, Local Land Board, Hay, with my report No. 85-380.—R. M'Donald, District Surveyor, 28/10/85.

No. 62.

The District Surveyor at Hay to The Chairman, Land Board, Hay.

Sir,

District Survey Office, Hay, 28 October, 1885.

In reference to your letter of 19th May, 1885, forwarding to me for report the application by C. W. Porter for the conversion of the available area within his prelease 78-2 and 84-18, I do myself the honor to inform you that prelease 78-2 was originally granted for 1,920 acres, as shown by blue edging on enclosed tracing "B," but it was afterwards ascertained that the lease was within two runs and it was regazetted for 1,100 acres, being the area (about) on the west of the run boundary.

In consequence of representations made by applicant against the reduction, the Secretary for Lands decided on the 8th July, 1884, that applicant should obtain his full area (*vide* 84-5,692 leases enclosed). In accordance therewith a fresh application was made for the area, about 820 acres east of the run boundary, which was provisionally gazetted on the 31 December, 1884, as prelease No. 84-18.

The

The application for conversion specifies an area of 1,920 acres, being the combined areas of the leases, but only prelease 78-2 is quoted in the Schedule, but probably the application should be treated as in right of both preleases.

It will be observed, on reference to the tracing "B," that travelling stock reserve No. 381, notified 19th August, 1878, passes through the lease, and that about 600 acres are embraced by water reserve No. 9A extension, notified 15th January, 1883. Mr. Surveyor Conolly reports that travelling stock reserve No. 381 should not be curtailed, nor water reserve 9A extension reduced, both being necessary for travelling stock, but that the application does not appear objectionable on that account in view of section 108.

There would appear to be some question as to which track forms the basis of the travelling stock reserve. The track shown by dotted sienna lines, passing through the lease, was traversed by Licensed-Surveyor Tarrant, in 1883, as being part of the main track from Pooncarie to Euston, but a recent survey by Licensed-Surveyor Christie of the track shown by dotted black lines, is considered by him the basis of the travelling stock reserve. The former, however, is evidently the centre of the travelling stock reserve, the latter being apparently a divertion from the main track to Tarcoola station.

I have, &c.,
ROBERT M'DONALD,
District Surveyor.

No. 63.

The Chairman, Land Board, Hay, to The Under Secretary for Lands.

Crown Lands Act of 1884—(Part III, Section 52).

Recommendation by the Local Land Board on an application for the conversion of a pre-emptive lease into a conditional lease, under the 52nd section of the Crown Lands Act of 1884.

WHEREAS, on the day of , 188 , an application by Charles Wm. Porter, of Pooncarie, was received for the conversion of the pre-emptive lease therein specified into a conditional lease of 1,920 acres, subject to the provisions of the Crown Lands Act of 1884, and the said application having been duly inquired into by the said Board, it is recommended that no area be allotted in satisfaction thereof, except any area not included in travelling stock reserve 381, and which may adjoin the basis, or be over 40 acres.

Given under my hand, this 25th day of November, 1885.—

A. J. PARK,
Chairman.

Mr. Shaw,—What reserves were in existence when lease 84-18 was granted, in so far as the land in that lease is concerned?—H.C., 20/1/86. Is the land indicated by red tint on tracing B herewith (prelease 84-18) within any reserve? Was it in any reserve on the 23rd December, 1884?—M.S., 25/8/86. Mr. G. Lewis. The land in question is not, and was not within any reserve upon the 23rd December, 1884.—W.M., (*pro* G. LEWIS), 19/2/86. Mr. Shaw, Lease Branch. Conditional lease under clause 52, Crown Lands Act of 1884, No. 4,342, *Government Gazette*, 16/4/86. Conditional lease No. 4,342, regazetted as to difference on rent, 29/11/87.

No. 64.

Mr. C. W. Porter to The Chairman, Land Board, Hay.

Sir, Wentworth, 29 November, 1885.

I have the honor to give you notice that I intend to appeal to the Minister for Lands that he will not follow the recommendations of the Land Board, and refuse to convert my prelease No. 78-2 into a conditional lease under the Lands Act of 1884.

I have, &c.,
C. W. PORTER
(By his Agents,—READ AND WILKES).

No. 65.

Mr. C. W. Porter to J. P. Abbott, Esq., M.P.

Sir, Wondenbro, Pooncarie, 4 December, 1885.

The action of the Local Land Board at Wentworth, by their recommendation not to convert preleases into conditional leases where the old travelling stock reserves run at the back of conditional purchases, must be my apology for troubling you with this letter.

It is too late now to point out that a prelease was as much a condition of a purchase as the payment of the balance of purchase by instalments, residence, and the erection of improvements, and that this right of lease was the inducement to so conditional purchase.

To my thinking, the Land Board have mixed up the Central with the Western Division. In the Central I can well understand that these leases, carrying a right of purchase, land reserved from sale could not be included in them; but in the Western Division, where not 1 inch is more reserved from sale than is the whole, and where a purchase under any conditions cannot be made, I fail to see why leases cannot be granted. As a matter of fact, the Land Act of 1884 revokes, or rather absorbs, reserves from sale of whatsoever denomination in the Western Division by creating the division one, and only one, reserve, and leaves all land open for lease.

As to travelling stock, their rights are well protected by 29 Victoria No. 2, section 30, and 41 Victoria No. 19, section 16, which gives them a most decided right of 1 mile in width, except through purchased land, and with perfect liberty to camp where they may please on such mile-wide road, without hindrance from pastoral, homestead, or conditional lessee, they fulfilling their part of the contract by travelling the specified distances. Such being the case, reserves for their use are altogether unnecessary, and would merely be reserves from sale within a reserve from sale.

On

On the resumed portions conditional purchasers can take up homestead leases to include the land previously held by them as preleases, and, if their means would allow them to do so, would be in a far better position than previously. This, however, would require much money to fence and stock. On the pastoral lease no such escape exists, and the decision of the Land Board, if your approval should follow, would be utter ruin to a great number of families. Nothing would be left for them to do but surrender their selections (where they have made homes) at a valuation that would not, in all probability, meet one half the cost of them. The fencing on lease would be lost (5 miles in my own case), and then stock have to be sacrificed, 1 mile of country being quite inadequate to carry the stock for 4 miles.

To the best of my ability I have placed the matter of travelling stock and conditional purchaser (for that is the issue) before you, feeling sure, from your clear-headed judgment and strict impartiality, the ruling of the Land Board will not be upheld.

Of course all this is sending coals to Newcastle, as what I have said is nothing new to you; but, if it bores you reading it, my excuse is that it has eased my mind in writing it.

I think, however, you will be interested in the following way to work the Act of 1884:—

One William Lancaster, alias Billy the Pig, dummied about 400 acres of land for Michael Darchy, the manager and one of the trustees under the will of the late Thomas Darchy, the owners of Tarcoola Station. On the division of runs this selection was on the pastoral lease, consequently there was no further necessity to keep Lancaster on the land, where he lived, having been paid by the Government as a rabbiter on Tarcoola, and he was ordered to the head station to be paid-off. On his way there he stated that if Darchy did not ante-up well he should give himself up to the police for dummying (he never made any secret of his position). However, on his arrival at the station, and proposing this ante-up business, Darchy went for his necktie and made him sign, as he says, some papers, so that Darchy could get his money back from the Government. This, I take it, means a surrender. This is all hearsay, but very reliable. Should such a surrender come before you, you will be very able to decide if sub-section 3 section 75 was made to meet such a case. This Lancaster is well-known, and could very easily be found if required. Senior-Sergeant Keelty, of Wentworth, could readily trace him, having known him for years, and these men have a stated track in which they seek work.

Conditional Sales Branch. See last part of the letter enclosed.—H.C., 15/12/85. A copy has been made and registered conditional sales.—H.R., 24/12/85. Mr. Curry. Mr. Wiley for papers.—H.C., 5/1/86.

No. 66.

Office Memorandum.

Ls. 85-13,942, Board at Hay.

Conversion section 52, 48 Vic. No. 18.

Pre-emptive Lease No. { 78-2 of 1,100 acres. / 84-18 of 820 acres.

Applicant, Charles William Porter.

THE Board recommend the lease in a general way, subject to a favourable decision on the facts explained. The case is submitted.

For approval, of a conditional lease of about 1,920 acres to applicant at an annual rental of 2d. per acre, but subject to further appraisement as to future annual rental, if thought desirable; and subject to the right of resuming, at any time, so much of the lease as may be required for roads found to be necessary in the public interest.

Both pre-emptive leases were not specifically mentioned in the application, but the fact of the applicant having referred to the area as 1,920 acres, points to the conclusion that the application refers to both.

H.C., 23/2/86.

C.O., 25/2/86. Approved.—G.S., 26/2/86. Conditional lease, Crown Lands Act, 1884, No. 4,342, *Government Gazette*, 16/4/86; lessee informed, 19/4/86.

Mr. Licensed-Surveyor H. Tarrant for measurement, in accordance with approval (if unobjectionable) of 1,920 acres in one block, the boundaries to conform to the original boundaries of the preleases.—R. M'DONALD, District Surveyor.

Mr. Licensed-Surveyor H. Tarrant. District Survey Office, instruction No. 86-35, 1/6/86. Transferred to Mr. Licensed-Surveyor J. Tarrant, 2/8/86. Returned to the District Surveyor at Hay with my letter, No. 86-73, 20th November, 1886.—JOSEPH TARRANT, Licensed Surveyor. Conditional lease No. 4,342; regazetted as to difference in rent, &c., 29/11/87.

No. 67.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 19 April, 1886.

I am directed to invite your attention to a notice in the *Government Gazette* of the 29th November, 1887, to the effect that under the provisions of the 52nd clause of the "Crown Lands Act of 1884," a conditional lease, No. 4,344, of an approximate area of 1,920 acres, has been approved by the Secretary for Lands, subject, however, to any alteration of area, or reservation, or resumption, for any roads that may have been, or may be, found necessary or desirable, and subject also to any other action or limitations, which may have been, or which may be, found necessary or expedient. Land District, Wentworth.

The rent has, pending its ultimate settlement after inspection of the land, been calculated at the rate of 2d. per acre per annum; this rate may, however, be exceeded, but if it should be exceeded, due notice and information will be given you. The

The rent for 1886, £16, together with the balance of rent for 1885, £10, must be paid either to the Under Secretary for Finance and Trade, or to the Crown Lands Agent of the District, on or before the 16th May next, subject, if not paid during the prescribed term to the penalties imposed by the 96th clause of the "Crown Lands Act of 1884." For 1887 and any following year the rent must be paid during September of the year preceding that for which it may be intended, subject in default to the penalties referred to.

It must be distinctly understood that the lease may, without any preliminary notice, be cancelled, if found to represent an area in excess of what may be held under the Act before mentioned, or to have been obtained or granted contrary to any of the provisions of that Act.

When referring to the lease, or forwarding any rent for it, you are particularly requested to use the new number and not the original number of the pre-emptive lease.

I have, &c.,

H. CURRY
(For the Under Secretary).

No. 68.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, Pooncarie, 5 October, 1886.

I have the honor to address you concerning the alteration made by Mr. Licensed-Surveyor Tarrant when measuring my prelease, now converted into a conditional lease. His letter to me (enclosed herewith) will show that his starting point is totally disconnected with my conditional purchased land, and by starting from that point and altering the shape of conditional lease, he has cut out more than a mile of my fencing, which was placed on the lines of my prelease as granted, and the plan of which was placed in the Land Office at Wentworth. I was with Mr. Tarrant the first day he was out, and then complained to him of the alteration in shape. I could only learn from him that that was the land now given to me. The accompanying sketch will better illustrate my meaning, although drawn without any regard to accuracy. The lines in ink show the shape of prelease, and the pencil lines the alteration in survey by Mr. Tarrant. By this alteration the northern boundary of 9A reserve, the southern boundary of Michael Darchy's conditional purchase, and the northern boundary of Phelps' homestead purchases have all to be shifted about 3½ chains to the north. My fence runs east from the point marked "A," which is the south-east corner of M. Darchy's conditional purchase, as laid out by Mr. Surveyor Donovan, and if the present survey stands I shall have to shift this fence 3½ chains north, and this means expense. In the angle marked "B" there is also 36 chains, which will also have to be shifted. The line marked "C" was not chained by Mr. Tarrant, having only been pegged until it intersected my fence on the northern boundary of my lease, and very likely that northern boundary is 3½ chains further north, should it only be an overlapping of different surveys. I think I am not asking too much to have the mistake rectified at Mr. Tarrant's starting point, which is only a useless water reserve, having no water near it. You will please notice that on the plan of the prelease the east line runs north from the run boundary-line, marked "D," at a point where it will give me the 1,920 acres, and my fencing already erected is placed as part of my plan to fence and subdivide the whole of the lease; and again, if the present survey stands I shall have to shift much other fencing to make the best of land.

My request, therefore, is this,—to let the triangular piece remain as surveyed, with the exception of the northern line of 9A extending the 3½ chains on my fenced land, and that the east boundary should start north from the line marked "D," so as to complete my full lease. I do not ask for fresh survey; a plan, with the length of the lines given, is all that I should require; I can then easily run the lines without encroaching on my neighbour.

I am most anxious to receive an early reply, so that I can start fencing as soon as possible and secure the grass which I have been paying for so long without being able to fence, my lease having been in hot water for years.

I have, &c.,

CHAS. WM. PORTER.

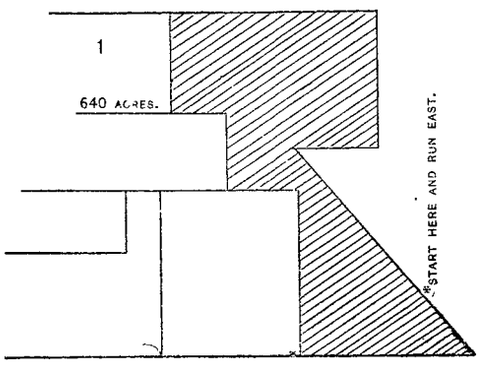
[*Enclosure.*]

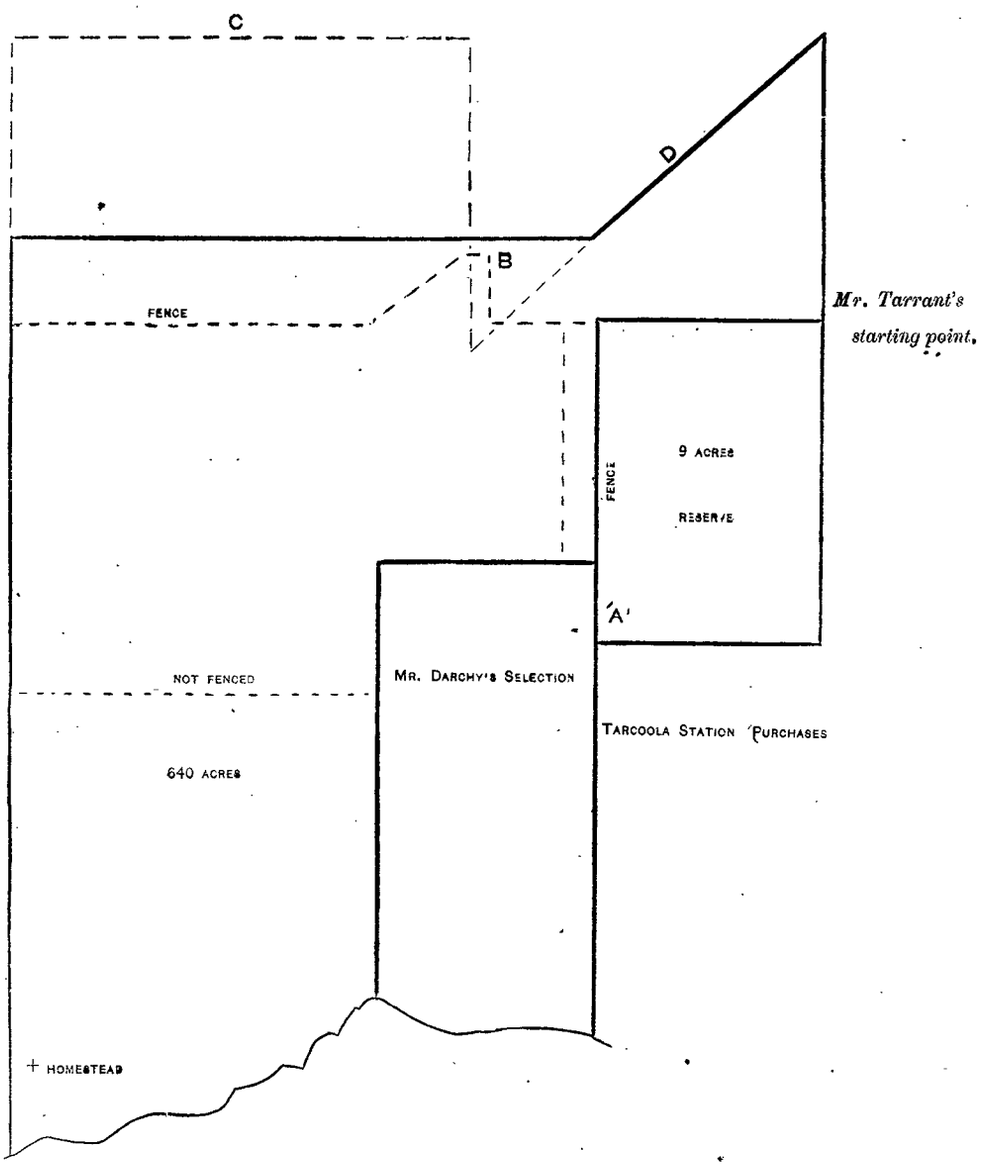
Dear Sir, Tarcoola, 9 August, 1886.

I am starting the measurement of your prelease in the morning. I shall start at the south-west corner. See sketch below.

I have, &c.,

J. TARRANT,
Licensed Surveyor.





No. 69.

Office Memorandum.

FORWARDED to the District Surveyor at Hay in connection with previous papers.

F. W.

B.C., Lands, 16/10/86. ——— (For the Under Secretary).

Mr. Licensed-Surveyor Tarrant for report, and in connection with instructions No. 86–35, of 1st June, transferred to him by Mr. Licensed-Surveyor Harley Tarrant.—ROBERT M'DONALD, District Surveyor, 3/11/86.

Returned to the District Surveyor, with papers, leases 86–2,064. My letter, No. 86–73, of 20/11/86.—JOSEPH TARRANT, Licensed Surveyor. The fence referred to in the enclosed letter is within reserve 9A, and consequently not on land that applicant can claim any legal right to.—WILLIAM ORR, Acting District Surveyor, 12/10/87. The Under Secretary for Lands.

No. 70.

Mr. Licensed-Surveyor J. Tarrant to The District Surveyor at Hay.

(No. 86–73.) Conditional Lease.

Sir, Wentworth, 20 November, 1886.

I have the honor to transmit herewith the plan of an area of 1,920 acres, numbered C P L, in the parish of Pooncarie, county of Perry, which I have measured for conditional lease No. 86–4,342, of the Wentworth Land District, applied for by Chas. Wm. Porter, in connection with conditional purchase No. 78–3, being portion numbered 1, in the parish of Pooncarie, county of Wentworth.

This survey has been effected in accordance with instructions No. 86–35, dated 1st June, 1886, issued by the District Surveyor at Hay.

Rental and capital value.—After careful consideration, I am of the opinion that the annual value of the land applied for is 2d. per acre, and the capital value of the same is £1 5s. per acre.

I

I have also the honor to furnish the following information as to :—

1. Proximity to railway and township.—Adjoins Pooncarie township reserve.
2. Objections to the lease on the ground of mining occupation or otherwise.—None.
3. Character of soil.—Chiefly red sandy soil.
4. Grazing capabilities.—About 7 acres to one sheep.
5. Agricultural capabilities.—Good ground for crops if irrigated.
6. Nature of timber.—Box and light scrub.
7. Whether densely or thinly timbered.—Thinly.
8. The extent of scrub land.—Lightly timbered, with scrub throughout.
9. Whether any of the scrub or brushwood growth is suitable for feeding stock in time of drought.—All scrub in lease is good as sheep feed.
10. The approximate proportion of plain, open forest, thickly timbered, and scrub country.—Light scrub throughout.
11. Improvements, their value, nature, date of erection, and ownership at date of application.—About 28,200 links; 5-wire fence (full value), at £30 per mile, property of C. W. Porter, £105 15s.; about 2,700 links 5-wire fence (full value), at £30 per mile, property of run lessee, £10 2s. 6d.; about 11,300 links 5-wire fence, at £30 per mile, the joint property of Porter and run lessee, on common boundary of portion 2, £42 7s. 6d.

In addition to the above I may state that the survey has been made in exact accord with sketch supplied me, with prelease papers herewith. The north boundary of water reserve 9A is in its correct position, which throws the fence about 3½ chains to the south. This is what applicant complains of in his letter—Paper, Leases, 86-7,195.

I have, &c.,
JOSEPH TARRANT,
Licensed Surveyor.

Received, District Survey Office, 27/11/86. Account 86-28, report on value land forwarded, 1/12/86. C.P.L. 124, Hy. A.G. Plan and action not yet complete by this office. Papers to be returned.—A. R. GALE (for District Surveyor), 28/2/87. Chas. Wm. Porter notified to attend Court at Wentworth, 4/4/87.—W.D., 8/3/87. Memo to surveyor, *re* reference to corner, 28/7/87. Examined and charted.—R. M. GALLAWAY, 28/7/87. Memo. returned, 4/8/87. Plan approved.—WILLIAM ORR, Acting District Surveyor, 12/10/87.

No. 71.

The Chairman, Land Board, Hay, to Mr. C. W. Porter.

Crown Lands Act of 1884.

Notice to appear at Local Land Board.

New South Wales, }
to wit. }

You are hereby notified to attend at the Court-house at Wentworth, on the 4th day of April, 1887, at 10 o'clock in the forenoon, when the matter or question stated at the foot hereof will be investigated.

On proof of due service of this notice, the investigation may proceed whether you appear in Court or not.

Given under my hand, at Balranald, this 8th day of March, 1887,—

A. J. PARK,
Chairman.

Matter for investigation.

To appraise the rent of your converted preleases, Nos. 78-2 and 84-18, for 1,920 acres, in the county of Perry, parish of Pooncarie, Land District of Wentworth.

[*Enclosure.*]

Balranald, 9 March, 1887.

RECEIPT for registered, No. 336, of 9th March, 1887, Land Office, Wentworth,—

Addressed,—
CHAS. WM. PORTER,
Pooncarie.

No. 72.

Decision of Land Board, Hay.

Rent of conditional lease.

No. 4,342, under the 52nd clause of the Crown Lands Act of 1884.

Land District of Wentworth; name, Charles William Porter; area confirmed or gazetted, 1,920 acres; area measured, 1,920 acres; rent recommended on area measured, £20.

WHEREAS the question of the annual value of the land represented by the conditional lease above specified, came before the Land Board held at Wentworth, on the 4th and 6th April, 1887, due notice of which inquiry was given to Charles William Porter, and during which inquiry there were present in connection with the matter, the following persons :—Charles William Porter, and William James Holding, Inspector of Runs.

And whereas after taking into consideration the report of Mr. Licensed-Surveyor Joseph Tarrant, made after an inspection of the land, and the evidence of Charles William Porter and William James Holding, the Board concluded 2½d. per acre to be the annual value of the land while under conditional lease, and accordingly recommend the rent to paid for it at this rate. Depositions now taken, as well as the

the former papers in the case, are enclosed. When the question was in the first instance dealt with, the land had not been inspected by an authorized valuator; and the following is a brief explanation of the manner in which the question was then dealt with:—

November 20th, 1885, applicant not present, and no proof of service of notice, and was, in consequence postponed.

November 25th, 1885, applicant not present, Mr. Wilkes appeared for him.

Refusal recommended, except of any area not included in travelling stock reserve 381, and which may adjoin the basis and be over 40 acres.

A. J. PARK, Chairman of Board.
M. S. LOVE, P.M., Member of Board.

[*Enclosure.*]

THIS deponent, on oath, states: My name is *Charles William Porter*; I am a selector; I know prelease 78-2, and 84-18, granted in virtue of conditional purchase 78-3, which was taken up by my wife in 1878, for which reason this Board on 31st March, 1887, said it ought to have been voided; I object to the form of the lease as surveyed, because it differs from the former lease as held by me, without improving it, and also excludes 36 chains of five-wire fencing worth £30; there is no fencing on the lines, all being within my boundaries; some was erected by the pastoral lessee three or four years after I got the land as a lease; I don't claim, and would not pay for it as it is useless; it may be removed; the country is fair sheep country, but no permanent water; the carrying capacity is 6 to 7 acres to a sheep, fenced and with access to water across my conditional purchase; I have no voluntary evidence.

Sworn before us, at Wentworth, this 4th April, 1887,—
A. J. PARK,
M. S. LOVE.

CHAS. WM. PORTER.

THIS deponent, on oath, states: My name is *William James Holding*; I am Inspector of Runs for the District of Wentworth; I know conditional prelease 78-2 or 84-18, Chas. Wm. Porter, on the Darling River, but separated therefrom by applicant's conditional purchase; the river is navigable at this place; no objection that I am aware of; gray soil and red sand, mostly the latter; grazing capacity, 6 acres to a sheep provided they have access to water over conditional purchase, and the land fenced; agricultural capabilities limited; timber, pine, and oak, no box; it is thinly timbered, being a nice piece of open country, with some undulating sand hills; there is no scrub, but some edible bushes, not thick enough to call scrub; sheep feed is grass, good herbage, and some salt and blue bush.

Mr. Porter here says he has no questions, and that the above is a very fair description, and he leaves it to the Board to appraise the rent.

Sworn before us, at Wentworth, this 4th April, 1887,—
A. J. PARK,
M. S. LOVE.

W. J. HOLDING, Inspector.

52nd clause, lease, Wentworth. Evidence of the Inspector given in open Court. The Board recommended rent at 2½d. per acre.—F.W., 27/10/87. Rent finally determined at 2½d. per acre.—T.G., 31/10/87. Area measured, 1,920 acres. Rent approved, £20. Conditional lease No. 4,312. Regazetted as to difference in rent, &c., 29/11/87. Chas. Wm. Porter informed, 30/11/87.

No. 73.
Office Memorandum.

District Survey Office, Hay.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of CPL, 86-4,342 (C. W. Porter), transmitted by Mr. Licensed-Surveyor J. Tarrant, letter No. 86-73 of 20th November. Instructions issued to Licensed-Surveyor H. Tarrant on 1st June, 1886, No. 35, and on which Mr. J. Tarrant's report in explanation is requested. { Parish of Pooncarie. County of Perry.

Subject.					Report.
On plan of above survey the references to corners are given as follows:—					The table, as I have now filled it in, is correct.—J. TARRANT, Licensed Surveyor, 2/8/87.
Cor.	Bearing.	From.	Links.	No. on tree.	
A.	193° 47′	Box.	93	↑ CPL	
B.	187° 30′	„	9	↑ CPL	

Numbered posts at other corners.

It will be thus seen that the bearing to corner B has been omitted, and that neither bearing or distance to corner A have been given. In the latter case it may be that the gum-tree is at the corner, but if so it should be so stated.—A. R. GALE (*pro* Acting District Surveyor), 28/7/87.

No. 74.
The Under Secretary for Lands to Mr. C. W. Porter.

Conditional Lease.
Clause 52 of Crown Lands Act of 1884.

Sir, Department of Lands, Sydney, 30 November, 1887.

I am directed to inform you that your conditional lease, No. 4,342, in the county of Perry, land district of Wentworth, the area of which was provisionally gazetted as 1,920 acres, has been found on measurement to contain 1,920 acres, more or less, and that the Secretary for Lands has approved of the annual rent of the land at £20, being at the rate of 2½d. per acre per annum. This rental will apply

to

to the lease from the 1st January, 1885, and any amounts paid in excess thereof will be refunded to you upon application to the Colonial Treasurer, to whom any letter respecting the account should be addressed.

This letter is written on the assumption that the rent on the lease has, so far, been paid up.

I have, &c.,
FREDK. WILLIAMS
(For the Under Secretary).

No. 75.

Mr. C. W. Porter to The Under Secretary for Lands.

Conditional lease, 4,342, Wentworth.

Sir, Wondenbro, Pooncarie, 10 January, 1888.

I have again the honor to draw your attention to my letter of 5th October, 1886, and to the one of 13th January, 1888.

You will understand that the lines of my prelease were fixed by the Department and not on those of my application, and to shift them again, as was done by Mr. Surveyor Tarrant, is inflicting a very great hardship on me. I have been paying the exorbitant rent of 2½d. per acre for four years for land I have been unable to use in the slightest degree, and I cannot think that the Lands Department issued the plan on which my conditional lease was surveyed.

I have had the wire lying idle for some considerable time, and as a bad season seems to be inevitable, unless I can get the remainder of my land fenced, my losses in stock, owing to this cause and the ravages of rabbits, will about smother me.

Hoping for a speedy and favourable reply,

I have, &c.,
CHAS. WM. PORTER.

The case is fully explained by the District Surveyor in his memo. of the 5th March on 88-421 L., and it is presumed the decision given thereon will not be disturbed.—F.W., 30/4/88. Certainly not.—T.G., 16/5/88. Mr. Thompson. C. W. Porter informed, 22/5/88. Register noted.—A.J.W., 5/6/88. Mr. Williams. The Chairman of the Land Board, Hay.—F.W. (for the Under Secretary), B.C., Lands, 6/1/88.

No. 76.

Mr. C. W. Porter to The Under Secretary for Lands.

Sir, Wondenbro, Pooncarie, 13 January, 1888.

I have the honor to draw your attention to my letter to you of the 5th October, 1886, wherein I ask that my conditional lease might be given to me on the same lines as when it was a prelease. I am aware that that part adjoining reserve 9A will have to be moved on account of that reserve coming further north than I was given to understand by Mr. Surveyor Tarrant when he gave me the boundary. This matter is very trifling compared with the alteration in the line connecting the triangular piece with the rest of the lease. I pointed this out to the Chairman of the Wentworth Board last April. He quite agreed with me as to the uselessness of the alteration, and said he would forward a recommendation to the Minister to have it given as it was originally. Awkward as it looks on the plan, that is nothing to what it actually means on the ground. I trust, therefore, that my request as regards this part will be granted to me as asked in my letter above referred to.

I have also the honor to ask that the £10 deposited by me, on my appeal connected with my conditional purchase, may be refunded to me. I believe this is the usual course when expenses have not been incurred.

I have, &c.,
CHAS. WM. PORTER.

District of Wentworth, Conditional Lease 4,342.

52nd clause, Wentworth Conditional Lease of 1,920 acres measured, stands good in the name of Charles W. Potter. Papers, 5,280. Records. Please attach above papers, then to Mr. Williams.—H.W.T., 19/1/88. Ls. 87-5,281, noted to Chairman. Hay, 7/12/87.—S.B., 19/1/88. Register noted.—J.H.M'L., 19/1/88. Extract of latter part of letter made and sent to Conditional Sales Branch for action.—A.F.W., 1/2/88. Will the Chairman be good enough to return the papers in the case.—F.W. (for the Under Secretary), B.C., Lands, 1/2/88. The Chairman of the Land Board, Hay. Papers herewith may be returned to the Under Secretary for Lands as requested.—C.H.D., 9/2/88. Mr. Boot. The Under Secretary.—A. Boot (*pro* Chairman), B.C., Hay, 10/2/88. Will the District Surveyor be good enough to furnish a report as to the advisableness of the alteration in the lease now desired.—F.W. (*pro* Under Secretary), B.C., Lands, 21/2/88. The District Surveyor, Hay. District Survey Office, Hay, 28/2/88. Mr. Gale.—T.B., 29/2/88.

In his letter of 5th October, 1886 (Ls. 86-7,195), C. W. Porter protests against the form of measurement of his conditional purchase lease 4,342, on the grounds that fence marked CD on tracing A. herewith is excluded, and the triangular piece of land, BEF, is, he considers objectionable. In reference to above letter, Mr. District-Surveyor Orr reported on 12th October that the fence was within reserve 9A, and consequently not on land that applicant could claim any right to. In this letter Mr. Porter appears to be willing to accept the north boundary of water reserve 9A as the boundary of his lease, but still protests against the exclusion from his lease of the triangular piece of land before mentioned, and claims that his boundary should be somewhat as shown by broken blue line on tracing A. The boundaries of the lease as measured are shown by blue edging on tracing A, and are exactly in accordance with boundaries of the original preleases. No action can now be taken, it is submitted, to alter the boundaries of the lease, as the land asked for was not within the boundaries of the prelease, and, being within a leasehold area, cannot be interfered with.—John Broughton, Acting District Surveyor, 5/3/88. The Under Secretary for Lands.

Submitted for approval.—F.W., 14/3/88. S.F. Submission approved.—J.J., 4/4/88. Mr. Thompson, 4/4/88. Mr. Porter informed, 11/4/88.

No. 77.

No. 77.

The Under Secretary for Lands to Mr. C. W. Porter.

Sir, Department of Lands, Sydney, 11 April, 1888.

With reference to your letters of the 5th October, 1886, and 13th January last, protesting against the form of measurement of your conditional lease noted in the margin, I am directed by the Minister for Lands to inform you that no action can now be taken to alter the boundaries of the lease in question, as the land asked for was not within the boundaries of a pre-emptive lease; and, being within a leasehold area, cannot be interfered with.

Wentworth, C.L. 4,342.

I have, &c.,
F. H. WILSON,
(For the Under Secretary).

No. 78.

Mr. C. W. Porter to The Under Secretary for Lands.

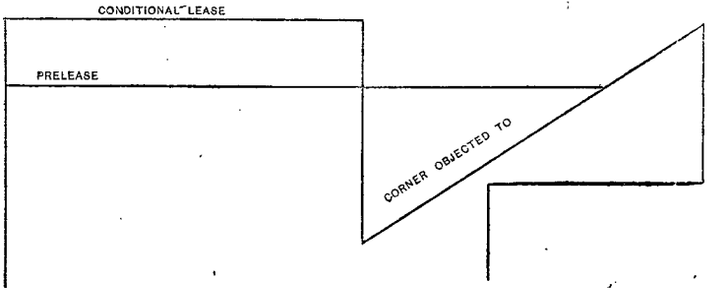
Conditional Lease 4,342.

Sir, Wondenbro, Pooncarie, 24 April, 1888.

I have the honor to acknowledge receipt of your letter of the 11th April, wherein you state that no action can now be taken to alter the boundaries of the lease in question, as the land asked for was not within the boundaries of the pre-emptive lease, and being within a leasehold area, cannot be interfered with.

How the Department arrives at the conclusion I am at a loss to understand. The land asked for by me is that given me as a prelease, and as the runs were divided long before my lease was surveyed by Mr. Tarrant (11th August, 1886), I think I can fairly say that the alteration made by that survey attempts to give me land belonging to the leasehold area.

A tracing of my lease was duly forwarded to the Wentworth Office for inspection, and that only is the land I ask for. In my letter of 13th January, 1888, I say: "I am aware that that part adjoining reserve 9A will have to be moved, on account of that reserve coming further north than I was given to understand by Mr. Surveyor Tarrant when he gave me the boundary. This matter is very trifling compared with the alteration in the line connecting the triangular piece with the rest or the lease. I pointed this out to the chairman of the Wentworth Board last April. He quite agreed with me as to the uselessness of the alteration, and said he would forward a recommendation to the Minister to have it given as it was originally.



"Awkward as it looks on the plan, that is nothing to what it actually means on the ground. I trust, therefore, that my request, as regards this part, will be granted to me."

I have again the honor to make the same request.

I have, &c.,

(For the Under Secretary).

No. 80.

J. P. Abbott, Esq., M.P., to The Under Secretary for Lands.

Sir, 6 and 7, Wentworth Court, Sydney, 24 September, 1888.

I have the honor to forward to you a letter with a tracing* received by me from Mr. C. W. Porter, of Wondenbro, Pooncarie, in reference to his conditional lease, which appears to have been dealt with as an application for the conversion of a prelease held by him at the date of the passing of the present Land Act. I shall be glad if you will inform me why Mr. Porter was not given his prelease as a conditional lease. I shall also be glad to know whether it cannot now be given to him; and, if not, why not. I may add that I mislaid Mr. Porter's letter, hence the delay in my inquiries.

*See Appendix N

I have, &c.,
J. P. ABBOTT.

Records,—Please attach Ls. 87-5,281, 88-421, 88-2,380, and forward to Mr. Williams. Papers Ls. 87-5,281, 88-421, and 88-2,380, with Ls. 88-2,882, noted to Chairman, Hay, 7th June, 1888.—S.B., 28/9/88. Mr. Williams. Will the Chairman of the Land Board at Hay be good enough to attach the papers in the case and return them to this Department at an early date.—F.W. (*pro* Under Secretary), B.C., Lands, 2/10/88. Papers attached.—C.H.D., 22/10/88. The Clerk-in-charge. The Under Secretary for Lands accordingly.—B. J. ATTERBURY (for the Chairman), B.C., 23/10/88.

[*Enclosure.*]

[*Enclosure.*]

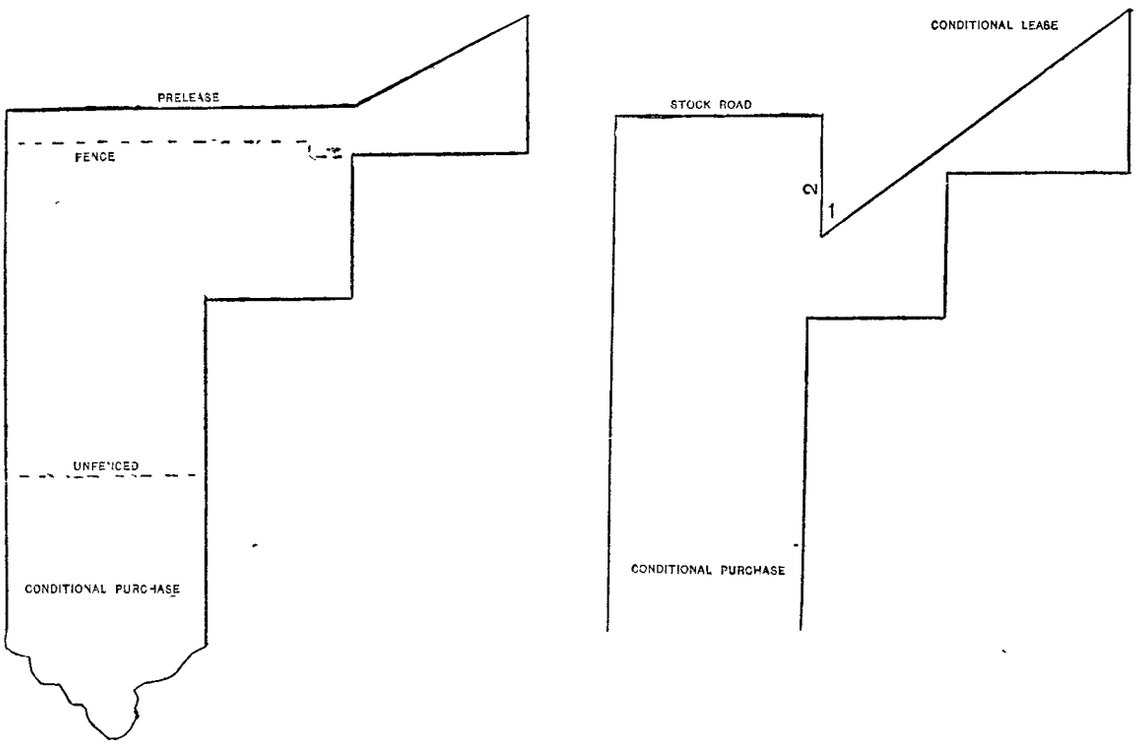
Wondenbro, Pooncarie, 27 July, 1888.

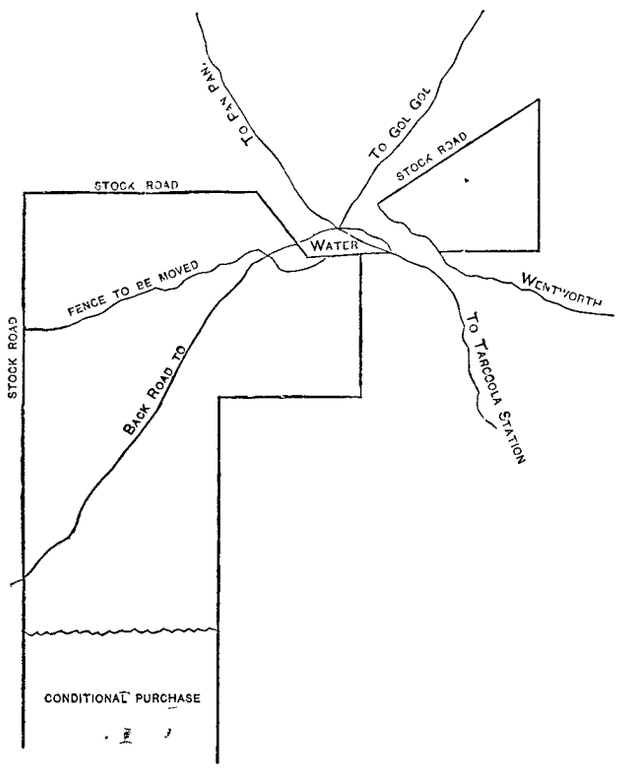
Dear Sir,

I think I can fairly ask a member for this electorate for assistance under the following circumstances connected with my conditional lease, late a prelease, and shall feel under considerable obligation if you will see the Under Secretary for Lands on the subject.

It would be useless to enter into a history of all the alterations made in my prelease since it was gazetted in 1878. It was definitely settled, as I supposed, in 1882, as on plan herewith; 820 acres were taken from it in June, 1884, and only recovered and gazetted at the end of December in that year.

The plan herewith drawn, without any attempt at accuracy, shows the prelease as it was when the present Act came into force, and also when the division of runs took place. A Mr. Tarrant surveyed it as a conditional lease in July, 1886, when he made the alteration shown in plan of conditional lease, thus cutting out about half a mile of my fence, and debarring me from water for a back paddock (water shown by figure 1), which water is only there after high floods in the Darling and lasts about two years, but is of great value to me. The only reply I could get from Tarrant when he was surveying was that it was the way the Lands Department had given it to me, at that time, and up to the present, I believe that statement to be false, and that the Lands did not know of the alteration until they received his plan.





On the lower plan is a rough sketch of how I intend to fence, leaving ample water supply (so long as it lasts) for stock and station, and also an open roadway, instead of fencing in the three-cornered piece altogether.

About 3 chains south from the line surveyed as conditional lease (which line I have marked 2) there is a station fence, up to which I wish to fence. This will give me access to a very small portion of the water, but ample for my wants. I shall also save the removal of the half mile of fence, and save some very considerable distance of new fencing. I

I base my right, to the prelease shape as follows :—It was mine on the passing of the present Land Act ; I shall not have to move any fence ; shall have less fence to erect ; and that in either case it only means 1,920 acres.

I pointed this out to the Chairman of the Local Board, who could not see why the alteration was made, or the use of it inquiring if the water was permanent. This not being the case he promised to communicate with the Minister.

I have myself written to the Under Secretary, and received a reply that Tarrant's survey could not be disturbed, as the land applied for was portion of leasehold, half of Tarcoola. How, why, or for what reason, the leasehold half, the Under Secretary did not attempt to show.

If you can get the head of the Lands Department to cause a return to the prelease area I shall feel for ever obliged. I do not want a fresh survey. A plan showing how far the east line comes west from Tarrant's survey corners will be sufficient for me to fence by. I will take good care not to trespass on the pastoral lessee.

Rents of conditional leases.—I think I may also draw your attention to this matter, and will mention my own case, the other lessees being as one with me. The best runs in the district were appraised by Mr. Holding, the Government Appraiser, as able to carry one sheep to 8 acres, and were rented by Land Board at 1d. per acre, which has been considerably reduced on appeal. At 1d. this would mean 8d. per sheep. My lease was, with the assistance of conditional purchase, estimated at one sheep to 6 acres, and the rent fixed at 2½d. per acre, which, taking out all the grazing value of conditional purchase, would leave it for rent of conditional lease alone at 1s. 3d. per sheep. As the Tarcoola run is to be reduced at more than one-half, why not reduce the smaller lessee in the same proportion. It appears to me a queer way to encourage settlement to charge over 200 per cent. in excess of the pastoral tenants' rent, and I have not the right to appeal. Neither did I conditionally purchase under the present rentals, and never should have done so.

I have, &c.,
CHAS. WM. PORTER.

J. P. Abbott, Esq., M.P., Sydney.

No. 81.

Office Memorandum.

Conditional Lease 4,342, Clause 52.

With regard to Mr. J. P. Abbott's letter, registered 88–6,379 leases, Mr. Porter was granted a prelease in in the year 1878, No. 78-2, of 1,920 acres ; it afterwards in July, 1884, transpired that the lease encroached on a different run to that in which conditional purchase was situated. The lease was applied for before the act of 1880 came into operation, and the provisions of the act of 1875, are that if there is any land in the first run the boundary cannot be crossed, for this reason, the lease was reduced in area from 1,920 to 1,100 acres, the existence of a travelling stock reserve preventing a more liberal proposal, part of the travelling stock reserve was then cancelled to admit of the full area being granted, and Mr. Porter was invited to make a fresh application for the land, which he did ; and a lease of 820 acres was gazetted in his favour in December, 1884, thus making up the full area 1,920 acres, to which he was entitled in virtue of a 640-acre conditional purchase.

These two preleases were converted as one conditional lease and measured for 1,920 acres exactly in accordance with the boundaries of the preleases. The land sought to be included in the lease did not form part of the preleases on 31st December, 1884, and is on the leasehold area of the run, and it was decided too, by Mr. Secretary Garrett, in May last, that it cannot for this reason be now included in the conditional lease.

F. W., 12/11/88.

Inform Mr. Abbott fully.—S.F., 10/11/88. J. P. Abbott, M.P., informed, 12/11/88. Register noted.—W.H.M.C., 14/11/88. No reply to date—S.B., 1/12/88.

No. 82.

The Under Secretary for Lands to Mr. J. P. Abbott, Esq., M.P.

Sir, Department of Lands Sydney, 12 November, 1888.

Referring to the letter forwarded by you from Mr. C. W. Porter, of Pooncarie, dated the 27th July last, respecting the conditional lease noted in the margin, I have the honor to inform you that Mr. Porter was granted a pre-emptive lease in the year 1878, No. 78-2, of 1,920 acres ; but, as the lease over reached on a different run to that on which the conditional prelease by virtue of which the lease was granted was situated, it was reduced in area from 1,920 acres to 1,100 acres, and the existence of a travelling stock reserve preventing a more liberal proposal, part of that reserve was then cancelled to admit of the full area being granted, and a lease of 820 acres was gazetted in Mr. Porter's favour in December 1884, thus making up the full area to 1,920 acres to which he was entitled, in virtue of a 640-acre conditional purchase.

Conditional lease, No. 4,342, C. W. Porter.

I am to add that these two pre-emptive leases were converted as one conditional lease, and measured 1,920 acres exactly in accordance with the boundaries of the pre-emptive lease.

Mr. Porter however, desired an amendment of these boundaries to make this holding more compact, but as such an amendment would necessarily involve a departure from the pre-emptive lease boundaries, and as the land is within a leasehold area, it was decided by Mr. Secretary Garrett that the request should not be acceded to.

I have, &c.,
H. CURRY
(For the Under Secretary).

No. 1.

Application by William Newell Hill.

[C.P. No. 13 of 1889.]

Crown Lands Act of 1884 (Part III, sections 26, 42, and 47).

Central Division, Land District of Condobolin; William Newell Hill; area, 600 acres.

To the Land Agent at Condobolin,—

Merringreen, Wollongough, 17 April, 1889.

I HEREBY apply for 600 acres of Crown lands as an additional conditional purchase, and I tender the sum of £60, being a deposit of 2s. per acre thereon. A description of the land applied for is on the back hereof, and the prescribed declaration is attached hereto. The land applied for partly improved. The nature and position of the improvements are as follows:—About three quarters of a mile of six-wire fence.

Extract to District Surveyor, 23rd April, 1889. Received and examined.—J.R.E., 23/4/89.

586— Description

[870 copies—Approximate Cost of Printing (labour and material), £7 9s. 11d.]

Description of the land applied for.

Central Division, county of Gipps, parish of Bolagamy, 600 acres: Commencing at a tree marked at the south-west corner of portion 9, parish of Bolagamy, county of Gipps; and bounded thence by lines running westward along the Humbug Creek; thence north; thence east; thence south, to point of commencement.

WILLIAM NEWELL HILL,
17 April, 1889.

Present and all previous holdings of the same series:—L.A. Nos.—74–839, 89–13. Date of applications.—30 July, 1874, and 18 April, 1889. Area.—40 and 600 acres. Total, 640 acres.

This is the application marked A referred to in the annexed declaration of William Newell Hill, made before me at Condobolin, this 17th April, 1889.

M. BOULTON, J.P.

This application (together with the deposit of £60) was lodged with me by Samuel Hill (agent, William Newell Hill), this 18th day of April, 1889, at 10 of the o'clock forenoon.

E. A. GRAINGER,
Land Agent at Condobolin.

[*Enclosure.*]

Crown Lands Act of 1884 (Part III, sections 24, 26, 42, and 47).

Declaration by applicant for a conditional purchase to accompany application.

I, WILLIAM NEWELL HILL, of Humbug Creek, selector, do hereby solemly declare and affirm that I am the applicant for the conditional purchase, as described in the application hereto annexed and marked A, and that the several answers to the questions in the schedule hereto are true and correct. And I make this solemn declaration as to the several matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

WILLIAM NEWELL HILL.

Made before me, at Condobolin, this 17th day of April, 1889,—
M. BOULTON, J.P.

Crown Lands Act of 1884 (Part III, sections 24, 26, and 47).

Schedule.

1. What is your name? William Newell Hill.
2. What is your age? 16 years.
3. State year and date of birth. 16th April, 1870.
4. Are you married, single, a widower, or widow? Single.
7. Do you intend using the land now applied for solely for your own use and benefit? Yes.
8. Have you entered into any agreement, or arrangement, by which any person other than yourself can acquire any interest in the land you apply for? No.
9. Is there any understanding between you and any person in reference to the land applied for that will tend to defeat or evade the provisions of the Crown Lands Act of 1884? No.
10. Are you under any obligation that will prevent you from fulfilling the law in regard to the land you apply for? No.
15. If you hold conditional purchases, are they mortgaged or encumbered in any way; and if so, to whom? Yes; not mortgaged.
16. Do you understand the conditions of residence and fencing required by the Crown Lands Act of 1884? Yes.

WILLIAM NEWELL HILL,
Merringreen, Wollongough.

Signature of attesting witness:—M. BOULTON, J.P.

No. 2.

Mr. District-Surveyor Sheaffe to The Chairman, Land Board, Condobolin.

Conditional Purchase—Condobolin Land District.

REPORT of the District Surveyor, Forbes, upon application for conditional purchase No. 89–13, on 18th April, 1889, under section 42 of the Crown Lands Act of 1884, for 600 acres, parish of Bolagamy, county Gipps, by William Newell Hill, Bolagamy Pastoral Holding, No. 260, 14th June, 1889.

Sir,

I have the honor to report that conditional purchase 89–13 is for 600 acres, as indicated by blue tint on accompanying *tracing, and that the description embraced alienated land not open to conditional purchase. The application is therefore submitted for disallowal.

*Appendix A.

I have, &c.,
G. H. SHEAFFE,
District Surveyor.

[*Enclosure.*]

Additional Conditional Purchase 89–13, Land District of Condobolin.

Crown Lands Act of 1884 (Section 42, C.P. No. 13, of 1889).

EXTRACT from an application for conditional purchase lodged with the Land Agent on the 18th day of April, 1889, at 10 of the clock forenoon, by

WILLIAM NEWELL HILL,
Merringreen, Wollongough.

Deposit paid, £60.

Description.

Central Division, county of Gipps, parish of Bolagamy, 600 acres. Commencing at a tree marked at the south-west corner of portion 9, parish of Bolagamy, county of Gipps; and bounded thence by lines running westward along the Humbug Creek; thence north; thence east; thence south to point of commencement.

Present and all previous holdings of the same series.—Conditional purchases—No. 74–8,391; date, 30th July, 1874; area, 40 acres. No. 89–13; date, 18th April, 1889; area, 600 acres. Total, 640 acres.

Improvements.

About ¾ of a mile of six-wire fencing.
Examined.—A.J.V.
Referred to the District Surveyor for report.
Land Board Office, Forbes, 23rd April, 1889.

A.J.V. (*pro* Chairman).

No. 3.

No. 3.

Caveat against Application.

Crown Lands Act, 1884 (Part III, section 30).

Additional Conditional Purchase 89–13, Condobolin.

TAKE notice that I, Francis James Scott, of Bolagamy, near Condobolin, selector, claiming a right to the land applied for by William Newell Hill, on the 17th day of April, 1889, at the Land Office at Condobolin, as an additional conditional purchase, object to the confirmation by the Local Land Board of the application for the said land. And I deposit herewith the sum of £10 to be dealt with by the said Board, as provided by the Crown Lands Act of 1884. My objections to the confirmation of the said application are as follows:—

1. That the application for the abovementioned additional conditional purchase was not signed by the said William Newell Hill in the presence of a Land Agent, Justice of the Peace, or a Commissioner for Affidavits.
2. That such application was not tendered by the said William Newell Hill in person or by an agent authorized in writing so to do, nor was such written authority delivered to the Land Agent at Condobolin with the application.

Dated this 17th day of June, 1889.

FRANCIS JAMES SCOTT,
Bolagamy.

No. 4.

Notice by Local Land Board of Meeting to deal with Caveat.

Crown Lands Act of 1884 (Part III, section 30).

Additional Conditional Purchase 89–13.

ON the 17th day of June, 1889, a caveat was lodged by you against the confirmation of an application made by William Newell Hill, for an additional conditional purchase, tendered at the Lands Office at Condobolin, on the 18th day of April, 1889. This is therefore to give you notice that the said application and caveat in reference thereto will be dealt with by the Local Land Board at the Court-house at Condobolin on the 8th day of July, 1889.

Dated this 19th day of June, 1889, at Forbes.

J. R. EDWARDS,
Chairman.

To Francis James Scott, care of C. P. Sowter, Solicitor, Forbes.

Declaration of Service.

I, FREDERICK STEPHENSON MURRAY, of Forbes, in the Colony of New South Wales, clerk, do solemnly and sincerely declare and affirm that on the 19th day of June, 1889, I served a true copy of the within notice upon the person to whom it is addressed by delivering it to Charles Pearson Sowter, solicitor, at his office at Forbes; and I make this solemn declaration as to the several matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided, for any wilfully false statement in any such declaration.

F. S. MURRAY.

Made and taken before me this 24th day of June, 1889, at Forbes,—

J. R. EDWARDS, J.P.

No. 5.

Notice by Local Land Board of Meeting to deal with Caveat.

Crown Lands Act of 1884 (Part III, section 30).

Additional Conditional Purchase 89–13.

ON the 17th day of June, 1889, a caveat was lodged by Francis James Scott, of Bolagamy, against the confirmation of an application made by you for an additional conditional purchase, tendered at the Lands Office at Condobolin, on the 18th day of April, 1889. This is therefore to give you notice that the said application and caveat and reference thereto will be dealt with by the Local Land Board at the Court-house, Condobolin, on the 8th day of July, 1889.

A copy of the objections alleged in the caveat is enclosed.

Dated this 19th day of June, 1882, at Forbes.

J. R. EDWARDS,
Chairman.

To William Newell Hill, Merringreen, Wollongough.

Declaration of Service.

I, FREDERICK STEPHENSON MURRAY, of Forbes, in the Colony of New South Wales, clerk, do solemnly and sincerely declare and affirm that on the 19th day of June, 1889, I served a true copy of the within notice upon the person to whom it is addressed by registered letter post at Forbes; and I make this solemn declaration as to the several matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided, for any wilfully false statement in any such declaration.

F. S. MURRAY.

Made and taken before me this 24th day of June, 1889, at Forbes,—

No. 6.

Decision of Local Land Board.

Crown Lands Act of 1884 (Part II, section 14, sub-section 4).

New South Wales, Condobolin, }
to wit. }

WHEREAS on the 8th day of July, 1889, it became a matter for investigation before us whether the application of the 18th April, 1889, by William Newell Hill for additional conditional purchase 89–13, Condobolin, 600 acres, should be disallowed, a caveat having been lodged by Francis James Scott, and having taken (seven p.p.) evidence and inquired into the said matter, we dismiss the caveat, as the caveator has not shown that he has any right to the land, and order a refund of the £10 deposited. We disallow the application, as there was no application and declaration as required by law lodged with the Land Agent, and order a refund of the deposit paid.

Given under our hands, at the Court-house at Condobolin, in the Colony of New South Wales, this 8th day of July, 1889,—

J. R. EDWARDS, Chairman.
M. BOULTON, Member.

Forward papers with letter to the Under Secretary.—J.R.E., 11/7/89. Mr. Viles.

No. 7.

Telegram from The Chairman, Land Board, Forbes, to The Under Secretary for Lands.

8 July, 1889.

IT was proved in Court to-day that, on the 18th April last, Mr. Matthew Boulton, Member of the Board, signed as a Magistrate a declaration for a conditional purchase, the applicant being 60 miles away at the time. Mr. Boulton admits that he was aware of the facts, but that, as the applicant's father had authority to lodge the application, he thought it made no difference. The papers will be forwarded as soon as possible.

J. R. EDWARDS,
Chairman.

May await receipt of papers and Mr. Boulton's explanation.—J.N.B., 9/7/89.

No. 8.

The Chairman, Land Board, Forbes, to The Under Secretary for Lands.

Sir, Local Land Board Office, Forbes, 11 July, 1889.

In reference to my telegraph message of the 8th instant from Condobolin, I now have the honor to submit the case, application conditional purchase 89–13, Condobolin, William Newell Hill, caveat by Francis James Scott. With the case there are depositions, pages 1 to 7 inclusive, exhibits A to E inclusive, and a written statement by Mr. Boulton, J.P.

The facts of the case are, that young Hill met with a severe accident, and on or about the 17th of April, when sundry papers are alleged to have been signed, young Hill states in his evidence, "I was so sick at the time that I hardly know my writing."

Samuel Hill, the father, swears that W. N. Hill signed the papers on the 17th of April. He swears only to the signing. Then the papers reveal that Samuel Hill travelled 60 miles, and took them to Mr. Boulton, who is a Magistrate, and a Member of the Land Board, and that he filled up the application, and, at any rate, the answers to the questions in the declaration, and attested the declaration as taken before himself as a Magistrate, and witnessed the application as an exhibit, which he had just filled. On the following morning Hill senior attended at the Land Office, and tendered the application and declaration to the Land Agent. It appeared before the Court on the 8th instant, for the first time, that a ballot took place, and that young Hill's application was successful. The Land Agent did not note the ballot on the application, or refer to it in any way, nor did he send on the authority for Samuel Hill to act for his son. Mr. Boulton's written statement herewith admits the correctness of the facts herein set out.

I beg to submit three issues :—

1. The Land Agent's action, which is a departmental matter.
2. Mr. Boulton's action as regards his position as a Member of the Local Land Board for Ministerial consideration ; and,
3. Mr. Boulton's conduct affecting his position on the Commission of the Peace, for consideration of the Government if thought necessary.

I have, &c.,
J. R. EDWARDS,
Chairman.

Submitted, as directed by the Minister on C.S. 89–18,131.—F.H.W., 18/7/89.

[*Enclosures.*]

In the matter of William Newell Hill, of Humbug Creek.

ON the 17th day of April last, Samuel Hill, father of the abovenamed claimant, called upon me at my residence in Condobolin, and stated that a reserve was thrown open for selection adjoining his property, and wished to take up an additional conditional purchase in the name of his son, William Newell Hill; but, owing to an accident, his son was unable to attend, and that he had brought the papers duly signed, knowing I was acquainted with his son's signature. After calling his attention to the irregularity of such a proceeding, I witnessed the signatures to application and declaration.

Condobolin, 9 July, 1889.

M. BOULTON, J.P.

Applicant

Applicant present.—Mr. Sowter, solicitor, appears for the caveator.

THIS deponent, *William Newell Hill*, being duly sworn, maketh oath and saith as follows :—I reside at Humbug Creek, near Wollongough ; I made an application for a conditional purchase, about the 17th April, this year ; the signature to the application produced is mine ; I did not tender that application myself to the Land Agent, but authorized my father to do so ; I gave him the application to tender, and I gave him a written authority ; I signed the application at my home, I think, about 60 miles from Condobolin ; the signature to the declaration produced is mine ; I signed it at my father's place ; I did not make it before Mr. Boulton ; I did not sign any declaration before Mr. Boulton ; I was very ill when I signed the application.

To Mr. Sowter : I met with an accident about the 13th April, when a horse fell on me ; I was suffering from bruises ; I suffered from my head, but don't known that it was concussion of the brain ; I was in the house about seven or eight days, from the 13th to the 20th or 21st April ; I was at home all that time, and was not in Condobolin during that time ; I see the letter produced and marked "A" ; I don't know whether I wrote it or not ; one of my brothers may have written it ; the signature is my name, but not my handwriting ; I don't remember if I wrote it or authorized it to be written ; I will not swear that it is not my handwriting ; I know my father's writing, it is not his ; the authority I gave my father with my application was signed by me ; I have now written my name and other words in Court on the paper produced and marked "B" ; I don't know Mr. Innes ; I gave no one but my father an authority to lodge an application for me ; I think the document produced and marked "C" is my writing ; I was so sick at the time that I hardly know my writing ; I will not swear it is my writing ; I am sure it is not my father's writing ; I recollect giving my father authority to take up the land for me ; I don't remember giving an authority to Mr. Innes ; I think the handwriting is mine ; my mind was in such a state that I may have written Mr. Innes' name in mistake ; I handed the authority to my father ; I remember giving one authority to my father, but don't remember giving two.

WILLIAM NEWELL HILL.

Sworn, this 8th July, 1889, at Condobolin, before us,—

J. R. EDWARDS, Chairman.
M. BOULTON, Member.

This deponent, *Edward Albert Grainger*, being duly sworn, maketh oath and saith as follows :—

By the Board : I am the Land Agent at Condobolin ; I received the application produced on the 18th April last from Samuel Hill ; I know it is necessary that an agent should tender an authority in writing with the application ; Mr. Hill gave me an authority which I now produce, marked "D" ; I overlooked the authority and placed it in my safe instead of sending it to the chairman with the application ; I am also Clerk of Petty Sessions, and have seen selector's signature on sheep returns ; I exhibit sheep returns and rabbit returns purporting to be signed by William N. Hill ; the signatures on the conditional purchase application and authority are "William Newell Hill" ; I see in the authority marked "D" that too large a space seems to have been left for the words "my father."

To Mr. Sowter : The conditional purchase application was tendered at 10 o'clock ; the authority was handed in at the same time.

To Chairman : The "N" in the signature to the authority is a capital "N" with a down stroke ; the capital "N" in the signature to the sheep returns has an up stroke.

E. A. GRAINGER.

Sworn, this 8th July, 1889, at Condobolin, before us,—

J. R. EDWARDS, Chairman.
M. BOULTON, Member.

THIS deponent, *Samuel Hill*, being duly sworn, maketh oath and saith as follows :—

By the Board : I reside at Humbug Creek, and am the father of William Newell Hill ; I remember the 18th April last ; my son signed some documents ; he had a fall from his horse some days before and was unable to attend ; he signed a declaration and a form to select 600 acres of land ; the application and declaration produced are the papers my son signed on the 17th April ; he signed those papers at my place, 60 miles from Condobolin ; my son also signed the authority produced marked "C ;" I anticipated a conflict for the land, and had the authority produced marked "D" for Mr. Innes to act, so that in case I could not act for my son that Mr. Innes would be prepared to do so ; I saw my son sign his name to the two authorities and to the application and declaration ; the signatures to the sheep returns produced are not my son William Newell Hill's ; they were written by my son Moses ; the signature to the paper produced, and marked "B," is my son, William Newell Hill's ; I came into Condobolin on the 17th April last ; I went to Mr. Boulton and told him that my son got a fall from a horse and was too ill to attend, and would he witness his signature ; he did so to the application and declaration now produced.

To Mr. Sowter : I have had dealings with Mr. Scott before this ; letters may have passed between us ; I now give a sample of my writing on the paper produced, and marked "E ;" I see the letter produced marked "A ;" it is either one of my son's writing ; it looks very much like the writing of my son William Newell Hill, but I won't swear it ; my son Moses writes much the same ; I did not see it written ; the declaration and application were signed at my place at Humbug Creek ; no magistrate, commissioner for affidavits, or land agent was present ; my son gave me an authority for Mr. Innes to act, and one for myself ; I saw him write the authority that Mr. Boulton signed ; I don't know that he signed the authority for Mr. Innes to act, but he gave it to me ; they are not in the writing of my son Moses nor in my writing ; I gave the authority to the land agent.

SAMUEL HILL.

Sworn, this 8th July, 1889, at Condobolin, before us,—

J. R. EDWARDS, Chairman.
M. BOULTON, Member.

Edward Albert Grainger, recalled :—There was a ballot for the ground ; William Newell Hill, Samuel Hill, two Mr. Scotts, junior, and Mr. Scott, senior, balloted ; I did not write the facts on the application ; I returned the deposits and applications to the unsuccessful applicants ; the land applied for was a reserve thrown open.

E. A. GRAINGER.

Sworn, this 8th July, 1889, at Condobolin, before us,—

J. R. EDWARDS, Chairman.
M. BOULTON, Member.

A.

Mr. D. Scott,—

Humbug Creek, Wollongough, 2 January, 1889.

No. 12.

Office Memorandum.

MR. BOULTON'S explanation of his action in the matter of William Newell Hill's application for conditional purchase in the Condobolin having been appended to the papers, there is no necessity to refer to him for report.

There is no escape from the fact that Mr. Boulton, a magistrate of the territory, and an intelligent man, has given a false certificate; and his admission that, after calling Mr. Samuel Hill's attention to the irregularity of the proceeding, he signed the false certificate, aggravates the offence, inasmuch as it clearly shows that he was conscious of the misconduct, and yet was pliable enough to allow himself to be used in an attempt to defeat the objects and requirements of the statutes of the Colony.

But one course is open, namely, to remove Mr. Boulton from the position of member of the Local Land Board, unless the Minister will take a more merciful course of offering him an opportunity of resigning.

After disposal of the matter, so far as this Department is concerned, it would seem to be proper to forward the papers to the Principal Under Secretary, with a view to consideration being given to Mr. Boulton's position as a Justice of the Peace.

20/78/9.

S. F.

Mr. Boulton may be afforded an opportunity of resigning.—J.N.B., 7/8/89. Mr. Boulton (*per* Chairman) informed, 8/8/89.

Notice of Appeal.

Form 62.—Crown Lands Act of 1884 (Part II, section 17).

Notice of Appeal to the Minister from decision of Local Land Board to be lodged with the Chairman.

New South Wales, } to wit. }

WHEREAS on the 8th day of July, 1889, a certain matter, wherein William Newell Hill, of Merringreen, applied for the confirmation of an additional conditional purchase made at the Lands Office, Condobolin, came before the Local Land Board at Condobolin, in the Colony of New South Wales, for confirmation, I being a party to such proceedings, and the said Board, after having inquired into the premises, decided that my application should be disallowed. And whereas I am dissatisfied with such decision, and intend to appeal therefrom to the Minister. These are, therefore, to give you notice of my intention to appeal as aforesaid, and I herewith tender the sum of £10 as security for the costs of such appeal. And the grounds of such appeal are annexed.

WILLIAM NEWELL HILL.

To the Chairman of the Local Land Board at Forbes.

RECEIVED the sum of £10 referred to above.

J. R. EDWARDS,
Chairman.

Forbes, 3rd August, 1889.

Grounds of Appeal.

1. That the decision of the Land Board at Condobolin was given against the weight of evidence and the reading and spirit of the Crown Lands Act of 1884.
2. That the application made and tendered by me was made by duly authorized agent on my account and on my behalf and in accordance with the terms of the Crown Lands Act of 1884.
3. And upon such other grounds as I may be advised at the hearing to adduce.

No. 15.

The Under Secretary for Lands to M. Boulton, Esq., J.P.

Sir, Department of Lands, Sydney, 8 August, 1889.

With reference to the explanation furnished by you in connection with your action in the matter of William Newell Hill's application for a conditional purchase in the Condobolin District, I have the honor to inform you that in view of the circumstances of the case, the Minister for Lands has approved of your being afforded an opportunity of resigning the position of member of the Local Land Board.

Forwarded through the Chairman Local Land Board Forbes.

I have, &c.,
STEPHEN FREEMAN,
Under Secretary.

No. 1.

Deed of Grant to Henry Lamb.

By His Honor Francis Grose, Esq., Lieutenant-Governor in and over His Majesty's Territory of New South Wales, and its Dependencies, &c., &c., &c.

WHEREAS full power and authority for granting lands in the territory of New South Wales to such persons as may be desirous of becoming settlers therein is vested in His Majesty's Captain-General and Governor-in-Chief (or in his absence the Lieutenant-Governor for the time being) in and over the said territory and its dependencies by His Majesty's instructions under the Royal Sign-manual bearing date respectively the twenty-fifth day of April one thousand seven hundred and eighty-seven and the twentieth day of August one thousand seven hundred and eighty-nine in pursuance of the powers and authority vested in me as aforesaid I do by these presents give and grant unto Henry Lamb his heirs and assigns to have and to hold for ever twenty-five acres of land to be known by the name of Lamb Farm laying and situate in Lane Cove in the district of Hunter's Hill the same twenty-five acres of land to be had and held by him the said Henry Lamb his heirs and assigns free from all fees taxes quit-rents and other acknowledgments for the space of five years from the date of these presents Provided that the said Henry Lamb his heirs or assigns shall reside within the same and proceed to the improvement and cultivation thereof such timber as may be growing or to grow hereafter upon the said land which may be deemed fit for naval purposes to be reserved for the use of the Crown and paying an annual quit-rent of one shilling after the expiration of the term or time of five years before mentioned.

In testimony whereof I have hereunto set my hand and the seal of the Territory at Sydney in the Territory of New South Wales this nineteenth day of November in the year of our Lord one thousand seven hundred and ninety-four.

Signed and sealed in our presence,— FRANS. GROSE.

J. FOVEAUX,
THOS. ROWLEY,
EDW. LAING.

Registered in the Secretary's Office—DAVID COLLINS, Secretary to the Governor.

Cancelled.

No. 2.

Memorandum by the Under Secretary for Lands.

THERE is a question in connection with the public lands of this Colony which I desire to bring under the notice of the Minister for Lands, as, if my impression with regard to the matter is correct, it is one I think of serious importance to the Government, and which should be dealt with without unnecessary delay.

The question I refer to is as to the position of the Crown with respect to lands which have been in the undisturbed possession of an individual for sixty years without the Crown having in any way asserted its rights.

I understand that in former years the law used to be that no length of adverse possession barred the right of the Crown, but that the law has since been altered in that respect so as to limit the Crown's rights by conferring a title upon an undisturbed possession after sixty years.

If this is the case, there are, it will be found, hundreds (possibly thousands) of cases in which the interests of the Crown will before long be in jeopardy, if indeed in some instances its rights have not lapsed already. I allude more especially to lands in the vicinity of or adjoining old grants, where the holders of such grants or those deriving their title from them have taken and been in possession of such adjoining lands for considerable periods, and who will therefore be in a position as soon as sixty years have expired to defeat any claim the Crown may then make to the said lands, unless the Crown should have in the mean time taken some action to assert its rights. The

The plan I would suggest for dealing with this matter, and the present time, when the surveyors are not fully employed, might be a favourable opportunity for it, is that all old grants, commencing in the first instance with those say 50 years old and upwards, should be carefully examined, and that surveyors be instructed to proceed to the various localities and measure all adjoining lands standing in the position I have indicated with a view to their being advertised for sale by auction. They could easily be withdrawn from sale after advertisement if it were not thought desirable eventually to alienate them, the object simply being for the Crown, by exhibiting its right or claim to the lands, to secure another sixty years of safety, and thus defeat the claims which would otherwise accrue of the present possessors.

The above recommendation (if approved) would, of course, take a considerable time to carry out, and I would therefore respectfully submit that the matter I have now brought under notice requires special and early consideration.

15th December, 1879. W. W. STEPHEN.

This Minute should be forwarded to the Surveyor-General for report.—J.H., 15/12/79. Surveyor-General.—W.W.S., 16/12/79.

Beyond the County of Cumberland I do not think a search would lead to results which would warrant the expense of inquiry. In Cumberland I think the general survey, when it is extended to and covers that county, will show some encroachments and other unauthorized occupations of Crown lands, and in the meantime if a schedule of all grants of forty years and upwards is supplied I will take the necessary steps to avoid any rights of the Crown from lapsing through expiry of the sixty years. I should also desire to be informed if possession for sixty years is held to bar the Crown from resuming unused roads and reservations of 100 feet around the waters of the coast and navigable waters. Also to be informed as to what may or may not be considered encroachments, &c., under the meaning of the Under Secretary's memorandum; for instance, in many cases very loose measurements have been used, and in most instances a larger area has been marked on the ground than accurate chaining would give, in few such cases would the area so discovered be in a saleable form? Further, I presume that no attempts need be made to resume any excess arising out of loose measurement when the grant is bounded by another grant, or defined and specified adjoining lands. Upon the whole I am not sanguine as to important results except in perhaps two or three cases, which will receive attention as soon as the general survey reaches the localities.—P.F.A., 26/12/79. The Under Secretary for Lands. B.C.

The report of the Surveyor-General on the matter within referred to is submitted. As my meaning has been somewhat misunderstood by that officer (as it appears to me), I would take leave to say a few words in further explanation. I did not mention anything about "encroachments." What I desired to convey was that there exists, or in all probability exists, Crown land which has in numbers of cases been in the possession or use of the grantees of lands adjoining, and that in the case of old grants such use of the Crown land without acknowledgment by way of payments of rent or otherwise would put the user in such a position that after sixty years the Crown could not oust him.

There are, I believe, lands which have been granted for fifty years and upwards in many of the counties besides that of Cumberland and therefore if any action requires to be taken at all, it will, of course, apply to those other counties also. With regard to the question as to whether sixty years possession bars the Crown from resuming reservations, &c., of 100 feet around the waters of the coast and navigable waters, a point on which the Surveyor-General desires information, I take it if people have held such reserved lands for sixty years without payment or acknowledgment of any kind, the right of the Crown to resume is gone, in the same way as it would be in the other cases referred to by me. Possibly the question is one which the Attorney-General might be asked to advise upon. It would be as well perhaps, however, not to give too much publicity to any action it may be thought expedient to take in this matter, lest persons now unaware of their position with regard to such lands might commence building up their titles in a way which might prove difficult to deal with. With reference further to the last part of the Surveyor-General's minute, I would point out that my memorandum was not intended to allude to excessive quantities of land within measured portions granted, but the Crown land outside or adjoining old grants, and which, although occupied, had never been granted at all to the occupant.—W.W.S., 6/1/80.

The last minute of the Under Secretary should be forwarded for the perusal of the Surveyor-General.—J.H., 22/1/80.

I think a reference should be made to the Crown Law Officers on the question at issue, and in case the opinion of the Under Secretary as to occupations of the 100 feet reservation being open to defeat by sixty years possession, steps will be necessary to be taken to secure some portions in the public interests also it is desirable that a list of grants be furnished me from the records of the Lands Department showing the dates of grants of all cases of fifty years and upwards. I would send a circular to surveyors in whose districts they were situated requesting their report.—P.F.A., 27/1/80. Under Secretary.

Perhaps as suggested by the Surveyor-General before any further action is taken, the point as to whether sixty years undisturbed occupation, bars the right of the Crown to resume 100 feet reservation, of the description alluded to, may be referred for the opinion of the Attorney-General.—W.W.S., 31/1/80. Approved.—J.H., 31/1/80. The Crown Solicitor.—W.W.S., B.C., 2/2/80.

No. 3.

P. J. Hourigan, Esq., to The Under Secretary for Lands.

Sir, 103, Elizabeth-street, Sydney, 22 August, 1883.

By a certain Crown Grant dated 19 November, 1794, 25 acres of land situated at Lane Cove, district of Hunters' Hill, known as "Lamb's Farm," under the hand of Sir Francis Grose, then Governor, &c., of New South Wales, was issued to one Henry Lamb. In the office of the Registrar of Deeds the said Crown Grant appears with merely the word "cancelled" written over it. I have therefore the honor to request that you will cause a search to be instituted in your office without delay with a view of ascertaining whether you hold or are in possession of any document or documents showing any cancellation of the said Crown grant with the consent of the grantee, the said Henry Lamb? An early reply will oblige.

I have, &c.,

P. J. HOURIGAN.

Mr.

Mr. M'Kern,—Did the grant issue for the land at Lane Cove? Is it not a fact that Lamb exchanged the Lane Cove land for land at Mulgrave Place, and if so would not that account for the writing of the word "Cancelled"? Please give any information available from your records.—R.H.D., 5/9/83.

A deed of grant dated 19 November, 1794, for 25 acres, in the district of Hunters' Hill, issued to Henry Lamb, and against the extract which appears in Cumberland Register No. 1, the word "Cancelled is written. Another grant dated April 10, 1798, for 25 acres at Mulgrave Place, also issued to Henry Lamb, but there is nothing to show that it was in lieu of the first 25 acres.—F.M'K., 12/9/83.

The above is all the information that can be obtained from the records in this branch.—F.M'K., 12/9/83. Mr. De Low. Mr. Watt,—Would you please give what information the plans, &c., may afford in this case?—R.H.D., 12/9/83.

Mr. De Low,—I have searched our old records carefully, and the only information I can find is a note to the effect that Lamb's grant was cancelled, a grant being given at the Hawkesbury in lieu. There is nothing to show the authority for the note mentioned. Mr. Thomas Lewis has suggested a search in the records of the Colonial Secretary's office.—F.H.W., 17/9/83.

The papers may be forwarded to the Principal Under Secretary as suggested.—R.H.D., 17/9/83. F.H.W., 18/9/83. Refer.—C.O., 18/9/83. The Principal Under Secretary.—C.O., B.C., 9/83. Cannot trace any grant under the name of Henry Lamb. Colonial Secretary's office. Have you looked through all the grants?—C.W., 20/9/83. Have looked through all the grants but cannot trace any grant under the name of Henry Lamb.—C.W., B.C., 24/9/83. The Under Secretary for Lands.

Search has been made, but no document has been found. It is, however, impossible to say that such document never existed as transactions of a similar character were often, in the early days of the Colony, effected without the authority being placed upon record. As Mr. Lamb received another grant of a similar area at Mulgrave about the time of the grant of the land at North Shore, it is not at all unlikely—indeed it is fair to assume—that the former was granted in lieu of the latter.—C.O., 29/9/83. P. J. Hourigan informed, 3/10/83.

No. 4.

Mr. F. W. Rutter to The Deputy Surveyor-General.

Sir, 14A, Exchange, Sydney, 21 September, 1883.

If you refer to the Registrar-General's Office you will, I think, learn that the 25 acres standing on the parish map of Willoughby, county Cumberland, in the name of H. Lamb, has been cancelled, and that an application to bring it under the Land Titles Act (with other land) has been refused.

It is worth while, in the public interests, to send up a draftsman with a tracing and examine the records. Date late in 1800 or shortly after.

I have, &c.,
FRED. WILLIAM RUTTER.

Mr. T. H. Lewis.—R.H.D., 27/10/83.

Mr. T. Lewis,—With reference to Henry Lamb's grant at Willoughby, I ascertained that the copies of the deed in the Registrar-General's Office and the Deeds Branch have the word "cancelled" written opposite, and that G. Tilley's, whose farm adjoined Lamb's, was also cancelled, and a note to the effect that a farm had been given at the Hawkesbury, "Mulgrave Place." I found that Henry Lamb and George Tilley have 25 acres each, adjoining, and with frontage to the Hawkesbury, in the parish of St. Matthews, county of Cumberland. I also ascertained at the office of the Registrar-General that applications have been received in the Lands Titles Branch for portions of Lamb's 25 acres (two 5-acre blocks, I think) under Torrens' Act, originally transferred from Gore. I forwarded particulars to Mr. Furber early in October for further investigation in his Branch.—W. M'INTYRE, 5/11/83.

The Surveyor-General,—The grant of 25 acres to Henry Lamb, dated 19th November, 1794, is written off in the Registrar-General's Office and on the copy in this office as "cancelled," that word being written on the copies in each of these offices. There is no statement of the reason of its being cancelled, though in most other cases of the same date such statement is made on the copies. It is necessary, however, to state the case of a grant to George Tilley of 25 acres, adjacent to Lamb's 25 acres, made on the same date (19th November, 1794), which possibly affects this case, as the two grants were probably treated in the same manner. Tilley's grant is written as "cancelled," but a note is also added, "grant given at Hawkesbury, Mulgrave Place," and on reference to the locality it is found that a grant of 25 acres was made to George Tilley, at Mulgrave Place, on the 10th May, 1798; that it adjoined a 25-acre grant to Henry Lamb made on the 10th April, 1798. It would thus appear that both grants were cancelled and the grants reissued for the same acreage in another locality, and that, as no subsequent alienation has taken place of the two blocks granted in 1794, they are still vested in the Crown. However, as far as Lamb's case is concerned, there is no other direct evidence of the cancellation of the deed of grant than the existence of the word "cancelled" on the copy, although the facts stated above form strong evidence in support of the cancellation. Perhaps the matter above stated should be communicated to Mr. Hourigan. See Miscellaneous, 83-15,901.—T.F.F., 18/2/84.

Under Secretary for Lands accordingly. It is suggested that, after conveying this information, inquiry should be made amongst the records of the Colonial Secretary's Office as to any facts that can be traced in connection with the case.—P. F. ADAMS, Surveyor-General, 20/2/84. The Under Secretary for Lands.

Submitted. The grant has been searched for at the Colonial Secretary's Office.—J.G.B., 7/3/84. See separate memorandum.

No. 5.

The Under Secretary for Lands to P. J. Hourigan, Esq.

Sir, Department of Lands, Sydney, 3 October, 1883.

With reference to your letter of the 22nd ultimo, relative to the cancellation of a grant of 25 acres of land at Lane Cove, known as "Lamb's Farm," alleged to have been issued to Henry Lamb by Sir Francis Grose, on the 19th November, 1794, I have the honor to inform you that although search has been made, it is impossible to say, at this late date, whether a document under Lamb's hand, showing his consent

to the cancellation as an exchange for lands elsewhere is in existence, or ever existed, as transactions of a similar character were often, in the early days of the Colony, effected without the authority being placed on record.

I may add that, as Mr. Lamb received in the early part of 1798 a grant for a similar area of land at Mulgrave Place, it is not at all unlikely, indeed it is but fair to assume, that the latter was given in lieu of the former, exchanges of that nature being frequent in those days, and effected in a similar manner.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 6.

Office Memorandum.

MR. HOURIGAN has already been informed partially to the effect of the Survey Office report, and I do not think it necessary to write further on the subject. It would, however, be wise to refer these papers to the Registrar-General for notatien in the event of any attempt being made to deal with the land.

C. O., 11/3/84.

Approved.—J.S.F., 2/3/84. The Registrar-General.—J. G. BLAXLAND (*pro* Under Secretary, Department of Lands), B.C., 18/3/84. Examiner of Titles.—E.G.W., 19/3/84.

Memorandum.—A certificate of title for 2 acres 1 rood 17 perches, portion of Henry Lamb's 25-acre grant, was, on the 13th March, 1884, issued to John Bede Magney and Herbert Edwin Weynton. The certificate of title is registered as of volume 688, folios 65 and 66.—H. D. MADDOCKS, 19/3/84.

Under Secretary for Lands.—E.G.W., B.C., 19/3/84. Submitted for the information of the Secretary for Lands.—C.O., 28/3/84.

The circumstances under which this certificate of title was issued should, I think, be inquired into, as well as any person's right to deal with the balance of the area of what is known as Lamb's Farm, the original grant to Lamb having been cancelled.—J.S.F., 31/3/84.

The Principal Under Secretary.—C.O., B.C., 8/4/84. The Registrar-General for report.—A.S., B.C., 12/4/84. C.W., 15/4/84.

Memorandum.—There is no proof whatever to show that Lamb's grant was legally cancelled. It is true that the record copy of the grant in the Registrar-General's department has written upon it the word "cancelled," but that will not in law enure a cancellation of the grant; therefore, under the circumstances, I am of opinion, that the certificate of title before referred to should remain intact; moreover it may be mentioned that the application under which the certificate of title issued was duly advertised in the *Government Gazette* and public papers, thus giving an opportunity of a *caveat* being entered by the Crown, or any person or persons forbidding the issue of the certificate of title.—H. D. MADDOCKS, Land Titles Office, Sydney, 18/4/84.

Mr. Examiner Maddocks' opinion herewith.—E.G.W., 18/4/84. Registrar-General.

It appears that a certificate of title has already been issued for 2 acres 1 rood 7 perches, part of the 25-acre grant to Lamb. The application has also been passed by the Board of Commissioners for 2 acres 1 rood 33½ perches, and certificate of title would, ere this, have been issued had not a *caveat* been lodged. Application may be lodged at any time for a portion or the whole of the balance left in Lamb's grant. In this event a notice will be forwarded to the Under Secretary for Lands to give him an opportunity to lodge *caveat* if the Government should see fit.—E. G. WARD, Registrar-General, 18/4/84.

Submitted.—C.O., 23/4/84. Seen.—J.S.F., 30/4/84. Forwarded for the information of the Surveyor-General.—J.G.B., 7/5/84. Mr. Furber, 12/5/84. The Surveyor-General.

The opinion of the Law Officers of the Crown should perhaps be obtained as to whether, under the circumstances of this case, this Department will be justified in lodging *caveat* against any application for title to the balance of the land in question; also, whether specific action should be taken to obtain possession of the land on the part or the Crown.—A. L. LLOYD, 7/6/84.

The facts of the case are, I think, sufficiently stated in the minute of 18th February, 1884, initialled T.F.F., to require a special minute for the guidance of the Crown Law Officers, and on it the case is submitted.—P.F.A., 16/6/84. Under Secretary for Lands.

No. 7.

Office Memorandum.

Lamb's grant of 25 acres, at Hunter's Hill, marked "Cancelled."

As many of the early transactions in connection with deeds of grant were effected through the Treasury, it is suggested the papers be forwarded to the Under Secretary for Finance and Trade, with a request that careful search be made in the early records of that Department, whether any particulars can be ascertained therefrom, as to the cancellation of the above, which it is assumed took place prior to 1800, in order to allow of an exchange being effected for 25 acres at Mulgrave Place, the deed of which issued in 1798.

R.H.D., 28/7/84.

The reference may be made.—C.O., 28/7/84. Approved.—J.S.F., 31/7/84. The Under Secretary for Finance and Trade.—F.H.W. (for the Under Secretary, Lands), B.C. Search has been made among all the old records of the office, but no trace can be found of any book or papers, which will throw any light upon the subject.—G.E. The Under Secretary for Lands.—W.N., B.C., 6/3/85.

Mr. Evans, Registrar of Records, Treasury,—Please assist in this matter by searching for any papers bearing upon the cancellation of the very old grant referred to in the enclosed papers. (Henry Lamb, 25 acres at Hunter's Hill, 17th November, 1794.) Particularly any letter referring to the cancellation of said grant, probably prior to the year 1800.—W.N., 27/2/85. Treasury, Revenue Branch. Urgent.

Mr. Newcombe,—I regret I can give you no assistance, as the books in this room do not go so far back as the date mentioned; possibly some trace may be found in the cellar.—A.E., 27/2/85. No records in the cellar.—W.N., 27/2/85.

No. 8.

Application by Mr. H. Nutter.

VOLUNTEER Order Selection.—Application by Howard Nutter, of Pitt-street, Sydney, for a grant of 50 acres of land, under clauses 44 and 45 of the Volunteer Regulation Act of 1867.

Received, with certificate, this 8th day of December, 1884, at 12·45 o'clock, by,—
R. H. DE LOW,
Land Agent for Metropolitan District.

Sir, 5 December, 1884.

In virtue of the enclosed certificate, I hereby apply for a grant of 50 acres of unimproved Crown land, hereunder described. I am, &c.,
HOWARD NUTTER,
158, Pitt-street, Sydney.

The Crown Land Agent.

Description.

County of Cumberland, parish of Willoughby; 25 acres formerly granted to H. Lamb, and surrendered; being surrounded northerly by public recreation reserve; westerly by grants to Baker and Tyler, each 25 acres, and easterly by public reservations for recreation and pound.

The application was received under protest after having been formally refused. Applicant was duly warned, the land being within the population boundary of Sydney, and therefore, even if unalienated, not open to selection.—R. H. DE LOW, Metropolitan Crown Lands Agent.
8th December, 1884.

Mr. H. Hare.—R.H.D., 10/12/84. Volunteer Land Order, 80–225, issued to Sapper Patrick Callopy. Declared void, 17/3/85. *Vide* 85–610 Alienation. C. 582–690 Roll, for 25 acres granted to H. Lamb.

Volunteer Land Order, 80–225, dated 8th December, 1884, by Howard Nutter. The land applied for under the above-mentioned Volunteer Land Order, appears to have been already alienated to H. Lamb; it is therefore recommended that the application be refused. In any case, the application could not be entertained, as it is less than 40 acres, and is for land situated within the reserve from conditional sale on account of the population of the City of Sydney.—ROBT. D. FITZGERALD (for Surveyor-General), 21st January, 1885. H.H., 19th January —C.W.L.B.

The Under Secretary for Lands. Approved.—J.S.F., 11/3/85. Declared void.—R.H.D., 13/3/85. Mr. Nutter with certificate, and Land Agent informed by printed letter, 17th March, 1885. Noted.—R.L., 18/3/85. Noted.—R.H.D., Crown Lands Agent, 19/3/85.

Mr. H. Hare to note and return.—R.H.D., 19/3/85. Voidance noted in Geographical Division 10.—C.W.L.B., 30/3/85. Mr. De Low.

No. 9.

Mr. Surveyor D. M. Maitland to The Surveyor-General.

Sir, Stanmore Road, 20 February, 1885.

Referring to the verbal instructions from yourself and the Under Secretary for Lands, I beg to report that I have inspected four portions of land in the parish of Willoughby, applied for as Volunteer Land Order purchases, which are within the Population Reserve of Sydney, and consequently, by the 44th section of the Volunteer Act of 1867, not open for Volunteer Land Order purchase.

* App. 5,599, D.Wilson, 2a 1r. 33½p. Caveat lodged against issue.
† App. 5,600, B. Magney, 2a. 1r. 17p. Certificate has issued.
‡Aln. 84–4,785 and 85–766.

1. Applications for titles under the Real Property Act for two portions containing respectively 2 acres 1 rood 33½ perches, and 2 acres 1 rood 17 perches, have been made by D. Wilson and J. B. Magney, applications 5,599* and 5,600† within the 25-acre block‡) applied for by Howard Nutter, and marked on the parish map as granted to H. Lamb, one of which titles has been granted. There did not appear to be any act of ownership exercised over any portion of the ground by applicant.

2. On the portion applied (Alienation 84–4,786 and 85–753) for by Henry Chapman, originally granted as 25 acres to Humphery Evans, a weatherboard house has been erected, now occupied by H. Waterhouse, who informed me that the block was claimed by Mr. Thomas Broughton, and that he was in charge of it for him.

3. The portion marked as granted to W. Wright, and now applied (Alienation 84–4,787 and 85–750) for by J. B. Magney, shows no signs of recent occupation but an old fence, originally erected, I believe, by E. Charlish, is still standing.

4. I could not find any occupation of G. Tilley's grant by the (Alienation 84–4,788 and 85–751) applicant, R. Magney.

I have, &c.,
D. M. MAITLAND,
Government Surveyor.

Mr. H. Hare, 20th March, 1885. Submitted. 1st. It is suggested the Registrar-General be requested to lodge a *caveat* against the issue of certificate to D. Wilson for the 2 acres 1 rood 33½ perches, (case 5,599), also to decline to register any dealing with the residue of Lamb's grant, with Humphery Evans', W. Wright's, and George Tilley's grants, for the reason that the grants appear to have been cancelled many years ago, and further that he be requested to furnish this Department with a tracing of the lands described in application 5,599 and 5,600.

2nd. That early search be made as to notations on plans, and in old registers (Deeds, &c.), in connection with the last three mentioned grants. (Date of grant—Evans, 3rd December, 1794; Wright, 3rd December, 1794; Tilley, 19th November, 1794.)—R.H.D., 28/4/85.

C.O., 29/4/85. Approved.—J.S.F., 30/4/85. Correspondence Branch.—R.H.D., 1/5/85. Registrar-General informed, 5/1/85. Mr. M'Kern,—Would you please take action as regards entries in old registers.—R.H.D., 6/5/85. Mr. Farnsworth.—F.M'K., 7/5/85.

Vide

Vide extracts from Cumberland Register No. 1, folios 37 and 41 herewith.—W.F., 11/5/85. Mr. M'Kern. Mr. De Low,—The accompanying extracts contain all the information I can give respecting the three grants referred to.—F.M'K., 11/5/85.

Mr. H. Hare,—Would you please cause early search to be made on old plans and maps as to grants mentioned.—R.H.D., 12/5/85.

It is found upon an inspection of the plans that no fresh information concerning the lands referred to can be furnished. Papers No. 69–12,190 and 69–14,059 alienation might perhaps be found to contain some information bearing upon the cases.—C.W.L.B. (for Mr. Hare), 18/5/85. Mr. De Low.

[*Enclosures.*]

Extract from *Cumberland Register.* No. 1, folio 57.

No. 308; No. 1, folio 136; grantee's name, George Tilley; number of acres, 25; grant or lease, grant; District, Hunter's Hill; by whom granted, Francis Grose; when granted, 19th November, 1794; annual quit-rent, 1s.; when it commences, 19th November, 1799; name of farm, Tilley's Farm; witnesses' names, J. Foveaux, Thomas Rowley, Edward Laing; D. Collins, secretary. Description of grant:—Laying and situate in Lane Cove in the district of Hunter's Hill. Remarks, cancelled, and a new grant given at the Hawkesbury, Mr. William Marr, proprietor.

14th May, 1822.

Extract from *Cumberland Register.* No. 1, folio 41.

No. 335; No. 1, folio 140; grantee's name, William Wright; number of acres, 30; grant or lease, grant; district, Hunter's Hill; by whom granted, Francis Grose; when granted, 3rd December, 1794; annual quit-rent, 1s.; when it commences, 3rd December, 1799; name of farm, Wright's Farm; witnesses' names, J. Foveaux, Thomas Rowley, Edward Laing; D. Collins, secretary. Description of grant:—Laying and situate in Lane Cove, in the district of Hunter's Hill. Remarks:—Exchanged by William Wright with Obadiah Ikin for William Baker's farm, then sold on 3rd August, 1797, to John Holdsworth for £3, who sells it on the 26th May, 1804, to Thomas Randal; he parts with it on the 17th of October, 1805, to Edward Quinn, and it has now been surrendered by William Sherwin, in consideration of an 800-acre farm, promised him in the Parramatta district, and not yet registered.

Torn up by me, this 15th September, 1821.

F. GOULBURN.

Extract from *Cumberland Register.* No. 1, folio 41.

No. 337; No. 1, folio 141; grantee's name, Humphery Evans; number of acres, 25; grant or lease, grant; district, Hunter's Hill; by whom granted, Francis Grose; when granted, 3rd December, 1794; annual quit-rent, 1s.; when it commences, 3rd December, 1799; name of farm, Evans' Farm; witnesses' names, J. Foveaux, Thomas Rowley, Edward Laing; D. Collins, secretary. Description of grant:—Laying and situate in Lane Cove, in the district of Hunter's Hill. Remarks:—Cancelled, this grant being found in the secretary's office with a note thereon, "Demised to the Crown," August 15th, 1804.

D. D. MANN, Clerk.

No. 10.

Application by Mr. S. M'Burney.

Crown Lands Act of 1884—(Part IV, sections 89, 90, or 92.)—Application for special lease.

1, Little Surry-street, Darlinghurst, Sydney.

I HEREBY apply for a special lease for brickmaking and general purposes of a brick manufacture purposes of the land hereunder described, and for which I am willing to pay an annual rental of £10 per acre. Enclosed is a receipt, showing that the sum of £10 has been paid to the Colonial Treasurer as a deposit towards the cost of survey and report.

Dated at Sydney, this 17th day of March, 1885.

SAMUEL M'BURNEY.

To the Local Land Board, Sydney.

Description.

Land district of Sydney, county of Cumberland, parish of Willoughby, about 9 acres. Portion of Lamb's grant in the parish of Willoughby, county of Cumberland, and commencing at the south-west boundary of Magney and Company's brickyard; thence by a line southerly, being the most southern boundary of that grant; thence by a line easterly to two pegs; thence by a line 20 chains northerly; thence by a line westerly 5 chains 49 feet, finishing at that point.

The sum of £10 suspended this day on within account.—P. J. HOLDSWORTH. Revenue Branch, Treasury.—E.H., 17/3/85.

Mr. J. F. Loxton, licensed surveyor, for survey and report, in accordance with instruction No. 124 of 1st April, 1885 herewith. This case may involve determination of disputed bounderies of grants, and unless the boundaries appear clear, &c., the application had better be refused. Should there be any complications Mr. Loxton is to see me prior to final action. A lease for fifteen years seems to be out of the question, at the same time, if expensive brickmaking machinery is erected, as applicant stated verbally to me, some consideration appears desirable.—JOHN W. DEERING, District Surveyor. No. 124, of 1st April, 1885.

The above instruction was withdrawn, certain matters connected with Lamb's grant becoming known to the District Surveyor.—JOHN W. DEERING, 19th June, 1885.

We recommend that the lease applied for be not granted, and further express an opinion that questions of title, such as appear to be involved, should not be entertained, and could not be profitably discussed before us. There is no obligation on the part of the Crown to grant a lease, and since it appears, at least, open to argument whether the land applied for be Crown lands, it will be the wiser course to refuse to grant one.—T. WARRE HARRIOTT, Chairman; HENRY EAGAR. Local Land Board Office, Sydney, 30th June, 1885.

No. 11.

The Deputy Registrar-General to The Under Secretary for Lands.

Sir, Registrar-General's Department, Land Titles Office, Sydney, 12 May, 1885.

In attention to your letter of the 5th instant, I beg to forward herewith plan showing land applied for by Messrs. Wilson and Magney (applications 5,599, 5,600), parish Willoughby, and to state that a *caveat* has been lodged against the land mentioned as desired.

I have, &c.,
HY. NEWCOMBE,
Deputy Registrar-General.

No. 12.

Mr. Metropolitan and Coast District Surveyor Deering to The Chairman, Local Land Board, Sydney.

Special lease, Sydney, No. 85-15; S. M'Burney; 9 acres; parish of Willoughby, County of Cumberland; for the purpose of brickmaking; No. 366; 17th June, 1885.

THE land applied for is part of 25 acres granted to Henry Lamb on 19th November, 1794. The grant was subsequently cancelled. A claim to this and other lands has been set up by Mr. Thomas Broughton. The whole matter is under consideration in the Alienation Branch, Lands Department. (*Vide* papers, "Alienation 84-3,060" within "Alienation 85-1,132," with which this present case might be placed.)

As M'Burney's application involves a question of title, I am of opinion that it must be refused. There are no costs in this case.

JOHN W. DEERING,
Metropolitan District Surveyor

At a meeting of Local Land Board, Sydney, on 30th June, it was recommended that the application for lease be refused.—T.W.H. Forwarded for Ministerial approval.—E.L., 7/7/85. C.O. Approved.—J.S.F., 10/7/85. S. M'Burney, Treasuary, and Cumberland Ranger, 15th August, 1885.

No. 13.

Office Memorandum.

Evans', Tilley's, and Lamb's 25 acres, and Wright's 30 acres, parish of Willoughby, county of Cumberland; resumed Crown land.

1. The circumstances of the four cases particularly mentioned in these papers, are specially brought under notice as involving a most important point, and one which would seem to require definite settling. It is one of very great interest and importance to the Department, *i.e.*, to the Crown, and perhaps no less so to very many persons in its far spreading effects.

2. Connected somewhat with these cases there is, probably, a still larger question, and one which, though under review several times, would seem never to have been settled, but which involves interests of very great importance.

3. In 1794 grants were prepared as above, but from notations in the registers of the Deeds Branch of this Department, and on the record copy of the grants in the Registrar-General's office, it is a question whether the lands did not revert to the Crown shortly after the date of the grant. It is perhaps not too much to hold that at that time the forms used were thought to be effectual in revesting the land in the Crown, and that the lands were thereafrer looked upon as Crown lands.

4. Although only four cases are herein specifically mentioned, it may be stated there are on the deeds registers of this Department many similar cases. Until an authoritative decision be available on the point involved, it might not be advisable to enter upon their consideration.

5. (*a*) In the case of Tilley the endorsement on the record copy at the Registrar-General's office is "cancelled, and a new grant given at the Hawkesbury." A grant dated 10th May, 1798, did issue to Tilley for land on the Hawkesbury, at a place called Mulgrave Place.

(*b*) In the case of Evans the notation is, "Cancelled, this grant being found in the Secretary's Office, with a note thereon, 'Demised to the Crown August 15th, 1804.—D. D. MANN, Clerk.'"

(*c*) In the case of Wright the notation is more lengthy, thus—"Exchanged by William Wright, with Obadiah Ikin, for William Baker's farm, then sold on 3rd August, 1797, to John Holdsworth for £3; who sells it the 26th May, 1804, to Thomas Randal. He parts with it on the 17th October, 1805, to Edward Quinn, and it has now been surrendered by William Sherwin, in consideration of an 800-acre farm promised him in the Parramatta District and not yet registered. Torn up by me this 15th September, 1821.—F. GOULBURN."

A grant of 800 acres, being part of a consolidated grant of 1,165 acres, at Sherwood, near Parramatta, issued, and bears date 25th June, 1831.

(*d*) As regards Lamb's 25 acres, the notation on copy of grant at Registrar-General's Office and in books of Deeds Branch is, "Cancelled." It is also on record that another grant of 25 acres issued in favour of Lamb. The land is on the Hawkesbury at Mulgrave Place, adjoining Tilley's, and the grant is dated 10th April, 1798; each within a month. The presumption is that a similar set of circumstances surround each case, viz., that, as was common in those days, there was an exchange in both cases, the notation being abbreviated in the case of Lamb.

6. A feature of Lamb's 25 acres now under review is that a "Certificate of Title" (application 5,600) under the Real Property Act, as issued in favour of J. B. Magney, for 2 acres 1 rood 17 perches thereof. Last year when dealing with an application (5,599) by Wilson, for a certificate of title for another part of 2 acres 1 rood 33½ perches of the same 25 acres, and against the issue of which a *caveat* has been lodged, the

the whole circumstances were brought under the notice of the Registrar-General. Owing to the great importance of the whole question attention is drawn to Mr. Examiner Maddocks' minute of the 18th April, 1884, on Miscellaneous 84–5,337, "There is no proof whatever to show that Lamb's grant was legally cancelled. It is true the record copy of the grant in the Registrar-General's Department has written upon it, 'Cancelled,' but that will not in law enure as a cancellation of the grant. Therefore, under the circumstances, I am of opinion that the Certificate of Title before referred to (J. B. Magney's) should remain intact."

7. Applications have on two occasions recently been tendered to select in virtue of Volunteer Land Orders these four blocks, but have been declared void for the reason that the lands are within the population boundary of Sydney, the question whether these are Crown lands having thus been avoided. More recently still, an application has been made by Mr. J. B. Magney, for a special lease of part of Lamb's 25 acres. The application has been recommended for refusal. It may also be mentioned that Mr. Thomas Broughton lays claim to these four blocks, as a part of what is called "the Gore Hill Estate," and for which estate he has for several years been applying to this Department for a Consolidated Deed, but without success.

8. If the Crown has now any right or title to these lands, and those similarly circumstanced, it would perhaps be as well to enforce it, or to have an authoritative decision to the contrary, for the repeated application by persons who assume the title to the lands is in the Crown, cause a waste of valuable time to the Department and all with no definite result.

9. Somewhat allied to the points involved in the preceding cases is the larger question, whether "the right of the Crown to recover the possession of land is in general barred after a lapse of sixty years," as regards this Colony (Nullum Tempus Act, 9 George III, chapter 16). This question was under review in 1880, and a copy of Mr. Attorney-General Wisdom's opinion, dated 31st May, 1880, is enclosed, together with the principal part of the correspondence connected therewith. From this it will be seen that Mr. Wisdom attached great importance to the question, and suggested the desirability of obtaining at the earliest opportunity the opinion of the Court upon it, and, if necessary, of appealing to the Privy Council.

10. The minutes succeeding the opinion show that the suggestion was not further proceeded with, but that it was decided to introduce into Parliament a short Bill declaring that "The Nullum Tempus Act" was not applicable to, and did not extend to, or become in force in "New South Wales." The Bill was prepared (copy herewith—Nullum Tempus Act, Declaratory Act), but it does not appear to have been introduced into Parliament.

11. Should the ultimate course indicated by Mr. Wisdom, of an appeal to the Privy Council, result in a decision that the Nullum Tempus Act is in force here, an Act of Parliament passed now negativing its application in this Colony might not be retrospective in its application, to the very early days of the Colony.

12. Under these circumstances, and in view of the great importance of the question raised, and the interests involved, the desirability is submitted of referring to the Crown Law Officers with a view to definite action on the point,—

(*a*) Whether the lands referred to in the four cases specially mentioned herein, and in cases of a similar character, are Crown lands, and can be dealt with as such.

(*b*) Whether the Nullum Tempus Act is in force in this Colony, and in the event of the highest tribunal deciding it is,

(*c*) Whether its application to this Colony should not be negatived by an Act of Parliament as proposed in 1880.

R. H. D., 18th June, 1885.

The advice of the Crown Law Officers may be sought. There are a number of cases now pending which involve one or more of the questions, and the lands affected are of considerable value.—C.O., 22/6/85. Approved.—J.S.F., 29/6/85. The Crown Solicitor.—C.O., B.C., 1/7/85.

[*Enclosure.*]

44 Victoria 1880.

A Bill to declare that the statute 9 George III chapter 16 commonly known as the Nullum Tempus Act is not in force in New South Wales.

Preamble. WHEREAS by the twenty-fourth section of an Act of the Imperial Legislature passed in the ninth year of the reign of His Majesty King George the Fourth intituled "An Act to provide for the Administration of Justice in New South Wales and Van Diemen's Land and for the more effectual government thereof and for other purposes relating thereto" It was enacted that all laws and statutes in force within the Realm of England at the time of the passing of the said Act should (except as therein excepted) be applied in the Administration of Justice in the Courts of New South Wales and Van Diemen's Land respectively so far as the same could be applied within the said Colonies respectively and that as often as any doubt should arise as to the application of any such laws or statutes it should be lawful for the respective Legislatures of the said Colonies to declare whether such laws or statutes should be deemed to extend to such Colonies and to be in force within the same with power to establish such limitations and modifications of any such laws and statutes as might be deemed expedient in that behalf And whereas doubts have been and are still entertained whether the statute first hereinbefore cited and commonly known as the Nullum Tempus Act extends to and is in force in New South Wales and it is expedient that such doubts should be removed Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows :—

The Nullum Tempus Act 9 George III c. 16 declared not to extend to New South Wales. 1. It is hereby declared and enacted that the statute passed in the ninth year of the reign of King George the Third intituled "An Act to amend and render more effectual an Act made in the twenty-first year of the reign of King James the First intituled 'An Act for the general quiet of the subjects against all pretences of concealment whatsoever'" was not applicable to and did not extend to or become in force in New South Wales by virtue of the provisions of the said twenty-fourth section of the Act 9 George the Fourth chapter eighty-three or otherwise.

Saving of rights, &c., determined or pending. 2. The declaration contained in the preceding section shall not affect any right or title whether of the Crown or a subject which shall have been determined by or shall be pending before any Court at any time before the passing of this Act.

Short title. 3. This Act may be cited as the "Nullum Tempus Act Declaratory Act."

No. 14.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Occupation of Lands, Sydney, 15 August, 1885.

Sir,

I have the honor to inform you that Mr. S. M'Burney's application for a special lease of 9 acres, parish of Willoughby, county of Cumberland, for brickmaking, has been declined, and I have to request that the deposit paid thereon into Suspense Account on the 17th March, 1885, may be refunded to him on application.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 15.

The Under Secretary for Lands to The Crown Lands Ranger.

Occupation of Lands, Sydney, 15 August, 1885.

Sir,

I have to inform you that Mr. S. M'Burney's application for a special lease of 9 acres of land for brickmaking at parish of Willoughby, county of Cumberland, has been declined.

I have to request that, on your next visit to the locality, you will ascertain whether there is any illegal occupation of Crown land; and, if so, to report the circumstances in order that the case may be dealt with by the Minister.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 16.

The Under Secretary for Lands to Mr. S. M'Burney.

Occupation of Lands, Sydney, 15 August, 1885.

Sir,

I have the honor to inform you, by direction of the Minister for Lands, that your application for a special lease of 9 acres of land for brickmaking, at parish of Willoughby, county of Cumberland, has been declined.

Your deposit will be refunded on application at the Treasury.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 17.

The Crown Solicitor to The Under Secretary for Lands.

Subject :—Resumed Crown Lands (Evans' Tilley's, and Lamb's 25 acres, and Wright's 30 acres), Willoughby.

Crown Solicitor's Office, Sydney, 18 August, 1885.

Sir,

I have the honor to return herewith the papers relating to the above matter, which were forwarded to me from your department on the 1st day of July, 1885, and to state that I have submitted them to Mr. Attorney-General Dalley, a copy of whose advising thereon will be found upon the other side of this letter.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Copy of Opinion. 12th August, 1885.

Re resumed Crown Lands (Evans' Tilley's, and Lamb's 25 acres, and Wright's 30 acres) Willoughby.

THIS seems to me to be a case which can only be properly provided for by legislation, which should be undertaken whenever it is found convenient by the Government to submit a measure.

W. B. D., Attorney-General.

Submitted, in view of the interests involved and the importance of the subject.—R.H.D., 25/8/85. This paper was held over with a view to Mr. Farnell conferring with the Attorney-General, but I do not think he had an opportunity of doing so, and it is now submitted for instructions.—C.O., 16/11/85. I think the quickest way to get over the difficulties in these cases would be to resume the land for some public purpose. The notification of that resumption vests it at once in the Crown.—J. P. ABBOTT, 21/11/85.

The papers in this case were unfortunately mislaid, hence the delay in taking action upon the above decision. The Cumberland Ranger informs me that timber is being removed from the land by men acting under the direction of Mr. Thomas Broughton. If they are summoned to the Police Court a question of title will be raised, and the Court will then have no jurisdiction.—C.O., 19/6/86.

Mr. Abbott's decision may be given effect to, and as it is necessary to specify a purpose for which the land is to be taken, it may be resumed for quarries and works for procuring stone, gravel, and earth.—H.C., 21/6/86.

Urgent.—Mr. District-Surveyor Deering for description, please, attention being invited to part of 85-1,486, and to part of Lamb's grant, No. 1,796.—R.H.D., 30/6/86. The necessary descriptions are with my report of this date to the Under Secretary for Lands.—JOHN W. DEERING, Metropolitan District Surveyor, 14th July, 1886.

No. 18.

The Cumberland Ranger to The Under Secretary for Lands.

Sir,

Petersham, 12 September, 1885.

Referring to your letter of the 15th August last, informing me that Mr. Samuel M'Burney's application for a special lease of 9 acres for brickmaking, at parish of Willoughby, has been declined, and requesting me to report whether there is any illegal occupation of Crown lands, I have the honor to report having visited the locality a few days since, and found that the parties named in the margin are now in illegal occupation of a portion of the land applied for by Mr. M'Burney for brickmaking. They are residing upon the land without authority from the Crown, said land being portion of Lamb's 25 acres.

John Grady, Charles Stead, William Welch.

I may add that a Mr. Magney is now in occupation of about 5 acres more or less of the same grant (Lamb's 25 acres). The land is enclosed, and being used by Mr. Magney for brickmaking. Awaiting instructions,

Lamb's 25 acres, parish Willoughby, county Cumberland.

I have, &c.,

JAMES M'KEOWN,

Cumberland Ranger.

The trespassers may be warned that if not removed within fourteen days, proceedings will be taken against them.—E.L., 24/9/85. Yes.—C.O., 24/9/85. J. Grady, C. Stead, and W. Welch, through Cumberland Ranger, 29/9/85.

No. 19.

The Under Secretary for Lands to The Cumberland Ranger.

Sir,

Department of Lands, Sydney, 29 September, 1885.

Referring to your report of the 12th instant, I have the honor to request you to deliver the enclosed letters to the trespassers noted in the margin, warning them that if the trespasses be not abated within a fortnight from this date, proceedings would be taken against them.

Be so good as to report further at end of that time.

Trespassers on Crown land at parish Willoughby, county Cumberland, Messrs. John Grady, Chas. Stead, and Wm. Welch.

I have, &c.,

CHARLES OLIVER,

Under Secretary.

[*Enclosures.*]

Illegal occupation of Crown lands, parish Willoughby, county Cumberland.

Sir,

Department of Lands, Sydney, 29 September, 1885.

It having been reported that you are in illegal occupation of Crown lands at parish of Willoughby, county of Cumberland, I have the honor to inform you that if the trespass be not abated within fourteen days from this date, proceedings will be taken against you.

I have, &c.,

Mr. John Grady.

CHARLES OLIVER,

Under Secretary.

Illegal occupation of Crown lands, parish of Willoughby, county Cumberland.

Sir,

Department of Lands, Sydney, 29 September, 1885.

It having been reported that you are in illegal occupation of Crown lands at parish of Willoughby, county of Cumberland, I have to warn you that if the trespass be not abated within fourteen days from this date, proceedings will be taken against you.

I have, &c.,

Mr. Chas. Stead.

CHARLES OLIVER,

Under Secretary.

Illegal Occupation of Crown Lands, Parish of Willoughby, County of Cumberland.

Sir,

Department of Lands, Sydney, 29 September, 1885.

It having been reported that you are in illegal occupation of Crown lands at parish of Willoughby, county of Cumberland, I have to warn you that if the trespass be not abated by you within fourteen days from this date proceedings will be taken against you.

I have, &c.,

Mr. W. Welch.

CHARLES OLIVER,

Under Secretary.

No. 20.

Messrs. Way and Way to The Under Secretary for Lands.

Sir,

69, Castlereagh-street, Sydney, 3 November, 1885.

We have the honor, acting under instructions from Mr. Thomas Broughton, to reply to your letter to Mr. John Grady, of the 29th September last, and to inform you that Mr. Grady is his tenant, and that he is prepared to defend his title to the property in question.

We may mention that a portion of the grant occupied by Mr. Grady was sold some time ago by Mr. Broughton to a Mr. Magney, who has since obtained a title under the Real Property Act to the land which he purchased, and that, therefore, it is hardly possible that the residue of the grant can be treated as Crown lands.

We have, &c.,

WAY AND WAY.

It appears from the District Surveyor's report that a question of title is involved in the land referred to, and that matter is being dealt with in the Alienation Branch. These papers may be forwarded to that branch in connection with those papers.—E.L., 5/11/85.

No. 21.

No. 21.

Mr. S. M'Burney to The Secretary for Lands.

Sir, 1, Little Surry-street, Sydney, 26 November, 1885.

I have the honor to inform you that I have made a fresh application for a special lease for brickmaking purposes of a portion of Lamb's grant, situate in the parish of North Willoughby.

I desire to bring under your notice that a pressing need exists, for Government work, for such a brick as can be made from the material of the above-mentioned area. The public sewers now being constructed are retarded for the want of such a brick, and viewing the further development of the sewerage scheme the urgency of granting this lease is apparent, and becomes a public necessity.

Mr. Bennett, the Engineer for Roads and Bridges, also of the sewerage scheme, speaks highly of a sample brick submitted by Mr. Magney, whose brick manufactory abuts the land applied for.

Should you feel warranted in granting a lease for the aforementioned purpose, of the land herein mentioned, I should be glad of its issuing in the name of John B. Magney & Co., Oswin Brickworks, North Shore.

I desire to mention that firm is willing to enter into a bond for the due fulfilment of a contract to supply sewer bricks for the Government sewer now in course of construction.

I have, &c.,
SAMUEL M'BURNEY.

May be referred to the Local Land Board in connection with application for special lease stated to have been made.—E.L., 1/12/85. Mr. Chairman Harriott.—C.O., B.C., 4/12/85.

No. 22.

Application by Mr. S. M'Burney.

Crown Lands Act of 1884—(Part IV, Sections 89, 90, or 92.)

Application for Special Lease.

I HEREBY apply for a special lease, for brickmaking and general purposes of a brick manufacture purposes, of the land hereunder described, and for which I am willing to pay an annual rental of ten pounds. Enclosed is a receipt showing that the sum of £10 has been paid to the Colonial Treasurer as a deposit towards cost of survey and report.

SAMUEL M'BURNEY,
1, Little Surry-street, Darlinghurst,
Sydney.

Dated at Sydney, this 26th day of November, 1885.

To the Local Land Board, at Sydney.

Description.

Land District of Sydney, county of Cumberland, parish of Willoughby, about 9 acres. Portion of Lamb's grant in the parish of Willoughby, county of Cumberland, commencing at the south-west boundary of Magney & Company's brickyards; thence by a line southerly, being the most southern boundary of that grant; thence by a line easterly to two pegs; thence by a line 20 chains northerly; thence by a line westerly 5 chains 49 feet, finishing at that point.

The sum of £10, received and placed to suspense on the within account this day.—P. J. HOLDSWORTH. The Treasury.—W.H.B., 26/11/85. Forwarded to the Metropolitan District Surveyor for report.—W.A.M., Land Board Office, 27/11/85. Report to Chairman No. 30 of this date.—JOHN W. DEERING, 7/1/85.

We recommend that this application be refused as the title of the Crown to the land is not made clear, as was reported by us upon a former application by the same person for the same land. We would call attention to the fact that so long as no costs are charged against the applicants, such applications are not unlikely to be renewed.—T. WARRE HARRIOTT, Chairman; F. A. FRANKLIN, HENRY EAGAR, Local Land Board, Sydney, 12/1/86.

Submitted for the consideration of the Minister that application be refused.—E.L., 18/1/86. What costs have been incurred?—C.O., 19/1/86. No costs. Perhaps some amount should be charged to prevent these repeated renewals of applications.—E.L., 20/1/86. There are the costs of investigation, inquiry by Board, &c., £5 5s., may be deducted from deposit, and the application rejected as recommended.—C.O., 22/1/86. Approved.—G.S., 23/1/86. S. M'Burney, Treasury, Local Land Board, and Cumberland Ranger informed.—30/1/86.

No. 23.

The Metropolitan and Coast District Surveyor to The Chairman, Local Land Board, Sydney.

S. M'Burney (for J. B. Magney & Company) 9 acres for brickmaking, parish of Willoughby, county of Cumberland.

Section 90, Crown Lands Act of 1884.—No. 30, 7th January, 1886.

Special lease 85-86.

1. My report of 17th June, 1885 (now herewith), on S. M'Burney's previous application to lease this part of the land known as Lamb's grant, applies with equal force to the present application, which, I am of opinion, must also be refused.

2. The question of title involved is still under consideration, not having yet been finally settled.

3. There are no costs in this case.

JOHN W. DEERING,
Metropolitan District Surveyor.

Sir, Department of Lands, Sydney, 30 January, 1886.

I have the honor to inform you that Mr. S. M'Burney's application for a special lease of 9 acres of land, parish of Willoughby, county of Cumberland, for brickmaking has been declined.

I have to request that, on your next visit to the locality, you will ascertain whether there is any illegal occupation of Crown lands; and, if so, to report the circumstances, in order that the case may be dealt with by the Minister.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 27.

The Under Secretary for Lands to Mr. S. M'Burney, Darlinghurst.

Sir, Department of Lands, Sydney, 30 January, 1886.

I have the honor to inform you, by direction of the Minister for Lands, that your application for a special lease of 9 acres of land, parish of Willoughby, county of Cumberland, has been declined.

Your deposit will be refunded on application at the Treasury, less £5 5s., cost of payment towards expenses incurred.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 28.

Mr. J. B. Magney to The Under Secretary for Lands.

Sir, 161, William-street, Sydney, 6 February, 1886.

It has come to my knowledge that S. M'Burney's application to lease from the Government for brickmaking purposes a portion of Lamb's grant, in the parish of North Willoughby, is about to be refused on the grounds that there are doubts of the Crown's position in *re* the title.

Being interested in the above-mentioned application, I trust I am in order in supplying information which I trust will be the means of dissipating any misgivings that the Government may have on that point.

On a very old map in the Surveyor-General's Office there appears a pencilled memorandum on the face of a charted portion of land (the grantee being Henry Lamb) purporting that land was given at the Hawkesbury in lieu. Henry Lamb obtained a cancelled grant in 1794; the land in lieu was given in 1798. Please observe that this latter was given ten years after the Colony was founded. By a registration of a birth in that district of Rebecca Lamb, daughter of Henry Lamb and Elizabeth Chambers, in 1798, being then 12 months old, or thereabouts (*vide* record in Registrar-General's Department), we have pretty conclusive evidence of Henry Lamb's identity. From this fact we derive the knowledge that three years after receiving the grant in North Willoughby he is residing in the district of the Hawkesbury—the place indicated in the "pencilled memorandum" on the face of charted grant previously referred to. We find him still living in that same district in June of 1805. A report appears in the *Sydney Gazette*, of 2nd June, 1805, "That the natives assembled at Lamb's farm at Portland Head on 31st May, 1805, and set fire to his house." In an earlier edition of the *Sydney Gazette* there is a report of Henry Lamb's evidence given against some captured prisoners who broke away from the prison depôt at Castle Hill, he (H.L.) being then a resident of the Hawkesbury district.

Should the above-mentioned facts dispel the doubts of H.L. of North Willoughby and the Hawkesbury not being identical, there may arise another doubt which would cause the Government some anxiety; but after my explanation and search being made to confirm what I advance, I think that anxiety will cease. The Government might anticipate a claim from H.L.'s heir-at-law, and in the absence of a surrender from H.L. of the grant, and would consequently avoid disputing that fact. I said previously in this letter that H.L. had a daughter by E. Chambers, but that issue was out of wedlock, as appears by a marriage of H.L. to E. Chambers in 1811, which was subsequent to the birth,—the birth being in 1797. For the copy of marriage certificate, *vide* record in Registrar-General's Department. She was the only child by that marriage, as a reference to the Registrar-General's Office will prove. By her illegitimacy her issue are barred from claiming. Further search will prove that was H.L.'s only marriage.

From

From the foregoing I think a very strong inference can be made that H.L., of North Willoughby, and H.L. of the Hawkesbury, are identical, more especially when it is considered that in those days so few people were here, and the improbability among so few that two Henry Lambs were here.

I shall be gratified to learn that my efforts to afford the Government information in this instance will be marked by the lease being conceded.

I have, &c.,
JOHN B. MAGNEY.

Special papers.—C.O., 8/2/86. Send to Mr. De Lowe, who will please see me.—C.O., 27/2/86.

No. 29.

The Cumberland Ranger to The Under Secretary for Lands.

Sir, Petersham, 15 April, 1886.

Referring to your circular letter of the 30th January last *re* Mr. Samuel M'Burney's application for a special lease for 2 acres, for brickmaking, at the parish of Willoughby, has been declined, I have the honor to report that while visiting the locality to-day, I found that the parties named in the margin are now occupying the land applied for by Mr. M'Burney; they are residing in tents, and working at Mr. Magney's brick-works, which also appear to be within Lamb's 25 acres.

Lamb's 25 acres. Occupied by Alexander Forbes and John Grady. Parish of Willoughby, county Cumberland.

I may add that the parties now in occupation of the land informed me that "James Bagreve" claims the land in question (Lamb's 25 acres), on behalf of Mr. Thomas Broughton; that they are paying him 6d. a week rent for the use of the land covered by the tents they are now residing in.

Awaiting further instructions,

I have, &c.,
JAMES M'KEOWN,
Cumberland Ranger.

Submitted for instructions.—V.C., 21/4/86. The Crown Lands Ranger is to proceed against the persons in occupation for trespass.—H.C., 6/5/86. Cumberland Ranger, 17/5/86.

No. 30.

Mr. J. Matthews to The Under Secretary for Lands.

Sir, North Willoughby, 14 May, 1886.

On behalf of Mr. John Boyle (I being his relative and deviser), I beg to bring the following under your notice. The matter has reference to a piece of land situated on the North Shore, called "Humphries Evans' Grant." On the 5th May, 1885, the Minister wrote to the Registrar-General, which was intended as a *caveat* against a piece of land called "Lamb's Farm" being brought under the provisions of the Real Property Act. The reason stated was, that it was a cancelled grant, and said letter also stated that it was thought the same set of circumstances applied to H. Evans' grant. We are only interested in the latter, and I beg respectfully to demur to the letter of the 5th May, 1885, that said land is a cancelled grant. We say that said land formed part of Gore-Artarmon's Estate, and was on the 26th May, 1855, transferred by Gore to John Boyle. In support of this I beg to submit for your consideration the following, which are only a few of the many documents in your office bearing on the matter:—1. Memorial by the Gores to the Government in the year 1854, and reply thereto with plan. 2. Surveyor-General M'Lean's report, compiled specially by him at the instance of the Government, to see what was really Gore's land in the year 1860. We also respectfully submit that, about the year 1856, the Government had this land measured with a view to sale, when Mr. Boyle brought the whole circumstances personally under the notice of the then Commissioner for Lands, Mr. Pearce, who recently died at Randwick, and that Mr. Pearce there and then had the land withdrawn from sale, and handed over to Boyle. I trust memoranda will be found in the office to this effect. We have had to contend against a great deal from others, in reference to lands purchased from Gore, but never anticipated any objection on behalf of the Government so late as the year 1885.

I will be glad, Sir, to meet you by appointment, and explain more fully in regard to the land in question.

I beg, &c.,
JOHN MATTHEWS.

Submitted.—E.M., 18/5/86. Reference to Mr. De Low, who is well posted in this matter.—C.O., 10/6/86.

From the papers in the Department the land belongs to the Crown. It will be seen that the title set up herein only goes back to 1855, but from what Crown grant is not stated. Several parties have claimed, one against the other, the land as part of the Gore Estate (Mr. Thomas Broughton being one), but as there is evidence, which at the time was deemed sufficient for the purpose, that the grant was cancelled, and therefore the land reverted to the Crown. There seems nothing to my mind to substantiate the claim set up, as possession by time against the Crown has not been decided to hold in this Colony.—R.H.D., 16/6/86.

There has, I think, been a recent decision given that this land, with others in a similar position, is to be resumed. The matter should receive special attention.—C.O., 26/6/86. Mr. De Low. Yes. *Vide* Alienation, 85-1,953.

No. 31.

The Under Secretary for Lands to The Cumberland Ranger.

Sir, Department of Lands, Sydney, 17 May, 1886.

Referring to your report of the 15th ultimo, respecting illegal occupation of Crown lands at parish of Willoughby, by John Grady and Alexander Forbes, I am directed by the Minister for Lands to request you to take the necessary proceedings under the 131st and 133rd sections of the Crown Lands Act of 1884, to compel abatement of the trespass and to recover penalty.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

No. 32.

No. 32.

The Crown Solicitor to The Under Secretary for Lands.

Sir, Crown Solicitor's Office, 12 June, 1886.

I do myself the honor to return herewith the papers forwarded to me under B.C., 2nd February, 1880, with reference to the question whether sixty years' undisturbed possession bars the Crown's rights of resumption, and to inform you that I have submitted them to Mr. Attorney-General Wisdom a copy of whose advising thereon is sent herewith.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

[*Enclosure.*]

OPINION.

Subject.—The applicability to this Colony of the Statute of Limitations, 9 George III, chapter 16.

BY the Nullum Tempus Act (9 George III, chapter 16), the right of the Crown to recover possession of land is in general barred after a lapse of sixty years. The Statute 9, George IV, chapter 83, section 24, enacts that all laws and statutes within the Realm of England at the time of the passing of that Act (not being inconsistent with any charter, or letters patent, or Orders in Council which might be issued in pursuance thereof) should be applied in the Courts of New South Wales and Van Diemen's Land so far as the same could be applied within the said Colonies. The question then is, can the Statute 9, George III, chapter 16, be applied to the circumstances of this Colony? This point has never been decided, but some light may be thrown upon it by a reference to certain judgments of our Supreme Court, in which the applicability of another English statute has been under consideration. In Hatfield *v.* Alford (*Sydney Morning Herald*, 27th October, 1846), the then Chief Justice, Sir Alfred Stephen, was strongly inclined to think that the 21 Jac. 1, c. 14 ("An Act to admit the subject to plead the general issue in information of intrusion brought on behalf of the King's Majesty, and retain possession until the trial") was not in force in this Colony, while Mr. Justice Dickinson and Mr. Justice Therry guarded against its being supposed that their judgment determined that the Act was in force. The point as to the applicability of this statute again are in Doe. Dan. Wilson *v.* Therry. [2 *S. C. R., Appendix* 1.]

For the plaintiff it was contended "that the Act did not extend to New South Wales, to the circumstances of which it was wholly inapplicable. By the ordinary rules of law it clearly would not extend here, and the enactment in the 9 George IV, chapter 83, section 24, notwithstanding the term 'applied' there used, could not reasonably be construed as introducing any and every statute physically susceptible of application without regard to its unfitness and inapplicability or utter unsuitableness to our condition and circumstances." The Court was strongly inclined to the opinion that, for reasons resting on the peculiar circumstances of a recently occupied territory, the statute was not in force here. Sir Alfred Stephen, who delivered the judgment of the Court, made use of the following among other observations:—"The circumstances of newly-discovered and unpeopled territories claimed by and vested in the Crown on behalf of all its subjects are so widely different from those of a populated and long-settled country, in which the lands never practically belong to the Crown, and with the exception of a few tracts and scattered properties often acquired by the Sovereign originally by purchase have for centuries been owned and cultivated by its subjects, that a moment's reflection would present them to the mind of even a stranger. The lands of this Colony lie necessarily unoccupied and waste until granted by the Crown to individuals willing to reclaim them from a state of nature. The Crown derives no 'profits' from them, and could in the literal sense no more possess them than it could the animals which roam unmolested over the vast area which they embrace. In such a territory it will unavoidably happen that many spots of ground may be occupied for a series of years without the knowledge of the Crown or its officers, or if by their knowledge, without the means (or frequently the wish) to disturb the parties." It seems to me that these observations bear with great force on the question now under consideration, and that many of them are quite as applicable to the statute of George as they are to that of James.

Finally, in Attorney-General *v.* Robinson (3, S. C. R., 23), the Court, consisting of Stephen (Chief Justice), Milford and Wise (J.J.), by a majority, held that the statute 21 Jac. 1, c. 14, is not in force in this Colony. Mr. Justice Milford, who dissented, was of opinion that both Jac. 1, c. 14, and 9 George III, chapter 16, were in force here.

On the whole, then, it is, I think, somewhat doubtful whether the right of the Crown in this Colony is barred after a lapse of sixty years. The Nullum Tempus Act seems to me to be in many respects unsuitable to our condition and circumstances, and its enforcement in such a vast territory as this might be productive of great public inconvenience and injury. However, whether any particular statute is or is not in force within the Colony is a question to be determined by the proper tribunals—first in the Colony, and afterwards, if necessary, on appeal to the Queen in Council. In view of the great importance of this subject, as affecting the public interests, it is highly desirable that the opinion of the Court should be obtained upon it at the earliest opportunity, and in the meantime steps should be taken to assert the rights of the Crown to any lands which may be in the unauthorized occupation of private persons before such rights have become jeopardized by the operation of 9 George III, chapter 16, should that statute be held to be in force here.

ROBERT WISDOM,
Attorney-General, 31/5/80.

From the opinion of the Attorney-General it appears to be somewhat doubtful whether the English Act quoted by him, which bars the rights of the Crown after a lapse of sixty years, is applicable to this Colony. At the same time Mr. Wisdom suggests that, in view of the great importance of the matter, as affecting the public interests, the earliest opportunity should be taken to submit a case for the decision of the Supreme Court of this Colony, appealing afterwards, if necessary, to the Privy Council. He also advises that in the meantime steps should be taken to assert the rights of the Crown before they have become jeopardized by the operation of the Act (9 George III, chapter 16), should it be held to be in force in this Colony. In submitting this matter to the Minister, I venture to offer a suggestion for his consideration, that a great deal of trouble and expense might be saved if a short Bill were to be passed, simply declaring that the Act referred to should not be held to affect the rights of the Crown in New South Wales.—W.W.S., 27/7/80.

I concur with the suggestions offered by the Under Secretary; but it appears to me that the Attorney-General would be the Minister best fitted to introduce such a Bill in Parliament. Mr. Stephen should consult the Crown Solicitor on the subject.—J.H., 29/7/80.

Before returning the papers to the Crown Solicitor, they are forwarded to the Surveyor-General for his information, in reference more especially to the last part of the Attorney-General's opinion in case any action is deemed necessary by the Survey Department for carrying out the recommendations herein contained.—W.W.S., 6/8/80.

The original papers have now been returned to the Under Secretary for Lands as requested.—H. FINCH, 5/11/80.

NOTE.—The above resulted in a decision to prepare a Bill that the Nullum Tempus Act did not apply to New South Wales. The Bill was prepared at the end of , but was never introduced into Parliament.—R.H.D., —/7/85.

No. 33.

The Cumberland Ranger to The Under Secretary for Lands.

Sir, Petersham, 29 June, 1886.

Trespass by John Grady and Alexander Forbes—Lamb's 25 acres, parish of Willoughby, county Cumberland.

Referring to your letter, Occupation 86–1,391, of the 17th of May last, I have the honor to inform you that I visited the locality to-day, and beg to state that the parties named in the margin have now vacated, and given up possession of the land known as Lamb's 25 acres at North Willoughby.

I have, &c.,
JAMES M'KEOWN,
Cumberland Ranger.

No. 34.

The Metropolitan and Coast District Surveyor to The Under Secretary for Lands.

Forwarding description for resumption of Evans' 25 acres, Tilley's 25 acres, Lamb's 25 acres, and Wright's 25 acres, parish of Willoughby, county of Cumberland.—No. 1,796, 14th July, 1886.

District Survey Office, Department of Lands, Sydney.

DESCRIPTIONS are enclosed for the resumption of the portions of land in the parish of Willoughby, county of Cumberland, known as Evans', Tilley's, Wright's, and Lamb's grants of 25 acres each, in accordance with Ministerial approval on Alienation, 85–1,953, herewith.

The area of Wright's grant is given in the enclosed papers as 30 acres, but the land referred to is evidently that applied for by J. B. Magney, under the void Volunteer Land Order, application No. 81–51 enclosed, and which is shown on the office maps and on the original plan as 25 acres, though containing by dimensions stated, at least 30 acres, exclusive of road.

Four descriptions herewith

JOHN W. DEERING.
Metropolitan District Surveyor.

Urgent. Mr. De Low, Miscellaneous Branch.—E.M., 20/7/86.

The papers may now be forwarded to the Department of Works, for the purpose of resumption, under the Act 44 Victoria No. 16, Lands for Public Purposes Acquisition Act, in terms of Minister's minute, 21/6/86, on 1,953, with a desire that the resumption be at once made.—R.H.D., 22/7/86, C.O., 22/7/86.

Approved.—H.C., 23/7/86. The Crown Solicitor for inspection.—J.R., B.C., 3/8/86. Received, 4th.—C.O.P.

[*Enclosures.*]

Land known as Evans' 25 acres.

COUNTY of Cumberland, parish of Willoughby, area 25 acres: Commencing at the north-west corner of Peter Dargan's 25 acres; and bounded thence on the west by a line north to the south-eastern side of a road 1 chain wide along the south-eastern boundary of R. Adams' 5 acres; thence on the north by that side of that road north-easterly, and the south-western side of a road 1 chain wide along the south-western boundary of J. C. Tucker's 5 acres 1 rood 30 perches, south-easterly to the western side of a road along the west boundaries of D. M'Pherson's 6 acres, and John Buchanan's 5 acres 2 roods 10 perches; thence on the east by that side of that road south to the north-east corner of Peter Dargan's 25 acres aforesaid; and thence on the south by the north boundary of that land west, to the point of commencement.

Exclusive of a road 1 chain wide, passing through the portion in a south-easterly direction.

Land known as William Wright's 25 acres.

COUNTY of Cumberland, parish of Willoughby, area 30 acres: Commencing on the south-west boundary of H. Hacking's 30 acres, at the northernmost corner of George Woodcock's 12 acres 3 roods 36 perches; and bounded thence on the north-east by a line forming parts of the south-west boundaries of H. Hacking's 30 acres, and Obadiah Ikin's 30 acres, north-westerly about 14 chains to the south-east boundary of Isaac Nicholl's 380 acres; thence on the north-west by that boundary, south-westerly about 23 chains to the north-eastern side of a road along the north-eastern boundary of Edward Salamon's 21 acres 34 perches; thence on the south-west by that side of that road south-easterly, about 14 chains to the intersection of the south-westerly prolongation of the north-west boundary of George Woodcock's 12 acres 3 roods 36 perches aforesaid; and thence on the south-east by a line partly forming that north-west boundary, north-easterly about 23 chains, to the point of commencement.

Land known as Lamb's 25 acres.

COUNTY of Cumberland, parish of Willoughby, area 25 acres: Commencing on the north-eastern boundary of T. Baker's 25 acres, at a point bearing north 41 degrees, west 5 chains from the easternmost corner of that portion; and bounded thence on the south-east by the north-western side of a road 1 chain wide, bearing north 49 degrees, east 10 chains; thence on the north-east by a line bearing north 41 degrees, west 25 chains; thence on the north-west by a line bearing south 49 degrees, west 10 chains to the north-east boundary of J. Taylor's 25 acres; and thence on the south-west by part of the north-east boundary of that land, and part of the north-east boundary of T. Baker's 25 acres aforesaid, being a line bearing south 41 degrees, east 25 chains to the point of commencement.

Land known as Tilley's 25 acres.

COUNTY of Cumberland, parish of Willoughby, area 25 acres: Commencing at the northernmost corner of Daniel Curry's 25 acres; and bounded thence on the south-east by the north-western boundary of that land south-westerly to the easternmost corner of John Sawyer's 25 acres; thence on the south-west by the north-eastern boundary of that land north-westerly to the southernmost corner of George Whitfield's 25 acres; thence on the north-west by the south-eastern boundary of that land, north-easterly to the southernmost corner of John Robert's 25 acres; and thence on the north-east by a line south-easterly, to the point of commencement.

No. 35.

Mr. J. J. Matthews to The Secretary for Lands.

Dear Sir, North Willoughby, 24 July, 1886.

In the matter of the piece of land situated at North Shore, known as "Humphery Evans'" grant, I would beg respectfully to point out to you that this matter has been before the Department for some months past, in the hope of an amicable settlement as far as we are concerned, so I urgently trust your early decision in the case. We claim the property. The Government say it is a cancelled grant. The property

property cannot possibly have two owners. The question then arises, to whom does the property belong. We had sold the property subject to a Torrens' title, but it was then found that the Government had lodged a *caveat* with the Registrar-General against it passing under the Act, so that unless this *caveat* is withdrawn, we have no alternative but to go to the Supreme Court, and we certainly do not want to go there, if it can be possibly avoided.

There are some people who have been regarding the lands, known as the Gore Estate, as a sort of no man's land. Some there are who would free select them by Volunteer Land Orders, but, in my humble opinion, the boundaries of what was once Gore's land are as well fixed as any boundaries in the Colony, from the fact that these lands were the subject of large litigation so far back as the year 1852, and in proof of this (should you favour me with an interview) I will show you a very comprehensive judgment by Chief Justice Stephen in our favour in the year 1853. There is also a more recent judgment in the case—the Attorney-General *versus* Boyle and another, made in the year 1870. This has reference to one of these cancelled grants (so-called). In this case the Supreme Court decided in our favour, so should we be obliged to go again to the Court, it will be only covering the same ground already twice gone over. In *re* the word "cancelled," that has been the cause of such grave doubts in the official mind, that word has reference to a date altogether anterior to the date of the title, or, in other words, before the lands became Gore's land, and because it was in the year 1819 that the legal estate passed into the Gore family. Another cause for doubt and confusion is the fact that the whole of Gore's instruments of title were surrendered to the Government of the day, in good faith, in order to have these old grants consolidated, but through some accident or other this was never carried out; but that fact does not, I presume, at all alter in any way Gore's original fixed boundaries. I am aware all this is very difficult for a Minister to deal with, I should say that it was more within the province of an Examiner of Titles. So I sincerely trust that you will allow the Land Titles Office to deal with our case. Trusting the favour of an interview when I call.

I beg, &c.,
JOHN J. MATTHEWS.

No. 36.

The Crown Solicitor to The Under Secretary for Lands.

Sir, Crown Solicitor's Office, Sydney, 5 August, 1886

I have the honor to return herewith the papers sent to me under B.C. of the 3rd instant with draft proclamation for resumption of four parcels of land in the parish of Willoughby, and to state that I do not think the minute "H.C., 21/6/86," gives sufficient information to warrant proclamation. The "Lands for Public Purposes Acquisition Act" only authorizes the resumption of land for quarries or works for procuring stone, gravel, earth, and other material when required, "for the construction of, or any of the purposes connected with, a public work or undertaking," mentioned in the preceeding part of the section, and there does not appear to be anything with the papers to show for what public work these quarries are required.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Forward to the Honorable the Secretary for Lands.—J.R., B.C., 10/8/86. Under Secretary for Lands. Submit the Crown Solicitor's letter of 5th instant to the Under Secretary.—R.H.D., 31/8/86. Mr. Marr.

[*Enclosure.*]

Notification of resumption of land under 44 Victoria No. 16.

New South Wales, } to wit. }

By His Excellency the Right Honorable Charles Robert Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

Governor.

WHEREAS the parcels of land hereinafter described are required for quarries and works for procuring stone, gravel, and earth.

Now, therefore, I, the Governor aforesaid, with the advice of the Executive Council, in pursuance of the power and authority given to or vested in me by the "Lands for Public Purposes Acquisition Act," by this notification published in the *Gazette* and a newspaper circulated in the Police District wherein the said land is situated, that is to say, in the *Sydney Morning Herald* newspaper, declare that the parcels of land hereinafter particularly described have been resumed for the public purposes hereinbefore mentioned, to the intent that upon the publication of this notification in the *Government Gazette* the said land shall forthwith become and be vested in the Minister for Public Works for the said Colony and his successor, on behalf of Her Majesty, for the purposes of the said Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rights-of-way, or other easements whatsoever; and that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the Minister for Public Works as a trustee with the powers in the said Act provided. And I declare that the following are the parcels of land hereinbefore referred to as resumed by this notification, that is to say:—

All that piece or parcel of land situated in the county of Cumberland, parish of Willoughby, area 30 acres: Commencing on the south-west boundary of H. Hacking's 30 acres, at the northernmost corner of George Woodcock's 12 acres 3 roods 36 perches; and bounded thence on the north-east by a line forming parts of the south-west boundaries of H. Hacking's 30 acres and Obadiah Ikin's 30 acres, north-westerly about 14 chains to a south-east boundary of Isaac Nicholl's 380 acres; thence on the north-west by that boundary south-westerly about 23 chains to the north-eastern side of a road along the north-eastern boundary of Edward Salamon's 21 acres 0 roods 34 perches; thence on the south-west by that side of that road south-easterly about 14 chains to the intersection of the south-westerly prolongation of the north-west boundary of George Woodcock's 12 acres 3 roods 36 perches aforesaid; and thence on the south-east by a line partly forming that north-west boundary north-easterly about 23 chains, to the point of commencement.

Also, that piece or parcel of land situated in the county of Cumberland, parish of Willoughby, area 25 acres: Commencing at the north-eastern boundary of T. Baker's 25 acres, at a point bearing north 41 degrees west 5 chains from the easternmost corner of that portion; and bounded thence on the south-east by the north-western side of a road 1 chain wide bearing north 49 degrees east 10 chains; thence on the north-east by a line bearing north 41 degrees west 25 chains; thence on the north-west by a line bearing south 49 degrees west 10 chains to the north-east boundary of J. Taylor's 25 acres; and thence on the south-west by part of the north-east boundary of that land and part of the north-east boundary of T. Baker's 25 acres aforesaid, being a line bearing south 41 degrees east 25 chains, to the point of commencement.

Also, that piece or parcel of land situated in the county of Cumberland, parish of Willoughby, area 25 acres: Commencing at the northernmost corner of Daniel Currey's 25 acres; and bounded thence on the south-east by the north-western boundary

boundary of that land south-westerly to the easternmost corner of John Sawyer's 25 acres; thence on the south-west by the north-eastern boundary of that land north-westerly to the southernmost corner of George Whitfield's 25 acres; thence on the north-west by the south-eastern boundary of that land north-easterly to the southernmost corner of John Robert's 25 acres; and thence on the north-east by a line south-easterly, to the point of commencement.

Also, that piece or parcel of land situated in the county of Cumberland, parish of Willoughby, area 25 acres: Commencing at the north-west corner of Peter Dargan's 25 acres; and bounded thence on the west by a line north to the south-eastern side of a road 1 chain wide along the south-eastern boundary of R. Adams' 5 acres; thence on the north by that side of that road north-easterly and the south-western side of a road 1 chain wide along the south-western boundary of J. C. Tucker's 5 acres 1 rood 30 perches south-easterly to the western side of a road along the west boundaries of D. M'Pherson's 6 acres and John Buchanan's 5 acres 2 roods 10 perches; thence on the east by that side of that road south to the north-east corner of Peter Dargin's 25 acres aforesaid; and thence on the south by the north boundary of that land west to the point of commencement,—exclusive of a road 1 chain wide passing through the portion in a south-easterly direction.

Given under my hand and seal, at Government House, Sydney, this day , in the year of our Lord one thousand eight hundred and eighty-six, and in the fiftieth year of Her Majesty's reign.

By His Excellency's Command.

God Save the Queen.

No. 37.

Notice under Real Property Act.

APPLICATIONS having been made to bring the lands hereunder described under the provisions of the Real Property Act, Certificates of Indefeasible Title will issue, unless *caveats* be lodged in Form B of the said Act, on or before the date named opposite each case respectively:—

Property—No. 6,764, Willoughby, 73 acres 2 roods 2 perches, on the Lane Cove Road, comprising the whole of 25 acres granted to George Whitfield, part of 25 acres granted to John Dark, and part of 25 acres granted to John Sawyer.

Name of Applicants—Francis Edward Rogers and Thomas Broughton.

Residence—Sydney.

Date up to and inclusive of which *caveats* may be lodged—6th January, 1887.

Diagrams delineating these lands may be inspected at the Registrar-General's Office, in Elizabeth-street, Sydney.—Dated this 2nd day of December, 1886, at the Registrar-General's Office, Sydney.

E. G. WARD,
Registrar-General.

No. 38.

The Deputy Registrar-General to The Surveyor-General.

Ordinary Notice to owner or occupier of contiguous land,—Application No. 6,764.

Sir, Land Titles Office, Sydney, 15 December, 1886.

Your attention is called to the accompanying notification of claim of Mr. F. E. Rogers and another, and tracing of land in respect of which he applies for Certificate of Title, especially with regard to the delineation of the boundaries, and to any question of possible encroachment on contiguous property.

You are reminded that if you have any opposing claim to allege it will be excluded unless *caveat* be lodged within the time limited.

The leading provisions of the law regarding *caveat* are noted below for your information; if required, a printed form may be obtained at this office.

Notwithstanding the provisions of the Act (s. 40) that rights-of-way or other easements shall not be extinguished by omission, it is desirable that if any exist they should be noted, and with that view persons claiming such rights are invited to disclose them.

I have, &c.,
HY. NEWCOMBE,
Deputy Registrar-General.

[*Enclosure.*]

Provisions of Real Property Act regarding *Caveat*.

1. The lodging of *caveat* suspends all further action until *caveat* be withdrawn, or until decision obtained from the Supreme Court. (Section 22 of original Act, and Section 9 of Amending Act.)
2. It is not now compulsory for a caveator to take proceedings to establish his title, as required by the 23rd section of the original Act, but the applicant may state a case for the opinion and direction of the Supreme Court, whose decision shall be conclusive on the parties interested and on the Registrar-General and Commissioners. (See section 9 of the Amending Act.)
3. *Caveat* may be withdrawn at any time by the caveator. (See section 81.)
4. Any person lodging *caveat* without reasonable cause is liable to make to any person, who may have sustained damage thereby, such compensation as may be just, which is recoverable in action at law. (Section 84.)
5. By omission to lodge, or allowing lapse of *caveat* after notice, or with knowledge of application, claim on assurance fund is forfeited. (Section 122.)

Urgent. Mr. District Surveyor Deering.—E.M., 17/12/86. Report to the Under Secretary for Lands. No. 3,682 of this date.—JOHN W. DEERING, 23/12/86.

No. 39.

The Metropolitan and Coast District Surveyor to The Under Secretary for Lands.

Francis Edward Rogers and Thomas Broughton applying for Certificate of Title to certain lands in the parish of Willoughby, county of Cumberland. Case No. 6,764, Registrar-General's Office; No. 3,682. 23rd December, 1886.

IT is recommended to the Under Secretary that a *caveat* should not be lodged by the Crown, in respect of the above application.

JOHN W. DEERING,
Metropolitan District Surveyor,
Department of Lands.

The Registrar-General.—C.O., B.C., 24/12/86. E.G.W., 29/12/86.

No. 40.

The Deputy Registrar-General to J. H. Clayton, Esq.

Case No. 6,832.—Application of Rogers and another.

Sir, Land Titles Office, Sydney, 5 January, 1887.

The following is a copy of the Principal Draftsman's preliminary report, viz. :—"This land was part of the subject of application 6,764, F. E. Rogers and another. My preliminary report in that case, dated 28th September, 1886, was as follows :—'A letter was received by the Registrar-General from the Minister for Lands, dated 5th May, 1885, requesting that certain grants were not to be dealt with, under the Real Property Act, G. Tilley's 25 acres was one of those mentioned. These instructions are still in force, and will require your consideration before the case can be further dealt with.' After receipt of the above the applicants withdrew the 25 acres from the above application, but have now lodged the present one. In Register Book No. 1, folio 136, across the grant to Tilley are these words, "Cancelled, and a new grant given at the Hawkesbury."

I have, &c.,

HY. NEWCOMBE,

Deputy Registrar-General.

No. 41.

J. H. Clayton, Esq., to The Deputy Registrar-General.

Application of Rogers and another (case No. 6,832).

Dear Sir, 136, Pitt-street, Sydney, 6 January, 1887.

In reply to the Chief Draftsman's report herein, I have the honor to submit the following facts for the consideration of the Examiners :—

A grant was issued to George Tilley of 25 acres, and on the copy the "cancellation" referred to by the draftsman was endorsed. No authority is shown for this endorsement being made, which was probably done by a clerk in the Survey Office, and even if it were authorized such endorsements would not be effective. The proper course, I submit, would be to obtain a surrender of the grant, and this not having been done the fee is outstanding and is now vested in the applicants.

I would call your attention to the fact that a similar endorsement was made on a grant to H. Lamb of 25 acres in the same district, and which the Minister for Lands requested the Registrar-General not to deal with, notwithstanding which a certificate of title has been issued for about 2½ acres of Lamb's grant.

The applicants are innocent purchasers, and I submit that, not having notice of the cancellation of the grant, they are not bound by such cancellation even if it were good.

I have, therefore, to request that the Registrar-General will at once proceed with the application.

I have, &c.,

JOHN H. CLAYTON

(*Per* A. J. Macauley).

No. 42.

The Deputy Registrar-General to J. H. Clayton, Esq.

Case No. 6,832.—Application, Rogers and another.

Sir, Land Titles Office, Sydney, 7 February, 1887.

Replying to your letter of the 6th ultimo, I have to inform you that, until the Principal Draftsman's preliminary report is satisfactorily complied with, the Examiners are unable to deal with the application.

I have, &c.,

HY. NEWCOMBE,

Deputy Registrar-General.

No. 43.

Mr. F. E. Rogers to The Secretary for Lands.

Sir, Chambers, 105, Elizabeth-street, Sydney, 14 May, 1887.

Would you allow me to bring under your notice the following facts :—On the 26th August, 1885, Sir Robert Wisdom, Mr. Thomas Broughton, and myself purchased about 100 acres of land on the North Shore. The conveyance was to Mr. Thomas Broughton and myself, we being trustees of Sir Robert Wisdom as to his share. In November of last year an application was made to bring this land under the Real Property Act, and an objection was taken by the Chief Draftsman in the Real Property Office, that, as to 25 acres of the land comprised in the conveyance to us, they were included in one of several grants which he had been directed by the Minister for Lands in May, 1885, not to deal with. (See copy of Principal Draftsman's report herewith.) Thereupon, so that no delay as to the remainder of the land might be caused, the application respecting the 25 acres was withdrawn, and my object in addressing you is, that some instructions may be given to the Registrar-General's Department, which will have the effect of either causing him to proceed with, and entertain the application or give us some decided answer so that steps may be taken by us to obtain a legal decision.

The three enclosures herewith will put you in full possession of the facts of the case, and will also show that we were innocent purchasers, and if, at your convenience, you can grant me the favour of a personal interview, I shall be very happy to give any further information in my power, if indeed anything further is required.

I have, &c.,

F. E. ROGERS.

In reference to the Minister's instructions of 13/6/87, on back of Registrar-General's letter of 30th May, 1887, Alienation 87-2,250, it is observed the whole case to the points involved is set out in my memorandum of 18th June, 1885, on Lands 85-1,486, Alienation herewith. The papers may perhaps be referred to the Crown Solicitor for the opinion of the Attorney-General as directed by Mr. Garrett.—R.H.D., 28/6/87.

Submitted.—S.F. Approved.—T.G., 6/7/87. The Crown Solicitor.—R.H.D. (for the Under Secretary for Lands), 11/6/87.

No. 44.

No. 44.

The Deputy Registrar-General to The Under Secretary for Lands.

Sir Registrar-General's Department, Land Titles Office, Sydney, 30 May, 1887.

In compliance with request in your letter of the 27th instant, I have the honor to return herewith application (No. 6,764) of Messrs. Rogers and Broughton, together with papers connected with the case.

I have, &c.,
HY. NEWCOMBE,
Deputy Registrar-General.

The facts of this case are fully set out in my memorandum of 18th June, 1885, Alienation 85–1,486, which led to the issue of the letter to the Registrar-General not to deal with Tilley's (among others) grant at the North Shore. One of the important points involved is whether the "Nullum Tempus Act," which bars the Crown after sixty years adverse possession is in force here. Upon this the present case and many others rest mainly. One of the parties to the present suit (Sir Robert Wisdom), when Attorney-General in 1880, had this peculiar feature before him, and gave a lengthy opinion upon the point (see enclosure herewith), to the effect that it was doubtful if that Act did apply to this Colony. Mr. Wisdom suggested special legislation. The point was referred to Mr. Attorney-General Dalley (now the Right Honorable W. B. Dalley, Q.C.), in connection with this very case of Tilley's. Mr. Dalley advised special legislation. I have gone fully through the circumstances again, and cannot recommend that the *caveat* be withdrawn, nor that the Crown give way in the least. Should the applicants move in the usual way for the removal of the *caveat* by the order of the Supreme Court, this Department should be advised, and the Crown represented by able counsel.—R.H.D., 13/6/87. Submitted.—C.O., 13/6/87.

I concur with previous recommendation. See it is strictly adhered to, and then have the question of law stated for the opinion of the Honorable the Attorney-General.—T.G., 13/6/87. Inform Mr. Rogers that the Minister declines to remove the *caveat*. 2nd. Inform Registrar-General that the Minister wishes the terms of Lands' letter of 5th May, 1885, No. 85,513 Alienation, adhered to.—R.H.D., 14/6/87. Mr. Rogers and Registrar-General informed, 22/6/87.

[*Enclosure.*]

Supreme Court, Friday, 20th May, 1887.

In Banco. (Before their Honors the Chief Justice, Mr. Justice Faucett, and Mr. Justice Innes).

In *re* Rogers and Broughton.

In the matter of the application of F. E. Rogers and Thomas Broughton, to bring certain land under the Real Property Act, and in the matter of the *caveat* lodged by John Joseph Matthews and John Boyle, no case having been stated by Boyle, and the case stated by Matthews not disclosing any title, their Honors, on the motion of Mr. C. J. Manning, directed the *caveats* to be removed, and a certificate to be issued to the applicants.

[From *Daily Telegraph*, 21stMay, 1887.]

No. 45.

The Under Secretary for Lands to The Registrar-General.

Sir, Department of Lands, Sydney, 22 June, 1887.

Referring to your letter of 30th ultimo (87,509), I have the honor to inform you that the Secretary for Lands desires the terms of letter from this Department, bearing date 5th May, 1885 (No. 85,513 Alienation), in reference to certain grants at North Shore, adhered to.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 46.

The Under Secretary for Lands to Mr. F. E. Rogers.

Sir, Department of Lands, Sydney, 22 June, 1887.

I have the honor to acknowledge receipt of your letter of 14th ultimo, in reference to the application of Sir Robert Wisdom, Mr. Thomas Boughton, and yourself, to bring certain land at North Shore, known as Tilley's Grant, under the provisions of the Real Proyerty Act, and to inform you that, after consideration of the matter, the Secretary for Lands declines to remove the *caveat* lodged by this Department against the granting of the application.

I have, &c.,

[*Enclosure.*]

Remarks :—

I CONCUR with the recommendation in minute of 13/6/87, signed R.H.D., that the *caveat* should not be removed, and an authoritative decision to be obtained as to—

(1.) The effect of the supposed cancellation of the grants.

(2.) The validity or invalidity in this Colony of the Nullum Tempus Act?

B.R.W., 18/7/87.

No. 48.

The Registrar-General to The Under Secretary for Lands.

Special Notice of Application.

Sir, Land Titles Office, Sydney, 10 August, 1887.

1. Your attention is called to the accompanying notification of claim of Messrs. Francis Edward Rogers and Thomas Broughton, and tracing of land in respect of which they apply for certificate of title, in order that you may lodge *caveat* within the time limited if you have any opposing claim to allege, as otherwise such claim will be finally excluded.

2. The causes which have lead to this special notice being given to you may be briefly stated as follows :—In the month of July, 1882, two applications were made to bring under the provisions of the Real Property Act, two parcels of land, being portions of what is commonly known as the Gore Estate, North Shore, in the parish of Willoughby, and part of 25 acres originally granted to Henry Lamb, by grant dated 19th November, 1794, the numbers of such applications being respectively 5,599 and 5,600. Though the three Examiners of Title in charge of such cases had before them the fact that there was written across the record copy of grant the word, "cancelled," they came to the conclusion, on a full consideration of the matter, that, there being then nothing to show when, how, or why such word was so written, they were not entitled to consider such an endorsement as affecting the title of the applicants, and accordingly reported in favour of the titles of the applicants, and the titles being passed by the Board of Commissioners, the usual advertisements were inserted in the Gazette and other necessary papers; but though a *caveat* was, at the instance of the Under Secretary for Lands, and on the ground that the grant was cancelled, lodged by the Registrar-General in case No. 5,599, a similar *caveat* was not lodged in case No. 5,600, and a certificate of title for the land applied for therein was duly issued. With regard to case No. 5,599 nothing seems to have been possible, also on account of another *caveat* which was lodged against it, and is still in force. In the month of August, 1886, Messrs. Rogers and Broughton lodged an application (No. 6,764) in which they sought to bring under the Act another portion of the Gore Estate, containing 99 acres 14 perches, including 25 acres originally granted to George Whitfield, parts of two grants of 25 acres each, to John Dark and John Sawyer, and the whole of 25 acres originally granted to George Tilley, but in consequence of the Principal Draftsman having made a preliminary report referring to the letter of instruction (5th May, 1885), under which the Registrar-General entered the *caveat* in case 5,599, the applicants withdrew the application so far as concerned Tilley's grant, so as not to delay the progress of the matter as to the other grants, and eventually the Principal Draftsman, having reported as to such other grants, the Examiners of Title in charge of the matter made their report in favour of the title of Messrs. Rogers and Broughton to such remaining lands, their title thereto, with the exception of the question as to the cancellation of grant being the same as their title to Tilley's grant, and afterwards, the application having been duly passed by the Commissioners, and advertised as usual, and two *caveats* by other claimants had been disposed of by the Supreme Court, a certificate of title was issued to Messrs. Rogers and Broughton. Not long after withdrawing the application in case 6,764 as to Tilley's grant, Messrs. Rogers and Broughton lodged a fresh application (No. 6,832) in which they sought to bring under the "Act" only the land so originally granted to George Tilley (grant dated 19th November, 1794). Upon the case coming before the Principal Draftsman for his report he made a preliminary (5th January, 1887) in which he referred to the Under Secretary for Lands' letter of 5th May, 1885, in which it was requested that certain grants, including George Tilley's 25-acre grant, should not be dealt with under the Real Property Act, and stating further that across the record copy of such grant were written the words, "Cancelled, and a new grant given at the Hawkesbury." A copy of this report having been sent to the applicant's solicitor, the correspondence shown by the copy letters of the Deputy Registrar-General and Mr. Clayton, of 6th January, 1887, 7th February, 1887, 8th February, 1887, 9th February, 1887. Subsequently, the Registrar-General having been urged to do something in the matter, either by refusing in writing to proceed with the matter, or by asking the Examiners of Titles to report on the matter so that it might come before the Board, placed the matter before the Examiners of Titles, and requested them to advise on the matter or deal with it as they might see fit. The Examiners so charged, having carefully considered all the matters herein referred, made their report in favour of the title of Messrs. Rogers and Broughton, subject to this special notice being given, so that you might be in a position to test the question of the cancellation of the grant in a proper way.

Herewith I send you copies of the Principal Draftsman's preliminary reports in cases 6,764 and 6,832, also of the correspondence referred to.

I might, perhaps, call your attention to sections 21, 22, 23, 24, 81, 82, 83, 84, and 122 of the Act 26 Victoria No. 9, and sections 4 and 9 of the Act 41 Victoria No. 18.

I have, &c.,
E. G. WARD,
Registrar-General.

[*Enclosures.*]

Case 6832—Application, Rogers and another.

Sir, Land Titles Office, Sydney, 9 February, 1887.

Replying to your letter of yesterday's date, I beg to inform you that the Examiners have nothing more to communicate than what is contained in my letter to you of the 7th instant.

I have, &c.,
HY. NEWCOMBE,
Deputy Registrar-General.

John H. Clayton, Esq., Solicitor, Pitt-street,

Re

Re Application of Rogers and another—Case No. 6,832.

Henry Newcombe, Esq., Deputy Registrar-General, Sydney,—

Dear Sir, 136, Pitt-street, Sydney, 8 February, 1887.

I have the honor to reply to yours of the 7th February instant, to call your attention to the 13th section of the Real Property Act, 26 Victoria, No. 9.

I contend that the land, the subject matter of this application, was alienated in accordance with that section, and so remains alienated from the Crown at the present time.

The Examiners have already taken this view in another application respecting Lamb's grant, and in the same district.

The Examiners have evidently overlooked my former reference to this application, as I feel sure precedent in the office will be followed.

The notice from the Minister for Lands or Surveyor-General in your office is entitled to no more consideration than any other member of the public. Either of these persons has a right to enter a *caveat* to the application when passed if so advised.

I need not point out if a similar notice was forwarded to your office by any member of the public the course I now suggest is the usual and only course adopted.

I would respectfully request, if the Examiners take a different view of the application, that a definite refusal may be recorded, to deal with the lands as proper subject matter for a Real Property Act application.

Under such circumstances an applicant can follow the other sections of the Act.

I have, &c.,
JOHN HORATIO CLAYTON
(*Per* A. J. MACAULEY).

Application No. 6,832—Principal Draftsman's preliminary Report.

THIS land was part of the subject of application 6,764, F. E. Rogers and another. My preliminary report (in that case dated 28th September, 1886), was a follows :—"A letter was received by the Registrar-General from the Minister for Lands, dated the 5th May, 1885, requesting that certain grants were not to be dealt with under the Real Property Act. G. Tilley's 25 acres was one of these mentiondd. These instructions are still in force, and will require your consideration before the case can be further dealt with." After receipt of the above, the applicants withdrew the 25 acres from the above application, but have now lodged the present one.

In Register, book No. 1, folio 136, across the grant to Tilley are these words, "Cancelled, and a new grant at the Hawkesbury."

ROBERT M. PEARSON,
5th January, 1887. Principal Draftsman.

Application No. 6,764.—Principal Draftsman's preliminary Report.

A LETTER was received by the Registrar-General from the Minister for Lands, dated the 5th May, 1885, requesting that certain grants were not to be dealt with under the Real Property Act. G. Tilley's 25 acres, part of the subject of this application was one of them. These instructions are still in force, and will require your consideration before further proceeding with the application.

ROBERT. M. PEARSON,
28th September, 1886. Principal Draftsman.

Memorandum.

Land Titles Office, Sydney.

APPLICATION 6,764 included Darks, Whitfield, and Sawyer's grants ; the certificate for this has issued, volume 836, folio 8.

Application 6,832 has passed for Tilley's grant, full particulars of which will reach the Under Secretary by letter from this office to-morrow.

R. M. P., 11/8/87.

No *caveat* was lodged in case 6,764 by Crown. Mr. Deering, by minute dated 23rd December, 1886, No. 3,682, stated that one should not be lodged. This minute was forwarded to Registrar-General.—R.M.P.

Notice under Real Property Act.

APPLICATIONS having been made to bring the lands hereunder described under the provisions of the Real Property Act, certificates of indefeasible title will issue, unless *caveats* be lodged in form B of the said Act on or before the date named opposite each case respectively.

Property—No. 6,832, Willoughby, 25 acres 2 roods 23½ perches, adjoining Sawyer's, Dark's, Whitfield's, and Robert's grants of 25 acres each, and the recreation reserve, originally granted to G. Tilley as 25 acres.

Name of applicants—Francis Edward Rogers and Thomas Broughton.

Residence—Sydney.

Date up to and inclusive of which *caveats* may be lodged—29th September, 1887.

Diagrams delineating these lands may be inspected at the Registrar-General's office, in Elizabeth-street, Sydney.

Dated this 21st day of July, 1887, at the Registrar-General's Office, Sydney.

E. G. WARD,
Registrar-General.

No. 49.

Office Memorandum.

Copy of Minute on Papers, Alienation 87–3,644, in connection with Real Property Application, No. 6,832.

CAVEAT.—Tilley's grant against dealing with this land, this Department, by letter of 15th May, 1885, to the Registrar-General, lodged a *caveat*. In the case of application No. 6,764, Real Property application, Messrs. Rogers and Broughton applied for certificate of title for this land among others. Tilley's grant was, however, withdrawn by Messrs. Rogers and Broughton from that application, in consequence of Lamb's *caveat* of 15th May, 1885. Messrs. Rogers and Broughton now apply for this land (Tilley's) in a fresh application, and that application has apparently passed, notwithstanding the *caveat* of this Department, of the 15th May, 1885, and of a repetition thereof by Lamb's letter to Registrar-General, of 22nd June last, No. 87–2,250 Alienation. That letter was the outcome of an opinion of the Minister for Lands, dated 13th June, 1887, expressed to the effect that the *caveat* should not be withdrawn, and that the opinion of the Attorney-General should be obtained. As regards the continuance of the *caveat* of 15th May, 1885, Mr. Secretary Garrett stated : "See that it is strictly adhered to"; hence the letter to Registrar-General, of 22nd June last. On reference to the Attorney-General, the Honorable B. R. Wise, under date 18th July, 1887,

1887, says: "I concur that the *caveats* should not be removed." It is not clear but that the *caveat* of 15th May, 1885, has been ignored. It is suggested that, on behalf of this Department, the Registrar-General do lodge a fresh *caveat* in this case, and also invited to cause the terms of letters of 15th May, 1885, and 22nd June last, to be strictly observed in the case of the other three blocks of land referred to therein.

As the caveator (the Crown in this case) is not compelled to take proceedings to establish title (or to defeat the applicants), Messrs. Rogers and Broughton, the applicants, should, if they think fit, take steps to state a case for the opinion and direction of the Supreme Court, and, in the event of them doing so, the Registrar-General should be requested to acquaint this Department, so that this Department may take steps to be represented, to express its view of the question.

R.H.D., 16/8/87.

Submitted for approval. I think the action taken by the Registrar-General is to be much regretted, and he should be urged not to pursue a similar course in future, unless legally compelled to do so.—C.O., 17/8/87. Approved.—T.G., 17/8/87.

No. 50.

I. E. Ives, Esq., M.P., to The Secretary for Lands.

Sir, Argyle Bonded and Free Warehouse, Sydney, 30 September, 1887.

The Mayor of North Willoughby informs me application was made some time ago, asking that 30 acres of land, known as Wright's grant, might be dedicated for a public reserve.

I enclose a tracing showing the position of the land, and have visited the locality, and consider it would be wise to grant the request.

I also enclose copy of a letter from Mr. Edward J. H. Knapp, Licensed Surveyor, to Mr. Ludovici, one of the aldermen. In this Mr. Knapp clearly traces the history of the land, and shows how it reverted to the Crown.

The district is a very large one, and is daily becoming more populated.

I have the honor to request you will give this matter your most favourable consideration.

Yours, &c.,

I. E. IVES.

Obtain report.—T.G., 30/9/87. Any trace of the application herein mentioned?—R.H.D., 6/10/87. Mr. Ferris. No.—J.R.F., 6/10/87. As regards the title to this land, attention is invited to my memorandum of 18th June, 1885, on Alienation 85-1,466, and to memorandums on Alienation 87-2,250.—R.H.D., 14/10/87. Submitted.

This Department has always held that the land in question is Crown land, and it would appear that the claimants cannot obtain a title. Submitted that the area be dedicated as a public reserve.—S.F., 14/11/87.

Verbal instructions to report from Minister through the Assistant Under Secretary. Report No. 3,000 of this date herewith.—JOHN W. DEERING, 21/11/87.

[*Enclosure.*]

Copy of a letter received from Mr. Alderman Ludovici, for the information of the Borough Council, North Willoughby, *re* 30 acres of land called Wright's grant, required for a reserve for recreation for the River Ward.

Mr. J. C. Ludovici, Swan-street, Sydney,— Wentworth Court, Elizabeth-street, Sydney, 6 March, 1883.

Sir,

Re that portion or land, 30 acres in extent, originally granted to William Wright, on the 3rd of December, 1794, I beg to inform you that when perusing an old field-book by my late father when he was in the year 1836 making a survey for Mr. Charles Nichols, I came across a memorandum to this effect, "Wright's 30 acres, exchanged and deed torn up."

I have to report that, at your request, I have searched the records of the Surveyor-General's Department, to ascertain the truth of this memorandum.

I beg to inform you that the result of my examination has been to verify the memorandum.

This will be readily perceived on perusing the descriptions hereunder, which have been copied by myself from the *Cumberland Registers* in the Surveyor-General's Department.

Cumberland Register No. 1, folio 41.—William Wright, 30 acres, Hunter's Hill; granted by Francis Grose, 3rd December, 1794, at a quit-rent of 1s. a year, to commence the 3rd December, 1799, and to be known as Wright's farm; laying and situate in Lane Cove, in the district of Hunter's Hill. Remarks—Exchanged by William Wright with Obadiah Ikin for William Baker's farm; then sold on the 3rd August, 1797, to John Holdsworth for £3, who sells it on the 26th May, 1804, to Thomas Randall; he parts with it on the 17th day of October, 1805, to Edward Quinn; and it has now been surrendered by William Sherwin in consideration of an 800-acre farm promised him in the Parramatta district, and not yet registered. Torn up by me, this 15th September, 1821.—F. GOULBURN.

Cumberland Register No. 1, folio 41.—William Baker, 40-acre grant, Toongabbie district of Concord, granted by F. Grose, 13th December, 1794, at a quit-rent of 1s. a year, to commence 13th December, 1794, and to be known as Baker's farm. Laying and situate in the district of Toongabbie.

William Sherwin, 1,165-acre grant, parish of St. John, granted by Rolph Darling, 25th June, 1831; quit-rent, £1 3s. a year, to commence 30th December, 1826, being consolidation, &c., &c.

It so happens that I am intimately acquainted with all these grants, having recently made a survey for you adjoining the land formerly granted to William Wright, surveyed and subdivided for Messrs. Carter, Abigail, and others, Baker's grant at Toongabbie, and laid out a number of roads and streets through Sherwin's consolidated grant for the mayor of Prospect and Sherwood, so that I personally know of the existence of Baker's grant given in exchange for the surrender of William Wright's 30 acres in question.

Seized with these facts, I have no hesitation in giving it as my professional opinion that this land is now vested in the Crown.

Moreover, it is a significant fact that my late father, who was in 1836 acting as surveyor to the Nichols family, did not consider it as a part of the estate, else he would most assuredly have subdivided it, and not excluded it from the elaborate survey he then made.

Yours, &c.,

EDWARD J. H. KNAPP,
Licensed Surveyor.

With letter from Isaac Ellis Ives, 30/9/87.

No. 51.

No. 51.

The Metropolitan and Coast District Surveyor Deering to The Under Secretary for Lands.

J. E. Ives, M.P., applying that about 30 acres, known as Wright's grant, should be dedicated for the purposes of public recreation No. 3,000, 22nd November, 1887.

Department of Lands, Sydney.

1. Within one mile of the above land there is a reserve for recreation, embracing a total area of no less than 107 acres of very valuable land, but now dedicated to the foregoing purpose. Probably the applicant is unaware of this extensive and valuable reserve, and his attention might be invited thereto.

2. The land known as Wright's being an old cancelled grant, is worth about £5,000 and should, I submit, be now surveyed into portions of about 1 acre each, and be offered forthwith at public auction. The distance from Milson's Point is only about 4½ miles.

JOHN W. DEERING,
Metropolitan District Surveyor.

Submitted special. This report was called for by Minister's instruction (*vide* memorandum of Mr. Deering, of 21st November, 1887, on 12,702).—R.H.D., 30/11/87. S.F. Inform Mr. Ives, M.P., of facts set out in this report. Submit plan of subdivision.—T.G., 10/12/87. Correspondence Branch. Mr. Ives, M.P., informed, 20/12/87. For plan of subdivision, Mr. District Surveyor Deering.—R.H.D. (for Under Secretary), 21/12/87. Wright's 30 acres cancelled grant, parish of Willoughby, county of Cumberland. Ms. 87-14,973. Mr. Surveyor Gordon for proposed design. Show position of Pearce's corner Railway.—JOHN W. DEERING, 29/12/87, No. 3,288. Mr. Surveyor Gordon. Received.—W.M.G., 4/1/88. Design prepared and forwarded under cover of my letter, 88-4, of the 14th February, 1888.—W. M. GORDON.

No. 52.

Mr. Licensed-Surveyor Knapp to The Colonial Secretary.

Re Crown land, parish of Willoughby, North Shore.

Nos. 1, 22, and 23, Wentworth Court, Elizabeth-street, Sydney, 28 November, 1887.

Dear Sir Henry Parkes,

You must pardon me again addressing you anent Crown land referred to in my letter of 15th August last, *re* which I have your note of 6th September, with Mr. Garrett's memorandum of 5th of same month, in which he says, "that we have done, and are doing, all that can be done to prevent the land being improperly alienated."

Since receipt thereof I have learned that some of the persons named in my letter of 15th August are endeavouring to secure, in addition to the land therein specified, a block of 30 acres belonging to the Crown, once granted to William Wright, but since cancelled; for proof of cancellation I enclose extract from Cumberland Register in the Surveyor-General's Office.

Now, as it is well known in the Lands Department that the several blocks of land which I have named are Crown lands, and on more than one occasion attempts have been made to have them improperly alienated, I beg to suggest that the shortest way of putting a check on these endeavours will be for the Government to forthwith fence in and take possession.

I feel confident if this be not done in some way or other the land will be lost from the public estate, this is my reason for pressing on you the necessity for prompt action.

I know your time is fully occupied, but this matter is of such moment to your constituents I cannot refrain from reminding you.

Yours, &c.,
EDWARD J. H. KNAPP.

Secretary for Lands.—H.P., 28/11/87. Acknowledge, and say that I have sent on the papers to the Secretary for Lands.—H.P. E. J. H. Knapp, Esq., 29/11/87. The Under Secretary for Lands. C.W., Principal Under Secretary, B.C., 29/11/87.

Mr. M'Kern to state if the enclosed information, *re* King's grant is all that can be given from his books, and if anything further can be gleaned from record copy in Colonial Secretary's Office.—R.L.

Mr. Farnsworth,—Check the information contained in the enclosures to Mr. Knapp's letter.—F.M'K., 14/12/87. The information is correct, and is the fullest that can be obtained from the Register.—W.F., 14/12/87. Mr. De Low—F.M'K., 14/12/87.

Urgent. Please attach a sketch or a lithograph showing prominently King's grant, referred to by Mr. Knapp, and say if your plans will throw any light on the statement in connection with King's 30 acres.—R.H.D. (for Under Secretary), 30/12/87. Mr. District-Surveyor Deering.

Wright's grant.—J.W.D.

Action has already been taken in the matter of Wright's 30 acres, upon papers, "Miscellaneous, 87-14,973." Instructions have already been issued by me, No. 3,288, of 29th December, 1887, for the subdivision of the above land prior to offering at auction. Mr. Knapp perhaps might be so informed.—JOHN W. DEERING, 4/1/88. The Under Secretary.

Are Wright's and King's grants one and the same?—R.H.D., 10/1/88. Urgent. Mr. M'Kern. Mr. Farnsworth.—F.M'K., 12/1/88. Urgent. No; Wright's grant is registered volume 1, folio 140; and King's, volume 1, folio 141.—F.M'K., 13/1/88. Mr. De Low.

It seems very doubtful if they are one and the same. King's name, however, does not appear on Willoughby maps—the descriptions in Register, volume 1, folios 140 and 141, seem to throw no light on the point.—R.H.D. (for the Under Secretary), 19/1/88. Mr. Deering.

Wright's grant and King's grant are different.—JOHN W. DEERING, 20/1/88. Mr. De Low. Knapp refers to Wright's grant, not King's.—J.W.D., 20/1/88. King's grant was cancelled, and has no existence.—J. W. DEERING, 3/2/88. It was never supposed they were the same by me.—J. W. DEERING, 3/2/88.

Extracts from Cumberland Registers in the Surveyor-General's Office.

George Tilley's grant ; 25 acres ; dated 19th November, 1794 :—

"Laying and situate in Lane Cove in the district of Hunter's Hill. Cancelled and a grant given at the Hawkesbury. Mr. William Marr, proprietor, 14 May, 1822." (See Cumberland Register, No. 1, folio 37.)

H. Lamb's grant ; 25 acres ; date, 19th November, 1794 :—

"Laying and situate in Lane Cove, in the district of Hunter's Hill. Cancelled." (See Cumberland Register, No. 1, folio 38.)

Robert King's grant ; 30 acres ; date, 3rd December, 1794 :—

"Laying and situate in the Lane Cove, district of Hunter's Hill. Cancelled." (See Cumberland Register, No. 1, folio 41.)

Humphery Evans' grant ; 25 acres ; date, 3rd December, 1794 :—

"Laying and situate in Lane Cove, in the district of Hunter's Hill. Cancelled, this grant being found in the Secretary's Office with a note thereon. Demised to the Crown, 15th August. 1804.—D. D. MANN, clerk." (See Cumberland Register, No. 1, folio 41.)

No. 53.

The Under Secretary for Lands to I. E. Ives, Esq., M.P.

Sir, Department of Lands, Sydney, 20 December, 1887.

Referring to your letter of the 30th September last, on behalf of the Borough Council of North Willoughby, urging that certain land, known as Wright's Grant, may be dedicated for the purposes of public recreation, I have the honor to inform you that within 1 mile of this land is a reserve for public recreation embracing a total area of no less than 107 acres of very valuable land, and in view of this the Secretary for Lands has approved of the area known as Wright's Grant being subdivided, and offered for sale at auction.

I have, &c.,

F. H. WILSON

(For the Under Secretary).

No. 54.

Mr. Surveyor William Matheson Gordon to Mr. Metropolitan District Surveyor Deering.

Sir, "Adace Villa," North Shore, 14 February, 1888.

In accordance with your instruction No. 87–3,288, of the 29th December, 1887, I have the honor to transmit herewith a tracing showing the design for subdivision in the parish of Willoughby and county of Cumberland :—

1st. The proposed design contains twenty-nine portions, varying in area from 2 roods 20 perches to 1 acre, the whole embracing an area of 25 acres cancelled grant to W. Wright.

2nd. The roads at present laid out are all practicable. Burns' Bay, Tambourine Bay Roads, and the Government Road on the north-west are formed and cleared.

3rd. An application has been made by one Broughton to bring this cancelled grant under the Real Property Act, under application No. 7,019.

4th. The grant consists of slightly undulating land, good soil, well timbered, suitable for orchard and building sites, and good road frontages.

The grant is 1 mile distant from the North Shore and Pearce's Corner railway line, now in course of construction, and only a quarter of a mile from the proposed branch line to Ball's Head.

5th. Adjoining land, and much inferior, has brought from £200 to £250 per acre.

6th. On the design tracing I have shown a local sketch, showing the relative positions of railway lines, Lane Cove River, and the main roads, also St. Leonards.

I have, &c.,

W. M. GORDON,

Government Surveyor.

Design submitted for approval.—JOHN W. DEERING, 6/3/88. The Under Secretary. Mr. De Low,—I think there are former papers relating to the question of dealing with Wright's cancelled grant. Please place them herewith, and state what was finally decided. Urgent.—C.O., 10/3/88. 1st. Yes ; Alienation 87–2,250 herewith. Please see also copy herewith of Alienation 87–3,657. 2nd. It was decided on Ms. 87–14,973 to have a subdivision plan of Wright's submitted, with a view to auction sale. I have learnt that Mr. Broughton has applied under Real Property Appropriation, 7,019, to have titles issued to him of all the four blocks herein referred to.—R.H.D., 14/3/88. Mr. Broughton has for a long time endeavoured to obtain a title to the land, but has failed. He appears now to be making a fresh effort. Submitted as to whether the sale should be proceeded with.—C.O., 16/3/88. Proceed with sale.—T.G., 16/3/88.

No. 55.

The Registrar-General to The Under Secretary for Lands.

Application No. 6,832.—F. E. Rogers and Thomas Broughton.

Sir, Registrar-General's Department, Land Titles Office, Sydney, 17 March, 1888.

Referring to my notice of the 10th August, 1887, addressed to you on the subject of the above-named case, I have the honor to inform you that the applicants above named have obtained an order from the Court that I should state my case. As the *caveat* lodged by me was lodged at the instigation of the Minister

Minister for Lands, I have the honor to inform you that the full Court did, yesterday, fix Wednesday next for the hearing of the cause. It will therefore be necessary that immediate instructions be given to the Crown Solicitor in this matter.

I have, &c.,
E. G. WARD,
Registrar-General.

This refers to Tilley's 25 acres. Statement of the Department's views herewith. Perhaps the Crown Solicitor may be requested to take the necessary steps.—C.O., 20/3/88. Forwarded to the Crown Solicitor.—C.O., B.C., 20/3/88.

[*Enclosures.*]

In the Supreme Court of New South Wales, for Friday, 23rd March, 1888.

In the matter of the application of Francis Edward Rogers and Thomas Broughton, both of Sydney, in the Colony of New South Wales, gentlemen, to bring certain lands situate in the parish of Willoughby, in the county of Cumberland, in the Colony aforesaid, under the provision of the Real Property Act.

And of the *caveat* lodged against the granting of the said application by the Registrar-General of New South Wales for and on behalf of the Under Secretary for Lands of the said Colony.

And in the matter of the Real Property Act, 26 Victoria, No. 9, and of the Amending Act, 41 Victoria, No. 18.

Notice of Motion—15/3/88—Quarter-past 2 p.m.—E.G.W.

JOHN H. CLAYTON.

In the Supreme Court of New South Wales.

In the matter of the application of Francis Edward Rogers and Thomas Broughton, both of Sydney, in the Colony of New South Wales, gentlemen, to bring certain land situate in the parish of Willoughby, in the county of Cumberland, in the Colony aforesaid, under the provision of the Real Property Act.

And of the *caveat* against the granting of the said application lodged by the Registrar-General of New South Wales for and on behalf of the Under Secretary for Lands of the said Colony.

And in the matter of the Real Property Act, 26 Victoria, No. 9, and of the Amending Act, 41 Victoria, No. 18.

Take notice that an application will be made on behalf of the above-mentioned Francis Edward Rogers and Thomas Broughton to the Court sitting in Banco at the Court-house, King-street, Sydney, on Friday, the 16th day of March instant, at 10 of the clock in the forenoon, or as soon thereafter as counsel can be heard in that behalf, for an order directing the Registrar-General, the above-named caveator, to lodge in the Court, on or before a certain day, a case on his own behalf, stating whether he claims in his own right or under another person, together with such other particulars (if any) as the Court shall think fit to order.

Dated this 15th day of March, A.D., 1888.

JOHN HORATIO CLAYTON
(Attorney for FRANCIS EDWARD ROGERS and THOMAS BROUGHTON),
136, Pitt-street, Sydney.

Real Property Application 6,832, by F. E. Rogers and Thomas Broughton, for Certificate of Title for 25 acres of land at Willoughby, county of Cumberland, known as George Tilley's 25 acres.

Statement of claim to the land put forth by the Crown.

1st. That the Crown grant of the 19th November, 1794, was cancelled by (and with the consent inferentially of) the grantee. The Deed Register, Cumberland Register, volume No. 1, folio 37, containing an entry, "Cancelled, and a new grant given at the Hawkesbury."

That the entry above named bears evidence of its ancient character.

That the copy at the Registrar-General's Office contains a similar endorsement.

That a grant did issue to George Tilley, for land at Mulgrave Place, near Windsor. The grant bears date, 10th May, 1798, and the land is called Tilley Farm, and was described as being bounded on the north side by Ross, and on the south side by Lamb's Farm.

That the Register of Deeds in the Lands Department shows that the deed of 10th May, 1798, of land at Mulgrave Place, was delivered to George Tilley in the presence of N. M'Kellar and C. Grimes.

That there is no evidence put forth by the applicant that the recognized and authorized forms of revesting the land in the Crown, as would have been required in England at the time (1794–1798) were demanded in this Colony at that time, and that viewing the then circumstances of the Colony, the custom then prevailing, as shown in several other cases, of exchanging lands with the Crown by simply delivering up to the Governor the grant and receiving a fresh one, was then held to be sufficient and effective, and that the entries of "cancellation" of grant in the early Registers, with similar endorsements on copy of grant, disclosing evidence of their ancient character, were held to be sufficient for years after, and were not called in question until recent years.

2nd. That the applicants and those through whom they are alleged to derive have not been in undisturbed possession for a number of years; that the right of any person to deal with the land has always been disputed by the Crown, and was never recognized when, many years ago (prior to 1840), efforts were made to consolidate what was called the "Gore Hill" Estate and later known as the "Artamon" Estate.

That even if applicants had been in undisturbed possession for sixty years, the right of the Crown to the land is not barred thereby, as the Supreme Court, it is thought, has not yet given a decision that the "Nullum Tempus Act," 9 George III, chaper 16, is in force here.

3rd. That applicants have not tendered any evidence that the grant has been "lost," but simply believe that is because it is not in their possession. They do not tender any evidence that the grant has been seen or heard of since 1798. That from similar cases now before the Department it is held the Crown grant was torn up at the time by the authority of the then Governor, a practice then followed.

CHARLES OLIVER, 20/3/88.

No. 56.

Applicant's Case.

In the Supreme Court of New South Wales.

In the matter of the application of Francis Edward Rogers and Thomas Broughton, both of Sydney, in the Colony of New South Wales, gentlemen, to bring certain land situate in the parish of Willoughby, in the county of Cumberland, in the Colony aforesaid under the provisions of the Real Property Act; and of the *caveat* against the granting of the said application lodged by the Registrar-General of New South Wales for and on behalf of the Under Secretary for Lands of the said Colony.

And in the matter of the Real Property Act, 26 Victoria, No. 9, and of the Amending Act, 41 Victoria, No. 18.

Copy, applicant's case

J. H. CLAYTON.

By

By His Excellency Francis Grose, Esquire, Lieutenant-Governor in and over His Majesty's Territory of New South Wales and its Dependencies, &c., &c., &c.

WHEREAS full power and authority for granting lands in the territory of New South Wales, to such persons as may be desirous of becoming settlers therein, is vested in His Majesty's Captain-General and Governor-in-Chief (or, in his absence, the Lieutenant-Governor for the time being), in and over the said territory and its dependencies, by His Majesty's instructions under the Royal Sign Manuel, bearing date respectively the twenty-fifth day of April, one thousand seven hundred and eighty-seven, and the twentieth day of August, one thousand seven hundred and eighty-nine. In pursuance of the power and authority vested in me as aforesaid, I do by these presents give and grant unto George Tilley, his heirs and assigns, to have and to hold for ever, twenty-five acres of land, to be known by the name of Tilley Farm, lying and situate in Lane Cove, in the district of Hunter's Hill, the said twenty-five acres of land to be had and held by him the said George Tilley, his heirs and assigns, free from all fees, taxes, quit-rents, and other acknowledgments, for the space of five years from the date of these presents, provided that the said George Tilley, his heirs, or assigns shall reside within the same and proceed to the improvement and cultivation thereof. Such timber as may be growing, or to grow hereafter, upon the said land, which may be deemed fit for naval purposes, to be reserved for the use of the Crown, and paying an annual quit-rent of one shilling, after the expiration of the term or time of five years before mentioned. In testimony whereof, I have hereunto set my hand and the seal of the Territory, at Sydney, in the Territory of New South Wales, this nineteenth day of November, in the year of our Lord one thousand seven hundred and ninety-four.

Signed and sealed in our presence,— FRANCIS GROSE.

T. FOVEAUX.
THOMAS ROWLEY.
EDWARD LAING.

Cancelled, and a new grant given at the Hawkesbury.

Registered in the Secretary's office.—DAVID COLLINS, Secretary to the Governor.

In the Supreme Court of New South Wales.

IN the matter of the application of Francis Edward Rogers and Thomas Broughton, both of Sydney, in the Colony of New South Wales, gentlemen, to bring certain land situate in the parish of Willoughby, in the county of Cumberland, in the Colony aforesaid, under the provisions of the Real Property Act.

And of the *caveat* against the granting of the said application, lodged by the Registrar-General of New South Wales, for and on behalf of the Under Secretary for Lands, of the said Colony.

And in the matter of the Real Property Act, 26 Victoria, No. 9.

And of the Amending Act, 41 Victoria, No. 18.

Case stated on behalf of the above-named applicants, under the provisions of Act 41 Victoria, No. 18, section 4 :—

1. Francis Edward Rogers and Thomas Broughton, both above named, claimed to be the absolute owners in fee simple of all that parcel of land situate, lying, and being in the parish of Willoughby, county of Cumberland, Colony of New South Wales, containing 25 acres 2 roods 23½ perches.

2. The said lands were originally granted to one George Tilley and his heirs, by deed of grant, dated the nineteenth day of November, one thousand seven hundred and ninety-four, by His Honor Francis Grose, Esq., Lieutenant-Governor in and over His Majesty's Territory of New South Wales and its Dependencies.

3. The said grant has been lost, but an alleged entry or copy thereof has been found in the office of the Registrar-General, and a true copy of such entry or copy, with the interlineations, erasures, and corrections now appearing thereon is hereunto annexed and marked "A."

4. The said lands, which were always known as "Tilley's Farm," subsequently became invested in one William Gore (who was in possession thereof, in connection with other adjacent lands, prior to the year one thousand eight hundred and fifteen), and they have remained in the continuous and undisturbed possession of the said William Gore, and those claiming by, through and under him, up to the present time, that is to say, for upwards of sixty years, and now by virtue of divers mesne assignments, the said lands have passed to, and become vested in the said applicants, for an estate in fee simple in possession.

5. The said applicants duly applied to bring the said lands under the provisions of the Real Property Act, and to be registered as proprietors thereof, in fee simple, and their title thereto was duly passed by the Examiners appointed in that behalf, but on the nineteenth day of August, one thousand eight hundred and eighty seven, a *caveat* was entered by the Registrar-General of New South Wales, for and on behalf of the Under Secretary for Lands, claiming estate or interest, as per an annexed memorandum attached to the said *caveat.*

6. The Registrar-General does not dispute the title of the applicants on any other grounds, but those appearing on the face of the said entry or copy grant, but contends that the said lands have never passed from the Crown, or have reverted to the Crown, and that in either case the applicants can have no title as against the Crown.

7. The applicants contend that in the absence of any evidence of a cancellation by the proper authority, and of any surrender and other authorized and recognized mode of revocation, the lands cannot be held to have reverted to the Crown, but must be taken to have passed from the Crown to the said George Tilley, by the issue of the grant, and that the Crown cannot now claim any estate or interest therein.

8. The applicants further contend that as against a possessory title of upwards of sixty years, the Crown cannot be heard to claim any estate or interest in the said lands.

9. The said caveator has taken no other step in connection with the said application or *caveat* up to the present time, and the applicants are therefore desirous of obtaining under the provisions of the Act 41 Victoria No. 18, Section 4, the opinion and direction of this Honorable Court in the above matter as to the proceedings to be taken herein, in order that the dispute between the applicants and the said caveator may be decided.—Dated this fifteenth day of March, A.D. 1888.

JOHN HORATIO CLAYTON
(Attorney for FRANCIS EDWARD ROGERS and THOMAS BROUGHTON),
136, Pitt-street, Sydney.

And of the *caveat* against the granting of the said application lodged by the Registrar-General of New South Wales, for and on behalf of the Under Secretary for Lands.

And in the matter of the Real Property Act, 26 Victoria, No. 9.

And of the Amending Act, 41 Victoria, No. 18.

Rule of Court.

JOHN H. CLAYTON.

In the Supreme Court of New South Wales.

IN the matter of the application of Francis Edward Rogers and Thomas Broughton, both of Sydney, in the Colony of New South Wales, gentlemen, to bring certain lands situate in the parish of Willoughby, in the county of Cumberland, in the Colony of New South Wales, under the provisions of the Real Property Act.

And of the *caveat* against the granting of the said application lodged by the Registrar-General of New South Wales, for and on behalf of the Under Secretary for Lands in the said Colony.

And in the matter of the Real Property Act, 26 Victoria No. 9.

And of the amending Act, 41 Victoria No. 18, Friday, the 16th day of March, in the year of our Lord, 1888.

Upon reading the case filed by the applicants, the above-named Francis Edward Rogers and Thomas Broughton, and upon hearing Mr. Charles J. Manning, of counsel for the said applicants, it is ordered that the caveator, the Registrar-General of New South Wales, do lodge in the Court on Wednesday, the 21st day of March instant, a case on his own behalf, stating whether he claims in his own right, or under another person's, and it is further ordered that the issue as to any fact or facts (if any) shall be settled by a Judge in Chambers.

By the Court,
for the Prothonotary,
C. R. WALSH,
Chief Clerk.

No. 58.

Instructions to prepare case on behalf of Registrar-General.

IN the matter of the application No. 6,832, F. E. Rogers and Thomas Broughton. This is an application to bring a grant to a man named Tilley under the Real Property Act.

Some months ago a *caveat* was entered against this application by the Registrar-General, at the request of the Department of Lands.

The Court has fixed to-morrow (Wednesday), 21st instant, for the Registrar-General to state a case.

As instructions for the case so to be stated, the minute sent herewith has been forwarded late this afternoon.

Will Mr. Pring please say if he can prepare a draft case to file in time to-morrow, making use of as much of the minute now forwarded as he may consider available for that purpose.

In the matter of the application of F. E. Rogers and Thomas Broughton.

Instructions to prepare draft case. Mr. Pring, two guineas. See within fold.—R.W.P.—WILLIAMS, Crown Solicitor.

I HAVE drafted the case on behalf of the Registrar-General; but in my opinion there are no grounds for the *caveat* lodged by him. According to his case, there actually was a grant issued to Tilley, so that unless proper means have been taken to revest the land in the Crown, the Crown has no title thereto. The alleged custom appears to me to be of no avail, for, in my opinion, the only mode in which the estate could legally revest in the Crown would be by a surrender by Tilly, or his representatives, to the Crown. This was never done, and hence, in my opinion, the estate is in those who now claim through Tilley.

Brief for Registrar-General.

In the Supreme Court of New South Wales.

IN the matter of the application No. 6,832 of F. E. Rogers and Thomas Broughton, to have certain land situate at Willoughby, in the county of Cumberland, brought under the provisions of the Real Property Act.

And in the matter of the said Act.

Brief for the Registrar-General—Mr. Pring, five guineas—24th March, 1888. Court :—Darley, Chief Justice; Owen and Foster, Puisne Judges.—Ordered that the *caveat* be taken off the file.

J. Williams, Crown Solicitor. R.W.P.

In the Supreme Court of New South Wales.

IN the matter of the application No. 6,832, of F. E. Rogers and Thomas Broughton to have certain land, situate at Willoughby, in the County of Cumberland, brought under the provisione of the Real Property Act.

And in the matter of the said Act.

Brief for the Registrar-General.

Statement of case by the Registrar-General :—

1. After the execution of the alleged grant of the said land to the said George Tilley, the said grant was, by and with the consent of the said George Tilley, cancelled, and in consideration of such consent and cancellation, and by way of exchange for the said land a grant was issued to the said George Tilley, dated the 10th day of May, A.D. 1798, of 25 acres of land, situate near Windsor, in the county of Cumberland. At the time of the cancellation aforesaid it was a well recognized custom, as between the Crown and the grantees therefrom, in the Colony of New South Wales, that lands originally granted by the Crown should be deemed to revest in the Crown on the delivery up to the Crown by the grantee on the cancellation thereof and the acceptance by him of a grant of other lands by way of exchange, and this custom was acted upon in the case of the said George Tilley and in several other cases.

2. Neither the applicants nor any person through whom they claim have been in undisturbed possession of the said land, but the Crown has always disputed and never recognized the right of any private individual to the said land.

3. The said applicants have not furnished the Registrar-General with sufficient or any proof of the loss of the said alleged grant.

E. GRANT WARD,
Registrar-General.

Darley, Chief Justice,—Question whether there are any issues for Jury. Admitted that grant issued, but counsel contended that there might be a surrender by operation of law. I am not aware of any law of that kind, and counsel admits that he can find no authority. That being so, there is an end to the case. The grant avails until there has been a surrender by deed. But the second point is also fatal. There is only one way to dispute possession, and that is by taking some step to dispossess the person. I think the case presents no issue for Jury.

Owen, Judge.—Entirely concur. (Grant was in existence for four years.) Only evidence of revesting to the word "cancelled; that is not sufficient. There is one well recognized mode of revesting which has not been followed. As to the possession, the Crown really admits that, but says it has always disputed that possession, which is not enough.

Foster, Judge.—I concur.

And in the matter of the Real Property Act, 26 Victoria, No. 9.

And of the Amending Act, 41 Victoria, No 18.

Saturday, the 24th day of March, in the year of our Lord 1888.

Upon reading the statement of case filed herein by the above-named Francis Edward Rogers and Thomas Broughton, and the statement of case filed by Registrar-General of New South Wales, and upon hearing Mr. C. J. Manning of counsel for the said Francis Edward Rogers and Thomas Broughton, and Mr. Pring of counsel for the said Registrar-General, it is ordered that the *caveat* lodged by the Registrar-General, for and on behalf of the Under Secretary for Lands for the said Colony against the granting of the application of the said Francis Edward Rogers and Thomas Broughton to bring certain land situate in the parish of Willoughby, in the county of Cumberland, in the Colony of New South Wales, and known as "Tilley's Grant," be removed.

By the Court,

(L.S.) FREDERICK CHAPMAN,
Prothonotary.

No. 62.

Extract from *Daily Telegraph* of 26th March, 1888.

Supreme Court, Saturday, March 24th.

In Banco—(Before the Chief Justice, Mr. Justice Owen, and Mr. Justice Foster.)

In *re* Rogers and Broughton.

In the matter of the application of F. E. Rogers and Thomas Broughton to have certain land at Willoughby, County of Cumberland, brought under the provisions of the Real Property Act. Mr. C. J. Manning appeared for the applicants, and Mr. Pring appeared for the Registrar-General, who had lodged a *caveat* on behalf of the Under Secretary for Lands.

The applicant's case set forth that in 1794, Lieutenant-Governor Francis Grose granted to George Tilley the land in question, consisting of 25 acres, and that the land subsequently became vested in William Gore, sometime prior to 1815, and had since then remained in his possession, or in that of those claiming under him, including the present applicants, up to the present time, and that that possession had never been disputed until now—a period of upwards of sixty years. The Registrar-General did not dispute their title on any other grounds, but that the land had either never passed from the Crown or had reverted to the Crown, but they contended that in the absence of any evidence of cancellation by the proper authority and of any surrender or other authorized and recognized mode of revocation the land could not be held to have reverted to the Crown, but must be taken to have passed from the Crown to Tilley by the issue of the grant, and that the Crown could not now claim any estate or interest therein, and further, that against a possessory title of upwards of sixty years, the Crown could not be heard to claim any estate or interest in the land in question. The Registrar-General in his case set forth that after the issue of the alleged grant it was by consent of Tilley cancelled, and that in consideration of such consent and cancellation, and by way of exchange for the land, a grant was issued to Tilley, dated May 10th, 1798, of 25 acres of land near Windsor, that at that time it was a well recognized custom as between the Crown and the grantees therefrom. In this Colony the lands originally granted by the Crown should be deemed to revest in the Crown on the delivery up to the Crown of the grant by the grantee, and the acceptance by him of a grant of other land by way of exchange, and that this custom was acted upon in the case of Tilley, and in some other cases, and that the Crown had always disputed and never recognized the right of any private individual to the land now in question. The office copy of Tilley's grant to this land bore across it the word "cancelled."

The Chief Justice, in giving judgment, said the first matter the Court had to determine was, whether the case filed by the Registrar-General raised any issues for determination by a Jury, if not, the Court was to make such order as they saw fit. There were two titles in point of fact on which the applicants were entitled to rely. First, the original grant they said was issued, and counsel for the Crown now admitted that the grant had issued, but counsel for the Crown contended that the relationship of the grantee had been really that of tenant of the Crown, and that he had by word of mouth surrendered his interest in the land in question to the Crown. He was not aware of any such propositions as that having ever before been stated, nor could he call to mind anything of the sort appearing in any book on real property relating to grants from the Crown which he had ever read, and counsel for the Crown admitted that he was not able to find either in any text book on the subject, or in any authority, that such a proposition could be maintained. In other words, that, when once the Crown had issued a grant to a subject, the subject could revest the land in the Crown by simply declining to take the grant, or having taken it for four, five, or six years, could revest it in the Crown by simply saying, "I don't desire to hold this any longer." He did not think that that could be maintained, or any authority found in support of it. That being so, there seemed to him to be an end to this case. A grant was in existence, until it was revoked, or until it was surrendered by deed to the Crown, and nothing of that sort appeared here. But there was also a second point which appeared to him to be fatal to the claim of the Registrar-General. It was admitted that the applicants, and those under whom they claimed, had been in possession ever since prior to 1815. As against that, the Registrar-General said that the possession of the land had been disputed. But there was only one way in which to dispute a person's possession of land, and that was to take some steps to terminate it. Nothing of that sort had been done. The mere fact that in some office in Sydney connected with the Lands Department, some officer of the Department constantly said to himself, or to some other officers of the Department, "We dispute certain persons' possession of such and such land," could have no effect. Under all those circumstances he thought that this case raised no issues to be tried before a Jury, and also raised no point of law that the Court could determine in the Registrar-General's favour; but, that, on the other hand, the applicants had made out a sufficient case to bring this land under the Act.

Mr. Justice Owen and Mr. Justice Foster both concurred, and the *caveat* was directed to be taken off the file.

No. 63.

No. 63.

Extract from *Sydney Morning Herald* of 26th March, 1888.

In *re* F. E. Rogers and Thomas Broughton and the Real Property Act.

Mr. C. J. Manning, instructed by Mr. J. H. Clayton, appeared for the applicants; and Mr. Pring, instructed by the Crown Solicitor, on behalf of the Registrar-General.

Mr. Manning explained that the applicants desired to bring certain land under the Real Property Act, but the Registrar-General, on behalf of the Minister for Lands, had lodged a *caveat*. The question whether there were any facts to go to a Jury would have to be settled. If there were not then the Court would be in a position to decide the matter. Francis Edward Rogers and Thomas Broughton claimed to be the absolute owners in fee simple of 25 acres 2 roods 23½ perches, situated in the parish of Willoughby. The land was originally granted as far back as November, 1794, to one George Tilley by His Excellency Francis Grose, then Lieutenant-Governor of the Colony, and was described in the grant as Tilley's Farm, situated in Lane Cove. The grant has been lost, but an alleged entry or copy has been found in the office of the Registrar-General. The land, which was always known as Tilley's Farm, subsequently became vested in one William Gore, who was in possession thereof in connection with other adjacent lands, prior to the year 1815, and it has remained in the continuous and undisturbed possession of William Gore, and those claiming through him, up to the present time, representing a period of upwards of sixty years, and has now become vested in the applicants. When the applicants sought to bring the land under the provisions of the Real Property Act, the title was duly passed by the Examiners, but, on the 19th August last, the Registrar-General lodged a *caveat*, on behalf of the Minister for Lands, alleging that the land had never passed from the Crown, or that it had reverted to the Crown. According to the caveator's statement it appears that after the execution of the grant to George Tilley, it was, by and with the consent of the grantee, cancelled, and in consideration of such consent and cancellation, and by way of exchange, a grant was issued to George Tilley, dated 10th May, 1798, of 25 acres of land situated near Windsor. At the time of the cancellation it was a well-recognized custom as between the Crown and the grantees that land originally granted by the Crown should be deemed to revert to the Crown on the delivery up of the grant by the grantee on cancellation and the acceptance by him of a grant of other lands by way of exchange, and this custom was acted upon in the case of George Tilley and others. The Registrar-General also affirms that neither the applicants nor any person through whom they claim have been in undisturbed possession of the land, but the Crown has always disputed and never recognized the right of any private individual to the land. The only record which had apparently been made of the exchange of land was the entry appearing at the foot of the copy of Tilley's original grant—"Cancelled, and a new grant given at the Hawkesbury."

The applicants now contended that, in the absence of any evidence of a cancellation by the proper authority of any surrender and other authorized and regular mode of revocation, the land could not be held to have reverted to the Crown, but must be taken to have passed from the Crown to George Tilley by the issue of the grant, and that the Crown could not now claim any estate or interest therein, especially as applicants could prove a possessory title of upwards of sixty years.

After hearing argument,—The Chief Justice said, the matter for the Court to determine was, whether there was any issues raised for the determination of a Jury on the cases filed. If there were no issues to be raised, it was then for the Court to make such order as they might think fit. There were two titles in point of fact upon which the applicants were entitled to rely. The first was the original grant which had been issued, and it was admitted by counsel for the Crown that the grant did issue, but the learned counsel contended that the relation of the grantee was really that of a tenant of the Crown, and that he could at any time by word of mouth have conveyed back his interest to the Crown. He (the Chief Justice) was not aware that any such proposition as that had ever before been stated, nor could he call to mind anything of this sort appearing in any book on real property that he had ever read, relating to grants from the Crown, and the counsel for the Crown admitted that he was not able to find any precedent in any text-books upon the subject, or any authority that such a proposition could be maintained; in other words, that when once a Crown grant was issued from the Crown to a subject, the subject could revest the land in the Crown again by simply declining to take the grant, or having taken it for several years to revest it in the Crown by simply saying, "I do not desire to hold this any longer." He did not think that such a proposition could be maintained, or that any authority could be found in support of it. That being so, it seemed to him to be an end of the case. The grant was in existance until it was revoked, or surrendered by deed to the Crown, but nothing of that sort appeared to have occurred here. There was another point which seemed to him to be fatal to the claim of the Registrar-General. It was admitted that the applicants, or those through whom they claimed, had been in possession since prior to 1815. As against that, the Registrar-General said that the possession of the land had been disputed, but there was only one way in which to dispute a person's right of possession to land, and that was by taking some step to terminate his possession. Nothing of that sort had been done here, and for some officer connected with the Lands Department, merely to be constantly saying to himself or other officers,—"We dispute the possession of certain persons to such and such land," could have no effect. Under these circumstances he thought the case raised no issue to try before a Jury, and raised no point of law which the Court could determine in the Registrar-General's favour, but that on the other hand the applicants had made out a sufficient case to entitle them to bring the land under the Real Property Act.

Mr. Justice Owen and Mr. Justice Foster concurred.

The decision was, therefore, that there were no issues for a Jury, and the Registrar-General was ordered to take his *caveat* off the file.

No. 64.

The Crown Solicitor to The Under Secretary for Lands.

Sir, Crown Solicitor's Office, Sydney, 3 April, 1888.

I have the honor to return herewith the papers relating to the *caveat* you caused to be entered in the Registrar-General's Office against a certificate of title being granted to F. E. Rogers and T. Broughton, which would include 25 acres of land situate in the parish of Willoughby, county of Cumberland, known as Tilley's grant.

The

The *caveat* in the case was entered by the Registrar-General in his own name upon request from your department to him.

Upon the Registrar-General being called upon to state a case in support of his claim, in order that it might be determined by the Court whether there was any issue that could be left to a Jury to determine, a gentleman from your department called upon me with reference to the preparation of the case to be submitted to the Court, and I informed him that I thought the *caveat* could not be supported, but that as it was thought to be desirable that the question as to whether an entry in the books of the department that a grant had been cancelled, could be taken as any evidence of the fact, I would have a case prepared by counsel and filed, and I delivered a brief to counsel to appear on behalf of the Government.

The matter came on for hearing on Saturday, 24th March last, when the Court unanimously ordered the *caveat* to be removed.

You will understand from this that the certificate of title about to be issued to Messrs. Rogers and Broughton will include the land known as Tilley's grant.

Your department will of course have to pay the costs occasioned by the *caveat* having been entered and of obtaining its removal.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS.

(CORRESPONDENCE, &c., IN CONNECTION WITH MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH.)

Ordered by the Legislative Assembly to be printed, 3 September, 1889.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 9th August, 1889, That there be laid upon the Table of this House,—

"Copies of all papers, letters, minutes, evidence, and other correspondence "in connection with Mrs. Ann Rouse's conditional purchase, parish of "Kahibah, in the county of Northumberland."

(Mr. Creer.)

No. 1.

Application by Ann Rouse.

C. [Alienation Act, sections 13, 14, and 19.]

District of Newcastle. No. 3 of 1871.

Application by Ann Rouse for the conditional purchase, without competition, of 80 acres of unimproved Crown Land.

Received by me, with a deposit of £20, this 20th day of July, 1871, at 11 o.clock,—

HEN. BAKER,
Agent for the Sale of Crown Lands at Newcastle.

Sir, Newcastle, 20 July, 1871.

I am desirous of purchasing, without competition, under the Crown Lands Alienation Act of 1861, the portion of unimproved Crown Land hereunder described, containing 80 acres; and I herewith tender the sum of £20, being a deposit at the rate of 5s. per acre on the area for which I apply.

I am, &c.,
ANN ROUSE,
Newcastle.

To the Agent for the Sale of Crown Lands at Newcastle.

Description.

County of Northumberland, parish of Kahibah, 80 acres: Starting at Quin's south-west corner, running 40 chains south, 20 chains west, 40 chains north, 20 chains back to point of starting.

Lapsed—*Gazette*, 29th January, 1875. Forfeited—*Gazette*, 3rd February, 1875.

No. 2.

Mr. H. Rouse to The Secretary for Lands.

Sir, Sydney, 29 July, 1874.

On the 20th day of July, 1871, my mother, Mrs. Ann Rouse, of Red Head, near Newcastle, selected a piece of land, adjoining her own freehold property, of 80 acres, under (as she thought) the 22nd section of the Crown Lands Alienation Act, and has made improvements thereon to the value of not less than £100. She now finds that the said land was applied for under another section of the Act.

She now therefore and hereby requests permission to amend her application for the said land, so as to fulfil the requirements under the aforesaid 22nd section of the said Act.

I have, &c.,
H. ROUSE,
Agent for the said Ann Rouse.

The

[870 copies—Approximate Cost of Printing (labour and material), £13 8s. 3d.]

The Minister for Lands decided this morning that the purchase should be declared lapsed, as Mrs. Rouse cannot make the declaration required by the Act in consequence of her not having resided on the land.—30/7/74. A. Rouse, 5 August, 1874.

No. 3.

The Under Secretary for Lands to Mrs. A. Rouse.

Madam, Department of Lands, Sydney, 5 August, 1874.

80 acres—Ann Rouse, 20 July, 1871. Newcastle.

With reference to your letter of the 29th ultimo, respecting the conditional purchase noted in the margin, and requesting that the section thereof may be altered from the 13th to the 22nd, I am directed to inform you that the Minister for Lands has decided that the purchase in question must be declared lapsed, as Mrs. Rouse cannot make the declaration required by the Crown Lands Alienation Act, in consequence of her not having resided on the land.

I have, &c.,
W. W. STEPHEN.

No. 4.

Mr. H. Rouse to The Under Secretary for Lands.

Sir, Sydney, 24 November, 1874.

My mother, Mrs. Ann Rouse, selected at Red Head, parish of Kahibah, near Newcastle, on the 21st July, 1871, 80 acres of land, under the 13th clause, and not having complied with the land regulations the same land by the Act will be declared forfeited. As agent for Mrs. A. Rouse I hope the land will be declared forfeited as soon as convenient to the Government.

I have, &c.,
HENRY ROUSE,
Agent for Ann Rouse.

Should be included in next forfeited list.—W.B., 22/12/74. Approved, 22 December.

No. 5.

Mr. Licensed-Surveyor Stuart to The Surveyor-General.

Sir, Camp, Teralba, 26 June, 1875.

I do myself the honor to transmit to you a plan of Ann Rouse's 80-acre A.C.P., No. 121.

Though now within the Newcastle water reserve, I presume that at the date of application, and from the number of surveyors' hands it has been through, it was then unobjectionable. I have therefore measured it subject to your approval.

The improvements, consisting of hut and fencing, I value at £46.

I have, &c.,
CLARENDON STUART,
Licensed Surveyor.

P.S.—The applicant is resident.—C.S.

Ask Mr. L.-S. Stuart why he left the road, &c.; also, why he stated on plan that the portion was applied for under the 21st clause.—J.H.C., 19 August, 1875. Dealt with in charting branch. The conditional purchase is within water reserve, notified 1st January, 1867, and also now within the population reserve around Newcastle.—J.H.C. Call the portion No. 221, and inform Mr. L.-S. Stuart to that effect.—H.C.

D.-S.-General,—Mr. L.-S. Stuart draws attention to the fact of the portion being measured within water reserve, notified 1st January, 1867, but he has overlooked the fact of its being also within population reserve around Newcastle.—J.H.C., 21 September. Shall he be paid for survey?

Conditional purchase application is noted forfeited. Papers may be placed at records after the D.-S.-General has seen my memo. of to-day's date.—J.H.C., 21 September, 1875. Measurement should be paid for, as the application was made before the extension of the population boundary.—R.D.F., 5 October, 1875. Papers may be placed away, as the portion, although measured, will not be offered at auction sale.—J.H.C., 5 October, 1875.

No. 6.

Mr. H. Rouse to The Under Secretary for Lands.

Sir, Newcastle, 11 August, 1875.

I have received your letter of the 5th, in answer. I am sorry the Minister could not allow the alteration to be made, inasmuch as all the money had been duly paid. I suppose the deposit will have to be forfeited. The balance (£61) I hope will be returned at your earliest convenience, and placed to the credit of Ann Rouse or myself in the Bank of New South Wales, Newcastle.

By so doing you will oblige. I am, &c.,
H. ROUSE,
Agent for Ann Rouse.

No. 7.

H. J. Withers & Co. to The Under Secretary for Lands.

Sir, Exchange Corner, Sydney, 19 August, 1875.

On behalf of Ann Rouse we have the honor to request that you will grant a refund of deposit paid by our client on the conditional purchase noted in margin. This land was taken up in 1871, but was not surveyed until the latter end of last year.

Ann Rouse, 21st July, 1871, at Newcastle.

We have, &c.,

HENRY J. WITHERS & CO.

The refund in this case should not be allowed, survey having been made on the 12th February, 1875, and the application for return of the deposit money, dated 19th of August, 1875. The application has also been lapsed and forfeited, in consequence of non-residence by applicant. Messrs. Withers & Co. should be apprised.—16/12/75.

No. 8.

The Under Secretary for Lands to H. J. Withers & Co.

Gentlemen, Department of Lands, 28 January, 1876.

Referring to your letter of the 19th August last, on behalf of Ann Rouse, applying for refund of deposit paid on her selection mentioned in the margin, on the grounds of non-survey within twelve months, I am directed to inform you that the refund cannot be granted, as the application was not made until after the survey of the land had taken place.

C.P. 71-2,478, 80 acres, Newcastle, 20 July, 1871.

I am also to inform you that your client's purchase was declared forfeited by notice in the *Government Gazette* of 5th February last.

I have, &c.,

W. W. STEPHEN.

No. 9.

Declaration of Conditional Purchaser.

(C.P. No. 75-1.) D. [Alienation Act.]

Declaration of Conditional Purchaser under the 18th section of the Crown Lands Alienation Act of 1861 (25 Vic. No. 1.)

I, JOHN WOOD, of Newcastle, wine merchant, do solemnly and sincerely declare that I am one of the trustees and executors of Ann Rouse, who died the lawful owner, by conditional purchase, under the 22nd section of the Crown Lands Alienation Act of 1861, of the land hereunder described, and that improvements, consisting of house, fencing, and orchard, and to the value of £500, have been made on the original selection adjoining (see 39 Vic. No. 13/8/22). The said Ann Rouse died on 17th of March last. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof and for the suppression of voluntary and extra-judicial oaths and affidavits."

Taken and declared, at Newcastle, this 6th day of May, 1878, before me,— JOHN WOOD.

ALEX. LUMSDAINE, Commissioner for Affidavits.

Description.

County of Northumberland, parish of Kahibah, 80 acres, at Red Head, being conditional purchase No. 1 of 1875, in the district of Newcastle, made on the 4th February, 1875.

[*Enclosure.*]

C.P. No. 75/1, L.A. No. Applicant, Ann Rouse (widow); land district, Newcastle; date, 4th February; time, 10·15; area, 80 acres; section 22.

Description.

80 acres, portion 221, in parish of Kahibah, county of Northumberland, parish of Kahibah: Starting at Quin's south-west corner, running 40 chains south, 20 chains west, 40 chains north, and 20 chains back to the starting point, and which adjoins my freehold of 40 acres on the west.

Action taken:—Declared void. (*Vide* 78-48,352 C.S.)

For particulars of applicant's freehold.—H.E.W., 27 September, 1878. Con. Sales Bch. Cannot trace any freehold by Ann Rouse, Land Agent at Newcastle may be able to give particulars.—H.E,W., 16 November, 1878. Con. Sales Bch. The Land Agent at Newcastle will please give the above particulars.—C. E. NEATE (for the Chief Commissioner), Department of Lands, B.C., 27 November, 1878.

No. 10.

Office Memorandum.

THE freehold of Ann Rouse, widow (deceased), referred to in annexed paper, is portion 21, in the parish of Kahibah, in county of Northumberland (within police district of Newcastle). This portion 40 acres was originally conditionally purchased by one Lydia Packer Priest (described in the C.P. Register at this office as the wife of a settler), on the 27th August, 1863, and under section 13 of 25 Vic. No. 1, and alienated to Ann Rouse aforesaid (entered in error by late L.A. as Henry Rouse, a son of said Ann Rouse), then a widow, on 23rd October, 1866, who, by payment of the balance of purchase money thereon, rendered it a freehold*, and who, in virtue thereof, and consequently under section 22† of aforesaid Act selected the 80 acres referred to in the amended paper,—a prior selection by her of same area, and identical therewith, having been cancelled, &c. (See *Government Gazette* in 75/30.)

C.L.O., Newcastle, 29 November, 1878.

ALEX. LUMSDAINE, C.L.A.

* Entered in error by late Land Agent as Henry Rouse (a son of said Ann Rouse.)

† Entered in error by late Land Agent as section 13.

It

It is recommended that C.P., application 75/1, Newcastle, be declared void, as the land applied for is situated within Newcastle population reserve, and also water reserve, notified 1st January, 1867.—Robt. D. Fitzgerald (for Surveyor-General), 20 January, 1879. C.S. Records.

For Cancellation.—A.O.M., 31/1/79. Applicant will refund order. Agent and Treasury informed. Refund of deposit and interest, 6 February, 1879.

No. 11.

The Chief Commissioner to The Land Agent at Newcastle.

Department of Lands, Sydney, 6 February, 1879.

Sir,

I desire to inform you that the application of Ann Rouse, on the 4th February, 1875, for the conditional purchase of 80 acres of land, is void, as the land applied for is situated within Newcastle population reserve and also water reserve, notified 1st January, 1867.

2. A form for refund of deposit has been forwarded for the signature of the applicant, the nature of which you will be so good as to explain to her if required.

I have, &c.,
W. M. BLACKMAN
(For the Chief Commissioner.)

No. 12.

The Chief Commissioner to Mrs. Ann Rouse.

Department of Lands, Sydney, 6 February, 1879.

Madam,

I desire to inform you that the application made by you at Newcastle, on the 4th February, 1875, for the conditional purchase of 80 acres of land, is void, as the land applied for is situated within Newcastle population reserve, and also water reserve, notified 1st January, 1867.

Deposit paid, £20.

2. Enclosed is a form which, on being filed up, in accordance with the instructions thereon, and forwarded to the Treasury, Sydney, will enable you at once to obtain the refund of your deposit.

I have, &c.,
W. M. BLACKMAN
(For the Chief Commissioner.)

P.S.—The interest paid will also be refunded upon application at the Treasury.

No. 13.

The Chief Commissioner to The Under Secretary for Finance and Trade.

Conditional purchase—Revenue refunded—Conditional purchase No. 75-1.

Department of Lands, Conditional Sales Division,
Sydney, 6 February, 1879.

Sir,

District, Newcastle; name, Ann Rouse; date of selection, 4th February, 1875; area, 80 acres.

I have to inform you that the conditional purchase noted in the margin being void, as the land applied for is situated within Newcastle population reserve, and also water reserve, notified 1st January, 1867, you will be good enough to refund to the selector the sum of £20, being the deposit money paid thereon.

2. I am to add that a receipt form for the disposal of the money has been forwarded to the applicant, with instructions to fill up same and transmit it to the Treasury.

I have, &c.,
W. M. BLACKMAN
(For Chief Commissioner.)

P.S.—The interest paid should also be refunded.

No. 14.

Mr. H. J. Brown to The Chief Commissioner.

Newcastle, 12 February, 1879.

Sir,

Referring to your communication of the 6th instant, addressed to the late Mrs. Ann Rouse, informing her that her conditional purchase of 80 acres of land, made on the 4th February, 1875, is void, as the land is situate within the Newcastle population reserve, I have the honor to state, on behalf of the executors and trustees of the will of Mrs. Rouse, that the land in question is situated 7 miles from the extreme boundary of the city of Newcastle, the population of which, according to the last census, was considerably under the prescribed number of 10,000, and was therefore open for selection, under the 13th section of the Crown Lands Alienation Act of 1861, and to purchase under the 22nd.

I may mention that at least £200 have been spent on the land, and that, in compliance with notice from the Government, interest has been paid on the balance of purchase-money, the whole of which would have been paid but for the fact that the will, not having been proved, the executors were not in a position to do so, which they are now prepared for.

I have, &c.,
HENRY J. BROWN.

The C.P. had been correctly declared void. The population reserve of Newcastle extends 5 miles, in *direct line* southerly as far as Red Head, and includes the land applied for.—T.S. (for Surveyor-General), 27 March, 1879.

No. 15.

No. 15.

The Chief Commissioner to H. Brown, Esq.

Department of Lands, Conditional Sales Division,
Sydney, 24 April, 1879.

Sir,

Adverting to your letter of the 12th of February last, on behalf of the executors of the late Mrs. A. Rouse, relative to the cancelled selection quoted in the margin, I have to apprise you that this purchase has been recently declared void, the population reserve of Newcastle extending 5 miles in a direct line southerly, as far as Red Head, including this land applied for.

Newcastle, C P. 75-1; Mrs. A. Rouse.

A. O. MORIARTY,
Chief Commissioner.

No. 16.

Mr. H. Rouse to The Secretary for Lands.

Red Head, *via* Charlestown, September, 1886.

Sir,

On the 20th July, 1871, I, as agent for my mother, the late Ann Rouse, selected 80 acres of land adjoining her freehold selection, portion 21, parish Kahibah.

In January, 1875, it was surveyed by Mr. Stuart, Government Surveyor, who made the selection 79 acres, the land at the time being outside the population boundary.

On applying for the deeds I found that the application was a free selection in place of an additional purchase to the selection my mother was at the time living on.

I may state that my mother expended in buildings, orchard, and fencing, upwards of £1,500.

I applied to the Lands Agent, Newcastle, for the necessary papers for my mother to sign; on finding a resident clause in the declaration my mother would not sign, not actually living on the selection.

I then went to Sydney, and had a personal interview with Mr. Farnell, then Minister for Lands; his advice was to get the selection forfeited and reselect under the clause he then read to me.

After a short time the selection was cancelled in 1875. (See *Gazette* No. 303.)

I then reselected, on 4th February, 1875, and paid another £20 as an additional purchase, in virtue of her freehold portion 21, parish Kahibah.

I also paid interest on the land from the 4th February, 1878, to the 3rd February, 1879.

After paying the interest I received notice that the land was resumed on the 6th February, 1879, for water purposes.

I also wish to state that the land at the second time of selection was outside the population boundary.

About 60 acres were fenced—a two-railed split, substantial, and capping in some parts; also a two-roomed slab hut, shingled; and about 6 acres felled and cleared,—the cost being at least £200.

The last time Mr. Farnell held office as Minister for Lands I spoke to him about the land and the fix I was in on account of the land being reserved as a watershed. Mr. Farnell's advice was, as the Government had gone to Maitland for their water supply, to get the reserve revoked; then put an application in for the land, having a prior claim, and he could not see what would stop me from securing it.

My mother died on the 17th of March, 1878, willing the proceeds of her property to myself, her only son; at my death the property will then fall into the hands of my four daughters. Mr. John Wood, spirit merchant, and Mr. H. J. Brown, solicitor, both of Newcastle, are the trustees. I am now acting in their behalf.

I am, &c.,
HENRY ROUSE.

Submitted as to whether, under the circumstances stated, the C.P. of 1875 may be validated under section 138 of the Act of 1884, provided that clause be deemed to include cases where residence has been complied with on the adjoining area held in connection with such C.P., and subject to the report of the Local Land Board as to the land not having been claimed in a lawful manner by anyone else since the date of voidance, and to its not being required for public purposes.—S.F., 9/12/86.

I think this is a case that can and should be validated under the 138th section, provided that no conflicting interests have arisen.—H.C., 9/12/86. Mr. H. Rouse informed, 15 December, 1886.

No. 17.

The Under Secretary for Lands to Mr. H. Rouse.

Department of Lands, 15 December, 1886.

Sir,

I have the honor to acknowledge receipt of your letter of September last, respecting the voidance of the conditional purchase quoted in the margin, and to inform you that the Secretary for Lands has approved of this conditional purchase being validated under the 138th section of the Crown Lands Act of 1884, subject, however, to the report of the Local Land Board, as to the land not having been claimed in a lawful manner by anyone else since the date of voidance, and to its not being required for public purposes.

C.P. 75-1, Ann. Rouse, 4th Feb 1875, 80 acres, Newcastle.

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

No. 18.

Mr. H. Rouse to The Chairman, Local Land Board, Maitland.

Newcastle, 5 February, 1887.

Sir,

I have the honor to communicate with you with reference to the land as mentioned in the margin of this communication.

C.P. 75-1, Ann Rouse, 4th Feb., 1875, 80 acres, Newcastle.

As I am only acting in the capacity as a life legatee, and as it is in the interests of my family alone, I wish to express my desire that your Local Land Board, of which you are the head, will cause an inquiry to be held at the earliest opportunity, so that I may be prepared with my witnesses, &c.

Mr.

Mr. John Wood, one of the executors of my late mother's estate, is shortly leaving for England, and it may be some considerable time before he returns, and as he is in possession of all the facts of the case it is both his wish and my wish that the matter should be settled prior to his departure.

Would you therefore kindly press this matter on as an urgent one, as Mr. H. J. Brown, the other executor in the estate, is willing to give his assistance in furthering the inquiry.

I shall be happy to suit your convenience as to whether the inquiry shall be held in Newcastle or Maitland, but as my witnesses are domiciled in Newcastle and its immediate surroundings, and it would suit my convenience and my witnesses if the inquiry were held in Newcastle so as to save unnecessary time, trouble, and expense.

I have, &c.,
HENRY ROUSE.

The District Surveyor will be good enough to report.—JAS. VERNON, Chairman. East Maitland, 8 March, 1887.

The Chairman,—There does not appear to be any other application for this land, but an authority, No. 352, under which permission to mine for coal, in terms of section 28 of the Mining Act of 1874, has been granted to Victor Thomas, Sherbrooke, Houghton, and Samuel Palmer, for certain lands, of which this portion forms a part. (*Vide* Misc. 86/21,844.—L.B., 87/106).—J. WITTEN ALLWORTH, District Surveyor, 9 March, 1887.

No. 19.

Memo. from The Under Secretary for Lands to The Chairman, Local Land Board, Maitland.

C.P., 75-1; Newcastle; Henry Rouse.

THE enclosed papers, referring to the C.P. noted in the margin, are forwarded to the chairman of the local Land Board, Maitland, with a view of ascertaining whether there are any conflicting interests before validating the C.P. in question.

F.H.W.
(For the Under Secretary).

B.C., 7/3/87.

The Chairman,—Since writing the above a letter has been received from the Land Agent at Newcastle stating this land has been applied for as a mineral lease. No. of application, No. 87-2; date of application, 17th January, 1887; area, 79 acres; No. of portion, 221; parish of Kahibah, county of Northumberland.—J. WITTEN ALLWORTH, 10 March, 1887.

No other interest has arisen with respect to this land than those referred to by the District Surveyor.—JAS. VERNON, Chairman, L.B., Maitland, 12th August, 1887. The Under Secretary for Lands.

No. 20.

Mr. H. Rouse to The Under Secretary for Lands.

Sir,

Redhead, *via* Charlestown, 13 July, 1887.

The Land Board held here last week did not think it advisable to take my claim into consideration from the fact that the chairman, Mr. Vernon, could do all that was required.

Mr. Vernon gave me to understand that he would send his report to Sydney after his return to Maitland.

You will please let me know if such report has been received at your office. I should like to go to Sydney and get the matter put through with the assistance of my solicitor, Mr. Merriman. Please let me know.

Yours, &c.,
H. ROUSE.

Mr. Fletcher, M.P., brought Mr. Rouse here some six or seven months back in reference to a void C.P. at Redhead, near Newcastle, and the case was remitted to the Board. Please let me know how the matter stands.—S.F., 14/7/87.

Inform that the case has not yet been returned.—S.F., 14/7/87.

No. 21.

The Under Secretary for Lands to Mr. H. Rouse.

Sir,

Department of Lands, 14 July, 1887.

I have the honor to acknowledge the receipt of your letter of the 13th instant, respecting the conditional purchase noted in the margin, and to inform you that the case has not yet been returned from the Local Land Board office.

Newcastle, C.P. 74-2,478.

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

No. 22.

Mr. H. J. Brown to The Chairman, Local Land Board, East Maitland.

Sir,

Newcastle, 2 August, 1887.

I have the honor to request to be furnished with a copy of Mr. Henry Rouse's letter to the Under Secretary for Lands, which was referred to the Local Land Board for report.

Would you be good enough to send in the report as speedily as possible, as Mr. Rouse is continually urging me on the subject.

I have, &c.,
HENRY J. BROWN.

Mr.

Mr. Brown may be furnished with a copy of the letter written by his co-executor, and informed at the same time that the case has been this day returned with the required report to the Under Secretary for Lands.—JAS. VERNON, Ch., L.B., 12/8/87. Mr. Fitzpatrick.

H. J. Brown with copy.—H.A.F., 12/8/87. Do any mineral leases embrace portion 221, shown on lithograph, blue pencil?—W.H.C., 28/9/87. Yes, it is separately held as a mineral lease by Houghton and Palmer, dated 26th March, 1887, under the Act 48 Vic. No. 10.—W.H.C., 29/9/87. The A.U.S. Submitted.—S.F., 29/9/87. Cannot be validated. Conflicting interests existing.—T.G., 20/9/87. H. J. Rouse, 30/9/87.

No. 23.

The Under Secretary for Lands to Mr. H. Rouse.

Sir,

Department of Lands, 30 September, 1887.

Adverting to my letter of the 15th December last, respecting the validation of the conditional purchase noted in the margin, I have the honor to inform you that the Secretary for Lands has now decided that as there are conflicting interests existing the selection in question cannot be validated.

Newcastle, C.P. 75-1, 4th February, 1875, 80 acres; Ann; Rouse.

I have, &c.,

STEPHEN FREEMAN

(For the Under Secretary).

REPORT from the Select Committee on Mrs. Ann Rouse's Conditional Purchase, Parish of Kahibah; together with the Proceedings of the Committee and Minutes of Evidence.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

Votes No. 16. *Tuesday*, 25 *October*, 1887.

15. MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH:—*Mr. Melville*, for Mr. Abbott, moved, pursuant to Notice,—

(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon all the circumstances attending the conditional purchase of Mrs. Ann Rouse of 80 acres, situate in the parish of Kahibah, and the forfeiture of the same.

(2.) That such Committee consist of Mr. Brunker, Mr. Day, Mr. Ewing, Mr. Goodwin, Mr. Garrett, Mr. Hassall, Mr. Lee, Mr. Thompson, Mr. Sydney Smith, and Mr. Abbott.

Question put and passed.

Votes No. 79. *Wednesday*, 18 *April*, 1888.

3. MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH:—Mr. Day (*by consent*), moved, without Notice, That the papers relating to the conditional purchase of Ann Rouse, and the applications of Messrs. Houghton and Palmer to mine under reserves at Kahibah, printed by order of the House, be referred to the Select Committee sitting in reference to the conditional purchase of Ann Rouse.

Question put and passed.

Votes No. 99. *Wednesday*, 6 *June*, 1888.

7. MRS. ANN ROUSE'S CONDITIONAL PURCHASE, PARISH OF KAHIBAH:—*Mr. Day*, for Mr. J. P. Abbott, Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 25th October, 1887.

Ordered to be printed.

Mrs. Ann Rouse's Conditional Purchase, Parish of Kahibah.

REPORT from the Select Committee of the Legislative Assembly, appointed on the 25th October, 1887, "*with power to send for persons and papers to inquire into and report upon all the circumstances attending the conditional purchase of Mrs. Ann Rouse of* 80 *acres, situate in the parish of Kahibah, and the forfeiture of the same*," and to whom was referred on the 18th April, 1888, "*the papers relating to the conditional purchase of Ann Rouse*," and "*the applications of Messrs. Houghton and Palmer to mine under Reserves at Kahibah*," beg to report to your Honorable House:—

Your Committee, having examined the witnesses named in the List (whose evidence will be found appended hereto), find as follows:—

(1.) That on the 20th July, 1871, Ann Rouse conditionally purchased 80 acres of land in the parish of Kahibah, county of Northumberland, and in 1874 the Government sent Mr. Surveyor Stuart to measure the land, and he reported the survey on the 26th January, 1875, which was approved on 20th September, 1875, four years after the land was selected.

(2.) On the 29th January, 1875, the conditional purchase was declared lapsed, owing to non-payment of interest and non-receipt of declaration.

(3.) On the 4th February, 1875, the said Ann Rouse, reselected the land by virtue of her freehold, on which she then resided, and on the 6th February, 1879, her second selection was declared void, as being on a water reserve.

(4.) Formal protests were made by the said Ann Rouse to the Lands Department against such voidance, and Mr. Secretary Copeland, after considering the case, wrote a minute on the 9th December, 1886, to the effect that he considered the case was one which should be validated under section 138 of the Land Act of 1884. This minute was written some nine years after the first selection, and over four after the second.

(5.)

(5.) No further steps appear to have been taken by the Department until 31st July, 1886, when a lease of the land was granted to Messrs. Houghton and Palmer for coal-mining purposes, thus creating conflicting interests, which prevented Mr. Secretary Copeland's minute from being carried out.

Your Committee, having considered all the circumstances of the case, and in view of the improvements effected on the land—the extraordinary delay of the Lands Department in declaring the voidance of the selections—and that the said Ann Rouse and her heirs have been in undisturbed possession since 1871—strongly recommend her case to the favourable consideration of the Government.

J. P. ABBOTT,
Chairman.

No. 2 Committee Room,
Sydney, 6th June, 1888.

Proceedings of the Committee.

Thursday, 15 *March*, 1888.

MINUTES OF EVIDENCE taken before the Select Committee on Mrs. Ann Rouse's Conditional Purchase, Parish of Kahibah.

THURSDAY, 3 *MAY*, 1888.

Present:—

MR. BRUNKER,	MR. LEE,
MR. EWING,	MR. SYDNEY SMITH,
MR. THOMPSON,	MR. DAY.

G. DAY, ESQ., IN THE CHAIR.

Mr. Henry Rouse called in, sworn, and examined:—

Mr. H. Rouse. 3 May, 1888.

1. *Chairman.*] Where do you reside? At Redhead, near Newcastle.

2. What is your occupation? I am what is termed a yeoman, living on my own property and spending my own means.

3. Do you remember an application being made by Ann Rouse in 1871? I made an application in her name.

4. You made an application in her name for the right to purchase 88 acres of land, and tendered a deposit of £20 in accordance with the provisions of the law? I did.

5. Did you ever hear anything about the purchase before you got a letter from the Under Secretary for Lands? I heard nothing of the property until 1879.

6. Did not Mrs. Ann Rouse receive a letter from the Under Secretary on the 5th August, 1874? Yes; it was about the forfeiture.

7. It stated that the land was forfeited because she could not make the declaration? It did.

8. What did you do after that? Reselected as a conditional purchase by virtue of the freehold that we were then residing on. We had spent something between £1,500 and £2,000 on the freehold. It was not voided until February, 1875. It was taken up as a free selection instead as an additional conditional purchase.

9. You heard nothing of the land after the second application was made until 1879? Not a sentence that I am aware of.

10. What did you first hear? That the Department had reserved the land for water purposes.

11. Did they refuse the application? They asked me to make out a claim for any improvements I might have made upon the land. I was in the hands of trustees, my mother having died. Mr. John Wood and Mr. H. J. Brown, of Newcastle, were my trustees. Mr. Brown was solicitor to the estate, and his reply was, "No; we will make no application. The land is freehold property. I do not think that the Government are entitled to take freehold property away from us without an Act of Parliament. We want compensation for the land and the coal that is underneath it." Matters have remained in that state until the present.

12. Did the Government take possession of the land? I have had possession ever since 1871. It is fenced in.

13. Have you had any communication from the Government since 1879? I have corresponded with them since 1879.

14.

Mr. H. Rouse. 3 May, 1888.

14. What has been the result of the correspondence? The last correspondence was to this effect: that the 80 acres was leased to Messrs. Houghton and Palmer for coal-mining purposes. Most of the correspondence has taken place since the land was taken up for coal-mining purposes.
15. Did you get any reason from the Department? They said that it was taken for water purposes—that it was part of the Newcastle water reserve.
16. It was not part of the water reserve when you took it up? Not that I know of. We did not know that there was a water reserve there.
17. Was there really a water reserve? I do not think that it had been proclaimed a water reserve. In 1875 Mr. Secretary Farnell did not tell me that it was a water reserve. If he had thought that it was a water reserve he would not have given me the land. I saw him frequently about the matter. He said that the land must be voided, and that I could take it up as an additional conditional purchase by virtue of my freehold. He told me what section of the Act I could take it up under.
18. You would not be satisfied with a refund of the deposit money, the interest, and the cost of the improvements? No; I should like the property. The improvements have all been burnt down. The land that had been cleared is now covered with bush. Saplings a foot through have grown on it since 1879. The property is too valuable for me to take compensation for the improvements.
19. Have you paid up the interest? Up to the time that they gave me notice that they had taken it for water purposes. I have not paid interest since the 6th February, 1879.
20. If the land was a water reserve then, according to law, you could not keep it? I do not know whether it was or not. If I had thought that it was a water reserve, I should not have taken it up. They took my money for the land both in 1871 and in 1875. I think that Mr. Bowie Wilson was Secretary for Lands in 1871. But Mr. Farnell was Minister when I took the land up on the second occasion. I was with him every week for twelve weeks over the matter. He told me how to get it forfeited. When I saw notice of the forfeiture in the Court-house, at Newcastle, I immediately went in and paid a deposit of £20. Mr. Farnell told me afterwards that no one could take the land from me.
21. *Mr. Brunker.*] What was the area of your mother's freehold? 40 acres.
22. Does this land adjoin it? Yes; the Government sent a surveyor, Mr. Clarendon Stuart, in 1874 to survey the land.
23. You were not aware that it was a water reserve at the time the selection was made? No, else we would not have made it.
24. When did you receive the first intimation that it was a water reserve? In February, 1879.
25. What action did you then take? The Government then asked us to make out a claim for any improvements that might have been made on the 80 acres, but Mr. Brown, one of the trustees and solicitor to the estate, as I have already said, would not consent to their proposition.
26. Did you take any further action? I applied to Mr. Secretary Copeland, and he, after looking into the case, wrote a reply which you will find in the papers, saying he could see no reason why under a certain section of the Act the selection might not be validated. I wrote my application in September, but I did not receive a reply until January.
27. Why was that? My application was mislaid somewhere or other. He did not get my letter.
28. Had Messrs. Houghton and Palmer, any idea that the conditional purchase had been taken up by you before they made application for a lease of the land for coal mining purposes? They knew all about it. Mr. Palmer knew about it for years and years.
29. Who is he? He was a boundary rider for Mr. Merewether. I used to see him every day. He knew that I had possession of the land since 1871. It was fenced in and there was a hut and everything on the land. He said to me one day in Sydney "I see you have gone in for your land." "Yes, of course I have." I said, "I know you are going round selecting all the land you can get. I want only 80 acres." He said, "Our people have plenty of money. We want the land. Give us the first chance. We will give you more than anybody else." I said, "So far as I am concerned I will sell the land and the homestead too, because I want to make a change; but my trustees are the proper parties to deal with, make your bargain with Mr. John Wood and Mr. J. H. Brown." He said, "All right."
30. *Mr. S. Smith.*] When Mr. Secretary Copeland wrote his minute were there any conflicting interests in existence? No.
31. Palmer and Houghton had not applied for the land then for coal purposes? No.
32. *Mr. Ewing.*] Do you believe that the land that you took up in 1871 is not within the boundary of the reserve? No; because Mr. Surveyor Stuart told me that there was no objections to the deeds being made out. In 1874 he stopped at my mother's place. He surveyed the 80 acres first and the reserve afterwards.
33. Did the Government put you in possession of the land? We have kept possession of the land; we have never lost possession.
34. How long have you been in possession? I have not given up possession of the land from 1871 up to the present time.
35. How long did the Government allow you to be in possession? They have never given me notice to quit the land in any shape or form. It was forfeited on account of a mistake in the application. Mr. Gillies, who is called a long-headed Scotchman, said to my mother, "Mrs. Rouse, take my advice, apply for the 80 acres as an additional conditional purchase in virtue of your freehold, and I will measure it for you." He wrote out the application, but instead of it being for an additional conditional purchase it was for a free selection. I think it was Mr. Baker, a lawyer in Newcastle, who made the mistake. Mr. Stuart, when he was at my mother's place in 1874 said, "Now, Mrs. Rouse, I have surveyed your land. I have sent the document to the Government. You can apply for the deeds and get them as quickly as you like."
36. You stated that you are still in possession of the land; I asked you whether the Government had at any time interfered with you in possession, and you said, "no," but it seems that the land has been cancelled? Forfeited.
37. That is the most practical interference that the Government could have with you? It was forfeited, and I took it up under another section. I applied for the land in 1874, and I was in occupation for four years before they gave me notice that they required it for water purposes.
38. *Mr. S. Smith.*] Were you informed by Mr. Stuart when he made the survey, that the land was within the water reserve? No; he surveyed all the water reserve after he had surveyed my selection. He was there for weeks after he had surveyed my selection.

William Henry Capper, Esq., called in, sworn, and examined:—

W. H. Capper, Esq. 3 May, 1888.

39. *Mr. Brunker.*] You are Clerk-in-charge of the conditional sales branch in the Lands Department? Yes.

40. What do you know with regard to this case of Mrs. Ann Rouse? An application was made on the 20th July, 1871, by Mrs. Ann Rouse under section 13 of the Act of 1861, for a conditional purchase of 80 acres in the district of Newcastle. It was declared lapsed on the 29th January, 1875, for non-receipt of declaration and non-payment of interest. This action was taken with the concurrence of the parties interested. The land was reapplied for by Mrs. Ann Rouse, on the 4th February, 1875. The application was declared void on the 6th February, 1879.

41. Was that the first intimation they had between the receipt of the application and the voidance of the selection? Yes. Protests against the voidance were subsequently received, but it was upheld. These protests have recently been renewed. Mr. Secretary Copeland on the 9th December, 1886, wrote a minute to the effect that he thought the case was one which should be validated under section 138 of the Act of 1884.

42. *Mr. Ewing.*] What is the section? No. 138; it provides for the validation of selections taken up within reserves where the applicants have retained undisturbed possession for twelve months.

43. It is a "retrospective" section virtually? Yes, but it has no effect where there are conflicting interests.

44. Not as against the Crown but as between individuals? Yes. And in the case now before the Committee, upon inquiry being made at the Mines Department it was found that there were conflicting interests, and consequently Mr. Secretary Garrett, on the 20th December, 1887, decided that he could not validate it under that section.

45. You say that Ann Rouse first of all made application in 1871, and that it was declared forfeited in 1875. What was the Department doing in the interim? The Department was waiting for the selector to fulfil the conditions.

46. *Mr. Thompson.*] In what way? Residence and improvements.

47. *Mr. Ewing.*] But the selection was not forfeited for that reason? Yes; as well as for the reasons already given.

48. Then the reason it was declared forfeited was not because it was a reserve, but because the selector had not carried out any of the conditions? Exactly.

49. Suppose that she had carried out the conditions—how would the Department have stood then—she would have got the land? That I cannot say.

50. If you forfeited the selection because she did not carry out the conditions, and you say that the Department was waiting for her to fulfil the conditions, the inference is that if she had carried out the conditions she would have got the land? I should say so.

51. Does it not seem a strange thing to resuscitate the reserve after an action of that kind? No; because the second application was quite a new matter entirely.

52. The reapplication was made on the 4th February, 1875. On the 5th September, 1875, the Department sent a surveyor in the employ of the Surveyor-General to survey the land*? Yes; that is the date of the approval of the plan.

53. When were the parties first informed that they were in occupation of Crown land? On the 6th February, 1879, when they received notice of voidance.

54. As far as the Crown was concerned the people apparently were in undisputed possession of the land for about four years? Yes.

55. You are aware that under the present Act if a person has been in undisputed possession for twelve months his title is a good one? It is capable of validation.

56. It is reasonable to infer that had Mr. Secretary Copeland remained in office this particular selection would have been validated? The present Secretary for Lands would validate it if there were no conflicting interests.

57. From the tenor of Mr. Secretary Copeland's minute it would appear that had he remained in office he would have taken definite action in the matter? That I cannot say, as it has been shown recently that conflicting interests had arisen. The conflicting interests would have affected the late Minister in the same way as they have affected the present one.

58. These conflicting interests have only been in existence since the 31st July, 1886. Does it not appear a strange thing that they should override what previously was departmentally a good claim? I cannot admit that they had a good claim.

59. Apparently the Department considers that had not application been made on the 31st July, 1886, Mr. Copeland would have validated it? Yes.

60. And that Mr. Secretary Garrett, it would appear, would be willing to validate it only for the existence of these conflicting interests? Yes.

61. The simple accident of a man creating conflicting interests ruins what otherwise would be to the man a good case? Yes, so it appears.

62. *Mr. Brunker.*] Is there anything in the records of the Department that would lead you to believe that it was anything but *bonâ fide* selection? No. But if the conditional purchase were validated to-morrow the Department would at once set to work to ascertain if the conditions had been fulfilled; but as the selection was declared void the Department ceased to take any steps to investigate the fulfilment of the conditions.

63. *Mr. Ewing.*] It is the custom of the Department to take a retrospective view of cases of this kind? Yes.

64. *Mr. Brunker.*] Who was the first to survey the land? Mr. Stuart surveyed the land in virtue of the first application made in 1871.

65. When did he report to the Department? He reported on the 26th January, 1875, and his survey was approved on the 21st September, 1875.

66. He made a survey of the land between 1871 and 1875, and the survey was approved in 1875? Yes.

67. What do you mean by the survey being approved? The Minister or an officer deputed by him has to approve of all surveys.

68. Then on the forfeiture of the first selection was there a second survey made? No.

69.

* Note (*on revision*):—Not so, no instructions were issued to a surveyor in connection with the second application.

W. H. Capper, Esq. 3 May, 1888.

69. How was the information first obtained by the Department that the first selection was within a water reserve? The question did not arise in connection with the first application, but an explanatory memorandum was furnished by the Crown Lands agent in regard to the second application.
70. But he must have been put in motion by the Department? Yes. In the application lodged by Mrs. Ann Rouse there were particulars wanting as to the freehold. In fact sufficient information was not given in the application to identify the freehold. A copy of the original application was sent to the Crown Lands agent in 1878 to furnish particulars. Thereupon Mr. Lumsdaine furnished a memorandum dated 29th November, 1878, and upon that the Deputy Surveyor-General recommended the application for voidance, on account of the land being within the Newcastle population reserve, and also within the water reserve.

WEDNESDAY, 16 *MAY*, 1888.

Present:—

MR. DAY,

MR. EWING, | MR. THOMPSON,

GEORGE DAY, ESQ., IN THE CHAIR.

William Henry Capper, Esq., called in, sworn, and examined:—

W. H. Capper, Esq. 16 May, 1888.

71. *Chairman.*] Was the second application made for this conditional purchase on the 4th February, 1875? Yes.
72. Was that application taken into consideration, and a surveyor sent to survey the land? No; a surveyor was never sent to measure it.
73. It was never measured after the second application? No; no steps were taken by any surveyor in connection with the second application.
74. *Mr. Ewing.*] You said that the Department never issued instructions to survey in connection with the second application? They did not.
75. Did they accept the deposit? The land agent did, of course, as he must do.
76. Did he accept it under protest? That I cannot say; I have nothing to show that he did.
77. You cannot say that it was not? I assume that it was not under protest.
78. They accepted the deposit, and the man went into occupation? I do not know anything about that.
79. You did not send a surveyor? No.
80. Do you mean that they intended to take no further action about it? No; certainly not. As I have already stated, the description was not sufficiently explicit, and the land agent was asked for information regarding the freehold.
81. What steps did the Department take after accepting the deposit? The papers merely show that the matter was dealt with by a draftsman, on the 16th November, 1878.
82. About three years after it was taken up? Yes; and then he stated that he could not trace any freehold in the name of Ann Rouse, and suggested that the land agent might be able to give particulars.
83. From 1875 to 1878 the applicant did not know departmentally that the Government was not prepared to complete the bargain? No.
84. *Mr. Thompson.*] Does it not show also by memorandum No. 10 in printed copy of papers that the freehold of Ann Rouse was discovered, and information given on the 29th November, 1878, as to that freehold? Yes, and upon that information the freehold was identified, and the position of the additional C.P. in virtue of it was located, and found to be in a reserve. Then the application was cancelled.
85. *Mr. Ewing.*] In the year 1878? Yes, on the 6th February.
86. *Chairman.*] Do you remember when the water reserve was proclaimed? No; but I can give you the date of the proclamation. It is dated the 1st January, 1867.
87. Was all the land embraced in this conditional purchase within that water reserve? Yes.
88. It was taken from the water reserve? Yes.*
89. And there has been no selection on that water reserve since then until now? Yes.
90. Have the selections been allowed? One has been validated by a special Act.
91. Which was that? One taken up on the 1st May, 1873, by Walter Baylis, portion 93.
92. *Mr. Ewing.*] On what ground was it validated? Because of its being within an area reserved from conditional purchase on account of the population of the City of Newcastle.
93. *Chairman.*] There is no reserve dated the 20th March, 1885? Yes; it is the population area. There is a water reserve proclaimed on the 1st January, 1867, and a population area proclaimed on the 20th March, 1885.
94. *Mr. Thompson.*] Look at the letter dated the 16th May, 1873, from the land agent at Newcastle, and say whether there do not appear to be two conditional purchases dealt with there within the area? Yes; but one is cancelled.
95. Which is that? One taken up in 1873 by Daniel Cane.
96. And Alcock's, which was originally Baylis's, was validated? Yes.
97. And is it not a fact that Baylis's consisted of portions 93, 55, and 56? Yes; but those others you have included now were made before the reserve was proclaimed.
98. Which? Numbers 55 and 56.
99. They were made then before the reserve was proclaimed? Yes. No. 56 was made in the year 1863, and No. 55 was made in the year 1862.
100. How is it then that they are both included in the water reserve which was made in 1867. How did the Government come to make a proclamation of a water reserve which included land already alienated from the Crown? I cannot answer that.
101. But still it is apparent that these selections were taken up within the area of the reserve a year before the reserve ever was proclaimed? Yes; but this matter of Mr. Rouse's only dates from the year 1875. Mr. Rouse has no claim before that.
102. Apropos of that, will you find out the minute with regard to the validation of Baylis's conditional purchase amongst the papers? The following is the minute with reference to the validation of Baylis's conditional

---

* NOTE (*on revision*):—No; it was not taken from the water reserve, as the application was declared void on account of it embracing land within the boundaries of the reserve in question.

W. H. Capper, Esq. 16 May, 1888.

conditional purchase. It is dated the 5th January, 1877, and is upon a special report by Inspector George Smith: "It is respectfully recommended that this case be inserted in the schedule to the Bill now in course of preparation. Applicant has been for years allowed to remain in possession of the land and to make improvements on the faith of the promise of successive administrations that his holding should be legalized. As pointed out, the only conflicting claim is from a person who subsequently to such promise, and on the failure of certain proposed transactions between them, has applied for the land under mineral lease. The omission of the case from the former Bill by the Committee of the Legislative Council was based not on the superior merits of the conflicting claim but on the ground that such a claim existed. It is submitted that the case can only be dealt with by legislation. If the land possesses special value, that will be settled by appraisement." Sir John Robertson approved of that minute, and wrote: "This case should be included when the next Bill is brought in." Cane's selection was made on the 1st March, 1873, and cancelled on the 27th June, 1873.

103. *Mr. Ewing.*] The reason why Baylis received his land was that he had been in undisputed possession for a considerable time, was it not? Yes.

104. *Mr. Thompson.*] And always paid his money? Yes.

105. *Mr. Ewing.*] The same grounds may be urged in favour of this claim from 1875 to 1879? I am not prepared to say so.

106. *Mr. Thompson.*] Can you give us the particulars of No. forty-nine? That was applied for by John Riley as a mineral conditional purchase on the 3rd June, 1872, and transferred to Frederick Alcock on the 7th April, 1874. The land was also measured in 1862.

107. *Chairman.*] I suppose that No. ninety-two was taken up at the same time? That appears to have been taken up by John Riley on the 3rd August, 1871, and transferred to Frederick Alcock.

108. *Mr. Thompson.*] Can you find No. fifty-seven, Thomas Jarvis Alcock, 40 acres on the lagoon? That, it appears, was selected by James Parker, on the 4th September, 1862, and subsequently transferred to Thomas G. Alcock.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS.

(CORRESPONDENCE, &c., RESPECTING SALE OF TOWNSHIP ALLOTMENTS AT TOCUMWALL.)

Ordered by the Legislative Assembly to be printed, 3 *September*, 1889.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 11th July, 1889,—That there be laid upon the Table of this House,—

"Copies of all papers and other correspondence by residents of Tocumwall "and others, relating to application that certain township allotments in "the town of Tocumwall should be submitted to competition by public "auction."

(*Mr. Chanter.*)

SCHEDULE.

NO.		PAGE.
1.	Petera Dunne to Surveyor Creed, with minutes. 11 February, 1887	2
2.	Licensed-Surveyor Creed to the District Surveyor at Albury, with minutes and enclosure. 31 May, 1887	2
3.	Petition from the residents of Tocumwall to the Secretary for Lands, with minutes	2
4.	The Under Secretary for Lands to Messrs. Howard, Taylor, and others. 20 August, 1887	3
5.	The same to the same. 12 December, 1887	3
6.	Messrs. Howard, Manning, and others to the Under Secretary for Lands, with minutes. 25 January, 1888	3
7.	R. Barbour, Esq., M.P., to the same. 12 February, 1888	3

CROWN LANDS.

No. 1.

Mr. Petera Dunne to Mr. Surveyor Creed.

Tocumwall, 11 February, 1887.

Dear Sir,

On behalf of the Catholic residents of this town, who are desirous of purchasing a site for the erection of a Church, I respectfully request you to recommend that the Church reserve, marked on the plan* of the village of Tocumwall as having a frontage to Hennessy-street on its northern side, and to Emily-street on its eastern side, be offered at public auction at the next Government land sale of Tocumwall allotments.

*Appendix A.

I have, &c.,
PETERA DUNNE.

Forwarded to Mr. District-Surveyor Wood for instructions.—WM. CREED, 22/2/87.

Mr. Licensed-Surveyor Creed may subdivide the area referred to. The allotments must not exceed half an acre each, and the same to be of the same width as that already provided in the section. —J. H. WOOD, District Surveyor.

Suggest upset price. Acted on by my letter and plan of 31st May, 87-24.—WM. CREED, L.S.

No. 2.

Mr. Licensed-Surveyor Creed to The District Surveyor at Albury.

Warmatta, 31 May, 1887.

Sir,

In reply to your instruction of 3rd March, 1887, No. 7, I have the honor to transmit herewith the plan of a part of the sub-division of section 8 into four allotments of half an acre each, numbered 4, 5, 6, and 7, in the village of Tocumwall, county of Denison, measured by me on the 5th March, 1887.

There are no improvements on the land.

The upset price of allotments 4 and 5 should be £10 each, and of 6 and 7 £8 each, as the former are fronting the main street.

I have, &c.,
WM. CREED.

Original voucher, 87-30, forwarded for payment of 75 per cent. advance on £3 11s.—WM. DAY. T. 8-1,816 Roll.

Plan approved. These portions have been measured on the application of the Roman Catholic residents of Tocumwall, who are desirous of purchasing a site for a Church in that village. It is recommended that these allotments be offered at auction, 4 and 5 at £10 each, and 6 and 7 at £8 each. The place of sale should be Corowa, and should be advertised twice in the *Corowa Free Press*.—WILLIAM ORR, District Surveyor, 3/5/88.

Submitted for approval.—R.H.D. (*pro* S.F.), 29/5/88. Approved.—T.G., 2/6/88. Mr. M'Lean.—E.C.M., 2/6/88. Mr. Fowler. Sale at Corowa, 28th September, 1888. Town lots, allotments 4, 5, 6, and 7, section 8. The above allotments not bid for, *vide* sale list of the 28th September, 1888.—R.L. (*pro* E.C.M.), 10/10/88.

No. 3.

Petition from the Residents of Tocumwall.

Sir,

The humble Petition of the undersigned residents of Tocumwall respectfully showeth that being desirous of acquiring sites to build in the village of Tocumwall, they would, therefore, respectfully request you to cause a subdivision to be made of that portion of the village reserve situated on the north side of Deniliquin-street, directly opposite sections 1 and 2, and then have the allotments offered at public auction, as business sites are in great demand.

And your petitioners, as in duty bound, will ever pray.

J. G. HOWARD, contractor, Tocumwall.
M. A. TAYLOR, Agent, Tocumwall.
J. T. BANKS, Farmer, Tocumwall.

[Here follow twenty-five other signatures.]

This petition be referred to the District Surveyor for report, keeping in view that if other lands suitable are available the reserves should not be interfered with.—R.H.D., 8/8/87. There are former papers, I think.—C.O., 9/8/87.

Former papers for Tocumwall land to be sent to auction herewith. They are not for the same land. The land applied for in this application is situated opposite sections Nos. 1 and 2.—E.C.M. (*pro* R.H.D.), 12/8/87. The Under Secretary.

Refer to the District Surveyor as proposed, and inform.—C.O., 15/8/87. Correspondence Branch to inform.—E.C.M. (*pro* R.H.D.), 15/8/87. Messrs. Howard, Taylor, and others informed, 20/8/87. The District Surveyor, Wagga Wagga.—F.H.W. (for the Under Secretary), B.C., 20/8/87. Mr. Surveyor Wood is requested to report as to the propriety of alienating the land herein referred to, 23/8/87.—C. F. BOLTON, District Surveyor, 26/8/87.

I am of opinion that the land referred to should be retained for future public requirements. Over fifty allotment are to be offered for sale, some with a frontage to the main street, on the 21st of this month.—J. H. WOOD, Surveyor, 8/8/87. The District Surveyor, Wagga Wagga.

Perhaps, as the land in question is not required for a specific public purpose, and it is no doubt less suited for commercial purposes, it might, in deference to the desire of petitioners, be measured and sold at auction.—C. F. BOLTON, 14/11/87. Only

Only five lots sold on the 21st September, 1887; fifty-six lots not bid for.—E.C.M., 21/11/87. Submitted. It is clear there is no demand for land, and it is suggested no further action is necessary.—S.F. (*per* R.H.D.), 24/11/87. Inform of result of sale, and of above submission, which is approved.—T.G., 5/12/87. Cor. Branch to inform.—E.C.M. (*pro* R.H.D.), 6/12/87. Messrs. Howard and others informed, 12/12/87. Put away.—E.C.M., 13/12/87.

No. 4.

The Under Secretary for Lands to Messrs. Howard, Taylor, and Others.

Gentlemen, Department of Lands, Sydney, 20 August, 1887.

I am directed to inform you that the petition has been received, and that your application to have the land noted in the margin brought to auction is being forwarded to the District Surveyor for measurement, should no objection exist and his report thereon is favourable.

Village reserve, part north of Deniliquin-street, village of Tocumwall.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 5.

The Under Secretary for Lands to Messrs. Howard, Taylor, and Others.

Gentlemen, Department of Lands, Sydney, 12 December, 1887.

Adverting to the petition signed by you, praying that lands in the village of Tocumwall might be offered for sale at auction, as you were desirous of acquiring building sites, I am directed by the Secretary for Lands to inform you that five lots only out of the number of allotments at Tocumwall offered for sale on the 21st September last were sold, fifty-six lots not being bid for; from which it is clear there is no demand for the land.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 6.

Messrs. Howard, Manning, and Others to The Under Secretary for Lands.

Sir, Tocumwall, 25 January, 1888.

Referring to your No. 87-3,556 of 12th December, intimating that the petition from residents of Tocumwall praying for certain lands in that town be put up to auction had been refused on account of the sale of Crown allotments on the 21st September last being unsuccessful, we have the honor to pray that you will again reconsider the petition on the following grounds:—

1. The allotments offered for sale on 21st September were three-quarters of a mile from the river bank, where the present township is situated, and were surveyed in a place utterly useless for building purposes, part of the ground being very swampy in winter time; the balance, sand-hills.
2. Many of the undersigned are anxious to secure building sites, and if the Crown lands opposite sections 1 and 2, Deniliquin-street, Tocumwall, be now offered for sale, great competition would undoubtedly take place to secure same, and, without doubt, all the allotments would realize very much more than the upset price.

Ever praying that our former petition will be favourably reconsidered by your Department.

We have, &c.,
J. G. HOWARD.
F. MANNING.

[And nineteen others.]

Mr. Howard,—Former papers.—E.C.M., 16/2/88. Papers herewith.—C.H., 18/2/88. Mr M'Lean,—Please supply tracing showing the land required; also sections 1 and 2.—E.C.M. (*pro* R.H.D.), 5/3/88.

Mr. Skelton,—Alienation Branch.—The land referred to as opposite sections 1 and 2 is unmeasured land outside the town boundary. As there is apparently some local demand for the land near the river indicated by the petitioners, the matter should probably be referred at once to the District Surveyor at Wagga Wagga.—R.M., 15/3/88.

Mr. M'Lean,—Can you please supply a tracing?—E.C.M. (*pro* R.H.D.), 23/3/88. Mr. Skelton for tracing.—R.M., 26/3/88.

Alienation Branch,—Tracing herewith. It may perhaps be pointed out that there are about fifty allotments in various measured sections in this village still unalienated and apparently available for auction sale.—R.M., 29/3/88.

Perhaps the matter should be forwarded to the District Surveyor for a report as to the advisability of measuring suitable allotments, which would sell more readily, as there appears to be a demand for building sites in the neighbourhood.—R.L., 8/6/88. Mr. Marr.

Mr. District-Surveyor Orr for report.—R.H.D. (for the Under Secretary), B.C., 20/6/88.

No. 7.

R. Barbour, Esq., M.P., to The Under Secretary for Lands.

Dear Sir, Parliament House, Sydney, 12 February, 1888.

I understand that the town allotments, Tocumwall, applied for, are now being surveyed and will shortly be gazetted for sale.

The Progress Committee desire that I point out to you the desirability of making Tocumwall the place of sale and not at Corowa or Jerilderie, 60 miles distant, as the buyers will be at Tocumwall.

Yours, &c.,
ROBT. BARBOUR.

No. 8.

No. 8.

R. Barbour, Esq., M.P., to The Under Secretary for Lands.

Sir, Parliament House, Sydney, 4 July, 1888.

In my district there is a township called Tocumwall. It is situated on the bank of the River Murray, in the county of Denison.

This town would be a thriving village were it not for the monopoly of a single individual named Hillson, who purchased all the best sites, and left the out-of-the-way and swampy ones. He then built a big hotel and general stores, secured the site of the punt, and got all the surrounding Crown lands made a reserve.

His next move was to get a river steamer and barges, and put it on to trade between Tocumwall and Echuca, in connection with Melbourne.

For years he has enjoyed this monopoly, and to such an extent as to charge 1s. a nobbler during a large part of the time.

I have, therefore, to ask that you will cancel the reserves round the punt site. They are not required in the interest of the public. A street leading to the punt is all that is required, and some day a bridge will no doubt take the place of the punt.

I think the reserves are two in number, but whether two or one, the people in the district are agreed that they should be revoked, and subdivided into town allotments and sold by auction. The land will sell well, and the sale will help the township to increase in population and in importance.

Yours, &c.,
ROBT. BARBOUR.

Submitted be referred to the District Surveyor for report.—E.C.M. (*pro* R.H.D.), 9/7/88. Yes. Inform.—C.O., 9/7/88. Cor. Branch to inform, then to District Surveyor.—E.C.M. (*pro* R.H.D.), 10/7/88. Done, 12/7/88. The District Surveyor, Wagga.—F.H.W. (for the Under Secretary), B.C., 13/7/88.

I beg to refer the Under Secretary to my previous communications on this subject, dated this 30th July, 1888 (Aln. 88-557).—William Orr, District Surveyor, Wagga Wagga, 30/7/88. The Under Secretary for Lands.

No. 9.

J. M. Chanter, Esq., M.P., to the Under Secretary for Lands.

Sir, Moama, 12 July, 1888.

An application from residents of Tocumwall, presented by Mr. Barbour, about the 22nd of last month, requesting that town allotments opposite sections 1 and 2 might be surveyed and offered for sale, kindly inform me how this case stands. The allotments will sell readily when offered.

Residents of Tocumwall desire me to request you to grant a small site of land for the purpose of erecting a church (Wesleyan).

Residents also request that in all future sales of Crown lands at Tocumwall, that the sales be effected in that town, and not, as hitherto, at Corowa.

Will you kindly forward to me here a litho. plan of the town of Tocumwall. Your early attention and reply to the foregoing requests will much oblige

Yours, &c.,
J. M. CHANTER, M.P.

Mr. Barbour, M.P., was informed of reference to the District Surveyor yesterday.—E.C.M., 13/7/88. Inform Mr. Chanter of reference to the District Surveyor as to Tocumwall lots for auction. Then to me specially.—R.H.D., 14/7/88. Corres. Branch. Done, 14/7/88. Send a memo. on Monday to the District Surveyor, requesting early report. Papers now with him.—R.H.D. (for the Under Secretary), 14/7/88.

No. 10.

Memo. from The District Surveyor at Wagga Wagga to The Under Secretary for Lands.

Sir, 13 July, 1888.

With reference to your instructions of the 20th June, 1888, directing me to report upon a petition presented to you by the residents of Tocumwall, county of Denison, praying for the subdivision of certain unmeasured lands in the village of Tocumwall, on the north side of Deniliquin-street, I have the honor to report that the land referred to is inundated in high floods, and is not, in my opinion, as suitable for settlement as measured portions within the town boundaries which are yet unsold.

If the land is offered for sale, as petitioned for, the original design, effected at considerable expense, will be distributed, and the business centre removed from its present position to a new locality. I regret to say I cannot recommend approval of the petition.

I have, &c.,
WILLIAM ORR,
District Surveyor.

The recommendation of the District Surveyor is submitted.—E.C.M. (*pro* S.F.), 10/9/88.

The petitioners may be informed to the effect of the District Surveyor's report. If any further reasons for the sale of the land referred to can be urged the matter might be reconsidered.—C.O., 14/8/88.

Inform.—H.P., 25/8/88. Cor. Branch.—E.C.M., 25/8/88. See Aln. 88-4,432.

No. 11.

The Under Secretary for Lands to R. Barbour, Esq., M.P.

Sir, Department of Lands, Sydney, 13 July, 1888.

I have the honor to inform you that your letter of the 4th instant, applying for the revocation of certain reserves at Tocumwall, in the county of Denison, has been referred to the District Surveyor for report.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 12.

The Under Secretary for Lands to J. M. Chanter, Esq., M.P.

Sir, Department of Lands, Sydney, 14 July, 1888.

Referring to your letter of the 12th instant respecting the sale of certain Crown lands at Tocumwall, I have the honor to inform you that the matter has been referred to the District Surveyor for report.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

P.S.—It may be mentioned that Mr. Barbour, M.P., was advised to the above effect on the 12th idem.

No. 13.

Mr. F. Manning to The Under Secretary for Lands.

Sir, Tocumwall, 8 August, 1888.

I have the honor to inquire if your Department have any immediate intention of selling reserved land opposite sections 1 and 2 in this township. Many petitions and requests for the sale of above have been refused, the assigned reasons being an alleged title or no demand existing here for the land.

I have to state that so large a demand exists for the land in the township, that the allotments under notice will bring large prices at auction when offered. Please inform me whether the Department would entertain an offer from me of £50 per acre for the reserve under notice.

I have, &c.,
FRANCIS MANNING.

Mr. Legg,—Please quote the former papers.—E.C.M., 13/8/88. Aln. 88-3,472. Submitted, 11/8/88.

No. 14.

J. M. Chanter, Esq., M.P., to The Under Secretary for Lands.

Sir, Moama, 27 August, 1888.

Some time since I wrote you requesting that town lots might be offered at auction in the village of Tocumwall, county of Denison, land district of Corowa; also whether any persons would be justified in erecting buildings for business purposes upon any of the unsold lots prior to their being offered at auction, and whether in that case the value of improvements would be secured to the occupants.

I also, a considerable time since, requested that these lots might be sold at Tocumwall instead of at Corowa, and recommended Mr. Joseph Howard, auctioneer, of Tocumwall, as Government auctioneer. Your early reply to the foregoing matter will much oblige.

Yours truly,
J. M. CHANTER, M.P.

Mr. Legg,—Please quote former papers.—E.C.M., 29/8/88. Aln. 88-3,472. 4,037 Marr., 29/8/88. Papers herewith.—C.H., 31/8/88. Mr. Marr, Correspondence Branch.—To inform in accordance with approval on Aln. 88-3,472. Also inform Mr. Manning his offer cannot be entertained.—E.C.M. (*pro* R.H.D.), 8/9/88. Mr. Chanter and Mr. Manning informed of decision on Aln., 88-3,472, 12/9/88. If nothing further by the end of September, 1888, put away.—R.L. (*per* E.C.M.), 12/9/88.

No. 15.

The Under Secretary for Lands to Mr. F. Manning.

Sir, Department of Lands, Sydney, 12 September, 1888.

Referring to the petition signed by yourself and other residents of Tocumwall, praying that certain lands in the vicinity of that place may be offered for sale at auction, I am directed by the Secretary for Lands to inform you that it appears from the report of the District Surveyor that the land you desire so offered is inundated in high floods, and not so suitable for settlement as the unsold allotments within the town boundary; but, if any further reasons for the sale of the land can be urged, the matter will be reconsidered.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 16.

No. 16.

The Under Secretary for Lands to J. M. Chanter, Esq., M.P.

Sir, Department of Lands, Sydney, 12 September, 1888.

Referring to your letter of the 27th ultimo, asking that certain town lots in the village of Tocumwall may be offered for sale at auction, I have the honor to inform you that it appears from the report of the District Surveyor that the land which it is sought to have offered is inundated at high floods, and not as suitable for settlement as the measured portions within the town boundaries which are yet unsold; but, if any further reasons for the sale of the land in question can be urged, the matter will be reconsidered.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 17.

Mr. F. Manning to The Under Secretary for Lands.

Sir, Tocumwall, 17 September, 1888.

With reference to the sale of Government land in Tocumwall, which is advertised for the 28th instant, I have the honor to inform you that the allotments notified for auction on that occasion are too far out of the township to be of use for building purposes. At the same time I desire respectfully to bring under your notice the fact that for years past the people of this town and district have agitated for the sale of the Government land in the township opposite sections 1 and 2. Petitions have repeatedly been sent to your predecessors in office, representing the necessity for selling these lots, and the gross injustice it is to keep them locked up from the public. I only ask that you will inquire into this matter, and if you determine to have such land surveyed and put up for auction, an upset price of £40 per acre will be readily guaranteed.

Your unblemished reputation as a business man has led me to believe that if this matter were thus represented to you, you would at least investigate it, and favour me with a reply at your earliest convenience.

I have, &c.,
FRANCIS MANNING,
President, Tocumwall Progress Committee.

P.S.—Referring to the communication from the Under Secretary just received (88-4,432), I desire to state that this land has not been inundated since 1870, when miles of the surrounding country were also submerged.—F.M.

Special. Please submit the papers with a statement of the facts.—C.O., 21/9/88. Mr. De Low.

No. 18.

Office Memo.

Respecting sale of land at Tocumwall. It appears that a petition has been made by the residents of Tocumwall (see Aln. 88-557 herewith) urging sale of land in that township, situated opposite sections 1 and 2; the land forms part of two reserves (see tracing herewith), and situated outside the town boundary.

Reference was made to the District Surveyor as to the advisability of sale, and in his report, registered Aln. 88-3,472, he states that he is unable to recommend the sale of the land applied for, it being situated outside the town boundary, and would necessitate the expense of measurement and alteration of design, and that there are still other unsold allotments which are available and suitable for settlement.

The recommendation was approved, and petitioners informed that if any further reasons for the sale of the land referred to could be urged the matter would be considered.

As no objections are made to the sale now advertised, and as only four allotments are for sale on the 28th instant the sale may, perhaps, proceed.

R.H.D.,
21/9/88.

I do not quite understand how the subdivision asked, if made, would have the effect of altering the design of the town; it would extend it, but not alter it otherwise. So repeatedly has it been urged that the land in question should be submitted for sale that I think steps to that end may be now taken. The interest of the Crown may be protected in the absence of competition by placing sufficient upset prices on the land, which should not, however, be so fixed as to render the sale unattractive.—C.O., 22/9/88.

Approved.—J.N.B., 24/9/88. Inform Correspondence Branch, 29/9/88. F. Manning informed, 4/10/88. The District Surveyor, Wagga Wagga; for measurement, *vide* approval, 24/9/88.—E.C.M. (for the Under Secretary), B.C., 10/10/88.

No. 19.

The Under Secretary for Lands to Mr. F. Manning.

Sir, Department of Lands, Sydney, 4 October, 1888.

Referring to your letter of the 17th ultimo, urging the sale of certain land situated opposite sections Nos. 1 and 2, in the township of Tocumwall, county of Denison, I have the honor to inform you that the Secretary for Lands has decided that the necessary steps be taken as early as practicable to have the land in question submitted for sale, and with this object in view the papers in the case are about to be forwarded to the District Surveyor for measurement of the land.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 20.

No. 20.

Memo. from The District Surveyor at Wagga Wagga to Mr. Surveyor Barlow.

[Aln. 88-5,423 ; L.B.D. 88-11,458.] 18 October, 1888.

SALE of town land at Tocumwall. The accompanying papers are forwarded to Surveyor Barlow, in order that he might carry out the Minister's decision thereon as soon as possible.

Mr. Barlow will be good enough to design the unmeasured land at Tocumwall, bounded on the south-east by Deniliquin-street, and if there is no objection to the design shown on accompanying tracing, marked A, he should measure two or three sections to meet the present urgent demand.

A gully or lagoon passes between sections 2 and 3, which should not probably be sold.

The plan of the measured allotments should be sent on with the papers immediately after marking out, and the design may be furnished later on.

WILLIAM ORR,
District Surveyor.

Urgent. Plan transmitted with my letter No. 88-80 of 19/11/.—M. BARLOW, Surveyor.

No. 21.

Mr. G. R. Jeffries to The Secretary for Lands.

Sir, Tocumwall, 1 November, 1888.

In reference to the petition and letters which have of late been sent from here asking for a survey of certain land in this township, with a view of it being offered at auction, I have the honor, now that the surveyor is engaged on such work, to ask your attention to a few facts which may not have been brought before your notice, and which, I think, will be worthy of consideration.

If you will kindly look at the map of the village of Tocumwall, you will see that in the whole twenty-two sections into which it is divided, no provision is made for public buildings, with the exception of two reserves for schools, one of which is already built on, and from the way in which all the best land has been purchased, there is not now one available section suitable from its nature or position for the erection of permanent Government buildings. The Court-house, Barracks, and Lock-up, a Post and Telegraph Office, are all at present rented to the various Departments, but from the rapid strides which this district is making, there is no doubt that at no distant date requisitions emanating from Progress and other Committees will be sent in to the Government, asking for the erection of more suitable and commodious public offices, and from its position, facing as it does the main street of the township in close proximity to the river and to the surveyed bridge site, there is no land more suitable for these purposes than that opposite section 1 and 2, particularly section 1, which on the map before me is marked R, as though intended for some such purpose. If, before allowing this land to be gazetted for auction, you will cause inquiry to be made as to the suitability of it for the purpose I have mentioned, you will, I feel sure, find my statement fully borne out, and that a permanent reservation of the whole frontage will save the Government from the necessity of purchasing land for public purposes from those whose only ulterior object is to secure to themselves the best land in the township with a view to future profit when the demand sets in for improved public buildings here.

The importance of this subject, and the fact that the surveyor is now at work will, I trust, be accepted as my apology for the length of this letter. I have, &c.,

GEORGE R. JEFFRIES.

Submitted be referred to the District Surveyor for report, and Mr. Jeffries be so informed.—E.C.M., 5/11/88. Yes.—F.H.W. (for the Under Secretary), 7/11/88. Correspondence Branch. To inform, then to District Surveyor.—E.C.M. (for R.H.D.), 7/11/88. Mr. Jeffries informed, 13/11/88.

The District Surveyor, Wagga Wagga.—H.C. (for the Under Secretary), B.C., 13/11/88. Forwarded to Surveyor Barlow to peruse and place with L.B.D. 88-11,458, sent to him on 18/10/88.—WILLIAM ORR, District Surveyor, 16/11/88.

Placed with L.B.D. 88-11,458 accordingly.—M. BARLOW, Surveyor, 19/11/88.

No. 22.

Mr. G. R. Jeffries to The Secretary for Public Works.

G. R. Jeffries—*Re* reservation of land as a site for public buildings at Tocumwall.

Sir, Tocumwall, 1 November, 1888.

I have the honor to bring before your notice the fact that in this township in the whole of the twenty-two sections no reserves have been set apart for public buildings other than two for schools, one of which is already built on. The whole of the best of the land has been offered at auction in years gone by and purchased, the remainder of the section, consisting of undulating sand hill, totally unfitted for building purposes. The one exception to this is a piece of land on the north side of Deniliquin-street, opposite section 1 of the village survey, which is now being laid out by the surveyor with the view of it being submitted at auction. The land consists of good dry box forest, admirably suited, both from its position and nature, for public offices, and it would indeed be a great pity to see it pass into the hands of speculators, who would be the first to demand an exorbitant price from the various Departments when the demand exists—which undoubtedly will be soon—for the erection of more commodious public buildings than those at present in use at Tocumwall.

If you deem these remarks worthy of notice, it would be well to at once see to the permanent reservation of this frontage for public purposes before it is gazetted for sale.

I have, &c.,

GEORGE R. JEFFRIES.

This communication should be referred for the consideration of the Lands Department, and Mr. Jeffries informed.—A.G.M'L., 8/11/88. Do so.—N.G., 8/11/88. G. R. Jeffries, Esq., 12/11/88. The Under Secretary for Lands.—A.G.M'L. (for the Under Secretary), B.C., 12/11/88.

The District Surveyor at Wagga Wagga for report.—R.H.D. (for the Under Secretary for Lands), 21/11/88. G. R. Jeffries, 21/11/88.

16 November, 1888.

PLEASE telegraph when plan and report of Tocumwall lands will be furnished.

H. CURRY
(For Under Secretary for Lands).

Received 9·40 on 17th November, 1888, and replied to by wire at 10 a.m. same date. Surveyor Barlow, who is on the ground, also wired to by this office to hasten survey.—W.O., 17/11/88.

No. 26.

Telegram from The District Surveyor at Wagga Wagga to The Under Secretary for Lands.

17 November, 1888.

SURVEYOR BARLOW, now at Tocumwall, making survey of town lands there. Expect to have his plan and report in by 30th.

WM. ORR,
District Surveyor.

Correspondence Branch,—Please inform Mr. Chanter, M.P.—E.C.M., (*pro* R.H.D.), 17/11/88. Mr. Chanter, M.P., informed, 22/11/88. Mr. Legg,—Survey in yet?—E.C.M., 23/11/88. Yes; allotments in sections 24 and 25 only. (See Aln. 88-6,444).—R.L., 27/11/88.

No. 27.

Mr. Surveyor M. Barlow to Mr. District-Surveyor Orr.

(Papers L.B.D. 88-11,458 and plan herewith, No. 80).

Sir, Albury, 19 November, 1888.

In compliance with your instructions, No. 88-110, of 18th October, on paper L.B.D. 88-11,458, "to survey two or three sections within the village of Tocumwall, county of Denison, to meet present urgent demand," I have the honor now to transmit herewith a plan* of eighteen allotments, numbered 1 to 10, section No. 24, and 1 to 8, section No. 25, and to report,—

* Appendices B, C.

That, on account of the flooded nature of the land to the north of section No. 23 (Police reserve), I did not consider it expedient to lay out section No. 25 exactly in accordance with the design shown on tracing marked "A"; but I surveyed eight allotments as shown on plan which embraced all the available land outside the limit of inundation; at date of survey the land shown on plan as liable to inundation was perfectly dry, but in wet seasons the flood-water from the river backs up for a considerable distance over this area and renders it unfit for town settlement.

The allotments shown on accompanying plan will be sufficient to meet the present demand, but I will furnish a design in a few days' time for the measurement of all the available land within the village.

As the existing reserve for public buildings is in an unsuitable position, being on a sand-hill and some distance from the business centre of the township, I would strongly recommend that allotments Nos. 6 and 7 of section 24 be reserved for public buildings, as, no doubt, before long a Post and Telegraph Office and a Court-house will be required, and these buildings should be in the main street (Deniliquin-street).

It is expected that there will be considerable competition for the allotments when offered for sale, and I would therefore suggest an upset price of £50 per acre for allotments 1, 8, 9, and 10, and £40 per acre for allotments 2, 3, 4, and 5 of section No. 24; also an upset price of £40 per acre for allotments 1 and 8, and of £30 per acre for allotments 2 to 7, of section No. 25.

Allotments Nos. 6 and 7 of section No. 24, proposed to be reserved for public purposes, are worth at least £50 per acre.

As

As will be seen by plan, the telegraph line to Deniliquin passes through allotments 9 and 10 of section No. 24, and the road in present use to Deniliquin, which has been cleared, follows the direction of the telegraph line, and passes through the reserve for wharf and punt, crossing instead of following the surveyed road.

All the allotments measured by me are liable to inundation, to a slight extent, in very high floods, but they have not been covered since 1870, and then only to a depth of a few inches, by back water.

I took my azimuth for this survey from the southern boundary of section No. 23, which I found to agree with the azimuth of sections Nos. 3 and 4.

Date of survey, 2nd and 3rd November, 1888.

I have, &c.,
MAURICE BARLOW.

P.S.—As the present town boundary only extends as far as the northern boundary of Deniliquin-street it will be necessary to renotify it along the northern boundary of Sugden-street, and its prolongation easterly to the eastern boundary of Hannah-street, and therefore coincident with the present suburban boundary.—M. BARLOW.*

* The present suburban boundary follows the southern boundary of portion 98 and not the northern boundary of Sugden-street, (*Vide* Mr. Barlow's memo. of 23rd November, 1888).

T. 90-1,816 Roll. Mr. Meldrum for examination.—W.H.H., 22/11/88. Examined and charted. —T. B. MELDRUM, 23/11/88. Plan approved.

It is recommended that allotments 6 and 7 of section 24 be proclaimed as reserve for public buildings and the necessary description is enclosed. In view of the fact that the present survey does not interfere or cause any alteration in the design of the town, it is submitted that action under the 107th clause is unnecessary; should it be held otherwise I will forward the necessary descriptions and tracings immediately on being advised to do so. I would recommend that an upset price of £50 an allotment be placed on allotments 1, 8, 9, and 10, section 24, and allotment 8, section 25; £40 per allotment on allotments 2, 3, 4, and 5 of section 24, and allotments 1 to 4 of section 25; £35 per allotment on allotments 5, 6, and 7 of section 25; and £30 per allotment on allotments 2 and 3 of section 25.—WILLIAM ORR, District Surveyor, 24/11/88. The Under Secretary.

The recommendation of the District Surveyor is submitted for approval.—R.H.D. (*pro* S.F.), 29/11/88. Approved. Sale to be held at Tocumwall and advertised in local newspapers.—J.N.B., 10/12/88. Mr. O'Dwyer.—E.C.M., 11/12/88. Will Mr. Keating please state whether this action involves any alteration of design.—J.O'D. (*pro* R. H. DE LOW), 15/12/88. Mr. Keating. Urgent. No alteration of design in the sense of the 107th section is involved. Descriptions are enclosed for notification of extended village and suburban land.—J.T.K., 18/12/88. Mr. De Low. Executive Council Minute. Sale at Tocumwall, 29th July, 1889. Town lots. Allotments 1 to 5, 8 to 10, section 24, 1 to 8, section 25. Charted plan, T. 9, noted.—R.D.A., 18/3/89. Examined.—R.M., 20/3/89. Now for auction sale.—R.M., 20/3/89. Mr. Fowler.

No. 28.

The Under Secretary for Lands to Mr. G. R. Jeffries.

(Ms. 88-14,577.)

Sir, Department of Lands, Sydndy, 21 November, 1888.

I have the honor to inform you that your letter of the 1st instant, addressed to the Department of Public Works, on the subject mentioned hereunder, has been referred to Mr. District-Surveyor Orr for report.

I have, &c.,
R. H. DE LOW
(For the Under Secretary).

Application for reserve for public buildings at Tocumwall.

No. 29.

The Under Secretary for Lands to J. M. Chanter, Esq., M.P.

Sir, Department of Lands, Sydney, 22 November, 1888.

With reference to your letter of the 16th instant, asking when the Crown lands in the township of Tocumwall will be offered for sale by auction, I have the honor to inform you that the District Surveyor reports that Mr. Surveyor Barlow is now at Tocumwall making survey of town lands, and that his plan and report are expected by the 30th instant.

I have, &c.,
H. CURRY
(For the Under Secretary).

No. 30.

Telegram from Mr. F. Manning to The Under Secretary for Lands.

5 January, 1889.

WHEN will allotments here be sold? What causes great delay?

F. MANNING,
President, Progress Committee.

Mr. De Low,—What does this refer to? If land in Common Tocumwall, some recent action has, I think, been taken.—W.H., 7/1/89. Eighteen allotments, in sections 24 and 25, are being put in schedule for sale. Government Printer.—E.C.M., 8/1/89.

No. 31.

Messrs. Chanter and Barbour, M's.P., to The Secretary for Lands.

Survey of Lands for Auction Sales in Town of Tocumwall.

Dear Sir, Parliament House, Sydney, 10 January, 1889.

The allotments have been surveyed. The people ask that they may be gazetted for sale at once. We approve of the sale as early as possible.

J. M. CHANTER, M.P.
ROBT. BARBOUR, M.P.

Have these lands not been advertised already; if not, what is the cause of delay?—J.N.B., 11/1/89. Schedule of eighteen lots now with the Government Printer, and will be advertised for sale about the end of January and offered for sale end of March, 1889.

[*Enclosure.*]

Messrs. Chanter and Barbour, M's.L.A., Sydney,—

Gentlemen, Tocumwall, January, 1889.

I send you herewith a petition hastily got up in favour of having the lots put up at auction.

The delay is inexplicable. Numbers of persons are constantly inquiring about them, and there appears to be a desire to settle here if persons could obtain the land. This they cannot do at present, and thus the progress of the place is retarded. Kindly urge for these lots to be put up this month if possible.

I have, &c.,
JONATHAN G. HOWARD.

[*Sub-enclosure.*]

Tocumwall, 7 January, 1889.

THE petition of the undersigned residents of Tocumwall and district, being desirous of purchasing building sites in the township of Tocumwall, respectfully request that you will be pleased to cause the allotments of land recently surveyed in the aforesaid township to be offered at public auction at an early date this month.

And your petitioners, as in duty bound, will ever pray.

J. G. Howard.....	Farmer, &c.....	Tocumwall.
Walter Whitehead.....	Auctioneer	Tocumwall.
Francis Manning	Manager	Commercial Bank.

[Here follow twenty other signatures.]

No. 32.

J. M. Chanter, Esq., M.P., to The Secretary for Lands.

Sir, Sydney, 16 January, 1889.

My constituents are complaining loudly at the continued delay in submitting to public competition the allotments recently surveyed in the town of Tocumwall. Will you kindly expedite matters and oblige.

Yours, &c.,
J. M. CHANTER.

Schedule of eighteen lots, now with the Government Printer.—E.C.M., 17/1/89. Mr. De Low. Inform as above to-day, please, and say sale will be held probably about end of March.—R.H.D., 17/1/89. Cor. Branch. J. M. Chanter, M.P., informed, 17/1/89.

No. 33.

The Under Secretary for Lands to J. M. Chanter, Esq., M.P.

Sir, Department of Lands, Sydney, 17 January, 1889.

Referring to your letter of yesterday, inquiring when the allotments recently surveyed in the town of Tocumwall will be offered for sale at auction, I have the honor to inform you that the schedule of eighteen lots is now with the Government Printer, and that the sale will be held probably about the end of March.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 34.

Executive Council Minute.

Urgent. Recommending Site for Village, &c.

Department of Lands, Sydney, 19 January, 1889.

IT is recommended to His Excellency the Governor and the Executive Council that the portion of land within described, containing about 300 acres, be declared under the 101st section of the Crown Lands Act of 1884, to be set apart as the site for a village to be called Tocumwall, with suburban lands about 160 acres to be attached thereto, and that the herein defined area of 1 acre, in the parish of Tocumwall, county of Denison, be reserved from sale, under the section quoted, for public buildings.

It is further recommended that so much of the notification in the *Government Gazette* of the 20th March, 1885, as relates to the setting apart of village and suburban lands at Tocumwall be cancelled.

WILLIAM JOHN LYNE.

The Executive Council advise that the recommendation in each case, herein set forth, be approved, and the necessary notices issued.—ALEX. C. BUDGE, Clerk of the Council. Minute 89/7, 22/1/89. Approved.—CARRINGTON, 22/1/89. Executive Council minute gazetted and Land Agent informed, 25/1/89. Confirmed, 29/1/89. Land Agent, with description, 7/2/89. Mr. Keating, 7/2/89.

No. 35.

No. 35.

Gazette Notice.

Department of Lands, Sydney, 25 January, 1889.

Site for a Village at Tocumwall.

His Excellency the Governor, with the advice of the Executive Council, directs it to be notified that, in pursuance of the provisions of the 101st section of the Crown Lands Act of 1884, the following portions of Crown lands are declared to be set apart as sites for the village of Tocumwall, and of suburban lands to be attached thereto.

WILLIAM JOHN LYNE.

Amended boundaries of Village Lands at Tocumwall.

County of Denison, parish of Tocumwall, area about 300 acres: Commencing on the right bank of the Murray River, at its intersection with the western side of Murray-street; and bounded thence by that side of Murray-street bearing northerly about 18 chains to the northern side of Sugden-street; thence by that side of that street and its prolongation bearing north-easterly to the eastern side of Hannah-street; thence on the eastern side of that street southerly to the south side of Kelly-street; on part of the south by the south side of that street westerly to the west side of Morris-street; and on part of the west by that side of that street northerly to the south side of Tuppal-street; thence on the remainder of the south by part of that side of that street westerly to the Murray River, and on the west by that river downwards, to the point of commencement.

Boundaries of the Suburban Lands at Tocumwall.

County of Denison, parish of Tocumwall, area about 160 acres: Commencing on the right bank of the Murray River, at its intersection with the western side of Murray-street; and bounded thence by that side of that street and a north-eastern boundary of portion 98 of 400 acres bearing north-westerly to the western extremity of a south-eastern boundary of same portion; thence by that boundary and its prolongation bearing north-easterly to its intersection with the western boundary of portion 44 of 320; thence by part of that boundary south to its southern extremity; thence a line partly forming the south-west boundaries of portions 44 and 43 bearing south-easterly to its intersection with a north-west boundary of last-mentioned portion; thence a line partly forming the north-west boundaries of portions 43 and 46 bearing south-westerly to the northern extremity of the east boundary of J. Page's portion 47 of 40 acres; thence by a north-east boundary of that portion north-westerly to its north-east corner; and thence on the south by the north boundary of that portion, being a line bearing west 2 minutes north 21 chains 75 links to the right bank of Murray River; thence by that bank of that river downwards, to the point of commencement,—but exclusive of the village of Tocumwall, as notified this day.

The above boundaries are in lieu of those proclaimed in *Gazette* of 20th March, 1885, and which are hereby cancelled.

No. 39.
R. Barbour, Esq., M.P., to The Secretary for Lands.

Dear Sir, Parliament House, Sydney, 12 June, 1889.

Our constituents at Tocumwall request Chanter and myself to ask you to make a reduction of £10 on the upset of the town allotments advertised to be sold on the 29th July.

These lands as sites for business will be much competed for—the people were very desirous of getting them sold, but change of Ministry and some instructions given by Mr. Lyne delayed the sale, this has caused the people to think that some person had blocked the sale, and we are requested to ask the papers in the case to be laid upon the Table of the House.

I however think that if you would write me a letter giving reasons for the delay, it may be sufficient.

I have, &c.,

ROBT. BARBOUR.

Inform Mr. Barbour that the upset prices were recommended by the District Surveyor, and inferring from his (Mr. Barbour's) representation that the land will probably be briskly competed for, it is not desirable in the public interest to reduce the upset prices. Mr. Barbour may also be informed why the sale has been delayed.—J.N.B., 13/6/89.

Corresponding Branch,—Mr. Barbour informed, 13/6/89.

No. 40.
The Under Secretary for Lands to R. Barbour, Esq., M.P.

Sir, Department of Lands, Sydney, 13 June, 1889.

Referring to your letter of the 12th instant, urging a reduction of £10 on the upset price of the town allotments advertised to be sold on the 29th proximo at Tocumwall, I am directed by the Secretary for Lands to inform you that the upset prices were recommended by the District Surveyor, and inferring from your representation that the land will probably be briskly competed for, it is not desirable in the public interest to reduce the upset prices.

I am to add that the delay of sale is owing to the total suspension of all auction sales of Crown lands since the 19th March last.

I have, &c.,

H. CURRY

(For the Under Secretary).

No. 41.
Mr. W. Whitehead to The Under Secretary for Lands.

Dear Sir, Tocumwall, 3 July, 1889.

I have received the lithos., &c., all right this morning and posted the others back. I suppose I shall receive more instructions as to terms, &c., before the sale day; unless the terms are pretty good, I almost think buyers would pay cash. What about No. 10 block that J. G. Howard has leased and erected a public-house on that will be opened about the middle of the month?

Yours, &c.,

WALTER WHITEHEAD.

Terms and conditions of sale sent Mr. Whitehead. Cor. Branch,—Please inform Mr Whitehead and the Crown Lands Agent, Corowa, that allotment 10, of section 24, has been withdrawn from sale, 29th July instant, at Tocumwall.—E.C.M. (*pro* R.H.D.), 13/7/89.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 8. TUESDAY, 2 APRIL, 1889.

8 CONDITIONAL PURCHASES MADE UPON BARRATTA RUN:—Mr. Barbour moved, pursuant to *amended* Notice,—

(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon all conditional purchases made upon the run of Barratta (Henry Ricketson, lessee), from January, 1872, till December, 1882; how many were lapsed or forfeited; what became of the improvements; how many were converted into improvement purchases.

(2.) That such Committee consist of Mr. Lyne, Mr. J. P. Abbott, Mr. Alison, Mr. Copeland, Mr. Chapman, Mr. T. G. Dangar, Mr. Brunker, Mr. Hugh Taylor, Mr. Woodward, and the Mover.

Question put and passed.

VOTES No. 14. TUESDAY, 16 APRIL, 1889.

2. CONDITIONAL PURCHASES MADE UPON BARRATTA RUN:—Mr. Lamb presented a Petition from Henry Ricketson, of Barratta Station, referring to the Select Committee now sitting upon this subject; and praying that he may be heard by Counsel, Attorney, or Agent before such Committee, with liberty to adduce such evidence as may be within his power.

Petition received.

Mr. Lamb (*by consent*) moved, without Notice, That the prayer of the Petitioner be granted.

Question put and passed.

VOTES No. 87. WEDNESDAY, 4 SEPTEMBER, 1889.

4. CONDITIONAL PURCHASES MADE UPON BARRATTA RUN:—Mr. Barbour, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 2nd April, 1889, together with Appendices.

Ordered to be printed.

1889.

CONDITIONAL PURCHASES MADE UPON BARRATTA RUN.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 2nd April, 1889, "*with power to send for persons and papers to inquire into and report upon all Conditional Purchases made upon the Run of Barratta (Henry Ricketson, lessee), from January, 1872, till December, 1882; how many were lapsed or forfeited; what became of the improvements; how many were converted into improvement purchases,*"—have agreed to the following Report:—

1. Your Committee having examined the witnesses, whose evidence is appended hereto, find as follows:—

(1.) The conditional purchases made upon Barratta Run from January, 1872, till December, 1882, numbered 89 (eighty-nine), and contained an area of about 20,000 (twenty thousand) acres.

(2.) *How many were forfeited.*—Seventy-five out of the eighty-nine conditional purchases were forfeited; one only obtained a certificate of conformity by Henry Ricketson, the owner of the run; the remaining thirteen being treated as null and void, as it does not appear that any improvements were effected upon them.

(3.) *Improvements.*—The improvements made upon the seventy-five forfeited conditional purchases, according to the valuation of the Inspectors, averaged nearly twenty shillings per acre, or a total of upwards of £18,000 (eighteen thousand pounds), and consisted of tanks or dams, fencing, and buildings.

(4.) *What became of the Improvements.*—Twenty-six of the forfeited conditional purchases were, sometime after, sold by auction to Henry Ricketson, and the value of the improvements was added to nine of them, and there is no evidence before the Committee to show that there were any improvements upon the other seventeen at the time they were sold by auction. Twelve of the forfeited conditional purchases are still Crown Lands, and so far as your Committee were able to ascertain the improvements are still upon the land, and the land and improvements are in possession of Henry Ricketson.

(5.) *How many were converted into Improvement Purchases.*—Thirty-seven of the forfeited conditional purchases have been purchased by Henry Ricketson as improvement purchases. Application was made by him to purchase each of these immediately after forfeiture had appeared in the *Gazette;* in twelve cases he made application only two days after forfeiture, viz., they were gazetted forfeited on the 7th of August, 1876, and his application is dated 9th August, 1876. In three other cases, three days elapsed; in others, seven days, fourteen days, twenty-one days, and so on, and so far as your Committee could ascertain the most of the improvements claimed in the applications appear to be those that are described as being upon the forfeited conditional purchases at the time of forfeiture. The area so dealt with is between 9,000 and 10,000 acres, and Crown grants have been obtained for the whole at prices varying from 20s. to 25s. per acre.

2. In the evidence given by the Under Secretary for Lands (questions 278 to 283) it appears that the Supreme Court has decided that when conditional purchases become forfeited the improvements thereon belong to the Crown. No evidence was adduced before your Committee showing that the improvements upon lands which Mr. Ricketson had been permitted to purchase as improvement purchases had not been erected by him either partly before and partly after, or wholly after the time the said lands had been conditionally purchased.

ROBT. BARBOUR,
Chairman.

No. 3 *Committee Room,*
Sydney, 4 *September,* 1889.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 10 *APRIL*, 1889.

MEMBERS PRESENT:—

Mr. Barbour, | Mr. Alison,
Mr. Hugh Taylor.

Mr. Barbour called to the Chair.

Entry from Votes and Proceedings appointing the Committee *read* by the Clerk.

Committee deliberated.

Ordered,—That an intimation be sent to Mr. Henry Ricketson (lessee of the Barratta Run) that the Committee intended to proceed with the inquiry, and that it was open to him to petition the House for leave to be represented before the Committee should he so desire.

[Adjourned.]

Re-assembling of the Committee to be arranged by the Chairman.

TUESDAY, 14 *MAY*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 15 *MAY*, 1889.

MEMBERS PRESENT:—

Mr. Barbour, | Mr. Chapman.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 16 *MAY*, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. T. G. Dangar, | Mr. Woodward.

Entry from Votes and Proceedings, granting leave to Henry Ricketson to appear by Counsel before the Committee, *read* by the Clerk.

Committee deliberated.

[Adjourned till Tuesday, 28 May, at *Two* o'clock.]

TUESDAY, 28 *MAY*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 29 *MAY*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 30 *MAY*, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. Alison, | Mr. T. G. Dangar,
Mr. Hugh Taylor.

Present:—Thomas Robertson, Esquire (*Solicitor for Mr. Henry Ricketson*).

Frank Griffin (*Clerk, Conditional Sales Branch, Department of Lands*), called in, sworn, and examined.

Witness handed in schedule showing particulars of all conditional purchases made upon Barratta Run, from January, 1872, till December, 1882. Ordered to be appended. (*See Appendix* A1).

Witness withdrew.

[Adjourned till Wednesday next, at a *quarter past Two* o'clock.]

WEDNESDAY,

WEDNESDAY, 5 *JUNE*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 3 *JULY*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

THURSDAY, 4 *JULY*, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. Alison.

Present:—Thomas Robertson, Esq. (*Solicitor for Mr. Henry Ricketson*).
Stephen Freeman (*Under Secretary for Lands*) called in, sworn, and examined.
Witness withdrew.

[Adjourned till to-morrow at *half-past Eleven* o'clock.]

FRIDAY, 5 *JULY*, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. Alison, | Mr. Hugh Taylor.

Present:—Thomas Robertson, Esq. (*Solicitor for Mr. Henry Ricketson*).
Henry Ricketson called in, sworn, and examined.
Witness handed in copy of a letter dated 23rd December, 1888, from Robert Barbour, M.P., to witness in reference to improvements on Barratta Run. Ordered to be appended. (*See Appendix* B1.)
Witness withdrew.

[Adjourned.]

FRIDAY, 2 *AUGUST*, 1889.

MEMBERS PRESENT:—

Mr. Barbour, | Mr. Chapman.

In the absence of a quorum the meeting called for this day lapsed.

WEDNESDAY, 14 *AUGUST*, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. T. G. Dangar, | Mr. Hugh Taylor.

Committee deliberated.
Chairman submitted Draft Report.
On motion of Mr. Hugh Taylor, in consequence of the absence of Mr. Alison, a member of the Committee, who desired to be present when the Report was dealt with, the consideration thereof was postponed.

[Adjourned till Wednesday, 28 August, at *Three* o'clock.]

WEDNESDAY, 28 *AUGUST*, 1889.

MEMBER PRESENT:—

Mr. Barbour.

In the absence of a quorum the meeting called for this day lapsed.

7

WEDNESDAY, 4 SEPTEMBER, 1889.

MEMBERS PRESENT:—

Mr. Barbour in the Chair.

Mr. Alison, | Mr. Brunker,
Mr. Hugh Taylor.

Chairman submitted Draft Report, as follows:—

"THE Select Committee of the Legislative Assembly, appointed on the 2nd April, 1889, '*with power to send for persons and papers to inquire into and report upon all Conditional Purchases made upon the Run of Barratta (Henry Ricketson, lessee), from January*, 1872, *till December*, 1882; *how many were lapsed or forfeited; what became of the improvements; how many were converted into improvement purchases*,'—have agreed to the following Report:—

"1. Your Committee having examined the witnesses, whose evidence is appended hereto, find as follows:—

"(1.) The conditional purchases made upon Barratta Run from January, 1872, till December, 1882, numbered 89 (eighty-nine), and contained an area of about 20,000 (twenty thousand) acres.

"(2.) *How many were forfeited.*—Seventy-five out of the eighty-nine conditional purchases were forfeited; one only obtained a certificate of conformity by Henry Ricketson, the owner of the run; the remaining thirteen being treated as null and void, as it does not appear that any improvements were effected upon them.

"(3.) *Improvements.*—The improvements made upon the seventy-five forfeited conditional purchases, according to the valuation of the Inspectors, averaged nearly twenty shillings per acre, or a total of upwards of £18,000 (eighteen thousand pounds), and consisted of tanks or dams, fencing, and buildings.

"(4.) *What became of the improvements.*—Twenty-six of the forfeited conditional purchases were, sometime after, sold by auction to Henry Ricketson, 'but although all of these were improved, only upon nine of them was anything added to the upset price for the improvements, consequently seventeen of such cases, averaging nearly £300 each, of improvements, became the property of Henry Ricketson without anything having been paid for such improvements.' Twelve of the forfeited conditional purchases are still Crown Lands, and so far as your Committee were able to ascertain the improvements are still upon the land, and the land and improvements are in possession of Henry Ricketson.

"(5.) *How many were converted into Improvement Purchases.*—Thirty-seven of the forfeited conditional purchases have been purchased by Henry Ricketson as improvement purchases. Application was made by him to purchase each of these immediately after forfeiture had appeared in the *Gazette*; in twelve cases he made application only two days after forfeiture, viz., they were gazetted forfeited on the 7th of August, 1876, and his application is dated 9th August, 1876. In three other cases, three days elapsed; in others, seven days, fourteen days, twenty-one days, and so on, and so far as your Committee could ascertain the most of the improvements claimed in the applications appear to be those that are described as being upon the forfeited conditional purchases at the time of forfeiture. The area so dealt with is between 9,000 and 10,000 acres, and Crown grants have been obtained for the whole at prices varying from 20s. to 25s. per acre.

"2. In the evidence given by the Under Secretary for Lands (questions 278 to 283) it appears that the Supreme Court has decided that when conditional purchases become forfeited the improvements thereon belong to the Crown. 'Your Committee are of opinion that the greater part, if not the whole of the described improvements were upon the land at the time that the selections were forfeited, and were therefore the property of the Crown, and that Henry Ricketson wrongfully claimed the said improvements to be his own property, and in consequence he was allowed to purchase the land as improvement purchases, and he has thereby obtained thirty-seven Crown grants which should not have issued in the circumstances.'"

Same read paragraph by paragraph.

Paragraph 1 read and agreed to.

Sub-paragraphs (1) to (3) read and agreed to.

Sub-paragraph (4) read, amended on motion of Mr. Brunker, by *omitting*, from lines 2 to 7,—"but although all of these were improved, only upon nine of them was anything added to the upset price for the improvements, consequently seventeen of such cases, averaging nearly £300 each, of improvements, became the property of Henry Ricketson without anything having been paid for such improvements," and *inserting*, "and the value of the improvements was added to nine of them, and there is no evidence before the Committee to show that there were any improvements upon the other seventeen at the time they were sold by auction,"—and agreed to.

Sub-paragraph (5) read and agreed to.

Paragraph 2 read amended, on motion of Mr. Brunker, by *omitting* from lines 3 to end of paragraph, the words "your" to "circumstances," and inserting "No evidence was adduced before your Committee showing that the improvements upon lands which Mr. Ricketson had been permitted to purchase as improvement purchases had not been erected by him either partly before and partly after or wholly after the time the said lands had been conditionally purchased,"—and agreed to.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

CONDITIONAL PURCHASES MADE UPON BARRATTA RUN.

THURSDAY, 30 *MAY*, 1889.

Present:—

MR. T. G. DANGAR. | MR. BARBOUR.
MR. ALISON. | MR. HUGH TAYLOR.

R. BARBOUR, ESQ., IN THE CHAIR.

Thomas Robertson, Esq., Solicitor, appeared on behalf of Mr. Henry Ricketson.

Frank Griffin called in and examined:—

1. *Chairman.*] You are a clerk in the Lands Office? Yes; in the Conditional Sales Branch.
2. We want to know what conditional purchases were made on the Barratta Run from 1872 to 1882. What was the first one that was taken up after 1872? The first one I have any trace of is dated the 7th August, 1873.

Mr. F. Griffin. 30 May, 1889.

3. What is the name? H. J. Ricketson.
4. What was the area? 320 acres.
5. What is the parish? Parish of Banangalite.
6. Have you any reports from Conditional Inspectors as to the improvements that were made upon that conditional purchase? Yes, a report by Mr. Keele; that is dated 1876.
7. What do you say about the date of lapsing? It was declared lapsed on the 7th May, 1877.
8. What does he report as to the improvements that were on that conditional purchase? Fencing, £140.
9. And what next? That is all that he reports.
10. Have you any other reports? Not on that conditional purchase.
11. What is the date of the inspection? The 2nd July, 1876, by Mr. Keele.
12. And the improvements were fencing? Yes.
13. Was that conditional purchase lapsed or forfeited? It was lapsed on the 7th May, 1877.
14. When was it gazetted? That was the date of the gazetting.
15. Was it gazetted as lapsed or forfeited? As lapsed.
16. The two words mean the same thing, don't they? No. Forfeiture would be for non-compliance with conditions of residence and improvements. A conditional purchase lapses when no declaration is sent in or no instalments are paid.
17. Both are for non-fulfilment of conditions? Yes. But one might be after inquiry in open Court.
18. Can you tell us anything more about that conditional purchase? Yes; that same land was applied for by R. Barbour, on the 20th November, 1873.
19. That was a long time before? Yes.
20. And whilst it was a conditional purchase? Yes.
21. And what was done with that? That was declared void, because it was the same land already applied for by H. J. Ricketson.
22. What was done with it after it lapsed? On the 28th May, 1877, Henry Ricketson applied for it as an improvement purchase.

Mr. F. Griffin, 30 May, 1889.

23. What were the improvements described as in the Inspector's report? The report was dated the 5th September, 1883.
24. Is that the report upon the application for the improvement purchase? Yes.
25. What is the report on the improvements? Wool-scouring establishment, £180; fencing, £172; a tank, £90.
26. Do you know if that fencing is the same fencing as was described in the conditional purchase? No; I could not say.
27. How long was the date of it after the lapsing? Three weeks.
28. What was the number of acres applied for as the improvement purchase? 320.
29. Was it granted? Yes.
30. And have the deeds issued? Yes.
31. When did they issue? On the 6th November, 1884.
32. Can you tell us anything more about that improvement purchase? The price was £1 5s. per acre.
33. That is the whole, is it? Yes.
34. What is the next conditional purchase? The next is on the same date, by F. W. Ricketson.
35. What is the area of that? 240 acres.
36. Was there any inspection of that? Yes; on the 26th June, 1876, Mr. Keele inspected it.
37. And what were the improvements then? A bridge and a house valued at £240.
38. Was that subsequently lapsed or forfeited? That lapsed on the 7th May, 1877.
39. Was that applied for as an improvement purchase? Yes; on the 28th May, 1877.
40. And what were the improvements in connection with the improvement purchase on the date of the surveyor's valuation? Fencing, £109 17s.; a tank, £94 10s.; a bridge, £50.
41. No house? No house.
42. Was that improvement purchase sold? Yes; in November, 1884.
43. As an improvement purchase? Yes.
44. At £1 5s. an acre? Yes.
45. Can you tell us anything more about that purchase? No.
46. What is the date of the next conditional purchase? The 14th August, 1873.
47. What is the name of the purchaser? F. W. Ricketson.
48. What is the area? 320 acres.
49. Was there any inspection of that? Yes; Inspector Carne inspected it.
50. What is the date? 17th June, 1878. That is after it lapsed.
51. What were the improvements? Stable for Cobb & Co., £175; fencing, £160; and tank, £132 6s. 8d.; total, £468 6s. 8d.
52. Was that subsequently lapsed or forfeited? It was lapsed before that inspection, on the 7th May, 1877.
53. Was it afterwards applied for as an improvement purchase? Yes, on the 21st May.
54. In what year? 1877.
55. What improvements were reported? The improvements were the same. It was the same inspection connected with the improvement purchase, the inspection being after the lapsing.
56. What was the time between the lapsing and the application for it as an improvement purchase? About three weeks, and from the date of application to the date of inspection about twelve months.
57. What did the improvement purchase claim as an improvement? A house, tank, fencing, &c.
58. Is there any difference between the improvements mentioned in the application for the improvement purchase and the improvements reported? The only difference is that the house is called a stable in the report.
59. Can you tell us any more about that purchase? The deed was issued, and the price was £1 2s. 6d. an acre.
60. What is the next conditional purchase? The next was on the same date, by W. F. Ricketson, 14th August, 1873.
61. Can you give the area of that conditional purchase? Yes; 320 acres.
62. Was that inspected? Not till after it was lapsed.
63. When was it inspected? On the 17th June, 1878. It was lapsed on the 7th May, 1877.
64. What were the improvements on it? An iron house, £160; fencing, £160; and an old hut, £5; total, £325.
65. Was that applied for as an improvement purchase? Yes; on the 21st May, 1877.
66. What were the improvements mentioned in that application? A house, fencing, &c.
67. Do these correspond with what was reported as on the conditional purchase? Yes, but the improvement purchase was refused.
68. Has it been applied for again? No; it was sold at auction at the upset price of £1 12s. 6d. an acre.
69. Is these anything said in the papers about the improvements being included? I do not think so.
70. What is the next case? The next is on the same date, by C. M. Ricketson.
71. What is the area? 320 acres, in the parish of Ricketson.
72. Was that inspected? Yes; by Mr. Smith.
73. What was the date? 14th August, 1873.
74. What were the improvements reported by Mr. Smith on the 12th April, 1876? There was a hut, £15; fencing, £180; and a tank, £100. There was an inquiry by Commissioner Johnson, on the 8th May, in connection with that purchase, and it was declared forfeited on the 7th August. 1876.
75. Was it subsequently applied for as an improvement purchase? Yes; on the 9th August, 1876, by Henry Ricketson.
76. And what improvements were claimed for? I have not got the papers of that particular improvement purchase.
77. Have you any report upon it? Yes; Mr. Licensed Surveyor Finlay reported upon it.
78. What did he say the improvements were? Fencing, £160; tank, £150; hut, £15;—£325 altogether.
79. Are these the same improvements that were on the forfeited conditional purchase? The same class—hut, fencing, and tank.
80. The total amount of the one corresponds with the total amount of the other? No; there was £295 worth on the conditional purchase, and £325 was the value for the improvement purchase.

Mr. F. Griffin. 30 May, 1889.

81. They were the same items? Yes.
82. Can you tell us anything more about it? Yes; the deed issued for that purchase at £1 an acre.
83. On what date? The 20th August, 1879.
84. What is the next conditional purchase? On the same date, by Amy G. Ricketson.
85. What is the area? 320 acres.
86. In what parish? Ricketson.
87. Any improvements reported upon it? Yes; Mr. Smith, on the 12th April, 1876, reported a hut, £15; fencing, £180; a tank, £150; total value, £345. Commissioner Johnson held an inquiry on the 8th May. It was forfeited on the 7th August, 1876.
88. Was it subsequently applied for as an improvement purchase? Yes.
89. What was the date of the application? 9th August, 1876.
90. And what are the improvements claimed for? A house, a tank, post and wire fencing.
91. And the value? £350.
92. Is that for the same improvements that are on the conditional purchase? Yes, the same items—a hut, fencing, and a tank. Mr. Carne inspected that on the 7th September, 1879. He found a hut, value £30; a dam, £20; fence, £160; tank, £120; iron hut, £60; total, £390. It was again inspected by Mr. Landon on the 15th June, 1881.
93. Do the improvements differ in any way? No; there were two tanks, fencing, and a hut, valued at £300.
94. Do they seem to be all the same improvements, but differently valued? The same class of improvements. Only 240 acres of that was granted out of the 320 acres applied for.
95. Have the deeds been issued for that? Yes; on the 30th July, 1883, at £1 1s. an acre; the balance of that portion is now an auction purchase.
96. What is the next case? The next is on the 20th November, 1873—George Boyd, selector, of 320 acres, in the parish of Billabong.
97. Was that inspected? No; that was declared lapsed on the 16th May, 1877.
98. Were there any improvements reported? No; it was sold by auction.
99. What was the next case after that? The next is on the same date, 20th November, 1873, by J. M. C. Orton.
100. Did anything come of that? That lapsed on the 16th May, 1877.
101. Were there any improvements reported? Yes; on the 12th October, 1878, by Inspector Carne.
102. What are the improvements? A house, £160; fencing, £180—£340 altogether. That was applied for as an improvement purchase on the 14th June, 1877, but it was refused.
103. Was it applied for again? No.
104. What was subsequently done with it? It was sold at auction.
105. What was the upset price? I have not got that.
106. What is the next case? The next is on the 20th November, 1873, by Frederick Gee, 320 acres, in the parish of Ricketson.
107. Was that reported upon? Yes, on the 24th December, 1874. Inspector Street reported upon it.
108. Was there a subsequent inspection? Yes, on the 7th September, 1879, by Inspector Carne.
109. What were the improvements reported on by Street? A hut with an iron roof.
110. And by Mr. Carne, in September, 1879? Fencing, £75; a tank, £20 9s. 4d.; and fencing again, £70.
111. Was there any subsequent inspection of that? Yes, in 1886.
112. And what were the improvements reported then? Fencing, £90; tank, £300.
113. Was that subsequently applied for as an improvement purchase? Yes, in 1877.
114. On what date? I cannot give the date; the application was refused.
115. Was there a subsequent application? I do not think so. It is now an auction purchase. I have no particulars as to the price.
116. What is the next case? The next one is on the 20th November, 1873, by Samuel Tucker; area, 160 acres.
117. Was that inspected? Yes; by Mr. Keele, on 7th July, 1876.
118. What did he report? A hut, value £5.
119. Was that all? That was all.
120. Was there any other inspection? Yes; on the 17th August, 1878, by Mr. Carne. He found a tank, £111 6s. 8d., and a hut, £10. Then Mr. Landon, on the 14th June, 1881, reported a hut, £20, a tank, £93 15s., and 93¾ acres were granted for the improvement purchase.
121. What was the date of the application for that improvement purchase? 13th June, 1877.
122. Did you say whether that was lapsed or forfeited? It was declared lapsed on the 16th May, 1877.
123. What is the next conditional purchase? On the 20th November, 1873, Fanny Barbour.
124. Was that reported on? That was an application for 320 acres, but only 158 acres were allowed. That is in the parish of Banangalite.
125. Was that inspected? It does not appear to have been inspected until after it was forfeited on the 19th March, 1878; it was inspected on the 10th July, 1880, by Mr. Carne.
126. What were the improvements? Cottage, £40; another, £25; shed, &c., £24; fencing, £134; total, £223.
127. Was that applied for as an improvement purchase? Yes; on the 26th March, 1878, by Henry Ricketson.
128. Was it allowed to be purchased? No; it was refused.
129. Do you know if anything was done with it subsequently? Yes; it was notified as reserved from sale and lease on the 26th March, 1878. That is the day on which it was applied for as an improvement purchase.
130. Do you know if anything has since been done with it? No; I think that case is proceeding now.
131. Is there anything to show whether it is gone from the Crown? It is still in the hands of the Crown.
132. What is the next case? The next case is that of Margaret Barbour, 20th November, 1873.
133. What is the area? 288½ acres.
134. Was that inspected? Not till after it was declared forfeited.
135. When was it declared forfeited? On the 7th August, 1876.
136. On what date was it inspected? On the 8th August, 1880, by Inspector Carne.

Mr. F. Griffin. 30 May, 1889.

137. What were the improvements? Fencing, £180; tank, £140; house, £160; total, £480.
138. Was that applied for as an improvement purchase? That was applied for as an improvement purchase by Henry Ricketson.
139. On what date? On the 27th November, 1876, the application being allowed for 144¼ acres.
140. What were the improvements claimed? It was originally applied for in connection with another conditional purchase, portions 3, 4, and 23, comprising 468¼ acres, and that was afterwards split into three. That was claimed in virtue of three tanks, valued at £495, and fencing, valued at £169 10s.
141. Then what was the other conditional purchase that was joined on to that one? That was the purchase of Josiah Pitty, 180¼ acres.
142. Have you Pitty's improvements? Yes. Pitty's improvements on the 12th April, 1876, were a hut, £20; fence, £90; another fence, £180; making a total of £290.
143. When was that forfeited? On the 7th August, 1876.
144. When was it applied for as an improvement purchase? On the 22nd November, 1876; but only 144¼ acres were granted at that time.
145. Was some other land granted subsequently? Yes; it was granted in three lots.
146. And what were the improvements on the three lots? The improvements on the 144¼ acres were valued by Surveyor Broughton on the 16th July, 1886—a tank, £62 10s.; fence, £85 10s.; total, £148; that is on portion 3. On portion 4 of the same area he found a tank, value £117 10s.; a fence, £28 10s.; total, £146. On portion 23 of Pitty's selection, a tank, £162 10s.; a dam, £10; and fence, £11 5s.; total, £183 15s.
147. Do these improvements correspond with the improvements reported on the conditional purchase? They reported a tank and a fence, but I do not know whether they are the same.
148. Does the next correspond with them? No. The deeds were issued on this third portion on the 3rd February, 1888; £1 5s. an acre was the price.
149. Have you given us the improvements that were inspected on all those conditional purchases? Yes; there were only two conditional purchases, but three portions.
150. Then what is the next conditional purchase on the Barratta Run? The next is George P. Barbour's.
151. What is the area? 320 acres.
152. And the date? The 20th November, 1873.
153. Were the improvements inspected? Yes. On the 12th April, 1876, Inspector Smith found a hut, value £20; fence, £90; tank, £60; total, £170.
154. Has there been any further inspection? Yes; it was inspected by Mr. Carne on the 9th August, 1880.
155. What did he report? He found a tank made by the selector valued at £26 15s. 4d.; improvements made by the lessee of the run, tank and fencing, valued at £324 3s. 4d. That was forfeited on the 7th August, 1876; that is portion 14 in the parish of Ricketson.
156. When was it applied for as an improvement purchase? On the 31st December, 1877.
157. And was it sold as an improvement purchase? No; it was refused.
158. Is it still Crown land? It appears to be still Crown land.
159. What is the next conditional purchase? The next is George Pitty's, 20th November, 1873, 144¼ acres; this is portion 5.
160. What improvements are reported? Inspector Smith, on the 12th April, 1876, found a hut, valued at £20, and a fence, £160. That was forfeited on the 7th August, 1876, and applied for as an improvement purchase on the 2nd May, 1878.
161. What improvements were claimed? A house and a tank.
162. Are those the same improvements that were on the conditional purchase? No; not according to the Inspector. He said there were a hut and a fence.
163. And the improvement purchase application is for a house and a tank? Yes.
164. What is the amount? On the 17th June, 1878, Inspector Carne found that there was a hut, £85, and a tank, £100.
165. Was that selection forfeited? It was forfeited on the 7th August, 1876.
166. When was it applied for as an improvement purchase? On the 2nd May, 1878.
167. Are the improvements different from the first one? The improvements made by the selector are valued at £76, and those of the lessee at £130 13s. 4d.
168. Was that sold as an improvement purchase? Yes, the deed was issued on the 24th October, 1881; the price was £1 an acre.
169. What is the next one? The next one is Thomas Kerr, 20th November, 1873, 320 acres. That was declared forfeited on the 1st October, 1878.
170. What were the improvements on it? They were not given till afterwards—the 7th September, 1879, there was a hut, tank, and fence, valued at £209 1s.
171. When was it applied for as an improvement purchase? On the 8th October, 1878.
172. What improvements were claimed? That was a conditional improvement purchase.
173. Have you any improvements reported? Yes; by Mr. Surveyor Orr, on the 6th July, 1881.
174. Was that inspection in consequence of the improvement purchase application? Yes.
175. What improvements did he report? A tank, £156 5s.; fencing, £125; a house, £110; total, £391 5s.
176. Do any of these correspond with the improvements on the conditional purchase? The same class of improvements—a hut, tank, and fence.
177. Was that sold as an improvement purchase? Yes; the deed was issued on the 2nd January, 1882, and the price was £1 5s. an acre.
178. What is the next conditional purchase? Mary K. Barbour, 20th September, 1873, area 320 acres, in the parish of Ricketson.
179. Was there any inspection of that conditional purchase? Yes; on the 24th December, 1874, Inspector Street reported that there were a hut and fencing, but no value was stated.
180. Was there any subsequent inspection? Yes; by Inspector Carne, on the 9th August, 1880.
181. What are the improvements? He found that the improvements made by the selector amounted in value to £105 16s. 8d., and those made by the lessee to £508 6s. 8d.
182. Was that applied for as an improvement purchase? Yes, on the 9th August, 1876. First of all it was applied for on that date as portions 10 and 11, 640 acres.

Mr. F. Griffin. 30 May, 1889.

183. Was the conditional purchase of M. K. Barbour allowed to be purchased? Not at first; subsequently, on the application of 5th February, 1877, it was.
184. By whom? By Henry Ricketson, 640 acres.
185. That included Catherine Barbour's conditional purchase? Yes.
186. What is the area of the two portions? 640 acres.
187. What improvements are reported on the last conditional purchase? Inspector Carne, on the 9th August, 1880, valued the improvements by the selector at £145, and those by the lessee at £331 13s. 4d.
188. What was the date of the application for that improvement purchase? The one granted was dated 5th February, 1877.
189. And were those the improvements that the improvement purchase was sold for? Licensed Surveyor Rigaut, on the 29th March, 1877, found on the block of 640 acres a tank valued at £450 7s. 6d.; a dam at £20; another tank, £166 14s. 6d.; a cottage, £70—total, £707 1s. 6d.; and the deed issued for that block on the 1st June, 1880, at £1 an acre.
190. Inspector Carne's inspection was in 1880? Yes.
191. When was the conditional purchase forfeited? It was forfeited on the 27th August, 1876.
192. And when was the application for the improvement purchase dated? There were two applications. First, 9th August, 1876; that was refused. And the second on 5th February, 1877.
193. And the second time the two conditional purchases were joined? On both occasions they were.
194. Is there any reason given for the first improvement purchase being refused? Yes—for not being within a block 5 miles square. That was a conditional improvement purchase.
195. And that was altered? Yes; on the 5th February, 1877, it was applied for as an improvement purchase.
196. At first it was applied for as a conditional improvement purchase, and that was refused? Yes.
197. And subsequently it was applied for as an improvement purchase, and that was granted? Yes.
198. Are the same improvements stated in both? The improvements in the conditional improvement purchase would not be on it.
199. Have you any improvements reported on about the date of the conditional improvement purchase? No; not about that date, but about four years afterwards. The improvements intended to be erected on the conditional improvement purchase were a house, tank, and post and wire fencing.
200. Were they put on? I do not know; that application was refused.
201. Are the improvements that were on the conditional purchase traceable in the purchase that was afterwards granted as an improvement purchase? They may be. There was a cottage valued at £70 on the improvement purchase, and two huts on the selection; that would be all. There is no mention of the two tanks or the dams being on the selection.
202. I think you said Mr. Carne's report was that a certain value of improvements were effected by the selectors? On Catherine Barbour's conditional purchase to the value of £145.
203. What was the value of the improvements reported to have been made upon the other conditional purchase? £105 16s. 8d.
204. These sums should amount to what? £250 16s. 8d.
205. And these are the two conditional purchases that were subsequently amalgamated in the improvement purchase of 640 acres? Yes.
206. What is the next conditional purchase? The next is Leighton Barbour, 20th November, 1873, 320 acres.
207. What are the improvements reported? The improvements reported on 10th August, 1880, by Inspector Carne, are a tank, £500; fence, £40—made by the lessee.
208. Was that applied for as an improvement purchase? Yes, that in conjunction with Robert Barbour, junr.'s, conditional purchase.
209. Was it an improvement purchase or a conditional improvement purchase? Both; that case is not settled yet.
210. What is the next conditional purchase? The next is J. Dougharty, in the parish of Banangalite, 238½ acres.
211. What improvements are reported there? Inspector Smith, on 12th April, 1876, reported a hut, £15; tank, £200; a fence, £78: total, £293. That was declared forfeited on the 7th August, 1876.
212. Was it applied for as an improvement purchase? Yes; on 9th August, 1876.
213. And what were the improvements claimed? A house, post and wire fencing, and a tank.
214. Are those the improvements that were on the conditional purchase? They are of the same class.
215. Do they differ in price or in the description? The valuation given by Mr. Finlay was only £263 6s. 3d.
216. And that was the valuation in consequence of the improvement purchase? Yes.
217. Does that differ from the first valuation? The first was £293.
218. Would a similar amount cover the necessary expenditure to enable the improvement purchase to be made? Yes; it is only 238 acres.
219. And the difference in price may be accounted for in that way? Yes.
220. Mr. Finlay finds the smaller amounts sufficient to cover the improvement purchase? Yes.
221. Was it sold? Yes; the deeds were issued on the 1st November, 1878, to Mr. Ricketson for £1 per acre.
222. What is the next case? The next was J. Dougharty again, of 27th November, 1873, for 81½ acres, in the parish of Ricketson.
223. That would be an additional conditional purchase? Yes; to make up the area of 320 acres.
224. What improvements were reported in that case? The improvements were nil. It is now an auction purchase. It was forfeited on the 7th August, 1876.
225. What is the next case? J. Kelly, for 238½ acres, and also for 81½ acres.
226. That is an additional conditional purchase? Yes, the 81½ acres.
227. What are the improvements reported on it? On 12th April, 1876, Inspector Smith found a hut £15, and line of posts only for fence valued at £78.
228. Was there a subsequent inspection? No; that was forfeited on the 7th August, 1876.
229. Was either of these applied for as an improvement purchase? No; they were sold at auction.
230. At what price? I do not know the price.
231. What was the date of the grant? I do not know.

Mr. F. Griffin. 30 May, 1889.

232. You cannot tell the upset price? No.
233. Can you say of your own knowledge that the document before you is a true and correct abstract of the papers bearing upon the several matters set forth in it? Yes; I drew it up myself.
234. Do you hand that in as an abstract of all the particulars contained in those papers? Yes; as regards the headings given in accordance with the Chairman's memo.
235. And you say that that is a true abstract statement of the particulars therein contained? Yes, as far as it goes. Of course it does not show what became of the improvements. [*See Appendix* A 1.]
236. *Mr. T. G. Dangar.*] Have Crown grants been issued in all the cases? No.
237. *Chairman.*] Does that paper show in what cases the Crown grants have been issued? Yes.
238. And whether they have or have not? Yes.
239. *Mr. T. G. Dangar.*] Do I understand that all these improvement purchases were originally conditional purchases, and that they were afterwards sold as improvement purchases? Some of them, not all.
240. *Chairman.*] What you have given were original conditional purchases, were they not? They were all conditional purchases.
241. Were they all subsequently sold as improvement purchases? Not all of them.
242. And that paper sets forth which were sold as improvement purchases? Yes.
243. *Mr. Robertson.*] The Chairman has asked about several improvements made during the currency of the conditional purchases—that is, if the improvements were mentioned in the improvement-purchase applications were not identically those mentioned in the conditional-purchase applications? There would be no way of showing.
244. Are you familiar with the Land Act? Yes.
245. When an application is made for the purchase of an improvement purchase the Department requires improvements to the amount of £1 an acre, and that the applicant shall himself be the owner of those improvements at the time he makes the application? Yes, and they are to be necessary for the working of the run.
246. All these essentials being there, the Department is satisfied? Yes.
247. Must not the Department have been satisfied, before granting leave to Mr. Ricketson to make improvement purchases that he had improved the land to the value of £1 an acre? Yes.
248. Do you know that all lapsed or forfeited conditional purchases revert to the run? Yes.
249. And that all improvements on these lapsed or forfeited conditional purchases then become the property of the lessee of the run? No. I did not know that.

THURSDAY, 4 *JULY*, 1889.

Present:—

MR. HUGH TAYLOR, | MR. ALISON,
MR. T. G. DANGAR.

R. BARBOUR, ESQ., IN THE CHAIR.

Thomas Roberston, Esq., Solicitor, appeared on behalf of Mr. Henry Ricketson.

Mr. Stephen Freeman called in, sworn, and examined:—

Mr. S. Freeman. 4 July, 1889.

250. *Chairman.*] You are the Under Secretary for Lands? Yes.
251. We have taken evidence before in this case, and an abstract was handed in by one of your clerks, Mr. Griffin;—is he a reliable officer? Yes.
252. And, as far as you know, the evidence that he gave is correct? I have no knowledge of his evidence.
253. Do you know the Barratta Run? Yes, on the map.
254. Who is the lessee? Henry Ricketson, I believe.
255. He has been for some years? Yes, for a good many years.
256. Have you got a copy of the evidence given by Mr. Griffin? Yes, I have, and also a schedule handed in by him.
257. In addition to what is supplied there, are there some conditional purchases which were afterwards bought as improvement purchases? Yes.
258. And some were made as auction purchases? Yes, I believe they were.
259. Have you a list of the improvements, if any, that were on the selections at the time they were sold by auction? Yes. I should like to qualify that. I should mention that it is not possible for the department to know exactly what improvements are on any portion of land that may be forfeited, because the inspection leading up to the forfeiture takes place some time before then, and delays occur, so that the forfeiture is not carried out until long after the inspection. It is impossible therefore for the department to say what was the actual value of the improvements at the date of the forfeiture.
260. You have no personal knowledge of the matter? No.
261. And the evidence you give us will be from the records in your office? Yes.
262. There is a great number of them, and the Committee, on the last occasion, asked Mr. Griffin to tabulate them;—have you done the same thing? I have particulars of the forfeited conditional purchases sold at auction, showing the area, the parish, the portion number, date of auction sale, value of the improvements, if any, added to the upset price, and for whose benefit.
263. And the upset price? No, I have not the upset price. The upset price in those days was almost invariably £1 an acre, irrespective of any question of improvements.
264. Will you hand in the list? Yes. The list contains a few other notes for my information, which will enable me to say when the Inspector visited the land in some cases, and what he found on the land.
265. To save time, would you hand in the list to the Committee? Yes.
266. And do you say it is correct? I believe it is correct. I have not myself obtained the information, but it has been obtained in the office by reliable officers.

267.

Mr. S. Freeman. 4 July, 1889.

267. And you believe it is correct? I have no doubt about it.
268. *Chairman.*] Will you state to the Committee the full particulars of the statement contained in that list? Yes. The first is conditional purchase 73-8,450; portion 48, parish of Barratta, 320 acres; £321 18s. 6d. added to the upset price for Mr. Ricketson's protection, he being understood to be the owner of the improvements. The sale took place on the 2nd November, 1888. The next is conditional purchase 73-12,282, portion 10, parish of Billabong, 320 acres; nothing added to the upset price. Mr. Carne inspected the land in October, 1878, and found £340 worth of improvements on it. The sale took place in December, 1881, the land being sold by auction. Conditional purchase 73-12,289, portion 6, parish of Ricketson, 320 acres; nothing was added for improvements. Mr. Carne inspected the land in September, 1879, and found improvements on it to the value of £12 9s. 4d. The land was sold in May, 1879. Conditional purchase 73-12,526, portion 7, Banangalite, 238½ acres; nothing was added for the value of improvements. Inspector Smith saw the land in April, 1886, and found improvements on it to the value of £93. The sale took place on the 29th May, 1879. Conditional purchase 73-12,528, portion 11, Banangalite, 320 acres; nothing added to the value for improvements. Inspector Smith, in April, 1876, found improvements on the land to the value of £315. The sale took place on the 29th November, 1876. Conditional purchase 73-12,529, portion 28, parish of Ricketson, 320 acres, £160 added for the protection of the Crown; and conditional purchase 73-12,532, portion 27, the same parish; 320 acres, £212 added for the protection of the Crown. Conditional purchase 73-12,851, portion 3, parish of Staniforth, 320 acres, had nothing added. Inspector Keele, in January, 1876, found that there were £5 worth of improvements. The sale took place on the 26th September, 1877. Conditional purchase 73-12,855, portion 21, parish of Ricketson, 320 acres; value of improvements, £327; added for the protection of the Crown. Conditional purchase 73-12,856, portion 10, Banangalite, 320 acres, nothing added. Inspector Smith, in April, 1876, found £205 worth of improvements. The sale took place on the 29th November, 1876. Conditional purchase 73-12,859, portion 19, parish of Ricketson, 320 acres; nothing added for value of improvements. Inspector Keele, in June, 1876, found £180 worth of improvements. The land was sold in September, 1872. Conditional purchase 73-12,862, portion 22, parish of Ricketson, 320 acres; nothing added for improvements. Inspector Rigaut, in April, 1877, found improvements to the value of £337 10s. Sale took place on the 5th January, 1882. Conditional purchase 75-12, portion 30, Banangalite, 40 acres; nothing added for improvements. Inspector Carne, in September, 1877, found improvements on the land to the value of £50. The sale took place in December, 1878. Conditional purchase 75-100, portion 15, parish of Carribarri, 320 acres, had £14 10s. added for improvements for the protection of the Crown. Conditional purchase 75-101, portion 72, same parish, 320 acres, had £109 added for the protection of the Crown.
269. In one case you said that the improvements were added to the upset price for Mr. Ricketson's protection? Yes.
270. Did that mean that he did not pay anything for improvements, but paid only the price of the land? Yes, the price of the land irrespective of improvements.
271. Because the improvements were recognized as belonging to him? Yes.
272. In two of the cases £212 and £327 were added for the protection of the Crown;—does that mean that the Crown received those amounts in addition to the upset price of the land? Yes. There are five cases like that.
273. In those cases, where you say that the improvements belonged to the Crown, the Crown received payment in the purchase? Yes.
274. Was any application made for improvement purchases for any of those pieces which were subsequently sold by auction? I cannot say.
275. The Committee want you to furnish a list of what improvements were applied for under certain improvement-purchase applications;—have you a list of those? Yes.
276. Can you hand that list in? Yes.
277. That list shows the applications for improvement purchases with the particulars of the improvements? Yes, the nature and value of the improvements in virtue of which the purchases were applied for.
278. Can you tell us whether any steps were taken to put those forfeited conditional purchases back into the leasehold? No step was necessary, the law in 1875 declaring that they fell back into the lease—section 19 of the Act of 1875.
279. Were any steps taken by the department to value those lands and the improvements that were put on them in order to assess the rent to be paid? I cannot say that, but there is a Supreme Court decision which seems to bear on the point as to what should be charged for those lands.
280. Were any steps taken by the department to ascertain? Not that I know of.
281. *Mr. Robertson.*] What case did you refer to? It is the case of Peterson *v.* Prowse, vol. 2, page 292, "Reports of Supreme Court Decisions." I will quote the part of the decision referring to this matter. Mr. Justice Faucett in giving his decision said:—

> "The 90th section of the Act of 1875 says that when lands conditionally purchased are forfeited they revert to the lessee. It follows that the improvements go to the lessee for the term of his lease, and subject to such lease they are vested as well as the land in the Crown."

That decision bears on the point, and definitely states that the improvements go to the lessee with the land.
282. *Chairman.*] That is the use of them? Yes, I suppose so.
283. Then comes the question again, were any steps taken by the department to assess the rent. Of course those forfeited conditional purchases going back into the run would not go back for nothing;—would not the department expect rent for them? The department should expect rent for them, and I have not the slightest doubt that when the succeeding term of five years was under appraisement it was the duty of the appraiser to consider the land that fell in to the lease prior to the appraisement.
284. Can you tell us of your own knowledge whether they did carry out their duty and ascertain the rent? I cannot say that, because the records of these appraisements were destroyed in the Garden Palace fire.
285. Can you give the rents charged for the Barratta Run for the years 1876, 1878, 1879, and 1880? Yes. In 1876, 1877, and 1878 the rent was £65 a year; in 1879 it was £127, and in 1880 it was the same.

Mr. S. Freeman. 4 July, 1889.

286. I saw by the schedule that was handed in by Mr. Griffin that in 1876 there were upwards of 7,000 acres forfeited or lapsed? I don't know whether that is so. No doubt it is so, but I have not inquired into that.
287. That was in 1876, and if the rent for 1877 was the same as in 1876 there was nothing added for that year for those lands that went back into the run? I cannot say that, because an area might have been selected in 1877 equivalent to that which fell in.
287½. But as far as is shown by the figures the rent was the same in 1877 as it was in 1876? Yes.
288. In 1877 then the area that reverted or lapsed was 8,000 acres, and as the rent for 1878 was the same as it was in 1877 the presumption is that nothing was added that year for the additional area? I cannot say that, because an equivalent area may have been selected.
289. *Mr. Robertson.*] With reference to the auction sale of land, with improvements valued at £318 18s. 6d., for the protection of Mr. Ricketson, I presume that that was bought by Mr. Ricketson? The whole of those lands were bought by Mr. Ricketson.
290. Had it been purchased by a stranger, would he not have had to pay the price with that amount added to it? Yes.
291. And the improvement money would not have been added in the case of Mr. Ricketson? Yes, that is so.
292. In the other cases the additional money would have gone into the Treasury? Yes.
293. But where you say it is for the protection of the Crown? Yes; anybody buying had to pay that to the Crown.
294. You mentioned a third class of cases where Inspector Carne reported certain improvements up to £50 in value, which were not taken notice of at the time of the sale? Yes.
295. If those improvements which Mr. Carne referred to had been made by Mr. Ricketson, and he became the purchaser at auction at the upset price, then I presume that no injustice was done? Not if those improvements were made by Mr. Ricketson during his tenure of the land; but if they were made by Mr. Ricketson during somebody else's tenure it would have been improper to add anything for Mr. Ricketson's protection.
296. Take one of the auction blocks advertised for sale without mentioning the improvements upon which Mr. Carne subsequently reported. That land having been sold without any additional price having been put upon it, the purchaser paid the upset price without any charge for improvements, but if the improvements had been made by Mr. Ricketson, no injustice was done either to the country or to Mr. Ricketson? No, certainly not, if Mr. Ricketson made those improvements whilst the land was under tenure to him.
297. *Chairman.*] But when it was under tenure to others? If the others forfeited their rights the improvements belonged to the Crown, and the department should have seen that they were paid for.
298. *Mr. Robertson.*] But that would not have been the fault of Mr. Ricketson? Certainly not.
299. About the forfeited selections with improvements on them, you have read the judgment of Mr. Justice Faucett that makes the improvements go to the lessee for the period of his lease? Yes.
300. Has a lessee any different ownership of improvements on other parts of his run? Yes.
301. In what respect? He has if he effects the improvements himself.
302. Assuming that the squatter makes improvements on his run, I want to know in what different position he stands in regard to those improvements from his position with regard to the improvements on the forfeited selections which may have reverted to his run? The distinction is rather marked. In the one case, where a pastoral tenant improves the run at his own expense, that fact is taken into account by the Crown when considering the sale of the land, if it should be sold.
303. We will assume that a squatter having improved a block of his own run to the amount of £320 comes to the end of his lease, what relationship does he hold in regard to those improvements? Under the existing law he has no claim for compensation in virtue of the improvements.
304. Therefore, inasmuch as Mr. Justice Faucett said that the lessee would have the other improvements during the rest of his term, virtually both classes of improvements are on the same footing? At the end of the term they would be if his tenure expired.
305. Then they are no more and no less than the other improvements? I would again repeat that if the Crown is considering the sale of the land the fact of the pastoral tenant being the owner of the improvements is taken into account, and he is protected to the extent of his improvements if the ground is sold to some one else.
306. *Chairman.*] If the Crown owns the improvements, what then? Then the Crown gets the benefit under the existing law.
307. Does the Crown discriminate between the improvements that are the lessee's and improvements that are the Crown's? I cannot say, because the leases have not ended so far. There has been invariably a renewal of the leases where they have paid their rents.
308. But suppose that at the end of December in one year there are certain lands improved which are forfeited conditional purchases, and certain other improved lands which are leased to the pastoral tenant;—is there any distinction in those two cases? I don't quite follow you.
309. To whom do the improvements on forfeited conditional purchases belong? To the Crown.
310. *Mr. Robertson.*] Of course you have a form of application for purchases;—a lessee of a run desiring to purchase has to apply in a particular form, and to state that he applies in virtue of the improvements, the words being, "which have been erected by me," or "of which I have become the proprietor"? Yes.
311. I think you have plainly demonstrated that a squatter is only in a limited sense the proprietor of the improvements made by himself,—that is, that at the end of his term they cease to be his, unless something happens which has not happened yet? Yes.
312. Therefore, the other improvements made on forfeited selections being in the same position in each case, the proprietorship for the time being appears to be the same? I am not sure about it, and I will tell you why. In the one case, under the law that was repealed in 1884, he might have been permitted to purchase in virtue of his own improvements. He certainly would not have been permitted to purchase in virtue of the other improvements, and there is the distinction.
313. We are speaking now of the time antecedent to that of 1884. We are speaking of the law under the Acts of 1861 and 1875. I want to see if it can be demonstrated that there is any distinction as to the ownership of the improvements during the currency of the lease? Yes; and I would define the distinction this way,—that where the Crown would recognize ownership to improvements effected by the pastoral tenant

Mr. S. Freeman. 4 July, 1889.

tenant it would not recognize the ownership of improvements if application were made for the purchase of forfeited conditional purchases that had reverted to the lessee during the term of his lease.
314. If the return shows that, as a matter of fact, they have done so, what you mean is that in your opinion they ought not to have done so? I do not follow that.
315. If this return before us shows that in some instances selections were forfeited on a given day, and applied for within a week as improvement purchases, and the improvements reported to have been on those selections at the time of the forfeiture are the same as described in the application, and the purchases were allowed? I do not know that any of those purchases were allowed in virtue of improvements which were on the conditional purchases when they were forfeited.
316. That answer is equally satisfactory to me, because if it had happened, and I could show that it was legal, that would have been a complete answer. Can you say that it has not happened? I do not know that it has. I may have my own opinion, but my opinion is worth nothing. Mr. Ricketson may have been wonderfully quick in the way that he effected improvements. There is strong presumptive evidence in one or two cases that he did apply to purchase in virtue of improvements that were effected prior to forfeiture of the conditional purchase?
317. The words in the form do not say "having erected and become the proprietor," but it says, "having erected becomes the proprietor of" the improvements? Yes.
318. Under the Act of 1861 it was decided by the Privy Council that vicarious selection was lawful;—I am referring to the case of Barton v. Muir? You are referring to selection before the Act of 1875 came into force.
319. But all these selections were taken up during the currency of the Act of 1861, at a time when vicarious selection or dummyism was lawful? Yes.
320. In the case of Barton v. Muir, I was solicitor for Mr. Barton, and sent the case Home. Muir was a shepherd in Mr. D. Barton's employ. Mr. Barton paid for his selection, and made all the improvements, Muir fulfilling the condition of residence. After the expiry of three years Barton called upon Muir to transfer the land to him, but Muir refused to do so, and set up the defence that nobody could be recognized in law but himself. The case came before the Supreme Court, and the Court decided that vicarious selection was illegal. Mr. Barton sent the case Home, to the Privy Council, who decided that vicarious selection was perfectly lawful, and that the selection and all the improvements were the property of Mr. Barton. When that decision was made a judgment of our Supreme Court, Muir's selection was transferred to Barton. You will admit that if Mr. Barton had failed to make improvements on the selection it would have been forfeited? Yes; it should have been.
321. Consequently, when the property was made over to Barton, it was not only because he paid for the land, but because he was owner of the improvements? Yes.
322. Ergo, Barton had erected those improvements. Supposing, instead of all this litigation, Muir had failed to observe the terms of residence, and consequently that that selection had been forfeited, would not that selection under the Act of 1875 have gone back into Barton's run? Yes.
323. Could not Barton then with perfect truthfulness have sent in this application under form A, having erected the improvements therein detailed? He could have sent in the application.
324. And could he not have said, with the history of the Privy Council's decision behind him, that he erected those improvement? Yes.
325. Where the two things coincided, this was a portion of his run containing improvements to the value of about a pound an acre, and those improvements having been erected by himself, were not the requisites there to entitle the Government, if they chose—because it is only optional after all—to sell him the land by appraisement? No; because the improvements were forfeited when the conditional purchase was forfeited.
326. But the forfeited conditional purchase reverts back to the run, and becomes part of the run. It has improvements on it, and those improvements were erected by the lessee. I am not speaking about the spirit of the law, but the letter of the application. According to that application, would not three incidents have happened—that is, first, a portion of a run under lease; second, improvements made upon the run; and third, that they were rented by the applicant;—would not those three incidents have arisen? They would have arisen, but if you mean to ask whether they would have entitled him to make the purchase, I must say no.
327. Is that not a matter of opinion? No; I do not think so. I had better explain why the form was drawn up in that manner. The form refers not only to improvement purchases made by a pastoral tenant on his leasehold, but to purchases under gold-field tenure (miners' rights owners). It frequently happens that a person who erects a house in a proper way, having a miner's right, sells his right to the house and clears out, and the buyer by the term is the person contemplated "having become the proprietor of" when that form was drawn up.
328. Suppose that I was acquainted with a gold-field licensee, and he says you put up a house for me, and I do so. By-and-bye he wants to leave the diggings, and he transfers his right to me in order that I may be recouped my outlay. Can I not then apply for an improvement purchase, the improvements having been erected by me? Yes; but the Act itself goes further. The clause allowing improvement purchases says that the land shall be sold to the owner of the improvements.
329. I have shown that during the currency of the lease the squatter has a limited ownership of the improvements during the term of his lease, and has he not precisely the same with reference to improvements on forfeited selections according to Judge Faucett's dictum in this case? No; it is not precisely the same. The Judge said that improvements go to the lessee "for the term of his lease." That is not ownership.
330. You cannot draw any distinction between one class of improvements and the other. Both are the squatter's during the term of his lease. It appears that no squatter could apply under this form, as he cannot say that he is the owner, because at the end of his lease the improvements will go to the Crown, but, notwithstanding that, is he not allowed to say that he is the proprietor? No; it says that the improvements on forfeited conditional purchases will go to to the lessee for the term of his lease. Interpreted by an average mind, that means that the improvements are held by him.
331. But his own improvements are just the same? No; they may have given him a right to purchase.
332. Suppose a lessee has a stockyard upon his run, he has the use of that during the term of his lease, and he applies for permission to buy? Yes.
333. In that case you do not say that he is not the proprietor, because at the end of the term he may lose

Mr. S. Freeman. 4 July, 1889.

the land? No. We recognize him as the owner in such a case, but we do not recognize him as the owner of improvements on a forfeited conditional purchase, but he is entitled to the use of them during the term of his lease.

334. *Mr. Alison.*] Is that your opinion, or has it been decided? I am quoting the decision of the Supreme Court.

335. *Mr. Robertson.*] That decision says that the improvements go to the lessee for the term of his lease—you have stated that the other improvements go a little further, and on the expiry of the lease the whole of the improvements remain behind him according to law? Yes.

336. We all know that under the law anything attached to the freehold by the tenant is supposed to become the property of the landlord, but I do not think that there has ever been any objection raised to squatters removing their fences, or their stockyards, or their woolsheds. I have never heard of a case? No, nor I. I do not know what right we have to object to it--the improvements are there during the term of the lease for the pastoral tenants to do what they like with.

337. During the term of the lease the squatter would have as much dominion over the improvements on the forfeited selection as he would have over improvements erected by himself? I do not think so. I should say that he could remove his own improvements—that he could alter, reduce, or increase them, but I question whether he could do that with the improvements on a forfeited selection.

338. *Mr. Alison.*] That is your opinion? It seems perfectly clear. The improvements are his during the term of his lease.

339. *Mr. Robertson.*] Suppose that a 40-acre selection was forfeited and falls back into a run, and that 40 acres is surrounded by a three-rail fence, and has upon it a hut and other improvements of that kind, do you contend that in that case the squatter must allow that 40 acres to remain fenced in for the rest of his term? I should contend that, undoubtedly. I should say that he has no right to remove that fence or that hut without the permission of the Crown.

340. The law says it forms part of his leasehold for the term of his lease. Is there anything in the lease that prevents a squatter from removing improvements? Nothing that I know of.

341. Then, when selections are forfeited and revert to the leasehold, by what law could you prevent the squatter from removing the improvements? I am aware of no law beyond this definition that the improvements are his for the term of his lease. It seems to me a clear straining of the law to say that he should be allowed to remove the improvements on forfeited selections, as they are not his property.

342. You admit that there is nothing in the lease to prevent the squatter from removing his own improvements, and I want to know where you find a law that says that he shall not remove them? I do not know of any law to prevent him from removing his own improvements, or altering, adding to, or reducing them.

343. We are told that during the term of his lease the improvements are his, and the Judge would say exactly the same about his own improvements? The Judge said something more. He said that, subject to such lease, they are vested in the Crown.

344. The improvements on all runs when the lease is up belong to the Crown; but up to that time the squatter has a legal ownership—he is owner of those improvements subject to his tenure expiring? Whilst the Judge said the improvements go to the lessee, he said that they are vested, as well as the land, in the Crown, and the vesting defines the ownership.

345. My argument is that it is impossible to draw a distinction between the two classes of improvements—when the lease terminates they all become the property of the Crown? When the lease terminates there is no difference.

346. *Mr. Alison.*] It seems to me that if the opinion you have expressed is correct we have got a perfect *reductio ad absurdum*. Suppose that a 40-acre selection has been completely fenced all round without a gateway, has the lessee no right to touch that? I cannot say that he has any right to reduce the improvements in value, or to destroy or remove them.

347. Suppose that the land is completely fenced so that he could not get any stock on to it? It is impossible to suppose that. I never knew of such a case.

348. Suppose it were so? I cannot imagine it.

349. He would not be able to use the land at all? I could not suppose that such a thing would be.

350. At the same time it might? Any mechanical fact is possible.

351. Any selector, if he chose to do it, could do it, and if the land reverted to the run what could the lessee do? He could get the permission of the Crown to alter the improvements so as to make the land available and useful.

352. *Mr. Robertson.*] Can you show any distinction in the law as to the right of a lessee to a run to deal with improvements made by himself and with improvements which have been upon the selection subsequently forfeited? Yes. The sections of the Acts of 1861 and 1875 providing for the purchase of land by virtue of improvements to the "owner."

353. Show us the clause? Clause 8 of the Act of 1861 and clause 2 of the Act of 1875.

354. Can you show me any distinction between the two classes of improvements? Yes. In one case the Crown will allow the lessee to buy by virtue of improvements, but in the other case the lessee will not be allowed to buy. The word "owner" means that he is to be the owner of the improvements, but not as Mr. Justice Faucett put it in the other case—subject to the rights of the Crown and to his limited tenure.

355. *Chairman.*] You say that the Act says that the lessee is the owner, but that is only when he has actually purchased the improvements? I interpret the Act to mean that the man is the owner when he has paid for the improvements.

356. Would you apply the term owner to a man who held improvements on a forfeited selection belonging to the Crown? No. Section 8 of the Act of 1861 describes the person entitled to purchase as the "improver," or his alienee. Section 2 of the Act of 1875, which repealed the other, empowered the Crown to sell to the "owner" of the improvements. In one place it is the "improver" or his alienee, and in the other it is the owner.

357. You mean the man who paid for them? Yes.

358. *Mr. Dangar.*] You admit that the whole of the improvements on the forfeited selection go to the lessee during his lease. You must allow that they belong to him, because you allow him to purchase the land? Not in virtue of the conditional purchaser's improvements, but in virtue of improvements that were recognized to be his. Whether in this case of Mr. Ricketson's they were the same as the conditional purchaser made or not I cannot say.

Mr. S. Freeman. 4 July, 1889.

359 These purchases reverted to the lessee of the run, and you allowed him to purchase them? I do not admit that he was allowed to purchase them by virtue of the improvements found on the forfeited selections. I say that the purchases are allowed in virtue of improvements that were claimed by the applicant and admitted to be his property.
360. The Crown did not challenge them because the deeds have been issued? I do not know that the Crown did not challenge them. I believe that in those days the administration was very lax in that and in many other matters.
361. *Chairman.*] Will you look at the list that was handed in by Mr. Griffin. On page 4 you will find conditional purchase 73-12,299? Yes.
362. What is the date of the forfeiture of that conditional purchase? It was forfeited on the 7th August, 1876.
363. What was the date of Mr. Ricketson's application to purchase it as an improvement purchase? The 9th August, 1876.
364. How long was that after the forfeiture? Two days.
365. What are the improvements said to be on that land? According to Mr. Smith's report, dated 12th April, 1876—a hut, £15; yard, £35; building, £15; fencing, £160—total £225.
366. Is it possible that these improvements could be erected in two days? It is possible, but highly improbable.
367. On the next page you will find the selection of J. Doherty, conditional purchase portion 8;—what is the date of the forfeiture? 7th August, 1876.
368. What is the date of the application for the improvement purchase? 9th August.
369. How many days had elapsed? Two days.
370. Next you will find the conditional purchase of William Liscombe;—when was it forfeited? On the 7th August, 1876.
371. When was application made for the improvement purchase? On the 9th August.
372. What length of time had elapsed? Two days.
373. Look at the next one, A. W. Robertson's selection; when was that forfeited? On the 7th August.
374. When was it applied for as an improvement purchase? On the 9th August.
375. What time had elapsed in that case? Two days.
376. Then there is D. Macpherson's purchase;—what is the date of the forfeiture of that? 7th August, 1876.
377. What is the date of the application by Mr. Ricketson to purchase the land by virtue of improvements? 9th August.
378. What time had elapsed? Two days.
379. Then there is the case of George Dogherty;—what was the date of the forfeiture of that lease? 7th August, 1876.
380. What was the date of the application to purchase by virtue of improvements? The 9th August.
381. How much time had elapsed in that case? Two days.
382. Then there is the case of William Dogherty;—what is the date of the forfeiture? 7th August.
383. What is the date of the application to purchase the land by virtue of improvements? 9th August.
384. What amount of time had elapsed? Two days.
385. The next is the case of Charles Miller;—what is the date of the forfeiture of that selection? 7th August.
386. And what is the date of the application to purchase it as an improvement purchase? The 9th August.
387. What was the lapse of time in that case? Two days.
388. There is another one, Fanny A. Carter;—what is the date of the forfeiture of that selection? 7th August, 1876.
389. What is the date of Ricketson's application to purchase by virtue of improvements? 9th August.
390. What time had elapsed in that case? Two days.
391. There is another case a little further down, that of Thomas Adams;—when did that lapse? On the 20th July, 1878.
392. When was it applied for as an improvement purchase? On the 29th August.
393. Were those forfeitures published in the *Gazette*? Yes.
394. Is the *Gazette* published in Sydney? Yes
395. How long would it take for the *Gazette* to reach Deniliquin? In those days it would take about two days and a half.
396. Is it reasonable to expect that when those forfeitures appeared in the *Gazette* several days had elapsed before Mr. Ricketson could see them? Yes, if he was living at Deniliquin; but still it was possible for him to know about them within half an hour, as he might receive the information by telegraph, or he might know a week beforehand that they were going to be forfeited. I think I should mention that a number of these applications made by Mr. Ricketson were refused, and other applications were afterwards made, which were granted.
397. And some were sold by auction, and he became the purchaser? Yes; but a number of his improvement purchase applications were refused.
398. Did those forfeited lands go into the lease for any considerable time, or were they almost immediately applied for to be purchased by virtue of improvements or sold by auction? Almost immediately most of them were applied for to be purchased by virtue of improvements.
399. And some were sold by auction? Yes.
400. And in such cases as these, would they be likely to go into the lease? I do not quite understand. They did fall into the lease the moment that the forfeiture took place.
401. But as there was only two days between the forfeiture and the application to purchase in virtue of improvements, would those forfeited selections go into the lease? Unquestionably, the moment that the forfeiture took effect.
402. How long? Until the land was sold.
403. Suppose that no rent was paid at all for the selections, would they form any part of the lease? Yes, they would still form part of the lease.
404. Without payment of rent? Yes; that is a matter for the department to look after.
405. Can a man be a leaseholder without being charged for rent? I do not see why a lease should not be granted for a nominal consideration.

Mr. S. Freeman. 4 July, 1889.

406. Has anything been paid? For the lease—yes; but for these lands I fear there has not.
407. As far as you know? As far as I know, rent was probably not paid for some of these selections, for a time at any rate.
408. *Mr. Robertson.*] You notice that the whole of the selections which you refer to were made under the Act of 1861? Yes.
409. And if in these cases these people whose names have been given were the vicarious selectors or dummies of Mr. Ricketson. I suppose you are not prepared to say that as far as the Crown knows Mr. Ricketson did not make the improvements on those selections? I do not know. He may have made them for all I know. It is only right to say that the appraisements were carried out every five years, and the lands that fell into the lease were not taken into account until the five-years term had expired.
410. *Mr. Alison.*] In those days the rent was so much a block? Yes.
411. *Chairman.*] Was this charged for in that way? That is conclusive when I point out that the rent in 1876, 1877, and 1878 amounted to £1 7s. 7¼d per section, showing that it must have been calculated at per block.
412. What became of those forfeited conditional purchases? They reverted to the pastoral lease in which they were situated.
413. And they were declared to be—what? They were declared by the Supreme Court to go to the pastoral tenant for the term of his lease. Mr. Ricketson was the registered holder, from and after the 12th February, 1874. The Australian Mortgage Land and Finance Company transferred to him on that date.

FRIDAY, 5 JULY, 1889.

Present:—

MR. ALISON, | MR. HUGH TAYLOR.

R. BARBOUR, ESQ., IN THE CHAIR.

Thomas Robertson, Esq., Solicitor, appeared for Mr. Henry Ricketson.

Mr. Henry Ricketson called in, sworn, and examined:—

Mr. H. Ricketson, 5 July, 1889

414. *Chairman.*] You are the lessee of the Barratta Run? Yes.
415. *Mr. Robertson.*] In the return which has been placed before the Committee there is a selection that was made on the 20th November, 1873, by Fannie Barbour, conditional purchase No. 73, portion 3;—what has become of this conditional purchase? I applied for it under the 31st clause of the Act, and put on my own improvements, which were passed.
416. The 31st clause gave the lessee a right to apply for land in virtue of prospective improvements—improvements which it was intended to make afterwards? Yes.
417. You stated that you intended to make certain improvements on the land? Yes.
418. And did you make those improvements? I did.
419. Have you obtained a grant of the land? No, not yet.
420. Then there is a selection in the name of Margaret Barbour;—what became of that? It was taken up by Margaret Barbour, and then forfeited.
421. And what happened after that? I applied for it under the 31st section of the Act, but it was refused. I was informed that I could apply under the 2nd section, which I did. It has been granted since.
422. Between the time of the first and the second application you improved the land? Yes.
423. And you applied under the 2nd clause, which gives a right to purchase by virtue of improvements? Yes.
424. And your application was granted? Yes.
425. And you have the Crown grant for that land? I think so; I do not know.
426. You have paid up for it? Yes.
427. I now come to another selection—R. Barbour's, portion 23, parish of Ricketson;—what was the history of that conditional purchase? It was taken up by J. Pitty, parish of Ricketson.
428. What did Pitty do with it? It was forfeited, and I applied for it, and that was dealt with in the same way.
429. You first of all applied for it under the 31st clause, and the Government granted it under the 2nd? Yes.
430. And you have a Crown grant? I believe I have; I paid for one.
431. I come now to portion 14, parish of Ricketson, selected by S. P. Barbour, 320 acres;—what is the history of that? It was forfeited.
432. What did you do after that? I applied for it under the 2nd clause, and put on the necessary improvements.
433. Was it granted? No; it is not granted yet.
434. Another selection was taken up by Mary K. Barbour—portion 10, parish of Ricketson;—what is the history of that purchase? It was forfeited.
435. It was forfeited on the 7th August, 1876;—did you apply for it afterwards? I applied for it under the 31st clause, but my application was refused, and I was told that I could have it under the 2nd clause, and it was granted under the 2nd clause.
436. There was another selection made by Catherine Barbour on the 20th November, 1873,—portion 11, county of Ricketson? It was taken up at the same time. They were forfeited, and I got them under the 2nd clause, having first applied for them under the 31st clause.
437. Another selection is that of Leighton Barbour, portion 13, parish of Ricketson. It was taken up on the 20th November, 1873;—was that forfeited? Yes; and I took it up under the 31st clause and put on the improvements.
438. *Chairman.*] Has it been purchased? It has not been granted yet.
439. *Mr. Robertson.*] Another selection is that of R. Barbour, junior—portion 12;—was that forfeited? Yes; I applied for that under the 31st clause, but to neither of these have I got a title. 440.

Mr. H. Ricketson. 5 July, 1889.

440. The whole of these selectors whose names you have mentioned are I believe children of the Chairman of the Committee, except J. Pitty? Yes, and he is his brother-in-law.
441. When these conditional purchases were forfeited, had they any improvements upon them; and if so, what was the nature of the improvements, and what became of them? There were no improvements that were any good except what I had put on the land myself. What I had put on I removed and put on new ones.
442. *Mr. Taylor.*] What improvements were on the land when the selection was forfeited? There was fencing of my own there, and there is fencing put on by the selector which is useless—it can neither keep stock in nor keep them out. It was fencing made of pine sticks 15 or 17 yards apart with corroded iron ruined by saltwater. These formed a part of what Mr. Barbour called improvements. These improvements were sold to me by Mr. Barbour.
443. *Mr. Robertson.*] When you speak of improvements made on the selections by you, do you mean boundary fences or improvements that you have made before the land was selected? Improvements made by me before the selections were forfeited to keep my stock off Mr. Barbour's land.
444. Then they were boundary fences? Yes.
445. Will you say that you purchased these improvements from Mr. Barbour. I presume you are referring to an award in the matter of arbitration between you, by which you were adjudged to pay? Yes.
446. What were you ordered to pay for these improvements? I objected to their going into the reference paper. I told Mr. Barbour that he could not get the land in virtue of them, but he said that if I would let them go into the reference paper he would get the Government to put the land so that I should have it at 30s. an acre. He said he could get the land for £1 an acre if I would allow it to go into the reference paper. The improvements were useless; they were all pine sticks, except a few gum posts, which belonged to me. He got them off my land, and some he took after they had been put into a pile on the run. Some were rejected posts of mine. Mr. Barbour had no business with them. Evidence on that point has been given by a man named Isaac Everett.
447. Under the award you were adjudicated to pay Mr. Barbour 10s. an acre for the improvements upon his forfeited selections? Yes, when a grant was procured from the Crown.
448. Did you succeed in getting that grant? Never.
449. And consequently the condition on which you were to pay that money was not fulfilled? No.
450. And you refused to pay it? I refused to pay.
451. And the improvements were of no use to you? Of no use whatever.
452. Does not Mr. Barbour consider that he has a grievance because you have not paid this 10s. an acre? He assumes to have a grievance, but he knows well that the improvements were no good. On portion 14 there is a fence which is useless—a calf could run through it—the posts are only little pine sticks. He could not get any others about there, the selectors having taken them all.
453. Is it not on account of Mr. Barbour's supposed grievance as to your not paying this 10s. an acre for the improvements that this Committee is sitting here to-day? Yes, it is. He tried to sell me the land the day after he selected it. He did not tell me the exact words, but I put a witness in the box who said that Mr. Barbour had stated that if I did not buy him out he would make the land cost me £5 an acre.
454. What have you done in reference to getting these grants? I had to put on the proper improvements and get the grants under the 2nd or 31st clause.
455. Have you made the improvements required by the Act in addition to Mr. Barbour's improvements? Yes, I have.
456. You are giving the Committee to understand that the Government refused to grant a selection on Mr. Barbour's improvements? Yes; they would not allow anything for them. I had to put on my own improvements. Mr. Barbour was to have got the land from the Government before he could give me a title.
457. Did Mr. Barbour ever threaten you with Parliamentary action unless you satisfied his claim? Yes; he told me one time, in front of the Exchange, that if I gave him £150 we would be good friends.
458. What followed from that? I told him that I would do nothing of the kind—that his improvements were no good, and that he had not carried out what he stated he would in the reference paper. I had carried out my part of the award, but he had not carried out his part. He told me that if I did not do so he would get roads gazetted through my run.
459. At any rate you believe that this inquiry is a result of your refusing to satisfy Mr. Barbour's demands? Yes.
460. What happened the second time he spoke to you? It was in the "Exchange Hotel" that he saw me again, and he asked me if I was going to give him anything; he repeated almost exactly what he had said before, and wanted me to give him some money. I said that I would do nothing of the kind, and turned my back on him. I told him that if he talked to me like that again I would put him in the logs. To the best of my recollection that was a year ago last April or May.
461. *Mr. Taylor.*] If Mr. Barbour had carried out his agreement, what amount would you have had to pay him at 10s. an acre? If he had carried it out I should have had to pay him £700 or £800, and it would have saved me twice that amount, because I had to put on good improvements.
462. *Mr. Robertson.*] I have a letter here which I intend to put in as evidence—you have heard this letter read, and the copy which you have handed in;—is that a correct copy? Yes. [*Appendix* B 1.]
463. In reference to the improvements generally upon Barratta Run, how many men did you keep employed there at the time of the forfeiture of the selections? The number varied. Sometimes 150 men. At that time I had about 450 men in my employment, and about 150 were on the Barratta Run.
464. And your object was to be able to put on by an almost instantaneous process any amount of improvements? Yes. I could put £3,000 worth of improvements on in a day in the shape of iron houses.
465. As a matter of fact you put on a number of iron houses? Yes.
466. And you made application in virtue of them, and the Minister refused the application? Yes.
467. He would not recognize them as anything but temporary structures? No.
468. Amongst all this land that you have already obtained grants for, have you obtained a grant of any land to which you were not legally entitled? Not any. I may mention with regard to No. 27, on which it is said I put the improvements in two days, that my overseer made the application.

Mr. H. Ricketson. 5 July, 1889.

application. Mr. Barbour himself saw that. On the 13th of September he was in the tank, and it was finished that morning. The selection was forfeited on the 7th August, and on the 12th or 13th September the tank was completed. There was a little hole before, about 150 yards. On the morning of the 13th I saw Mr. Barbour in the tank—there was then about 30 yards to come out. The next day he went and selected 170 acres, and took the tank in with it, which the morning before he saw I was putting down. This was fifteen or eighteen days after it was forfeited. Mr. Barbour knows that I put on the improvements, and that my improvements were added to the selection, and I had to pay for them again. That was portion 27. I saw Mr. Barbour in the tank, and he got up and ran through the fence, which was close to the boundary of the selection taken up by his daughter Margaret.

469. If Mr. Barbour offered to give the whole of the money that you have expended in improvements on the Barratta Run, and in paying the Government for the land, with interest for the time in which you so invested your capital, would you be glad to get that money back? I should be very glad to get it back—the improvements that I have put on the Barratta Run would come to £45,000 or £50,000. Besides paying for the land, I have put down 160 tanks on the Barratta Run, and some I put down on purchased land after I had bought it.

470. How much have you expended on improvements? I should say £45,000, and a great deal of the land I have bought at auction. I bought 10,000 acres one day without any tank on it, and I put tanks on that land too.

471. How much has the Barratta Run cost you altogether? For land and the improvements, reckoning Bank interest up to the present date, I should think £200,000—with Bank interest up to £250,000 or £300,000—more than I could get for it, a great deal. Taking the Bank interest the amount would come close up to £300,000; and as regards the selections, Mr. Barbour knows about Mr. Kelly's selection. About 100 yards out of that a small tank was made to hold water for the men to do work. When Mr. Barbour left portion 6 he knew that there was a tank on George Kelly's selection. He knew that it was not finished, and there was not over 150 yards out, yet after that £150 or £200 was put down for that tank, and they have charged for it, although Mr. Barbour knows that it was put down after the selection was forfeited, and it was added to my price. Mr. Barbour selected portion 27. He was in there on the 13th, and I think that on the 14th he selected it in the name of Ramsbotham. He had a man of that name in his employment.

472. You again repeat that not one block of land have you acquired except in accordance with law? Not one. My overseers put in applications, and Government officers were sent to inspect the improvements, but they would not recognize iron houses, and they would not pass the improvements until tanks were put down.

473. I suppose that a great many of your applications were refused in the first instance? Yes, they were, and further applications were sent in. I knew very well that there were always officers sent down to inspect the lands immediately they were forfeited. When the selections were forfeited my improvements were put on. I had to put on improvements to keep my stock off Mr. Barbour's land. I was not going to let Mr. Barbour get the better of me at law. He was waiting for that. I fenced all round portion 10. He ran up a fence between my boundary and portion 9, but it was no good. I had to put up another fence 6 inches from it. When I did that Mr. Barbour took up that fence and put it in another place. He then sent his children out there for three weeks, and they cut up the fence and burnt it. I put up a new fence there again. Mr. Barbour knows all that. A man named Beady was teaching his children for three weeks out there.

474. *Chairman.*] Will you look at this schedule—there is a selection there in the name of F. W. Ricketson, taken up by Henry Ricketson as agent for him, 320 acres;—when was that selection taken up? I think some time in August.

475. What improvements did you put upon that selection? Improvements enough.

476. Did you put up stables for Cobb & Co.? Yes.

477. When did you put up the improvements mentioned in the schedule? I think the day after the house went on the land, and after it was forfeited.

478. Were those improvements put on whilst it was a conditional purchase? They were not.

479. You applied to purchase that on the 21st May, and it was forfeited on the 7th May? Yes.

480. Do you want the Committee to believe that between the 7th May and the 21st—fourteen days—you put up stables that cost £175, fencing that cost £160, and made a tank that cost £133. Yes.

481. Do you expect the Committee to believe that in fourteen days you made improvements amounting to £468? Yes.

482. Were those improvements put up after the 7th May, and before the 21st May? Yes; the improvements in virtue of which I got the land were put on after the forfeiture of the selections.

483. The stables for Cobb & Co. £175, the fencing £160, the tank £133;—did you put all these improvements on the land between the 7th and the 21st May, a period of fourteen days? I could not swear to the fourteen days, but the stables were put up the day after the forfeiture. I was always looking out for these things.

484. Again I ask did you erect the whole of these improvements in fourteen days? Some may have been later than fourteen days. I think I was on there some days after putting up a fence, and some of the officers visited the place. It was a month after. The men had not finished all the fencing, but there was enough to take the land.

485. Did you put any of those improvements on before the 7th May—before the selection was gazetted forfeited? Not to my knowledge, I had the fencing round the margin of the selections ready to be put up.

486. Did you not put up the improvements before the 7th May, 1877. No; I did not. If there was anything at all there it would be a little hole to hold the water.

487. There is a selection in the name of C. N. Ricketson, No. 8, parish of Ricketson, 320 acres;—was that a selection that you took up in the name of one of your children? Yes, it was.

488. What improvements did you put on during the time it was a selection? There were some improvements on the land before it was a selection.

489. That is not an answer to the question;—what improvements did you put on during the time that it was a selection? I do not really know. My overseers were there; they made out the application, but another went in after. I know that the improvements were put on after. I do not remember much about it; but I know that there was a tank there before the land was selected, which I think you saw. 490.

Mr. H. Ricketson. 5 July, 1889.

490. When Smith, the Inspector of Conditional Purchases, visited that selection on the 12th April, 1876, he reported that there was a hut valued at £15; fencing, £180; a tank, £100? That was some months before the selection was forfeited. It was forfeited on the 7th August, and his report is dated the 12th April, 1876.
491. I suppose that that report is true, is it not? I know that there was some tank marked out, and Mr. Smith asked if I was going to put a tank there, and I told him I was.
492. At the time Smith called, when you took him round, he reported that there was a hut, valued at £15; fencing, valued at £180; a tank, at £100,—were these improvements there when he visited the selection? I do not remember it; it is a number of years ago. I do not know what value he put on the improvements. I know there were tanks put down after the land was forfeited, and you remember it too. You saw the men at work there.
493. Will you answer my question. Were there any improvements made on this selection whilst it was a selection? Yes. I daresay there was something in the way of a hut, but I think that was put on before it was selected.
494. I wish you would say yes or no? It is a thing I cannot recollect.
495. You can say you don't know? I will say what is correct.
496. You say that there was something put on the land before it was selected? If it was it was taken off again, and other improvements were made.
497. You say something was put on;—was that the hut which is valued at £15? I know there was a hut on it.
498. Was the fencing valued at £180? I cannot remember. All the ground was laid out with fencing
499. If you are determined not to answer the question say so, and I will not ask you any more? You can ask whatever questions you like. The improvements that the land was taken under were put on after it was forfeited.
500. Were those improvements which I mentioned just now put on the selection whilst it was a selection? I think there is some exaggeration as to their value.
501. Who removed them? I do not know—some of the men.
502. Who instructed them;—they could not do it without your instructions? I could move my fencing where I liked.
503. Did they remove it against your instructions? Some of the men would do it under the directions of the overseer.
504. *Mr. Taylor.*] You have overseers? Yes.
505. They could give orders? Yes.
506. *Mr. Alison.*] They might act without your knowledge? Yes.
507. *Mr. Taylor.*] They have the power? Yes; they have power to make paddocks.
508. *Chairman.*] You mean that the improvements were moved either by your consent or by your authority? If I put up a fence I had a right to take it down. They certainly knew my fencing from anything you put up. Your fences were all pine sticks.
509. They removed the improvements then without your authority? I do not know anything about it—what you call improvements were no use at all—anyone could knock them down with his hands. There were seven horses in a paddock, and when they were running one of them struck your fence and knocked seven panels down. A two-year-old foal got entangled in the wire and broke off a dozen of them.
510. The next selection is in the name of M. A. G. Ricketson;—was that also one of your children? Yes.
511. That selection was subsequently forfeited, was it not? Yes, and there was a tank on it before it was selected.
512. Were the improvements on it put on it by you for your daughter whilst it was a selection? If they were put there there were others put on afterwards.
513. There is a hut £15, fencing £180, tank £150. Those were improvements that Inspector Smith found there? Yes; those are portions 8 and 9. To the best of my knowledge the hut was put on before it was made a selection.
514. And was the fencing put on whilst it was a selection? No; to the best of my knowledge there was a portion of it fenced, but the fencing did not remain there.
515. Was the tank put on whilst it was a selection? No; it was finished after it was forfeited. The tank had been commenced, but was not completed. Almost all the work was put on after the forfeiture—you would hardly call it a tank that was there before the forfeiture.
516. It is reported by Smith as having been there? Yes, but it went on before.
517. Were the tank and fencing put on the land whilst it was a selection? No. I do not say any such thing. There was some fencing on it, but it came off.
518. Who took it off? My men, I suppose.
519. By your instructions? I do not remember instructing them. I told them to put a new fence on, so that we could apply for the land under the 2nd clause.
520. *Mr. Alison.*] There was some fencing, some sort of a tank, and some sort of a hut, I suppose? Yes. When it was taken up there was some sort of a tank on it, and I think the hut was on it. I put on the improvements.
521. *Chairman.*] Further on there is another selection taken up by you as agent for J. Dogherty—No. 8, Banangalite;—what improvements did you put on whilst it was a selection? I think there was a very small tank.
522. That selection was forfeited on the 7th August, 1876? Yes. To the best of my knowledge there was a small tank, which was made into a large one.
523. Was that inspected by Smith on the 12th April? I do not know.
524. He says there were a hut valued at £15, a tank valued at £200, and a fence £78;—is that true or not? I do not know. I cannot say what was Mr. Smith's valuation. It was certainly not worth that, but it was made up to that.
525. You were with him on the 12th April, some six months before the thing happened, and this is his report, as shown by the papers? I know that the tanks were all made into large tanks after the land was forfeited.
526. From April to August is four months. Before the land was forfeited Smith found those improvements on it;—is that true or false? When Mr. Smith saw those improvements he asked me if I intended to finish the tank, and I said yes.

Mr. H. Ricketson. 5 July, 1889.

527. A few months afterwards Mr. Finlay visited the selection and found fencing to the value of £120, a tank valued at £133, and a hut valued at £10;—is that true? Yes; it was going on when Mr. Finlay was there.
528. Were they there when he called? There was fencing going on then. If there was any fencing on it it had not been completed. The old fencing had been removed. It ran up against your house.
529. You took up a selection as agent for William Liscombe? Yes.
530. Did you put any improvements on the land whilst it was a selection? That I cannot say. There were improvements put on after. The officers inspected the land two or three times, and would not allow for the iron houses, and tanks were put down to make it up.
531. That was forfeited on the 7th August, and Smith had reported on 12th April that there was a hut valued at £15 and fencing of the value of £135? There was fencing and a house, but the fencing is outside the line; it is not on Liscombe's land.
532. The next selection is A. W. Robertson's;—did you take that up as agent for Robertson? Very likely I did.
533. Did you put any improvements on that land whilst it was a selection? A small tank, I think, and a hut.
534. And some fencing? There may have been some fencing. There was some fencing around the margin of the selection.
535. That land was also forfeited on the 7th August, 1876? Yes.
536. And Smith visited the land on the 12th April and reported these improvements, which you say were a hut, fencing, and tank? There might have been a small tank on it. There was a larger tank put on it afterwards.
537. Was that after the 12th April, the time when Smith was there? It was made into a large tank after Smith had been there.
538. There was a tank there when Smith was there? I would not swear it. If Smith reports that there was it was only a small tank.
539. There is another selection in the name of D. Macpherson;—did you take up that land in the name of D. Macpherson? Yes.
540. What improvements did you put on whilst it was a selection? A hut and a little tank, and that was going on at the very time when you were on the selection.
541. Was there a fence? Not a complete fence. I had fencing there.
542. If Smith reported that there was fencing there would he be telling the truth? Oh, there would be some fencing there, I daresay, but the same fencing is not there now.
543. *Mr. Robertson.*] And you have not got the land? No; but I have some fencing there.
544. Have you removed the fencing there? Decidedly. I have not one mile of my old fencing that was standing on the 7th August. It was all renewed, to the best of my knowledge.

CONDITIONAL PURCHASES MADE UPON BARRATA RUN.

APPENDIX.

[To Evidence of F. Griffin.]

F GRIFFIN,
Clerk, Lands Department

30th May, 1889.

[*To Evidence of Henry Ricketson.*]

B 1.

Parliament, New South Wales, Sydney, 28/12/88.

Dear Sir,

In reply to your note of to-day inquiring whether I have anything to communicate, I have nothing but to refer you to my former letters, that letter that had the postcript which you have been showing to some of the Deniliquin people, to persuade them to sign your petition, several of whom have written to me to get their names struck off, as they say you misled them.

About the improvements, I will get a Select Committee when the House meets to go into the whole matter. They will deal with Barratta first, and take Arratulla, Cornallo, and the other stations after.

Truly yours,
R. BARBOUR.

Henry Ricketson, Esq.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CONDITIONAL PURCHASES MADE UPON BARRATTA RUN.

(PETITION FROM HENRY RICKETSON, PRAYING TO BE HEARD BY COUNSEL BEFORE SELECT COMMITTEE ON.)

Received by the Legislative Assembly, 16 *April*, 1889.

To the Honorable the Speaker and Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The humble Petition of Henry Ricketson, of Barratta Station,—

RESPECTFULLY SHOWETH:—

1. That Mr. Barbour has moved for the appointment of a Select Committee, to consist of Mr. Lyne, Mr. J. P. Abbott, Mr. Alison, Mr. Copeland, Mr. Chapman, Mr. T. G. Dangar, Mr. Brunker, Mr. Hugh Taylor, Mr. Woodward, and the mover, with power to send for persons and papers, to inquire into and report upon all conditional purchases made upon the run of Barratta (Henry Ricketson, lessee) from January, 1872, till December, 1882, how many were lapsed or forfeited, what became of the improvements, and how many were converted into improvement purchases.

2. That your Honorable House has sanctioned this request and that the matter has been referred by your Honorable House to the Select Committee for inquiry and report.

3. That your Petitioner is interested in the lands on the Barratta Run under lease from the Crown, that many of the forfeited and lapsed conditional purchases on this run have been sold at auction and have been otherwise acquired and have been conveyed by Crown grant to him, and that he is in possession of information which would be of the greatest importance in adopting a report.

Your Petitioner therefore humbly prays that he may be heard by counsel, attorney, or agent before the Select Committee, with liberty to adduce such evidence as may be within his power.

And your Petitioner, as in duty bound, will ever pray.

HENRY RICKETSON.

Dated this 10th day of April, 1889.

VOTES No. 54. FRIDAY, 5 JULY, 1889.

7. CLAIM OF ISAAC BARCLAY :—Mr. Morton moved, pursuant to Notice,—
(1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into and report upon the claim of Isaac Barclay, Cambewarra, for compensation for losses sustained in defending his title to land held under Crown grant.
(2.) That such Committee consist of Mr. Hawken, Mr. Waddell, Mr. Stevenson, Mr. Brunker, Mr. O. O. Dangar, Mr. Garrett, Mr. Chapman, and the Mover.
(3.) That the Report from the Select Committee on the same subject, brought up on 17th July, 1888, be referred to such Committee.
Question put and passed.

VOTES No. 60. WEDNESDAY, 17 JULY, 1889.

2. CLAIM OF ISAAC BARCLAY :—Mr. Morton, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, the Select Committee for whose consideration and report this subject was referred on 5th July, 1889.
Ordered to be printed.

CLAIM OF ISAAC BARCLAY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 5th July, 1889,—"*with power to send for persons and papers, to inquire into and report upon the claim of Isaac Barclay, Cambewarra, for compensation for losses sustained in defending his title to land held under Crown grant*, and to whom was referred on the same day *the Report from the Select Committee of Session* 1887–8 *in reference to the said claim*,"—have agreed to the following Report:—

Your Committee having carefully considered the Report referred to them, find as follows:—

That in 1863 Isaac Barclay acquired by conditional purchase under the "Crown Lands Alienation Act of 1861," three allotments comprising 54 acres, and two additional of 40 acres each at Cambewarra, parish of Illaroo, county of Camden, and subsequently obtained his deeds for two of them.

That during the same year William Emery conditionally purchased 96 acres, the measurement of which Barclay objected to on the ground that the land measured was already in his possession, and on a resurvey being made on the authority of the Minister it was found that Emery's application clashed with Barclay's. The Minister decided, however, to uphold Barclay's.

That Emery subsequently entered an action in the Supreme Court against Barclay for trespass, and obtained a verdict, notwithstanding that Barclay held an indefeasible title from the Crown. The title of Barclay is therefore upheld by the Government, whilst the Supreme Court holds that the land belongs to Emery.

That the evidence given for the Crown before your Committee clearly admits Barclay's title, and that he was justified in defending such, the Crown grant being regarded as indefeasible, though held by the Court not to be so.

Your Committee are therefore of opinion that Isaac Barclay in having been, through a mistake on the part of the Crown, forced into litigation and deprived of his land, has established a just claim for compensation, and they recommend such claim to the favourable consideration of your Honorable House.

PHILIP H. MORTON,
Chairman.

CONDITIONAL PURCHASE OF ZACHARY BENN, RICHMOND RIVER DISTRICT.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 19th July, 1889, "*with power to send for persons and papers, to inquire into and report upon the conditional purchase of Zachary Benn, in the District of the Richmond River, recommended for forfeiture by the Casino Land Board,*" and to whom was referred on 25th July, 1889, "*the Return to Order in reference to the said conditional purchase,*"—have agreed to the following Report :—

Your Committee having examined the witnesses named in the List* (whose evidence will be found appended hereto), and carefully considered the papers referred, find as follows :— * See List page 4.

That on 24th July, 1884, Zachary Benn conditionally purchased 202½ acres of land in the county of Richmond, parish of Shannon, which land was subsequently forfeited on the ground of non-residence by the conditional purchaser.

That such forfeiture appears to your Committee to be against the weight of evidence.

That the evidence before your Committee, together with statutory declarations contained in the papers referred to them by your Honorable House, prove that the said Zachary Benn did reside upon his land.

Your Committee are therefore of opinion that the said conditional purchase should not have been recommended for forfeiture, and recommend the case to the favourable consideration of the Government.

THOS. EWING,
Chairman.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CONDITIONAL PURCHASE OF ZACHARY BENN, RICHMOND RIVER DISTRICT.

FRIDAY, 26 *JULY*, 1889.

Present:—

MR. EWING, MR. McFARLANE, | MR. STEVENSON, MR. NICOLL.

THOMAS THOMSON EWING, ESQ., IN THE CHAIR.

William Henry Capper called in, sworn, and examined:—

Mr. W. H. Capper. 26 July, 1889.

1. *Chairman.*] Do you come as a representative of the Lands Office? Yes.
2. You bring the particulars of the case of Zachary Benn? Yes.
3. In this case the selection has been declared forfeited by the Land Board? Yes.
4. And that was upheld in the Appeal Court on a technical point? Yes.
5. The merits of the case were not gone into, I believe, because the plaintiff had not appealed in time? Yes, that was the reason.
6. Therefore, the decision in the case is the result of the action of the Board? Yes.
7. That decision is, I believe, dependent upon the evidence first of all of Inspector Miller? Yes.
8. Also on the evidence of Mr. Fanning? Yes.
9. On evidence given by Mr. Taylor? Yes.
10. And Mr. Tandy and Mr. Alexander Campbell? Yes.
11. Have you looked through the papers? I have.
12. Those whom I have mentioned are all employees on the station? That is a detail which I did not take notice of.
13. You will see that Mr. Fanning is the manager of the station? Yes.
14. If you look at the evidence of Mr. Taylor you will see that he is a stockman, and that he was sent from the station to see into the matter? Yes.
15. Then you will see that Mr. Tandy says in his evidence, "I got my instructions to go from my employers?" Yes.
16. What is Mr. Alexander Campbell? Overseer of Wooroowoolgan Station.
17. So that all the evidence except that of the Inspector of the Department was evidence given by men who at the time were employed on the station? Yes.
18. And who were interested in having the land forfeited? I do not know whether all the witnesses were interested, but no doubt the owner of the station was.
19. He had an interest in the forfeiture? Yes.
20. If you look at page 8 (Mr. Fanning's evidence), you will find that he says, "By obtaining the forfeiture of the conditional purchase, we would be getting rid of an undesirable neighbour, and the land would revert to the run?" Yes,

Mr. W. H. Capper. 26 July, 1889.

21. There is no doubt that Mr. Fanning, part owner of the station, says that he gave evidence with the idea of procuring the forfeiture of the selection in the interests of the station? Yes.
22. All this evidence then, except that of your Inspector, was given by people who were interested in the forfeiture? Yes.
23. And I presume that they brought such evidence as would enable the forfeiture to be obtained? Yes.
24. Beyond that you have the evidence of Inspector Miller? Yes.
25. According to the report of Mr. Miller the selection is 202 acres, and within 10s. there was the full value of the required improvements on it? Yes.
26. Then the question resolves itself into a question of residence? Yes.
27. Mr. Miller says that in his opinion the man came there occasionally and worked? Yes.
28. Then Mr. Miller believes that he spent some time there? Yes.
29. But he says further on that the selector lived with his father;—that is the contention of the Department? I cannot give that evidence. We do not say where the man lives; the Department have to be satisfied that he lives on the selection.
30. But that appears to be the opinion of the Inspector? Yes, it is a supposition on his part.
31. In dealing with Mr. Miller's evidence you will see that on page 8 the Board speak of Mulhearn, the butcher, as being a reliable witness? Yes.
32. If you look into Mulhearn's evidence, page 7, you will see that when asked whether the boy lived at his father's he says, "I was there dozens of times at night, and never saw the selector there?" Yes.
33. From Mulhearn's evidence, he being acknowledged by the Board to be a reliable witness, it appears that the boy did not live with his father? That is asking me for an opinion as to this man's evidence. I am very doubtful as to his evidence.
34. But the Board were not? They might not be.
35. We will put it this way—If Mulhearn be a reliable witness, there can be but little doubt that the boy did not live with his father as shown by the evidence? It appears from the evidence of Mulhearn that he has admitted that although he was at his father's house dozens of times at night he did not find the selector there.
36. And it is reasonable to suppose that if the selector was there he would have seen him? It is.
37. It is reasonable to suppose that if Mulhearn was at the father's place continually, and the boy was living there, he would have seen him? Yes.
38. Then the inference drawn by Mr. Miller, the Inspector, is contradicted by the evidence of Mulhearn, who is regarded by the Board as a reliable witness? Yes.
39. If you look at page 4 of the evidence of Miller you will see that he says, "I saw him coming from the direction of his father's place with iron"—the boy was not on the ground on that occasion, but was going towards it with the iron, and the Inspector does not seem to have doubted that he was taking the iron to his own place? They are allowed to go off their place for iron.
40. If you look further at Miller's evidence you will see that the hut did not appear to have been abandoned? Yes.
41. So he is under the impression that the man was there sometimes? Anybody could be there but it does not follow that he was living there.
42. If any one is there you cannot prove whether he is residing or not? It is reasonable to suppose so, but it is not evidence.
43. Mr. Miller says, "I am pretty sure that I saw no bed in the hut," but he is not quite sure about that? No.
44. Mr. Miller says, "I did not take a note of what I actually saw there—I did not see selector on the first occasion, and I do not remember seeing anyone at the slip-rails—it is possible, but I do not remember?" Yes; that is his evidence.
45. The date of the inquiry was the 9th August, 1887? Yes.
46. The inspection was made on the 4th August, 1885, two years before? Yes.
47. The Inspector then trusted to his memory for about two years? Yes.
48. He said that he took no notes of what he saw in the hut—is it not imperative for him to do so? It is not. He has his "remarks."
49. He says I did not take a note of what I actually saw there? That was in the hut.
50. But it is of vital importance what the contents of the hut were? Sometimes.
51. In a case of residence it is most certainly? Yes; but he has given evidence as to residence.
52. *Mr. McFarlane.*] Do they not usually take notes? They usually do.
53. *Chairman.*] According to the evidence the Inspector was there twice. On one occasion he saw the man coming home with iron for his house; and on the second occasion Benn says he saw him at the slip-rails; and the Inspector says "It is possible, but I do not remember?" Yes.
54. It was possible that the boy was there on the two occasions? Yes; it is quite possible.
55. The Inspector says, "It is possible that he was working on the land and I did not see him?" Yes.
56. And he says, "In my report I stated I believed selector lived with his father, but it was merely a conjecture"—he was not quite sure? No.
57. You will see on the plan a line running back from Deep Creek 67 chains long, and then, by the appearance of the plan, there must be a 2-mile frontage to Shannon Brook, and you will see Apple, Mahogany, and Gum Flats, and from that do you think it is possible that a person might go through such country as that and a man be on it without being seen? Yes, I do.
58. That no person could tell half-a-mile away where the man was? No.
59. You think, then, that if a person went to the land, unless he took special trouble to find the man, it is quite possible the man might have been there without his seeing him? Yes.
60. I will now refer to Taylor's evidence; he is a stockman employed on the station, and he, I presume, found Benn off his land? Not necessarily so; but the evidence showed that he did find him off the land.
61. What was Taylor's object in going there? To see whether the selector was residing there or not.
62. Was it not to get such evidence as to cause the forfeiture of the land? It was such evidence as would support the complaint laid by the station manager.
63. Taylor says he does not know where the selector resided;—he says that he has seen the selector on the land five or six times? He says, "In riding through the country I did see over the selection, and on one occasion I saw the selector erecting a sapling fence."

64.

Mr. W. H. Capper. 26 July, 1886.

64. Mr. Taylor says that he had seen the selector there, and had seen him at work there? Yes. He says, "When I came he was there; I saw him erecting a sapling fence."
65. As far as we can gather from the diary, he did not make any note of it when he saw the man there, but only on the days when he did not see the man there? Those were the dates of his visits.
66. Still, he does not give the dates when he saw him there? No.
67. He kept a diary which he made up every week? I do not think he would have so many items to put down as a merchant would have.
68. In his examination by Mr. James, Taylor says, "The selector may have been in the hut." He says, "I never went into the hut except on one occasion. I did not ride all over the run on each occasion. I rode straight through it. The selector certainly may have been on the land. I made no particular search for him." He satisfied himself apparently that the selector was not on the land? Yes.
69. He goes on to say that there were considerable improvements on the land. He says, "I do not know that the selector did the work himself. I saw him erecting a sapling fence and a straddle for corn?" Yes.
70. From that evidence it seems possible that the selector was on the ground, that Taylor did not take special trouble to find out whether he was not, and that Taylor has seen him at work on the land? Yes.
71. Mr. Tandy in his evidence says, "I got instructions to go from my employer." He went in the interests of the station? Yes.
72. He says that he in 1885 saw two men on one occasion coming away from the fencing and one appeared to be a grown up man and the other a youth and looked like this selector? Yes.
73. Apparently he was not sufficiently interested in it to see whether the person really was the selector. The impression is that he saw the man there? I do not say that.
74. Another witness was Mr. Alexander Campbell, the overseer of the station. He says that he never saw the selector there but he may have been on the ground somewhere? Yes.
75. Mr. Campbell says in reply to a question by the Board that there were no tracks about the hut? Yes.
76. If you look at Fanning's evidence you will see that there was a bush track between the father's place and the hut? Yes; but Campbell says there were no tracks about the hut, but there may have been tracks through the selection. If the place is inhabited there will be bush tracks around it.
77. Fanning says, "The hut was a rude place with a bark roof and a sheet of bark leaning against the opening for a door; the selector's father resided 4 or 5 miles away, and there is a bush track between the two places." Another witness says that there were no tracks at all about the hut? He does not say anything about the tracks between the two places.
78. Do you not think that in view of that evidence it would have been better if the Board had taken steps to remove any doubt of that kind? Yes, I do.
79. There appears to be some conflict in the evidence given in the interests of the station? Yes, on details.
80. That is the evidence upon which the forfeiture is based? Together with the evidence given by the parties themselves.
81. The selector, Zachary Benn, gave evidence, and he says, "That he often used to go away." He says, "That he used to take his dinner with him when he was away from the hut, but he used to have his supper and breakfast in the hut." He was working, I presume, and used to go for his food and washing a couple of times a week? Yes.
82. That might explain the bush track to which the owner of the station referred? Yes.
83. And if the man said that he used that bush track twice a week that would bear out the other statement? Yes.
84. He says in his evidence that he saw Mr. Miller once at the slip-rails; that was when Mr. Miller was there; he saw the selector, and he saw him once when he was fetching iron; that is when Miller says that he did see him? Yes.
85. This man evidently shut up his house and left it in the mornings and came back when he had done his work—a reasonable proceeding in the bush? It is possible.
86. It is perfectly plain from the evidence that this is his contention? He said, "I was never away from the selection except now and again."
87. He says, "I have made no other place my home?" Yes, that is what he says.
88. Does it not seem a reasonable mode of procedure that a man should take his breakfast and go on to his work during the day-time? Yes.
89. And is it not possible that persons could ride through the selection without finding the selector unless they cooeyed? Yes.
90. Would it not be easy enough to prove where he did live? I cannot give an opinion on that; I have no local knowledge.
91. It would be a matter of ordinary comment where the man lived, would it not? Yes.
92. The attempt to prove that he lived with his father absolutely broke down? I cannot say.
93. It appears so from the evidence? I cannot say that.
94. Is it possible that he lives with his father? The supposition is thrown out that he did live with his father; but the Department, in dealing with the case, do not take into consideration where he lives if he did not live on the selection.
95. Is it not reasonable to suppose that they could prove where he does live if he does not live on the selection; if he swears that he has not another home, you cannot combat that? No.
96. Mr. James Burns, of Shannon Brook, swore that the selector lived on the selection; he said, "To the best of my knowledge it has been his *bonâ fide* home?" Yes; I see that. Is he supposed to be a man of greater integrity than those who have been through the land and never found the selector?
97. Mr. James Mathers, the next person who was examined, says, "I will swear that he spent most of his time at the hut;" his opinion is that the selector lived there too? Yes.
98. Mr. John O'Connell also says that when he was there Benn slept at the hut all the time? Yes.
99. Phillip O'Connor says that Zachary Benn was living on the selection at the time; he says, "I slept with him one night." The essence of O'Connor's evidence is that the selector resided on the land? Yes, so for as he knew, that was whilst working close to the selection.
100. We will take Mulhearn's evidence which is considered by the Board to be good evidence? They expressed the opinion that he was believable.

101.

Mr. W. H. Capper. 26 July, 1889.

101. Mulhearn went there in November and found Zachary Benn there? Yes.
102. And he saw there tools and cooking utensils, and the hut appeared to be a single man's residence? Yes.
103. He went two months after Christmas—he cooeyed and the selector came up with an axe from the paddock? Yes.
104. Supposing he had not cooeyed, would he not come to the conclusion that Zachary Benn was not there? No doubt.
105. Might not Benn have appeared when the station hands went if they had cooeyed? Yes; it is possible.
106. Another witness is T. J. Carlill, and he is acknowledged by the Board to be a reliable witness? Yes.
107. He says that he passed the selection dozens of times, and that he saw the selector three times? Yes.
108. On one occasion he was cutting poles, and on another occasion he was working about the place, and on the third occasion he came off the selection to see me? Yes.
109. This man passing a dozen times saw him three times, and he is looked upon as a reliable witness? Yes.
110. Mr. Fanning says that by obtaining the forfeiture of the conditional purchase they would get rid of a very undesirable neighbour, and the land would revert to the run? That is not correct.
111. That was his impression? Yes; but that is not the law.
112. But did not a great many people think it was at the time? Yes.
113. They set to work to get the land forfeited believing that it would revert to the run? Yes.
114. We find then that the case stands this way that there is some evidence given against the selector by the Inspector, that there is evidence given against him by the manager of the station, by the part owner of the station, Mr. Fanning, by Mr. Taylor, by Mr. Tandy, and Mr. Campbell—that is the evidence on which the forfeiture took place? Yes, combined with the evidence given by the selector and his witnesses.
115. Against that we have the evidence of Zachary Benn, and the evidence of Burns, Mathers, O'Connor, Mulhearn, and Carlill—the last two being reported by the Board to be reliable witnesses, and the essence of all their evidence is that Benn did reside on his selection? Yes, they found him there.
116. The essence of it is that they believed it? Yes.
117. Still, with this evidence against them, given by the station hands and the Inspector, the selection was forfeited? Yes, but the Board have the great advantage of seeing the witnesses.
118. I will show how the Board used the great advantage that they had. The Board said in their summary of the evidence, "Mr. Fanning visited Benn's hut but once, but he was not there; no tracks, no sign of recent occupation." Fanning says in his evidence that there was a beaten track between the hut and his father's residence? He said there were no tracks, but there was one track.
119. Is it not contradictory? Yes.
120. Mr. Taylor's evidence is put as if Mr. Taylor had actually stated that the man was never there. It is, "A. C. Taylor, stockman, living 2 miles from Benn's conditional purchase, swore that it was his business, before Benn took up the land, and after, to pass through it on an average once a week for six years; went by instructions when the selection was made to see if Benn was residing. Went seventy times to see if he was there at all times of the day between January, 1885, and 25th July, 1887. * * * Saw the selector five or six times on the land and spoke to him." Taylor said "I always went in the day-time—at all hours," but I presume that he never went there at night? Yes.
121. And the selector says that when he had done his breakfast he used to go out to work, so that Taylor chose a time to go when in all probability the selector would be away. Would it not have been better for him to have gone at night? Yes, it would have either strengthened or weakened the evidence.
122. Would it not have been very much more satisfactory if he had gone at the night-time? Yes.
123. In fact the mode of living on selections is that they are away at day-time at work? Yes.
124. Would it not have been well for the Board to have endeavoured to have elicited some information on that point? Yes.
125. In the summary it says that he never saw the selector, but he saw a man fencing? Yes.
126. But Campbell says in his evidence that the selector may have been the man whom he saw on the ground? Yes.
127. Do you think that is a fair summary by the Board under the circumstances, when the witness Campbell says that the selector may have been on the land, and the Board summarise it to the effect that he never saw the selector? Yes, I think it is perfectly right.
128. Do you think it is a just summary? Yes, because although the selector may have been there Campbell may not have seen him.
129. He says he saw men fencing, but he does not think that Zachary Benn was one of them? From that I infer that he knew Benn.
130. And he is not very sure whether he was on the ground or not? He may have been on the ground although the witness did not see him.
131. Campbell does not swear whether he was there or not? No, certainly not.
132. But the inference from the summary of the Board is that he never was there, is that fair? I think it is. He says that he did not see the man, but he does not say that he was not on the ground.
133. He may have been there? Yes.
134. And it is possible that he was there at the time Taylor was there, without Taylor seeing him? Yes.
135. The improvements apparently were substantial? Yes, fairly substantial.
136. Taylor says, there were considerable improvements upon the land? Yes; I am taking the improvements valued by the Inspector.
137. If you look at page 13 of the papers you will see there a declaration by J. M'Dougall to the effect that he found the selector on the land when he went there? Yes; but these are declarations for the Minister after the inquiry has been held.
138. Had the Board been aware of the selector being able to give this evidence might there have been a different finding? Yes; probably.
139. You will see that J. B. M'Dougall found the selector on the land? But these are all *ex parte* statements, and these people may not bear cross-examination.
140. We are taking it for what it is worth. I can bring evidence to prove that some of them are intelligent men, and knew what they were doing in making their declarations? The reason why I take exception to the

Mr. W. H. Capper. 26 July, 1889.

the consideration of these declarations is that if they are made by men of weight, they would justify a reinquiry

141. You think that if the statements were from men of weight a reinquiry would be justified? Yes; it would show that the inquiry was not properly gone into—not through any neglect on the part of the Board, but on the part of the selector in not bringing all the evidence that he could.

142. You think that if all the evidence had been brought before, there might have been a different decision? There might have been.

143. Mr. Mee found him on the selection when he went there? Yes.

144. You will see that Mr. John Studders, a farmer of Shannon Brook, says that the selector was making the land his home? Yes.

145. Mr. Sylvester Shanley says that the house on the selection had the appearance of being continually occupied, and that when he saw it it was locked up—the man, evidently, being out working? Yes.

146. He said that the general appearance of the place showed that it was the house of a *bonâ fide* selector? Yes.

147. Mr. John Ryan also says that he has seen Benn about his land? Yes.

148. Mr. Petersson says that he has been there on several occasions, and has seen the selector on the land, and he says, "I am satisfied that the selector made it his home?" Yes.

149. In view of that evidence does it not appear to you that the finding of the Board was a little hasty? No, because the Board had no other evidence before them.

150. Do you think that the summary was judicially drawn up? I must refrain from criticising the Board.

151. Do you think that in view of what I have pointed out—the apparent contradictions—that it would not have been better if they had relieved the case of any doubt in view of the complications that I have shown,—would it not have been better if they had made the case a little more explicit? Yes, the evidence might have been taken in more detail.

152. In fact, that it appears from the evidence that there is considerable doubt about the case? Well, these declarations strengthen the case of the selector.

153. Leaving the declarations out for the time, do not you think there is some doubt on the evidence before you? It is difficult to answer that question. He was evidently a man who did not reside continuously, as he was away for weeks.

154. Any man who wanted to find him found him. A cooey would bring him, and did, when Mulhearn visited the place? Yes, in one instance.

155. But those who did not want to find him did not cooey? No; I should say that the squatter's people went to see whether he was on the selection or not. I have no doubt that they did not care whether they found him or not.

156. Allow me to put it this way. You are known to follow a certain line of business; suppose that I was appointed to discover whether you lived at your place of residence, and knowing that you left at 8 o'clock to go to your office and did not return till 6 o'clock at night, if I went seventy or 700 times during the day I should not find you at home? No.

157. Would it be justifiable to swear that it was not your home because you were not found there during the middle of the day? Certainly not; but the cases are not parallel. The selector is within certain prescribed limits.

158. And may he not have been within those prescribed limits? Yes.

159. Was there any attempt to prove that he was not on his land;—has not every witness here, when pressed, said that he was not sure that Benn was not on his land? Any man must give such evidence unless he has gone over every foot of the land.

160. If he wanted to swear definitely whether the man was on the land or not, could a man not have found out whether he was on the land? I do not know. One witness says that he could see all over it, but the plan shows Ti-tree scrub and swamp.

161. Any person who wanted to know whether a man was on that 200 acres could have satisfied himself? Yes.

162. In no instance have they taken the necessary trouble to swear that? No; they have not sworn it.

163. If a man swore that a selector was there, and they could not swear that he was not, should not that view be taken? They did not prove that he lived continuously there.

164. It was obligatory on them after lodging a complaint to prove that the man was not on his ground? Yes; but he did not fulfil the conditions of residence.

165. When they came to give evidence they were not prepared to swear that he was not on the land? The evidence goes to show that he was not at the hut or within a reasonable distance of it.

166. How could he make a living if he was sitting in the hut all day? That is not possible.

167. *Mr. Nicoll.*] Judging from the evidence there is no doubt that you put it down as being unreliable as far as the station employees are concerned? I cannot express an opinion upon the evidence given.

168. Take the evidence all through—if it was your own case would you not reject it? I cannot give an opinion on that; only the Minister can do it.

169. *Mr. Stevenson.*] One witness said, "I will not swear that there were no cooking utensils";—is that not contradictory to the Inspector's report? He merely says he will not swear.

170. Is that not contradictory? I would not say that it was. He did not find that the selector had any of those utensils.

171. Is it not a fact that the evidence is unsatisfactory? I cannot say whether it is or not.

172. Mr. Fanning in his evidence says, "Mr. Donald Campbell is not in the employ of the station now; he is not here to-day; he told me he was afraid to come";—do you not think that very strange evidence for the manager of the station to give? Why should Mr. Campbell be afraid to come? I do not know.

173. Judging from Mr. Fanning's evidence, does it not appear that Mr. Campbell was not a very willing witness in this case? I cannot say at all.

174. Mr. A. G. Taylor, one of the station hands, swore that the improvements were considerable? Yes.

175. He does not know whether the selector did them himself, but that he saw him working there? Yes.

176. Did Alexander Campbell say that he could not say but what the selector slept on the land at night? He could not swear whether the selector slept there or not.

177. Mr. Mulhearn's evidence contradicts the report and evidence of the Inspector in reference to the cooking utensils? Yes, but the dates are different. The Inspector visited the place on the 10th August, 1885, and Mulhearn went there in November, 1885, for the first time. 178.

Mr. W. H. Capper. 26 July, 1889.

178. He said he would not swear that there were no cooking utensils, yet in his report he says that there were not? No; on account of the lapse of time I presume.
179. *Chairman.*] Should he not be able to swear exactly? He should swear to what he sees.
180. Do you consider Mr. Miller's evidence is reliable,—do you consider it satisfactory? No; it is not satisfactory.
181. *Mr. Stevenson.*] Was there never anything said as to the way in which the Chairman of the Board discharged his duties? I am not prepared to give any evidence about him.
182. Is Mr. Blackman still occupying the position that he occupied as Chairman of the Land Board? No.
183. Has he been dismissed from the Service? No.
184. Has he resigned? No.
185. Is he in the employ of the Department? No; I think he is superannuated.
186. *Chairman.*] Was there any inquiry into Mr. Blackman's management of the district? The Board of Inquiry appointed last year by the Government inquired into the working of all the Boards.
187. Do you know whether they found affairs under Mr. Blackman's supervision eminently satisfactory? I cannot say.
188. If they inquired into his work, and subsequently he ceased to do that work, is not there an obvious inference? He is a man of advanced age.
189. He is not 60, so that cannot be the reason why he is gone? I think he is near 60.
190. After the Land Board Inquiry was Mr. Blackman superseded? Another Chairman was sent to Grafton, but he is only an acting chairman.
191. *Mr. McFarlane.*] With the exception of the Inspector those who gave evidence against the selector were directly interested in the forfeiture of the selection? The lessee was interested, and the other witnesses being his employees would naturally be indirectly interested.
192. Do you think that their evidence would be reliable? If they are men of honor it should be.
193. Do you think it would be open to some degree of suspicion? I do not think so. I presume there are honest men in the employ of the squatters as there are in the employ of the selectors.
194. Yes, but in the law courts where a witness is personally interested, his evidence has not so much weight as it would be if he were not interested? Certainly not.
195. The evidence given in support of the selection proving that he had resided? I cannot follow you when you say the evidence proving it.
196. Then we will say the evidence supporting it—there is no evidence to show that either of the selectors' witnesses was interested in any way in the selection? It has been stated one was a butcher and another was a hawker—they might have some interest in keeping him on the selection.
197. There is nothing to show that the witnesses were directly or indirectly interested in the selection? No; not as employer or employees.
198. On the other hand it is admitted that it would have been to the interest of the lessee of the run if the selection had been forfeited? Yes.
199. When you have evidence from persons directly interested on one hand, and evidence from persons who are not at all interested on the other, which would you be prepared to believe? The disinterested evidence would have the greater weight.
200. *Mr. Stevenson.*] Do you think that if the statements made in the declaration had been given in evidence on behalf of the selector it would have made a difference in the decision? They say that selectors very often are so careless that they do not bring forward all the evidence that they can obtain. But if the decision is against them they bring forward statutory declarations, and all kinds of evidence.

Mr. John Perry, M.P., called in, sworn, and examined:—

Mr. J. Perry, M.P. 26 July, 1889.

201. *Chairman.*] Do you know Zachary Benn? I know him to be a reputable man. I do not believe he would perjure himself.
202. Do you know Mulhearn? Yes.
203. Is he known to be a reputable man? Yes.
204. You do not think he would perjure himself? No.
205. Do you know Carlill? Yes, I know him well. I think he is a straightforward man. I do not think he would perjure himself.
206. Do you think J. B. M'Dougall would willingly perjure himself? I am certain that he would not.
207. Are you under the impression that Mr. W. E. Mee would willingly perjure himself? I am certain he would not.
208. Do you think Mr. Sylvester Shanley is a man who would willingly make a false statement? I cannot say that I know him personally, but I have heard of him—he bears a good name in the district.
209. His reputation is that of an honest straightforward man? Yes.

TUESDAY, 30 *JULY*, 1889.

Present:—

MR. EWING, | MR. STEVENSON,
MR. LEES.

THOMAS THOMSON EWING, ESQ., IN THE CHAIR.

Mr. Patrick Hogan, M.P., called in, sworn, and examined:—

Mr. P. Hogan, M.P. 30 July, 1889.

210. *Chairman.*] You are well acquainted with the Richmond District and with its inhabitants? Yes.
211. Do you know Martin Mulhearn, a butcher at Casino? I do.
212. Is he man of good reputation? He is.
213. You do not think he is a sort of man who would perjure himself? I am confident that he would not.
214. Do you know Mr. Carlill? I know him by repute.
215. Do you think that he is a man who would willingly perjure himself? Certainly not.
216. Have you had any business transactions with him? I have not.
217. But you know him to be a man of good repute? There is scarcely a man in the district that I do not know something about. I know every family in the Richmond electorate. 218.

Mr. P. Hogan, M.P.
30 July, 1889.

218. Do you know James Burns, another witness, who gave evidence? I have some knowledge of him similar to my knowledge of the gentleman to whom you last referred.
219. What is the public repute of James Burns? It is unquestionably good.
220. *Chairman.*] You do not think that he would perjure himself? I do not think he would.
221. Do you know J. Mathers? I do.
222. How does he stand? Something similar to the others.
223. Has he a good character? I never heard anything advanced against him.
224. Do you know John O'Connell, of Coraki? Yes; he is a gentleman of good character.
225. Had he been a man of bad character would you have known it? Yes.
226. Have you heard of J. B. M'Dougall, of Casino? Yes.
227. Do you think that he would willingly perjure himself? I should not think so.
228. He is an honest man? Yes; of as good standing as any one in the district.
229. There is Mr. Mee, auctioneer, Casino—do you think he is a man who would purjure himself? I do not.
230. Do you know Mr. Sylvester Shanley? Yes.
231. Is he a man of good repute? Yes; unquestionably.
232. He is not a man who would be willing to perjure himself? He would be the last man in the district that I should even suspect of such a thing.
233. We are holding an inquiry in reference to Mr. Zachary Benn's conditional purchase at Casino—do you know the Benn family? I do. I have known them for a number of years.
234. Are they a respectable family? There is not a more respectable family in New South Wales, nor a family of better colonists.
235. Do you know how the public regard this case? Numbers of the local inhabitants have spoken to me about it. They think that Benn has been unjustly treated with reference to the forfeiture of his land. I have had a good deal to do with the case myself; as I took steps to get undone what was a manifest wrong in the forfeiture of the young man's selection.
236. Do you know Zachary Benn's father? Yes.
237. What is your opinion of him? I do not know a better man in the Colony.
238. You think he would not tell a lie? I am sure he would not.
239. Are the Benn's good colonists? I do not know better colonists in the country. Benn told me that he had twelve or thirteen sons, and he wanted to get them settled on the land.

SELECTIONS BY JOHN HARRISON, OF LISMORE.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 19th July, 1889,—"*with power to send for persons and papers, to inquire into and report upon the selections made by John Harrison, in Lismore district, declared forfeited,*" and to whom was referred on the same day "*the Report from the Select Committee of Session* 1888–9 *in reference to the said case,*"—have agreed to the following Report:—

Your Committee having carefully considered the Report referred to them, find as follows:—

That John Harrison acquired the following conditional purchases in the parish of Bungabbee, county of Rouse and district of Lismore, viz.:—74/2,138, 77/11, 81/92, 81/107, 81/128, 81/297, and 81/319, of 40 acres each; also 81/440 of 125¾ acres, and 82/136 of 234¼ acres.

That his conditional purchases Nos. 81/107, 81/128, 81/319, and 81/440 were recommended for forfeiture by Mr. Secretary Garrett, which action would also forfeit No. 82/136 on account of separation.

That, on examination of the papers and the evidence, your Committee is of opinion that the conditional purchases of John Harrison should not have been declared forfeited, and they recommend his case to the favourable consideration of your Honorable House.

THOS. EWING,
Chairman.

No. 2 *Committee Room,*
Sydney, 23rd July, 1889.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 23 *JULY*, 1889.

MEMBERS PRESENT :—

Mr. Ewing, | Mr. Perry,
Mr. Stevenson.

Mr. Ewing called to the Chair.

Entry from Votes and Proceedings appointing the Committee, and referring the Report from Select Committee of Session 1888–9, *read* by the Clerk.

Printed copies of the Report referred, before the Committee.

Committee deliberated.

Motion made (*Mr. Stevenson*), and question,—"That the Report from the former Committee, and dated 16th January, 1889, be the Report of this Committee,"—put and passed.

Chairman to report to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS BILL.

(PETITION FROM JAMES McLAURIN, CHAIRMAN OF MEETING HELD AT GERMANTON.)

Received by the Legislative Assembly, 14 *June*, 1889.

The Honorable the Members of the Legislative Assembly in Parliament assembled.

The Petition of the Pastoral Lessees in the Hume Electorate, Eastern Division,—

RESPECTFULLY SHOWETH:—

That the Minister for Lands for the time being, in accordance with section 78, subsection 4, of the Crown Lands Act of 1884, notified in the *Gazette*, and to lessees that the five years' extension provided for in that clause should not be given to pastoral leaseholders in the Eastern Division, while leaseholders in the Central have five years, and those in the Western ten years longer than the Eastern.

That no provision is made in the Amending Land Act now before your Honorable House for an extension of pastoral leases in the Eastern Division, leaseholders thereby suffering an injustice which is not intended to those in the other divisions.

That the land in the Eastern is inferior in quality to that in the Central Division, and your Petitioners respectfully pray your Honorable House to make provision in the Amending Bill now occupying your attention for a renewal of the pastoral leases in the Eastern Division equal to those given to holders in the Central Division.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

Signed on behalf of a public meeting held at Germanton this day,—

JAMES McLAURIN,
Chairman.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS BILL.

(PETITION FROM RESIDENTS OF TOWN AND DISTRICT OF ALBURY IN OPPOSITION TO EXTENSION OF PASTORAL LEASES IN CENTRAL DIVISION.)

Received by the Legislative Assembly, 16 *July*, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

This Memorial of residents of the town and district of Albury in public meeting assembled,—

RESPECTFULLY SHOWETH:—

That your Memorialists have heard with surprise and alarm that it is proposed to grant an extension of pastoral leases in the Central Division.

That whilst anxious to render justice to all classes of the community, your Memorialists feel bound to protest against so serious an alteration of the Land Law.

That there are thousands of persons waiting to get on the lands of the Colony, and that if the proposed amendment be carried they will be debarred from settling on the land for eleven years.

That before the passing of the 1884 Land Act the lessees expressed their willingness to pay an increased rent in consideration of their receiving security of tenure, and that almost immediately afterwards they commenced an agitation for compensation for improvements.

That, in your Memorialists' opinion, the principle of compensation for improvements, though right in the abstract, should not be adopted in this instance, because the rental paid by lessees in the Central Division being much less than the true value they have been compensated already, and it would be impolitic and unjust to the rest of the community to allow any further concession.

That your Memorialists are quite satisfied with the mode of dealing with improvements proposed in the original Draft Bill.

That it would not be wise to make so radical a change in an important principle of the measure without first giving the country an opportunity of expressing an opinion on the question.

Your Memorialists therefore respectfully pray that, taking the foregoing facts into consideration, and having regard to the extreme demand for land for purposes of settlement, your Honorable House will be pleased to restore to the Bill the original clause in lieu of the amendment now proposed.

And your Memorialists, as in duty bound, will ever pray, &c.

Signed by direction and on behalf of a public meeting held at Council Chambers, Albury, this 15th July, 1889.

G. ARTHUR THOMPSON,
Mayor of Albury.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

INSTALMENTS DUE BY CONDITIONAL PURCHASERS.

(PETITION FROM CERTAIN FREE SELECTORS OF INVERELL.)

Received by the Legislative Assembly, 28 *February*, 1889.

To the Honorable the Minister for Lands, Sydney.

The Petition of the undersigned free selectors of the district of Inverell,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners are *bona-fide* selectors in this district.

2. That in consequence of the protracted and disastrous drought with which this district has been visited, your Petitioners have been unable to get any returns whatever for the labor and capital expended on their lands, the whole crops of the district having entirely failed, and most of your Petitioners' stock having died.

3. That in consequence of the foregoing facts your Petitioners are reduced to a state of actual poverty, and are quite unable to pay the annual instalments and interest on their respective selections falling due in March next.

Your Petitioners therefore respectfully pray that the foregoing facts, and the great hardships under which your Petitioners are labouring, may be taken into your most favourable consideration, and that you will cause a Bill to be at once introduced into Parliament for the purpose of either remitting or postponing the payment of the said instalments and interest.

[*Here follow* 235 *signatures.*]

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

INSTALMENTS DUE BY CONDITIONAL PURCHASERS.

(PETITION FROM ALEXANDER RODGERS, CHAIRMAN OF MEETING HELD AT ATTUNGA.)

Ordered by the Legislative Assembly to be printed, 11 *April*, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Farmers and Land-owners in and around Attunga, near Tamworth, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH :—

1. That your Petitioners are Farmers in the district of Tamworth, and are holders of conditional purchases on which one year's interest is now due. Your Petitioners would beg to state to your Honorable House that the year 1888 gave the smallest rainfall of any year within the memory of the oldest inhabitant of this district.

2. In many cases your Petitioners have not had any wheat crops, and only a few of them had very light crops, hence your Petitioners have had no income from their land during the past year.

3. Your Petitioners desire that assistance should be given to the distressed farmers, and humbly pray that a quantity of wheat be granted to the people of this district needing the same.

4. That your Petitioners are unable to pay the interest now due on their land, and would humbly ask your Honorable House to relieve them from such payment during the present year in such manner as your Honorable House may see fit to arrange.

Your Petitioners humbly pray that your Honorable House will take their Petition into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

ALEX. RODGERS,
Chairman of meeting held at Attunga, on the 20th day of March, A.D. 1889.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE LAND LAW.

PETITION FROM CERTAIN CROWN LESSEES, CONDITIONAL PURCHASERS, MERCHANTS, AND OTHERS RECOMMENDING ALTERATIONS IN LAND ACT.)

Received by the Legislative Assembly, 17 *April*, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament Assembled.

The humble Petition of the undersigned Crown lessees, conditional purchasers, merchants, and others interested in the question of land legislation for the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners are all greatly affected by, and interested in, the question of land legislation for the said Colony.

2. That your Petitioners beg respectfully to protest against the provisions of the Land Act of 1884, which place absolute power of ultimately determining the rental of all Crown lands in the hands of the Minister for Lands.

3. That the right of appeal should be allowed in all cases of appraised rentals, and such appeals should be heard before a Court entirely independent of political or departmental influence.

4. That the rental of all lands should be fixed by the Board in its discretion, and the minimum rent fixed by the Act should be abolished.

5. That in all cases of improvements approved of by the Local Board, and which tend to the better development of the land, compensation for the then value shall be paid by the incoming to the outgoing holder, provided such improvements are of a permanent nature, and such compensation shall not exceed 2s. 6d. per acre on all acreage to be in proportion to the area of the holding.

6. That provision should be made whereby adjoining holders may enclose two or more holdings with one ring fence, and in such cases improvements to the required amount, other than dwelling houses, be substituted for the internal fencing.

Your Petitioners therefore humbly pray that your Honorable House will favourably consider the matters in the foregoing Petition, and make such amendments in the Land Act as will give the relief which your Petitioners seek.

And your Petitioners will ever pray, &c.

[*Here follow* 265 *signatures.*]

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CROWN LANDS AMENDMENT AND SUPPLEMENTARY BILL.

(MESSAGE No. 13.)

Ordered by the Legislative Assembly to be printed, 10 *April*, 1889.

CARRINGTON,
Governor.

Message No. 13.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with a Bill to amend the Land Act of 1884, and to make provision in other respects for the management and disposal of the public lands, and for other purposes.

Government House,
Sydney, 4th April, 1889.

1889.

NEW SOUTH WALES.

CROWN LANDS ACT OF 1884.

(NOTIFICATION OF AMENDMENT OF NO. 11 OF THE TIMBER, STATE FOREST, AND QUARRY REGULATIONS.)

Presented to Parliament, pursuant to Act 48 Vic. No. 18.

AMENDMENT OF REGULATION No. 11, UNDER THE TIMBER, STATE FOREST, AND QUARRY REGULATIONS OF 18TH AUGUST, 1885.

Department of Lands, Sydney, 8th March, 1889.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following amendment in the Timber, State Forest, and Quarry Regulations of the 18th August, 1885, viz. :—The substitution of the word "Lands" for "Mines" in Regulation No. 11.

[Ml. 89–2,065]

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF SITE FOR MARKETS AND SITE FOR MARKET-PLACE OR SQUARE AT EAST MAITLAND.

It is hereby notified for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to resume the site for markets, area 6 acres 2 roods 27¾ perches, and the site for market-place or square, area 3 acres 2 roods 2 perches, in the town of East Maitland hereunder described, with a view to portions thereof being set apart for public recreation and water supply.

[Ms. 89-2,946] JAMES N. BRUNKER.

Description.

Site for Markets.

6 acres 2 roods 27¾ perches. County of Northumberland, parish of Maitland, town of East Maitland, being part of section 40: Commencing at the intersection of the south-west side of Newcastle-street with the south-eastern side of Victoria-street; and bounded thence on the north-west by part of the south-eastern side of the last-mentioned street bearing south 44 degrees 22 minutes west 14 chains 12½ links; on the south-west by part of the north-eastern side of Rous-street bearing south 44 degrees 46 minutes east 4 chains 73 links; on the south-east by a lane 20 feet wide bearing north 44 degrees 20 minutes east 14 chains 14½ links; and on the north-east by the south-west side of Newcastle-street aforesaid, bearing north 45 degrees west 4 chains 70½ links, to the point of commencement.

Site for Market-place or Square.

3 acres 2 roods 2 perches. County of Northumberland, parish of Maitland, town of East Maitland, being part of section 26: Commencing at the intersection of the north-west side of High-street with the north-east side of Lindesay-street; and bounded thence on the south-west by part of the north-east side of the last-mentioned street bearing north 45 degrees west 7 chains 4½ links; on the north-west by the south-eastern boundaries of allotments 4 and 5 bearing north 44 degrees 59 minutes east 4 chains 99½ links; on the north-east by the south-west boundaries of allotments 7, 8, 9, 10, 11, and 12, bearing south 45 degrees east 7 chains 4½ links; and on the south-east by part of the north-west side of High-street aforesaid, bearing south 45 degrees west 4 chains 99½ links, to the point of commencement.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF SHOW GROUND AT TAMWORTH, AND DEDICATION FOR THE SAME PURPOSE IN LIEU.

It is hereby notified for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Tamworth, area 3 acres, being part of section 43, dedicated on the 14th November, 1879, for Show Ground, and hereunder described, with a view to the dedication in lieu thereof of allotments 11 to 14 of section 44, town of Tamworth, area 1 acre 3 roods 20 perches, also hereunder described, as an addition to Show Ground for the use of the Liverpool Plains Pastoral, Agricultural, and Horticultural Association.

[Ms. 89-3,303] JAMES N. BRUNKER.

Descriptions.

Show Ground Proposed to be Resumed.

County of Inglis, parish of Tamworth, town of Tamworth, 3 acres, part of section 43: Commencing at the western corner of the section; and bounded thence on the north-west by White-street north-easterly 10 chains; on the north-east by Upper-street south-easterly at right angles to White-street 3 chains; on the south-east by a line south-westerly parallel with White-street 10 chains to Carthage-street; and on the south-west by that street north-westerly 3 chains, to the point of commencement,—as shown on plan catalogued T. 41-1,393.

Show Ground Proposed to be Dedicated.

County of Inglis, parish of Tamworth, town of Tamworth, 1 acre 3 roods 20 perches, being allotments 11, 12, 13, and 14 of section 44, town of Tamworth: Commencing at the most eastern corner of allotment 15 of section 44, W. H. Russ' 1 rood 35 perches; and bounded thence on the north-east by part of Upper-street being a line bearing south 48 degrees east 4 chains to White-street; on the south-east by part of White-street, being a line bearing south 42 degrees west 4 chains 70 links to a lane 30 links wide; on the south-west by part of that lane, being a line bearing north 48 degrees west 4 chains to the southern corner of allotment 15 first mentioned; and thence by the south-east side of that allotment bearing north 42 degrees east 4 chains 70 links, to the point of commencement,—as shown on plan catalogued T. 39-1,393 Roll.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF GENERAL CEMETERY AT WILLYAMA.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the General Cemetery at Willyama, area 12 acres 2 roods 28 perches, dedicated on the 3rd August, 1888, and hereunder described, it being intended to dedicate another site in lieu thereof.

[Ms. 88-16,209] JAMES N. BRUNKER.

DESCRIPTION.

County of Yancowinna, parish of Picton, containing an area of 12 acres 2 roods 28 perches: Commencing on the north-east side of a road 1 chain 50 links wide, at a point bearing north 41 degrees 39 minutes west 4 chains 50 links from the western corner of suburban portion 202, town of Willyama; and bounded thence on part of the south-east by a line bearing north 48 degrees 21 minutes east 6 chains to the eastern corner of allotment 7 of 2 acres 1 rood 24 perches, measured for a General Burial Ground; bounded thence on the north-east by a line bearing north 41 degrees 39 minutes west 8 chains 79 links to a point on the southern side of a road 1 chain wide; thence on the north-west by a line bearing south 69 degrees 36 minutes west 8 chains 5 links; thence on part of the south-west by a line bearing south 41 degrees 39 minutes east 1 chain 70½ links to the northern corner of allotment 2 of 3 roods, measured as a burial ground for the Independents; bounded thence by a line forming the north-west boundaries of allotment 2, just mentioned, and allotment 1 of 1 rood, site for Jews' Burial Ground, in all 5 chains; on the remainder of the south-west by a line bearing south 41 degrees 39 minutes east 10 chains to the southern corner of allotment 5 of 2 acres, set apart as a burial ground for the Roman Catholic Denomination; and thence on the remainder of the south-east by a line bearing north 48 degrees 21 minutes east 6 chains 50 links, to the point of commencement,—shown on plan catalogued Willyama 5, District Survey Office, Bourke.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF PUBLIC SCHOOL SITE AT RALEIGH EAST, AND DEDICATION FOR THE SAME PURPOSE IN LIEU THEREOF.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Public School Site at Raleigh East, area 2 acres, viz.:—Portion 53, in the parish of North Bellingen, county of Raleigh, dedicated on the 11th July, 1884, and hereunder described, with a view to the dedication of 1 acre in the village of Repton, also hereunder described, as a site for a Public School in lieu thereof.

[Ms. 89-1,461] JAMES N. BRUNKER.

DESCRIPTIONS.

Public School Site proposed to be Resumed.

County of Raleigh, parish of North Bellingen, 2 acres, at Raleigh East, on the Bellinger River. Portion 53: Commencing on the southern side of a road 1 chain wide, at a point bearing south 49 degrees 1 minute east and distant 1 chain 52½ links from the south-western corner of portion 114 of 41 acres, on the left bank of the Bellinger River; and bounded thence on the north by that road dividing it from part of that portion bearing east 4 chains and 82½ links; on the east by a line bearing south 4 chains and 44 links; on the south by a line bearing west 4 chains and 20 links; and on the west by a line bearing north 8 degrees west 4 chains and 48½ links, to the point of commencement. Plan P. 1,153-1,978.

Public School Site proposed to be Dedicated.

County of Raleigh, parish of North Bellingen, village of Repton, area 1 acre: Commencing at the intersection of the eastern side of River-street with the southern side of Caper-street, being also the north-western corner of an allotment 1 of 1 rood; and bounded thence on the west by the eastern side of River-street first mentioned, being a line bearing south and distant 4 chains to the south-western corner of allotment 4 of 1 rood; thence on the south by the south boundary line of that allotment bearing east 2 chains 50 links to the western side of a lane 31 links wide; thence on the east by the western side of that line bearing north 4 chains to the southern side of Caper-street above mentioned; and thence by that side of that street bearing west 2 chains 50 links, to the point of commencement.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF PERMANENT COMMON AT TUENA.

IT is hereby notified for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the permanent common at Tuena, dedicated on the 3rd May, 1878, and hereunder described, it being intended to reserve another common in lieu thereof.

[Ms. 89-1,456] JAMES N. BRUNKER.

DESCRIPTION.

County of Georgiana, parish of Yarraman, being the area dedicated 3rd May, 1878, as containing about 640 acres, but by measurement found to contain 382 acres: Commencing on Tuena Creek, at the south-east corner of John G. Richardson's 787 acres; and bounded thence on part of the north by part of the south boundary of that portion bearing westerly 12 chains 86 links to the north-east corner of portion 15 of 30 acres; thence on part of the west by the east boundary of that portion bearing south 20 chains to its south-east corner; again on the north by the south boundary of that portion bearing west 14 chains 95 links to east boundary of John M'Kenzie's portion 14 of 31 acres; again on the west by part of that east boundary bearing south 9 chains 2 links; again on the north by part of the south boundary of that portion bearing west 11 chains 87 links to a point due north from the north-west corner of the Tuena village reserve; thence on the remainder of the west by a line south 53 chains 72 links to that north-west corner; thence on the south by the north boundary of the village reserve aforesaid bearing east 60 chains 97 links to Tuena Creek; and thence on the east by that creek downwards, to the point of commencement.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF RACECOURSE AT MOAMA AND RE-DEDICATION OF PART THEREOF FOR THE SAME PURPOSE, AND THE REMAINDER FOR PUBLIC RECREATION.

IT is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the racecourse at Moama, area 120 acres, dedicated on the 6th December, 1867, and hereunder described, with a view to the re-dedication of 12 acres as a racecourse and the remainder, 108 acres, for public recreation.

[Ms. 89-2,000] JAMES N. BRUNKER.

DESCRIPTIONS.

Racecourse proposed to be Resumed.

CENTRAL DIVISION.

LAND DISTRICT OF DENILIQUIN.

Within the resumed area of Moira Holding No. 619, notified 31st July, 1885.

County of Cadell, parishes of Moama and Tataila, at Moama, 120 acres: Commencing on the northern side of a road 1 chain and 50 links wide, at a point distant 1 chain west and 1 chain 50 links north from the north-western corner of portion 40 of 4 acres 3 roods 14 perches, in the parish of Moama; and bounded thence on the south by that road and a line, in all bearing west 26 chains and 31 links, and thence by a road 1 chain 50 links wide west 37 degrees 6 minutes north 12 chains and 76 links to a road 1 chain wide; on the west by that road dividing it from part of portion 19 of 61 acres, in the parish of Tataila, bearing north 26 chains and 28 links; on the north by a line bearing east 36 chains and 49 links to a road 1 chain wide; and on the east by that road bearing south 33 chains and 98 links, to the point of commencement. Plan C. 72-1,817.

Racecourse proposed to be Dedicated.

Within the resumed area of Moira Holding No. 619, notified 31st July, 1885.

County of Cadell, parish of Tataila, containing an area of 12 acres. The Crown Lands within the following boundaries: Commencing on the east side of a road 1 chain wide separating the land herein described from portion 19 of 61 acres, at a post marked broad-arrow over JCR, distant 10 chains 32 links south from the south-west corner of portion 74 of 20 acres; and bounded thence by lines bearing south 16 chains 96 links, south 53 degrees 20 minutes east 4 chains 27 links, north 17 degrees 27 minutes 20 seconds east 13 chains 70 links, north 13 degrees 11 minutes east 4 chains 42 links, north 2 chains 13 links, and west 8 chains 54 links, to point of commencement,—as shown on plan catalogued Miscellaneous 23 in the District Surveyor's Office, Hay.

Proposed Dedication for Public Recreation.

Within the resumed area of Moira Holding No. 619, notified 31st July, 1885.

County of Cadell, parishes of Moama and Tataila, containing an area of 108 acres. The Crown Lands within the following boundaries: Commencing on the south side of a road 1 chain wide at a fence post distant 1 chain from the south-west corner of portion 74 of 20 acres, parish of Tataila; and bounded thence by lines bearing east 36 chains 49 links, south 33 chains 98 links, west 26 chains 31 links, north 52 degrees 54 minutes west 8 chains 48 links, north 17 degrees 27 minutes 20 seconds east 13 chains 70 links, north 13 degrees 11 minutes east 4 chains 42 links, north 2 chains 13 links, west 8 chains 54 links, and north 9 chains 32 links, to the point of commencement,—as shown on plan catalogued C. 72–1,817.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF PUBLIC SCHOOL SITE AT GERMAN HILL.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Public School site at German Hill, area 2 acres, viz.:—Portion 207, in the parish of Barton, county of Ashburnham, dedicated on the 24th October, 1882, and hereunder described, the land being no longer required for the purpose for which it was dedicated.

[Ms. 89–1,997] JAMES N. BRUNKER.

Description.

2 acres. County of Ashburnham, parish of Barton, portion 207: Commencing on the north-western side of a road 1 chain 25 links wide, at the eastern corner of portion 159 of 2 roods; and bounded thence on the south-east by that road bearing north 72 degrees 30 minutes east 3 chains and 33½ links; on the north-east by a line dividing it from portion 5–VII bearing north 17 degrees 30 minutes west 6 chains; on the north-west by a line dividing it from part of that portion bearing south 72 degrees 30 minutes west 3 chains and 33½ links; and on the south-west by the north-eastern boundary of portion 160 of 1 acre and the north-eastern boundary of portion 159 aforesaid, in all bearing south 17 degrees 30 minutes east 6 chains, to the point of commencement.

Plan P. 662–1,978.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Department of Lands,
Sydney, 9th April, 1889.

PROPOSED RESUMPTION OF PART OF WALCHA PERMANENT COMMON.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of that part of the permanent common at Walcha, area 21 acres, hereunder described, it being intended to include that area in a travelling stock reserve.

[Ms. 89–2,001] JAMES N. BRUNKER.

Description.

EASTERN DIVISION.

Land District of Walcha.

County of Vernon, parish of Walcha, 21 acres: Commencing at a point bearing 1 chain east from the north-east corner of portion 413, E. B. Boulton's 40 acres 3 roods; and bounded thence on the north by a line east 4 chains; thence on the east by a line south 52 chains and 59 links to the north boundary of portion No. 118; thence on the south by part of the north boundary of that portion and a line bearing west in all 4 chains; and thence on the west by a line north 52 chains and 59 links, to the point of commencement,—shown on plan catalogued Ms. 121 AE.

The above is in lieu of the notice in the Government Gazette of the 5th March, 1889.

Sydney, 2nd July, 1889.

PROPOSED RESUMPTION OF CHURCH OF ENGLAND CHURCH AND PARSONAGE SITES AT GOOBANG, AND DEDICATION FOR CHURCH OF ENGLAND CHURCH PURPOSES AT PARKES IN LIEU THEREOF.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Church of England Church and Parsonage Sites at Goobang, area 1 acre 2 roods, viz., allotments 1, 2, and 10 of section 8, dedicated on the 8th January, 1875, and hereunder described, with a view to the dedication of allotment 1 of section 13, town of Parkes, for Church of England Church purposes in lieu thereof.

[Ms. 89-6,866] JAMES N. BRUNKER.

Church of England Church and Parsonage Sites proposed to be Resumed.

County of Ashburnham, parish of Parkes, town of Goobang, allotments 1, 2, and 10 of section 8, containing 1 acre 2 roods: Commencing at the north-eastern corner of the section 8; and bounded thence on the east by Forbes-street southerly 2 chains; on the south by the northern boundary line of allotment 9 westerly at right angles to Forbes-street 2 chains 50

links to a lane; on the west by that lane northerly, parallel with Forbes-street, 2 chains; and on the north by Pioneer-street easterly 2 chains 50 links, to the point of commencement. Again, commencing at the north-western corner of section 8; and bounded thence on the west by Maclean-street southerly 4 chains; on the south by the northern boundary line of allotment 3 of same section easterly, at right angles to Maclean-street, 2 chains 50 links to a lane; on the east by that lane northerly, parallel with Maclean-street, 4 chains; and on the north by Pioneer-street westerly 2 chains 50 links, to the point of commencement,—plan C. 392–1,984.

Area proposed to be dedicated for Church of England Church purposes.

County of Ashburnham, parish of Currajong, town of Parkes. Allotment 1 of section 13, containing 2 roods: Commencing at the intersection of the north-eastern side of Hill-street with the south-eastern side of Bushman's-street being the north-west corner of allotment 1, section 13; and bounded thence by part of the south-eastern side of Bushman's-street aforesaid being a line bearing north 73 degrees 6 minutes east 2 chains 50 links to the south-western side of a lane 30 links wide; on the north-east by part of the south-western side of that lane bearing south 16 degrees 54 minutes east 2 chains to the northernmost corner of allotment 2, section 13; on the south-east by the north-western boundary of the aforesaid allotment bearing south 73 degrees 6 minutes west 2 chains 50 links to the north-eastern side of Hill-street aforesaid; and thence by part of that side of that street bearing north 16 degrees 54 minutes west 2 chains, to the point of commencement,—as shown on plan catalogued P. 1–2,139 Roll.

Department of Lands,
Sydney, 2nd July, 1889.

PROPOSED RESUMPTION OF PERMANENT COMMON AND RECREATION RESERVE AT WARIALDA.

It is hereby notified, for public information, that, in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the permanent common and the recreation reserve at Warialda, areas 700 acres and 105 acres, dedicated on the 19th May, 1868 and 13th January, 1882, respectively, and hereunder described, it being intended to set apart areas for temporary common and public recreation in lieu thereof.

[Ms. 89-7,917] JAMES N. BRUNKER.

DESCRIPTIONS.

CENTRAL DIVISION.

LAND DISTRICT OF WARIALDA.

Permanent Common proposed to be Resumed.

County of Burnett, parish of Warialda, area 700 acres: Commencing on the right bank of Warialda Creek, at a south-east corner of portion 10 of 100 acres; and bounded thence on part of the west by an east boundary of that portion bearing north 10 chains; on part of the south by part of the north boundary of that portion bearing west 43 chains; again on the west by a line bearing north 45 minutes east 86 chains; on the north by a line bearing south 89 degrees 15 minutes east 81 chains; on the east by a line bearing south 33 chains to the north side of High-street, village of Warialda; on the remainder of the south by part of that side of High-street and a line bearing west 11 chains 90 links, crossing Deep Creek to its right bank; thence by that creek downwards to its confluence with Warialda Creek aforesaid; and thence by that creek downwards, to the point of commencement,—shown on plan B. 42–1,951.

NOTE.—The above was dedicated for permanent commonage on 19th May, 1868.

Recreation Reserve proposed to be Resumed.

County of Burnett, parish of Warialda, area 105 acres. Commencing at a point bearing north 65 degrees 28 minutes west 75 chains 49 links from the north-west corner of section 8, town of Warialda; and bounded thence on the south-east by a line bearing south 68 degrees 15 minutes west 35 chains; thence on the south-west by a line bearing north 21 degrees 45 minutes west 30 chains; thence on the north-west by a line bearing north 68 degrees 15 minutes east 35 chains; and thence on the north-east by a line bearing south 21 degrees 45 minutes east 30 chains, to the point of commencement,—as shown on plan catalogued G. 48–1,834.

NOTE.—The above was dedicated for public recreation on 13th January, 1882.

Sydney Charles Potter, Government Printer —1889.

Department of Lands, Sydney, 30 July, 1889.

PROPOSED RESUMPTION OF RECREATION RESERVE AT KEEPIT, WITH A VIEW TO RESERVATIONS FOR THE SAME PURPOSE IN LIEU THEREOF.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the land at Keepit, area 137¾ acres, dedicated on the 13th May, 1887, for public recreation, and hereunder described, with a view to the reservation of areas of 25½ acres and 4 acres in the locality mentioned, for the same purpose in lieu thereof.

[Ms. 89-9,347] JAMES N. BRUNKER.

Description.

EASTERN DIVISION.—LAND DISTRICT OF TAMWORTH.

Recreation Reserve—Proposed to be resumed.

County of Darling, parish of Keepit, 137 acres 3 roods: Commencing on the left bank of the Namoi River, at the south-western corner of portion 92 of 100 acres; and bounded thence on the north by the southern boundary of that portion bearing north 89 degrees 43 minutes east 61 chains 87 links; on the east by the western boundary of portion 186 of 135 acres, and the end of a road 1 chain wide, in all bearing south 17 minutes west 22 chains 77 links; on the south by part of the northern boundary of portion 147 of 60 acres, the end of a road 50 links wide, and the northern boundary of portion 51 of 50 acres, in all bearing west 51 chains 15 links; thence by part of the western boundary of the latter portion south 3 chains; and thence by part of the northern boundary of portion 50 of 50 acres west 15 chains 30 links; on the west by a line north 10 chains 62 links to the aforesaid river; and thence by that river upwards, to the point of commencement.

Exclusively of a road 1 chain wide passing through this land in a south-easterly direction, and of portions 100, 101, 159, and 160, situated within the boundaries of this land, the areas of which have been deducted from the total area.

The above is in lieu of the notice in the *Government Gazette* of the 24th August, 1888.

CROWN LANDS.

("GAZETTE" NOTICES SETTING FORTH PROPOSED DEDICATION OF CERTAIN LANDS, UNDER THE ACT 48 VIC. No. 18.)

Presented to Parliament, pursuant to Act 48 Vic. No. 18.

Department of Lands, Sydney, 27th August, 1889.

PROPOSED RESUMPTION OF PART OF NARRABRI PERMANENT COMMON.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of that part of the Narrabri Permanent Common, area 160 acres, hereunder described, with a view to part thereof being included in a travelling stock reserve of 144 acres and the remainder set apart for road purposes.

[Ms. 89-10,855] JAMES N. BRUNKER.

Description.

Part of the Permanent Common at Narrabri, dedicated 6th December, 1867. County of Nandewar, parish of Narrabri, area 160 acres, within the following boundaries: Commencing at the westernmost corner of the Permanent Common, as dedicated 6th December, 1867; and bounded thence by part of the north-west boundary of the common bearing north 54 degrees 48 minutes east 20 chains to the southernmost corner of portion 130 of 320 acres; thence on the north-east by a line bearing south 35 degrees 12 minutes east 80 chains to the south-east boundary of the common; thence by part of that south-east boundary bearing south 54 degrees 48 minutes west 20 chains to the southernmost corner of the common; and thence by the south-west boundary of the common bearing north 35 degrees 12 minutes west 80 chains, to the point of commencement.

Department of Lands, Sydney, 27th August, 1889.

PROPOSED RESUMPTION OF WATER RESERVE AT MELYRA SPRINGS.

IT is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the water reserve at Melyra Springs, county of Forbes, area 60 acres, dedicated on the 6th December, 1867, and hereunder described, the land having been included in camping reserve No. 8,569.

[Ms. 89-11,675] JAMES N. BRUNKER.

Description.

County of Forbes, parish of Melyra, situated 2½ miles from Grenfell, at the Melyra Springs, area 60 acres: Commencing at a point bearing north 10 degrees east and distant 185 chains and 25 links from the north-western corner of section No. 3 of the town of Grenfell, at the Emu Diggings; and bounded thence on the west by a line bearing north 25 chains; on the north by a line bearing east 24 chains; on the east by a line bearing south 25 chains; and on the south by a line bearing west 24 chains, to the point of commencement,—shown on plan catalogued L. 14-1,834.

1889.

NEW SOUTH WALES.

CROWN LANDS.

(PROPOSED DEDICATION OF CERTAIN LANDS, UNDER THE ACT 48 VICTORIA No. 18.)

Presented to Parliament, pursuant to Act 48 Vic. No. 18, sec. 105.

Department of Lands,
Sydney, 24th September, 1889.

PROPOSED RESUMPTION OF PUBLIC SCHOOL SITE AT ROWAN.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Public School Site at Rowan, area 2¼ acres, viz., portion No. 116, in the parish of Rowan, county of Wynyard, dedicated on the 1st June, 1880, and hereunder described,—the land being no longer required for the purpose for which it was dedicated.

[Ms. 89-12,514] JAMES N. BRUNKER.

DESCRIPTION.

County of Wynyard, parish of Rowan, 2 acres 1 rood, portion 116: Commencing at the intersection of the left bank of the Six-mile or Stringy Bark Creek with the eastern side of a road 2 chains wide from Albury to Wagga Wagga, at the south-west corner of portion 116; and bounded thence on the west by that side of that road, being a line bearing north 7 degrees 21 minutes east 5 chains 25 links to the most westerly corner of portion 115 of 15½ acres; thence on the north by a southern boundary of that portion, being a line bearing east 4 chains 82 links; thence on part of the east by a western boundary of the aforesaid portion, being a line bearing south 1 chain 11 links to the left bank of the creek aforesaid; and thence by that bank of that creek upwards, to the point of commencement,—shown on plan catalogued P. 512-1,978.

Department of Lands,
Sydney, 24th September, 1889.

PROPOSED RESUMPTION OF KIAMA AND SHELLHARBOUR PERMANENT COMMON.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Kiama and Shellharbour Permanent Common, area 795 acres, dedicated on the 6th December, 1867, and hereunder described, with a view to the reservation thereof in two areas for Temporary Commonage, to be placed under the temporary control of the Borough Councils of Kiama and Shellharbour respectively.

[Ms. 89-12,885] JAMES N. BRUNKER.

DESCRIPTION.

County of Camden, parish of Terragong, at Terragong Swamp, containing 795 acres: Bounded on the east, from E. Russell's 50 acres, by the Minnamurra Rivulet and J. Collis' 1,280 acres southerly; on the south by J. Collis' 1,280 acres aforesaid and by R. Miller's two portions of 50 acres each, T. Walker's 50 acres, J. Marks' 50 acres, and J. Morris' 250 acres westerly; on the west by a line forming the northerly prolongation of the boundary dividing J. Morris' 250 acres aforesaid and M. Campbell's 250 acres to J. Colley's 126 acres; on the north by that land, R. Owen's 127 acres, J. Collins' 114 acres, M. Farraher's two portions of 89 acres each, D. Farraher and J. Seymour's 27 acres 3 roods 20 perches, and E. Russell's 50 acres aforesaid easterly, to the Minnamurra Rivulet aforesaid.

Department of Lands,
Sydney, 24th September, 1889.

PROPOSED RESUMPTION OF PUBLIC SCHOOL SITE AT BREDBO, AND DEDICATION FOR THE SAME PURPOSE IN LIEU THEREOF.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Public School Site at Bredbo, area 2 acres, viz., portion 98, in the parish of Bransby, county of Beresford, dedicated on the 18th January, 1884, and hereunder described, with a view to the dedication of portion 118 of 1 acre 1 rood, in the same locality, as a site for Public School in lieu thereof.

[Ms. 89-12,081] JAMES N. BRUNKER.

DESCRIPTIONS.

Public School Site proposed to be resumed.

County of Beresford, parish of Bransby, area 2 acres, being portion 98,—shown on plan catalogued P. 1,001-1,978.

Public School Site proposed to be dedicated.

County of Beresford, parish of Bransby, containing an area of 1 acre 1 rood. The Crown Lands within the boundaries of measured portion 118,—as shown on plan catalogued Bredbo I.

Department of Lands,
Sydney, 24th September, 1889.

PROPOSED RESUMPTION OF SHOW GROUND AT WALGETT, AND DEDICATION FOR THE SAME PURPOSE IN LIEU THEREOF.

It is hereby notified, for public information, that in accordance with the provisions of the 105th section of the Crown Lands Act of 1884, it is proposed to revoke the dedication of the Show Ground at Walgett, area 10 acres and 6 perches, viz., portion 23, in the parish of Walgett, county of Baradine, dedicated on the 15th January, 1886, and hereunder described, with a view to the dedication of portion 75 of 20 acres and 30 perches, in the parish of Merritombea, as a site for Show Ground for the use of the Walgett Pastoral and Agricultural Association in lieu thereof.

[Ms. 89-12,515] JAMES N. BRUNKER.

DESCRIPTIONS.

CENTRAL DIVISION.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

HYDE, PHILLIP, AND COOK PARKS.

(REPORT OF TRUSTEES FOR YEAR 1888.)

Ordered by the Legislative Assembly to be printed, 14 *April*, 1889.

The Chairman, Trustees of Hyde, Phillip, and Cook Parks to The Secretary for Lands.

Sir, The Board Room, Hyde Park, 5 March, 1889.

The Trustees of Hyde, Phillip, and Cook Parks have the honor to submit to the Executive and to Parliament the following Report for the past year, 1888:—

1. As mentioned in our Report of the 24th March, 1887, the three Parks comprise not less than 52 acres, of which area Hyde Park contains about 45 acres, having asphalted walk nearly 5 miles in length, over which more than 30,000 persons (including all ages) pass daily.

2. We had then completed an enclosure for exclusively indigenous plants, of which about 300 species are now named and labelled. A second has in the past year been added, and both are among the most interesting portions of the Park. We reported also an increased number of other enclosures containing collections of rare plants, and the substitution of iron railing in various directions, as far as our means extended, for the unsightly old wooden structures.

3. During the year 1888 the following works have been accomplished:—Three large new beds have been made, enclosed with iron railing, trenched and planted: One devoted to the growth of palms, macrozamias, and agaves; one to ornamental plants of a sub-tropical character; and the third to ornamental indigenous trees and shrubs solely. There are now altogether twenty-three similar enclosures in Hyde Park, some of them nearly half an acre in extent, and laid out in parterres. We have in these enclosures a rich collection of plants, and a succession of flowers has been maintained in all of them during the different seasons of the year, adding greatly to the attractions of the Park and the pleasure of its numerous visitors.

4. A rockery has been erected round the playing fountain in the lakelet (near the junction of Elizabeth and Liverpool streets), with additions made to the waterfall and to the existing rockery, where the succulents are growing. A stone fountain, 22 ft. in diameter, having a centre-piece representing dolphins, made to throw out jets of water, has been erected in the north-eastern section of the Park. This was a gift to the Trustees by Mr. John Baptist, of Redfern. The same gentleman gave also to the Trustees eight large iron vases, which have been placed in suitable positions on the Park, with agaves and yuccas surmounting them. He has given us also many valuable plants, and two lofty palms (*Chæmerops excelsa*), 14 and 16 ft. high, which have been successfully transplanted.

5. Parliament having, in response to our suggestion in March, 1887, granted the necessary funds, a band pavilion has been erected on one of the large lawns on the north-eastern section of Hyde Park, and bands, both of the Permanent and Volunteer Artillery Forces and Infantry Regiments, as well as other associated city bands (the Young Australian and Centennial among others), have at stated intervals rendered excellent music there, many selections being of a superior and instructive class and character. These performances are very much appreciated by the public. On fine days there have been as many as 3,000 persons present. The Naval Brigade Band performed on one evening, greatly to the enjoyment of a large body of listeners, and the band of the Industrial Blind Institution, Boomerang-street, has also on one or two occasions played there.

6. Eighteen new seats have been purchased and placed in various positions on the Park, principally near the band pavilion, for the convenience of listeners there. A new lawn-mowing-machine has also been purchased and brought into use. All the asphalted walks have been top-dressed from time to time with tar and sand, a work necessary to keep them in order, the large traffic daily over them being considered. They require, in fact, constant supervision and care. One man is employed almost exclusively in keeping them free from the dropping of leaves and other *débris* left by night wanderers and others. On the other hand, four or five labourers are daily at work throughout the year keeping the numerous beds in order, trenching where necessary for additional enclosures, pruning or occasionally removing old and planting new shrubs and trees, watering, manuring, &c.

7. It will be obvious from this detail that a very considerable yearly expenditure is unavoidable, unless these extensive grounds, now becoming an ornament to the city, are to revert to their former unkept and discreditable state. This is, of course, a matter for Parliament to determine. Seven men altogether, including the overseer, are employed—practised and reliable workers—and our total expenditure, with secretary's salary, is £93 per month. We have made inquiries as to the cost of public gardens elsewhere, and we find that our own, the extent and kind of work being considered, is under the average expenditure.

On behalf of the Trustees,
ALFRED STEPHEN,
Chairman.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NATIONAL PARK.

(EXTRACT OF DEED OF GRANT OF.)

Ordered by the Legislative Assembly to be printed, 1 *May*, 1889.

[*Laid upon the Table in answer to Question No.* 8, *of* 1*st May*, 1889.]

8. MR. WALKER *asked* THE COLONIAL SECRETARY,—Have the trustees the power and authority to grant a lease of any portion of the National Park to any publican for the purpose of erecting a public-house or hotel?

EXTRACT OF DEED OF GRANT.

IN the Deed of Grant of the National Park it is provided—"That for the purpose of providing accommodation for the persons visiting the said Park lands it shall be lawful for the said trustees of the National Park from time to time by deed under their hands and seals or the hands and seals of any three of them authorized so to do at any general meeting of the trustees of the National Park of which a copy of the resolution authorizing such letting endorsed upon the lease and signed by any three of the trustees of the National Park for the time being shall be *prima facie* proof to grant under such terms and conditions as to them shall seem expedient leases of parcels of the land of the said Park each parcel not to exceed five (5) acres, to any person or firm desirous of erecting buildings at which lodgings or refreshments may be purchased or to the owners or keepers of steam launches or boats for the use of visitors to the said Park in or at such part of the said land as the trustees of the National Park in their discretion may think fit for any number of years not exceeding seven years commencing from the time of the signing the lease by which the right of using the said lands shall be granted at such rents whether uniform or otherwise and subject to such terms and conditions as to the erection of buildings upon the said land so leased or as to the uses by the lessees of the lands so leased as the trustees of the National Park may think fit and that for the purpose of providing for a superior class of building for the accommodation of visitors to the said Park lands it shall be lawful for the trustees of the National Park by and with the consent of the Governor for the time being of the said Colony first obtained but not otherwise to grant leases of parcels of the said land (in addition to the leases which the trustees are hereinbefore empowered to grant) each parcel not to exceed five (5) acres in such position as the trustees of the National Park may think desirable for a term of more than seven (7) and not exceeding twenty-one years upon such terms as to the erection of buildings and the purpose for which such buildings shall be used by the lessees and as to whether any lessee shall be allowed to apply for and obtain a license for the sale of liquor at such buildings and as to the amount of rent to be paid and whether the same shall be uniform or not and whether all or any of the said parcels of land for the whole or part of the term of the lease shall be let at a rack-rent with or without building covenants or at a nominal rent or other rent with building covenants as the trustees of the National Park in their discretion shall think fit.

1889.

NEW SOUTH WALES.

COMMONS ACTS, 1873 AND 1886.

(REGULATIONS.)

Presented to Parliament pursuant to Acts.

Department of Mines,
Stock Branch,
Sydney, 15th February, 1889.

REGULATIONS.—THE COMMONS ACTS, 1873-1886.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to cancel the Regulations of 13th November, 1886, and 14th July, 1887, under the above-named Acts, and to substitute the following in lieu thereof which are hereby published for general information.

JOHN MOORE CHANTER.

Meetings of Commoners and of Trustees.

Meetings of Commoners.

1. The Trustees of every Common shall cause at least seven days' notice of every meeting of Commoners to be given by advertisement in a local newspaper, and by posting notices at the Post Office nearest to the Common.

Trustees to meet once a quarter.

2. The Trustees of a Common shall meet once at least every quarter. Three to form a quorum, and the Chairman shall have a casting vote.

Business at special meetings.

3. A special meeting of Trustees may be convened by the Chairman or by any other Trustee upon twenty-four hours' notice being given of such meeting. No business shall be transacted at a special meeting except that specified in the notice thereof.

Service of notice of meetings of Trustees.

4. Notice of a meeting shall be given by delivering it personally to the Trustee, or leaving it at his place of business or residence, or by transmitting it by registered letter through the post.

Commoners' Roll.

Applications for enrolment.

5. Any person claiming commonable rights upon or with respect to a Common may make an application, to the effect of Form 1 hereto, to the Trustees of such Common to have his name entered on the Commoners' roll.

How and when applications for enrolment are to be lodged.

6. Every such application shall be lodged with the Chairman of the Trustees not more than fourteen nor less than seven days previous to the date of the meeting at which such application shall be considered.

How applications for enrolment are to be dealt with, and when.

7. All such applications shall be numbered and entered in the order in which they are received, in a list containing the names and addresses of the applicants, and the dates on which the applications were received, and shall, if lodged within the time hereinbefore prescribed, be considered and dealt with at the quarterly meeting of Trustees held next after the lodging of such application.

Procedure at meeting.

8. At such meetings the persons making application for enrolment may attend in support thereof, and the Trustees (whose decision shall be final) shall consider and decide with respect to all such applications and to any objections taken thereto.

Mode of enrolment.

9. The Trustees of every Common shall cause the names of the persons whom they consider entitled to commonable rights upon or with respect to such Common to be entered in the order in which they are numbered in a book to be kept by the Secretary for the Common to the effect of Form 2 hereto; and such book shall be the Commoners' Roll of such Common.

Revision of Commoners' Roll.

10. The Trustees of every Common shall, in the month of December in each year, at a meeting specially called for that purpose—of which notice, as prescribed by Regulation No. 1, shall have been given—revise the Commoners' Roll of such Common, and shall strike off from such roll the name of every person who is proved to their satisfaction to have died, or otherwise ceased to be entitled to commonable rights upon or with respect to such Common.

Fees for licenses to remove soil, stone, and timber from Commons.

11. The following fees shall be chargeable for licenses to remove soil or stone and to cut and remove timber from any Common :—

For soil, per load, one shilling.
For stone, per load, one shilling.
For standing timber for firewood, per load, not exceeding the rates set out in Form 4.
For other standing timber, per tree, one shilling and sixpence.

And all such fees shall be paid to the Trustees of the Common from which such soil or stone is intended to be removed or such timber is intended to be cut; and all such fees shall be applied to the improvement of such Common.

Fees for extended pasturage on Common.

12. The Trustees of any Common who shall allow the right of extended pasturage to any animals actually in use by *bona fide* carriers, teamsters, travellers, or drovers, for carriage, riding, or driving on such Common, may demand and receive from the owners or persons in charge of such animals fees for such pasturage at rates not exceeding those specified in Form 3 hereto.

13. The Trustees of any Common who shall allow any travelling stock to be depastured on such Common may demand and receive from the drover or person in charge of such stock fees for such pasturage at rates not exceeding those specified in Form 3 hereto for that description of stock.

14. All such fees shall be appropriated for the improvement of the Common on which such extended pasturage or the pasturage of travelling stock shall have been allowed.

FORM 1.

COMMONS ACTS, 1873–1886.

Application for enrolment as Commoner.

To the Chairman of the Trustees of the Common at

I, , of , hereby claim to be entitled to commonable rights upon or with respect to the Common at , on the following grounds [*here state qualification*], and to have my name entered on the Commoners' roll of the said Common.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND AT SHELLHARBOUR FOR PUBLIC RECREATION.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, to wit. } By His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor.*

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the resumption of a portion of land at Shell Harbour for public recreation, and for the acquisition thereof public funds are lawfully available; and whereas the land hereinafter described is required for public recreation: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Kiama Independent," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for public recreation, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interest, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act. And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the county of Camden, parish of Terragong, town of Shell Harbour: Commencing on the left bank of a creek which forms the south-eastern boundary of section 1, at its intersection of the south-easterly prolongation of the north-eastern side of John-street; and bounded thence on the south-west by a line partly forming that side of that street north-westerly to the easternmost corner of allotment 4 of section 2, by the north-eastern boundaries of allotments 4, 5, 8, 9, 12, and 13 in the same section north-westerly to the northernmost corner of the last-named allotment, by a line north-westerly to the easternmost corner of allotment 2 of section 3, and by the north-eastern boundary of that allotment north-westerly to its northernmost corner; thence on the west by a line northerly to the southernmost corner of allotment 1 of section 4; thence on the north-west and west by the south-eastern and eastern boundaries of allotments 1 and 2 of that section north-easterly to the north-eastern extremity of the south-eastern side of Town's-street; thence again on the west by a line northerly to the easternmost corner of allotment 7 of section 5; thence on the south-west by part of the north-eastern boundary of that allotment north-westerly to high-water mark on the shore of the Pacific Ocean; and thence by that shore generally southerly to the left bank of the creek aforesaid, and by that bank upwards, to the point of commencement, containing about 30 acres.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-third day of May, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

HARGRAVES AND AVISFORD COMMONS.

(REPORTS, &c., IN CONNECTION WITH THE SALE OR LEASE OF.)

Ordered by the Legislative Assembly to be printed, 1 *March*, 1889.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6th November, 1888, That there be laid upon the Table of this House,—

"Copies of all letters, papers, petitions, reports, applications, and other "documents received by the Lands and Mines Departments in connection "with the sale or lease of portions of the Hargraves and the Avisford "Commons."

(*Mr. Wall.*)

HARGRAVES AND AVISFORD COMMONS.

Hargraves Common.

No. 1.

Memo. from Mr. District-Surveyor Crouch to Mr. Surveyor Conolly.

3 June, 1887.

Parishes of Grattai, Hargraves, Avisford, Windeyer, County of Wellington.

WITH reference to my circular of this date as to the desirability of offering annual leases in population areas, Mr. Conolly is requested to furnish a report, together with design of the vacant lands within the population area at Hargraves, in the terms of the circular referred to.

This population area is identical with the temporary Common, but the latter appears to be excessive in area, and might be reduced without detriment to public interests.

I have, &c.,
H. A. CROUCH,
District Surveyor.

Received, 14/6/87.—T.W.C. Replied to by 87-47, of 29th November.—T. W. CONOLLY, Surveyor.

No. 2.

The Trustees, Hargraves Common, to W. C. Wall, Esq., M.P.

Hargraves, 18 October, 1887.

Sir,

We, the Trustees of the Hargraves Common, beg to draw your attention to the following:—Whereas some few years ago a portion of our temporary Common was measured off for sale, and whereas there are further surveys now being made on the western side of our Common (which includes the only permanent water we have, and without which the remainder of the Common would be almost useless);—We, the Trustees, on behalf of the residents of Hargraves, respectfully request you, as our worthy representative, in co-operation with Messrs. Black and Haynes, M's.P., to ascertain whether the Government intends to curtail our Common still further.

We are forwarding copies of this to Messrs. Black and Haynes, and we beg that you will give the matter your earliest attention, so that we may take immediate steps to prevent such injustice.

We have, &c.,
JOHN PETRIE, Chairman.
ANDREW HICKEY.
JOHN M'GOWAN.
WILLIAM WAKELIN.
(*Per* JAMES B. BALEY, Hon. Sec.)

No. 3.

W. C. Wall, Esq., M.P., to The Secretary for Lands.

Legislative Assembly, 20 October, 1887.

Sir,

I have the honor to bring under your notice the above letter, which I have received from the Trustees of the Hargraves Common, protesting against the sale of portions thereof, which I respectfully trust will meet with immediate attention.

I have, &c.,
W. C. WALL.

The District Surveyor for early report.—S.F., B.C., 20/10/87. Inform Mr. Wall, M.P. Mr. Surveyor Conolly for explanatory report of projected action.—H. A. CROUCH, District Surveyor, 15/11/87. Received 18 November. Replied to by No. 87-46, 28th November.—T. W. CONOLLY, Surveyor.

No. 4.

Mr. Surveyor Conolly to Mr. District-Surveyor Crouch.

PROTEST by the Trustees of the Hargraves Temporary Common against alienation of any part thereof, and explaining projected action in dealing with the temporary Common, with a view to obtaining revenue from part thereof by leasing annually for pastoral purposes.

Mudgee, 28 November, 1887.

Sir,

In compliance with your B.C. instructions, No. 87-49, of 15th November, I have the honor most respectfully to submit,—

2. Your letter of 18th November, No. 87-214, to the Under Secretary, fully deals with the Hargraves Common Trustees' protest *re* alienation, none such being contemplated.

3. The projected action in connection with proposal to offer for annual lease for pastoral purposes certain lands within the population area of Hargraves, which is identical within the temporary Common, will contain a submission for reduction of Common by about 3,500 acres, leaving still an area of 9,000 acres, exclusive of permanent Common and unalienated lands within town boundaries for a population of not more than 200 people.

4. It will not be proposed to interfere with watering places, and much of the best grazing country will be retained in the interests of commoners.

5. Full report will follow in a few days.

I have, &c.,
T. W. CONOLLY,
Surveyor.

No. 5.

No. 5.

Mr. Surveyor Conolly to Mr. District-Surveyor Crouch.

REPORT *re* Temporary Common at Hargraves, within the population area of Hargraves, county of Wellington.

Sir, Mudgee, 29 November, 1887.

In compliance with your memorandum of instructions, No. 87–30, of 3rd June, I have the honor to report,—

2. The area of the Hargraves temporary Common is about 13,000 acres. The contained population is about 200. So the inhabitants enjoy the privilege of grazing their stock over an area equal to 65 acres per head of population. In addition to this privilege they have the use of unsold lands within town limits (about 360 acres), and a permanent Common of 640 acres, giving a total of 14,000 acres for 200 people.

3. It is so patent that the commonage is excessive, that I respectfully submit for your consideration the design herewith for seven annual leases for pastoral purposes, which lie partly within the population area. See Appendix

4. It is proposed to reduce the temporary Common to 9,500 acres, and to lease the remaining 3,500 acres in connection with adjoining Crown lands.

5. The Trustees for the Hargraves Common state that Stockyard Creek, which is a head of Maroombilla Creek, is one of their best watering places. The country throughout is mountainous and broken, but the water supply is good in all parts; however, as there has been an expressed wish to retain the south-west part of the Common, I would suggest that it be retained for the use of commoners.

6. As the mining population is so tenacious in holding to certain privileges granted at the time when it was deemed judicious to give large inducements and great freedom by reservations of land from sale and lease, I think it is expedient to leave very ample provision, lest by a vigorous readjustment popular excitement may be moved to defeat the object of turning altogether enormously disproportionate reservations for commonage into rent-producing pastoral leases, which, in view of the diminution of population and falling off of mining returns, is demanded in the interest of the State at large.

7. The most accessible and best grazing land is proposed to be retained for the use of the commoners.

8. The projected leases are indicated by the hetched lines, and upset rentals, which I think may fairly be expected, are shown on each block in blue colour.

I have, &c.,
T. W. CONOLLY,
Surveyor.

Entered in Reserve Book, District Survey Office.—J.G.F., 20/2/88. Annual leases dealt with separately by my memo. to Under Secretary, No. 88–22, 21st February, 1888.—H.A.C. Memo. of instructions and design herewith, Mr. Gerard.—9 December. Submitted in connection with my memo. of the 21st February, No. 88–22. 88–2,030 Occ. The area reserved for commonage purposes is unquestionably excessive, and the proposal to offer part of Common as annual lease under the 85th section is recommended.—H. A. CROUCH, District Surveyor, 21/2/88. The Under Secretary for Lands.

No. 6.

Minute for The Governor and Executive Council.

Withdrawal of Land from Temporary Commonage.

Department of Lands, Sydney, 21 May, 1888.

IT is recommended to His Excellency the Governor and the Executive Council that the within described portion of land, situated in the county of Wellington, parishes of Hargraves and Grattai, area about 3,635 acres, be withdrawn from the temporary Commonage at Hargraves for purposes of lease.

THOMAS GARRETT.

The Executive Council advise that the portion of land referred to be withdrawn from the temporary Commonage at Hargraves for purposes of lease. Approved.—CARRINGTON, 22/5/88. A. C. BUDGE, Clerk of the Council, 22/5/88. Minute, 22/5/88. Confirmed, 29/5/88.

WITHDRAWAL FROM TEMPORARY COMMON AT HARGRAVES.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that the portion of land hereinafter described has been withdrawn from the temporary Commonage at Hargraves.

Eastern Division—Land District of Mudgee—Within the population area of Hargraves.

Part of the Hargraves Temporary Common, county of Wellington, parishes of Hargraves and Grattai, area about 3,635 acres; that part of the Hargraves temporary Common, notified 7th June, 1870, included within the following boundary: Commencing at the south-west corner of the town of Hargraves, as notified 20th March, 1885, and bounded thence on part of the east by a line partly forming the west boundary of the town, bearing north to a point west of the south-west corner of portion 25, parish of Hargraves; thence on part of the south by a line bearing east to that corner of that portion; thence on the remainder of the east by part of the west boundary of portion 25 aforesaid, bearing north to the north boundary of the Hargraves temporary Common; thence on the north by part of the north boundary of the temporary Common, bearing west to its north-west corner; on the west by part of the west boundary of the temporary Common, bearing south about 2 miles to its intersection with the right bank of Maroombilli Creek; thence on the south-west by that creek upwards to a point west of the point of commencement; and on the remainder of the south by a line bearing east to that point.

This revocation does not affect reserve from conditional purchase proclaimed 17th March, 1884.

No. 7.

Gazette Notice.

Department of Lands, Sydney, 9 June, 1888.

WITHDRAWAL FROM TEMPORARY COMMON AT HARGRAVES.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that the portion of land hereinafter described has been withdrawn from the temporary commonage at Hargraves.

THOS. GARRETT.

Eastern Division—Land District of Mudgee—Within the population area of Hargraves.

Part of the Hargraves Temporary Common, county of Wellington, parishes of Hargraves and Grattai, area about 3,635 acres. That part of the Hargraves temporary Common, notified 7th June, 1870, included within the following boundaries: Commencing at the south-west corner of the town of Hargraves, as notified 20th March, 1885; and bounded thence on part of the east by a line partly forming the west boundary of the town bearing north to a point west of the south-west corner of portion 25, parish of Hargraves; thence on part of the south by a line bearing east to that corner of that portion; thence on the remainder of the east by part of the west boundary of portion 25 aforesaid bearing north to the north boundary of the Hargraves temporary Common; thence on the north by part of the north boundary of the temporary Common bearing west to its north-west corner; on the west by part of the west boundary of the temporary Common bearing south about 2 miles to its intersection with the right bank of Maroombilli Creek; thence on the south-west by that creek upwards to a point west of the point of commencement; and on the remainder of the south by a line bearing east to that point.

This revocation does not affect reserve from conditional purchase, proclaimed 17th March, 1884.

[Ms. 88-6,815]

No. 8.

Petition from Residents and Miners of Hargraves to The Secretary for Mines.

THE humble petition of the undersigned, residents and miners of Hargraves,—

Showeth:—

That it is with regret we notice in the *Government Gazette* of 9th June, 1888, that it is contemplated to withdraw from the Hargraves Common a large portion lying to the west of the township of Hargraves which embraces the most permanent water on the Common, and the proposed boundary line of which, running as it does along the western boundary of the township, it is evident that the loss of the block would largely interfere with mining interests.

More than 300 acres of the Common are at present held under gold-mining lease; upwards of £4,000 has already been expended on machinery within the last few months, and in all probability several other plants will follow in due course. These facts, together with the fact that gold is now being obtained in several of the mines now at work, have drawn a large and daily increasing population to the place.

Your Petitioners would humbly suggest that under these circumstances any curtailment of the Common at the present time is ill advised and would be injurious to the best interests of the district, and particularly detrimental to mining pursuits, and we therefore beg that the proposed curtailment be not carried out.

And your Petitioners, as in duty bound, will ever pray.

W. H. BOND,
R. G. BOND,
W. W. MILLETT,
And sixty-eight others.

Has this Department been consulted or notified of the intention to reduce this Common?—H.W., 14/7/88. No.—A.B., 18/7/88. The Under Secretary for Mines. Ask Lands Department whether it is proposed to cancel any part of this Common, and then refer to the Warden for report as to the effect of proposed cancellation.—H.W., 18/7/88. The Mining Warden, Mudgee, for report.—E.W. (for A.B.), B.C. 19/9/88. This petition seems to have been sent to me in error, as the locality is within Mr. Warden Steele's division of the gold-field, and I therefore forward to him.—W. D. MEARES, Warden, 12/10/88.

No. 9.

The Under Secretary for Lands to W. C. Wall, Esq., M.P.

Sir, Department of Lands, Sydney, 13 July, 1888.

Referring to the letter forwarded by you from the trustees of the Hargraves temporary Common, dated the 18th October, 1887, protesting against the curtailment of the Common in question,—I have the honor to inform you that under the report of the District Surveyor, to the effect that the area of the Common is excessive, areas of 675 acres and 3,635 acres have been withdrawn from the temporary Commonage at Avisford and Hargraves by notice in the *Government Gazette* of the 9th ultimo, with a view to the land being offered for annual lease.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 10.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 19 July, 1888.

I have the honor to request that you will be good enough to state whether it is proposed to cancel any portion of the Common at Hargraves.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 11.

5

No. 11.

The Under Secretary for Lands to Mr. District-Surveyor Crouch.

Sir, Department of Lands, Sydney, 28 August, 1888.

I have the honor to request that you will be good enough to state whether any further withdrawals from the temporary Common at Hargraves are at present contemplated.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

Mr. Gerard, 4th September. It is not proposed at present to interfere with any portion of the Hargraves temporary Common.—H. A. Crouch, District Surveyor, 26 September, 1888. The Under Secretary for Lands.

The Mines Department may be so informed.—R.H.D. (for the Under Secretary). Corresponding Branch, 10/10/88. Under Secretary for Mines informed.—H.L.T., 17/10/88. Put away.—J.O.D., 19/10/88.

No. 12.

W. C. Wall, Esq., M.P., to The Secretary for Mines.

Sir, Mudgee, 13 September, 1888.

I had the honor some short time ago to present to you a petition from the miners at Hargraves protesting against the sale of a portion of the Hargraves Common, which you promised to forward to the Lands Department with a minute requesting that the land be withdrawn from sale. I heard no more of the matter, and I now learn that the land has been sold.

The miners and residents of Hargraves are justly indignant that their petition has been ignored. I would be extremely glad if you would furnish me with a copy of the reply, if any, received by your Department to the petition by which they, the Lands Department, justify their action in selling this land against the unanimous petition of the miners.

I have, &c.,
W. C. WALL.

No. 13.

Mr. Warden Meares to The Under Secretary for Mines.

Sir, Mudgee, 22 September, 1888.

With reference to the petition received on the 9th July last from miners and others at Hargraves against the withdrawal from the Hargraves temporary Common of an area of 3,625 acres, as Gazetted on the 9th June last, and which petition you have referred to me for report, I have the honor to inform you that a notice appeared in the *Government Gazette* of the 20th July last that this and some adjoining land would be offered for sale for annual lease on the 20th August last, and that on that day all the lots so offered, except one of 263 acres, were sold.

Under these circumstances I think it probable that you may not require any report from me, and before going out to Hargraves I shall await further instructions, as this sale of the leases may make further inquiry unnecessary.

I have, &c.,
W. D. MEARES,
Warden.

As the leases granted of the land here referred to are only annual, I think Mr. Warden Meares should be asked to make the report called for, when, if necessary, such portions of the land as may be required for the Common might not be relet.—A.B., 27/9/88.

The Under Secretary for Mines. Submitted.—H.W., 29/9/88. Approved.—F.A., 1/10/88.

No. 14.

Mr. J. B. Daly to The Secretary for Mines.

Sir, Hargraves, 24 September, 1888.

I have the honor to forward to you the accompanying petition, with 141 signatures attached.

You will probably remember that a petition from the miners and residents of Hargraves, praying that the Common be left intact, was presented to you on the 17th July last, by Mr. Wall, M.P., for Mudgee.

In conclusion, I would humbly suggest that it seems highly improbable that a block of land through which the main line of reef runs, and on which several gold-mining leases are held, would be cut up into pastoral leases unless the matter had been misrepresented either to the Mines Department or to the Department of Lands.

Trusting, therefore, that you will give the matter your consideration,

I have, &c.,
JAS. B. DALY,
Secretary to the Trustees, Hargraves Common.

For early report.—F.A.. 27/9/88.

It will be seen from the accompanying letter from the Lands Department that an area of 3,635 acres has been withdrawn from the Common at Hargraves for annual leasing. The Warden has been asked to report as to the area required for Commonage purposes, so that, if necessary, the Lands Department may be asked not to relet the land. The petitioners and Mr. Wall, M.P., might perhaps be informed.—A.B., 3/10/88. The Under Secretary.

Submitted; Mr. Haynes, M.P., also.—H.W., 12/10/88. Approved.—F.A., 13/10/88.

[*Enclosure.*]

[*Enclosure.*]

Petition from miners and residents, Hargraves, to The Secretary for Mines.

4 September, 1888.

THE humble Petition of the miners and residents showeth :—

It is with regret that we notice the sale of 4,040 acres of our Common on 21st August 1888, through which the main line of reef that is now being worked is known to run, and which comprises the choicest pastures and most permanent water.

Now, at the present time, upwards of 300 acres are held under mineral leases, for which £500 has been paid into the revenue for mineral leases and miners' rights during the past seven months.

At the present time two companies, holding about 60 acres, have expended £6,000 in machinery alone. Gold is being obtained at several of the leases now being worked on the line of reef, and this fact has drawn a large and daily increasing population.

Your Petitioners would humbly suggest that this curtailment of the Common at the present juncture is ill-advised and injurious to the best interests of the district, and particularly detrimental to mining pursuits; and your Petitioners beg that this portion of the Common may be restored to the inhabitants. And your Petitioners, as in duty bound, will ever pray.

A. M'LENNAN.
W. H. SMITHERS.
W. H. BOND.

[And 138 others.]

No. 15.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 2 October, 1888.

With reference to your letter of the 19th July last, I have the honor to invite your attention to notice in the *Government Gazette* of the 9th June last, in which is intimated the withdrawal of certain land from the temporary Common at Hargraves, and to inform you that such withdrawal is for the purpose of leasing only.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 16.

The Chief Inspector of Stock to Mr. Warden Meares.

Sir, Department of Mines, Stock Branch, Sydney, 3 October, 1888.

With reference to your letter of the 22nd ultimo, with regard to a petition against the withdrawal of a portion of the Hargraves Common, I am directed by the Secretary for Mines to state that your report should be obtained, as the leases granted are only annual, and if necessary such portions of the land as may be required for the Common may not be relet.

I have, &c.,
A. C. THOMSON
(*Pro* Chief Inspector of Stock).

No. 17.

Newspaper Extract.

AN IMPORTANT LAND QUESTION—ALIENATION OF A COMMON—THE MINERS' PROTEST.

HARGRAVES is but a small place now; still there has happened lately (if what a correspondent states be correct) a matter in reference to the Hargraves Common of great general importance taken in connection with the alienation of the public lands. Our correspondent, signing himself "A Miner," writes thus from Hargraves :—"No small amount of commotion has been occasioned here by the action of the Government with reference to the Hargraves Common. In the *Government Gazette* of 9th June last appeared a notice intimating that it was intended to withdraw from the temporary Common at Hargraves a large portion on the north-western boundaries. Now this block embraces the most permanent water and the best pasture on the Common, and as the main line of reef (now being extensively worked on Hargraves) runs right through it—indeed the Homeward Bound and several other important claims are included in it—it was obvious that if the block was cut up into pastoral leases it would be a source of very serious annoyance and inconvenience to the mining population. It was thought advisable, therefore, to use all fair means to prevent its passing into the hands of the grazier. Accordingly a public meeting was held, and a petition from the miners, embodying the above facts, was forwarded to the Minister for Mines by the trustees of the Common. The only reply was another notice in the *Gazette* to the effect that the block was to be leased by auction on 21st August. The greater portion of the block was leased by a member of the Mudgee Land Board. In order to fully appreciate the injustice of this step, particularly to the mining population, the following facts must be borne in mind : Since 1st January last the miners of Hargraves have contributed to the public revenue not less than £600 for miners' rights and mineral leases. Several of the mines now at work on the line of reef already referred to are yielding good gold, and making employment for a large number of men, and the population of the place is consequently increasing rapidly. One of these mines was floated a short time ago for £40,000. It was on this line of reef that Dr. Kerr's great hundredweight nugget was found in 1851, and within half a mile of the same spot not less than £10,000 has been expended by two gold-mining companies within the last twelve months. It was also on this line, and within the very block now withdrawn, that the famous Jubilee nugget, now being exhibited at the Centennial Exhibition in Melbourne, was found; and a great many miners, most of whom own a horse or two each, are residing and working within the resumed portion, and have been for many years. It cannot therefore be denied that gold is known to exist on this block. Yet, in the face of these facts, it is allowed to pass away from the miner to the pastoralists for the paltry sum of £40. Thus the claims of the whole community are ignored for the sole benefit of one individual. Last week another petition, very numerously signed, was sent to the Minister for Mines, praying that the block be restored to the miners, and as it has been promised that the attention of Parliament shall be drawn to the subject there is some reason to hope that the miners will get fair play on this occasion."

Department

Department of Mines, Sydney.

Hargraves Common.

THE attention of the Lands Department may be invited to the practice of withdrawing or cancelling portions of Commons without consulting this Department.

This Department being charged with the management of Commons is naturally blamed for anything done to the prejudice of the commoners, and no defence can be made without casting blame upon another Department, which is most undesirable.

If this Department were consulted, as I venture to think it should be, then it would have properly to take the blame for any error in which it concurred.

H.W., 13/10/88.

Submitted. Approved.—F.A., 13/10/88.

No. 18.

The Chief Inspector of Stock to J. Haynes, Esq., M.P.

Sir, Department of Mines, Stock Branch, 15 October, 1888.

Referring to a petition which has been received in this Department from the miners and residents of Hargraves, praying that the area withdrawn from the Common for annual leasing may be restored, I have the honor, by direction of the Minister for Mines, to inform you that the Warden has been asked to report as to the area required for Commonage purposes so that, if necessary, the Department of Lands may be asked not to relet the land.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

No. 19.

The Chief Inspector of Stock to W. C. Wall, Esq., M.P.

Sir, Department of Mines, Stock Branch, 15 October, 1888.

Referring to a petition from residents and miners of Hargraves, presented by you to the Minister for Mines, praying that the area withdrawn from the Common may be restored, I have the honor to inform you that the Warden has been asked to report as to the area required for commonage purposes so that, if necessary, the Department of Lands may be asked not to relet the land.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

No. 20.

The Chief Inspector of Stock to Mr. J. B. Daly.

Sir, Department of Mines, Sydney, 15 October, 1888.

I am directed by the Minister for Mines to acknowledge the receipt of your letter of the 24th ultimo, forwarding a petition from the miners and residents of Hargraves, asking that the area withdrawn from the Common may be restored, and in reply to inform you that the Warden has been asked to report as to the area required for commonage purposes so that, if necessary, the Lands Department may be asked not to relet the land.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

No. 21.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 17 October, 1888.

Referring to your letter of the 19th July last, inquiring whether it is proposed to cancel any portion of the Hargraves temporary Common, I have the honor to inform you that the District Surveyor at Orange reports that it is not proposed at present to interfere with any part of the Common in question.

I have, &c.,
F. H. WILSON
(For the Under Secretary.)

No. 22.

Mr. Warden Steel to The Under Secretary for Mines.

Sir, Warden's Office, Hill End, 23 October, 1888.

Referring to the petition (herewith) from certain miners at Hargraves, complaining against the withdrawal of a portion of the Hargraves Common, and forwarded to me by Mr. Warden Meares (Mudgee), to whom it appears to have been sent in error, I have the honor to report that I have visited the locality, and made inquiries from the trustees and miners in the neighbourhood. It appears from their statements that six sections of the Common have been leased, one to Andrew Hickey, Hargraves, two to a person named Brennan, and three to one Atkinson, of Mudgee. The portion leased to Hickey adjoins the township, and was rented by him on behalf of the miners, but has little permanent water on it. He informs me he is quite willing to consent to the lease being cancelled, and he believes Brennan will also, provided Atkinson also consents. On the leases held by Atkinson and Brennan (chiefly on the former) about 100 miners, including Chinese, reside, who have two stores, and most of the

miners

miners have stock of some kind, which now are at the mercy of the lessees, who can impound or charge the owners for grazing. The most permanent water is on Atkinson's portions. The stock owned by the residents of the town are liable to stray on Hickey's portion, owing to its proximity to the town boundary.

The commoners admit they have a very large area, that a third of it is worthless, which they would consent to have withdrawn, while the portion now withdrawn is mostly used. I am of opinion that injustice has been done to the miners and others by its withdrawal, which might have been obviated had the Department of Mines been first consulted. Under the circumstances I would respectfully recommend that the leases (if possible) should be cancelled, either by consent of the lessees or otherwise. I may add that the population of Hargraves is fast increasing, owing to a large amount of capital being invested and labour employed.

I have, &c.,
W. A. STEEL,
Warden.

No. 23.

Mr. A. Hickey to Mr. Warden Steel.

Sir, Hargraves, 23 October, 1888.

In reference to the block of land rented by me at Mudgee, on the 21st August, being a portion of the land lately taken from the Hargraves Common, I do agree to have the block cancelled, provided that Mr. Atkinson's two blocks, numbered 4 and 5, and Mr. Brennan's two blocks, numbered 2 and 3, be also cancelled.

I have, &c.,
A. HICKEY.

This has reference to the statements in my report on the petition against the withdrawal of portion of the Hargraves Common, forwarded yesterday.—W. A. STEEL, Warden, Hill End, 25/10/88.

Avisford Common.

No. 1.

The Secretary to Trustees of Avisford Common to The Secretary for Lands.

Sir, Avisford, 27 March, 1886.

I have the honor, at the request of the Trustees of the Avisford Common, to bring the following case before you: F. Lovett, of this place, has had for the last eight years some 5 acres of land fenced in and under cultivation on this Common. Some time since, availing himself of being a Trustee, he fenced in as much more, thereby having some 10 acres alienated from the Common, part of which has been surveyed for a recreation ground for the public school. The trustees hear that he is applying to purchase the whole of the land having a river frontage, and there being gold thereon, would long since have been taken up by diggers for sluicing purposes had it not been fenced in. Under those circumstances the Trustees trust he will not be allowed to purchase.

JOSEPH AMBLER,
Secretary.

Mr. Morris,—Any trace of I.P. application?—R.H.D., 30/3/86. Cannot trace.—J.E.M., 8/4/86.

No. 2.

The Secretary to Trustees of Avisford Common to The Secretary for Lands.

Sir, Avisford Common, Avisford, 24 May, 1886.

I have the honor to inform you that I have received a communication from the Department of Lands that a letter I sent to that Department on the 27th March last has been forwarded to the Department of Mines with a view of the trespass on the Common complained of being dealt with. As the case is urgent, F. Lovett, the party complained of making preparations for ploughing, and several miners being anxious to test the ground for gold, it being well known there is gold therein, may I beg an early reply.

I have, &c.,
JOSEPH AMBLER,
Secretary.

The Trustees complain that F. Lovett has fenced in 10 acres of the Common. They have the power and should compel him to remove the fences.—A.B., 1/6/86. The Under Secretary for Mines.—Inform.—G.E.H. (for U.S.), 5/6/86.

No. 3.

The Chief Inspector of Stock to The Secretary to Trustees of Avisford Common.

Sir, Department of Mines, Stock Branch, Sydney, 8 June, 1886.

With reference to your letter of the 24th ultimo, I have the honor to inform you that the Trustees have the power, and they should compel Lovett to remove the fences which he has erected on the Common.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

No. 4.

No. 4.

The Secretary to Trustees of Avisford Common to The Secretary for Lands.

Sir, Avisford Common, Avisford, 6 November, 1886.

From instructions received from the Trustees of the above Common I have the honor to inform you, that in accordance with section 7 of the Commons Act of 1886, and from instructions received from the Department of Mines, F. Lovett was served with a notice to remove the fences which he has erected on the Common, and the Trustees received answer that he had applied to purchase under the Gold-field Regulations Act. The Trustees protest against him being allowed to purchase the land he has applied for, for the reasons I stated in my last communication, viz.:—He has some 10 acres fenced in, the whole of which is river frontage, and contains gold. I was talking to a miner, and he told me before Lovett fenced in the first 5 acres he obtained 7 oz. of gold, and it would have been long since taken up by sluicers if it had not been fenced in, there being ground to occupy the limited number of miners about there for a long time.

I have, &c.,
JOSEPH AMBLER,
Secretary.

Submitted that this letter be forwarded to Mines Department.—R.H.D., 12/11/86. The Under Secretary for Mines, B.C., 17/11/86. Refer to the Warden for inquiry and report.—H.W., 27/11/86.

No. 5.

The Secretary to Trustees of Avisford Common to The Secretary for Lands.

Sir, Avisford Common, Avisford, 16 November, 1886.

At the request of the miners who got up the enclosed protest I have the honor to forward it to you.

I would remark that, acting under instructions contained in your letter of the 8th June, and section 7 of the new Commons Act, Lovett was served with notice to remove his fence, to which he paid no attention. I applied on the 5th instant at Hargraves for a summons, and was told by Senior-Constable O'Brien I could not have one, as Lovett had applied to purchase. I wrote to the Department of Lands on the 6th, protesting against the land being alienated.

I have, &c.,
J. AMBLER,
Secretary.

Mr. Warden Steel.—G.E. (for U.S.), B.C., 27/11/86.

[*Enclosure.*]

Protest from Miners, Avisford, to Secretary for Mines.

Sir, 13 November, 1886.

We, the undersigned diggers, holders of miners' rights, have the honor to lay before you the following statement:—

F. Lovett, of this parish, has had some 5 acres of land fenced in and under cultivation for the last ten years; he availed himself when Trustee of the Common to fence in as much more; it is all river frontage, and is well known to contain gold. A digger, just before he enclosed it, got 8 ounces of gold. He has now applied to purchase the land.

We, the undersigned, respectfully protest against it being alienated.

We have, &c.,
JOHN BOLTT.
E. DANIEL.

[And fifteen others.]

No. 6.

Mr. Warden Steel to The Under Secretary for Mines.

Sir, Warden's Office, Hill End, 20 December, 1886.

I have the honor to report that I have held an inquiry into the matter of complaint of the Avisford Common and miners against Frederick Lovett occupying Crown lands in excess of what he is legally entitled to.

I caused notices to be served on Joseph Ambler, secretary to the said Trustees, as well as the Trustees themselves, but they did not attend the inquiry. I forward herewith statements of two miners who signed the petition against Lovett, as well as Lovett's own statement, by which it will be seen that no miners have been prevented from mining on the land, and have now full liberty to do so, or any miner can apply to lease the land under the Act to amend the Act 37 Vic. No. 13, and wherein all temporary Commons are deemed to be Crown lands. However, as there seems to be also a complaint against Lovett by the Trustees of the Avisford Common for fencing in a portion of the Common, which appears to me to be the real grievance, I would respectfully point out that Lovett can be proceeded against under the Mining Act 37 Vic. No. 13, for holding land in excess of which he is entitled to in virtue of his miner's right, and thus put an end to the grievance as alleged.

I have, &c.,
W. A. STEEL,
Warden.

So long as Lovett does not apply to purchase the land no action appears to be necessary on the part of this Department, and the Trustees can proceed or cause proceedings, as suggested by the Warden, to be taken against Lovett, if necessary, in the interest of the Commoners.—H.W., 3/1/87.

Submitted. Approved.—C.K.M., 4/1/87.

[*Enclosure.*]

[*Enclosure.*]

INQUIRY into the matter of complaint by Trustees of the Avisford Temporary Common and certain miners against Frederick Lovett for illegally occupying Crown lands on a proclaimed gold-field, within the Avisford Temporary Common.

Warden's Office, Hargraves, 17 December, 1886.

William Henry Winnan states :—I am a miner, living at Avisford ; I signed a petition to the Minister for Mines, Sydney, dated the 13th November, 1886, complaining of F. Lovett trespassing on the Avisford Temporary Common, on a proclaimed gold-field ; I know the land occupied by Lovett on the Meroo Creek, in the Hargraves division of the Mudgee mining district ; Lovett has occupied it, about 5 or 6 acres, for the past ten years, which he has fenced in ; gold exists on the land, and many of the miners are desirous of working for gold on it ; I have never heard that miners have been prevented from working by Lovett ; I signed the aforesaid petition, believing that the whole of the land occupied by Lovett would be sold, and that the miners would lose the advantage of working on it for gold.

W. H. WINNAN.

John Miller states :—I am a miner, living at Avisford ; I remember signing a petition to the Minister for Mines complaining of F. Lovett trespassing on the Meroo Creek by fencing and cultivating certain land, about 7 or 8 acres ; I object to the land being alienated, and that was what I petitioned against ; Lovett has occupied it about ten years ; I was digging on it when Lovett put up the fence ; he did not object to my digging ; I know there is gold on it ; it cannot be worked on account of water ; I have never heard of Lovett preventing anyone mining on it ; I would work on it to-morrow if I wished to do so.

JOHN MILLER.

Frederick Lovett states :—I am a labourer, living at Avisford ; I occupy about 5 acres of land on the Avisford temporary Common ; I am a commoner ; also hold a miner's right ; I have lived on it fifteen years ; I applied to purchase two 2-acre blocks of the land about ten years ago ; I never signed an application, but instructed an agent (Mr. De Courcy Browne) to do so ; I have never refused or prevented any miners from working it, and have no objection to their doing so at any time ; miners have worked on it since I occupied the land.

FREDERICK LOVETT.

No. 7.

The Under Secretary for Mines to Mr. Warden Steel.

Sir, Department of Mines, Sydney, 5 January, 1887.

Referring to your report in the matter of the complaint of the Trustees of the Avisford temporary Common (and certain miners) against Frederick Lovett for illegally occupying Crown lands, I am directed by the Secretary for Mines to inform you that, so long as Lovett does not apply to purchase the land, no action appears to be necessary on the part of the Department, and the Trustees can proceed (or cause proceedings as suggested by you to be taken) against him in the interests of the commoners.

HARRIE WOOD,
Under Secretary.

No. 8.

The Secretary to Trustees of Avisford Common to The Secretary for Mines.

Sir, Avisford, 20 March, 1887.

I have the honor to refer you to a petition I forwarded to you in the month of November from a number of diggers of this township, and to which they have had no reply.

The Gold-field Warden, when he inquired into the matter, told the petitioners that the land should not be alienated. Since then a surveyor has surveyed F. Lovett's 1 acre, on which his house stands, and blocked off 8 acres to be sold by auction, including the whole lot objected to being sold in the petition, besides including a large portion surveyed as a recreation ground for the public school, bringing his peg within a short distance of the school.

We cannot see where Lovett is entitled to purchase by virtue of improvements, as the house in which he lives was erected by the inhabitants at a great cost as a school. Population dwindled down as the diggings gave out, and the school had to be closed, and Lovett jumped the school ; that's how he got the buildings. As population revived a school was wanted, and Government was put to the expense of building a new one. May I beg an early and favourable answer.

I have, &c.,
JOSEPH AMBLER.

The writer may be informed of the result of the inquiry, and a copy of this letter may be forwarded for the information of the Lands Department in case Lovett has applied to purchase in virtue of improvements.—H.W., 5/4/87.

No. 9.

The Under Secretary for Mines to The Secretary to Trustees of Avisford Common.

Sir, Department of Mines, Sydney, 7 April, 1887.

Referring to your letter of the 20th ultimo touching the petition forwarded by you from certain miners at Avisford against the alienation to Frederick Lovett of any land included in the temporary Common at Avisford, I am directed by the Secretary for Mines to inform you that, so long as Lovett does not apply to purchase the land, no action on the part of this Department appears to be necessary, and the Trustees can proceed or cause proceedings to be taken against him in the interests of the commoners.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 10.

No. 10.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 7 April, 1887.

I have the honor to forward herewith for your information a copy of a letter addressed to this Department by the Secretary to the Trustees of the temporary Common at Avisford, in case that Lovett has applied to purchase any land included in such Common, by virtue of improvements.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 11.

Gazette Notice.

Department of Lands, Sydney, 14 May, 1887.

WITHDRAWAL FROM TEMPORARY COMMON AT AVISFORD.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that the portion of land hereinafter described has been withdrawn from the temporary Commonage at Avisford.

THOS. GARRETT.

Eastern Division—Land District of Mudgee.

County of Wellington, parish of Avisford. Area, 9 acres 1 rood 30 perches. That part of the Avisford temporary Common, notified 5th May, 1871, included within the boundaries of measured portions 3 and 4, as shown on plan catalogued 35, parish of Avisford, District Surveyor's Office, Orange.

No. 12.

The Secretary to Trustees of Avisford Common, to J. Haynes, Esq., M.P.

Sir, Avisford, 31 May, 1887.

You may perhaps think it late to congratulate you on your glorious victory, but it is never too late for a good thing, and my excuse being from home and not being well. You may perhaps not remember the name, but I seconded the candidates at the general election, at Windeyer, and I had the pleasure of meeting you at Mr. Jones', at last election, on the Sunday night.

I have a very important piece of business that I want you to look to and do your best for us. I have no personal interest in the matter, but a lot of hard-working miners have. It is their bread. In November last some score of miners, to a man voting for you (being presiding officer I know), sent a petition to the Minister for Mines, against a piece of ground containing some 6 or 7 acres, and fenced in by one Lovett, being alienated, it being a trespass on the Common, and known to contain gold. We thought it was all right, as I received an answer from the Department of Mines to that effect, when judge our surprise when a surveyor made his appearance and measured some 8 acres off in one block, including the ground petitioned against being alienated, and in either last week or week before *Gazette* it is revoked from the Common, having appeared in last week's *Independent* as news. Would you oblige by calling at the Lands Office and using your powerful influence, if it is to be put up for auction, getting it revoked. You may use your discretion whether you ask Mr. Black and Mr. Wall to accompany you or not. I trust you will be successful for the sake of the miners.

I have, &c.,
JOSEPH AMBLER.

For report early.—F.A., 27/6/87.

The Lands Department may be asked whether it is true that 8 acres of land has been withdrawn from the Common with a view to its sale, and if so, to urge that the sale may be stayed till this Department has reported whether the land is auriferous.—H.W., 30/6/87.

Submitted. Approved.—F.A., 1/7/87.

No. 13.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 8 July, 1887.

I have the honor, by direction of the Secretary for Mines, to ask whether it is true that 8 acres have been withdrawn from the temporary Common at Avisford, with a view to its sale; and if so I am to urge that you will be good enough to move the Secretary for Lands to stay the sale of such land until this Department has reported whether the land is auriferous.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 14.

The Secretary to Trustees of Avisford Common to The Secretary for Mines.

Sir, Avisford, 11 July, 1887.

I have the honor to refer you to your letter of the 7th April, in which you state so long as Lovett does not apply to purchase the land no action on the part of this Department appears to be necessary.

1st. I would respectfully submit that Lovett appears to have applied to purchase an improvement purchase, No. 87-2, on the 8th February, 1887, and the same will be before the Land Board in Mudgee during the week.

2nd.

12

2nd. As I remarked in my letter of the 20th April, the land petitioned against being alienated by the Mines was surveyed with additions and blocked off, and since, by notice in the *Government Gazette*, withdrawn from the Common with the view, I suppose, of being offered by auction, it is said here on application by Lovett.

I am writing this at the request of the miners who signed the petition I forwarded to you.

Having resigned the secretaryship to the Trustees you will oblige by addressing as below.

I have, &c.,
JOSEPH AMBLER.

Urgent. Will Mr. Warden Steel please report as to the auriferous character, or otherwise, of the land referred to.—G.E.H. (for U.S.), B.C., 15/7/87. Mr. Warden Steel.

No. 15.

The Under Secretary for Lands to The Under Secretary for Mines.

Department of Lands, Sydney, 14 July, 1887.

Sir,

Referring to your letter of the 8th instant, I have the honor to inform you that 9 acres 1 rood 30 perches, being portions 3 and 4, parish of Avisford, were, on the 14th May last, withdrawn from the temporary Common at Avisford, and to ask that your report as to whether the land is auriferous may be furnished as early as practicable.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 16.

Mr. Warden Steel to The Under Secretary for Lands.

Warden's Office, Hill End, 30 July, 1887.

Sir,

I have the honor to report for your information that I have inspected the land described as 9 acres 1 rood 30 perches, portions 3 and 4, parish of Avisford, in the letter from the Department of Lands, dated 14th instant, herewith annexed, and beg to state that with the exception of about 1 acre (on which stands the house and improvements occupied by Frederick Lovett) the land is auriferous, and should not be alienated. Large portions of the ground have been worked for gold at various times, with varied success, and abandoned through an influx of water; but it is the opinion of many old miners in the neighbourhood that gold exists in payable quantities.

The portion I refer to as having no gold has, in many places, soil not more than 6 inches in depth, and its alienation would not affect mining interests.

I have, &c.,
W. A. STEEL,
Warden.

The Warden's report may be forwarded, and the Lands Department may be informed that with the exception of (say) 1 acre, including Mr. Lovett's house, &c., the land should not be sold.—H.W., 3/8/87. Submitted. Approved.—J.I., 5/8/87.

No. 17.

The Under Secretary for Mines to The Under Secretary for Lands.

Department of Mines, Sydney, 10 August, 1887.

Sir,

Referring to your letter of the 14th ultimo, to the effect that the area of 9 acres 1 rood 30 perches of land, being portions 3 and 4, parish of Avisford, had been withdrawn from the temporary Common at Avisford, and in which you ask that the report as to the land being auriferous may be furnished, I have the honor to forward herewith a copy of the Warden's report on the matter, and I am directed by the Minister to point out that with the exception of (say) 1 acre, including Mr. Lovett's house, the land should not be sold.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 18.

Minute for The Governor and Executive Council.

Withdrawal of land from temporary Commonage.

Department of Lands, Sydney, 21 May, 1888.

It is recommended to His Excellency the Governor and the Executive Council that the within described portions of land, situated in the county of Wellington, parish of Hargraves, area 675 acres, be withdrawn from the temporary Commonage at Avisford for the purposes of lease.

THOS. GARRETT.

The Executive Council advise that the portions of land referred to be withdrawn from temporary Commonage at Avisford for purposes of lease. Approved.—CARRINGTON, 22/5/88. ALEX. C. BUDGE, Clerk of the Council, 22/5/88. Minute, 22/5/88. Confirmed, 29/5/88.

13

WITHDRAWAL FROM TEMPORARY COMMON AT AVISFORD.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that the portion of land hereinafter described has been withdrawn from temporary Commonage at Avisford.

Eastern Division—Land District of Mudgee—Within the old settled district.

Part of the Avisford temporary Common, county of Wellington, parish of Hargraves, area about 35 acres. That part of the Avisford temporary Common, notified 5th May, 1871, within the following boundaries: Commencing at the south-west corner of the Avisford temporary Common, as notified 5th May, 1871; bounded thence on the south by part of its south boundary, bearing east about 18 chains to the left bank of Meroo Creek; thence by that creek downwards to its intersection with the west boundary of the temporary Common; and on the west by part of that boundary bearing south, to the point of commencement.

This revocation does not affect reserve from conditional purchase proclaimed 17th March, 1884.

WITHDRAWAL FROM TEMPORARY COMMON AT AVISFORD.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified that the portion of land hereinafter described has been withdrawn from temporary Commonage at Avisford.

Eastern Division—Land District of Mudgee—Within the old settled districts.

Part of the Avisford temporary Common, county of Wellington, parish of Hargraves, area about 640 acres. That part of the Avisford temporary Common, notified 5th May, 1871, within the following boundaries: Commencing on the left bank of the Meroo Creek, at the north-west corner of portion 25; bounded thence on the east by part of the west boundary of that portion bearing south to the south boundary of the Avisford temporary Common, as notified 5th May, 1871; on the south by part of the south boundary of the temporary Common bearing west about 126 chains to the left bank of the Meroo Creek aforesaid; and thence on the north-west by that creek upwards, to the point of commencement.

This revocation does not affect reserve from conditional purchase proclaimed 17th March, 1884.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEWCASTLE PASTURAGE RESERVE BILL.

(MESSAGE No. 14.)

Ordered by the Legislative Assembly to be printed, 10 *April*, 1889.

CARRINGTON, *Governor.*

Message No. 14.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with a Bill to legalize the occupation by certain persons of part of the Newcastle Pasturage Reserve, to admit of the withdrawal from mining lease of the surface of parts of the said reserve, and to authorize the alienation thereof.

ANNUAL REPORT.

To the Honorable Sydney Smith, Esq., M.P., Minister for Mines, &c., &c.

Sir,

I do myself the honor to submit to you the following Report upon the working of the Department under your control, and also the progress and results of Mining in this Colony during the year 1888.

The following statement shows to some extent the amount of work performed in this Department during the past year:—

Statement of the number of Papers Registered, and Letters despatched, by the several Branches of the Department of Mines.

	Papers Registered.		Letters Written.	
	1887.	1888.	1887.	1888.
Mines proper	19,209	31,983	10,406	19,694
„ Account Branch	.....	10,255	.....	.....
Stock	12,869	13,365	4,073	4,019
Drills and prospecting	4,399	5,559	2,558	2,809
Public Watering Places	7,176	8,881	4,121	3,214
	43,653	70,043	21,158	29,736*

* Exclusive of printed forms and circulars.

In comparing it with the work of the preceding year it is necessary to bear in mind that at the commencement of the year 1888 the Forest Branch, the Rabbit Branch, and the Public Parks Branch were transferred from this to the Lands Department, consequently the staff of the Department has been considerably reduced; nevertheless the number of papers registered exceeds the number (67,948) registered in 1887, when those Branches were included, and the number of letters written in 1888 is only 1,183 less than in 1887, before the officers of those several Branches were withdrawn. It has been necessary to obtain a little temporary assistance, but I have mainly depended upon the zeal and industry of the officers, who have cheerfully worked after office hours to keep down arrears. I take this opportunity to express my high appreciation of their conduct in the sacrifices they have made to duty. I am especially indebted to the Chief Clerk, the Chief Mining Surveyor, the Geological Surveyors, the Inspector of Mines, and the other heads of Branches, for the manner in which they have aided me in all my efforts to expedite the work of the Department.

The number of applications made to lease Crown lands for mining purposes during the year 1888, including applications for special gold leases, was 5,982, being an increase of 3,394, as compared with the number of such applications made in 1887.

Of the 5,982 applications so made 1,717 were for auriferous land, comprising an area of 14,838 acres 2 roods, and 4,265 were for mineral land, comprising an area of 180,648 acres 3 roods.

The number of applications dealt with in 1888 was 4,143, which, compared with the number dealt with in 1887, shows an increase of 2,393, considerably more than twice the number. I have persevered in my efforts to reduce the time occupied in dealing with applications to lease, keeping, however, in view the necessity for the utmost care in guarding against the creation of conflicting titles, and giving due consideration to the rights of applicants. The result as shown above, which has been secured without any increase in the staff, is, I venture to think, highly satisfactory and most creditable to the officers, whose

whose zeal has enabled me to prepare for Ministerial action such an exceptionally large number of cases. I still look forward to the adoption of certain changes, which will tend to increased expedition without sacrificing necessary safeguards.

Of the 4,143 applications dealt with in 1888, 1,054 were for gold-mining leases, comprising an area of over 9,107 acres, and 3,089 were for mineral leases, covering an area of over 117,170 acres.

The area of auriferous Crown lands applied for in 1888, as compared with 1887, shows an increase of 8,487 acres. The area of mineral Crown lands applied for in 1888 is greater than the area applied for in 1887 by 104,057 acres.

The following table shows the quantity of Crown land applied for to lease during year 1888, and the minerals to be mined for therein :—

	a.	r.	p.
Gold	15,831	2	0
Diamonds	948	0	0
Tin and diamonds	346	0	0
Tin	10,490	0	7
Tin and silver	80	0	0
Tin, silver, copper, and lead	720	0	0
Tin, silver, and lead	7,719	1	6
Tin and rubies	2,160	0	0
Tin and copper	130	0	0
Silver	56,266	1	13
Silver and lead	36,991	1	7
Silver, lead, and copper	13,219	2	10
Silver and arsenic	340	0	0
Silver and antimony	280	0	0
Silver, tin, and rubies	400	0	0
Silver, copper, lead, and rubies	200	0	0
Silver, lead, and limestone	280	0	0
Silver, lead, tin, and rubies	120	0	0
Silver and bismuth	120	0	0
Silver, lead, and rubies	110	0	0
Silver, tin, and copper	120	0	0
Silver, lead, and bismuth	100	0	0
Silver, lead, copper, and antimony	80	0	0
Silver, lead, tin, and iron	80	0	0
Silver, lead, copper, and limestone	60	0	0
Silver, calspar, and lime	40	0	0
Silver, lead, and calspar	40	0	0
Silver, lead, and iron	40	0	0
Silver and tin	720	0	0
Silver, antimony, and lead	40	0	0
Silver, calspar, and lime	40	0	0
Silver and cobalt	40	0	0
Silver, lead, and flux	100	0	0
Slate	20	0	0
Slate and silver	40	0	0
Copper	3,240	0	0
Copper and silver	1,512	0	0
Silver, alum, lead, and bismuth	40	0	0
Cobalt	20	0	0
Coal	14,639	0	0
Coal and shale	25,611	0	0
Coal, shale, petroleum, and gas	1,817	0	37
Hematite ore	40	0	0
Graphite	40	0	0
Plumbago	260	0	0
Zinc, lead, and silver	40	0	0
Antimony	501	0	0
Alumite and alum stone	40	0	0
Bismuth	199	0	0
Rubies, tin, and lead	120	0	0
Manganese and silver	49	0	0
Total	196,480	1	0

The aggregate area applied for in 1888 is considerably more than double that of 1887. The increase is chiefly in applications to mine for gold, diamonds, silver (either alone or with other minerals), and coal and shale.

The following table shows the quantity of Crown land held under application to lease on the 31st December, 1888, and the minerals proposed to be mined :—

	a.	r	p.
Gold	9,910	3	19
Antimony	757	0	0
Antimony and silver	45	0	0
Alumite and alum stone	40	0	0
Bismuth	70	0	0
Bismuth and silver	40	0	0
Coal	14,779	3	30
Coal and shale	36,083	3	0
Copper	3,120	0	0
Coal and ironstone	600	0	0
Coal, kerosene, shale, and ironstone	1,280	0	0
Copper and spar	20	0	0
Cobalt	20	0	0
Cobalt and nickel	85	0	0
Copper, tin, silver, and lead	40	0	0
Coal, petroleum, and shale	1,077	0	0
Diamonds	460	0	0

Limestone	20 0 0	260 0 0		280 0 0
Silver, lead, and limestone	335 3 18			335 3 18
Coal and shale	360 0 0	4,770 0 0		5,130 0 0
Silver, tin, and copper	80 0 0	40 0 0		120 0 0
Mineral salts	40 0 0			40 0 0
Marble	40 0 0			40 0 0
Manganese, cobalt, and copper	40 0 0			40 0 0
Alum	480 0 0			480 0 0
Silver, lead, and spar	140 0 0			140 0 0
Lead, silver, and asbestos	40 0 0			40 0 0
Not specified			37 1 33	37 1 33
Sulphate of alumina and potash	95 3 17			95 3 17
Iron	20 0 0			20 0 0
Tin and copper	30 0 0			30 0 0
Silver, lead, and iron	80 0 0			80 0 0
Silver, lead, and zinc	80 0 0			80 0 0
	72,455 0 20	39,804 2 19	2,641 1 33	114,901 0 32

The above table shows a considerable increase upon the area held under lease at the end of 1887. The area held for gold and copper respectively has been nearly doubled. The area for silver—silver and copper—silver, lead, and copper—silver, lead, and iron—silver, lead, and tin—silver, lead, and zinc—silver, lead, and limestone—silver, lead, and spar—silver and tin—tin, coal, and coal and shale respectively,—is increased, while the area for silver and lead and some other minerals is decreased.

The number of applications for permits or authorities, under section 27 and 28 of the Mining Act, to mine under reserves received during 1888 was 611, being an increase of 439 upon the number received during 1887—more than three times the number. The number dealt with in 1888 was 279, being greater by 137 than, or nearly double, the number dealt with in 1887.

The following table shows the area of reserved land, comprised in permits or authorities, granted during 1888, and the minerals to be mined thereunder:—

	a. r. p.
Coal	20,376 3 30
Coal and shale	30,282 2 39
Tin	11 0 14
Tin and diamonds	10 0 0
Silver	20 0 0
Silver and lead	20 0 0
Copper	160 0 0
Alum and alumstone	80 0 0
Gold	22 1 25
	50,983 0 28

In many cases the permits or authorities had not actually issued prior to the 31st of December, 1888.

The aggregate area of reserved lands comprised in permits and authorities granted in 1888 is greater by 33,295 acres than the area so granted in 1887, or nearly three times the area.

The

The following table shows the areas of reserved lands, comprised in authorities, granted under sections 27 and 28, which were issued prior to 1888, and the minerals to be mined thereunder :—

	a.	r.	p.
Coal	39,524	2	9
Coal and shale	3,029	1	0
Tin	318	1	26
Shale	8	2	32
Coal, iron, and shale	18	2	16
Ironstone	79	3	7
Silver and lead	15	3	5
Limestone	10	0	0
Marble	5	0	0
Bluestone and gravel	12	0	0
Gold	207	1	6
	43,229	1	21

This shows a considerable decrease, due to cancellation of authorities and change of title from authorities into leases.

Area comprised in permits or authorities (section 27 or 28) issued, which were in force 31st December, 1888 —

	a	r	p.
Coal	47,540	1	39
Coal and shale	4,949	1	0
Tin	376	1	35
Shale	8	2	32
Limestone	10	0	0
Bluestone and gravel	12	0	0
Marble	5	0	0
Silver and lead	22	1	30
Ironstone	79	3	7
Coal, iron, and shale	18	2	16
Alum and alumstone	80	0	0
Silver	20	0	0
Copper	80	0	0
Gold	227	1	8
	53,430	0	7

The number of applications under section 45 of the "Crown Lands Act of 1884," for permits to dig and search for gold, received during 1888 was 327, the number granted during the year was 97, the number refused was 51, and the number now in force is 135. At the end of 1887 the number in force was 57.

The number of applications for permits under section 7 of the "Crown Lands Act of 1884" received during 1888 was 128, the number finally dealt with was 73, the number granted was 32, but only 14 were issued, the others await payment of stamp duty, and the number of such permits issued and now in force is 36.

In the month of December last regulations were made, under which permits may be granted to search for minerals within conditional leaseholds ; the number of applications received since then to the end of 1888 was 38, and the number finally dealt with was 16. The number of permits issued was 11.

During the year two returns were published of holdings, under section 28 of the Mining Act, namely, one for the half-year, ending 31st December, 1887, the other for the half-year, ending 30th June, 1888. And three returns of gold and mineral leases were published during the year. These latter are very voluminous, containing full information concerning the holder's area and conditions of each, and occupy a considerable time in compiling and printing, and consequently they were not published as promptly as I could desire, but in view of the very great pressure of work during the whole year there is every excuse for the delay.

The foregoing tables do not include all the land occupied for mining purposes, as considerable areas are held under miners' rights as claims, and under mineral licenses as prospecting areas. There are also private lands, upon which extensive mines are being worked.

Prospecting Board.

During the year the Prospecting Board visited the following amongst other places, viz —

Adelong
Albury
Araluen
Armidale
Barraba
Bathurst
Bingera
Black Mountain
Blayney
Booroolong
Boro Creek
Bowling Alley Point
Broken Hill—"Waukeroo"
Bungendore
Bingera
Byrock
Canadian Lead
Canowindra
Capertee
Carcoar
Cowra
Crookwell
Captain's Flat
Deep Creek

Denison Town	Kiandra	Temora
Emmaville	Milburn Creek	Tichbourne
Forbes	Mitchell	Tumberumba
Forest Reefs	Moonbi	Tumut
Glen Innes	Mount M'Donald	Uralla
Grenfell	Old Junee	Vegetable Creek
Gulgong	Orange	Walcha
Gundagai	Parkes	Wattle Flat
Hanging Rock	Pinnacles	Windeyer
Hargraves	Queanbeyan	Wingello
Hill End	Sofala	Young
Hillgrove	Swallow's Nest	
Home Rule	Tamworth	

Aid granted in	133 cases.
Aid refused in	125 "
Applications not yet dealt with	359
	617

And dealt with a large number of applications for aid. In 133 cases the Board recommended that aid be granted, and in 125 cases that aid be refused. In many cases the works aided were not in a sufficiently forward state at the end of the year to indicate what the result will be, but in some cases the works had been completed without making any discovery. In some cases the works subsidized have proved of indirect benefit in attracting attention to particular localities which had been abandoned, but which are now busy scenes of mining industry. In some cases more direct results are reported, as, for example, one party at Dark Corner reported to have struck a reef 4 feet wide, at a depth of 275 feet, which is estimated to yield 2 oz. per ton. The deep shaft sunk by the prospecting party at Mount Brown has enabled the owners of the adjoining claim to work their deep ground, which appears to be moderately rich, though the prospectors have not yet bottomed. Rich stone is said to have been found at a depth of about 300 feet by one of the parties at Mount M'Donald, to whom aid was granted. The party at the Black Range, at Albury, to whom aid was granted, has had a crushing of 9 tons for a yield of 2 oz. per ton. My thanks are due to Mr. D. M'Culloch, of the Diamond Drill Branch, for the very efficient manner in which he has performed the clerical work of the Board.

Geological Survey.

Hitherto the records of the work of the Geological Survey Branch has been published in connection with the Annual Report of the Department, but during last year it was decided that these records should in future be published separately. I, however, propose still to submit a *résumé* of the work performed by the Geological Surveyor in charge, Mr. C. S. Wilkinson, F.G.S., F.L.S., and the staff under him in my report. I cannot speak too highly in praise of the labours of the Geological staff, and the zeal they always evince in the work of the Department. The Geological Survey staff have examined various parts of the Colony, some of which were visited in connection with applications for aid out of the prospecting vote. As a member of the Prospecting Board, the Geological Surveyor in charge accompanied me to Mudgee, Gulgong, Meroo, Two-mile Flat, Hargraves, Tambaroora, Hill End, Pyramul, and Windeyer. For the same purpose Mr. Wilkinson, with Mr. Slee, inspected the Sunny Corner, Bathurst, Crookwell, Taralga, Bungonia, Captain's Flat, Michelago, Bredbo, and Kiandra districts. Accompanied by Mr. Geological-Surveyor David, I proceeded to Gundagai, Adelong, Tumut, Tumberumba, Tarcutta, Junee, Temora, Barmedman, Cowabbee, Shoalhaven River, Mittagong, Wattle Flat, Sofala, Sally's Flat, and Albury, and dealt with the applications for aid in those gold-fields. Mr. Geological-Surveyor Anderson also assisted the Prospecting Board in examining Barraba, Nundle, Hanging Rock, Bowling Alley Point, Moonbi, Uralla, Bora Creek, Walcha, Glen Morison, Tia Reef, Armidale, Booralong, Eversleigh, Herbert Park, Warm Corner, Hillgrove, Gyra, Glen Innes, Vegetable Creek, Gulgong, Home Rule, Reedy Creek, Denisontown, Talbragar, Merindie, and Capertee, numerous sites proposed to be prospected both for alluvial and reef gold in these districts were inspected, and it is anticipated that the aid afforded by the Government will lead to discoveries of value, and stimulate mining interests.

Mr. Wilkinson proceeded to Queensland and inspected the Mount Morgan Mine, near Rockhampton it having been deemed advisable that an examination be made of the remarkably rich gold-bearing deposit at Mount Morgan, in Queensland, with the view of ascertaining the probable occurrence of similar deposits in New South Wales.

Mr. Wilkinson was instructed to visit the mine. He there found that the country rock formation consisted of lower carboniferous strata of the same age as those which form a considerable portion of the eastern and western slopes of the Dividing Range north of the Hunter River, in New South Wales. But about Mount Morgan the strata had been greatly metamorphosed by the intrusion of igneous rocks, and the main body of the mount, for a width of about half a mile, consisted of altered silicious rocks and

 quartz,

quartz with auriferous iron pyrites more or less disseminated through them in large masses, as well as in minute crystals. Through fissures in this pyritous formation thermal mineral waters, having gold in solution, issued, producing the deposit of sinter and ironstone which have been proved so rich in gold. Mr. Wilkinson's observations therefore confirm those of Mr. R. L. Jack, Government Geologist of Queensland, who, in 1884, was the first to describe the geyser origin of this unique and large auriferous deposit. This geyser deposit forms the summit of the mount, and is about 1½ acres. It is removed bodily for treatment at crushing and chlorination works. The ore varies in richness, but for convenience of treatment the rich and poor ores are mixed together so as to yield about 5 oz. of gold per ton. Mr. Wesley Hall, the able manager, states that ½ oz to the ton will pay working expenses and leave a good profit. Mr. Wilkinson is of opinion similar deposits may exist in New South Wales, especially in the metamorphosed formations on the eastern falls of the northern portion of our Dividing Range; the chief surface indications would be deposits of porous silicious ironstone. The occurrence of gold which has been deposited from solution is already known in this Colony at Brown's Creek, Barraba, &c., but the auriferous rocks in these places are not geyser deposits like that at Mount Morgan.

Mr. Geological-Surveyor David has been engaged in examining the country from Teralba, at the head of Lake Macquarie, to Gosford, in order to ascertain the southerly extension of the Northern coal measures, and the probable depth of the coal-seams in them. He has also commenced an examination of the coal formations in the Port Stephens and Raymond Terrace Districts, and has further mapped out the Greta coal series to the south-west of Maitland. Mr. Anderson, Geological Surveyor, inspected certain localities near Gunning and Tumut in connection with the alienation of lands, also numerous mining localities in the Bingera and Barraba districts, and has examined and reported upon the country to the north-west of Molong, the coal-bearing formation near Dubbo, and the remarkable fossiliferous deposits at Myall Creek and at Talbragar, from which the collector, C. Cullen, has lately obtained such valuable collections for the Mining and Geological Museum.

Mr. Robert Etheridge, junior, palæontologist, has been engaged upon the examination of the extensive collections of fossils, chiefly of the carboniferous fauna. His work on the Invertebrate Fauna of the Wianamatta Hawkesbury Series, Memoir No. 1 of the Palæontological Series of the Geological Survey, has been published, and also Memoir No. 2, by Baron von Ettinghausen, on the Tertiary Flora, which he has edited. The works of Dr. Ottakar Feistmanter on Carboniferous Flora, and of Professor de Konnick on the Devonian and Carboniferous Fauna, will also shortly be issued.

Mr. J. E. Carne, Curator and Mineralogist of the Mining and Geological Museum, in addition to his ordinary duties in connection with the Museum and the examination of mineral samples submitted by the public, has rendered valuable service in connection with the preparation and arrangement of the mineral exhibits, both private and departmental, in the Adelaide Jubilee Exhibition and the Melbourne Centennial Exhibition, in which the representation of the mineral resources of New South Wales was so successful. Particulars regarding the awards, &c., at these Exhibitions are given in Mr. Carnes' progress report herewith.

Whilst Mr. Carne was engaged upon the work of these Exhibitions, which occupied him during a considerable portion of the year, his duties relating to the examination of mineral samples were ably performed by Mr. G. A. Stonier, Assistant Geological Surveyor. The number of samples submitted for assay more than doubled that of the previous year, being 5,245 as against 2,222 in 1887.

In consequence of this large increase the resources of the laboratory of the department were completely overtaxed, and though Mr. Mingaye, the assayer and analyst did his utmost to meet the work, it was found necessary to appoint an Assistant Assayer, Mr. White, and to provide the larger laboratory now occupied at the old Naval depôt in George-street.

Numerous additions to the Mining and Geological Museum have been made during the year, both by the Geological Survey officers, and by private donors, many of whom have presented to the Department the samples of minerals exhibited by them at the Adelaide and Melbourne Exhibitions, so that the Department is now in possession of splendid collections representative of the mineral resources and geology of the Colony; but for want of proper Museum space, they cannot be adequately exhibited, which is consequently a loss to the public of a very important means of promoting the development of the mining interests.

The Library has received many additions, including important mining and geological works of reference. The number of volumes registered is 2,364.

The Superintendent of Caves, Mr. W. S. Leigh, reports that a growing public interest is manifested in regard to the caves, now that they are made more accessible, and better accommodation provided for visitors. Additional improvements have been effected, and some splendid new caverns discovered. The number of visitors during the year were—At Jenolan, 1,829; Wombeyan, 400; Wellington, 1,679; Yarrangobilly, 200.

It is my painful duty to record the death, on 31st December, of Mr. H. T. Wilkinson, J.P., the clerk and draftsman of the Geological Survey Office. Mr. Wilkinson was a very able officer, and was connected with the Geological Branch for many years. On behalf of this Department, and as Visiting Magistrate for the Government, he paid quarterly visits to Lord Howe Island; also, on behalf of His Excellency the Governor, he proceeded to Norfolk Island, in reference to the proposed transfer of that island to the Government of this Colony. At the request of the Honorable the Minister for Justice, in November last, he was deputed to act as City Coroner, and continued to perform his official duties until the day of his death.

Mining Surveys.

In consequence of the mining excitement which prevailed more or less all over the Colony during the year 1888, the work done in this Branch of the Department greatly exceeds any previous records.

Fifty-three surveyors were employed at mining surveys under the supervision of the Chief Mining Surveyor (Mr. E. F. Pittman). Of these 9 were in receipt of salaries, in addition to the fees, while 44 received fees only.

The total number of surveys made during the twelve months was 4,317, consisting of 1,208 gold-mining leases, 2,991 mineral leases, 85 mining tenements, and 33 mining permits. This total is more than three times that of the previous twelve months.

On the 1st of January, 1889, 980 applications were still awaiting survey; but I am happy to say these are being rapidly cleared off, and the work of this Branch is reaching its normal proportions.

In the Charting Branch, 4,977 applications for gold-mining and mineral leases were received, and of these 4,720 were finally dealt with during the same period. Two hundred and seventy-nine applications, under section 28, were also dealt with, out of a total of 611 received. In addition to these, 15 parish and gold-field maps were compiled, and 455 copies of mining-maps were revised, charted to date, and forwarded to the wardens, district surveyors, &c.

The very large increase of work in the Charting Branch has been dealt with, with scarcely any additions to the number of working hands, the only additions being two contract draftsmen from the middle of July—1 from the 1st of October, and 1 from early in December. About the middle of August a temporary clerk was employed, and on the 1st November a cadet. This expedition in dealing with the work is owing to the fact that during the early months of the year the draftsman worked after office hours, giving their services gratuitously, for which the thanks of the Department are due to these gentlemen. In August a system of contract work was instituted, and has been found to work well. Under this system draftsmen were paid extra for all cases dealt with by them in excess of a certain fixed number, which was adopted as a fair average month's work. If some such system as this had not been introduced the staff of the Branch would have been quite unable to cope with the unusual rush of work; and I look forward to the adoption of a scheme under which the work of this Branch will be done by contract.

Mineral and Gold Lease Applications received and dealt with in Charting Branch in 1888.

Month.	Cases received.	Cases dealt with.	Month.	Cases received.	Cases dealt with.
January	211	149	August	635	579
February	299	241	September	615	556

Inspection of Mines.

The Inspector of Mines (Mr. Slee, F.G.S.) reports 12 fatal and 9 non-fatal accidents during the year. Of the fatal accidents 4 were caused by falls of earth, 3 by explosions, and 4 by falling down shafts &c. Of the non-fatal accidents 6 were due to explosions, and 3 to falls of earth. Of the 21 accidents 13 occurred in silver-mines, 4 in gold-mines, 2 in copper-mines, and 2 in tin-mines.

The Inspector attaches to his report an interesting table, showing that the percentage of fatal accidents is ·0693 per 10,000 miners, and the non-fatal 0·52 per 10,000 miners employed. During the year the Inspector, in addition to his duties as Superintendent of Drills, and as a Member of the Prospecting Board, has visited and inspected the mines at Kiandra, Cooma, Michelago, Queanbeyan, Captain's Flat, Goulburn, Mount Costigan, Tuena, Young, Dubbo, Wellington, Buckenbah, Parkes, Forbes, Orange, Grenfell, Mudgee, Sunny Corner, Bathurst, Tamworth, Nundle, Walcha, Uralla, Hillgrove, Warm Corner, Armidale, Black Mountain, Glen Innes, Vegetable Creek, Silverton, Broken Hill, Purnamoota, Poolamaca, Wawkeroo, Euriowie, Milparinka, and Tibooburra. Such a record needs no comment from me to prove Mr. Slee's zeal in the performance of his duties.

Diamond Drills and Water Augers.

The work done by the diamond drills during the year 1888 is in every way highly satisfactory, and reflects the highest credit upon the management of Mr. Slee, F.G.S., the Superintendent.

The total depth bored during the year was 8,292 feet, as compared with 3,097 feet in 1887. The average rate bored per hour of boring was 13·67 feet, as compared with 10·22 feet per hour in 1887. The average cost per foot bored during the year (exclusive of salaries, &c., of officers) was 8s. 11¾d., as compared with 18s. 1d. per foot in 1887. The average cost per foot bored during the year (including salaries, &c., of officers) was 11s., as compared with £1 2s. 4⅛d. in 1887. The cost of diamonds destroyed during the year equalled 1s. $0\frac{2}{16}$d. per foot bored, as compared with 1s. $6\frac{14}{16}$d. in 1887. The gross earnings of the drills for the year amounted to £8,067 19s. 11d., as compared with £2,574 19s. 7d. in 1887. The gross cost (exclusive of depreciation of plant by wear, &c.) for the year was £4,564 8s. 2d., as compared with £3,460 17s. 7d. in 1887. The percentage of core saved is exceptionally high, a most important feature.

I am quite satisfied such results could not have been obtained without the strictest economy, and the ablest supervision both in the field and in the office. The office staff under Mr. Slee also deserves the utmost credit. The aim of the Department has been to perform the work of boring for the public at the lowest possible rate, and thereby to encourage the development of the mineral resources without putting the State to expense, and I think it may be fairly said that this has been accomplished, as the rates charged last year were comparatively very low (though I look forward to further reductions under Mr. Slee's management) yet the earnings were sufficient not only to cover the total cost of working and management, but also to provide for depreciation of plant from wear, &c.

During the year four augers were engaged in boring for water, three on the road Bourke to Milparinka, and one at Tibooburra, during the first part of the year, and later on at Milparinka. The total depth bored during the year was 1,962 feet, at a total cost of £2,702 6s. 7d., equal to £1 7s. 6½d. per foot. At the first glance the cost appears high, but when the cost of carriage, which, in 1888 amounted to £703 10d., equal to 8s. 1¼d. per foot bored, is taken into account, it will be seen that the cost is not exceptionally high. On the road, Bourke to Milparinka, artesian water (22,464 gallons per day) was struck at 101½ miles bore. Three other bores were started, and considering the state of the country during the severe drought good progress was made, but latterly one of them had to be temporarily abandoned in consequence of the complete absence of grass and water. During the year a bore was started at Tibooburra with the object of striking artesian water for mining purposes. When the bore had reached a depth of 233 feet operations had to be discontinued, in order that the townspeople, whose water supply was exhausted, might draw water from the bore, an ample supply of good water having been struck therein. The auger was then removed to Milparinka, the town supply there being also exhausted, but the bore at this place was not successful in striking water. The late rains having supplied the township, the bore at Tibooburra will now be continued until artesian water is reached. If this bore be successful in finding a large supply that will rise to a sufficient height to admit of its being carried by gravitation to the vicinity of the mines, it will prove a great boon to the miners, whose great difficulty in that dry country is to obtain water to wash out the gold.

Mineral Products.

The aggregate value of the mineral products of this Colony to the end of 1888 amounted to £76,818,235 4s. 10d.; the value of such products for the year 1888 was £3,879,333, showing an increase upon the value in 1887 of £713,895. This increase is mainly due to the output of silver and silver lead, the value of which is about double that of 1887. The increase in the output and value of coal is considerable. The output of copper is less, but the value shows a considerable increase. There is also an increase in iron and antimony. The output of gold, I regret to say, shows a considerable decrease, being the smallest for many years, due, no doubt, to the long and severe drought. There was also a decrease in output of shale, bismuth, and sundry minerals.

The production of fine silver, though showing a large increase as compared with that of 1887, falls very far short of that of 1885 and 1886. I trust, however, that it may be taken as an indication that we are beginning to solve the difficulty of treating our argentiferous ores. The fact that the value of our output of fine silver and of silver-lead ore in 1888 amounts to £1,142,405 is highly satisfactory.

The following table shows the aggregate value of minerals, the produce of New South Wales, for the years 1887 and 1888, respectively compared:—

Minerals.	Quantity.	Value.	Quantity.	Value.	Increase in value.	Decrease in value.
	1887.	£ s. d.	1888.	£ s. d.	£ s. d.	£ s. d.

Gold.

When preparing my Report for 1887 I had the pleasure of inviting attention to an increase in the output of gold, and I then hoped we had reached the lowest point, and were on the eve of more prosperous time in gold-mining, but the severe drought, and possibly to some extent other causes, have proved my hope fallacious. Yet, in spite of the small production of gold in 1888, I feel convinced we still possess most valuable auriferous deposits, from which we shall yet obtain much larger yields of gold than have been won during the past few years. During last year, in spite of the drought, considerable prospecting was carried on, though no doubt under considerable disadvantage, and some finds were made which give promise of considerable future yields.

The Inspector of Mines reports no new discoveries of any great importance were made during the year in alluvial mining, and that sluicing had in most cases to be discontinued owing to the protracted drought, but quartz-mining progressed steadily. In some districts, where quartz-mining had been dormant for years, revivals occurred. The most important was the opening of the rich reefs at Baker's Creek, Hillgrove, and he anticipates the discovery of payable reefs between Hillgrove and the Woolumlumbi and Warm Corner Falls towards Kempsey. He also reports that at Parkes quartz-mining has taken the place of alluvial, and has become a permanent and profitable industry. A fresh start has also been made in the Grenfell district, and at Sofala, Sunny Corner, Hargraves, Mudgee, and other districts.

The following extracts from the reports of the Wardens and Mining Registrars indicate the condition of gold-mining in the several mining districts during the past year:—

In the Bathurst District the reports say:—"There has been no sluicing at all during the year, and many of the alluvial claims were idle for want of water. On the banks of the Abercrombie an attempt has been made by means of powerful pumping machinery, but it has not been at work sufficiently long to prove the value of the property operated upon. Quartz-mining has been carried on at Napoleon Reef and at Cheshire's Creek, and several parties are prospecting. Yield of gold, 435 oz. alluvial, 300 oz. quartz. The returns from quartz-mines have not been very encouraging at Mount M'Donald, Trunkey, Tuena, Oberon, and Mitchell, but the work has been carried on in a half-hearted manner; ten times the quantity

of

of stone should have been treated. At Trunkey, the Bathurst Company is sinking a vertical shaft 800 feet to test the reef at that depth. The reef was payable from the surface to a depth of 520 feet. Owing to want of water, only about £1,000 worth of alluvial gold was won during the year. At Tuena, £4,500 worth of gold was obtained from alluvial deposits. At Mitchell, the Paddy Lackey Company crushed 80 tons quartz for 145 oz. gold. The St. George Company obtained 186 oz. from 9 tons of stone. Gold to the value of about £5,161 was won during the year. At Mount M'Donald, 438 tons of stone yielded 677½ oz. of gold. Only 1,130 oz. of gold was won during the year. Permission has been given to some miners to prospect on the Grabine estate (freehold), near the Lachlan River. Three parties bottomed on wash, varying from 3 gr. to 6 gr. to the dish. At Burraga only £501 worth of gold was sold locally. This was obtained at the Isabella River. At Rockley, the Blossom Hill Co. washed 70 tons of dirt for 22 oz. of gold. Yield of gold at Rockley for the year was 196 oz. In the Orange division some promising reefs or veins have been discovered at Carangarah (freehold); 3 tons crushed yielded 33 oz. At the Bluff Ophir an expensive tunnel is being constructed through the company's leases; 50 tons of quartz is at grass. About fifty miners are working alluvial at Lewis Ponds, with a fair show of success. At Caloola several promising reefs and some alluvial deposits are attracting attention. At Lucknow the New Reform Co. has reached a depth of 525 feet, the lode varying from 1 to 20 feet in width. About 3,000 tons of ore raised during the year, valued at £6,484. After extracting the free gold the ore is sent to Germany for further treatment. The New Reform Pups, at a depth of 225 feet, have a lode 3 feet wide. They have raised about 250 tons of ore. The quantity of gold purchased by the banks at Orange was 2,588 oz., valued at £7,702. At Gulley Swamp (Carcoar division), the Homeward Bound Co., at a depth of 140 feet, have cut lodes of a more permanent and valuable character, which are said to increase in width and richness in depth; 120 tons of stone from a higher level, and including 50 tons of surface stone, yielded 200 oz. of gold. The Brown's Creek Co. was not worked, owing to the mine being flooded and other causes. 2,890 oz. of gold was sent from Carcoar during the year, but this, it is thought, does not represent all the gold won there. At M'Phillamy's Hill, King's Plains, two shafts have been sunk 116 feet and 98 feet. At 114 feet a cross-cut driven 98 feet has cut twenty-one gold-bearing veins. It is proposed to work alluvial on the same property. In the Blayney division, 1,009 oz. of gold was won, 276 oz. from alluvial and 733 oz. from quartz. In the Cowra and North Cowra divisions 121. oz. of gold was won, 70 oz. from alluvial and 71 oz. from quartz.

In the Mudgee District, the reports say:—At Limestone Creek (Mudgee division), several small nuggets were found, varying from 4 oz. to 10 oz. In the Gulgong division, 1,268 oz. of gold was obtained from alluvium. In the Wellington division, 595 oz. of gold has been won from alluvium, chiefly from the beds of the Macquarie and Mudgee Rivers, and 27 oz. from quartz. In the Dubbo division there are three parties at Tomingley Reef. They crushed 253 tons for 60 oz. 13 dwt. of gold, and they have 305 tons of stone at grass. The width of the reefs varies from 3½ to 10 feet. There are two parties working on the Myall Reef. They crushed during the year 568 tons for 707 oz. of gold. The reef is 12 feet wide. 75 tons of stone and 25 tons of tailings have been sent Home to be tested. These claims have been idle the greater part of the year, owing to the drought. In November alluvial gold was discovered about 9 miles south of Tomingley. No washing could be done owing to want of water. Twelve claims have bottomed on apparently good wash. The depth varies from 40 to 140 feet; the wash is from 1 to 3 feet thick. There are several reefs in the locality. On one a claim has been worked, and 30 tons raised, estimated to contain 1 oz. per ton. In the Hargraves division, at the Big Nugget Battery, 365 tons was crushed for a yield of 8 dwt. per ton. The last crushing at Queen of Sheebah Co. yielded 2½ oz. per ton. The Catherine Co. crushed 50 tons for 18 dwt. per ton. Sundry parcels, aggregating 100 tons, yielded from 12 to 25 dwt. per ton. The Hargraves Co. is raising a trial crushing of stone. Some valuable reefs have been discovered at Tucker's Hill, about 3 miles from Hargraves. In the Tambaroora and Turon District, at Hill End, a few nuggets were unearthed, one weighing 28 oz. The Red Hill Co. struck a reef, yielding 7 oz. per ton, and improving. The Cornelian Co. crushed 1,400 tons of quartz from a blow 15 to 50 feet wide, for about 207 oz. of gold. In the Sofala division several valuable reefs have been discovered. An important discovery has been made in the Queenslander mine. It consists of a mass of auriferous rock, the extent of which has not yet been ascertained. The gold obtained by the battery pays expenses, and concentrating plant is being erected, which is expected to increase the yield; 120 oz. has been obtained from 500 tons. George Williams, to whom aid was granted out of the Prospecting Vote, discovered a payable reef. An engine and battery are about to be erected on the mine. The Big Oakey Co., to whom aid was granted, struck a rich vein at 200 feet deep. Some rich specimens were found on Whalen's Hill. Sundry parcels of quartz (292 tons) crushed yielded 212 oz. 3,054 oz. of gold sent from Sofala. At Ironbarks considerable quantities of quartz are awaiting crushing when water is available. 1,300 oz. gold obtained from alluvium and 700 oz. from quartz. At the Gordon mine, 2,459 tons of stone raised yielded 600 oz. of gold.

In the Lachlan District, the reports say:—The Brittania Reef (Forbes), which had been long abandoned, has been taken up again, and a good crushing plant and gear have been erected thereon; the last crushing gave nearly 1½ oz. per ton, the average being over 1 oz. The reef is about 2 feet wide, and appears to improve in depth. The Pinnacle Reef, between Forbes and Grenfell, though poor, is large—11 feet wide in places—and has averaged ½ oz. per ton, and appears to improve with depth. A good battery has been erected by Nicholas and party on their claim. The Forbes Alluvial Co., Old South Lead, have won over 400 oz. of gold for the year. At the Bald Hills one claim is at work in alluvium, from which ½ oz. per load has been obtained at a considerable depth. A quartz reef 4 feet wide showing gold has been discovered. The gold won in the Forbes division was 549 oz. from alluvium, and 402 oz. from quartz. At Parkes, Hazlehurst and party won 860 oz., and Drummond and party 740 oz. from the quartz claims. The small reefs at Opossum Gully continue to pay well. At the Kohinoor Reef, Caledonian Hill, a large body of stone has been regularly worked, and yielded 1¾ oz. per ton. The old Strickland Reef has been opened again, and a body of stone varying from 12 to 15 feet wide, carrying a fair proportion of gold, has been discovered. Sundry parcels of quartz, aggregating 2,789 tons, were crushed at Parkes yielding 3,742 oz. of gold. 1,245 tons alluvium puddled gave 243 oz. The quantity of gold purchased by the banks was 4,269 oz. At Delaney's Dyke, about 15 miles from Molong, Delaney Bros., the prospectors, their shafts have been sunk, one to a depth of 145 feet; there is a large lode visible all the way, averaging 6 feet wide. A crosscut at the 60-feet level has cut another lode of 7 feet wide. From 1,500 to 1,800 tons of lode stuff is at grass. 70 tons crushed in March is said to have yielded 15 dwt. of gold and 5 dwt. of silver per ton. Since then there has been no water to crush with. Most of the quartz claims in the Grenfell division were idle for want of water. At the Pinnacle Battery several parcels from Sandy Creek were crushed, varying from 14 to 21 dwt. per ton. About 600 tons was at grass. Machinery has been erected at Star Gully to treat quartz tailings, but has been idle for want of water. At Quondong, a few claims were raising payable wash, but only 90 tons (which averaged 1 oz. per ton) could be puddled, owing to the scarcity of water. 166 oz. was won in the Grenfell division. At Boney's Rock (Cudal), 85 tons of quartz crushed yielded 125 oz. At Paling Yards, 80 tons gave 40 oz.; this is a large lode, and should give employment to a number of miners. At Canowindra, 1,237 tons from the Blue Jacket Reef, which is 4 feet wide, gave 1,293 oz. of gold. 44 tons from Hayes Reef gave 49 oz. of gold. The Ironclad Co., Cargo, crushed 723 tons for 566 oz. of gold. In the Young division, several new reefs were discovered during the year, from which a number of miners are earning good wages. The new Burrangong Co. which only recently reached the main wash, obtained 215 oz. from the Burrangong Lead. Two other Co's. start shortly. Two trial crushings from a reef on private property at Wombat gave 1½ oz. and 2¼ oz per ton, and it is reported that gold-bearing stone has been found on the surface about ½ mile eastward 156 tons from the Archdeacon Reef yielded 1½ oz. per ton. At Murrumburrah, a new reef of great promise has been found on private property. The Cunningar works obtained 1,565 oz. 10 dwt. of gold, valued at £6,490, during the year. Gold won in the Murrumburrah division, 218 oz. from alluvial, 1,718 oz. from quartz. At Temora, 6,400 loads of alluvium puddled gave an average of 2⅓ dwt. per load. Bourke's Reef Co. crushed 417 tons for 178 oz. of gold. Gold purchased at Temora, 1,771 oz. At Barmedman, 2,665½ tons crushed for 989 oz.; the low yield is due to the fact that the bulk was obtained from stone and mullock raised from shallow workings.

In the Cobar District, the reports say:—Considerable work has been done on the claims on the reefs discovered near the town of Cobar, though the drought has retarded the development of them. At Fort Bourke, arrangements are being made for the erection of a large crushing plant on the Chesney Cobar Co.'s mine. Some 22½ tons of quartz from this mine was sent to Melbourne for treatment, the result being 47 oz. of gold. Encouraging prospects have been obtained from other mines, both at Fort Bourke and at the Peak. At Mount Billagoe, the Mount Billagoe Co. have had assays of their ore as high as 32 oz. gold and 946 oz. of silver. Some 30 cwt. of quartz was sent to Ballarat for treatment, and 31 to Sandhurst, with the following results:—Ballarat, gold, 6·85 oz. silver, 46·047 oz.; Sandhurst, gold, 11·876 oz., silver, 112·076 oz. Since then 2 tons 18 cwt. of stone was sent to Dry Creek, S.A., for treatment, with the following result:—8 oz. gold, and 121 oz. of silver per ton.

In the Albert District, the reports say:—At Milparinka and Tibooburra the rainfall for 1888 amounted to about 2 inches, and at Mount Brown to about ½ inch; the effect of this upon mining can easily be understood. Mining operations at Tibooburra ceased by the end of February, and some of the miners turned their attention to the reefs in the Warratta Range. Messrs. House and Lawes struck a promising leader, and at the Milparinka mine the battery and other machinery have been put in order, and the mine is being pumped out with a view to thorough working. At Mount Brown there was no water for any purpose, except what was raised from the mines; this enabled some of the puddling machines near to work during part of the year, and dirt that was rich enough was carted to them. For surfacing,

the

the miners had to resort to dry blowing. The Mount Brown Prospecting Co. had to discontinue sinking when they had sunk to a depth of 241 feet, owing to their inability to keep down the water by means of a whim, though they worked their shifts. The quantity of gold won at Tibooburra was about 764 ozs.; at Milparinka, say 1,120 ozs. There have been some nuggets found during the year—one 12 oz. 1 dwt., one 28 oz. 17 dwt., one 9 oz., and several from 1 oz. to 4 oz. A specimen of gold-bearing quartz was brought into Wilcannia, said to have been found 30 miles from that town; want of water prevented prospecting operations being carried on.

In the Tumut, and Adelong District, the reports say:—At Tarcutta, the Wagga Wagga Co. have raised 300 tons of stone ready for crushing. At Adelong, the total yield of gold, 1,357 oz., viz., 350 oz. from alluvium, and 1,007 oz. from quartz. 273 tons stone from the Perseverance, Victoria, and Williams mine gave 335 oz. of gold. Owing to the difficulty and danger of working the mine by means of underground excavations, Mr. A. D. Shepherd has been engaged in bringing to perfection appliances for stripping the ground by machinery with the aid of water, and it is thought he will succeed. At Tumut, 138 oz. of gold was won. At Reedy Flat, 453 oz. of gold was won. A prospecting party has found a reef showing gold at a depth of 36 feet; it is 8 inches wide; 17 tons have been raised, estimated at 3 oz. per ton. At Cowabbie, Ferrier and party crushed 200 tons for a yield of 4 dwt. per ton, but it is supposed a large proportion of the gold was not saved, and they are introducing special appliances. They have 200 tons at grass. Several new and apparently promising reefs have been discovered in the Junee Division; the crushings from the Redan claim have given from 1½ to 2 oz. per ton, notwithstanding the defective machinery. Some very rich stone is being raised from Fincher's claim at a depth of 60 feet; the last crushing of 14 tons gave 2 oz. 13 dwt. per ton. There is about 120 tons of stone at grass at Wantiool. The Pioneer Co., at Eurongilly, 105 tons have been crushed for 79 oz. Prospectors have obtained some very good specimens from the reefs at North Junee. The gold won in the division was 232 oz. The yield of gold at Tumbarumba was 151 oz. The prospecting party (aided by Government) had sunk 48 feet through basalt, and expect to bottom in nine weeks. If they find the lead payable it will open up a large extent of untested alluvial. At the Black Range (Albury), some very rich specimens were found in Meredith and party's claim, and there is now a prospect of the reefs on the range being tested to a depth. Some rich crushings have been obtained from the Hawksview claim, on Maher's Hill. At May-Day Hill, Pye and party obtained 95½ oz. from 13 tons, and 45 oz. 13 dwt. from 10 tons. Yield of gold (Albury), 425 oz. Gold won at Kiandra, 586 oz. At Kydra, a large quantity of stone has been raised, but could not be crushed, owing to want of water. The Fiery Creek Reefs, on the Umeralla River, have caused some excitement. On the Coolamon Creek (Queanbeyan), several men were getting good returns from alluvial workings. At Bindabella there is said to be an alluvial deposit, which has been tried to a depth of 95 feet, and is 300 yards wide, upon which operations are about to start. At Mac's Reef, a vein 18 inches wide showing gold was struck by a party to whom aid out of the Prospecting Vote had been granted. On Wright and party's lease, 400 tons of 4-dwt. stone has been raised; reef 4 feet wide. On New Mac's Reef work has been suspended, as the mines are within a conditional lease. The Colinton Reef (Cooma), found in June last, has been tested to a depth of 40 feet; is 3 feet wide. Several tons of stone sent to Sydney for treatment yielded from 2 to 8 oz. per ton. At Fiery Creek there are several parallel reefs from 6 inches to 3 feet. The gold is very fine, and the stone requires careful treatment. The assays made show from 1 to 10 oz. per ton. Over 100 tons of stone has been raised ready for crushing. Several other auriferous reefs have been found in the district.

In the Southern District, the reports say:—Gold won in the Braidwood division, 727 oz. The Day Dawn Reef, Little River, averages 36 inches wide. The tailings from this reef contain 5 per cent. clean pyrites, which assay 20 oz. of gold per ton. 10 tons of these pyrites have been sent to Cunningar for treatment. The Day Dawn Co. crushed 240 tons for 143¾ oz. of gold, and have 150 tons at grass waiting crushing. In the Little River division, 650 oz. was obtained from alluvial, and 335 from quartz. In the Nerriga division, 450 oz. from alluvial. At Major's Creek (Braidwood), machinery is being erected for the treatment of the mundic reefs in that locality, and if it prove successful, it will probably lead to the working of numerous reefs now lying idle. 554 oz. of gold was won at Major's Creek—459 oz. from quartz, and 95 oz. from alluvial. The yield of gold at Araluen was 4,128 oz. At the Homeward Bound claim, Yalwal, lately worked as an open quarry, during the twelve months prior to May, 1888, gold to the value of £8,000 was taken out. From then till the end of the year crushing was retarded by repairs to the machinery and want of water; nevertheless, gold to the value of £2,565 was won. Since June, 1882, this claim has yielded gold to the value of £25,600. At the Pioneer mine, 400 tons of stone has been raised. During five years this mine has turned out gold to the value of £10,000. While awaiting the erection of machinery on this mine, small crushings made at a local battery have yielded from 15 dwt. to 2 oz. per ton. From the Eclipse mine, during the past eight years, gold has been won to the value of £10,577. From the Pinnacle mine, it is said, gold to the value of

£15,000 was obtained—1875 and 1885. The tailings from the creek having been tested, and given 7 oz. per ton, some 2,000 bags will probably be sent to Sydney. At Moruya, the Little Gem Co. has recently completed the erection of machinery, and has about 300 tons ready for crushing. The quantity of gold won in the division was 1,100 oz. From Coman and party's reef, at Bumbo, 30 tons crushed gave 30 oz. of gold. At the Mount Coman Co. mine, Nerrigundah, the reef is 4 feet 6 inches. 600 tons have been raised ready for crushing. Motley Bros. crushed 49 tons for 150 oz. The Fiery Cross Co. crushed 277 tons for 48½ oz. Total, Nerrigundah Division, 896½ oz. Quantity of gold purchased in the Bombala Division, 502 oz. At one of the mines at Dalton (Gunning), 500 tons have been raised ready for crushing. Trial crushings from these reefs have given satisfactory results.

In the Hunter and Macleay District, the reports say:—At Wonga Wonga mine, Lower Wangat (Dungog), 90 tons of stone crushed yielded 98 oz. 12 dwt. Total yield of gold in the division, 112 oz. At Copeland the small quantity of stone crushed has yielded nearly 2¼ oz. per ton. notwithstanding the absence of modern gold-saving appliances. Total yield of gold for the division, 330 oz. At the Golden Butterfly (Bulladelah Division), 115 tons crushed yielded 16½ dwt. per ton. They have 40 tons at grass. The reef varies from 7 to 12 inches. Stuart and party (the Mount Springfield Co.), owing to want of water, were able to crush only 50 tons, which gave 1 oz. per ton. They have 100 tons at grass. At 70 feet deep the reef is 4½ feet wide. The Suttor Co. crushed only 5 tons for 8 dwt. per ton. They have a well-defined reef 3 feet wide at Paddy's Creek. A trial crushing gave 2 oz. per ton. Total yield of gold in the division, 167 oz. At Deep Creek (Kempsey Division), a considerable blow of mispickel quartz was found, from which several samples were sent for assay, with results varying from 3 to 6 oz. of gold per ton, while a sample from a depth of 40 feet gave 11½ oz. of gold per ton. Since then a quantity of stone has been sent to Sandhurst to be treated by chlorination. The reef has also been struck on an adjoining claim, but the stone is difficult to treat, and there is no machinery or appliances on the field.

In the Peel and Uralla District, the reports say:—(Scone Division).—The Royal Standard Co. have crushed 800 tons of stone, which yielded 1,900 oz. The total yield of gold at Stewart's Brook, from about 1,250 tons of stone, is estimated at 2,250 oz, and there is a large quantity of stone at grass waiting to be crushed. Two crushings from the New Year's Gift line of reef gave 13 and 21 dwt. per ton respectively. From Carter's line of reef, average width of reef 2 feet, several crushings were had, averaging 1 oz. per ton. Crushings from the Early Rose line of reef have given nearly 5 oz. per ton. From Fuller's Reef numerous crushings have yielded from 1 oz. to 10 oz. per ton. From Welchman's Reef, which is 16 feet wide in places, some crushings have yielded as much as 5 oz. per ton. 150 tons crushed at Denison yielded 197 oz. of gold. At Tamworth, Aitken and party (aided out of Prospecting Vote) are driving a tunnel 250 feet, to cut a series of reefs; they have driven 80 feet, and have cut one reef 10 to 21 inches wide, carrying gold. At Mount Ephraim, Nundle, a quantity of cement has been treated in pans, with satisfactory results. Extensive water-supply works for sluicing at Mount Sheba have been constructed, but operations have been delayed by the drought. Tunnels are being constructed for working deposits of cement on a large scale; if successful, a field of labour, 10 miles by 5 miles, will be opened. The yield of gold in the division was (approximately) 1,700 oz. The quantity of gold won in the Armidale Division was 11,500 oz., at Hillgrove 10,454 oz. The Baker's Creek Co., in the four and a half months between May and December, obtained 8,964 oz. from 766 tons of stone. The Eleanora Co. crushed 6,053 tons for 1,490 oz., average 4 dwt. 22 gr. per ton. Work was stopped during four weeks from want of water. The drought, though it retarded the working of the mines, is thought to have given an impetus to prospecting. Great progress is anticipated in the development of the Hillgrove mines in 1889. (Walcha Division).—The Glen Morrison Prospecting Co. report they have good prospects on the Star Reef, at 50 feet level, and 127 feet level 4 oz. to 5 oz. per ton; width of reef, 6 to 15 inches. On the Bar Reef the stone averaged 3 oz. per ton; the width of the reef at 150 feet is 1 foot to 3 feet. On the Temperance Reef which is 2 feet wide, trial crushings gave 16¼ dwt. per ton. The Centennial Co. reports the reef 3 feet wide; stone estimated to yield 1 oz. per ton. At the Tia Reefs, 150 tons of stone has been raised ready for crushing. On the Mountain Maid Reef the prospectors (aided out of the Prospecting Vote) have sunk 101 feet; have a reef, 22 inches wide, showing gold; 10 tons stone raised. Gold won in the division, 100 oz. (Uralla Division).—Of the three parties to whom aid was granted out of the Prospecting Vote the return obtained by me is so far very poor, but the prospects of another are very promising. About a dozen parties have been working at the rush at Mount Jones, the yield averaging ½ oz. per load. The sinking is shallow, and the wash is about 2 inches. During the drought the wash-dirt had to be carted about a mile. The wash is very patchy, and the rush is not likely to be permanent. Yield for division, 820 oz. (Bingera Division).—The yield of gold was 1,250 oz., in spite of the suspension of work, owing to the drought. Large quantities of wash stacked waiting for rain. Mr. A. S. Low has sunk a shaft 250 feet in basalt, with a view to test a deep lead, but had to suspend work, owing to a great influx of water. Payable gold is said to have been struck on the Town Flat. (Glen Innes Division).—410 oz. of gold won. The reefs at Kookabookra are narrow, but the stone in places is very rich.

rich. The owners of the Welcome Stranger Mine are erecting a battery. The field appears to be extensive. Alluvial gold has been worked for years in all the creeks and gullies in the neighbourhood; but quartz veins have only recently been prospected.

In the New England District, the reports say:—In the Fairfield Division the difficulty of saving the gold, owing to its fineness and its association with other minerals, has not yet been overcome, though extensive works are in course of erection, which will soon prove whether the practically unlimited extent of poor or low class ores can be profitably treated. If it proves that ores containing from 4 to 10 dwt. of gold to the ton can be made to pay, it will open a vast field for enterprise. In the Straus Mine the ore is low grade, but from the size of the lode (9 or 10 feet wide) the ore is plentiful and easily obtained. From the surface to water-level about 1,400 tons crushed gave about 10 dwt. per ton. At the Great Northern Mine extensive appliances are being provided for working, at small cost, for gold, silver, and copper, an extensive deposit. The ore is not expected to yield more than 4 to 6 dwt. of gold per ton. 1,420 tons of stone taken from various parts of the mine yielded about 235 oz. of gold, but tests show a loss of gold in the tailings. A deep shaft is to be sunk on the Adeline Mine, and a new process to be used for saving the gold, which is mixed with iron, copper, and other minerals. A small, but rich, find of gold was made in Rivers and Co.'s lease at Long Gully; 13 tons of ore treated gave 353 oz. of gold. The reef is a narrow seam of zinc blende, carrying free coarse gold. At Red Rock a considerable quantity of work has been done, chiefly by the Great Red Rock Gold-mining Co., who have crushed a large quantity of ore; but it was found that by the ordinary process they could not save all the gold, nor any of the silver, and a proper plant is now being obtained, under the advice of Mr. Howell. 800 tons of stone taken from various parts of the mine was crushed for 207 oz. of gold, whereas the ore assays over 1 oz. per ton. Assays of the tailings show a loss of nearly two-thirds of the gold. 1 ton tested at Sandhurst by chlorination yielded 1 oz. 3 dwt., and a ton of tailings similarly treated gave 14 dwt. Total, 1,713 oz. of gold won in the Fairfield Division. The Surface Hill Co. (Timbarra) are working auriferous granite dykes, which, by crushing and hydraulic sluicing, yield about 4 or 5 dwt. per ton. The ore, which is unlimited in quantity, can be broken out at a low cost, and worked on a large scale should pay, but the plant is quite insufficient. The water is very troublesome in the quartz mines at Boonoo Boonoo, and at several of them machinery has been erected, and crushing has been carried on, but the results are not made known. Some stone was recently crushed from Vickery's mine at Boonoo Boonoo which yielded 3 oz. 9 dwt. per ton. A few men are making fair wages working the alluvium in the creeks. At Solferino, an alluvial deposit 3 feet deep, yielding ½ dwt. to the dish, was found on Marcolini Creek in December. The Garibaldi Prospecting Co. had 25 cwt. of picked stone treated at the Mint for 144 oz. Three tons of stone from the John Bull Reef, Cangi, sent to the Mint for treatment, gave 3½ oz. per ton. Total, Solferino Division, 343 oz.

In the Clarence and Richmond District, the reports say:—At Grafton, 400 oz. gold purchased At Nana Creek, a crushing of 20¼ tons from the Nana Queen Co. yielded 25½ oz. From the Day Dawn Reef, 4 tons crushed gave 5 oz. 13 dwt. Parcels of quartz crushed, aggregating 133 tons 17 cwt., gave 159 oz. 7 dwt. At Dalmorton, four new reefs showing gold were opened. From the Little Dora Reef, trial crushings gave from 1¼ to 2 oz. per ton—total gold, 277 oz. At Ballina, rich alluvial deposits are supposed to exist behind the terraces on the Beach; but there are no appliances in the locality to cope with the water. Some sluicing claims south of Evans River are working with payable results. Trial crushings aggregating 8 tons from the mine at Block Rock averaged 12 dwt. per ton; the gold is found in a seam 9 feet thick, showing in the face of the cliff at Black Head, Ballina.

The following information has been kindly furnished by R. Hunt, Esq., C.M.G., F.G.S., the Deputy-Master of the Royal Mint.

QUANTITIES of Gold, the produce of New South Wales, received into the Royal Mint, Sydney, during 1887 and 1888 compared.

SUMMARY.

District.	1887.	1888.
	oz.	oz.
Bathurst	17,675 53	6,904·01
Tambaroora and Turon	2,006·66	2,725·18
Mudgee	4,766 15	4,518·56
Lachlan	10,832·13	7,034·81
Albert	4,199·29	1,881·44
Southern	5,181·86	4,333 02
Tumut and Adelong	4,385 30	4,204 90
Peel and Uralla	3,187·41	11,459 69
Hunter and Macleay	882·22	261 92
Clarence and Richmond	626 71	466·21
New England	974·23	1,799·47
Localities unknown	50,551·22	37,302·08
	105,268 71	82,891·29

From the above statements it appears that the quantity of New South Wales gold sent to the Mint in 1888 is less than the quantity sent in 1887 by 22,377·42 oz. This, as will be seen by the reports of the Wardens, &c., is mainly due to the severe drought.

THE following table is compiled from information kindly furnished by the Collector of Customs:—

EXPORT of Gold, 1888.

Gold.		Quartz Tailings and Pyrites		Total.	
Quantity.	Value.	Quantity	Value.	Quantity.	Value.
oz.	£		£	oz. dwt. gr.	£
6,896	28,023	Tailings, 6,523 packages Pyrites, 3 tons 4 cwt.	8,279	9,103 14 16	36,302

The quantity of gold sent to the Mint added to the quantity exported makes 91,995 oz., but according to the Deputy-Master of the Mint, 4,491 8 oz. of the gold exported passed through the Mint, therefore the total yield is set down at 87,503·24 oz., valued at £317,099 12s., which, compared with the output for 1887, shows a decrease in quantity of 22,784·82 oz., and in value of £77,479 4s. 3d.

The

The output of gold, according to the returns furnished by the Mining Registrars, is less than the quantity sent to the Mint by 9,557 oz. This indicates the difficulty of obtaining complete returns from the owners of mines; at the same time it shows that the Mining Registrars do not exaggerate the gold yield in their respective divisions.

RETURN of Gold for 1888 from Mint and Mining Registrars compared.

District.	Mint.	Mining Registrars.	Excess.	Deficiency.

The following table shows the results obtained from the treatment of certain parcels of alluvium in 1888, compared with the results obtained in 1887. The meagreness of the information for last year under this head is probably due to the fact that owing to the drought little or no work was done in alluvial mining in some districts, and in many cases where alluvial mines were worked the wash-dirt had to be stacked till the drought broke up. The average, however, is higher in 1888 than in 1887.

COMPARATIVE Statement of Average Yields from Alluvial Mines for 1887–8.

The following table shows the yields obtained from certain parcels of quartz crushed in some of the Mining Districts. As to 1888 the table appears less complete than for 1887. This may be in part accounted for by the fact that in some localities the quartz raised had to be stacked owing to insufficient water for crushing purposes. The average yield, however, shows a considerable improvement.

This

This may, however, indicate that in consequence of the water supply being insufficient for general crushing only the best of the stone was treated, but it is largely due to the rich stone raised by the Baker's Creek Company at Hillgrove.

The number of miners engaged in gold-mining in 1888 was, according to the returns furnished, 8,460, being 2,400 more than in 1887. Of these, 7,897 were Europeans, and 563 were Chinese. 4,092 were engaged in alluvial mining, 3,310 in quartz-mining, and as to 1,058, the reports do not say whether they were working quartz or alluvial.

Dividing the quantity of gold won by the number of miners, the result obtained is that each miner appears to have won only 10·34 oz of gold, valued at £37 7s. 11·12d. Ordinarily, a certain proportion of our miners are engaged during part of each year in other pursuits, but last year it is probable that the number was largely increased, because, by reason of the drought, they were prevented from carrying on mining operations.

During the year, 4,976 assays for gold were made, by direction of this Department.

3,798 yielded nil.

896 yielded under 10 dwt. per ton.

282 yielded as follows :—

Coal.

The output of coal for 1888 as compared with that of 1887 shows an increase of 280,947. The value of the coal raised in 1888 exceeds that of 1887 by £108,758. The export of coal to colonial ports in 1888 shows a decrease of 37,506 tons, while value of the coal so exported shows a decrease of only £791. The decrease in the quantity sent to the other colonies is no doubt due to the strike which occurred last year. The reason that the decrease in value, as compared with 1887, is so small, is that the coal averaged 4·36d. more in 1888 than in 1887. The export to foreign ports in 1888 exceeded that of 1887 by 170,936 tons. This, the largest quantity sent in one year to foreign ports, indicates that our foreign trade was not affected by the strike to the same extent as intercolonial trade. The value of the coal sent to foreign ports in 1888 compared with 1887 shows an increase of £104,724. This is due, not alone to the increase in the quantity so sent, but in part, to the fact that the coal realized an average of 2·60d. ton more in 1888 than in 1887. Our home consumption in 1888 shows an increase of 147,517 upon the previous, which must be regarded as highly satisfactory in view of the disturbance of the coal trade during the strike. It is, however to be noted, the average price of coal in the home market was lower in 1888 than in the previous year, but this may, I think, be clearly traced to the strike, the consumption of Northern coal having been replaced by coal from the Southern and Western mines. Hence our total output for 1888 averaged 1·55d. per ton less than that of 1887. As indicating the growth of our coal trade I may invite attention to the fact that our output has more than doubled within the last ten years. During the past twenty years it has increased 3·48 times.

During the year 14,618 tons of coke, valued at £23,020, was sent from Newcastle. The bulk of it was sent to South Australia and Victoria.

The aggregate thickness of coal-seams pierced by Government diamond drills in 1888 was 185 ft. 6⅞ in., namely:—At Joadja, 19 ft. 2 in. and 2 ft. 11 in.; Redhead, 18 ft. 2 in.; Snake Creek, 37 ft. 7½ in.; Cockle Creek, 47ft. 8¾ in.; Woodford, 28 ft. 7⅝ in.; Fassifern, 9 ft. 9 in.; Hexam Island, 9 ft. 6¼ in.; and Ash Island, 12 ft. 1 in.

The number of mines opened out or in course of development during the year 1888 was 30. One was abandoned, as compared with 8 opening out and 1 abondoned in 1887.

Prospecting for coal and shale has been extensively carried on in the Lithgow division.

Quantity and Value of Coal raised from the opening of the Coal-seams to 1857, inclusive:—

The following comparative statement shows a decrease in the output of coal from the Northern collieries during 1888 as compared with 1887 of 176,749 tons, value £74,679; while the output from the Southern collieries shows an increase of 420,238 tons; increase in value £167,355; and the output of the Western collieries shows an increase of 37,457 tons; increase in value, £16,100. The above figures indicate pretty clearly the effect of the recent strike upon the Northern collieries. If the collieries in the south and west had reaped the whole of the benefit the Colony as a whole might have had no cause to complain but the Customs returns justify the belief that the stoppage of our Northern mines has led to the development in other colonies of their coal resources which will permanently deprive us of some of our best customers. It is true our aggregate output shows a large increase, but it is almost certain that but for the closing of many of our most important mines it might have been much larger.

COMPARATIVE Statement of Output of Coal in the Northern, Western, and Southern Districts.

The average price of coal per ton in the several districts was as follows :—

	1887. s. d.		1888. s. d.	
Northern	9 9·3	... ...	9 10·66	—an increase of 1·36d. per ton.
Western	5 2·78	... ...	5 7·23	—an increase of 4·45d. per ton.
Southern	9 0·77	... ...	8 5·81	—a decrease of 6·96d. per ton.

The number of collieries under inspection during 1888 was 91, namely :—55 in the Northern; 18 coal and 2 shale in the Western, and 15 coal and 1 shale in the Southern District, as compared with 72 in 1887.

TABLE compiled from Reports furnished by Owners of Collieries, showing the quantity and value of Coal and Shale won during the year 1888, and the number of Men employed in the Collieries.

The number of accidents during the year was 15 fatal, and 43 non-fatal, total, 58; while in 1887 there were 140, of which 95 were fatal, and 45 non-fatal, but deducting the 81 deaths caused by the Bulli disaster there remained 14 fatal, and 45 non-fatal, total 59 against the total of 58 for 1888. This, considering the increase in the number of collieries under inspection, is on the whole satisfactory. Of the 43 non-fatal accidents 32 occurred in the Northern, 7 in the Southern, and 4 in the Western District. Of the 15 fatal accidents 9 occurred in the Northern, 5 in the Southern, and 1 in the Western District.

The following is a summary of the chief practical results of a partial geological examination of the Northern Talbragar River Coalfield:—

The original classification of the Palæozoic coal-bearing formations of New South Wales, adopted by the late Rev. W. B. Clarke, Mr. C. S. Wilkinson, F.G.S., and Mr. J. Mackenzie, F.G.S., according to which the measures were divided into four groups, has been quite confirmed by subsequent geological examination. The four groups, ranged in descending order, are as follows:—

4. Newcastle series.
3. Tomago and East Maitland series.
2. Greta series.
1. Lepidodendron or Stroud series.

1. *Lepidodendron or Stroud Series.*

Until quite lately only thin unworkable seams of coal have been discovered in this series, but last year a geological examination of the outcrop of a seam on Mr. Garrett's land at the 7-mile on the Raymond Terrace to Stroud road, showed that this seam, which, inclusive of bands, is over 10 feet thick, is in reality in the lepidodendron series. Although there is not more than 2 feet of clean coal in any single layer in this seam, and the lower part of the seam is much split up with bands, and the percentage of ash in the coal is rather high, still a thinning out of some of the bands, and a slight improvement in the quality of the coal might render this seam workable in other localities. This is, therefore, geologically the oldest known seam of coal at all approaching a workable thickness in Australia.

2 *Greta Series.*

By means of a detailed mapping of the Maitland District the outcrops of the Greta seams have been traced continuously for a distance of 22 miles in a southerly and south-westerly direction from Maitland, the exact line of outcrop for the greater part of that distance being known on the geological map, furnished last year by the Department. In the course of the geological survey the actual outcrop of a seam of coal 16 feet thick was discovered at Deep Creek, near Bishop's Bridge, West Maitland, and the continuation of the outcrop of the same coal seam has been observed by Mr. Geological Surveyor David quite recently near Cessnock, and within 3 miles of Ællalong. This sou'-sou'-westerly extension of the Greta measures from Deep Creek towards Ællalong is important, as the angle of dip being low a much larger area of coal lies here within workable depth than was originally contemplated. All the Crown lands covering this coal seam, where it lies at a workable depth, have been recommended for reservation for mining purposes, and four companies have already commenced prospecting operations within the reserved area.

Geological evidence proves that the Greta measures will be found to extend, with only local interruptions, from near Ællalong to Anvil Creek, near Greta, and Black Creek, near Branxton. At Leconfield, 2 miles north of Greta, the actual lines of outcrop of the Greta, seams were traced during the preliminary geological survey of the Greta Coal-field, and this greatly facilitated the subsequent opening out of the coal seams, which are now being worked. Geological examination has also demonstrated that the seam which outcrops on Drinan's selection, near Billybrook, parish of Stanhope, county Durham, is unquestionably a continuation from Leconfield of the Greta seam, which at Billybrook is 9 feet 9 inches thick, and contains 6 feet 6 inches of good coal, and as the dip here is gradual, there is an extensive unworked area of the Greta coal measures in this locality.

In the neighbourhood of Raymond Terrace also, although no actual outcrops of the seams have been observed, there are strong geological indications of the existence of the Greta Measures under the town of Raymond Terrace, and under a considerable area of country to the north-east and north-west of that town.

3. *Tomago and East Maitland Series.*

The geological survey of the Maitland District showed that the Rathluba seam, the best workable seam of this series, probably extended from East Maitland at least as far east as Ash Island, and acting on the advice given by the geological survey, the North Stockton Coal Company continued their bore at Ash Island until the horizon of the Rathluba seam was reached, when the seam was struck, and proved to be 5 feet 7 inches thick, inclusive of three small bands. The continuity of the Rathluba seam is thus established over the large area of intervening country, 9 miles wide. Recent geological examination has also shown that these Tomago Coal Measures extend to Port Stephens, and so must underlie the greater part of the intervening country between Ash Island and Port Stephens, a distance of 15 miles, and also that they extend in a southerly direction from East Maitland to the "Ovens," near Mount Vincent, a distance of 9 miles. A seam of coal 7 feet 4½ inches thick, outcropping in the bank of the Hunter River at Piercefield near Muswellbrook, has been reported on by Mr. Geological Surveyor David, and from the character of the coal and the associated strata, it is considered to belong probably to the Tomago measures.

At Westbrook, near Singleton, Mr. C. S. Wilkinson, F.G.S., the Government Geologist has observed nine coal seams, one of which is 24 feet thick, which he considers as belonging to this group. None of those seams have been worked up to the present, but the high angle of dip would considerably increase the cost of winning coal from them.

4. *Newcastle Series.*

A geological examination of the country between Lake Macquarie and Gosford shows that the Newcastle coal measures, when traced southerly from Lake Macquarie dip under the Hawkesbury Series near Dora Creek, at the rate of about 113 feet per mile. A seam about 12 feet thick, and estimated by the Examiner of Coal Fields, Mr. J. Mackenzie, F.G.S., to contain a thickness of about 10 feet of workable coal, was proved near Wyong in Alison's Wallarah Bore at a depth of 778 feet, so that here also is an extensive area of country containing workable coal.

At Black Jack, near Gunnedah, near the North Western Railway, coal has been discovered, and according to Mr. Geological Surveyor David's report, there are here probably two seams at least, one of which is 6 feet 4 inches, and the other about 7 feet thick, each containing coal of good quality for all purposes. Coal has also lately been discovered within 2 miles of the North Western Railway Line at Curlewis, near Gunnedah.

This coal-field, which is at present quite unworked, is of considerable extent, and probably belongs to the Newcastle or Tomago measures. At Ashford, near Inverell, a seam of coal has been reported by Mr.

Mr. Geological-Surveyor David to be 30 feet thick, and to contain coal of good quality, especially for steam and smelting purposes, so that it may hereafter be utilized when wood becomes scarcer, for tin smelting in the adjoining tin-field of Vegetable Creek.

The reports of Mr. Wilkinson and Mr. Geological-Surveyor Anderson show that the Ballimore Coal Measures extend towards the town of Dubbo. On the Talbragar River, about 20 miles north-east of Dubbo, a seam of coal 5 feet thick has been proved in a diamond drill bore. It is probable that other seams of coal occur in these measures.

During the year the following analyses of coal were made in this Department:—

Locality.	Description of Mineral.	Analysis.		Coke %	Sulphur %	Specific Gravity.	Remarks.
Branxton (Leconfield)	Bituminous coal	Hygroscopic moisture	2·35	58·03	·817	1·271	Coke, hard, fairly lustrous, and slightly swollen; ash, buff colour, floculent.
		Volatile hydrocarbons	39·62				
		Fixed carbon	48·30				
		Ash	9·73				
			100·00

Fuller particulars concerning the composition of the coals of this Colony may be found in the Annual Report of this Department for the year 1880.

Shale.

The output of boghead mineral or petroleum oil cannel-coal, commonly called shale in 1888, being the product of two mines, was less in quantity by 5,141 tons, and in value, by £14,149, than the output for 1887. There is a probability that shale will be produced at some other mine shortly. At the Katoomba Shale Mine an adit is being driven to prove the thickness and quality of the bed of shale.

The following table shows the quantity and value of Kerosene Shale produced during the years 1865 to 1888:—

Year.	Quantity.	Average price per ton.	Total value.	Year.	Quantity.	Average price per ton.	Total value.
	Tons.	£ s. d.	£ s. d.		Tons.	£ s. d.	£ s. d.
1865	570	4 2 5·47	2,350 0 0	1878	24,371	2 6 11·40	57,211 0 0
1866	2,770	2 18 10·48	8,150 0 0	1879	32,519	2 1 1·96	66,930 10 0

1875	6,197	2 10 2·22	15,500 0 0	1888	84,869	2 2 2·66	73,612 0 0
1876	15,998	3 0 0·00	47,994 0 0				
1877	18,963	2 9 0·81	46,524 0 0		516,121	2 4 9·91	1,156,781 15 0

The average price per ton during 1888 was only £2 2s. 2·66d., being the lowest average since 1883. During the year the following tests and analyses were made in this Department:—

Silver and Lead.

The Inspector of Mines reports:—Silver-mining has now spread to every mining district in the Colony, but the richest and most extensive deposits are at the Barrier Ranges, in the extreme north-west corner of New South Wales. These deposits are now found to extend over 100 miles from Thackaringa, where the first discovery was made, by several miles in width. The Broken Hill Proprietary is the most important

important mine in the district. The quantity of ore treated during the year was 94,125 tons; the bullion obtained therefrom was 16,779 tons, yielding 3,924,192 oz. of silver, and 16,658 tons of lead, the gross value of which was £928,877 5s.

The Company consists of 16,000 shares, of £20 each, and the dividends paid during the year amounted to £22 per share. During the three and a half years this Company has been in existence, it had, up to the 30th November last, paid dividends to the amount of £586,000. The lode in this mine has now been proved to exist through the three 40-acre blocks, the width varying from 10 to 100 ft., with an almost unlimited supply of ore. He (the Inspector) is of opinion that Block 14 and the British Blocks will, in the near future, be dividend paying. He points out that throughout the Barrier Ranges the ore occurs in lenticular blocks or shoots, and has no doubt that the permanency of some of the mines there is now assured. In the Vegetable Creek District, at Webb's mine, the lode appears to improve in depth. Work is being carried on vigorously in the adjoining mines; but he is afraid there is no regular defined lode, but that the ore occurs in branches. At Pye's Creek there are several silver-mines being worked with varied success. The Sunny Corner mines still add their quota to the production of silver. The mines at Lewis Ponds and elsewhere in the Orange District have not realized the expectations formed concerning them. Extensive works are carried on at Captain's Flat.

The following extracts from the reports of the Wardens and Mining Registrars indicate the state of silver-mining in their respective districts:—

In the Bathurst districts the reports say:—The returns from Mitchell have been considerable, and a large number of men are constantly employed there. At Mount Costigan the smelters were in blasting five months of the year, during which time 3,000 tons of ore was smelted, yielding 9,600 oz. silver, and 300 tons lead, matte, valued at £9,700; total value, £28,000. New and improved machinery is in course of erection. There are 13,000 tons of ore at the furnace awaiting treatment. The Cordillera treated 9,300 tons of ore, yielding 82,800 oz. silver, 404 oz. of gold, 227 tons of lead, and 220 tons of copper, valued at £37,343. There are 1,500 tons of ore at the furnace ready for treatment. A great deal of prospecting was done during the year between Mount Costigan and the Cordillera mines. The Sunny Corner Co. treated 24,972 tons of ore for 201 tons of lead, 309 tons of copper, and 1,256 tons of matte, containing 319,324 oz. of silver, 2,300 oz. of gold, valued at £74,209. The Silver King Co. (Sunny Corner) produced 277 tons of matte and 2 tons of lead bullion, valued at £8,200. At the Bulga Mountain (Orange Division), the Hidden Treasure Co., who received aid out of the Prospecting Vote, at a depth of 80 feet, cut through a lode 12 feet wide, the assays from which were considered encouraging. The New Lewis Ponds Co., besides carrying on active operations in the mine, have erected costly machinery and smelting plant, but smelting did not commence till 2nd January, 1889. (It is reported that between the 3rd and 19th January 233 tons of ore smelted produced over 9 tons of bullion, containing 3,651 oz. silver, 73 oz. gold; furnace crucible contains 4½ to 5 tons bullion, of similar quartz, made 7 tons of matter containing 5,703 oz. silver and 3½ oz. gold, some lead and silver, absorbed in bricks, and run off in slag.) Tom's Lewis Ponds Co. have sunk three shafts, deepest 180 feet, average width of lode 15 feet, quantity of ore raised estimated at 500 tons, containing 30 oz. silver, 5 dwt. gold per ton, and 10 per cent. of lead. Spicer's Co. have done a great deal of work, and have a considerable quantity of ore at grass, the assays from which have been satisfactory. At Denisontown and Mount Stewart (Mudgee District) a number of leases have been applied for. Some very good samples have been obtained. At Gumble, in the Molong Division, there are two mines at work on a lode which contains silver, tin, and copper (silver predominating), and varying in width from 1 to 8 feet. A great deal of work has been done, and about 200 tons of ore is at grass, but none of it has been treated yet. On a conditional purchase, 13 miles from Grenfell, a lode, said to be 11 feet wide, was discovered. Samples from the surface assayed 13 dwt. per ton, but at a depth of 60 feet as high as 309 oz. of silver was obtained on assay. Several lodes have been discovered in the Condobolin Division, the most important, apparently, being in a small range of hills called the "Three Peaks." The lode appears to be 2 feet wide; assays from which are said to vary from 39 oz. to 800 oz. per ton.

In the Albert District the reports say:—The Thackaringa mines have been steadily developed, and in some cases with good results. There are about 4,000 miners employed on this field, of which number the Broken Hill Proprietary Co. employs 1,609. The work done on the British Blocks, block 14 South Broken Hill Junction, and Central Mines has considerably increased their value. The following figures show the declared value of minerals exported from the district:—Argentiferous lead, valued at £863,467; silver ore, £136,800; tin ore and oxide, £1,095; copper ore £304; auriferous quartz £182; total, £1,001,848. The Broken Hill Junction Co. raised 6,000 tons of ore, of which 3,000 tons, valued at £27,000, was sold. Central sold 458 tons for £1,359, leaving 988 tons ore at grass. Block 14 sold 150 tons, and has 5,000 tons at grass. Broken Hill North raised 3,100 tons of ore, sold 1,100 tons ore for £6,000,

£6,000, smelted 1,000 tons; yield, 40,000 of silver and 300 tons lead. The Proprietary Co. raised 101,610 tons of ore, sold 1,433 tons for £9,203, smelted 98,353 tons; yield, 4,077,257 oz. silver, and 17,117 tons lead; value (estimated), £713,519. The Broken Hill South raised 1,078 tons of ore, sold 978 tons for £5,868, leaving 100 tons at grass. The British Blocks raised 4,600 tons of ore. The Umberumberka sold 1,400 tons of ore for £21,000, and has 1,500 tons at grass. The Pioneer Co., Thackaringa, sold 560 tons ore for £5,400, and 2,828 tons at grass. The drought prevented the reported find of silver ore at Kallara Station being tested.

In the Tumut and Adelong District the reports say:—At Coppabella several galena lodes were found. One, 25 feet wide, consists of quartz with patches of galena. An average of the assays gives 42 oz. of silver per ton—55 per cent. Silver has been found at Nimitybelle, and gold and silver at Thoko, 15 miles from it. The Koh-i-noor Co., Captain's Flat, obtained 540½ tons of ore, 14,035 oz. of silver, 63 tons of lead, 2 tons copper, and 63½ oz. of gold. The Company also obtained silver, lead, gold, and copper, to the value of £2,700, from another smelting, the details of which have not been supplied, and they have 200 tons of ore at grass. The Vanderbilt and Commodore Co. smelted 661½ tons ore for 11,000 oz. silver, 29¾ tons lead, and they have 500 tons of ore at grass. The North Vanderbilt Co. has constructed very extensive works in opening up their mine. A lode was discovered near the Bredbo Railway Station, consisting of galena and ironstone, gossan assays from which gave 20 to 25 oz. of silver per ton. Shafts were sunk to the depth of 50 and 70 feet, when sinking had to be suspended on account of the quantity of water met with. At Big Badga River a lode was discovered, and a shaft has been sunk to a depth of 100 feet, but it is thought greater depth will have to be reached before getting into settled country. Assays from a depth of 20 feet gave 329 and 334 oz. of silver per ton, with a large percentage of lead.

In the Southern District the reports say:—The New Carrington Mine, Goulburn, has stopped smelting, and are sinking for galena ore. Preparations are being made for working some galena lodes in the Major's Creek division. On the right arm of the Yalwal Creek very promising argentiferous ore has been found. The mine at Moruya is about to recommence work.

In the Peel and Uralla District the reports say:—Quantity of silver won in the Glen Innes division, 18,160 oz. At Webb's mine an extensive crushing, roasting, and leeding plant, but the plant was unsuited or the men were inexperienced, hence the treatment was abandoned after the first trial, and the ore has been concentrated and sent to Adelaide. 400 tons of ore yielded 13,182 oz. silver, equal to 33 oz. per ton. The manager of Webb's Consols reports they have sunk five shafts each on a distinct lode. From No 1 shaft 80 tons of ore has been raised. No. 2 shaft is in a galena lode, estimated at 15 feet wide. From this shaft two parcels of ore were bagged and sent away for treatment, viz., 20 tons to Adelaide and 20 tons to Germany. The average gross returns from these parcels was 73 oz. silver per ton and 66 per cent. of lead. There is 200 tons of ore at grass. No. 3 shaft is in a lode containing mispickel, but has not yet reached galena. Yield of silver, 2,920 oz. The ores in the Pye's Creek Mine contain a larger percentage of galena. About 400 tons have been raised; 42 tons of ore sent to Adelaide for treatment. The result of a portion gave 49 oz. silver and 5 dwt. of gold per ton. Yield of silver, 2,058 oz. At the Castteray Mine the ores bear a close resemblance to those found at Sunny Corner.

In the New England District the reports say:—Fairfield division: Rich silver ore, containing a percentage of gold, has been found in the Mascotte Gold-mine. About 600 tons of ore has been raised, valued by the manager at £12 per ton. The deepest shaft is about 100 feet (the lode is 8 feet wide), and it is estimated that there is 7,000 tons of ore in sight. The works on the White Rock Proprietary Co.'s Mine are very extensive, and preparations are being made for the reception of vast machinery. A very large body of stone has been quarried out, and about 13,000 tons is awaiting treatment. The quantity of ore obtainable is practically unlimited. The greater part of the ore is low grade, but the seams, which are numerous, are rich. About 163 tons of picked ore has been sent away at various times and to various places, resulting in returns averaging £8 per ton. The mine appears to be inexhaustible, the ore now in sight, even with the large reducing works to be employed, would last for many years. The mine shows every indication of becoming richer as it is developed. Rich silver ore, containing chlorides, was discovered about 5 miles south of Boonoo Boonoo, from which remarkably rich assays have been made. Some parcels of ore sent away for treatment have given satisfactory results, the lodes consisting of quartz and gossan are well defined, but the water is troublesome, and machinery is required to work the ground. An important silver field was discovered at Rivertree, 16 miles east of Wilson's Downfall. The reefs are large and well defined, and show rich galena and carbonates of lead, assaying from 10 to 100 oz. silver per ton. Smelting furnaces are in course of erection.

Though the attempts to develop the value of our silver lodes has resulted in many disappointments, mainly the result of want of experience in the treatment of silver ores, I venture to doubt whether our

failures

failures are more numerous than have been made in other countries, or than might reasonably have been expected when entering upon (to us) an entirely new industry, and one requiring not only considerable technical knowledge but also large practical experience. It may perhaps be said that we can avail ourselves of the knowledge acquired in older countries, and that may be true, and yet we may lack the experience which enables us to apply that knowledge with profitable results. I have no doubt that, in course of time, we, like others, shall learn to turn to the best advantage the valuable deposits we possess; and there can be little question that the proposal of the Government to establish works for the treatment in bulk of our various matalliferous ores by the process best adapted to each, and to give facilities to those concerned to acquire the knowledge requisite to enable them to treat the ores in their respective mines, will materially hasten the time when we shall reap the full benefit of our recent discoveries. When we consider that it is scarcely five years since we began to recognize the existence in this Colony of extensive argentiferous deposits, and that we have already exported silver and lead to the value of two and three-quarter millions sterling; and further,—that we are gradually learning, even by our blunders, how some of our ores can be treated, we ought not to complain, because many of our silver mines are idle for want of the skill and appliances requisite to work them profitably. The value of our output for last year reached nearly one million, and there can be no doubt that will be largely increased as soon as all the mines opened are in full work. The reports show that in some of our mines there are almost unlimited deposits of low grade ores, and in view of that fact it is a matter of great importance that our attention has been directed to the methods of concentration adopted in America, because if we can work them profitably they will provide employment to a very large number of miners. The fact that so few of our silver mines are paying dividends may also, probably, be in some measure due to our lacking the experience necessary to enable us to adopt the most economical and efficient modes of treatment.

During the year 4,973 assays of silver ore were made in this Department.

Tin.

The Inspector of Mines reports the Basaltic Prospecting Company at Vegetable Creek have carried on vigorous prospecting operations during the year, and have at times obtained fair prospects but will have to get into more settled country before anything payable is struck. During the year they have sunk 77 feet, and have driven 680 feet, including open cutting and trenches. At Butler's lode excellent stone has been raised during the year. A new discovery of tin was made during the year in the Barmedman division, on the Mandamah Station, but the severe drought interfered with its development. The stream tin was struck at depths of from 12 to 15 feet, the wash was 1 to 4 feet thick, assays of the ore are said to have given 58 to 62 per cent. The Lady Don Co. at Poolamacca raised 500 tons of ore. Stream tin has been found at Thoko; the prospectors obtained from 2 to 5 oz. per dish. At Watson's Creek (Bendemere) Anderson and party raised 8 tons 18 cwt. of ore, sold at £75 per ton; Murray and party raised 5 tons, sold at same price; Northey and party raised 3 tons 7 cwt. sold at same price; Hetherington and party raised 2 tons, sold at £65 per ton. Inverell division.—Some 11,000 tons of ore was raised, the price averaged £68 per ton. Crushing and smelting works were erected by Mr. Bathurst, but the works are at a standstill from want of water. Glen Innes division.—1,037 tons of ore was raised at Emmaville, value £70,063; and 244 tons, value £16,470 at Glen Innes. Owing to the drought, 1888 was the most trying year that has been experienced since the opening of the tin-fields. Prospecting was carried on vigorously during the year by the Basaltic Lead Co. with a view to test the deep lead. One cross drive showed a face of coarse wash 80 feet wide, from 1 to 6 feet thick, containing

a little tin. At Big Ben Flat a large extent of land has been taken up for tin-mining, and fair prospects have been obtained. The Ottery Mine is the only one in which lode tin-mining is carried on in the division. 93½ tons of block tin was won from stone crushed at the Tent-hill battery. 573 tons of fine tin ingots was sent to Newcastle from the smelting works. In the Oban division a large area of land has been taken up by Mr. Dowel, M.P., for tin-mining, and expensive works have been constructed for conserving water. Some enterprise has been shown in opening up deep ground at Wylie Creek. The quantity of tin-ore won in the Wilson's Downfall division was 203 tons, valued on the ground at £12,180.

Notwithstanding the severe drought the output of tin ore last year was only 151 tons less than that of 1887, and the value of the tin won owing to the higher price obtained exceeded that of 1887 by £57,076.

TABLE showing the quantity and value of Tin exported from, and the produce of, the Colony of New South Wales, since the opening of the Tin-fields in 1872.

Year.	Ingots.		Ore.		Total.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons cwt.	£ s. d.	Tons cwt.	£ s. d.	Tons cwt.	£ s. d.

„ „	„	0·49
Tamworth	Black sand, chiefly titanic iron and oxide of tin	19·2
Temora	Stream tin	54·2
Tent Hill	Chlorite rock, with oxide of tin	26·4
Tingha	Stream tin sand	39·6
„	Quartz, with tin-stone	12·1
Tumberumba	Gem sand, with resinous stream tin	40·2
Tumut	Stream tin	74·2
„	Micaceous quartz, with oxide of tin	8·1
Warialda	Lode tin in greisen	37 1

COPPER.

The following is an extract from the Reports of the Wardens and Mining Registrars:—Tuena division: The Cordillera Co. extracted 220 tons of copper from their ore. Only 24 men are employed at the Peelwood Mine. The Burraga Mine was in full work during the whole year. The yield of copper was 499 tons, valued at £36,000. The deepest shaft is 300 feet; at that depth the lode is 15 feet wide. The

New

New Burraga Co. is sinking two shafts, and it is reported they have struck 12 per cent ore at 40 feet. The Milburn Creek Mine obtained 13 tons of copper, valued at £975. On Mr. M'Killop's property, at Carcoar, some good looking copper ore has been raised from a lode discovered on the river bank. Wellington division.—Several companies have been doing good work during the year. The Wilkinson Co. were raising ore, and a smelting furnace has been erected. The Belara Mine put out 1,400 tons of ore, 840 tons of which was smelted, yielding 70 tons copper, valued at £5,250. Dubbo division.—A copper lode has been discovered near the Guerie railway station. This lode is 2 feet 6 inches wide, assays from which ranged from 18 to 30 per cent. copper. The Rose Hill Co. has raised 4 tons, and sent it to Newcastle to be smelted. Thirty-four miles north-west of Condobolin, near the gate of the Melrose run, a copper lode has been discovered, assays from which are said to have shown 27 per cent. copper, 9 per cent. lead, and 6 oz. silver per ton.

At the Nymagee mine 12,600 tons of ore was raised and smelted, yielding 1,300 tons of copper valued at £93,276. This shaft is 700 feet deep, the deepest level 618 feet; width of lode, 14 to 20 feet.

At Hermitage Plains a large quantity of ore has been brought to grass, and the Company is erecting a small furnace. The Great Cobar Co. raised 13,210 tons of ore, from which 1,005 tons of copper, valued at £60,300, was obtained. The shaft is 566 feet deep, the deepest shaft 420 feet, the width of lode from 2 to 50 feet. In the month of October a trial was made of about 12 tons of Dubbo coal in the Reverberatory furnaces blacksmiths' shop and locomotives, the result being highly satisfactory. If the railway were extended to Cobar it would not only do much to open up the coal-mines in the Dubbo district, but it would overcome the difficulty of procuring fuel to carry on the work of the Great Cobar Mine. The New Mount Hope Co. smelted 1,187 tons ore, which produced 137 tons of copper, valued at £8,900. The Great Central Mine was at work eleven months, during which time they produced 142 tons 8 cwt. of fine copper. The Frogmore Co. was engaged most of the year in sinking a new shaft, to a depth of 250 feet, and repairing or rebuilding furnaces. They raised 130 tons of ore. A rich lode of copper is now being worked in the Great Northern Mine (Fairfield). 20 tons of the ore treated at Newcastle yielded over 21 per cent. of copper (more recent assays show 18 to 26 per cent of copper). The lode, 4 feet wide, consists of carbonate and sulphide of copper, containing a little gold. There are several other good looking copper lodes in the mine.

TABLE showing the quantity and value of Copper, the produce of the Colony, exported from the Colony of New South Wales, from 1858 to 1888.

The output of copper during 1888 was less than any previous year since 1876, but the value of the output exceeds that of any year since 1886. This is the result of certain arrangements in Europe for

for regulating the market price of copper, which are now understood to be at an end. Unless something be done, either to increase the present price of copper, or to reduce the cost of production, it is probable that the output of the current year will show a more serious decrease. This would be matter for serious regret, as affecting a very large amount of capital invested and the employment of a large number of miners.

During the year, 59 assays of copper ore were made by this Department, as follows:—

Locality.	Description of Mineral.	Per cent. metallic copper.	Per Ton.	
			Gold.	Silver.
			oz. dwt. gr.	oz. dwt. gr.

Iron.

During the year, 3,747 tons of bar and rail iron were made by the Eskbank Iron Co., valued at £23,721 6s. 9d.

Seven assays were made by this Department during the year with the following results:—

Locality.	Description of Mineral.	Per cent. ferric oxide Fe 2. O 3.	Remarks
Blayney (Brown's Creek.	Magnetic iron	69·77	
Kangaloon	Earthy hematite	94·67	
Marulan	Oxide of iron	14·08	
Mittagong (Hill Top)		20·48*	*Poor quality, with much insoluable matter, chiefly sand.
,, (Jellore)		31·36	
Newbridge	Brown iron ore	68·54	
Wollongong	Clay ironstone	23·04	

Cobalt.

What appears to be a most valuable lode of cobalt has been discovered on freehold land adjoining the town of Carcoar, on the south bank of the Belabula River. The lode has been traced more or less plainly for half-a-mile on the same property, where a shaft is now being sunk, and valuable ore got out, In the adjoining property a shaft is being sunk on what is considered a continuation of the lode.

During the year this Department made the following tests and analyses:—

Manganese, Cobalt, and Nickel.

3 tests were made for manganese, 6 for cobalt, and 7 for nickel.

Locality—Carcoar.
Description of mineral—
(1.) Danaite, (?) with a little erythrine and hornblende.
(2.) Danaite. (?)

Analysis—	(1.)	(2.)
Moisture	·12	2·18
Metallic arsenic	51·81	29·01
,, cobalt	10·447	13·83
,, nickel	·59	·39
,, iron	11·86	15·78
Alumina	trace.	trace.

	99·905	99·67

* Insoluble in acids, and consisting of hornblende and silica.

Locality—Carcoar.
Description of Mineral—Molybdenite, with a little felspathic material and spots of erythrine.
Analysis—

Sesquioxide of cobalt	4·24 per cent.
Nickel	nil.
Silver	8 dwt. 4 gr. per ton.
Gold	trace (under 2 dwt. per ton).

Locality—Cooma.
Description of Mineral—Oxide of manganese.
Binoxide of manganese, 74·1 %.

Locality—Marulan District (Bungonia).

Mineral.	Cobalt sesquioxide, %.	Nickel protoxide, %.
Crushed cobaltiferous manganese oxide	3·23	·4
,, ,,	2·61	·35
,, ,,	2·14	·4

Locality—Cowra.
Description of Mineral—Green coloured mineral.
A qualitative analysis was made, with the result that nickel, arsenic, and a trace of cobalt were found present. The bulk of the mineral consists of mispickel, containing cobalt and a small percentage of nickel; also much gangue. The mineral was much decomposed in places, and the green mineral was visible where this decomposition had taken place. From the results obtained this green substance is probably nickel bloom.

Plumbago.

Plumbago exists in large quantities at Undercliff, between Wilson's Downfall and Rivertree.

During the year the following analyses were made in this Department:—

Locality—Grafton.
Description of Mineral—Felspathic graphite.
Analysis—

Moisture (at red heat)	8·77
Silica	27·96
Alumina	15·93
Oxide of iron	trace.
Lime	·96
Magnesia	nil.
Carbon	46·28
	99·90

Locality—Mudgee.
Description of Mineral—Plumbago clay.
Analysis—

Moisture	7·35
Carbon	34·40
Gangue	58·25
	100·00

Antimony.

Antimony was discovered during the year at Ford's Creek, midway between Gulgong and Mudgee. Several parties are working there, it is said, with favourable results. Near the South Arm of the Bellinger River a large reef of rich antimony ore was discovered. A shaft has been sunk to a depth of 50 feet, and about 100 tons of ore raised. Another reef was discovered on the Nambucca. The Corrangula Antimony Mines are likely soon to be worked again; the furnaces and plant are being put in order The Eleanora Company put out 133 tons of antimony ore. Furnaces were being erected for extracting the antimony from the stone before crushing for gold.

During the year six assays were made in this Department, as follows:—

Locality.	Description of Mineral.	Per cent. Antimony.	Per Ton.	
			Gold.	Silver.
				oz. dwt. gr.
Bellinger	Sulphide of antimony	66·8	nil.	nil.
Lismore	" " with a little quartz	45·5	"	10 1 12
Nambucca (west of Bowra)	" " "	64·3	"	nil.
New England (Stonybatta)	" " "	55·71	"	44 2 0
Two-mile Flat	" " in quartz	29·36	trace.	nil.

Bismuth

Has been found near Nimitybelle, in the Southern district. 47¾ tons of bismuth was raised at the Kingsgate Mine, near Glen Innes.

During the year twelve tests were made by this Department for bismuth, and two for tellurium:—

Locality.	Description of Mineral.	Per cent. metallic bismuth.	Gold.	Silver.	Per cent. metallic tellurium.
			oz. dwt. gr.	oz. dwt. gr.	
Bowen	Ferruginous quartz and felspathic rock, with carbonate of bismuth.	17·62	nil.	trace.	.....

"	Ferruginous quartz with native bismuth	1·06	nil.	nil.	.....

Salt.

Four hundred acres of land was applied for under lease, in the Maitland district, for the purpose of working a deposit of salt.

Alum.

Alum.

The Alum Company has expended on their mine, which comprises 300 acres, a large sum of money, but they still require additional machinery, which is being procured. Refined about 20 tons, and samples have been sent to Melbourne, England, Germany, China, and other places, where they were regarded as highly satisfactory. They have 750 tons calcined awaiting the additional machinery.

During the year the following miscellaneous tests and analyses were also made by Mr. J. C. H. Mingaye, F.C.S., Assayer and Analyst in this Department:—

Chromium, Tungsten, and Uranium.

Locality—Barraba, Fairfield.

	Description of mineral.
Chromite	40·18 per cent. sesquioxide of chromium.
Black sand	No tungstic acid.
Ferruginous claystone	No uranium.
Schist	,,

Limestone, Shale, &c.

During the year ten analyses were made as follows:—

Locality—Corowa.
Description of mineral—Dolomite.
Analysis—

Carbonate of lime	53·05
,, magnesia	42·03
Insoluble in acids (sand)	3·72
Oxide of iron, with traces of alumina	1·38
	100·18

Locality—Cowra.
Description of mineral—Crystallized calcite.
Analysis—

Moisture	·57
Carbonate of lime	80·8
Oxide of iron	15·09
Alumina	·9
Silica	1·49
Phosphoric anhydride	·43
Carbonate of magnesia and undetermined	·72
	100·00

Copper Shale.

Locality—Dent's Creek, Holt-Sutherland Estate.
Description of mineral—Dark greenish and purplish grey clay shale, with a little metallic copper, from the diamond-drill bore at a depth of 1,780 feet.
Analysis—

Combined moisture	5·32
Moisture at 100° C.	3·38
Silica	56·28
Alumina	24·21
Oxide of iron	7·34
Metallic copper	·08
Magnesia	2·36
Lime	1·10
	100·07

Remarks:—Two large assays were made for gold and silver, but neither of these metals was found to be present.

Locality—Mandurama (Cliefden Station).
Description of mineral—Limestone.
Analysis—

Moisture	·07
Carbonate of lime	65·06
,, magnesia	3·95
Silica	17·83
Oxide of iron and alumina	13·32
Phosphoric anhydride (P_2O_5)	·14
	100·37

Locality—near Mudgee.
Description of mineral—White powder.
Analysis—

Moisture at 100° C.	2·70
Combined moisture	1·24
Carbonate of lime	67·97
,, magnesia	2·62
*Alumina	8·20
Silica	17.27
	100·00

* Containing a trace of oxide of iron.

Remarks:—The carbonate of lime and insoluble matter being in such a fine state of division, this mineral if mixed with the right proportion of ingredients, and burnt, should make a good cement. The insoluble in acids consists of silicate of alumina (clay).

Locality

Locality—near Mudgee (Pine Ridge).
Description of mineral—White powder.
Analysis—

Moisture at 100° C.	·18
Carbonate of lime	50·04
,, magnesia	36·08
Silica	6·21
Alumina	6·11
Oxide of iron ($Fe._2O_3$)	1·27
	99·89

Locality—Shaking Bog, near Tumut.
Description of mineral—Kaolin.
Analysis—

Moisture at 100° C.	6·10
Combined moisture	10·19
Silica	44·46
Alumina	37·85
Oxide of iron	a minute trace.
Lime	·22
Magnesia	trace.
Alkalies, &c.	1·18
	100·00

Remarks:—This is an excellent sample of clay, being white in colour, practically free from iron and grit, and containing all the constituents in proportion to the best Cornish and Chinese clays. The following table exhibits the composition of some of the more important clays used in the manufacture of porcelain. The first two are results obtained by Ebelmen and Salvetat the other from an analysis made in Richardson's laboratory, and are quoted in the second volume of the English translation of Knapp's Technological Chemistry.

	Washed Kaolin.			New South Wales—Shaking Bog, near Tumut.
	Chinese. I.	St. Yrieux. II.	Cornish. III.	
Silica	50·5	48·37	46·32	44·46
Alumina	33 7	34 95	39·74	37·85
Oxide of iron	1·8	1·26	·27	a minute trace.
Lime	.....	.....	·36	·22
Magnesia	0 8	trace.	·44	trace.
Potash	1 9	2·40	12·67	1·18
Soda				
Water	11·2	12·62		16·29

Locality—Rooty Hill.
Description of mineral—Siliceous limestone.
Remarks:—This sample contains 58·54 per cent. of silica, consisting mostly of coarse sand, and is not suitable for the manufacture of cement.

Locality—Strathbogie.
Description of mineral—Argillaceous limestone, with a little free silica.
Partial Analysis—

Silica	48·72
Carbonate of lime	22·55
Alumina	17·69
Oxide of iron	1·58

Locality—Wollongong.
Description of mineral—Grey limestone.
Analysis—

Carbonate of lime	46·41
,, magnesia	1·33
Alumina	10·02
Oxide of iron	2 92
,, manganese	trace.
Silica	36·55
Phosphoric anhydride	trace.
Moisture, organic matter and alkalies	2 77
	100·00

Water.

During the year 13 analyses were made of water, as follows:—

Broken Hill.—From Jenkin's, Kidwell's, Maiden's, and Walsh's Quarries.

The samples were received, supplied in dirty whisky bottles, corked with corks which had been previously used, some of them being in a foul state, making it impossible to determine the free and albuminoid ammonia, viz., organic impurities, so that reliance cannot be placed on the results. All these waters contain a large amount of saline matter for potable waters, which renders them very unsuitable for human consumption, and, if no other be obtainable, they should be well boiled and filtered before use, as by these means some of the salts and suspended matter would be separated. With strangers drinking a quantity of these waters, especially that from Marden's Quarry, containing 24·6 grains per gallon of sulphate of magnesia, it would tend to cause diarrhœa.

Jenkins Quarry—

Soluble solids	107·724	grains per gallon.
Insoluble solids	11·220	,,
Total solids	118·944	,,
Chlorine	37·2	,,

Analysis

Analysis of Total Solids.

Silica	1·344 grains per gallon.
Alumina	·578 ,,
Oxide of iron	trace.
Carbonate of lime	6·972 ,,
Carbonate of magnesia	2·326 ,,
Sulphate of magnesia	8·170 ,,
Sulphate of lime	trace.
Sulphate of soda	17·850 ,,
Chloride of sodium	61·300 ,,
Alkaline carbonates, &c.	20·404 ,,
Total solids	118·944 ,,

Remarks.—Water clear, with a small amount of suspended matter. On ignition, the residue darkened, giving off a foul smell somewhat resembling burnt wool, thus showing the presence of organic impurities. No poisonous metals present.

Kidwell's Quarry—

Soluble solids	144·99 grains per gallon.
Insoluble solids	15·036 ,,
Total	160·026 ,,
Chlorine	55·7 ,,

Analysis of Total Solids.

Silica	1·484 grains per gallon.
Alumina	·728 ,,
Oxide of iron	trace.
Carbonate of lime	11·172 ,,
Carbonate of magnesia	1 652 ,,
Sulphate of magnesia	11·650 ,,
Sulphate of lime	strong trace. ,,
Sulphate of soda	22·160 ,,
Chloride of sodium	91 740 ,,
Alkaline carbonates, &c.	19·440 ,,
Total solids	160 026 ,,

Remarks.—Water clear, with a small amount of suspended matter. The residue darkened on ignition, showing the presence of organic matter. No poisonous metals present. The quantity received was rather small for a thorough analysis.

Maiden's Quarry—

Soluble solids	134·596 grains per gallon.
Insoluble solids	19·460 ,,
Total	154 056 ,,
Chlorine	55·8 ,,

Analysis of Total Solids.

Silica	1·274 grains per gallon.
Alumina	·882 ,,
Oxide of iron	trace.
Carbonate of lime	16·520 ,,
Carbonate of magnesia	·784 ,,
Sulphate of magnesia	24·600 ,,
Sulphate of lime	2·470 ,,
Sulphide of soda	8·530 ,,
Chloride of sodium	91 780 ,,
Alkaline carbonates, &c.	7·216 ,,
Total solids	154·056 ,,

Remarks.—Water clear, with a small amount of suspended matter. On uncorking the bottle, the water had a strong odour, due to sulphuretted hydrogen. The quantity received was rather small for a thorough analysis. No poisonous metals present.

Walsh's Quarry—

Soluble solids	112·412 grains per gallon.
Insoluble solids	11·880 ,,
Total	124·292 ,,
Chlorine	38 8 ,,

Analysis of Total Solids.

Silica	1 148 grains per gallon.
Alumina	·672 ,,
Oxide of iron	trace.
Carbonate of lime	6 300 ,,
Carbonate of magnesia	3·760 ,,
Sulphate of magnesia	7·550 ,,
Sulphate of lime	trace. ,,
Sulphate of soda	23 950 ,,
Chloride of sodium	63 930 ,,
Alkaline carbonates, &c.	16·982 ,,
Total solids	124 292 ,,

Remarks.—Water clear, with a small amount of suspended matter. No poisonous metals present.

BROKEN HILL.—From Broken Hill, Brewery, Silverthorne's Well, and Stephen s Creek Stone Dam.

The manner in which these samples are taken, viz., bottling in dirty spirit bottles and corked with dirty corks which had been previously used, renders the estimation of the organic impurities, *i.e.*, free and albuminoid ammonia, of little value, as from the corks alone sufficient contamination might be given to the waters to condemn them for drinking purposes. The total solids in the first two samples are high for potable waters. The amount of free ammonia found in the water from Stephen's Creek and Silverthorne's Well condemns them for drinking purposes; but, as before stated, part of the organic contamination may have been derived from the careless way in which the samples were put up. I am of opinion, however, that from the foul odour given off from the samples on evaporation and the darkening of the residues on ignition, that not all is due to the corks alone, also, that they are not desirable waters, by any means, for human consumption. With reference to the sample taken from a soakage hole in Stephen's Creek, it is a very impure sample of water. On opening the bottle, stinking, and, on evaporating some down to dryness, it gave a residue which had a very foul odour, darkening strongly on ignition, thus showing the presence of much organic matter. The quantity of albuminoid ammonia found in this sample utterly condemns the water for drinking purposes, the analysis pointing out contamination from sewage matter, or some organic matter such as decomposed animal matter.

Brewery—

Soluble solids	123·526	grains per gallon.
Insoluble solids	19·246	,, ,,
Total solids	142·772	,, ,,
Free ammonia	·0026	parts per 100,000.
Albuminoid ammonia	·0260	,, ,,
Chlorine	54	grains per gallon.

Analysis of Total Solids.

Silica	·656	grains per gallon.
Alumina	·308	,, ,,
Oxide of iron	trace.	
Carbonate of lime	15·036	,, ,,
Carbonate of magnesia	3·146	,, ,,
Sulphate of magnesia	15·950	,, ,,
Sulphate of lime	trace.	
Sulphate of soda	6·111	,, ,,
Chloride of sodium	89·810	,, ,,
Alkaline carbonates, &c.	11·755	,, ,,
Total solids	142·772	,, ,,

Remarks.—Water cloudy, with a small amount of matter in suspension. The water gave off a very foul odour on opening the bottles. No poisonous metals detected.

Silverthorne's Well—

Soluble solids	101·92	grains per gallon.
Insoluble solids	16·548	,, ,,
Total solids	118·468	,, ,,
Free ammonia	·01	parts for 100,000.
Albuminoid ammonia	·032	,, ,,
Chlorine	45·2	grains per gallon.

Analysis of Total Solids.

Silica	·630	grains per gallon.
Alumina	·210	,, ,,
Oxide of iron	.....	,, ,,
Carbonate of lime	11·256	,, ,,
Carbonate of magnesia	4·452	,, ,,
Sulphate of magnesia	4·250	,, ,,
Sulphate of lime	2·172	,, ,,
Sulphate of soda	11·180	,, ,,
Chloride of sodium	74·400	,, ,,
Alkaline carbonates, &c.	9·918	,, ,,
Total solids	118·468	,, ,,

Remarks.—Water cloudy, with a small amount of matter in suspension. It had a very bad odour on opening the bottle, and the residue darkened strongly on ignition, thus showing the presence of organic matter.

Stephen's Creek—

Soluble solids	6·496	grains per gallon.
Insoluble solids	11·284	,, ,,
Loss on ignition	3·640	,, ,,
Total solids	21· 42	,, ,,
Free ammonia	Nil.	
Albuminoid ammonia	·066	parts per 100,000.
Chlorine	3· 8	grains per gallon.

Remarks.—Water cloudy with a fine reddish coloured clay in suspension. On opening the bottles the water had a foul odour, and on evaporating some down to dryness it gave a residue which stank, and on ignition strongly darkened, thereby showing the presence of much organic matter. The insoluble solids were found to consist of a fine reddish clay, carbonates of lime and magnesia. The soluble of chlorides of sodium, with traces of sulphates of lime, magnesia, and alkaline nitrates and nitrites. No poisonous metals detected.

Broken Hill, from portion 86. Water taken from a bore in Limestone Quarry—

Soluble solids	136·360	grains per gallon.
Insoluble solids	13·916	,, ,,
Total solids	150·276	,, ,,
Free ammonia	·002	parts per 100,000.
Albuminoid ammonia	trace.	
Chlorine	48· 8	grains per gallon.

Analysis

Analysis of Total Solids

Silica	·120	grains per	gallon
Alumina	028	,,	,,
Oxide of iron	trace		
Carbonate of lime	8 632	,,	,,
Carbonate of magnesia	4 000	,,	,,
Sulphate of magnesia	6 005	,,	,,
Sulphate of lime	trace		
Sulphate of soda	30 803	,,	,,
Chloride of sodium	80 410	,,	,,
Alkaline carbonates, &c	19 278	,,	,,
Total solids	150 276	,,	,,

Remarks —Sample received sealed, water clear and free from sediment No smell observed on heating some in a closed flask at 100 F. No poisonous metals detected The analysis shows the water to be high in saline matter, as is the case with most of the samples hitherto examined from the Broken Hill District As regards organic impurities, it is exceptionally free. This water will exert no injurious effect on human beings or stock, but at the same time it should be used for domestic purposes only when no other better supply is obtainable

Myall Creek—

Soluble solids	189 8	grains per	gallon
Insoluble solids	16	,,	,,
Total solids	205 8	,,	,,
Chlorine	54 5	,,	,,

The soluble solids consist of chlorides of sodium and magnesian alkaline carbonates, organic matter, &c ; the insoluble of carbonates of lime and magnesia, alumina, &c

No instructions were received with this water, the sample being sent in a spirit bottle corked with a dirty cork, and was much too small for a proper examination

Nyngan— WATER FOR STOCK PURPOSES.

Soluble solids	1473 92	grains per	gallon
Insoluble solids	79 38	,,	,,
Total solids	1553 3	,,	,,
Chlorine	77 2	,,	,,

The soluble solids were found to consist chiefly of chlorides of magnesia and sodium, sulphates of lime and soda, nitrates, organic matter, &c The insoluble of silica, alumina, trace of iron, carbonates of lime, and magnesia

Remarks —Water turbid, with a small quantity of suspended matter On heating in a closed flask the water gave off a strong aromatic smell, somewhat resembling one of the oils yielded from the Eucalypti, as also a foul smell on first opening the bottle On tasting the water, it had a strong saline taste, and on ignition the residue darkened considerably, thereby showing the presence of much organic matter With the large amount of saline matter, consisting as it does of chlorides of magnesium and sodium and sulphates of lime and soda, it is not desirable that this water be used for watering stock, as also it is totally unfit for human consumption There is no way of completely purifying this water except by distillation.

Rylstone—

Soluble solids	652 40	grains per	gallon.
Insoluble solids	30 24	,,	,,
Total solids	682 64	,,	,,
Sulphuric anhydride (SO_3)	310 807	,,	,,
Chlorine	95 2	,,	,,

The soluble solids were found to consist of chiefly sulphate of magnesia, chloride of sodium, sulphate of lime, &c. the insoluble of carbonates of lime and magnesia, with a small quantity of alumina, silica, &c

Remarks —May be classed as a mineral water, being strongly impregnated with a large proportion of salts, and should possess medicinal qualities The water had a peculiar harsh taste, due to Epsom salts in solution, a large proportion of the sulphuric acid present being combined with magnesia The quantity sent was much too small for a thorough analysis.

Wilcannia—Water from Tarella Total solids, 233 24 grains per gallon—

Analysis of Total Solids

Silica	1 526	grains per	gallon.
Alumina	·448	,,	,,
Oxide of iron	trace		
Carbonate of lime	23 576	,,	,,
Carbonate of magnesia	6 37	,,	,,
Sulphate of magnesia	42 391	,,	,,
Sulphate of lime	1 941	,,	,,
Chloride of magnesium	6 994	,,	,,
Chloride of sodium	140 986	,,	,,
Alkaline carbonates, &c	9 008	,,	,,
Total solids	233 24	,,	,,

Remarks —Water free from odour, and clear, with a small amount of sediment at the bottom of the jar. This water contains a large amount of saline matter, which renders it unsuitable for human consumption, and it should not be used for watering stock if better water is obtainable No poisonous metals detected

Wilcannia—

Soluble solids	876 22	grains per	gallon.
Insoluble solids	20 48	,,	,,
Total solids	896 7	,,	,,

Soluble solids consisted chiefly of sulphate of magnesium, sulphate of lime, chloride of sodium, &c ; the insoluble of clay, &c.

Remarks —The water had a very foul smell, due to sulphuretted hydrogen With the large amount of sulphate magnesium present, it is not advisable to use this water for watering stock. The action it has on cattle is not stated, but it is no doubt due to the quantity of sulphate of magnesium, which will tend to produce purging and diarrhœa. The quantity received was too small for a thorough analysis.

Miscellaneous.

Locality—Temora.

Description of mineral—White crystalline mineral, stained blue and green in places.

On submitting same to qualitative analysis the mineral was found to be silicate of zinc, probably willemite. The colour is due to copper stains.

Mineral for qualitative analysis and said to occur in New South Wales.

Found to consist of sulphides of antimony and nickel, very similar in appearance to a specimen found in South Australia, and presented to the Mining and Geological Museum some five years ago.

Locality—Capertee, near Mudgee.

Description of mineral—A white crystalline mineral.

Found to be an impure sulphate of alumina (alum), containing the following impurities:—Sand, sulphate of lime, magnesia, and a small quantity of alkaline salts.

Two samples of supposed natural dyes:—

(1.) Of a blue colour, slightly soluble in water. On examination this blue colouring matter was found to be ultramarine, a compound of sodium and aluminium silicates, with sodium pentasulphide.

(2.) Of a rose colour, largely soluble in water. On examination this rose colouring matter was found to be rose aniline, arsenic being found present, it being one of the ingredients used in the manufacture of this dye. There was also a large amount of alumina present, which probably owes its presence in the sample to the dye having been mixed up with the ordinary alumina mordant.

The samples are evidently artificial.

Mount Morgan.

(1.) Mineral. On applying the tongue to this mineral it had a slightly acid taste, and on treating some of the mineral with water and filtering, the solution gave a slightly acid reaction to litmus paper. The soluble matter was found to be alum and sulphate of magnesia (Epsom salts).

(2.) Light green-coloured mineral. Colour was found to be due to a silicate of iron and alumina. Mineral insoluble in nitric and hydrochloric acid.

(3.) Pieces of wood taken from the timber used for supports in the Mount Morgan Mine, Queensland, tested for the presence of gold deposited from solution on the wood. The sample was submitted to a careful qualitative test, with the result that no trace of gold was found present. The wood was blackened, the stain in places having soaked through the pieces. This is no doubt due to the action of a salt of iron on the tannin of the wood.

(4.) Ferruginous clay-stone. Examination of colouring material:—A basic sulphate of iron of a yellow colour, nsoluble in water, soluble in hydrochloric acid. On exposing some of the mineral in a glass tube to a low red heat, it acquired the colour of rouge, and sulphurous and sulphuric oxides, together with a large amount of moisture, were given off.

Garnets from Silverton.

Silica	37·41
Alumina	26·81
Protoxide of Iron (Fe O)	33·33
Peroxide of Iron (Fe_2 O_3)	.....
Protoxide of manganese (Mn. O)	2·14
Oxide of Chromium	.. ...
Lime	.. ...
Magnesia	.....
	99·69

Many determinations of the specific gravity of these stones were made, which in every case were found to vary—no two determinations agreeing. Specific gravity from 3·887 to 4·32.

In conclusion, it affords me very great pleasure to submit the following summary of the mineral products up to the end of 1888, the value of which has reached nearly seventy-seven (77) millions sterling:—

Summary.

	Quantity.	Value.	Total Value.
		£ s. d.	£ s. d.

Department of Mines,
Sydney, 24th May, 1889.

HARRIE WOOD,
Under Secretary for Mines.

WARDENS' AND MINING REGISTRARS' REPORTS.

BATHURST DISTRICT—Trunkey Division.

(*T. A. Smith, Warden.*)

I have the honor to forward my report for the year 1888.

Alluvial mining suffered greatly, many claims being idle for months on account of the want of water. There has been no sluicing at all during the year; the rainfall was only 15·21 inches. On the banks of the Abercrombie sluicing has been attempted by means of powerful pumping machinery, but the speculators have not been at work sufficient time to estimate the value of the properties operated upon.

At Grabbine and Junction Point, the proprietors of large freehold properties threw several thousand acres of their land open to the miners, but disappointment has followed; the gold was only found in small quantities.

The returns for quartz-mining have not been very encouraging at Mount M'Donald, Trunkey, Tuena, Oberon, and Mitchell. A considerable quantity of stone has been crushed, but the work has only progressed in a half-hearted manner. Ten times the amount of stone should have been treated with a corresponding increase in the returns. Silver, copper, and lead mines have worked on fairly well for the year. The returns from Mitchell have been considerable, where a large number of men has been in constant work. Cordillera has turned out a large quantity of bullion. Mount Costigan Mine has been in work all the year, but the smelters have only been in blast five months. New and improved machinery is in course of erection, from which much is expected. Burraga, which is a copper-mine, has been in full work all the year. The output could be increased considerably if the proprietary thought fit to extend the works. This mine must be paying as well as any in the Western District.

I think it my duty in this report to call the attention of the Department to the damage done to all rivers and creeks by the diggers washing the sludge into the natural water-courses; for years the water-holes have been destroyed in the creeks, and the rivers are filling up very fast. A drought of a few months duration would not, years back have been felt, as far as scarcity of water was concerned, but now as soon as the rain is over the creeks become dry, the beds having been silted up, and where holes 10 and 12 feet deep used to be found full of water nothing remains but sand and shingle.

A considerable sum from the prospecting vote has been granted for prospecting in this district. I do not anticipate any benefits from the vote. If a discovery is made to benefit the miners it will be at Mountain Run and Swallow's Nest. I would like to see miners paid liberally by the Department when they made discoveries from which permanent benefits are derived. I think M'Guire, who discovered Mount Costigan Mine, and from which discovery thousands of persons have derived benefit, should be liberally rewarded, and every other person who makes similar discoveries; but I do not think any benefit will be derived from the portion of the prospecting vote expended in this district unless in the two instances mentioned above. I am sorry that £1,000 out of this vote has not been given to the Bathurst Gold-mining Company to enable them to put their shaft down 800 feet. This mine was originally worked to a depth of 520 feet, and abandoned. The present proprietors must have spent £4,000 on this mine in sinking a vertical shaft 10 feet by 3 feet, intending to go down 800 feet. This reef was payable from the grass to 520 feet, but was abandoned when expensive pumping machinery became necessary.

I will now endeavour to give you a detailed account from the various mining centres in this district, and attach a schedule by way of recapitulation.

Trunkey.

The Bathurst Gold-mining Company, and the Mount Gray Company are the only two now working the reefs. The former is sinking a vertical shaft to cut the reef formerly worked. £4,000 have been expended by the proprietors who hope to get down 800 feet. The Mount Gray Company, whose property is on the east bank of Grove Creek, a mile below the Abercrombie Caves, is being prospected, and a mill erected on the lease; but returns have not been satisfactory.

Alluvial mining has been a failure, there being no water; only 15 inches of rain for the whole year. Alluvial gold won during 1888 was of the value of about £1,000.

Tuena.

£4,500 worth of gold has been obtained here, all being alluvial.

Mount Costigan.

At Mount Costigan Silver Mine the furnaces only ran for 5 months. During this time silver and lead were obtained to the value of £28,000 from 3,000 tons of ore smelted. The yield of silver being 96,600 oz., and 300 tons of lead. The Company was not satisfied with the furnaces and decided upon erecting fresh ones, which will be completed in about 2 months from this date. The mine worked continuously during the whole year; 13,000 tons of ore are at the furnace waiting treatment, the value being by assay about £32,000.

Cordillera.

Cordillera is also in Tuena district 7 miles south of Mount Costigan. This mine has worked pretty well all the year, 9,000 tons of ore have been treated, yielding 82,800 oz., of silver, 404 oz. of gold, 227 tons of lead, and 220 tons of copper, valued at £37,343. There are 1,500 tons of ore at the furnace ready for treatment, valued at £9,375. Total value of out-put from the mine, £46,718 for 1888. A great deal of prospecting has been done between the Costigan and Cordillera Mines, but up to date no defined lode has been reported; rich leaders have been found in many places.

Peelwood.

I thought when I last reported that this mine would have been in full work months ago; only 24 men are, however, employed.

Burraga.

The Burraga Copper Mine has been in full work during the whole year. The total yield of copper was 499 tons valued at £36,000. The deepest shaft is 300 feet; the lode at this depth is 15 feet wide.

The New Burraga Mining Company is sinking two shafts, and, I have just heard, struck 12 % ore at 40 feet. Although a large area of ground is leased for silver mining, little has yet been found. In gold only £501 worth has been sold locally, and that was obtained at the Isabella River.

Bathurst.

Mining within this division is limited.

Rockley.

Rockley.

A large area of land has been applied for as leases this year, but little work done in prospecting upon the leased land, which is now locked up as securely as if it were freehold; only about 50 men are working. Labour should be enforced for the first year of the lease, so that the ground would be prospected. After that some honest cause might be assigned when seeking exemption from the labour covenants of the leases.

Oberon.

Several gold leases are being worked in this division. The Welcome Home, Luck's All, and Homeward Bound are the principal mines. Valuable machinery has been erected, and I hope good returns will reward the proprietors. At Diamond Hill, near Sidmouth Valley, 50 acres of land have been secured for minerals other than gold. Good returns have been obtained by the proprietors, Wilson and M'Cauley, from large parcels submitted for treatment. I have, however, not obtained a copy of the returns.

Mitchell.

This mining centre has taken a fresh start, with every prospect of permanence. The Sunny Corner and Silver King silver mines have been giving satisfactory returns. The former for the year treated 24,972 tons of ore for 201 tons lead, 309 tons copper, and 1,256 tons matte, which contained 319,324 ounces of silver and 2,300 ounces of gold; total value, £74,209. The Silver King produced 277 tons of matte and 2 tons of lead; bullion valued at £8,200. Gold to the value of about £5,161 has also been obtained here during the year.

Lithgow.

Six gold leases, 3 silver leases, and 36 coal and shale leases were applied for during 1888, the total area applied for being 10,523 acres. Several new coal and shale seams have been opened at Ben Bullen during 1888; this is near the Mudgee railway line and not far from Mitchell. I am informed that coking ovens are being erected at one of these new mines by Wilson, Massey, & Co. I hope the venture succeeds, for if it does coke for smelting the silver ores will recede in price. At Lawson, Gallacher & Co. secured three blocks of 640 acres each to prospect for coal. A bore was put down 1,620 feet without success. The company, however, has started another bore. I hope this time they will be more fortunate.

Mount M'Donald.

Mining on this field has not been very encouraging. A considerable area of land was secured by leasing, viz., 48 gold leases, area 307 acres; and 35 mineral lease applications, the area being 1,760 acres. Fourteen tons of copper were sent from the Old Milburn Creek Mine, which is upon this field. The total quantity of gold obtained at Mount M'Donald during 1888 was only 1,130 ounces, valued at £4,378 15s. Detailed statistics attached hereto.

* Approximate.

BATHURST DISTRICT—ORANGE DIVISION.

(J. T. Lane, Warden.)

FOR the past twelve months there has been more excitement in connection with gold and silver mining than we have had for many years. For some time the mania raged at fever height; nearly every one who could manage by any means to raise a few pounds went into taking up leases or buying shares at Lewis Ponds. Had nothing arisen to damp the ardour evinced in favour of silver-mining, the most hazardous speculations would have been gone into, and in all probability there would have been no end to the perpetration of swindles. The gullibility of the people was so intense that the mere mention of Williams Lewis Ponds in connection with any portion of land being spoken of was deemed sufficient to determine any point at issue touching it. The prestige of this claim, now known as New Lewis Ponds, was fully maintained by the result of the smelting operations commenced on the 3rd instant. The machinery worked beautifully, and not a hitch, that I am aware of, has occurred since. By the second evening some thirty bars of bullion were turned out, weighing 85 lb. each. The operations are still going on most satisfactorily. It is said there is sufficient gold in the silver ores of this mine to pay for the cost of working. If this be so our mines in this locality may reasonably be expected to take a fair place in comparison with Broken Hill, &c. The recent reports *re* Spicers, Toms, and South Lewis Ponds are satisfactory, and I have no doubt the Lily and others are also promising good results, but I have heard nothing of their operations lately. I never attributed the recent depression in the share market to any falling off in the indications presented by the mines which had been fairly tested, but to causes bearing upon the hasty manner in which so many rushed into buying shares, and the natural and subsequent effects resulting therefrom. Everyone who could raise a few pounds bought shares without one due consideration beyond the act. When repayments had to be made, business claims became pressing, and the banks began to put the screw a little tighter, scrip was forced into the market to that extent that it became glutted. And this state of things, through the want of more capital, has continued. We may hope for a more prosperous time; things at any rate will be more stable, and the whole system on a more healthy basis in all its ramifications. "Once bitten twice shy."

Gold-mining operations have not been very successful. At Byng some promising reefs or leads have been discovered on Dr. Codringtons' land, and on the adjoining portions south and east, all of which have been taken up during the past few months. To say more than the above at present would be premature. A short time ago 3 tons from Carangara (Dr. Codrington's) were crushed, yielding 33 oz., equal to 11 oz. per ton.

Ophir.—The Amalgamated Bluff Company which sprung into life out of the ashes of the Company which has kept Ophir in existence for years past, is carrying on operations in accordance with the intentions of its predecessor. The tunnel from near the battery into the mountain to connect the different leases which have or are to be amalgamated, is a great and costly undertaking, and it is to be hoped the spirited enterprise will be rewarded by success in proportion to its magnitude.

There is an inadequate supply of water for extensive operations of any kind just now. Some 50 tons of quartz are "to grass" awaiting the maturity of certain matters. About fifty miners are working an alluvial spot up Lewis Ponds with a fair show of success. Ophir will some day spring into new life and vigour.

Calmla.—Several promising reefs, and some alluvial workings, are attracting some attention here, but in the absence of a fuller development we can only hope that the anticipations will be fully realised.

Forest Reefs.—Nothing is being done here at the present time save at the Grand Junction. The basaltic rock has been penetrated, and the Company purpose going 36 feet deeper before starting to drive. The dip is 4 in 9. The headings or sediment of the old river bed is about 4 feet thick. The timber and portions of the ancient forest are interesting features in connection with these workings. No gold seen as yet.

The Lumpy Company is being re-organized.

The Band of Hope has collapsed after sinking 230 feet, and driving 300 feet at a cost of some £3,000, for want of adequate means to carry on, leaving the claim untried. There is some talk of forming a new Company.

The Great Extended seems to be finally closed after expending about £50,000. The shaft is 236 feet, one drive 2,000 feet, and the main one 2,416. The end of this drive is lower than the bottom of the shaft, hence arose the difficulty of keeping the water under. At this point payable gold was procured, but as it came under private property, and no satisfactory arrangement could be made with the owner, there was no alternative but to close the mine.

Cadia.—Prospecting is still being continued, but with what result I am not in a position to say. No important find has been discovered.

Four Mile.—Here too all hope has not vanished, for some few persons continue to persevere in face of repeated discouragements.

Mr. Murphy will go into figures showing some interesting facts. Nothing doing in copper.

BATHURST DISTRICT—CARCOAR DIVISION.

(Mr. N. Connelly, P.M., Warden.)

I HAVE the honor to forward my annual report of the Carcoar portion of the Bathurst Mining Division.

The yield of gold, as per escort returns, shows, I regret to say, a large decrease upon that of the previous year, 1887.

This is accounted for in a large measure by the stoppage of work for the greater portion of last year at the Brown's Creek Mine, the annual yield from which has seldom been less than 3,000 ounces. The cessation of work has not arisen from any falling off in the quality of the stone, but is understood to have resulted from some disagreement amongst the shareholders, which is likely to be shortly terminated and the mine again placed in full work.

Another reason for the falling off arises in the fact that several of the most valuable and productive mining properties in this district have passed into the hands of syndicates, who mostly reside at Orange, to which town the gold obtained has been conveyed by private hands, and will consequently go to swell the returns of that district.

The

The tremendous season of drought which has not yet terminated here has also been an important factor in the decrease, by causing the almost total suspension of work on many known properties of great value until a sufficient rainfall occurs, notably amongst these is the Old Junction, now known as the Mandurama Gold-mining Company, on whose property water power having been substituted for steam, from this cause work has been almost entirely suspended. This is much to be regretted, as the Company having added at considerable cost to their plant, valuable new machinery, for gold saving purposes would otherwise, no doubt, be reaping the reward of their enterprise.

On a recent visit to Galley Swamp one of the oldest and best proved gold-bearing localities in this district.

I found that work was being prosecuted on the Homeward Bound Company's property with great energy by the local Mining Manager, and that at a depth of 140 feet lodes of a much more permanent and valuable character have been cut, which are said to increase in richness and width as the mine goes down. About 2 tons of stone from this level were at grass, which examined microscopically gives promise of an unusually rich yield, 120 tons of stone taken from this claim before reaching the present levels, and which included 50 tons surface stone, gave the handsome return of 200 oz. The Company's plant consists of a fine new 10-horse power engine, driving the pumping and winding machinery attached most efficiently, and it may be reasonably anticipated that when the new battery is erected for crushing purposes the prospects of this Company will be excellent.

On the next property known as the Great Western Gold-mining Company, late Lam & Co.'s, I found a fine shaft in three compartments securely timbered, had been sunk to a depth of 163 feet, but the pumping machinery, although driven by a 12-horse power engine, owing to its unsuitable character altogether unable to keep the water out of the shaft, so that work may be prosecuted at this lower level. I was informed, however, that it is intended at once to get fresh pumping-gear and commence raising stone as soon as the water is got under. This property is one of the oldest on the field, and has given rich yields before the water level was reached.

At Rowe and Company's which has also been a very rich claim, and one of the earliest worked on the field, the water has also become troublesome, and it is impossible to raise stone until the Tangye pump is replaced by more powerful and suitable pumping-gear, which I was informed will be shortly erected. The battery owned by this Company is the only one on the swamp at present serviceable for crushing.

I think it my duty to call attention to the discovery of what appears to be a most valuable lode of cobalt on the freehold land of Mr. J. A. M'Killop, adjoining the town of Carcoar on the south bank of the Belubala River.

The lode was first discovered on two spurs of the hills which rise abruptly from the river banks, about a ½ mile distant, and some fine samples of this mineral have been raised from two trenches cut to expose the lodes which are distinct and well defined, and have been traced more or less plainly for a ½ mile further south on the same property, where a shaft is now being sunk and valuable ore got out. A trench about 60 feet in length at this outcrop, reveals what appears to be a rich lode of cobalt, ½ a ton of which has been sent to the Melbourne Exhibition, and these pronounced to be of superior quality. In an adjacent paddock the property of Mr. J. O. Dodd, a shaft is now being sunk on what is considered to be a continuation of this cobalt lode.

Mr. M'Killop is also taking out some good looking copper ore from a lode discovered on the river bank, 2 tons of which will shortly be despatched for smelting with a view to test its quality.

The recent Act authorizing mining on Church and School lands, on permit from the Minister, will as soon as a plentiful rainfall occurs, give a great stimulus to mining in this district, as the whole of these lands in the vicinity of Carcoar are more or less auriferous.

BATHURST DISTRICT—Mitchell Division.

(T. G. Wright, Warden's Clerk.)

During the past year there has been a decided improvement in mining at Sunny Corner, in fact the place appears firmer now than ever it has since it first started. The only mines at work are Sunny Corner, which employ 425 men; the Silver King which employ 77 men; the St. George Gold-mining Company employ 29 men; the Bana and Albion Gold-mining Company employ 18 men; the Paddy Lackey employ 6 men. There is also quartz-mining being carried on by F. T. Wolesley on private property, which gives employment to 12 men, and as for any of the other leases which are held no work whatever has been done during the past twelve months.

Sunny Corner Mine is still doing good work, the output from that mine during the past twelve months was,—Sulphide ores raised 13,147 tons; sulphide ores and gossan smelted, 11,826 tons, producing 201 tons of lead, 309 tons of copper, and 1,256 tons of matte, containing 319,324 oz. of silver, 2,300 oz. of gold; total value, £74,209.

The Silver King Mine has been running well for the past three months, doing good work with the water jacket furnaces having treated 2,331 tons of ores, producing 277 tons of matte, valued at £7,940 17s. 6d.; 2 tons of lead bullion valued £183 16s., and 217 oz. of silver valued £32 10s. There has been a deal of land taken up at Dark Corner, no doubt on account of the fine reef that was cut in the Paddy Lackey claim at a depth of 265 ft., 80 tons of stone was crushed out of this claim which yielded 145 oz. of gold.

The Old Homeward Bound has been taken up and formed into a company, known as the St. George, who have erected a crushing plant at a cost of £2,500, 9 tons of stone was crushed which yielded 18 oz. of gold.

Johnson and Shephard, lessees of the Big Hill, have floated it into a company, known as the Bana and Albion, on which they are erecting a large crushing plant.

During the year there was 38 applications for mineral leases, in all 1,112 acres; 22 applications for gold-mining leases, in all 296 acres; there was 236 miners' rights; 79 business licenses, and 24 mineral licenses sold at this office during the year.

Total value of mining plant in the division, £43,860

BATHURST DISTRICT—Bathurst Division.

(W. G. B. Smith, Mining Registrar.)

Turner's battery of 10 stampers on Clear Creek has not been used for over six months, the last crushing of 100 tons yielded about 4 dwt. per ton. The owner is endeavouring to form a company to take same over and provide the most reliable machinery for saving gold.

Grist's battery, 5 stampers, on Clear Creek has not been working lately, principally for the want of water.

Coombes' battery, at Napoleon Reef, 5 stampers, has not been used for the past three years—out of repair.

Percival and party have been working on the old Flat Reef, near Napoleon Reef, for twelve months; they have a large quantity of stone which looks well; they intend sending same away to a machine.

Lynch and party are down about 80 feet on a portion of Old Napoleon Reef; they have a large body of stone with a thick reef, very little gold to be seen in the stone. Thompson and party at Cheshires Creek have been at work continually for the past fifteen months, they are down about 70 feet with a good body of stone, about 2 feet wide, and have about 20 tons ready for crushing; they had two trial crushings of about 5 tons each, which yielded ½ oz. to the ton.

Several parties are prospecting in the Bathurst Division, viz., at the Old Fontana Reef, Napoleon Reef, Bon Ridge, Winbundale, and Clear Creek.

Total value of mining plant in the division, £1,500.

BATHURST DISTRICT—Orange Division.

(Mr. Stephen Murphy, Mining Registrar.)

I have the honor to submit my report for the year 1888.

My collections for that period have been as follows:—

	£	s.	d.
372 miners' rights	158	15	0
9 business licenses	6	0	0
168 mineral licenses	168	0	0
Gold mining leases	172	10	0
Mineral leases	1,944	5	0
Deed fees and stamp duty	80	5	0
Revenue proper	2,529	15	0
Survey fees, &c.,	1,096	10	0
Total	3,626	5	0

It will be at once apparent that there has been a great increase of business during the year, the collections exceeding those of 1887 by £3,037 10s. Quite a rush for taking up land took place in February, March, and April, during which months I was almost constantly employed in receiving applications for leases. During the year 25 applications for gold mining leases have been lodged, representing an area of 224 acres; also 250 applications for mineral leases, representing an area of 7,777 acres, excluding in both cases the area of reapplications for the same portions. The land applied for is situated in the following localities, viz.:—Lewis Ponds, Ophir, Cadia, Byng, Calenla, Summer Hill Creek, Emu Swamp, Mount M'Cann, and the Bulga Mountains.

Bulga Mountains.

In this locality the owners of the Hidden Treasure claim, who have been in receipt of assistance from the Prospecting Vote, have gone to a depth of 120 feet. At the 80 feet level they cut through a lode 12 feet wide consisting of slate, gossan, quartz, and galena, the assays from which were considered encouraging. The claim has, for the present, ceased working, owing to the want of water and to allow time to raise further capital. I may state that the protracted drought has seriously interfered with mining operations throughout the district, water for drinking purposes being very scarce, and no ground sluicing of any moment has been carried on for many months past. Several other shafts have been sunk in this locality, but up to the present nothing payable has been obtained. The general opinion is that the lodes are at a much greater depth than any yet reached.

Lewis Ponds.

The New Lewis Ponds Gold and Silver Mining Company (limited) has been carrying on operations for the greater part of the year. In addition to sinking shafts and raising large quantities of ore, the Directors have expended a large sum of money in erecting costly machinery, including a smelting plant. Smelting commenced at this mine on the 2nd instant, and I am informed that everything is going on satisfactorily. Up to the present, however, I have not been able to ascertain the correct yield. Since writing the foregoing I observed the following report in the *Sydney Morning Herald*:—

The New Lewis Ponds Gold and Silver Mining Company, January 19.—The plat at the 232 feet is completed, and crosscut east driven 20 feet from plat; country intermixed with veins of galena, pyrites, and quartz. A quantity of water making in end of crosscut. The north drive out of eastern winze at 232 feet extended 4 feet; total 38 feet; water heavier, and on account of air being continually bad in this winze, have ceased work until crosscut at the 232 feet breaks through to this level. The north drive at the 157 feet has been extended 14 feet, or 120 feet from eastern winze. No. 2 shaft: The level south has been extended 5 feet; total, 15 feet from crosscut. Machinery working well. Smelting report: From blowing in of furnace, 3rd January to 19th January, smelted 233 tons of ore, producing 9 tonf 2 cwt. 2 qrs. 7lb. of bullion, containing 3,651 oz. silver and 73 oz. gold. Furnace crucible contains 4½ to 5 tons bullion of similar quality. Made 7 tons matte, containing 560 oz. silver and 3½ oz. gold. Shortage in lead and silver largely due to absorption of these metals by the bricks of the furnace, and also to some rich slags run ere the ores thoroughly fluxed, which slags will be gradually resmelted.

The Toms Lewis Ponds Gold and Silver Mining Company (limited) have sunk three shafts, the deepest being 180 feet, and the lode averages 15 feet in width. The estimated quantity of ore raised is 500 tons, and the average yield per ton is 30 oz. silver, 5 dwt. gold, and 10 per cent. lead. Number of men employed, thirty-five.

The Spicers Gold and Silver Mining Company have done a large amount of work during the year, and have a considerable quantity of ore at grass, the assays from which have been satisfactory. The Company is employing seventeen men.

Lucknow.

Lucknow.

Mr. H. W. Newman informs me that in the New Reform Gold-mining Company, a depth of 525 feet has now been reached, the lode varying from 1 foot to 20 feet in width. About 3,000 tons of ore have been raised during the past year, valued at £6,484. The plant is valued at £10,000, and number of men employed 50. The ore after being locally treated and the free gold extracted, is sent to Germany to be further dealt with.

The New Reform Pups under the same experienced management is still carrying on operations. A depth of 225 feet has been reached with a lode 3 feet wide, and about 250 tons of ore have been raised; value of plant £5,000 and number of men employed twenty-five

Forest Reefs.

At this field the Band of Hope Gold-mining Company has for the present ceased work and steps are being taken to raise more capital. The Grand Junction Gold-mining Company (no Liability) is still carrying on operations. At a depth of 205 feet the trap rock has been pierced, and the sinking is now much easier being through a mixture of clay and, what appears to be, volcanic mud. Within a comparatively short time the Directors expect to reach the wash dirt, but the progress of the work is considerably retarded by the constant inflow of water.

Byng.

Work is still being carried on upon the Carangara Estate, owned by Dr. J. F. Codrington, and to which I referred in my last report. The Carangara Gold-mining Company, which leased a large portion of the estate, has been steadily at work during the year, and the deepest shaft is down about 140 feet. At that depth very rich stone with pyrites and carbonate of lime was found, but the shaft had to be abandoned for the time on account of bad air. A new shaft was then commenced, which is now 40 feet deep and said to carry payable gold from the surface. Messrs. Wright and Party have also leased 25 acres on the same estate, and a short time ago they had about 3 tons of stone crushed which gave the very satisfactory return of over 13 oz. of gold to the ton. The whole line of reef dips to the east and this party cut the reef at 30 feet, they then went a few feet deeper and are now driving east to cut the reef again. A large area of Government land has also been taken up in this locality, both for gold and copper.

At Rosedale, about 6 miles from Orange, on the Ophir Road, considerable capital has been expended in testing three mineral leases held by Messrs. Windred, Aaron's and others, and which it is proposed to amalgamate for convenience of working. One main shaft 118 feet and three others respectively 22 feet, 24 feet and 30 feet have been sunk and timbered, various crosscuts have been put in at different levels and two monkey shafts have also been sunk in the main one. At the 116 feet level they are driving north and have penetrated 16 feet in that direction. I understand that the proprietors have had the advice of an expert and that this has guided their operations. For the sake of the plucky owners, and of the district generally, it is hoped that success may reward their efforts.

Cadia.

In this locality the Scottish Australian Mining Company is still carrying on operations, having eighteen men at work, but I have been unable to obtain any further details. At Digger's Creek, near Cadia, Messrs. Spiers and Cross now own the property formerly held by the old Canoblas Gold-mining Company, upon which only two men are at present employed, the want of water has prevented any crushing for some time past.

Ophir.

At this old diggings the protracted drought has seriously affected mining operations. A number of men have taken out miners' rights and I hear that, occasionally, a satisfactory deposit of the precious metal is obtained by one of these fossickers. I regret that I have not been furnished with any particulars respecting the Bluff Gold-mining Company, though I asked for them some time back.

The managers of the local Banks have kindly supplied me with particulars of gold which has passed through their hands during the year, the total being 2,588 oz. 7 dwt. 10 gr. of the value of £7,702 6s. 5d. This does not, of course, represent the whole of the gold produced in the district, a large quantity is no doubt sent to Sydney direct.

The gross value of machinery in the district is valued at £28,000, and the total number of men employed is estimated at fully 500.

I regret that my report is not, in some respects, more complete, but several persons with whom I have communicated have failed to furnish me with particulars.

BATHURST DISTRICT—Blayney Division.

(W. Roche, Mining Registrar.)

I have the honor to submit my annual report of the Blayney portion of the Bathurst Mining District for the year 1888.

The Brown's Creek Gold-mining Company have sunk their main shaft a depth of 50 feet, and after having worked for 3 or 4 months, the water became so troublesome and came in in such large quantities that it flooded the mine and consequently it had to be abandoned; the machinery on the ground not being sufficient to keep the water down. The mine at the time was looking better than it ever had previously.

It is the intention to again work this mine as soon as the legal manager returns from England.

Several other prospecting areas have been taken up on Church and School lands, at Brown's Creek, but very little has been done on them.

The Confidence Gold-mining Company.

The Confidence Gold-mining Company, at King's Plains, have ceased work on their 20-acre lease. The manager states it was on account of the poor returns obtained from the ground, which only averaged 2½ dwt. to the ton.

The plant was sold last month, at Orange, for £1,025. The purchaser intends working this mine as soon as he obtains a transfer from the old Company.

M'Phillamy's Hill Gold-mining Company.

M'Phillamy's Hill Mine is situated at King's Plains. A Sydney Company having leased 200 acres of the property, have sunk two shafts which are respectively 116 and 98 feet deep, and have driven in an easterly direction 114 feet, and in a westerly direction, 98 feet. There are twenty-one gold-bearing veins. They do not know the extent of the lode, they have driven 114 feet, and have not yet gone through it. They are making preparations to erect two batteries and three puddling machines. They intend treating the stuff first with the puddling machines, and what they cannot treat with the puddling machine they intend to crush. The manager states that if the lode only gives 2½ dwt. to the ton, it will be one of the best claims in New South Wales. About ½ a mile from these workings on the flat, they are sinking a shaft which is now down 66 feet, and is 9 by 4 in the clear.

Close to this shaft, some years ago, very rich alluvial was obtained, and has been abandoned through not being able to keep the water down.

This Company intend working the alluvial by means of this shaft and also to use it as a water-shaft, to convey water to the batteries and puddling machines which are situated some ½ mile further up the hill. The water will be conveyed by means of pipes. At present there are twelve men employed, but when the batteries are completed they intend putting on fifty men. A pumping engine will be stationed at the shaft to force the water to the other workings.

Flannagan's Gully.

At Flannagan's Gully nothing has been done for some time owing to the scarcity of water, which is so scarce that there is hardly enough to supply the ordinary necessaries of life.

There have been 132 miners' rights issued and four gold mining leases applied for during the year.

Nothing has been done at the *Annandale Copper Mine* which is situated about ½ mile from Blayney and about 300 yards from the Southern Railway Line.

A small syndicate has been formed to work it, they intend erecting two smelting furnaces if the price of copper keeps up, they believe this mine will pay well as the facilities for working it are so easy.

BATHURST DISTRICT—Oberon Division.

(*J. S. Hayes, Mining Registrar.*)

I have the honor to herewith forward my report of mining operations in the Oberon portion of the Bathurst Mining District for the year ending 31st December, 1888, and in doing so I regret that my anticipations of last year has not been realized. The Homeward Bound Mine was idle during the early part of the year, the proprietors having obtained suspension of labour from the Warden on two occasions. This was owing to the want of proper pumping machinery to enable them to cope successfully with the influx of water to the mine. They afterwards made arrangements to have the mine floated into a Company, which was done. Splendid pumping machinery was very soon erected, but through some unexplained cause the mine is now again at a standstill. This Company hold about 22 acres of land. Mitchell and Party has a 5-acre lease upon the same line of reef, and has 2 shafts down to a depth of 90 feet; but their progress is retarded by the Homeward Bound Company's Mine being idle, thereby keeping these men continually bailing water. The Lucks All Gold Mining Company holds 30 acres on the Lucks All line of reef, about 7 miles from Oberon, and bids fair to go ahead. The Company has recently erected a magnificent Huntingdon Mill with all modern improvements for gold-saving, and pumping upon one of their leases. The stone will be conveyed to the mine by means of a tramway, scales for weighing the stone and hoppers for crushing the same being now complete. Should this Company be successful in striking payable gold, it will give an impetus to mining in this locality. Several persons has been getting small parcels of alluvial gold upon private property, but I have been unable to obtain the result. There has been eight gold leases taken up during the year, representing 115 acres leased; eight mineral leases representing 270 acres leased.

Miners' rights issued, forty-three: mineral licenses issued, twenty; business licenses issued, two.

Total value of mining plant in the division, £4,500.

BATHURST DISTRICT—Mt. M'Donald Division.

(*J. Gunning, Mining Registrar.*)

I have the honor to submit my annual report for the year 1888, and, in doing so, regret that it is not as complete as I would wish, owing to the difficulty in obtaining the results of the crushings from the various claim holders, although I communicated with the principal claim holders, with a view of obtaining the result of their years crushings, only one has favoured me with the necessary information.

I have again to thank Mr. C. H. Forwood, manager of Oliver's Battery, for the valuable assistance he has afforded me, by placing the books of the battery at my disposal from which I have gained all the particulars of crushings.

It will be seen that in some cases the tonnage is not given, this is owing to the fact that the stone was treated at so much per hour instead of per ton as is more frequently done.

The total yield of gold for the year is 1,130oz. 1dwt. 3gr., which is a marked falling off as compared with previous years, but I think may be accounted for by the absence of a crushing from the Caledonian and temporary suspension work on the Balmoral towards the close of the year. The output of gold for the year is made up as follows :—

	tons	oz.	dwt.	gr.
Butcher's claim	86	180	15	23
Balmoral	211	317	17	4
Mathesons	65	83	4	1
Grants	19	43	8	14
Woman's lease	13	14	13	18
Corder's Tribute	44	37	12	11
	438	677	11	23
Oliver Co. (Recrushing sand &c.)		270	10	1
Sundry Crushings (without tonnage)		181	19	3
		1,130	1	3

By

By the above it will be seen that 438 tons yielded 677 oz. 11 dwt. 23 gr. at the rate of 1 oz. 10 dwt. per ton. It is, therefore, gratifying to find that although there is a large falling off in the yield of gold there is no perceptable change in the average quality of stone, and I feel sure that the coming year will see a change for the better. I have issued during the year 129 miners' rights, 19 business licenses, and 22 mineral licenses, representing in value £93 15s. I also received 48 gold lease applications embracing an area of 307 acres, and 35 mineral lease applications covering 1,760 acres. I received in deposits on gold leases and mineral lease application the sum of £316 and £340 respectively, and the total amount received by me during the year is £1,018 10s.

Work was resumed (by Mr. C. J. Campbell, of Sydney,) upon the old Milburn Creek Copper Mine, and although there are not many men employed, the proprietor informs me he has obtained 13 tons 3 qrs. 13 lb. of copper, valued at £975, from the mine. I am also given to understand that a change is likely to be made with a view of further developing the mine.

The proprietors of the Caledonian Mine have disposed of an interest in their mine to some gentleman in Orange, and it is now their intention to erect a 10 head battery with all the latest gold saving appliances near the claim.

At present the Balmoral is being worked by a party of tributors who are raising splendid stone.

In December a party of miners obtained permission from Mr. Stimpson, of Carcoar, to mine upon the old Grabine Estate (freehold) near the Lachlan River, and about 4 miles from Mount M'Donald. The prospectors bottomed at a depth of 14 feet upon what is considered three grains to the dish. No. 1 South is also on same quality of dirt, but the sinking is a little deeper. No. 1 East has bottomed at about 45 feet on three to six grains to dish of dirt—two feet of wash.

The miners are paying £1 per month to the proprietors for the right to mine.

Water is plentiful.

Copper.—13 tons 0 cwt. 3 qrs. 13 lb.; value £975.

Total value of mining plant in the division, £3,250.

BATHURST DISTRICT—Trunkey Division.

(*H. T. Lee, Mining Registrar.*)

The past has been a most disastrous year for mining in this division by reason of the scarcity of water and so much attention having been given to silver and other minerals. In quartz mining at the New Bathurst Company's Mine, Wilson's reef, more satisfactory progress has been made, the shaft, previously too small, had to be enlarged by cutting down. It is now to a depth of 370 feet; size, 10 feet 6 inches by 3 feet 6 inches, timbered in three divisions. It is expected to gain the depth of the old workings at 550 feet, when it is hoped rich gold will again be struck. At Mount Gray, on Grove Creek, the Huntingdon mill does not appear to have been the most suitable for the class of quartz. It is said other machinery is to be erected in the meantime. Shafts and drives are being made so as to explore and test the lode. At Pine Ridge works are suspended for readjustment.

During the year the rainfall, as supplied by Mr. Licensed Surveyor Ryan, was only 15·04 inches.

Miners' rights issued, 149; business licenses, 26; mineral licenses, 30; total, 205.

Twenty-three gold and thirty-two mineral lease applications were issued for an area of 1,577 acres.

Total revenue for year, £925 15s.

Total value of mining plant in the division, £14,350.

BATHURST DISTRICT—Carcoar Division.

(*W. B. Harner, Mining Registrar.*)

The year 1888 was a trying one for the gold-miners in this district. The winter was one of the driest ever known, and the spring and summer have been characterized by extreme drought, thus putting an end for the greater part of the year to all sluicing for alluvial gold. The crushing plants have also been short of water, particularly that at the old Junction claim, which is driven by a turbine wheel. The Brown's Creek Gold Mine has suffered from too much water for some months past, a spring having broken into the workings, completely flooding them. It is feared that it will be some months before the mine will again be in working order. All this has tended to reduce the yield of gold very materially. For 1887 the amount of gold sent down from Carcoar by escort was 8,238 oz.; for 1888, 2,890 oz., thus showing an apparent fall of 5,348 oz. in the yield of gold for the year. This decrease is, however, I am happy to say, more apparent than real, and can be explained thus: The Burnt Yards and the Gally Swamp have been for years (omitting Brown's Creek), the principal gold producing localities in this division, but as I mentioned in my last annual report, the claims in the places have been purchased by syndicates promoted by speculators mostly residing in Orange. The gold now produced is taken charge of by the management, and instead of being brought to the banks in Carcoar, goes to Orange probably to swell the returns of the Orange division, although every ounce of it is raised within about 8 or 10 miles of the town of Carcoar.

During the year twenty-two applications for gold-mining leases were made to me, and six for silver. None of these silver leases are being worked, and very few of the gold. Most of these claims were taken up during the mining excitement with a view to selling out at a profit to syndicates. No fresh finds of gold have been reported during the year, but a very important and extensive lode of cobalt has been discovered within a few hundred yards of the Municipal boundary of the town of Carcoar. The first discovery was made on freehold land, the property of Mr. John A. M'Killop, manager of the Commercial Bank, Carcoar, who had a couple of men prospecting for a copper lode not far from the town. The discovery was accidental, and was made by one of the men when leaving off work. He broke with his pick a weather-beaten piece of rock protruding above the surface of the ground, and noticed that it was quite different from any stone he had yet found. The ground was cleared away from the surface, and in a short time the top of the lode of cobalt was exposed, well defined, between two walls of slatey rock for about 20 yards. Half a ton of this cobalt ore was sent to the Melbourne Exhibition, where it is now on view. Since the first discovery the lode has been opened out in two other places on Mr. M'Killop's land, the last find being more than ½ a mile from the first discovery. In all the places the cobalt lode has been exposed to view clear and well defined. In each the lode seems to run almost due north and south. Following in the same direction but a little further south, Mr. Dodd has discovered the lode on his freehold. A Melbourne firm of merchants, who have examined the ore on view in the Exhibition, have offered

to take 200 tons a month of this ore in its raw state at £45 per ton, but this is believed to be considerably under the present market value. In making the roads on this property to work the cobalt, a copper lode has been discovered, and ore is now being raised and dressed to be smelted at Newcastle. The sinking is close to the Belubula River, and at present is about 25 feet deep. This is the only copper now being worked in my division.

During the year I sold 132 miners' rights, one business license, and thirty-two mineral licenses.

BATHURST DISTRICT—Burraga Division.

(William Ritchie, Mining Registrar.)

Gold.—Owing partly to the very dry season and partly to the demand for miners at the Burraga Copper Mine, the attention has not been paid to gold-mining that the auriferous nature of the district warrants.

Silver.—During the year I have received 31 applications, embracing an area of 1,100 acres, for silver-mining purposes; but up to the present no work has been done on the land applied for.

Copper.—During the year Mr. Lewis Lloyd, the proprietor of Burraga Mine, has given employment to 170 men, who have treated 4,991 tons of ore, yielding 500 tons of fine copper, value £36,000. Eight men are prospecting on Brownlow & Co.'s lease, north of Mr. Lloyd's, and have struck two nice veins of ore, which I understand will be treated by Mr. Lloyd, who is erecting two new furnaces. I have also received 10 applications for leases of land for copper-mining purposes, embracing an area of 200 acres. Of this, 160 acres have been applied for by the New Burraga Copper-mining Syndicate, who have three men prospecting on one of their leases about 2 miles north of Burraga, where they have struck a nice lode of black and yellow copper ore and native copper.

The future prospects for mining in this district are very bright indeed.

Copper, 500 tons; value, £36,000.

Total value of mining plant in the division, £7,000.

BATHURST DISTRICT—Cowra Division.

(B. P. P. Kemp, Warden's Clerk.)

There was a large demand for miners' rights and mineral licenses during the year, and a larger area than usual taken up under mineral lease; but up to the present time it does not appear that anything beyond a few specimens of minerals have been unearthed, and matters now are very quiet again, as far as I am aware of.

BATHURST DISTRICT—Tuena Division.

(Fred. Bell, Warden's Clerk.)

I have the honor to forward herewith my annual report upon the mining industry of the Tuena Division of the Bathurst Mining District for the year 1888.

During the year 382 miners' rights were issued, equivalent to £150; 109 mineral licenses, equivalent to £109; and 123 business licenses, equivalent to £75. 232 mineral leases were applied for, representing 8,120 acres, equivalent to £3,190, and 68 gold leases, 413 acres, equivalent to £520. About 500 men are employed on the different mines in this division, the silver mines giving out more than three-quarters of the labour. The results of the smelting at the Mount Costigan Lead and Silver Mine, and the Cordillera Hill Silver Mining Company will be found on the attached forms. On the whole, the mines of this division are in a flourishing state.

BATHURST DISTRICT—Cowra North Division.

(Wm. Cook, Mining Registrar.)

There is really nothing to report for this division as through the severe drought, the Gospel Oak Battery although erected twelve months have not been able to start crushing, they are now engaged in pumping water to the dam from a spring ½ a mile distant, so that crushing will soon commence which it is believed will give a great impetus to mining around Stockyard Gully.

There has been a few men engaged in the alluvial ground about, a true estimate of the quantity of gold won cannot be obtained, but about 40 oz. is probably near the amount.

The only quartz crushed from this division was a parcel of 30 tons from the Southern Cross, Hogan's Gully, the yield from which 10 oz. 10 dwt. also a small parcel from Sullivan's of 4 tons, which yielded 1 oz. of gold.

What is reported to be a rich copper lode has been discovered at Copper Creek, in the parish of Malongulli, a number of assays have been made, which are stated to have been favourable. A 40-acre lease has been taken up by the finders.

During the year 114 acres have been applied for under gold-mining lease regulations and forty mineral leases.

Total value of mining plant in the division £2,000.

BATHURST DISTRICT—Lithgow Division.

(H. Lumsdaine, Warden's Clerk.)

I do myself the honor to report for the information of the Minister for Mines that there has been continued activity in mining operations throughout the Lithgow division of the Bathurst Mining District during the year 1888.

Prospecting for silver and for coal and shale has been carried on with success and has resulted in the opening of new seams of coal at two localities, namely, two in close proximity to the Great Western Zigzag and two at Cullen Bullen.

The miners' strike which occurred in the Newcastle district during the year gave a short impetus to the trade of the collieries in and around Lithgow; but at the close of the year that impetus was followed by considerable depression.

As

As regards the number of gold and mineral leases applied for during the year and the amount of revenue collected, I have to state that full particulars were supplied to the Warden of the district on the 16th ultimo. The labour conditions, as far as I am aware have been well observed.

On the whole, I believe the state and prospects of mining in this district may be pronounced satisfactory. My inability to leave the office, in consequence of other duties of my position in the public service requiring my daily attention, prevents me from visiting the mines, and so precludes me from furnishing any specific information as to particular indications of ores or as to particular localities in this metalliferous district.

TAMBAROORA AND TURON DISTRICT—Hill End Division.

(W. A. Steel, Warden.)

I have the honor to submit my annual report of the various divisions in the Turon and Tambaroora Mining Districts, under my charge for the year 1888, and I am glad to state that a perceptible improvement in mining matters has taken place during the year.

At Hargraves, the Eureka reef (late Bonds) now owned by the Hargraves Gold-mining Co., valuable machinery, consisting of crushing plant and battery, costing several thousand pounds have been erected under the able managemant of Mr. M'Lellan, from Adelong, and the first trial crushing of stone is about being raised at the Big Nugget reef (within a few yards of where the historic 100-cwt. was found in the early days) owned by a Mudgee syndicate, a large plant and battery has been erected and several crushings have been made, but the result has not been made known. Considerable excitement has recently been caused by the discovery of valuable reefs at Tucker's Hill, about three miles from Hargraves, on the Mudgee road, a number of leases have been applied for, and a company formed to work the Luck's All lease. Sixty gold lease applications have been received at Hargraves during the year, comprising an area of 443 acres, and three hundred miners rights and business licenses have been issued during the same period. Mining has been retarded by the scarcity of water.

Hill End Division—Nothing in alluvial workings has been done worth noting, the Cornelian Gold-mining Co. have continued on with varying success, with the exception of a short interval for want of water. A few nuggets have been unearthed, one weighing 28 oz. pure gold by Ackerman and Myers, in their sluicing claim, Hawkins Hill. The chief and most noteworthy event is the success of the Red Hill Gold-mining Co., Tambaroora, owned by Newton Bros., which has been worked for several years with poor success, partly owing to the great influx of water; the enterprising proprietors however having procured more powerful machinery, they, three months since, were rewarded by striking the reef at a greater depth, and stone has been crushed yielding 7 oz. to the ton, which continues to improve.

Three hundred and twenty-seven licenses and miners' rights, and 33 gold-mining leases have been issued, being an increase on the previous year.

Sofala Division—Considerable activity has been going on in this part of my district, through the discovery of several valuable reefs at Wattle Flat and Spring Creek. At the former owned by a Bathurst syndicate, extensive machinery and plant is in course of erection, and the stone already raised is said to be very rich.

The Queenslander Mine—A valuable discovery has been made by Mr. Morgan, a gentleman of large experience in mining, at Spring Creek, near Sofala, in alluvial workings, which the owners are satisfied will pay well when machinery is erected for specially treating the ore, which is found in unlimited quantities on the surface.

The Tara Mine, which caused some excitement at the time of its discovery, is closed for the present, owing to some disagreement between the owners and lessees.

TAMBAROORA AND TURON DISTRICT—Sofala Division.

(M. Fagan, Mining Registrar.)

I have the honor to forward my report on the mining interest in this division for the year 1888. The scarcity of water, which has been increasingly felt during the past five or six years, has prevailed during the past year, thereby entirely suspending sluicing operations throughout this division.

Notwithstanding the continned dry weather a marked change for the better has taken place in quartz reefing, owing principally to a valuable discovery made by Mr. Thomas Morgan, late of Mount Morgan, at the head of Spring Creek, about 3 miles south-west of Sofala, now known as the Queensland Gold-mining Company's Mine. This mine is undoubtedly a vast mass of auriferous rocks, the extent of which has not yet been ascertained. The face of the hill, comprising the claim, has been opened up by two excavations, one near the road, the other about 100 feet higher up, both of which show a great number of gold-bearing quartz veins, running in every direction, and that is the character of the rock wherever it crops out in any part of the property. The area is about 22 acres, which includes machine site, dam and water rights, &c. A good supply of water is obtained from an old shaft near the battery. The engine in connection with the mine is 25 horse-power, and the boiler 30 horse-power. Both are in first class order, but at present only work ten head of stampers, although capable of doing much more. Intermediate gear and concentrating machinery are now being erected, and as the gold won by the battery pays current expenses, the directors are confident that by the use of these improved appliances upon the large quantity of stone to be treated, the mine will soon become one of the best dividend paying and permanent properties in the Colony. Twenty men are employed on the mine. 500 tons of quartz have been raised, which yielded 120 oz. of gold, value £470 3s. 3d.

Owing to the aid obtained from the Prospecting Vote, the prospector, Mr. George Williams, discovered a payable reef at a depth of 82 feet, on Camey's line of reef, about 1½ miles south-west of Sofala. Great excitement was caused by this discovery and several leases were at once applied for, in consequence of which a considerable increase has been made in the amount of revenue received by me during the year. The prospector applied for a 6-acre lease of the land which he has since sold to a gentleman from Sydney, who has secured an engine site close to the mine, upon which he is going to erect an engine and battery.

Wattle Flat.

Big Oakey Gold-mining Company—Work has been carried on continuously by this company during the year. A shaft, 9 feet by 3 feet, has been sunk from surface to a depth of 200 feet, from the bottom of which a tunnel has been driven 100 feet west and 96 feet east. A vein, 6 inches thick, showing gold freely, has just been cut in the eastern drive. There is a 10-horse power boiler and engine together with complete winding gear on this mine, and £2,000 have been expended in prospecting the Company's ground (15 acres) during the year.

The

The old Caledonian Reef has always been a favourite, and at no time has it been quite deserted; yet, through want of machinery, &c., on the ground, the expenses attending crushing were so great that all the profits have been swallowed up.

In the month of May last, the lease upon which the mine is situated was declared forfeited owing to the fact that the labour conditions had not been complied with. So soon as the forfeiture became known some of the old miners who knew the valuable returns which had been received in olden days, determined to try the mine. Amongst these were Messrs. Roberts and West. So certain of success were they that they applied for a 10-acre lease of the land, and purchased a crushing plant at Crescent Hill, about 16 miles from Tambaroora. The plant is complete and consists of a 20-horse power engine and boiler, 10 head of stampers, all of which are in good order. While the machinery was being removed work at the reef was going on, and the dams have been formed, which, when once filled with water, will contain a sufficient supply for several months. A large quantity of stone is at grass, so that as soon as rain comes no time will be lost in testing the value of the mine.

Solitary Reef, Webb & Co., prospecting party.—The old shaft has been enlarged and timbered a depth of 170 feet, and further sunk a depth of 80 feet, on a vein averaging 1 foot in width. So far the mine has been non-paying, as it scarcely averages 7 dwt. per ton.

Whalen's Hill.—Some very rich specimens were discovered on this well-known hill, by John Holmes, in May last, who has since sold his interest in a 12-acre lease for £1,000.

Quartz Ridge Gold-mining Company.—This is a private company prospecting old ground area 25 acres leased; machinery, 12 horse power engine working a suck pump, winding gear, and ten head of stampers, and wet shaft pipes and pump down to a depth of 180 feet; still sinking; vein at present narrow and non-payable, hard diorite rock; 10 hands employed, also dray and three horses.

Lord Nelson Claim.—This is an extended quartz claim 1,200 feet by 1,100 feet along line of reef prospecting sinking a shaft 120 feet. Motive power, a whip worked by one horse, had several trial crushings of over 200 tons, not payable; now trying for a better run of stone—vein about 8 inches wide. Both of these claims are on the one line of reef, which in olden times returned large quantities of gold, was the first reef worked in New South Wales in 1852. The Honorable G. A. Lloyd having been the Sydney manager for an English Company. The reef was worked to the water level and then abandoned. At one time it supported a large population—two public houses, stores, &c.

Bells and Party, Bullock Flat, have erected an 8-horse power and battery of 5 head of stampers, but, owing to the scarcity of water, have been unable to do any effectual work.

Palmer's Oakey Franks line of Reef.—An extended quartz claim has been taken up on this line of reef by Messrs. Buckland and Franks, in connection with which a small engine and battery has been erected. 18 tons of quartz crushed from this claim yielded 6 oz. of gold. Work has been suspended.

At the Upper Turon, O'Farrell and party and McDonnell and party, have made good wages in their ordinary alluvial claims, on old and abandoned ground.

Razorback Gold and Antimony Company.—This mine is owned by a Sydney Syndicate, and comprises 42 acres of land formerly, worked by M. A. Oppenheimer. The mine is situated about 10 miles east of Sofala. The course of the lode or reef is north and south, and it has a uniform underlay of 1 foot in 2 to the west. The foot wall is a greenish brown diorite; the hanging wall is composed of a hard black slate, much shattered. The lode or reef is composed of quartz and sulphide of antimony with some iron pyrites; the latter lying between the walls and the lode. The gold lies, as usual in all reefs, principally along one wall, and in this case is associated chiefly with the antimony. The reef is very irregular in thickness, varying from 12 to 18 inches in places and opening out to 5 feet. At present engaged in cutting down shaft for the purpose of erecting winding and pumping gear. 10 men employed during the month of December last.

Applications received for gold-mining leases during the year, 84; for mineral leases, 8; business licenses issued, 24; miners' rights issued, 527; mineral leases issued, 13.

The following amount of gold was transmitted per gold escort during the year, viz.:—2,715 oz. 5 dwt. 7 gr.; by other means, 339 oz. 8 gr.—Total, 3,054 oz. 5 dwt. 15 gr. Value of same £11,495 19s. 4d.

Total value of mining plant in the division, £5,100—a return of which is herewith attached.

The following shows the owners of several parcels of quartz obtained from various veins in the division, and treated at Mr. Webb's Mill, Wattle Flat:—

	Tons.	oz.	dwt.	gr.
Joseph Gittens	2	1	18	0
J. Bonfield	10	9	11	0
F. Dowling	2	1	13	0

Aid

Aid from the Prospecting Vote of 1888 has been granted to the following parties in this division:—

Thomas Crawford and party, Allendale, to continue the old 40-foot shaft a further depth of 160 feet.

Dowling, Lee, and party, Magenta Reef, to continue their present 60 feet shaft to a further depth of 100 feet.

Louis Balsom and party, Dead Horse Reef, to sink a shaft from surface to a depth of 100 feet.

Webb and party, Magenta Reef, to drive 50 feet each way from the bottom of their 250 feet shaft.

Wm. Heagney and party, Bullock Flat, to sink a perpendicular shaft at a point one chain westerly from the last vein, to a depth of 200 feet.

H. Brees and party, Swedes Hill, to sink on the north-eastern reef to the depth of 150 feet.

Stephen Swain and party, Caledonian Reef, at Big Oakey Creek, driving into the hill for a distance of 150 feet.

Hendrick, Ellis, and party, Butcher's line of reef, to drive a tunnel for a distance of 250 feet.

The Big Oakey Gold Mining Company, Surface Hill, to drive an additional 200 feet from the bottom of their 200 feet shaft.

Elliott and party, Cemetery Hill, to sink from surface on the underlay to a depth of 50 feet.

Foskett and party, Nuggetty Hill, to sink a shaft from the surface to a depth of 100 feet.

Hyland and party, Trappett's Hill, to sink a shaft on the underlay of the reef.

TAMBAROORA AND TURON DISTRICT—Ironbarks Division.

(J. Shillington, Mining Registrar.)

I have the honor herewith to submit my annual report for the Ironbarks Division of the Tambaroora and Turon Mining District for the year 1888.

At the commencement of the year several reefs were being vigorously prospected, some with encouraging prospects, but the limited rainfall during the year has caused work to be suspended in several mines. Two batteries of 20 stamp-heads and one of 5 stamp-heads have been erected during the year, also large dams for conserving water for quartz-crushing, but at only one dam is there any water. At several reefs considerable quantities of quartz await crushing (until sufficient rain falls to put water in the dams) the yield of which will determine whether the quartz contain gold in payable quantities, which result is looked forward to with considerable interest. Some of the reefs have been prospected to a much lower level than formerly, but as yet only one shaft (at Specimen Hill) has reached a depth of 200 feet.

During the year 65 application for gold-leases were received for land aggregating 498 acres and 6 applications for mineral leases were received for land aggregating 240 acres.

407 miners' rights, 27 business licenses and 36 mineral licenses were issued during 1888.

TAMBAROORA AND TURON DISTRICT—Hill End Division.

(T. Purcell, Mining Registrar.)

I beg to report for your information on mining operations in my division during the past year, and I am sorry to say it is still on the decline, although the revenue is larger than the previous year. On Hawkins Hill, the Cornelian Gold-mining Company are still at work, although they had to knock off for some months for want of water, the season has been so extremely dry. Mr. J. W. Marshall, the manager, has kindly supplied me with all information in his power. They have crushed during the year 1,400 tons of quartz for a trifle over 207 oz. of gold; this has been taken from a blow of quartz ranging from 15 to 50 feet wide. There are only three or four other parties working on Hawkins Hill, none of which, I am informed, are making wages. Messrs. Newton Bros., Red Hill, Tambaroora Mine, has been constantly at work during the year, but has had great difficulties in contending with water, principally, I am informed, through the machinery not being powerful enough. They struck very good stone two or three months ago, but I have not been able to get the particulars, as Mr. E. Charlton, the manager, declines to give any information to the department. The few other quartz claims worked by the miners on their own account have not been payable.

A considerable quantity of land has been applied for under lease at the Root Hog, Macquarie River, by Messrs. Barclay and Carrington, of Sydney, and others, who have put on from fifteen to twenty men at once to work the ground. They have had two or three crushings, but I am informed it was not payable. Mr. H. F. Wilkinson, the manager, informs me they are going to put up a battery of their own on the ground.

In alluvial there has nothing new been found, and, as a matter of course, the old ground is getting poorer every year.

I have issued 315 miners' rights, as against 302 the previous year; 12 business' licenses same as previous year; 7 mineral licenses, none previous year; and 33 gold-mining leases, as against 15 the previous year. The revenue collected from all sources under the Mining Act at this office was £481 2s. 6d. for the year.

I am sorry to say none of the parties to whom aid was granted out of the Prospecting Vote struck payable gold during the year. I have not been able to get the returns of gold sent from here during the year. Since the gold escort was abolished it goes through various sources to the Mint, and is kept for obvious reasons very quiet.

Total value of mining plant in the division, £18,500

MUDGEE DISTRICT—Dubbo Division.

(Mr. W. S. Caswell, P.M., Warden.)

I have the honor to make the eighth annual mining report for this subdivision of the Mudgee District for the year 1888.

The mining interest at Tomingley and Myall, owing to the want of water, has received a check. The gold won from the year 1884 had increased from about £4,000 per annum to £10,000 in the year 1887. For 1888 it had fallen as low as £3,000; the total won, so far as I can ascertain, being about 767 oz.

The

The population at Tomingley and Myall remains about the same, 250; but 8 miles south, at the new rush in Madden's selections, there are about another 100 persons. The Public School attendance and business establishments continue the same as last year.

The water supply has been deficient for all purposes, the new Government tank has never yielded any. The residents depend on the Springs near Tomingley.

Crushing machines.—The 3 crushing machines are thus distributed:—1 at Tomingley, 1 at Myall; the third has been removed from Tomingley to Ten-mile Ridge. The last has not been at work since its removal.

Miners' rights issued at Tomingley:—Miners' rights for 1887, 52; for 1888, 149. Business licenses, for 1887, 7; for 1888, 8.

Miners' rights issued at Dubbo:—Miners' rights for 1887, 63; for 1888, 86. Business licenses for 1887, 1; for 1888, 1. Mineral licenses for 1887, 7; for 1888, 42.

Tomingley Reef.

Prospecting Claim, late Tattersall and Hayes, has been abandoned since last report.

No. 1 *North.*—Croft, Reakes, and party crushed during the year 60 tons of quartz for 17 oz. 8 dwt. They have 25 tons of stone at grass. Reef looking well at 190 ft. deep, and at lowest level 5 ft. wide.

No. 2 *North.*—Crowhurst and party crushed 43 tons for 18 oz. 5 dwt. They have 130 tons at grass, estimated to yield ½ oz. per ton. Shaft lowered from 140 ft. to 175 ft., with width of vein at that depth of 3 ft. 6 in.

No. 3 *North.*—Late Richmond and party—now Centennary Company, of Orange—crushed 150 tons of stone for 25 oz. of gold. They have 150 tons of poor stone at grass. The depth of working is 70 ft.; width of reef, 10 ft.

There is only one battery now in Tomingley—the Centennary Co.'s—the other crushing plant having been removed to Ten-mile Ridge.

The want of water has completely paralysed mining on this reef, only one claim having been worked for nearly five months.

Myall Reefs.

Spare ground.—Mooney and party have raised 70 tons of stone for 81 oz. of gold. The depth of shaft has been increased from 120 ft. to 140 ft.; the reef being 12 ft. wide. They have 25 tons of stone at grass.

No. 1 *North.*—Mooney and party have crushed 498 tons of stone for 626 oz. of gold. The shaft is 140 ft. deep, with width of reef 12 ft.

These two claims have been on suspension of work for five months for want of water. The owners have been particularly unfortunate, for, although the appearance of the reef is even better than it showed last year, they only raised 568 tons in 1888, as against 2,000 tons in 1887, being little more than quarter of the last-mentioned year's raising.

The proprietors have sent to England for treatment 75 tons of stone, and 25 tons of tailings, as a sample to induce the formation of a large Company, and should their hopes be gratified, the venture must tend to develop the mining interest of the district generally.

Ten-mile Ridge.

There has been some prospecting in this direction, but owing to want of water, no mining of any consequence. The crushing machinery, owned by Martin Moore, purchased from the United Star Co., and removed from Tomingley to the Ridge, has been idle since its removal for the same reason.

The New Rush.

This rush, which commenced on the 5th of last November, owing to the discovery of alluvial gold by Mooney and party on Madden's conditional leasehold, No. 9, situated about 9 miles south of Tomingley, and 3 miles west of the Parkes Road, and 11 miles north-west of Ten-mile Ridge, has caused considerable excitement in the neighbouring gold-mining districts. There were at one time as many as 500 people on the ground. Most of these, the majority of whom were not *bona fide* miners have left—very few having ever worked. There are still 100 persons on the ground. No washing has been effected owing to want of water. Twelve claims have bottomed on apparently good stuff. The nearest water is at least 4 miles distant on the Bogan River, and even there it is not sufficient for mining purposes. Water carts supply water to the miners from the Bogan and Tomingley at 3d. per bucket. The depth of sinking varies considerably; it is through tenacious red and greyish clay, from 40 ft. to 140 ft. The wash is from 1 foot to 3 feet, and very heavy; driving is safe and easy.

Most of the claims are on Madden's leasehold on conditional purchase. He has demanded payment, and in some cases obtained it from the miners for occupation of his land; and as he has appealed to the Dubbo Court in some instances for trespass, I have deemed it my duty to suggest the cancellation of his holdings. The field cannot be thoroughly tried until there has been a fall of rain. There are several reefs on Madden's property, on one of which a claim has been worked, and 30 tons of stone, supposed to contain 1 oz. of gold per ton, placed at grass.

Copper.

The works at Girilambone Mine are still suspended.

What appears to be a valuable lode has been discovered near Geurie Railway Station, between Wellington and Dubbo, Mr. Rowles, one of the proprietors, has favoured me with a report hereto attached.

Rose Hill Copper Mine.—Consists of 50 acres and is situated on a conditional purchase in the Parish of Muketa Mulga, County of Lincoln, about four miles south of Geurie Railway Station, on the Western Line. Three shafts have been sunk of the respective depths of 25, 40, and 90 feet. The two first show blue carbonate stains very freely. The 90-ft. shaft follows the lode which is well defined. The proprietors have for the present stopped work until they receive a report of the smelting of 4 tons of ore at Newcastle. The lode is 2 ft. 6 in. thick, consisting principally of yellow sulphide of copper ore, which, in various assays, has ranged from 18 to 30 per cent. of metallic copper with traces of gold and silver. As soon as the result of the smelting is known work will be resumed and a new shaft put down perpendicularly, as at present, owing to the shaft following the dip of the lode, there is great difficulty in bringing ore to the surface. The proprietors resident in Dubbo are Messrs. Nancarrow and Rowles.

Coal-mining

Coal-mining.

I attach reports hereunder of the progress and development of the coal-mining interest.

The Managers of the Great Western Coal-mining Co, the Dubbo Coal-mining Co., and the Spicer's Creek Coal-mining Co. have all favoured me with reports which I attach as part of my annual report.

Great Western Coal-mining Company (No Liability).

This Company is divided into 24,000 shares, held by about 30 shareholders principally resident in the District of Dubbo. The Company's property consists of 1,280 acres of minerally conditionally purchased land at Ballimore, on the Talbragar River, about 23 miles from Dubbo, and the Company have expended £3,000 in boring for coal with a Government Diamond Drill. Two bores have been put down.

In the first a seam of good coal, 5 ft. 2 in., was found at a depth of about 550 feet, and under this a very valuable artesian mineral spring was tapped to which the Company have put down 3 inch piping, and the water is now running away through a reduced pipe at the rate of 1,000 gallons an hour. The overflow is very beneficial to the stock, and perceptibly increases the volume of water in the small river Talbragar.

The water has been analysed by the Government analyst and others, and is said to contain many valuable ingredients, some of which are sodium potassium and traces of lithia. Experts have pronounced the water to be very like the Vitchy, French water, and equal to many continental waters. The Company contemplate erecting a large hotel with a view to establishing the spring as a permanent watering place.

Smaller seams of coal have been met with in both bores. The second bore was put down to a depth of 1,100 ft. when discontinued, but the shareholders are sanguine that at greater depth they will meet with more success.

Report of Mining Manager of Dubbo Coal-mining Company.

The Dubbo Coal Mines are situated on the Talbragar River east of Dubbo, about 20 miles, and about 14 miles from the nearest point of the Great Western Railway, three shafts have been sunk on the property, in all 420 feet. Tunnelling about 120 feet.

About 50 tons of coal have been raised, part of which was given to the railway as a trial, which proved very successful, several seams of coal have been cut in the sinking, ranging from 1 ft. 6 in. to 5 ft. 10 in. At present the mine is laying idle, awaiting the inspectors' report as to the improvements, the inspectors have just reported, and the Land Board have recommended the approval of the inspectors' report, which is as follows:— On 980 acres of land, the amount expended is £2,107 10s., over £2 per acre, the Company will recommence operations on the mine as soon as the certificates of conformity have been issued; on the Company's property there is 15 ft. of fire-clay running through the mountain, the fire-clay is of a superior quality, the property is on the bank of the Talbragar River with a never failing supply of water. The above land was taken up in 1883, the land is well timbered with ironbark, box, and pine."

Although mining has not been as profitable in 1888 as in the previous year, there is nothing to make miners despond, there is no deterioration in the value of mining properties. The mining interest, like the grazing, has suffered chiefly from the dry season; with a favourable change of weather, gold-miners have nothing to fear.

MUDGEE DISTRICT—Wellington Division.

(*F. Marsh, Warden.*)

I have the honor now to forward the accompanying reports from the mining registrars of the Wellington Division of the Mudgee and the Ironbarks Division of the Tambaroora and Turon Mining District, with detailed particulars of the several workings, &c., in both divisions for the year 1888.

Many of the remarks contained in my report of the 18th January last, for the year 1887, referring to the extent and value of the copper and gold-fields surrounding Wellington and Ironbarks, are of course applicable on the present occasion. But, unfortunately, there is no ignoring the fact that the prolonged and very severe drought now prevailing has materially interfered with the prosperity of the mining interests generally.

With a thorough (and what would be hailed with joy by all) change in the weather, and a rainfall that would be sufficient to allow of mining operations being carried on continuously, I am sure that very much more valuable results would ensue than what appears in the enclosed papers, as both the divisions named are rich in mineral resources.

The details, as I have remarked, are shown in the accompanying return, and, considering the severe nature of the drought, show that, notwithstanding such adverse circumstances, a fair amount of gold, copper, &c., has been won during the year.

In passing, I may note that the powers conferred under the Crown Lands Act of 1884, to dig and search for gold on alienated lands within proclaimed gold-fields, and to remove minerals, &c., are being better understood by the mining public, and advantage is being taken accordingly of the privilege.

In closing, and irrespective of my special report on the subject, I may remark that my inspection of the Buckinbah Yeoval Gold-field in October last, where a rich discovery of alluvial gold was reported to have been found, proved that the report had no justification whatever, and I may now say that the appearance of such a report was very severely criticised and condemned by several of the western newspapers.

MUDGEE DISTRICT—Hargraves Division.

(*T. O'Brien, Warden's Clerk.*)

In submitting my annual report I have the honor to inform you, that, during the year ending 31st December, 1888, I received sixty applications for gold-mining leases, all of which were surveyed within the last three months.

The Big Nugget Gold-mining Company, to which a grant of £527 10s. has been sanctioned from the Prospecting Vote, enlarged their prospecting shaft from the surface to its present depth, 172 feet. This shaft is not 189 feet deep, as was at first represented. The machinery attached to the Big Nugget consists of an 8-stamper battery, a winding and a pumping engine, the whole being valued at £5,000. No quartz have been raised from this shaft, and the labour conditions have not been fulfilled since the 2nd December last. The Company should be compelled to comply with the labour conditions, or show cause why their leases should not be cancelled.

365 tons of quartz, averaging 8 dwt. to the ton, were crushed for various persons by the battery attached to the Big Nugget shaft.

The Hargraves Gold-mining Company Limited formerly known by the name of Eureka, has 15 men employed in sinking a shaft and in erecting machinery thereon. The machinery is valued at £1,600. The shaft is now 100 feet deep, and the shareholders express their intention of having it continued to a further depth of 500 feet.

The Queen of Shebah, situated near Maitland Bar, and owned by Wilton and party, has been sunk to the depth of 95 feet. The last 3 tons of quartz raised and crushed from this claim yielded 2½ oz. per ton.

The proprietors of the Clarke's Creek Claims, Catherine and Crystal Palace had a considerable amount of work done in the early part of the year. The Catherine crushed 50 tons with a result of 18 dwt. to the ton. The Crystal Palace crushed 8 tons, which yielded half an ounce to the ton. The machinery, belonging to the proprietors of the Catherine and Crystal Palace Claims consists of a 10-stamper battery, iron frame, a wheeler pan, two concentrators, copper-plates, 24 ft. blanket tables, with pumps for supplying water to the battery from the dam built in the creek, also a 6-inch cylinder Tangye pump, and a 14 horse-power engine and boiler. The whole is valued at £4,000. 100 tons of quartz, yielding from 12 to 25 dwt. per ton, were crushed for various small holders in the vicinity of Clarke's Creek.

Alluvial.

Many of those miners who have been engaged for years in alluvial mining in this locality were obliged to seek other employment on account of the scarcity of water occasioned by the drought. The pug-mills and sluicing claims had also to be abandoned through the same cause.

266 miners' rights, 24 business licenses, and one mineral license were issued by me during the year. Taking into consideration the number of leases for which application has been made, and the amount of capital which the applicants state they will expend on their holdings, I believe that mining matters will be in a flourishing state during the year 1889, and hope, therefore, to have the pleasure of furnishing a better account of this locality in my next yearly report.

MUDGEE DISTRICT—Mudgee Division.

(R. H. Acheson, Mining Registrar.)

I have the honor to submit in the following my report for the year 1888 on the mining industry of the Mudgee Division of the Mudgee Mining District.

Generally, mining has improved on its condition in 1887, as instanced in the number of leases, principally mineral, taken up here in 1888 as compared with 1887. These leases are mostly in the region of Boobolar in the county of Phillip, and were taken up for silver-mining. From the first they proved well, but as the lessees intend developing them with outside capital, not much, so as to judge of their value, has been done on them as yet.

Gold-mining in the division has been greatly retarded by the want of water. Limestone Creek still maintains a small mining population on its alluvial workings, where, during the year, several small nuggets of from 4 to 10 oz. were found.

Roberts and party are still working their lease on and adjoining hill, but pending the erection of crushing machinery, no reliable estimate of the yield can be obtained.

At Merrendee, Crossing and party are in possession of some ground worked in earlier days, but not much has come of it yet, but they are sanguine of ultimate success. This party is in receipt of aid from the Prospecting Vote.

Mullamuddy and Apple-tree Flat yet retain their mining inhabitants, who, during the year, have done fairly well.

In 1888, I sold 309 miners' rights, 59 mineral licenses, and 5 business licenses.

The local banks purchased 3,943 oz. of gold during the year, and I understand that quite 2,000 oz were sent from the district by private purchasers.

MUDGEE DISTRICT—Wellington Division.

(A. G. Chiplin, Warden's Clerk and Mining Registrar.)

I have the honor to herewith submit my annual report for the year 1888.

Since my last report mining in this division shows some signs of improvement; copper being the mineral most sought after.

Portions of the Wellington Temporary and Permanent Common, situate to the east and south of, and overlooking the town, were some years ago pegged out, and applications made for leases of same.

These applications were refused, and the ground in consequence was abandoned. Some eight or nine months ago the land was again pegged out, and rich assays resulting from test of the ore found, a good portion of the common was soon taken up under mineral lease and mineral license regulations, 780 acres being applied for under mineral lease regulation during 1888. None of these mineral lease applications have yet been approved of, but a good deal of work has been done in some of the claims in the matter of raising ore. The principal claims are, the Syndicate Claim, Lindberg & Co. Claim, and the Apsley, all of which are doing good work.

The Wilkinson Mine, situate near the Caves, is also raising ore. A smelting furnace has been erected by a Company at a cost of £450, and the ore from the Lindberg and Apsley claims has been tested, with very poor results, only very little copper being obtained from several tons put through the furnace, and that obtained being mixed with slag. The prevailing opinion is that the furnace is defective. However, operations, which had been somewhat retarded by these unsatisfactory tests, have again commenced, and fresh tests will shortly be made, with, it is anticipated, better results.

The Belara Mines, situate at Goolma, where no smelting was done in 1887, have this year raised 1,400 tons of ore, 840 tons of which have been smelted, giving a return of 70 tons of copper, valued at £5,250.

At Sugarloaf, in the parish of Galwadgere, the leases formerly held by Backes and others, have again been applied for. In

In gold-mining the principal work done has been in alluvial mining, as will be seen from the gold returns, and has been carried on in the beds of the Macquarie and Mudgee Rivers and their tributaries.

The gold returns, kindly supplied by the managers of the Bank of New South Wales and Commercial Bank, show that 595 oz. 5 dwt. 16 gr. were obtained during the year from alluviums and 27 oz. 12 dwt. 12 gr. from quartz.

The old Mitchell's Creek Mine, which has been idle for some years, is to commence work almost immediately, and, as there is said to be plenty of payable quartz obtainable in the neighbourhood, a revival in quartz-mining may be looked for.

During the year 29 mineral leases were applied for and 4 gold leases.

Miners' rights issued during the year, 97; business licenses, 1; mineral licenses, 72.

MUDGEE DISTRICT—Tomingley Division.

(*R. Bell, Mining Registrar.*)

Tomingley.

During the past year mining has been almost at a standstill at Tomingley and the Myall in consequence of the great scarcity of water, there only being sufficient for domestic purposes.

At the beginning of the year there were two good crushings at the Myall, viz., No. 498 tons for 626 oz. gold, and the spare ground, 70 tons for 81 oz. All work at the Myall has been suspended for the last five months.

At Tomingley the quantity of gold won has been very small, viz.:—

No. 1—Croft and party crushed 60 tons for 17 oz. 8 dwt.

No. 2—Crowhurst and party crushed 43 tons for 18 oz. 5 dwt.

No. 3—Contencry Company, of Orange, crushed 150 tons for 25 oz.

Total—60 oz. 13 dwt.

There are two batteries, one at Tomingley and one at the Myall.

There has been little or no mining at the Ten-mile Ridges during the last year, but Mr. M. Moore purchased the battery formerly owned by the United Star Company, Tomingley, and had it erected at the ridges, but in consequence of the drought has not been able to do any crushing yet, but about 50 tons of very fair stone is now at grass. A rush set in on the 5th November last on a conditional lease owned by Geo. Madden, about 9 miles south of Tomingley, but up to the present nothing of any importance has been found, and with the exception of the prospecting claim no other claim is on payable gold. There are at present about 100 men on the field, and it will not be properly tested until heavy rain falls.

The population of Tomingley is about the same as in 1887, namely, 200 persons, and with the new rush and the ridges would be about 350 persons. The average school attendence is 38; hotels, 2; stores, 2; butcher, 1; baker, 1; blacksmith, 1.

The number of miners' rights issued for 1888 was 149; business licenses, 8; mineral licenses, 4.

Total value of mining plant in this division, £3,000.

MUDGEE DISTRICT.—Gulgong Division.

Mining matters in the Gulgong portion of the Mudgee District have been very dull during the last twelve months. The prolonged drought prevailing over this part of the country has had a most depressing influence both on mining and agriculture; and should there be no rain within the next week or two, the outlook for the coming winter will be very gloomy indeed. In regard to gold-mining, little has been done during the past year. None of the prospecting parties receiving aid from the Prospecting Vote have been successful in finding gold. Some of the localities prospected looked very promising and merit a further trial, when more money is available for the purpose.

At Scully's claim, on the Black Lead, work has been carried on during the greater part of the year. The plant is very complete and in good working order. It is the only claim at present being worked by machinery in the Gulgong District.

The old White Horse claim on the Nil Desperandum, has ceased working. This claim was worked for some time by a party of miners with very good results, who received from the late Company the sum of £2,000 as the price of the mine. The Company erected machinery, and have been working for the last three or four years, but have at last given it up in consequence of the difficulty and expense of sinking through the limestone. The machinery has been taken down and sold, the slabs drawn from the shaft, and the ground is now deserted—never, in all probability, to be worked again.

At Tallawang, near Clough's Gully, Chappell and party have taken up a lease for the purpose of working the cement. Mr. Chappell has erected machinery for crushing the cement, but owing to the want of water, he has been unable to treat the material on the ground, and he is now waiting for a good downpour of rain to fill his dams and enable him to prove whether his undertaking will be as successful as it deserves to be.

At Canadian, Home Rule, Cooyal, Two-mile Flat, Slashers Flat and the rest of the Gulgong Goldfield, there is no work of any importance going on at present; but there are a number of miners scattered over the country, who all manage to make a living, and some of them appear to be in fairly prosperous circumstances.

At Ford's Creek, about half way between Mudgee and Gulgong, several leases have been taken up for the purpose of working the antimony which was lately discovered in this neighbourhood. Several parties are at work, and, I am told with very favourable results.

At Denisontown a number of leases for silver-mining have been applied for during the past year. Great hopes are entertained by the parties concerned that this will turn out a successful undertaking, and if so, it may possibly have the effect of reviving the mining industries of this district. At the present time the Mount Stewart Mine is the only one working. Some very good samples of ore have been obtained, and the shareholders seem to be well satisfied with their prospects.

There has been 228 miners' rights, 40 mineral licenses, and 12 business licenses, issued from this office during the year 1888, and 53 applications for leases have been received during the same period.

The amount of gold purchased by the banks for the year ending the 31st December last is 1,268 oz. 15 dwt. 16 gr.

MUDGEE DISTRICT—Dubbo Division.

(W. J. Martin, Mining Registrar.)

I have the honor to submit my annual report for the Dubbo Mining District for the year ending the 31st December, 1888.

19 mineral lease applications have been lodged in this office during the past twelve months principally for permission to mine for silver and coal. The land is situated at Spicer's and Mitchell's Creeks about 30 miles along the Mudgee Road and north-east of Dubbo, but as far as I can ascertain no men have been employed thereon. Two of these applications have been for permission to mine for hematite ore, but, as is the case with those before mentioned, no men have been employed. At Black Hill, situated about 20 miles south-east from Dubbo, and near Ponto, about 14 men are now mining for silver, these I believe are the only miners actually at work in my district.

I have sold during the year 86 miners' rights, 42 mineral licenses, and 1 business license, which were principally supplied to men going to the late rush at Tomingley just outside my district.

LACHLAN DISTRICT—Forbes, Parkes, Molong, Grenfell, Cudal, Canowindra, and Condobolin Divisions.

(E. A. Sharpe, Warden.)

I have the honour to submit for the information of the Honorable, the Minister for Mines, my annual report for the year 1888.

Forbes.

After being abandoned for many years, the Britannia Reef, which is about half a mile from the town of Forbes, and in close proximity to the once famous South Lead, has been taken up; and a considerable area, about 30 acres, leased by the new company—who are mostly local men, and well acquainted with the reef they are working. A good crushing plant and gear has been erected on the mine, and the last crushing lately cleared up gave a yield of nearly 1½oz. to the ton. As the reef seems to improve with depth, a shaft is now being sunk to cut the underlay at about 150 feet. At the present rate of sinking, one foot per day, that depth will be reached early in February, and I am informed that the next crushing is expected to give a return of 2oz. per ton. The Britannia has well defined walls, and is about 2 feet wide. I have seen some of the stone, and if in quantity, the return should be very handsome.

The Pinnacle Reefs, situate about 20 miles from Forbes, between that town and Grenfell, are being worked by Messrs. Nicholas, Raymond, and party. They have been working their extended quartz claim for I think about 2½ years, and although the stone is poor, there is plenty of it. The reef is, I am informed, 11 feet wide in places, and has averaged half an ounce per ton. A good battery has been erected close to the claim, and when I last saw it a large quantity of stone was ready for crushing, I think over 600 tons, but the dams were all dry, and have unfortunately been in that condition for many months past. Stone is still being raised, and the quartz mill will be kept busy for a long time when once the dams have a sufficient supply of water. I am informed that it was proposed to float this mine into 30,000 shares of £1 each. This seems a large sum, but I think with such a large body of stone, which seems to improve with depth, a larger battery, and the mine properly opened out, the returns, judging by those obtained by Nicholas and party, should soon yield the shareholders a handsome profit. A trial crushing of a large number of tons was offered, but the attempt to float was not successful, and perhaps it was a fortunate thing for the present shareholders that it was not, as the stone seems much improved in quality. I saw some very rich stone taken from below the water level, gold showing freely all over the honeycombed face, and apparently right through the heart of the stone.

At Stricklands Reef, a company called the Metropolitan put up a valuable crushing plant called I think, a Huntingdon battery, erected a valuable dam, and it was expected a very large blow of stone would prove payable; but it did not, and I am informed the battery is for sale. The Eldorado Company whose mine is about 2 miles from the battery, have, I believe, the plant under offer, and it will be a good thing for the district if the sale takes place. The truth is, the Metropolitan Company's reef was not properly proved, and this should have been done before the expense of a battery was incurred, and then the shareholders might have had some return for their money, instead of probably a heavy loss. If the battery remains where it is, I have no doubt claims will be taken up on the old reef, and its value proved beyond a doubt. Before the company came the return from various places on the line showed a yield averaging half an ounce. It would be a curious thing if this stone cannot be found again. A lot of 80 tons, mostly rubble stone from the surface, has just been put through the machine by the Eldorado Company, the yield from this was about 10·oz. They are now raising stone from the solid reef, which is said to show gold freely. The crushing battery I have mentioned as having been erected by the Metropolitan Gold-mining Company differs entirely from the ordinary stamper battery, and perhaps a short description of it will not be out of place in a report of this kind. The stone to be crushed is thrown into a stone-crusher where it is broken to the size of road metal or smaller if required. It then passes through a shoot into a round barrel containing four revolving crushing wheels, these crush the stone very fine, and it has to pass through a very fine grating with oblong instead of round holes, I think about 250 to the inch. The tailings then pass over tables with blankets and copper-plates. And below this again there are shaking tables with india-rubber belts to save the pyrites. It is called "Freres' Ore Concentrator." Perhaps the working of the battery is not sufficiently understood, but it seemed to me that the quantity of stone put through in a week was small. I was informed that from 50 to 60 tons of stone could be treated, but not more. I should think the gold is extracted or most of it, and probably more is saved, than with the ordinary stampers, but a small stamper battery would work quicker, and would, I think, probably be preferred to the Huntington machine which costs a great deal more money. As this is the only battery of the kind erected in the district, it cannot be said to have had a fair trial, but that it is sure to get, if the Eldorado Company purchase, which I am informed they are likely to do. I may remark that it is probable the Frere Ore Concentrator would be of great use for concentrating ores of silver, lead, or copper—after stamp, or pulverizers.

Alluvial.

On the Old South Lead a large amount of ground is held under lease by the Crinoline and the Forbes Alluvial Gold-mining Companies, the former are not at present working owing to the main shaft having

having caved in. The ground is difficult to work, there being a depth of drift sand to pass through and water to contend against. The Forbes Alluvial Company are carrying on work with less men than usual pending the decision of the shareholders as to the purchase of a second engine and plant, the one engine on the mine not being powerful enough for the purpose. The manager states that the prospects from the north end and the south end of the Company's mine are encouraging, but up to the present time the yield of gold has not paid wages, but a large number of men were employed.

At the north end of the town of Forbes Shanks and party are working a claim on the Victoria Lead, the wash yields half an ounce to the load, and this would pay handsomely if the conditions of working were different. On Thompson's Lead, 1 mile north of Forbes, some claims have been taken up, and work will shortly be commenced.

At the Bald Hills, about 4 miles north of Forbes, one claim only is at work, from which half an ounce to the load has been obtained. In this claim at a considerable depth a quartz reef has been discovered 4 feet wide showing gold. From this I am informed the shareholders are about to get out a trial crushing of some 20 tons. Should this reef prove payable, doubtless many others in the neighbourhood will be taken up and worked.

Parkes.

At Parkes, which is the chief mining centre of this division of the Lachlan mining district, a good deal of reefing is being done with satisfactory results. The claims I mentioned in my last report, as producing a large amount of gold. Hazlehurst and Drummond and party are still at work, and from the last mentioned during the past year 860 oz. 10 dwt. of gold was won. Hazlehursts yielded 740 oz. for the same period. I am sorry to have to report that up to the present time none of the prospecting parties, with Government aid or without, have made any discoveries of payable gold. Parties are working on the Dayspring and the Currajong, near Parkes, and on the Eldorado, 13 miles south of Parkes, but whether they will get payable stone or not remains to be seen. The New Sandhurst Gold-mining Company have taken up claims or leases on four different old and abandoned reefs, viz., the Young Australian, the Homeward Bound, the Native Cat, the Batchelors, and the Stockman's. The mining operations of this Company are principally confined to the Young Australian and Homeward Bound, which in times past have yielded some very good stone. A large tank for crushing purposes has been excavated, and a portion of the crushing battery is on the ground and will be erected with as little delay as possible. This Company is also carrying on prospecting at the Bushman's Reef, at present employing nine men. They have completed a large tank at Happy Valley, and machinery is about to be erected.

The small reefs at Oppossum Gully, near Parkes, continue to pay well. There are as nearly as I can ascertain about 450 miners working in this division, and the gold purchased by the banks for the past year amounted to 4,269 oz. 7 dwt. and 8 gr., of this 512 oz. 13 dwt. 2 gr. was alluvial gold.

Molong.

At Gumble—about 10 miles south westerly from Molong—4 leases have been taken up for tin, three of these are held by Messrs. Hill and party. A lode containing tin, copper, and silver, and varying in width from 1 to 8 feet has been discovered here, and silver appears to be the predominant metal. On Messrs. Kelly and Moore's leases a good deal of work has been done in sinking and driving. The shafts are of various depths from 150 to 30 feet, the aggregate number of feet sunk is 415 and the extent of drives is 450. I am informed that upwards of £1,700 has been expended on the mine. Kelly and Moore have about 200 tons of ore at grass. On Hill and party's lease a shaft has been sunk 32 feet and a drive put in for 10 feet, but the lode has not been found. No mining is going on in this locality at present as there is no water even for drinking purposes. I observe the Geological Surveyor in his report for 1886 remarks of this lode that it is impossible to form an opinion as to whether it is payable or not, until average bulk samples have been operated on. The ore raised at this mine showed both oxide of tin and blue and green carbonates of copper, as also red oxide of copper.

On the 31st August, 1887, 4 leases of 4 acres each were taken up at a place called Delaney's Dyke, it is situated about 15 miles in a north-westerly direction from Molong; on these leases a lode was found on the surface by Messrs. Delaney Bros., and in what is known as the prospecting lease; it varies in width from 6 to 12 feet. The mine, I am informed, now belongs to a company with a capital of £80,000. The manager supplies the following information:—The lode showed on the surface for a distance of about 80 yards, and was from 12 to 26 ft. wide. Three shafts have been sunk on the lease and are connected by drives at the 60-ft. level. The shafts all cut the lode at 30 feet and then follow the underlay at an angle of 45 degrees. The south shaft has been sunk 145 feet and there is a large lode visible all the way down, averaging 6 feet, this shaft is still working, and drives, north and south are being put in. At the 130-foot level, the lode widening as the drive progresses. In driving at right angles to the lode at the 60-foot level, another lode was found 7 feet wide. Work has been continuously carried on on this lease with an average number of 9 men, there is now from 1,500 to 1,800 tons of the lode stuff at grass which contains silver and gold. 70 tons from this lode was crushed in March last, which I am informed yielded 15 dwt. of gold and 5 dwt. of silver per ton. Since then there has been no water to crush with and hence the large quantity of ore at grass. On the Company's lease a battery of 10 stamps has been erected, with 2 dams to supply water. The ore is soft and of a sandy nature and is easily and cheaply raised, but there appears to be a difficulty in treating the amalgam, in order to separate the two metals. This country is terribly dry, and since March last, water for domestic use has had to be carted a distance of 1½ miles. There are 4 leases north and 4 south of the Company's mine, but in none of them has the lode been found although a great deal of work has been done.

Grenfell.

In this division an important discovery of reef gold was reported on the 4th of May last by Brenner and party, the place is known as Sandy Creek, and is about 35 miles south-east of Forbes and 25 miles west of Grenfell. The prospectors found the reef containing gold on the surface, their trial crushing of 16 tons gave 16 oz. 12 dwt. per ton, the reef in places is 2 feet wide in smooth vertical slate walls. This auriferous belt seems to be a continuance of that at the Pinnacle, and the character of the stone seems the same. At the date of my visit in May last, 4 claims had crushed, viz.:—The prospectors, No. 1 and No. 2 north, and No. 1 south. No. 1 south got 16 dwt. 20 gr. per ton for 12 tons, No. 2 north, 1 oz. per ton for 14 tons; No. 1 north, 14 dwt. per ton for 72 tons. Since my visit a good deal of work has been done on this line of reefs, but want of water has simply stopped all mining operations, or the value

value of most of these claims would have been proved long ago. Messrs. Gough & Co. have erected a dam and quartz-crushing plant in a gully close to the reefs at a cost, it is said, of £1,500. The number of ordinary claims registered at Sandy Creek is about eighteen, but no work is being done at present, as there is no water, even for domestic purposes. The average width of these reefs is about 20 inches, the ground is hard and requires powder from the surface. As nearly as I can tell there is about 600 tons of stone ready for the stampers. It is difficult to form an opinion about these reefs, but I am inclined to think some of the claims will prove payable, and this opinion is shared by miners of experience who have seen the stone. At Grenfell, mining has almost ceased, and the battery has been idle all the year, and only one or two of the mines are raising stone. During the year, machinery for treating quartz tailings has been erected in Star Gully, near the town; the cost of this machinery was I am informed about £2,000, but owing to want of water, the proprietor has not been able to make a start. In alluvial mining there is, I am sorry to have to report, very little doing. At the Quandong, a few miles from Grenfell, seven claims are at work, and five, I am informed, are raising payable wash; want of water has been the drawback in this locality as in all other parts of the district. Only 90 tons of washdirt has been puddled during the year, which gave 1 oz. of gold per ton.

At One-mile Gulley, near Grenfell, O'Brien and party have 60 tons of wash, but cannot treat it for want of water. In July last, an important discovery was made on Aramagong Run, about 13 miles from Grenfell, on a conditional purchase taken up by D. Anderson, on the 9th September, 1875. The lode was discovered on the surface by W. Randle, a miner, and he came to an arrangement with some moneyed men in Grenfell to prove the mine. Specimens were sent for assay, and returns which began with 13 dwt. per ton at the surface, have now, at a depth of 60 feet, got as high as 309 oz. of silver per ton. The lode is, I am imformed, 11 feet wide, when I saw it at a depth of 17 feet it was 7 feet wide, in smooth granite walls. Some of the ore (a small parcel) I took myself from the heap, and sent to the Department for assay; it proved to be galena, carbonate of lead, and fellspathic lodestuff, which yielded of silver 48 oz. 14 dwt. per ton, and of gold a trace. During the year 11 silver-mining leases and 10 gold-mining leases have been applied for at the Grenfell mining office, 381 miners' rights were issued and 27 mineral licenses. The return of gold has, however, been very small, and no doubt want of water has a great deal to do with this. Only 166 oz. 11 gr. having been obtained in this division during the year 1888. A good deal of prospecting is being done in this division for both gold and silver, and it is likely that some important discoveries will be made. I think it is a great pity that so much land has been alienated when it was known to be auriferous. I have been surprised several times to find old workings, and some of them pretty extensive, on lands that had been selected; of course, permits can be obtained, but the miner likes to take up his claim when and where he pleases, he cannot abide delay, and does not often wait for the permit, especially on reserves. It is greatly to be regretted that where lines of reefs have been apparently abandoned, although known to contain gold, a certain quantity of land was not left open to holders of miners' rights.

Cudal.

At Boney's Rocks about sixteen miners have been employed during the year, the quantity of stone crushed was about 66 tons for a yield of 101 oz. of gold. The reefs in this locality have yielded some very rich stone, and on account of a dispute, what is supposed to be a very rich claim or lease has been idle for many months. This dispute has now, I believe, been settled, and instead of being in the hands of some Sydney gentlemen it is to be worked by miners, some of whom were originally interested in the lease. At the Paling-yards, 8 miles from Cudal, Court and party crushed from their mining tenement 80 tons of lodestuff for a yield of 40 oz. If this lode is extensive, it should give employment to a large number of men. Several parties have taken up claims or leases on the supposed line.

Canowindra.

The reef known as the Blue Jacket still continues to be the principal gold producer, having yielded 1,242 oz. from 1,237 tons of stone. The owners are now working at a depth of 220 feet. The reef is from two to four feet wide and averages over an ounce per ton. The proprietors intend erecting two additional 5 head of stamps to the battery as the supply of stone is very large.

Hayes' Reef.—This party crushed 45 tons of stone for 49 oz. of gold. This mine is now let on tribute. A good many applications for permits to mine on conditional purchases have been made in this division of my District and the localities are usually old and abandoned reefs.

At Cargo the reef known as the Ironclad is in the hands of an English Company, and has been floated in England for £150,000, and it is to be hoped the venture will be successful. A very great outlay has been incurred in expensive machinery, for treating refractory ores. The manager is an experienced miner, having been employed in India in mines where the ore is of a similar kind to that found in the Ironclad Mine. The Company hold 12 acres of leased land, and 10 acres of freehold.

Condobolin.

In this division a few parties are working—some in the immediate neighbourhood of the township for silver and copper, others at a place called Melrose, about forty miles north-west of Condobolin. Another party have discovered a lode containing silver at Mount Tindah, which is about seven miles from Melrose station. In May last year I had occasion to visit this locality to report on a lode containing silver, discovered by Messrs. Byrum and party, who have been prospecting in this out of the way place for some years past. The difficulties they have had to contend against must have been very great, and it is to be hoped their present venture will prove a valuable one. This mine is on a mineral selection taken up on a small range of hills called "Three Peak." Byrum and party, who have been prospecting in this locality for the last three years, found the lode showing on the side of a steep hill, and excavated under it for a considerable distance. The lode is in slate walls—well defined where it is visible—but the country is much disturbed. The lode appears to be over 2 ft. wide, and runs north and south, underlying to the east. I was shown a report of some assays obtained from ore sent to Sydney. The lowest assay gave 44 oz. of silver per ton, the highest 800 oz. I took a parcel of the ore and sent it to the Department for assay, and got a return of 39 oz. of silver per ton. Byrum and party were preparing to sink a shaft to catch the lode at a depth. The formation on one side of the lode—next and near slate—is conglomerate or "pudding stone," and granite rocks occur close to the other slate wall.

Prospectors

Prospectors in this locality labour under great disadvantages, as water and feed is very scarce at any time of the year. Near the boundary gate of the Melrose and Boonah runs, 34 miles north-west of Condobolin, a copper lode has been discovered, and a company was, I believe, formed to work it; but I have not heard whether the mine is at work or not. Assays of ore from this lode gave 27 per cent. copper, 9 per cent. lead, and 6 oz. of silver per ton. The mine is, I am informed, principally in the hands of some miners at Nymagee.

In conclusion, I am glad to be able to state that during the past year the mining industry in this district has greatly improved. More miners are employed. A good deal of new mining machinery has been erected. A great deal of land has been taken up for mining purposes, and some valuable discoveries have been made, which may reasonably be expected to give handsome returns when the mines are properly developed. Prospecting parties are working, with and without Government aid, and in places hitherto untried; and although they have had to contend against a very severe drought, and consequent difficulty in obtaining provisions of any description, the work is still being carried on. A good deal of prospecting has been done for silver, and in one or two instances what appear to be valuable deposits of this metal have been discovered, notably near Melrose and near Grenfell, on the Aramajong run. These mines I have described in a previous part of this report. I may be permitted to remark that very little is known about silver-mining, at any rate in this part of New South Wales; and when miners who have had experience in this kind of mining find their way into this district, probably lodes abandoned as valueless will be found to contain the mineral in payable quantities. Silver is usually found in combination with other metals, and the ores are so varied in appearance and value that only a miner of experience and skill would be able to determine whether a discovery was of importance or not. I may here remark that frequent inquiries are made at this office by miners to be allowed to see ores of silver, of which I have a few specimens; and I would submit that it would be a great advantage to miners if I could be supplied with a small collection of specimens of silver ores generally found in this and the adjoining colonies, so that prospectors could compare their specimens with them and be able to form an idea of their value, and identify any ores they have found in connection with this class of mining. I may remark that few miners accustomed to work quartz reefs for gold can form any idea of the difficulties and great expense attending the treatment of silver ores; still, there is no doubt these difficulties will be got over, and silver-mining become a valuable industry. A writer in one of the daily papers makes these remarks, and I think they are worthy of note:—"Although one-half of the silver-mining companies floated during the last mania will never be heard of again, except in liquidation, there are a considerable number of valuable properties scattered throughout New South Wales, which will hereafter become lastingly payable mines when the initial difficulty of management and treatment of refractory ores is overcome; but there are certainly many improvements to be made, both in machinery and appliances, and many wants to be supplied before this can be effected. Such as want of fuel, want of flux, want of inland carrying, and want of skill and experience in providing for these wants, and, I may add, want of patience on the part of shareholders who have entered into mining ventures to wait until the potential riches of the mines can be developed. Still, New South Wales, with its wonderful coal measures, its admirable timber for manufacturing charcoal, its deposits of lime and oxides of iron for flux, its numerous seaports with deep water up to the very shores, to say nothing of geographical position with regard to other colonies,—should be, and is, capable of working its silver deposits to immense advantage and profit in years to come; but it seems very probable that experience will show that it will pay the owners of large mines better to carefully concentrate their ores of silver on the ground, and send them for treatment to smelting furnaces erected on the best and most approved principle, situate on the seaboards of Sydney or Newcastle, where fuel, flux, and all other appliances are plentiful and cheap; where skilled labour is more largely obtainable, and where ultimately the residual products of the ores will become of value. The capital spent in the expensive erection of smelting works would be saved and at command to erect efficient concentrating machinery, and the providing of a good and copious supply of water, properly opening out the mine, and the erection of good winding machinery." In this district, two small rushes took place, one of which I have already described, at Sandy Creek, and another at Boyd Station. This place was the scene of a rush about sixteen years ago, which was a failure, except in one or two claims which yielded wages. The prospectors at Boyd, in June last, bottomed at 121 feet, and reported 13 gr. for five dishes of dirt, which would yield at the rate of 8 dwt. per load. About eighty or ninety miners came on the ground, sank a few shafts, and then left. The place is now quite deserted; but it is quite possible a run of gold may be found in this locality yet. Gold-bearing reefs are in the immediate neighbourhood, and some of the miners think the lead has been missed. Colours can be obtained over a large extent of country, but nothing payable.

LACHLAN DISTRICT—Young Division.

(*S. Robinson, Warden.*)

I HAVE the honor to report that 2,642 oz. 9 dwt. 11 gr. of gold was won in this division during 1888, of the value of £10,611 17s. 7d., showing an increase on the previous year amounting to £4,398 0s. 1d. Our issue of miners' rights was 574, including 118 taken at Murrumburrah. Business and mineral licenses disposed of stand at 32 and 33 respectively. Applications have been sent in for 6 gold-mining leases, comprising 59 acres.

My last report foreshadowed results for 1888 which have not been quite realized. Notwithstanding this, considerable progress was made in discoveries and developments of reefs at Wombat, at Demondrill, and also in the neighbourhood of Murrumburrah. The old Archdeacon reef has been worked, I believe, successfully. Mr. William Smith Barnes, of Wombat, has mined advantageously for some time past on his private property, close to the village. Two shafts are down, one at 50 feet, showing the reef, the other at 30 feet, which also strikes the gold-bearing quartz. The result of two trial crushings has been 1½ oz. and 2½ oz. to the ton. Close to this spot other parties are prospecting, and it is reported they have struck the same reef at a point westward. About half a mile eastward good gold-bearing quartz has been found near the surface. The place is known as Tobin's claim. I may here mention that all these properties are located not far from Sherlock Creek, where, at various times, quartz richly impregnated with gold has been discovered. At Murrumburrah a new reef of great promise has recently been found on private property.

The Cummingar works are now in full swing, and gold during the year has been extracted, realizing £6,222 17s. 6d. Eighty men are usually employed, but at present 112 are at work. The plant and machinery are valued at £25,000.

The

The New Burrangong Company has at last overcome the great underflow of water, and excellent results must follow, as it is know from repeated tests that the ground is equal to the choicest claims of the old Lambing Flat diggings. Gold, valued at £985 11s. 1d. has been obtained from the underground trenches and cuttings made for drainage purposes only. The main wash has only just now been touched, and since writing the above 118 oz. gold has been shown at this office, obtained since the beginning of the current month. Adjoining the New Burrangong is the South Burrangong mine, which may be described as in *statu quo*. Work in the immediate future will be resumed on this holding.

The Victoria Hill Sluicing Company, known as Gough's claim, for one man working fifty days, has given 60 oz. of gold.

Mr. Morton states that gold as treated at his mine (Cummingar), realized for 1,565 oz. 10 dwt. £6,490. Hence the high aggregate value shown in this report.

LACHLAN DISTRICT—Barmedman Division.

(*Thomas Love, Mining Registrar.*)

I HAVE the honor herewith to submit my annual report of the mining industry in the Barmedman Division of the Lachlan Mining District for the year ending 31st December, 1888, which I regret to add bears unfavourable comparison with the previous year, both as regards the quality of the stone and the number of miners who found profitable employment, but this appears more the fault of unfavourable circumstances than a deterioration in the quality of the reefs. The miners being unable to get to work below water-level, have been for the most part engaged in raising stone and mullock from the shallow workings which had been previously picked over and left as unpayable, and getting it crushed on terms or shares by the battery proprietors to enable the claimholders to hold possession of the ground and keep the pot boiling pending the long-expected and promised introduction of outside capital to erect the necessary powerful machinery to cope with the water and develop the resources of the field. Out of 2,665½ tons of stuff crushed during the year, over 2,000 tons have been crushed on the conditions named. This will account for the poor average yield as compared with that of the previous year, as per schedule hereto.

1887—1,370½ tons 1,454 oz. 9 dwt. 13 gr. ; average, 1 oz. 1 dwt. 5 gr. per ton.
1888—2,665½ tons 989 oz. 4 dwt. 5 gr. ; average, 7 dwt. 10 gr. per ton.
Number of Miners' rights issued for year, 80.
,, Business licenses issued for year, 10.
,, Mineral licenses issued for year, 5.
Quantity of gold won during year, 989 oz. 4 dwt. 5 gr. ; value at average price of £3 17s. 6d. per oz., £3,833 5s. 5d.
Number of applications for gold-mining leases, 5 ; embracing an area of 19 acres 3 roods 14 perches.
Number of claims from which gold has been won during the year, 8.
Number of miners employed, about 60.
Population of town, 190.

Tin has been discovered on West Mandamah Station by Roberts and party. The site of the discovery is about 12 miles south-west of Barmedman. A rush took place in July last, and a number of leases were applied for at the Temora office. The absence of water has prevented the discoverers from testing the value of their property.

Five prospecting parties, assisted by Government, have been prospecting the vicinity of Barmedman for alluvial gold, but have failed to discover anything of a payable nature. The only parties who obtained any gold are Pettiford and party and Debeneditti and party. The former on the site west of the Add Hill, close to the old alluvial discovery of Nessi and party, and the latter at a depth of between 50 and 60 feet on the Barmedman Creek, 2½ miles east of Barmedman. From a few to fifteen and twenty colours to the dish of fine gold were obtained from a heavy boulder wash on a hard uneven slate bottom, but not being payable the prospectors have abandoned it without giving the ground the test that such a prospect would apparently warrant. The ground being entirely untried, with the exception of the one line of shafts leading to the one from which the gold was got, the creek is the natural outlet for any alluvial leads there might be in the immediate neighbourhood of Barmedman.

None of the other three parties have obtained any gold.

LACHLAN DISTRICT—Temora Division.

(*James Davoren, Mining Registrar.*)

I HAVE the honor to submit the following as my report for the Temora Division of the Lachlan Mining District for the year 1888.

I issued during the year 314 miners' rights, being a decrease of 18 from the year 1887 ; 48 business licenses, 23 less than was issued in 1887. I also issued 27 mineral licenses. No mineral licenses were taken out in 1887.

I received during the year 9 applications for gold-mining leases, comprising an area of 59 acres, being 12 less than the number received in 1887.

According to returns received from the banks here the gold sold from this Division for the year is 1,771 oz., of the value, at £3 17s. 6d. per oz., of £5,862 12s. 6d.

After most careful inquiry I find there was about 6,400 loads of wash-dirt puddled at the various puddling machines, which gave an average return of about 2½ dwt. to the load. Most of this was obtained from headings and unworked patches at the outside verge of the lead.

In the early part of the year the South Australian Company and Bourke and party worked their respective quartz claims at Upper Temora. I have been unable to ascertain the quantity of stone crushed, or the returns, as all the parties connected with these claims have left the district.

About May or June, Bourke's Reef Company purchased the interest in the South Australian Company's mine, also in the Hidden Star claim. Bourke's Reef Company have since crushed 417 tons of stone, which yielded 178 oz. 1 dwt. 13 gr. of gold, of the value of £568, as per manager's return, herewith furnished.

I have been unable to trace the sources from which the 1,771 oz. of gold has been obtained. The managers state they promised many of the parties from whom they purchased gold to give the public no information on the matter.

The only machinery at work at Temora during the year was in the early part of the year, the South Australian Crushing Machine ; and in the latter part of the year the same machine, worked by Bourke's Reef Company, with the addition of Christie's Patent Stone-crusher, &c. According to Mr. Christie's estimate herewith, this plant is valued at £3,000.

Mr.

Mr. W. R. Groves' crushing machine at the Homeward Bound is estimated to be worth £2,000. It has not been at work during the year, owing to some difficulty in perfecting Mr. Groves' title to the ground.

The South Australian Company's old machine at Lower Temora has not been worked during the year. Its estimated value is £500 to £600.

About 100 miners were employed in alluvial-mining, and 55 at quartz-mining during the year.

I have no doubt there will be much more activity in quartz-mining in this division in 1889 than in any previous year, as much ground, believed to be payable, is held under leases which has never been worked.

About ten claims have been taken up during the year for tin-mining on Mr. Davidson's Mandama Station.

Messrs. Roberts, the prospectors, state the tin struck was stream tin, the depth of sinking 12 to 16 feet; the depth of wash was from 1 to 4 feet. The width of the run has not been ascertained, as they assert that tin can be struck anywhere they sink.

Mr. H. J. Woods, J.P., informs me he sent a small parcel of the ore to the Department of Mines, and that it assayed at the rate of 58 per cent. He also sent a parcel of 50 lb. to Messrs. Isley & Co., which assayed 62 per cent.

Owing to the dryness of the season and scarcity of water, I am informed that most of those who took up claims have abandoned them.

LACHLAN DISTRICT—Condobolin Division.

(E. A. Grainger, Mining Registrar.)

I do myself the honor to report, for your information, that mining operations in this division are only in their infancy; but I believe, from reports heard, that it would develop into a splendid silver and copper district if only the necessary capital were obtainable.

The Eureka Copper and Silver-mining Co. (Limited) are working their mine near the town, but as yet have not sunk sufficiently deep, but from observation seems satisfactory. It is impossible to say whether it will be payable or not.

Messrs. Stevenson and party have floated their Condobolin mine into a company, and from reports I have heard, things seem promising, but as yet are not down to any depth.

LACHLAN DISTRICT—Murrumburrah Division.

(Charles Cutcliffe, Mining Registrar.)

The Mining Registrar at Murrumburrah reports that the gold won during 1888 has been in money value £7,866 0s. 4d., being an increase on 1877 of £4,511 10s.

The number of miners' rights issued has been 118, as against 42 of the preceding year. Business licenses, 10; mineral, 3.

The Cunningar Quartz Mine is now in active operation, with more improved machinery and modern appliances for extracting gold. The number of miners employed is 100.

The Archdeacon's reef at Wombat is down 200 feet. 156 tons have been crushed during the year, yielding a return of 1 oz. 10 dwt. per ton.

A full and exhaustive report of the mines and their working in this division has been furnished to the Warden and Mining Clerk at Young for the Hon. the Minister of Mines' information.

LACHLAN DISTRICT—Young Division.

(Mr. E. Rogerson, Warden's Clerk and Mining Registrar.)

I have the honor to submit my report of the business transacted during the past year in connection with mining in this locality.

There has been a marked improvement in many respects in mining operations over those of the preceding year, notably as regards prospecting and the discovery of new reefs, and although not attended with very successful results as yet, still a more hopeful impetus has been given to mining enterprise, and a large number of miners have been, and still are, earning good wages. The old workings in quartz reefs at Garibaldi Gully, Stoney Creek, have been revived, and are being again tested, in some cases with fairly encouraging results.

The New Burrangong Gold-mining Company have had an average of thirty men employed; at present there are forty-eight. The principal operations have been on the lower level (or in bottom), 22 feet below the wash, for draining purposes. During the last three months of 1888 a yield of 215 oz. has been obtained.

The South Burrangong and the Hidden Star will start work shortly.

The Victoria Hill Sluicing Company has obtained during last year 60 oz. by one man for fifty days' working with steam-pump. Operations are suspended at this mine at present, owing to the drought.

During the year the issue of miners' rights has been 456, being an increase of 66 over the preceding year. Business licenses issued, 22; and mineral licenses, 30; the former showing an increase of 1, and the latter an increase of 28, on the number issued during 1887. Six gold leases, of the aggregate area of 59 acres have been applied for, and 22 quartz claims, 3 alluvial claims, 25 residence areas, 6 dams, and 5 water-rights have been registered.

The managers of the local branch of the Bank of New South Wales and of the Union Bank have kindly furnished me with the following particulars *re* gold purchased during 1888:—

	oz.	dwt.	gr.		£	s.	d.
Bank of New South Wales	610	2	13	value	2,378	0	11
Union Bank	95	8	11	„	369	15	3
Total	705	11	0		£2,747	16	2

Of the above purchased by the Bank of New South Wales, 251 oz. 4 dwt. 1 gr., representing a value of £985 18s. 1d., were won from the New Burrangong.

LACHLAN DISTRICT—Cudal Division.

(A. Minslow, Mining Registrar.)

I have the honor herewith to submit annual report for the year 1888 for the Cudal division. Eleven applications have been received for mineral, and fourteen for gold leases during the year. Courts and party, of Paling-yards, have crushed from their prospecting claim 80 tons of stone for 40 oz. of gold.

At Boney's Rocks 85 tons of stone have been crushed from the different leases and claims for 125 oz. of gold. There is a 5-stamp battery at Paling-yards, also a 5-stamp battery at Toogong. Those comprise all the machinery in the portion of the district. Scarcity of water and want of machinery appears to be the great drawback to the mining industry in this division. During the year 105 mines' right, 1 business license, and 10 mineral licenses were issued.

LACHLAN DISTRICT—Canowindra Division.

(Wm. Cook, Mining Registrar).

I have the honor to report a considerable improvement in this division for the year, the yield being 1,939 oz. 12 dwt. gold of the value of £7,382 7s., against 1,100 oz. for last year; of this, about 30 oz. was obtained from alluvial workings about Gum Flat. There is no doubt that but for the want of rain during the year the returns would have been much larger. There is no doubt that the coming year will show a still greater improvement.

Blue Jacket, Belmore.—This claim continues to be the largest gold producer in the division, having produced 1,293 oz. 1 dwt. from 1,237 tons stone, or an average of something over 1 ounce per ton. The vein, which varies from 1 to 4 feet in width, is now being worked at a depth of 220 feet.

Hayes Reef, Belmore.—Crushed 44 tons for 49 oz. gold. The mine is now being worked by tributers, who expect constant returns in future. They are now engaged in crushing a parcel of 50 tons.

Queen of the Ranges.—Have not crushed any stone during the year, as the vein is very much pinched in the shaft. The mine is now under suspension for three months to enable the holders to obtain funds to carry on work.

Wright and party, Belmore.—On the southern end of the Blue Jacket, are making preparations to start working their lease, which it is expected will add to the returns for the coming year.

Cargo, The Ironclad.—This mine, which is now held by a powerful English Company, has had a large amount of money expended during the year, both in developing the mine and erecting machinery, but owing to the great scarcity of water the returns are not nearly as large as they would otherwise have been. 723 tons of stone was treated for 567 oz. 2 dwt. gold.

Rise and Shine.—This party are having a trial crushing raised, to be treated in Sydney; should it answer expectations, machinery will be at once erected on the ground.

Dalcoutt Hill.—Steel and party are cross-cutting for their vein at a depth of 180 feet. Very nice gold was found in cutting through the vein in the shaft.

Copper lease.—Gazzard and party have taken up a copper lease between Dalcoutt Hill and the Ironclad Hill, samples from which are reported to have assayed very favourably.

During the year 197 acres have been applied for under Gold-lease Regulations, and 80 acres mineral leases.

Number of miners' rights sold, 169; mineral licenses, 21; and business licenses, 3.

Total value of mining plant in the division, £8,200.

LACHLAN DISTRICT—Parkes Division.

(Wm. C. Weston, Mining Registrar.)

I have the honor to forward my report for the year 1888. It will be seen that the yield of gold is not quite equal to 1887, but I fully anticipate 1889 will exceed the yield of either.

During the year 1888, the mining industry on this gold-field has further advanced, and the reefing has established itself on a thoroughly firm basis. The increased number of reefs working and number of miners' rights issued demonstrate this fact, although the yield is slightly less than that of the previous year, this is to be accounted for by the crushing machinery being stopped from the want of water. The Buchanan line maintains its position as possessing the noted claims of Hazelhurst and Quaile & Co.'s, which continue to yield very handsome returns; and on the Caledonian Hill, the Koh-i-noor reef (Dean, Pritchard, & Co.) have crushed regularly; their reef, which is easily worked, yielding 35 dwt. They have also a large body of stone to work on. Several companies have been formed during the year to work several well-known properties, viz., the Bushman's Hill, and the Young Australian, and the Homeward Bound claims; at each of these machinery of an improved type is to be erected, and will doubtless further stimulate the reefing industry of the district. At Currajong, Old Strickland reef has been reopened by Davis and party, who have discovered a body of stone varying from 12 to 15 feet in width, carrying a fair proportion of fine gold, and is considered by miners to be a valuable property. Many leases have been applied for, and old abandoned ground reopened, in some instances with good results. Much improvement is expected from the erection of machinery which will save fine gold.

In alluvial mining little is now done. At the Bachelors, dirt is being got up, but the drought has prevented washing being done, no water being available. On the Buchanan line, Hazelhurst is raising splendid stone. Quaile & Co., ditto. In Possum Gully, Fitzgerald & Co., Moore & Co., Paravicini & Co. have good stone. At the Caledonian Hill, Dean, Pritchard, & Co. have a good paddock out. At Currajong, the Dayspring Co. are raising stone from the old workings. Davis & Co., also at Currajong, have 400 tons grassed, expected to yield something over ½ oz. to the load. At Bartley's Creek, Wright, Miller, & Co. have 120 tons at grass. Various other localities reefs are being tried, and small trial lots are ready for crushing. The Eldorado Co., at Magpie Gully, are crushing at the Metropolitan Co.'s battery trial crushings of surface stone. This Company are sinking their main shaft, prospecting for the very rich shoot of gold lost by the former holders. They have a lot of ½-oz. stone in sight. The present year promises fresh developments. The district contains many reefs, which must remain unworked until machinery capable of saving fine gold is introduced into the district.

Leases

Leases for copper and silver have been applied for, and the specimens obtained give most encouraging results.

523 miners' rights were issued, 18 business licenses, and 3 mineral licenses; 52 applications for gold-mining leases, and 6 applications for mineral leases were applied for, and mining tenements were registered.

LACHLAN DISTRICT—Forbes Division.

(*E. A. T. Pery, Mining Registrar.*)

I have the honor to submit my report and statistics for the Forbes Division of the Lachlan Mining District for 1888. The amount of gold won in this division (as per Escort returns) for the year, is 962 oz. 7 dwt., 15 gr., showing an increase of 235 oz. 9 dwt., 21 gr. on the amount won in 1887, to which must be added about 100 oz. still in the hands of the banks, making a total of considerably over 1,000 oz. The increase thus shown, as compared with the statistics, may be accounted for by small amounts, derived from claims, not possessed of machinery.

Britannia Co-operative Gold-mining Co. (Limited.)—This Company has completed the erection of winding and pumping machinery, and has worked out a portion of the reef at the 90 ft.-level which has averaged over an ounce to the ton. The sinking of the main shaft is being proceeded with, for the purpose of getting ground open, ready for "stopping."

Pinnacle Reef Quartz-mining Co.—This Company has been greatly delayed in its operations by want of water, owing to the very dry season. The stone crushed during the year has averaged about 9 dwt. to the ton, nearly 1,000 tons of stone are now at surface, awaiting crushing.

The Metropolitan Gold-mining Co.—(Stricklands Reef) have, within the last half year, erected a "Huntingdon" mill, which has operated upon a quantity of stone, with very poor returns. Said stone being taken from a very large reef, proved not payable, owing to much of it, being "barren." I am informed that this Company is in process of liquidation.

Forbes Alluvial Gold-mining Co. (Limited.)—This Company has worked during the past year with varying success, having won considerably over 400 oz. of gold. They have met with much difficulty, through large bodies of water, from old workings.

The Crinoline Gold-mining Co. (Limited) have, through the collapse of main working shaft, been compelled to suspend operations during the last nine months; a reorganisation will shortly be effected.

Try Again, late Nil Desperandum.—This Company has done nothing during the past year.

The Phœnix Gold-mining Association—(Victoria lead) have, after considerable difficulty (through water), bottomed a shaft, on the above lead, and are at present taking a main drive, to the western boundary of their ground, preparatory to "blocking out." This claim, is worked with horses. About 50 oz. have been won, to close of year.

Bald Hills Lead.—Bathgate and party have during the year been at work on this lead. They have met with fair success, and have erected a puddling machine and whim.

El. Dorado Gold-mining Co.—This claim was originally known as Pennington's Reef, which at one time yielded as high as 11 oz. to the ton, but this rich "shoot" of stone was worked out. The present Company has been formed, for the purpose of thoroughly prospecting the ground and have great hopes of finding other good "shoots."

During the past year, I have issued 318 miners' rights, 18 mineral licenses, 10 business licenses. 32 applications for gold-mining and 2 for mineral leases were also received at this office.

Copper.—In November last a 40-acre mineral lease was applied for at Euroa, near Eugowra. I understand that active operations will shortly take place, in this neighbourhood.

Silver.—An 80-acre lease, near Melrose Plains, was applied for here in July last, but I have heard nothing of any work being done in that direction.

LACHLAN DISTRICT—Molong Division.

(*M. Hanly, Mining Registrar.*)

I have the honor to report on the mining industry in this division for the year now nearly closed.

During the year I issued 151 miners' rights, 14 mineral licenses, and 3 business licenses. I received 14 applications for gold-mining leases, and 4 applications for mineral leases.

The only place in this division that gold-mining is now carried on is now known as Delaney's Dyke, the locality is called Gumble or Woollogolong. The Dyke is situated about 14 miles in a north-westerly direction from Molong. The discovery was first made known in August last year by John E. Kelly, Esq., M.P., and Messrs. Delaney Brothers, the latter were the prospectors. The prospecting claim is a gold lease of 8 acres; the lease having been issued, the property has been formed into a limited liability company, with a capital of £80,000. On a recent visit to the mine I saw the manager, Mr. William Davidson, and the resident director, Mr. Andrew Delaney. The manager kindly supplied me with information of the mine as follows:—

The lode outcropped on the surface for a distance of 80 yards, and was found to be from 12 feet to 26 feet wide on the surface. Three shafts were sunk perpendicularly, and the lode was cut in each at 30 feet, and were continued on the underlay. At the 60-feet level the three shafts are connected by drives. The lode underlays at an angle of about 54 degrees. The south shaft is about 140 feet deep, and carries a 6 feet of lode all the way down to present level. Men were found sinking in this shaft. A drive has been commenced at the 130-foot level, going north and south, the lode widening as the drive progresses. At the north end of the 60-foot level the lode is 12 feet wide. A drive at right angles with the 60-foot level drive was put in, and a second lode was cut 7 feet thick, with a horse of 6 feet of ground between the two lodes, which appear to run parallel with each other. When the battery (ten stampers) was erected in March last, the small quantity of water then available was used up in crushing about 70 tons. It is said that the result of that first crushing was 15 dwt. of gold and 5 dwt. of silver per ton. Since then there has been no water to enable the battery to work, and for domestic use it has to be carted a distance of 1½ miles. Work on this mine has been continuous, with an average of nine men, so that, while the battery has been idle, the lode stuff at grass has accumulated to about 1,600 tons. Owing to the nature of the lode, which is not quartz, but some kind of a conglomeration, it is easily mined, and is

raised to the surface cheaply: a shot dislodges tons. In a gully or dry water-course quite close to the battery, are two large dams prepared many months ago to catch water.

No. 1 south is an 8-acre lease, Blunden and party.

No. 2 South is a 6-acre lease, M'Groder and party.

No. 3 South is an ordinary claim of four men, Windred and party.

No. 4 South is a 4-acre lease, Hughes and party.

No. 1 North is a lease of 8 acres, held by Delaney and party.

No. 2 North is a lease of 8 acres, held by Kelly and party.

No. 3 North is a 4-acre lease, held by Rubie and party.

No. 4 North; Haslam and party hold 6 acres. There are two other leases on the east of the lode held by Tanner and party and Williams and party.

In these various leases, a great number of shafts have been sunk, and driving done, but in none has the lode been found up to the present time.

The population at the Dyke, all told, is at this date 36 souls.

The Government land at this place is limited, as the freehold of Messrs. M'Callum Brothers is near on the north, east, and south, it is said that the lode outcrops in their land, and they found gold in the outcrop.

About 10 miles from the dyke, and about 12 miles from Molong in a south-westerly direction, I came to the Gumble tin-mine. Here there are four leases, three being held by Messrs. Kelly and Moore, and one by Mr. Hills. The former have sunk six shafts, having an aggregate of 415 feet sinking, and about 450 feet of driving; about 200 tons of ore is at grass; none of it has yet been treated. The lode is from 1 to 8 feet wide; men were at work, but here also water is scarce. No person was at work on Mr. Hills' lease; a shaft has been sunk 32 feet, but the lode was not found.

SOUTHERN DISTRICT—Braidwood, Araluen, Little River, Major's Creek, Nowra, and Nerriga Divisions.

(*J. Aldcorn, Warden.*)

There has been a good deal of activity generally in mining matters during the year 1888. In some of the above divisions a large extent of ground has been taken up, and leases applied for both for gold and other minerals.

In the Braidwood Division, alluvial mining has been carried on much as in recent past years, when water was available, and with fair success. A number of leases have been applied for for the purpose of working silver lodes recently discovered, as well as some quartz reefs for gold. Prospecting on the ground thus applied for has been in some instances vigorously carried on. The results as yet have not, except in one or two cases, been such as to justify the procuring of machinery.

In Araluen Division the workings have been confined almost entirely to the deep stripping claims in the bed of the creek, the long-continued dry weather having prevented any work in the smaller sluicing claims. The result as to gold procured is about the same as in the previous year. Unfortunately the otherwise welcome rain which fell towards the end of the year filled in several of the claims, which will involve a considerable loss in re-opening, if indeed the holders in some instances will be able to incur the expense of doing so.

In the Little River Division the want of water has, for the greater part of the year, prevented any ground-sluicing operations, from which hitherto the greater part of the gold has been obtained in this locality. There is a considerable falling-off in the amount procured in consequence. There has been a revived movement in the way of efforts to work the numerous quartz reefs in this division. About a dozen leases have been applied for, and some of the parties have set to work. In one case several leases previously granted have been purchased by a Company, chiefly of persons outside the district, and machinery has been erected on the ground. This Company are pleased with present prospects, and are now adding to the machinery for the purpose of more effectually saving the gold. As several of the leases lately applied for have just been granted, it is probable that more extended operations in this division will be the result.

Major's Creek Division is also dependent on a large supply of water for the working of the alluvial ground, and this it has not had, except for a few days during the year. A number of the miners have been obliged, therefore, to seek for other employment. A considerable part of the land in this division is private property, and on it, in past years, a good deal of work has been done in reefing. The difficulty, however, of effectively treating the stone led to the abandonment of several attempts to work the ground. Quite recently, however, the proprietor, in conjunction with some others, has procured machinery, the erection of which is nearly completed, which, it is hoped, will enable them successfully to work some of these reefs. Should this be so, there will probably be a revival of mining in the neighbourhood, as there are several places which may be similarly tried. On Crown land also some leases have been applied for, on which are galena lodes and mundic reefs. I understand that arrangements have been nearly completed for working these.

As to the Nowra Division, of which I have not long had charge, I am indebted to one of the leaseholders at Yalwal, the principal mining centre of the division, for the following information:—Lease No. 13, known as the Homeward Bound, has, during the last eighteen months, been worked as an open quarry. Previous to that time a tunnel had been driven about 200 feet into the ridge which carries the auriferous lode, and the quartzites having been cut, upward stoping was carried on from a depth of about 50 feet, the whole of the lode between that depth and the surface having been crushed. The stone is still being taken out from the walls of this cavity, which is about 60 feet wide. The output of the mine for twelve months prior to May, 1888, crushed at a small and not very effective 10-stamper battery, resulted in value to over £8,000. Since May, operations have been a good deal retarded by necessary repairs to machinery and want of water, but, nevertheless, gold to the value of £2,565 has been won since that date. The claim altogether has, since June, 1882, yielded the sum of £25,600. To the north of the Homeward Bound is the claim known as the Pioneer, a 5-acre lease, on which a large amount of work in sinking shafts and driving has been done during the past year, and about 400 tons of stone raised, which is estimated

estimated to go half an ounce to the ton. Before, however, it could be crushed, want of water obliged the owners to stop their machinery. In former times, for about five years, this mine produced gold to the value of £10,000—there is much good stone still in sight. The Caledonian is a 12-acre lease, on which six men have been at work during the year. Tenders were accepted for machinery, but in consequence of the insecure state of a bridge over which it would have to be conveyed the matter has been deferred for a time. Meanwhile a contract has been let for driving a tunnel through this ground. From time to time small crushings at neighbouring machines have resulted in 15 dwt. to 2 oz. a ton. The Hit or Miss is situated to the north of the Caledonian. On it a large amount of work has been done in trenching. Several shafts have also been sunk, in one of which, at a depth of 65 feet, good-looking quartz has been raised. The Star is an 8-acre lease adjoining the Homeward Bound on the south. About 700 feet of tunnelling has been done on it, at a large expense, but, as yet, without payable prospects. A third tunnel is now being driven with the object of cutting the Homeward Bound lode. Several other leases are held or have been applied for near these, from prospecting which very good indications have been found. Further down the creek is the Eclipse, a lease of 3 acres 3 roods. There is a 10-head stamper battery on this ground, with a shoot and between 300 and 400 feet of tramway. A large amount of dead work has been done in driving and sinking during the past year. About 700 tons of stone has been caushed, but with indifferent results. The workings have not been carried on in a very effective or economical way. The value of gold obtained from this holding for the past eight years is £10,577. To the south of the Eclipse is the Pinnacle, which has been almost idle for some time, and the holders have been called on to show cause why the lease should not be forfeited. On this mine there is a 20 h.-p. engine and a 15-stamper battery, tramways, &c. When it was continuously worked, from about 1875 to 1885, it is said that gold to the value of £15,000 was obtained. In addition to the foregoing, I may mention that a party from Sydney have been gathering up the tailings from the creek which have been allowed to go to waste. Some 2,000 bags will probably be sent to Sydney for treatment. Trials have given 7 oz. to the ton.

With regard to minerals, a small "Silver rush" took place, the locality being near the junction of Baxter's Creek with the Shoalhaven River. A number of 40-acre blocks were taken possession of under mineral licenses. Nothing of importance has as yet resulted from this. More recently, on what is known as the Right Arm, Yalwal Creek, a discovery of very promising argentiferous ore has been discovered, but nothing beyond a little prospecting has been done. A Company is, however, being formed with a view to testing the ground thoroughly.

In the Nerriga Division a large extent of ground has been taken up, chiefly for gold-mining, but in two or three instances also for silver and copper. A good deal of work in the way of prospecting has been done, although only in regard to one holding has the result as yet warranted any expenditure on machinery for quartz-mining. In my last report I referred to two Companies which had been formed for carrying on extensive operations by way of hydraulic sluicing on the old beds of the Shoalhaven River. One of these had completed a long and expensive race, &c., and had commenced operations. Unfortunately, however, the supply of water has been quite insufficient, and not much has been done in working the ground held by the Company. As regards the other Company, all that has as yet been done has been the testing of the large area taken up by them by sinking shafts, &c. The results of trials of the drift obtained therefrom have been very satisfactory. A considerable time has been occupied in taking levels for what will be a long and expensive race, for the conveyance of water to the Company's ground from the Shoalhaven River, near its junction with the Jembaicumbene Creek, with a branch from the Mongarlowe River. This work has occupied a longer time than was anticipated, but I am informed by Mr. Temmes, the manager, that it is now completed, and that tenders will shortly be called for the construction of the race and several necessary dams in connection therewith.

The foregoing is a report in, for the most part, general terms, but the Mining Registrars in the several divisions will, I have no doubt, add some more detailed information.

SOUTHERN DISTRICT—Berrima Division.

(F. R. Wilshire, Warden.)

I have the honor to report that during the year 1888 no increase in mining has taken place within my division, but rather a decrease, as shown by the smaller number of applications for mineral land, &c., &c., which are tabulated below, as compared with last year's results

Of the number of leases, &c., &c., applied for, few will, I fear, prove of any great value.

Few, if any, of the leases for silver at the Peaks, in the Picton District, are likely to prove remunerative, and the larger area taken up in this district for coal and shale will, in all probability, lapse or become forfeited, most of it having been applied for for speculative purposes, and without any present intention of winning the minerals therein.

Berrima Colliery is still at work, but the output is merely nominal; such also is the case with the Mittagong Colliery.

The Company, with large capital (some £170,000, I believe), to open a coal-mine at Wingello, some 15 miles south-west of here and of Moss Vale, and of which I spoke in last year's report, is about commencing operations, the manager having recently arrived.

The coal is said to have been thoroughly tested, and proved good, but the same thing has been said of nearly all the coal yet opened in this district. At the same time, the greatest difficulty has always been experienced in getting the Government railway officials to use it, representing it to be unsuitable for locomotive purposes.

It is alleged by some that the coal is highly suitable for said purposes, and it was hoped that the new Railway Commissioners would have had a searching investigation into this long-debated matter, seeing the immense importance it has in connection with the cost of working the Southern Railways, but nothing yet in this line appears to have been initiated, and the valuable coal deposits of this district seem to be doomed to remain unworked and undeveloped.

Referring to the Mittagong Coal Company, which recently opened with an output of 100 tons per day during the Newcastle strike, mostly for the Melbourne market (overland), they subsequently failed to secure a tender for the N.S.W. Railway supply, and are now closed, or nearly so, for want of orders.

This

This is the third or fourth colliery opened in this district within the last few years meeting with the same disastrous fate, and the subject is deserving of the earnest and careful attention of the Railway Commissioners.*

With regard to gold, nothing of any importance has been developed in the way of reefing, but several prospecting claims are being tested with the aid of moneys from the Prospecting Vote. Nothing is being done on the Mittagong Gold-field.

Work has been resumed on the Carrington mine, but with what prospects I am not at present able to state.

At Towrang silver-lodes nothing has been developed of much (if any) value; and the iron-ore lodes, in the vicinity of Bungonia, have not proved of any commercial value so far.

Should the Carrington mine prove profitable, these Bungonia lodes will doubtless receive further development, as being almost identical therewith (geologically speaking).

On the whole, with the exception of land taken up in this district for speculative purposes for coal and shale, mining has slackened off considerably in my division during the past twelve months.

Berrima.

Goulburn.

No particulars to hand (the Mining Registrar being on leave, I believe).

SOUTHERN DISTRICT—Bombala Division.

(*James Giles, Warden.*)

I have the honor to submit my report for the year 1888 upon the Bombala and Cooma Divisions of the Southern and Tumut and Adelong Mining Districts, over which I exercise supervision as Warden, and which embrace the following gold-fields, viz.:—Delegate, Towomba, Nimitybelle, Collinton, Snowy River, Crackenback, and Kiandra.

Under separate cover I forward reports from the Mining Registrars at Bombala, Cooma, Kiandra, and Adelong; and I presume the officers stationed at Bega, Eden, Nimitybelle, and Tumut have already furnished their reports for the past year, giving detailed accounts of the various workings, proceeds, &c.; also the number of miners' rights and business and mineral licenses issued within their respective divisions to the 31st December last.

At Kiandra, the gold won during the past year did not exceed 600 oz., being considerably less than the yield for 1887.

The mining population of Kiandra, Crackenback, and Snowy River gold-fields may be estimated at 350, consisting of Europeans and Chinese.

Nimitybelle Gold-field.—I am pleased to state that there is a decided improvement in respect of mining matters upon this gold-field.

Collinton Gold-field.—Several gold-mining and mineral leases have been applied for; there is a very marked improvement in all matters connected with mining within this gold-field.

Towomba Gold-field.—Several prospecting parties have been searching for gold and silver reefs on this gold-field, and some mineral leases have been applied for.

Delegate Gold-field.—Although I cannot report improvement in mining business within this gold-field, I am convinced there is no retrogression.

SOUTHERN DISTRICT—Moruya Division.

(*G. Maunsell, Warden.*)

Although the favourable anticipations of my last report did not become realized during 1888, they are in no way diminished.

The completion and erection of most of the crushing plants have been delayed through various causes, consequently outside speculation has been in a semi-dormant state during the greater portion of the year, awaiting the results from the several crushings.

At the Gulph, Mr. Pollock has a 10 and the Mount Coman Co. a 25-stamper machine at work. Returns from the latter have not yet been made public.

The Little Gem, situated near Moruya, has erected on it a fine Huntington mill, which will be at work in a few days.

The Bodalla Mining Co., recently The Belle of Australia, at the Wogonga North Head, has a somewhat similar plant in the course of erection.

The late proprietor of the Moruya Silver-mine informs me that his Company, an English one, has sent out instructions to commence work immediately.

At Bumbo, in the parish of Wanban, a small water-wheel, driving a 4-stamper battery, has been erected.

The Bega Prospecting Association has men employed at Nelson testing the reefs there.

At Windham and Wallagoot, lease-holders are busy prospecting for silver, and have met with good indications of it. There are several parties prospecting in these localities; but the dryness of the season has hitherto proved a drawback to their operations. At

* The capital said to have been expended upon these futile attempts to develop this important industry in this district is represented to b something like the following:—Eritho Colliery, £15,000; Berrima, £24,000; Ringwood, £28,000; the Great Southern Co., Mittagong (and las £40,000, representing a gross sum of some £107,000.

At Tanja, a few parties make a livelihood by fossicking in the gullies.

Messrs. Bailey and Miles, on Mount Dromedary, are turning out some very rich pyrites; and Cowderoy's party works its mine constantly.

At Mogo, the prospecting party is earning good wages at alluvial working, and two other parties there have erected steam-pumps, with the intention of vigorously testing their grounds.

Messrs. Tyrell & Co. are industriously working a reef there, and they hope soon to find sufficient encouragement to induce them to procure machinery.

Within the last fortnight a small rush for leases has taken place at Dwyer's Creek, about 5 miles from Moruya.

Some of the mines, in the past, have been badly worked, and a great quantity of unnecessary labour has been done through the mismanagement. The want of water; a tendency to obtain possession of "abandoned" ground, with a view to dispose of it to syndicates before the issue of the leases, by persons not possessed of the means to develop it themselves; a lack of cordiality or of means, perhaps both, amongst some shareholders,—are causes that have tended to retard the development of the mining industry of my division during the past year.

I can now report that most of the obstacles referred to are on the eve of being removed, also that the recent heavy rains will give a further impetus to mining.

SOUTHERN DISTRICT—Yass Division.

(H. J. Chisholm, Warden.)

In submitting this, my annual report for the year 1888, I regret to say that the mining industry in this district is not in such a satisfactory and progressive state as I hoped it would have been.

In the early part of the year a sudden impetus was given to mining matters. During the following months the undermentioned areas were applied for, under mineral leases:—

January	40 acres.
February	280 acres.
March	80 acres.
April	60 acres.
May	20 acres.
June	40 acres.
July to December	Nil.

For a short time after the applications were made glowing reports were received as to the progress of work made, and it was anticipated that at last this district would be fully worked.

In some cases work has been suspended awaiting the survey of the blocks and the issue of the leases.

Gunning.

I enclose report from Mr. Pembroke, Warden's Clerk.

Burrowa.

I have received the following information from Mr. Wotton, the Mining Registrar:—

Frogmore Copper Mines, 16 miles from Burrowa.—These works stopped about four years ago, but have started again. 100 tons of ore on the ground, about 40 men employed, and have about £5,000 worth of machinery.

The silver mines about Rye Park have shown very good assays.

Yass Warden's Clerk.

The report from this officer will be at once forwarded.

Taking all things into consideration, our future prospects have not been for some time past so hopeful as at present.

SOUTHERN DISTRICT—Cobargo Division.

(L. J. Clifford, Mining Registrar.)

I have the honor to furnish for your information my annual report on the portion of Dromedary Goldfield in my district.

There are seven men working at Montreal on old ground fossicking.

During the year two or three claims on quartz in the neighbourhood of Bermague have been taken up under the Mining Act, but so far nothing tangible has resulted, as they seem only to be holding them with a view to selling.

The line of reef known as Progress and Poverty, near Montreal, has been entirely abandoned.

For the year I have sold 42 miners' rights and 37 business licenses, amounting in the total to £35, being an increase on the former year of £16.

SOUTHERN DISTRICT—Wagonga Division.

(W. J. Foster, Mining Registrar.)

In submitting my annual report upon this division I regret that the anticipations shadowed forth in my predecessor's annual report for the year 1887 have not been realized. Various causes have conspired to frustrate those expectations, which will be noticed further on.

I also regret to be compelled to state that claimholders and proprietors of crushing mills refuse to give any information in regard to the amount of stone raised or crushed, or the gold won therefrom, so that I am totally unable to give that data which is the vital information required by the Department for showing the prospects and progress of the gold-mining industry in this Colony. They seem to think that if they give the information sought they are exposing their private business, and perhaps jeopardising the value they place upon their holdings, forgetting that the information will be published in gross, and not in detail, or not believing that it will be so given.

Mount Dromedary.

The original prospectors have not crushed any stone during the year. Having worked out the upper levels they have been employed in driving a lower level; what success has attended their efforts I am unable to state, as they are very reticent.

The claims on the Star of the South line have been in full work, and considerable quantities of stone have been crushed, yielding fair returns, which rumour says is satisfactory to the owners; but the amount of stone treated, and the yield of gold therefrom, I am unable to state for the reason stated above.

There is a new feature developed during the year, that is to say, the deeper the work is carried the less free gold—the gold being found in pyrites, which cannot be saved by the ordinary stamper battery, and necessitates special machinery for saving the pyrites or "concentrates." A quantity from one of the claims on the Star of the South, was treated in Sydney by a mill adapted to the purpose, and the yield, as I have been informed, was about 75 per cent. of concentrates of the gross amount of stone treated, with a small return of free gold. I applied for the particulars, but have not received any answer.*

Wagonga North Head.

In this locality are situated the mines known as the Lady Carrington, Bodalla Gold-mining Company, and three or four private holdings. In regard to the above Companies, the work has been desultory, and no crushings, save trial crushings, which have been satisfactory, so much so, that the Bodalla Company is now erecting a large plant for saving the pyrites.

In one private holding the trial crushings have been satisfactory. In another, considerable quantities of stone have been sent to Sydney for treatment for pyrites. The percentage of pyrites, and the amount of free gold won, I have not been able to obtain.

Montreal.

Near this place is the reef known as the Progress and Poverty, in which some rich specimens were found some two years ago, and which caused considerable activity in taking up ground to lease at that time. During this year little or no work has been done.

Parish Cadjangary, County Dampier.

At or near the head of Coolagilite Creek a prospecting protection area in quartz was registered in August last. Since then two leases of 4 acres each have been applied for on the supposed line of reef. I am unable to state whether payable gold, or gold at all, has been found. The prospectors have not reported gold. One of the applicants to lease informed me their shaft was down 30 ft., and they intended having a trial crushing.

Brassknocker Creek, County of Dampier, Westward of Cobargo.

In 1886 a lease of 12 acres, on a then recently-discovered reef on or near this creek, was applied for, and considerable work done. A Berdan was placed on the ground for treating the stone, but whether the Berdan was ineffectual for the purpose—which is likely—or the stone too poor, I am unable to say. During this year little or no work has been done, and the ground is virtually abandoned.

Alluvial.

No new ground has been discovered during the year, and what work is being done is by fossickers, scattered over the division.

General Remarks.

158 acres 34 perches have been applied for to lease for gold-mining purposes, and 40 acres for mineral lease—silver.

The year has been exceptionally dry, and has retarded very much in some instances mining enterprise, as well as depressed all other industries.

TOTAL VALUE of Mining Plant in the division, £4,800.

SOUTHERN DISTRICT—EUROBODALLA DIVISION.

(*Henry J. Lea, Mining Registrar.*)

I HAVE the honor to report for your information that there is no mining carried on in this part of the Southern Mining District. All the mining is being done at Wagonga and Nerrigundah, where there are Warden's Clerks. I have during the year sold 121 miners' rights and 18 business licenses to the miners and business people on the Nerrigundah Gold-field.

SOUTHERN DISTRICT—MORUYA DIVISION.

(*H. Bragg, Mining Registrar.*)

I HAVE the honor to report in reference to the gold-mines in the Moruya Division that the alluvial claims have, with the exception of one, done but little during the past year. The claimholders expect better returns for the present year, as there are now three donkey engines on the alluvial diggings at Mogo. The quartz reefs are but as yet in their infancy. The Little Gem, situate about 3 miles to the south of Moruya, have erected extensive machinery, and have about 300 tons of quartz ready for crushing. This Company will commence crushing in a few days, and good results are anticipated.

Silver

* Warden's Office, Wagonga, 26th January, 1889. Sir,—I wish to amend my annual report for the year 1888 in that part relating to Mount Dromedary, and having reference to the production of "concentrates" from pyrites. Since forwarding that report I have received from one of the proprietors of the mine the amount of stone treated, and the yield of concentrates, which is as follows: 7 tons 16 cwt. 3 qr. of stone, producing 1 ton 15 cwt. of concentrates; equal to 22·32 per cent of concentrates. I have put the amount in the report at about 75 per cent., which is an error.—W. J. FOSTER, Mining Registrar. The Under Secretary for Mines, Sydney.

Silver.

There is one mine, about 4 miles from Moruya, with machinery erected thereon. This mine has been idle for some time past, but it has lately been floated into a Company in England, and the working of this mine will commence again in a few weeks.

Copper, Coal, Iron, and Tin.

None of these minerals have as yet been found in the district.

Total value of mining plant in the division, £2,850.

SOUTHERN DISTRICT—Gunning Division.

(*Sel. Pembrooke, Warden's Clerk.*)

I have the honor to report that during the year ended 31st December, 1888, three (3) gold-mining and six (6) mineral lease applications were applied for in this district, while the number of miners' rights and mineral licenses issued amounted to thirteen (13) and fifty (50) respectively. The gold-mining leases are all situated near Dalton, and are distant about 9 miles from Gunning. There has been a large amount of work done on Lease No. 88–1, the proprietors having about 500 tons of gold-bearing stone at grass, and I am informed that they intend erecting machinery for crushing within a few weeks, when it is anticipated that employment will be found for at least sixty miners. Gold-mining Leases Nos. 88–2 and 88–3 have also been extensively worked, and preparations are being made for erecting machinery. These leases are situated close to Lease No. 88–1, and the whole of them are said to be good paying properties, as the quartz is easily got out and the reef is very wide. Bulk lots have been crushed from each of these claims, giving results which have exceeded the most sanguine expectations of the parties interested.

Of the mineral leases applied for the majority have been worked more or less, the greatest amount being done in connection with Lease No. 88–1, on which a shaft has been sunk to a depth of 90 feet, and a drive put in for a distance of about 40 feet. This lease is situate about 16 miles from Gunning, and is in close proximity to the Jerrawa Railway Station. Several of the mineral leases are situated in the parish of Mundoonan, distant about 12 miles from Gunning, the whole having been tested more or less, but work has been temporarily suspended, awaiting the survey of the blocks and the issue of the leases.

The whole of the mineral leases were taken for the purpose of mining for silver. Numerous assays have been made from ore taken from the various claims, but no authentic information has been furnished to me as to the results.

I anticipate that the erection of machinery in connection with the gold-mining leases will give an impetus to mining in other parts of this district.

SOUTHERN DISTRICT—Araluen Division.

(*E. F. Carlile, Mining Registrar.*)

Notwithstanding the severe character of the protracted drought, continuing up to the last month of the year, the yield of gold has maintained very fair proportions, being 4,128 oz., value £15,892 16s. (4,100 oz. from alluvium and 28 oz. from quartz). Sluicing has been much retarded during the year through want of water, some of the claims having occasionally been enabled to work only one day in the week, instead of continuously, and the largest had to knock off one or two boxes altogether, which, of course, made a considerable difference in the returns. When rain came at last it was in such liberal supply that nearly all the deep claims were filled with sand or water, thus preventing profitable work for a few weeks. In one claim a steam-engine, and a centrifugal pump are buried out of sight On the other hand, the rain has been beneficial by causing a good growth of green feed, and checking the upward price of dry, which is a large item of expense in working the claims, where so many horses are employed.

During the "boom" many parties were out in the ranges prospecting for minerals, but did not succeed in finding anything worth while. As most of the specimens, however, sent to the Department for assay were surface stone only, not much dependence can be placed on the result till depth is reached. Some work is still being continued searching for silver.

The only quartz-mining has been at Bell's Creek, and not as much done there as in some previous years.

Judging from late yields of the claims, and the water supply being now abundant, the outlook for the coming year is as good as usual.

Total value of mining plant in the division, £20,830.

SOUTHERN DISTRICT—Little River Division.

(*P. J. Galway, Mining Registrar.*)

I have the honor to forward report for the year 1888, and am happy to state that quartz-mining is firmly established here, and as suitable machinery has been procured there is every prospect of the opening up of an extensive reefing district.

Sixteen new leases, representing 111 acres, and two extended quartz claims have been applied for during the past year, the greater portion being for legitimate working.

The Day Dawn Company, which was formed in Goulburn to work the Day Dawn Reef in connection with that known as the Earl Granville, have secured additional leases representing 27 acres adjoining their grounds.

Suitable buildings have been erected, and the battery-shed contains a 25 horse-power Tangye boiler, two Huntingdon mills, one 3½ feet, and one 5 feet, and two concentrators of the most approved kind.

There is also a Blake's pump for the supply of water for the battery. The necessary quantity is obtained from a substantial reservoir formed in the creek which runs close to the works, and can be depended on to keep up a supply in the driest seasons.

A steam mining-pump placed in the main shaft and driven from the boiler in shed keeps the working perfectly dry, and a large winch does the hauling.

The stone is heavily charged with pyrites, which are separated from the tailings by the concentrators, from 20 tons of which 1 ton of clean pyrites were obtained; assayer shows 20 oz. of gold to a ton of pyrites.

Ten

Ten tons of pyrites have been sent to Gunningar for treatment.

The reef averages 36 inches in width, and at 80 feet from the surface extends 160 feet, which is the present length of drive.

Forty men are employed in connection with the claim, and when the main shaft is put down 150 feet several more hands will be employed.

Murphy & Co. hold three leases, containing 18 acres, adjoining the Day Dawn Co.'s ground. Five tons of surface stone treated in Sydney returned 25 dwt. per ton. A shaft is being sunk on the reef.

Proctor and party hold 35 acres in two blocks. From the 25-acre lease 5 tons of stone taken from the 70-foot level and treated in Sydney returned 25 dwt. per ton. Work is expected to commence at once.

A steam pump will be placed on the Flora Reef, which is the property of the Day Dawn Co., and distinct from their present workings, as soon as a suitable one can be obtained.

The Jubilee Reef is idle for pumping machinery, and 40 tons of stone has been raised.

At Nom Chong's Extended Quartz Claim 10 tons of stone await crushing. This stone shows for 4 oz. to the ton.

Five tons of stone taken from Rickett's Extended Claim gave 15 dwt. per ton in Sydney.

It is expected that the Day Dawn Co. will crush for the public when they clear off the quartz they have at grass, which is now some 150 tons.

Prospecting for copper at Currawang Creek, Burrawang Range, has been going on for the past two years, and though promising indications have been met with from time to time, no continuous lead has yet been found.

A 40-acre copper lease has been taken up 20 miles further down the river by a Melbourne party, but no work has been done as yet.

During the silver mania a large amount of prospecting was done here, with the result of a gossan lode being found, which was traced and sunk on for 8 miles. Assays of from 7 to 10 oz. of silver were returned per ton. The deepest prospecting shaft was 25 feet.

The exceptional dry weather prevailing during the year prevented alluvial mining to any extent, and great damage has been done to the flumes connected with the water-races by bush fires, and the only place where a little gold could be procured was in reach of the river. This also had ceased to run, and all the river claims were idle from want of pumping power.

166 miners' rights, 8 mineral licenses, and 4 business licenses were issued during the year.

SOUTHERN DISTRICT—Nerriga Division.

(*P. J. Galway, Mining Registrar.*)

My annual report will show that this division, usually looked upon as an alluvial field, has during the past year developed into an extensive reefing district.

12 gold leases, quartz, representing 130 acres, have been applied for; also, 3 special leases for sluicing purposes, containing 75 acres; 5 gold leases, alluvial, 115 acres; 1 mineral lease, copper, 40 acres; 1 mineral lease, silver, 40 acres; 3 mineral leases, coal, 1,920 acres; 7 applications for sluicing claims, 175 acres; 3 extended river claims; and 3 engine sites for crushing and pumping machinery.

The quartz leases have been chiefly taken up on the line of reef known as the Welcome and Excelsior, and a Sydney syndicate hold a large interest in most of the leases there.

Crushing and pumping machinery of the most modern and approved kind is being erected, and a main shaft 9 feet by 3½ feet is being sunk.

There is also a 10-head battery on Dhutz's 20-acre lease, further down the river.

The applicants for gold leases for alluvial mining are engaged in surveying and laying out races for sluicing purposes.

No work is going on at present on the copper and silver leases. Most encouraging prospects have been obtained, and I am given to understand that work will be commenced shortly.

The coal leases are reapplications for leases previously taken up at Nowra, and refused by the Mining Department. The present applicants represent a Melbourne syndicate who are prepared to open up the mine, which contains kerosene shale of the richest quality. Surface indications of shale deposits can be traced for miles through the Nerriga District.

The Gorang Sluicing Company's works have been at a stand during the greater portion of the past year, caused by a want of water, and the Company propose erecting a large reservoir at the head of the race. This should have been done at first.

I am certain that the alluvial deposits can be more economically and quickly washed by raising water by pumping from the river than by gravitation. The water carried in the races has to be taken so high up the creek that the main supply remains untouched.

The Shoalhaven Hydraulic Sluicing Co., holding 500 acres by special lease, and 125 acres under the Mining Board regulations, have not commenced forming their race as yet. This race will be over 30 miles in length; the size, 8 feet by 4 x 4. The survey and laying down the pegs for cutting is completed, and work will commence, the manager informs me, when the ground required for that portion through Church and School lands will be resumed by the Department.

A wide bed of basalt crosses the Nerriga Division. Some years back a shaft was put down and the basalt pierced at a depth of 132 feet, and an auriferous drift struck. From the great influx of water, only a few buckets of wash-dirt were obtained, which gave most promising prospects of payable gold.

A small Co-operative Company has been formed to test the ground, and a tunnel 1,200 feet in length will be driven to cut the track 30 feet under the present depth obtained in the shaft. This will fully test the ground, and, if successful, be the means of opening up a large extent of ground for deep sinking.

The gold returns for the year are below the average, the very dry season preventing much alluvial mining. Number of miners' rights issued, 54; mineral licenses, 3.

These do not represent the actual number held, as a great many were taken out in Sydney and Goulburn by applicants for leases.

SOUTHERN DISTRICT—Major's Creek Division.

(*John Heaylett, Mining Registrar.*)

Consequent on the extraordinary dry season, alluvial mining within my division has been very slack. No ground-sluicing has been done, and very little puddling. The Long Flat portion of the division where, with a few heavy showers occasionally, the dams would hold out, but the past season favoured it not, hence very little has been done. The quantity of gold purchased on the creek will prove what I say to be pretty correct, and by comparing it with the quantity bought the previous year, I find there is a falling off of 295 ounces. I have no means of ascertaining what quantity has been disposed of at Braidwood. I am, however, pretty certain that some parties have taken the bulk of their gold where they get the best price, and as this is the case as regards the years prior to 1888, it cannot alter the figures set down in tabular form herewith, viz., 459 oz. 10 dwt. 15 gr., from alluvial ground, and I am surprised that such a quantity could be obtained without the aid of water.

Quartz-mining has not until now made any signs of progress. The result of 600 tons from a reef near Dargue's, at Spring Creek, shows a very small average to the ton, yet it paid the owners fairly good wages. The 120 tons from Tomsen's Blow, for an average of 2 dwt. 8 gr. to the ton, could not have satisfied the party, otherwise they would not have left it till it becomes richer. It is said that every picture has a dark as well as a bright side, and as I have been showing the dark side first, I shall now reverse it, to find that where stood the crushing mill erected by Dargue and party many years ago now stands a stone-cracker, a centrifugal roller, quartz-mill, two concentrators, (Frue) and steam engine of 30 horse-power, all of which looks much better than the old mill known as Dargue's, and it is expected this machine will be ready for action in the course of a few weeks at most, and will then commence on stone being taken out of the United Miners' old claim, which has been recently sunk 50 feet into the mundic stone, and are now putting in levels, and work going on day and night. A whim is being erected also, and a road made from claim to machine, contracts entered into for the carting of stone, and a supply of fuel for the engine. All this is going on on the private land owned by Messrs. Roberts, Hassell, & Co. I believe it is called the Dargue Company. Stone from this claim recently treated at the Cunningar pyrites works is said to have yielded as high as 19 oz. 17 dwt. to the ton. Should this mine prove a success, the Snob's Reef at Big Hill ought to get a fresh trial, it being on the same line with the United Miners, and it is said by experts that it is the best mining property at the creek.

During the year I sold 45 miners' rights, as against 41 for the previous year, and 18 mineral licenses, as against 3 during the previous five years. These latter have been taken for the purpose of prospecting for silver at Cleetmore and Wyambene, some 10 or 15 miles from here by a straight line, and 15 and 20 miles by the road from Major's Creek to Krawarree.

I asked the manager of the Wyambene Company's mine for information as to what has been done by him up to the end of 1888, and as yet no answer.

Speculators will not work the Rise and Shine Reef at Red Hill. Must have lease of it. Of course a leasehold is much harder to jump; yes; and can be held longer without working. The stone from this mine assayed at the rate of 3 oz. 12 dwt. gold and 32 oz. silver to the ton respectively. This and many other spots on the creek would not be idle but for the folly of planting a township on the very ground containing the gold; yes; both alluvial and quartz.

Number of days on which rain fell at Major's Creek, during the following years:—

1881	Rained on	117 days.
1882	"	113 "
1883	"	107 "
1884	"	78 "
1885	"	63 "
1886	"	74 "
1887	"	99 "
1888	"	40 "
	Total during the 8 years	691 "

Number of frosty nights at Major's Creek, during the following years:—

1881	Frosty nights	66
1882	" "	84
1883	" "	86
1884	" "	89
1885	" "	83
1886	" "	91
1887	" "	63
1888	" "	106
	Total No. of Frosts during 8 years	668

Not having a rain-gauge, I am unable to state the quantity which fell on each day, but may say that on many occasions a few drops only fell, and very often as much fell as about laid the dust—indeed it would be safe to say that not more than one half of the number gave enough to be of any benefit to the grass crops or for mining purposes, and on two occasions only was there enough to be of service to the sluicing or flooding of claims.

I have appended this to my report merely to show that these eight years have not been favourable to the working of the alluvial, *i.e.*, old workings, and there is no new ground to prospect consequent on the township and suburban allotments being in the way.

SOUTHERN DISTRICT—Braidwood Division.

(*C. E. Oslear, Mining Registrar.*)

I regret to say that I have very little to report in regard to the progress of the mining industry in my division of the Braidwood District. There is a considerable amount of prospecting going on, but no claims at present considered sufficiently good to warrant any great expenditure in machinery, &c. Messrs. Samuels & Co. are cutting a very extensive race, and when completed, with undoubtedly fine prospects, will show a splendid return for their work, setting aside the number of people it will give employment to in the district.

SOUTHERN DISTRICT—Goulburn Division.

(*A. A. Williams, Warden's Clerk.*)

I have the honor to forward my annual report of mining in this district during year 1888.

There is a falling off in gold and mineral lease applications as compared with 1887.

Gold lease applications for 1888, 19; for 1887, 54; mineral lease applications for 1888, 20; for 1887, 33.

Number of miners' rights issued during 1888, 217; mineral licenses, 79; business licenses, 4.

SOUTHERN DISTRICT—Bombala Division.

(W. A. Dorets, Mining Registrar.)

I have the honor to tender my report as Mining Registrar for this division for the year 1888, and I am glad to say that although no special advance in mining matters has been made, yet there has also been no retrogression. A large number of miners' rights have been issued, and indeed many more than last year would have been so issued were it not that the prospectors in so many cases brought their rights and licenses from elsewhere. Five extended alluvial claims have been applied for at Nelbothery, and from these a great yield is reasonably expected. They are at present in "suspension of labour" to give time to erect the very costly machinery which will be required to work the claims.

The amount of gold purchased by the Banks this last year is 501 oz. 19 dwt., as against 745 oz. 12 dwt. for 1887; also, the issue of rights and licenses for the past year is as follows:—Miners' rights, 44, as against 49 of the previous year; mineral licenses, 10, as against 2; and business licenses, 23, as against 24.

It may be confidently expected that as soon as Nelbothery is opened up by the abovementioned claims a great impetus will be given to mining within this division.

SOUTHERN DISTRICT—Nerrigundah Division.

(D. F. Stinson, Mining Registrar.)

I have the honor to forward my annual report for the year 1888.

Having only entered on my duties from the 18th July last, my report will not be as complete as I should desire. There being no office established in this division up to July of this year, the whole of the business from here was done at the Eurobodalla and Wagonga offices.

Quartz-mining.

The principal mine in this division is the Mount Coman, the property of the Mount Coman Gold-mining Company, Limited. The width of the reef averages about 4 feet 6 inches. This Company have erected a powerful battery of 25 stamp-heads, driven by a 40 horse-power steam-engine. It is connected with their mine by a permanent horse tramway about 2 miles in length. Fifty tons of stone (out of 600 tons at grass) has been crushed, but the yield is not known. Several smaller reefs have been opened during the year, the returns from which I have given elsewhere. Two other batteries have been erected since last report; one by James Pollock, at North's Creek; it is 10 stamp-heads, driven by 12 horse-power steam-engine; the other has been erected for E. J. Coman & Co., at Bumbo; description—4 stamp-heads, driven by an overshot water-wheel. Other Companies contemplate erecting machinery during 1889.

Alluvial.

Alluvial mining has almost been at a standstill owing to the scarcity of water. Creek claims are the only ones being worked. The miners inform me that they are barely making a living, but still have good hopes of the future of this diggings. No miners' rights or business licenses have been issued from this office during the year.

Total value of mining plant in the division, £17,000.

SOUTHERN DISTRICT—Bega Division.

(R. Frappell, Mining Registrar.)

I have the honor to forward my report of mining operations in this division for the year ending 31st December, 1888.

Mining has made little progress, but steps have been taken to develop the resources by forming a Prospecting Association, and operations commenced by testing a reef at Nelson's. Two shafts were sunk about 110 feet, and one driven 50 feet, but nothing payable has as yet been met. Alluvial gold was found in a creek near Wyndham; being on private property, operations were stopped.

A mineral lease of 40 acres has been taken up at Wallagoot. Sufficient indications of silver have been met to warrant a thorough prospecting. The ore raised has not been deemed sufficiently good enough to warrant the expense of a test. Several parties are out prospecting, and with plenty of water to facilitate their labours, I trust to hear shortly of something payable having been found. No machinery for treating ore has been erected in this division. About 20 ounces of gold has been purchased by the bank, principally from the old workings around Nelson's. With a better water supply and more interest taken in mining, I trust the present year will be productive of better results.

SOUTHERN DISTRICT—Yass Division.

(G. Addison, Mining Registrar.)

I have the honor to report with regard to mining in this division of the Yass Mining District for the year 1888 that I have received fourteen mineral lease applications for an area of 540 acres. All these applications were for silver, and as some of the specimens obtained were very good it was thought that mining matters would go ahead. However, little has been done, and at present matters are at a standstill. Although this is the case, yet, survey of the leases having just been completed, it is very probable that some work may be done.

There has been a little prospecting for gold, but there is nothing further to report on this subject.

During the year I have issued 26 miners' rights and 15 mineral licenses.

SOUTHERN DISTRICT—Berrima Division.

(Percy Barnett, Mining Registrar.)

In forwarding my annual report for the Berrima Division of the Southern District, I have the honor to state that, having been appointed Mining Registrar on the 1st December last, from which time to the end of the year no mining business was done in this office, my report as to the state of mining in this district can only be based upon a comparison between the business transacted in 1887 and 1888, as shown by the books in this office.

Four

Four gold-mining leases, covering an area of 63 acres, were applied for during the past year, as against one for 1887; and on some of them suspension of work has been obtained. So far as I am aware, gold-mining appears to be about at a standstill in this division, nothing new having been reported to me.

Sixty-seven mineral leases were applied for, covering an area of 17,291¾ acres, as against 13 for 1887, the majority of them being for coal and kerosene shale, with about 11 for silver, &c. 19 miners' rights, 60 mineral licenses, and no business licenses were issued during 1888.

TUMUT AND ADELONG DISTRICT—Queanbeyan Division.

(Jas. Aldcorn, Warden.)

The principal mining operations in this division are at Captain's Flat, and these have for the past year been chiefly carried on by three companies, known as the Commodore, the Vanderbilt, and the Kohinoor. At the Commodore, which was formerly known as the El Capitan, and for a time worked first for gold, and subsequently for silver, operations have been steadily carried on in the mine and at the smelting works from the time when the Company obtained possession, about five months since. The main shaft has been sunk 100 feet, and about 300 feet of driving has been done during that time. Tramroads to the smelting works have also been constructed. About 400 tons of lead ore has been stoped out. The smelting returns are 450 tons of ore (which includes a portion of gossan ore from the Vanderbilt Mine, which is being worked in conjunction with the Commodore), producing 33 tons of bullion. At the Vanderbilt, which comprises several leases, and, as stated, is worked along with the Commodore, a large amount of work has been done, including 1,500 feet of driving, 100 feet of sinking in main shaft, 550 tons of ore broken and still in the mine, a hopper constructed to hold 100 tons, with about 120 feet of tramroad 30 feet high. Several drives have been put in with the object of cutting lodes; but, except in the original shaft, nothing has yet been found to justify the erection of further smelting works, as is intended in connection with the Vanderbilt holdings, or rather the joint companies. At the Kohinoor Mine there have been several changes in the management, and the present manager, who has only had full charge for a short time, could only give me an approximate estimate of the work done and its results, as follows:—Drives, 700 feet; rises, 240 feet; stoping, 2,000 feet. Total value of ore produced, gold, silver, copper, and lead, about £6,880. Several stoppages have occurred for want of teams to draw coke (procured from Newcastle), limestone, &c. Another Company, the North Vanderbilt, hold some private land, and besides have recently acquired some leases on Crown land. They have done a considerable amount of work in sinking and driving, but have not as yet got any payable ore. Apart from the operations of these Companies not much has been done. A number of leases have been applied for, which have not yet been granted. By some of the applicants a little prospecting has been done.

The Goodrabigbee Sluicing Company, at Brindabella, have been carrying on their works in cutting a head and tail race—the former involving an extensive piece of tunnelling. Until the water is got on, not much can be done in the way of gold-mining.

At the Original Mac's Reef, Gundaroo Gold-field, lease 231, of 10 acres, operations have been suspended for some months for the purpose of getting machinery. A trial crushing of 400 tons of stone has been made, yielding at the rate of 4 dwt. to the ton.

On two leases held by Messrs. Bray, M'Alister, and others, three months' work has been done. A shaft has been sunk 30 feet, showing a reef 18 inches wide, and with gold visible. The sinking has been very hard, and an excess of water has been encountered. It is proposed to tunnel the hill and cut the reef; about 150 feet have already been got through.

At what was known as the New Mac's Reef nothing has been done for some months, it having been found that the reefs were on conditionally leased land, and that new regulations were necessary for the working of such land. Some applications have recently been made for permits to work thereon.

TUMUT AND ADELONG DISTRICT—Gundagai Division.

(C. W. Weeks, P.M., Warden.)

I have the honor to submit my report on the Gundagai Division of the Tumut and Adelong Mining District for the year 1888.

I regret to report that mining during the past year has been of an unprofitable nature throughout this division.

Quartz reefs, both old and new, have been tested at considerable expense, but in no instance has a payable reef been discovered.

The only conclusion practical miners can come to is that the lower depths must be reached before the second payable shoots of gold can be looked for. Such work requires more capital than seems likely to offer. The Bongongolong Co., at Burra, has not resumed work, the dyke on which they were sinking not having proved payable. Williams' battery, at Coolac, is only partially employed on prospectors' lots. The Mount Morgan discovery, at Mooney Mooney, has not sustained the reputation its name would imply. This find consisted of numerous detached leaders scattered over the hill, and it was expected that these would junction in a strong lode at a depth. Some of these leaders were very rich, but they appear to run out at a shallow level. Two of the original party still continue to prospect the ground. The pyritous reefs at Johnston's Hill, Kimo, have not come up to anticipations, the percentage of pyrites being too low.

Two applicants in this division were granted a share in the Prospecting Vote, viz., James Higgins, at Mount Parnassus, and Jesse Harford, at Kimo. Both are busy sinking, but with nothing new to report at present.

I see little prospect of gold-mining having a revival in these parts until an Act to authorize mining on private property is passed similar to the Victorian Act. It is believed that valuable deposits exist on private lands around Gundagai, the owners of which decline to permit any mining.

TUMUT AND ADELONG DISTRICT—Tumbarumba Division.

(J. F. Makinson, Warden.)

The year 1888 has seen some renewal of enterprise in this division, and, altogether, mining has progressed fairly. In April several lodes bearing galena were found at Coppabella, and 37 leases were applied for. At the original find of Musgrove and party, the lode shows at the surface 25 feet wide; the vein-stuff is quartz,

quartz, through which, in parts, is seen galena in patches. At the west side there is an almost solid mass of galena 3 feet wide, to where the country rock overlaps it; how much further this may run into the hill it is hard to say, for no opening-up has been done. An average of the assays of the galena gives about 42 oz. of silver to the ton, and 55 per cent. of lead. The lode runs nearly N. and S., and is in slate country, there being coarse-grained micaceous granite a little higher up the hill. There has been some litigation about this find, and development has been delayed from that cause and from the late collapse in silver-mining generally.

Sluicing for gold has been a little less productive than last year, owing to scarcity of water, the most successful being The Burra Sluicing Co., Watson and party, Tarcutta, and Heinecke and Sons, Upper Tumbarumba. Gras, Fort, and M'Larrin have applied for a special lease of 100 acres at Tumbarumba Creek, about 2 miles up from Tumbarumba, to be worked by the new hydraulic elevator sluicing process. This party is now at work boring to test the depth of the ground preparatory to constructing their elevators.

Very little has been done in gold-reefing. Shanghan and Johnson, after crushing about 200 tons from their reef at Horse Creek, found the yield insufficient to pay, and have given up operations for the present.

At Bald Hill, Rolfe and Moorehouse have all the year been vigorously working to find the deep lead under the basalt, but are unable to report success as yet. Matthews and party, who have obtained a subsidy from the Prospecting Vote for ground allotted to them to search for a deep lead at Tumbarumba Creek, about a mile and a half below the town, have, at the date of this report, got down 48 feet through the basalt, and expect to bottom in about nine weeks.

Butler and party have taken up a lease for lode-tin mining at Jingellic, and the prospect seems good.

As nearly as can be reckoned, the yield of gold for 1888 has been 1,510 oz. The number of miners' rights issued was 195.

TUMUT AND ADELONG DISTRICT—Albury Division.

(T. A. Browne, Warden.)

Since furnishing my report for the year 1887, I have the honor to state that an important change has taken place in mining prospects. On the hills and slopes of the Black Range, near Albury, always remarkable for the richness of occasional deposits, a reputation for permanently-payable reefs has been gradually acquired.

The exceptional crushings from the claim of Messrs. Pye and Wealands, at a depth of more than a 100 feet, first attracted investors, inducing the formation of a syndicate for the purchase of this and the adjoining lease. This 8-acre lease, as well as the 7-acre lease of Messrs. Goldsworthy and others, being secured, a Company has been floated, and the ground is being systematically worked.

On the same line and adjoining is the 5-acre lease of Messrs. Meredith, M'Lennan, and party, from which were obtained the unusually rich specimens referred to in my telegram of 26th June last.

A portion of the subsidy granted by the Government for the purpose of assisting prospectors has been awarded to the leaseholders of this claim, who have put down a shaft more than a 100 feet in depth, substantially timbered. The One Tree Hill and Clina claims are also being worked, and a tunnel has been commenced for the purpose of striking the leaders in the former claim, which are known to be of more than ordinary richness.

Not the least considerable mine-works in the vicinity of Albury are the Hawksview quartz-claims, situated on Mahir's Hill on the estate of Arthur J. King, Esq. Gold was found there and good work done more than ten years since, and though the work has been interrupted occasionally the average crushings have been rich, and the amount of gold won very considerable, having regard to the capital expended. A royalty of 10 per cent. has been paid by the leaseholders, of whom Mr. Polkinghorne has been the principal proprietor and organizer. As to the workings, a considerable amount of labour has been expended in tunnelling and sinking, as well as stoping, but the plan of operation hitherto pursued cannot be described as complete or satisfactory, having regard to the probable extent of the auriferous area.

The battery, which has been erected on the river bank at a distance of a mile, is, I am informed, to be replaced by more modern machinery. Mr. Polkinghorne has, I am told, a comparatively long lease of the ground from the former proprietor, but would not object to coalesce with a Company, should one be formed on terms mutually advantageous.

The line of country would appear to be distinctly auriferous, as the same formation is observable on the south bank of the Murray towards Bethanga, while, about a mile due north, Messrs. Osborne and Hertzog are working with fairly payable results from their last crushing on the property of Mr. H. C. Smith, of Mount Pleasant.

The Soudan claim, at Splitters Creek, is being worked by Messrs. Dalton and party, but without present results of importance. Considerable activity was evinced a few months since at Ganara, but after the leases were applied for the excitement seems to have died out.

The Bungowannah Gold-mining Company have not been at work for some months. Great difficulty was experienced in saving the gold, although the machinery was modern and complete, owing to the peculiar nature of the conglomerate among which the gold, in the first instance, was discovered. Eventually the shareholders decided to sell, and the works were closed. There has been no work done for the past six months, though it is thought that a different mode of treatment would render the affair payable. This property is situated upon the freehold of Mr. Gottlieb Singe, and is distant from Albury about 14 miles in a north-westerly direction.

There has been a considerable increase in the number of miners' rights issued and gold-mining leases applied for, as against similar tokens of mining industry in the past year. During the year 1888 there have been issued—miners' rights, 119; business licenses, 10; mineral licenses, 4; gold-mining leases applied for, 26; mineral leases, 7.

I may conclude with the expression of my opinion that as the existence of the precious metal has been proved on the western, northern, and eastern borders of the town of Albury, as from time to time deposits of extraordinary richness have been discovered, as in the present workings of the Black Range Companies highly payable stone is being brought to grass from a depth never previously reached, it may fairly be conceded that steady perseverance in the present systematic operations, combined with adequate capital, is alone needed to enable Albury to reach the first rank of auriferous localities.

TUMUT AND ADELONG DISTRICT—Narrandera Division.

(L. S. Donaldson, Warden.)

The character of the gold-mining industry in this division may be described as one of "great expectations." A number of reef-claims that were worked and abandoned some twenty years ago were reopened in 1887, some as ordinary claims and some as leases. The old returns were said to have been enormously rich, but so far nothing has been discovered to justify the report. The intensely dry weather that has prevailed during the past year has completely stopped operations, and all the claims and leases are registered for suspension of labour conditions.

The only yield of gold during the year has been from a crushing of 200 tons by Ferrier, Evans, and party, at Cowabbie, which gave some 4 dwt. to the ton, the value of the gold being nearly £150. The gold in this reef is extremely light and difficult to save, and it is estimated that more gold remains in the sludge than was extracted by the machine. They have a battery of ten stamps, and have purchased some specially-designed apparatus for saving the fine gold, which has not yet been tested. They have 200 tons of stone now ready for crushing, and as some good rain has fallen since the new year came in they intend to crush immediately. The shaft is now being deepened with assistance from the Prospecting Vote.

Some 4 miles from Cowabbie, Messrs. Anlezark and party have sunk a shaft, with assistance from the Prospecting Vote, to a depth of about 120 feet. A small quantity of stone has been raised showing gold.

At Grong Grong a few claims have been worked with no result, owing to the dry weather.

Should we be favoured with good rains this winter all the abovementioned claims and leases will be thoroughly tested, and if the anticipated results are realized there will be room for the introduction of more extensive crushing plant.

There has been no alluvial working in this division.

TUMUT AND ADELONG DISTRICT—Adelong Division.

(J. James, Warden's Clerk.)

I have the honor, in accordance with your telegraphed instructions of 14th January, to transmit to you my annual report for the information of the Honorable the Minister for Mines.

The year has closed for a total yield of 1,357 oz. 7 dwt. and 23 gr. of gold, 350 oz. from alluvium, and the balance from quartz. It shows, however, an increase of business in twenty-three applications for gold-mining leases. Other business is as follows:—Issues of 188 miners' rights, 4 business and 4 mineral licenses; registrations, 15 conditional, 9 unsurveyed, and 1 surveyed.

Mr. A. W. Molineaux, General Manager for the Perseverance, Victoria, and Williams' Amalgamated Companies, reports that during the year 273 tons quartz, yielding 335 oz. gold, were crushed at the Perseverance Battery, nearly the whole coming from the Company's "own" mine, varying from about 4 oz. to as many pennyweights per ton. During the year the Company have added a concentrator for saving the pyrites to their already extensive crushing plant. The concentrator, although giving a considerable amount of trouble at first, now works well. At the Perseverance Company's mines work has been chiefly confined to the Adelong shaft, which has been sunk a further 100 feet, making a total depth of 565 feet from the surface. The make of white stone still continues, and one speck of gold only was seen in the sinking. Mr. Molineaux is of opinion that were this white stone got through a payable reef would be found below it. Drives were also extended at the 300-feet level both north and south, but not a sufficient distance to reveal any change in the country. Payable stone is now being worked in the stopes above the 400-feet north drive, and also in some old workings at about 10-feet in depth, to the south of the main shaft.

During the past few months a small but rich leader was followed into the 4-acre lease to the south, but it cut out.

In the Prowse and Woodward's mine men have been working on tribute during the whole year, and have on the whole made fair wages, the number of men employed varying from seven to three.

At the Great Victoria Company's mine men have also been working on tribute during the whole year, varying from eleven to two. The Company have also done a large amount of baling, having had three men and two engines employed for about one week in four.

Mr. Molineaux hopes before another year has passed there will be considerably more activity displayed on the hill, and is convinced that capital is only required to develop the mines in order to reap rich returns.

Mr. A. D. Shepard, in his alluvial lease, has for a considerable period been engaged in an interesting experiment of stripping deep ground by machinery, which, by ordinary methods, was found difficult and dangerous to work, owing to drifts and influx of water. The material operated on is sand and black alluvium, the accumulation through ages of decayed vegetable matter. Powerful and costly machinery of a novel description is used. The mode of operation is first by streams of water, under 100 feet pressure, and operated by hydraulic nozzles. The powerful action of the water on the mass reduces it to mud or sludge, when it is pumped up. Mixed with the water which breaks it up the material runs away when pumped to the surface, and gives no further trouble. The chief difficulty to contend with is the tendency of the material to slip in large masses into the cut when it is first opened out. As the work proceeds time has to be taken to let it drain, and when once drained it stands like a wall. The experiment is likely to prove a great success, and will reward the enterprising proprietor, as the washdirt is proved by bores to be rich.

Two iron water-wheels, two turbines, and two steam-engines are kept in constant use.

In conclusion, it may be stated that the year has not been devoid of prospective interest. There is the large area of 180 acres taken up outside the extensive areas already held, the sale of the Curragong and Donkey Hill leases to syndicates, and the visit of the Prospecting Board. One good feature in the Board's visit is that the £300 allowed for prospecting the Gap vein will soon be availed of, as an engine and pumping gear are in course of erection.

TUMUT AND ADELONG DISTRICT—Queanbeyan Division.

C. J. B. Helm, Mining Registrar.

I have the honor to submit my annual report for this division for the year 1888, and in doing so am able to state that there has been a considerable stir in mining matters during that period, and a large amount of capital has been expended in developing and establishing works of a permanent nature preparatory to commencing

commencing mining operations. It is expected that when fairly started good results will be obtained, particularly in alluvial mining. On the Coolaman Creek there are several men getting excellent results from alluvial washing, and on the Goodradigbee River, at Brindabella, the Goodradigbee Gold-mining and Sluicing Company (Limited) have started with a capital of £25,000, to work 26 acres of alluvial ground, which they have acquired, and which is well known to be of rich formation. For the purpose of working the wash, which is supposed to be fully 100 feet deep, having been tried to a depth of 95 feet, and is 300 yards wide, a head-race 4 miles 38 chains long has been constructed, at a cost of £2,000; also, an extensive dam and reservoir. Other works necessary are at present being pushed on, thirty-six hands being employed. The mining manager expects to start washing very shortly. At Mac's Reef work is being pushed on by Bray and party, who hold two 10-acre gold-mining leases. A reef, 18 inches wide, showing gold, was struck at a depth of 30 feet. A tunnel has been put in 154 feet through very hard country at a depth of 100 feet, and it is expected to strike the reef about 300 feet in. Several other leases have been taken up in this locality. On Wright & Co's. lease of 10 acres some 400 tons of quartz have been raised, assaying 4 dwt. to the ton. The shaft has gone down 110 feet; width of lode, 4 feet. Prospecting has been general throughout the district. 156 miners' rights and 29 mineral licenses were issued during the year, being a large increase on former years. 10 gold leases and 6 mineral leases were applied for.

Four tenements were conditionally registered, and 2 registered in the Surveyed Tenement Register, also 12 tenements registered in the Unsurveyed Tenement Register.

Mining in this district is at present only in its infancy, and before long there should be some good results, as the district is without doubt a rich gold-bearing one, and it only requires capital to develop it.

TUMUT AND ADELONG DISTRICT—Nimitybelle Division.

(*G. W. Myers, Mining Registrar.*)

I have the honor to submit my report for 1888, and have much pleasure in reporting that a great improvement in all classes of mining has taken place during that period. Several new finds have been made, and the miners' rights and mineral licenses issued have been greatly in excess of the number for the previous year, as the subjoined table will show. In addition to the quartz reef at Kydra, at which a fair amount of work has been done in the way of stone-raising (Kiss and party alone expending five or six hundred pounds), crushing operations having been suspended owing to want of water consequent on the long continued drought. The following new finds have been taken up and worked upon—bismuth near Nimitybelle; silver near Nimitybelle; gold and silver at Thoko, about 15 miles from Nimitybelle; and stream tin at Thoka. The Firery Creek reefs on the Umeralla River have also caused a little excitement here, and the rush there has been the cause of a number of miners and others leaving this locality to work there. Crushing operations are to be commenced at Kydra in a week or two, and judging by the results obtained with a pestle and mortar the return from the stone at grass should give a handsome profit after paying working expenses. At Thoko a shaft was put down 100 feet on a lode, assays from surface of which gave both gold and silver, but a trial crushing of stone in Sydney did not give as favourable result as was expected. At Thoka also stream tin was discovered, and two prospecting areas of 80 acres each were taken up, but want of water caused the prospectors to obtain a suspension of work. However, they were able to obtain the following results from trial washing, viz.—from 2 up to 5 oz. per dish.

Return of miners' rights, &c., issued for 1888:—Miners' rights, 70, as against 19 for the preceding year; mineral licenses, 21, as against nil for the preceding year.

Total area of land applied for:—For gold, 35 acres; for silver, 80 acres; for bismuth, 79 acres.

In conclusion, I may safely anticipate increased activity in mining in my division during the coming year, and have no doubt that capital and machinery will be more largely employed in developing the apparently vast mineral resources of this district.

TUMUT AND ADELONG DISTRICT—Tumut Division.

(*C. J. Lloyd, Mining Registrar.*)

Gold-mining has looked up a little in this division this year. Two special leases have been applied for on the Shaking Bog Creek of 100 acres and 50 acres respectively. Croker and Benson have also applied for a 25-acre lease on Adjingbilly. Up to the present time no results have been obtained. The mining in the district is mostly alluvial. The only quartz-workings are Perkins and party at the old Lacmalac Reef, and Webb and party at Murphy's Reef, Micalong, neither of which have yet struck the quartz. The miners are so scattered that it is most difficult to ascertain the actual amount of gold found. Many of them sell it in Gundagai, and small quantities are sold to local storekeepers. Twelve mineral leases have been applied for at Yarrangobilly for working silver, copper, and lead. The owners are sanguine that they will develop a rich silver-mine, but up to present date no great results have been attained.

TUMUT AND ADELONG DISTRICT—Kiandra Division.

(*W. D. Bailey, Mining Registrar.*)

I have the honor to submit my report of the Kiandra Division for the year 1888. The number of miners' rights issued was 119; business licenses, 2; mineral licenses, 20; gold won, 586 oz.

Mining here is in a depressed state. The causes are a bad season for water and the shallow ground being nearly all worked out. At the Basalt, Evans and party have driven a tunnel 190 feet into the hill, also driven into the wash at about 80 feet, but did not strike payable gold. It is thought that they are not sufficiently far into the hill. At Township Hill, Heinz, Hooper, and party have extended their tunnel, also put in cross-drives in various directions, 168 feet, 40 feet, and 63 feet respectively; also sunk a shaft about 17 feet, and put in a short drive from it. At the Empress claim they had a very short season for water, but the yield of gold was fair. At the New Chum Hill they have erected a derrick, worked by a Pelton water-wheel, put in a new tail-race, and various other improvements. A large amount of stones are met with on the face at present, but the wash-up will not take place until the end of this month.

There was some little excitement caused by the report that a good silver lode had been found at Yarrangobilly, 20 miles distant, on the Tumut Road.

At this place a large number of 40-acre blocks were pegged out, but no work of any consequence done on any, with the exception of one or two. It is now almost deserted.

Doubtless other gold was won which I cannot account for.

TUMUT AND ADELONG DISTRICT—Reedy Flat Division.

(J. T. Hely, Mining Registrar.)

I have the honor to forward my report for the year 1888, as under:—

Mining matters in this division are very quiet at present, although it has every prospect to brighten up before the end of this year.

The number of miners' rights issued was 79, as against 65 for 1887; business licenses, 4, as against 3 for 1887. There was a greater number of miners working in the locality in 1887, but a number of them were working without rights. I had to prosecute some of them to take out miners' rights, and since then others have been more careful.

The quantity of gold won during the year was 453 oz., valued at £1,756, and about 60 or 70 oz. may possibly not be accounted for, as it has been taken to other places for sale.

Some attention is being devoted to quartz-reefing lately.

A Company has been formed, with a capital of £500, to erect a 5-head battery, to be worked by water-power, and expect to be in working order in about four months' time.

A prospecting association was formed some three months ago to search for reefs in the neighbourhood, and a reef has been struck, about 10 inches wide on the surface, and about 8 inches at the 36-feet level, showing gold freely, and is estimated to yield about 3 oz. to the ton, with about 17 tons at grass. Encouraged by the success of the prospectors, six claims have been pegged out along the line of reef, and other parties are prospecting in the locality.

The principal drawback to the opening up of the reefs is the fact that most of the land has been alienated, and without a special permit from the Minister for Mines miners are not allowed to prospect, and complain about the delay in obtaining the necessary permission to search for gold on conditional purchases.

The reefs about here would pay well with a battery so convenient, but most of the miners have no capital to back them.

I have been unable to furnish my report sooner through absence on other duties, but trust to be able to furnish it sooner next year with more satisfactory results.

TUMUT AND ADELONG DISTRICT—Albury Division.

(Charles A. Conley, Mining Registrar.)

I have the honor to report that a very considerable revival has taken place in mining during the past year, principally at the Black Range and vicinity. Several leases which had been previously worked and abandoned have been reapplied for, and are now receiving another trial; and, in most cases, with favourable results.

Some very good yields have been obtained at May Day Hill by Messrs. Pye and Wealands, viz., 95 oz. 10 dwt. for 13 tons, and 45 oz. 13 dwt. for 10 tons. This lease of 8 acres has, together with Goldsworthy Brothers' 7 acres, and other leases to the west, been purchased by a syndicate at a very high figure, and is now being systematically worked.

The holders of the adjoining lease (5 acres), on the same line and to the east, Messrs F. W. Meredith, M'Lennan, and party, have struck some extraordinarily rich patches in two shafts sunk by them, and as they get down the reef is more defined, and similar to that on the 8 acres referred to above. Messrs. Meredith, M'Lennan, & Co. were awarded a share of the Prospecting Vote this last year, and have already sunk a new shaft to a depth of nearly 100 feet.

The One-Tree Hill lease, situated on the east bank of Black Range Creek, and for many years worked by Messrs. George Day, M'Lennan, and others with varying success, has been applied for by a new Company, but comprising several of the old party. They have started a tunnel from the deepest level, 182 feet, and are driving to cut leaders originally worked, one having proved particularly rich in years gone by. Should they succeed in striking the leader as rich as anticipated at this depth, the general impression is that the claim will prove one of the most valuable in New South Wales.

During the past year both the Splitter's Creek and Bungowannah properties have been at work; besides, Hawksview (private property) and Nine-mile Reserve are receiving attention.

There is nothing to report in alluvial mining.

I append a list of miners' rights, &c., issued by me during the year:—Miners' rights, 119; business licenses, 10; mineral licenses, 4; gold leases applied for, 26, as against 1 last year; mineral leases, 7, one of the latter being situated near Yarrara, and remaining six at Mount Pilot, at head of the Murray.

TUMUT AND ADELONG DISTRICT—Cootamundra Division.

(A. J. M'Carthy, Mining Registrar.)

I have the honor to forward my report of mining operations in this division for the year ended 31st December, 1888.

During the year I have sold 57 miners' rights and 2 mineral licenses, and during the same period 3 gold-mining leases and 1 mineral lease have been applied for.

TUMUT AND ADELONG DIVISION—Captain's Flat.

(T. Canning, Mining Registrar and Warden's Clerk.)

I have the honor to forward my report, for the information of the Honorable the Minister for Mines, for the year ending 31st December, 1888. I have great pleasure in stating great progress has been made in the development of mining industry within my portion of the division of the Tumut and Adelong District, Captain's Flat. Area of land applied for at the local office here, 1,297 acres; miners' rights, 89; business licenses, 26; and mineral licenses, 28—sold during the year. Population, 500 (five hundred).

North Vanderbilt Amalgamated Silver-mining Co., portion of which land comprises 79½ acres, rented by the Company from Mr. George Osborn, of Foxlow, the remainder being mineral leases rented from the Crown. No. 1 main engine shaft, 10 x 4 in the clear, is sunk a distance of 212 feet, and timbered with sawn wood 2 x 7 to the bottom of shaft, cross-cut west at this level 108 feet; main level

south

south 160 feet, cross-cut east 24 feet to intersect lode; will have to drive further distance in cross-cut to intersect lode; a chamber and cross-cut at the 100-feet level running west; also a cross-cut at the 50-feet level running west 30 feet; a drive along course of lode running north and south 75 feet.

No. 2 shaft, 9 x 4 in the clear, is sunk to a depth of 102 feet, further sinking to be continued to a distance of 122 feet, when will open out and cut lode. This property adjoins the Kohinoor Mine on the north, and to all appearance is a continuation of the Kohinoor lode, running direct into the Vanderbilt Co.'s ground, only being separated by the Molonglo River.

No. 3 shaft is sunk a distance of 32 feet on course of lode slightly to the west of the Kohinoor line of reef, and adjoining the Kohinoor Mine. Recent assays obtained from several samples of ore taken from this shaft give returns to the ton, viz., 48 oz. of silver, 4 dwt. of gold, and 20 per cent. of lead.

Mr. Collins, mining manager is very hopeful of cutting a rich lode of gossan ore in No. 2 shaft, at present showing promising indications. A great deal of work has been done on this property.

Kohinoor Gold and Silver Mining Co. (Limited), Captain's Flat.—A good deal of work has been done at this mine. Much delay was experienced owing to the coal-miners' strike, being unable to obtain supplies of coke to keep smelter running. Levels driven a further distance of 7,000 feet, rises 240 feet, shafts sunk 130 feet, driven out in stoping 2,000 feet. Bullion from smelter containing gold, silver, lead, and copper matte, value £6,108 12s. 6d. I am unable to give quantity of ore put through smelter during the year which yielded the above return. Ore at grass, 200 tons, valued at £6,000. I am informed by the mining manager a second water-jacket blast furnace is to be erected here at once. Portion of the machinery is at present at Bungendore Railway Station awaiting transit to the Flat. When completed this will give employment to between thirty and forty hands more.

Commodore and Vanderbilt Gold and Silver Mining Cos. (Limited), Captain's Flat.—These mines have been quite recently amalgamated, although they are separate and distinct properties. No. 1 tunnel, Vanderbilt Mine, has been driven in mining lease 117 of 20 acres a distance of 570 feet, having to drive a further distance of 40 feet before lode will be intersected. In lease 19 of 20 acres a shaft has been sunk a distance of 130 feet; the lode was intersected at 100 feet, which proves 6 feet wide of good payable ore; a drive was then started to intersect lode shaft, at which point 128 backs were gained for 400 feet of driving, drives from shaft north and south on lode a distance of 177 and 84 feet respectively, which distance cut through shoot of ore, which is at present being stoped. No. 3 tunnel, which is situated in western lease, is in a distance of 300 feet at 236 feet from mouth of tunnel. Commodore lode was driven through at 20 feet wide, composed of iron and copper pyrites with a small percentage of galena. This drive is at present standing awaiting an air-shaft holing, when further development will be made.

North boundary of lease 114. A shaft has been sunk a distance of 78 feet, and drives have been put ahead north and south on lode 40 and 30 feet respectively through low grade ore.

Commodore Mine, Captain's Flat. In Commodore lode a drive has been driven along course of lode a distance of 900 feet, carrying 300 feet of backs, and proved a lode of 20 feet wide, composed of gossan and intersected with shoots of sulphides of lead, the lead ore now being used to smelt with Vanderbilt gossan. At mouth of tunnel a main engine-shaft 10 x 4 in the clear is sunk to a depth of 100 feet, and at present cross-cutting the lode, which is expected to be reached during the week. On the north end of lease a tunnel has been driven 148 feet and cut lode 3 feet wide, consisting of iron and copper pyrites. Other extensive surface works are being pushed ahead. I am informed by Mr. J. V. Thompson, mining manager in charge of both mines, that there is in sight sufficient ore to keep the furnace at least nine months running, the ore referred to being very remunerative. Bullion from smelter, 27½ tons recovered for 661 tons of ore, yielding—gold, 82½ oz.; silver, 11,000 oz.; lead, 29 tons 14 cwt.; total value of bullion, £2,868 18s. 1½d. I may also state there is to be erected at the Commodore a second water jacket blast furnace in the course of a month or so. Furnace running splendidly. A Mr. Levine, whose services have been secured by this Company, comes from Colorado, United States, seems to thoroughly understand how to treat the ore here, as the furnace is running most successfully.

A great deal of prospecting has been done in and around the Flat during the year.

I would like to mention a great public want felt here is the delay caused in putting the town allotments up for sale, the township being the most suitable place for residence here.

Total value of mining plant in the division, £10,000.

TUMUT AND ADELONG DISTRICT—JUNEE DIVISION.

(A. Elliot, Mining Registrar.)

I HAVE the honor to submit for the information of the Honorable the Minister for Mines my report for the year 1888 upon the Junee Division of the Tumut and Adelong Mining District. I am glad to be able to state that a considerable improvement has taken place in mining matters in the division, and experts have given their opinion that there are some rich reefs in this neighbourhood. Since my last report several new and apparently very promising quartz reefs have been discovered in this division. Several Victorian speculators have purchased half of the Redan claim (Johnson and party), and I hear that a good battery will shortly be erected by them. Several crushings have been made from this claim, the yield being from 1½ to 2 oz. to the ton, and it is considered that quite as much gold was lost owing to the very defective machinery, which consists of five head of stampers, very much out of order. Some splendid stone is now being obtained from Fincher's claim at a depth of 60 feet. The last crushing from this claim (14 tons), with very defective machinery, yielded 2 oz. 13 dwt. per ton. In Stevan's claim, which adjoins Fincher's, some very good stone has been obtained within the last few weeks. There are at present at Wantiool about 120 tons of quartz at grass. During the year the Pioneer Gold-mining Company has been formed to work the Pioneer claim at Eurongilly. Machinery known as the Huntingdon Mill has been erected near the claim at a cost of about £1,250. From this claim have been crushed 105 tons of quartz, yielding 79 oz. 15 dwt. 19 gr., which realized £300 12s. 1d. Everything at these reefs is now at a standstill owing to the want of water. At Mitta Mitta; on Piercy and Dobbyn's lease, things are very quiet, but I have been informed within the last few days that a Company is being formed in Sydney to work the reefs there. It is the opinion of practical men that only by the most approved of modern appliances for saving gold can the ore in this locality be successfully treated.

Within the last few weeks several prospecting parties have obtained some very good specimens from the reefs at North Junee, which have been abandoned for some years, but it is very probable that ere long a stir will take place in this locality.

Not

Not far from these reefs, at Specimen Hill, M'Grath and party (having received aid from the Prospecting Vote) are still carrying on their work in the alluvial, but up to the present with no definite results. The gold won in my division during the year (as far as I can ascertain) has been 232 oz. 2 dwt. 16 gr., representing £835 17s. 6d.

During the year I issued 66 miners' rights (nearly double the amount of previous year), and received 8 applications for gold-mining leases, covering 68 acres. A number of extended quartz claims have also been applied for.

I hope next year to be able to furnish a report showing a still further increase of business in my division. Total value of mining plant in the division, £2,300.

TUMUT AND ADELONG DISTRICT—Cooma Division.

(*Jas. B. Spence, Mining Registrar and Warden's Clerk.*)

I HAVE the honor to furnish you with my annual report of the Cooma Division of the Tumut and Adelong Mining District for the year 1888.

516 miner's rights, 127 mineral leases, and 2 business licenses have been issued in this office, as against 65 miner's rights, 27 mineral licenses, and 1 business license issued during 1887.

Gold.

A very considerable amount of prospecting has been done in this district, and I am pleased to state with very encouraging results.

The Colinton reef was found in June last, since which time some very good work has been done on the different areas, but, owing to the very rough and hilly country, only the prospector and two adjoining claims have yet struck the reef, which, in the prospecting claim at a depth of 40 ft., is 3 ft. wide, and well defined. Several tons of quartz sent for treatment to Sydney have yielded from 2 oz. to 8 oz. to the ton. There are now about thirty miners at work on the different claims.

What is known as the Fiery Creek diggings is a most important find, and quite a local rush occurred in August last. There are several parallel reefs at this place, composed of a conglomerate slate quartz and ironstone gossan on the surface, but at a general depth of 40 ft. the reefs turn to solid quartz, varying from 6 in. to 3 ft. in width. The gold found at this place is generally very fine, and will require very careful treatment to save it. Numerous assays have been made, yielding from 1 oz. to 10 oz. to the ton. I am informed that machinery is to be erected on the Umeralla River, near to this field, very shortly, and, when it arrives, I feel sure the sixty miners at present working there will be fully doubled. On the various claims there is over 100 tons of stone ready for crushing, the value of which it is impossible to arrive at.

Several other auriferous reefs have been found in this district, and those being worked with encouraging results are—Big Badja, Bredbo, and Cowra Creek.

Twenty gold leases have been applied for since the 1st June last, amounting in the aggregate to 120 acres.

220 gold claims, mostly quartz, have been registered, but a great number have since been abandoned.

Although the requisite forms were posted to managers of several mines, no returns have yet been received by me.

There are very few men engaged here in alluvial digging, and the amount of gold bought is only about 195 oz., of the value of £773, the price of gold being from £3 15s. to £3 16s. per ounce.

Silver.

Silver-mining has been actively prosecuted during the year, 42 mineral leases being applied for amounting in the aggregate to 1,605 acres.

In the Bredbo District a Goulburn syndicate have taken up several leases, and on one of them employed some eight or ten men to sink a shaft, from which several tons of ore was sent to Sydney for treatment, but I have not been able to obtain the results.

Messrs. Mant and party discovered a lode within 1 mile of the Bredbo Railway Station, consisting of galena and ironstone gossan, assays from which return 20 to 25 oz. of silver to the ton. They have applied for two leases of 40 acres each, and have sunk two shafts to a depth of 70 and 50 feet, but had to suspend operations owing to the flow of water in both shafts. I believe they are about floating a Company to obtain necessary appliances to work.

The find of a silver lode near the Big Badja River caused a sensation here, and mineral prospecting areas were pegged out for miles, but the original prospectors, Messrs. Jackson and party, are about the only ones who have continually worked the land. They secured 100 acres, on which they have put down two shafts. No. 1 shaft is well timbered to a depth of 100 ft., with a drive of 50 ft. No. 2 shaft was sunk to a depth of 30 ft. when a flow of water suspended further sinking. Owing to the very broken and unsettled state of the country in this vicinity, it is thought that sinking to a great depth will be necessary before the lode becomes well defined. Assays from No. 1 at a depth of 20 ft. gave the splendid returns of 329 and 334 oz. of silver to the ton, with a large percentage of lead. The lode consists of conglomerate quartz and ironstone gossan, with veins of galena.

During the year the mining revenue received at this office amounted to £1,110 12s. 6d.

In conclusion, I may state that, from the large amount of prospecting done in this district during the past year, there is every probability, with the advent of machinery, that substantial developments will be made during the present one.

PEEL AND URALLA DISTRICT—Glen Innes Division.

(*G. Martin, Warden*).

Tin.

THE season of 1888 was the most trying experienced by the miners since the opening of the tin-mines in 1872; and the rapid fall in prices, coupled with the long continued dry weather, had a most depressing effect on the industry. The severity of the drought was unprecedented in New England. From the middle of February to the first week in December very little rain fell on any part of the tableland, and the very gum-trees withered away on range and flat under the fierce heat and absence of moisture. In

such

such a season surface-mining was brought to a standstill in most places, and as the deep leads opened were gradually diminishing in productiveness the fall in the output from 2,846 tons to 1,281 was not surprising.

Prospecting has been carried on vigorously by the Basaltic Lead Company during the year, with a view to test the deep ground, ending at the Gulf, near Kangaroo Flat. Eight men have been continuously employed, and the manager informs me that 73 feet of trial shafts have been sunk in drift and basalt, 57 feet of cuttings opened, and 627 feet of tunnels (6 by 5 feet) driven mostly through hard granite rock. A cross-drive, put in for a distance of 183 feet, showed a face of coarse wash-dirt, from 1 to 6 feet in thickness and 80 feet in width, carrying a little tin.

The amount expended to 31st December in prosecution of this work was £1,189 8s. 10d.

The only operations being carried on in the lode are at the Ottery mine, from which source 93½ tons of black tin were won from stone crushed at the Tent-hill battery.

The output of tin ore for the year was 1,281 tons 13 cwt., Emmaville producing 1,037 tons 13 cwt., and Glen Innes 244.

At the average price of £67 10s. at the smelting works at Tent-hill the total value would be £86,533 18s.

573 tons ingots refined tin were forwarded from the smelting-house to Newcastle during the year.

Silver.

At the commencement of the year the silver boom was at its height, and supposed silver-bearing land could not be measured fast enough to satisfy the demands of a market where investors generally seemed to care little or nothing about the prospects of *bona fide* mining, but very much about the prompt issue of transferable scrip. Of the many companies floated in the early part of 1888 but four were in active operation at the close, viz, Webb's, Webb's Consols, Pye's Creek, and Castlerag. Webb's was earliest in the field, and the mine was well opened up and an extensive crushing, roasting, and leeching plant in full operation in January.

The machinery, however, was apparently defective, and the workmen necessarily inexperienced in the manipulation of a new and refractory ore. In consequence, active work in reduction was suspended after the first trial, and the ore concentrated and forwarded to Adelaide for final treatment.

The local manager reports that 400 tons of ore were treated during the year, giving a return of 13,182 oz. silver, being at the rate of 33 oz. per ton. The average number of men employed was 43, and the depth of the main shaft 314 feet. The distances driven in the mine were 354 feet on the 90-feet level, 260 feet on the 150-feet level, 126 feet on the 200-feet level, and 24 feet on the 250-feet level.

The value of the machinery on the ground is estimated at £11,250.

Webb's Consols mine is about 10 miles south of Webb's, and in a different formation of country, and although it is not so well developed as the latter mine the indications of richness are more promising.

The mining manager in charge (Mr. T. G. Davey) has favoured me with a report, which I give in full:—

This mine comprises five mineral leases, being portions 1,014, 1,015, 1,016, 1,018, and 1,019 of 20 acres each, and four mineral lease applications for 120 acres, all situated in the parish of Gordon, county of Gough.

In April last a Company was formed in Melbourne to work the mine, and since then the exploratory operations have been uninterruptedly carried on.

Work has been confined to sinking five main shafts, two of which are now 100 feet deep, and the others 75, 67, and 20 feet respectively. These shafts are each on a distinct lode, and all of them have produced more or less payable ore.

No. 1 shaft is 10 by 4 between timbers, and has been sunk perpendicularly. As the lode underlies slightly to the east it is now out of the shaft, but the continued occurrence of spots of galena at the bottom shows that it cannot be more than a few feet distant. Some 80 tons of ore have been raised from No. 1 shaft, consisting principally of copper pyrites and arsenical iron. It is only of late that we have met with indications of galena reef, assaying about 35 oz. of silver per ton.

No. 2 shaft is at a much lower level, and has been producing galena from the surface. This lode is almost perpendicular, and its width has not yet been ascertained. It is known, however, to be over 15 feet wide, as it has been traversed for that distance without showing any indication of walls. It consists of veins and "bunches" of galena, mispickel, and copper pyrites in a matrix of felspathic quartz. Some of the galena veins have at times been as much as 4 feet wide. From this shaft two parcels of ore have been bagged and sent away for treatment, the first parcel of 20 tons to Adelaide, and the second, also of 20 tons, to Germany. The average gross returns from these two parcels have been 73 oz. of silver per ton and 66 per cent. of lead. There are still 200 tons of ore lying at the surface from this shaft, which contains about 7,000 oz. of silver and 60 tons of lead. Preparations are being made to drive north and south on the lode at a depth of 76 feet.

No. 3 shaft is higher than No. 1, and has not reached the galena level yet. It produces large quantities of mispickel, and the lode is composed of very soft porphyry.

No. 4 shaft is 66 feet deep, and consists of felsite, through which crystals of galena are disseminated.

No. 5 shaft is 20 feet deep, and carries large quantities of mispickel and copper pyrites.

The Company is now negotiating for the purchase of a small concentrating plant, with a view to obtain immediate returns from the ore being raised from these shafts. The plant will consist of a set of Wall's rolls, with stonebreaker, screens, elevator, &c., three automatic plunger jiggers, two or three revolving sluice-tables, buddles, and a 20 horse-power engine. The capacity will be about 120 tons per week.

So soon as the mine has been sufficiently developed the plant will be materially increased, and smelting and refining will be introduced on the mine.

As lead predominates in the concentrated ore, it is needless to say that simple smelting is the process which is best adapted to its treatment.

The country formation is granite and quartz porphyry.

There is no doubt that at a depth galena will be abundant in all the lodes, as is shown by the fact that in No. 2 shaft (which is situated in a gully, and at a much lower level than the other shafts) galena predominates. In No. 4 shaft, again, which is next in level to No. 2, galena is freely seen; and in No. 1 shaft, where no galena had previously been seen, it was met with at 90 feet, and since continued to increase as sinking proceeds.

I consider that the prospects of this mine are most encouraging, and I see no reason why it should not soon occupy the premier position among the silver mines of New England, especially when we take into consideration the large area and numerous lodes.

The bearing of the lodes, approximately, is north 10° east.

Pye's Creek mine is about 20 miles north of Webb's, and as its ores carry a larger percentage of galena it is probable that they will be found much easier of reduction.

With the exception of a 12 horse-power engine, with winding gear complete, there is not any machinery on the ground, and operations have in consequence been confined to raising ore, of which there is about 400 tons to grass at the main shaft (now down 179 feet). This ore is estimated to yield 40 oz. of silver to the ton and 25 per cent. of lead. 42 tons of ore were sent to Adelaide for treatment, and the returns of a portion smelted gave 49 oz. silver and 5 dwt. of gold to the ton. All labour is now concentrated at the main shaft, where three shifts of men are employed. It is intended to sink to the water-level, with a view to open up the mine and test its value before erecting the reduction works the management have in contemplation.

Castlerag

Castlerag mine is within 6 miles of Deepwater railway station, and being a more recent discovery is not so well opened up as the other mine. The ores bear a close resemblance to those of Sunny Corner, in the western district of the Colony, and it is anticipated that, as with those ores, the process of reduction will not be difficult. Operations in shaft-sinking and tunnelling are being actively pushed on by the proprietary, who seem determined to bring the mine into full working order as soon as possible.

The total amount of refined silver obtained was 18,160 oz., contributed as follows:—Webb's, 13,182 oz.; Pye's Creek, 2,058 oz.; Webb's Consols, 2,920 oz. The total is not large, but considering the difficulties attendant on the introduction of a new phase of mining, and the utter inexperience of those at first entrusted with its management, it is not surprising that the results so far have been profitless and the output so small. It has, however, been proved that the silver-bearing veins are valuable, and when a more extended experience shall have given the knowledge necessary to master the treatment of the ores with economy, as well as skill, there is little doubt that many of the mines will pay, and that the local industry will take its place amongst the permanent industries of the country.

Gold.

Although the Glen Elgin Gold-sluicing Co. virtually abandoned operations after an expenditure of more than £3,000 on their concession on the Rocky River, there were signs of a revived interest in mining for this metal in other parts of the division. They were most encouraging.

Towards the end of the year two companies were formed to work large areas of alluvial ground at Oban, and many leases were taken up on the long-neglected reefs at Kookabooka.

At this latter place the reefs are very numerous, intersecting a peninsula of granite formation, hedged in amongst slate mountains, on the edge of the wild and broken country extending easterly towards Grafton. The veins are narrow, but the stone in places is very rich, showing gold freely.

The proprietors of the Welcome Stranger (Simpson, Drew, and Brereton) are erecting a crushing plant with ten head of stampers, which will be ready for work about the middle of April, and it is anticipated that the stone to grass will yield from 5 to 10 oz. to the ton.

The field appears to be an extensive one, but its development will depend very much on the success of the first crushing of stone from the Welcome Stranger. If anticipations are realized, there will be a rush to the place, and a very promising mineral country will be opened up. At present there are about 100 people on the ground, and preparations are being made to accommodate a much larger number. Gold has been mined for in the alluvial for years in every creek and gully in this neighbourhood, but it is only recently that prospectors have been successful in inducing capitalists to assist in opening the reefs. The field is distant S.E. from Glen Innes 34 miles by road.

About 360 oz. of gold were won from the alluvial at Oban and Glen Elgin during the year, principally by old resident miners.

At £3 15s. per oz., the value would be £1,350. It is not possible to ascertain the average earnings of the goldminers, as the return of metal won is but approximate, and tin and gold are associated and mined for together.

I should say, however, that ordinary labourers' wages are not made by the majority.

Ten oz. of gold were obtained from the Pye's Creek silver ore from the Emmaville District under treatment at the smelting works in Adelaide. This is an entirely new source of supply, and may be of importance when that mine is further developed.

Bismuth.

The Kingsgate Bismuth is still the only mine at which work is being actively carried on. About 40 men and 20 boys have been employed, and, according to the railway returns, 47 tons 15 cwt. were forwarded to Newcastle for shipment to England. I cannot give the value, as the management decline to furnish any particulars in connection with the working of the mine or sale of ore.

The average numbers of miners at work in my division during the year were as under:—

Emmaville.

Europeans	544
Chinese	950

Glen Innes.

Europeans	60
Chinese	80

Generally, in my division, mining for stream tin is becoming less and less productive, as known deposits are being worked out without new sources of supply being opened up. Tin-mining in the lode is still in a tentative condition, and of the three plants formerly at work but one, the Ottery, is now crushing stone. As this phase of mining is lessening in productiveness, there are, however, others opening which promise to more than take its place. From the Queensland Border to the Aberfoile River (the southern boundary of the division) silver ores have been found of more or less commercial value; and over half that distance, centring at Oakwood and Kookabookra, gold-bearing reefs are known to exist, which, it is probable, will now be made to disclose a profitable return on invested capital.

In the neighbourhood of Kookabookra, at Paddy's-land, the ranges are of serpentine and slate, basalt-capped, and evidently highly mineralized. In almost every gully on the west side of these ranges gold has been found, and silver and copper ores have been obtained where the formation has been laid bare on their eastern planks. The slate has weathered away for miles on these ranges, covering steep mountain sides with a smooth grass-grown coating of soft debris; but at some points hard cubical masses of slate are exposed in bulk, offering opportunities for procuring roofing material which may some day be turned to account. This portion of the country has been but little explored by any miner with the exception of the solitary and inexpert gold fossicker. In these days of mining adventure, it ought not to be any longer overlooked, as its mineral presence is worthy of closer investigation than has yet been given to it.

PEEL.

PEEL AND URALLA DISTRICT—Bingera Division.

(*Corbett Lawson, Warden.*)

I have the honor to submit my report for the portion of the Peel and Uralla Mining District under my observation for the year 1888.

After careful inquiry from reliable sources, I find the yield of gold from the Bingera District was over 1,250 oz. last year, being in excess of the preceding year, in spite of the prolonged suspension of operations caused by the scarcity of water for washing purposes. In many places large quantities of wash-dirt are stacked waiting the much-coveted rain.

At the following fields the prospects are gloomy and discouraging:—

Diamonds.—The old Diamond Co. has disappeared. Three new companies have retaken some of the old abandoned leases. The new Australian diamond-mining syndicate have sunk in a deep mountain gorge a shaft on the field proper, striking diamondiferous wash-dirt at a depth of 130 feet, and driven tunnels south and west. Mr. A. S. Low has sunk a very fine shaft, 250 feet deep, in the basaltic rock, and is compelled to suspend operations to obtain machinery to reduce the great influx of water struck at that depth.

Gold.

Bingera.—The All Nations Reef has changed hands. It is expected increased capital will furnish means to properly develop this promising reef. On the Town Flat several leases are pegged out. One Company has sunk a shaft and erected pumping plant. It is reported they have struck payable wash-dirt.

Bobby Whitlow.—A few old hands still making a living, and some shafts are commenced on the prospecting reserves, by the aid of a grant from the Prospecting Vote.

Gympie Flat.—In the first months of the year the flat was remunerative, but in consequence of the continued drought wash-dirt was stacked, and miners left.

Spring Creek.—Reading and party have struck some good patches. H. Miller has sunk several shafts without success. This country requires crushing appliances to develop its resources.

Upper Bingera.—Most of the leases abandoned. Collins & Co. still continue working with variable returns.

Barraba.—Several new Companies floated, who have commenced work.

Tea-tree.—The Pioneer Co. have suspended labour. Creek dry; engine and battery idle.

At Ironbarks, Crow Mountain Paling Yards, very little doing.

PEEL AND URALLA DISTRICT—Tamworth, Nundle, and Bendemeer Division.

(*J. L. King, Warden.*)

In reporting the mining progress in the Tamworth, Nundle, and Bendemeer Divisions of the Peel and Uralla Mining District I regret that I have not a more favourable one to make.

Tamworth Division.

In the latter end of 1887 seven gold leases, in all 110 acres, were taken up in the vicinity of Swamp Oak Creek, adjacent to the Great Northern Railway line, about 20 miles from Tamworth, the leases for which are only now lying in my office for signature. The applications being for abandoned ground, no actual work beyond a prospecting shaft or two has been done. I have once inspected these leases, and am informed that a Company has been formed to work them. They contain an ironstone lode which is said to have gone from 5 dwt. to 1 oz. per ton.

The only other mining property in this division is a prospecting area held by Aitken and party, about 4 to 5 miles easterly of the town. To this party aid has been promised to the amount of £312 10s., *i.e.*, 25s. a foot for 250 feet of tunnelling. There are a series of reefs running in a north and south direction, and the drive is to cut them at a lower level. The distance completed is 82 feet, and the first reef has been cut at 74 feet at a depth from the surface of about 50 feet; it is 10 inches at top, and 21 inches at bottom of tunnel, between hard slate walls, and well defined. The quartz on crushing has been found to carry gold.

Nundle Division.

The great excitement which prevailed here at the latter end of 1887 and beginning of this year has almost subsided. The work now going on consists of a few of the leases on the cement being worked, I may say, with the exception of Mount Ephraim in a preliminary way. At Mount Ephraim, the cement has been followed at two levels with sandstone between, above, and below. A large quantity of stuff has been put through the pans, with, I am informed, fairly satisfactory results. A number of other leases have been applied for in this locality. At the one at Cement Hill machinery equal to the Mount Ephraim plant has been erected. Several shafts have been put down, and the owners are now calling for tenders for the working of the lease on tribute.

Particulars of Mount Sheba water scheme and tail-race:—No. 1 Dam, at junction of Burnt and Burnt Hut Creeks, with 13 acres surface; base, 120 feet; height, 25 feet; length, 5 chains; to hold 30,000,000 gallons of water. No. 2 Dam, 10 chains below No. 1 Dam, 7 acres, surface; base, 70 feet; height, 22 feet; length, 5½ chains; to hold 10,000,000 gallons of water; to be led by race, 2 feet 6 inches at bottom, 18 inches deep at lower side, which includes a flume of galvanized iron, 6 chains long, across Wet Creek to Dam No. 3, to hold 1,000,000 gallons of water; thence again by race to wooden tank (this race is about 3 miles long, from No. 2 Dam to wooden tank); thence by iron and steel pipes, 2,400 feet to where the wash-dirt is, viz., 800 feet of 22-inch iron pipes, 800 feet 18-inch steel pipes, 800 feet 15-inch steel pipes, 200 feet extension pipes, 13 inches of steel, to face of hill; the whole pipes are to be fitted with expansion joints; the end has two nozzles, with 4-inch vents. It is estimated that 500 yards of wash-dirt can be washed into tail-race every eight hours. The tail-race is cut in the solid rock, and is 7 x 5, with a fall of 10 inches in every 12 feet, and is 400 feet long, where, in the boxes, paved with wooden blocks, will be laid, and everything swept into them. The bed rock is dipping into the hill, and the wash-dirt has a face of about 100 feet, and seems to be inexhaustible, and it has been proved for years to carry gold, as good wages have been made, so it is said by all who have worked it, and a very large quantity of the dirt has been washed away with only race-water power.

At

At Mount Sheba (or Red Hill), where it is intended to sluice the face, large dams are being constructed, capable of holding 40,000,000 gallons. The pipes (iron) are on the ground, and operations were to have commenced in February next; but the want of water will be a great delay. The prospects of this Company appear to be very good, as it has been proved that the gold exists, and the latest and best sluicing appliances are to be used. At Dangar's Gully a new tunnel has been driven, and is now in 300 feet, and when completed will prove the whole of the six leases here taken up.

At Nimble Nook the Tamworth Prospecting Company are driving a tunnel to prove the existence or not of a cement lead in that locality. (It is about 5 miles from Mount Ephraim.) They are in about 561 feet. The cement has been found and worked in a primitive way in various localities with success by small parties, but as yet the working of it on a large scale has not proved a success. Should it do so, I am certain a large field of labour will be opened out over an area of 10 x 5 miles.

Several reefs are still being worked (without machinery) in the vicinity of the Hanging Rock, but, as heretofore, they bear a very low percentage of gold, and when found in any quantity it is contained in small leaders or veins which pinch out. There is no crushing plant in the neighbourhood, which is a great drawback, as stone will not pay when carted any distance.

A pound nugget was found at the beginning of the year about 12 feet from the surface, but nothing since. In fact, alluvial mining is at a standstill, owing to the scarcity of water, this being the dryest season for years past.

At Foley's Reef, at Bowling Alley Point, they are sinking on a lead of gold, which yields from ½ to ⅔ of an oz. per ton. Dowel and Stewart are working on their lease. All other workings are idle, except the Chinamen's claim in the bed of the river, which is being worked, I hear, to good advantage, but they are reticent in disclosing their winnings.

At Anderson's Flat (of which I have a very good opinion) is likely soon to be work, but it will be an expensive and tedious undertaking to cope with the large quantity of water in this flat. The present holders are however *bonâ fide* in their intentions, and are deserving of some leniency, as they have spent considerable sums of money.

The Lord Carrington Reef has been worked by Messrs. Hole and Williams to a depth of 100 feet, and a drive of 37 feet, but here, the water is in great quantities; as also at the John Bull claim, adjoining, where work has been suspended for a long time.

There is a crushing machine here which does the work of the whole field.

The area of land held and applied for under lease in this division is 1,032 acres 3 roods 33 perches, and the gold won for 1888 cannot be fairly estimated.

Bendemeer Division.

The mineral leases in this district are principally for tin-mining, and are being worked as far as want of water will allow, the Watson's Creek Tin-mining Company excepted. This property consists of 160 acres of mineral leases and valuable plant. The whole was offered at auction lately and brought in.

Gold won (approx.), 1,700 oz.; number of miners' rights issued, 321; number of business licenses, 8; number of mineral licenses, 17.

PEEL AND URALLA DISTRICT—SCONE DIVISION.

(*W. F. Parker, P.M., Warden.*)

I DO myself the honor to forward my sixth annual report upon the Scone Division of the Peel and Uralla Mining District, under my charge, during the period 1st January to the 31st December, 1888, viz., at Stewart's Brook and the Denison (Moonan).

There has been a considerable influx of miners to Stewart's Brook Gold-field during the past twelve months. The Royal Standard Gold-mining Company (Limited), which was formed about May, 1888, have raised and crushed about 800 tons of stone, which yielded 1,900 oz. of gold, valued at about £6,800. The nominal capital of this Company is £24,000, in shares of £1 each. The directors are Messrs. John Wheeler (chairman), Wm. Lovegrove, W. Clarke, J. V. Wareham, and I. P. Josephson. The legal manager is Mr. F. R. Woodhouse, and the mining manager is Mr. W. L. Adams. About thirty men are employed on the works. The Company purchased the claim of Messrs. A. Hearn Bros. for £2,000, and acquired other land adjoining by purchase, making a total area of about 35 acres, situate on a steep hill. They have a battery on the ground, and its appliances are to be greatly strengthened by the addition of five stamp-heads. Originally the stampers were driven by water-power, but are now worked by a 12 horse-power portable steam-engine. Of course when the supply of water is sufficient the machine can still be driven by water-power, and thus save expense in the working.

First Half-yearly Report of the Directors of the Royal Standard Gold-mining Company to Shareholders thereof.

Your directors have much pleasure in submitting their first half-yearly report, and in doing so have to congratulate the shareholders upon possessing a valuable dividend-paying property. Immediately after the formation of the Company on the 2nd May, 1888, your directors appointed Mr. W. L. Adams—a practical and experienced miner—as mining manager, who has put the mine in good working order, and under whose supervision sinking has been continued, drives proceeded with, and stoping and raising stone carried on.

Your directors have purchased a battery and manager's house, including the right to a water-race and machine site lease of 2 acres, and were therefore enabled to start crushing early in July. This battery is situated close to the mine, is worked by a water-wheel, but owing to the supply of water at times being insufficient to keep the machine going—in fact a stoppage was caused upon two or three occasions—your directors have recently purchased a 12-horse-power portable engine, which works satisfactorily; so that when the water supply fails the engine can be worked, and therefore crushing need not be stopped for want of driving power. The present battery consists of five head of stampers, but your directors decided to increase the number to ten, and the additional stampers have been ordered from the foundry, and will be erected as soon as possible.

The following is the result of crushings from your mine since the Company's formation:—On 19th July, 1888, 50 tons of stone yielded 158 oz. of gold, 21 oz. silver, of the value of £617 18s. 4d.; on the 9th August, 1888, 75 tons of stone yielded 227 oz. of gold, 31 oz. silver, of the value of £884 14s. 7d.; on 24th August, 1888, 40 tons of stone yielded 148 oz. gold, 19 oz. silver, of the value of £578 5s. 4d.; on 25th September, 1888, 60 tons of stone yielded 299 oz. gold, 38 oz. silver, of the value of £1,167 3s. 4d.;—thus 225 tons of stone yielded 832 oz. gold and 109 oz. silver, valued at £3,248 1s. 7d.

The battery was unavoidably stopped recently for ten days, owing to sickness amongst the miners, but everything is again in satisfactory working order.

The balance-sheet to 29th September, duly audited, is appended, and shows at credit of profit and loss account £1,562 18s. 9d., out of which a dividend of 1s. per share has been declared, payable 20th October, amounting to £1,200, leaving to be carried forward to credit of profit and loss account £362 18s. 9d.

J. WHEELER.

The

The total yield of gold at Stewart's Brook during last year from about 1,250 tons of stone crushed I estimate at about £8,000, but there is a large quantity of stone to grass waiting to be crushed. On the north of Stewart's Brook (where till the last few months but little mining has been done) a good deal of prospecting and work is now being carried out with encouraging prospects for future operations. John Ninnies and party's 8 acres, leased on New Year's Gift line of reef, situated about ¼ mile north-west from the Royal Standard Battery reef, averages 9 to 10 inches, in very soft, easily-worked country. Shaft sunk 30 feet, out of which two crushings were made, going 13 and 21 dwt. of gold per ton respectively. North of this about 1 mile is the line of reef known as Carter's, running north and south, on which, Adams, Gordon, and party have 10 acres leased, the reef averaging 2 feet in thickness. Several crushings have been made from this reef, averaging 1 oz. per ton. I have heard that this claim is about to be formed into a Company, with a capital of £2,500, to erect a battery and work the mine efficiently. There is a good supply of spring and swamp water available. To the east and adjoining is a claim and lease held by Kariens and party, on a new line of reef known as the Marquis of Lorne, which shows good gold; reef, 15 inches at present depth of shaft, and widening as they sink. Close to this is a claim worked by Finn, Goddard, and party, who are working on a large reef with sufficiently good prospects to cause them to persevere. About ¼ mile away from this, in a south-easterly direction, is the Lady Maude line of reef, out of which very good crushings have been raised. Clifford and party and Kariens and party have claims on it. South-west of this 300 yards is the Cook's Patch line of reef, on which Elliott, Hewison, and party have a 10-acre lease, on which they have done a great deal of work, having sunk two shafts over 70 feet deep, and have put a level in between same about 40 feet in length for ventilation purposes. At 70 feet the reef underlays sharply to the east (or slides), which they are following, with better gold showing the deeper they get. They have something over 100 tons of stone at grass awaiting the completion of the additional five heads of crushing machinery at the Standard Battery. Through the gap, and on Denison Fall side of Blue Mountain, is situated the Morning Star reef, on which Elliott, Hewison, Manly, and party have a couple of leases. This reef is a good size, and promises well. There are also two other large reefs running adjacent and parallel to it, each carrying gold, but not sunk on. North-west of this about 300 yards is the Early Rose reef, on which Mr. A. A. Wall, who has a lease and claim, has done a lot of work and expended a good deal of time and money searching for the main reef. Crushings from this reef have gone nearly 5 oz. to the ton. A good deal of prospecting is being carried out about here in addition to the claims mentioned. West of the Early Rose lease about ¼ mile is a 25-acre lease, held by Messrs. Wall, Harris, Gillies, Oram, and party. Some rich prospects are to be got on this ground, which, when developed, should prove a good property. This ground is not being worked now, through awaiting survey and granting of lease. North-west from this is a 5-acre lease, held by Harris, Oram, and Wall, on a new line of reef, known as the Red, White, and Blue, on which a tunnel is being driven to cut the reef in solid country. North-west of this again is Fuller's Reef, distant about ¼ mile, on which Driscoll, Williams, and party hold several leases. This reef is the only one that has had a large amount of work done on it, and from which very good returns of gold have been obtained in past years. The lowest level tunnel in this claim is over 1,200 feet in length, and there are several others, with numberless shafts, &c., out of which numerous crushings have been taken, some reaching as high as 10 oz. per ton, and nothing below 1 oz. To the north of Fuller's reef about ½ mile is the Welchman's line of reef, which is a very large one, being 16 feet in places across, and from which some very good crushings have been taken, yielding as much as 5 oz. per ton. Messrs. Wall and Harris have a large lease here, and are busily engaged sinking and timbering up a main shaft 8 feet by 3 feet in clear, divided into up and down ways and ladder-way. This is a fine bit of work. They are down about 60 feet, and it is their intention to sink a further distance of 100 feet on the reef (underlay) before going to the heavy outlay to sink the main shaft. A tunnel is driven in on reef a distance of 330 feet, and requires driving another 300 feet to cut the shaft at a depth of about 120 feet. In moist seasons this reef is very wet, and the tunnel will drain the workings to that depth. Application for aid to drive same has been made to the Prospecting Board, who are expected to visit this field and Stewart's Brook. Mining otherwise at the Denison is quiet, as there seems no prospect of being able to get stone crushed through the long-continued drought. Several lots of stone are waiting for the necessary rain, viz., Fuller's Co., 100 tons; Black of Fuller's reef, 30 tons; Baber of Painter's reef, 25 tons. There seems to be any amount of reefs about carrying gold which require the necessary capital to develop them. Several of the largest reefs about here were leased some months ago, and there seems to be no intention of working them till the leases are granted. Moore and party and Tilse and party are on a good reef at Rusty Gap, Omadale Brook, and I hear there is some prospect of a Company being formed to work same effectively and to erect machinery on the ground.

In connection with the future prospects of Stewart's Brook and the Denison, I may here state that I have strong grounds for believing, taking the extent of the auriferous quartz country into consideration, the excellent average given by the reefs tested, and the hitherto primitive mode of working them, that there is a prosperous future in store for these fields. All that is required is a judicious expenditure of capital to develop and open out the field, and which can best be done by Companies, as from the difficult nature of the country the individual miner would have no chance.

I have just heard upon good authority that two of the largest and best reefs at Stewart's Brook are about to be floated into limited liability companies, which, if carried out, will give considerable impetus to the mining interests, and which might reasonably be expected from the marked success of the Royal Standard.

The Bluey line of reef, situated at Upper Stewart's Brook, is a well-defined reef, and which, I believe, is about to be floated into a large Company. I believe this claim, if skilfully managed, would yield a handsome return to the shareholders.

At the Denison (Moonan), during last year, 150 tons of stone was put through the battery there (a ten-stamper, driven by water-power), yielding a return of 197 oz. of gold. I estimate the number of gold-miners at Stewart's Brook at 250, and at the Denison 25, making a total of 275. During the year, 197 miners' rights, 4 business licenses, and 6 mineral leases were issued, and 87 applications for gold-mining leases. I may here state for your information that a number of the miners at Stewart's Brook are in possession of miners' rights for the present year issued to them out of this district, which accounts for the difference between the number of miners estimated and the number of miners' rights issued from this office.

The

The families of about thirty of the miners have settled at Stewart's Brook during the latter part of last year, and a publican's general license has been issued to Mr. Michael Dunn, at Stewart's Brook, which supplies a long-felt want.

The following is a summary of the stone raised and the yield at both the Denison and Stewart's Brook :—

	tons.	oz.	amount.
Stewart's Brook	1,250	2,250	£8,000
Denison (Moonan)	150	197	690
	1,400	2,447	£8,690

PEEL AND URALLA DISTRICT—Armidale Division.

(C. E. Smith, Warden.)

In forwarding my annual report for the year 1888 of mining operations in the Armidale Division of the Peel and Uralla Mining District, I have to refer with regret to the long-continued drought which prevailed during autumn, winter, and spring of last year, causing serious losses in stock and to agricultural products, and retarding the development of our mineral resources from an insufficient supply of water, and in many instances causing unavoidable cessation of work at the various mines in the district. However, the dry season has helped to give a great impetus to prospecting, and new discoveries of minerals in different localities were of frequent occurrence, and may lead to profitable employment being found for a large number of miners.

The quantity of gold obtained in the district is returned at 11,500 oz. as against 5,000 oz. for 1887, which shows a marked improvement in the increase of the mineral wealth. The find at Hillgrove amounts to 10,454 oz. 1 dwt. 5 gr., and the return from Mr. George Smith's mine, now known as Baker's Creek Gold-mining Company, is highly satisfactory, and has fully realized the favourable anticipations I expressed relative thereto in my last report, as the total yield for four and a half months' crushings, between May and December, is represented to have been 8,964 oz. 5 gr. from 766 tons quartz.

The legal manager of the Eleanor Gold-mining Co. reports as follows for the past year :—"6,053 tons of stone crushed, yielding 1,490 oz. 1 dwt. gold, valued at £5,842 16s. 9d.; average, 4 dwt. 22 gr. per ton; and that the antimony ore raised was 133 tons. That the shafts, viz., Brackin's, was 213 feet deep; Isabella, 100 feet deep; and No. 2, 100 feet deep. There were from 55 to 60 men employed. The stone raised was very poor, and operations were suspended during four weeks owing to failure of water supply. The Company is now erecting furnaces for extracting the antimony from the stone, leaving the stone to be afterwards treated in the battery to extract the gold."

During the year frequent applications were made for suspension of labour on land taken up for gold-mining, and had to be granted, owing to the scarcity of water and want of capital and machinery. Some Companies recently formed have commenced work with proper appliances, and under the skilful management of experienced mining experts.

The Hillgrove mines, which have attracted a population of nearly 1,500, will, during 1889, be tested, I trust, with satisfactory results; and I am of opinion dividends in many instances may be expected from capital judiciously invested in the Gara River Gold-field.

PEEL AND URALLA DISTRICT—Inverell Division.

(W. W. Fraser, Warden.)

I have the honor herewith to submit my report for 1888 of the working of the mines in my division.

Owing to the continuing drought, the like of which I have not known during my residence in this district for over thirty-five years, the output of tin in this division has fallen to some 11,000 tons. The money value, however, of the output has not been so much affected, owing to the high prices ruling, which averaged £68 per ton. The same causes have similarly affected all the other mining industries, viz., diamonds and silver, and most of the mines have had to suspend operations for want of water. Some valuable additions in machinery have been erected, noticeably crushing and smelting works, by Mr. E. W. Bathurst. But for the causes above stated, the works are now at a standstill.

Prospecting for silver still continues on the Weean and Dingo Creeks, and the assays have in some instances, been good.

Our future prospects do not look very encouraging at present, but we must hope for better times.

PEEL AND URALLA DISTRICT—Tingha Division.

I have to report that the year 1888 has been a most disastrous one as far as the mining industry is concerned, on account of the want of water, there having been no rain of any consequence for the whole year.

The output of tin for the year has been 253 tons less than that for 1887. The price, however, in consequence of competition, has been exceptionally high, and consequently the price therefor has been only £29,458 less than that for 1887. The falling off in the output is attributable to the failing of the shallow ground and the want of water.

Reefing is now being resorted to, but as yet there is no definite result to report.

The diamond mines, as far as I can learn (as all their business is transacted at the Inverell Office), have also been at a standstill for want of water.

Tin.—Quantity, 1,007 tons; value, £69,683. Total value of mining plant in the division, £6,900.

PEEL AND URALLA DISTRICT—Uralla Division.

(James Watt, Mining Registrar.)

I do myself the honor to submit the annual report for this division for the year 1888.

Owing to the prolonged and disastrous drought very little stuff could be washed, and that only at long intervals of time. Old claims, which have been patiently worked for years by such parties as Young's, Anderson's, Watson's, and others, have yielded the usual regular quantum of gold, and it is a matter

matter of surprise, and speaks well for the auriferous character of the field, that upwards of 200 miners most of them European, can at any rate obtain sufficient gold on the Rocky River and vicinity to warrant their devoting the whole of their time to the task.

Of the deep-lead mines at Doherty's Hill I have nothing of an encouraging nature to report. The Old Rocky Mining Co. have now tunnelled 429 feet in a S. 20° E. direction from their shaft, 300 feet of which were driven with assistance granted from the Prospecting Vote, but the returns up to the present have been so very poor that operations will shortly be suspended. Messrs. Carroll, Rice, and party, and Mr. W. J. French have also been granted assistance by the Government. The prospects from the claim of the first-named party are very promising, and they confidently expect some rich return for the long and hitherto profitless task in which they have been engaged during the past three years.

In August last a rush of a mild nature took place to a spot to the north of the Chinese burial-ground, and to the south of the old workings on the famous Mount Jones. About a dozen parties have been working their since, with a yield averaging ½ oz. to the load. The sinking is comparatively shallow, but the wash is for the most part only about 2 inches deep, and the stuff up to the present has had to be carted for about a mile to water. Boners and party have been the most successful in this rush, realizing at first about an oz. to the load. The ground is exceedingly patchy, and not at all likely to develop into something permanently beneficial to the district.

From what I have been able to glean from the local banks, gold-buyers, and other sources, I estimate the yield of gold last year in this division to be approximately 820 oz., as against 900 oz. reported for the previous year.

Licenses were issued as follows:—Miners' rights, 327; business licenses, 2; mineral licenses, 14; as against: miners' rights, 266; business licenses, 5; mineral licenses, 2,—sold in 1887.

The increase in the number of miners' rights sold in 1888 may be accounted for by the fact that about the middle of July a large number of leases were applied for at Boro Creek, situated about 25 miles east of Uralla, in which many of the Uralla residents were interested, and which, by the way, proved a complete failure, some inexperienced persons having mistaken quartzite, which is abundant in the locality, for auriferous quartz.

PEEL AND URALLA DISTRICT—WALCHA DIVISION.

(E. Marriott, Warden's Clerk.)

I HAVE the honor to submit herewith my annual report for the Walcha Division of the Peel and Uralla Mining District for the year 1888.

A considerable amount of prospecting has been going on throughout the district, and mining generally may be considered to be progressing.

Glen Morrison.

The Glen Morrison Prospecting Company still continue working their ground. Mr. Walworth, the person in charge of the mine, reports as follows:—

(2) *Star Line of Reef.*—Deepest shaft, 195 feet; lowest level, 185 feet; lowest worked level, 127 feet. Work done since 27th June, 1888:—Building old workings; prospecting at various levels—good prospects at 50-foot level and 127-foot level; prospect about 4 to 5 oz. per ton; width of reef, from 6 inches to 15 inches. Crushings from this reef have reached as high as 70 oz. per ton.

(2.) *Bar Line of Reef.*—Deepest shaft, 130 feet; lowest level, 84 feet. Work done during the past six months:—Building old workings; sinking main shaft from 84-foot level (which work is still being carried on to a depth of 150 feet; width of reef, from 1 foot to 3 feet. Crushings from this reef average 3 oz. per ton.

(3.) *Temperance Line of Reef.*—Deepest shaft, 70 feet; lowest level, 70 feet. No work done on this line of reef during the past six months. This reef is 2 feet wide; trial crushings, 16¼ dwt. per ton; crushings have reached 3 oz. per ton; about 20 tons quartz at grass.

(4.) *Root Hogg Line of Reef.*—Not worked for three or four years; crushings, 7 dwt. per ton.

(5.) *Cherry-tree Line of Reef.*—Not worked for three or four years; crushings, 11 dwt. per ton.

Centennial Gold-mining Company.

Mr. J. N. Watts, secretary, reports as follows:—This is a lease of 6 acres on the Glen Morrison field. The Company have expended about £500, and have sunk a main shaft to a distance of 104 feet. They are driving on the 60-foot level, and the reef shows 3 feet thick, and carries a very fair prospect of gold, which is estimated to go, at the least, 1 oz. to the ton. The Company have prospected the entire length of the lease, and traced the gold at each end.

Homeward Bound Gold-mining Company.

Mr. J. N. Watts, secretary, reports as follows:—This claim has been worked by James Kean and party, under a permit from the Minister for Mines. The Company have expended about £300 in prospecting the ground, and have proved the property payable, and reported the same to the Warden. Application was made to the Prospecting Board for assistance, but Messrs. Slee and Anderson considered the stone, at sight, was rich enough to pay all expenses to sink to a depth and prove the reef in settled country. The Company have increased the shares, and now have sufficient capital to thoroughly test the property, and are very sanguine as to the future of the mine. Work will be pushed on vigorously at once.

Tia River Reefs.

Tia River Gold-mining Company.—Mr. J. N. Watts, secretary, reports as follows:—This Company have been steadily pushing on work, and have about 150 tons of stone at grass for crushing. It is the intention of the Company to continue the shaft to a depth of 170 feet, and then put in a cross-drive and work the reef from that level. The expenditure up to date has been about £850, and all the work done is of a very substantial nature, and fixed for the future working of the mine.

Mountain Maid Reef (E. Oxenbridge and party).—Prospecting Claim—Sinking main shaft under assistance from Prospecting Vote. Present depth of shaft, 101 feet. Reef about 22 inches wide, showing a little gold. About 10 tons of stone raised. Propose to sink to a depth of 150 feet, and then drive on line of reef 50 feet.

Sleeping Beauty Reef (David George).—Sinking main shaft under assistance from Prospecting Vote. Present depth of shaft, 78½ feet. Proposed to drive east from 70 feet deep. *Nowendoc*

Nowendoc.

Mount Carrington Claim, Nuggetty Gully—Henry Whittam and party.—Still working on this claim. Air-shaft, 150 feet; deepest level, 300 feet from top of mountain to end of present working in No. 2 tunnel; propose to drive 500 feet more in a northerly direction.

Cells River, below Yarrowitch.—A number of miners have been working (alluvial) in this locality with fair returns,

Mumble Creek, below Yarrowitch.—Messrs. Potter, Welsh, and Rodway have taken up two leases and a prospecting area; still prospecting. Attention having been directed to this locality, may ultimately prove payable. Miners' rights issued during the year, 88; licenses, nil. About 100 oz. of gold purchased locally, value (Sydney Mint), £3 13s. 3d. per oz.

PEEL AND URALLA DISTRICT—Barraba Division.

(*P. Sinclair, Mining Registrar.*)

In submitting my report to you of the Peel and Uralla Mining District (Barraba Division) for the year 1888, I have the honor to inform you during the year I have issued 102 miners' rights, 4 mineral licenses, and have had 28 applications for leases, meaning a sum paid into the Treasury of £207 for the year. For the last twelve months mining matters have been very slack in this division. Owing to the long drought we have had people have been compelled to leave the mines and seek work elsewhere, for want of water.

There are 3 batteries in this division; they have hardly done any work in the year for want of water. I think 1889 will see a great change in mining matters in this division.

There is a Company formed that intend, in 1889, to use the chlorination process, and great results are expected, and many are of opinion the coming year will see this a very flourishing division.

I find it difficult to furnish you with a satisfactory report. Owing to the scattered position of the miners, there has been a great decrease in the population this last six months. I cannot form an estimate of the yield of gold according to the scattered population and the small lots that have been obtained by different parties. Very few of the leases are worked.

PEEL AND URALLA DISTRICT—Bingera Division.

(*T. Connolly, Mining Registrar.*)

I have the honor to submit to you my report for the year 1888, which, on the whole, is much better than 1887.

I have issued 208 miners' rights, 1 business license, and 12 mineral licenses. Twenty-five mineral leases and 24 gold-mining leases have been applied for. 1,200 oz. of gold has been obtained during the year.

The continued dry weather is a great drawback to miners. There are hundreds of loads of dirt stacked, waiting for sufficient rain to wash.

Total value of mining plant in the division, £2,200.

PEEL AND URALLA DISTRICT—Tamworth Division.

(*H. A. Ledger, Mining Registrar.*)

The number of miners' rights applied for during 1888 was 86. There are about 14 men at work in different localities prospecting some reefs, but as yet no payable reef has been found. The leases taken up some time ago for manganese have not been worked during the year, nor has any other mineral been found in payable quantities.

PEEL AND URALLA DISTRICT—Bendemeer Division.

(*H. B. H. Stumbles, Mining Registrar.*)

I have the honor to forward my report for the past year of the Bendemeer Division of the Peel and Uralla District. During the year ending 31st December, 1888, there have been 15 applications for mineral leases received at this office for the purpose of mining for tin, that being the only mineral at present worked in this district. There have been 17 mineral licenses issued at this office and 2 miners' rights during the year. Anderson and party have raised 8 tons 18 cwt. of tin, which was sold at £75 per ton. Murray and party have raised 5 tons, which was sold at £75 per ton. Northy and party have raised 3 tons 7 cwt., which was sold at £75 per ton. Hetherington and party have raised 2 tons, which was sold at £65 per ton. The Watson's Creek Tin-mining Company's ground has mostly been worked on tribute. The Bendemeer Company have commenced work on their ground, and are at present employing about 13 men.

PEEL AND URALLA DISTRICT—Cassilis Division.

(*Henry S. Hawkins, Warden's Clerk.*)

Three 40-acre blocks were marked out at Yellow Water-holes, Cassilis to Mudgee Road. Prospects for tin made, but without success, the assay of metal being too small to work on. Nothing has been done in the way of mining for last six months.

Two mineral licenses issued in year 1887.

HUNTER AND MACLEAY DISTRICT—Copeland Division.

(*E. L. Maitland, Warden.*)

I have the honor to submit my report of the Copeland Division of the Hunter and Macleay District for 1888.

Having taken charge of this district towards the end of the past year, time has not allowed me to make so thorough an inspection of the various claims and leases in this division as I could wish.

The past year has shown no improvement on 1887. Mining matters generally being at a very low ebb, but little work has been done; and, although the returns from the small quantity of stone crushed have been good, yet the expense attending the crushings, together with the cost of cartage to the machine, leave but a small margin for profit.

The result of the various crushings throughout the field have averaged nearly 2¼ oz. to the ton, and, as the gold-saving appliances comprise none of the modern improvements, it proves conclusively that, with capital judiciously expended and improved machinery, payable returns would be forthcoming from the greater number of the numerous reefs in this part of the district.

The Centennial Gold-mining Co. have now driven their tunnel about 994 feet, and are preparing to extend it still further, in the hope of shortly cutting the rich reef known to be in their claim.

During the year that has passed, 16 applications in connection with gold-mining leases have been dealt with.

Capital and improved gold-saving appliances are absolutely necessary in this district, and, until these are available, there is but little hope of a permanent improvement in the present state of mining affairs.

HUNTER AND MACLEAY DISTRICT—Bulladelah Division.

(*Charles H. Fawcett, Warden.*)

I do myself the honor to report as follows with reference to the Bulladelah portion of the Hunter and Macleay Mining District:—

At present there is only one party working at Coolongolook, and another at Paddy's Creek,—at the former the yield of late being over 16 dwt. per ton, and from the latter about 2 oz.

When suspensions granted expire, and leases are granted that have been applied for, no doubt the field will show an improvement.

The only claims apparently flourishing are those of the Alum Company, Limited. Their buildings, works, and improvements are valued at over £8,000. With additional ground they have now nearly 300 acres.

The refined samples forwarded to England, Melbourne, China, Germany, and many other places, have been considered highly satisfactory; and when additional machinery, now expected, arrives, a large addition to the men employed will be made.

HUNTER AND MACLEAY DISTRICT—Kempsey Division.

(*John Ducat, Warden and Mining Registrar.*)

I have the honor to submit my annual report on the mining fields for the year 1888 in the Macleay Division of the Hunter and Macleay Mining District, showing the progress made thereon.

At the beginning of the year a discovery was made near Deep Creek, in the county of Raleigh, and parishes of Newry and Valley Valley, of a belt of country which contained a mispickel quartz which had the appearance of being highly auriferous, and supposed to be silver-bearing. An application was made by Buckman and Marshall, the prospectors, for a mineral lease of 20 acres. They commenced work on this at once, and soon uncovered a blow of considerable size of that quartz. Several small quantities of the stone was sent for assay to prove what it contained. All of these, from the separate assays, and made by separate assayers, gave a report that the stone contained gold varying from 3 oz. up to 6 oz. to the ton. This caused the prospectors to convert their application into a gold lease. Immediately five others were also applied for. Upon none of these, however, could a second blow or reef be discovered. Shafts were sunk on three or four of them to a depth of 40 to 50 feet without a reef being struck. These shafts were north and south of the prospectors. Buckman and Marshall sunk a new shaft west of their first, and at 40 feet struck stone. They sunk down the face of this reef for 27 feet. An assay of stone at this depth gave a return of 11½ oz. gold to the ton. The reef now dipped off to the east. A drive has been put in. When at 20 feet the reef was again found. They have sent a quantity of stone away to Sandhurst to have it treated in bulk by the chlorination process. This will be a test whether the field is to be a payable one. Much money has been expended already on the ground searching for the reef, and to prove that there really is a reef. From the prospectors' shaft the reef proves to bear east and west, not north and south as at first supposed. There are thirty-four mineral leases applied for around the immediate neighbourhood of the prospectors. On several of these shafts have been put down to a depth of 45 and 50 feet. On Verge's and one of T. B. Larke's the reef was struck lying west of the prospectors. The stone raised is finer grained and closer looking than that from the prospectors. Some assays have been made of the stone, and gold found to be the principal mineral contained. The reefs are proved to be very hard to work and the stone difficult to treat, so that it can only be by great expenditure of capital that the field can be made payable. There is no machinery or other appliance on the field up to this for crushing or developing the mines. The gold in the stone is very fine dust.

About 2 miles south-west from this field, and nearer the south arm of the Bellinger River, while some persons were prospecting the country around, an antimony reef was discovered, and five applications for mineral leases lodged on the supposed line of reef. D. Anderson and party on No. 88–6 have done much work. They have a shaft down 50 feet, and have uncovered a large reef of rich antimony. They have about 100 tons or more at grass, but have not put any quantity on the market. They desire to float it into a Company, and thus procure capital to work it. None of the other applications lodged on this antimony-field have been opened up yet, but are being held over to ascertain, by the work on Anderson's lease, whether the reef is payable and likely to be permanent. A second reef of antimony has recently been discovered on the Nambucca, about 20 miles to the south-west of Anderson and party's, in the direct line over to the Corrangula antimony mines. I have before pointed out to miners here that I was confident a reef was underlying the country between the Deep Creek and Corrangula mines.

The Warrell Creek mining field is nearly at a standstill. Numerous reefs were discovered of chiefly ferruginous quartz, and supposed to be silver-bearing stone. Forty-four applications for mineral leases were lodged, and several prospecting protection areas were also taken possession of. A good deal of work in sinking shafts was done. The assays obtained from the stone were so poor that it was not sufficient encouragement for money to be expended on them. The holders of land had not means sufficient to persevere on into deep sinking, and I am satisfied that it will only be on deep sinking anything like payable stone will be found. The present state of the field—the uncertainty of what or how much mineral the stone contains—does not give sufficient encouragement for investing capital to fully prove it by deep sinking.

The Corrangula antimony mines are likely again to be actively worked. Mr. Becke, the manager, is at the works, having the machinery, furnaces, and plant put in working order; and I hope soon to see the works assume their former busy activity.

The

The leases Nos. 237 and 245 (Hodson's) have suspension of work granted on them, so that nothing is doing on them. Cohen and party's leases in parish of Lincoln are idle. No work has at any time been done at these.

As no alluvial diggings have ever been discovered in my division, as Mining Registrar, I have only to report on the sale of miners' rights and licenses. I have sold during the year, 241 miners' rights, 69 mineral licenses, and 1 business license.

HUNTER AND MACLEAY DISTRICT—Dungog Division.

(C. G. Smith, Warden.)

I have the honor to report that the mining operations at Wangat during last year do not seem to have sufficiently advanced in importance to attract an increase of population. This is attributed to want of capital to enable the few miners now on the field to efficiently work their ground; but the claim at Lower Wangat, known as the Wonga Wonga (late Golden Spur), and which is said to be the best of these workings, having lately passed into the hands of a Company of business men, there are hopes of a better future for the field. The claim alluded to is worked by a tunnel about 300 feet in length, at a perpendicular depth of about 200 feet; width of vein, from 8 to 18 inches; underlay to north, bearing east and west; six men at present employed; plant, consisting of trucks, rails, and mining implements, is valued at £100. During last year 90 tons crushed for 98 oz. 12 dwt., valued at £320 18s. 10d. On an adjoining claim a tunnel is being driven to cut the vein, and a lease of 5 acres on same reef has been applied for.

At Upper Wangat one claim has lately been worked, but not to advantage, the returns for 80 tons crushed being only 14 oz.

Three leases have been applied for of 7, 4, and 2 acres, evidently on the same reef as the workings at Lower Wangat, about 5 miles distant. A lease of 10 acres has also been applied for at Little Mountain, 4 miles from Dungog, but nothing payable yet found.

At Lower Wangat there is a battery of ten stampers, water-power, 15-horse, and valued at £1,200; and one at Upper Wangat, five stampers, water-power, 10-horse, and valued at £700.

No pyrites or cement have been operated upon in this division, and only a trace of silver in the stone.

Twenty-three miners' rights have been issued for this year, about one-half being held by working miners.

HUNTER AND MACLEAY DISTRICT—Bulladelah Division.

(Robert Quayle, Mining Registrar.)

I do myself the honor to report as follows respecting the Bulladelah portion of the Hunter and Macleay Mining District for the year ending 31st December, 1888:—

Twelve leases have been taken up for quartz-mining, 108 acres in all.

The Golden Butterfly, late Mountain Widow, J. F. Conway and party, crushed about 115 tons, which yielded 16½ dwt. to ton. Owing to the machinery breaking, crushing has been suspended. The deepest shaft is 120 feet, and contractors are sinking 50 feet deeper. The reef averages from 7 to 12 inches. About 40 tons of quartz to grass.

Mount Springfield, James Stuart and party, have made considerable progress in sinking and driving; but, owing to insufficient supply of water for crushing purposes, suspension of labour was granted. The deepest shaft is 70 feet, and a reef of 4 feet 6 inches to the bottom. About 50 tons crushed yielded 1 oz. to the ton; 100 tons to grass.

The Sutton, T. A. Paulson and party, crushed 5 ton, which yielded 8 dwt. to ton. Shaft down 25 feet. A well-defined reef, 3 feet thick, traced to the bottom. Suspension of labour granted to afford time to erect machinery.

The Wonder, J. H. Gillman and party. Very little progress has been made, owing to the country being very hard and wet. Shaft down about 96 feet, with a small vein showing good gold. The above-mentioned claims are situated at Coolongolook, about 20 miles from Bulladelah.

The Rosebud, W. Masters and party, at Paddy's Creek, put in a tunnel, expecting to cut the reef, but as yet have not done so. A trial crushing went 2 oz. to the ton in Sydney.

The Australian Alum Co. (Limited) have made considerable progress since my last report, and have added to their shed accommodation, purchased a new 35 h.-p. boiler, erected an additional kiln, made additional tramways, and doubled the width of the shoot that brings the ore from the top of the mountain to the tramways. There are about 750 tons of calcined stone on the slacking-floor ready for treatment in the extracting-vats, and the manager is now waiting for some additional machinery from Melbourne to recommence manufacturing. About 20 tons of allum has been refined, and samples sent to England, Germany, China, Melbourne, and other parts of the world, which has given great satisfaction. Forty acres have been added to this property, which makes about 300 acres in all. It is situated close to Bulladelah, and a great number of men will be employed when full work is carried on.

HUNTER AND MACLEAY DISTRICT—Maitland Division.

(F. V. Isaacs, Warden's Clerk.)

I beg to report that the only mineral operated upon in my division during the year 1888 was coal.

As the quantity of coal raised during the year at the various mines working in my division is supplied to you from other sources, I have not considered it advisable to obtain it again, as I found last year that the returns made to me were very inaccurate.

The principal collieries working in this district are the Greta Coal-mining Company, South Greta, and Homeville Collieries, near West Maitland, Rathluba, and several smaller ones, such as Four-mile Creek, Matthew Tulip's pit, &c., near East Maitland.

The number of applications for mineral leases during 1888 was 37, comprising an area of 18,404 acres, and an annual rental of nearly £3,000.

The coal is generally reported to be of first-class quality.

Five of the before-mentioned applications, consisting of 400 acres, were taken up for the purpose of mining for salt, and the specimens shown me by the applicants prove that the salt is of very fine quality.

The number of mineral licenses issued during the year was 29, and miners' rights, 19.

HUNTER

HUNTER AND MACLEAY DISTRICT—Copeland Division.

(E. N. Maitland, Assistant Mining Registrar.)

Mining has been almost at a standstill during the past year, and the little work done has been by miners without capital, who have been heavily handicapped by the want of modern gold-saving appliances, the high prices charged for crushing, and the cost of cartage from the mines to the machines.

The number of miners' rights and business and mineral licenses issued for 1888 are as follows:—Miners' rights, 166; business licenses, 20; mineral licenses, 20.

Total value of mining plant in the division, £3,250.

NEW ENGLAND DISTRICT.—Tenterfield Division.

(J. B. Graham, Warden.)

I do myself the honor to submit my report on the Northern Division of the New England Mining District for the year 1888.

In my last report I pointed out that at Fairfield, the principal gold-field in this district, great difficulty had been experienced in saving the gold, in consequence of its fineness, and its association with other minerals, and I was then in hopes that before the close of 1888 appliances would be available to satisfactorily treat the ores. I regret that I am not yet in a position to report that such is the case. During the greater part of the past year, in consequence of failures and the great general depression that took place in the early part of the year in all mining matters, the industry almost collapsed. The depression was especially felt in this district, as the mines were comparatively in their infancy. Only failures having been previously met with, and in no case did there exist a dividend-paying mine, it was almost impossible to obtain the necessary capital to carry on mining. Fortunately, principally through the enterprise of Mr. R. W. Stuart and a few gentlemen connected with him, a fresh impetus was given to Fairfield, and there is now every probability of proving whether the mines are payable or not. Extensive works are in course of erection, which will soon prove whether the practically unlimited extent of poor or low-class ores can be profitably treated. If it proves, as is confidently expected by experts, that the ores, containing from 4 to 10 dwt. of gold to the ton, can be made to pay, it will open a vast field for the enterprise of capitalists and miners. The great wealth of Fairfield will be found in its low-class ores. Vast quantities of stone can be obtained at a minimum cost that will yield an average of from 4 to 6 dwt. to the ton. This yield, treated with the latest labor-saving appliances, and on a large scale, is expected to leave a handsome profit. Generally, on the gold-fields in this district, the yield is, as far as I can ascertain, equal, if not greater, than the preceding year. In other minerals, such as silver, tin, copper, &c., the general prospects are encouraging, although the yield up to the present time has not been great. The necessary machinery and plant to extract the metals is not yet available.

I will deal with each division of my district separately.

Fairfield Division.

This division comprises the east and north-east portions of my district, including Fairfield proper (or Drake), White Rock, Red Rock, Timbarra, Pretty Gully, Tooloom, and other smaller diggings.

The Fairfield Gold-field of which Drake is the township, is situated about 38 miles east from Tenterfield. It is now about two and a half years since gold was discovered in the locality. Since then it has risen to be a field of great importance and promise, not only in gold, but also in other minerals. It can now be said to be through the dangerous period of depression and reaction consequent on that over-estimation of value, over-speculation, &c., which invariably affects all new fields started as this was, on a "*rich find*" and a "*rush.*"

The land at Fairfield was originally taken, in the most part, by working miners or prospectors, as gold-mining leases; and this was the first field to which the regulation applied compelling labour to be employed from the time that the land was taken possession of. Many of these leases have now been abandoned and cancelled. Some have been retaken again to be worked in larger areas, and in cases where gold is not the principal mineral, in mineral leases. This is the only way in which capital can be encouraged in the field From the difficulty of extracting the gold the poorness of the ores, and the necessity for the erection of large works and labour-saving appliances, the field is not what may be termed a working-miner's field. It is impossible to successfully mine in almost any part of it unless by the preliminary expenditure of considerable capital.

The principal mines in the immediate vicinity of Fairfield are the Mascotte Gold and Silver-mining Company, the Strauss Gold-mining Company, the Great Northern Gold-mining Company, the Adeline Gold-mining Company, and the Mount Carrington Gold-mining Company.

The Mascotte gold-mine is situated about 3 miles south-east from Drake. Rich silver ore has been found containing a percentage of gold. The leases are held as gold-mining leases, and work has been continuously employed during the year principally in opening up the mine and prospecting it as to its permanency. About 600 tons of ore has been raised, which is valued by the manager at an average of £12 per ton. The deepest shaft is a little over 100 ft., and it is estimated that there is 7,000 tons of ore in sight. I am informed that the Company are making arrangements for the erection of machinery to treat the ores for gold and silver. Various trial crushings and experiments have proved most satisfactory. The mine is under the management of Mr. B. Bryant, an old and experienced Victorian miner. This mine should yield payable results immediately on the completion of the machinery and treatment of the ores. The manager expects to be at work within a few months.

The Strauss Gold-mining Co.'s mine is situated on Sawpit Gully. The ore in this mine as far as yet ascertained is of low grade, but from the size of the lode likely to be very plentiful and easily obtained. It was worked from the surface down to water, and the ore crushed resulted in a yield of about 10 dwt. to the ton. About 1,400 tons have been crushed. In order to drain the mine of water, it was decided to put in a tunnel to cut the lode at the 90 or 100 ft. level. The tunnel is not yet complete, but considerable work in connection with the mine and machinery has been effected during the year, such as laying tramways to facilitate the delivery of the stone to the mill, &c. As soon as the tunnel cuts the lode it is anticipated that a great body of stone can be operated on at a minimum cost. The lode is 9 or 10 ft. wide. About 30 men are employed on this mine.

The

The Great Northern Gold-mining Company.—This is a new Company, taking what was called Messrs. Harvey, Pastetrson, & Co's. holdings, and some other neighbouring leases. The Company now own a considerable area of land, principally situated in Sawpit Gully. It is intended to mine for gold, silver, and for copper, which exist in large and valuable lodes and reefs through the property. Mr. R. W. Stuart is the resident managing director of the Company, to whose courage and enterprise, to a very great extent, the further development and advancement of this field is due. Although this Company has only very lately been formed, extensive machinery has been ordered, and some of it is now on the ground. A considerable number of men have been constantly kept employed in prospecting, opening mines, making roads, tramways, dams, machine sites, &c., and great energy is shown. The Company are satisfied by their manager's and the reports of experts that although the ore is of a very low grade its quantity, and the small cost at which it can be mined, the treatment will leave a considerable profit, if worked on a large scale. The ore is not expected to average more than from 4 to 6 dwt. to the ton. 1,420 tons of stone from various parts of the land have been crushed, the yield of which was about 235 oz. of gold. The treatment by the battery was not considered satisfactory, as a loss of gold was shown in the tailings.

A very rich lode of copper running through some of the leases is now being worked. Twenty tons of the ore has been treated at Newcastle, yielding over 21 per cent. of copper. The reef is 4 feet wide, and consists of carbonates and sulphides of copper containing a little gold. On a late visit I made to the locality I inspected this reef, and from what I saw of the stone raised at the shaft I should estimate the whole lode to average from 12 to 15 per cent. copper. There are several other good-looking copper lodes on the land and in the vicinity which have not yet been developed, but some have been sufficiently prospected to show rich outcrops of copper ore. My opinion, after seeing the country, is that it will eventually prove to be an extensive and valuable copper-field.

The Adeline gold-mine is situated on private property, immediately adjoining the town of Drake. It was here the first discovery of gold was made, about 2½ years ago, and where the first surface lot of stone that was quarried, or shovelled out, 10 tons, yielded 130 oz. of gold; this find caused the rush to Fairfield. £7,000 worth of gold was obtained from this mine in a comparatively short time, but for some reason it has been closed for a considerable period and no work done on it. During the whole of last year no work was done, but arrangements have been made now and the mine is reopened. A shaft is to be sunk to a depth, and a new process is to be used in saving the gold, which is mixed with iron, copper, and other minerals, rendering it difficult or impossible to save by the ordinary process. I anticipate that this mine will again show good results.

The Mount Carrington Gold-mining Company have expensive and perfect battery plant, consisting of 15 head of stamps, extensive self-acting tramway, and other works, on which a considerable expenditure of capital was made. I regret to say this mine is now idle in consequence of the poorness of the ore and the difficulty of extracting the gold.

There are various other mines at Fairfield which are not of sufficient importance for special notice in this report. Speaking generally of Fairfield, I am convinced, although many disappointments have been met with, that the gold and other minerals, especially silver and copper, exist in such quantities and over such large areas, it will, with the White and Red Rocks, prove one of the most important fields in this Colony.

At Long Gully, about 6 miles south from Fairfield, a number of mineral leases for silver were applied for during the year. In one case a small but very rich find of gold was made in what is known as Rivers & Co.'s lease. About 13 tons of the ore has been treated, yielding 253 oz. of gold. The reef is a narrow seam of zinc-blende, carrying free coarse gold, plainly visible in almost every piece. The seam is only a few inches thick, and has not much the appearance of permanency. Objections have been made to the granting of this mineral lease on the ground that the land is auriferous. The matter now awaits the inspection and report of a geological surveyor. The country is very rough, in a dense scrub difficult of access.

White Rock.—Although the now celebrated White Rock is properly a Fairfield mine, being only about 3 miles from the township, I have kept the report on it separate. The only work being done in that locality is in the White Rock Proprietary Company's mine and in the White Rock Silver-mining Company. The works in the White Rock Proprietary Company's mine are very extensive, and preparations are made for the reception of vast machinery which has been ordered from America. A very large body of stone has been quarried out, and some valuable prospecting has been done in sinking a shaft to test the lode at a deeper level. About ninety men have been kept employed during the year in building dams, levelling machine sites, making roads, tramways, and other necessary works, erecting machinery, of which, although not nearly completed, a considerable quantity is on the ground, consisting of a 20 horse-power compressing engine for air rock-drills. A 12 horse-power engine driving saw-mills and two large engines for the reduction works are also now being put into position. It is expected that the machinery will be at work in three or four months. About 13,000 tons of ore is awaiting treatment, and the quantity that can be obtained is practically unlimited. The ore raised is estimated to be worth over £20,000. The question to be solved is whether or not the ore can be treated at a profit. Mr. Howell, an American expert of high reputation, estimates that with the machinery he has ordered for the Company, over £100,000 a year profit should be made. The greater part of the ore is low grade, but the seams, which are numerous, are rich. About 163 tons of picked ore has been sent away for treatment at various times, and to various places, resulting in returns averaging £8 per ton. I understand the process to be adopted in the treatment of the ore is by crushing and concentrating the galena and pyrites by gravity, much similar to the treatment of lode-tin ore. For this purpose a considerable quantity of water will be required. Dams have been erected and excavated to contain 1,000,000 gallons of water. The watershed of the gully on which the mine is is only of very limited extent, but this is to be assisted by taking water from Plumbago Creek, and pumping it over a spur range 200 feet high. A 20 horse-power engine will be employed at this work. When this mine gets fairly to work, if it nearly approaches the anticipations of the manager and the experts who have examined and reported on it (and I have no reason to doubt but that it will), it will be one of the largest and richest silver-mines in the Colonies, second only to the Broken Hill Proprietary mine. The mine appears to be inexhaustible. The ore now in sight, even with the large reducing works to be employed, would last for many years. As far as I can judge (and it is also the opinion of experts), the mine shows every indication of its becoming richer as it is developed,

developed. The seams appear to be making in every case as they go down, and from the first shot put in until the present time the appearance of the mine, and the richness and number of seams have improved. The only question is, as I said before, will it pay a profit on the working and treatment.

The Red Rock is situated about 9 miles north-westerly from Fairfield. Several large Companies have been formed to work the mines in this locality for gold and silver, the principal of which is the Great Red Rock Gold-mining Company. A considerable amount of work has been done by this Company during the past year. There is a 20-head stamp mill on the property. A large quantity of ore was put through, but it was found that the ordinary process of crushing and amalgamating would not save all the gold, nor any of the silver. Proper plant for the treatment is now being obtained under the advice of Mr. Howell. Mr. W. J. Begilhole, an experienced miner, is the manager; and important works have been done and erected under his supervision in a way most creditable to him as a mining manager. A main shaft is now being put down, dimensions 13 x 5 feet, containing three compartments; it is now 140 feet deep, to be continued to 300 feet. An engine and winding gear is used in connection with this shaft, and the work is progressing rapidly. A tunnel has been driven on the course of the lode which will eventually meet the main shaft; it is now in 233 feet, and is to be continued 217 feet further; it is kept in full work, and will strike the main shaft in that distance. Crushings from stone taken from various parts of the surface of the land yielded 207 oz. of standard gold to 800 tons of ore crushed, but as the average of the ore was found on assay to be over an ounce to the ton crushing was discontinued; the tailings on careful assay showed a loss of nearly two-thirds of the gold. A trial ton of the ore was sent to the Chlorinatory works at Sandhurst, which yielded 1 oz. 3 dwt. of gold; and a ton of tailings similarly treated yielded 14 dwt. of gold. Mr. Howell, whose experience entitles him to be considered a reliable authority, I understand reported favourably on this mine, and he has been instructed to obtain the necessary plant for the proper treatment of the ores.

Adjoining this mine there are several other Companies, principally the British Red Rock and the Central Red Rock. A considerable amount of work has been done on the mines belonging to these Companies. On the British Red Rock a shaft and drive have been put in, which intersects the lode at the 200-feet level. The ore carries payable gold; its extent is at present unknown; it appears to be an enormous deposit of auriferous ore, mixed with other refractory minerals; it is comparatively poor, but with the natural advantages, such as the low cost the ore can be mined and the existence of water-power, it should be made to pay. If the Great Red Rock Company succeed in profitably treating the ore by the process recommended by Mr. Howell, a large field of auriferous country will be opened. The future of the whole of this district depends on whether or not the low-grade ores can be mined and treated profitably.

Timbarra Gold-field is situated 35 miles south-east from Tenterfield. The principal works are on the Surface Hill Gold-mining Co's. land. They have been working for some time in auriferous granite dykes by crushing and hydraulic sluicing. The yield is about 4 or 5 dwt. to the ton, which, as the ore can be broken down with the hydraulic and quarried out at a minimum cost, should, if worked on a large scale, with improved machinery and labour-saving appliances, pay well. Little or no profit has yet been made, as the plant is quite insufficient. It is expected that the Company will be refloated, with a view to obtain capital to work on a large and economic scale. The auriferous granite is in dykes of soft stone, running through a high spur range. The quantity of stone is unlimited. About 10 miles north of Poverty Point, on the Old Tabletop, Mr. Dickson has a small 3-head of stamps battery. He is also on an auriferous dyke running through granite, showing heavy iron pyrites, and yielding a payable return of gold.

Several alluvial claims are working in the gullies and in the Timbarra River, at which the miners are making fair wages

Pretty Gully is situated about 40 miles north-east from Tenterfield. The workings are principally alluvial. About twenty-six miners have found employment there, and are earning fair wages. This is a good field for prospecting for reefs. Although alluvial mining has been carried on for many years in the creeks and gullies, very little prospecting for reefs has been done.

Tooloom Gold-field was once of great importance. Many years ago, in the first rush for alluvial gold, in the northern district, Tooloom proved to be one of the richest fields. On the rich gullies being worked out it was abandoned for other rushes, and very little work has since been done on it. Some miners have been working on surfacing and old workings, and a little work has been done in reefing, but it has been virtually a neglected field. Occasionally some rich finds are still made. This is another field which certainly holds out every inducement for prospecting for reefs and old deep leads. The basalt ranges in the locality, I have no doubt, cover old river beds and alluvial deposits, in fact some prospecting has been done in a basalt range extending north-east and south-west, from near Pretty Gully to the old Tooloom diggings. From the appearance of this range and the surrounding country it was expected that it covered an old river or watercourse. A syndicate was formed by Mr. C. Haagar, and about £400 has been expended in sinking a prospecting shaft through the basalt. This shaft was put down on the range to a depth of 232 feet. Ninety feet was through decomposed basalt, then 100 feet of sedimentary sand thickly impregnated with arsenical pyrites and wood fossils, and the last 40 feet was through very coarse sand, showing patches of alluvial wash. The bottom when left was on a coarse layer of gravel. At this depth water was struck, and the syndicate having expended its capital, work was stopped in December. It is to be regretted that this prospecting has, at any rate for a time, been abandoned. Taking into consideration the great extent of country that would be proved by prospecting under this basalt, I would strongly recommend it as a fit object for the assistance of funds from the Prospecting Vote. If the theory is correct that it is an old river, the whole surrounding country being auriferous would make it most probable that a deposit of rich wash existed. I intend to bring this matter under the notice of the Prospecting Board on their anticipated visit to the district.

Tenterfield Division.

Boonoo Boonoo is the only field of any importance in this division. It is situated 13 miles north from Tenterfield. A great deal of work has been done on the field during the year, and a considerable amount of capital has been expended, I regret to say, with generally disappointing results. The two principal gold-mines are held by Queensland syndicates—the Golden Crown and the Lady Mary; both have now knocked off work under partial suspension of labour, in consequence of too much water, but pumping is kept continuously going in both mines, night and day. The country, although on the top of a high tableland, is extremely wet. The formation is granite, and the reefs are large and generally

well

well defined; but the gold is patchy and uncertain—in fact, with few exceptions, I do not think they are payable, unless gold is found at a lower level than it has yet been found possible to go. The Golden Crown Company, under the management of Mr. H. Benjamin, have shown courage and enterprise which deserve a better fate than they have as yet met with. A considerable amount of work has been done by the Company, and a very perfect little plant, consisting of a 5-foot Huntingdon mill, has been erected. Pumping gear to lift 5,500 gallons an hour has been kept constantly at work day and night since August, 1887. Even that now fails to keep the mine dry enough to sink over 65 feet. Gold was found to the 40-feet level; the reef then appears to have been cut off by a large reef carrying little or no gold. Prospecting drives have been put in, extending in all 220 feet. The country proved to be unsettled, and the manager has every confidence, if he is able to get to a lower level, he will again strike the gold. £700 has been expended by the Company without any resulting profit, and they are now applicants for assistance from the Prospecting Vote, to enable them to continue operations. This application will be brought before the Board on their visit. The Lady Mary also has a 5-foot Huntingdon mill and complete plant and pumping machinery. They are very much in the same position as the Golden Crown. Both these mines are still keeping the pumps going day and night.

Some stone was crushed lately from a mine known as Vickery's which yielded 3 oz. 9 dwt. to the ton. This may be only a patch, but the holders are confident that they have a good reef.

A few men are working in the old alluvial in the creeks and making fair wages. About 5 miles south from Boonoo Boonoo, rich silver stone was discovered, containing chlorides; a great many leases were applied for, and some of the leases are now being worked by syndicates or Companies—the Andrew Jackson, Tuca, Lady Mary, and others. Remarkably rich assays have been obtained, and the reefs show in many places good stone containing gold and chlorides and sulphides of silver. Some quantities of stone have been sent away for treatment, and the results have been satisfactory. These mines are still in their infancy. It will require capital and time to develop them, but they promise well. The reefs are in granite, and they consist of quartz and gossan; they are well defined, but the mineral-bearing seam is at present narrow, widening in depth. The deepest shaft on the field is not more than 30 or 40 ft. The water is troublesome, and no proper mining can be done until steam-pumps are used. At present there is no machinery on the ground.

Wilson's Downfall Division.

Wilson's Downfall is about 30 miles north from Tenterfield. The mining in this district is principally tin and silver. In tin, the old workings on the alluvial are still supporting a large mining population, principally Chinese, working on mineral licenses or tribute. Little or no work has been done in prospecting for lodes or deep leads, which no doubt exist. Some enterprise has been shown in opening up deep ground low down on Wylie Creek, with some success; two pumping engines are kept at work, and the wash yields well; the stripping is heavy, about 25 ft. A very important silver-field has been discovered at Rivertree, about 16 miles east from Wilson's Downfall. The reefs are large and well defined, and show rich galena and carbonate of lead, assaying from 10 to 100 oz. to the ton. Smelting furnaces are in course of erection. The richness and the size of the lodes would justify the expenditure of capital to develop the silver. I feel convinced that as soon as capital can be obtained to put on the necessary reducing plant good results will be obtained. There can be but little doubt but that payable lodes exist, and nothing but the general depression and stagnation in mining, caused by over-speculation and estimation of values, prevents this rich field from coming into prominence. Plumbago of a very superior quality exists in large quantities at Undercliff, between Wilson's Downfall and the Rivertree mines.

Lunsville and Solferino.

There is very little to report on these fields. A number of miners are still working on the reefs, and occasionally good finds are made, but they are small and patchy. A new discovery of gold was reported to me on the 11th December, on Marcolini Creek, about 3 miles from Miller's Scrub; the find is alluvial, depth, 3 feet, yielding ½ dwt. to the dish of coarse gold.

I have not received the particulars from any of the officers as to the number of mining applications, issue of miners' rights, business licenses, &c., except Fairfield and Tenterfield, but that information can be obtained from the reports of the Mining Registrars.

The number of miners' rights, business licenses issued, and the number of applications for gold and mineral leases at Fairfield and Tenterfield were as follows:—

Fairfield.—Warden's Office for 1888.

Miners' rights issued	555
Business licenses issued	30
Mineral licenses issued	195
Applications for mineral leases	182
Applications for gold leases	56

Tenterfield.—Warden's Office for 1888.

Miners' rights	223
Business licenses	13
Mineral licenses	123
Applications for gold leases	16
Applications for mineral leases	48

I am forwarding specimens of the various mines in connection with this report.

NEW ENGLAND DISTRICT—Wilson's Downfall Division.

(*J. G. Draper, Mining Registrar.*)

I have the honor to forward my report on the mining industry of Wilson's Downfall Division of New England Mining District.

During the early part of the year 1888 some activity was shown in portions of this district. At Rivertree, a vast area of land has been applied for, containing silver, several of the applicants having prospected with good results, and I am informed that they intend shortly to go more fully into the development of the country, which is as yet new and untried, and only situated within 4 miles of the Tooloom gold-diggings. One party stated some time ago that they intend to erect a furnace, having been well satisfied with their prospects; but in any case something will be done after leases have been received.

At

At Undercliff, Wooller and party are prospecting a reef which is supposed to contain gold, but nothing of importance has been obtained yet.

Mr. John Carmichael has been doing extensive prospecting for tin on Wylie Creek, employing at the present time about fifty miners, also having two engines at work. Smith and party also intend shortly opening up their ground adjoining Carmichael. There is nothing new to report in other parts of this district.

During the year ending December 31, 1888, the following business was done in this office:—112 mineral licenses issued; 19 miners' rights issued; 6 business licenses issued. 83 mineral leases applied for, as follows:—Silver, 63; tin ore, 17; plumbago, 3. The quantity of tin ore won during the year ending December 31, 1888, being 203 tons, valued on the ground at £12,180. The mining population is at the present time about 320.

NEW ENGLAND DISTRICT—Fairfield Division.

(*J. P. Curran, Mining Registrar.*)

I have the honor to forward my annual report for the year just ended, December 31st, 1888. Although our expectations of the past two years have not been fully realized, the general outlook of this gold-field is by no means discouraging. Judging from the earnest way in which some of our leading mining men are securing large areas of mining land and expending a great deal of money in the erection of machinery and in the development of their mines, is, I think, a sure and certain sign of the confidence thus shown of this being in the future a large mineral-producing district. In my last report I called attention to the fact that the way the land was then held in small areas by poor men had a tendency to retard the progress of the field, and the prosperity of the field depended on the time when the land would be in the hands of wealthy companies who could afford to erect suitable appliances for working the land on a large scale, and thus confer greater benefits on the working man, and contribute largely to the wealth of the district.

At the end of last year I informed you that silver-mining was again coming into prominence. Since the discovery of that metal in this part of the division, 196 applications have been made for mineral leases, comprising an area of 7,000 acres. Very little work has been performed on any of this land, except two blocks owned by the White Rock Proprietary Company and two blocks held by the Extended White Rock Silver-mining Co. On the first-named Company's land they have about 12,000 tons of ore ready for treatment, and now awaiting the completion of the reduction works. This Company have expended about £20,738 during the year in raising ore, making tramways, dams, saw-mill, and concentrating machinery, and have constantly employed about ninety men on the mine and works connected therewith, and have raised altogether about 12,163 tons of silver ore, estimated to be worth £22,203. Of the quantity raised, 163½ tons of first-grade ore has been treated, and silver obtained therefrom of the value of £1,207 13s. 7d. The plant at the mine consists of one air-compressing engine, 20-horse-power, for the purpose of working the rock-drills; one saw-mill, with all the necessary appliances, where all the timber is cut for the use of the mine, the machinery of which is driven by a 12 horse-power engine; and one 6 horse-power winding engine. They are also placing in position one pair of engines, 200 horse-power, for reduction and concentration works. The whole of the machinery is expected to be in working order within three months from date. Ample provision has been made for the supply of water necessary to carry on these extensive works by the excavation of three large dams, estimated to contain 1,000,000 (one million) gallons of water. To keep up the supply they have, by means of a race, diverted the water from Plumbago Creek, which will be lifted from a reservoir at the terminus of the race, a height of 200 feet to the crown of a hill which divides Plumbago Creek from the gully on which the White Rock mine is situated. For this purpose they have an engine 20 horse-power. The ore will be conveyed from the mine to the reduction works by means of a self-acting tramway 1,000 feet in length. The trucks will run up to the face of the mine, when they will be loaded by hand and discharge their contents at the battery, the full truck in its descent drawing back the empty one. The face of the mine, which is 350 feet wide, shows numerous veins of ore of a superior quality, and I have no doubt will be one of the best mines in the district, and be the means of maintaining a large population in its immediate neighbourhood. They purpose when in full operation at the works to reduce 1,500 tons per week. In conclusion, I might state that the whole of the work is under the control of Mr. John Rossiter, whose skill as a mining engineer is well known.

The Mascotte Gold and Silver-mining Co. is the next in order to the White Rock Proprietary Mine. This mine has been during the past year continuously worked, ten men being employed, but the most of the work carried on has been of an exploratory nature. The object has not been to raise stone so much as to prove the pemanency of the mine by the shaft and drives now open. 600 tons of ore have been raised, of the average value of £12 per ton. The deepest shaft is 106 feet, and the lode is 8 feet wide; and the manager, Mr. B. Bryant, informs me there is now about 6,666 tons of ore in sight ready to be broken down. The ore in this mine contains both gold and silver. The reason why no returns of bullion have been obtained from this mine before this is that they had not decided as to which was the best and cheapest method of treatment. This difficulty appears now to have been overcome, and it is expected that the mine will be in full operation in a few months, as arrangements are now being made and nearly completed in London for the erection of the best gold and silver saving appliances in connection with this mine.

The Strauss Gold-mining Co., Saw-pit Gully, is the next mine of importance on the field. This Company have been employed during the greater part of the year in developing their mine, therefore very little crushing has been done. The quantity of ore passed through the mill during the year amounted to 1,318 tons, from which they obtained 673 oz. of gold, of the value of £3 17s. 10d. per oz.; amounting in all to £2,619 1s. 10d. At the commencement of the year this Company, in consequence of the great influx of water in their mine, found it necessary to drive a tunnel from the lowest part of the land in order to cut the lode at the 90-feet level, and thereby drain their workings, and at the same time to facilitate the transport of ore to their battery, and dispense with all hauling. They have laid a tram-line from the face of the workings at the level just mentioned to the battery, a distance of 500 yards, which is now completed, and crushing operations will be immediately resumed. This, when in full work, should be one of the best paying mines in the district, as there is an immense body of crushing stuff to operate on; the lode being 9 feet wide, and with such improved appliances as they have at hand for the extraction of the metal, cannot fail to be remunerative. They have kept constantly employed thoughout the year twenty-seven men.

The

The Great Red Rock Gold-mining Co.—This mine is being worked for gold and silver, and is situated at Red Rock, about 8 miles north-west of Fairfield. The operations of this Company are confined principally to surface outcrops, which gave encouraging returns last year; but in order to ascertain the value of the mine at a depth crushing operations were suspended, and the Company have sunk a shaft to a depth of 149 feet, and at this depth the ore is found to be of such a refractory nature that it is found necessary to introduce a different kind of machinery for its treatment to that hitherto used, which will probably be erected during the incoming year. The machinery previously used consisted of 25-head battery, with mercury-tables, &c. The plant, including the winding-engine on the mine, is valued at £2,500. The last crushing was from a surface lode 40 feet wide. About 800 tons yielded 207 oz. of bullion, worth £2 15s. 9d. per oz., and judging from its low value it evidently contains a large percentage of silver. The quantity raised during the year is about 1,000 tons. The dip or underlay of the reef is east, bearing or strike north-east by south-west. Forty-five men are constantly employed on this mine.

The British Red Rock Gold-mining Co. (a London proprietary) is the next of importance in this locality, and the works are under the management of Mr. Richard Sweet, a gentleman of great mining experience. A great deal of work of an exploratory nature has been performed by this Company during the year; 22 men have been regularly employed. One shaft has been sunk to a depth of 66 feet, and a level driven from the face of the hill on which the mine is situated which intersects the lode at a depth of 200 feet. The width of gold-bearing matter is uncertain, as it appears at present to be one great mass of gold-bearing quartzite. The prospects of this mine, on the whole, are very good.

The Great Northern Gold-mining Co. is another Company which has been formed recently for the purpose of working a number of gold and mineral leases at Fairfield. The general manager, Mr. R. W. Stuart, has kindly furnished me with a report, which will be found attached hereto, from which you will gather some valuable information respecting the properties held by this Company. I have no doubt that the formation of this Company is a step in the right direction towards the development of this field. Hitherto the land had been held by men who had not the means to work it, and were simply holding possession of it as best they could for the purpose of selling to the best advantage. All difficulties now seem to be removed, and fair and reasonable arrangements have been made with the original holders of the land by admitting them into the Company just formed, and thereby giving them an opportunity of participating in any profits that may accrue from the venture. I do not think I need to go into any further particulars respecting this property, as Mr. Stuart's report will give all the information required.

The Mount Carrington Gold-mining Co., I regret to report, has entirely suspended work, and the battery, which appeared to be the most complete mining plant on the field, having been erected at a cost of £6,500, is now idle. Still there are hopes entertained of a resuscitation of the Company, and active operations being resumed.

The Adeline Gold-mining Co.—The mine, owned by the above Company, is situated on the private estate of George Smith, Esq., adjoining the village of Drake, and directly on the main road from Tenterfield to Casino. Though this was the first mine opened at Fairfield, and from which £7,000 worth of gold was obtained in a few months, it has been closed for a considerable time. The Company has been lately reorganised, and a main shaft has been started to thoroughly open up the lode, and a better method of extraction than that previously adapted will be decided on. It has been found that the ore is of a complex nature, and can not be dealt with by the ordinary process used for the extraction of free gold. From the present appearance of this lode in this mine I should think that with the proper gold-saving appliances that good results might be expected. This mine, in my opinion, has not been worked in a way by which it could be made profitable. Sufficient care has not been bestowed in the proper classing of the auriferous matter. Consequently a great quantity of worthless stuff has been sent to the mill, with the result that the poor stuff impoverished the rich stuff, and the mine could no longer be worked at a profit. The lode in this mine is about 4 feet wide, dip or underlay west, bearing north and south.

At Long Gully a man named Rivers, whilst searching for silver on a mineral lease, discovered a small vein of gold-bearing stone. It being contrary to the mineral lease regulations to work for gold on a lease of this description, an application was made for a gold-mining lease of 4 acres to cover the portion of land in which the gold had been found, and upon sinking the reef showed unmistakable signs of being very rich. About 13 tons of stone was taken out in sinking, which yielded 353 ounces of gold. The locality where this gold was found is situated about 6 miles south of Fairfield, and has every appearance of being auriferous. At present the whole of the country in that direction is covered by mineral leases, which prevents any searching for gold. Rivers and party are still raising very rich stone. The gold in this particular claim appears in a peculiar formation, the free gold being found embedded in zinc-blende.

This gold-field is remarkable for the number of rich patches of mineral that have been discovered from time to time. At a place called Grant's Gully, near Tooloom, a man named Payne obtained 110 ounces of gold in six days from an old abandoned reef. I paid a visit to this locality during the holidays, and was surprised to see so little prospecting done over such a large area of auriferous land, as evidenced by the number of creeks and gullies that have been worked years ago, and in which a few old fossickers still seem to be making a living. I was told by the old residents there that there are a great number of small veins of gold-bearing quartz in various parts of the district, but none of them have been sunk on. The more I see of this part of the division the more convinced I am that it will in time come to the front as a large gold-producing district. The great auriferous belt extends from Poverty Point in the south to Upper Tooloom in the north a distance of 55 miles. The places intervening where gold has been found, and worked for a lengthened period, are M'Leod's Creek, Timbarra, Fairfield, Lunatic Reefs, Pretty Gully, and Lower Tooloom.

The number of men who find employment at Tooloom is about 30, and at Pretty Gully and Lunatic Reefs I find about the same number, and all seem to be making fair wages.

A Mr. Haager has for the last two years been engaged in sinking in the basaltic formation, which extends from Pretty Gully in the direction of Tooloom. The only encouraging result obtained as yet has been to find a little gold at a place within 4 miles of Pretty Gully, at a depth of 300 feet. The influx of water at this place prevented him from continuing his researches, as he had not proper appliances to cope with the water. He has also, at a point about the same distance from Tooloom, sunk a shaft 232 feet deep, but not bottomed: the first 90 feet through hard basalt, the next 100 feet through a kind of sedimentary rock highly charged with pyrites and fossiliferous matter, the remainder of the depth through coarse gravel and boulders. Sinking the last 5 feet the water became very heavy, and work has been

suspended,

suspended. £400 has been expended on account of this shaft. The most interesting feature in connection with this place is that within a short distance from the shaft the bed rock is close to the surface, indicating the presence of a deep channel inside, which has been filled in by volcanic or other causes.

I have endeavoured to obtain from the various mine managers the most reliable information respecting the properties under their supervision. Mr. W. J. Begelhole, the manager of the Great Red Rock Gold and Silver-mining Company, has handed me a carefully-written report of the mines under his control. From this and Mr. Stuart's report you will obtain a great deal of information of an interesting nature.

Mr. Peter Bezant has also handed me a short report, giving a description of the mine which he has charge of, from which you will be able to get some further information.

The population of this division at the present time numbers about 1,000 (one thousand). The climate is particularly healthy, judging from the death-rate, which is exceedingly low compared with other districts.

Only one fatal accident has occurred in the mine during the year, a miner named Richard Hacket having lost his life through an explosion of gunpowder in a mine at Red Rock. A magisterial inquiry was held, and a verdict of accidental death was returned, no blame being attached to the manager of the mine.

I am indebted to the courtesy of the manager of the two local banks for returns of the amount of gold which has passed through their hands this year.

The amount of gold won from all sources amounts to 1,713 oz. 17 dwt. 21 gr.

The amount of revenue collected during the year is as follows:—

	£	s.	d.
Deposits with mineral lease applications	1,672	15	0
,, gold lease applications	266	0	0
Collections for miners' rights	259	10	0
,, mineral licenses	195	0	0
,, business licenses	30	0	0
Deed fees and stamp duty on leases	44	5	0
Summonses, subpœnas, and sale of gold-maps	13	13	0
Total	£2,481	3	0
On account Trust Fund :—			
Survey fees, mineral leases	803	10	0
,, gold leases	45	10	0
,, mining tenements	57	5	0
Deposits with objections to leases	20	0	0
Total	£3,405	8	0

I have received 182 applications for mineral and 56 applications for gold leases. I have issued 555 miners' rights, 30 business licenses, and 195 mineral licenses.

NEW ENGLAND DISTRICT—Solferino Division.

(R. Wilkinson, Mining Registrar.)

I have the honor to herewith give my annual report upon the Solferino Division of the New England Mining District.

Quartz.

The Lion Mine, Lionsville, which is held by a syndicate, of which Mr. Ken Hutchison is the managing director, have had two men at work all the year putting in a tunnel on the course of the reef, from the level of the adjacent creek, and which is intended to be continued on to the main shaft, which will be met with at about the 150-foot level. These two men have driven a distance of 225 feet with a fair reef all the way, but walls mostly very hard, but have not seen any gold visible to the eye, although a sample of the stone assayed 14 dwt. to the ton. They still have about 200 feet further to drive before meeting with the shaft.

The Garibaldi Prospecting Claim.—Bassetti, Uduesich, and party have kept four hands at work during the whole of the year, stoping out blocks of ground left by former owners of the mine, which in some instances turned out fairly well, having treated at the Sydney Mint and other places about 25 cwt. of specimens for a money value return of £523 12s.

No. 1 North Garibaldi.—C. Harkin has kept steadily at work all through the year putting in a low-level tunnel on the reef, and informs me that he has come on to some very good gold during last month.

Shellamelia.—A. Famini and others commenced a tunnel in January, to enable them to get some 100 feet of "backs" to work upon; they have driven 190 feet on the reef, but never saw a colour, and have still 130 feet further to go before they expect to be under the shoot they had in the upper or 40-foot level, which turned out very well, although not publicly made known.

Band of Hope.—(J. F. Adam and party.)—Owing to the non-success of the Company to float their property in London market for purpose of putting in a tunnel on the reef at a depth of 500 feet, and other causes, they were granted suspension of labour for six months, and it is only within the last two months that they made a fresh start.

Golden Bar.—Which, as mentioned in my last report, was about changing hands, a sale for £500 cash having been effected early in January, the syndicate who purchased put four men on for a couple of months, and then two for three months more, but unfortunately never struck another patch after clearing out the one in view when the sale took place, and the funds having run low they procured six months suspension, at the expiration of which, no doubt, they will recommence.

Cangi.—There have been two 10-acre leases taken up—one upon the John Bull reef, and the other upon the Sir Walter Scott, both being abandoned ground for the last ten years. The applicants have been doing a little work on each since taking possession, and upon the latter they have got some very good gold, having taken out 3 tons quartz and sent it to the Mint for treatment, which gave a very good yield of 3½ oz. to the ton, thereby causing a little notice to be taken of it, and it is very probable that a large company will be formed to give it a thorough trial, machine site and water-rights having been applied for in conjunction therewith, the claim being within half a mile of the Mitchell River. On the

the John Bull the owners have driven in an old drive a further distance of 20 feet with good prospects; also sunk a shaft on the reef some 100 feet from the old workings, and have a good show, sufficient to induce them to enlarge their capital with the view of erecting machinery.

The Pioneer, about midway between the Cangi and Mann River, was retaken possession of in early part of the year by Taylor Bros., but I have not heard what they have been doing, except a report of 1 ton of stone being treated at the Dora battery, Mann River, for a yield of 1 oz. 9 dwt.

In Alluvial.—There is nothing worthy of note from the old quarters; all the hands that are at work have been in same spot for years, making their usual average of ½ oz. per week. The only excitement is a new find made by Mr. Paulo Marcolino, who, with a couple of others, were deputed to prospect the Solferino neighbourhood some two months back.

Mr. Marcolino reported a new discovery of gold on 10th December, in a creek he has called Marcolino Creek, which is distant about 3 miles north-easterly from Old Scrub Diggings and 9 miles westerly from Lionsville, on Washpool Waterfall. It is one of the left-hand branches of Cedar Creek, and being well up on the range there is very little water for sluicing purposes.

Mr. Marcolino obtained 15 oz. 4 dwt. of coarse gold, up to 5-dwt. pieces, in about five weeks, upon a rough bar and in crevices. The holidays coming on so close after the report, nothing much was done up to the end of the year, except the marking off of claims, of which some thirty men's ground was taken possession.

What trial there has been does not show any gold above Marcolino's prospecting claim, which he applied for, although nice-looking country and well cemented. There were a couple of ounces got some 300 yards below the prospector in a small bit of ground, also a 7-dwt. piece. The creek downwards is very rough, with hard bars intervening, and all the available ground in the creek is being now worked by some twenty-five men, who will soon see what it is to turn out.

There are several other creeks in the neighbourhood which will now get a thorough overhaul by those prospecting around.

I have issued 59 miners' rights, 1 mineral license, and received 6 applications for gold-mining leases for an area of 41 acres.

As far as I have been able to collect, the amount of gold won in this division is as follows:—From alluvium, 189 oz. 7 dwt. 4 gr.; from quartz, 154 oz.; total, 343 oz. 7 dwt. 4 gr.,—valued at £1,202 12s. Price of gold, from £3 6s. to £3 13s. per oz. Number of miners at work are 15 each, quartz and alluvial; total, 30.

NEW ENGLAND DISTRICT—Tenterfield Division.

(*T. Burne, Mining Registrar.*)

I HAVE the honor to forward my report for the year 1888.

Since my report submitted to you for the year 1887, machinery has been erected on the Lady Mary Gold-mining Co's. property, consisting of a 5-foot Huntington roller and a 14 horse-power steam-pump with saw-bench complete. This being a Queensland Company, no information has been received of the amount of gold won therefrom.

On the Golden Crown Gold-mining Co.'s property, machinery somewhat similar to that on the Lady Mary claim has been erected. The water being very troublesome, the steam-pumps are kept working night and day. This is also a Queensland Company.

Hinith and party have been working off and on throughout the year, the last crushing giving a very fair return to the owners. This claim is about being floated into a Company.

On the Big Swamp, known as Basket Swamp, the Andrew Jackson Silver-mining Co. have done good work in prospecting, obtaining very payable assays. Water is very troublesome preventing them going down any great depth without the aid of machinery. Five tons of stone from this mine has been sent to England for treatment. There are three shafts down on this mine. No. 1, 27 feet, showing lode of 2 feet 6 inches, have driven same north and south 29 feet and 27 feet respectively; No. 2, down 12 feet, showing lode 3 feet; and No. 3, down 14 feet. Ore at grass, about 50 tons. Work on this mine has been temporarily suspended, waiting arrival of machinery.

The work of prospecting is still going on at the 8-mile silver claims, but the ground is too wet to make much progress; the stone obtained therefrom has given very satisfactory assays.

There has not been much work done on alluvial. Some of the old ground has been reworked at fair wages by a few men.

I have issued during the past year:—miners' rights, 223; business licenses, 13; and mineral licenses, 123.

I have received 16 applications for gold-mining leases, and 48 applications for mineral leases.

NEW ENGLAND DISTRICT—Emmaville Division.

(*Ewd. W. Robinson, Mining Registrar.*)

I HAVE the honor to submit my report of mining operations for the year ending 31st December, 1888, for the Emmaville Division of the New England Mining District.

During the early part of the year a great impetus was given to this district in consequence of the boom for silver lands, and a great quantity of land was taken up for silver-mining purposes. Several Companies were floated, some of which continue working with reasonable prospects of success ultimately. Others, from various causes, only partially tested their lands, and stopped working, and in some instances little or no work has been done upon the land selected.

Following on this bright prospect, a disastrous drought occurred, extending over eight months, its effect being severely felt by those engaged in tin-mining, one of the principal products of this district, consequently the output of this mineral has been greatly restricted for the past year.

Vegetable Creek proper is still being worked over and over again by the various Companies upon tributes, principally by Chinese, who make small wages and appear satisfied, and also here and there on the course of the creek parties are to be found obtaining tin mineral more or less.

The deep lead at Rose Valley continues to be worked on tribute principally. There are three parties on Wesley Co's. land, and one party on the adjoining land, known as 17 acres. Bailey's claim continued to work throughout the year, employing a large number of men, but intend closing, as they have cut

out

out all payable land at the present market rate for the mineral. The adjoining claim, Cunneen, Reed, & Co., have nearly cut their ground out. The Albion Co. are preparing to contend with the large amount of water known to exist in the vicinity of their ground.

Cadell & Co., who were prospecting Thomas Gordon's land, adjoining the Albion Co., have stopped for a time. They have expended a large amount, and will have to erect machinery to contend with the water, &c. Allen & Co., at the Two-mile, have cut out their rich patch.

At Kangaroo Flat the Hall Bros. continue working their ground upon tribute. Little mineral has been obtained during the year through want of water.

The Basaltic Lead Prospecting Company, at the supposed outlet of the deep lead, are vigorously pushing on their works. The work done represents about 70 feet of sinking, 57 feet of open cutting, and 627 feet of tunnelling, and have expended nearly £1,200. It is to be hoped that this Company will be successful, as it will open out a large field.

At the Y Waterholes both the deep lead and shallow workings continue to be worked by Chinese, principally on tribute, also at the Graveyard Creek.

At Big Ben Flat a great amount of land has been taken up for tin-mining purposes, and fair prospects have been obtained.

At the Glen Creek several parties are at work, only making wages.

The Dalcoath Company have erected an engine and pumping appliances to ground-sluice their surface land; also a considerable amount of work has been done on the lodes on this Company's land, also on the land adjoining, and from both some rich stone has been raised.

At the Tableland the output of tin has been small, consequent upon the drought, in some places not having rain for twelve months.

The Dutchman Lode Company are preparing to open out their land again.

At the Butler mine work is being constantly carried on.

At the Nine-mile a Company are erecting an engine and pumping appliances to work their land, the tin showing very fairly in the ground.

Work has been continuously going on during the year at the Ottery Lode Co.'s land, but for want of water the crushing and dressing plant has been stopped.

Silver.

Work is being vigorously carried on at the Webb's mine, the Webb South Extended, the Centrals, Webb's Consols, and others.

At Nine-mile a considerable amount of work has been done, and some good assays have been obtained from the Emma, Octopus, and Broken Hill mines, Pye's Creek.

A great amount of work has been done by the Pye's Creek Co., also by the Caves Co., Bonanza Co., Cornstock Co., and Homeward Bound, also at Castlereagh.

The outlook for silver-mining looks very fair, but will require time and capital to develop the mines to a depth.

CLARENCE AND RICHMOND DISTRICT—Grafton Division.

(A. L. M'Dougall, Warden.)

I have now the honor to forward you my annual report as Warden for the Clarence and Richmond Mining District for the year 1888.

I beg to state that I have not thought it necessary to make a personal inspection of the mines under my jurisdiction, and have obtained from the Mining Registrars at Grafton, Dalmorton, and Nana Creek the subjoined return of lease applications, miners' rights, &c., issued by those officers during the year 1888, as follows:—

At Grafton, 109 miners' rights and 84 mineral licenses were issued, and 2 gold-mining and 7 mineral lease applications were duly registered and forwarded on to your Department.

At Dalmorton, 68 miners' rights and 4 business licenses have been issued, and 16 applications for gold-mining leases, comprising 83 acres, have been received, and duly forwarded to you. Five machine areas, 1 prospecting claim, 6 quartz claims, 2 business areas, 1 tunnel site, 2 water-rights, and 6 applications for protection areas have been made.

At Nana Creek, 25 miners' rights have been issued; 15 gold-mining lease applications, comprising 47 acres, were made, and duly forwarded on to your Department; and under the Mining Board Regulations, 2 prospecting claims, 3 ordinary claims, 2 machine sites, 1 residential site, 3 tunnel and 2 dam sites were applied for. 133 tons 17 cwt. of quartz were crushed at the Dargue battery during the year, and 159 oz. 7 dwt. 12 gr. of gold obtained.

There are now only about 35 men at the Nana Creek Gold-field engaged in mining and other pursuits, but I cannot give you a return of the number at Dalmorton and the Mann River reefs, but it must be considerably more, especially at the latter place.

CLARENCE AND RICHMOND DISTRICT—Murwillumbah Division.

(Joshua Bray, Warden.)

I do myself the honor to report that no payable gold has yet been discovered in the district under my charge.

In the early part of January, 1888, a party of prospectors circulated reports that an assay of stone obtained from Smith's Creek gave a result of 4 oz. 15 dwt. of gold and 53 oz. of silver to the ton. A small local rush immediately occurred, eight gold-mining lease applications were lodged for land at that place, and many prospecting areas were pegged out, but the only work done beyond the removal of small quantities of surface stone was the sinking of two shafts, each about 25 feet, upon what appeared to be the most promising reef. A ton of stone was forwarded to Sydney for assay, which yielded only a few grains of gold to the ton, and work in the locality was then discontinued.

In addition to the prospecting at Smith's Creek, two leases were taken up within the suburban boundaries of the town of Murwillumbah. Three shafts of 53, 35, and 30 feet, respectively, were put down, the result absolutely nil, and at the end of May all the leases which had been applied for in this district had been abandoned.

A Warden's Court of enquiry was held in February, but the disputed area has since been abandoned by both the interested parties.

CLARENCE AND RICHMOND DISTRICT—LISMORE DIVISION.

(*C. Coghlan, Mining Registrar.*)

I DO myself the honor to report for your information that mining operations in this district have revived considerably during the past year. On the 9th March, 1888, I reported that, on 6th instant (March) £28 10s. were received through Mr. Warden Bray for gold-mining lease application of 25 acres at a place called Black Head, on the coast, north of Ballina; and that a notice of intention to apply for 25 acres more at same place was posted at the Court-house here by Jas. Holden, E. W. Allingham, and A. S. Meares; but no report of discovery of gold had been made. Very soon after this a small rush set in to this locality, and 10 other gold and 4 mineral leases were applied for. Several practical miners worked the sand on the beach, and were supposed to have made wages.

On the 23rd May, D. W. Munro reported that he and party had discovered payable gold at Black Rock, near Ballina, which was contained in a seam 9 feet thick, described as scoriaceous basalt, underlaying about 20 feet of columnar basalt on the face of the cliff, about high-water mark, and appeared to extend a considerable distance inland. He also stated that two parcels of the mineral rock taken from the said seam of about a ton each were forwarded to the Royal Mint to be crushed; that the first yielded 15¼ dwt. and the second 12 dwt. to the ton, which is supposed to be payable, owing to the facility with which the ground can be worked and stone crushed. Efforts have been made to procure suitable machinery; but for some reason or another a start has not yet been made at crushing.

Several miners are at work at a locality known as Evans River, some 8 or 10 miles south of Ballina, and are making wages.

Three other gold-lease applications were made for a locality known as Peter's Grass, on the dividing range between the Richmond and Tweed Rivers, but not much mining operations carried on there.

One hundred and seventy-four miners' rights and 36 mineral licenses were sold, and 15 gold and 6 mineral leases were applied for during the year.

CLARENCE AND RICHMOND DISTRICT—DALMORTON DIVISION.

(*W. F. Poole, Warden's Clerk.*)

THERE has been considerable stir in mining matters during the past year, but owing to the drought very little crushing has been done. Four new reefs showing good prospects have been opened. One of these, the Garden Hill, has 30 tons at the Union Company's machine waiting to be crushed. Another, the Mountain Maid, is reported to have about 60 tons ready for the same machine when rain comes.

The Scottish Chief is reported to have struck a new reef carrying good gold. The manager of this claim is now making a dam, and states that machinery will shortly be placed on the ground.

The Little Dora Reef did not crush as expected, still the returns ought to be considered payable, the average being over 25 dwt. per ton from Taylor's claim, and over 2 oz. from the other claims that have had trial crushings.

Alluvial mining is confined principally to fossicking. I have issued during the year 68 miners' rights, 4 business licenses; received 16 gold-lease applications, comprising 83 acres, registered 5 machine sites, 1 prospecting claim, 6 ordinary claims, 2 business areas, 1 tunnel site, 2 water-rights, and 6 applications for protection areas.

Total value of mining plant in the division, £4,200.

CLARENCE AND RICHMOND DISTRICT—NANA CREEK DIVISION.

(*George Geddes, Warden's Clerk and Mining Registrar.*)

IN reply to advice of 8th December, 1888, I have the honor to forward my report upon the state of mining in the Nana Creek Division of the Clarence and Richmond District during the past year.

Nana Queen.—This is a prospecting claim owned by John Nicholson, and situated about 2½ miles in a south-south-easterly direction from Nana Creek proper. It was taken up on the 1st May, and has been since worked continuously. There are two shafts down—one 34 feet, and the other 22 feet. The reef in the former averages about 4 inches in thickness, running a direct north and south course, and that in the latter 7 inches, with a like bearing. The reefs have been stoped out for a distance of 60 feet lengthways to a depth, as stated, of 22 feet in the second shaft. There is every indication of the reef enlarging at a greater depth. Gold is found in both shafts and traced along the 60-feet stope, still continuing at both ends and under foot. The formation is granitic sandstone, very hard, and there is a likelihood of its terminating in granite. The gold got proves from the Mint returns to be of excellent quality. A crushing on the 28th August of 20¼ tons of quartz yielded 25 oz. 10 dwt. of retorted gold. There are some 14 tons at grass, but it cannot be crushed until the new year.

Lady Carrington.—A 2-acre lease of this ground has been applied for, but owing to a misunderstanding between the applicants, Messrs. Fauvel and Dargue, no further action in the matter will be taken by them jointly. The claim is now held by the former. The main shaft, down about 40 feet, underlays to the east, and the reef, 19 feet from the surface, on the average 15 inches in thickness, bears north and south, showing gold, which, it is thought, will give 1 oz. 10 dwt. to the ton. There are about 10 tons of stone at grass.

New Year's Gift.—This property is a lease of 4 acres, gold lease 156, situated near Tallewidgen Creek, and owned by Oliver Anderson. Since my last report a new shaft has been sunk to a depth of 85 feet; size of reef, 20 inches at the bottom, carrying, it is supposed, gold which will give 2 oz. to the ton; its bearing is north-west and south-east, underlaying to the east. The original shaft, 54 feet in depth, through soakage, caved in. No. 2 tunnel in this claim is now 106 feet in length, and is driven along the line of reef.

The Challenge.—This is the property of O. Anderson, and is 4 acres, gold lease 165. In this ground no further work has since my last report been done. Six months suspension of labour upon these claims was granted by the Warden to Mr. Anderson, and that time has not yet expired.

Advance Australia.—Since reporting last upon this claim an application for a gold-mining lease of 6 acres has been made by the owners, Messrs. Wilson, Forbes, and Soderberg. No. 1 main shaft, down 30 feet, has a reef about 3 inches wide, bearing north and south; shaft slabbed to about 15 feet downward. A winze shaft down 75 feet carries on the same line of reef a north and south reef 3 to 15 inches wide,

and

and stoping out 30 feet south from the 60-feet level up to the 45-feet level has been done. On the north side a drive is in of 16 feet on the 60-feet level, and stoped in 6 feet from the 45-feet level up to within 16 feet of the surface. No. 2 shaft down 50 feet, reef north and south, width on an average 4 to 20 inches, underlays to the east. Stoped out from the 25-feet level 6 feet on either side of the shaft, making in all a chamber of 20 feet by 25 feet. No. 3 shaft down 50 feet, reef north-west by south-west, width on an average 6 inches. Ground very hard from the 20-feet level. No. 4 shaft down about 90 feet, reef north and south, average thickness 3 inches, carries good gold. On the 85-feet level to the south a drive is in about 10 feet; reef here averages 1 foot, but is now pinched out nearly, work; thereon suspended for the present. The present workings are a surface leader of about, on an average, 9 inches in thickness, and a small shaft sunk on a blow in which good quartz is found, and further a reef is met with about 8 inches thick on the foot-wall. There is a tunnel driven 15 feet at, it is thought, a 40-feet level on a body of quartz, the reef bearing north and south, and averaging 9 inches in thickness. Stone at grass, about 20 tons.

Nicholson Reef.—This claim has since its abandonment been taken up by Messrs. Sharpe and Morrow as an ordinary claim. It is situated on a spur on the east bank of Tallewidgen Creek, shaft down 40 feet. The reef bearing north-east and south-west is not well defined, the gold found being got from bunches of quartz. The formation is slate and easily worked. The proprietors have at grass about 16 tons of quartz, and that they have registered. Suspension of labour was granted by the Warden for six months on the 25th July.

Day Dawn Reef.—This was taken up as an ordinary claim by the Messrs. Sharpe and Morrow, and a like suspension of labour was granted them in this claim. It is situated on a spur of the Bushman Range, in the vicinity of Tallewidgen Creek. The reef runs north and south, and is on an average 6 inches to 1 foot wide. The shaft is sunk 35 feet. Formation of ground is decomposed slate. A crushing of 4 tons of stone was put through a small 2-stamper battery erected close to the claim, driven by water-power, the result being 5 oz. 13 dwt., or 1 oz. 8 dwt. 6 gr. per ton. The plant being their own, there is no heavy outlay, as hitherto, for carting and crushing.

Jubilee.—Since my last report the owner, Mr. Alexander Nicholson, of this prospecting claim, through lack of means to carry on work, applied for, and was granted by the Warden's order of the 11th April, six months' suspension of labour. The main shaft has been sunk from 34 feet to 50 feet. The reef, bearing east and west, with an underlay to the south, averages 2 feet in width, shows fair gold, but is somewhat patchy. The tunnel at the 60-feet level has been extended 40 feet, making the full length 200 feet, penetrating a 50-feet shaft of the old Matilda line of reef workings, which, owing to heavy rains, oftentimes held, through soakage, water to a depth of from 30 to 40 feet. This is now drained, and all inconvenience in that direction stopped. There are about 20 tons of stone at grass.

Waratah.—This claim changed hands on the 25th September from E. F. Rudder to S. H. Jones, and a suspension of labour granted to the latter by the Warden's order of the 28th idem for two months. There are two shafts down—one 75 feet, and the other 50 feet. They are both well slabbed. In the former is a drive of 25 feet to the north-west, and in the latter, same bearing, one of 41 feet, both timbered. The reefs are north and south; width on the surface, 3 feet; but, in sinking, the reef is lost in one shaft and proves small in the other. A small crushing of 5 tons of quartz was, I learn, put through the Marcolino battery; but the result I cannot ascertain. It took place a short time prior to the Christmas holidays, and then the owner left for Sydney.

Nymboi.—This is a 7-acres lease, gold-mining lease 162, granted to E. F. Rudder and two others, and by them transferred on the 25th September to S. H. Jones, of Sydney. Suspension of labour was granted by the Warden's order of the 28th September for two months. No work has been done since by the lessee in this ground.

Black Dog.—This ground was worked by Messrs. Forbes and Wood. A crushing of 9½ tons quartz was taken out of the surface workings, giving 5 oz. 9 dwt. It is now abandoned. It is situated in the vicinity of John Nicholson's prospecting claim.

Jessie Smith.—This is a prospecting claim taken up by Messrs. Willoughby and Gordon. It is situated about 5 miles from Kangaroo Creek and 20 miles from Nana Creek. When I was there in July the shaft was down about 20 feet. A few tons of quartz had been taken out, a small quantity of which was sent to Sydney for assay, the particulars whereof are unknown to me. On the 24th October the Warden granted a suspension of labour for six months. On this line of reef 5 gold-mining leases have been applied for, and in the case of three of them suspension of labour has been granted by the Warden for six months.

Dargue Battery.—This was worked during the year by Mr. O. Anderson, and the results of the several crushings I give below.

Marcolino's Battery.—This was worked once only, by Mr. S. H. Jones, near to the Christmas holidays, 5 tons of quartz being put through. The yield of gold I cannot find out, but I am told it was not deemed satisfactory. Jones's stone from the Waratah was operated upon.

Sharpe and Morrow's Battery.—This is a small portable battery, weighing altogether about 16 cwt. The stamper-box is faced with a screen perforated with 144 holes to the square inch, and carries two stampers, each weighing 2 cwt. They have a drop of 11 inches. Connected with the cam shaft is an iron fly-wheel of 4 feet diameter, weighing 2 cwt., driven by a cog-wheel about 2 feet in diameter. These, in turn, are connected with a small wooden grooved wheel in which a rope runs connecting it with another wooden grooved wheel of 2 feet 4 inches diameter, which is operated upon by the main fly-wheel, 30 feet in circumference, constructed of wood and canvas; width of wheel, about 15 inches. The driving power is water running from a gorge distant about 150 feet from the machine along a bark fluming at a height of 18 feet from the ground, and giving a fall of 9 feet on to the main power wheel. The water for crushing is conveyed into the stamper-box by means of a wooden trough fed from the front of the large water-wheel. In front of the stamper-box there is a small wooden box, about 20 inches in length, tapering off to about 9 inches. In, at the foot of, the stamper-box is a small silvered plate, about 1 foot by 3 inches, upon which much of the amalgam settles. There are also, below this, two other shallow boxes, lined with copper plates, having suitable ripple-wells for catching the gold. Their dimensions are 3 feet 8 inches by 15 inches and 4 feet by 15 inches. In the first box is placed a piece of wood, 1 foot by 3 inches, in which are a number of holes This is to break the fall of the water, and thus prevent the quicksilver on the plates

plates being unduly disturbed. There are also two small blanket-tables, each about 4 feet 6 inches by 10 inches, with ripple-wells. The whole plant is, I am told, the sole design of the proprietors, the iron-work being made by Mr. Donaldson, engineer, and owner of the Star Foundry, Grafton. The entire work is certainly a credit to Mr. Donaldson, and all praise is due to Messrs. Sharpe and Morrow for the ingenuity and enterprise displayed by them. The machine works smoothly; still, it is known that some alterations are requisite, and it is intended to make such with the least possible delay. The crushings will then be effected more expeditiously and at a less cost. For one thing, the cog-wheel which drives the fly-wheel is found to be too small, its revolutions giving to the stampers but thirty drops per minute, and that is far too slow.

There were 15 gold-mining leases, comprising 47 acres, applied for. Three leases applied for in 1886 were executed, and on application to the Warden the lessees were granted a suspension of labour, The like was also granted to the applicants of three gold-mining leases situated near Kangaroo Creek.

I have issued 25 miners' rights; business licenses, nil; mineral licenses, nil, and have registered the following claims:—Prospecting claims, 2; machinery areas, 2; residence, 1; water-race and water-right, 1; ordinary claims, 3; tunnel sites, 2; dam-site, 1; stream water-right, 1.

Suspension of labour was granted by the Warden to the owners of 2 prospecting and 3 ordinary claims.

Most opportune rain has visited this district during the past two months, and that in abundance, accompanied by, in some instances, terrific hail and thunder storms, the lightning being dangerously near; trees were struck and scattered in all directions. I have known nothing like it for many years past. The country is looking its best—plenty of feed for cattle and water-holes filled to overflowing.

Total value of mining plant in the division, £717.

CLARENCE AND RICHMOND DISTRICT—Ballina Division.

(W. Tippett, Mining Registrar.)

I have the honor to report that very little mining is carried on in the division, with the exception of beach-mining, which is carried on intermittently along the whole of the coast in my division, the average earnings being from 30s. to £3 per week, the richer and easier-worked portions, from which splendid results were formerly obtained, having been worked out. Rich deposits of gold are known to exist behind the terraces behind the beach, but owing to the great quantity of water to contend with these deposits cannot be worked with the primitive appliances of the ordinary beach fossicker. A good deal of prospecting has been done throughout the division during the past year, but mostly by inexperienced men. In the beginning of the year, however, Mr. D. W. Munro, who has devoted a considerable amount of practical and scientific research towards the development of the mineral resources of the district, in company with William Bevan, followed a certain line of country from the dividing range between the Tweed and Brunswick Rivers, towards the coast, and discovered and took up the 25-acre lease now known as "The Black Rock," which is being worked by a small local Company. The formation is very peculiar, and is the subject of much controversy. A ton of the stuff, however, having yielded 15¼ dwt. gold at Sydney Mint, a rush set in, and a great number of leases were pegged out and applied for, but little or no work is being done on these pending the issue of leases. Some sluicing claims south of the Evans River are working with payable results. Nearly all the miners' rights for this division during the past year were issued at Lismore.

CLARENCE AND RICHMOND DISTRICT—Murwillumbah Division.

(Joshua Bray, Warden.)

No mining work is now being carried on in this district. In the early part of the year a few prospectors were out searching for gold, and a few leases were applied for, but nothing payable having been found all the leases have been abandoned.

CLARENCE AND RICHMOND DISTRICT—Casino Division.

(J. J. Campbell, Mining Registrar.)

There is no actual mining going on in this district. There are some few prospectors out, but with little success.

CLARENCE AND RICHMOND DISTRICT—Grafton Division.

(William Clarke, Mining Registrar.)

During the year several parties have been prospecting for coal and shale. Mineral claims were marked off at Coaldale, the Orara, and Chatsworth, and a good deal of searching was done, but, as yet, the samples found appear to be of too recent formation, although they looked well, and some of them burned freely.

Several

Several mineral leases for plumbago were applied for at Buchanan's Head, about 10 miles south of Yamba. The leases have not yet been granted, and work is at a standstill. I believe all these leases will be abandoned. A lease was taken up at Yarrkalkiarra for copper, and I hear that some good ore was found.

Two applications for gold-mining leases were lodged for old and abandoned ground at Chambigne. A few tons of quartz were raised and sent to Sydney to be treated, in the hope of being able to float a Company.

I issued 109 miners' rights and 84 mineral licenses, and received 2 applications for gold-mining leases and 7 for mineral leases. A number of the miners' rights were issued to persons working or interested in other divisions.

ALBERT DISTRICT—Milparinka Division.

(C. De Boos, Warden.)

The year 1888 commenced under the most favourable auspices for this district. Work was going on energetically at the several digging localities, and the miners, satisfied with the result of their labours, were working with that steadiness that showed them to be contented with the prospects before them. A copious rainfall of about 2 inches took place in the early part of January at Milparinka and Tibbooburra, still further gladdening men's hearts, giving them fresh encouragement, and leading to a universal anticipation that we were entering upon a season of general prosperity ; but the rainfall of January was the first, the last, and the only fall of the year, for the few casual showers, if such they may be called, which fell at long intervals, gave no appreciable quantity of water. Mount Browne, which unfortunately missed the January rain, has not had more than ½ inch of rain during 1888, whilst Milparinka has averaged about 2 inches, and Tibbooburra a trifle more. The natural consequence of this can very readily be understood. The population of the field, which had appreciably increased, and promised to go on increasing, was left without resource, and as the months travelled on with the same steely sky, the same parching heat, and the same stern unbroken outlook of drought, gradually betook themselves to other occupations. Tibbooburra, which from the peculiar character of the work carried on there, suffered more than any of the other fields, and was soon partially deserted. By way of showing the progress that had been made and the hopeful outlook of the beginning of the year, I may mention that up to the end of February the number of miners' rights issued for the district were within half a dozen of the total number issued in 1887. As far as Tibbooburra is concerned, the field may be said to have been virtually unproductive since the end of February, when the puddling-water gave out. The small quantities of gold that have come in from dry blowing, or from panning with soakage water, are so inconsiderable as to be hardly worth taking into account, and were certainly not sufficient to provide "tucker" for the worker.

When the water gave out at Tibbooburra a good many miners turned their attention to the reefs at the Warratta range, and House and Laws having struck a very promising-looking leader in the Elizabeth reef, took up an extended claim on that reef, and commenced working it. Others, led on by the prospects obtained, followed suit, and then came several applications for leases. An interest in the locality was awakened, and party after party settled down upon the reefs, until now there are something like 60 miners on the spot, with a population of about 120. A public-house and two boarding-houses have been opened, and altogether there seems every prospect that a settled community will be fixed upon the spot. No very large amount of work has been done as yet, most of the men awaiting the result of arrangements which are now being made for the effective working of the Milparinka Gold-mining Company's lease.

The history of this lease shows that its working has been very much mismanaged from the beginning. Money has been recklessly squandered; useless work has been performed at an enormous expense; and really useful work has been so executed as to be virtually useless. No wonder then that the Adelaide Board of Directors gave up the property with a sigh of relief. Then the property fell into the hands of the Milparinka Gold-mining Company, in whose favour it may be said that the purchase was only made to prevent the crushing plant and machinery from being taken out of the district. Still the Company made a praiseworthy effort to put things at the mine on a proper footing. An engineer was engaged, and was some three months at work putting the machinery, especially the pumping gear, in order. When this was done a manager was selected in Melbourne, at a handsome salary, for the purpose of setting the mine at work on a proper basis; but unfortunately this manager turned out to be not exactly the "man for Galway." He was not in any way up to his work, nor fitted for the position he had undertaken. After pottering about aimlessly, making a hopeless attempt to reset the tables of the machine, and wasting no small amount of the Company's funds, his services had to be dispensed with. In the meantime a gentleman who is largely interested in mining ventures in the Colony heard of these reefs, and as the best means of satisfying himself came on to the ground and closely inspected the Company's property. He was so far satisfied with this inspection, and with the manifest prospects of the mine, that he entered into a treaty for the purchase of the property, and has now bought the Company's lease, together with two areas adjoining, for which application for lease has been put in. No sooner was this done than two really competent officers were engaged in Victoria and sent up to the reefs—a manager who has had the best experience of the sister colony, and an engineer fully up to the work he has undertaken. These, with the necessary men to assist them, are now hard at work in pumping out the shaft, relaying the tables of the batteries, and generally getting the mine in order for systematic work. The tables are nearly completed, and as soon as the working shaft is pumped clear of water samples of stone will be taken from the different levels and proved by the only unfailing trial—the stampers. From the assays of several samples of stone taken from the shaft, as well as from assays of the tailings from recent crushings, the present owner of the mine anticipates a brilliant success for his venture. These anticipations are shared in by others, for as many as sixteen leases have been taken up on the Warratta range, and though some of these have doubtless been applied for for speculative purposes, still, perhaps, about half of this number may be worked legitimately when the leases are issued. The lessees will of course be strictly looked after in accordance with the practice of the Department, and if there is any hanging on such leases as are not fully worked will be reported and cancelled.

Coming now to Mount Browne, the miners here have had very hard times to go through during the past year. As I have previously stated, the rainfall for the year amounted to only about half an inch; in fact, there has been nothing like a good shower since September, 1887. Thus there has been absolutely

absolutely no surface water for washing. The underground water that was struck in the Golden Lake shaft has, however, been the great standby for the miners. For months this shaft supplied the whole of the water for household use, for watering stock, and for keeping one puddling machine going. To this machine was brought dirt from claims whose wash was rich enough to bear the cost of carting. Then came the water from the All Nations claim, and afterwards the large supply from the shafts of the Mount Browne Prospecting Company. The All Nations, the Hit or Miss, and the Sons of Freedom were all handy to the water, and could puddle almost at the mouth of their shafts; but when the Company knocked off baling they were unable to keep the water down in their shafts, and so could raise no wash. They have, however, continued to raise water, which they use for puddling for other claims. Some of the richer stuff from the deep ground at Stringer's Gully and the One-mile has thus been puddled here, and so kept the yield of gold from absolutely falling off to nothing. As regards the surfacing, the men have had to depend entirely upon dry-blowing, and leaving the balance of the dirt to be washed when the lucky time shall come which will bring them rain.

The Mount Browne Prospecting Company have got their shaft down to a depth of 241 feet. Having reached this they were compelled to knock off, as the water could not be kept down by baling, though work was carried on night and day with three relays of horses at the whim. It was evident that nothing but a powerful pump could keep the water down, and the Company lost no time in procuring one. Their manager was at once sent to Victoria to select the necessary pump and engine, and he did so without loss of time; but owing to the drought teams cannot travel on the road, and as yet only a portion of the machinery is on the ground, the remainder being stuck up between here and Silverton. Still everything that can be done has been done in the way of preparation for the erection of the machinery on its arrival, so that when it reaches Mount Browne very little more will have to be done than to put it in place. It is to be hoped that early in the year the pump will be at work, the bottom reached, and it will be known whether the venture is to be a success or not. The miners generally seem to be very sanguine about the matter. They look upon the prospects as most encouraging, as well from the indications given by the depth of the Prospecting Company's shaft, as from the actual returns given by the adjoining shafts of the All Nations and the Hit or Miss. As proof of this, five 25-acre leases have been applied for in immediate contiguity to the Company's reserve. Two of these are by large companies of working miners, who, if the prospect of the Mount Browne Company is successful, have determined to open shafts on their own account.

And here arises a very serious question. The residents at Mount Browne have been during the whole of the year entirely dependent upon the underground water for their supply for domestic use, as well as for the watering of their cattle and horses. Now, if one, or possibly two, Companies have at work pumps so powerful as to keep down the water so as to allow their claims to be workable, there will be no water for the public. The water being their own private property, the Companies will as much as possible conserve it for their own use when it comes to the surface—for their engine and for puddling. If they have no more than sufficient for these purposes, it is hardly likely that they will let the public have what they want for themselves to make their venture remunerative. The shallower shafts now used will be drained dry, and then comes the question, how is household water to be obtained? It may be said probably that a well could be sunk in some other locality beyond the reach of the draining action of the Company's pumps. But who is to do it? There is nothing in the Mining Board Regulations to provide for the taking up of a well or water-shaft. Such an idea was never mooted before the Mining Board. Their whole idea was to get rid of underground water, and the Regulations go so far as to make a man liable for a share of the cost of pumping his shaft dry. Thus a miner sinking a shaft for water purposes can get no protection for it. Such a field as Mount Browne, so different from any other in the Colony, was certainly never dreamt of in the Mining Board philosophy. If a water reserve be proclaimed it would be open to all, and no person would have a right to sink a well and claim the monopoly of the water. And even if permits were given by the Government endless disputes would arise; and, with the well-known wrong-headedness of miners, the moment the reserve was made there would be a general concurrence of opinion that there on that spot and below that reserve was to be found the best run of gold in the district. The question is one that will arise, though perhaps not immediately; but it is one that ought to be met in some shape, if the Mount Browne Company, being successful, should get into a heavy swing of work.

The quantity of gold actually purchased at Tibbooburra during the year was 664 oz. 9 dwt., 6 gr., fully five-sixths of which came to hand by the end of February. To this may be added about 100 oz., the estimated quantity taken down by private hands, making in all 764 oz. for the year, a marked falling off from last year, and showing how seriously the drought has effected us.

In Milparinka, the quantity of gold actually purchased was 1,020 oz., about nine-tenths of which came from Mount Browne and the rest from Good Friday and Warratta. In addition, 70 oz. are known to have gone down privately, and probably 30 oz. in addition, making 1,120 oz. for the year. There have been some nice nuggets found during the year,—one of 12 oz. 1 dwt. found in Murray's claim at the back of the township; one of 28 oz. 17 dwt. found in Main's claim, about 200 yards from the township; one of 9 oz. in the Hard Up claim; and several very nice pieces weighing from 1 oz. to 4 oz. There is a little history connected with the 12-oz. nugget. The man who found it tried to conceal it from his mate. However, the matter came to light, and the offender was apprehended, and, under section 89 of the Criminal Law Amendment Act, was sent to gaol for four months.

ALBERT DISTRICT—Silverton and Broken Hill Divisions.

(W. Brown, Warden.)

For the information of the Hon. the Minister for Mines, I now have the honor to submit the following report on the Silverton and Broken Hill Divisions of the Albert Mining District for the year 1888.

During the year just ended only about 3½ inches of rain fell in the district, nearly 2 inches of which fell early in February, consequently this has been without exception the driest season ever known since records have been kept, extending over several years. By reason of this continued drought nearly all prospecting over the field has been discontinued, suspension of the labour covenants having been granted on many leases, there being no water in their locality for domestic purposes.

As regards the silver-mining industry, the Broken Hill line of country still maintains the premier position, while the Thackaringa mines have been steadily developed, and in some cases with good results.

The principal mines on the Broken Hill lode are now connected by rail with ports Adelaide and Pirie, and as a considerable reduction has lately been made in the freight to these ports for low-grade ores, large consignments are daily being sent from Block 14, The Junction, Broken Hill South and North.

During the past year the Broken Hill Proprietary Company has, besides constructing the railway from the town terminus to the mine, which work necessitated the erection of an expensive bridge, paid dividends amounting to about £350,000, and are now employing about 1,600 hands. The total number of miners employed on the field I should estimate at about 4,000, and the prospects of the field in general, and the Broken Hill line in particular, look more promising than ever. A very large amount of work has been done on the British Blocks, Block 14, South Broken Hill, Junction, and the Central mines during the year, and I think that the work of development has proved that these mines are worth double the money they were twelve months ago.

Through the kindness of Mr. Mooney, the Sub-Collector of Customs, I am enabled to supply the following figures, showing the quantities and declared value of minerals and ores exported from this district during the past year

	Tons	cwt.	qr.	lb.	£	s.	d.
Argentiferous lead	17,247	12	0	25	863,467	0	0
Silver ore	10,756	2	1	18	136,800	0	0
Tin ore and oxide	55	16	0	12	1,095	0	0
Copper ore	24	15	1	0	304	0	0
Auriferous quartz	9	17	1	0	182	0	0
					£1,001,848	0	0

The above figures show the exports of minerals to be nearly double that of the year 1887, and I have no hesitation in saying the exports for the present year, with a fairly wet season, will greatly exceed in value that of the year just passed.

The amount of work done and revenue received at the Warden's offices at Silverton and Broken Hill can be gathered from the following figures.

	Silverton.	Broken Hill.
Mineral leases applications received	1,384	42
Gold-mining applications	12	.....
Mineral licenses issued	328	304
Miners' rights	89	893
Business licenses	388	4,313
Revenue received	£19,807 5 0	£4,445 15 0
Deed fees and stamp duty	717 10 0	.....
	£20,524 15 0	
	4,445 15 0	
	£24,970 10 0	

In addition to the above total, £1,635 was remitted by the Mining Registrar at Broken Hill to the Treasury for survey fees on mining tenements. The value of machinery now at work and in course of construction on this field cannot be less than £150,000.

The depth of shafts, length of levels, &c., will be found in the reports herewith, supplied by the managers of some of the principal mines. All these reports have not yet been received by me, but I will forward them to you as they arrive.

In conclusion, I may add that since the commencement of this year about 2 inches of rain has fallen generally over the district. This will enable work to be again proceeded with on mines where operations had been suspended for want of water.

ALBERT DISTRICT—Wilcannia Division.

(G. H. Gower, Warden.)

I do myself the honor to report that prospecting for gold and silver has been considerably retarded in this district from the prolonged drought, but am informed that many men are now prospecting for gold, especially since the late rains, with sanguine hopes of success on the Mount Browne road, between Milparinka and Wilcannia. I must refer you to the Mining Registrar's report for further information on the mining industry of this district, as I have had no opportunity of visiting and inspecting any of the localities where prospecting operations are being carried on.

ALBERT DISTRICT—Wilcannia Division.

(A. W. Pratt, Mining Registrar and Warden's Clerk.)

I do myself the honor to report for the information of the Minister with respect to the Wilcannia Division of the Albert Gold-field, as follows:—

The mining industry in this district has considerably improved during the past year, the returns of collections at the Warden's office, Wilcannia, showing an improvement in comparison with those of the year 1887, the collections for 1887 amounting to £17 15s. only, and for 1888, £112 5s., showing an increase of £94 10s.

In May, 1888, a find of silver was reported from Kallara Station, but although several mineral licenses were taken out and a good deal of the country prospected, nothing permanent was done towards the development of the country, the scarcity of water prohibiting work on an extensive scale.

Other discoveries both of silver and gold have been reported, and a specimen of kerosene shale was brought in from the Mount Browne District.

A week or two ago a fairly good specimen of gold-bearing quartz was brought into town. It was found only 30 miles from Wilcannia. The prospectors report that there is plenty more in sight, and the stone has been forwarded to Sydney for assay.

I may conclude my report by saying that in the opinion of some of the oldest practical miners on the field the want of water is the only bar to the district's becoming a most extensive mineral-producing country, and from the reports of prospectors considerable gold discoveries may be looked for as soon as the state of the country permits freedom of travel.

COBAR

COBAR DISTRICT.—Cobar Division.

(*Mr. T. C. K. McKell, P.M., Warden.*)

I have to forward herewith my annual report of the Cobar Mining Division for the year 1888.

Gold.

In my last report I informed you that a decided improvement had taken place in the gold-mining industry in this district through the recent discovery of gold within close proximity to the town, and it is now gratifying to know that the impetus then given has not in the least abated, but during the year 391 acres were applied for by 42 applicants. The excessive and continuous dry weather has to a great extent retarded the proper development of the field, but nevertheless large sums of money have been expended and a considerable quantity of work performed in various claims.

In several instances suspension of work had to be granted in consequence of no water being available.

Four leases at Fort Bourke Hill, viz., Houghton's 10 acres, Price's 5 acres, Chesney's 5 acres, and Fulton's 5 acres, were recently purchased by a Melbourne syndicate and floated in Melbourne into 100,000 shares, in the name of the Chesney-Cobar Gold-mining Company (No liability). This Company also purchased 100 acres of freehold land adjoining, upon which it is the intention to erect a large crushing plant as soon as the 40,000 cubic-yard tank now in course of construction is completed.

Some 22½ tons of quartz taken promiscuously from the Company's claims were forwarded to Melbourne for treatment, the result being 47 oz. 2½ dwt. of gold, valued at £4 2s. per oz. A very able and experienced manager has arrived from Sandhurst to take charge, and in a few months I hope to be able to furnish you with some practical results of the first local crushing from this and other claims.

Other leaseholders along this line of reef, and at the Peak, have had encouraging prospects, making them very sanguine of success, and in two or three instances small Companies have been formed by Sydney speculators to thoroughly prospect the land; the great drawback at present being the want of water and machinery.

Mount Billagoe.—The Mount Billagoe Prospecting Company, which was formed into 100 shares of £5 each some eighteen months ago, increased the shares to 200 at £5 each, and registered the Company here under the Limited Liability Act, but shortly afterwards the Company was wound up for the purpose of increasing the shares to 5,000, which has since been done, and registered in Melbourne under the name of the Mount Billagoe Gold and Silver-mining Company.

During the past twelve months good prospecting has been done, and from some private assays as high as 32 oz. of gold and 946 oz. of silver have been obtained. Some 30 cwt. of quartz were forwarded to Ballarat and 31 cwt. to Sandhurst, for treatment, with the following results:—Ballarat—gold, 6 oz. 850/1,000; silver, 46 oz. 47/1,000; Sandhurst—gold, 11 oz. 876/1,000; silver, 112 oz. 76/1,000. Total value, £105 8s. 5d.

I might mention that, in consequence of the rich assays, some of the original shares were sold at the high sum of £400 each. A thoroughly practical manager has arrived from Melbourne to take charge of and to open up and thoroughly test the value of the mine. The principal hindrance to the development of this valuable property appears to be the want of proper appliances for testing the ore, but no doubt that that will be shortly overcome when operations are in full working order under the new regime.

A township, known as "Billagoe," has been formed; some eighty allotments were surveyed, twenty-seven of which have been registered as business sites, and an hotel has been opened for the accommodation of the travelling public.

A few prospectors were in search of alluvial, but were unsuccessful.

Silver.

Through the splend'd assays obtained from the Mount Billagoe claim, a great improvement at once took place in this industry; 1,726 acres were applied for by 195 applicants, as against 100 acres by three applicants last year. These leases are not confined to the town of Cobar, but are in various localities in the district, the principal number being at Mount Billagoe.

The only lease worked near the town is 20 acres at Fort Bourke Hill, known as "Griffin's lease." A considerable amount of money has been expended in developing this claim. A tunnel has been driven into the hill 315 feet with a view of cutting the lode, but without any practical results as regards finding mineral. This land, properly speaking, is a quartz claim, and is on the same line of reef as other gold leases; and I am informed that as only slight traces of silver have been found, and fair prospects of gold, it is the intention to convert the holding into a gold lease.

In some two or three mineral claims at Billagoe good work has been done, some shafts having been sunk over 100 feet through solid country. Most of the land applied for near Nymagee has not proved so satisfactory as at first anticipated, therefore work has been suspended.

Machinery.

In a few months there will be two crushing plants in full working order. The Chesney Cobar Company's and the Cobar Quartz-crushing Company's tanks are now in course of construction, and the capital has been fully subscribed for the machinery.

Copper.

Nymagee mine has done good work during the year. 400 men are employed, and 12,600 tons of ore have been raised, realizing 1,300 tons of copper, valued at £93,276. This mine has for a considerable time past paid dividends.

Hermitage Plains.—Work had to be suspended in this mine through scarcity of water. A large quantity of ore is to grass, and the proprietors are now sinking a tank and erecting a small furnace to enable them to further develop the mine and smelt the ore.

Cobar Mine.—Through the returns of this mine not being completed, I am unable to give the out-put for the year. There are 400 men employed, and extensive alterations and improvements have been made in the working plant. This mine has had a great deal to contend against in procuring fuel. For a radius of about 10 miles the firewood has almost become exhausted, and the Company have been compelled to remove and relay part of their tramline to enable them to overcome the difficulty.

In

In the month of October a trial was made of about 12 tons of Dubbo coal in the reverberatory furnaces, blacksmith's shop, and locomotives, the result being highly satisfactory; and, if the long-promised railway to Cobar were completed the difficulty in procuring fuel would soon be overcome, and this mine would then be able to carry on the works more extensively.

C.S.A.—This mine is being worked by the Great Cobar Company. Two new shafts have been put down from 100 feet to 120 feet, and the drives extended in the old shaft, but no good results have yet been obtained.

There were only 6 in. of rain during the year.

The business transacted in this office during the year was exceptionally heavy, a large number of cases having occupied my attention in the Warden's Court:—miners' rights issued, 302; mineral licenses issued, 107; business licenses issued, 92; gold lease appplications issued, 42; mineral lease applications issued, 195; mining tenements issued, 7; water-rights issued, 19; business sites issued, 27; revenue received, £3,334 2s.

COBAR DISTRICT—Cobar Division.

(J. V. Foley, Mining Registrar.)

I HAVE the honor to transmit my annual report of the mining industry in this division for the year ending 31 December, 1888. Forty-two applications were lodged for leases for gold-mining purposes, and 195 applications for mineral leases. The following business was also transacted in this office during the year:—Miners' rights, 302; mineral licenses, 107; business licenses, 92; mining tenements, 7; water-rights, 19; business sites, 27. These matters, in conjunction with a large number of cases which occupied the attention of the Warden in the Warden's Court, made the business of the year exceptionally heavy.

Since the Warden reported, 2 tons 18 cwt. of stone from the Mount Billagoe Gold and Silver-mining Company's claim were forwarded to the smelting works of the Australian Smelting and Refining Company (Limited), at Dry Creek, Adelaide, South Australia, to be tested, with the following result:—

Assay value per ton, 8 oz. gold, 121 oz. silver—					
The gold realized £4 per oz	...	...	...	£84	12 0
The silver realized 3/5$\frac{5}{16}$ per oz.	...	...	...	56	8 4
			Total ...	£141	0 4

The Great Cobar Copper Mine is giving very satisfactory results. There are 400 men employed on the mine, and horizontal engines, crushing rolls, stone-crackers, locomotives, furnaces, &c., of the value of £80,000, are being worked in developing the ore. 13,210 tons of ore have been raised during past twelve months. It has been all smelted on the mine, yielding 1,005 tons of copper, which is valued in Sydney at £60,300. The shaft is 566 feet in depth, and the lode varies from 2 to 50 feet in width.

COBAR DISTRICT—Hillston Division.

(D. G. McDougall, Mining Registrar.)

THE New Mount Hope Copper Mine and the Great Central Copper Mine at Mount Hope are being worked extensively. The Great Central Mine has now been at work eleven months, and 130 hands are employed. Up to the 8th instant 142 tons 8 cwt. of fine copper has been produced; the value of the plant being about £2,000.

The New Mount Hope Mine has now been working about twelve months, 110 hands are employed, and ore to the value of £4,800 has been raised. 1,187 tons of ore has been smelted, producing 137 tons of copper, of the value of £8,900; the value of the machinery is about £7,200.

COBAR DISTRICT—Nymagee Division.

(R. T. Garland, Mining Registrar.)

I HAVE the honor to submit my annual report for the Nymagee Division of the Cobar Mining District for the year 1888.

During this year I issued 30 miners' rights and 41 mineral licenses. Three leases were applied for the latter end of the year—one for a gold-mining lease of 25 acres, and two for mineral leases of 40 acres each.

Gold.

There have been a good many prospecting for gold; but the serious drought and want of water have greatly interfered with their progress.

Copper.

The Nymagee Copper-mining Company (Limited) during the year employed 400 men. The quantity of ore raised was 12,800 tons, it having been smelted at the mine, yielding 1,297 tons of fine copper, the value of which was £91,000.

The depth of the shaft is 704 feet, the depth of deepest level being 618 feet; the width of lode is from 8 to 12 feet and 8 to 20 feet, dip or underlay south-east and north-west, and the bearing or strike 10 degrees east of south.

The plant at the mine is valued at £82,000, and consists of one 40 horse-power horizontal winding engine, and one 35 horse-power horizontal winding engine, two Tangye pumps, and one 11 horse-power Root's blower, a stone-breaker and crusher.

INSPECTOR OF MINES' REPORT.

In submitting my Annual Report for the year 1888, I have the honor to inform you that the following is a list of the accidents reported on by the Wardens, Coroners, or Mining Registrars, as having occurred during the year in the Metallic Mines of New South Wales:—

No. of Accidents.	Date.	Name of Mine or Company.	Locality.	Persons Killed	Persons seriously injured.	Occupation.	Cause of death or injury.	Fatal.						Non-fatal.

Table No. 2 gives, in addition to the value of mining machinery, the number of persons employed and the percentage of persons killed or injured during the year in the metallic mines of New South Wales: Out of a total of 12 persons killed during the year, 8 lost their lives in silver-mining, 2 in gold-mining, 1 in copper-mining, and 1 in tin-mining. By the above it will be seen that the greatest number of persons who sustained fatal or non-fatal injuries were engaged in silver-mining, which is comparatively a new industry in New South Wales, and the majority of these fatal accidents occurred in the silver mines of the Barrier Ranges, and to persons most of whom were novices in mining, who, by their want of knowledge, were unable to lessen the danger by such precautionary measures as practical experience in mining alone can teach. I may here state that the regulations for inspection and regulation of mines, other than coal and shale mines, have been strictly enforced in all mines inspected by me throughout New South Wales.

Seldom have I had cause for complaint against any mining manager who understands his duty and values his reputation, as he knows that by keeping the mine under his charge in a secure state, and by using every reasonable caution for the prevention of accidents in his mine, he studies the interest of his employers as well as persons employed in his mine.

My inspection, as Inspector of Mines and member of the Prospecting Board, has extended during the year,—in the Southern Districts, as far as Kiandra (Snowy River), Cooma, Michalago, Queanbeyan, Captain's Flat, Goulburn, Mount Costigan, Tuena, and Young; in the Western Districts, to Dubbo, Wellington, Buckanbah, Parkes, Forbes, Orange, Grenfell, Mudgee, Sunny Corner, and Bathurst; in the Northern Districts, to Tamworth, Nundle, Walcha, Uralla, Hillgrove, Warm Corner, Armidale, Black Mountain, Glen Innes, and Vegetable Creek; in the extreme North-west, to Silverton, Broken Hill, Purnamoota, Palamaca, Wawkaroo, Euriowie, Milparinka, and Tibbooburra.

Prospecting Vote for Gold and other Minerals.

This vote has given a great stimulus to prospecting for minerals in New South Wales, although the anticipated direct results have so far not come up to expectations. The benefits accruing under the Prospecting Vote ought not to be solely judged by direct results, but the indirect benefits, such as the opening up of adjoining mines, and the impetus given to mining enterprise generally, should be taken into consideration. If this is done it will be found that the Prospecting Vote has done some permanent good.

It can, however, not be denied that the direct results of prospecting north-west of Parkes and Forbes, on the Melrose Plains, Carlyle, Yellow Mountains, and other places, have been disappointing. These districts were known to be auriferous, and were frequently quoted as favourable localities for the energetic and persevering prospector. Payable prospects of gold and platinum have often been obtained, but, after further prospecting, was found only to occur in small patches, and nothing of a permanent nature to open up a new gold-field. There is, however, still hope, and sufficient prospects that, if not an entirely new gold-field, payable leads are likely to be discovered on some of the older gold-fields by persons aided by the Prospecting Vote.

Quartz-mining seems to have fared better, as instances have been reported where Government-aided prospectors have obtained payable results.

Exception has been taken by some persons as to the mode of distributing the vote and the constitution of the Prospecting Board. It has been suggested that the money voted for prospecting purposes should be placed in the hands of local men for distribution in their particular districts. Such a system would considerably lessen the work, anxiety, and responsibility of the present members of the Prospecting Board, who have other important complicated official duties to perform, and which duties have to be carried on personally by them, whether they travel as a Prospecting Board or not. I am one of two members of the Board who averaged during a six weeks' trip somewhat over thirteen hours per day in travelling, inspecting, and reporting. Hence it will be seen that it is entirely against the personal interest of the present Board to uphold the adopted system. Nevertheless, it is to the public interest that personal inconvenience should not be considered in public matters, and that as long as public money is voted for prospecting purposes the recommendation for the distribution of such moneys should be made by a Board or persons who have practical as well as scientific knowledge of everything in connection with or appertaining to the development of mining in all its branches.

The present system, although giving a great deal of extra work to the members of the Prospecting Board, is, considering all circumstances, the best that could be adopted for the public interest, as I could cite numerous cases which have come under my notice in favour of the present system.

For instance, several parties of miners had made application to the Honorable the Minister for Mines for aid out of this year's Prospecting Vote to develop, as they stated, the quartz reefs at a place known as Boro Creek, about equal distance (being about thirty miles) from Uralla, Armidale, and Walcha, in the New England District. Accompanied by Mr. Geological-Surveyor Anderson, we inspected the place, and found about thirty men at work. Some of these men had been there for six months. Glowing accounts were given of the place by the local inhabitants of Armidale and Uralla, and we were informed that as much as £300 had been refused for a fourth interest in a four-man's claim. I proceeded down shaft after shaft, and informed the miners and applicants for aid that we could not recommend any aid being granted them, as they had no quartz reefs, but were working on beds of quartzites containing no gold, and were only wasting their time and money. The applicants appeared surprised and disappointed at the results of our visit. They have since forwarded several parcels of this quartzite to different localities in New South Wales and Victoria, results being nil, and Boro Creek is now deserted.

At the Black Mountain a party of coal-miners had applied for aid. We inspected the locality, and found applicants for aid driving into a basaltic hill through a bed of lignite in the full belief that they would discover a good seam of coal. Recommendation for aid was also refused in this instance. As stated before, I could have cited numerous instances similar to the above where local people wasted large sums of moneys in their district for want of practical and scientific knowledge in mining matters, which leaves no doubt that the present system is the best safeguard for the public interest.

Gold.

No new discoveries of any great importance have been made during the year in the alluvial working, and even sluicing had to be discontinued on account of the protracted drought. Quartz-mining is, however, steadily progressing, and in some districts were quartz-mining had been dormant for years fresh starts have been made; notable of which is Hillgrove, in the Armidale District. Here, for a number of years, the Eleanora Mine was the principal payable mine near Hillgrove; but during the year several rich quartz reefs have been opened, such as the Baker's Creek Mine, the Sun Light Mine, and others. Thousands of ounces of gold have been obtained from Baker's Creek Mine, and large dividends have been paid. There is now a flourishing township at Hillgrove, with Warden's and Police Court, Post and Telegraph Office, and Public School. Indications are not wanting which point to the belief that in the near future Hillgrove will become a very extensive auriferous quartz-reefing district; and that other discoveries of payable reefs will be made towards the Woollumlumbe and Warm Corner Falls, towards Kempsey. At Parkes quartz-reefing has now taken the place of alluvial mining, and has become a profitable permanent industry. A fresh start has also been made in the Grenfell District, where years ago the quartz reefs yielded rich returns for the fortunate shareholders; but through various causes the Grenfell reefs were nearly one and all abandoned. They have been reoccupied, and, if systematically worked, may again give payable returns. Fresh starts have also been made in the Sofala, Sunny Corner, Hargraves, Mudgee, and other districts.

Silver.

The silver-mining industry has now spread to every mining district in New South Wales, but the most extensive and richest silver deposits are situated on the Barrier Ranges, in the extreme north-western parts of this Colony. As early as 1886 galena ore containing silver was discovered at Thackaringa and Umberumberka, but with the exception of a few tons of ore having been forwarded to Europe for treatment, and of which no satisfactory results were obtained, the discovery was allowed to remain undisturbed until the year 1883, when a rush set in, and large areas for silver-mining purposes were taken up.

up. Since that time discoveries of high-quality silver ores have been made at Broken Hill, Pinnacles, Purnamoota, and other parts now known as the Silverton District. In fact, these argentiferous deposits have been discovered to extend for a distance of about 100 miles from Thackaringa in a north-westerly direction, and several miles in width, but the most extensive and richest ore deposit so far discovered is in the now famous Broken Hill Proprietary Mine, at Broken Hill.

This mine, of which Mr. W. H. Patton is the general manager, and Mr. William Harper the mining manager, is at present the most extensive and richest silver mine in Australia. The ore treated by this Company on their mine during the year is 94,125 tons, the bullion obtained therefrom 16,779 tons, yielding 3,924,192 ounces of silver and 16,658 tons of lead, of a gross value of £928,877 5s. The Broken Hill Proprietary Company consists of 16,000 shares of £20 each, and the dividends paid during the year amounted to £22 per every £20 share, or £344,000 for the year. The total dividends for the three and a half years since the Company has been in existence reach, up to the 30th November last, to the large sum of £568,000.

During the last six months, ending the 30th November, 55,846 gross tons of ore were extracted from the mine, equal to 52,896 net tons, which were treated at the smelters, yielding 9,453 tons of lead and 2,273,175 ounces of silver, as the output from 52,896 net tons of ore, or at an average of 17·7 per cent. of lead, and 42·9 ounces of silver per net ton of ore. This ore was raised and put into the mine dumps at a cost of 18s. 9·65d. per ton, as against 41,340 gross tons at an average cost of 19s. 11·97d. per ton during the previous six months.

The cost of smelting the ore and delivering the bullion at the truck of the Broken Hill tramway during the last six months has been at the rate of £1 15s. 6d. per ton, the slight increase being caused by the additional amount of flux required to treat the siliceous ores.

Mr. W. H. Patton, the general manager, has made great improvement in the mine and machinery both above and below ground. Patterson shaft has been equipped with a compound condensing pumping engine, having cylinders 16½ inches by 60 inches, and 26 inches by 60 inches, geared four to one, to a double line of 9-inch by 7-inch plunger pumps, and is of sufficient power to raise 700,000 gallons of water per day from a depth of 1,500 feet. Also with a double cylinder hoisting engine 18 inches by 36 inches, capable of hoisting from same depth, and is intended for the main hoisting and pumping engine for Blocks 12 and 13.

M'Culloch's shaft was down 382 feet, and at the completion of the pumping gear it was intended to sink it to a greater depth. This shaft is equipped with safety-cages—if not entirely of Mr. Patton's invention, they were certainly greatly improved by him and the latter gentleman informed me that he intended to fix safety-cages on all the principal shafts on the mine, so as to enable him to have the employés lowered and raised in the shafts to and from the different levels, instead of having his men tired out by climbing the ladders as at present.

Jamieson's shaft was equipped with a new pumping plant during the year, which worked very smoothly, and supplied the smelter with the necessary water. This shaft had nearly reached the depth of 316 feet, and has mainly been kept sinking to keep up the water supply.

There are also Rapp's, Broadribb's, and Knox's shaft, and No. 1 and No. 2 shafts on Block 11.

No. 1 shaft on Block 11 is situated 200 feet from the southerly boundary line, and is a large 3-compartment shaft sunk to a depth of 250 feet. At the depth of 160 feet siliceous iron ore was struck of a payable nature, and high-grade lead ore was sunk through, continuing to bottom of shaft. This discovery is of utmost importance, and adds largely to the value of the mine, more especially so as the surface indications at the site of shaft were not encouraging. This, in my opinion, is due to the fact that near No. 1 shaft on Block 10 the lode faulted, and after development the cap of the lode will be found easterly of the shaft. This fault can be traced on the surface through Block 10 into Block 11, and before the southern boundary of Block 11 is reached another fault or heave to the east occurs, leaving in a southerly direction from Block 11 nothing but beds of quartzite.

The lode in the Broken Hill Proprietary mine has now been proven to exist along the length of the three 40-acre blocks, with from 10 to 100 feet in width, with an almost unlimited supply of ore; in fact, from M'Culloch's shaft on the 316-feet level in Block 14, and the British Blocks 15 and 16, at corresponding depths, ore has been cut of the same description and quality, proving the galena ores to extend for a considerable distance in a northerly direction. There is, however, a great probability that at a greater depth the lode will fault, but will again be discovered easterly, taking its old former dip or underlay.

As stated before, great improvements have been effected since the advent of Mr. W. H. Patton to the management of this famous mine. Amongst various other matters Mr. Patton has also introduced a new system of timbering, known as square timbering; although new in the mines in New South Wales, it has been in use in the principal mines in Germany, and from there was introduced into America, and again by Mr. Patton into New South Wales. In countries were it has been made use of it is considered by mining authorities a safe and economical plan of timbering and securing extensive mine works.

No doubt this system of timbering appears dangerous, and is awkward to the miner who has only had practice in hard metallic mines; but the alluvial or even quartz miner ought to feel quite at home with it. In my opinion there is far more safety in square than in rough timbering; the only thing required is to be careful when putting in temporary sets, more especially so as the ore in all the upper levels of the Broken Hill Proprietary Mine is very friable, and may almost be taken for alluvial. Should swelling rock or side pressure be met with, such may be overcome by diagonal stays or the filling in of stuff obtained from cross-cutting or other refuse. Square timbering does away with the system, to use a miner's phrase, of kyhooting or fossicking, and promotes the exposing to view of larger masses of ore than is otherwise the case with ordinary timbering. Stopes are kept open, and room is thereby obtained for a large number of persons.

The new ore-dressing plant, which is a duplicate of ore-dressing machinery used at the Lake Superior and Annaconda Copper Mines in America, where it has proved to be economical and efficient, has been erected under the able supervision of Mr. Holly, who has had large experience in America, and this plant was successfully started by Mr. Holly before the end of the year, and with excellent results.

There is still other machinery, such as water-condensers, smelting works, sawmills, tramway, &c., on the details of which a large book could be written. Suffice it to say that the smelting works are under the immediate management of Mr. H. H. Schlapp—a capable, energetic, persevering, and successful metallurgist. Every

Every reasonable precaution is taken and everything possible is done in thoroughly ventilating and securing the mine, &c., by Mr. Patton, the general manager, Mr. William Harper, mining manager, and Messrs. Thomas and Pearse, the assistant mining managers, for the prevention of accidents to persons employed in or about the mine.

The Broken Hill Proprietary Company is to be congratulated in being so singularly fortunate in securing and retaining the services of such officers, men who thoroughly understand their respective work, and who do not try to avoid the full responsibilities appertaining thereto.

Broken Hill, Block 14, which is under the able management of Mr. Zibina Lane. There are several shafts on this mine, the main shaft being about 300 feet in depth. The ore so far obtained has contained less percentage of silver and lead than that met with in the Proprietary Mine; but I have no doubt whatever in the occurrence of rich galena and sulphite ores when greater depth is reached, and that in the near future the mine will become dividend-paying. The reason that the ore is of a lower percentage than that of the adjoining mine is owing to the characteristics of the ore deposits on the Barrier Ranges, the ores occurring in shoot or lenticular blocks, therefore the present workings may be between two different shoots. Heavy and extensive pumping machinery and concentrating plant similar to those at the Proprietary Mine have been erected. Everything in and about the mine is substantial, and Mr. Lane is not only complying with the regulation for the inspection and regulation of mines other than coal and shale mines, but he seems to leave no stone unturned to prevent accidents, which is a credit to himself and a great benefit to his employers.

The Broken Hill British Block is north of Block 14. This Company is more fortunate than that of Block 14, in as much that they have extensive deposits of high lead and galena ores; in some parts the lenticular bunches are as much as 90 feet in width. It is only a short matter of time when this Company will rank amongst the payable and dividend-paying silver mines of New South Wales. The pumping gear and concentrating plant is a *fac simile* to that of the Proprietary and Block 14 Mines. This mine is under the able management of Mr. Thomas Eyre, who for many years was manager of the Catherine Mine, Sandhurst, Bendigo, and so successfully managed the Sunny Corner Mine. Here, too, Mr. Eyre is doing everything possible for the prevention of accidents, and so far he has been singularly fortunate.

The abovenamed three mines are connected with the Silverton Tramline and South Australian Railway, so that the railway trucks can be loaded or emptied at the mouth of the shafts, whereby a great deal of labour and expense are saved.

A few hundred yards north of Block 15 of the British Blocks, and a little beyond their concentrating works, a fault occurs in the lode, and not a bend as generally appears on plans. This fault is westerly several hundred yards from the line of lode which is being worked in the British Blocks. On this part of the Broken Hill lode are the Junction and Broken Hill North Mines. The Junction Mine is being managed by Captain Jolly, formerly of the Nymagee Copper Mine, who has hardly had a fair chance to bring his undoubted ability, and practical knowledge to bear favourable results. The lenticular blocks in this mine are not as large as in the abovenamed mines; hence a great deal of dead or unprofitable work has necesarily to be carried on. The same may be said of the Broken Hill North Mine, which is under the management of Mr. Alfred Wilson.

Starting again from the southern boundary of the Proprietary Block 10, is situated Block 11, which is also under the management of Mr. W. H. Patton. Very probably part of the lode now sunk upon on Block 11 will also be obtained in Block 10, but I doubt very much whether this will be the case during the whole length of that block, as a bed of quartzite crosses the lode before the southern boundary of Block 10 is reached, which no doubt is connected with the faulting of the lode, as can be seen to the eastward in the Central Mine, and again still further east in the Broken Hill South Mine. The latter is managed by Mr. Richard Piper, who has a good reputation as mining manager, but whose ability and perseverance have so far been unsuccessful in making the South Broken Hill a payable mine. South of this are several mines, but I am afraid they will never be payable ones, as the lode seems completely split up after passing the Broken Hill south range. The Rock Well Paddock Mines were also inspected by me; so were the Pinnacles and Thackaringa Mines; at the latter place the Gipsy Girl and Pioneer are the principal. North of Broken Hill are several mines—the Victoria Cross, Bonanza, Alpha, Cosgrove, Round Hill, and others, which were all inspected by me. At the Round Hill a main shaft was sunk to, if possible, strike a payable lode at a greater depth. Captain W. H. Mathews, who has managed several mines with great credit, has so far been unfortunate in not striking payable ore in his mine. The Umberumberka, Day Dream, and Purnamoota Mines, and the Waukaroo and Palamira Tin Mines, were also inspected by me during the year.

The ore in the whole of the Barrier Ranges occurs in lenticular blocks and shoots, even in the far-famed Broken Hill Proprietary Mine; only in the latter they are of large dimensions, and occur near each other, whereas in all the mines north and south of the Proprietary, Block 14, and British Blocks, they are smaller, and in some instances so small that they will never pay, as too much unprofitable country rock has to be removed between the lenticular blocks or shoots of ore. Where these lenticular shoots of ore are large enough for profitable work, mine-owners, managers, and miners should not be discouraged by these features, which are characteristic all over the field; whether gold, silver, copper, tin, or any other mineral, but they should sink, and drive for new shoots or bunches of ore. To this characteristic of the field no doubt is due the fact that the Brisbane Block Company have not ere this intersected the Broken Hill Proprietary lode, which it was thought would have been reached between 700 and 800 feet, had the lode kept the same underlay as in the top levels. The diamond drill is now 1,300 feet in depth, with little if any more indications of the lode than were obtained in the ore brought up by the drill in the higher levels. I cannot come to any other conclusion than that the Broken Hill Proprietary lode has faulted to the east, or else taken an easterly underlay; but the former theory is the most likely. And if my theory, based on very close observation, proves to be a correct one, then the Brisbane Block Company may have to bore a very considerable depth before they will intersect the Broken Hill Proprietary lode.

There is no doubt whatever that the permanency of some of the Barrier silver mines is secured; but it is also certain that several of the smaller mines, where the bunches and shoots of ore are not extensive, will have to cease work, as the prospects will not increase, either in the size of the blocks or richness of ore, by sinking to a greater depth. The fictitious prosperity and mushroom growth of some

of

of the Barrier Ranges mines, which was caused through over-excitement (and may almost be called a mining mania), has its desponding effect on the public mind; and the time is near at hand when, instead of gambling in shares only, legitimate mining will be carried on—when *bona fide* capitalists will only invest in mines worthy of such name; and then a solid, permanent prosperity will set in.

Vegetable Creek.

Webb's Silver Mine is still being under development, and as depth is reached the mine seems to be somewhat improving.

Webb's Consols has been vigorously worked for a considerable time, in hopes that ultimate success will be the lot of the enterprising shareholders of this Company.

Webb's Centrals are also still at work, with the same hope for the future as the owners of the Webb's Consols. I am, however, afraid that, as there is no regular defined lode, but rather bunches, caused by filtration, the cost of working these bunchy deposits will be too great to prove very valuable to shareholders.

There are also the Jubilee, Webb's South, Webb's Extended, The Severn, Hill Hole, and other silver mines, some of which have lately suspended work.

Webb's would probably have been a payable mine by this time had that Company not started before they were ready, or rather had they had sufficient capital to properly open up their mine before they started with their reduction and smelting plant.

There has been a great deal of prospecting done during the year in this district for silver deposits, consequent upon the mining boom.

Mr. Thomas Chandler, J.P., one of the most able and energetic managers in New South Wales, has the management of several of the above-mentioned silver mines in the Vegetable Creek District.

At Pye's Creek there are several silver mines still at work, with varying success.

The Sunny Corner Silver Mines still add their quota to the silver-producing industry of New South Wales; and the Sunny Corner proper, whose prospects, machinery, and reduction works have been in previous reports noted by me, is being vigorously worked, with varied success.

The silver mines in the Orange District, at Lewis Ponds and other parts, are not in such flourishing condition, nor yet have they come up to such great expectation as was formed of them by those directly interested in the development of said mines. Extensive works are carried on at the Captain's Flat mines.

Tin.

Owing to the fluctuating price of tin, and protracted drought, which almost completely stopped alluvial tin-mining, the tin-mining industry has not been in such a flourishing condition during the year as it otherwise might have been.

Emmaville (Vegetable Creek).

Vegetable Creek proper being still worked, principally on the tribute system, by Chinese.

On the Deep Lead, Rose Valley, there are still parties of tributers occasionally obtaining patches. One party on the Wesley Mine are working O'Rourke's and Flannery's old ground; expect to reap a rich harvest as soon as their plant is erected and at work.

A find of some importance was made by O'Mara and party in Vincent's old ground. As yet the full extent of the patch cannot be ascertained; as it is it will be very profitable to the party, as they hold the land under a very low royalty.

On the so-called Seventeen Acres there is one party of tributers at work.

Baily & Co. have principally worked the shallow ground during the year, and it is feared have worked out the principal part of their alluvial deposits.

Cunneen & Co. have completed the working of their deep lead, and are now working in the shallow parts, which, however, is rather poor.

The Albion Company are driving across the lead.

Wesley & Co., at the Three-mile, have been prospecting, but so far have not met with much success.

At Kangaroo Flat (Hall's Bros'. mine) work is still carried on under the able management of Mr. Thomas Chandler, with payable results.

The Basaltic Lead Prospecting Company have carried on vigorous prospecting operations during the year, and have at times obtained fair prospects, but will have to get into more settled country before anything payable is struck. They have during the year sunk 77 feet, and with open cutting and trenches have driven 680 feet; a great deal of this work was done in hard granite rock at an expenditure of about £1,200 since the Company was formed. This land is supposed to contain the outlet of the basaltic lead from Rose Valley.

At Y Waterholes and at the Graveyards mining is still carried on by Chinese on the tribute system.

At Big Ben Flat a large Company has been formed to work an extensive area of land, but so far have not washed up anything.

Glen Creek still employs a number of miners, with varying success.

The Dalcoath Company have erected an engine and pump to ground-sluice their surface, which is supposed to contain payable tin.

On the Tableland and the Gulf little tin has been raised during the year, owing to the drought.

During the year a Company was formed at the Nine-mile, and are now obtaining a plant.

Tin Lodes.

The Ottery lode (Tent Hill) has been worked during the year with profitable results, and other lodes have been prospected in the vicinity, but without success.

At Butler's lode excellent stone has been raised during the year. Operations have been recommenced at the Dutchman's lode, and at the Torrington lode a few parties of tributers are still at work. At Cope's Creek (Tingha) many miners, both European and Chinese, are still employed, with varying success. Smelting works were also erected during the year.

The

The Barrier Ranges tin lodes were almost deserted during the year. This is principally due through some of the shoots and lenticular blocks containing the tin ore not being extensive enough to be worked with payable results.

A new discovery of tin was made during the year in the Barmedman District, but the severe drought at the end of the year severely interfered with its development.

COPPER.

Cobar, Nymagee, Mount Hope, Great Central, Burraga, and other copper mines extended their operations at the beginning of the year, but owing to the uncertainty in the price of copper at the end of the year prospective works were considerably curtailed.

BISMUTH.

The bismuth mine near Glen Innes was worked during the year with very encouraging results.

COBALT.

The recently-discovered cobalt deposits in the Carcoar District are likely to play an important part in the future history of the metallic mines of New South Wales.

In conclusion, I beg to state that having travelled through nearly every district of this Colony where metallic mining is carried on, I could not refrain from observing that, although a reaction has set in, consequent upon the great excitement of the public mind during the late so-called mining boom, during which time many bubbles were placed on the market, and eagerly taken up by many persons, not for the sake of legitimate mining but for gambling or trafficking in shares, legitimate mining has, nevertheless, made strides ahead for the advancement of our Colony's prosperity; and those engaged in legitimate mining will profit by the follies of the past, and no doubt demonstrate by their actions that there is not much more risk in the investment of capital in mining than there is in pastoral or other commercial pursuits, provided mining is carried on on legitimate commercial principles.

I have, &c.,
W. H. J. SLEE, F.G.S.
Inspector of Mines.

REPORT of the Examiner of Coal-fields for the Colony of New South Wales, for the year 1888.

IN accordance with the provisions contained in the 26th section of the Coal Mines Regulation Act, 39 Vic. No. 31, I have the honor to submit reports from the Inspectors of Collieries, with this my general report, for the year ending 31st December, 1888.

The information I have the honor to submit, in respect to the condition and progress, &c., of the various coal and boghead mineral mines during the year 1888, is as follows:—

Number of accidents in 1886, 1887, *and* 1888.

In 1886 there were twenty-nine fatal and forty-three non-fatal accidents; eight of the fatal accidents occurred at the Lithgow Valley Colliery.

In 1887 ninety-four fatal and forty-five non-fatal accidents; eighty-one of the fatal accidents occurred through the Bulli disaster.

In 1888, the year under notice, there have been fifteen fatal and forty-three non-fatal accidents. Three of the fatal accidents happened from falls of stone roof; the 4th and 5th, from a stone falling down shafts; the 6th, from a fall of coal and stone; 7th, through some substance falling down a shaft; 8th, from a loaded bucket falling down a shaft; 9th, through a fall of roof; 10th, through a derrick pole falling; 11th, from an explosion of fire-damp; 12th, from an explosion of powder; 13th, by a wire rope in motion; 14th, by some empty skips underground; and the 15th, through being jammed between waggons.

Twelve of the non-fatal accidents happened from falls of coal; the 13th and 16th, inclusive, through falls of stone; 20th and 22nd, inclusive, from a scaffold falling in shaft; 23rd and 24th, from an explosion of fire-damp; 25th and 26th, through a water-bag falling down shaft; 27th and 28th, from explosion of a shot; 29th and 30th, by a loaded skip; 31st, through a hammer falling down shaft; 32nd, by a surface incline waggon; 33rd, by a fall of screens; 34th, by a skip on underground main road; 35th, from a descending cage; 36th, from an empty skip; 37th, from an empty waggon; 38th, through being caught between waggons; 39th, through slipping on a rail; 40th, from an explosion of powder; and 41st and 43rd, inclusive, through a bucket falling down shaft.

All of the above fatal and non-fatal accidents have been inquired into, the scene of the accidents inspected, inquests attended and reports made thereon and forwarded for your information.

The names and occupations of the persons who died from injuries received, and those who have been seriously injured, as well as the names of the collieries where the accidents occurred, are given in the following summary.

SUMMARY

SUMMARY showing the number of fatal and non-fatal accidents in 1888, the names and occupations of the persons

Number of accidents.	Date.	Colliery.	Where situated.	Persons killed.	Persons seriously injured.	Occupation.
1	Jan. 5	Bulli	Near Wollongong		Thos. Tindall	Labourer
2	,, 6	South Waratah	Charlestown	John Simpson		Clerk

Increase in 1888	52	302	37,457 9 0	16,100 2 10

From these returns we find that in the Northern District, in the year under notice, there has been a decrease of 176,749 tons in the quantity of coal raised, and £74,697 in the value of it, whilst in the previous year (1887) there was an increase of 65,676 tons, and in the value of the coal raised, £12,165. This large decrease in the output of coal from the Northern District is entirely owing to the Newcastle strike of thirteen weeks' duration.

In the Southern District there has been an increase of 420,228 tons, and in the value of £167,355, whilst in the previous year (1887) there was only an increase of 5,738 tons, and in the value of £20,690. For this large increase in the output of coal in 1888 the Southern collieries are indebted to the Northern District thirteen weeks' strike.

In

In the Western District there has been an increase of 37,457 tons, and in value of £16,100, whilst in the previous year (1887) there was only an increase of 21,908 tons, and in the value of £10,420. This year's larger increase in the output of the Western collieries has also occurred through the strike in the Northern District.

The following table shows comparisons between the year under notice and two preceding years, as regards the exports of coal to foreign and intercolonial ports; the quantity used for home consumption; total output and value; tons of round and small coal raised for each person employed in and about the collieries; value of round and small coal raised for each person so employed; and the quantity of coal raised for each life lost.

Complaints made of deficient ventilation, &c.—I have, as usual, inquired into sundry complaints made with respect to deficient ventilation and non-compliance with the requirements of the provisions of the Coal-mines Regulation Act, 1876. Proceedings, where necessary, have been taken to enforce the provisions of the Act, and reports furnished thereon.

NEW MINES OPENED OUT OR IN COURSE OF DEVELOPMENT DURING THE YEAR 1888.

Irondale Colliery, near Wallerawang.

On January 22nd, Mr. D. Lawson notified the Examiner of Coal-fields that he was preparing to restart, and expected to be at work in about three months.

Young Wallsend Colliery, Teralba.

On January 23rd, Mr. A. Fairly gave notice that he had commenced, on behalf of the Young Wallsend Coal Co., their main shaft, situated at Teralba.

Mr. Thomas Garrett's property, near Raymond Terrace

On February 28th, Mr. T. Garrett notified that he had sunk a shaft on his land, about 6 miles from Raymond Terrace, and cut a seam of coal.

Old Adit, near Mittagong.

On March 26th, Mr. Peter Murphy notified that he had commenced to reopen the old adit which was driven by Mr. Chalders about four years ago, in the parish of Jellore, county of Camden, and adjoining the Mittagong Coal Co.'s property, 4 miles from Mittagong.

On April 10th, Mr. Joseph Holt notified that he intended to re-open a coal-mine that was formerly worked by Mr. Mitchell, to supply the neighbours about Wallerawang, and for his own use, situated at Lidsdale, near the Mudgee Road.

Linwood Colliery, Newcastle.

On May 3rd, Mr. Hugh Walker gave notice of his intention to sink a shaft on the Linwood Estate, at Wickham, on that portion of the Wickham and Bullock Island Coal Co.'s lease.

Trial Shaft, near New Lambton A Pit.

On May 10th Benjamin Tonks and David Hughes notified that they were sinking a trial shaft about 120 yards from the New Lambton A Pit, to prove whether the coal is workable or not.

Katoomba Colliery, Katoomba.

On May 17th, Mr. Edwards, colliery manager, notified that he had commenced a drive or heading in the shale at Ruin Castle.

West Burwood Colliery, Newcastle.

On May 29th, Mr. Evan Lewis notified that a tunnel had been opened, to mine for coal, situated at the Glebe Hill, Newcastle.

On June 6th, Mr. Donald Shaw, for himself and two others, gave notice of their intention to mine for coal on Mrs. Price's land, parish of Stockrington, near East Maitland.

Hillside Colliery, Newcastle.

On June 13th, Mr. Wilde notified that he had commenced to put in a new tunnel on the Burwood Estate.

Portion 98, parish of Stockrington, near East Maitland.

On June 23rd, Mr. James A. Hollings, for Shaw and party, notified that they were preparing to break ground by sinking a shaft to search for coal on portion 98, being part of mineral lease No. 13, near East Maitland.

South Greta, Farley.

On July 10th, notice was received from Mr. D. A. W. Robertson, notifying that the colliery formerly known as Homeville, near Farley, is now designated South Greta Colliery.

The Northumberland Land and Coal Company (Limited), Fassifern.

On August 1st, Mr. John W. Crawford notified that he had opened up a seam of coal about 16 ft. 6 in., in the ranges above their shaft, 40 ft. from surface.

Port Waratah, near Newcastle.

On August 3rd, Mr. Henry Harper notified that he would use his best endeavours to sink a shaft near Port Waratah, with a view of opening out a small colliery at some future time.

Dulwich Colliery, Singleton.

On August 22nd, Mr. W. Longworth, on behalf of the Singleton Coal and Coke Co., notified having commenced to open out work at the above new mine, situated near the Great Northern Railway, and about 7 miles from Singleton.

Leconfield Colliery, near Greta.

On August 24th, Mr. D. A. W. Robertson notified, on behalf of the Greta Coal Co., having commenced operations on the Leconfield Estate for the purpose of working the coal in these lands.

Burwood Colliery, near Newcastle.

On September 8th, Mr. W. B. Pendleton, manager, notified having started to sink a shaft on their 320-acre leasehold block.

Tulip's Pits, West Maitland.

On September 28th, Mr. Matthew Tulip gave notice of his intention to sink a prospecting shaft on the Government land at West Maitland, about 10 chains in a N.-N.-West direction from his last pit on said land.

Langlands Estate, County of Durham.

On October 1st, Messrs. Willis and Lonsdale, contractors, on behalf of Mr. J. C. H. Baass, notified that they intended sinking a trial shaft, prospecting for coal, on the Langlands Estate, Williams River, parish of Uppington, county of Durham.

Grice's Land, Buttai, near East Maitland.

On October 8th, Mr. Donald Shaw and others notified that it is their intention to sink another shaft on the land at Buttai, specified in his last communication.

Monkwearmouth Colliery, near Minmi.

On October 10th, Mr. A. M'Kinnon, contractor, notified that he had commenced operations; diameter of shaft, 16 ft. 6 in.

The South Wallsend Coal Co. (Limited), Lymington, Lake Macquarie.

On October 20th, Mr. John Johnston notified having resumed work—formerly known as the Lymington Colliery, Winding Creek.

Richmond Vale Colliery, near East Maitland.

On October 25th, Mr. John R. Rigg gave notice that he had commenced operations for sinking a shaft for the Richmond Vale Coal Company.

Summer Hill Colliery.

On October 9th, Mr. Andrew Sneddon gave notice of having opened a new tunnel in the municipality of Plattsburgh, off Minmi Road.

South Burwood and New Wallsend Collieries.

On December 5th, Messrs. Alex. M'Kinnon and John Corbett notified having opened two new collieries—one at South Burwood, and one at New Wallsend.

Cullen Bullen Coal and Coke Company's Colliery.

On December 6th, Mr. J. Bryant notified, on behalf of the Company, of having opened two new mines on two different payable seams of coal, situated about 6 and 15 chains respectively east of the eastern boundary of Sir J. Jamison's 2,000-acre grant, Cullen Bullen, County of Roxburgh.

North

North Stockton Colliery.

On December 31st, Mr. Henry Wright notified, on behalf of the North Stockton Coal Company (Limited) that it is their intention to sink a pair of pits on their coal property, Hexham Island, Kilcoy and Kennington Park Estates, parishes of Hexham and Raymond Terrace respectively.

Australian Agricultural Company's New Winning Colliery, Newcastle.

On December 18th, Mr. Wm. Turnbull gave notice that in future the A. A. Company's new colliery will be called the New Winning, instead of Sea Coal-pit, as previously notified.

Adams Coal-mine, West Maitland.

On December 22nd, Mr. H. J. Adams notified that he was working a coal-mine near Maitland.

COAL-MINES ABANDONED DURING THE YEAR 1888.

Matthew Tulip, on December 5th, notified that he had abandoned the coal-pit worked on Tulip's freehold, on account of stone.

Durham Colliery

SECTION, taken by Mr. Inspector DIXON, showing the thickness and character of the Borehole coal-seam sunk through and being worked by the Scottish Australian Mining Company, on Water Reserve No 4, near Redhead, and about 12 miles by rail from Newcastle Harbour. The Company hold about 3,214 acres of land, on mineral lease, from the Crown, at a royalty of 6d per ton on large and 3d per ton on small coal raised

Young Wallsend

THESE are sections showing the thickness and character of the Borehole coal-seam, sunk through at the Young Wallsend Colliery, situated about 2½ miles, by rail, from the Cockle Creek Railway Station, and 13 miles from the Newcastle Harbour A shaft, 15 feet in diameter and 512 feet in depth, has been sunk through it, and a substantial pit top, with four screens, has been erected, also a manager's house and workshops, and the Company anticipate sending coal to market in July next.

LAKE MACQUARIE.

Account of works in progress at the Wallarah Coal-mining Company's Colliery, at Swansea, Lake Macquarie. This Company have purchased from Messrs. Parbury, Saddington, Lamb, and others, 1,200 acres of freehold property, and an adit is being opened out in the No. 1 seam, and Mr. Thomas Parton, F.G.S., the Company's manager, informs me that they are preparing for an output of 120,000 to 150,000 tons per annum. A railway (Government gauge) is being constructed from the mouth of adit to jetty in Catherine Hill Bay, a distance of 2 miles 10 chains.

The jetty is already completed for a length of 720 feet from the shore, and it is proposed to carry it another 230 feet, where a depth of 28 to 32 feet of water at high tide is obtained. The jetty is well sheltered from the south-east and southerly winds.

GUNNEDAH

During the year four mines have been opened out, and coal raised and sold therefrom, in the Gunnedah District, viz., Black Jack, Melville, Springfield, and Centennial Colleries, situated about 5 miles from the Government railway. These new mines I purpose visiting and taking sections thereof at an early date, an account of which will be given in next yearly report.

The Company hold 1,800 acres of land on mineral lease from the Crown, at a royalty of 6d. per ton on large and 3d. per ton on small coal raised.

The winding-shaft is 451 feet above sea level, 16 feet in diameter, 1,098 feet to the No. 1 Coal Seam, and 46 feet additional to the No. 2; and is situated 24 chains from the Government Railway, to which a branch line has been constructed.

An air-shaft, 15 feet in diameter, is in course of sinking to the No. 1 coal, where a large fan, for ventilating purposes, is proposed to be erected.

A winding-engine, with two coupled 34-inch cylinders and 5 feet 6 inch stroke, three Lancashire boilers, 26 feet 2 inches x 8 feet 2 inches, and three screens, are in course of erection; and the Company expect to be raising 800 tons of coal per day shortly, to be ultimately increased to 1,000 tons per day.

SECTION

SECTION of a lower coal seam sunk through at the bottom of the Bulli Company's incline, and about 120 feet above sea-level. Measured by Mr. Inspector Rowan.

SECTION of the No. 1 or uppermost coal seam opened out by Mr. Pringle on the Southern Coal Company's property, near Mount Kembla, and about 8 miles from Wollongong. Taken by Mr. Inspector Rowan and myself. It is owned by an English Company, who are constructing a jetty at Five Islands, and an incline tramway from there to the mine. They have also erected coke ovens.

Area of land held under permits.—The property consists of 4,000 acres of Crown land, held under applications for authorities to mine for coal and shale, by Joseph Markby, at a royalty of 6d. per ton on large and 3d. per ton on small coal.

The largest portion of area shows no signs of disturbance.—The area, exclusive of creeks and gullies, is table-land (Hawkesbury sandstone), having an elevation of about 2,300 feet above the sea-level, through which are found a few intrusive dykes of diorite and trachytic rocks, the majority of the area showing no signs of disturbance whatever.

No. 1 coal-seam, of any commercial value.—Two coal-seams have been proved by Mr. Philip Winchester to exist under about 300 acres in and adjacent to the Joadja and Wanganderry Creeks. The upper or No. 1, lying immediately under the bottom of the Hawkesbury sandstones, is the only one which is of any commercial value. They lie very flat, with a slight dip in an easterly to north-easterly direction.

The character of No. 1 coal-seam proved in seven adits along an outcrop of over a mile.—The upper, or No. 1 coal-seam, has been opened out by seven adits driven into it in the Joadja and Wanganderry Creeks, along an outcrop of over 1 mile in length (*vide* numbers 1 to 7 on tracing annexed). The lower portion, about 5 ft 6 in in thickness, of this seam, where proved, is a free-burning bituminous, caking, and coking coal, of superior quality to any I have hitherto seen in the Mittagong or Berrima districts.

Impossible by present provings to estimate area under which coal of a similar quality is likely to be found.—As the coal seams in the Mittagong and Berrima districts are very variable in their character and workable thickness, it is quite impossible for me to give an approximate estimate of the area under which coal, of a similar quality to that proved, is likely to underlie the area granted to Messrs. J. Markby and others.

Further operations by boring would prove an area of 2,000 acres.—By putting down three bore-holes, at A, B, and C on tracing, the value of the coal seam under about 2,000 acres could be proved. These bore-holes would pierce the No 1 coal at a depth of probably not more than 300 feet. They will all be in creeks where there is a plentiful supply of water, and a diamond rock-drill boring machine can easily be carted there.

Best place for mining the coal after borings put down.—The place for sinking the shafts and winning the coal is near to No. 3 borehole, from whence a tramway of about 10 miles in length, running alongside the Joadja Creek tramway, could be easily constructed, to the Great Southern Railway, at or near to the Mittagong Railway Station

OAKEY

Oakey Park Colliery.

Section showing thickness and character of the Lithgow Valley coal-seam (lowest in the series) at the abovenamed colliery, Taken by me adjacent to the winding-shaft.

The Oakey Park Colliery is situated north of the Vale Mine in Lithgow Valley, and will shortly be connected with the Great Western Railway by a branch line.

The winding-shaft is 327 ft. in depth to the bottom of the Lithgow Valley coal-seam, and a winding engine has been erected with two coupled 11-inch cylinders and a 3-ft. stroke, and two screens, &c. This mine would have been sending coal to Sydney early in 1889 if some obstruction had not been thrown in their way to delay the construction of a branch line.

Vale Colliery.

Section showing thickness and character of the Lithgow Valley coal-seam (lowest in the series) at the abovenamed colliery. Taken by me adjacent to the winding-shaft. In a southerly direction as far as at present proved it has decreased considerably in thickness.

The Vale Colliery is situated east of the Vale of Clywdd in Lithgow Valley, and is connected with the Great Western Railway by a line of about 250 yards. The winding-shaft is 333 feet in depth to the floor of the Lithgow Valley coal-seam, and a winding engine has been erected with two coupled 14-inch cylinders and a 2 feet 6 inch stroke, three screens, &c. A furnace shaft is in course of sinking to the coal-seam, and the Company anticipate raising a considerable quantity of coal in 1889. Cullen

Cullen Bullen Colliery.

The Company hold 3,000 acres of land, on mineral lease from the Crown, at a royalty of 6d. per ton on large and 3d. per ton on small coal raised.

Two tunnels have been driven into the seam at a height of about 3,000 feet above sea-level. Pit bank, screens, workshops, and a branch line 1¼ miles in length to the Mudgee Railway, are nearly completed, and the Company expect to be sending coal to market early in 1889. The following analyses of the coal have been made by Mr. Mingaye :—

No. 1 Adit—Bituminous coal.

Moisture	2·04	Sulphur	·782%

Ash	10·75	Ash, pink.	
	100 00		

During the last few years numerous new coal-mines have been opened out on reserved Crown lands, for which the Crown has a royalty of 6d. per ton on round and 3d. per ton on small coal raised, and who will thus receive a very considerable sum of money in 1889 and subsequent years.

In conclusion, I have only to add that there were 91 collieries under inspection, and that notices have been received of 30 new mines having been opened out, against 72 collieries under inspection in the preceding year, and 8 opening out, and that the year's returns show a decrease in the Northern District of 176,749 tons of round and small coal raised and £74,697 in value; in the Southern an increase of 420,228 tons and £167,355 in value; and in the Western District an increase of 37,457 tons and £16,100 in value.

I have, &c.,
JOHN MACKENZIE, F.G.S.,

The Half-yearly Report on the Collieries in the Northern District in New South Wales, and Accidents therein investigated by the Inspector of Collieries during the six months ending 31st December, 1888.

The Examiner of Coal-fields, Sydney,— Newcastle, 31 January, 1889.

Sir,

Pursuant to the provisions of clause 26 in the Coal-mines Regulation Act, 1876, we have the honor to transmit to you this our six-monthly report on the state of the various collieries in the Northern District for the half-year ending December 31, 1888.

The total number of collieries under inspection in the Northern District during the term embraced in this report is fifty-five, being an increase of eleven during the last six months, viz.:—West Burwood, Summer Hill, Monkwearmouth, Richmond Vale, Buttai, Leconfield, Dulwich, Centennial, Springfield, Gladstone, Melvilles.

The New Lambton B pit has been abandoned; and, in addition to the above, one shale mine has been under inspection.

Present state of Mines.

A. A. Co's. No. 2 and Hamilton Pits.—About 600 men, &c., are employed in this colliery on the day-shift, and supplied with about 100,000 cubic feet of air per minute. The face workings are divided into separate and distinct districts, and in none of the districts are there more men than the Act allows. The provisions of the Act are also complied with in other respects.

New Winning.—There are about 70 men, &c., employed in this colliery. A Schiele fan is being erected for the purpose of ventilating the workings. The provisions of the Act are complied with.

Wallsend Colliery.—About 800 men, &c., are employed in this mine in the day-time; the total quantity of air introduced into the mine per minute is about 170,000 cubic feet. In connection with the face workings there are thirteen splits or districts, each district being supplied with a separate and distinct current of fresh air. In one district there are more men than the Act allows. The Act in other respects is complied with.

Newcastle Co's. Colliery.—About 360 men, &c., are employed in this mine during the day-time, and the total quantity of air introduced into the mine per minute is about 86,000 cubic feet. The face workings are divided into separate and distinct districts, and the number of men in each district is in keeping with the provisions of the Act. In other respects also the Act is complied with.

Co-operative Colliery.—About 400 men, &c., are employed in this mine during the day, and the total quantity of air circulating in the mine per minute is about 100,000 cubic feet. The face workings are divided into separate and distinct districts, and the provisions of the Act are complied with in every particular.
