The congestion of the wool trade has created large wool warehouses in the city on valuable land, under the cost of which the woolbrokers are labouring, and are compelled to frame charges with which the pastoralists are discontented; and as a central position is an absolute necessity, for, with eleven (11) weekly sales held during the season, it is a physical impossibility for the buyers to inspect wool outside the city radius—as in Melbourne, where there are only half the number, no other site would so well forward the conditions which led to the formation of the Association, inasmuch as it combined the elements of moderate cost, which meant lower charges to the pastoralists, great facilities for shipping, and, above all, more expedition in the delivery of wools to the purchasers, a reasonable certainty of a satisfactory dividend to the shareholders, a great relief to the present overcrowded street traffic to the Corporation, a diversion of a part of the immense traffic which is centralising to an enormous extent at Darling Harbour, and the advantages of an almost perfect frozen meat dépôt, possessing unrivalled advantages in its close proximity to the great steam carriers of the ocean.

The detailed advantages of the position, from our own point of view, and those which we believe will accrue to all concerned by the extension of the railway to Kirribilli Point, I have now much pleasure in submitting:—

*Wool.*—The consignments of "J. H. Geddes & Co." from the northern districts, represented last year 7,823 bales; and as 150,000, approximately, bales of wool are grown in the districts north of Sydney, it may reasonably be supposed that this number will be considerably augmented this season, under the stimulating auspices of the Pastoralists' Association, and considerably increased during succeeding years.

*Produce.*—9,151 butchers' sheepskins, 91 tons 6 cwt. dry station skins, 117 casks tallow, 6,244 hides, 88 bags bark, 7 tons bones, 8,000 horns, 1,000 lb. hair, 11,253 marsupial skins, 12,612 opossum skins, 293 bags grain, and 70 bales hay were consigned to their firm this last season from the northern districts, and which could be received and dealt with at Kirribilli Point.

*Machinery.*—Although only the first year, 50 tons machinery, approximately, were forwarded by us on account of the Wolsley Sheep Shearing Company last season to the northern districts. This season a great increase is anticipated, in keeping with the superseding of the old hand shears by the machine shears.

*Frozen Meat.*—Special provision will be made for the storage and shipment of frozen meat in our warehouse; and as the northern pastures are amongst the most favoured in the colony for fattening purposes, representing say 20,000,000 sheep, a great tide of frozen meat export must naturally set in at Kirribilli Point, more especially as the great increase in the flocks necessitates an immediate outlook for facilities for shipment, evinced by the formation of pastoral companies throughout the different stock centres for the purpose of erecting establishments for the slaughtering and despatching of sheep in chilled cars. As an evidence of which, in last few weeks' news we have notices from Narrandera, Glen Innes, Tenterfield, Narrabri, and Brisbane, for the proposed formation of country meat freezing centres, whilst in the Paris letters of the *Sydney Morning Herald* it is said that huge stores are being erected for freezing food and other perishable articles. The increase in the frozen meat export in New Zealand may, in support of this, be taken into consideration, viz. :—In 1881 the value of frozen meat shipped represented £19,000, with a gradual advance to £750,000 last season, and an anticipated advance this season to £1,000,000. This result is obtained from 15,000,000 sheep, two-thirds of which are cross-breeds; therefore it is reasonable to suppose that as the New Zealand shipments have reached 2,000,000 sheep per annum from a total of 15,000,000, the outcome of 20,000,000 sheep depasturing in the northern districts will be at least 200,000 the first year, or exceed 500,000 within five years, or equal to 1,000,000 carcasses within seven years, all of which could be depended upon as shipments from North Shore, for although our present breeds are principally merino, the demand for frozen meat would cause their gradual superseding by the larger types, for which our grasses are admirably suited. The shipments of frozen meat last year from New South Wales may be computed at £150,000, and nothing will be more intimately associated with the great development of the future than the frozen meat trade, and no situation offers greater facilities than the water-line from the eastern side of Lavender Bay to Kirribilli Point.

As evidence of the inexhaustible markets for our frozen meat, it may be stated that England pays £140,000,000 per annum for food supply from outside sources, and her demand is rising between £4,000,000 and £5,000,000 per year. Her demand in animal food alone is—

Meat.....	£9,000,000
Frozen meat .....	£5,000,000
Bacon and Hams .....	£8,140,000

England supplies 1,195,000 tons meat per year.  
 England requires 440,000 tons from outside sources.  
 France produces 1,060,000 tons meat.  
 France imports 150,000 tons meat.  
 Germany produces 1,345,000 tons meat.  
 Germany requires 60,000 tons meat.

Altogether, the European countries are short of their meat supply 600,000 tons annually.

*Great Northern Goods Dépôt.*—The natural effect of the construction of the railway will be the gradual creation of an enormous goods dépôt for the supply of all the Northern districts, as it is manifest that the discharging upon wharf and carting by waggon to warehouse in city, to be re-delivered to waggons and conveyed to Darling Harbour railway station, 11 miles longer, cannot possibly compete with a direct discharge to wharf, thence to rail, to be distributed throughout the Northern districts by a much shorter route; therefore warehouses will arise in accord with the natural flow of traffic, which in 1887 was estimated, including Newcastle, at 161,000 tons merchandise, 21,135 tons wool, and 11,580 tons live stock.

The enhanced value of Government resumption will almost repay total cost of line.

*Darling Harbour Wool Traffic.*—This great congestion could be greatly relieved, and in the future the whole of the facilities associated with the position will be required by the Southern and Western traffic, even if the Government erected frozen meat dépôts, which is somewhat doubtful, as coming into direct competition with private companies, and perhaps beyond their province, and I believe that the goods and passenger traffic of the Southern and Western districts will, in future years, completely monopolise the lines now tending to Darling Harbour.

The enormous street traffic during the five months of the wool season, represented by the passing through the Sydney streets of 336,412 bales, and 5,225 butts wool, irrespective of produce, &c., and which will in a few years almost monopolise the streets of the city, more especially as it is yearly increasing.

As an evidence of the advantages which they deem the position to possess for their own requirements (which represent the greatest export branch of commerce in Australia), the Directors of the Association have accepted contracts for, and are proceeding with, the erection of their warehouse, which, when completed, will be the largest wool and frozen meat warehouse in Australasia.

And, finally, in support of my detailed statement of the probable amount of goods traffic, I respectfully beg to call your attention to the opinions of such high authorities as Mr. Eddy, Mr. Darley, and, more recently, Mr. Goodchap, who, in his evidence before the City Railway Commission, stated that he thought the future traffic to North Shore would be very heavy, and that the ultimate connection with that portion of the city should be a feature kept in view.

The position from Kirribilli Point to Milson's Point is not inferior to the Circular Quay for warehouses, and a site for a goods traffic station near Kirribilli Point could be obtained if the actual point itself could not be resumed for the purpose; and I may state that, as the Pastoralists' Association chose the position for convenience and economy, it may reasonably be supposed that other large firms will also avail themselves of the same.

790. *Mr. Dowell.*] Have you acquainted yourself with the proposal now before the Committee? Yes.

791. Do you think the proposal a good one? Yes, I think it is very good, indeed; but I would go further, and say that the railway should be extended to Kirribilli Point, because we represent a fact.

- J. H. Geddes, Esq.  
2 July, 1890.
792. Before building your warehouse, did you take into consideration the probability of the railway being continued towards it? We hoped that it would be; but as a wool broker here, and one thoroughly conversant with the whole of the details of the wool business, I was, in the first instance, driven to purchase land which would be accessible to the buyers, and owing to the City Improvement Act, any building which I put up here would have had to be of a certain thickness—14-inch walls—so that I was forced to build on North Shore, because there I could put up a galvanized iron building. But after my business was merged into The Pastoralists' Association, the company saw the practicability of the project, and entered into an engagement for a larger building.
793. Suppose produce comes from the south, how will you get it to your warehouse from the proposed railway station? It is my idea to take it in barges.
794. The proposed railway would come to Milson's Point;—do you expect to use that railway? Yes.
795. I understood you to say that a large quantity of wool and produce would be consigned to you from the north on that railway? Yes; and I may state *à propos* of that, that the steamship companies carry wool for less than the railway does, but that pastoralists have a disinclination to take their wool from the trucks at Newcastle and ship it there to be re-delivered to stores here.
796. Do you consider that there would be any greater difficulty in the berthing of ships in Lavender Bay than there would be in berthing them in Sydney Cove? The frozen meat question being the greatest question which I had to take seriously into consideration, I interviewed Mr. Johnstone, of Johnstone and Balchin, who are the agents of the Kaiser line, in New Zealand. They have vessels fitted up for the frozen meat trade which will carry 40,000 carcasses. Before he would give me any opinion as to the probability of the Kaiser Company shipping the meat, he had first to inspect our property, after which he said that he saw no difficulty at all in having his ships hauled across to, and berthing alongside of, Kirribilli Point to take the frozen carcasses into their chambers. The Kaiser line is almost similar to the Orient line.
797. How do you propose to get the frozen meat to your warehouses? We are in hopes that the Government will extend the line to Kirribilli Point, in order that we may receive the meat from the cars into our receiving rooms. At the present time they send it to the chilled storehouses at Darling Harbour, and then carry it through the streets at night, and deliver it on board the receiving vessels.
798. In the meantime, would you use the railway to Milson's Point? Yes.
799. For the produce which you have enumerated? Yes.
800. Can you inform the Committee in round figures how much you propose to expend upon the buildings and wharfs? The building you see represented in the picture is to be built in accordance with the City Architect's plans, and will cost £60,000. It will be very much larger than a building on this side of the water which cost £179,500, and has not the same facilities for the business. I could tell you the name of that building, but I do not wish to make any comparisons here.
801. What was the cost of the land? The £60,000 includes the cost of the land, which has a depth of from 315 to 400 feet, and is worth £50 a foot, whereas land in Phillip-street would cost £250 a foot, and have only 90 feet depth.
802. You said that the increased value of resumptions would pay for the construction of the line—in what way can you prove that to the Committee? I have no idea of the price of land in Lavender Bay, but I imagine that it could be resumed for £50 a foot, and I am firmly convinced that any land so close to Circular Quay is worth £200 a foot. Putting the land down at £50 a foot, I believe the frontages down to Kirribilli Point would pay the cost of the line.
803. In the construction of a line to your proposed warehouse we should have to go down to the head of Careening Cove? I would suggest that the railway should be taken *via* Milson's Point and Kirribilli Point, and that a tunnel should be made through Careening Cove, where a general goods station could be arranged for, with the ultimate idea of extending the line on to Neutral Bay and Cremorne, if necessary.
804. You have referred to meat and wool as the produce which you are likely to receive by the railway;—do you anticipate any trade in wheat? Yes; but I am merely dealing with facts at the present time. The province of our Association will be to deal with wheat, hay, and all other produce, but I do not suppose that we shall ever be able to carry hay from the Hunter by rail as cheaply as we can by steamers.
805. Is it not a fact that a large quantity of hay comes down from that district at the present time by train? Yes; but we would save a penny if we possibly could. Last year was the first year that we touched hay or grain. I think we had 1,300 bags of grain, but that came from another district.
806. Have you any special knowledge of the northern districts? Yes.
807. An intimate personal knowledge of them? Yes; many of my constituents have properties there.
808. Do you know that it is a large producing district? Undoubtedly.
809. You anticipate that if the railway were continued to Milson's Point a very large proportion of the northern trade would come to the terminus? I think the whole of it would come there. Having a knowledge of the state of Darling Harbour during the height of the wool season, I feel sure that when there are smaller paddocks, and more care is given to the sheep, that, together with the extension of the railway, will make the accommodation at Darling Harbour insufficient for the southern and western traffic; and I believe that the whole of the northern traffic will centre elsewhere. At the present time we only get the wool from 25,000,000 to 30,000,000 sheep, although we have 50,000,000 in New South Wales. The wool from the rest goes towards Melbourne and Adelaide.
810. You are clearly of opinion that a large proportion of the northern traffic, instead of being arrested at Newcastle, will come on to Sydney? Yes. They made an attempt two or three years ago to hold wool sales in Newcastle, but the distance made it impossible for buyers to attend them, and consequently—although they made vigorous attempts last year to get the wool to Newcastle—the shipments from there were less than they were the year before, and no sales were held there.
811. Do you think that it would be wise to take the railway to Cremorne instead of to Milson's Point? No.
812. Not under existing circumstances? No.
813. You think that the wharfage which could be provided in Lavender Bay and at Kirribilli Point would be sufficient for years to come? Yes. I think Lavender Bay will give facilities for shipping equal to those afforded at the Circular Quay.
814. Do you know whether Lavender Bay is larger or smaller than Sydney Cove? I am not sure which it is, but I do not think that there is very much difference between the two.
815. You do not know which is the larger? No. Speaking as a business man, I am perfectly sure that Lavender Bay will give just as good facilities for shipping as the Circular Quay does, and that it will be quite large enough for the northern traffic for many years to come.

816. Do you know anything of the relative depths of the water in the two bays? Yes.
817. Is Lavender Bay sufficiently deep for all shipping purposes? I should say that in any reclamation which the Government would have to make in carrying the railway to Milson's Point there would be a greater depth of water than at Circular Quay. All of the water would be deep enough for the larger ships. I can speak definitely as to the depth of the water at Milson's Point and Kirribilli Point.
818. Have you any knowledge of berthing ships? Not necessarily, although I have been a very large shipper, and incidentally connected with ships for many years.
819. Can you see any more difficulty in berthing a large ship in Lavender Bay than in berthing ships in the Circular Quay? Certainly not.
820. You are clearly of opinion, having given considerable attention to the proposal before the Committee, that that would be the best point to bring a branch railway to in order to get at the deep waters of Port Jackson? Yes; because in bringing a railway to Milson's Point the Government enter immediately into an assured traffic.
821. Do you think that there would be any advantage in making Milson's Point a terminus for the Great Northern line, both for passengers and goods, in order to relieve the congested traffic at Redfern? My ideas as regards the future traffic are perhaps rather large. I think Milson's Point would do very well for a branch, but not for a main station. I should propose going to Careening Cove, where the Government own a great deal of land.
822. What area do the Government own there? I could not tell you the acreage.
823. That bay you think would be very suitable for goods? Yes. At Kirribilli Point at the present time, if required, the Government could take up 1,000 by 200 feet from Theulda and Beulah. I know that that would be quite large enough for our own wool and frozen meat trade, and our wool trade will probably amount to 10,000 bales for this year alone.
824. Are you of opinion, knowing the cost of the line—£150,000—that it would pay interest on the capital and working expenses? I think that the mere payment of interest should not be taken into consideration when a railway line to any given place is proposed, such as the line from Nyngan to Cobar. The development of the country has to be taken into consideration—
825. *Chairman.*] That is not evidence, Mr. Geddes. You are discussing the question of railway policy.
826. *Mr. Dowel.*] Do you think the construction of the line would bring about sufficient traffic to pay interest on its capital and working expenses—if not at the present time, how soon? I should say at once.
827. Have you made any calculations as to the amount of money which you are likely to pay the railways for goods carried to your stores? No, we have not made a calculation of that, but I should say £10,000.
828. Per annum? Yes.
829. Under all the circumstances, you are clearly of opinion that other people will endeavour to follow in your footsteps, and erect stores and warehouses of the description of which you are erecting? I feel sure that they will.
830. Do you think that if the railway is constructed, a considerable local goods traffic will arise? Yes, because of the facilities which would be given there over those at Darling Harbour.
831. Can you inform the Committee what length of water frontage you have purchased at Kirribilli Point? Just over 908 feet.
832. How many wool ships could you berth there at one time? By berthing *echelon* instead of fore and aft, we could berth sufficient to take nearly all the wool that comes from the northern district. We could berth three Orient boats; but they take so much that there would be no necessity for berthing so many in front of the store.
833. How long does the wool season last? Five or six months.
834. Can you inform the Committee whether the wharfage accommodation in Sydney is sufficient at the present time? I think that the wharfage accommodation naturally extends to Darling Harbour, simply because there is not sufficient room at the Circular Quay.
835. The construction of wharves at Lavender Bay would to a large extent supply the demand for accommodation, would it not? Yes.
836. Is there any delay now in shipping wool by reason of there not being sufficient wharf room? At the present time, if one requires to ship wool through A. Lamb & Co., they take it and dump it round to Circular Quay very often, so that a vessel lying at Lavender Bay would be in the same position as a vessel lying at Lamb's Wharf—that is, as far as the buyers are concerned.
837. Do you know what the railway freight would be—you stated the amount of wool? No, except on the basis of the present freights to Darling Harbour.
838. What do you expect them to be? From Newcastle?
839. *Mr. Trickett.*] Yes? The railway freight at the present time is 22s. or 22s. 6d. a ton.
840. *Chairman.*] Is that for wool? Yes.
841. *Mr. Dowel.*] Have you worked out the freight for wool? No. We paid £6,000 or £7,000 last year—that was J. H. Geddes & Co.; but this year we have many thousand bales coming to us which we did not have last year—I say £10,000 from the various districts generally. We are especially strong in the northern district, inasmuch as the Messrs. Dangar and the White's have joined our Association.
842. When you said that you thought that you would pay the railways £10,000 a year, is that for wool only? That was for the whole of the lines. I think you might divide that by three for the northern traffic.
843. Then the northern wool traffic would represent something over £3,000? Between £3,000 and £4,000.
844. *Mr. Trickett.*] Was that from Newcastle? No; a great deal of wool is brought direct to Darling Harbour from the north by rail now.
845. *Mr. Dowel.*] What advantage would a wharf at Kirribilli Point have over the wharves at Darling Harbour? The wharf at Kirribilli Point would be a private wharf, while that at Darling Harbour is a Government wharf. The Government could not build a wool store, neither could they build a frozen meat depôt. If they did do that at Darling Harbour the whole of the space would be taken up with the produce from the southern and western districts. We are in our infancy here as far as frozen meat is concerned. I have quoted the figures of what is done in New Zealand to show what we shall come to.
846. You think that there will be a large trade in meat and that consequently you will have to pay the Government a large amount for freight? Yes; but as I have nothing to base it upon; I have made no calculation as to what that would be. I think that we may estimate that more than 100,000 carcasses will be shipped after the first year.

J. H. Geddes,  
Esq.  
2 July, 1890.

- J. H. Geddes, Esq.  
2 July 1890.
847. Can you give the Committee any information as regards the erection of depôts in the interior to provide accommodation for the frozen meat trade;—are you aware whether any have been established? Last week or the week before, six places were mentioned where depôts were being established, under the pressure of necessity. We have 50,000,000 of sheep here, while in New Zealand they have only 15,000,000, and I estimate that last year we sent away £150,000 worth of frozen meat. The Orient boats are not fitted for carrying the number of carcasses which the New Zealand boats will take—they take nearly 40,000 at a time.
848. What are the places to which you refer? Depôts are being established almost every day. At Narrandera they have floated a company and are erecting a depôt. At Tenterfield they are holding meetings, and at Brisbane, I think, they have floated a company. Mr. Buchanan will give you evidence about what they are doing in Narrabri.
849. Do you know of your own knowledge that there are five or six places where depôts are being or are about to be established? Yes.
850. In the northern districts? Well, at Narrabri or Tenterfield, in the northern districts; but where we count two at the present time we shall have twenty-two in twenty years time. The trade in frozen meat has never yet been properly followed up as a business, but it will be.
851. You think that the development of the frozen meat trade in the interior, and more especially in the north, will be very large? Yes.
852. Have you entered into a contract for the warehouse, the plan of which you exhibit? Yes; for the first section of it, representing a third of what is shown on the plan. We had hopes that it would have been finished by November, but as it will not be completed by then we have extended the contract to the 1st January.
853. You propose to go on continually erecting until the building is completed? Yes.
854. You told the Committee just now that £60,000 would be the cost of the whole building? Of the building and the land.
855. When completed? Yes.
856. *Mr. Humphery.*] As designed? Yes. At the present time the contract exceeds £20,000.
857. Is there any other information which you would like to convey to the Committee? Well, I might say that so strongly were my directors impressed with the advantage of erecting a warehouse at the place where I purposed erecting it, that having purchased Beulah, and having found that they could not erect a warehouse there for eighteen months, they purchased Theulda, and so little speculation entered into the concern, that I believe they are quite willing to give the land required for the railway for nothing.
858. That is, if the Government extend the line further? Yes, and although the directors have purchased the land and have accepted the tenders for, and taken the responsibility of the building, they have accepted no shares, and any pastoralist can take an interest in the business on exactly the same terms as those who have purchased the land and have taken the contract for the building.
859. *Mr. Hurley.*] In the event of a railway being constructed to Milson's Point, would the company continue the line on to their own premises at their own cost? The Government at the present time, although it is not generally known, actually pay for the delivery of wool to the stores from Darling Harbour. They had to pay, approximately, on 350,000 bales 3½d. a bale. We would ask the Government to deliver the wool free to our store as they deliver it from Darling Harbour, and consequently it would be no advantage to us to continue the railway, but it would be an advantage to the Government, because they could then deliver the wool by train, without having to pay for the cartage of it.
860. *Mr. Douel.*] Could they deliver it more cheaply by constructing a railway than by taking it on punts? We could not enter into the frozen meat trade properly without having a line of railway down to our warehouse. Mr. Buchanan is an authority on this point, because he owns land, and breeds sheep, and he states emphatically that he believes he will have 200,000 carcasses during the first year.
861. Have you caused any calculation to be made as to the cost of extending the railway from Milson's Point to Kirribilli Point? No; but as a private speculator, I would buy up every piece of land there, knowing that the railway would at least double its value, and if you put £50 a foot on to the land the whole of the cost of the railway would be paid by its increased value.
862. You have made no estimate of what the increased value of the land would be, or the cost of extending the line? No.
863. *Chairman.*] When did your firm buy Beulah? I first bought Beulah.
864. When did you buy it? Two days after the proposal to extend the railway to Milson's Point was decided against by the Committee.
865. Can you tell us about the date—I am not asking you out of curiosity, but I want to see what you paid for the land with a view to comparing that with what we are told the resumptions will cost? About the 1st December.
866. How much a foot did you pay for it? I paid £21,000 for Beulah, and it has a frontage of 570 feet, so that that would make it between £30 and £40 a foot—about £35 a foot.
867. What depth is it? The depth ranges from 300 to 350 feet.
868. It goes back to a street? To Campbell-street—the best street in North Shore.
869. The next property belongs to the late Surveyor-General, Mr. Adams? We paid £50 a foot for that.
870. You say that the Government deliver all the wool sent by railway to the various stores in the city and that the cost of that delivery is included in the railway charges? Yes, that is, the brokers have the wool delivered to their warehouses free; and even with that charge we could deliver our wool over the punt at Kirribilli Point for the same amount of money. We can give the same facilities there as are given on this side. There is one matter I would like to refer to with reference to the buyers. During the wool sales in December the buyers, represented by Germans and Frenchmen, as well as by Englishmen, are in a perfect fever, and we have to work all night, at times, for consecutive nights. When a buyer buys 1,000 bales of wool at a sale he gives an order for that to the dumpers. The dumpers, such is the competition, take delivery of it free, and send perhaps fifty waggons for it. The waggons are continually crying out for their wool, and we are in a perfect fever until it is delivered, while the buyers are in a fever to get the shipping receipts from the dumpers, and they cannot get them until we have delivered the wool, so that we have the whole of them irritated at the same time. But at Kirribilli Point we shall make special arrangements so that the dumpers instead of taking delivery of their wool in waggons will be able to send a barge to hold 250 bales, instead of twenty teams to take delivery of twenty bales at a time. That is recognized by the buyers as an immense advantage.

William Frederick Buchanan, Esq., pastoralist, sworn, and examined :—

871. *Mr. Copeland.*] What are you,—a pastoralist? Yes.
872. Owning squatting country? I am a pastoralist, or squatter.
873. Have you any interest in Geddes' new buildings? Yes; I am a shareholder and director in J. H. Geddes & Co., The Pastoralists' Association.
874. Do you anticipate a very rapid development in the meat export business? I think it must develop as soon as we have established a depôt and given proper facilities for it.
875. Have not several companies been formed at various times for the export of meat? I do not know of any company having been formed especially for that purpose. The Orange Meat Company was formed for the purpose of sending country killed meat to Sydney, as well as to carry on the exportation of meat; but it was established principally to supply Sydney with meat.
876. But they have attempted to export meat, have they not? The project fell through some years ago.
877. Is there any company in existence now which exports meat? The only company I know is the Riverstone Company—Richards' Company.
878. Is that still in existence? I think so. I think that they are the principal people who supply the carcass export trade. Some meat is prepared for export, I believe, at the Fresh Food and Ice Company's works.
879. Whom do they supply? The P. & O. and Orient boats, so I understand, and I think they take 600 or 700 carcasses, and sometimes more, on each trip, but I do not know that positively. They take all that they can prepare, and I heard from Mr. Richards and others that they are not able to prepare enough, but that additional machinery is coming out to meet the larger demand.
880. Is Geddes & Co. one and the same company as the Meat Exporting Company? No, if you alluded to Richards'?
881. Do Geddes & Co. contemplate exporting meat? It is contemplated to erect at North Shore a depôt to receive meat for the purpose of export.
882. That will be part of the business of the company? That is part of the scheme of the company. The left wing of the building is now being erected for the purpose of receiving wool and other produce, but it is proposed to erect premises to deal with the export of meat, and to provide refrigerating rooms.
883. If the Government did not extend their line beyond Milson's Point, would you still carry on the meat export business? We look upon the extension of the railway to Milson's Point as the chief auxiliary in the matter of a meat export trade.
884. But suppose the railway is not extended beyond Milson's Point? We are building close to Admiralty House, and Milson's Point is near that.
885. Suppose the Government did not extend the line beyond Milson's Point, and left the meat there, how would you get it to the new building which you contemplate erecting? We should have to cart it.
886. Would that be a great inconvenience to you? I think it would be a great obstacle in our way. The great idea is to have the meat landed directly into the building—to have it taken there direct by train.
887. When you commenced the undertaking had you any assurance that the railway would be brought round to your building? None whatever, further than that suggested by the natural features of the country and the possibility of the extension of trade and commerce, and the necessity which must eventually arise for meeting its requirements.
888. Do you think that the Government are likely to take the railway to every new warehouse that is erected? No; I do not think they are. I think that they are only likely to take the railway to places that offer inducements for the facilitating of trade, and thus benefit the country.
889. And leave private individuals to fix upon the locality? Decidedly. If private individuals make mistakes they cannot expect the Government to assist them: but if they do not make mistakes, but erect places for the benefit of the country, and the country sees it, I think that it is right that they should give us facilities for increasing the benefit.
890. I suppose you are a large shareholder in this company? I am not a particularly large shareholder in it, though I am as large as any of them. Individually we are not taking large interests, because we wish it to be an extensive thing—more of a co-operative institution. The shareholders are supposed to be recipients of the rebate from the commissions, and so forth—it is to be co-operative more than anything else. There is no proprietary interest that receives any direct benefit.
891. I suppose you contemplate supplying the company with stock yourself? I have never made that part of my calculation. I shall sell my stock wherever I can make most money by them.
892. Can you say what other traffic besides meat the railway would have if we brought it down to Kirribilli Point? I think it would have a large wool trade from the northern part of the colony, as it would give great facilities for taking wool direct to market or for export.
893. Is there any other company or association which is likely to erect buildings at Kirribilli Point. If the Government were to bring the railway down there they would then have to go back again if they intended to take it on to Neutral Bay; what other traffic do you think there would be to your particular warehouse? I do not know of any company that is desirous of building over there for that special purpose, though it is possible that they would see the advantage of doing so. Goods landed there—wool for instance—could be stored as cheaply as it could be stored at Darling Harbour.
894. You do not contemplate the Government making your warehouse the terminus of the railway—you would expect it to go further? It would not interfere with us if it went beyond, so long as it came near us.
895. Is there any likelihood of any traffic going beyond you that you are aware of? I am not aware of any special traffic, but with the increase of population I think it probable that railway communication would have to be extended all the way down the harbour.
896. The only inducement that you know of at the present time for the Government to extend the railway to Kirribilli Point is the existence of your particular business? No; I do not know that that is any special reason.
897. Do you know of any other inducement? I do not know that that is the only one. I think a public benefit would be derived from the extension.
898. Can you tell us what section of the public would be benefited other than your company? I think that all the travelling public would be benefited.
899. By being able to land at your warehouse? Close to there, so that they could get across to the Circular Quay.

W. F.  
Buchanan,  
Esq.  
2 July, 1890.

W. F.  
Buchanan,  
Esq.  
2 July, 1890.

900. Could they not do that at Milson's Point? Yes.

901. What traffic do you think the railway would get by being extended from Milson's Point to Kirribilli Point; would there be any other traffic except that from your business? I do not know of any direct goods traffic other than ours, unless other buildings were erected there. A coal traffic might be formed there. Coal could be put on board the large ships by means of shoots, and thus get rid of the handling to which it is subjected by the lightering system.\*

902. Do you think that now that they are exporting wool direct from Newcastle, people would be likely to send it from Sydney instead, if the railway were constructed? I think it is quite possible that people would prefer to send it to the central market, where they would have a chance of sale, and then take the same, or even better advantages in shipping.

903. Have you any reliable information as to the number of bales of wool that come to Newcastle from the northern ports? No; I have not got any statistical information, but that could easily be arrived at.

904. Could you give the Committee any information as to the number of bales of wool which come from Newcastle by steamer and the number which come by train at the present time? No, I cannot.

905. Do you know what the charge is by steamer from Newcastle to Sydney—per ton or per bale? No, I do not. In sending my own wool down I avail myself of the railway, rather than unload at Newcastle and have it handled again. I think it better to send it direct on by rail.

906. Is your wool offered for sale in Sydney? Yes; it was all sold in Sydney.

907. I suppose the majority of those who do not sell in Sydney would prefer to ship from Newcastle? I do not know. I shipped from there for two years; but now I have abandoned the practice, because I think it pays better to ship from Sydney, and for the last two or three years I have shipped from Sydney. I prefer to send it to Sydney. I like to send the wool direct from my sheds into the stores here.

908. From where do you anticipate getting your stock for the meat business—from the north or from the west? From the north, of course, and from as far west as the railway system will go.

909. Why from "the north, of course"—why not from the south as well? So it can; but the whole of the northern lines would come down to the North Shore, making a saving of 10 or 11 miles in distance and the meat would come direct from the up-country slaughtering depôts. Such a depôt could be established to a very great advantage on the Upper Hunter, since that is one of the finest fattening districts in Australia.

910. Could not this meat export business be developed from Newcastle at the present time just as well as from Sydney. Suppose it were found to be a profitable business, what is to prevent people from erecting freezing works at Newcastle and exporting direct from there? There is nothing that I can see to prevent them, but they have not done it, although it is not for want of facilities. A slaughtering depôt could be established on the Upper Hunter, another at Breeza on the Liverpool Plains, another at Tamworth, another at Gunnedah, another at Narrabri, another at Walgett, and another at Dubbo. The meat from all those places would come in on the Northern line, and the districts in which those towns are situated embrace the finest fattening land in New South Wales.

911. *Chairman.*] Not one of those depôts have been established yet? No.

912. They are waiting for the construction of the line to North Shore? I suppose so—they are waiting for something that will help them.

913. *Mr. Copeland.*] Were there not meat-preserving works at Maitland? I think they had tinning establishments there.

914. Was the tinning company at Maitland a success? I do not think so. I think it has been abandoned once or twice, and then started again. It was originally a boiling-down company.

915. Do you know anything of the freezing works in Queensland? Yes; I have heard of those at Rockhampton. I understand the company there paid a very good dividend last year, and that they are going very largely into the business just now. Very large meetings were held in Brisbane the other day, and a large amount of money subscribed for the establishment of companies there.

916. You say that that company has paid a dividend? I think they have paid a very good dividend.

917. It is the first? I think it is about the first.

918. How many years have they been at work there? I think they were tinning there before they commenced the export trade. A company was also started for the export of meat to Java, but it fell through, though I can scarcely tell you the cause. Not because the thing was a failure, as far as the refrigerating system went, but more on account of the management.

919. Do you know whether the pastoralists have joined the Association to any great extent with a view to exporting meat? No. The shares have all gone off very well, and a large number of pastoralists have joined the Association.

920. What is the nominal value of the company? £150,000.

921. In £1 shares? Yes; to be increased as it is required. At present only a portion of the shares are distributed.

922. The whole of the shares are not allotted? No. We do not want all the money yet. Only 50,000 shares have been allotted.

923. On those how much has been paid up? 7s. 6d. on each. A call of 2s. 6d. will shortly be made and the balance per share, as required.

924. That is £25,000? Only 30,000 shares have been put upon the market.

925. But those have all been subscribed for? Nearly all.

926. On those that have been subscribed for 10s. has been paid? No; not 10s. yet, about 7s. 6d.—it has not all been called in yet. We can call in what we want, but we do not wish to call in more money than we require.

927. Would it not be likely to be more profitable to export meat from Newcastle;—would not that save the railway freight between Newcastle and Sydney. If the meat is to come from the north it must come from the north of Newcastle? I cannot see that it would be more profitable to export from Newcastle.

928. Would you not save the railway freight from Newcastle to Sydney? Yes; but we might lose that in other directions. Here we have the Orient and P. & O. Company's boats, which would not go into Newcastle. They are fitted up for the trade, and when they are going out they like to get their meat on board at once.

929. Do you think that those boats would come to your wharf? I think they would; but even if they did not, the transit would be so easy and quick that they could receive the meat on board at any time. At present they have to get the meat down at night, and there is a good deal of bother over it. Then there

are

\* NOTE (on revision):—A large general traffic would at once arise if there was a railway.

are other large ships which would come specially for the meat. I have been advised of boats which would be specially laid on for the trade, and some would take 30,000 carcasses away. The coal trade is another great feature in the traffic of the railway. The coal would come direct to the wharf, and be shot on board the steamers, thus saving an immense amount of labour.

W. F.  
Buchanan,  
Esq.

2 July, 1890.

930. *Chairman.*] Have you given the question of carrying coal any consideration? No; I was never in the trade; but that is done at Newcastle.

931. Do you know the difference in freight between carrying it by rail to the North Shore, and by ship to any part of the harbour? No, I do not exactly; but I know that the facilities would be greater.

932. Would you avail yourself of a great facility at an outlay of 50 per cent.;—because a thing was easy, would you pay 50 per cent. more for it? No; if a large transaction will pay 5 per cent. that is a great consideration. The Orient Company paid 5 per cent. last year as their dividend.

933. *Mr. Copeland.*] You stated just now that 30,000 shares had been allotted? Nearly that number; that is all that were put on the market.

934. Can you say how many of those have been sold? I think that about 8,000 are left.

935. So that only 22,000 have been sold? Yes; no effort has been made to get the others off.

936. In reality you have only about £8,000 of capital actually paid up? Of course, the other is available when we require it.\*

937. Do I understand that you have let a contract for the erection of a building at North Shore? Yes, for a portion of it—100 feet square.

938. What is the amount of that contract? About £14,000.

939. You are of opinion that unless a railway is taken to your warehouse it will militate very much against the meat export trade? I think a railway would facilitate the trade. I do not know that it would militate against it if it were not carried there, but it would not give us the same facilities.

940. It would be a great advantage to you if the railway did go there, but not a very great disadvantage if it did not? I think it would be of greater advantage to the meat export of the country if it went there, and I think that that will be one of our principal exports.

941. I suppose you have no idea of what it would cost the Government to take the railway from Milson's Point to your warehouse? No, it is not far, and I do not think that it would cost very much. Facilities could be rendered by the Pastoralists' Association which would render it easier still.

942. I understand that the land on which you propose to erect a building is the property of the company? Yes, we bought it.

943. What was the amount of the purchase money? I think about £16,500.

944. Was that also paid for out of the £8,300 paid up capital? No; six of us bought it.

945. Six of the promoters? No; there are no promoters. We bought it and handed it over to the company. I did not receive anything for my interest in it.

946. I suppose the company has still to pay you for it? Yes; part of it has been paid for in cash and the rest remains on interest.

947. You have not heard of any other company or syndicate which intend to erect business premises in the vicinity of your warehouse? No, we have not entered into negotiations with any. We simply bought the land for the company to build upon. We bought up Geddes' business, and it forms the base of the company. We took over all their buildings and property over here, for which they get 20,000 shares paid up. That is part of the £50,000 I mention. As soon as all the shares are absorbed we will put some more upon the market.

948. Does the £16,500 embrace 908 odd feet of frontage? No, only 300 odd feet. It embraces Theulda.

We also bought Beulah, and we hold it independently of Theulda. The same six of us bought Beulah first, but it has nothing to do with the company.

949. *Chairman.*] Beulah does not belong to the company? No.

950. Then you have only 300 feet of frontage? Nearly 400 feet.

951. Beulah does not belong to you? It does not belong to the company.

952. Mr. Geddes told us that you had 900 feet of frontage? That embraces the two properties. The company could buy Beulah if it was found necessary to do so, but it is not theirs at present.

953. *Mr. Copeland.*] Do you think that the large ocean steamers could go alongside your wharf without interfering with the navigation of the river? I think they would be out of the roadway altogether. There is a crescent-shaped inlet there. We looked at it very closely one day. The water is very deep—I think deep enough to allow any large ship to lay alongside.

954. Do you contemplate a wheat export business? Yes; I do not see why we should not have a very large export of meat.

955. It is not likely that that would be sent from Newcastle? I do not think that that is at all more likely than that it would be sent from here. As you increase the shipping facilities so you increase the means of loading.

956. As a matter of fact, do not ships that take wheat take a full cargo of it? I think they take a full cargo, but I was never in the trade.

957. Would the Orient ships be likely to take wheat? I do not know; they might take it from Adelaide. I do not see why they should not. There is no country in Australia better suited for wheat growing than the slopes of the western ranges on the northern and western side. I think the country there is some of the finest wheat growing land in the world; but it has never been used to any great extent, owing to the difficulty of getting the wheat to the sea board.

958. *Mr. O'Sullivan.*] Is it not a fact that the carcasses of merino sheep sent to England are dark and unsightly, whereas those of cross-bred sheep are clean looking? I have heard from experts that the carcasses of cross-bred sheep look the nicer.

959. That being so—merino sheep give an inferior meat? I do not say that the meat is inferior. I say that it is darker; but I find, from the reports of recent sales in London, that Sydney meat has brought as much as New Zealand meat, or nearly so.

960. Still, as a matter of fact, the merino meat as a rule is dark and unsightly, and brings an inferior price? Heretofore it has done, but latterly it has brought nearly as much as the New Zealand meat.

961. Do you think that we shall ever be able to compete with New Zealand, the Argentine Republic, or Chicago? I think so. There is no reason why we should not breed cross-bred sheep. I breed them very largely, and I fancy that I can compete with New Zealand. 962.

\* NOTE (on revision):—Then Geddes and Co.'s business was given in, for which we had to give 20,000 fully paid-up shares, so that our capital paid up this moment represents £28,250.

- W. F. Buchanan, Esq.  
2 July, 1890.
962. At the present time we have not many cross-bred sheep here? A sheep will grow to its full size in 18 months or 2½ years, so that you would not have to wait long.
963. We have now merino sheep principally? Yes; but cross-breds are very easily reared.
964. Do you think that people will go in for cross-breds for the meat export trade? I think so. I know that a neighbour of mine is selling his merinos so as to be able to go in for cross-breds. I also think that they will go in for cross-bred sheep very largely in the Illawarra district. We could breed them as well there as they do in Warrnambool.
965. Do you know of a single company which has been formed in the northern districts for the purpose of freezing meat to send to Sydney? No.
966. There is none? Not that I know of.
967. Is any agitation going on about it? Yes.

The following letter was forwarded by Mr. Buchanan in explanation:—

13 Phillip-street, Sydney, July 3rd, 1890.

To the Chairman, Parliamentary Standing Committee on Public Works:—

Dear Sir,

With reference to my statement, made yesterday, regarding the cost of the buildings to be erected by The Pastoralists' Association, I find, upon research, that the amount stated, about £14,000, does not include foundations, wharf, canal, &c., the cost of which will bring the cost of the building now in course of erection to upwards of £20,000.

Yours, &c.,

W. F. BUCHANAN.

THURSDAY, 3 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Arthur Samuel Hamand, Esq., sworn, and examined:—

A. S. Hamand, Esq.  
3 July, 1890.

968. *Dr. Garran.*] Are you a recognized member of any engineering institute? I was a member of the Institute of Civil Engineers in 1870.

969. Have you had practical experience in laying out railways? For nearly thirty years.

970. Have you had practical experience in working them? I have been a director of a railway for twelve years.

971. You know all the details as to the cost of running, working expenses, and so forth? I think so.

972. Is the plan before the Committee a fair representation of the route which you mention in the letter sent to the Committee by you? Yes; I think it is very approximate. Of course the plan which I have sent to you is on a very small scale, so that it was difficult to mark it out exactly.

973. I gather from the plan that you would leave the existing line about 9 miles from Hornsby;—you would not go on to the present St. Leonards terminus? At 9½ miles from Hornsby, I think.

974. Then you throw away about a mile of the line already made? I should not quite throw it away. I had not overlooked that point. You could, of course, commence much nearer to St. Leonards' Station; but that would make the line more roundabout. It had occurred to me that before long some line must be made on the north side of the Lane Cove River, and in that event the piece of line running down to St. Leonards' Station could be utilised.

975. Apart from that, in order to get to Milson's Point, you would not avail yourself of it? No.

976. For what purpose do you consider a line might at any time be taken to Lane Cove—on the north side of the Lane Cove River? The district will develop, and in a very short time become full of residences.

977. You are aware that originally the Government surveyors laid out this line to come down to Ball's Head? I cannot say that I am aware of it.

978. At any rate there was a line made out to Ball's Head? Yes.

979. Would this mile that we are speaking of be available for making a descent to Ball's Head? Certainly.

980. You know the route that the surveyors originally laid out from St. Leonards' Station, as it is now, to Cremorne Point? Yes.

981. Have you walked over that route? Not over the Cremorne end of it—not quite up to Cremorne.

982. Have you gone over the portion between St. Leonards' Station and where your line would join it? Yes.

983. Can you make a fair comparison between that line and your line, which is practically a little to the north of it? There will be, if anything, more work upon the Government line.

984. The length is a little greater with your line than with theirs? Not from the point I start from. If you look at the plan a moment you will see that my 12 miles comes almost exactly opposite their 12 miles.

985. From the point where you leave the main line to the head of Long Bay, which is the point where the lines join? The actual mileage of construction is longer.

986. It is not very much longer? No; very little.

987. But yet your gradient is easier than theirs? Yes. I have not seen their section over the Cremorne line, but I imagine that the line must rise after leaving the existing line before it begins to fall.

988. They both leave the existing line at the 9½ mile point, and meet again very near the head of Long Bay? Yes.

989. If your gradient is much easier than theirs, they must have some level or compensating gradients? I think they have a rise in between; I have no rise.

990. Is your descent continuous, or do you allow levels for stations? There would be level portions, of course.

991. Have you put those in, or have you merely left room available for them? I have left room for them in the gradient.

992. You have allowed for them? I have allowed for them;

993.

993. You can ascend from this point at the head of Long Bay with a gradient of 1 in 70? The gradient is very much less on the average—it is only 60 feet in a mile, or 1 in 88. A.S. Hamand,  
Esq.
994. Looking at the little peninsula between the two coves in Long Bay, I see that you have avoided the heavy work by going round? I looked at that, and it did not seem to me worth while to cut through the hill, and bridge so many streets. The main thing for the public is the position of the stations, and how you get from one station to another does not matter to them. 3 July, 1890.
995. Stations should be at points to which as much traffic as possible converges? That is the main consideration—to put the stations where they would serve the public.
996. The red circles indicate where you would put the stations? Yes.
997. The one you show at a little past the 11 miles is close to the head of Long Bay; but, except for the bridge crossing to the North Sydney Company's land, that would not be a place for the concentration of traffic? No.
998. You look upon the bridge as bringing traffic from the estate? There would be traffic on the south side as well as on the north side.
999. That would cross the private tramway? Yes.
1000. You would put the station at the intersection with the tramway? Yes.
1001. The other station would be near the head of Willoughby Falls? It is marked at Willoughby Falls, but it is not quite close to the falls; it is in the valley there, on the Cammeray-road.
1002. From there you go in a generally south-west direction through the heart of the already occupied part of St. Leonards? Yes.
1003. In making your estimation of the cost, have you considered that you go right through the well populated part of the district there—that the ground would be very expensive to buy? We should tunnel at that point.
1004. Would the whole of the line be a tunnel between the station at the 12 miles and the next station at the 12½ miles? Not all of it, but nearly all.
1005. By that means you would avoid the expense of purchasing land? Yes.
1006. When you emerge from the tunnel again you have another station? Yes; that is not far off the end of Ridge-street.
1007. *Chairman.*] Ridge-street is where the terminus of the tram is? Yes; this is at the east end of Ridge-street, where it impinges upon the head of the valley at Neutral Bay.
1008. *Dr. Garran.*] You would have another station between that point and Milson's Point? Yes, in the other fork of the Neutral Bay Valley; not very far from Willoughby-street.
1009. You think that that would be well placed for catching all the traffic from the Neutral Bay district? That would take the whole of the traffic from Walker-street.
1010. Then you propose to go right on to the point? Yes.
1011. The part from the head of Lavender Bay to the point is common to your plan and to the Government plan? Yes.
1012. Do you think it important to go as far as the point? I had not considered this North Shore Railway alone. I have been looking at it in connection with the general accommodation of all the suburbs. I sent in a plan to the Royal Commission on the City Railway, a copy of which I hand in. You will see by that that I do not contemplate Milson's Point being a terminus.
1013. Your plan contemplates a bridge? No; my plan contemplates crossing the harbour in a tube laid almost on the surface of the silt, but sunk into it to some extent.
1014. If you laid it on the silt it would be immaterial to you how deep the rock was underneath? Yes.
1015. The sand and mud would give you sufficient bottom? Yes. The main advantage of crossing in a tube is that you have only to descend 60 feet below the water.
1016. But if you were going to use a tube you would have to make a descent in some point on the line? I do that by a helical curve, which you see marked on the plan.
1017. Do you mean a spiral? A helical curve—a spiral. That length of curve is something like seven-eighths of a mile.
1018. You enter this curve? At Milson's Point.
1019. So that your plan contemplates a level line along Lavender Bay to Milson's Point, before coming to the spiral? Starting there to descend on the spiral.
1020. And a circle of the diameter shown will give you the requisite distance to enable you to descend under the water? I go down 1 in 70, cross the water on a level, and rise 1 in 70 on the other side.
1021. On emerging at Dawes' Point do you rise with another circle? I rise 1 in 70 up to Circular Quay. I do not know whether I need go into the whole subject. The main point I wish to insist upon is, that you should never have a terminus if you can avoid it—always try to go on somewhere else.
1022. You would not have a terminus in Sydney? No.
1023. You would have a circular railway? Yes; always take your trains on.
1024. Never pull up to a dead stop in the middle of the city? I have made a calculation by which I estimate that the stopping and going back again of 100 trains a day, at Redfern, is a waste of something like £20,000 a year.
1025. Still, in London they all stop—Charing Cross is a stopping station, and so is the Mansion House? Only for certain trains.
1026. What about Liverpool-street? That must be so, of course, when you are not prepared to go on. Besides there you must remember that the jealousy of the different companies interferes to prevent the working of the lines as a whole; it is quite different here.
1027. Still you do not want to take the big trains from the north circling round the city? I should work them as a part of the suburban service.
1028. But the people from the north do not want to go cruising about the city? I am quite sure that they do not all want to be put down at the same place.
1029. But from that place they could radiate to wherever they wanted to go, and that will answer their purpose? It involves another journey by tram or cab.
1030. Does anybody ever come into the city who does not have to make another journey? At the present time, no; but I would put stations at places which would accommodate everybody.
1031. Your scheme for carrying the railway to Milson's Point is independent of the scheme for crossing the harbour. The latter could be added, or not, as we liked? Yes.
1032. Do you, by your descent, reach the wharf level at the head of Lavender Bay? Yes. 1033.

- A. S. Hamand, Esq.  
3 July, 1890.
1033. So that you have the whole of the frontage on the eastern side of Lavender Bay available for wharf purposes? Yes.
1034. Supposing we did not want to make this circular railway of yours, but only wished to bring the passengers to a point at which they could be shipped to Sydney,—do you think it would be necessary to go all the way to the point, or would you land them at the head of the bay? I should bring them to the point.
1035. When they have to go in a steamer—does it matter much whether the journey is one-eighth of a mile more or less? I think so. Why should you not bring your passengers to the nearest point.
1036. But if the cost is pretty considerable, would you not avoid it. The Government has to purchase the whole of this frontage from the head of Lavender Bay to Milson's Point, which will cost a considerable amount of money;—would it not be better if you avoided that? You could, of course, avoid it altogether simply by tunneling.
1037. But without tunneling; suppose you put the passengers on board the ferry at the head of Lavender Bay instead of taking them by railway to Milson's Point, would it make any difference; you must put them on the steamer? Then your steamer would have to call at Milson's Point.
1038. Not necessarily, if another steamer was put on for that traffic? There is no doubt that that might be done. It would be a little inconvenient, but I do not think myself that it is the right way to handle traffic.
1039. Still you must put your people on board a ferry steamer? Yes; if you consider this as a line stopping there, but it cannot stop here.
1040. I am supposing that it does stop here. Until you want to make the line across the harbour, is it well to go to the expense of resuming the land along the eastern side of Lavender Bay? I do not know what the cost of the resumption of that foreshore would be.
1041. You have not gone into the calculation? No; I have no figures to guide me.
1042. The estimates given to us vary from £20 to £50 a foot? It is a lot of money.
1043. Would you face that expenditure in order to save a quarter of a mile in the journey by steamer? At the present time I would not face the expenditure of connecting the line at all—not with the existing traffic. It is the future traffic that will compel you to do this.
1044. Merely for present traffic necessities it is not required? I question whether the line itself is required for present necessities.
1045. If the Government brought the line to Lavender Bay that would add to the value of the land about there? Immediately you bring the line down to North Shore you will develop there precisely the same kind of building as is going on on the southern suburban line right up to Parramatta.
1046. Supposing the Government bring the line to the head of Lavender Bay, which you admit is enough for present purposes, will it be a good policy for them to at once possess themselves of the frontage to the bay, remembering that they will have to buy it some day, and that if they do not buy it now, its value will be enhanced by the improvements which they have created? There would not be a question that the Government should resume it or keep it.
1047. Whether they make the railway or not? They are not obliged to use it for the railway. They can use it for other purposes. The actual width required for a railway to the point would be trifling, but in the making of that railway they might reclaim a certain area which would go a very long way to repay the outlay.
1048. You are of opinion that if the line is ever brought to the head of Lavender Bay it is bound to go on to Milson's Point? Certainly.
1049. You therefore think that it would be good policy to resume the land there without delay? Yes.
1050. But that it is not wanted for the immediate purpose of traffic? No.
1051. You look upon this circular grade and the pipe as the cheapest method of getting across the harbour? I am sure that it is.
1052. Have you formed any estimate, starting from Milson's Point, of the cost of your circle, and of the tunnel under the point, together with the rise until you get on the level at Circular Quay? I have; but not separately—not detached from the rest of the scheme.
1053. Could you tell us roughly what it would cost? I cannot give you the figures at this moment.
1054. Would it amount to £500,000? As far as Circular Quay, yes—including Circular Quay.
1055. The line from the station at Milson's Point to the station at Circular Quay would cost not less than £500,000? That also includes the station at Dawes' Point.
1056. Have you formed any idea as to what it would cost to make a bridge? No, I have not, because I think that a bridge would be the wrong thing, for many reasons.
1057. Do you think that a bridge could be made for £500,000? I think it is more likely that it would cost £1,000,000; but the chief objection to a bridge is that to get an approach you would have to start from about the Town Hall on one side, and from Walker-street at the other side, and the railway will be of no use at all to the population between those points.
1058. We are told that we could get an elevation of 160 feet from Observatory Hill, and that we could get the same level on the other side? But you have to get up to Observatory Hill from somewhere.
1059. From Wynyard-square we could rise enough to cross the harbour at an elevation of 160 feet? I am afraid that it would be one of those tremendously steep gradients.
1060. 1 in 40 or 1 in 50? 1 in 50 is not possible.
1061. At any rate, you are clear in your own mind that Milson's Point is the best place from which to make a circular descent? Yes.
1062. And that Dawes' Point is the best place to strike the land on this side? Yes; it is the shortest crossing.
1063. You do not trouble your head at all about the depth of the rock? It really does not matter.
1064. It would be cheaper to sink the pipe in the mud? It is not mud; it is hard silt.
1065. A great deal of it is mud from the streets? You will find it very hard.
1066. Hard enough to give you all the bottom you want? Certainly.
1067. You would have to sink this pipe low enough to give enough depth of water to enable all kinds of vessels to cross it? The top of the tube would be 50 feet below the water.
1068. Would the tube itself dip, or would it be level? It would be practically level; there would be just enough fall to drain it.
1069. Drainage each way to the shore? Yes.
1070. There would be no fall in the middle? No. It would be much easier to lay such a tube in the water than it would be to construct it in earth or soil permeated by water.
- 1071.

1071. Supposing that the rock were solid at a depth of 50 feet, would it be harder to tunnel through it than to lay this tube? Very much harder.
1072. Can you refer me to any instance in which a tube of this kind has been laid? Not in water; but there are a great number of cases where such tubes have been laid in earth, clay, or gravel, which was pervious to water. In such cases, you had not only the water to deal with, but you had the earth in addition.
1073. Can you refer me to an example of such a submarine railway? I do not know.
1074. Then we should have to make an experiment? There is a railway under the Thames.
1075. Through the Old Thames Tunnel? No, a new one, just finished, going through an iron tube.
1076. That would be an instance that I want? That tube is not made in the water—it is laid in the gravel bed of the river, which is worse than laying it in the water, because you have the weight of the gravel to deal with in addition to the water. You would have to provide for the water outside the gravel.
1077. By your scheme would you have to dredge a channel? Yes; it would be dredged by a special revolving dredge.
1078. You would get the bottom level, and then lay the tube in it? Yes.
1079. What would be the length of the tube from Milson's Point to Dawes' Point? Twenty-five chains.
1080. What would be its diameter? Twenty feet externally.
1081. Would you have one or two tubes? Two—one for each line of rails.
1082. Quite separate from one another? Quite.
1083. You estimate the cost of your line at £350,000 from the point where you leave the Hornsby line to Milson's Point;—does that include everything? Yes.
1084. It includes the cost of land? Yes.
1085. Will there be only one tunnel? There may be a short tunnel under Alfred-street.
1086. The principal tunnel will be between the 12 and the 12½ miles? Yes.
1087. About half a mile in length? I think it would be a little over half a mile.
1088. Let us return for a moment to the question of the tube;—have you made a separate-estimate of that part of the work, which would consist of the cost of the tube, and of laying it? Yes.
1089. Would you mind saying what it is? I do not like to give figures unless I can give them accurately. I have not got the estimate with me, but I shall send it to you.
1090. What do you understand to be the cost of the Government line from St. Leonard's to Milson's Point? I think £260,000 or thereabouts, including the land.
1091. You are £90,000 above that? Yes; but I give you 2 miles more of line.
1092. That makes the journey from Hornsby to Milson's Point 2 miles longer? One mile longer.
1093. But one of the supposed advantages of this line is that it will shorten the journey to Sydney from the north, so that you would lessen that advantage by adding a mile? Shortness of the journey does not always depend upon distance. Sometimes it depends upon the time which you can save on the journey.
1094. Sometimes the longest road round is the quickest road home? Yes.
1095. You have mentioned in your letter that your proposed line would be a help towards a line to Manly? Yes; and I think you ought to take into account the fact that it is really 2 miles towards Cremorne.
1096. Your line to Manly would go to the Spit? Yes.
1097. Would you propose to cross there by a bridge? You must do that.
1098. If you take the railway there you must have a bridge? I think so. I would not like to say that I am now pronouncing a final opinion on the point, but I think that the land there is suitable for a bridge.
1099. At the head of Willoughby Falls you join the Government survey to Cremorne? I cross it.
1100. You could work into it with a curve? I do not know the levels of the Government survey to Cremorne; but I imagine that it is on a higher level than mine.
1101. Have you followed the Government line from Willoughby Falls to Cremorne? No.
1102. But you have dove-tailed that in as your method of getting to Cremorne? I have no doubt that it can be accommodated to that line.
1103. You have not looked into the line? I do not know the levels of the Cremorne branch, so I could not tell you whether my line could join it.
1104. I understood that you recommended your line as being equally convenient for getting to Cremorne? I know that from that point a line can be made quite as easily as the Government line.
1105. From the head of Willoughby Falls to Cremorne would be somewhat longer than if we extended the Government line from the head of Lavender Bay to Cremorne? I daresay it would.
1106. It would be a more expensive way of getting to Cremorne? Which?
1107. By going to Willoughby Falls? I do not think so.
1108. It would be a greater length of journey? I think it would be found easier, and I think that you would find the outlay less.
1109. You think that the greater distance would be compensated for by lighter work? Yes.
1110. Though the length will be greater the cost would not be greater? I do not think so.
1111. Do you think that from the head of Lavender Bay to Milson's Point there is shore-line enough to answer all the requirements of both goods and passenger traffic? Certainly not of goods traffic. In the first place there is not sufficient depth of water, nor is there space for the vessels to lie outside the wharfs.
1112. Lavender Bay is as large as Sydney Cove? It may be nearly as large, but I should say that it is not quite as large.
1113. If Sydney Cove has been large enough for the trade of Sydney for the last 100 years, and big steamers have been going in there for the last ten years, why should Lavender Bay not be suitable? I do not see very many ordinary commercial ships coming in to the Circular Quay. I see them going to Darling Harbour, Dawes' Point, and Miller's Point.
1114. Would there be as much accommodation in Lavender Bay as in Sydney Cove? You might make it, but you would not get the same depth of water in the middle.
1115. We are told that there is any quantity of water in Lavender Bay? The shape of the bay is different.
1116. I think that if you look at the map you will see that the two bays are very much alike? Now that I look at the map I see that Lavender Bay looks a good deal smaller. If you put wharves up there you take a certain amount of the water space away, and thus reduce the area.
1117. Would you recommend Lavender Bay as a place for shipping coal from the north? Certainly not.

A. S. Hamand,  
Esq.  
3 July, 1890.

- A. S. Hamand, Esq.  
3 July, 1890.
1118. For what reason? There are plenty of other places that are far better.
1119. What makes it objectionable, supposing we get the railway there? In the first place it is already occupied by residences. I do not think that we should destroy residential property in order to make wharves, and erect coal shipping staiths, when we have plenty of space not far off in either direction.
1120. Do you think that if there was a coal shipping place there the coal-dust would spoil the neighbourhood for residential purposes? It would within half a mile of the wharf.
1121. Do you think it would have any disagreeable effect on Sydney? I do not think so.
1122. Do you know how far fine coal-dust travels? A very long way; it blackens the country for a long distance.
1123. Have you made any experiment in connection with the matter? No.
1124. Would not a north-east wind bring some of the fine coal-dust over to Sydney? That is quite possible, but the winds from that quarter do not seem to me to blow continuously enough to do that very much.
1125. You think that the North Shore people would feel the nuisance most? I think they would be blackened.
1126. Would it damage the district for residential purposes to ship wool from there? No; not very much.
1127. You do not want the whole length of the shore from the head of Lavender Bay to Milson's Point for a passenger station? I do not think that you want more than a short length at the point for a passenger station.
1128. Would 800 feet be enough? Certainly.
1129. You run along the edge of the water for the whole distance, but you do not want all that land? No; you do not require it for the railway, but it could be utilized with the railway there.
1130. What way would you utilize it? It depends upon where you make the railway. If you made the railway in a cutting you would have all the frontage to spare.
1131. But the probability is that the cliff would be cut down and levelled? Then you would have all the space outside of the railway to spare for general wharf purposes.
1132. Wharf purposes would be the only purposes to which it could be put. You would have 50 or 100 feet of level land, and you could do little more with it than construct wharves and warehouses there? You could not do anything more with it.
1133. If you have been the director of a railway perhaps you have considered the question as to the probable traffic which will be brought down to the water by the proposed line? That depends very much upon how the traffic is going to be worked.
1134. You are aware that it is a slightly shorter line to the water of the harbour than the route round by Ryde? Yes.
1135. Do you think that that shortening will induce the commerce, all things being considered, to go to the north side of the harbour instead of coming, as it does now, to the south side? I believe that the difference in length is something like 10 or 11 miles, but I do not think that 11 miles is worth considering.
1136. We were told by a witness yesterday that the Government undertakes to deliver wool and produce into people's stores in Sydney, wherever they may be;—in that case, would it matter to them which way it was brought? Not in the least—it could not. Besides, traffic rates are not always settled exactly by mileage. The rate from Sydney, let us say, to any place beyond Newcastle, would be the same, whether the goods were sent from the north shore or from the south shore.
1137. Supposing you were working this railway, would you break the trains at Hornsby, to send half of the trucks down to North Shore? Certainly not. I should concentrate all my goods traffic, and all my wool traffic, and whatever there was, as much as possible, at one dépôt.
1138. Concentration means economy, but dispersion means expense? Yes.
1139. Supposing the two lines were made and put under your management, and supposing it were part of your contract to deliver wool, tin, horns, and so forth, to some store in Sydney, would you concentrate the trade in Darling Harbour until your space there was too small? Yes.
1140. And you would not seek another dépôt until you were pressed for room? And then I should get a place as near as possible to the original dépôt.
1141. You are of opinion that it will not pay the Government to split the traffic at Hornsby unless it has some inducement in the way of extra trainage? Of course the public idea is that by having a line 11 miles shorter they will be able to get the rates reduced somewhat; but that cannot be so. In a general way you would have to haul 11 miles for a lesser rate, but Darling Harbour would get the advantage of any reduction.
1142. You mean that the rate for both places would be the same? Yes.
1143. The Government will not have two rates? I do not think that it is possible.
1144. From Tamworth to Sydney there would be a specified rate? Yes, to either point.
1145. If it will not pay the Government to split the traffic, will it pay the consignors to ask for it to be split? If there was a special traffic of sufficient importance to warrant a train being run separately for it it might pay the Government to work the line in that way, but I doubt whether that would be the case.
1146. There would have to be a whole train-load to one place;—it would not pay to split at Hornsby? They would never do it, and if they did the rate would be the same.
1147. In your estimate of £350,000 for the line, have you divided the cost of land and resumption from the cost of works? Yes; I did divide it, of course, in making it.
1148. Could you give us the figures;—I have not got them with me, but I will send them to you.
1149. You say that you would not take coals to Lavender Bay. Have you got in your mind any place where, supposing a coal traffic should spring up from the north, you would ship coal? The coal might either go to Cremone, or it might go to one of the bays further west.
1150. To Ball's Head Bay or to Berry's Bay? Yes.
1151. Either of those would suit well? Very well indeed.
1152. Supposing coal should come from the north, do you think it would be better to ship it from the north or from the south side of the harbour? I think it would be best to keep the whole of the coal shipping in one place, whether it came from the north, south, or west. I do not believe that any coal will ever come from the north by rail; it will probably all come from the south.
1153. The coal from the south must necessarily be shipped from the south side; so, therefore, we must have cranes and staiths on this side of the harbour? Yes; and I do not believe that you will ever require  
1154.

1154. It being essential for us to ship from the south, you think that we had better concentrate all the traffic here? Yes. A.S. Hamand,  
Esq.
1155. There would be no advantage to shippers in having two sets of wharves? No. 3 July, 1890.
1156. Are you at all acquainted with the coal shipping trade in England? Yes.
1157. Does it bear any analogy to the coal shipping trade here? It bears some analogy, of course; but the quantities there are rather immense.
1158. The coal harbours in England are coal harbours specially;—they do not ship coal from London? No.
1159. Do they ship it from Liverpool? No; they do from Birkenhead, sometimes.
1160. Do the ships ever get coal brought in by railway, and have it put on board at the docks for cargo purposes? Where?
1161. In London? By railway?
1162. Yes? Occasionally.
1163. But there is no large trade of that kind? No.
1164. Ships going out of London do not, as a rule, carry coal for freight? No, never.
1165. But ships coming out from here do carry coal as freight? Yes; or they would if they had it to carry.
1166. *Mr. Trickett.*] What are your general views as to the desirability or otherwise of extending this railway from its present terminus? I think it ought to be extended.
1167. Have you considered the question of tram connection? Yes, I have.
1168. What do you think about that? I think it would be wrong to endeavour to work a passenger traffic of any magnitude by that tram service—I mean, of course, the projected tram extension to St. Leonards' Station.
1169. You think that that would be a mistake? I think so.
1170. Do you look upon the proposed extension in the light of a passenger extension, or of a goods extension? Mainly of a passenger extension.
1171. You do not attach much importance to the goods aspect of the question? Not at the present time, but it is my opinion that in the course of twelve years the trade of Sydney will double itself, and, therefore, I look forward to the possibility of the north side of the harbour coming out more boldly with a goods trade.
1172. And taking that view you think the railway should come in the direction you advocate, in preference to that suggested by the Government? Yes. I think, apart from the question of goods traffic, the line which I have suggested is more calculated to develop the district and to accommodate the public, and I think that in the course of a few years there will be more people residing along the line which I propose to make than along the Government line.
1173. Can you tell us the extra length of your line? It makes the distance from Hornsby 1 mile more.
1174. Where would you make your passenger terminus? At Milson's Point.
1175. Right at the point? At the point itself.
1176. On the western or on the eastern side? On the western side.
1177. What area do you think would be necessary for the purpose of providing station accommodation? If it were not a terminal station, probably some 4 or 5 acres would be enough.
1178. But looked at as a terminal station? You would want more than double that—10 or 12 acres.
1179. Is Milson's Point a suitable place for constructing a station at? No; it is an awkward place at which to arrange a terminal station.
1180. By reason of its narrowness? Yes, and also because of its height above the water.
1181. *Mr. O'Sullivan.*] What induced you to lay out your line on the eastern side of the North Shore? Do you mean why did I diverge?
1182. What induced you to go on that side instead of on the western side, as the department proposed to go? I considered the question as to which line would accommodate the public best.
1183. Do you think, then, that there is a larger population on the eastern side? There is already more population there than on the Government route.
1184. And the descent to the water is very much easier? That, of course, is one of the main reasons for the deviation—the easier gradient.
1185. Do you propose that a portion of your line shall be utilized afterwards as a line to Manly and Pittwater? It would in any case be the beginning of a line to Manly and beyond, and it would also serve to connect Cremorne.
1186. If your station were brought to Milson's Point, could you make the spiral descent which you have mentioned? It would be a continuation of the line, but the station at Milson's Point would cease to be a terminal station, and would become a through station.
1187. *Mr. Copeland.*] I suppose your scheme of a spiral descent could be availed of if the Government proposition were carried out? It could.
1188. *Mr. Dowel.*] Have you made yourself acquainted with the proposal now before the Committee? The only one with which I am acquainted is that which is shown on the lithographed plan attached to the report of the Committee.
1189. You propose to increase the length of that line, as I understand, by 2 miles? By 1 mile.
1190. What is the length of your line altogether? I think that it is 13 miles 68 chains from Hornsby.
1191. Where would your terminus be? At Milson's Point.
1192. What is the total length of your line? Do you mean the additional mileage besides what is already constructed?
1193. Yes? Something like 4 miles.
1194. Have you made yourself acquainted with the value of the land at North Shore? Yes, pretty well.
1195. And you think that you have allowed sufficient in your estimate for resumptions? I think so.
1196. Where would your line strike the level in Lavender Bay? Strike the level of what?
1197. The water. You come down with a grade to Lavender Bay—where would your level run be there? Where would the gradient cease?
1198. Yes? About halfway between Lavender Bay and Milson's Point.
1199. For what length of run have you made provision in Lavender Bay? For something like a quarter of a mile.

- A.S. Hamand, Esq.,  
3 July, 1890.
1200. How many tunnels do you have? There is one tunnel through the summit, and a very short one under Alfred-street.
1201. What would be the length of those tunnels? Perhaps three-fourths of a mile altogether.
1202. What would be the height of the mouth of your tunnel at the northern end? I cannot tell you.
1203. Have you taken any levels at all? Yes; but I do not carry all these small figures in my head.
1204. How far would your line extend from Willoughby Falls? I have marked it upon the plan—it is not a very great distance.
1205. Do you know where the bridge is that has been constructed over in that direction? Do you mean the suspension bridge?
1206. Yes? I do.
1207. What distance will your route go from that bridge? Perhaps 100 yards from the end of it.
1208. That is your proposed terminus? No; the line has no terminus.
1209. Is there any population at all along the route which you advocate? Between the 12-miles point marked on the plan and the terminus I should say that there was a great deal of population, but between the 12-miles point and the junction with the existing line there is very little at the present time—that is to say on the first half of the route there is very little settlement, and on the second half there is a great deal.
1210. Will you be good enough to explain to the Committee what population would be served by your line? You know where the Cottage Hospital is, on the North Sydney-road. There would be a station not very far from that, and that is not very far from a good deal of population.
1211. That is one portion? That will be the first station on the new route. At the next station there is no population at all, but at the one after that there is some population.
1212. Can you inform the Committee the amount in numbers? Well, I see streets being laid out and houses being erected, but I do not know the number of the population.
1213. You referred, in some answers which you gave to Dr. Garran, to a proposal for a bridge;—where would you propose that that bridge should be intercepted by the line? I proposed no bridge.
1214. You said that a bridge would have to be constructed at a certain point, and I do not think that you made it very clear where. You have not considered the question? You mean that it was a supposition?
1215. Yes? It would have to start from the head of Lavender Bay, at Blue's Point somewhere.
1216. You stated that you thought the bridge would cost £1,000,000 to construct? I have not considered the subject sufficiently to say. I know very well that there have been various estimates.
1217. I will ask you, as an engineer, why should a bridge from this particular point cost more than the bridge over the Hawkesbury, which cost £460,000;—would it be more difficult to erect—would it have larger spans? It is not the bridge so much as the approaches. No doubt the span would be a very large one—much larger than those at the Hawkesbury.
1218. Can you inform the Committee what would be the relative cost of a tube and a bridge? Yes. I should think that a tube would only cost half as much.
1219. *Mr. Garrard.*] That would include the approaches to the spiral descent? Oh, yes.
1220. *Mr. Dowel.*] What advantages do you claim for a grade of 1 in 70 or 1 in 80? Over a grade of 1 in 40?
1221. We are to have 1 in 50? Then your line will cost more money.
1222. What are the advantages which you claim for a grade of 1 in 70 over a grade of 1 in 50? Do you mean in point of haulage, or how?
1223. In point of haulage? In the first place a grade of 1 in 40 is risky and dangerous, and in the next place you can haul up a very much heavier load on a 1 in 70 grade than you can on a 1 in 40 grade, or you can take the same load of a 1 in 70 grade at twice the speed which you can take it up a 1 in 40 grade.
1224. What are the special advantages which you claim for your proposal? Really, I have set them out in my letter, and if you do not mind I will refer you to that.
1225. Is the route which you propose the route which the residents of Manly want;—is it what they have been agitating for? I cannot tell you.
1226. *Mr. Tonkin.*] Could you inform the Committee whether the spiral descent is an original idea of your own, or has such a thing been carried out in any other part of the world? I might say that it is a common thing. On the St. Gothard Railway, which crosses the Alps between Switzerland and Italy, I think there are four spirals on the one side and three on the other. They are put in for the purpose of gaining an additional length and avoiding a heavy gradient. The valley there rose too quickly, so they put in a spiral to get to a higher level before proceeding up it.
1227. What would be the diameter of the circle? 24 chains.
1228. And have you ample room at Milson's Point? It is 32 chains wide at the widest point.
1229. And on the Dawes' Point side are you able to rise without a spiral? There is sufficient length between Dawes' Point and the Circular Quay to allow us to get up without a spiral.
1230. With a grade of what? 1 in 70.
1231. Then the ascent or descent will not be more than 1 in 70 on either side? No.
1232. The gradient to get under the water will actually be less than will be required to run down from Hornsby to Milson's Point? Yes.
1233. Have you any idea of the grades which have been suggested in case of the construction of a bridge? I have seen nothing better than 1 in 40.
1234. Then your grades would be less than those suggested to Parliament for the approaches to a bridge? I think so. What is more, this particular line would earn more money than any other line you could propose, because it would go where the traffic is, and would pick it up.
1235. Whereas a bridge would have to be constructed wherever the conformation of the ground offered facilities? Yes.
1236. *Mr. Humphery.*] Is your estimate of £500,000 to bring the railway over to the Sydney side? I will send you the estimate in detail. From memory I think that it would cost £500,000 to extend the line from the terminus at Milson's Point, through tubes, across the harbour to the Circular Quay.
1237. That is in addition to the £350,000? Certainly.
1238. So that the cost of extending the line from a mile back from the present terminus to the Circular Quay would be about £850,000? Yes.
1239. *Mr. Copeland.*] How does this tube of yours get its level again at Dawes' Point;—how does it emerge from the water? It joins up to the rock.
- 1240.

1240. It continues a grade of 1 in 70 until it meets the rock, and then pierces the rock on the same grade until it comes to daylight? Yes. A. S. Hamand,  
Esq.
1241. About where would it emerge into daylight—at Dawes' Point? It would come nearly up to the Circular Quay first. There would be daylight at Dawes' Point itself, because I propose to build the station there at the lower end of Fort-street. 3 July, 1890.
1242. You would continue the tunnel from Dawes' Point? Yes, because the ground there is so high.
1243. But it would take from Dawes' Point to the Circular Quay to run out your levels? Yes.
1244. In crossing the harbour of course the tube would be level all the way? Yes; that would be the easiest part of it.
1245. Would not the weight of the tube be likely to make it curve and sink into the mud? The difficulty would be to put weight enough into the tube to keep it down. You must remember that that tube would displace a column of water having a diameter of 20 feet, and put air in its stead. The air would give a certain amount of buoyancy to the tube, which would have to be made heavy enough to counterbalance the displacement.
1246. Still there would be the pressure from water above? It would be the pressure of 50 feet of water, but that goes on all round.
1247. Then you think that the tube would remain constantly in one position—that it would not be likely to sink? I am sure of it.
1248. Would it remain so when the train was passing over it? That would have no effect upon it.
1249. You said a little while ago that you were quite sure that there would be no coal traffic from the north? I do not know that I said that I was sure, but I said that it seemed to me one of the improbabilities. I do not see how they can haul coal over that railway.
1250. Would there be any more difficulty in hauling coal from Wyong than from Lithgow, on the Western line? No, no more difficulty—there would not be so much difficulty.
1251. If they bring coal from Lithgow, why should not they bring it from Wyong or Lake Macquarie? Because I think the southern coal is destined to displace all those coals that are farther away.
1252. All the northern coal? Yes, certainly for railway carriage.
1253. Do you not think that it would be cheaper to bring coal from Lake Macquarie to the North Shore by train than to take it to Newcastle, and then pay freight from Newcastle to Sydney? Yes, that might be; but I do not know.
1254. I suppose that you are aware that there is coal not more than halfway between Sydney and Newcastle—that the coal beds extend south of Newcastle for nearly half the distance? I know that.
1255. At a workable depth of 800 feet there is coal for over 40 miles south of Newcastle? In any case it would be much further away than the southern coal.
1256. Than the Metropolitan or Coalcliff coal? Yes.
1257. Suppose a trade in sawn timber and logs were to spring up, which do you think would be the most suitable dépôt for it; do you think that there would be any place for it in Lavender Bay? There would be accommodation there, but I do not think that it would go there,
1258. Where do you think that it would go? Round on the Darling Harbour side, where there is now a great deal of it—to Pyrmont. Nothing is more difficult than to move trade from one place to another.
1259. You think that the trade does not follow the railway? It is very often a long time about it.
1260. The Americans are supposed to be a smart people, and they generally hold to that doctrine? You are talking about the opening up of the country, but what you propose to do here is to put the North Shore into competition with the south shore, which is a different thing altogether.
1261. In any case I suppose it would only be the right hand competing with the left, seeing that it is a Government affair? Yes.
1262. Whatever trade is developed on the North Shore would to a great extent be taken from the south shore? For some time, but I think the time will come when the North Shore will develop in commercial matters.
1263. Speaking in general terms, without committing yourself too closely, do you think the North Shore Railway is a venture which is likely to pay the Government for its construction? Yes, I think so. I should certainly advise its construction.
1264. Would you like to take shares in it yourself? That is another question altogether. Before doing so I should like to know something about how it is to be worked. There is one point on which I have not touched. When you make railways the proper thing is to get as much mileage as you can, because all the rates and fares—passengers' fares at any rate—are based upon the mileage.
1265. So you would adopt the practice of circle-sailing? No; but I would not carry people up a 1 in 40 gradient for the same fare as I would carry them up a 1 in 70 gradient for—it is not right.
1266. You would rather make the distance longer and have an easy grade, and charge the people rather on the distance than on the cost of construction? Especially if I could give additional accommodation by making the line a little longer.
1267. *Mr. Garrard.*] What are your reasons for proposing a double tube instead of a single tube? I have several reasons.
1268. Would you mind stating them? In the first place, for all underground railways I should build each line with a single tunnel, because a train passing through a single tunnel drives out the air at one end and sucks it in at the other after it, thus keeping up a continual current, and assisting the ventilation. In the second place, two trains in different tubes could not possibly collide.
1269. Do I understand that your spiral descent would also be double? Oh, yes.
1270. Would not that add materially to the cost? I do not think it makes any difference. As a matter of fact the cube excavated, and the quantity of the lining of the tunnels would be very nearly the same whether you build two small ones or one large one.
1271. Would it be necessary in the tunnels to provide apertures for the escape of smoke and to allow ventilation, or do you apprehend that the rush of the train would clear the tunnel? The longest length unventilated in my proposed tunnel would be, perhaps, 30 chains— $\frac{3}{8}$ ths of a mile—and that is nothing.
1272. Has not the St. Gothard tunnel, to which you have referred, been found exceedingly objectionable owing to the accumulation of smoke in it? The St. Gothard tunnel is  $9\frac{1}{2}$  miles long, and there is some slight difficulty there with the ventilation, but that is a double-line tunnel, and the coal used in the locomotives is what they call brick coal, made up with slack, tar, and other substances. It is a composite fuel.

- A. S. Hamand, Esq. 1273. Is not the coal used on the Northern line very dirty? It does not emit such a terrible smoke as that patent fuel. The smell of burning tar is worse than anything.
- 3 July, 1890. 1274. Is it not a fact that one of the principal objections to the underground railway in London is the want of ventilation and the nuisance of the smoke? They do not use coal there; they use coke. On some of the lines they use anthracite coal, which makes no smoke, and which contains a great deal of sulphur.
1275. Has not the smoke been a nuisance, and does it not militate against the success of the underground lines? There is no question as to their success. They carry 140,000,000 people a year.
1276. You do not anticipate any serious nuisance from the use of coal on this line? It would not be necessary to use coal. We might use coke. I do not anticipate the least difficulty. The principal section of the underground tunnel in London which is affected in the way you mention is three-quarters of a mile long, and contains a double line of rail. There is a train through it every minute, and these trains churn up the smoke and make such a confusion in the air that it never gets out. This was the length of the Metropolitan Railway which was first constructed, and in succeeding lengths they have remedied the nuisance to a large extent.
1277. Will you strike the Circular Quay at a level or overhead? I go below. I put the level of the rails 10 feet below high-water, and I raise the whole of the southern end of the Quay 4 feet.
1278. You do not interfere with the level of the roadway in any way? I think it would be an act of vandalism to put a viaduct there, or to interfere with the picturesque.
1279. Does that usually enter into the calculations of railway engineers? I think it ought to do so, though it does not do so always.
1280. *Chairman.*] Did you travel along the route proposed by the Government from the present railway station to Milson's Point? Not immediately upon the staked line. I walked over the ground, and touched the line at various points—that is all that I can say. I know the country pretty well.
1281. Do you think that your proposal would serve a greater number of people than the Government proposal would serve? I am sure of it.
1282. And with your improved grades I suppose you would take people from Milson's Point up to where you join the Hornsby line quicker than the Government could on their line? Although I should have a mile longer, the journey to Chatswood would be effected in quite as short, if not in a shorter time, by my route than by the Government route.
1283. You do not anticipate that there will be any goods traffic on the line except the local traffic from Milson's Point to Hornsby? That is all.
1284. You think that the line will never develop the goods traffic from the north as against Newcastle and Darling Harbour? No.
1285. Having the railway where it is now, you think that we must bring it to the water somewhere in order to make it pay? We must.
1286. The present line will never pay working expenses or interest? Interest is out of the question. I do not suppose that it pays working expenses at the present time.
1287. Do you think that the district will justify the proposed extension? I do. I think that it is a very valuable residential district.
1288. If there is to be no goods traffic, or only goods traffic of a very limited character, and the Government line is adopted, will there be any necessity for taking it the whole way to Milson's Point;—would it not answer just as well to come halfway down to Lavender Bay? I do not think so.
1289. Why? Because I think you should come as near to Sydney as you can get.
1290. Then what are you to do with the steam-ferry service there? If you continue the railway across the harbour the steam-ferry service will suffer.
1291. We can only deal with the proposal before us to bring the railway to Milson's Point. We have heard all you have to say as to the advisability of going on; and now what I want to know from you is, whether the line would not be equally remunerative if it were brought halfway along Lavender Bay as if it were brought to Milson's Point? I think it would be a lame affair to do that.
1292. Suppose the railway is brought to Milson's Point, what is to become of the ferry service? Of course, if the railway goes to Milson's Point the passengers will get out of the train and jump into the steamer, just as they do now with the tram.
1293. Is there sufficient space there, do you think? Oh, yes.
1294. That would be for passengers, but not for goods? Not for goods in any case. There is no room there for goods.
1295. Would there be room for goods in Lavender Bay further up? There would be enough room for local traffic, but for traffic of a large description there would not be room.
1296. Do you think that it might be made by cutting down the hills right up to the Lane Cove-road. To make a railway, a good deal of the land at Lavender Bay will have to be cut down? Some of it; but the Government purpose to have a viaduct across the baths.
1297. Coming out on to the level at Lavender Bay? Yes.
1298. You do not think that it would be wise to stop there, but that we should go right on to the point? I certainly should not stop there.
1299. Did you prepare a section of your plan? A somewhat rough one. I can let the Committee have a copy of it.

TUESDAY, 8 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. ANDREW GARRAN.	JACOB GARRARD, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	HENRY COPELAND, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	JAMES EBENEZER TONKIN, Esq.
EDWARD WILLIAM O'SULLIVAN, Esq.	

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

John Duff, Esq., Chief Inspector of Forests, sworn, and examined:—

1300. *Chairman.*] You are attached to the Colonial Secretary's Department? Yes.
1301. Do you know why you were summoned to give evidence—were you consulted before you were summoned? It was through Mr. Barling that I came.
1302. He expressed a wish that you should give evidence here? Yes.
1303. About what? Respecting the timber on the proposed line of railway.
1304. Between Milson's Point and Pearce's Corner, or on the northern line? Mr. Barling did not specify which.
1305. Is there a large timber trade round Gosford and Cooranbong at the present time? The trade is not as large as it was several years back.
1306. Is there a large area of forest land there? Yes; between Gosford and Newcastle there are forest reserves, embracing a total area of 88,374 acres.
1307. Does that stretch away to Cooranbong and East Maitland? Yes.
1308. At the back of Newcastle? At the back of Newcastle.
1309. What is the character of the country—is it soft or is it hardwood? It is hardwood chiefly.
1310. There is no softwood there? Scarcely any softwoods near Newcastle, but there are softwood or brush forests in the vicinity of Gosford, Ourimbah, Wyong, and Cooranbong.
1311. You say that a great deal of timber in the past has been taken from that district? Yes, and especially from close to the railway line and to the main and minor roads.
1312. To your knowledge, has there been a falling off in the trade of late years? There has been.
1313. Since you have occupied your present position? Yes.
1314. To what do you attribute that? There has been a depression in the timber trade throughout the colonies, but I attribute it principally to the importation of American timbers of late years. They are much more easily wrought, and they are cheaper than our colonial hardwoods, though, of course, they are not so durable. Iron, of late years, has also largely superseded timber for building and fencing purposes.
1315. How far is this forest of 80,000 acres from Sydney? That area embraces the whole of the forest reserves between Gosford and Newcastle.
1316. How far is the most remote part of this forest from Sydney? The nearest is at Gosford.
1317. I said the farthest—is it 100 miles? I suppose it would be about 100 miles.
1318. Is the timber suitable for ordinary purposes?—Yes; there is excellent timber throughout the district.
1319. And do you mean to say that the American trade can beat that? No. I think the use of American timbers will only last for a while, and they will only be used for indoor purposes. It is also intended to plant forests of the leading species of useful American timbers, which will ultimately have the effect of largely reducing the quantity of these timbers imported.
1320. The American timbers are softwoods? Yes.
1321. No hardwood comes here from America? None that I am aware of. Hickory is imported for coach and buggy building, and American ash for tool handles.
1322. Is there much timber in those reserves suitable for building and other purposes? Yes; there is a great deal.
1323. I suppose the bad roads all through the district render it very difficult to get timber to market from those reserves? Yes, it is very difficult, especially in the loose, soft soil in the brush forests.
1324. Do you imagine that if that railway were taken to North Shore it would have the effect of developing the trade more than the existing line does? I think the proposed line would increase the trade in timber wonderfully, especially towards the North Shore.
1325. Why? The line would pass through good timbered country.
1326. But does it not do so now? Yes; but it only takes the timber to Sydney, Newcastle, Maitland, and Singleton, chiefly. If the line were tended, as proposed, I think it would take it direct to the North Shore.
1327. For what purpose? The line would enable the residents upon it to forward their timber to market.
1328. What market? At North Shore, chiefly.
1329. You think that if the line were extended to the North Shore a direct local market would be opened up there? Yes.
1330. But it would not help to develop the timber trade beyond that? No, not beyond that.
1331. Is there anything else which you can tell us about this subject? I have furnished a report upon the timbers of the whole of this district as far as I can give information about them.
1332. When was it prepared? I finished it this morning.
1333. You give a description of the timbers? Yes.
1334. With their botanical names and their local names? Yes; and the names of the reserves, with the number and area of each.
1335. I see that there are timber reserves in the district with a total area of 88,374 acres? Yes.
1336. And the revenue derived from them since 1883—seven years—has been £1,477 3s. 6d.? Yes. An immense quantity of the timber from that district has been cut on private land, and more, I think, than from Crown land or from forest reserves.
1337. You hand in this report to the Committee? Yes. [*Report handed in.*]
1338. You think that the extension of the railway to the North Shore will afford a local market at that place? Yes.
1339. And to that extent it may develop the trade? Yes.
1340. But no more? No.

J. Duff, Esq.  
8 July, 1890.

1341.

- J. Duff, Esq. 1341. *Mr. Garrard.*] Is there any export of this hardwood to any other colony, or to any other place in the colony? Some timber has been shipped direct from this district to China, Victoria, and New Zealand, but the major portion of it goes to Sydney, Newcastle, Maitland, and Singleton.
- 8 July, 1890. 1342. Do you think that if the line were constructed to the deep waters of Port Jackson it would lead to a development of the export trade in timber? Yes, to the other colonies, and especially to Victoria.
1343. There is a dearth of good hardwood in Victoria? Yes.
1344. And that colony largely draws its supplies from New South Wales? Yes.
1345. You think that if the line were constructed to the deep waters of Port Jackson it would lead to a development of the export of timber from this district? Yes.
1346. But they have now the opportunity of taking their timber to the deep water of the harbour at Darling Harbour? Yes.
1347. You therefore think that the shortening of the journey would materially improve their position in exporting timber? I am not certain that it would.
1348. You do not think that a shortening in distance of a few miles would very much improve their position? No, I do not think so.
1349. *Mr. O'Sullivan.*] What hardwoods are there in the district? I have furnished a complete list of them in the report.
1350. Do you include ironbark? Ironbark, spotted gum, blue gum, grey gum, turpentine, swamp mahogany, red mahogany, &c.
1351. Many of these are not timbers which are used for building houses? Some of them are not.
1352. But there would be a demand at North Shore for timber for building houses? Yes; the principal timbers sent from the district are ironbark, blackbutt, and spotted gum.
1353. *Mr. Copeland.*] To what distance does your district extend? I go throughout the colony; I am Chief Inspector.
1354. Do you know how many sawmills there are at work between Sydney and Newcastle? There were at one time as many as twenty at work between Gosford and Newcastle, but I believe that there are now only six mills at work in the district.
1355. Do you know where those are? There are two sawmills at Wyong, one at Ourimbah, one at Wyee, one at Dora Creek, and one now being erected at Tuggerah railway platform.
1356. Do you know the Wyong Estate? I do.
1357. What sort of forest is there there? The timber in that locality is about the best on that line of railway—about Wyong, Wyee, and Cooranbong.
1358. Do you consider that there is a good forest at Wyong;—what kinds of timber are there—blackbutt, spotted gum? Yes, and grey gum.
1359. Turpentine? Yes, and a good many kinds of brush timber.
1360. Those are all useful timbers? Yes.
1361. Do you know where they send the timber to at the present time from the sawmills at Wyong? The timber is sent from the sawmills at Wyong chiefly to Sydney and Newcastle.
1362. Can you say whether there is a very large amount of useful timber in the district? There is a very large quantity of useful timber in the district.
1363. If the railway were extended to the North Shore, and 11 miles of journey thus saved, do you think people would be likely to send their timber by the North Shore line instead of through Redfern? I do not think that a few miles of carriage counts much, as the principal expense is in loading and unloading the timber.
1364. Do you know whether any timber is exported to the other colonies? Yes, to Victoria and New Zealand.
1365. Do you think it likely that a timber trade would spring up on the North Shore if the railway were brought to the deep water there? Yes.
1366. Do you know of any other forests of timber as near to Sydney as the Wyong forest is? Not of as good a quality of timber.
1367. I suppose you are of opinion that there is still enough timber there to last for very many years? Yes, there is.
1368. Do you know the mountains away to the west of Lake Macquarie, where the timber was got for the Newcastle railway. I think Amos Brothers have some selections up there? I do not know that locality very well.
1369. Do you know the selections which Amos Brothers took up for timber at the time when the Northern railway was being constructed? No.
1370. Then you do not know the country to the westward very much? Not so well—I have not travelled over it so much.
1371. Have you any idea whether it is the intention of the Wyong people to erect more sawmills there? I am not aware that it is their intention to do so.
1372. Up to the present time they have not done so? No.
1373. There is only one sawmill there? Two.
1374. One is alongside the railway station? Yes, and the other is on the Maitland-road.
1375. Have you any idea of the quantity of hardwood which comes into Sydney during the year from the various ports? I could not tell you the quantity without referring to statistics.
1376. You know of no forest equally as good as that at Wyong within a reasonable distance of Sydney? Not so close to Sydney. One of the best which I know is the Nelligen forest reserve, near Bateman's Bay. That is even better, I think, taking it altogether, than the Wyong forest, and there is a much larger quantity of good timber there.
1377. Would that be further from Sydney? Yes; but I do not know its distance from Sydney.
1378. It would be considerably further from Sydney than Wyong is? Yes; it is not far from Moruya.
1379. *Chairman.*] Do you know that the Harbour Trust of Melbourne, at the present time, get nearly all their timber from the Clarence River—their hard timber? No; I was not aware of that. I know that all our red gum on the Murray goes into Victoria.
1380. They get all the timber for piles from the Clarence River; and it struck me as extraordinary that they should go to the Clarence, where the entrance is difficult, for timber, instead of to Broken Bay, where the entrance is good. Turpentine, I think, is considered one of the best timbers for piles? Yes, it is.
1381. Is there any great quantity of that timber in these reserves? In the brush forests there is the largest quantity, and the best quality of it. 1382.

1382. Is not the timber rather inaccessible there? The difficulty is in getting it out. The ground is so soft and moist—no roads having been formed—that the drays frequently bog. J. Duff, Esq.

1383. I suppose the best timber is left simply because it cannot be got out through the want of proper roads? Yes; that is one of the main reasons. 8 July, 1890.

Hugh M'Lachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—

1384. *Chairman.*] You were examined during the previous inquiry into this line of railway, were you not? Yes. H. M'Lachlan, Esq.
1385. Do you remember saying on that occasion that the Commissioners recommended this particular line purely on the ground of its being likely to be profitable as a suburban passenger line? Yes. 8 July, 1890.
1386. This is your evidence, questions 736 and 737:—"736. Do you think it would be an advantage to make the terminus of the Great Northern line at Port Jackson;—do you think it would relieve the traffic very considerably, and that it would be advantageous to have this terminus at Milson's Point for the whole of the traffic—passengers and goods? I do not think it would answer for general goods traffic—that is, for Sydney goods traffic. I do not think it would be so convenient as Darling Harbour except for the local traffic on the Shore. 737. You do not think it would be a suitable place then for goods traffic, whatever it might be for passenger traffic from the north? I do not think it would be so convenient as Darling Harbour." Have you any reason to alter that opinion now? No.
1387. Do you think that if the line were constructed to Milson's Point it would develop any goods traffic? It might develop a little, but I do not think that it would develop a great deal of what you might call foreign goods traffic—that is, goods traffic which at present goes to Sydney.
1388. Do you know whether the Commissioners have changed their views on the subject? No, they have not changed their views materially. They have noticed that one or two wool companies, and one in particular—perhaps attracted by the prospect of getting cheaper land at North Shore—are building stores there, and, no doubt, those people will in their own interest get their wool consigned to the local station, but the Commissioners do not think that the general bulk of the traffic will be affected.
1389. The Commissioners do not expect any great traffic in wool or coal? No. They are not counting upon there being any great goods traffic on the line.
1390. Is the carriage of coal profitable to the department? Not particularly, because it means empty running back.
1391. It is like the carriage of stock? Yes; and we carry coal at a very low rate.
1392. But your rate is rather high compared with the English rate? Yes; it must be noted, however, that we carry much smaller loads.
1393. On account of the grades? On account of the grades.
1394. Would there be any difference, supposing the line were extended to Milson's Point, between the rate for the bulk of produce to that place and to Darling Harbour, or would the rates be the same? For wool, I think we should charge the same, but for produce there would be a difference of 6d. or 7d. a ton.
1395. In favour of Milson's Point? Yes. Produce is carried at about 1d. a ton per mile, and there would be a saving of 6 or 7 miles.
1396. What is the policy now in the carriage of wool from the north, say from Narrabri to Newcastle;—do you know the rate for that per 100 miles? We have a regular tonnage rate to Newcastle, which is pretty well the same from any distance outside of a small differential area. To Sydney it is 22s. 6d. a ton. That is a common rate for all northern wool coming into Sydney.
1397. What is the rate from 100 miles north of Newcastle, say from Scone? Scoured wool, £2 a ton.
1398. And then you carry it another 100 miles for 22s. 6d.? Yes.
1399. Why is that—the grades are steeper on the latter half of the journey? It is to an extent influenced by the competition there. The passenger fares are also cheaper. We charge the same passenger rate from Milson's Point to Newcastle as from Sydney to Newcastle, though at the present time the distance by the former route is several miles shorter than that by the latter.
1400. Would it not be more advantageous to the department for the through goods traffic from the north to go to Darling Harbour than for it to be transferred to the North Shore Railway? I daresay it would be better for us; it would save us having another staff, and working separately. It is an advantage to concentrate your traffic, if you can.
1401. Do the Commissioners desire to divide the goods traffic on the northern lines? No; they desire to concentrate it, because it is cheaper to work it in that way.
1402. By concentrating it, are they able to give the public advantages which they would not be able to give if it was scattered about. Do the public reap any benefit by increased earnings, or otherwise? They would indirectly, because it is more economical to work all the traffic at one place. It allows you to bring in full trucks, and means a saving in working expenses in more ways than one.
1403. When you get north of Scone, what is the carriage of wool per ton for 100 miles? About 4d. a ton.
1404. Per mile, or per 100 miles? Per mile. It would run nearly that. From Scone it would be £2, and from Tamworth, 82 miles further north, £1 10s. more.
1405. Take Armidale, about 75 miles further north? The rate from Armidale would be £4 4s.
1406. Can you tell us what quantity of wool has been brought from the north to Newcastle for shipment during the last two years? Last year we had 68,700 bales.
1407. Do you know what the northern produce is? About 126,000 bales came from the northern districts.
1408. Then the other half of it went to Darling Harbour? No; more than half of it went to Morpeth.
1409. What quantity went to Morpeth? About 34,000 bales.
1410. I suppose some of the wool from the most northern parts of the colony was sent into Queensland? No; I do not think that we lose much by rail that way. A little comes down through Grafton.
1411. *Mr. Garrard.*] The balance of the wool comes through? Yes.
1412. *Chairman.*] Can you say whether the opening of the railway through from Newcastle to Sydney has affected the quantity of wool which is sent from Newcastle—has it reduced it? We have brought 21,000 bales to Sydney this year which we did not get two years ago, though we had not the railway then.
1413. You have no means of telling? No. We know that that quantity came to Sydney by rail last year, and that it did not come before. 1414.

- H.M. Lachlan, Esq.  
8 July, 1890.
1414. What is the rate per ton at which coal would be conveyed by railway to the North Shore—first from Newcastle? From Newcastle to Milson's Point it would be about 8s. Some of the mines are nearer than Newcastle.
1415. Now, from Lake Macquarie? About 6s. 9d.
1416. *Mr. Copeland.*] Which station are you taking? Cockle Creek. It would come to about 7s. to bring it down to the point.
1417. *Chairman.*] Suppose there were coal at Wyong? That would be about 5s.
1418. What do you charge per ton per mile? Up to 100 miles it is about 1d. per ton per mile.
1419. Now, take Gosford? That would be about 4s.
1420. Is there at the present time any coal traffic to speak of between Newcastle, Lake Macquarie, or any of the other northern coal centres, and Sydney, by rail? No, nothing to speak of.
1421. Would it be possible to develop a coal traffic if you carried coal for less than you are now carrying it—for, say, half the rate? I daresay that it would be possible, if we carried coal for half the rate at which we now carry it.
1422. Would it be possible to reduce your coal rates, having regard to the power of your engines, and to the grades between Sydney and Newcastle? It would not be profitable to reduce them to any appreciable extent.
1423. You have told us that there is very little profit now on coal, because the trucks run back empty? Yes.
1424. We need not look upon the line to Milson's Point as likely to earn anything by a coal traffic? No, unless they opened up coal mines about Gosford—that might affect the trade.
1425. Do you know whether the Commissioners anticipate any great traffic from the north along the North Shore Railway in agricultural produce? That is for Sydney business?
1426. For any business? There would be so far as the local market is concerned.
1427. That would not be a source of profit to the department? I do not think that it would be very remunerative.
1428. If it is taken by Milson's Point Railway it will be taken away from the Darling Harbour Railway? Yes.
1429. You still adhere to the opinion which you expressed before, that if the line were constructed it would have to depend upon the passenger traffic and the local goods traffic for its earnings? Yes, almost entirely.
1430. We had a witness before us the other day who told us that wool was carried by the railway, and delivered into the warehouses free of expense? Yes, the delivery is included in the charge.
1431. Have you done that with coal, or with anything but wool? It has been done principally with wool and parcels, but not with coal.
1432. Do I understand that general produce is taken from Darling Harbour in drays? No, but we deliver all wool.
1433. Are there not many things upon which you charge a higher rate than you do upon wool, and which you do not deliver to the owners? Yes.
1434. If I book my portmanteau by train, would you deliver it for me? Yes.
1435. Free of charge? No.
1436. And would you not charge a higher rate for it than you do for wool? Yes, proportionately.
1437. You must get the wool traffic, whether you deliver the wool to the warehouse or not? Of course there is competition for it on each side with the different colonics, though there is a certain amount of wool which we are bound to get. In the border districts it is a matter of competition.
1438. What does it cost you a bale to deliver the wool in Sydney. About 3d.
1439. Have you ever tried delivering coal? No, we have not.
1440. Do you make any profit out of the delivery of wool, or is there a loss? It is simply included in the charge. You pay £4 a ton for your wool, and the carting is part of the charge.
1441. But you do not pay £4 from Newcastle to Sydney? No; that is an imaginary figure.
1442. If Geddes & Co. put up warehouses on the North Shore, would you punt the wool over to them? No.
1443. Why not, if you deliver it on this side? It is an assistance in the busy times to clear the station, and it has been an inducement for the people in the border districts to send their wool to Sydney.
1444. But why would you not deliver it to Geddes & Co.? The matter has not been considered by the Commissioners.
1445. Would it not be cheaper for you to punt it than to cart it? We have never delivered outside of Sydney. We have only delivered within the city of Sydney.
1446. Suppose you did deliver it, would it not be cheaper for you to take it from Darling Harbour by punts than from Lavender Bay by drays. You know where they propose putting up their warehouses, near Kirribilli Point, and you know where it is proposed to bring the line of railway to, at Milson's Point. There can be no connection between that place and Geddes' by direct road. Would it not be cheaper to take it by water? I daresay it would be cheaper to lighter it.
1447. To take it from Darling Harbour to Geddes', instead of from Milson's Point? I do not know that there would be any appreciable difference.
1448. Mr. Deane told us the other day that it was suggested that the line should be brought about midway between Milson's Point and the head of Lavender Bay, stopping there;—do the Commissioners approve of that? The Commissioners are strongly in favour of having the line brought down to Milson's Point. Their idea is that if it stops anything short of there it would be simply of a makeshift character. The line is in North Shore already, and to make it convenient for the public it should be brought to Milson's Point. The Commissioners think that it would be a convenience if it were taken to Lavender Bay, but that it would be more convenient if it were taken to Milson's Point.
1449. Have the Commissioners done all they can to develop the North Shore line, by giving the public proper conveniences for travelling to and fro upon it? We have at the present time a train service there which we think is convenient.
1450. Three or four trains a day? There is not much traffic.
1451. Take the mail train from the north;—have you attempted to study the convenience of passengers by that train? To meet those mail trains we should want a second set of men. At the present time we are running the line as cheaply as we can, with one set of men. To meet the mail trains we should want two sets of men and vehicles.
1452. But you do not arrange to meet any of the trains going north, except the mixed goods trains? No special connections have been made.
- 1453.

1453. Do you not think that it would have added very much to the convenience of the line if the mail trains were met? We do not know whether it would pay for the extra working expenses. H.M. Lachlan,  
Esq.
1454. What extra expenses would there be in meeting these trains? We should want another train. I am referring to the mail train in the morning. 8 July, 1890.
1455. But take the 9 o'clock express from Sydney;—do you not think that it would be a great convenience to the public to be able to meet that at Hornsby? Yes, no doubt, if you could arrange the working of the line without extra expense.
1456. What greater difficulty would there be in meeting that train than in meeting the mixed goods trains? I do not know whether the train is at this end at that time.
1457. Can you tell us anything about the earnings of the North Shore line? So far they have been very poor.
1458. When was the line opened? I simply took out the earnings for several months. During the first four months of the present year the line earned £464.
1459. What was your expenditure for wages during the same period? £1,489.
1460. And for interest? £2,676.
1461. I suppose the Commissioners regard it as an impossibility to make the line fairly remunerative if it is left where it is? Yes.
1462. What were the earnings for the first month of the year? £122.
1463. And for the fourth? £144.
1464. Do the Commissioners regard it as hopeless to make the line pay interest while it is left where it is? Yes; they cannot see any prospect of its being a paying line under present circumstances.
1465. If the line were brought down to Milson's Point it would take some time for the population on it to increase so as to develop the traffic? Yes. But the Commissioners look upon the district as a splendid one for residential purposes, and they expect that a big population will settle there.
1466. To the right and left of the line? Yes, right through.
1467. What is the nearest point to the Lane Cove River from the line? I do not know exactly.
1468. *Mr. Copeland.*] Do the Commissioners see a prospect of the line paying within a reasonable period if it is extended to Milson's Point? They think it will pay far better if it is taken further down.
1469. Better than it pays now? Yes.
1470. The loss will be reduced? Yes.
1471. Where would the goods trains have to break? They would have to break at Hornsby.
1472. I suppose it would be necessary for the wool and produce consigned to Milson's Point or North Shore to be put into separate trucks? Yes, and in that way you might only get half loads for each place, whereas by concentrating the traffic the trucks would be full.
1473. To load up the trucks the wool would have to be discharged again to other trucks? Yes.
1474. Do the Commissioners anticipate any increase in the wool trade? The natural increase, of course.
1475. I think you said that you received 21,000 bales from the north last year? Yes.
1476. What warranted the Commissioners in anticipating any increase upon that? It is a convenience to get your goods brought direct to your stores, and as long as we can compete at all with the water carriage we are likely to get a great deal of the freight.
- 1476½. But is not Newcastle developing a direct export trade? They have been exporting from Newcastle for some years past.
1477. Is not that trade likely to develop? There was a falling off in the wool sent from Newcastle last year, because of the opening of the line.
1478. You anticipate being able to compete successfully with the steamers trading between Newcastle and Sydney? Of course the wool for direct export will go into Newcastle, and it may be that some will come down by the steamers, but we expect to get a fair amount of the wool coming down, and, as a matter of fact, we did so last year.
1479. Do you expect it in an increasing ratio—do you anticipate taking the trade from the steamers? I do not think that, for the present, we will do much more than we are now doing. I do not think that we shall have any very great increase.
1480. The only increase you expect will be from the increased number of sheep? Yes, and I think the greater convenience of having their wool sent direct to the stores will lead people to send it to Sydney. It will be remembered we have made a differential rate from some of the districts up north.
1481. I suppose the Commissioners think it a sound policy to enter into competition with private enterprise—to enter into a cut-throat competition? I do not think that they wish to work the traffic at a ruinous rate, either for themselves or for anybody else, but still they have the railway, and they want to make use of it.
1482. But it is their policy at the present time to carry goods between Sydney and Newcastle at so low a rate as to virtually make the steamers unprofitable? No; we have made no alteration in our general goods rate.
1483. Only in the wool rate? That is a special rate—22s. 6d.
1484. Have you not differential rates from New England? Yes, but we also have them from Newcastle.
1485. In the rate from Armidale or Guyra, do you not eliminate the charge between Sydney and Newcastle altogether? No; it is cheaper to send it to Newcastle than it is to send to Sydney.
1486. Do you not charge the same rate from Sydney to Guyra or Glen Innes as from Newcastle to Guyra or Glen Innes? No; take wool. We charge £3 15s. a ton to bring wool to Sydney, but we take it to Newcastle from that district for £2 17s. 6d. That is a difference of 17s. 6d., which is not a great cutting under of the 22s. 6d.
1487. But for goods which you send up there, say rice? There is still a fairly good difference. It is not as much as the ordinary tonnage rate, but there is a difference between the charge from Newcastle and from Sydney.
1488. You do not anticipate that there will be any large goods traffic on the North Shore Railway if the proposed extension is carried out? No, not any large general goods traffic.
1489. You will depend almost entirely upon the development of the passenger traffic for profit? Yes.
1490. But is there not a danger of your gaining at North Shore what you lose from other suburban districts;—would not people be likely to leave districts in which they are now living to reside on the North Shore line? I do not know whether that would affect us to any great extent—it might to a limited

- H. M. Lachlan, limited degree. The North Shore people, no doubt, will move out, and the Sydney people will move out. There is a natural growth of population. Sydney is growing bigger every year, and the increase of population tends to spread the people out in that way.
- Esq.  
8 July, 1890.
1491. You think this district will develop by the natural increase of population? Yes, and by the pushing out of the city.
1492. You anticipate that the development will be sufficient to make the line something like remunerative? Yes, in a few years.
1493. Do you know what the Commissioners' opinions are with reference to the Cremorne route or a route to some of those other eastern bays? No, I do not think that the Commissioners have ever considered those projects.
1494. I suppose they have not considered the goods question at all? Not to Cremorne.
1495. They do not anticipate any coal or timber trade? Not to Milson's Point.
1496. Nor to the North Shore, supposing a goods line was to deviate from the Milson's Point line to Cremorne and Neutral Bay? I do not think that they have looked into the Cremorne extension at all.
1497. According to the Commissioners' views, I suppose the Committee must judge almost entirely from the amount of passenger traffic as to whether the line will pay? Yes; it is largely on the basis of the passenger traffic that the Commissioners think that the line is to be a success.
1498. Have the Commissioners considered the question of having steam punts to Milson's Point? To bring the passengers across in opposition to the ferry service?
1499. Yes? I know that the feeling of the Commissioners in the matter is that the present ferry company is giving a good service, and they would leave it to them to meet the development of the traffic, and to adapt themselves to its requirements.
1500. Do the Commissioners think that there is land enough available for a terminal station at Milson's Point? Yes.
1501. Notwithstanding all the land which they require at Redfern and the difficulties which they have in managing the traffic there? They think there is sufficient room at Milson's Point for a terminal station. Mr. Deane has shown them the plans.
1502. *Dr. Garran.*] Although you do not anticipate any through goods traffic to Lavender Bay, there would be a certain amount of local goods traffic upon the line,—suburban goods traffic? For short distances you get very little goods traffic. The cost of handling is too great.
1503. There might be some traffic in bricks, perhaps? There might be a little.
1504. If any manufactories sprang up at North Shore, all their goods would come down to the terminus? If there were brickworks anywhere near Milson's Point they would probably get their coal sent there, so that we might get local traffic in that way.
1505. Will there be room enough for this suburban goods traffic in addition to the passenger traffic on the shore line of Lavender Bay? Yes. Some of the goods traffic would stop short at the station on the top of the hill. We are getting a little there now.
1506. Have you considered whether there is room enough between the head of the bay and Milson's Point for the passenger traffic and such moderate goods traffic as you anticipate? Yes; the Commissioners think so.
1507. Quite room enough; there will be no need to go to further expense? Yes.
1508. And without confusing the two kinds of traffic you could accommodate both? Yes.
1509. Then there is no necessity to go further afield for a water frontage? Yes.
1510. You would make one continuous wharf from Lavender Bay to Milson's Point? Yes. The Commissioners think that all that frontage ought to be resumed.
1511. And you would extend the wharf as you wanted the space? Yes.
1512. The first thing that you would want would be a wharf for the passenger traffic? Yes, and a few sidings as the goods traffic required them.
1513. But in the matter of wharfage? Yes; I think that would be all at first.
1514. You do not think that any further outlay of money is necessary in the first instance than what is sufficient for making the line and constructing the necessary passenger station and sidings, and the wharf for the passenger traffic? Yes.
1515. And you could add on wharfage to meet your growing requirements if a goods traffic sprang up? That is the view of the Commissioners.
1516. But it will be some years before they want more wharfage accommodation than they could get between Milson's Point and the head of Lavender Bay? Yes, the Commissioners think that that frontage will meet all requirements for some little time to come.
1517. Suppose there was a good fruit trade, would you have room for it? Yes, there would be room in those sidings.
1518. This is a fine fruit district? I understand that it is a good fruit district.
1519. Would you be able to get the trade, and deliver the fruit to the markets or elsewhere, in Sydney? We shall not get all of it—the people would probably cart a good deal of it direct to Sydney.
1520. Do not many of them cart back loads of manure? Not that I am aware of.
1521. Is it not a common thing for the orchard people to bring their fruit into market, and to take manure out again? I do not think that it is done a great deal.
1522. Is not the bulk of the Sydney stable manure taken away in that manner? By market gardeners.
1523. And by fruit-growers too? I have not seen it done.
1524. Have you counted upon a fruit traffic for this railway? Not to a great extent.
1525. It will have a passenger traffic principally? Yes.
1526. Have the Commissioners considered the advisability of making a bridge or tunnel across the harbour? That has been before them; but they think that it is a matter for the future. If a tunnel were constructed this line could be worked in to it.
1527. Where would they work it in—on the Sydney side? Their line will go down to Fort Macquarie, if they continue it at all? The map would show pretty well the line which they have in view.
1528. For a bridge? For a tunnel.
1529. Where from? From Fort Macquarie.
1530. That would go to M'Mahon's Point? Yes.
1531. Is it not a very much longer journey from Fort Macquarie to M'Mahon's Point than from Dawes' Point to Milson's Point? I see the plan shows the bridge to M'Mahon's Point, and this I took for Milson's Point; the tunnel is proposed to come in at Milson's Point.

1532. If they make the line to Fort Macquarie they must make the tunnel there? Yes.
1533. They have no provision for getting to Daves' Point? No; it is a matter they have not considered—they think it is a matter for the future.
1534. For the present they think that the private ferry service would be sufficient? Yes.
1535. And that a good passenger traffic would be developed without the construction of a bridge or of a tunnel? Yes.
1536. They think the prospect of such a traffic so good that they recommend the expenditure of this additional sum of money? Yes.
1537. Do you know whether the Commissioners have considered any alternative route westward to Milson's Point? No; I do not think that they went into the matter of alternative routes—they left that to the engineers largely.
1538. They are more anxious to get a line down than to determine which way it should come? I believe they think that Mr. Deane has selected a very fair line.
1539. Do you know whether they have considered these two routes—the 1 in 40 and the 1 in 50? From what I heard from them they think that Mr. Deane has selected a very fair line, and one which they would be prepared to recommend with a grade of 1 in 50.
1540. Are they not against 1 in 40 grades, as a rule? Yes.
1541. Do you know that the line under our consideration has a grade of 1 in 40? I understood that the grades were 1 in 50.
1542. Do you know that the line with the grade of 1 in 50 has absolutely never been surveyed? No; I understood that it was the 1 in 50 line that was under the consideration of the Committee.
1543. We are told that between St. Leonards and Hornsby the grade is not more than 1 in 50, but that in the descent to Milson's Point it is 1 in 40;—are you prepared to say anything as to the relative merits of the 1 in 40 or the 1 in 50 grade? The Commissioners would prefer a grade of 1 in 50.
1544. Other things being equal? Yes. I believe that Mr. Deane can get that grade with very little extra expense.
1545. You are not prepared to say anything about the Commissioners' opinion? I understood that it was a 1 in 50 grade line, which they thought was a good one.
1546. *Mr. Tonkin.*] In the event of this extension to Milson's Point being made, do you expect a very large increase in the number of passengers from the Northern Districts? That is a foreign traffic, you might say.
1547. Yes? No; we do not expect a great increase.
1548. The traffic which you expect is purely local? Yes.
1549. If that is so will not the railway in some manner compete with the tramway? Not to a great extent. The tramway serves a different body of people; it serves the people to the east, and all the populated parts of St. Leonards which the railway will not serve.
1550. You think that the railway will not affect the tramway? To a slight extent it will; but not to a very appreciable degree. The people are commencing to settle largely on the eastern side of the tramway, while the railway goes to the west of it.
1551. It is purely with the idea that there will be a local traffic that you are advocating this extension? Yes.
1552. Will it not take some years before there can be this large increase of population? Yes, it will take a few years; but the Commissioners think that the line as it is at present will never develop the traffic, while if it is extended to Milson's Point people will be led to settle along it, so that it will in time become a paying line.
1553. You think that the proposed extension would in itself more than pay for the other line? Yes.
1554. That is, supposing the other line were not constructed, but the line to and from Milson's Point to the Crow's Nest were constructed, the latter would be the better paying line? It would help to make the other line of some use.
1555. *Chairman.*] You do not mean to say that the length from Milson's Point to the Crow's Nest will pay of itself? No; its construction, of course, is a means to an end.
1556. There would not be enough traffic on it to make it pay? I do not know that there would be so much traffic on that local section.
1557. *Mr. Tonkin.*] But I understood you to say that you expected the whole of your returns from the local traffic in the event of the line being constructed? Yes; that is from Hornsby to Milson's Point.
1558. You do not expect any traffic from beyond Hornsby? Not a great deal. The Commissioners think that there will not be a great deal of through traffic.
1559. *Mr. Trickett.*] What will be the total cost of this extension? I think Mr. Deane set it down as somewhere about £240,000. He has proposed several alternative schemes, but I think that that would be the whole cost, including everything, of constructing the line to the point.
1560. What revenue would have to be earned by this portion of the line to recoup the Government for working expenses and the interest on that amount? At 3½ per cent. the interest would come to £8,400.
1561. That is on the extension? Yes.
1562. And what would be the increased working expenses on this portion of the line? I do not think that they are worked out.
1563. Including station management? Of course they would not be so particularly heavy, because the engines perhaps would otherwise be lying idle. You could use the same engines and men.
1564. It would not come to very much? No, it would not.
1565. Can you give us any idea of what the expense of working would be? £2,775, according to the Commissioners.
1566. Does that include the maintenance of the stations—the porters, cleaners, and people of that kind? Yes.
1567. They are all included? Yes.
1568. So that the interest and expenses would come to over £11,000? Yes.
1569. Do you see any reasonable prospect of the Government being recouped that yearly expenditure in the shape of returns? Not immediately. I do not think that the line will pay immediately.
1570. From your experience of other suburban lines how long do you think it would take before it would pay? I should not like to say.

H. M'Lachlan,  
Esq.  
8 July, 1890.

Tannatt William Edgeworth David, Esq., Geological Surveyor, Department of Mines, sworn, and examined:—

T. W. E.  
David, Esq.  
8 July, 1890.

1571. *Mr. Copeland.*] Do you know the district lying between Sydney and Newcastle? Geologically, I am acquainted with the greater part of it.

1572. Do you know the coal-fields? Yes, pretty well.

1573. Can you tell the Committee whether there is any prospect of coal mines being opened up, (say) between Gosford and Newcastle, or between Gosford and Lake Macquarie? I can say that the coal lies within a workable depth between Gosford and Lake Macquarie. By a workable depth I mean at a less depth than 2,600 feet.

1574. Do you know anything about the coal which was discovered on the Wyong Estate? Only by the reports furnished by Mr. Wilkinson and by Mr. Mackenzie, the Government Examiner of Coal-fields. I was not present when the cores were drawn from the bores, but I know the particulars of those bores as furnished by them, and I also know the rate of dip from the disappearance at Lake Macquarie towards the Wyong bores, which would lead me to suppose that the seams struck in the Wyong bores must be the same as we see cropping out in the cliffs at Lake Macquarie.

1575. The coal at Wyong is the southernmost coal in the northern district? Yes. Alison's is the southernmost proving of coal in the northern coal-field.

1576. There are two bores, one to the north of the other? To the north-east—yes.

1577. Do you know the depth of the bore to the north-east? In the Wallarah bore there is a 5-feet seam, struck at a depth of 535 feet—at least it was reported so in our annual report. I was not present myself when the coal was drilled through. There was also an 8-feet seam of coal and bands at a depth of 641 feet, and a seam 12 feet thick with a few bands at a depth of 778 feet. This is at the Wallarah bore, which is to the north-east of what is commonly called the Wyong bore.

1578. Do those seams accord with the seams discovered at Lake Macquarie and north of it? They accord tolerably well in their sections, and in the relative thickness of the strata separating them, with the first three seams observable in the coast sections, except that the upper seam is only 5 feet at the north-eastern of these two bores, whereas near Redhead it is from 6 to 8 feet thick, and of a somewhat better quality, apparently.

1579. You know the seams at Catherine Hill Bay? Yes.

1580. You know that there is what they term a 5-feet seam on the top of the cliff there? Yes.

1581. Down at the ocean level there is a 14-feet seam? Yes.

1582. There is another seam about 11 feet in thickness which was bored through by Hardie and Gorman, on the beach, below the 14-feet seam? Yes.

1583. Further westward, about the same latitude, Amos Brothers bored through a seam about 11 feet thick, between Catherine Hill Bay and Wyong, in that direction? Yes.

1584. Do the seams at Wyong accord with those at Catherine Hill Bay, and with the seam found by Amos Brothers? I think that, approximately, the three seams struck in the bore near Wyong accord with the three seams seen in Catherine Hill Bay. The third seam struck at Wyong, a 12-feet seam, would, I think, be identical with the seam which you have referred to as being struck at ocean level at Catherine Hill Bay. Above that there is a seam from 3 to 5 feet thick, and above it again there has lately been proved an uppermost or No. 1 seam in the Newcastle coal-field, which is from 6 to 8 feet thick, and where it has been worked at the Wallarah Colliery, near Catherine Hill Bay, it is 8 feet thick at the tunnels.

1585. They have also tunnelled in from the lake, have they not? They are between the lake and the shore line, near the ballast quarries between Catherine Hill Bay and Swansea.

1586. Would it pay to work at a depth of 535 feet? It would, if the coal were of a good marketable quality.

1587. Do you know the distance from that bore at Wyong to Sydney by the present railway line? My impression is that it is about 68 miles.

1588. Do you remember the exact distance of the bore to the north of Wyong Station? About 2 miles. The northernmost of the two bores is 5 or 6 miles northerly from the Wyong Station.

1589. It is the northernmost bore of which you are speaking? Yes.

1590. Do you think that it would pay to send that coal by railway to Sydney, assuming it to be a marketable coal? As a geological surveyor it is, perhaps, a little beyond my province to give an opinion upon the subject. I am not quite aware what rate would be charged on the coal—so much would depend upon the rate of carriage.

1591. Comparing it from the distance from which they send coal from Lithgow? If the coal could be carried at about the same rate as the coal is carried from the western and southern fields, I think it ought to pay to work a seam at that depth.

1592. Would it not pay as well, or better, assuming that the mine was worked, to send the coal to Sydney than to send it to Newcastle, and then to ship it from Newcastle to other parts? If it was intended to bring it to Sydney after it had been shipped at Newcastle, and then to tranship it here, I think it would be cheaper to bring it direct by rail.

1593. Do you know anything about the quality of the coal found in the north-east bore? No, except from the reports of others in the records of the Department of Mines.

1594. What do those records show? They do not speak much about the first two seams. Mr. Wilkinson saw the core that was reported to have come from the third seam, the 12-feet seam at 778 feet, and he expressed it as his opinion that the coal was of good quality.

1595. That core was burnt in the Garden Palace fire? It was. Mr. Wilkinson could not himself guarantee that it was drawn from that particular bore, but he saw the core when it was forwarded to Sydney, and he told me himself that it was a good sample of coal.

1596. The elder Mr. Alison reported it as having come from that bore? I presume so.

1597. Do you know whether there is any gas escaping from the bore; have you inspected it yourself? There was none issuing from the bore when I inspected it, because I tested it with a match, but the residents in the district round assured me that for some time previous gas had been escaping from the bore, and my guide told me that he had lit it and boiled his billy over the flame.

1598. Did you try both bores for gas? Yes. There was no gas. At the time of my visit neither bore showed any escapement of gas.

1599. Do you remember the distance between the two bores;—I want to get at the rate of dip? The rate of dip, as calculated exactly from the distance, is 113 feet per mile to the south-west. 1600.

T. W. E.  
David, Esq.  
8 July, 1890.

1600. Have you gone into any calculation to show at what depth coal would be found, supposing it existed, at Gosford, or Broken Bay? Yes, I have made calculations, and I find that the south-westerly dip coming towards Broken Bay changes to a westerly dip, which prevails past Narrabeen to Sydney Heads, and probably dies out gradually about Port Hacking. It then changes to a northerly dip, so that practically from Gosford, as far perhaps as Sydney, a line running north and south along the coal would be almost a level line. The chief dip would be to the west. At the Narrabeen bore, near Narrabeen, strata, known as the chocolate shales, red ferruginous shales which crop out on the surface, at Narrabeen Head, were not struck in the bore until a depth of 318 feet was reached. The Narrabeen bore is only  $2\frac{1}{4}$  miles west-south-west from Narrabeen Head, so that there must be a pretty considerable westerly dip of the measures between Gosford and Sydney Heads, which would mean that the coal-seams would not be increasing much in depth from Gosford towards Sydney.
1601. Did you say at what depth the coal would be found at Gosford, according to your calculations? My calculations show that the depth of coal at Gosford would be between 2,100 and 2,400 feet.
1602. Then the Wyong coal-field would really be the nearest on that line where there was coal at what might be called a reasonably workable depth. Can you tell us the depth at which coal was found in the southern bore on the Wyong Estate? Yes. According to the report of the Department of Mines, the first seam in the southern Wyong bore was struck at a depth of 787 feet, as against 5,535 feet in the northern bore.
1603. The second seam? At a depth of 892 feet as against 641 feet in the northern bore.
1604. I think that they did not strike the lower seam at all in the southern bore? No; they did not go deep enough to reach the horizon where they might expect to strike it.
1605. Coal has not actually been discovered south of the southern bore on the Wyong Estate? Not that I am aware of. A bore has been put down at Ourimbah, between Wyong and Gosford, to a depth of about 1,450 feet, without striking the coal.
1606. Do you know whether any coal has been discovered west of Wyong anywhere near the railway line? No; I am not aware that any coal has been discovered for a considerable distance west.
1607. Can you say whether there is a probability of the coal rising as it approaches the ranges to the west? According to the dip at Wyong, which is south-westerly, and going in a westerly direction from that place, the coal would deepen, unless there was a strong change of dip.
1608. But is there not a likelihood of the coal rising again as the hills have been elevated? The evidence in the hills, as far as I have seen them, goes to show that they are due to a survival of newer rocks rather than to the elevation of the coal measures, being chiefly composed of masses of the Sydney sandstone, such as we have in the mountains. The hills to the west of Wyong are chiefly composed of the sandstone of the Hawkesbury series.
1609. Have you seen conglomerates there? At Wyong?
1610. West of Wyong? Not any of the conglomerates belonging to coal measures until you get near Awaba. There the conglomerates are very strongly marked, as they are also at Dora Creek; but I have not seen any conglomerate which I should refer to the coal measures to the west of Wyong.
1611. Have you to the north-west? I have not been there much.
1612. Do you know of any other mineral deposits in this neighbourhood—iron, for instance? No; I am not aware of any iron deposits.
1613. Do you know of any shale? I have been informed that kerosene shale exists, and I have been shown samples of it, but the samples have been of a very inferior variety of shale.
1614. You know no other minerals of a marketable character likely to be brought to Sydney by train? No.
1615. Limestone? I know of no limestone. I was informed of the occurrence of gold at a place called Yarramerlong, near Wyong, and was sent to report on it; but it proved to be a large mass of basaltic rock which had burst up through the coal measures. It was said to have yielded gold in payable quantities, according to some assays; but my assays only showed traces of gold. It was trap-rock, similar to that at Pennant Hills and at the Prospect reservoir.
1616. *Mr. Tonkin.*] How far to the north of Newcastle do the coal measures run? The Newcastle measures?
1617. Yes? The Newcastle measures have at their base the Borehole or Wallsend seam, and it is assumed that that extends only a short distance to the north of Stockton harbour, and that then the line of outcrop runs under the sea.
1618. Do you know of any coal discoveries on the Clarence, or up the Clarence anywhere? We have not had any important discoveries reported to us lately.
1619. *Mr. Garrard.*] Are you aware whether a bore was put down on the eastern side of Mullet Creek by Mr. Alison? Yes.
1620. Do you know to what depth he went? It was over 1,000 feet.
- 1621-2. Do you know if coal was struck? Coal was not struck. I cannot tell you the depth from memory.
1623. Wyong is the furthest place south on the Newcastle-Hornsby line where coal has been struck? So far, yes.

WEDNESDAY,

WEDNESDAY, 9 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

William Bethel Sharp, Esq., Chairman of the Chamber of Commerce, Newcastle, sworn, and examined:—

W. B. Sharp,  
Esq.  
9 July, 1890.

1624. *Mr. Copeland.*] Where do you reside? At Newcastle.

1625. What business are you in? I am the representative of Dalgety & Co. (Limited).

1626. Are Dalgety & Co. interested in the export of wool? Yes.

1627. In anything else? In coal.

1628. I suppose the Newcastle office is a branch office? Yes.

1629. In connection with the Sydney office? There are offices at Sydney and at Melbourne.

1630. Do you occupy the position of manager? Yes.

1631. How long have you held that position? For seven years now, at Newcastle.

1632. Can you tell the Committee what quantity of wool was shipped by your firm from Newcastle last year? I can tell you the total quantity that was shipped; it was 59,693 bales.

1633. That was from Newcastle, not including Morpeth? Not including Morpeth.

1634. What quantity was shipped the year before? 61,180 bales.

1635. And during the previous year? I have the complete list here. The first shipments were made in the season of 1883-4, when the total quantity of wool handled was 42,961 bales. In 1884-5, it was 44,298 bales; in 1885-6, 57,455 bales; in 1886-7, 50,927 bales; in 1887-8, 57,766 bales; in 1888-9, 61,180 bales; and in 1889-90, 59,693 bales—an increase of 50 per cent. since we first started.

1636. Where was that wool shipped to? To London.

1637. All to London. Yes.

1638. Was none of it shipped to Sydney by your firm? Three thousand or 4,000 bales of that quantity would be shipped to Sydney this year.

1639. The rest of it was sent to London? To London direct.

1640. Have you any knowledge of the number of bales which passed through Newcastle;—do you know the total northern clip? The total northern clip now equals about 150,000 bales.

1641. Have you authentic information on that point? Yes; I got the particulars from the railway, together with the amount carried from Morpeth.

1642. Can you say whether the total clip is increasing? Yes. When we first started there I do not suppose that the total clip was more than 120,000 bales at the outside.

1643. When was that? In the season 1883-4.

1644. Do you anticipate that there will be a continuous increase in the total clip? Yes; and also an increase in the shipments.

1645. But how do you come to the conclusion that there will be an increase in the total clip, seeing that large areas of land are being taken away from wool-growing and used for agricultural and other purposes? The increase of agriculture in the northern districts will not affect the wool yield one iota, because every year more country is being used for feeding sheep upon, and as the railway extends to the north and west we shall get so much more wool, much of which now finds its way to other ports for shipment.

1646. Then you anticipate a steady increase in the clip? Yes.

1647. Do you anticipate an increase in the shipments from Newcastle—do you think that Newcastle will have a larger proportion of the export trade? I expect that the wool sent from there this year will be between 75,000 and 80,000 bales.

1648. What does it cost to send wool from Newcastle to England? Exactly the same as to send it from Sydney to England.

1649. Then any saving would be on the freight from Newcastle to Sydney? Yes, by coasting steamer or by train.

1650. What is the freight to England?  $\frac{3}{4}$ d. and  $\frac{1}{2}$ d. in a sailing ship. We only load sailing vessels and steamers at Newcastle during the wool season. It is  $\frac{3}{4}$ d. for greasy and  $\frac{1}{2}$  for scoured wool now.

1651. That is by sailing vessels? Yes.

1652. How much is it by steamer? You could get it taken by steamer at the same rate. There is a scarcity of wool, and they will take it for cargo at any rate you like to offer.

1653. By steamers and sailing vessels the freight from Sydney is the same as the freight from Newcastle? Yes.

1654. What is the freight by steamer from Newcastle to Sydney? It used to be from 3s. 9d. to 4s. a bale. Then they made reductions, and now that the companies' agreement no longer exists, I believe they are running the wool down for a great deal less.

1655. Do you know what they are charging now? I believe you can get it down for about 2s. a bale.

1656. With steamers, is there any fixed standard for the weight of a bale? No; they take the wool at so much a bale, whether it is scoured or greasy.

1657. Can you say what the rate amounts to per ton? At the present time it would amount to about 8s. or 10s.

1658. Do you know what the railway freight is? Seventeen shillings and sixpence.

1659. Can you explain why it is that not more wool is sent from Newcastle to Sydney by steamer;—we were informed yesterday that 21,000 bales came down from Newcastle by train? That would be about the quantity.

1660.

W. B. Sharp,  
Esq.  
9 July, 1890.

1650. If it is so much cheaper to send it by steamer, how is it that people do not use the steamers more? As a matter of fact the steamers do get a great deal more wool than the trains get.
1661. I do not think that the figures show that? You must include what goes from Morpeth.
1662. Thirty-four thousand bales came from Morpeth? Yes, as against 21,000 bales by railway.
1663. I suppose no wool is shipped direct from Morpeth to London? No.
1664. All that goes from Morpeth is for Sydney? Yes.
1665. I suppose the contention is that the steamers will always be able to compete successfully with the railway, as far as freight is concerned? Of course there is a disadvantage with steamers, because there is more handling if you ship by them; but for all that I think that they will always carry a fair proportion of the wool.
1666. The steamer freight, I suppose, merely includes taking the wool on board at Newcastle and Morpeth, and discharging it at the steam company's wharf in Sydney; they do not undertake, as the railway authorities do, to deliver the wool at the warehouses of the merchants in Sydney? I believe not.
1667. They simply land it on the wharf? Yes; they do not cart it.
1668. Are you of opinion that if the North Shore Railway were constructed it would produce any development of the wool trade, by train, between Newcastle and Sydney? No; I do not think that it would alter it one iota.
1669. Supposing the railway were constructed to Cremorne, or to Neutral Bay, or to any of those bays, where there is plenty of room for the accommodation of shipping, do you think that people would be likely to send their wool there in preference to sending it to Newcastle? I do not think that they would send it there for shipment. They might send it down for sale.
1670. Do you think that the extension of the railway would be an inducement for them to send it to Sydney, over and above any inducement that they have at the present time? No, because they would not have as good shipping facilities at Cremorne, or at the places which you have named, as we have at Newcastle. We have every facility there for shipping wool.
1671. You do not think that the Railway Commissioners would get an increased share of the wool trade if the railway were extended? I do not think that they would get any increase whatever.
1672. And you anticipate that in future they will lose a portion of the trade which they now have—that is to say, that the exportation of wool from Newcastle will increase more than the exportation from Sydney? The exportation of wool from Newcastle depends very considerably upon the colonial market. If that market is good, the wool comes to Sydney for sale in large quantities; but if it is indifferent, the wool is shipped at once to London. Last year the market in Sydney was good, and consequently our shipment fell off by about 1,000 bales.
1673. You have no sales of wool in Newcastle? No. We had once, but the Sydney buyers did not attend them in sufficient numbers to warrant our continuing them.
1674. Was there not some arrangement amongst the wool-buyers in Sydney not to attend the Newcastle wool sales? I believe that there was such an arrangement, though it was kept quiet. They endeavoured to boycott the sales, and they effectually did it.
1675. That was before the railway was opened? Yes.
1676. I suppose there is no attempt at the present time to recommence the sales? I believe that they will be recommenced again there.
1677. In that case a still greater quantity of wool will be shipped from Newcastle? Yes; a lot of wool will be kept in Newcastle then which now goes to Sydney for sale. The railway communication now is so rapid that it would be no trouble for the buyers to go to Newcastle.
1678. You appear before the Committee as a delegate from the Newcastle Chamber of Commerce? Yes; I am Chairman of that body. I was commissioned to come here by a special meeting. We read the evidence given before you upon the line about a fortnight ago.
1679. Will you explain to the Committee how it is that you have come here to give evidence against the proposed extension of the line if you are under the impression that it will not, if constructed, divert trade from Newcastle? Because statements were made by witnesses which might have led you to infer that if the railway were made it would bring the whole of the northern wool to North Shore, and we thought that it would be just as well for us to tell you exactly what the facts of the case are. We do not consider that the extension of the railway would bring any more wool to Sydney from the northern districts than comes at the present time, though it was publicly stated by one of the witnesses that the whole of the wool from the northern districts would come here if the line were constructed. That statement was quite absurd.
1680. You are here through a desire for the public interest, and not because of any fear of losing trade from Newcastle? No, provided that the present railway rates are charged. If differential rates are established, and the wool is run as cheap to Sydney as it is to Newcastle, the chances are that we shall lose a portion of it.
1681. Do you find that the differential rates are injurious to the Newcastle trade at the present time? To a certain degree they are.
1682. Can you explain to the Committee in what direction the Newcastle trade suffers by the present wool rates? At present they take a truck load of goods from Sydney to Guyra for £24; while they charge £21 to take a similar load from Newcastle to Guyra, so that there is only a difference of £3 a truck.
1683. That is a truck of 6 tons? Yes.
1684. That makes a charge of 10s. a ton from Sydney to Newcastle? Yes.
1685. But you could get your goods taken by steamer from Newcastle to Sydney for 10s. a ton? For 7s. 6d. a ton.
1686. Then you are in the same position as the people who send goods by rail? Yes.
1687. It matters nothing to the Guyra storekeeper whether he gets his goods sent by railway to Newcastle for 10s. a ton or whether they are taken by steamer? The charge offers an extra inducement to the Guyra people to buy in Sydney instead of in Newcastle.
1688. If the Newcastle people sell at the same rates? Yes.
1689. Where is the extra inducement? The inducement is this, that if the Newcastle people have to buy their goods the storekeepers hold them at a disadvantage of 10s. a ton.
1690. Do not some of the Newcastle people import direct from home? Yes; a great many of them do.
1691. Supposing you get goods from England, they are brought out for the same charge as if they were sent to Sydney? Yes.

- W. B. Sharp, Esq.  
9 July, 1890.
1692. So you would have an advantage of 7s. 6d. a ton—that is, the Guyra people should be able to buy at Newcastle for 7s. 6d. a ton less than at Sydney, because if they bought in Sydney they would have to pay 7s. 6d. a ton extra carriage by steamer, or 10s. a ton for extra carriage by rail? Yes; but I wish to point out that the Railway Commissioners only charge 10s. a ton for a distance of 100 miles, while beyond that the rate is higher.
1693. But the steamers charge 7s. 6d. a ton for 100 miles? Somewhere about that.
1694. Can you tell the Committee what is the usual freight for coal from Newcastle to Sydney? About 4s. a ton.
1695. That is the present freight? Yes.
1696. Do the freights vary at all? No; that is the standard freight. You can get it cheaper occasionally—perhaps 3s. 6d. a ton.
1697. The mine proprietors pay the craneage, do they not? Yes.
1698. The freight is simply for taking the coal from the wharf at Newcastle to the wharf at Sydney? Yes.
1699. Do you know what the railway freight is for the same distance? 1d. per ton per mile.
1700. That is 8s. 6d? Yes.
1701. You do not anticipate that a coal traffic would spring up to the North Shore? No, never.
1702. Do you know the country south of Newcastle? Yes, I know the whole of the country.
1703. From Lake Macquarie down to Wyong? Yes.
1704. Do you think that there is any likelihood of there being a coal traffic from that neighbourhood? It is quite possible that they may find coal there, but it would be very expensive to work.
1705. Why? It is at a great depth.
1706. Is there not plenty of coal there at a depth of from 200 to 500 or 600 feet? I do not know of any.
1707. You are not aware that coal has been found at Wyong at a depth of 500 feet? I was not aware of that fact.
1708. I suppose you know that at Wallarah, on Amos' property, coal was found at a depth of 200 feet? I was not aware of that. Was it a surface seam or good coal?
1709. Good coal. Suppose coal were discovered at a depth of from 200 to 500 or 800 feet anywhere about halfway between Newcastle and Gosford, do you think it likely that a coal trade would spring up from there to Sydney? If collieries are opened up the coal must be exported, and I suppose they would have to send it by rail.
1710. Would they send it by rail to Sydney, or by rail to Newcastle, and then take it by steamer from Newcastle to Sydney? If they sent it to Sydney it would be for export, and if they sent it to Newcastle it would be for export. They would not send it to Newcastle and then ship it from there to Sydney. They would send it to whichever place was the nearer.
1711. Do you think that if coal mines were opened up at Wyong they would be likely to ship the coal from the Hawkesbury? I think that is the place from which it ought to be shipped.
1712. Do you think that vessels would be likely to leave Sydney and go to the Hawkesbury in ballast in order to take a cargo of coal from there? I think that it is quite likely.
1713. Do you think that it would be better for them to do that than to pay a few extra pence for railway freight and have the coal brought here? They would have to pay 3s. or 4s. extra to have the coal brought to North Shore.
1714. But they would have to pay something to purchase ballast? They would only require a small quantity of ballast. A ship of 1,000 tons would only take 250 tons of ballast.
1715. Would they have to buy that? Yes.
1716. About what would they have to pay for it per ton? 1s. or 1s. 6d.
1717. What would it cost them to load and unload it? About another 1s.
1718. One shilling to load and another shilling to unload? Yes.
1719. They would have to pay about 4s. 6d. a ton, then, for ballast? From 3s. 6d. to 4s.
1720. And would they not have to pay extra insurance? No; ships are always insured for twelve months, no matter where they go.
1721. You do not anticipate that there would be any immediate coal traffic to support a line to North Shore? I do not think that there would.
1722. And you do not think it likely that there will be any increase in the wool freight? I do not think that they will get a bale more wool than comes to Sydney at the present time.
1723. Do you know anything about the fruit business; do you think that there will be any fruit traffic on the line? From what I can see in passing through, nearly all the fruit business is served by the present line.
1724. Do you know anything of the timber trade between Newcastle and Gosford? Yes.
1725. Do you think it likely that there will be any sawn timber or logs sent from about Wyong to Sydney? I do not think so.
1726. Do you know whether there is any good timber there? Yes; there is about Wyong.
1727. Do you not think that timber will be required in Sydney? Why do they not send it at the present time; they have got the railway into Sydney?
1728. I suppose you know that the railway, if extended, would save some 11 miles of carriage from the north? They would not bring timber to Sydney to land it on the North Shore—at least I do not think so.
1729. I suppose you know that an export trade in colonial timber is beginning with England? Yes, but it is very small.
1730. Do you think that there is any likelihood of that trade developing? Yes; but it would not develop for the timber between here and Newcastle.
1731. Why? It is the timber growing on the northern rivers that is exported.
1732. Is there not equally good timber between here and Newcastle? Not suitable for export.
1733. What kind of timber is exported? Cedar, I think, and some particular kinds of timber which grow on the northern rivers.

1734. Is it not all hardwood that has been exported? Hardwood is not exported to England, at least I have not heard of any being exported there. The principal export of hardwood is to the various colonies, for public works. I do not think that a single cargo of it has ever left Australia for England. W. B. Sharp,  
Esq.  
9 July, 1890
1735. You do not anticipate any timber trade to North Shore? You will not get a shipment of timber from there for the next twenty years.
1736. Your opinion is that no traffic whatever will be developed by the construction of the proposed railway? I do not think that its construction would advance the trade one particle.
1737. You do not think that there would be more railway traffic than there is at the present time? I do not think that there would be any more goods traffic.
1738. And whatever traffic there was on the North Shore line would be taken away from the existing lines? It would be taken from Redfern—yes.
1739. Do you think that there is likely to be any passenger traffic on this particular line? I do not think that there would be any through passenger traffic. Of course there would be a suburban passenger traffic.
1740. Do none of the people living on the North Shore travel to the north? Yes.
1741. Would not they be likely to use the branch line in starting away from home or coming back? It is quite possible that they would if it suited them.
1742. I suppose you anticipate that that part of Sydney will increase in population very much as the years go by? I believe that the whole of the suburbs will increase in population.
1743. Then it is likely that the passenger traffic would develop to something considerable? I think that the suburban traffic would. I do not think that the through traffic would.
1744. Is there not a chance of North Sydney growing to equal proportions with what may be termed South Sydney? It is quite possible, but I think that they have as many conveniences at the present time as South Sydney.
1745. Water accommodation and good sites for buildings? I think they have all the accommodation that they want at the present time.
1746. Do you know anything about the frozen meat trade? Yes.
1747. Can you say whether there is any likelihood of its being developed? It is going to be developed at Newcastle. An English company has been there, and I have been up the line and selected a site.
1748. Can you tell us where? I am not at liberty to divulge the name of the place.
1749. This meat will be exported direct from Newcastle to England? Yes.
1750. Is there any likelihood of the meat coming to Sydney if your line is constructed? No; because if they have facilities for shipping at Newcastle they are not likely to carry it 102 miles further to ship it from Sydney. We have Government wharves at Newcastle, and the trucks can go alongside the ships.
1751. You have every facility there that could be given at any part of the North Shore? We have better facilities there than there are in any other port in New South Wales.
1752. Do you think that any of the mail steamers would be likely to go to Newcastle for a cargo of frozen meat? For part of the cargo.
1753. You think they would be more likely to take meat from Newcastle than from Neutral Bay? Yes; because they could get their coal from Newcastle at the same time as they were loading meat.
1754. Have any of the Orient boats ever gone to Newcastle for coal? One came there for wool, but none of them have come for coal.
1755. *Mr. Garrard.*] Which boat? The "Potosi."
1756. *Mr. Copeland.*] Do you anticipate that these large steamers will go to Newcastle for frozen meat? As soon as the trade is established the steamers will go there for freight. The freight is very high on frozen meat.
1757. Do they consider Newcastle as safe a harbour as Port Jackson? It is quite as safe, but it is not so deep.
1758. If it is not as deep how can it be as safe? Quite as safe, if a vessel is drawing not more than 22 feet 6 inches.
1759. But I am speaking of the large mail boats? They would go there light.
1760. And then come back to Sydney to load up? Yes, and go on to Melbourne and Adelaide to finish, as at present.
1761. You do not think that we are likely to get any of the frozen meat trade. What about wheat, supposing that were exported? The same objection applies as applies in the case of wool. If the wheat was intended for exportation it would be shipped from Newcastle.
1762. Do you think that whatever wheat there was for exportation it could be shipped from Newcastle, and would not be likely to go past a good harbour like that in order to come to Sydney? It stands to reason that it would not come to Sydney.
1763. Do they charge any wharfage dues at Newcastle? No.
1764. They have not done so for some years? No.
1765. Can you say how many years it is since wharfage dues were abolished there? It must be nine years.
1766. There are wharfage rates in Sydney? We pay wharfage rates on ships loading at Newcastle, but not on the goods. The ships all pay a wharfage rate just as they do in Sydney. I think the wharfage returns at the present time are about £5,000.
1767. Do you know what wharfage rates are charged in Sydney? I know that it is 4d. per bale on wool—there is a regular tariff.
1768. Suppose the same rates were charged from Newcastle, would that affect the sales here? Not a bit.
1769. They would have to pay it just the same as they do in Sydney? Yes.
1770. I understood you to say that wheat intended for export would not pass Newcastle to get to Sydney? No.
1771. Are you aware that last year 250,000 bushels of wheat did pass Newcastle to come to Sydney? It is quite likely. No doubt it was offered at Sydney for sale first and then shipped.
1772. Do you not think that the trade is likely to increase if more land is brought under cultivation? We shipped wheat from Newcastle last year, but it came from Adelaide.
1773. Then you shipped it to England? Yes.
1774. Why was it brought from Adelaide to Newcastle? It was brought to Sydney, but we could offer cheaper freights from Newcastle.
1775. I suppose the wheat was sent from Adelaide to Newcastle because the steamers were going to Newcastle for coal? No; this was a sailing vessel. They could not get a freight in Sydney, and we shipped the wheat to London from Newcastle.

- W. B. Sharp, Esq.  
9 July, 1890.
1776. I suppose some of the steamers do bring freight from Adelaide to Newcastle when they are coming for coal? Yes.
1777. What is the freight—on flour for instance? 3s. a ton.
1778. From Adelaide to Newcastle? Yes.
1779. Anything less than that? It is sometimes taken for ballast at less than that. That is a fair average.
1780. Do you know what freight is paid for bringing this particular kind of wheat to Newcastle? I cannot remember now.
1781. Is the wool usually dumped at Newcastle before shipping? It is all dumped at Newcastle.
1782. Brought down by rail? The train comes right alongside the wool stores, which are on the wharf; there is no handling at all. The wool is discharged into the stores, dumped, and put on board the ships straight away.
1783. I suppose it would not be possible, under any circumstances, to have an improvement upon that system? I do not think so. I think the arrangements at Newcastle are perfect—in fact, we have much better shipping facilities there for wool than you have here.
1784. *Mr. Garrard.*] Did you not obtain the returns which you have read to us from the railway authorities? No; the wool passed through our own hands.

Henry E. Stokes, Esq., Member of the Chamber of Commerce, Newcastle, sworn, and examined:—

- H. E. Stokes, Esq.  
9 July, 1890.
1785. *Chairman.*] Will you tell the Committee why you come here to-day? Well, I understood that one of the reasons why it is proposed to extend the railway is that there are not sufficient facilities at Newcastle for transacting the shipping trade of the north and north-western districts, and that the railway is to take a portion of that trade. I maintain that it is quite possible to deal with the whole of the northern and north-western trade at Newcastle, and I think that the traffic upon the railway will not be supplemented by any trade from the north and north-west, because that trade will naturally seek its nearest shipping place.
1786. The port of Newcastle has been very much improved during the past few years for shipping? Yes; and it could do a great deal more trade than it is doing at present. If there were more ships coming there we could do a larger trade.
1787. You think that even if the line is constructed goods will not be sent past the port of Newcastle to Sydney, any more than they are sent now? Yes. I may say that I am a large shipper from Newcastle, and have had a great deal to do with the shipping of that port for the last twenty-five years. I am a large exporter of wool and other produce from there, so I have good opportunities for forming an opinion on the subject.
1788. What is the draught of the largest vessels that come into Newcastle—sailing vessels and steamers? About 23 feet. Perhaps, with a good tide, vessels drawing 6 inches more might get in.
1789. Any vessel drawing over 23 feet 6 inches could not get in or out? Not unless there was a very good tide. I should say that that was about a fair depth to reckon upon.
1790. Could a vessel drawing that depth get up alongside most of the cranes? Yes.
1791. I suppose at Newcastle you do not look upon it as possible to develop the coal trade to Sydney by railway with the present rates? Oh, no, because, in the first place, they can ship so much more cheaply by steamer. Colliers can take coal far cheaper than the railways can.
1792. I suppose, so far as the Newcastle people are concerned, they do not care whether the line is extended or not? I do not think they do.
1793. You do not care yourself—you do not come here to protest against the extension? No.
1794. Your object is merely to inform us that the extension of the railway will not take the trade from Newcastle? I do not think that it will. I do not think that it will affect Newcastle at all.
1795. Suppose there was a determination on the part of the woolgrowers to test the market in Sydney, that would affect the exportation from Newcastle considerably? That is already being done to a great extent. A great many woolgrowers do send their wool to Sydney now.
1796. And some of them ship direct, without trying the Sydney market at all? Yes. They find it cheaper to ship from Newcastle than from Sydney. Of course if they wish to try the market, they send the wool to Sydney.
1797. But they often try the market and then ship direct? Yes.
1798. That adds to the cost considerably? Yes, it adds to the cost materially.
1799. Have you any hope of inducing buyers to go to Newcastle;—have you tried to get them to do so since the railway has been opened? I think there has been one sale since the railway has been opened, though I am not sure.
1800. It was tried before the railway was opened, by Dalgety & Co.? Dalgety & Co. held sales there for two years.
1801. They did not prove a great success? I think they sold pretty well, but I think the sales were abandoned because of a combination of the Sydney brokers, who objected to bidding at the Newcastle sales.
1802. But, as a shipper, do you not think that it would be an advantage for the colony to have one market where the buyers could congregate, instead of splitting up the buyers and producers;—do you not think that it would be an advantage to the buyers and producers to have one place in which to buy and sell? I do not think that that is very likely to happen. I think that, as a rule, buyers will go direct to the stations. I think that that will be the future of the wool trade.
1803. But the men who do that do not buy the wool for the purpose of exporting it, but rather to speculate with it. It has been done for years? I think it is done rather by the agents of the consumers, who wish to put themselves into direct communication with the producers. They buy on the station and ship the wool away—it is not tried in the market. They send a man round to buy the wool from the producers.
1804. Do you know any other commodities besides coal which are exported from Newcastle—wheat or grain of any kind, or tin or other metals? A good deal of tallow is sent away, and some metal.
1805. Tin, I suppose? Some tin, but not very much.
1806. Does that generally come to Sydney? No. Some of the tin ore goes in the wool-ships, I think.
1807. Is any wheat exported from Newcastle? No, none.
1808. Do you know what quantity comes to Sydney? I do not think that there is any wheat grown in the northern districts that comes to Sydney.
1809. What do you find has been the effect of the construction of the railway from Newcastle to Sydney;—has it added to the prosperity of the town, or otherwise? I do not think that it has affected it.

1810. But has it not given very great facilities to the Newcastle people for transacting business in Sydney? Well, perhaps it has, but I do not think that it has had any effect either for good or for evil upon the place. I do not notice any depreciation in value there, and I cannot say that I have noticed any marked increase, more than you might expect from the increasing age of the town. H. E. Stokes,  
Esq.  
9 July, 1890
1811. *Mr. Garrard.*] How many ships were there at Newcastle last year loading wool only? I cannot tell you how many ships there were, but I think there were about 60,000 bales shipped.
1812. *Chairman.*] Were any of those ships entirely loaded with wool? A good many of them were loaded entirely with wool.
1813. *Mr. Garrard.*] Did any of them bring inward cargoes, or did they come in ballast? Some came with cargoes and some with ballast.
1814. From what ports? They would bring cargoes from the home ports.
1815. From what ports did the ships come in ballast? From various ports, but mostly colonial.
1816. Mostly from Sydney? I think that some came from Melbourne, but, perhaps, most of them came from Sydney.
1817. Do they require ballast stiffening to get from Sydney to Newcastle? Yes.
1818. What would be the cost of putting in and taking out of ballast for a vessel going from Sydney to Newcastle? It would not be very much.
1819. How many inward cargoes of merchandise came from Europe direct last year? I daresay from fifteen to twenty ships.
1820. With full cargoes? Yes. There is generally a ship a month to one firm, and a ship or two come in at odd times.
1821. Did you say that the facilities for shipping at Newcastle were more than the trade required? Yes; we could do twice the trade.
1822. Is it true that large sums of money are being spent there to increase those facilities? There is a proposal to do certain necessary work there, I think, but I am not prepared to say what sums of money are to be spent.
1823. I think there is a proposal to erect half a dozen extra cranes? Yes.
1824. That is not necessary? I do not say that it is not necessary. We hope that the trade will grow. If we had more ships we could do more trade. We have, at the present time, more orders for coal in Newcastle than we can execute, because we have not enough ships. If enough ships came we should need more cranes. The trade is a growing one.
1825. How long is it since wharfage rates were discontinued in Newcastle? I should say about seven or eight years.
1826. Are you aware whether any of the wool-dumping buildings belonging to Dalgety & Co., and others, are erected on railway land, and held at a very low rental? They are erected on railway land; but I do not think that they are held at a low rental; I think they pay a very good rental.
1827. Dalgety's, for instance? I think that they pay about £2 per foot per annum for rent.

Arthur Harrison Collings, Esq., Manager of the Gore Hill Brickworks, St. Leonards, sworn, and examined:—

1828. *Mr. Dowel.*] What is your occupation? I am manager of the Gore Hill Brickworks. A. H. Collings  
Esq.  
9 July, 1890
1829. Where do you reside? At West-street, North Shore.
1830. Have you made yourself acquainted with the proposal now before the Committee with respect to the construction of a railway down to the deep waters of Port Jackson? I have.
1831. What is the nature of the evidence which you desire to give to the Committee? Simply as to the effect which the construction of the line would have upon the brickworks with which I am connected. I have prepared a written statement, which I should like to read. It is as follows:—

EXTENT to which the Railway Department would be benefited in revenue derived from carriage of bricks and coal to and from the Gore Hill Brickworks, provided the terminus was at Milson's Point instead of where it is at present; we would then connect with a branch line into our works from siding at St. Leonards' Station.

Our ordinary output of bricks is about 200,000 per week; but through slackness of trade it has been reduced to 180,000 per week. The total extent of our plant production, if utilized to full capacity, is 450,000 per week. We have added largely to our plant during the past twelve months, in anticipation of an increase in trade, through better facilities being given us for delivery. We felt certain the railway would be extended to Milson's Point, and we could then connect with the siding at once, thus enabling us to reload our bricks from railway trucks (these would be loaded direct from the kilns) into waggons at Milson's Point, for Sydney, Milson's Point, or direct from railway trucks into boats for harbour, river, or coast trade, which is a considerable factor in our calculations. I shall mention six contracts, together with quantities we supplied them, during the past twelve months, in order to prove to you that the figures I quote are not given in anticipation of trade to come, but as it exists at the present time. The following are the quantities supplied:—

Messrs. Dean & Sons, "Australian Hotel" .....	5,350,000
Messrs. Waine & Baldwin, Lands Office .....	250,000
"Wentworth Hotel" .....	325,000
Crown-street Reservoir .....	75,000
Bulli Coke Co. ....	350,000
Total .....	6,350,000

Now we come to the question of amount of money which would have been saved to our company had the Milson's Point extension been carried out, and the goods traffic of our works carried on it, instead of the road, as at present.

Cartage of bricks to Sydney by carts, per 1,000 .....	£0 16 6
Cartage of bricks with siding at works, and extension of railway to Milson's Point, per 1,000 .....	0 12 9
Cartage of bricks to Darling Harbour <i>via</i> Hornsby, per 1,000 .....	0 17 8
Of course, sending them <i>via</i> Darling Harbour is dearer than the cart system, so the line is practically useless to us for carriage of bricks with the terminus as it is at present.	
We sent 6,000,000 at a less rate of cartage of 3s. 9d. per thousand .....	£1,125 0 0
We sent to Blue's Point wharf, for Bulli Coke Co., 350,000; our cartage was 10s. per 1,000; if taken by rail to water's edge, 5s. 3d., meaning a saving of 4s. 9d. per 1,000 .....	83 2 6
Our trade at Milson's Point averaged 5,000 per day; forwarded by rail we save 1s. per 1,000...	75 0 0
Total saving in carriage of bricks .....	£1,283 2 6

The next item is the saving in coal, by being able to receive it from boats at Milson's Point and take to place of destination direct by rail.

A. H. Collings,  
Esq.  
9 July, 1890.

We usually consume per week 50 tons of Southern coal and 20 tons of Lithgow. The cost of it is as follows, by rail :—

Large coal—At mine, 8s. ; rail, 5s. 6d. ; road, 2s.—15s. 6d.	
Small coal—At mine, 3s. ; rail, 5s. 6d. ; road, 2s.—10s. 6d.	
Coal landed at Milson's Point from boat, and thence by rail to yard :—	
Large coal, freight—At Point, 11s. 6d. ; rail freight, 1s. 6d.—13s.	
Small coal—At Point, 6s. ; rail freight, 1s. 6d.—7s. 6d.	
22 tons of large coal per week, at 2s. 6d. ....	£143 0 0
28 tons of small coal per week, at 3s. ....	218 8 0

Total ..... £361 8 0

With siding into works we would save the sum of £104 per annum on 20 tons per week at 2s. per ton; present price for cartage, from St. Leonards to works .....	104 0 0
Add to this the saving on bricks, cartage.....	1,283 2 6

Total saving to our Company with railway to Milson's Point (minimum amount) ... £1,748 10 6

Next item is the revenue received by department for carriage of bricks and coal on the Milson's Point line :—	
26,166 bricks per day, by rail, at 5s. 3d. per 1,000 .....	£2,060 7 3
50 tons of coal per week, at 1s. 6d. ....	195 0 0

Total, provided railway taken to Milson's Point ..... £2,255 7 3

We receive on Hornsby route, 20 tons of Lithgow coal per week, at 9s. 3d. .... 481 0 0

Grand total ..... £2,736 7 3

We are now getting southern coal by steamer landed at Point, and find it more economical than by rail, with present terminus, and shall continue to do so until line is extended to Milson's Point.

In these figures no calculation is made for increase in trade, which we are certain must ensue, as we can tender for several contracts which under present conditions we would not, as if our bricks were carried to Point by rail we would have an advantage over last year's quotations through saving of cartage into Sydney, 3s. 9d., 1s. at Milson's Point, and 4s. 9d. per 1,000 for rivers, harbours, and coast trade.

We lost several good contracts, one for 3,000,000 to be delivered by water to Walker's Hospital, Concord, on the Parramatta River; and 1,000,000 of Messrs. Dean's order, we had to procure from Messrs. Bakewell Bros. Although we had more than that quantity in stock, we were handicapped by being unable to secure sufficient carts to deliver them up to time. If the railway had been there it would have been avoided, as then no difficulty would have been met with. We are now sending 600,000 facing bricks by water carriage from Point to Walker's Hospital, on Parramatta River; also some 2,000,000 to Garden Island; all these would come by rail to Point if completed to it. We have already had sixty boxes made to hold 500 bricks each, to facilitate the handling from railway trucks to waggons or boat, whichever purpose they were required for; they are at present being used to convey the facing bricks to Parramatta and bricks to Garden Island. Having had a large experience amongst the clay shales of Victoria, New Zealand, Tasmania, and New South Wales, I can safely assert that the clay and shale of North Shore is superior to any I have met with in the other colonies for all classes of potteryware; in fact the majority of it should never be used for ordinary bricks, being very valuable for fancy ware. There are already four potteries making regularly now all the articles in finer branches of earthenware trade. Fire-clay, from which first-class fire-bricks are made, abounds largely on North Shore. I, myself, have made already more than half a million of them; therefore these resources are sure to be developed far more largely in the future, thereby increasing the revenue derived from carriage of goods on the railway of North Shore. I fully anticipate that very few months after the line is completed we will double our present output, and the Milson's Point line will receive in revenue the sum of £5,472 17s. 6d. derived from our works alone, independent of any of the other two brickworks.

1832. *Chairman.*] You swear that what the statement you have just read contains is true? Yes.

1833. *Mr. Dowel.*] You anticipate that the freight on your bricks alone will give a revenue to the railway, if it is extended to Milson's Point, of over £5,000? £2,736 under present conditions; but if the trade increases it will amount to that, because the railway will enable us to tender for jobs which we cannot tender for now.

1834. Would the construction of the railway place you in a better position for tendering? In a far better position. At the present time we cannot procure enough drays to take the bricks away.

1835. Are your bricks of such a quality that they are always likely to be in demand? Certainly, if we could procure drays enough.

1836. You do not anticipate any competition in the future which will prevent their being in demand? Certainly not. With the plant which we have no competition could affect us.

1837. The railway would also offer you very considerable facilities for working your business as regards the supply of coal? Certainly; it would make a considerable saving.

1838. And you would pay the Government a considerable amount of money in the shape of freight for the coal? Yes.

1839. Is there any further information which you would like to give to the Committee? No; there is no further information.

1840. *Chairman.*] How many bricks are there to a ton? They run about 3 ton 10 cwt. to the thousand.

1841. At the present time the Railway Department get nothing from you except for the haulage of the Lithgow coal which you consume? Yes.

1842. Are these boxes which you have constructed to provide a new method of loading trains? Yes; they facilitate the handling—you can handle them more quickly.

1843. Would you put the boxes into the trucks? You could, but at the present time we put them on lorries.

1844. Suppose you were working with these boxes in connection with the trains, would you put a box containing the bricks on to the truck and send it down to Milson's Point? No; I should not do that. The boxes are mostly for the lorries. They would increase the cost of carriage by their weight.

1845. In that case you would not have the handling of the bricks again at Milson's Point in unloading? That is all provided in the cost which I have given.

1846. You mention 1s. 6d. a ton as the cost of hauling coal from Milson's Point? Yes, that is correct—1s. 6d. will take it to Hornsby.

1847. *Mr. Humphery.*] That is the minimum charge? Yes.

1848. *Chairman.*] It is 12 miles to Hornsby? Yes.

1849. *Mr. Dowel.*] Are there any other brickmakers in this particular locality who would use the railway if it were constructed? There are two just alongside the railway.

1850. Doing a large business? Not so extensive a business as ours, but they are doing a large business.

1851. A considerable amount of railway freight would be derived from the carriage of bricks on their account? Yes, and there would be the carriage of their coal too.

1852. What are the names of these brickmakers? Magney and Wainton, and the Crown Plastic Brick Company Limited. 1853.

Sydney... 20,000  
Milson's  
Point... 5,000  
Boats .. 1,166

1853. Is there any specially good shale and brick-clay on any other portion of the line between your works and Hornsby? Yes; throughout the whole of the district clays and shales of the most superior quality for the manufacture of any class of earthenware abound.

A. H. Collings,  
Esq.  
9 July, 1899.

Walter Liberty Vernon, Esq., surveyor and architect, North Shore, sworn, and examined:—

1854. *Chairman.*] You are a surveyor and architect? I am.

1855. Residing at North Shore? Yes.

1856. You hold the position of alderman over there? I am an alderman of the Borough of East St. Leonards, and I have expended between £40,000 and £50,000 in building residences there.

1857. You know the North Shore pretty well? Very well, indeed.

1858. You are engaged there now in laying out some large areas of land? Yes, and in some large building operations too.

1859. Do you know the proposal to construct the railway down to the deep waters of the harbour? I have not seen the recent scheme.

1860. It is shown on the map before the Committee by a dotted red line. The railway would have a grade of 1 in 50 on that route? I came to raise an objection to such a westerly route being taken, because I do not think that it will be used for suburban traffic or for the general traffic. It does not seem to me, and I know that others think with me, that it is sufficiently central to convenience the people over there. There is a very large population to the north-east of the line, and if the line skirts the water's edge, as it is proposed that it shall do, it cannot serve that population. It will only serve the population on one side of it at most. I have a rough scheme here, based on a plan prepared and published some time ago by the *North Shore Times*, showing the trial surveys for this line.

1861. You propose to branch off from the existing line at about 10 miles from Hornsby? From the present station. Then I pass below the Cottage Hospital in order to keep down the levels.

1862. That is to the north? Yes; I get to a natural depression of the ground there.

1863. Have you made any rough surveys of this route? I cannot say that I have. I have some rough data to go upon, but it is not sufficiently accurate to give as evidence.

1864. I see that you put a station just where I live? I put a station there because it would enable the train to take the existing tram traffic, and it would also serve the large district, called North Sydney, lying beyond the new bridge which they are building. The advantage of going so far north is that you keep at a lower level.

1865. Do you know what grades you would have coming past Alfred-street? As near as I can tell, about 1 in 60.

1866. Have you seen Mr. Hamand's proposal—his scheme bears away east as far as Willoughby Falls? No; I have not.

1867. He only gets a grade of 1 in 70? I think I am on the safe side in saying 1 in 60. I did make it a little more but I wish to be safe. There is a natural depression on the other side of the Military-road, where the creeks run down to Middle Harbour, and I propose to take advantage of it before you get to Milson's Point or to the southern shore.

1868. Your objection to the proposed route is that it goes too far to the westward to serve the population which must spring up to the eastward of the tram-line? True.

1869. Do you not think that if the tram service were extended to the east it would suit the requirements of those people. Suppose the tram were extended along the Military-road, would not that afford a great convenience to the people of all those suburbs? I do not think that it would answer the same purpose as a railway.

1870. But if the tramway were extended along the Military-road nearly as far as Middle Harbour, what would be the furthest distance that any of the inhabitants there would have to travel to get to it? Probably not more than three-quarters of a mile.

1871. Do you not think that it would be infinitely cheaper to construct a tramway than to make a detour with the railway? I do not think so. I consider that there are certain advantages to be gained by taking the line in the direction which I have shown which no other route would have.

1872. Will you tell us what they are? The line from Miller-street, running under the Military-road, at the eastern corner of the reserve, by a short tunnel, would come out into the Neutral Bay valley, which is very rough land, and would be, comparatively speaking, inexpensive. There is a quarry there. That would bring you to the head of Neutral Bay, where the Government, in conjunction with the East St. Leonards Council, propose to reclaim some land to the extent of  $7\frac{1}{2}$  or 8 acres, so that they will be put to no expense in purchasing a frontage. The property will be extremely valuable for wharfage purposes, and the only expense which the Government would have to incur would be in filling in. Then a short tunnel would bring the line to the head of Careening Cove, where there are  $2\frac{1}{2}$  acres of land which the excavations from the tunnelling would no doubt reclaim. From there it would be an extremely short cut by a tunnel either to Milson's Point to the line proposed, or to Kirribilli Point, which would be directly opposite the line on the other side, if the Railway Commissioners' scheme for carrying the railway to Hyde Park were agreed to.

1873. So that you have four tunnels? Three tunnels.

1874. If you came down to Kirribilli Point you would come out by a tunnel? Yes.

1875. And you would do the same with Lavender Bay? Yes; but I should make Careening Cove the depôt for the railway.

1876. But you would also use Neutral Bay for that purpose? If it was required. It is in the hands of the Government, and something like 10 acres could be reclaimed there.

1877. You would put the passenger stations at the mouth of the tunnel either at Lavender Bay or at Kirribilli Point? Yes. I think that there are about 40 extra chains in the route which I propose. You could also extend the line to Cremorne, and to Manly from the top—it would serve both extensions.

1878. Your proposal has this advantage, that it serves the people between the present terminus at St. Leonards and Pearce's Corner? Yes, most decidedly.

1879. And it has the advantage of serving the people in the most densely populated part of St. Leonards? Yes.

1880. It is about centrally situated for the suburbs of the North Shore? Yes.

1881. What is the difference in cost between your proposal and that of the Commissioners? I have not reckoned that out at all, but I should say that the cost of my scheme would be considerably less than the cost

W. L. Vernon,  
Esq.  
9 July, 1899.

- W.L. Vernon, cost of the proposed scheme, because the value of the land required to be purchased would be less. I think I understood that the resumption of land in Lavender Bay would come to something like £67,000. There will be nothing like that to buy in this scheme.
- 9 July, 1890. 1882. But you have three tunnels? Certainly; but purchasing land for a tunnel is very different from purchasing a water frontage.
1883. You are a professional man;—do you think it possible to offer any evidence in favour of this proposal without first testing its practicability by taking levels? I think the tunnels get one over the difficulty of all the inconvenient physical features of the land.
1884. What are the lengths of these tunnels, roughly;—what is the length of the first one, towards Long Bay? About 25 chains.
1885. Then the middle one? About 15 chains, between Neutral Bay and Careening Cove.
1886. Then between Careening Cove and Lavender Bay? About 20 chains.
1887. And between Careening Cove and Kirribilli? About 28 chains.
1888. Can you get to the wharf level at the head of Lavender Bay? No, you cannot. You would have to take a siding with the same grade to get down to it.
1889. At Careening Cove you do get to the wharf level? Yes.
1890. Is not Careening Cove very shallow? No; there is a deep-water frontage where the new wall is to be erected.
1891. Can you say what the feeling of the people of the North Shore is about this? I am not prepared to speak definitely, but I know that those on the eastern side would feel it greatly if no more accommodation was granted to them than the western scheme would give them.
1892. The western scheme will be of no advantage whatever to the people east of the tramway line? I do not think that it will.
1893. Practically it would only open up the country between what points would you say? Between the present tramway and the existing station at Gore Hill, I imagine.
1894. Would not the extension of the line to Milson's Point open up the country between Pearce's Corner and the present St. Leonards' Station? That country would be opened up in either case, but it would give greater conveniences to the people on the North Shore if a central line were constructed. To mention my own case, I have a place at Hornsby, but I cannot get there by the present line, so I drive; I never go by rail.
1895. *Mr. Copeland.*] The adoption of the tunnels which you propose would get rid of any difficulty as to grade? Yes.
1896. All that you would have to do to alter the grade would be to take an extra few feet from the length of the tunnel? True.
1897. May you not find when you come to make an accurate survey and to work out the levels that you will have to extend the curve considerably, so as to get the level to the eastward? That may possibly be necessary, but from my rough calculations and observations I do not think so.
1898. You have gone to no calculation whatever as to the cost of land resumption? No. I have only looked over the country generally. Anyone can see that the ground on the route which I propose is covered by far less valuable properties than is the ground upon the other route. There is no comparison between them at all.
1899. You are under the impression that the route which you propose would accommodate a greater number of people than the route which we are considering? That is my idea. There is another point in favour of my line, but I am not prepared to speak on it so confidently, and that is, that the shipping will be kept on the eastern side of Kirribilli Point instead of passing through the confined space to Lavender Bay, which is becoming more crowded every day.
1900. Do you propose to have the terminus at Milson's Point? I make that optional. I do not think that that affects my scheme at all.
1901. Would there be any necessity, if your scheme were carried out, to continue the tramway? I should take it up to the station in Miller-street, so as to make a junction, and it would then go right on over the new bridge.
1902. Would not the tramway and railway be running parallel? No; they would run across each other at right angles.
1903. You say that the tunnel to Kirribilli Point would be 28 chains long—do you think that anyone residing midway over it would care to travel 14 chains to get to the railway? Yes; they would have to take the ordinary roads, I presume.
1904. Do you think people would prefer to travel through tunnels like rats to coming out into the open daylight? You have certain physical features to contend with, and you must deal with them the best way you can. I think the short tunnels will be no great objection.
1905. I suppose you have seen Mr. Hamand's proposal? No, I have not.
1906. I suppose you can give the Committee no assurance as to what grade your proposed line will have? Not accurately, because I have not been in a position to take the accurate levels, but I know pretty well the height from the water at Miller-street, and with these tunnels I think you can take a very level grade right down to the water. I have calculated it out, and I think the grade would be 1 in 60.
1907. Still you have made no survey? No.
1908. So that it is mere guesswork at the present time? It is, to a certain extent, but I have some data.
1909. Your opinion is based upon the mean levels, I suppose? Yes.
1910. *Dr. Garran.*] Your route runs through what is now the settled part of St. Leonards? Yes.
1911. If Mr. Deane's line is made, and the Crow's Nest Estate is cut up, that will be as thickly populated as the present settled part of St. Leonards? On one side, but it skirts the water closely.
1912. Still there is a good deal of land between the railway and the water's edge upon which houses could be built? There is some, but the line has not a central position.
1913. The land on the western side of the line will not contribute so much traffic as that on the eastern side? Yes.
1914. Because it is limited in area? Yes.
1915. Still there will be a considerable population settled there some day? Undoubtedly.
1916. If we take your route we shall have to buy small pieces of land from a large number of proprietors? Yes.
1917. But with the other route we should have to buy a large quantity of land from one proprietor? On the Berry Estate—yes.

1918. In that case the clause of the Land Resumption Act which allows us to deduct from the value of the land taken anything which it gains by the construction of the railway will come into force? Yes.
1919. So that we shall not have to pay so much for land going through the Berry Estate? I think you would have to pay more for the water frontage.
1920. You think that the ground gained at Careening Cove and Neutral Bay would compensate us for what we lost in other ways? Yes.
1921. You think your line will be cheaper, and would suit the present population better? Far better.
1922. Still you would have to make some resumption in Lavender Bay? Yes, at the extreme point.
1923. You have not considered the question of crossing the harbour? No. I have taken my line to Kirribilli in order to meet Mr. Eddy's scheme which was published in the newspaper some short time ago, and I was shown the ferry service which would connect across.
1924. Do you mean Mr. Eddy's scheme for a ferry or his scheme for a tunnel? For both. The tunnel could come out at Careening Cove, while the ferry could go to Kirribilli—that is another of the advantages of my scheme.
1925. Are you aware that the borings across the harbour have shown that the rock is as much as 116 feet deep in some places? Yes.
1926. That would greatly increase the cost of the tunnel? Yes.
1927. Are you aware that Mr. Hamand has suggested a scheme for laying the line in iron tubes? I think I saw something in the newspaper to that effect.
1928. You are not engineer enough to check his estimate? I should not attempt it.
1929. You think you can form an estimate of the surface work and cuttings? Yes; I have been at that all my life.
1930. You have looked into the line sufficiently to hazard the statement on your professional reputation that you think it would be cheaper, all things considered? I am prepared to say so.
1931. You cannot tell us at all about the grades? I give you 1 in 60 as the maximum grade.
1932. Do you know the elevation above the water level at Amherst Station? 240 feet.
1933. You have measured that? Not by a survey, but by aneroids.
1934. You have calculated the mileage in which to make the descent to the water? I have.
1935. *Mr. Humphery.*] You propose to serve the traffic on the eastern side by the line coloured red—would not most of the traffic which you propose to serve be served by the existing tramway and the extension in course of construction? It would to some extent, but not so fully as by a railway, because I anticipate that there will be a large traffic from North Shore itself up into the northern districts, and to the settlements round Gordon and Pearce's Corner. It is far more convenient for the public to drive right to the railway station than to get into a tram and then shift again.
1936. Supposing the people round Pearce's Corner and on the existing line can get to Milson's Point by railway, does it make any difference to them whether they travel to the east or to the west of the present tramline? I will instance my own case. To get from Hornsby to my house at Neutral Bay the railway at present is useless to me, and therefore I drive, and if it were taken to Milson's Point it would be of very little more use to me; but if I could get out at a station centrally situated I should be near my own home, comparatively speaking.
1937. But would it not suit people going to Sydney for business just as well to travel to the west of the tram as to the east of it, as proposed by you? Yes; but I do not think that it would suit the North Shore so well. I do not think that the line as proposed by the department is sufficiently central for the North Shore people, though I admit that for Sydney people, going direct to Hornsby or to Pearce's Corner, it does not matter two-pence half-penny whether they go to the east or west of the line.
1938. *Mr. Dowel.*] What is the length of your route? About 275 chains, as against 235 chains on the proposed route.
1939. The length of the proposal which the Committee are considering is 181 chains? That line starts from the Railway Station at St. Leonards.
1940. Where does your line start from? From the same place.
1941. So that your route is 1 mile and 14 chains longer than the route under the consideration of the Committee. What is the estimated cost of your proposal? I have made no estimate of the cost.
1942. Did I not understand you to say that you had made an estimate, and that your scheme would compare favourably with that which we are considering, both as regards grade and cost? I have made a rough estimate as to the value of the resumptions, such as an ordinary business man, looking over the ground, might make.
1943. What is the value of the resumptions? I have not gone into particulars.
1944. Then how did you arrive at your estimate? I walked over the two routes, and saw the difference in the character of the settlement on each.
1945. Have you made any estimate of the cost of construction? No.
1946. Do you know anything of the cost of the earthworks or of the tunnels? I am not prepared with that evidence.
1947. *Mr. Copeland.*] You merely indicate a route? Yes. I should like to say, in explanation of the length of my route, that I take up the Cremorne and Manly route. I made the Government route 2 miles 75 chains. I have not had the advantage of seeing the last scheme submitted to the Committee. I admit that my route is the longer, but it serves a double purpose.

The following letter was forwarded by Mr. Vernon in explanation :—

Sir,

Union Bank Chambers, 10 July, 1890.

In connection with the evidence I had the honor of tendering yesterday, in reference to the extension of the North Shore Railway, it was suggested that the alternative scheme I advocated involved an additional length of line of nearly 2 miles beyond that of the Government scheme.

May I be allowed to confirm my own evidence by stating that measurements taken on the map of the Government scheme give the following results :—

Government scheme, from St. Leonards' Station to Milson's Point (westward), 2 miles 44 chains.

Alternative route (eastward), 3 miles 12 chains.

Or a difference only of 48 chains (half a mile) against the latter, instead of the suggested 2 miles.

I have, &c.,

W. L. VERNON.

The Secretary, Parliamentary Standing Committee on Public Works.

Mr.

Mr. Richard Porter, fruit-grower, Gordon, sworn, and examined:—

- Mr. R. Porter. 1948. *Mr. Copeland.*] Where do you reside? At Gordon.  
 9 July, 1890. 1949. What is your occupation? I am a farmer—a fruit-grower.  
 1950. Have you come prepared to make a statement to the Committee either in favour of or against the proposed line? I have come to speak in favour of it, and to show the produce and wood taken from the district, and the manure brought into it.  
 1951. Have you prepared any statement? No.  
 1952. You know the route of the proposed railway? Yes.  
 1953. I suppose you have seen the surveys? Yes.  
 1954. Do you think that that railway would convenience yourself and your neighbours? Yes. About 50,000 cases of fruit go out of the district in twelve months.  
 1955. Is there any likelihood of that increasing? Yes; it increases every day, because more orchards are continually being planted.  
 1956. Do you know how many cases went away the year before last? About the same number.  
 1957. Then the quantity has not increased much in one year? It would not increase very much in one year.  
 1958. But you think that it will increase considerably? Yes, because more people are planting.  
 1959. I suppose there is plenty of good land available for additional orchards? Yes, plenty.  
 1960. Are you and your neighbours desirous of seeing the line constructed? Yes.  
 1961. If it were constructed, would you make use of it to bring your fruit to Milson's Point? Decidedly.  
 1962. It would be the easiest way of getting to the Sydney market? Yes.  
 1963. Do you make any use of the railway at the present time? No; it is too far round.  
 1964. Where do you reside? About a quarter of a mile from Pymble Station.  
 1965. You are decidedly in favour of the route proposed by the Government? Yes.  
 1966. You wish to see it carried out? Yes.  
 1967. Do you speak for yourself only or for the Lane Cove people—have you had any meetings? No. We had a sort of meeting. We were speaking about the line, and we came to the conclusion that it is no use where it is.  
 1968. Were you asked to represent your neighbours' views here? Yes.  
 1969. How many were there at the meeting? It was not quite a meeting. I went through them and spoke to them.  
 1970. You think that the people generally are in favour of the proposed line? Yes.  
 1971. And that if it is constructed they will make use of it in order to send their fruit to market? Yes.  
 1972. *Dr. Garran.*] Do you think the quantity of fruit produced by your district would be doubled if the railway were made? It would take some time.  
 1973. Do you think it would be doubled in three years? No.  
 1974. Would it in five? No; I think it would take ten years.  
 1975. Before the 50,000 cases became 100,000? Yes.  
 1976. How far are you now from Milson's Point by road? Ten miles.  
 1977. If you were only five miles off, would you send the fruit by railway? I should.  
 1978. And have it shipped across the water? Yes.  
 1979. Do not many of the fruit carts bring back manure? Not many. They bring a bag or two sometimes.  
 1980. There is very little return freight? They have as much bulk going back as they have coming, because empty boxes take up as much room as full boxes.  
 1981. But they do not bring back anything heavy? No.  
 1982. What do you think it costs to cart fruit to market now? It requires a man and a horse, and the man has to get up at two or three o'clock in the morning to get to market in time. It costs 10s. or 12s. a load.  
 1983. For what do you expect to send it by railway? For less than half that.  
 1984. That would include the ferrying across, and the cartage on this side? Yes, and you would not be troubled with a horse in town.  
 1985. Would you have to make your own private arrangements for carting to market? No; there would be plenty of vans.  
 1986. Would you save half what you at present pay for cartage, and have all trouble taken off your hands? Yes, fully that. About 1,000 tons of bonedust and lime come into the district each year. They use a large quantity of lime now. The trees are subject to a number of diseases, and they apply a great deal of lime to them; they think that there is nothing so good.  
 1987. Where do the lime merchants get that lime? They get it from Marulan and those places.  
 1988. It does not come by sea? No, by rail. We buy it from the dealers in Sydney, and they send it to us.  
 1989. Do you think that the railway would carry 1,000 tons of lime and other manures? I do.  
 1990. What would be the freight on that to Gordon from Milson's Point? I do not know what it would be. They charge 1s. 6d. a ton for wood.  
 1991. How many tons do you think come down by the railway? Some of the wood is carted, and some is sent down by trucks. I suppose there are about 50 tons a week sent down altogether, but there are thousands of tons which would come down but for the expense. The railway charge is 1s. 6d. to St. Leonards, and then you have to pay 2s. 6d. more to have it delivered to the wood-yards, so that it costs you 4s. for 6 or 7 miles of carriage.  
 1992. You think there would be an increased traffic in wood, lime, and fruit, if the railway went down to the water's edge? Yes; I am sure that there would be.

THURSDAY, 10 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Captain Benjamin Jenkins, Member of the Marine Board, sworn, and examined:—

1993. *Chairman.*] You were at one time, I think, Mayor of the borough of St. Leonards? Yes.
1994. And an alderman of that borough? I was an alderman for ten years, for four years of which I was Mayor.
1995. Are you still an alderman? No.
1996. You are a member of the Marine Board? Yes.
1997. An elected or a nominated member? An elected member.
1998. Representing what interest? The shipowners.
1999. Do you know the proposal to extend the line of railway from the present station at St. Leonards to Lavender Bay? Yes.
2000. Are you well acquainted with that part of the district? Yes.
2001. In your opinion, does Lavender Bay offer good facilities for shipping goods to and from a railway? I did not approve of the line coming down to Milson's Point.
2002. Why? Because I think that, what with the tram and the ferries, Milson's Point has as much traffic now as it can have, while it is not a suitable place for shipping.
2003. Lavender Bay is not a suitable place for shipping? Lavender Bay is not a suitable place for shipping, because all the vessels going there would have to come through the very narrow waters between Milson's Point and Dawes' Point, which is the narrowest part of the harbour.
2004. Have you had much to do with the shipping of this port? Yes.
2005. For how long? It is thirty-six years since I first came here. I came here as first mate of a ship, and have been connected with the shipping of this port ever since.
2006. Why is Lavender Bay not a suitable place for shipping? Because of the want of room there, and because all ships going there would have to go through the narrow channel which I have mentioned. In my opinion the shipping should either be below Kirribilli Point or above Blue's Point—below preferred.
2007. Apart from that, would the railway serve the best interests of the North Shore district, suppose it were for passengers only? It would not serve those living about St. Leonards—they seem to have been ignored altogether.
2008. Would it be of any use to the people living down towards Middle Harbour? In my opinion it would be of no use to any one on the heights of St. Leonards, as there is no station near there.
2009. Whereabouts is the population located which this railway would begin to serve? The population is all to the east of the proposed line. It would not serve any of the people of St. Leonards.
2010. Where would you suggest that the railway should be brought? I think Kirribilli Point, if you must have it at the nearest point to Sydney. That, in my opinion, would be the nearest and most suitable place, while the line would come down into Neutral Bay, a fine harbour for shipping.
2011. You would extend it so as to touch Neutral Bay and come to Kirribilli Point, if it were necessary to bring it to the place nearest to Sydney? Yes.
2012. Is Neutral Bay suitable for shipping? Neutral Bay is the best place for shipping on that side of the harbour.
2013. Is it better than Cremorne? I consider that Cremorne Point and Kirribilli Point enclose Neutral Bay. Cremorne is a fine natural wharf with deep water on each side.
2014. Have you anything else to tell the Committee? No; I do not think so.
2015. *Mr. Dowel.*] You have stated that there will be considerable difficulty in taking vessels to Lavender Bay? Yes; because you have to manœuvre in the narrow fairway.
2016. Would there be more difficulty in taking them into Lavender Bay than into Sydney Cove? Yes; for the Cove is nearer to the wide part of the harbour, and it would be increasing the traffic in the narrow part of the harbour.
2017. What would be the difference between taking a vessel into Lavender Bay and taking it into Sydney Cove? A vessel going to Lavender Bay would have to come from the wide water below Fort Macquarie and Kirribilli through a narrow channel, and in going out large ships would be nearly across to Dawes' Point before they could turn round.
2018. Is not Lavender Bay as large as Sydney Cove? Nothing like it.
2019. What is the area of Sydney Cove? I think Sydney Cove is about 1,800 feet wide at the entrance, and that width does not diminish very much as you approach the head of the bay. And you must remember that Sydney Cove is smaller now than it was before the wharves there were erected. If you make wharves in Lavender Bay its area will be very much diminished.
2020. What is the area of Sydney Cove? I cannot say.
2021. Can you inform the Committee of the width of Lavender Bay? I have a plan of the harbour here, on which I can explain matters. [*Witness pointed out on the map the relative size of Lavender Bay and Sydney Cove.*]
2022. So I understand that there is very little difference between the areas of the two bays? There is a good deal of difference. In the first place the Cove is much deeper.
2023. Not according to the measurements which you took just now on the map? Yes, there is, because a couple of hundred feet must be taken up for wharfage purposes on each side of the bay, and more at the head of the bay.

Captain  
B. Jenkins.

10 July, 1890.

- Captain B. Jenkins.  
10 July, 1890.
2024. But I mean their areas at the present time? There is not much difference in width at the entrance at M'Mahon's Point and the eastern shore than there is between Campbell's and the Orient Company's wharves.
2025. But you can give us no further information with respect to the areas of the two bays? No.
2026. What is the depth of water in Sydney Cove? From 8 fathoms at the entrance to  $3\frac{1}{2}$  close up to the wharves at the southern end.
2027. What is the depth in Lavender Bay? From about 6 fathoms to perhaps 3 fathoms a little way from the shore.
2028. Then the depth of water in Lavender Bay is nearly equal to that in Sydney Cove? There is not much difference.
2029. Do you not think that the eastern side of Lavender Bay is a suitable place to bring the railway to for shipping purposes? I do not think that it is.
2030. For what reason? In the first place you have not got one foot of level land—you will have to make all the land, and there is no road down to it.
2031. That is provided for in the proposal before the Committee? I have not taken notice of it. I go by what I know of the bay.
2032. That difficulty in your mind having been got over, what other difficulties exist? The place is very small. If a steamer 400 or 500 feet long went in there to load coal there would not be much length to swing.
2033. But the width of the two bays being about the same, it appears to me that there would be no more difficulty in swinging in one than in swinging in the other? The bays as they are now are nearly alike, but, in width, when you make the wharfage at Lavender Bay, there will be a considerable difference in every way.
2034. Have you made yourself acquainted with the proposal before the Committee? I have not seen the maps; I have seen the line. I speak from what I know of the place.
2035. Of course you know the bay exceedingly well? Yes.
2036. You were asked by the Chairman whether you consider Milson's Point a suitable place for a passenger terminus—is it not, in your opinion, the best point in the harbour that could be selected? I think that if the railway passengers must come to Lavender Bay, they could just as well go on board the ferry steamers at the head of the bay as at Milson's Point, which is now fully taken up with the tram and vehicular traffic. There is not much land at Milson's Point.
2037. You do not think that there is sufficient room for a passenger terminus there? No. A train could come in and go back again, but there would scarcely be room for a turntable.
2038. Suppose there were sufficient room there for a passenger terminus, would it not be the most convenient spot to which the train could be brought so as to give access to the Circular Quay? I suppose it would be the nearest point to the Circular Quay, but I do not think that it is a suitable place for a railway terminus, because we never bring ships to a point; they generally go up into a bay.
2039. I understand that you think some other spot on Lavender Bay would be much more suitable for a station? I think so, because of the traffic which there is already at Milson's Point, and that traffic must increase.
2040. *Dr. Garran.*] You seem to think, as a nautical man, that there will be some difficulty in manœuvring ships in Lavender Bay? Yes, and I am opposed to forcing traffic into those narrow waters, so as not to block the fairway.
2041. Will there be any greater difficulty than there is now in manœuvring ships between Dawes' Point and Miller's Point—is not that equally in the narrows? No; it is not so narrow there.
2042. Still all the ships have to pass between Milson's Point and Dawes' Point? Yes, but I object to ships manœuvring there. Sometimes, when the large boats are coming out of the Cove they swing right out and block the traffic.
2043. I understand you to divide Port Jackson into three parts—the broad lower harbour, this narrow part, and the broad harbour above? Yes.
2044. You object to congregating too many large ships in what we may call the narrows, between Kirribilli and Blue's Point on one side, and Fort Macquarie and Dawes' Point on the other? Yes.
2045. Would there be more trouble in berthing a vessel in Lavender Bay than between Dawes' Point and Miller's Point? At the latter place you have more room.
2046. But in either case you have to pass through the narrows? Between Milson's Point and Dawes' Point is the narrowest part of the harbour, and a ship must naturally find it difficult to swing there.
2047. They go in bow first? Yes.
2048. Would they not swing in Lavender Bay itself? These boats would have steamers to assist them.
2049. Do not the Orient boats come straight into Sydney Cove? Yes, with two steamers attached to them, and then they nearly block up the place. If more boats came in it would make things worse.
2050. Would vessels swing in the fairway before going into Lavender Bay? They would swing either going in or coming out.
2051. Do not they swing from the Quay itself? They do not do so always. Sometimes they swing outside and come in stern forward.
2052. But they often come straight in, and are tugged out, swinging in Sydney Cove itself? I saw the "Kaiser-i-Hind" one day trying to come up, and she had to make a second attempt.
2053. You wish to show that there is some difficulty now in Sydney Cove, and that the difficulty would be greater in Lavender Bay? Yes, while the traffic would increase.
2054. You say that there will be greater difficulty in dealing with large ships in Lavender Bay than there is in dealing with vessels in the little bay between Dawes' Point and Miller's Point? Yes.
2055. You know that the Government have bought land at Darling Island;—would there be greater difficulty in getting there than in getting to Lavender Bay? No.
2056. There would not be so much difficulty in swinging at Darling Island as there would be in swinging in Lavender Bay? No, because there is not as much traffic there.
2057. You would rather take an Orient liner to Darling Island and bring it back again than take it in and out at Lavender Bay? I do not say that I would rather do that; but still at Lavender Bay there is more traffic, and there is the difficulty of the narrow waterway.
2058. The difficulty in the narrows is not in passing through, but in swinging there? Yes, there it comes in.
2059. Will the difficulty of swinging at Darling Island be greater than it is at Sydney Cove? No.
2060. It is an easier place? Yes.
2061. If you had to berth vessels you would rather berth them at Darling Island than at Sydney Cove? I think I should.
- 2062.

2062. If you had large ships you would rather take them to Darling Island than to Lavender Bay? Yes.
2063. *Mr. Copeland.*] If I understand you aright your greatest objection to the Lavender Bay scheme is that it would tend to concentrate more shipping in Lavender Bay, and thus increase the traffic at this point? Yes.
2064. Not only is Lavender Bay smaller than Sydney Cove, but it would also confuse the existing traffic to concentrate the shipping more in this narrow part? Yes; that is my idea. Some people say that there will be no coal trade to this place, but I believe that there will be a great deal of traffic.\*
2065. Would you anticipate any difficulty with the shipping if it were concentrated in Neutral Bay? Neutral Bay is so much larger—there is plenty of room.
2066. You think that it would not interfere with the fairway? It would not; and it would be more convenient for a vessel, if she were going to sea, to leave Sydney Cove and go to Neutral Bay than it would be for her to go to Lavender Bay.
2067. Then you think that there will be no difficulty in providing ample accommodation for coal and other trade at Neutral Bay? No; it is a very fine harbour, and ships could get away at any time.
2068. *Mr. Trickett.*] There is a proposal to bring the line round to the eastern side of North Shore? I have seen it.
2069. What do you think of it? In my opinion it is the better scheme of the two.
2070. Why is it the better? It would give you a station in St. Leonards; whereas, with the Government scheme, there is no station at all in St. Leonards. It appears the people of St. Leonards are not considered.
2071. Would it serve as much or more population than the Government scheme? More.
2072. Would the present scheme be of any benefit to the people who use the existing tramway? None whatever.
2073. Not one of those people would use the railway? Not one; the station is too far away.
2074. You know the property adjoining Admiralty House, where they are proposing to build wool-stores? Yes.
2075. Do you think that that would be a desirable place at which to concentrate a large amount of shipping trade? No, I do not.
2076. For what reason? Because it is right in the narrow part of the harbour—it would block the fairway.
2077. If a large wool and coal shipping trade were done there would it inconvenience the general traffic of the port? It would, as I have before stated.
2078. Because of the narrowness of the harbour at that place? Yes.
2079. When you were speaking about Lavender Bay a little while ago you said that it would provide less shipping room than Sydney Cove? Yes; the Cove is the finest shipping place in Sydney.
2080. Did you mean that Lavender Bay would have to be filled in considerably and made much less than it is now? Yes.
2081. Do you remember when the American mail boats used to lie in Lavender Bay? Yes.
2082. Was it found a suitable place for ships to lie in? No, it was not a suitable place, and there was a good deal of complaint about the vessels lying there. They used to swing too far out into the fairway, and were in the way of the ferry-boats. The people petitioned to have the steamers removed from there.
2083. *Mr. Garrard.*] Would not the same objection hold good in Sydney Cove if a vessel were allowed to swing at her anchors there? Yes.
2084. Did I understand you to say that your objection to Lavender Bay as the terminus of the line was that it would not afford sufficient facilities for the shipment of cargo? Yes.
2085. How do you propose to get the line down to Neutral Bay? Well, I am not an engineer.
2086. But you said that you believed in that scheme? I believe that they have a tunnel to get into Lavender Bay, and they could tunnel under the reserve and come into Neutral Bay.
2087. Take a header down. The reserve is the highest part of St. Leonards? The tunnel would be a long one, of course.
2088. Do you think that Neutral Bay would be as convenient for passengers as Milson's Point? No. I said that Milson's Point would be a more convenient point for passengers than Kirribilli Point, if they must go to the Circular Quay.
2089. But you think Kirribilli Point would be nearly as good a place for passengers as Milson's Point? Yes, because you could run them across to Fort Macquarie.
2090. We should interfere with a great deal more valuable property on your route along the western side of Neutral Bay to Kirribilli Point than we should on the route to Milson's Point? No; I should say that some of the most valuable property on the North Shore is in Lavender Bay.
2091. Upon the east side of the bay? From the head of the bay, where the tunnel is to come out, to Milson's Point.
2092. Is that more valuable than the properties at Kirribilli Point? I do not know, but it is more valuable than any other part.

George Pile, Esq., auctioneer, sworn, and examined:—

2093. *Chairman.*] You reside in Sydney? At Parramatta.
2094. You carry on business in Sydney? Yes.
2095. You are pretty well acquainted with all the suburbs? Yes.
2096. You have offered to give evidence before the Committee in reference to the proposal to extend the railway to Lavender Bay;—what information can you give us? First I will give you the number of houses to the east of Milson's Point.
2097. That is, to the east of the proposed line? Yes.
2098. You know where the line comes in at Lavender Bay, and where it runs through the Berry Estate? I think so.
2099. You know the Government proposal, and you have seen a sketch of Mr. Hamand's proposal? Yes. The number of houses in the two boroughs in Neutral Bay—
2100. East St. Leonards and St. Leonards? Yes. The number of houses there is 221—171 in East St. Leonards, and about 50 in St. Leonards. In the Mossman's Bay ward of the St. Leonards' Borough there are 172 houses, and in the Warringa ward 181 houses, making a total of 574.

\* NOTE (on revision):—For this reason—Time is of great importance to large vessels. Should a large steamer require a thousand tons of coal, say, this evening, it would be brought here ready, if a suitable coaling-place were made. She would go alongside, have them in in a few hours, and be off, thereby saving the expense of loading at Newcastle and the time in going there, which would be more than would pay for the carriage of the coals to Sydney.

Captain  
B. Jenkins.

10 July, 1890.

G. Pile, Esq.

10 July, 1890.

- G. Pile, Esq.  
10 July, 1890.
2101. But there must be more than that number of houses to the east of the railway? Those are the houses which would use a railway to Neutral Bay and Cremorne. Another thing which I should like the Committee to have on record is the space required in other places for terminal stations. As far as I can ascertain, the total station area at Redfern is 35 acres, 20 of which are devoted to the goods traffic. At Darling Harbour, as far as Union-street, there are about 19 acres; and the reserve for goods traffic at the Melbourne Spencer-street station is about 350 acres—that is to meet the increase of traffic in the future. So it will be necessary that ample provision should be made at North Shore for the large traffic which there will be there.
2102. You know Milson's Point, to which it is proposed to bring the railway? Yes.
2103. Do you think there is sufficient room there for all the possible requirements of a railway at present? There would be if only the parishes of Gordon and Willoughby were served, but I do not think it will be sufficient for the traffic which there will be when the country to the north is more settled, as it will be in time.
2104. You think that the construction of a railway to the proper point at the deep waters of Port Jackson would develop a large passenger traffic on the North Shore? Yes.
2105. But it would, of course, depend upon the conveniences given by it for getting to Sydney? Yes. If you leave the terminus of the railway where it is I do not think that the traffic upon it will grow very fast.
2106. But you think that if a railway is brought to a convenient point on the harbour the traffic will increase? Yes. There is no traffic which increases so much as suburban traffic does.
2107. You know the whole of that country? I do.
2108. Is it not very admirably situated for residential purposes? The district on the Lane Cove ridge is unquestionably the most beautiful of all the suburbs.
2109. Do you think that the scheme before us would serve the greatest population, present and future;—take the present population? Do you mean taking the railway from Milson's Point, and doing nothing further?
2110. Yes? I do not think that it will sufficiently serve the North Shore districts.
2111. Do you think that the line ought to go more to the eastward than it does at the present time? I think that the proposed line may give you the easiest grades, and may be the cheapest, not having any lengthy tunnels; but if you wish to serve the North Shore districts you must carry a railway to the east, touching Neutral Bay, Shell Cove, and Mossman's Bay.
2112. If you touched Neutral Bay with the railway you could extend the line on to any of the bays to the eastward? I think so; and also to Manly and towards the Spit.
2113. What do you think of Mr. Hamand's scheme? For the special object which you have in view I do not think that it is as good as the Government scheme.
2114. What object have we in view? To get the quickest route to the existing ferry steamers.
2115. Should not the object of the construction of a railway be to serve the greatest number of people? Yes.
2116. Do you not think that a good grade is a great advantage, especially on a suburban line, where you want to carry heavy loads? Yes.
2117. Do you not think that it would be worth while to lengthen the line in order to get a good grade? Provided that you can go through the large residential areas of St. Leonards. I have not had much time to consider the proposal before me.
2118. You think that a line to serve the residents of North Shore should be more to the eastward? I do not think that the line which the Government propose would be sufficient. You would require another line to Neutral Bay, and out in that direction.
2119. *Mr. Tonkin.*] Do I understand you to say that those people will only benefit by the extension of the line from the head of Lavender Bay through to Neutral Bay? If the line is only taken to Milson's Point, as shown on the plan, it will not serve a great part of the district; but you will need another branch from the head of Lavender Bay towards Neutral Bay.
2120. Do you not think that more population would be served by a railway going to the east, such as Mr. Hamand proposes? Certainly, if you could construct it with an easier grade.
2121. The railway proposed by Mr. Hamand would have an easier grade than the Government railway; but, leaving out of consideration the question of grades, do you think that it would go into a better-populated district than the proposed line? Yes; it would go through the centre of the present population.
2122. If that is so do you not think there would be more traffic upon it than upon the proposed line? Yes; the present population of St. Leonards is not on the Government line at all.
2123. It is to the eastward of it? Yes.
2124. Referring to the map, which line do you think would serve the greater population—Mr. Hamand's or the Government line? Unquestionably Mr. Hamand's. It goes right through the centre of the population.
2125. Which line would you recommend? I should have to go into the question of cost.
2126. Supposing the cost to be nearly equal and the grades the same? Unquestionably Mr. Hamand's line serves the larger population, and it also goes close to the township of North Sydney.
2127. Would that line serve the future population as well? It would give direct communication to a large quantity of land which the Government line would not serve at all.
2128. And would also give facilities for a branch towards Manly and Cremorne? I question whether it would serve Cremorne. It would not serve the slopes to the harbour, but it would serve the slopes towards Long Bay and Middle Harbour.
2129. Supposing that the deviation lengthened the distance by half a mile, while it reduced the grade to the almost nominal one of 1 in 75 from 1 in 50, do you think it would be preferable? Singularly enough this is the very line about which I made calculations some years ago, starting from Willoughby Falls.
2130. You have no hesitation in saying that you prefer Mr. Hamand's line to the proposed line if it can be constructed with a less grade than, and with a slight increase of distance over, the proposed line? Yes.
2131. Do you think that if the railway were extended to Milson's Point the goods traffic should be concentrated there, and along the east side of Lavender Bay? If you have sufficient space.
2132. Do you consider that there is? I have told you what is required in other places. Of course Lavender Bay is very central if you have sufficient room there, but I think that if the traffic grew to large proportions you would not have sufficient space at Lavender Bay for it.
2133. Do you think that there is any probability of a very large traffic coming there? I think so, eventually.
2134. To meet local requirements? No. I think that when the railways penetrate into the agricultural district of the north, and when New South Wales becomes, as it will become, a very large wheat-producing country, you will require great facilities for the shipment of wheat as well as for the shipment of other produce.

2135. Do you know that we have communication at the present time from Darling Harbour with the G. Pile, Esq. north? Yes.
2136. Remembering that, you think that North Shore would be a large depôt for produce? I think so. 10 July, 1890.  
Not only is the distance to it from the north less, but the existing wharfage accommodation round the harbour is also being so rapidly used that it is getting scarce, and you will have a need for the water frontages at North Shore in the course of time. The Government alone are taking half a mile of water frontage in Darling Harbour.
2137. Taking into consideration the water frontages which would be available if the railway was carried on towards Neutral Bay? I suppose you could get 4 miles of water frontage on the shores of Neutral Bay, Shell Cove, and Mossman's Bay, or at least over 3 miles.
2138. Taking that into consideration, would you advise the carrying of the line beyond through to Neutral Bay? If you had a large goods traffic I do not think that the accommodation which you get on the shores of Lavender Bay would be nearly sufficient.
2139. If we were to have a very large goods traffic it would be necessary to carry the line through to Neutral Bay and use the water frontage there? Yes; my estimate of the amount which the Government would have to pay for resumption in Lavender Bay is about £50 a foot for water frontage.
2140. What do you think would be the value of water frontages at Cremorne and Neutral Bay, per foot? The value of the water frontages at Cremorne is from £10 to £15 a foot.
2141. And Neutral Bay? £20 to £25, and you will probably have to give compensation to the people who have frontages to the cross-streets which the railway will stop.
2142. *Mr. Garrard.*] What depth do you allow? Well, about 150 or 200 feet. -
2143. *Mr. Dowel.*] Can you inform the Committee what would be the probable cost of resumption upon Mr. Hamand's line? I assume that you will take the same width as the Government have done with other railways— $1\frac{1}{2}$  chain, and I do not think that from the junction to Willoughby Falls the land would cost more than £10 or £12 a foot, besides reckoning the cost of the houses and small corner pieces which you might take. I think you might reckon upon £25 a foot for the land on the rest of the journey.
2144. Right to the head of Lavender Bay? Yes.
2145. Can you tell the Committee what would probably be the cost of resumption to Cremorne? £20 a foot as far as Cremorne, and £12 a foot to the point.
2146. Would Mr. Hamand's line pass through costly or much improved property? No; you do not take any exceedingly valuable properties till you get to M'Laren-street; to Alfred-street the property is not quite so valuable—there is a cliff there; and there is nothing specially valuable south of Alfred-street until you get on to a level with William-street. From William-street there is some valuable property.
2147. After careful consideration you are of opinion that the resumptions would exceed in cost the amounts which you have named? Yes.
2148. Do you know the distance from the head of Lavender Bay to Milson's Point? From 2,500 to 2,600 feet.
2149. Are you of opinion that that would be a sufficient length for the present traffic, both goods and passenger? If you confine yourself to the local traffic of the parishes of Willoughby and Gordon, taking a fair depth towards the hill, say from 150 to 200 feet, it would be sufficient, but I do not think it will be enough if you have the traffic which I anticipate you will have.
2150. Is Milson's Point a convenient place for connecting the passenger traffic with Sydney? Yes, very convenient.
2151. The distance from there would be shortest? Yes.
2152. You are aware that Mr. Hamand's route increases the cost and lengthens the line very considerably? I am aware that it increases the cost, but I have no knowledge as to what extent it increases the cost.
2153. Taking into consideration the increased length of Mr. Hamand's route—nearly a mile and three-quarters—do you not think that we could gain access to Port Jackson more quickly by the Government route? Of course the Government route is shorter, but it does not go through as much settlement as the other route does, and only on one side of it would the land be settled upon to any extent, besides there is the question of grades for the Committee to consider.
2154. All that would be gained by Mr. Hamand's line would be a local traffic—a suburban traffic? Yes, but if there were a goods traffic from Sydney and the North Shore into the country districts you must bear in mind that a heavier load could be taken up an easy gradient than up a stiff gradient.
2155. Would it not be a disadvantage to have to travel a mile and three-quarters more in carrying goods? But in going up a hill you can take a much larger load with an easy grade than with a stiff grade.
2156. You are of opinion that for present requirements Lavender Bay would provide sufficient accommodation for both goods and passengers? If you only look to the local trade which would be developed in the parishes of Willoughby and Gordon.
2157. You have a considerable knowledge of the northern districts, and know what they produce? Yes.
2158. Would any of those products be likely to pass Newcastle and come on to Sydney? I think so. Ships will take in cargo where they discharge. Vessels coming from England or Europe to Sydney would like to take in cargo at the place where they have discharged inward cargo.
2159. What produce do you think would be carried by this railway? I think it probable that New South Wales will be one of the largest wheat-producing countries in the world in the course of a few years.
2160. You are aware that at the present time large quantities of wheat pass Newcastle, and come on to Sydney for sale? Yes.
2161. Do you anticipate that there will be any large business in frozen meat? Yes, I think so, but I have no means of knowing.
2162. But from what you know of what is being done at the present time? Yes.
2163. Do you anticipate that large quantities of hay, chaff, maize, and such produce will come to Sydney from the northern districts? I have not the slightest doubt that large quantities of farming produce will come, and I think that with our climate and soil, which are so eminently adapted for the growth of wheat, New South Wales will become, in the course of time, one of the largest wheat-producing countries in the world.
2164. Do you think that a large quantity of wool will pass Newcastle and come to Sydney? I think so.
2165. It does so at present? I believe so, but I have no special knowledge of the trade.
2166. *Mr. Trickett.*] Suppose this produce did come to Sydney, do you think that the producers would prefer to send it to Lavender Bay if they could take it to Darling Harbour for the same rate? I think that there will be more facilities for shipment at North Shore—more wharves will be available. Of course, in time wharfage space on the south side of the harbour will be very valuable. 2167.

G. Pile, Esq. 2167. You have said that Lavender Bay is only suitable for the traffic from the parishes of Willoughby and Gordon? I do not think that Lavender Bay alone would give sufficient accommodation for the whole traffic. I think you will have such a large trade from the northern districts that it will be found more convenient to ship it from the North Shore.

10 July, 1890.

2168. Captain Jackson, the chief wharfinger here, has stated in evidence that if the trade of Sydney increased 50 per cent. at once there would still be sufficient wharfage accommodation for it at the Circular Quay, Woolloomooloo Bay, and Darling Harbour. That being so, do you think that people would prefer going to Lavender Bay? I very much question that it is so; but while wharf space is available on the south side of the harbour, it would be preferable to ship there than from the north side.

2169. They would not like to take the produce to North Shore and then punt it over to Sydney to put it into the ships here? No; but Circular Quay is becoming a dock for large ocean steamers. I do not think that you will ever see anything but steamers there in future.

2170. But are there not wharves round Miller's Point and Darling Harbour? That wharfage is being rapidly used up. The New Zealand boats now go to Woolloomooloo Bay, and the Union steamers go above the bridge.

2171. You estimate the value of the wharfage frontage at Cremorne at £12 a foot;—is it not a fact that the Government have a right to a depth of 100 feet there? As you know, I am interested in property at Cremorne, and our solicitor disputes that right. I believe there is a lawsuit going on about it now.

2172. At any rate, the Government claim it? One of the Government officers has threatened to do certain things; but he has not done them yet.

2173. How much land have you sold there at £12 a foot? A large quantity.

2174. How many feet? 700 or 800 feet.

2175. Did not a good deal of it sell for less;—I think that I saw some of it sold for £8 a foot? No; none of the water frontage sold for less.

2176. What class of population do you think would spring up on the North Shore heights? Very much the same class as are now living in the other suburbs, excepting that there would be no Darling Point people.

2177. Would there be a large working population? The working population are settling fast at North Shore.

2178. Far out? As far out as North Sydney, 3 or 4 miles inland.

2179. You think that that class of population will go out? All classes of population are settling there now.

2180. Do you think that a working man could go 6 or 7 miles out along this railway and come into Sydney for work? They do so in Melbourne.

2181. Where they have land and water journeys to get to their work? The water journey would only cost 1d. each way.

2182. It is the matter of time that I am speaking of? Those who were employed in the northern parts of the city could afford to live at North Shore.

2183. You think that a working population would grow up there, as well as a population inhabiting houses of good value? Yes.

2184. *Chairman.*] I judge from your replies about the wharf accommodation that you think it is not equal to the demand for it? The present accommodation is getting used up fast.

2185. Do you not think that Mr. James Powell is a pretty good authority on the question of wharfage accommodation? Yes.

2186. Tell me if you agree with this:—"Do you think that at the present rate of increase of the population the present accommodation will be sufficient for the shipping trade which we may expect, say, ten years hence?" "I think it would be very hard to forecast ten years." "Take the average increase in the population?" "Judged by the past, I think that the present accommodation will be amply sufficient for the next ten years. I am speaking of the accommodation of the port as it is, and not of the Circular Quay alone."

2187. Do you not think that Mr. Powell has given the matter more consideration than your business would allow you to give it? I think that Mr. Powell has considered only part of the question. He does not there allude to the large amount of wharfage accommodation necessary for the economical management of certain businesses and factories, such as timber yards and smelting works. Several of those businesses have been removed from Pymont, and land is now being reclaimed in Blackwattle Bay to be used for wharfage purposes.

Charles Cyrus Bullock, Esq., surveyor, sworn, and examined:—

C. C. Bullock, Esq. 2188. *Chairman.*] What are you—a surveyor? Yes. I should like to point out that I received my professional training in one of the largest and oldest firms in the west of England, and that that firm carried out engineering works of every description. After I had completed my articles there I was engaged under the supervision of one of the engineers of the Lancashire and Yorkshire Railway Company, and, under his supervision, was afterwards engaged on various other railways, so I profess to have some little knowledge in the laying out of railway lines.

10 July, 1890.

2189. Have you ever laid them out? Yes, I have laid out short railways, sidings, and so forth.

2190. What railways have you laid out? The railway from Macclesfield to Romily, the Burscough Junction, and others, though not on my own responsibility, but under the supervision of superior officers. I then came out here, and passed as a licensed surveyor in 1877, and, because of my engineering training, was sent to Orange to carry out a scheme for supplying water for that town, under the supervision of Mr. Clarke. Subsequently I was employed at North Shore; and in 1882, when I was a first-class staff surveyor, I resigned my position in the Government service to practise my profession privately.

2191. You have already given evidence in reference to this railway, and I understand that you desire to give some further evidence? I merely wish to say that the route proposed by the Government, with the modification suggested by Mr. Deane—that is the flattening of the grade from 1 in 40 to 1 in 50—is the best scheme that has yet been proposed or can be proposed. I assume that it is necessary to take the line down to the water, and I think that the Government route is the cheapest, shortest, and most direct.

2192. Have you seen Mr. Hamand's scheme? I have not seen it, but my partner has been here during the investigation, and I have it sketched on the plan which I will now show you (*plan produced*). I may tell the Committee that I speak from figures arrived at by the actual survey of the ground. The Government line from its point of commencement follows the Parramatta River watershed, which, as you see, has a long fall.

2193. You are speaking now of the line sent to us, not of Mr. Deane's deviation? I am speaking of the line sent to you, but the deviation does not make much difference; it is very slight. The line follows the

the watershed of the Parramatta River, and from the highest point of the plateau at North Shore the slope to the water is much longer than it is on this side. The plateau extends to within a few chains of Long Bay, and if you wish to take a railway down to the water by the Middle Harbour watershed you must follow it as Mr. Hamand has done. Mr. Hamand's line has the merit of being carried out by an engineer who understands his business, whereas the principal Cremorne route has been designed in the face of the natural features of the country. The Government line, on the other hand, falls all the way. To Bay-road it would fall with a grade of 1 in 44, or, with the modification suggested by Mr. Deane, with a grade of 1 in 50. It would fall all the way to Lavender Bay, while Mr. Hamand is compelled, through following the wrong watershed, to fall only about 80 feet in nearly 2 miles. Of course he gets a grade into 1 in 70, but then his line is lengthened by a mile. Mr. Hamand says that that mile will collect more traffic, but I say that it will not, and when Mr. Hamand designed it he was compelled to go in that direction, because of the natural features of the country, which forced him round by Willoughby Falls. The physical features of the country govern the position, and you cannot take a line anywhere you like.

2194. *Mr. Tonkin.*] But do not the physical features force the Government line to the west just as much as they force Mr. Hamand's line to the east? Yes, but the Government line is forced in the best direction.

2195. *Chairman.*] Why? Because it will follow the shortest and cheapest route, and will provide as well for the local passenger traffic and the distribution of goods as Mr. Hamand's scheme or any other scheme. The plateau ranges from 325 to 270 feet in height, and Mr. Hamand's scheme is so low that he could not get access to it from the land, except by the station at Willoughby Falls, from Folly Point-road to Miller-street. Mr. Hamand has no get-out. The land is so much higher than the railway that he cannot arrange for the get-out. The only get-out which he has is the station at Willoughby Falls Creek.

2196. But he proposes a station near the hospital? The hospital is at the end of the line. Mr. Hamand starts at 240 feet in height, and he apparently rises, instead of falling. (*Explaining on map.*)

C. C. Bullock,  
Esq.  
10 July, 1890.

Dugald Thomson, Esq., merchant, sworn, and examined:—

2197. *Chairman.*] Will you tell the Committee what you have to say on this matter? I give evidence because I was appointed by a committee at a meeting held in East St. Leonards, at which I was not present, to look after the interests of the district in connection with railway extension. I had, at first, a personal bias against the Milson's Point scheme, because I reside near Kirribilli Point, and know that if a railway comes near there it will take away from the picturesqueness of the locality, and render it less suited for residential purposes; but when I came to look closely into the matter I saw that these considerations would have to give way in the interests of the district and of the railway. In addition to the evidence which I gave before, and which I came here prepared to support in all its details by authorities for figures, arguments, and so forth, but which I shall not now allude to, I would say I do not think it has been given in evidence that, in spite of what looks like a large sum for this extension, the line from Hornsby to Milson's Point will be the cheapest suburban line yet constructed. The line from Granville to Sydney cost £80,000 a mile; that from Hurstville to Sydney, £40,000 a mile; while the line from Hornsby to Milson's Point would cost only about £32,000 a mile, including the valuable and extensive water frontage, which is an asset that neither of the other lines have. I should also like to say that although Melbourne has twelve suburban railway arms, while Sydney has only three, the Victorian Minister for Railways is proposing a further suburban extension, which will cost £1,683,000, which means a cost of £54,000 a mile, against which our North Shore line would cost only £32,000 per mile. The question has been raised whether a bridge to North Shore would do away with the necessity for the extension of the line, but I think that bridge or no bridge the line would have to be extended to the waters of the harbour, because, should there be no bridge connection between the North and South Shore Railway systems, the extension of the North Shore Railway is necessary to reach the main traffic centre and the waters of the port; whilst, if there is a bridge connection, the proposed extension is the only route by which the approach to the bridge can be reached, and with a bridge the connection of the railway with the water will still be necessary on the North Shore (as it has been found necessary on the South) to develop and provide for the shipping and commercial interests of what will be a large city, which commercial and shipping interests are even now being established, and to provide for, and take advantage of, the very considerable and growing traffic which will continue to centre at Milson's Point even if there be a bridge. It is not to be thought that this line would merely draw passengers from the other suburban lines, though, of course, it would do that to some extent, but it would increase the railway revenue by attracting people on to a railway line who do not now live on one, and would provide for some of the 3,000 new households by which Sydney is yearly growing. It must also be remembered that as North Shore becomes a large city this will act as a suburban line to it. Now, as to the prospect of a goods traffic; as to the route, if the extension of the line be approved; and as to the position of the terminus, should the Milson's Point scheme be adopted, I will shortly state my views. I may say that since I last gave evidence here the prospects of a goods traffic are much stronger than they were previously—that is to say, the immediate prospects, because it was pointed out before that there would be a very large goods traffic. It has been shown by some of the witnesses that there would be a timber trade, especially of firewood, and also a brick trade, and that the traffic would be increased through the establishment of the Pastoralists' Company, which example is likely to be followed by other industries, because with stores for salt, cement, and other heavy goods, a saving of 3s. to 5s. in a ton could be effected upon the carriage of those commodities if they were in touch with the two great highways, the water and the railway, as they would be at North Shore if the extension were made. Supposing a flour mill turned out 400 tons a week, and there was a saving of 5s. a ton, the total saving in a year would be about £5,000, or proportionately less if the saving on a ton were 2s. or 2s. 6d. Although the Commissioners will try not to divide the goods' traffic but to take all to Darling Harbour, they cannot altogether prevent the traffic from going to this terminus, because of the establishment of these businesses, and because the growth of population at North Shore, and the consequent local requirements will necessitate traffic coming down to Milson's Point. As to the question of route, I think I went into that pretty fully before. The only new routes are Mr. Hamand's and Mr. Vernon's. Next to the Government route, Mr. Hamand's is the best which has been suggested, but there are several objections to it which, since, I dare say, they have been dealt with, I need not go into. But there was one remark made by Mr. Vernon in favour of his scheme to which I should like to refer. He stated that the population was all left to the east of the Government proposal, but I think that as the railway has been confined, partly by natural causes, to the Lane Cove ridge, it cannot be proposed as a good thing to take it from the present terminus winding about the Shore, when there

D. Thomson,  
Esq.  
10 July, 1890.

D. Thomson, Esq.  
10 July, 1890.

there is a pretty direct route to the centre of traffic at Milson's Point. To do that it would be injuring the people along the line in order to confer a supposed benefit upon some of the residents between the end of the present terminus and the water, but, if the line wound to the eastward, this benefit would be conferred very largely upon the leasehold property of the Cooper Estate, while the freehold property along the Government route would be injured. The population is now settled mostly to the east, because that part of the district is within reach of communication with the heads of the bays, and when communication is given to parts to the west and further out they will rapidly be settled upon. The Berry Estate possesses some of the finest land upon the shore for residential purposes, and if it is thrown open there will be almost a city population there in the course of a few years, and in that way the balance of the population will soon alter from east to west. Next, as to the question of where to put the terminus—whether the line is to end at Milson's Point, the head of Lavender Bay, or half-way along the bay. With regard to all but the first site, there is the difficulty of levels, which, no doubt, has been alluded to, and the fact that approaches would have to be made for carts and other vehicles. I notice that Mr. Eddy, in his evidence before the City Railway Commission, stated that at Liverpool £750,000 had been expended in trying to bring Tithebarne-street station down to the level of the street. I know that station myself, and it was not more out of level than stations half-way up Lavender Bay would be. The natural approach to these places is from Milson's Point, and the road to them would probably have to be carried from Milson's Point. Besides that, the improved value which the Government line would give to the Government land at Milson's Point has to be considered. I think that it is a mistake that the Government are not allowed to resume more land than they actually want for a railway, and even if they did not want it, I think it would be better to resume this part of the foreshore, because of the increased value which contact with a railway would give to it, and if they sold it again they would reap the value of the improvement. I also think that a very strong argument in favour of the construction of the line to Milson's Point is the fact that a railway should go to where the traffic converges. The private lines try to do that, as is illustrated by the action of the Glasgow Railway Company, who crossed the Clyde at an expense of £4,000,000 in order to get to the traffic centre, as was mentioned by Mr. Eddy. At Milson's Point the tram line and the horse and passenger ferries converge, and it is just the place that a railway company, which lives on traffic, would seek to reach, especially for passenger traffic. It may be said that while private companies might have to go to such a place because of competition, there would be no need for the Government to do so, although the expense would be comparatively small. But I think that it is still more the interest of the Government to carry the railway to such a place, for while a private railway, through competition, might at any moment lose some of the traffic sought by the construction of another line, that would never occur in the case of a Government railway which would gain for all time the full advantage. Then, as to going on to other portions of the harbour, if there was not sufficient accommodation in Lavender Bay for the goods traffic that goods traffic would certainly be payable, and it would be justifiable and easy, since the line was down to the water's level, to take it further on at any time to the other bays, as the work would be mostly tunnelling. As to going further along the foreshores, I think the Government should go to the best position for its own advantage and convenience; and if industries beyond that point desired railway connection, I do not see why they should not allow running rights over their ground, and secure the intervening properties, if necessary, which would prevent the granting of those running rights. It would be to their advantage to do this, and the Government would not hesitate to run their line to wherever these places were established. I have fuller notes, but, in deference to the wish of the Committee, I shall cut them short, and not attempt to elaborate my remarks, but I can do so, if desired.

2198. Do you know the area of the Spencer-street station ground in Melbourne? I do not.

2199. We were told just now by Mr. Pile that the Government there were reserving 350 acres? There is an immense swamp there, where they could practically reserve any area they liked.

2200. *Mr. Dowel.* You stated just now that you had some objections to Mr. Hamand's scheme—have you made yourself acquainted with his proposal? Yes, so far as it is possible to do. His line strikes off about a mile—I am speaking roughly as to the measurements—on the Hornsby side of the present terminus. It passes by the end of Miller-street, near the termination of the private tramway which it is proposed to construct, and then goes over near Willoughby Falls, and down to Neutral Bay by a tunnel, then under Willoughby-street to Milson's Point.

2201. What are your objections to that route? First of all, its greater length, which I heard stated was an advantage, because it would bring more mileage revenue to the Government. This might be the case with a private company, though not if they had competition; but the Government acts for the people, and it would be absurd to make those further out on the line pay more by lengthening the route, so that the line should earn a little larger total. It would also come into competition with the tramway more than the present line would do, and would not serve more people, because the St. Leonards' people would have to go too great a distance to get to it. The places from which he proposes to get traffic are either now well served or are very little inhabited, and although they would become inhabited if the railway were made, such a railway would lose the population on the proposed route from the head of Berry's Bay to the present terminus, which I consider would be much greater than that on Mr. Hamand's route. I also understand that the cost of Mr. Hamand's line will be about £100,000 more than the proposed line, while its only advantage is the better grade which it will have, and that, of course, on the extension only. But I suppose you could get a better grade with a greater length upon almost any line, unless natural difficulties prevented you. I think, however, that Mr. Hamand's line is the best that has been proposed after the Government route.

2202. Do you think that the residents on Mr. Hamand's route would be better served by a railway or by a tramway? Some of them would be better served by a railway, and some by a tramway. All the nearer localities would be better served by a tramway, while the people residing in the very sparsely-populated neighbourhood, at the end of Miller-street and on to the present terminus, would be better served by a railway.

2203. Have you a tolerably good knowledge of the port of Newcastle? Not a good knowledge. I have been there twice.

2204. You have some knowledge of the resources of the northern district. You know its produce of wool, wheat, and stock? Not of my own knowledge—that is, not the exact quantities.

2205. From your knowledge of the way in which business is transacted in Sydney and Newcastle, are you of opinion that any proportion of the produce of the northern districts would pass Newcastle and come on to Sydney, or would it stop at Newcastle, and be shipped from there? I think that all the less valuable produce would be shipped from Newcastle. I saw that some one was said to have made a statement that

the

the whole of the northern traffic would come to Sydney if the line were constructed. I do not think that anyone would make such a foolish statement, but I think much traffic that would otherwise go by rail to Darling Harbour from the north would come to Milson's Point, on account of the shorter distance, if the Commissioners allowed it, and there would be some other traffic in addition to that which does not now go to Darling Harbour because of the extra mileage. But I do not think that the line would interfere with the Newcastle trade to any serious extent.

D. Thomson,  
Esq.  
10 July, 1890.

2206. Do you not know that a large portion of the wool, maize, wheat, and hay from the northern districts finds its way direct to Sydney by the present railway passing Newcastle? Yes; and that part of it which comes to Sydney now would certainly continue to come, though not all to Darling Harbour.

WEDNESDAY, 16 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with Port Jackson, at Milson's Point.

David Kirkcaldie, Esq., Chief Traffic Manager, Railway Department, sworn, and examined:—

2207. *Dr. Garran.*] Supposing the line were continued to Milson's Point, would that in any way affect the working of the goods traffic from the far north? I think not.

D. Kirkcaldie,  
Esq.  
16 July, 1890.

2208. When you have completed the arrangements at Darling Harbour which you are now carrying out, will you have room there for all the waterside goods traffic? Yes.

2209. If you can accommodate it all there you will rather not have another wharf on the north side? Decidedly.

2210. We understand that you deliver wool into the stores of the wool merchants? That is so.

2211. Shall you continue to deliver it by dray when you have got your Darling Harbour premises complete? So long as there is no railway round the wharves we shall deliver it.

2212. But where a wool-store is alongside the water, will you deliver the wool by dray or by punt? By dray, if the railway would not go alongside the stores.

2213. Suppose the Pastoralists' Company complete the structure which they are erecting at North Shore, and you have wool to bring to them, will your contract of delivering wool into the stores apply to them? No.

2214. You have not yet committed yourselves to delivering it there? Nowhere, except at Darling Harbour.

2215. You do deliver it to the stores in town—to Messrs. Geddes' store on this side? Yes.

2216. Would you consider yourselves bound to deliver it at North Shore? No.

2217. Why not? Because we only undertake to deliver wool within the city of Sydney. The question has never arisen about delivering wool at North Shore.

2218. It might arise, and you would then have to decide whether you would or would not deliver it? Yes.

2219. Suppose you were to decide to put their North Shore store on as good a footing as their Sydney store, would it pay you better to deliver the wool by steam punt from Pymont than to take it by dray or by punt from Milson's Point? It would depend on the quantity. If there were any large quantity I should think it would be cheaper to deliver it by punt.

2220. It would not pay you to make an extension of the railway to these stores in order that you might deliver the produce? No.

2221. You are sure? Yes, unless there was a very large quantity.

2222. Mr. Geddes appeared to be under the impression that it would pay the Government to extend the line to their stores rather than to cart the wool there from Milson's Point; is he right? I do not think so.

2223. You do not contemplate having to do this? No.

2224. Supposing the line came down to Milson's Point, it would not, so far as other goods traffic is concerned, make the slightest difference in your present arrangements? No.

2225. You would not split the traffic? No; but if large wool-stores were erected at North Shore, and the wool consigned to Milson's Point, we should have to bring it there.

2226. If they told you that they had 250 bales coming down, and that they wanted them to be delivered to North Shore, would it pay you better to split the goods trains at Hornsby than to bring the wool on to Darling Harbour, and to punt it across? It would pay us better to bring the wool to Darling Harbour.

2227. And punt it across. I am supposing that you had to deliver it into their stores? Then we should bring it from Hornsby to Milson's Point.

2228. If you agreed to give their North Shore premises the same advantages as you give the wool-stores on the south side, it would pay you better to split the traffic at Hornsby than to bring the wool to Pymont, and then send it across to North Shore? Yes.

2229. But even if you took it to North Shore you would have to cart it from Milson's Point? Yes.

2230. Would it pay you better to cart the wool from Milson's Point than to take it by punt? Yes, it would, if the railway were taken there. The distance would only be 300 or 400 yards.

2231. It would not pay you better to extend the line from Milson's Point to the stores than to cart the wool on drays? Not unless there was a very large traffic.

2232. Then you do not contemplate being forced to extend the line? No.

2233. But you do contemplate the possibility of splitting the trains? Yes.

2234. I understood Mr. M'Lachlan to say that it did not pay to split the trains? No; we would rather have all the traffic at Darling Harbour. But if the wool were consigned to Milson's Point we should have to bring it there.

2235. Then the people on the North Shore would put you to more expense than those on the south side do—you would make less profit from their wool than from that which you bring to Darling Harbour?

- D. Kirkcaldie, I do not know. We have arbitrary rates for wool from the northern district, and we should charge the same to Milson's Point as to Darling Harbour.
- Esq.  
16 July, 1890.
2236. If you had to split the traffic at Hornsby, would you have to keep a larger staff of men there? Yes, but not many more.
2237. One or two men extra? Yes.
2238. Will you always be able to load up the wool intended for North Shore into special trucks? We can always do that. We can always get good loads for wool-trucks.
2239. It would not involve you in any extra expense? No.
2240. You would keep the wool for North Shore in separate trucks? Yes.
2241. So that you would only have the shunting to do at Hornsby? That is all.
2242. There would be a little delay, and the employment of one or two more men; but you would rather go to that expense than punt the wool across from Darling Harbour? Yes.
2243. So far as the passenger traffic is concerned, would you split the trains coming from the north? No; we should have a junction there.
2244. Would you compel the passengers to change carriages there? Yes, but there would be very few.
2245. You would treat the line as a branch line? Yes.
2246. But if it is shorter, and would bring them to Sydney more quickly, would not people prefer to take it? Yes; but it is better for people coming to Sydney to go round by Strathfield, because then they are brought straight into the city, and can get a cab to take them to their hotel, or anywhere else, in a very few minutes. On the North Shore, however, they would have to take the steam ferry as well.
2247. Taking the saving in distance into account, and at the same time the waste of time, you think a traveller would get into Sydney more quickly by the North Shore line than by the other? No. Every passenger from the north will come to Sydney *via* Strathfield, unless he intends to go to North Shore.
2248. It will only be the local passengers who will change carriages, and for them you will have a branch service? Yes.
2249. You do not look upon this line as a very great help to your business for either the through goods or the passenger traffic? I do not, though I think that it will develop a local traffic to some extent, particularly a passenger traffic.
2250. Between Hornsby and Milson's Point? Yes. There may be a little development of through traffic, but not a great deal.
2251. You do not look upon the line as likely to facilitate the development of traffic in northern produce? No, except to such stores as Geddes & Co. or anyone else may put up there.
2252. At the present time you have not considered whether you will or will not extend the line to their North Shore premises? No.
2253. Has there been any request made to you to do so? I am not aware of any.
2254. No promise has been given by the Commissioners to encourage the erection of the building? No, not that I know of. It is the first time that I have heard it mentioned.
2255. If you have to have a branch train waiting on the northern train you cannot run it at a fixed hour? Yes, we could.
2256. The northern trains are very uncertain? Yes; but that is principally due to the state of the roadway. As soon as we get the roadway in good order we ought to be able to make the trains keep fair time.
2257. You do not anticipate any difficulty? Not in that direction.
2258. If you have a branch service for the use of the northern line you will always keep the branch trains waiting? Yes.
2259. So that the local passengers will have to subordinate their convenience to that of the northern passengers? Yes; but that would only be in the case of one or two trains a day. If the northern train was very late we should run an extra branch train.
2260. You would wait for half-an-hour, not more? Yes, about that. I do not anticipate any difficulty in the matter.
2261. You are expecting to take large ships to your wharves at Darling Harbour presently? I do not know that we shall be able to do much at Darling Harbour.
2262. You think that you will have small craft there principally, to take goods to the big ships? Yes; wool is generally sent down to the stores direct, or to the ships at Circular Quay.
2263. But other produce besides wool comes down? Yes; but the rates for other produce are so low that they could not possibly afford to bring it across in punts.
2264. Do you anticipate anything like a coal traffic springing up on this line? I do not, except for local purposes.
2265. You do not think that it will pay to send coal from Newcastle here? No. I may say that some coal has come from Newcastle for local consumption.
2266. By the railway? Yes.
2267. To manufactories at North Shore? Yes, to some of the brickworks.
2268. But simply for local consumption? Yes.
2269. What do you charge for that? Some has come from Wallsend, for which we charge 7s. a ton.
2270. What is the distance? Eighty-four miles.
2271. That is not quite so far as from Newcastle? Scarcely so far as from Newcastle.
2272. A penny a mile is the fixed rate? Yes.
2273. Do you have to find the trucks for that? Yes.
2274. Then you have begun to find trucks to a small extent for the northern coal trade? We always have done so, to some extent. It is principally to carry coal for shipment that the coal companies provide their own trucks.
2275. Have you brought coal down for the use of local coal merchants at the North Shore? I could not tell you. I only know that coal has been brought down there. We have brought it from Wallsend, Eskbank, Corrimal, and Bellambi.
2276. How do you get it round? *Via* Strathfield.
2277. Do you charge for the extra distance? Yes.
2278. But you have not shipped any coal in Sydney from any of these mines as yet? No.
2279. Do you think that the cranes at Darling Harbour are available for that purpose? They are available, but nobody will use them.
2280. What makes them useless? Their construction is awkward—the trucks cannot get under them. They will never be used for coal-shipping purposes.
- 2281.

D. Kirkcaldie,  
Esq.

16 July, 1890.

2281. Do you think that they are a waste of money? Yes, for those purposes.
2282. They would have to be removed? Yes.
2283. Have you made any arrangements for shipping coal? Arrangements are being made at Darling Island.
2284. You look upon that as your coal shipping-place? Yes.
2285. If coal comes to Sydney from the Illawarra or the Western line, that is where you will ship it? Yes.
2286. And you think that will be sufficient for all your purposes at present? I think so.
2287. If a northern coal trade should by any chance spring up, would it pay you better to take the coal round by Strathfield, and ship it at Darling Island, than to have a new wharf on the north side? We would rather bring the coal to Darling Island.
2288. Will you have room enough at Darling Island for all the shunting lines that you will want? Yes; we will be able to carry on a large traffic there.
2289. You have been to Newcastle, and you know the large space which is taken up there by the different lines? I do not anticipate that we shall do anything like the same amount of trade at Sydney.
2290. You will not be cramped for room at Darling Island? I do not think so. They have a very large trade at Newcastle.
2291. Even if a large trade springs up? I do not think that the trade will ever be so large that we cannot accommodate it at Darling Island.
2292. Do you think that if that is made a coal shipping-place, it will cause fine coal-dust to be blown over Sydney? I do not think so, to any appreciable extent.
2293. If the trade should outgrow your space at Darling Island, would you try to find more room on the south side, or would you erect a second wharf on the north side? We should concentrate it at one place as much as possible.
2294. Concentration means economy? Yes.
2295. You would rather not have the trade scattered if you could help it? Decidedly.
2296. The whole of your management will be directed towards preventing the splitting of your terminal traffic—you wish to concentrate? Yes.
2297. *Mr. Copeland.*] Do you anticipate any increase in the coal traffic in supplying the brick-making establishments at North Shore? I daresay there will be an increase, but not a very great one.
2298. Has not the brick-making business developed very considerably over there during the last three or four years? Oh, yes, and it will develop.
2299. Do you not think that as Sydney increases in size and population that business will develop considerably? Undoubtedly.
2300. I understood you to say that you have brought coal to North Shore from Wallsend at 7s. a ton. Supposing coal-mines were opened at Wyong, from which the distance is only 62 miles, I suppose you would bring coal for 5s. 2d. a ton? 5s. 3d.
2301. Would the people at North Shore not be more likely to get coal from Wyong than from Eskbank, and thus develop the coal trade on the railways? Yes; but they would not develop the trade to a very large extent. They would pay a little less for their coal, but I do not know that the volume of traffic would be increased very much.
2302. Would not they be able to make cheaper bricks? Yes; they could make their bricks more cheaply, and could therefore dispose of them more readily.
2303. As population on the North Shore increased there would be an increased demand for coal for domestic purposes? Yes. I look upon the line as one which will be a favourite suburban line for settlement.
2304. Do you think that there is any chance of the timber trade from Wyong being developed? Yes; there is a large timber trade there now. I think it very likely that that will be a very large trade.
2305. So you really anticipate having some goods traffic on this line if it is constructed? Yes; but, as I said before, I think it will only be a local traffic.
2306. What do you mean by a "local traffic"?—If they brought coal and timber from anywhere between Lake Macquarie and the North Shore, would you consider that local traffic? Yes; if it was for local use, and not for export.
2307. If timber was brought for local use, is it not likely that it would be also brought for export, supposing it were being sent to any of the other colonies? I do not think so, unless they got ships to go over there.
2308. Do you know any reason why ships should not go to Neutral Bay, supposing there were wharves there, and the railway were constructed to the place? Yes.
2309. Would not ships go there for timber or for coal, if they required either? They might; but I think that they would always be inclined rather to go to Newcastle or to Darling Island.
2310. Would it not be cheaper for a vessel, if she had discharged a large cargo at Sydney, to go over to Neutral Bay with a little stiffening than to go to Newcastle in ballast. If coal were brought from Wyong for 5s. 2d. a ton, by train, that would be very little more than the steamer's freight? But the ships themselves go to Newcastle as a rule.
2311. What have the Newcastle companies to pay to get their coal delivered to the wharves;—take Wallsend? For a distance of 10 miles, if they provide their own waggons, they are charged 1s. a ton.
2312. Including trainage? Yes.
2313. What if the railway find the waggons? We never do find waggons in the north for shipment coal—we have never been asked to do so. The rates are exceptionally low, to encourage a large export.
2314. Do you not find waggons for the Greta coal? No; the company provide their own waggons. All the companies there provide their own waggons.
2315. I suppose there is a reasonable amount of coal traffic from Greta to Newcastle? Yes.
2316. What is the distance? 33 miles.
2317. From Wyong to North Shore would be about 56 miles. Would the difference between 33 miles from Greta and 56 from Wyong stop all export from the latter mine to Sydney? The conditions are so very different. We could not afford to allow the same rates from Wyong to the North Shore, or to Darling Harbour, as we can from Greta to Newcastle.
2318. Why? Because we can take nearly three times the load from Greta to Newcastle that we can from Peat's Ferry to Hornsby. We could not possibly afford to give the same rates.
2319. What increased rates, proportionally, would you have to charge so as to make up for the difference in grade? I do not think that we could afford to charge less than we are charging at the present time—1d. per ton per mile.
2320. What do you charge the Greta Company per mile? I could not tell you at the present moment.

- D. Kirkcaldie, I know that they get a considerable reduction when they give us the coal in train-loads of thirty-five waggons. They do not get a reduction if they give it to us in less quantities.
- Esq.
- 16 July, 1890.
2321. *Mr. Garrard.*] That is your maximum train-load? I do not say that it is the maximum, but we bind them down to that.
2322. *Mr. Copeland.*] Does one engine take that? Yes.
2323. How many trucks would an engine take from Peat's Ferry to Hornsby? Not more than fifteen.
2324. The difference is caused simply by the grade? Yes.
2325. Are you in the habit of charging different rates according to the grades all over the country? We charge the same rates over all the lines, except at Newcastle, where the circumstances are quite exceptional. We are doing a large export trade there, and it is the rule all over the world to give low rates for export traffic.
2326. Would not that apply in the case of Wyong;—if you gave low rates between Wyong and the North Shore, is it not likely that mines would be opened up, and the coal traffic increased? Yes; but the Wyong traffic would still go to Newcastle, because it is only 40 miles, while it is 62 to Sydney.
2327. But it is necessary to bring a considerable quantity of coal to Sydney? Yes.
2328. Would it not be cheaper, instead of travelling 40 miles from Wyong to Newcastle, and then paying freight from Newcastle to Sydney by sea, to send direct to the North Shore? Undoubtedly it would, but then it is open to question whether the Wyong companies will be able to compete with the Metropolitan Coal Company, whose mine is only 28 miles from Sydney.
2329. *Mr. Garrard.*] There is a different class of coal? That is a matter I am not prepared to go into.
2330. *Mr. Copeland.*] You said that you were not sure whether you would deliver wool from the North Shore to Geddes' wool warehouses;—what difference in principle would there be between delivering it to them there and your practice on this side, supposing the railway were constructed to the North Shore? I do not suppose that there would be the same necessity at North Shore. We deliver wool in Sydney because the traffic is so large that if we allowed it to accumulate for one day we should be blocked up.
2331. Do you not do it as an inducement for people to send the wool to Sydney by railway instead of by steamer? No.
2332. Is it not partly an inducement? No; it has been done for many years, for the reason I say. If we allowed the consignees to take the delivery themselves we should be in a state of complete confusion in the busy season.
2333. Would it not be possible for you to insist on the people removing their wool immediately at their own cost? It is better for us to do it ourselves, and pay for it.
2334. If the railway were opened to North Shore, would not the same principle apply there as applies at Darling Harbour? Yes, only there would not be the same necessity, because there would not be the volume of traffic there.
2335. Is it not possible that the traffic might increase? It might. We do not do it at Newcastle, nor anywhere, except at Darling Harbour.
2336. *Chairman.*] Or at Morpeth? Or at Morpeth. We take it to the ship's side there.
2337. I suppose you hold to the opinion that the construction of the North Shore line would not in any way increase the general bulk of the railway goods traffic? Not of the through traffic, except if wool were consigned to stores on that side.
2338. It is not the case that the more line you construct the more traffic is brought to the railway? I do not think so.
2339. You think that this extension would develop a local passenger traffic, but not a goods traffic? Not to any great extent.
2340. You say that the rates would be the same for goods going to the North Shore as for goods going to Darling Harbour? Not for goods, though they would be for wool, because there are what we call arbitrary rates now to a very large extent.
2341. These arbitrary rates are fixed so as to compete with the steamers? They are to some extent.
2342. They are not for ordinary goods, but only for wool? We allow them for goods going to the country, but not goods coming from the country.
2343. In that case the northern people would have the advantage of 11 miles shorter distance if they sent their goods from the North Shore? Seven miles. It is 21 miles from Hornsby to Darling Harbour, and 14 miles from Hornsby to North Shore.
2344. To what part of North Shore? Milson's Point.
2345. They would have the advantage of 7 miles? Yes.
2346. Do you think that that would be a sufficient inducement to them to consign their goods to North Shore? I do not think so. I do not think that we should give them a cheaper rate.
2347. So that the northern people would get no benefit whatever from this large expenditure of public money? I do not think so—not from us.
2348. We may consider, then, that it will be made purely and simply in the interest of the North Shore people themselves? Yes, to a very large extent. It is very certain that the line will never do any good while it terminates where it does. The traffic is not likely to increase under present circumstances, though it would increase if the line were brought down to the water's edge.
2349. In estimating the possibility of the undertaking being payable, we have to confine ourselves to the prospect of the passenger traffic? Pretty well entirely.
2350. *Mr. Trickett.*] By a return recently laid on the table of the House it was stated that the working expenses of the railway for the first four months of this year amounted to £4,165. For a whole year that would come to £12,495. The probable cost of the extension proposed will be £262,000, the interest upon which will come to £11,420, so that the total cost during a year of interest and working expenses, if the line were carried to Milson's Point, would be about £24,000 per annum. What prospect do you see of its paying that amount? I do not think that it will pay that amount for a very considerable time; but, to my mind, the money that has been expended will practically be wasted unless we bring the railway to the centre of population.
2351. But do you see any probability of there being a considerable return for this additional large expenditure? I think the extension of the line to the shores of Port Jackson would certainly induce a large settlement of suburban residents, and from that a certain amount of goods traffic would naturally follow. In my opinion, the line goes through the best suburb around Sydney.
2352. That is between the heights of North Shore and Hornsby? Yes.
2353. But as to the returns—they, of course, are merely speculative? Yes.
2354. You think, at any rate, that it would be some time before they would be very great? I think so.

2355. Have you considered the question of the extension of the railway to Cremorne Point? No, I have not. D. Kirkcaldie, Esq.
2356. You have not considered that extension from a traffic point of view? No; that is in relation to the shipment of coal? 16 July, 1890.
2357. Yes? I cannot see why a shipment of coal is going to take place at Cremorne Point.
2358. You do not think that there would be any great advantage in the extension? I do not think so.
2359. So that whether the railway is brought to Milson's Point or to Cremorne Point the result, looking at the goods traffic, will be about the same? I think it would be better to bring the railway to Milson's Point than to Cremorne Point.
2360. Because then you would get the local goods traffic? Yes.
2361. Which you would not get if you went to Cremorne? Yes.
2362. *Mr. O'Sullivan.*] I infer from your evidence that you do not anticipate much traffic from the northern districts to Milson's Point if the line is extended? Except with the exception of what may be sent to such wool-stores as it is reported Geddes & Co are going to put up.
2363. You simply look upon the extension as necessary to make the existing line valuable? That is what I mean.
2364. You also appear to think that the line, if extended, would, as a suburban line, eventually be remunerative? I do.
2365. Do you think that that would justify us in recommending a suburban line merely for one side of the North Shore? No; but I fancy that the other side is fairly well attended to with the tramway.
2366. The tram runs almost through the middle of North Shore, does it not? Yes.
2367. Then what about the eastern side, where there is a very large population? You cannot possibly go to both sides. I think the western side is the side which ought to be served.
2368. Do you think that the North Shore is of such importance as to require a circular railway? I do not.
2369. Do you think that if a bridge were made over the harbour, and a railway constructed to Cremorne, that it would become a shipping-place for wool? I do not think so.
2370. Do you think that there is enough accommodation for the wool traffic as it is? Yes.
2371. Therefore the Cremorne proposal does not enter into your consideration in advocating this extension? No.
2372. Have you examined Mr. Hamand's plan? I have not, though I read his evidence this morning.
2373. *Mr. Lee.*] Do you know the quantity of wool hauled to Newcastle by rail from the northern district? Roughly, about 100,000 or 150,000 bales.
2374. Can you say what proportion of that is hauled from Newcastle to Sydney by rail? I think that last year we had about 30,000 bales.
2375. Do you think that if the line were extended to Milson's Point a greater quantity of wool would be brought past Newcastle? I do not think so.
2376. Neither to Milson's Point nor to Darling Harbour? Yes. The quantity of wool brought to Sydney will always be regulated by the rates to a very large extent indeed.
2377. Do you know whether the line from Hornsby to St. Leonards is used for the conveyance of goods from Sydney to North Shore? No, it is not.
2378. Supposing the line were extended to Milson's Point, would goods to North Shore be sent that way, or would they continue to go across in the ferry? They would continue to go across in the ferry.
2379. Consequently you cannot look to the goods traffic to give you any revenue? Not to any large extent.
2380. If the passenger traffic is what you solely depend upon to maintain the line, do you think the route proposed is the proper one to obtain it? I think so. I fancy that a very large number of people would go from Sydney and live at North Shore if the line were extended.
2381. You think that increased facilities of communication would induce a greater number of people to settle on the heights of Gordon, Hornsby, and intermediate places? Yes.
2382. Taking the same length of line either on the Granville or the Illawarra suburban line, how long did it take to produce an amount of traffic sufficient to pay a return upon the line? There is scarcely any analogy between either of those lines and the North Shore line, because they go to the heart of the city of Sydney, while the other line only touches North Shore circuitously. The traffic on the line between Sydney and Hurstville developed more rapidly than that on any other line that we have had. At Tempe, in 1884, we got £137; in the following year, £1,118; in 1886, £1,885; in 1887, £1,934; and last year, £2,117. From Rockdale, in 1884, we got £271; and last year, £6,152. The passenger traffic at the latter station increased from £213 in 1884 to £4,184 in 1889.
2383. So that the great difference in the returns is owing chiefly to the passenger traffic? Yes.
2384. Has the goods traffic increased in the same proportion? No. The goods traffic at Rockdale, in 1884, yielded £58; and in 1889, £1,968.
2385. Would the passenger traffic alone on the line be sufficient to pay the ordinary expenses? No, not for a very long time to come.
2386. And you naturally look to any line to supply a certain amount of goods traffic as well as passenger traffic? Yes, a certain amount of goods traffic.
2387. I suppose you could form no estimate of the number of passengers likely to be carried daily upon this line? No.
2388. You have taken no means to ascertain the present traffic in vehicles? No.
2389. Your opinion is that the great source of revenue on the line will be the passenger traffic? Yes.
2390. But that has to grow? Yes.
2391. It is not there at present? It is not there at present.
2392. *Mr. Dowel.*] You have made yourself acquainted with the proposal to extend the line to Milson's Point;—do you think that is the best place for a terminus? Yes.
2393. You are acquainted with Lavender Bay? Yes.
2394. What is your reason for saying that Milson's Point is the best place to which we could bring the line? Because you have the largest population there, and the line would serve the greatest number of people at North Shore.
2395. Are you aware that there is deep water in Lavender Bay? Yes.
2396. And that when wharves are constructed there the largest ships that have come into Port Jackson will be able to go alongside them? Yes.
2397. Would it not be an advantage to shippers of produce from the north to be able to bring wool, wheat, and other produce direct to the ships, instead of transshipping? Transshipping where?
2398. At Darling Harbour? What kind of produce do you mean?
2399. What produce passes Newcastle and comes to Sydney? Wool, principally. 2400.

- D. Kirkcaldie,  
E-q.  
16 July, 1880.
2400. Wheat? To some extent.
2401. Hay? Yes; but not a very great deal of it.
2402. Chaff—maize—timber? Yes.
2403. All those things pass Newcastle, and come direct to Sydney? Yes.
2404. Yet you say that you do not think that there would be any advantage in being able to put that produce right into the ships? There has been none of it shipped.
2405. No wool? Yes, wool; but none of the other produce.
2406. Do you think that wheat will be grown in the northern districts for export? It may be.
2407. Is it not a fact that the traffic at Redfern is congested—that you scarcely have accommodation there for the Northern, Southern, and Western lines? Yes; but that is principally the passenger traffic. We have plenty of room for goods traffic at Darling Harbour.
2408. Would it not relieve the traffic at Redfern if the northern traffic were brought straight down to Milson's Point? It would to a little extent, but the benefit would not be very appreciable, because the whole of the produce that comes from the northern districts, except wool, is consumed in the city of Sydney and suburbs.
2409. Is it a usual thing in some parts of the world to take trains from one side of the river to the other on board steam punts? Yes; but it is very expensive.
2410. Can you see any insuperable difficulties in originating a service of that sort from Milson's Point to Circular Quay? The thing could be done. I have seen it done.
2411. Where? In Scotland. But they have got rid of the system there now by erecting the Forth and Tay Bridges.
2412. Nevertheless, in some parts of America, trains are carried across the water on steam punts? Yes.
2413. Supposing that service were carried on here, do you think that Circular Quay would be the best place to bring the trains to? I think so.
2414. And the passengers would be landed there without having to get out of the carriages? I have never seen passenger trains carried that way.
2415. Only goods? Goods waggons.
2416. Does the steam punt service in America not carry passenger trains, or only goods trains? I think only goods trains; but I would not be sure. I have never known passenger carriages to be conveyed that way.
2417. You have made no estimate from which you can inform the Committee what the probable receipts from goods and passenger traffic on this line will be? No; the traffic is purely speculative.
2418. Can you give the Committee any information as to the quantity of wheat, wool, hay, maize, chaff, and other produce which passes Newcastle on its way to Sydney? No, I cannot.
2419. You have not got those returns to hand? No.
2420. *Mr. Tonkin.*] Did you make any estimate for the Commissioners of the returns on this line from any kind of traffic? No.
2421. Do you know upon what grounds the Commissioners expect a goods traffic to assist in paying for its construction? I am not aware that they do expect a very large goods traffic.
2422. Do you know that the line has been placed before the Committee a second time with the express understanding that the Commissioners have altered their minds with regard to the goods traffic which would pay the working expenses and interest on the line? I have heard so indirectly.
2423. It is not because of any information that they have received from you that they have done so? No.
2424. Are there any other sources from which the Commissioners would derive this information besides yourself? I scarcely think so, but of course I cannot say.
2425. You say that the Commissioners are still of opinion that the goods traffic will be quite immaterial? Perhaps that is putting it a little too strongly—I do not mean to convey that impression; but I do not think that there will ever be a very large traffic.
2426. You have already said that the traffic will be purely local? Yes, except such as may come down to stores erected on the North Shore.
2427. Have you seen Mr. Hamand's estimate of the probable traffic returns? No; but I do not see how any man could prepare an estimate of a speculative traffic.
2428. Is it not possible to base it on the analogy between this line and some other suburban line where the facilities given to the residents are about the same? I do not think so, because all the other suburbs are in direct communication with Sydney. This line would merely be in communication with North Shore. Any figures that might be given would be utterly unreliable.
2429. *Mr. Copeland.*] Have not the Commissioners and the Department in all other instances in which railways have been submitted given estimates of the probable income? Yes.
2430. Why could they do it in those cases and not in this? Because this railway is only 2 or 3 miles long, and there would be no traffic from Sydney by it; besides, it is near the city.
2431. We had an estimate of the probable return from the Marrickville-to-Burwood Railway? Yes, but that line comes direct into Sydney. You cannot give any estimate of the traffic on the North Shore line because the passengers would, at the terminus, have to get out of the train into the steamer. It is not as if they went direct from Sydney to where they lived.
2432. *Mr. Tonkin.*] I should like to know if you agree with the following statement, made by Mr. Barling:—"The Department think it can be shown that there is a promise of considerable goods traffic in wool, meat, timber, and other merchandise, which it is anticipated can be dealt with in Lavender Bay, or by a branch line along the frontage of the harbour, between Milson's Point and the Admiralty House. It may also reasonably be anticipated that depôts will arise for the supply of all the northern districts (in the way of station supplies, &c.), and an advantageous feature of this is that it would tend to relieve the present congested street traffic to Darling Harbour"? I could not endorse it.
2433. Your idea is that if the extension is constructed the returns upon the line will be purely from local traffic? Yes.
2434. Caused by the present population, or by an anticipated population? By an anticipated population, to a large extent.
2435. Then it would take a few years before the return would be sufficient to pay working expenses? I think the line will pretty well develop as far as suburban passenger traffic is concerned.
2436. You do not expect much return from the coal traffic? No, I do not.
2437. *Mr. Humphery.*] When was the line between Hurstville and Sydney opened? I think it was opened towards the end of 1883.
2438. And it was open during the whole of 1884? I could not be sure.
- 2439.

2439. You gave the returns for 1884? That was either the year after the line was opened, or the year in which it was opened.
2440. Which are the first complete returns which you have? Those for 1885 would be complete.
2441. Did the earnings cover the working expenses during the first year that the line between Hurstville and Sydney was opened? Yes, I think they did; but I could not say positively.
2442. *Chairman.*] There is no doubt whatever, in your opinion, that the railway cannot be made to pay if it is left where it is, even on the present cost of construction? I am quite sure of that.
2443. Supposing it were connected with the tram system, would that make it pay? It would undoubtedly make it pay better.
2444. Do you think that it would make it pay as well as it could be made to pay by bringing it down to the deep water of the harbour, having regard to the additional cost of construction? I do not think so. Bringing it to the deep water is the only way of making it yield any return.
2445. You say that the line which the Government propose is the best that can be got? Yes.
2446. Do you know the North Shore very well? Fairly well.
2447. The proposed extension would not serve very much of the present population of the North Shore? No.
2448. There is no population between the Crow's Nest and Lavender Bay that would use the train under any circumstances? The only thing would be to get the people back further.
2449. Supposing the line were brought to Lavender Bay after it had taken a detour to the Military-road on the top of the hill, would it not then serve the people out towards Cremorne and Middle Harbour? Yes; but it would not take any additional passengers from Sydney to the new line.
2450. Could not a line such as that proposed by Mr. Hamand be connected by a tramway service at any of the places out there? To my mind people will not go by a steamer, and then take the tram, and subsequently the train.
2451. Do you think that people would take the train from Milson's Point to the heads of the bays and Middle Harbour? Yes, if you make the train to the foreshores.
2452. Do you know Willoughby Falls? Yes.
2453. Mr. Hamand proposes to take the line towards Middle Harbour, coming down by Willoughby Falls, past Neutral Bay, to Lavender Bay; would not that railway serve a large population, both present and prospective? I think it would. It is a matter to which I have given no consideration, because I have not seen his plan.
2454. Would not it serve the people living out towards Folly Point? Yes, it would.
2455. There is a great deal of vacant land out that way? Yes.
2456. Mr. Hamand's route would also serve the people out towards Cremorne and Middle Harbour generally? Yes.
2457. People living out there would take the railway to Milson's Point to get to their residences—do you think that the people living about the Crow's Nest would take it, supposing the tram were where it is now? I think they would still take the train.
2458. Which route do you think would serve the present population best? From your sketch and the appearance of that plan, Mr. Hamand's seems to serve the largest population.
2459. From your evidence it is desirable that the grades on the line should be lessened as much as possible? Yes.
2460. The first cost is the cheapest in the service for all time? Yes.
2461. I suppose that, with your experience, if you were building a railway you would not allow it to have a grade of more than 1 in 50? Not if I could help it—not if a few thousands a mile would give 1 in 100; and the line were likely to develop a large traffic.
2462. A heavy grade means an additional cost for all time? Yes.
2463. Mr. Hamand's route is a little less than a mile longer than Mr. Deane's, and his steepest grade is 1 in 70, as opposed to 1 in 50 on Mr. Deane's deviation;—would not the difference in grade be an enormous advantage? Yes.
2464. You say, first, that Mr. Hamand's line would serve a population which already exists, and, secondly, that, although it is a mile longer than the Government line, it could, because of its lesser grade, be worked better and more cheaply for the public? The grade is undoubtedly a most important element in the cost of working.
2465. Assuming that it would cost (say) £100,000 more than the Government line, do you think that it will be an advantage to construct it? Yes. Of course such a heavy expenditure will be a drag for a time, but before many years the great advantage of the lesser grade will be felt.
2466. Have not the grades between Sydney and Newcastle hampered the traffic enormously, and increased the cost of working? Yes.
2467. I think you told us just now that the concessions which are made to the Greta Colliery are made principally because of the levelness of the road? Yes.
2468. And that it would be impossible to make similar concessions for traffic between Newcastle and Sydney? Yes.
2469. You, of course, have had some experience in the traffic there;—is it a wise policy to construct a line with a stiff grade? Certainly not, if for a reasonable expenditure you can get a line with an easy grade.
2470. A railway is constructed either because it is a necessity, or because in a few years it will be remunerative, that is, pay interest and working expenses? Yes.
2471. A great element in the cost of working a railway is a stiff grade—so, therefore, you think that at any reasonable expense the grade should be reduced? Yes.
2472. And for all time those who have got to use the line will gain the benefit? Yes.

John Henry Geddes, Esq., woolbroker, sworn, and further examined:—

2473. *Chairman.*] What is it that you wish to tell the Committee? I have embodied the material part of the supplementary evidence which I wish to give under a few headings:—

*Barging.*—The most effectual method for relieving the streets of Sydney from the 400,000 bales passing through on their way to the warehouses and wharves—one which would also save the great cost of wear and maintenance of the streets, as well as relieve the great traffic strain during the five months of the wool season—would be to barge the wool from Darling

D. Kirkcaldie,  
Esq.

16 July, 1890.

J. H. Geddes,  
Esq.

16 July, 1890.

J. H. Geddes, Esq., Darling Harbour to the wool warehouses, almost all of which have either water-frontages, or are easily accessible from water. If this were adopted, the whole of the foreshores of Lavender Bay to Kirribilli Point and onward could be used as a receiving depôt for northern goods traffic, from whence the wool could be lightered to the respective warehouses or ships.

16 July, 1890. *Newcastle.*—With reference to wool coming to Darling Harbour from the north by rail, I find that 25,000 bales came last season, owing to owners' disinclination to have the wool interfered with after being placed on trucks—this being always an objection. The steamer rates during 1888 were in excess of the railway rates; last year, slightly under. The shipments from Newcastle to London show, I believe, a decrease last year upon the preceding year, while the sales and shipments from New South Wales generally have shown a steady increase during past years—as, for instance—

SALES.	
1887-1888 .....	162,511
1888-1889 .....	209,252
1889-1890 .....	234,419

SHIPMENTS.	
1887-1888 .....	396,419
1888-1889 .....	452,042
1889-1890 .....	471,484

That is from 30,000,000 sheep. We have 52,000,000 sheep in New South Wales; but through various causes a great deal of the wool goes to Melbourne and Adelaide. Until last year the wool shipment from Melbourne almost exceeded that from Sydney, although they have only 10,000,000 sheep. Now, however, owing to the extension of the railways, we are getting more wool year by year.

*Proprietary.*—In order to explain the exact constitution of the Pastoralists' Association, permit me to state that the objects are more for the co-operation of wool-growers generally than for the accumulation of funds, and our shareholders, 130—pastoralists—although only representing 22,000 shares, actually own upwards of 3,000,000 sheep, or, approximately, about one-third of the total number of sheep in Victoria, or one-fourth of that of Queensland, or one-fifth of that of New Zealand, whence 57,791,110 lb. of meat were exported during the past year. Yet, regardless of one share being applied for, the directorate purchased the land, and almost immediately afterwards accepted tenders. I explain this, Sir, to show that the Association is composed of wealthy, earnest men, who have the power within themselves of giving effect to their intention of erecting the warehouse.

"Beulah" has a frontage of 570 feet, and was purchased by the founders with the intention of erecting the warehouse, but owing to a lease it was not available, and "Theulda," with a frontage of 330 feet, was purchased in the interests of the company. However, I believe that the owners of "Beulah" and "Theulda" will give the land free for the purpose of a railway line.

Since my last evidence, a very large meat export company in Brisbane, with a capital of £1,000,000, has been formed, and the export of frozen meat from New Zealand during the last six months, as given in the latest returns compiled within the last few days, amounted to 57,791,101 lb. This quantity is given as far in excess of the amount exported during any entire year prior to 1888, while in the *Sydney Morning Herald* of this morning there is quoted an increase of 192,000 carcasses of frozen meat exported during the year ending March, as compared with the previous year.

The frozen meat trade, we anticipate, will constitute one of the most important branches of our business at Kirribilli Point, and, according to the Government Statistician's Report of 16th June, 1890, the available sheep for export throughout Australia is estimated at 3,996,000 in an average year, and the stock of sheep is considered inexhaustible.

I have very much pleasure in reading a letter received from Messrs. Balchin, Johnston, & Co., bearing upon this subject:—

*Frozen Meat Export.*

Dear Sir,

In discussing with your co-directors the important question of providing tonnage for your requirements, it may be of assistance if we shortly recapitulate the main facts dealt with in our yesterday's conversation with you.

We are agents for the Tyser Line (Limited). As you are aware, the Tyser Line has been closely associated with the New Zealand frozen meat trade for some time past, and of late they have added no less than four new steamers to their fleet, with a carrying capacity of over 40,000 carcasses each, and fitted with the newest and most powerful machinery. These steamers have been wonderfully successful, and no damage has yet occurred to meat through breakdown of machinery.

The managers of the line are perfectly willing to enter into the New South Wales meat trade, and if sufficient inducements are offered—that is, regular shipments for a given period—we have no doubt a direct service could be established.

The great drawback to the development of the frozen meat trade in this country has been uncertainty of the seasons, and the difficulty of bringing the sheep to Sydney in times of drought, but we understand it is proposed to establish central slaughtering depôts in the different pastoral districts; and if this is done, and your warehouse connected with the main line, which we are pleased to see there is a prospect of your being able to do, you will doubtless surmount this difficulty.

When your proposed wharfage accommodation is ready—and your plans seem to us to be carefully and well thought out—there will be no difficulty whatever in placing the steamers alongside to receive the cargo direct from your stores. This is a very essential thing for the success of the enterprise. In a warm climate the meat should not be exposed to the heat of the sun, and if the cargo can be placed on board as you propose, loading can go on continuously from morning till night, without the slightest danger of any risk to the mutton. You will thus save the cost of lighterage and cartage, and also the heavy cost of night labour. If you cannot load the carcasses direct from the warehouse to the steamer, nightwork during the summer-time, at least, is absolutely necessary.

We, ourselves, have had a close personal connection with and experience of the frozen meat trade in New South Wales, and the Tyser Line has been instrumental in developing the New Zealand trade.

We shall be very pleased to place our experiences and services at your disposal.

Two steamers of the line, the "Maori King" and "Star of England" will be here next week, and we shall be very pleased if you and your co-directors will inspect the vessels.

We are, &c.

BALCHIN, JOHNSTON, & CO.

I might point out that the agent of the Tyser Line, after a careful inspection, decided that there was not the slightest difficulty in hauling vessels across to North Shore. These ships are fitted up to carry 40,000 carcasses at a time.

2474. None of them come here? Simply because there is no direct meat export from here. The Orient boats simply provide accommodation for 5,000 carcasses. The meat has to be brought to the ships at night, and is shipped in the most primitive way. With our tremendous stock of sheep we must get an outlet, and the whole country is in a state of ferment about it. We took this into consideration when we secured the place at North Shore, because from no other place, unless we had a water-frontage at Darling Harbour—and the Government have secured all that frontage—could we give the northern pastoralists the accommodation they require for exporting meat. Our sheep now are principally merinos; but cross-breeds will grow as well here, and there is only a difference of a farthing a lb. between the price in England. A company has been shipping merino meat to England for two years, and they have monopolized all the trade here. [*Witness at this stage, referring to a map, pointed out the advantage of the site chosen by the Pastoralists' Company at North Shore for the business which they intended to carry on.*] In barging the wool you would save 3½d. a bale on what the Government now have to pay, while the Corporation would be saved an enormous amount of money in the maintenance of their streets, and the traffic would be relieved. The distance between a line drawn from Milson's Point to Kirribilli Point and the shore is 800 feet.

2475. Do you think that the people who have got the wool trade now will surrender it to you—Hill, J. H. Geddes, Clark, & Co., Mort & Co., and others? I mean to say that Mort & Co.'s wool, instead of being consigned to Darling Harbour, could come to North Shore, and be much more easily barged over from there than it could be brought from Darling Harbour, so that Lavender Bay would become the depôt for the whole of the northern wool, irrespective of the particular consignee. The depth of water between Milson's Point and Kirribilli Point ranges from 44 to 41 feet: it is 41 feet in front of "Theulda." 16 July, 1890.

2476. *Mr. Garrard.*] Are you sure that there are 800 feet between the shore and a line drawn from Milson's Point to Kirribilli Point? I obtained that information from a well-known firm of surveyors here, and I have plans with that exact number of feet marked on them. I wish to draw attention to this to show that our wharfs will not be in the fairway. No vessel would come inside Milson's Point. The whole of the northern wool consigned to any one but the Pastoralists' Association could be barged over from North Shore.

2477. Would it be convenient for Mort, Goldsborough, & Co. to have their wool brought to Darling Harbour or Milson's Point by punt;—would they not then have to carry it across the road? At the present time it is not a question of convenience, because the Government have to deliver the wool. It would be better for the Government to do this.

2478. It would be cheaper for the Government to punt the wool from Darling Harbour to the Circular Quay, and then to cart it across to the store, than to cart it direct to the store? They would not cart it direct to Goldsborough-Mort's store; they would simply truck it. This large firm has nothing intervening between their store and the water.

2479. Surely that means handling, and it is the handling that creates the expense? It does not mean any additional handling. At the present time if they are shipping wool from Goldsborough-Mort's to a vessel opposite they could run it across on trucks.

2480. Would it be no inconvenience to have 700 or 800 bales of wool lying at the Circular Quay? Not a greater inconvenience than there is at the present time. During the wool season there are many teams in front of the warehouses waiting to be unloaded. Besides, the wear and tear on the streets has to be considered.

The following letter was forwarded by Mr. Geddes, in explanation:—

Sir,

13 Phillip-street, Sydney, 17 July, 1890.

In my evidence yesterday before the Committee I stated that a line drawn from Kirribilli to Milson's Point would admit of a measurement of 800 feet between this line and the shore. This evidence bore upon the feasibility of berthing ships for reception of northern wools. After giving this matter serious consideration, I called on the surveyors who furnished the measurement (Messrs. Loxton and Bullock) at my request, and, after re-measurement, they discovered that it should be 600 feet instead of 800 feet.

Permit me to express my sincere regret at this unintentional mis-statement on my part, a statement which was based upon information received from well-known experienced surveyors, who inadvertently made an error in calculation.

I have, &c.,

J. H. GEDDES,

Managing Director, J. H. Geddes and Co.,  
The Pastoralists' Association, Limited.

J. P. Abbott, Esq.,  
Chairman, Parliamentary Standing Committee on Public Works.

TUESDAY, 22 JULY, 1890.

Present:—

THE HON. JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

WILLIAM M'COURT, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

2481. *Dr. Garran.*] Since you were here last have you personally examined Mr. Hamand's route? Yes, I have walked over it.

2482. Were you accompanied by any other surveyor or engineer? Mr. Wright went with me.

2483. He is the gentleman who made out the line at Kiama? Yes.

2484. You went together over the greater part of Mr. Hamand's line? We walked over the whole of it, except just along Lavender Bay.

2485. Was the examination sufficient to enable you to form a fair estimate of its value? Yes, I believe quite sufficient.

2486. Could you tell the Committee the general conclusions at which you arrived? Yes; I find that the section of his line furnished by Mr. Hamand is not quite accurate, and I suppose that he did not take levels over the whole of it. There is one place in particular, just to the north of the Cammeray-road, where there is a remarkable hill which the line as shown on the plan goes through, while the section only represents a cutting of about 15 feet. I could not tell exactly what that cutting would be, not having taken any levels myself, but I should imagine that it must be at least 50 or 60 feet. If, as I have heard since, Mr. Hamand intends to go round the hill he would meet a corresponding depression with which he would have to deal in passing the creek, so that there would be very little difference either way.

271—L

2487.

H. Deane,  
Esq.

22 July, 1890.

- H. Deane, Esq.  
22 July, 1890.
2487. You mean to say that the cost on that part of the line is under-estimated? I merely point this out to show that the section is not accurate; since if it were, the irregularities would be shown greater, and the cost would consequently be shown to be increased.
2488. Mr. Hamand must either have a deep cutting through the rock, or a bank when he gets round the point? Yes. In criticising his line I will commence from the Milson's Point end. The first part of the line, it appears to me, would compete with the tramway, and would not be so useful as the tramway. The tramway for a short distance is very much more useful than a railway, because a tram can stop at the street crossings, and on the North Shore tram-line it has lately been arranged that the trams shall stop wherever required, and this, I believe, has greatly benefited the revenue. A railway comes to be useful when you have to get out 2 or 3 miles from the terminus. On Mr. Hamand's line the first station is between Careening Cove and Neutral Harbour, and the next above the head of Neutral Harbour.
2489. How far will the second station be from the tram-line? Nearly half a mile, I think.
2490. Then it would be a different centre for population? Yes; but Mr. Hamand says that the district to be served by his railway runs up to Miller-street, the street in which the present tramway is. It seems to me that his first station would be of no use whatever; because the people living near it, if they wanted to get across to Sydney, would very much prefer to come down and get into the boat at Milson's Point.
2491. They have been accustomed to taking the boat hitherto? Yes, and it would be far better to take the boat direct.
2492. They would otherwise have to pay the railway fare and then take the ferry at Milson's Point, and this you think they would not do? I am sure that they would not. Of course if they wanted to travel away from Sydney they would use the line; but you would scarcely make such a line merely to carry these people in that direction. The second station, near Bent-street, is right down in a hole, and could be used only by the residents in a few houses. The district which this station is supposed by Mr. Hamand to serve goes right up to Miller-street on one side, and to Shell Cove on the other; but Miller-street is nearly 200 feet above the level of the station, and it is absurd to think that people would climb up and down that height to take the train when they could take the tram, or, to suppose that people living on the high land about Shell Cove would make a similar journey when they could take the ferry boat from one of the wharfs of the Neutral Bay ferry. There is another reason why that station would be of no use to the district on the east side of it, and that is the ground there is so steep that hitherto it has not been possible to make a road there.
2493. I suppose the large reserve to the north-west could not be built upon? No. It follows from what I have said that as far as the end of the tunnel—that is 2 miles from Milson's Point—the line is practically useless, or, at least, the expense of making the line would be far greater than the small amount of traffic that would be obtained on it would repay. From this point—
2494. You are now on the north side of the tunnel? Yes, there is a small population; but between Cammeray-road and Miller-street there is no population, though a population might spring up in the future. I do not object to the line because of there being no population here, since a portion of the Government line goes through land where there is now no population, but where it is expected population will spring up. A good deal has been made out of the station at the North Sydney-road. Anyone standing on the high ground nearly opposite where the tramway bridge over Long Cove is being erected sees a considerable population springing up on the North Sydney-road, and it has been said that one of the advantages of Mr. Hamand's line is that the line will provide a station for the use of this population; but in a straight line this population is quite as near to the present St. Leonards' Station as it will be to Mr. Hamand's station on the North Sydney-road, so that there is a possibility of serving it to a very much greater extent by the Government line than by Mr. Hamand's line. It will be seen by looking at the new map of the municipality of Willoughby which is before the Committee that the population of North Sydney is situated almost opposite the  $9\frac{1}{2}$ -mile peg on the Government line.
2495. How far from the St. Leonards' Station? About a mile.
2496. How near would it be to Mr. Hamand's proposed station? Roughly, very nearly a mile and a half.
2497. Then it is actually nearer to the present station? Yes. If it were required to serve that population it would be very much more convenient to them to make arrangements for a station at the  $9\frac{1}{2}$ -mile peg, and this could be done by a slight alteration of grade and a bridge across the creek—which need not be expensive—could be constructed, so that a much better and more suitable station could be provided. The advantage of having a station at the North Sydney-road is absolutely nil, and therefore the reason for Mr. Hamand's line coming round as it does can only be to serve the population at present existing or likely to spring up in the neighbourhood of the further end of Miller-street and the head of Long Bay, or in the neighbourhood of Willoughby Falls.
2498. Would not the population of Miller-street be served by the private tramway which is now being constructed? Yes, the population of Miller-street is already served, or it will be served when the private tramway is constructed, so that there is not the slightest necessity for carrying a railway round there. Now, Mr. Hamand says that level crossings are inadmissible on a suburban line, and there is no doubt that they are very objectionable, but he does not show on his section how he would carry the line across one or two of the roads. On some of the roads, like the Cammeray-road, it may be possible to raise the approaches to the line, so as to have an overhead bridge, but in many cases with the lines as laid out that would be quite impracticable. I find, upon examining his section, that at M'Dougall-street, for instance, the line is in a cutting of 5 feet, so that the road would have to be raised about 15 feet to cross over it. At High-street it is in a cutting of 8 feet; and at William-street, just at the head of Neutral Bay, it is in a cutting of 17 feet, so that there the road would not have to be altered very much in level, although it is very much on the slope. At Alfred-street, which his line would affect, Mr. Hamand does not say how he would carry people across, or how he would accommodate the people whose houses front that street. At Bent-street, a little further on, where there is to be a station, the line is on a bank of 5 feet. Mr. Hamand says that he would deviate Bent-street slightly, but a slight deviation would not convert a 5 feet bank into a cutting of 20 feet, which it would be necessary to have to be able to carry the road over the line. At Cammeray-street the line is in a cutting of about 7 feet, so the road would have to be raised, and that no doubt could be done, though it would cost money. At Miller-street the line is in a cutting of 16 feet, and on the North Sydney-road it is in a cutting of 15 feet, so that both of these roads would have to be raised considerably. Then between Cammeray-street and Miller-street, and also between Miller-street and the North Sydney-road, you will see on the plan several crossings at which the section does  
not

H. Deane,  
Esq.  
22 July, 1890.

not show such a depth of cutting as would enable one to carry the road over the line without considerably altering the road-level. I know that in laying out a line it is impossible to deal with all the streets; and I point these things out to show that this matter of road-crossing cannot be treated in the off-hand manner in which the report deals with it. In a great many cases, in a country like this, the providing of crossings is very expensive, and considerable details have to be gone into before you can tell what the whole cost of the line will be. I have not the slightest doubt that the cost of these road-crossings would form a very important item in the whole estimate.

2499. The Government line goes very largely through the Berry Estate, where the streets are not yet formed? Yes. In the Berry Estate we only cross one road—Edwards'-road—and there we have a tunnel.

2500. Then you make the line first, and the streets will have to adjust themselves to it? Yes.

2501. But if, in an adjustment of those streets, the municipality has to go to great expense for bridges or banks, will they not come to the Department? No; the owners of the land will cut it up.

2502. But is it not a common thing for people to apply to the Commissioners for an overhead or an underground road-crossing? We could make a crossing at Edwards'-road.

2503. But we shall have to face the expense of making these cross-roads sooner or later? Yes.

2504. So that it is only postponed on the Government line? Yes; but there you can choose your own crossings.

2505. You have more latitude in choosing the crossings? Yes.

2506. Still the railway authorities will have to pay part of the expense? Possibly; but that will not be anything as compared with the cost of altering the levels of the existing streets.

2507. It is much cheaper to adapt the street-crossings to the railway than the railway to the street-crossings? Very much.

2508. Still you do not entirely get rid of the expense—it will have to come in, bit by bit? I do not know about bit by bit. I do not know that any more cost would be incurred than has been shown, because when the estate is laid out there will, no doubt, be roads on each side of the line parallel to it, and from them cross-roads would branch off.

2509. You do not anticipate any further requests for cross-streets beyond those? No; it is not like an old standing right.

2510. But is it not a fact that the Commissioners are repeatedly applied to between Sydney and Parramatta to make fresh crossings? I do not think that there is any case similar to this between Sydney and Parramatta.

2511. The lay of the ground here is so ridgy that you cannot cross the line except at intervals? I do not think that the cases are parallel.

2512. You have to contemplate the fact that the construction of the line will lead to a population being settled upon the land through which it passes, and that if there is population there must be streets;—will not many more crossings be required than the two for which you have provided? No; I do not think so. If you had an overhead bridge at Edwards'-road, an underground bridge in the bank beyond, we will say, and an overhead bridge again at the next cutting, that would be quite sufficient to serve all purposes. It is in cases where the roads have been laid out before the railway that you have the trouble. I have made an estimate of the cost of Mr. Hamand's line from his section, not allowing for any inaccuracies in it, or for the heavy cost of making the road approaches which I have just mentioned. I have taken the same prices as are made use of in the estimate of the cost of the Government line, and I find that Mr. Hamand's line comes to £221,000 for works alone—about £100,000 more than the estimate for the Government line. The cost of land will be serious, and I do not suppose it will be less than £200,000, since only a very small portion of the land through which the line will pass is unimproved. Of course, I have not reckoned the land through which the tunnel passes; but there is a good deal of valuable property between where the line cuts into Alfred-street and the head of Lavender Bay, but its value could best be estimated by a land valuer. Now for Mr. Hamand's section: Mr. Hamand gives 600 feet of level at the end of Milson's Point, and starts his grade immediately from there. The other day I pointed out that on the Government scheme, platforms 400 feet in length would be provided, and that another 100 feet was allowed at the end of the platform, so that a total length of 600 feet would only allow a margin of 100 feet for shunting purposes, unless you went up on the grade, which would be a most undesirable thing to do. You ought to have a station yard practically on the level, and to show how inadequate a length of 100 feet would be to branch off from the station, I may mention that every cross-over road takes from  $2\frac{1}{2}$  to 3 chains—that is, close upon 200 feet; so, therefore, the branching out of a number of lines would require a very much greater length than that. Then Mr. Hamand's line does not utilize the frontage to Lavender Bay at all; he simply comes down on the grade all the way, and cuts off the frontages—spoils it in fact.

2513. You could shunt back on that line when you once got to the level? It is a most undesirable thing to carry on shunting operations on a steep grade. For shunting operations, a grade of 1 in 60 or 1 in 70 is very steep.

2514. But when you get to the level? But Mr. Hamand has only 600 feet of level. The relative advantage of the two lines are these. The Government line is one which will cost, including land, except that which is tunnelled through, but which was included in the first estimate, about £220,000, as compared with Mr. Hamand's line, which, reckoning on the same prices, will cost £420,000. I consider that the Government line will serve the population a great deal better than Mr. Hamand's line, because, as I have shown, his line will only serve a very small population, and that a long distance out—only the population about Willoughby Falls. The rest of the population which might use his line is accommodated either by steamer or by tram. The ruling grade on the Government line—that is, on the deviation—is 1 in 50, which I maintain is quite good enough, because the ruling grade on the section beyond the present St. Leonards Station is 1 in 50. There are two stretches of 1 in 50 on that line—one rising up to Chatswood, and the other at Gordon. You cannot get over them, so it is no good to try to get a better grade on this line. It is certainly not worth while to go to an extra expense of £200,000 to get a grade of 1 in 70, destroying the frontage to Lavender Bay which I have already referred to.

2515. What do you say is the difference in length between the Government line and Mr. Hamand's line? One mile 25 chains apparently—a little over  $1\frac{1}{4}$  miles.

2516. Since you were here last, have you examined your 1 in 50 line more minutely? No.

2517. Nothing has been done to it? No.

2518. Are the Committee to understand that you present it as an improvement on the 1 in 40 line? Yes.

2519.

- H. Deane, Esq.  
22 July, 1890.
2519. The comparison which you have made is between your new line and Mr. Hamand's? Yes. The difference in length between Mr. Hamand's line and the line submitted to the Committee by the Government would be greater; but I recommend the extra length so as to give a grade of 1 in 50.
2520. Seeing that you have nothing worse than 1 in 50 between Hornsby and St. Leonards Station, you admit that it is important to have nothing worse than that down to Milson's Point? Yes.
2521. You think that it was a defect in your first line to have a grade of 1 in 40? I remember that when the first line was laid out it was supposed that there was an objection to having curves sharper than 15 chains, but after consideration it was shown that it would be far better to have much sharper curves and flatter grades.
2522. Of the two evils, a sharp curve is better to be faced than a steep grade? Very much.
2523. Is that theoretically or practically? Both theoretically and practically.
2524. On both sides? Yes.
2525. As you must have a grade of 1 in 50 in the whole line, there is no special object in fighting for a grade of 1 in 75 on this particular part? No.
2526. If you had a grade of 1 in 75 between Hornsby and St. Leonards, would you make a great fight to continue the line down to the water at that grade? Yes, I should.
2527. Where you are dealing with passenger traffic and very frequent stations, a steep grade is still more objectionable than on a line where the stations are fewer? I do not know that it is.
2528. If you were going to stop every three-quarters of a mile each way, would not a grade of 1 in 40 be very objectionable? You would have to use the brakes a good deal.
2529. Would not there be more risk of over-running and of accident with a steep grade? I think not so with the Westinghouse brake.
2530. You would not mind dealing with any amount of passenger traffic coming into a city with grades of 1 in 40? No.
2531. You think that it would be perfectly safe and easy? Yes.
2532. You think that on the whole Mr. Hamand's line for the first two stations will only accommodate people who are already sufficiently accommodated? Yes.
2533. And that beyond the second station the population has to be created? I intended to convey the impression that the people living round the first station were already accommodated, and that those living round the second station were also accommodated, while the second station is in such a hole that the people whom Mr. Hamand says would be accommodated by it would not go to it.
2534. It could not be very accessible? No; very inaccessible.
2535. And beyond the big tunnel, round the next two stations, there is not very much population at present? No.
2536. While the people round the fifth station are either sufficiently accommodated already, or could be accommodated by a special arrangement of your line? Yes; they could be accommodated on the old line.
2537. You think there is nothing to justify the increased expense which Mr. Hamand's line would cost? No, nothing whatever. The only new district is that crossed by the Cammeray-road.
2538. We are dealing with a line to which the great objection is the very large amount of money it will cost; that being the case, is it not specially important that we should keep down the capital expense? Decidedly.
2539. You think that is an additional reason why we should not, for imaginary advantages or small positive advantages, face a very large extra expense? Yes.
2540. To adopt Mr. Hamand's line would practically be to increase the cost by one-third? I reckon that it would increase it by as much again.
2541. Then you make a further objection to his line, that it will not come down to the wharf level at the head of Lavender Bay, and that it will therefore waste a large and valuable water frontage for goods purposes which you would utilize? Yes. If Mr. Hamand brought his line down to the head of Lavender Bay it would lengthen his tunnels, and very much increase its cost.
2542. His object in rising at once is to shorten the tunnels, and to get an elevation as quickly as possible? Yes.
2543. To do that he must forfeit the advantage of the water frontage? Yes.
2544. At the same time, does not his line bring Neutral Bay into play, and this your line does not do? I do not see the advantage of going into Neutral Bay.
2545. We had a captain here who said that Neutral Bay was immensely superior for handling ships to Lavender Bay—that it had a better get-away, and prevented the shipping being crowded in narrow waters? But Mr. Hamand does not go down to Neutral Bay, he only skirts it.
2546. But he goes to a point from which it is very easy to descend to Neutral Bay? You mean his proposed station?
2547. Yes? I do not know. His station is at the head of Careening Cove, and there is a ridge between Careening Cove and Neutral Bay. The next station at the head of Neutral Bay is a long way above the bay. I fail to see that the line serves Neutral Bay at all.
2548. Supposing goods traffic ever should spring up, and we should want either Neutral Bay or Cremorne, your proposed extension would make those places accessible? Yes; and my proposal is the best way of doing that.
2549. Your extension would be less expensive than a branch from Mr. Hamand's line? Yes; it would not be easy to start from his line and run round there.
2550. You could get to Neutral Bay from the head of Lavender Bay for about £60,000 or £80,000? Yes, easily.
2551. You could get there for that, including resumption of land and works? I believe so.
2552. That would be your answer to the statement that Neutral Bay is made more accessible by Mr. Hamand's plan? Yes.
2553. You have been obliged to go as far westward as you do go to avoid immense cutting and tunnelling;—you could not have come more eastward with your line? No; we simply followed the contour of the ground.
2554. You follow the curve of the ridges as they descend towards the water? Yes.
2555. It is only a tramway which could climb that ridge, I suppose? That is all.

H. Deane,  
Esq.  
22 July, 1890.

2556. You think North Sydney would be best served by a tramway climbing the ridges, such as the present tramway, and by a railway skirting the coast? Yes.
2557. That is the best way of getting to the top? Yes.
2558. The two routes will give accommodation to the present and prospective population? Yes. The Government route keeps altogether out of the way of the tramway, and opens up fresh country for settlement.
2559. And the Government tramway, together with the private tramway which is being constructed, will sufficiently meet the wants of the people on the ground? Quite.
2560. And branch tramways can be taken off from it if required? Yes; there is a proposal now to run a branch tramway along the Military-road.
2561. You think that tramways are the best means of dealing with the ridges on North Shore? Without giving the matter further consideration, I am inclined to think that they are.
2562. Your line skirts the high ground at North Shore on the west, and Mr. Hamand's on the east? Yes.
2563. You neither of you accommodate the central portions of the high ground? No; because it is absurd to think that people will climb up and down a couple of hundred feet to get to the railway. I believe that a tramway is the best means of serving the heights.
2564. The alternative, then, really lies between skirting the high ground on the east and on the west? Yes.
2565. For the reasons that you have given, you prefer skirting it on the west? Yes; because such a line will be cheaper, shorter, and will serve the district better than the eastern route.
2566. *Mr. O'Sullivan.*] Which line, in your opinion—the Government's or Mr. Hamand's—would serve the largest population, present and prospective? The Government line.
2567. Can you tell us the cost of resumption upon the Government line? That has all been in evidence. In an appendix to my evidence in the last inquiry into this work, I show how the estimate of cost could be reduced by cutting out £21,000 for the land on the Berry Estate. That would make the cost £87,000; but leaving out only half the amount mentioned, the total cost of land would be £97,500, exclusive of the land over the tunnel. I have not taken that land into consideration on either line, because we are not obliged to resume it. To the £97,500 would be added £5,700 as the extra cost of land on the deviation of 1 in 50, making £103,000 for the total cost of land on the Government route.
2568. What is your rough estimate of the cost of the land on Mr. Hamand's line? I put down £200,000; I do not think you can reckon on less than that.
2569. So that the cost of land on his line would be almost double that of the Government line? You would have the most expensive land—that at Lavender Bay—on either line; and on Mr. Hamand's line you have to resume the land from Alfred-street up to the head of Neutral Bay—at any rate up to Bent-street.
2570. In the event of a line being sanctioned between Milson's Point and Manly, would not a large portion of Mr. Hamand's line be utilized for it? I doubt it.
2571. Is it not laid out with that intention? I cannot tell why Mr. Hamand laid it out in the way which he has done. He mentioned that the line would come in for an extension to Manly, but I am very doubtful as to whether this would be the proper way to take it.
2572. Have you had a survey made of any line between Milson's Point and Manly? No.
2573. Where do you think a line would branch off from North Shore to go to Manly? At the present moment, I am inclined to think that Manly does not require a railway at all; but if connection was necessary I believe that a tramway would answer every purpose. It would be a very costly line to make, unless you made it as a tram-line. I believe that Mr. Hamand said that he has not examined the country beyond Middle Harbour; but any one who had examined it would know that it would be frightfully expensive to carry a line round the shores of Middle Harbour in the way Mr. Hamand suggests. You must have a swing-bridge over Middle Harbour, or else rise up to a height and get a high-level bridge at the Spit.
2574. *Mr. Tonkin.*] Considering the position of the two lines, would they serve the population on the high land in the centre pretty well? As suburban lines they would not serve it at all.
2575. Neither of them? Neither of them. I consider that the centre of St. Leonards, as a suburb of Sydney, is well served by the tramway.
2576. Neither line is proposed for the purpose of serving the existing population of the North Shore? Not as centred in the neighbourhood of the reserve or the Government offices.
2577. If that is so, will you tell us what amount of population you have on the western side of the Government line, in comparison with the population on the eastern side of Mr. Hamand's line;—is there any population on the western side of the proposed Government line? A good deal of it is still in the future.
2578. There is no population there at present? There is some population on the other side of the tunnel, near Blue's Point, but I cannot tell you what it is. There is a thicker population there than there is on Mr. Hamand's line, beyond his tunnel.
2579. On the eastern side of Mr. Hamand's proposed line, is there not a very much larger population than on the western side of the Government proposed line? There is no population on the eastern side of Mr. Hamand's line which could use his line at all. On the eastern side of Neutral Bay there is a regular barrier of steep slopes.
2580. But where the streets are marked? That is over the tunnel on the top. Those people would not be served; they would not use the line.
2581. Beyond that again, at the head of Long Cove, is there any population of importance? There is a population springing up between the end of Miller-street and the North Sydney-road.
2582. Would that be served by Mr. Hamand's line? Yes; but it will be better served by the private tramway.
2583. Do you think that the private tramway is likely to be constructed? I could not say; they have lately got an amended Bill through Parliament.
2584. I think you mentioned that the population on the North Sydney-road is something like a mile and a half from Mr. Hamand's nearest station;—is the country between that population and Mr. Hamand's proposed station likely to be built upon—is it available for settlement? Yes; but it would also be served by the existing line.
2585. How far is Mr. Hamand's station from the existing line? About half a mile, I should say.
2586. Is it situated where there is likely to be much population? Yes; the land there has been cut up, and is pretty good land for building purposes.

- H. Deane,  
Esq.  
22 July, 1890.
2587. Would not the people living there be the best served if Mr. Hamand's line were constructed? I expect they would, because the line would go close along their houses, but then the question arises—is it worth while to incur an extra expense to go round that way and give them a slight advantage.
2588. Do you think that it is any advantage to have Mr. Hamand's line going so far towards a line that might be constructed to Manly? I do not believe that it is.
2589. Mr. Hamand's line would be so many miles on the way? I do not believe that it would. I am not at all persuaded that this is the best way of getting to Manly. I think the level would be the wrong one.
2590. Do you think that if a line should be constructed to Manly any of Mr. Hamand's line would be likely to be used for the purpose? No.
2591. Suppose it were not constructed, but that it was decided to carry a line to Manly, would such a line be likely to go anywhere near where Mr. Hamand proposes to go? I am very doubtful about it.
2592. Do you see any objection to that portion of Mr. Hamand's line from Milson's Point to where the junction is shown, supposing a line were to be constructed to Manly? You mean would there be any objection to adopting that portion of the line and making a junction from it?
2593. Yes? Possibly that might be considered, but I believe that it would turn out to be a very expensive route—the coast-line along there being very rugged.
2594. But do you think that there is a better route? I am sure that the question could be solved in a better manner than by going that way.
2595. Putting the question of cost on one side altogether, do you think that the Government line would serve more population, not only at present, but also in the future than the line proposed by Mr. Hamand? I am certain that if the whole country on each route were thickly populated, and the two lines cost exactly the same, the Government line would be better than Mr. Hamand's line.
2596. *Mr. Douel.*] Have you made a very careful examination of Mr. Hamand's proposal? Yes; I have been right over it.
2597. You have examined it sufficiently to justify you in giving an estimate of cost to the Committee? I have had the quantities taken out.
2598. What is the cost of construction on the Government line? The original estimate was £127,000, to which £16,000 have to be added for the deviation, making altogether £143,000, giving the total cost of the line, including land resumption, £246,200.
2599. Then you give the Committee to understand that the additional cost of Mr. Hamand's line would be £175,000? That is it, I think.
2600. Have you made yourself acquainted with the tunnel on Mr. Hamand's line? I know where it is to be.
2601. What do you estimate will be the cost of the tunnel? I put down the cost of the tunnel at £70 a yard. I have taken it as a double tunnel throughout, with the same construction as has usually been adopted on the Government lines here. Mr. Hamand, I believe, recommends two single tunnels, which would be more costly than one tunnel, though I have not calculated the cost of two single tunnels. For the sake of comparison I have taken the cost of one double-line tunnel.
2602. You claim for the Government proposal a very considerable advantage in its utilizing more of the Lavender Bay frontage than Mr. Hamand's line does? Yes, and I think that that is a very material advantage.
2603. The Government line would give a large amount of wharfage space, and a much greater length of level to work upon, than Mr. Hamand's line would give? Yes.
2604. You consider it a great advantage at any station to have a considerable length of level running? You must, to do the shunting properly.
2605. It would be dangerous to shunt on a grade? It would be excessively inconvenient.
2606. And dangerous also—trucks would be liable to run away, and all sorts of things might occur. You referred just now to a grade of 1 in 50 at Chatswood; what is the length of that grade? I do not remember exactly, but I believe about three quarters of a mile.
2607. Would it be possible to cut that grade out and make an easier grade there? I don't think it could be done.
2608. It could be done, but at a considerable cost? You can do nearly anything by paying for it.
2609. Would it be very expensive to cut that grade out? It would.
2610. And no corresponding gain would be made, because on the main northern line there are grades of 1 in 40 that would have to be overcome? Yes.
2611. If the line were continued across the harbour, would not the station which Mr. Hamand proposes at Careening Cove be very useful? I do not see how it would come in at all. If there were a bridge across the harbour, it would have to come in at some point on the Government line.
2612. Mr. Hamand's station then would be of no use for the purpose of connecting with the bridge across the harbour? No—it would be too low down, for one thing.
2613. Having very carefully examined Mr. Hamand's proposal, and the Government proposal, are you of the same opinion as you were when you gave evidence here last time, that the Government proposal is infinitely superior in every respect to Mr. Hamand's proposal? Yes.
2614. On the score of cost, and because of the advantages to the public generally? Yes.
2615. *Mr. Lee.*] You have a copy of Mr. Hamand's estimate of cost before you? Yes. I see that, by an extraordinary coincidence, Mr. Hamand's estimate almost agrees with mine, but he has taken the cost of land and compensation at £130,000, while I have put it down at £200,000. His estimate for works is £220,677, while mine was £221,000.
2616. You estimated the cost of Mr. Hamand's line at £421,000, so that there is a difference between your estimate for his line and his own estimate of £70,323? Yes, and that is entirely due to the item "land and compensation."
2617. Do you think the amount allowed by Mr. Hamand for roads and bridges, &c.—£13,000—is sufficient? No. I mentioned that my estimate for his line did not include these very costly road approaches, deviations, and so on. It would be impossible to make a full estimate of this without taking levels and seeing how the different streets could be dealt with.
2618. But Mr. Hamand includes them in his estimate? Yes; and so far he differs from me, because, if a careful estimate were made of these works, I think the total cost would have to be increased by a pretty large sum.
2619. You make Mr. Hamand's proposal cost £174,800 more than the Government proposal? Yes.

H. Deane,  
Esq.  
22 July, 1890

2620. Is your estimate of Mr. Hamand's proposal a correct one? I think that it is as likely to be correct as Mr. Hamand's is.
2621. If your estimate is right Mr. Hamand's must be wrong? The difference is entirely due to the estimate of land and compensation.
2622. Suppose the bulk of the traffic of the line was beyond St. Leonards Station, would it be an insuperable difficulty that Mr. Hamand's line was a mile and a quarter longer than the Government line? In going down the grade it would take longer to cover the extra distance, but in going up hill I dare say you would notice the difference less, because the trains would proceed more slowly up the steeper grade.
2623. But, remembering that so many people reside along the Illawarra line as far as Kogarah, and along the main line as far as Homebush, would this 1 mile 25 chains of extra length be likely to discourage settlement on the North Shore line? I do not say that it would discourage settlement, but people would have the extra distance to travel. People  $7\frac{1}{2}$  miles out on Mr. Hamand's line would only have about 6 miles to come by the Government line.
2624. Is there not more probability of there being an intermediate traffic from the upper portion of Mr. Hamand's line than from the upper portion of the Government line—that is about St. Leonards Station? I am certain that there would not be a greater traffic.
2625. Does not the population lie between St. Leonards Station and Lavender Bay? Yes.
2626. Consequently, the line as it got lower down, would influence the traffic more than it would higher up? The Government line would induce settlement and gain revenue on its whole length, from the other side of Blue's Point-road up to the present St. Leonards Station, while I reckon that Mr. Hamand's line would not serve the district through which it passes, until it got to the other side of the tunnel on the Middle Harbour slope.
2627. You stated in reply to Mr. Tonkin, that you thought the point at which Mr. Hamand showed that a line might be taken to Manly Beach, was in your opinion, a wrong one? I believe it to be the wrong one.
2628. Which point do you think would be the best to take it from on to Manly Beach? I am not in a position to say at present.
2629. Suppose the Government line were made to Milson's Point, and it was the desire of the Government to extend it to Manly Beach, could it be brought round along the route now submitted by Mr. Hamand as far as the big tunnel? My impression is that if it were necessary to take the line to Manly, it would be far better to get it at a higher level—nearly at the top of the ridge, because the nearer you get to the top of these ridges the easier the work is.
2630. Supposing Mr. Hamand's line were constructed, could it be used in any way to connect with the bridge across the harbour? I do not consider that it could.
2631. Are you of opinion that such a bridge must go from the highest points? That is the least costly way of making it, and the cost is always a consideration.
2632. The highest points are considerably above Milson's Point and Lavender Bay? If the bridge had to be constructed, the nearest high point to the southern side of the harbour is M'Mahon's Point.
2633. If a bridge were at any time constructed from the high point across the harbour, could the railway line be extended from Milson's Point to cross it? No; it would not be made from Milson's Point; but it could be made to start from the Government line, about three-quarters of a mile back.
2634. Could the bridge be approached more easily from the Government line than from Mr. Hamand's line? Yes. I do not consider that the bridge could be approached from Mr. Hamand's line, except at very great cost.
2635. Could it be approached from the Government line without any extra cost? Yes; other than the cost of the approach to the bridge.
2636. Why? Because the levels suit.
2637. *Mr. Copeland.*] Can you tell the Committee what is about the average cost for wear and tear per mile of running on a grade of 1 in 50? I have not any particulars here.
2638. I suppose we may understand that it would be greater on a grade of 1 in 50 than on a grade of 1 in 70? Not considerably greater. I do not see that it would affect the matter very much.
2639. Has not a computation been made of what it costs by wear and tear on the rails and wheels to bring up a train? Going down hill, of course, there is more wear and tear, because of the action of the brake.
2640. Would there not be more wear and tear in bringing up a train on a grade of 1 in 50 than on a grade of 1 in 70? Yes.
2641. There would be more friction from the brakes? Yes, naturally. You would have to allow a longer distance for stopping in, and the brakes would have to be put on earlier.
2642. And going up the grade there would be more waste of steam-power in starting? No; there is nothing lost there. You have the same height to mount up, and the same work is done in each case.
2643. Does it not require a greater expenditure of power to take a train up a 1 in 50 grade than to take it up a 1 in 70 grade? Of course it does; but then the distance on the heavier grade is shorter, and the work done is exactly the same, unless the engine is overtaxed, but we are not assuming that.
2644. How is that you would have the same height to mount in both cases? Supposing you have to go up 350 feet—
2645. But that is supposing that both routes are the same? No; but they both have fairly level grades. Mr. Hamand's grade is 1 in 70 for nearly the whole distance, while the Government grade is 1 in 50. There are no reverse grades, and you are mounting all the way. The work done in each case is exactly the same. Mr. Hamand does it more easily, but he has a longer distance to go.
2646. In going from A to B, although the ultimate level to be obtained would be the same, might there not be a number of routes differing greatly in grade, rising at some points and descending at others; would there not be a greater waste of power if you went up a rise of 50 feet and then down again, than if you took a more level route with a grade of 1 in 70? Decidedly; but you are assuming that in one case you lose in some places whatever height you gain in others, but on the Government line we do not do that. Every inch in height we keep.
2647. But I am not comparing the different grades on the same route. Here we have two routes, and there may not be the same declivities on Mr. Hamand's route that there are on yours? No; but we are mounting all the time.
2648. But you may mount and descend, and mount and descend again? But we do not do that, although Mr. Hamand really does. He has to rise to a slightly higher point than we do in the Government route.
2649. Mr. Hamand's section shows that the steepest grade on his line is 1 in 70, and that the grade varies from

- H. Deane,  
Esq.  
22 July, 1890.
- from 1 in 70 to 1 in 290. Would it not be much cheaper per running mile to work a railway with these grades than to work the Government line with a grade of 1 in 50? Yes, certainly, per mile.
2650. It would be cheaper per mile to work Mr. Hamand's railway than to work the Government railway? To a slight extent.
2651. Would not the additional 1 mile 25 chains on Mr. Hamand's line bring in more revenue to the Government. Would not the Government charge for that extra length? Yes; they would.
2652. They would receive more revenue by way of fares? The fares would be increased, but there is a point in connection with this, which did not strike me before, and it is this, that a place 7 miles distant from the terminus on the Government line is further out, and in better country than a place 7 miles out on Mr. Hamand's line, so that the Government would get the advantage of settlement further out, and in a better and more favoured district, by their scheme than by Mr. Hamand's. Strathfield is 7 miles from Sydney—taking it as the natural limit of the thick population which will spring up, 7 miles along the Government line would be nearly  $8\frac{1}{2}$  miles on Mr. Hamand's line, and if the population is limited by the 7 miles distance, the district which is likely to be populated, is shortened in length by Mr. Hamand's line, and there would be less revenue forthcoming.
2653. Why fix 7 miles? You could take 10 miles, if you liked; the comparison would be the same.
2654. Do I understand you to take up the position that there is a greater population on the Government line than on Mr. Hamand's line? I am considering the future population. The shorter you can make the journey to the high land, say at Gordon, the better for the Government and the railway revenue.
2655. But what warrant have we for assuming that population will increase at a greater ratio on the Government line than on Mr. Hamand's line? I do not say that it will. I say that by shortening this portion of the line you render greater the length of district available for traffic purposes. I think that the population will increase very much between St. Leonards and Milson's Point; but I also believe that there will be a very large population going out to Gordon, on account of its height above the sea.
2656. I suppose you will not dispute the fact that at the present time there is more population on Mr. Hamand's route than on the Government route? I dispute the fact that Mr. Hamand's route would serve even now the larger population, because it is my opinion that it would not serve a large portion of the district through which it passes.
2657. Are there not more people settled on Mr. Hamand's route? There may be, but I do not consider that that has anything whatever to do with it. The thickest population on Mr. Hamand's line is over the tunnel, but those people are not served by the railway. There is also a thick population near the second station, but the people there would not be served by the line, because the station is in a hole, while the people further down are not served, because they can walk to Milson's Point more easily than they can take the train.
2658. Without railways or tramways, we find that the people have settled in larger numbers on the route that Mr. Hamand has chosen? Yes; that shows that the railway is not necessary—that the people there are already sufficiently accommodated.
2659. It must be admitted that the people have, without the convenience of a railway or tramway, settled in greater numbers along Mr. Hamand's route than along the Government route. Is not that a good reason why we should believe that in future they will settle along there to a much greater extent if they get the railway? That is not my opinion.
2660. What grounds have you for believing that people will settle in greater numbers on the western line? Because there is a greater length available. I say that the length available for settlement on Mr. Hamand's line only commences when you get to Willoughby Falls.
2661. At the present time there is virtually no population on the Government route—very little population? There is a little population on the other side of Blue's Point.
2662. Is not a stern chase a long chase. Will it not take some time with the population on the Berry's Bay route to catch up to the existing population on Mr. Hamand's route? No; I am not at all sure about it; but I am inclined to think that an estimate of the population on both routes, excluding that part of the population on Mr. Hamand's route, which I say would not be served by his line at all, would be greater than on the Government line.
2663. Let us consider the Government line. In the first place, on the western side of that line there is no population, while, on the eastern side, you can only count upon the population to within half way of the tramway, because those nearer to the tramway would be likely to use it? Yes; most probably.
2664. Half of the people living between the tramway and the Government line would use the tramway, and the other half would use the railway? Yes; something of that sort, I daresay.
2665. So that on the western side of the Government line you have no population, and on the eastern side you have only half the population between the railway and the tramway? I daresay that there is not very much population at present, but there is plenty of room for population on the western side, and surely we have to consider the future population on this line quite as much as the present population.
2666. Would not that apply to Mr. Hamand's line as well? No; I do not think it would.
2667. What is your reason for that opinion? I have been endeavouring to give it to you. I have shown that I consider that the first part of Mr. Hamand's line would not serve the district through which it goes. His first station is situated in a locality which is already admirably served by steamer and tram; his second station at the head of the creek at Neutral Harbour, and before the entrance to the tunnel, is right down in a hole, and would not serve the surrounding population, which is for the most part situated nearly 200 feet higher; his line, therefore, would not serve any population until you get to the further end of the tunnel; beyond that point there is a considerable length of line before you come to the station. At Cammeray-road there is very little population, though there is plenty of room for it. I admit that it would be a good thing, if it was not too costly, to make a railway for the future population about Miller-street, if they had no tramway; but they have one which will serve them better than the railway. Then again, although there is a population on the North Sydney-road, Mr. Hamand's railway would not serve it, because a new station at  $9\frac{1}{2}$  miles on the Government line would be nearer to them.
2668. Now will you commence on the Government railway. Starting from Milson's Point, at the head of Lavender Bay, I suppose no one would be likely to make use of the railway? No. But the Government line provides wharfage, which Mr. Hamand's line does not.
2669. But we are speaking now of population. There is no regular steam trade to Berry's Bay at the present time? No.
2670. Simply because there is no population. But if the population which we anticipate in the future were settled there, would there not be a steam ferry running in competition with the railway, just as there

H. Deane,  
Esq.

22 July, 1890.

there is a steam ferry from Neutral Bay, which would run in competition with Mr. Hamand's route? Why has the steam ferry not been started then.

2671. I suppose because there is no population. Do you not think that if the population which you have predicted were to settle at Berry's Bay, there would be a ferry service from there to Sydney? No one runs a ferry there now, because there is no population, and if we bring a railway there the population will increase.

2672. And is it not reasonable to suppose that as soon as the population increases a ferry will come into existence? Even if it did it would not make very much difference.

2673. Would not such a steam ferry be running in competition with the Government railway, just as the Neutral Bay ferry would run in competition with Mr. Hamand's railway? There might be, under these circumstances, some competition, but I do not know that there is anything to lead one to suppose that where once you have established a railway a second means of conveyance will enter into competition with it. The population about the 12-mile peg would sooner go the shorter distance to the train than to the water.

2674. What is the distance from Gore's Creek to your railway station? It is not very far, but the height from the water there is considerable, and the people would not like to run up and down to catch steamers.

2675. Would not the people between your line and the water be more likely to go down hill to a steam ferry than up hill to a railway? It is all high land round Ball's Head, and I am certain that the people living about there would very much prefer going to the railway to going to the water.

2676. Until you get to the 11-mile peg, the distance of the Government scheme from navigable water varies from 1 chain to a quarter of a mile. Would not the people living on that land be more likely to travel by steam ferry to Sydney than to patronize the Government railway? I am very doubtful of it. If they could run down in the train to the North Shore, and go across in the ferry, it would be quicker and easier for them than to go down to the water's edge on foot.

2677. Starting from Milson's Point, for several miles your route runs parallel to the navigable waters, whereas Mr. Hamand's route goes away from them and runs inland, where there is, and can be, no ferry competition? But you are forgetting the fact that Mr. Hamand's line, although it goes away from the water for the first 2 miles, picks up no traffic.

2678. But is your line likely to pick up much traffic for the first 2 miles? Yes; I believe a great deal of traffic.

2679. The people will prefer to travel by railway rather than to travel by ferry boat? Yes. The end of the 2 miles is about three quarters of a mile from the St. Leonards Station.

2680. For a great part of the way people would actually have to leave the water's side to get to your railway—it would not be more than a chain away from the water? I would leave that part out of consideration, and still, beyond doubt, there would be a greater population served by the Government line. People living half way between the Bay-road and the Lane Cove-road would certainly prefer to go down to the railway.

2681. Are they not served by the present tramway? It would be easier for them to go to the railway than to go to the tramway. Further along the line the ground is very high.

2682. Considering the number of trams that there are running and the small number of trains that there would be, is it not more likely that people would prefer to take the chance of catching a tram before that of catching a train? I do not think so.

2683. Taking Mr. Hamand's estimate of £350,677 for his line, I understand that the difference in cost between the two proposals is £95,523? I do not acknowledge Mr. Hamand's estimate.

2684. But you have already stated that your estimate is very near his, less the cost of land resumption? Yes.

2685. Would we not be justified in looking upon that as an evidence of Mr. Hamand's capabilities of forming an accurate estimate? I do not object to Mr. Hamand's estimate; it tallies in a remarkable manner with mine, though I pointed out in the first place that there are inaccuracies on the section, which, if corrected, would increase the cost of work, and in the second place there is the question of approaches for roads, which I have not been able to estimate, and which I have not included, but which, if a reliable estimate had to be made, should be properly worked out.

2686. I understood you to say that you had not gone into a careful estimate so as to be able to check Mr. Hamand's estimate with regard to the land resumptions? Yes; I have simply taken the old estimate as a basis.

2687. Might we not as fairly consider that Mr. Hamand's estimate is correct as that yours is? No.

2688. For what reason—if Mr. Hamand has gone over the ground, and if he has the same data as you have, is he not competent to form an estimate? The Land Valuer's estimate of the value of the land on the Government line, with certain deductions which I have mentioned, is £103,200, and Mr. Hamand only reckons £130,000 for the land along his route—that is to say, he only allows £27,000 for the difference in distance and in the quality of the land through which he passes—I say that that is not enough.

2689. But all land is not of equal value? No, it is not. There is one advantage in the Government line—it does not destroy any house property—while Mr. Hamand's line goes through a lot of houses. Even supposing the land were not valuable, these houses would have to be paid for, but the land on Mr. Hamand's route is much more valuable than the land on any portion of the Government line west of Lavender Bay.

2690. Would not the land in the Government line be of much greater value, seeing that it has mostly water frontage, than the land on Mr. Hamand's line? The land on the Government line is not close to the water. We should not take any water frontages, except at Lavender Bay.

2691. But you would not be more than 1 or 2 chains away from the water? We should not be very far away; but even if we did take the land we should have the water frontage. I have not valued the land—the Land Valuer has done it.

2692. At any rate, taking your estimate for the Government proposal as £246,100, and Mr. Hamand's estimate as £350,677, we have a difference in the estimated cost of the two routes of £95,523? But you have no right to take Mr. Hamand's estimate of his line and mine for my line—you must go on the same basis for both. The difference lies chiefly in the estimated cost of the land, because I have not taken into account the errors in the section, which may amount to a good deal, or the road approaches, which are most important. I am most distinctly of opinion that Mr. Hamand's estimate of £130,000 for land resumption is certainly not more than two-thirds of what it should be. I am convinced of that.

WEDNESDAY, 23 JULY, 1890.

Present:—

THE HON. JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

WILLIAM M' COURT, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Arthur Samuel Hamand, Esq., sworn, and further examined:—

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2693. *Vice-Chairman.*] You have come to give evidence upon the alteration in the route from Lavender Bay, at St. Leonards Station, suggested by you? Yes; but before you go into that question I should like to say that it has been suggested that somebody prompted me as to this particular route—somebody who might be interested in it. In answer to that, I wish to say that I do not know anybody on the North Shore who is interested in the route.

2694. *Mr. Garrard.*] Has any member of the Committee made that suggestion? I do not think I need tell you exactly who it was made the suggestion, but nobody has moved me in the matter. I have acted solely upon my own judgment with the desire to obtain a route which would best serve the interests of the public.

2695. *Mr. Copeland.*] I think that if any member of the Committee made the suggestion it would be a desirable thing for you to say so? No member of the Committee made the suggestion.

2695½. *Vice-Chairman.*] Have you been very long engaged in the examination of the route which you propose? Not very long. I know the North Shore very well.

2696. You would not call yours a complete survey? I should call it a trial survey. I know very well that when the line comes to be staked out I can reduce the cost. When I sent my estimate into the Committee I asked particularly that it should not be forwarded to the Works Department, because I had already some experience of how the Works Department dealt with my figures and statements, and I very much preferred that they should have made an independent estimate. They had the section and the plan and description, and they could go over the country, so that they were just as well able to make an estimate as I was myself.

2697. You do not regard your estimate as a conclusive one? I am quite sure that it is too liberal. Now, as to the question of land. So far as the works are concerned, Mr. Deane admitted yesterday that his estimate and mine were identical—that the only difference was in the estimate of land. Now, if you will look for a moment at Mr. Deane's figures, you will see that he estimates the value of land on my line to be £200,000, while I put it at £130,000. Mr. Deane did not tell you how he was going to make up his £200,000, and, in fact, he would have had some difficulty in doing so; but I will tell you how I made up my £130,000, and then I will apply the valuation which he puts upon the land on his line to the land upon my line, and you will see that his estimate of £200,000 is all nonsense. He said, yesterday, that those figures were not final, that he had not been into the matter, and all that kind of thing; but it is nonsense to give an estimate unless you have something approximate to go on. I know that £130,000 is a liberal figure, and I will show you exactly how I arrived at it. I put down £55,000 for the foreshores of Lavender Bay, from Milson's Point to the Alfred-street tunnel, and the balance, £75,000, I spread over 3½ miles of line, so that you will see that that 3½ miles of line would cost about £23,000 a mile. Now, if you will take the Government line, you will see that they occupy in Lavender Bay a frontage of 52 chains, while I only occupy 35 chains there—that is to say, the Government line takes up half as much again in length of frontage in Lavender Bay as my line does. I put a valuation of £55,000 upon the 35 chains which I take up. If you add 50 per cent. to that, it comes to £82,500, which, I believe, is below the figure Mr. Deane gave you as the cost of the resumption of the land around Lavender Bay on the Government route.

2698. *Mr. Tonkin.*] Mr. Deane's estimate of the cost of resumption on the eastern shore of Lavender Bay is something over £37,000? Yes, and then there is the land at the head of Lavender Bay to add to that. You see that I have absorbed, at Lavender Bay, £82,000 out of the £103,000 which Mr. Deane has allowed for land and resumption on the whole of the Government route. £82,000 subtracted from £103,400 leaves £21,000, and the last amount has to be spread over 1 mile 70 chains on the Government route, which works out about £12,000 a mile. Now, I think that those gentlemen who have been over the route will have no difficulty in coming to the conclusion that if £12,000 a mile for land is enough between Blues Point-road and St. Leonards Station, £23,000 a mile is certainly enough for land between Alfred-street, round the Middle Harbour shores, to Miller-street, North Sydney-road, and so on. £23,000 a mile is a great deal more than enough for it, and I put it to you as a matter of common sense if it is not so. You will not find any two land agents likely to agree on this subject. When two land agents go into court, one generally says double what the other says, according to whichever side he is on. Again, if you consider the acreage resumed on each route, you will find that the resumptions upon the Government route, apart from the Lavender Bay land—upon the mile and 70 chains—come to £1,500 and £1,600 an acre, while the land upon my line is estimated to be worth on the average over £2,000 an acre.\*

2699. *Mr. Humphery.*] What area of land do you allow to a mile of railway? 10 acres to the mile. I have taken the same acreage to the mile in each case. I hope I have made it pretty clear to you that the estimate for land upon my route is amply sufficient. At any rate you may see from the figures which I have quoted that my estimate for land on the route which I recommend is more liberal than Mr. Deane's estimate for the Berry's Bay route. There is one other point upon which I wish to say something. The station in what was not very euphoniously called the "Hole"—we will call it the Valley—the station near Bent-street, was said to be of no use whatever, because the summit of the ridge was 200 feet above it. The summit of the ridge is 200 feet above it, but that is only one street. The streets come down to the level of the line, and go 100 feet below it, so that it is ridiculous to talk about the height of the ground preventing

\* NOTE (on revision).—The figures per acre should be £1,200 per acre on the Government route, and £2,300 per acre on my route, if ten acres per mile are reckoned in both cases.

preventing people from coming down to the railway station—they have to come down now to the ferry. At Lavender Bay people go up and down a couple of hundred feet without thinking much about it, and if they will do that to get to a ferry they would do it to get to a railway. But if the traffic justified it, there would not be the slightest difficulty in putting in a hydraulic lift at this place. Such lifts are in operation upon the Mersey railway, where the line descends under the river, and where the stations are only 80 or 100 feet below the surface.

A. S.  
Hamand,  
Esq.

23 July, 1890.

2700. *Mr. Copeland.*] Have you any interest on the North Shore at all? Not the slightest.
2701. Are you interested in any way, directly or indirectly, in either route? Not in the slightest.
2702. So you have no personal motive to serve in advocating this route? Not the slightest.
2703. Are you likely to receive, or have you been promised, any consideration in connection with the matter? I do not like the question at all, but I would not advise anybody to try that on with me.
2704. You have not been promised anything by the Committee in the way of remuneration;—you have not been engaged by the Committee? No; this is all pure philanthropy.
2705. All voluntary on your part? Perfectly. My reason for proposing the route was simply this: I knew that the Committee had decided against the Government route before, as not being a suitable one, or, at any rate, as not being required in that direction; and I was surprised to see that the Department endeavoured to force the line down your throats by submitting it again without any material alteration. Then I observed that you were going to Cremorne and other places looking for routes, and it came into my mind that I knew the route which would serve the country best, and I therefore sent you a sketch of it.
2706. The trouble you have taken is purely and simply in the public interest? Entirely.
2707. In order to see what you considered the best line constructed? That is it.
2708. I suppose it is not part of an engineer's profession to value land for resumption? No; but I have very often bought land myself for railway purposes. An engineer can vary the cost of land considerably. He can vary the cost materially if he goes hand in hand with the land agent and arranges the route. The slightest variation sometimes affects the price at which you are going to buy land very materially. In cases of this sort, where the land is valuable, I never allow a line to be staked out until the land-owners have all been consulted.
2709. Still, in making the estimate of the total amount to be paid for land resumptions, I suppose you must have gone pretty well by the rule of thumb—you had no valuations to guide you—you have not had the assistance of a land agent? I do not think that a land agent is very much assistance generally. He cannot tell you much more than you can find out without him. Very often a land agent is used as a cloak for responsibility.
2710. I suppose in this case you have adopted the rule generally adopted by engineers in furnishing a report to the Department—you have simply made a rough estimate of the cost of the land? I do not think that it is very rough; I think I could buy the land for that price to-morrow, and for a good deal less.
2711. You consider that you have allowed a liberal estimate? I have never had a case where my estimate has been exceeded, either for land or works.
2712. You have had similar cases to this? I have had similar cases to this.
2713. This is not the first railway that you have laid out? Not by a great number. I have not only acted as an engineer, but I have also acted as a contractor. I have carried out works myself, and know their value down to a 6d.
2714. Are you a member of the Engineering Association? I was made a member of the institution of Civil Engineers in 1870—twenty years ago.
2715. So that your scientific training is quite sufficient to qualify you for making an independent survey like this, and for forming estimates similar to that with which you have furnished the Committee? Yes. I do not believe in engineering which is merely technical; I think it ought to be commercial as well. I have endeavoured to put this matter before you in a common sense—commercial way—not merely from an engineering point of view, so that you could form a judgment for yourselves.
2716. *Dr. Garran.*] Starting from Milson's Point, I understand that you only keep the wharf level for a sufficient length for a passenger station? I am very glad you asked me this question, because I wanted to make an explanation in reference to this matter. I show the line as being constructed somewhat out in the water. The water at this place is shallow—the ground runs out flat; and if you want to build a wharf there, you must either put it well out in the water or dredge and excavate so that vessels may be brought alongside the land. Although I show the middle line well out in the water, it is really only a small distance out, and if it were determined that it would be better to have the line on the land instead of on the water it would be perfectly easy to make the alteration; but my idea was to construct the line where I show it. You will observe on the section that the line at one point is some 20 feet above the Quay level. There will be no difficulty in running the railway over head at that point and using the bottom level for wharf purposes. Then something was said yesterday, and very much was attempted to be made out of it, about my having only 600 feet for a station. I wish here to remark that the bulk of Mr. Deane's figures were extremely elastic, and sometimes they were pulled one way and sometimes the other. This 600 feet is, as a matter of fact, more nearly 700 feet, and the length is plainly shown on the section to be 660 feet, which is just twice the length of the longest platform which you have in the colony, and it is the length of the longest train which you could run on the line, whether for goods or passengers. It is just long enough to do the shunting comfortably. You will not have a great quantity of goods there; but, if you did, it would be perfectly easy to work the traffic. The whole of the goods sidings will be led up to one junction with the main line for the purpose of having the proper interlocking apparatus and signals, so as to close the main line to all goods shunting and that sort of thing; but if you preferred a longer length of level, you would only have to raise the station, making it 12 feet above the water instead of 8 feet, and you could have double the length of level, though it would be of no use to you.
2717. If you make the passenger station 12 feet above the wharf level, all the passengers will have to go up steps to the station, and will have to carry their luggage up? They may go up steps, or up a slight slope.
2718. Do you think that that is an advantage? Do you know the present level of the Quay above water level?
2719. We put the wharf level at 6 feet above high-water mark? Well, suppose your line of rails is 12 feet above it, there would not be much inconvenience.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2720. But where you meet a steam ferry, is it not best to bring the line of rails in at the wharf level? I think you will find that the present tram terminus is somewhere about 12 feet above water level? I dare say you will remember that the passage through the arch is all on the rise.

2721. But the tram passengers are purely suburban passengers, who do not carry any luggage; with the train we should have passengers coming from a longer distance? You will never get passengers from a long distance here.

2722. You are proceeding on the assumption that Milson's Point will never be anything but a suburban passenger station? That it will never be anything but a suburban passenger station.

2723. And having the railway platform 12 or more feet above the water level will be no greater inconvenience than it is to have the tram terminus that height above the water level? Not in the least.

2724. You have between 600 and 700 feet of station level? Yes.

2725. You go on the assumption that more than that length will not be wanted, because there will be no heavy goods traffic requiring a longer wharfage space here? If there were you could not possibly stand it on the main line; you must bring it to the terminus and shunt back.

2726. Would you bring the trucks into the passenger station and shunt them back along the level? Certainly. It is not necessary to bring them on the actual lines of rails occupied by the passenger trains; there may be other lines of rails.

2727. But you must come to that level? Yes.

2728. You must push your goods trains to the end of the station before you shunt back? Yes.

2729. Is it a good arrangement to bring goods under the passenger shed and then take them back again? They would be outside the passenger station on another set of rails.

2730. Parallel with it? Yes.

2731. But practically in the same yard? That is so everywhere; it is so at Redfern.

2732. Is it not a most awkward arrangement at Redfern to have the goods lines splitting across the passenger lines? You must have that at some point; you must bring all your traffic on one line of rails, and there must be some point where they diverge. As long as you have interlocking apparatus and a system of signals there is no more danger in these trains crossing than there is in running them upon the main line.

2733. At Lavender Bay, according to the Government scheme, the goods are taken along the water's edge while the passengers will go inside, near the cliff, without crossing the goods line? No; you must surely cross. The only difference is that on the Government route it is proposed to do it at the head of Lavender Bay, instead of at Milson's Point, as in my proposal.

734. They diverge there? They must cross.

2735. The up and down goods must? You are simply transferring the point of junction from Milson's Point to the head of Lavender Bay.

2736. But making it far more convenient, I imagine? It might be so if you were actually going to convert the whole of the Lavender Bay frontage into a wharf.

2737. That is the Government scheme. It is proposed to have the goods traffic along the edge of the bay, and the passenger traffic behind that, so that on the wharf level the two kinds of trains do not cross one another. The only point at which they would cross would be after starting upon a journey. No shunting of goods would ever come upon the passenger lines? Not after you reach the head of Lavender Bay, but there you would have the same thing to do as you would have to do at Milson's Point with my scheme.

2738. But there would be no shunting on the passenger flat? Nor would there be in my case. If you wanted to get to the wharves, you would simply back the train.

2739. Your plan is to give 600 feet of space at Milson's Point, and, if a goods traffic is to be provided for, to shunt back along the water's edge? The local goods station would be close to Milson's Point—that is, the station for goods required between Sydney and Hornsby.

2740. A suburban goods wharf? Yes. There is no more difficulty about working trains down to Milson's Point and back again than there is about working from Lavender Bay. It is a mere question of convenience.

2741. After you pass your 600 feet you rise at once with a gradient? Certainly.

2742. In order to shorten the tunnels and to get your elevation as quickly as possible, you have no other possible route open to you than to go to the head of Lavender Bay, and by a short tunnel into the valley of Neutral Bay;—there is no other route practically available? No, I think not. I think that is the best way of taking the line.

2743. When you once get into the Neutral Bay valley you have nothing to do but to follow it up until you come to the tunnel under Military-road? I do not know whether it is worth mentioning, but there are two valleys in Neutral Bay—one at the head of Careening Cove.

2744. That is a small subsidiary one? Yes. From that point you may go round Neutral Bay, Kirribilli Point, or anywhere you like.

2745. But if you want to go to St. Leonards Station, you have practically nothing to do, when you get into the valley at Neutral Bay, but to tunnel up and come out at the other side;—the line is marked out by nature? Yes; the valley seems to be made for the line to go up it.

2746. When you come out on the other side your course is equally marked out. Yes.

2747. You have heard what Mr. Deane said about the rock cutting? No, unfortunately I did not hear it, as I was not here then; but I see by the newspapers that Mr. Deane talks about a hill there. I have laid out the line to avoid that hill, and Mr. Deane cannot have looked over the plan very carefully or he would have seen that I avoid it.

2748. You go a little more round than is marked on the map, because Mr. Deane says you must have a deep cutting? I see that somebody has sketched out an imaginary hill upon the map. The hill does not go out as far as it is shown to do, and the line just skirts the end of it. But we will assume for the moment that Mr. Deane is right: then all I can say is, that it would be very easy to push the line out a little bit.

2749. As a matter of fact, you go round the hill? Yes.

2750. Mr. Deane told us that if you do go round the hill you will have an embankment at the head of Willoughby Bay which will be quite as expensive as the cutting? That sounds very pretty, but it does not happen to be true.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2751. If you escape Scylla do you not encounter Charybdis; if you get rid of the cutting will you not have a corresponding difficulty in the way of an embankment? No, certainly not. Mr. Deane's idea is that the line is not shown so close to the Falls as I intend it to go, and that if I bring the line out further I shall be into the Falls. Now the line is some 3 or 4 chains away from the Falls, so that it is quite possible to bring it much closer to them; and, in fact, I intend it to do that.
2752. *Mr. Garrard.*] It amounts to this, that the diagram before the Committee does not correctly represent your plan? No; one is on a very large scale, and the other on a very small one.
2753. *Dr. Garran.*] After you pass the cutting, you sweep round by the base of the hill to the private bridge? Yes, round the slope of the hill.
2754. Crossing the street where they descend to the suspension bridge, and from there you go on and join the St. Leonards Station? Yes.
2755. I understand you to admit that your line will cost about £100,000 more than the Government line will cost? Let us say £90,000.
2756. You told us on a previous occasion that you had been a director of a railway company—can you tell us what there is in your route to justify an increased outlay of £90,000? You open up a district which is certainly a better district for building in, since it commands magnificent prospects and is more likely to be rapidly developed than the district through which the Government line goes.
2757. Do you think that the extra traffic likely to be brought on to your line would pay the interest on the extra capital? I think that the first 4 miles of line will earn more than all the rest put together.
2758. You mean as far as the Bent-street station? As far as St. Leonards Station.
2759. Do you think that the larger investment in your line would be more productive than the smaller investment on the Government line? Yes. Throughout this inquiry I have treated you, gentlemen, as the board of directors of a commercial company, and have advised you precisely as if you were that.
2760. I asked Mr. Deane yesterday whether your scheme made Neutral Bay accessible, and he seemed to think that you would have some difficulty in getting down to Neutral Bay to utilize the shore line there? I have a much greater opinion of Mr. Deane's ability than to suppose that he could not get to Neutral Bay, or Cremorne, or anywhere else, if he choose, from my line.
2761. From what point in your line would you branch off to use the two sides of Neutral Bay, leaving Careening Cove out to begin with? Then it is very easy to come down round the head of the bay. The upper part of the bay will be reclaimed.
2762. Would you follow the red line marked on the plan? It would be too straight; my line would be a little more curved than that. There are various ways of coming down to the water—you might come down on either side of the promontory between Careening Cove and Neutral Bay, or you might come down through the middle of that promontory, and cut off the head of Neutral Bay and reclaim it.
2763. If you come down the middle of the promontory do I understand that you would shunt back to the coast line? You would come through in short cuttings, or with the tunnel.
2764. Anyway, you could utilize Neutral Bay from your line? There is not the slightest difficulty about it. The members of the Committee have seen the whole country, and they can see for themselves that there is no difficulty about it.
2765. Are you able to form any opinion as to which would be the better bay for big ships—Lavender Bay or Neutral Bay? There is no comparison between the two—Neutral Bay, of course. The depth of water in Lavender Bay is not sufficient to allow big-sized vessels to turn round.
2766. If we are to contemplate big shipping at the North Shore we had better direct our attention to Neutral Bay than to Lavender Bay? Yes; and besides, all the ships coming to Lavender Bay would have to cross the narrow part of the harbour where the ferries are.
2767. *Mr. O'Sullivan.*] You said just now that you expected that the line from Milson's Point to St. Leonards would earn more than all the rest of the line from Hornsby. I presume that in saying that you had an eye to the future? Yes.
2768. Do you know the number of houses on the first mile of your line from the St. Leonards Station? No, I do not, but there are a great number dotted about—many more than you think.
2769. I understand that there are only thirty-four? Within what distance of the line on either side.
2770. Along the proposed line? That is all nonsense.
2771. I am given to understand that there are thirty-four houses on the first mile and seventy-six on the second? You must inquire what width on either side of the line was taken. There are houses dotted about here and there. [*Referring to the map.*]
2772. At the present time there is not a very large population any way? There is not likely to be, because they cannot get to town.
2773. Do you think that rocky land can compete with the good land on the western side, which is admirably suited for residential purposes? I am not sure that I understand the drift of your question.
2774. On your line, near North Sydney, where the suspension bridge is being constructed, and all about that locality, the land is very rocky, is it not;—do you think that that land is likely to compete as a residential suburb with the land between Lavender Bay and the St. Leonards Station, on the Government route? I do not think that people would consider that much. They would not go in for market gardening or anything of that sort, when they put up their houses. Besides, numbers of people prefer rocks.
2775. People who build in the suburbs like to have gardens;—do you not think that they would prefer to build in a country where the soil is good before building on sandstone? You will find that all this country is covered with soil except where the line goes.
2776. You are aware that the tramway runs up the side of the reserve opposite where your line goes, and must certainly command the traffic from the high part of the land there? My experience of traffic is this: that the man who goes by tramway does so until he has got a railway, when he deserts the tramway and somebody else takes his place in it. But tramways and steam-boats are very useful factors in developing a district, and if I own a railway I never object to a tramway or steam-boat or omnibus alongside of it. They all help to develop the district, and, although for a time they detract from the receipts of the railway, yet in the course of a year or two, by multiplying the number of passengers in the district, they increase the traffic, and bring back to the railway more than they took away from it.
2777. You think that this tramway will act more as a feeder to than as a sucker from the railway? Yes. If I owned the railway and had power to take up the tramway, and abolish the steam-boats, I would not do it.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2778. Mr. Deane, yesterday, was of opinion that your line could not be utilized as a portion of a line going to Manly? He did say so. He said that it could not be part of a line to Manly, and then he went on to say that he had not considered the matter, and by-and-bye he landed himself in this fix, that he admitted that he thought that Manly had better not have a railway at all—that it had better be content with a tramway. My idea is that, ultimately, Manly, Pittwater, and those places, will be placed on a new line of railway to the Hawkesbury Bridge, and that that will wipe out the usefulness of the Northern line for through traffic.

2779. *Mr. Tonkin.*] Do you think that your line would give as much convenience to the people on the table-land in the middle as the Government line would do? I think that my line would be of more use to them, because it is more up to their level.

2780. Do you know anything of the country to the west of the Government line? Yes; I know that country well. I know all those bays to the north.

2781. Is there much population there? None whatever at present.

2782. Is that country as likely to be populated as is the country to the eastward of your line? There is already a large population to the eastward of my line, but I still think that the whole of that country will develop, both east and west. I think it will all fill up.

2783. Do you know the exact difference in the length of the two lines—that is, between the length of your proposed line and of the dotted line with a grade of 1 in 50? Yes.

2784. What is the exact difference? One mile  $22\frac{1}{2}$  chains, which is as near as possible one mile and a quarter. Upon that I should like to say that, if you look at the Railway Commissioners' returns for June, 1889, you will see that the average fare per passenger per mile over the whole of the suburban railways is  $\cdot 64$  of a penny, that is, including first-class, second-class, workmen's, and season tickets. So that one mile and a quarter at North Shore would affect everybody living to the north of St. Leonards Station, to the extent of  $\cdot 80$  of a penny, that is, four-fifths of a penny. Everybody living to the north of St. Leonards Station, or who might live there in the future, would have to pay on the average about four-fifths of a penny extra to be brought down the easier gradients to Milson's Point. But I think that that four-fifths of a penny may be looked upon as an insurance premium against accidents, for, with your 1 in 40 and 1 in 50 gradients, you may any day repeat the Peat's Ferry accident.

2785. But those passengers would already have gone over a 1 in 50 gradient to Chatswood? There is a very short length—about three quarters of a mile—of 1 in 50 at Chatswood, but that could be altered to a grade of 1 in 70 by lowering the top end 11 feet, and raising the bottom end 11 feet. I have looked at the section, and I see that, by an expenditure of £4,000 or £5,000, you could wipe out that particular piece of 1 in 50.

2786. *Mr. Garrard.*] Is not there another grade of one in fifty near Gordon—could it be wiped out? I have not looked at that for this reason—I consider this line as very much in the same position as the Illawarra or Parramatta line. If there is to be any traffic over it, you will want trains to run every half hour. If you have a 1 in 50 grade, you can only take up four coaches at a time, while if you have a 1 in 70 grade you can take up six coaches—that is, six long coaches, which is about the length of a train which you would require for working the traffic generally. The bulk of the trains, as you will see by the traffic estimate which I have prepared for you, would stop at Gordon, and that station would correspond with Homebush and Hurstville. If a train went further than Gordon you could take off a coach there, because the traffic would by that time have dropped off. You could get over the 1 in 50 grade beyond Gordon by leaving part of the train there, and picking it up on the way back.

2787. *Mr. Tonkin.*] Do you consider that it is a dangerous thing to have a 1 in 40 grade coming up to a short level at a station? Not only is it dangerous but it is also wasteful.

2788. But do you consider it dangerous? Yes.

2789. Would a 1 in 50 grade be dangerous? It would be better than a 1 in 40 grade.

2790. Still, would it be dangerous? Yes. Every day I see the main line trains running with two engines. The trains from the north come in with two engines and four coaches, and it is the same on the southern line. They find that they cannot keep time unless they put on two engines.

2791. That is on account of the grade? Yes.

2792. Do you not think that it is a great advantage on your line to be able to branch from it on the way to Manly? I think it would save you £150,000 when you came to make a line to Manly, which you will do presently.

2793. Do you think that if the Government decided to construct a line to Manly they would go by any other route, or that a much better route would be discovered than the one which you have suggested? There is no other route which they could take, unless they chose to wind along the face of Neutral Bay, Cremorne, and those places, or have a succession of tunnels through the spurs.

2794. Do you think that it would be preferable to go from St. Leonards Station to Manly, across by Bantry Bay? Such a line would be very much further round to begin with, and would involve a very expensive crossing—perhaps two crossings—at Middle Harbour.

2795. You think that if the line which you recommend were constructed it could actually be the first mile—? Two miles.

2796. On the road to Manly? Yes, and that would be the shortest route to Manly.

2797. And you think the best? Yes. All that back land—the land fronting Middle Harbour—must, some day or other, be accommodated with a railway. You may make a line up the front of Neutral Bay by winding about or tunnelling, but the steamers already go there, while at Middle Harbour they could never compete with the railway.

2798. Your line offers equal, if not superior, advantages to the present population to those offered by the Government line? I think so.

2799. *Mr. Dowel.*] In answer to a question just now you informed the Committee that you had laid out several railways. Will you inform the Committee where they were situated, and what was the number of them? It would take a long while to enumerate the whole lot as I have been doing it all my life—for thirty years.

2800. The list is so long that you could not make it up, I suppose? I certainly could make it up, if you wish to have it. I have not only laid out railways myself, but I have also gone over the routes of other engineers, and revised them, sometimes at their own request, and sometimes at the request of financial houses.

2801. Will you be good enough to name one or two railways which you have laid out, and to tell us where they are? Yes. I laid out 20 miles of line in very difficult country in North Yorkshire. The line was called

called the Whitby, Redcar, and Middlesborough Union Railway. As a matter of fact, the Committee have all this evidence already in the report on the Crookwell line. There I gave a sort of *résumé* of what I had done. In the line to which I have just referred there were cliffs 600 feet high staring me straight in the face.

2802. You have also informed the Committee that you have contracted and carried out railways;—will you name them, and give us the number of them? I built a suburban line near Birmingham entirely through the corporation streets, and going through building land the whole distance; that is one example of a railway.

2803. You also informed the Committee that you have had considerable experience in the management and working of railways? Yes; for the last fifteen years I have spent a great portion of my time in assisting small railway companies in their struggles with the great ones.

2804. You have been director of a railway? Yes; chairman for some time, and I take particular interest in the working of lines and traffic.

2805. Going back to the proposal before the Committee, have you been carefully over your proposed route, and estimated the number of buildings that will have to be removed or resumed? There are five houses, the rent of which varies from 14s. to about 30s. a week. There is one, I think, of which the rent would be about 30s. a week.

2806. Then the land through which your railway would pass has very few buildings upon it;—there would be no expensive resumptions? It simply means that there do not happen to be many houses on the route, though they closely adjoin it.

2807. What were your reasons for saying that there would be no through traffic at Milson's Point? Because I know perfectly well that the line must go to Redfern and Darling Harbour, because the through trains will always run that way.

2808. Is not the line from Hornsby to Milson's Point shorter than the line from Hornsby round by Strathfield? I have already explained to the Committee, and I think the Committee know full well, that it is not always the shortest mileage that is the quickest.

2809. Would it not be an advantage to bring the goods and passengers straight to the deep waters? I do not think there is any advantage in doing that.

2810. Your only reason for supposing that there will be no through traffic to Milson's Point is that you think the Commissioners will not alter their present mode of dealing with the traffic? The Commissioners, in a very wise economy, will concentrate their goods traffic and their fast passenger traffic as much as possible, otherwise they will not understand their business. They are sure to do it.

2811. Would not a shorter distance effect a saving of time? No.

2812. You would run the extra distance of 11 miles from Hornsby to Redfern in the same time as you could run from Hornsby to Milson's Point? In the first place, I think the extra distance is reduced to 10 miles. What does that amount to in time?—ten minutes.

2813. That is not the pace we travel at the present time—60 miles an hour? I did not suggest that you should do such a thing. I would rather be out of the train when you attempted it.

2814. Did you not say that there was only a saving of ten minutes? No; I will put it at half an hour, if you like. Half an hour with a goods train is nothing—they often wait hours to go on.

2815. But it is a considerable time when passengers are concerned? It would not make that difference in the passenger service.

2816. Still you must admit that there would be a considerable saving in time? No, I do not think so.

2817. Travelling 10 miles more would not make a difference in time? It would so far as Milson's Point is concerned, but how many people require to be dragged there. Most of the passengers, after they got to Milson's Point, would have to take the ferry, which they might have to wait five or ten minutes for, to Circular Quay, and then a cab to their destinations. There are hardly enough passengers now to fill an ordinary train to Redfern, and there would never be enough to fill two trains—to make it worth while to run two expresses to Sydney—one by the north shore, and the other by the south shore.

2818. Your opinion about the management of the Northern line is vastly different from that of other people. They are of opinion that eventually there will be a direct traffic to the North Shore, while you think that that will never take place? I see that my opinion coincides with the opinion of the Commissioners, and with that of Mr. Kirkcaldie, which is worth quite as much. I am sure any practical man will agree with me that no express trains will go to Milson's Point.

2819. How did you arrive at the value which you put on your land—did you make any inquiries, locally? Yes.

2820. As to the value of the property through which your line would pass? Yes.

2821. Do you think that you obtained reliable information? They did not know what I wanted it for, so therefore I do not know why it should not be reliable; besides—and I hope you will excuse me saying it—I do not think I am a fool, and when I ask questions I can always add the grain of salt, if I do not like the answers.

2822. And the persons you asked were able to furnish the information you gave the Committee? They had no object in telling me anything but the truth.

2823. You stated just now that there was not enough depth of water in Lavender Bay for the purpose of swinging large ships? I said that you could not turn a large ship round. I ought to have said at the head of Lavender Bay.

2824. Are you aware that the water there is as deep as the water at Sydney Cove, and that the largest ships come into Sydney Cove? There is some difficulty in turning round occasionally.

2825. Nevertheless they come in? They do, of course—they have to back in. But the depth of water over the whole area of Sydney Cove would, on the average, be very much greater than the depth of water in Lavender Bay.

2826. Are you quite sure of your figures? I think so.

2827. Looking at your estimate, I see that you have allowed £10,000 for twelve road bridges? Yes.

2828. What description of bridge do you propose to erect? That depends entirely upon the street or road over which I build the bridge.

2829. Of what material do you propose to construct the bridges? That will vary; sometimes masonry, sometimes concrete, sometimes brickwork, sometimes ironwork, and in some cases, perhaps, timber. I think you may take it that that estimate is sufficient.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2830. £800 a bridge? I should be very glad to construct the line for £20,000 or £30,000 less than my estimate, and then I should make £50,000 out of it.
2831. In your estimate of £800 for a bridge, have you included any approaches? If the approaches are earthwork, they are included in my estimate for earthwork; but there are very few approaches really.
2832. You consider £800 a bridge ample? On the average—yes.
2833. Have you made an estimate of what would be the additional cost per annum of working your line, as compared with the Government line? No, I have not. I do not quite know what you mean. Of course, if you have an additional mileage to work, you also have an additional mileage to earn interest.
2834. I am asking if you made an estimate of the additional cost of working your line, compared with the working of the Government lines? No, I have not; but I will give it to you, if you wish—I will send it to you. You must understand that you do not incur the additional working expenses unless you get the additional earnings.
2835. In your estimate you have not given the working expenses of this particular line at all? No; I have endeavoured to put the matter before you in such a way that you can verify my statements for yourselves. I have simply taken figures of the past working expenses of similar lines, and I have endeavoured to apply them to this line—you can use your own judgment in taking them. There is no question in my mind that 9 miles of line on the North Shore will develop certainly as fast, if not faster, than 9 miles on the Illawarra line did. The only thing you can say is that the Illawarra line, as far as Hurstville, carries a certain amount of pleasure traffic to the shores of Botany Bay and to National Park, but I have Middle Harbour to balance that, and, in addition, a settled population on North Shore already.
2836. Do you consider it necessary to bring the railway from St. Leonards Station to Milson's Point, either by the Government line, or by your proposal? I have no doubt about it.
2837. And Lavender Bay is the best place to bring it for all interests concerned, either by your route, or by the Government route? Yes.
2838. *Mr. Lee.*] When you submitted your estimate of cost to the Committee the length of your route was stated to be 4 miles 25 chains, and the cost, £350,677 10s.? Yes.
2839. Is the route which you now submit the same length, or a less length? It is a less length.
2840. Is it not now more than 4 miles and 5 chains? Exactly 4 miles 2½ chains.
2841. Approximately, 4 miles 5 chains? Yes.
2842. Have you reduced the cost of construction, as well as the length of the line? No; but I stated in the letter which accompanied my memorandum that the cost would be £8,000 less. In any case it would be less, you may depend on it.
2843. Then the approximate cost per mile, as then submitted by you (£82,000) would not now be correct? Very nearly.
2844. The shorter distance would increase the cost per mile? Slightly.
2845. The actual distance now is about 4 miles 5 chains, and you adhere to your original estimate, approximately? Yes.
2846. The only alteration would be the cost per mile? You will find that that would vary very little.
2847. The Government proposal is 2 miles 60 chains, and would cost £246,200, or £89,520 a mile, while the cost of your line would be about £86,320 a mile, and in the aggregate would cost £104,477 more than the Government proposal? That is so.
2848. There is a difference between you and the Acting Engineer-in-Chief as to the value of the land upon your line? Yes.
2849. That difference is £70,000? Yes.
2850. If the Acting Engineer-in-Chief's estimate is correct the cost of your line would be increased by £17,000 a mile? Possibly.
2851. That would bring it up to £103,520 per mile? I am not following the figures, but I take it that they are correct. You must remember that Mr. Deane does not vouch for his estimate of the value of the land—he is very chary of doing that.
2852. Your route would have a grade of 1 in 70? Yes; that would be the maximum grade.
2853. You have heard Mr. Deane give his reasons why he is content with a grade of 1 in 50? Because he has a grade of 1 in 50 elsewhere.
2854. If you were to plan out your route with a grade of 1 in 50, would it make any difference in the cost? I should like to consider that before I told you. Of course it would make some difference, but I cannot tell you how much the difference would be.
2855. Do you think that it would be considerable? Yes, it would be very considerable.
2856. Would you consider that the line from Milson's Point to St. Leonards could be safely worked with a grade of 1 in 50? I should not recommend it.
2857. If it could be worked with that grade on the Government route, could it not be safely worked with the same grade on your route? No doubt if there is safety in one 1 in 50 grade, there is safety in another 1 in 50 grade. Safety is a relative term. Safety and risk are in the two opposite scale-pans, and if one goes up the other goes down—there is always a certain amount of risk.
2858. Suppose the grade on the existing line north of Hornsby must be retained, would there be any great advantage in having a grade of 1 in 70 on your line? An engine could only take four carriages up a grade of 1 in 50 at the same speed as it could take six carriages up a grade of 1 in 70.
2859. Do you know Blue's Point and Ball's Head? Yes.
2860. Those are the high points on the North Shore? Yes.
2861. Supposing at any time it was determined to take a bridge from either of those points to Sydney, could your line be extended to connect with it? Of course it could, very easily.
2862. In what direction? Instead of descending to Neutral Bay, you would go straight across.
2863. What would be about the distance? Perhaps it would be half a mile.
2864. Through the most densely-populated portion of North Shore? Yes; but you would have the advantage of a station on the route, and you could take traffic from there. But you will never make a bridge; it will cost too much money.
2865. Supposing it may be necessary to make a bridge of some kind, and to connect the railway with it, I want you to show the Committee how a branch could be taken from your line to the bridge? Very easily.
2866. Will you name the point where you would leave the Neutral Bay Valley line? I should probably leave the line at Alfred-street.
- 2867.

A. S.  
Hamand,  
Esq.  
23 July, 1890.

2867. And go in as straight a line as possible to where? You would have to go with a curve. The line would go under the tramway at the end of Walker-street, and come out alongside the Blue's Point-road. But I do not think that it is fair to talk about that bridge unless you also talk about the possibilities of the tunnel. It seems to me that the tunnel would be much cheaper, and that you have no more right to consider the possibility of a bridge than you have to consider the possibility of a tunnel.

2868. *Mr. Dowel.*] Do you think that a good and efficient steam punt service could be worked from Milson's Point to Circular Quay, obviating the construction of a bridge? Would you mind explaining a little more.

2869. Is it desirable or practicable to have a steam ferry service between the terminus of the railway at Milson's Point and any part of Circular Quay, or thereabouts? Do I understand that you mean for transporting trains?

2870. Yes? And the passengers in the trains?

2871. Yes? I think that would be very inadvisable; in fact I think that the passengers would all get out.

2872. For what reason? They would not sit in the train to be transhipped that short distance.

2873. Would not the carriages be put right on to the punt? That takes time.

2874. What time? Seven or eight minutes at the very shortest. I have had something to do with transshipping vehicles and that sort of thing on to a steamer carrying rails.

2875. Is it not the custom to do this in certain parts of America? Yes; in the middle of a long through route, but they do not do it in New York.

2876. Is there a delay of 7 or 8 minutes at any place you know of in America? I have never been in America, so I cannot tell you; but I have seen this done at home. We have steamers carrying goods traffic to the Isle of Wight.

2877. Is there any reason why the transshipping of passengers without the carriages should occupy 7 or 8 minutes? No. You have seventy passengers in 18 tons of coach; that is, about four or five times the weight of live traffic. It would never pay to bring the carriages across.

Thomas Allright Dibbs, Esq., General Manager, Commercial Banking Company, Sydney, sworn, and examined:—

2878. *Mr. Copeland.*] What business are you in? I am the General Manager of the Commercial Banking Company of Sydney. T. A. Dibbs, Esq.

2879. You have occupied that position for a number of years? I have been in the bank for the last forty-three years, and I have been manager for twenty-three years. 23 July, 1890.

2880. Where do you reside? At St. Leonards.

2881. What part of St. Leonards? The place is called "Graythwaite," and adjoins Holterman's Towers, on the heights.

2882. How long have you resided on the North Shore? I have lived on the North Shore for two periods of ten years each.

2883. I suppose you are thoroughly well acquainted with the whole of the North Shore? Yes, I have known the North Shore for the last fifty years.

2884. Do you know the route proposed by the Government for bringing the railway from St. Leonards Station to Milson's Point? I have not seen the plans, but I have heard that it goes past Mrs. Old's residence, and from Berry's Bay to the south of Union-street, in front of my residence, by a tunnel through to Lavender Bay, but I have not seen any plans.

2885. You are well acquainted with the locality through which the line would go? Yes.

2886. Is it your opinion that it would be desirable in the public interest to construct that short distance of line at a cost of £246,200? I think the railway should be conducted to the water's side. My idea is, that coal traffic and traffic in other produce should be taken to the deep waters of Ball's Head Bay by a branch line, but I do not think that it would be more than 200 or 300 yards long. There the coal could be received into the ships at the smallest expense by gravitation, since the coast is bold. I think the Government should resume the whole of that water frontage. They will be receiving from the Berry estate something like £60,000 for probate shortly, which they might wisely spend in resuming the water frontage.

2887. I think you are connected with the exportation of coal? No, I am not interested in coal.

2888. I thought you were interested in a mine at Newcastle? No more than by being a mortgagee of a coalmine there.

2889. Is it your opinion that Ball's Head Bay would be a better place to ship coal from than Neutral Bay? Infinitely better; the coal could be received into the ships at the minimum expense by gravitation. The water is deep, and the place is sheltered, while the shipping would not be congested as it would be at Milson's Point.

2890. The question I asked you was: Would Ball's Head Bay be a more suitable place than Neutral Bay? Yes, I think it would.

2891. On account of its being nearer to St. Leonards? Speaking from memory, I think you could strike the water in 200 or 300 yards from Mrs. Old's house.

2892. You think it would be an advantage to be able to ship coal by gravitation—I suppose you mean by shoots? Yes, there would be no lifting; no haulage power would be required.

2893. Do you think that there would be sufficient passenger accommodation to warrant the expenditure of this large sum of money—local passenger traffic? In plain English, I do not think the line is wanted at all, but as you have already constructed part of it, you are bound to continue it to the water. In taking it to the water, I think you should take it to Milson's Point for passenger traffic, and to Ball's Head Bay for coal and heavy traffic. At Milson's Point the harbour is very narrow, and any day, in crossing, you may see eight or ten steamers in front of you. The horse ferry is often delayed there by steamers passing. In my opinion the less you congest the traffic the better.

2894. Do you not think that if the tram were connected with the railway at St. Leonards that would give sufficient accommodation for the passenger traffic that is likely to be developed in the future? I think that for the present that would do.

2895. But for the future? For the future you must continue the railway to the harbour.

2896. You consider Milson's Point the most suitable position for a passenger station? Yes, for passengers only—not for goods traffic.

- T. A. Dibbs, Esq.  
23 July, 1890.
2897. Will it not be more desirable to construct the railway now, while the land is of comparatively little value, than to wait until North Shore becomes densely populated, and then have to pay much more for land resumption? I say, in answer to that, that at present, and for some time to come, the passenger traffic will, in my opinion, be very light indeed. If it were put to me I should say, connect with Milson's Point for passenger traffic, and with Ball's Head Bay for any heavy traffic which you may have. I am very indifferent about the matter. I am not interested one way or the other. I am not a volunteer witness, but I give you my opinion for what it is worth.
2898. Do you think that there is likely to be any coal traffic on the Northern line from any place between Gosford and Newcastle? They have yet to find the coal at Gosford.
2899. I mean north of Gosford, between it and Newcastle? I believe that the coal will come by sea, and not by railway at all, for the simple reason that it must be brought beyond any terminus on the North Shore to the ships, and it is cheaper to bring it by water than by land.
2900. Then you do not anticipate any coal traffic on this line? No.
2901. Do you anticipate any other traffic—say wool? No, I do not think any wool will come that way.
2902. You think that wool will continue to be sent to Darling Harbour? No; I think that the wool will go to Newcastle.
2903. But you know that a considerable quantity of wool comes every year past Newcastle to Darling Harbour? Possibly it may.
2904. If the railway were constructed would it continue to go to Darling Harbour, or would it be likely to go to the North Shore? I do not see any advantage in sending it to the North Shore. If you send it there, I should say send it to Ball's Head Bay.
2905. You do not anticipate a goods traffic at all on the proposed line? I believe that the railway will be a failure for the next twenty years.
2906. Would it not be making it a still greater failure to continue it? Sooner or later it must be continued.
2907. I understand that there is a loss upon the line now of about £11,000 a year. Do you think that by expending an additional £246,000 we should add to the failure, or diminish it? My opinion is that there would be a still greater loss for years to come.
2908. Do you think it likely that there will be any through passengers from the north—say, from Newcastle or from the New England districts, to North Shore; would the passengers go to North Shore instead of to Redfern? I should say that they would go to Redfern to avoid crossing the water.
2909. You only contemplate a passenger traffic from the residents of St. Leonards? The only passenger traffic is that which may be developed by people building along the line.
2910. Do you anticipate, judging by the present population, that the railway fares would be anything like sufficient to cover the interest on £246,000? No. As I said before, I think that this would be a non-paying line for years to come. It was a mistake in the commencement to bring the line where it is, but having done so it must, sooner or later, be extended to Milson's Point.
2911. Would you advocate the construction of a line for passengers? For passengers—yes; although it may be a non-paying line.
2912. Rather than adopt a connection with the tram system? A connection with the tram might do for the present, but, finally, the line will have to go to Milson's Point for passenger traffic, although it may not pay.
2913. I suppose you would not care to invest a few thousand pounds in this undertaking if a private company were going to carry it out? Certainly not, if I expected any return from my capital.
2914. Looking at the proposal from the standpoint that the Government are the permanent holders, do you see a sufficiently good prospect to warrant the Government in going to this expense and laying out of their money for a number of years, with the knowledge that in the future they will be recompensed? I can only repeat that I think the tram system, if connected, would be sufficient at present. If you connect the line with Milson's Point it will not pay for years to come.
2915. For how many years? Twenty years. I have known the North Shore for fifty years, and I have watched its progress.
2916. I suppose you do not anticipate a northern city growing up there? There is no doubt that North Shore is the most rising of the suburbs, and it will increase.
2917. Which of the two lines—Mr. Hamand's or the Government line—would be likely to serve the larger number of people? Apparently, Mr. Hamand's line would accommodate more people.
2918. Taking everything into consideration, do you think that his line would be the more profitable line to construct? For passengers only?
2919. For passengers only? It would require some consideration. No doubt a great deal of the population about here would be served by the tram, and although there are very few people living out to the north, that country may be built upon. But Mr. Hamand's line would not serve the Lane Cove-road people, because it is such a long way round.
2920. It is 1 mile 5 chains longer than the Government route, and the steepest grade upon it is 1 in 70, as against 1 in 50 upon the Government route? Upon reconsideration, I should not say that Mr. Hamand's line was as good as the Government line.
2921. In coming to that conclusion, do you notice that the Government line for a great portion of its length is in close proximity to deep water, and therefore would have to compete with the ferry boats? I would not give an answer to that without consideration. When I saw Mr. Hamand's line first I thought it went very much more to the south than it is shown to do.
2922. I suppose you anticipate that if the Government line were constructed the Berry Estate would be cut up and the population there would increase considerably? There is no doubt about it.
2923. Supposing that to be the case, do you not think it likely that steam ferries will be established there as they are to Neutral Bay, and other bays in the harbour? There is no doubt that the nearer you take the railway to the water the greater is the chance of competition with ferry boats; but knowing the country so well, I think, because of its hilly nature, a person on the heights would prefer to travel by rail rather than by steamer.
2924. Notwithstanding the fact that he would still have a water journey? If he were going to the back parts of the Berry Estate he would not go by water, he would go by rail.
2925. Supposing you were residing near Berry's Bay or Ball's Head Bay, and wished to go to Sydney, would

would you be likely to take the railway to Milson's Point, and then cross the harbour at Circular Quay by the ferry, in preference to taking the steamer direct? I think you would take the steamer direct if you were close to the water, but if you were on the high ground in the Berry Estate you would take the rail.

T. A. Dibbs,  
Esq.  
23 July, 1890.

2926. You know that there is a public agitation in favour of a railway to Manly and Pittwater; do you consider that project feasible? I consider it all humbug. Such a line would never pay. I know the road well. I would consider it the grossest piece of extravagance if ever a railway was taken from Manly to Newport.

2927. Supposing the proposal was to connect the proposed railway with Manly, do you think it would be feasible? I cannot see that there is any good country to start with. If carried out, I think it would be one of the grossest jobs ever perpetrated. I know the route as well as I know my own residence. Four years ago there was scarcely a soul to be seen along it.

2928. Then you would not look more favourably upon Mr. Hamand's line on account of its being 2 miles in the direction of Manly from Milson's Point? No; because, in my opinion, there never should be a railway to Manly Beach, or from Manly Beach to Newport.

2929. Do you think that in the future the suburbs on this line will be densely populated by the working classes, or by people holding tolerably large areas of land? I am under the impression that the land along the Lane Cove-road would be taken up by people who could afford to pay as much as the people who live at Burwood. The working classes would hang more about the water, and would avail themselves of the steamers.

2930. From what you know of the district out towards Hornsby, is there much cultivation going on in the shape of orchards? I know that orchards only pay the working men out there—that you or I could not make them pay. A German, working twenty hours a day, could make a fortune out of an orchard there, but to have men working eight hours a day would not bring you in a profit.

2931. You would not anticipate a large amount of traffic from orchards? No, I think the country is not suitable for orangeries now: I think you must go further out. I know that people have gone to a great deal of trouble in draining and sub-soiling, but they cannot make it pay, because they are not working men.

2932. Do you note much increase in the cultivation? I have not been along the Stoney Creek-road lately, but I do not think that Lane Cove is as suitable as other districts for orchards. The climate is altering.

2933. You do not anticipate a fruit trade on this line? There may be some fruit.

2934. Not sufficient to be a consideration in its paying capabilities? No.

2935. *Mr. Garrard.*] You are intimately acquainted with the country between Newport and Brooklyn, on the southern side of the Hawkesbury River, including Cowan Creek and other places? Yes.

2936. Do you think it would be very easy to make a railway from Newport to the Hawkesbury bridge? You can make any line you like, but you would have to cross Cowan Creek, which would take you twenty minutes to pull across.

2937. In your opinion there is nothing to justify a railway to Newport? Nothing whatever.

2938. To make a railway from Newport to the present Hawkesbury Bridge would be very expensive and unjustifiable? Yes, and it would go through country that would not keep a rat, except for a little way on the shores of Pittwater. Opposite Scotland Island there are one or two farms.

2939. Do you know that there is a large population between Sydney and Hurstville? I think so.

2940. Do you attribute that to the convenience of railway communication or to other causes? Partly, and partly to the land boom.

2941. Land booms usually result in a large amount of vacant land? The land there is being occupied, but it is a different class of country to this—it is more level. You go through populous suburbs to start with, but in this place there are few houses.

2942. Is it better country than that between Milson's Point and Hornsby? The country between Milson's Point and Hornsby is a thousand times superior to that between Pittwater and Brooklyn.

2943. I want to compare the country between Sydney and Hurstville with that between Milson's Point and Hornsby? It is a matter of taste. I consider the North Shore and the Lane Cove country a thousand times superior to the Hurstville country for residential purposes—the latter is the land of mosquitoes, while in the former you have some comfort, and you are higher.

2944. If population has followed so rapidly upon a railway to Hurstville, would not a population follow more rapidly upon a railway to Hornsby. Might we not naturally expect a much larger increase? For residential purposes; yes.

2945. *Mr. Trickett.*] You know the land to the east of the park, between the tram line and Mr. Hamand's proposed line? Yes; it commands beautiful views of the city, and is very valuable.

2946. Then, to the north again, is the land suitable for residential purposes? It is all being built upon now. Land having a view of the city would command £10 or £15 a foot here.

2947. Do you think that if better means of communication were provided there would be a considerable population there? The tram is close to there.

2948. Does the tram serve that district at present? The tram serves it as far as the reserve.

2949. Do you think a railway in that direction would be of any benefit to the locality? No doubt it would be a benefit at the Government expense. To the north of the reserve it is all poor land. There are acres of land there without a house upon them.

2950. Would that land be good for residential sites? Not so good as what I call the backbone of the North Shore—the country on the Lane Cove-road. I consider that there are some of the best residential sites there that you could find in the world.

2951. You are aware, I believe, that this line was rejected by the Committee some time ago? I saw it in the newspaper.

2952. Are you also aware that the line has been referred back to the Committee on the ground that there would be a considerable goods traffic upon it? Yes.

2953. From your knowledge of the country, can you hold out any hope of there being a goods traffic upon the line? I have no hope that there will be any goods traffic that would pay at all. The district will grow into a residential suburb.

2954. And that is all? That is all.

2955. *Mr. Dowel.*] Is it not a fact that there are a large number of brickyards in the neighbourhood of the present railway? Yes; there are some.

2956.

- T. A. Dibbs, Esq.  
23 July, 1890.
2956. Do you not think that those brickyards would provide traffic and revenue to the railway in the carriage of coal and bricks. Do they not bring bricks down to Milson's Point in large numbers now? Yes, they do.
2957. Do you not think that that would create a traffic? There are too many brickworks there now—none of them pay.
2958. We have had evidence that the brick works cannot keep pace with the demand for bricks? If you go out to the brickyards, you will find them filled with bricks, and I know of one that came to grief there. No doubt the railway would benefit them at the Government expense—they would get their coal by it.
2959. Would not they be the means of providing traffic? Of course they would help the traffic.
2960. Both by bricks and coal? No doubt, if the Railway Commissioners charged them a low freight for running bricks into the city.
2961. From your knowledge do you think that they would give any considerable amount of revenue to the railway? No. They will supply the North Shore demands, but they will not have occasion to use the railway, except to bring coal from the water.
2962. Is it not a fact that they send large numbers of bricks to Sydney at the present time? I do not believe it. Occasionally you see bricks coming over.
2963. *Mr. Trickett.*] If they did send bricks over to Sydney they would first have to put them into the railway, and then transfer them into carts to take them across the water? Yes.
2964. *Mr. Lee.*] Did you observe on Mr. Hamand's line the tunnel near Neutral Bay, half a mile in length, so that although that locality may be thickly populated, people would have to go to one end or other of the tunnel to get the train? Certainly.
2965. Consequently, in some places, they would be half a mile from a station? Yes.
2966. Would not that be as far as they are from the present tram terminus? No. Anyone living near the line would take the train.
2967. But there would be no great inducement to go to the railway station as against the tramway? The people living nearest to the railway would use it, while those living nearer to the tramway would use the tram.
2968. The Government line is 2 miles 60 chains long, which is less than Mr. Hamand's line;—will it be of more advantage to construct it than to construct his line? I should certainly recommend the Government line, for two reasons—first, that the line is better, and second, that it goes through a better class of country.

THURSDAY, 24 JULY, 1890.

Present:—

THE HON. JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

WILLIAM MCCOURT, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

- H. Deane, Esq.  
24 July, 1890.
2969. *Vice-Chairman.*] A letter written by you to the Committee with reference to the evidence which you gave on Tuesday, has been read by the Secretary (*Vide Appendix*); are you prepared to swear that the statements it contains are true? Yes; they are.
2970. *Dr. Garran.*] Have you done the utmost in the way of reducing the grade upon your deviation? I believe so.
2971. Do you agree with Mr. Hamand that you could reduce the gradient at Chatswood to 1 in 70, at a cost of £5,000? No, I do not; it is quite impossible for anyone to make a correct statement in a matter of this kind without careful consideration.
2972. Taking the line as it is, do you think any object is to be gained by improving the gradient on the extension, to 1 in 70? No.

Charles Cyrus Bullock, Esq., surveyor, sworn, and further examined:—

- C. C. Bullock, Esq.  
24 July, 1890.
2973. *Dr. Garran.*] I understand that you have prepared a statement which you wish to read to the Committee? Yes; but before reading it, I should like to make my pecuniary position in relation to this railway clear. I distinctly state that I have not a single inch of land on the extension, although I have interests higher up on the line, some 5 miles from Milson's Point, and I am therefore interested in getting the line down to the water's edge, just as the Government is; but whether the line is taken to Ball's Head or Lavender Bay, whether by the Government or Mr. Hamand's route, will not affect me. My partner, Mr. Loxton, who is a vigorous opponent of Mr. Hamand's line, and an advocate of the Government line, would be largely benefited if Mr. Hamand's line were constructed. My statement is as follows:—

The district of North Shore, as generally spoken of, comprises the Boroughs of St. Leonards, East St. Leonards, and Victoria, and its population is 16,395. Its mean length, extending from Gore Bay to Middle Head, is about 4 miles, while its width, extending from Port Jackson to Middle Harbour, is about 2 miles. With the exception of its north-western boundary it is bounded by the deep waters of Port Jackson and Middle Harbour.

The population of the Borough of St. Leonards is 7,270, that of East St. Leonards 5,655, and that of Victoria, 3,470. The Borough of St. Leonards is subdivided into the following wards,—Belmore Ward with a population of 3,845, Albert Ward with 1,660, Warringa Ward with 905, and Mossman's Ward with 860. East St. Leonards is also subdivided into the following wards,—South Ward with a population of 780, West Ward with 2,670, North Ward with 1,450, and East Ward with 755. The Borough of Victoria is not subdivided into wards. My object in giving these figures, is to show to the Committee the disposition and the location of the population.

With regard to the increase in population on North Shore, I find that in 1881, the population of the Borough of St. Leonards was 2,647, of East St. Leonards 2,320, and Victoria 2,182; a total of 7,149. These figures show that the population

population of the Borough of St. Leonards has increased by 175 per cent., that of East St. Leonards by 144 per cent., and that of Victoria by 59 per cent., the increase of the combined boroughs being 129 per cent. They also show, since the population of Warringa and Mossman's Bay Wards is only 1,765, that the greatest increase has taken place where the means of transit are good. A further proof of this fact is shown with regard to the increase in the population of the Borough of Willoughby where the means of transit are bad. In 1881 the population was 1,411, while in 1889 it was only 1,828, being an increase in eight years of only 29 per cent. Moreover, the increase has taken place principally at Greenwich and Longueville in proximity to the steamers running there.

C. C. Bullock,  
Esq.

24 July, 1890.

In the Borough of Victoria there are two public wharves to which ferry steamers run—one at M'Mahon's Point, the other at the head of Lavender Bay—while the cable tram passes through the north-eastern portion of it. Of the 3,470 inhabitants of that borough not one of them is situated more than half a mile from a ferry or a tram.

In the Borough of East St. Leonards there are four public wharves to which ferry steamers run—one at the head of Lavender Bay, one at Milson's Point, one at High-street, Careening Cove, and one at Hayes'-street, Neutral Bay, while the cable tramway passes through Western Ward. Of the 5,655 inhabitants of that borough few, if any, are situated more than half a mile from a ferry, while, of the 4,900 inhabitants of North, South, and West Wards, few, if any, are situated more than half a mile from the cable tram.

The water frontage portion of the Borough of St. Leonards which lies to the west of Berry's Bay belongs to the Berry Estate, and as there are no public wharves upon it, consequently there are no ferry steamers running there. In the eastern portion of the borough there are two public wharves, at Mossman's Bay, to which ferry steamers run—one at Curraghbeena Point, the other at the head of the bay—while the cable tram passes along Miller-street, the common boundary of Albert and Belmore Wards. The wharves in Mossman's Bay serve the greater number of the 860 inhabitants of Mossman's Ward, the remainder travel by 'bus to the tram terminus. Warringa Ward has no frontage to the harbour; but as the greater number of the 905 inhabitants of that ward reside between the Military-road and Neutral Harbour, the greater number is served by the ferry at Hayes'-street. The remainder travel by 'bus to the tram terminus. Albert Ward has no frontage to the harbour; but with few, if any exceptions, the 1,660 inhabitants of that ward are situated within half mile of Miller-street, and are accommodated by the tramway in that street. Belmore Ward has a frontage to the harbour between Berry's Bay and Gore Bay, but I have already stated that there are as yet no ferries running in that direction. Between the Lane Cove-road and that part of the harbour the land is principally the Berry Estate, and of the 3,845 inhabitants of that ward but few reside on the south-western side of that road. The bulk resides between that road and Miller-street, and consequently the cable tram provides the necessary accommodation.

It is therefore seen, that out of a total population of 16,395, the 14,630 inhabitants of the Boroughs of Victoria and East St. Leonards, and of Belmore and Albert Wards of the Borough of St. Leonards, are within half a mile of the tramway, or of the proposed extension of the tramway, in Miller-street, or of one of the ferries alluded to. So far, therefore, as the 14,630 inhabitants are concerned, no railway accommodation is required by them. Of the remaining 1,765 it is also seen that the majority of them are located within three-quarters of a mile of the ferries in Neutral and Mossman's Bays. It may also be stated that while the 1,765 inhabitants are located upon about 4 square miles, the 14,630 are located upon only about 2 square miles.

Now I contend that a railway cannot be constructed to serve the whole of North Shore, or even a small portion of it, any more than a railway can be constructed to serve the whole of the colony, since its population is scattered over a large area and located at high and varying altitudes. A glance at a map of the district will show that a line running in an easterly or westerly direction would be going away from, instead of to, the ferries. If a line were constructed through the centre of population, that is where the cable tram is constructed, the line for the greater portion of it would be in tunnel, and therefore of no service. The altitude of the plateau upon which the bulk of the population is located precludes the feasibility of a railway being taken over that plateau and continued to a suitable water terminus. If a line follow the Middle Harbour watershed, as proposed by Mr. Hamand, then the bulk of the population is located to the south and west of it. If a line follow the Parramatta River watershed, as proposed by the Government, then the bulk of the present population is located to the east of it. Moreover, both lines are below the present population.

I have stated, and I state again, that in my opinion, the Government scheme, with the modification of grade proposed by the Acting Engineer-in-Chief for Railways, is the best scheme that has been, or can be, proposed. I say the best scheme that can be proposed, because I am perfectly familiar with every portion of the district, having resided at North Shore for nine years, and carried out more surveys there than any living surveyor. I have minutely examined the Government schemes to Ball's Head, to Blue's Point, to Milson's Point, and to Cremorne. Not only that, but my partner, Mr. Loxton, and myself took levels over two years ago, and before the line to Milson's Point was surveyed, in connection with the same route almost that Mr. Hamand has placed before the Committee. We also worked out another route, which left the present line at about 10 miles from Hornsby and traversed the plateau north of the St. Leonards' recreation reserve, where we located a central station; thence it crossed under the Military-road by tunnel, and traversed the valley of Neutral Bay, and on to the business centre of the township of St. Leonards, where we placed a station, not in a hole, but at an elevation of 120 feet, in order that it could be approached; thence it traversed the Neutral Harbour slope, passed near Kirribilli Point, and on to Milson's Point, where it terminated. Mr. Whitton, the late Engineer-in-Chief for Railways, was aware of our actions in this matter, and permitted us to take copies of the sections of the routes surveyed by the Department. After carefully investigating the merits of those routes, as well as our own route, we came to the conclusion that the Government route to Milson's Point was the best, and informed Mr. Whitton to that effect.

When I stated in evidence a few days ago that Mr. Hamand's line possessed the merit of following the natural features of the Middle Harbour watershed, I was under the impression that the line contoured the Flat Rock Creek Valley from where he leaves the Government line to where he intersects the North Sydney Tramway Investment Company's tramway at Miller-street. The level of that point being only 20 feet lower than the point where he leaves the railway, a gradual descent between the two points could have been obtained by following that valley. Instead of following that valley, however, Mr. Hamand has chosen to pierce the plateau between the North Sydney-road and the railway, in order to follow the valley of the creek leading from Chandos-street to Long Bay. In consequence of following that route Mr. Hamand's section shows that, at 65 chains from the railway, he is 23 feet higher than his starting point, and at 1 mile 15 chains he is only on the same level. Moreover, he has a 40-foot cutting at 60 chains from the existing railway. Apart from these facts, it may be stated that the Flat Rock Valley route to Miller-street would be a quarter of a mile shorter than the Chandos-street Valley route. Moreover, a station on the North Sydney-road would serve the residents of Central Township and North Sydney much better than a station at Chandos-street.

Of Mr. Hamand's alternate proposal it is somewhat difficult to speak. In connecting two points on opposite sides of a dividing range by a railway it is generally considered advisable to cross that range but once. By his alternate proposal, however, he would cross the range three times; once at the lowest point in the range, where the Government line is constructed, then, completely turning round in the opposite direction to his objective point, Milson's Point, he crosses the range a second time at one of the highest points on the range; and here again, instead of his line constantly falling, as the Government line does, it rises for about 22 chains, at which point there is a cutting of about 35 feet. The third crossing I have already alluded to is in tunnel at about 160 feet below the summit of the range. The distance to Miller-street by Mr. Hamand's alternate proposal would be three-quarters of a mile longer from Hornsby than the Flat Rock Valley line, while the dividing range would be crossed only once by the latter route.

According to Mr. Hamand's section his original proposal is 4 miles 25 chains, and his alternate proposal 4 miles and 3 chains in length, while the Government amended proposal is only 2 miles 51 chains. Thus it is seen that Mr. Hamand's original proposal is 1 mile 54 chains, and his alternative proposal is 1 mile and 32 chains longer than the Government amended proposal. These figures are strictly accurate, and therefore other figures are inaccurate. In comparing Mr. Hamand's line with the Government amended line, either as regards length, cost, or accommodation provided in Lavender Bay for wharfage or for station purposes, it must be clearly remembered that it is necessary, first of all, to reduce each line to a common basis. Regarding accommodation for wharfage and station purposes, I will fully explain myself. On Mr. Hamand's line only 660 feet of a level run in Lavender Bay is provided, while those stations at the head of Careening Cove and Neutral Bay are placed on grades of 1 in 220 for a length of only 5 chains. On the Government line 1,848 feet of a level run is provided at Lavender Bay, while the stations thereon are placed on grades of 1 in 400 for a length of 10 chains.

Now, I will assume that a level run of 1,848 feet in Lavender Bay has been provided, and that each station at the head of Careening Cove and Neutral Bay is placed on a grade of 1 in 400 for a length of 10 chains, then it follows that the run between Milson's Point and the proposed station at Willoughby Falls must be increased by 30 chains. The three points which govern the grading of the line are the water level at Milson's Point, the lowest land at Willoughby Falls, and the

C. C. Bullock, the present railway. Now, the bed of the creek at Willoughby Waterfalls is 130 feet above sea level; but, as all the surrounding land is higher, it is necessary to place the station at a higher level. That level has been fixed by Mr Hamand at 152 feet above sea level. Now, the southern end of that proposed station is distant 2 miles  $7\frac{1}{2}$  chains from Milson's Point, but that distance would be increased to 2 miles  $37\frac{1}{2}$  chains if the extra accommodation referred to were provided. Thus, instead of Mr Hamand's original proposal being 1 mile 54 chains longer than the Government amended line, it would actually be 2 miles and 4 chains longer; and instead of Mr Hamand's alternate proposal being 1 mile and 32 chains longer than the Government amended proposal, it would actually be 1 mile and 62 chains longer.

Esq.

24 July, 1890.

If Mr. Hamand did provide the same accommodation as that which is provided for on the Government amended line, and did not increase the length of his run, then, instead of the station at Willoughby Falls being 22 feet above the bed of the creek, it would be actually 6 feet below it, and the station rendered practically useless. To place that station at the elevation assigned to it by Mr. Hamand, and to provide the same accommodation as that provided for on the Government amended line, it would be necessary to increase the length of Mr Hamand's line by those 30 chains. Now, the same arguments apply to the proposed stations at the head of Careening Cove and Neutral Bay, and, therefore, either those stations must be lowered or the length of run between them be increased. But, since the line between the station at Willoughby Waterfalls and Lavender Bay is either in tunnel or on escarpment, it will be readily seen that it would be enormously expensive to obtain the requisite length, since nearly the entire length would be in tunnel. But, assuming the extra length obtained, it follows that the length of Mr Hamand's original proposal to be constructed would be increased from 4 miles 25 chains to 4 miles 53 chains, and the alternative proposal from 4 miles 3 chains to 4 miles 33 chains. It may suit Mr. Hamand to say that 660 feet at Milson's Point is sufficient for local goods and passenger traffic; but I desire that it shall be clearly understood not only that it is not feasible to provide the same accommodation the Government scheme provides in Lavender Bay, but that it is scarcely feasible to increase the accommodation at all.

In reducing the estimated cost to the same basis, I shall assume, for the present, that Mr Hamand's estimate of the cost of his line is correct. A correction, however, must be made for the 30 chains, the difference in length arising from the difference in the accommodation provided.

The original estimate of the Government proposal before the Committee is £262,000, but from that sum have to be deducted the following items:—£23,000 for properties situated over the tunnel, which need not be resumed, but which are included in the above estimate; and £21,000 for the resumption of the Berry Estate, which, according to what has been stated in Committee, need not, under a provision in the Public Resumption Act, be paid for. These deductions, amounting to £49,000, reduce the estimate to £213,000. This amount, however, has to be increased by £21,700 to affect the alteration in grade, thereby bringing up the official estimated cost of the scheme before the Committee, with the modification in the grade proposed by the Acting Engineer-in-Chief for Railways, to £234,700. Now, in estimating the cost of construction and resumption of the additional 30 chains on Mr. Hamand's line at £40,000, I have made a very reasonable allowance, since I have allowed for only half the distance in tunnel and half the distance for resumptions. Assuming Mr. Hamand's estimate of £350,000 to be correct, then the total cost of Mr. Hamand's line, reduced to the basis of the Government line, would be £390,000, or £155,300 more than the Government amended line.

It must also be remembered that the Government line utilizes the whole of the constructed portion of the line, while Mr. Hamand's original proposal would render 78 chains, and his alternative proposal about 14 chains, of it useless. Neither of those portions could be utilized in continuing a line to the water level at Ball's Head, since the distance thereto is altogether too short to obtain a grade of 1 in 40; nor could it be utilized for the purpose of a line to accommodate the population that may reside on the eastern side of the Lane Cove River. Apparently, Mr. Hamand is unacquainted with those portions of the district.

It may, I think, be taken for granted that, sooner or later, a high-level bridge will be built to connect North Shore with Sydney, and that the proper site for it is that between M'Mahon's and Dawes' Points. Now, while the Government amended line would follow the route to the bridge to the 12 miles' point from Hornsby, Mr. Hamand's original proposal would leave the route to the bridge at 9 miles 53 chains therefrom, and his alternate proposal at 10 miles 37 chains. For the purpose of comparison, I will assume the bridge connection at 12 miles. Now, to carry out Mr. Hamand's original proposal to Milson's Point, and to continue the railway to the bridge connection, the amount of capital that would be sunk in the work would be £390,000 to Milson's Point, and (say) £80,000 to the bridge connection, being a total of £470,000. But the Government amended line, as I have already pointed out, follows the line to the bridge connection; and thus it is seen that, so far as taking the line to Milson's Point and to the bridge connection is concerned, the Government amended line would fulfil those conditions at a cost of £205,300 less than Mr. Hamand's original proposal, and about £195,000 less than his alternative proposal. And here I may remark that, while Mr. Hamand's proposals are disadvantageous to a bridge connection, the Government proposals are advantageous to a spiral tunnel connection, as proposed by Mr. Hamand, since they terminate at the same point at which Mr. Hamand's proposals terminate.

Among other advantages claimed by Mr. Hamand for his scheme, is one to the effect that it would save 2 miles of the route to Cremorne. The value of this argument will be readily seen from the following figures. According to the evidence of the Acting Engineer-in-Chief for Railways, the estimated cost of construction and resumptions to extend the railway from the head of Lavender Bay to Cremorne is £115,000, and, as the estimated cost of the line to Milson's Point is £234,700, it necessarily follows that the total cost of continuing the Government amended line to the extremity of Milson's Point and to Cremorne itself is £349,700, or £40,300 less than the estimated cost, to take Mr. Hamand's line, reduced to the basis of the Government line, to Milson's Point only. Not only, therefore, is it no argument to say that Mr. Hamand's line saves 2 miles of the route to Cremorne, because, even if it saved the whole length of it instead of only a portion of it, it would still be cheaper by £40,300 to reach Cremorne by the Government route.

A further advantage claimed by Mr. Hamand is, that his line would form the first 2 miles of a line to Manly. That would be true if a line thereto branched off his line at 2 miles from Milson's Point; but I challenge Mr. Hamand to prove that those 2 miles would follow the proper route. The proper route, and the shorter route, to Manly would be by tunnel from the head of Lavender Bay to Neutral Bay, which would be crossed by a bridge about 50 feet above sea level; thence the line would continue through the Cooper leaseholds between the Military road and Mossman's Bay; it would then continue through the Rangers' Estate, and passing under the Military-road would descend the spur leading to the Spit, which, in my opinion, should be crossed by a bridge at least 100 or 120 feet in height. Now, the distance from Milson's Point to the Spit, *via* Mr. Hamand's line, and a continuation thereof along the Middle Harbour watershed, would be about 5 miles, while by the route I suggest it would be only 4½ miles. If Mr. Hamand's line, instead of mine, were adopted, there would be a saving of a ¼ mile of construction; but it must not be forgotten that the estimated cost of Mr. Hamand's line to Milson's Point exceeds that of the Government line by £155,300. With this £155,300 it may fairly be assumed that it would construct 2 miles of my proposed line to Manly; hence it follows that for the same cost that Mr. Hamand can take his line to Milson's Point, the Government line can be extended to that Point, and to a point three-quarters of a mile nearer to Manly than Mr. Hamand's line takes it. In other words, if £390,000, the estimated cost of Mr. Hamand's line to Milson's Point, were expended in carrying out the Government amended line, and in constructing a railway towards Manly by the route I suggest, then instead of there being 3 miles to construct, as there would be to reach the Spit from Mr. Hamand's line, there would be only 2¼ miles to construct to reach the Spit from the point of my suggested line at which the £390,000 was exhausted. These figures show unmistakably that Mr. Hamand's line does not afford any advantages to reach Manly over those of the Government line, but that, in reality, the reverse is the case. Nor should it be forgotten that a considerable length of the route I propose to Manly could be utilized for the extension to Cremorne. Moreover, it follows Mr. Hamand's line until it reaches the western side of Neutral Bay, and thus, if necessary, which I contend it is not, a station could be placed between Willoughby and M'Dougall-streets, at the head of Careening Cove, as proposed by Mr. Hamand. Again, a station placed on the opposite side of Neutral Bay would serve the population there and at Shell Cove infinitely better than a station on Mr. Hamand's line, at the head of Neutral Bay gorge, and on the western side of it. Mr. Hamand urges as an objection to the Government line to Milson's Point, that it is a one-sided line for collecting traffic. If that be so, then I contend that Mr. Hamand's proposed extension to Manly, as far as the Spit is concerned, is unmistakably a one-sided line, since for nearly its whole length it is not more than 10 or 20 chains from Long Bay. On the other hand, the Military-road is about 30 chains, the nearest part of Port Jackson about a mile, and Bradley's, Chowder, George's and Middle Heads are about 1½ or 2 miles from it. The route I propose would pass through the centre of the district, and, moreover, there is a much larger area of land on the Port Jackson watershed than on the Long Bay watershed; and, in addition thereto, the latter watershed has a north-westerly aspect which is very objectionable for residential purposes.

When

When Mr. Hamand speaks of the stations on his line serving the various portions of the district referred to by him, C. C. Bullock, Esq. he must evidently intend to carry the traffic direct to Sydney, otherwise, as I shall presently show, but little traffic would be served by those stations. Mr. Hamand's proposal to cross the harbour by an iron tube laid at the bottom thereof, and to descend thereto and ascend therefrom by a helical tunnel, is possible, and may be feasible; but I do not think it is the proper means to adopt to cross the harbour. In my opinion, the harbour should be crossed by a high-level bridge, not by tunnels, helical or inclined. A connection across the harbour should provide for railway, vehicular, and foot traffic, and this cannot be provided for by tunnelling. Of what use to North Shore for vehicular or foot traffic would an incline tunnel across the harbour be? The tunnel proposed by Mr. Eddy would disappear at King-street, in Sydney, and re-appear at Bay-road Station at North Shore, a distance of about  $2\frac{1}{2}$  miles, and its grade, I understand, would probably be 1 in 30. Nor would Mr. Hamand's tunnel be of service except for railway purposes. Its minimum length would be over 2 miles, and the distance to travel between Milson's Point and Circular Quay would be  $2\frac{1}{2}$  miles, as against  $\frac{3}{4}$  mile by ferry. Probably the  $2\frac{1}{2}$  miles could be travelled as quickly as the  $\frac{3}{4}$  mile, but it is a well-known fact that tunnels are objectionable on suburban passenger lines, and should be avoided as much as possible. Now, if Mr. Hamand's connection across the harbour were made, there would be nearly 3 miles of tunnel between the northern side of the Military-road and Circular Quay, while, if the Government line were adopted, and the bridge connection were made, there would be no tunnel between Hornsby and Wynyard-square. Moreover, while the distance from Hornsby, by Mr. Hamand's original proposal, to Milson's Point, and by tunnel to Circular Quay, would be  $16\frac{1}{2}$  miles, the distance from Hornsby by the Government line and by bridge would be only  $13\frac{3}{4}$  miles, and Wynyard-square is more central than Circular Quay. Besides, while Mr. Hamand's tube would be placed 60 feet below the water, the bridge would be erected 160 feet above it.

24 July, 1890.

With reference to Mr. Hamand's line being continued beyond Milson's Point and under the harbour by a helical tunnel, since the radius of the sharpest curve in Mr. Hamand's line is 12 chains, I presume the curve of the tunnel would be no sharper, more especially as that radius would give the requisite fall for a grade of 1 in 70. Now, a 12 chains' curve from the end of Milson's Point would take in the whole of the water frontage between the extremity of Milson's Point and the south-western boundary of The Pastoralists' Association's property. What the cost of resumption of those frontages would be I would not like to say; but I think Mr. Hamand will agree with me that some other point of departure must be adopted. If a point in the line in Lavender Bay be adopted so that the southern portion of the curve lie under Campbell-street, then about 10 chains of the line to Milson's Point would be unnecessary for that particular purpose. If a station were placed at that point, and a level run provided between it and the head of the bay, then, as I have already pointed out, it would be enormously expensive to obtain the necessary run to obtain a 1 in 70 grade to the station at Willoughby Waterfalls. The other alternative is to run the curve in the opposite direction; but that arrangement would be objectionable since shunting would have to be resorted to at Milson's Point.

Mr. Hamand states that his line would provide better accommodation to the district than the Government line; but I shall endeavour to prove that neither in the collection of passenger traffic, nor for the distribution of a local goods traffic, is Mr. Hamand's line superior to the Government line.

Regarding the distribution of goods for the local population, it is quite evident that but little, if any, goods would be carried by the railway from Milson's Point for distribution between that Point and St. Leonards Station. Goods going from Milson's Point in that direction would probably be carted, as at present. Undoubtedly the bulk of the goods for local distribution would come from the north. Now, I contend that, for a central distributing station for the upper portion of St. Leonards, no point is more central or convenient for that purpose than St. Leonards Station itself. Within a radius of a mile of this station, Central Township, the proposed stations on Mr. Hamand's line at North Sydney-road and at Miller-street, near the bridge in course of construction at Long Bay, nearly the whole of the plateau overlooking Long Bay, a portion of the recreation reserve in Falcon-street, St. Thomas' Church, near the Crow's Nest, a large portion of the villages of Greenwich and Longueville, and the various brickyards at Gore Hill, are embraced. In fact, the most distant point on the visible portion of Mr. Hamand's line on the northern side of the Military-road is not  $1\frac{1}{2}$  mile from St. Leonards Station. Moreover, it should be remembered that St. Leonards Station is higher than any proposed station on Mr. Hamand's line, while it is 85 feet higher than the proposed station near the Willoughby Waterfalls. I again assert, in the most emphatic manner, that no better position could be chosen for a central distributing station than St. Leonards Station, and that that station already affords the fullest accommodation for the upper portions of the district. Moreover, as the passenger traffic in that portion of the district will be fully provided for when the tramway is extended to the North Sydney Tramway and Investment Company's bridge, it must be admitted, without reservation, that at least that portion of Mr. Hamand's line extending from the present line to the mouth of the tunnel on the southern side of the Military-road, either for goods or passengers, is absolutely unnecessary.

As regards the carriage of goods from the north to St. Leonards Station it should be very clearly remembered that the question of superiority of grades does not enter. From the point where Mr. Hamand's line junctions with the present railway, the distance to St. Leonards Station is about a mile. Of this length  $\frac{3}{4}$  mile is practically level, while the other quarter is built on a grade of 1 in 66, which is practically the same as 1 in 70. It may be here mentioned that the nearest 1 in 50 grade to St. Leonards Station commences at 8 miles 60 chains and terminates at 9 miles 41 chains from Hornsby; and it should not be forgotten that all goods from the north would have to be hauled over the 1 in 50 grades to reach any station in Mr. Hamand's line.

Now, I have shown that for the distribution of goods for the upper portion of the district, ample accommodation has been provided by the construction of St. Leonards Station, but I would point out that the Government line provides for another conveniently situated distributing station at Bay-road. Within a radius of a mile from that station, half of the recreation reserve in Falcon-street, nearly the whole length of Mr. Hamand's line on the southern side of the Military-road, the head of Neutral Bay, the whole of Blue's Point, and Ball's Head, would be embraced. Now, I contend that no station could be placed on Mr. Hamand's line, in the Neutral Bay Valley, that could be compared with the station in Bay-road. From the latter there is an excellent approach to the township, but from the former it would be an expensive undertaking to provide for an approach at all. The bulk of the population is in Alfred-street and to the west of that street; but, the difference in the levels of that street and the railway varies from 100 to 150 feet, and in a distance of about 10 or 12 chains only. Any approach from a station in that gorge to the township must be, of necessity, a circuitous one. Neither that station nor the station proposed to be placed at the head of Careening Cove in Mr. Hamand's line would be of much use either for goods or passenger traffic.

To sum up the question of the local distribution of goods, I contend that the upper portion of the district is already served, and that the Government scheme provides greater facilities for the lower portions than Mr. Hamand's scheme provides. Moreover, it may be mentioned that the Government amended scheme is located within a mile of nine-tenths of the whole population of the Shore.

Now, I contend that neither Mr. Hamand's line nor the Government line, nor the two lines combined, would serve any great number of the local population of the three boroughs, yet I contend that the Government scheme would serve the greater number. And it should be clearly remembered that it is not a question as to whether the Government line would serve the people in this locality or whether Mr. Hamand's line would serve the people in that locality; but, since neither line would serve the people in both localities, the question is which line would serve the greater number of people. While the Government line passes through the three boroughs already alluded to, and which have a population of 16,395, Mr. Hamand's line passes through only two boroughs, which have a population of only 12,925. In dealing with the local passenger traffic, it should be borne in mind that the bulk of the population is located along the water-line and within walking distance of the ferry. Then, the cable tramway runs right through the most populated part of the district, and when it is extended to Long Bay, about 14,630 out of the 16,395 inhabitants of the Shore will be amply provided for. When it is remembered that Mr. Hamand's line is located only  $\frac{3}{4}$  mile to the east of the tramway it can be readily understood that it is not required. What earthly use would a station be in the Neutral Bay Valley? The residents of the few houses on the top of it might use it, but no one else would, because the bulk of the population there could reach a ferry or the tram in less time than they could reach the station. Then again, who would use a station near Willoughby-street? Within a few yards of that street, ferries and the tram are in close proximity. But little consideration is required to show that the line from the Military-road to Milson's Point could not be patronized to any appreciable extent, for the simple reason that the most ample accommodation in the shape of ferries and the tram is available. If stations would be made use of on Mr. Hamand's line at Willoughby-street, and in the Neutral Bay Gully, then I should contend that stations on the Government line at Walker-street, at the head of Lavender Bay, and Union-street, near the head of Berry's Bay, would also be made use of. Notwithstanding that there are over 3,000 inhabitants between these points and Blue's Point, and that ferry steamers do not run to Berry's Bay, yet I contend that very few would patronize the railway, even if stations were located at the places mentioned. A reference to a map will show that the whole of the 1,765 inhabitants of the two eastern wards

of

C. C. Bullock, Esq.  
24 July, 1890.

of the Borough of St. Leonards are situated to the east of, and located about 150 feet above, Mr. Hamand's line, showing that his line could not be used by them. The inhabitants in these wards, now or in the future, can be accommodated only by a system of tramways, or by the line to Manly to which I have referred. With the exception of the population, which may in the future reside between the Willoughby Waterfalls and Willoughby or Cammeray Point, I fail to see that Mr. Hamand's line will accommodate any other portion of the district; even Willoughby Point, in Middle Harbour itself, is only three quarters of a mile from the North Sydney Tramway and Investment Company's bridge over which their tram will run. But, whatever traffic Mr. Hamand's line would collect, I doubt whether it would be sufficient to pay working expenses of the extension, let alone the interest on £155,300, the difference of cost of his scheme and the Government scheme which, at 3½ per cent. would represent an annual payment of £5,435. The only portion of the district that I contend the Government scheme will accommodate is that between the Lane Cove-road, Bay-road, and Carr-street to the head of Berry's Bay; thence by that bay, Ball's Head Bay, and Gore Bay, and by Berry's Creek to the Lane Cove-road again. Nearly the whole of that space is the Berry Estate, and it will carry a large population. Its area is over 400 acres, while the area of the borough of Victoria is only 200 acres, and it has now a population of 3,470. It may be here mentioned that, at the head of Ball's Head Bay, and within 300 or 400 yards of Bay-road Station, the manufacture of neokratine is carried on. Although, I understand, there are now only twenty hands employed, it is confidently hoped, when the works are in full swing, that the number will be increased to 100. But, while all the stations on Mr. Hamand's line are within a half mile of a tram, a ferry, or the railway, it should be distinctly understood that the two stations on the Government line are nearly twice the distance from the tramway or a ferry. Now I consider that I have shown not only that Mr. Hamand's line is unnecessary for a local goods line, but, that it is practically useless as a passenger line.

The chief advantage claimed by Mr. Hamand for his line is that it possesses a better grade than the Government line, that while the grade of the Government line is 1 in 50 the grade on his line is 1 in 70. The advantage, at first sight, would appear greater than it really is. Therefore, it is of the very greatest importance to remember that, of the 10 miles 51 chains of the railway already constructed, the ruling grade is not 1 in 70, but 1 in 50. Why, then, should the remaining short portion of the line be constructed on a grade other than that of the ruling grade, more especially when it would necessitate the line being taken in a circuitous route, and at an enormous expenditure. From the foregoing remarks it is clearly seen that, whatever advantages Mr. Hamand may claim on the score of grades, those advantages apply, not to the entire length of the branch line, but to his extension only. Outside his extension no advantages can be claimed, since a 1 in 50 grade is encountered within a few chains after leaving it. If, therefore, a fully laden train left Milson's Point and travelled up Mr. Hamand's line, so soon as it arrived at the Government line so soon would it stop. To get over the difficulty either 33 per cent. of the load would have to be left behind or additional power be applied, and that could be applied equally as well, if not better, at Milson's Point. If it were probable that a large goods traffic would be carried on the extension between Milson's Point and St. Leonards Station for local distribution, then a grade of 1 in 70 would be an advantage; but it has been shown that there is little likelihood of more traffic being carried on the extension than on the other portion of the line, therefore a grade superior to that of the ruling grade is hardly necessary for the extension. With regard to haulage down the Milson's Point grade, if a load that can be taken up the ruling grade of 1 in 50 from Milson's Point can be safely taken down the ruling grade of 1 in 40 to the Hawkesbury River, it follows of necessity that a load that can be taken up the Hawkesbury River grade can be more safely taken down the Milson's Point grade. On the Milson's Point grade the smaller load would be taken down the flatter grade, while upon the Hawkesbury River grade the larger load would be taken down upon the steeper grade. Moreover, as the traffic from the North to Milson's Point will be heavier than the traffic from Milson's Point thereto, it will be readily seen that the load to be taken down the Milson's Point grade will be measured by the load hauled up the Hawkesbury grade. Now, if it be dangerous to take down a grade of 1 in 50 that which can be hauled up a grade of 1 in 40, how much more dangerous would it be to take down a grade of 1 in 40 that which could be taken up a grade of 1 in 70. As with haulage, so with speed. Any advantages claimed on the score of speed apply not to the entire branch railway, but to the extension only; and, although a train would travel up a grade of 1 in 70, half as fast again as it would travel up a grade of 1 in 50, the difference in speed would affect a distance of only 2 miles, and against that advantage the extra length of Mr. Hamand's line would have to be debited. It may, therefore, be stated that Mr. Hamand's extension could be travelled as quickly as the Government extension by through trains; but since there would be five stations on Mr. Hamand's line as against three stations on the Government line, it would necessarily follow that Mr. Hamand's extension could not be travelled as quickly as the Government extension by slow trains. With regard to the advantages of a 1 in 70 grade over a 1 in 50 grade as regards locomotive expenses, which are directly affected by grades, I find, according to the Railway Commissioner's Report for 1887, that the average working expenses per train mile were 54·05d. of which 16·61d. were due to locomotive power and repairing expenses. Now, I have already pointed out that only 2 miles of the extension is on a 1 in 50 grade, and against this Mr. Hamand's original proposal is over a mile longer than the Government line. For the purpose of my calculations I shall assume that fifty trains depart from and arrive at Milson's Point daily. That would give a train mileage of 200. Now, assume that the locomotive expenses of a 1 in 50 grade are in inverse ratio to the haulage capacity, and we have £15 a day on the 1 in 50 grade and £10 a day on the 1 in 70 grade, a difference in favour of the better grade of £5 per day. But, against that advantage we have to deduct 100 train miles run on the extra mile in length on Mr. Hamand's line, which, at only 12d. per train mile is equal to £5 per day, and consequently the locomotive expenses on both lines are equal. In other words, the lower cost of locomotive power on the flatter grade is compensated for by the shorter run on the steeper grade.

Seeing, therefore, that the Government line is superior to Mr. Hamand's line as regards the distribution of goods to the local population and the collection of local passenger traffic, and seeing also that no advantage would be gained by adopting Mr. Hamand's line as regards grade, I am forced to the opinion that there is nothing to warrant the construction of Mr. Hamand's line in preference to the Government line.

A serious objection to Mr. Hamand's line is the fact that he has made insufficient provision for the goods traffic that will reach Lavender Bay. It has been suggested that even when the railway reaches the water, the large goods traffic expected to gradually develop will be throttled by the Department to force all such traffic to Darling Harbour. If undue compulsion were attempted, which is not likely, it would certainly not be long successful. A railway coming to a central position on a splendid and busy harbour will sow its own goods traffic. Industries will arise where water and rail communication junction, and will demand the necessary railway carriage of their incoming land-borne goods, and of their outward land-borne productions. Not only so, but the specially local industries which now exist between Hornsby and Milson's Point will develop and increase, others will be originated, and they must use the railway for a harbour outlet. Then the very means of communication a railway supplies will cause the North Sydney population to grow even much more rapidly than in the past, and the goods requirements of that population, with the usual wharfage and commercial needs of a large city will, not only find ample paying goods traffic for a railway, but will make the most powerful means of goods conveyance on land—that is a railway—an absolute necessity.

According to Mr. Hamand's section, only 660 feet of level run at Milson's Point is provided. The line then ascends on a grade of 1 in 70, and leaves Lavender Bay at 34 chains therefrom, and at an elevation of 30 feet above high-water mark, thus rendering the greater portion of the frontage useless for shipping purposes. To make the line available for wharfage purposes it would be necessary to extend the railway on a level bench to near the head of Lavender Bay, as is the case with the Government line, but, as I have already pointed out on several occasions, it would not be feasible to do that and obtain a 1 in 70 grade on Mr. Hamand's line. A 1 in 70 grade can be obtained only by sacrificing wharfage accommodation, and wharfage accommodation can be obtained only by sacrificing the grade, or by enormously increasing the cost of construction.

Another objection is the fact that Mr. Hamand's scheme does not offer the same facilities as the Government line for extension to the various bays of the harbour. Suppose, for instance, it were necessary to extend Mr. Hamand's line to Cremorne. To do so from the northern side of the Military-road would necessitate a run of about 2½ miles, the greater portion of which would be in tunnel, and, necessarily, the cost of construction would be enormous. If it were extended thereto from the station at the head of the Neutral Bay Valley, a run of 1½ mile would be necessary, while the cost of resumptions along the route would be considerable. Nor could Mr. Hamand's line be extended to Kurraba Point, in Neutral Harbour, except by shunting from Milson's Point. Moreover, the proposed reclaimed lands at the heads of Careening and Neutral Bays could not be tapped from Mr. Hamand's line except by shunting from Milson's Point. Those reclaimed lands would serve for the erection thereon of a locomotive depot, while if there were no locomotive depot, all engines would have to be sent to Eveleigh to be cleaned or repaired. If it were necessary to connect the western side of Neutral Harbour with Mr. Hamand's line, a run of 50 chains would be necessary to reach the water level, thus rendering useless for shipping purposes, since the line would be away from and too high above the water, the best portion of the water frontages. Now,

the Government line can be extended from the head of Lavender Bay to the proposed reclaimed lands at Careening and Neutral Bays and on to Cremorne, and, moreover, it can be extended thereto in the future practically at the same cost as at present, since nearly the whole of its length is in tunnel, thereby necessitating but little expenditure in resumption. From this extension branches can be run to Kurraba Point, on the eastern side, or Kirribilli Point, on the western side of Neutral Harbour. And while these extensions would be perfectly level the extensions from Mr. Hamand's line would be on a grade.

Now, I contend it should not be lost sight of for a moment, that it is absolutely necessary that the eastern side of Lavender Bay shall be made available for shipping purposes. That frontage is the most valuable asset in connection with the railway, because it cannot be denied that within five years of the opening of the line that asset alone will be worth as much as the whole branch line of railway cost. In spite of anything that has been said to the contrary, evidence has been given which conclusively proves that wool, wood, coal, bricks, fruit, and other merchandise will be carried, and it would be preposterous to suppose that 600 feet, as allowed by Mr. Hamand, is sufficient to accommodate both the passenger and the goods traffic that would go there. Mr. Hamand's line, as a matter of fact, makes no provision for goods traffic, and, what is more, it cannot make provision for it in Lavender Bay. I challenge Mr. Hamand to show that he can strike the water-level at the head of Lavender Bay, and retain a grade of 1 in 70, except at a prohibitive cost.

I have stated that North Shore should eventually be connected with Sydney by a high-level bridge, and that it should be located between Dawes' Point and M'Mahon's Point. Although the water distance between Dawes' Point and Milson's Point is shorter than that between Dawes' Point and M'Mahon's Point, yet it must be remembered that the land in the vicinity of Milson's Point is low in comparison with that at M'Mahon's Point, while the approaches to the bridge at the latter point would be very much shorter than the approaches to it at Milson's Point. Moreover it is more direct to St. Leonards Station, and to the cable tramway in Miller-street, which doubtless would be taken across the bridge if it were constructed. Besides the bridge should be placed as far west as possible, and placing it at M'Mahon's Point would leave Lavender Bay entirely open to incoming vessels. I have assumed the height of the bridge at 160 feet, and from that elevation a grade of 1 in 50 could be obtained on the Sydney side by commencing to rise at Charlotte-place. On the North Shore side a connection could be made on a 1 in 80 grade at 12 miles from Hornsby.

If it be asked if the bridge would do away with the necessity of extending the railway from the bridge connection to Milson's Point I say no, because the line must be continued to the water for the purpose of utilizing the water frontages for goods traffic, and in the meantime, since the construction of the bridge would occupy some years to bring the present constructed portion of the line into profitable operation.

Mr. Hamand claims that his line will earn more than the Government line since its length is over 1 mile greater and since all passenger fares are based upon mileage. When it is remembered, however, that this extra mile is obtained at an expenditure of over £150,000 it will be readily seen that advantages, other than that of taxing the people for all time to pay interest on that sum, a doubtful advantage certainly, should be proved. If the State possessed more capital than it could profitably employ then it might, with some degree of justification, purposely increase the length of railways to extract higher fares from the pockets of those who used them. There is a great difference, however, between a few individuals constructing a railway for the public, and the public constructing a railway for themselves. The principle which guides private individuals in constructing railways is graphically described by A. M. Wellington M.I.C.E., one of the best American authorities on railways, who states as follows:—"Spending money to shorten one's own line for through business, therefore, must, except under peculiar circumstances, be classed among those charitable actions for which a reward may possibly be hoped for in the next world, but hardly in this. The only important exceptions are: First, when a road reaches all important points over its own lines, as the Pennsylvania; or secondly, when it is built for other reasons than direct profit to the investors, as the Cincinnati Southern Railway, or lines built by the State." I may here remark that Mr. Hamand's tunnel under the harbour would sufficiently increase the mileage between Hornsby and Sydney without adding another mile to it, as he proposes. Mr. Hamand may compel passengers to pay the extra fare on the mile between Hornsby and Milson's Point, but I venture to assert that he would carry few passengers by his tunnel between Milson's Point and Circular Quay if mileage rates were charged. People would not pay fares for nearly 3 miles of railway under the harbour when they could travel by steamer on the top of the harbour by paying a penny fare.

With regard to the cost of resumptions on Mr. Hamand's line I find, since writing the above, that Mr. Hamand's estimate is only £130,000. I have made a careful valuation of the land and houses outside Lavender Bay, and the tunnels, and I estimate the cost at £126,568. Now, Mr. Hamand's line necessitates the resumption of all the water frontage on the eastern side of Lavender Bay, and this is valued by the Government Valuator at £67,760, bringing up the total sum to £194,328, or £64,328 more than Mr. Hamand's estimate. Taking the cost of the line at £220,000, as estimated by Mr. Deane and Mr. Hamand, and we have the total cost of Mr. Hamand's line at £414,328. But reducing Mr. Hamand's line to the basis of the Government amended line brings up the total cost to £454,328, or £219,628 more than the cost of the Government line.

In my previous calculations I assumed that the cost of Mr. Hamand's scheme exceeded the cost of the Government scheme by only £155,300, so that the capital that would be sunk in continuing the railway to Milson's Point and to the bridge connection would be £299,618, instead of £225,300. And instead of the difference in cost of the two schemes constructing the Manly line three-quarters of a mile nearer that place than Mr. Hamand's line would carry it, it would in reality carry it about 1½ mile nearer.

With regard to Mr. Hamand's line collecting more traffic, or effecting a saving in working expenses, it must be clearly remembered that Mr. Hamand's line would have to earn annually £7,686 in interest on the additional capital (£219,628), and (say) £750 for working expenses for the additional mile, a total of £8,436 more than the Government line. That sum is sufficient to pay all working expenses of 11 miles of the railway.

I would respectfully point out to the members of the Committee, that in dealing with this line they have to consider not only the present but the future. In that respect it is very different from a country line passing through a district which in twenty years time will not be sufficiently populated to seriously interfere with the course of a railway. The extension of the North Shore Line has to pass through lands which are only vacant because they have been locked up. Immediately they are opened they will be settled. Settlement and building will so increase the cost of resumption that even were it decided the line would only be required twenty years hence, it would be a great saving to resume now, allowing for compound interest on the present resumption value. The population of the boroughs of North Shore is now 16,395, it having increased 129 per cent. in the last eight years, in spite of many portions having inferior communication. If we take a similar increase in the future, and as the communication is improved, especially by a railway, the area for settlement being thus immensely widened, the ratio of increase should be greater, a very large population will be settled on the Shore in twenty years' time. Thus if we reckon the present population of the boroughs as 16,000 instead of 16,395, and the increase in eight years as only 125 per cent., instead of 129 per cent., we may calculate the population of twenty years hence as about 130,000. It is, perhaps, natural for a person who has watched the growth of the North Shore population from small beginnings for fifty years past to think it only amounts to so much per year, and that is not a great deal, but the increase of the population of Sydney itself would look very small viewed in that light. Such an estimate omits altogether the effect of the compound increase, and the Shore has now a sufficient population to make the compound increase tell enormously every year. Therefore it is not even the present considerable population this railway has to reckon with but the vastly increased population of the immediate future. Those who believe, as surely all must, that Sydney will, not so many years hence, rival the present one million population of New York, will believe also that North Shore will be its Brooklyn, with at least one-half the population of Sydney. This means a great city with wide-spread suburbs, and although the proposed extension of the railway promises, in my opinion, at a comparatively early date, a highly remunerative return, the proposal deals also with the resumption now at a comparatively slight cost of the ground for a railway, which by future development will yield a rich harvest on the original outlay. If it be said in answer to this that with the prospects of such a future Milson's Point does not offer sufficient accommodation, I would draw attention to the fact that the promontory on which Milson's Point is situated, extending as it does from Milson's to Kirribilli Point, is by far the widest promontory on the north side of the harbour, and thus affords a greater expanse for all future developments than any other situation.

In conclusion, I say that Mr. Hamand's scheme should not be constructed in preference to the Government scheme, because it would cost nearly £220,000 more; because it would be over 1 mile longer; because it would necessitate the additional construction of a large portion of the Government proposed line to connect with a high-level bridge; because it does not offer the same facilities for extensions to the various bays on the northern side of the harbour; because it would not serve as great a local population; because it does not afford the same accommodation for distribution of goods; because it does not possess advantages to reach Manly; because it makes inadequate provision for a goods traffic; and because it renders practically useless the most valuable asset on the line—that is, the water frontage on the eastern side of Lavender Bay.

TUESDAY, 29 JULY, 1890.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

WILLIAM McCOURT, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Charles Cyrus Bullock, Esq., surveyor, sworn, and further examined:—

C. C. Bullock, Esq.  
29 July, 1890.

2974. *Dr. Garran.*] Taking your figures as to the position of the population on the North Shore, I should like to follow up the two proposed lines of railway from the start, to see if you can give me an approximate estimate of the area which each station on each of the two lines would serve, together with the present population. Starting from Milson's Point—that would not be a collecting station for traffic on the way to Sydney, but simply a discharging station? Yes.

2975. Therefore we cannot credit it with any business on its own account as a station? Exactly so.

2976. It is not proposed by the Government to have a station at the head of Lavender Bay, but if there were such a station there would be no traffic there, because no one would take the train for such a short distance in order to reach the ferry at Milson's Point? Just so.

2977. Therefore, the first collecting station on the Government line would be Bay-street? Yes.

2978. What area, of course taking into account the drainage of the traffic by the tramway, would that station serve? Do you mean in acreage?

2979. Yes. Could you give me a rough estimate? I think about 200 acres. I reckon that the two stations would serve 400 acres, and that each of them would serve half that area.

2980. Have you any idea what the present resident population is which the Bay-street Station would serve? No; and any statement I could make would not be worth having. I might say that there is not very much there at present.

2981. Can you form any idea as to what the prospective population might be? Yes. In the Borough of Victoria, the area of which is about the same as the area which this station would serve, there are 3,470 residents, and I think that this space round the station is quite as capable, or more capable, of carrying that population than the Borough of Victoria is.

2982. Judging by the population on a similar area, you conclude that this 200 acres will be able to carry the population which you have mentioned? Yes. It would be capable of carrying more. The Borough of Victoria could carry 6,470 people.

2983. I am thinking of the traffic six years hence;—would the area to which we are referring be capable of carrying 4,000 people without being overcrowded? Quite.

2984. Are the whole 200 acres fairly suitable for building purposes? Yes; the greater portion of this area is very suitable for building—every part of the country from Bay-road Station to Ball's Head, and from the station to the Lane Cove-road. I do not include any of the population on the Lane Cove-road, because that would filter to the tramway.

2985. I presume that you have drawn an imaginary line of demarcation? The Lane Cove-road forms the boundary. The people to the north-east of it would go to the tramway, while those to the south-west would go to the railway station.

2986. Are you crediting this station with the whole of the people who reside at Ball's Head? Yes; I should do so.

2987. Irrespective of the possibility of a steam ferry service there? Yes; because at the Head the ground is very abrupt, and people could not get down.

2988. How far is it from this station to Ball's Head? About 3,500 feet—1,200 yards.

2989. Roughly, two-thirds of a mile? Yes.

2990. Now take the next station, at Edwards'-road—what area do you consider it would drain? About the same area as before—200 acres.

2991. Are those 200 acres fairly good for building purposes? Yes. Some of the land down the creeks is a little rough, but generally speaking it is suitable for residential purposes.

2992. Do you think that in five or ten years' time this area will carry 4,000 people? It is capable of doing so.

2993. The next station is the St. Leonards Station, which is common to both routes? Yes.

2994. Now take the other line—the first collecting station on that line would be that at Careening Cove? Yes.

2995. What area will it drain, remembering the steam-boat competition? I cannot see that the station there would serve any people at all, except a few houses right on the top.

2996. Would not the country to the north drain down to this station? There is no portion of that country half-a-mile from the ferry. Careening Cove Station is only 1,800 feet—600 yards—from the ferry at the bottom of High-street.

2997. If you were living within a quarter of a mile to the north of this station, would you pass it to come to the steamer? No. This station is in a valley, and if you lived a quarter of a mile away from it, you would be close to the tramway. The trams and steamers bristle here.

2998. You think the competition of trams and steamers would destroy the value of this station as a collecting station? I think so.

2999. What is the next station—Bent-street? Yes.

3000. What drainage area would it give you? Only a few houses immediately situated——

3001. I asked for the area? I think 10 or 20 acres at the very outside. I do not think that it would serve as much as that.

3002. Those 20 acres comprise steep slopes and valleys? I suppose this is the worst part of the North Shore for building purposes. 3003.

3003. You would not credit it with the possibility of carrying a large population? I should not. If there were a large population there, the people would travel by the steamers. C. C. Bullock,  
Esq.  
29 July, 1890.
3004. What would you put as the maximum population which would drain to this station? My statement is very much a guess, and I do not see that it has much value—say 200 people.
3005. What is the next station? That at Willoughby Falls.
3006. What area will it drain? You must understand that the same arguments apply again as to lines of communication.
3007. You are not to credit it with any traffic that would go to the tramway;—I asked for the area that will drain to the station, assuming that the railway is constructed? Before I answer that question, I might point out that the space coloured green on the map is a reserve for public recreation. It contains about 40 acres, and could not be cut up for building sites. About 40 acres probably.
3008. What do you consider would be the population on that area—some of it is good building ground is it not? Some of it, on the ridge.
3009. On the flat of the spur there is good building ground? Oh yes, you could build there.
3010. Both north and south of Willoughby Falls there is good building ground? The tunnel, you must remember, is only 6 chains from the station.
3011. But I presume that there would be a road of access? The road would come down here. (*Referring to the map*).
3012. At what do you put the population? Probably 500.
3013. *Mr. Garrard.*] Present or future? The future population.
3014. *Dr. Garran.*] Now take the Miller-street Station—there is a private tramway to compete with the railway, and the traffic from the area surrounding the station will therefore be common to both tram and train. What do you suppose would be the proportion of the people who would patronise the railway? It is very difficult to make a guess, but the people coming from Amherst-street would not travel by the railway.
3015. They would not go north to take the railway? I will tell you why.
3016. It would be a competition of time and fares, would it not? I will give you the exact distances. By Mr. Hamand's route the distance from Miller-street to Milson's Point would be 2 miles 67 chains.
3017. With three stoppings on the road? Yes; and the distance by the tramway from Amherst-street would be 2 miles.
3018. With how many stopping-places? As many as you like. A person travelling from Amherst-street would have to go a quarter of a mile to the railway, and then travel  $2\frac{3}{4}$  miles by train, while a person going by tram would only have to travel 2 miles.
3019. Which person would get down the quicker? I do not think that there would be much difference in time, but the tramway would be better for enabling people to get to their homes, because it is on the same level. In Amherst-street you have to fall about 70 feet.
3020. Still, I want you to guess at the population which would patronise the Miller-street station? Three hundred or 400 people.
3021. What is the next station? That at the North Sydney-road.
3022. What area would that drain—of course remembering the competition with the trams? I should not say more than 500 people.
3023. I have now mentioned all the stations on Mr. Hamand's line, have I not? Yes.
3024. According to your statement the prospective population on the Government line would be about 8,000 people, and on Mr. Hamand's line about 1,600 people? Yes; I think that the Government line would serve five times as much population as Mr. Hamand's line would serve. I think that is about the population that would be carried, reasoning by analogy.
3025. You make out that the population that would feed the Government line is very much larger than any probable population that would feed Mr. Hamand's line? There cannot be two opinions about it.
3026. Will Mr. Hamand's line have more, or less, competition from the tramway than the Government line? More, most distinctly, because Mr. Hamand's line would run parallel with the tramway.
3027. How far would it be from the tramway at the furthest point? Thirty-six chains, and lower down 18 chains, and then it crosses it. The Government line at the Bay-road Station would be nearly a mile from the tram-line—it would be 42 chains crossing the cliffs, but by road the distance would be greater.
3028. North Shore has been settled, in the first instance, through the agency of the steam-boats? Yes.
3029. You say that experience has shown that people settle to within half a mile or three-quarters of a mile of transit facilities? Yes.
3030. Beyond that the population is hardly ever dense, until fresh facilities are provided? That is so. Of course, you must clearly understand that the reason why population has not gone westward is that the Berry Estate has blocked it.
3031. Since people will not go more than three-quarters of a mile back from transit facilities, new ferry stations have been established along the shores of the harbour? Yes.
3032. Population liking to be within half a mile of transit facilities? Yes. When, I was surveying down at Mossman's Bay, about ten years ago, there was no ferry, and now I think there are about 860 people living round there.
3033. The population on the North Shore has never been concentrated at more than three-quarters of a mile from transit facilities? Generally speaking, that is so.
3034. Does that seem to indicate that, if we wish to provide the suburbs with population, we must have transit facilities within three-quarters of a mile of where we want that population to be, either by railway, tramway, or steamer? Yes.
3035. Which of the proposed lines meets this condition of things best, Mr. Hamand's or the Government line, multiplying the centres? The Government line, because it is more direct, and goes a longer distance in a much shorter time. I contend that Mr. Hamand's line, from Willoughby Falls' Station, would serve practically nobody at all.
3036. If the Government line is made will there be any part between it and the tramway more than three-quarters of a mile distant from transit facilities? Not until you come down to the Bay-road Station, where it is about half a mile across the cliffs, but to walk it it would be over that.
3037. You do not answer my question; would there be any part between the Government line and the tramline more than three-quarters of a mile from transit facilities? No. That would necessitate  $1\frac{1}{2}$  mile between the railway and the tramway.

- C. C. Bullock, Esq.  
29 July, 1890.
3038. Then the tramline and the Government railway line would adequately meet the wants of the whole of the district between them? Yes; and where Mr. Hamand's line is located the population is already served by the tramway, since it is less than half a mile from it.
3039. But the country to the east is not served by the tramway? Nor is it by Mr. Hamand's line, because his line is 160 feet below it.
3040. You mean to say that the population to the west of Mr. Hamand's line is already accommodated by the railway, and that the population to the east of it would not be accommodated by it? It would not, but most of the population to the east of his line is accommodated by the wharf at Hayes'-street. That wharf is only half-a-mile from the Military-road, and you walk down the spur, as it were, to it. You must, in dealing with the passenger traffic at the North Shore, take into consideration the physical features of the country.
3041. *Mr. Tonkin.*] But the people going to the ferry would have to walk up hill when going home? Yes, and so they would from any of the stations on Mr. Hamand's line.
3042. *Dr. Garran.*] Mr. Hamand estimates the extra expense of his line at £92,000, although you estimate that it would be very much larger. Supposing Mr. Hamand's figures to be correct, do you think that it is worth that extra money? I do not.
3043. Suppose Mr. Hamand's line could be constructed for the same price as the Government line, do you think it would be preferable to it? I do not.
3044. You would rather have the Government line than Mr. Hamand's line, even if the cost of the two were the same? I should.
3045. You have seen from the figures before the Committee that the estimate of the cost of the Government line, from the head of Lavender Bay to Milson's Point, is £98,760? Yes.
3046. You have said that property in Lavender Bay is worth buying to have as a national asset, its estimated cost being £67,760;—do you think it would be sound policy on the part of the Government to buy the land at this price now, even if it may not be wanted? Most decidedly.
3047. You think it better to buy it now, so as to prevent an increase in value, suppose we wished to buy it hereafter? Yes.
3048. You feel certain that if the line were brought to the head of Lavender Bay, it would have to be extended to Milson's Point? Yes.
3049. And that it is better to incur an unproductive outlay at present than to have to pay an increased amount for land hereafter? Yes.
3050. You say that the profit from the land will be worth the cost of the line;—do you mean that it will nominally be worth it, estimated per foot, or that it would bring in that return? I have been told by business men that they could pay the Government a rent equal to paying £200 a foot for the land.
3051. It could only bring the Government a return by being used for wharfage purposes or factory sites? Yes. I have been told by business men that this land could be leased, if the Government did not want to use it for the railway, at a figure that would pay interest on the outlay.
3052. You mean to say that the value of the land for business purposes would be such that it could be leased at as much as would pay the Government interest on the railway work? Yes.
3053. You think it would be a good thing to buy the land now? Yes; apart from the policy of continuing the line to Milson's Point.
3054. You are aware that a modified project has been submitted to the Committee, stopping short at the head of the bay, and making a saving of £52,760? Yes.
3055. Would you recommend that that project should be carried out? I would not.
3056. You think it would be better to expend the money in extending the line? Yes.
3057. Suppose the Government were to buy the land, but merely made a station at the place which Mr. Deane has suggested as a temporary station, would that be wise? No; because the works are estimated at only £31,000.
3058. And we should only save out of that perhaps half by not going to Milson's Point? You would save £31,000 I understand.
3059. There would be a saving of £10,000 in works? I should certainly advise you to take the line on to Milson's Point.
3060. You do not think it would be worth while to save £10,000 by making a temporary station between the head of the bay and Milson's Point, it would be better to go on? Yes. An advantage of the extra half-mile would be that you would be taking your passengers nearer to Sydney, which Mr. Hamand's extra distance does not do, and you could therefore legitimately charge a fare for the longer distance.
3061. Suppose the Government line went right on to Milson's Point at once, you do not think that it would be necessary to use all the frontage for wharfage purposes directly—only enough wharves should be erected to accommodate the passenger traffic? Yes.
3062. We could add to the wharfage bit by bit? Yes.
3063. So there is no necessity to go to the expense of constructing wharves along the whole of the eastern side of Lavender Bay? Yes.
3064. You think that the traffic would increase gradually? Yes, but there would be a large traffic.
3065. The estimated cost of the route submitted to the Committee was £262,000, to which has been added £21,700 as the extra cost for an alteration of grade, making the total cost £283,700? That includes many things which have to be accounted for. £262,000 is not what the railway will cost, because £28,000 must be deducted as the value of properties situated over the tunnel which need not be paid for, and £21,000 for the land in the Berry Estate which need not be paid for, under the provisions of the Public Works Act.
3066. *Mr. Garrard.*] That is a matter of opinion? In that case the figures would only be wrong by £10,000, because the trustees of the Berry Estate offered to let the Government have the land for £10,000.
3067. *Dr. Garran.*] What would that bring the cost down to? £213,000. Then the Department estimate that the cost of the 30 chains additional length, which is necessary to reduce the grade to 1 in 50, will be £16,000.
3068. No; it is estimated altogether at £21,700. If we allowed a reasonable margin for contingencies, the cost of the line would be £250,000? That should be allowed with Mr. Hamand's line also.
3069. Do you think the line will pay interest on that amount? I do not look upon this as a separate line, but as the completion of an existing line.

3070. But should we get back the interest on that £250,000? If you spent this £250,000 I contend that within two years the Department would get a large return from the line sufficient to pay the interest on the capital spent between Hornsby and Milson's Point. C. C. Bullock,  
Esq.
3071. And you have no doubt about that being done within five years? Not the slightest doubt. 29 July, 1890.
3072. Do you mean interest after paying working expenses of the line? Yes.
3073. *Mr. O'Sullivan.*] You claim for the Government line that it will serve a larger prospective population than Mr. Hamand's line is likely to serve? Yes.
3074. Have you made due allowance in that comparison for the excursion traffic to Middle Harbour? I think the excursion traffic on Mr. Hamand's line will be infinitesimal. The people would have to walk down to the harbour from Folly Point, about  $\frac{5}{8}$ ths of a mile, and descend 150 feet.
3075. But would not the line give access to the back portions of Middle Harbour? Very little more than the private tram-line does. From Miller-street to Folly Point would be very slightly more than a mile from the tramway. Passengers going to Middle Harbour would go in the tramway as far as Falcon-street, and walk the rest of the distance, which would be a mile, so that the railway would only have the advantage of half a mile at the most.
3076. You take the view that this will be a passenger line only? I do not. I think there will be a goods traffic.
3077. Where do you expect the goods will come from? You have had evidence already that wool will come down to The Pastoralists' Association's stores at Milson's Point, and that there will be a return of something like £2,000 or £3,000 a year from bricks. Then there is the produce which a large population like that at North Shore would consume; while, if coal were found at Wyong—though I cannot see that any coal would come from Newcastle—I think it would find its way to Milson's Point or Ball's Head. From Milson's Point to Wyong the distance is 5½ miles, while it is 40 miles from Wyong to Newcastle; so that there is only a difference of 14 miles.
3078. *Mr. Garrard.*] There is a difference in grade? Yes.
3079. *Mr. O'Sullivan.*] The evidence of the Department is against the idea of much traffic in coal? Yes. If there were a coal traffic, provision could be made for it by an extension of the line to Ball's Head. This extension of the line has not been put before you by the Department, but it is possible to extend the line to Ball's Head. Such an extension would leave the Government line, and shunt back round by the head of Berry's Bay to Ball's Head, where it would be about 25 feet up—about the same height as the Newcastle shoots are. You would have there about 2,500 feet of frontage.
3080. You estimate that the Government line will serve a prospective population of 8,000? That the area through which it runs would carry a population of 8,000.
3081. Does not the greater portion of the line go through the Berry Estate, at Crow's Nest? Yes; half of it goes through the Berry Estate.
3082. Why are the proprietors of the Berry Estate not ready to cut their land up? The land belonged to Mr. Berry, and he would not cut up any of it; but he is dead now, and it is decreed by his will that the land shall be sold, so that the trustees are compelled to sell it.
3083. You claim that the Government line will serve a better kind of land—land more fitted for residential areas—than Mr. Hamand's line will serve? Most decidedly. It is first-class land for residential purposes, while the land on Mr. Hamand's line is all sandstone.
3084. I gathered from your evidence that you did not think that Mr. Hamand's line, if carried out, would serve as part of a line to Manly? My idea is that Mr. Hamand's line does not follow the right route to Manly. If you asked Mr. Hamand to survey a line of railway from Milson's Point to Manly, I venture to say that he would tell you that the proper route was on the southern side of the Military-road, that is to say, on the Port Jackson watershed—not on the Middle Harbour watershed.
3085. You do not think, then, that 2 miles of his line could be utilized for a line to Manly? If Mr. Hamand's railway were constructed, and Mr. Hamand wanted to get to Manly by it, 2 miles of it could be utilized, but that would not be the right route to Manly.
3086. But if it were so, the saving of 2 miles would be an advantage in Mr. Hamand's line? I do not think so. I think that I show by my figures that you can carry the Government line nearer towards Manly than Mr. Hamand's line goes by the extra distance, and that that line would be on the right watershed, and serve more people than Mr. Hamand's line, while it would in every other way be better than it.
3087. The money you would save by carrying out the Government line, as compared with Mr. Hamand's line, would enable you to carry the line 2 miles on towards Manly? It would take a line nearer to Manly than Mr. Hamand's line would go.
3088. Following a better route? Yes, in every way.
3089. *Mr. Tonkin.*] In estimating the amount of population which the Government line would serve—8,000 people—did you take into consideration the whole of the land from the railway line west to the water frontage? Yes.
3090. Do you think that there would be no ferry-boats to compete for the traffic from that land? No; they cannot compete there in the same way as they can compete at Neutral Harbour, because the land is much more bold. You must also bear in mind that the distance from the Circular Quay to Ball's Head Bay and to Gore Bay is considerably longer than the distance from Circular Quay to Milson's Point or High-street.
3091. Is not the whole of the line constructed on ground falling towards the water—is it not a long way below the plateau? Yes; but still some portions of it are very high. Bay-road is about 120 feet above high-water mark.
3092. Do you think that under these circumstances, if the Berry Estate were sold, the people who had built lower down towards the water would travel up to the railway line, supposing they could get a ferry steamer? I think very few would travel by the ferry steamers, because the land at the water's edge is very abrupt. You could not subdivide the land immediately at the water's edge into allotments 100 feet in depth.
3093. Is the land at the head of these bays more abrupt than the land in the bays to which the steamboats ply? It is very much more abrupt in the bays to the west than it is in the bays to the east. Here [*referring to the map*] it simply slides up.
3094. How far is the Edwards'-road Station from the water? It is 2½ miles by ferry from Circular Quay.
3095. But how far would it be from navigable water? About 10 chains. By steamer it would be about 2½ miles from Circular Quay. 3096.

C. C. Bullock, Esq.,  
29 July, 1890.

3096. It would be as far from Milson's Point as from Circular Quay? But you must compare that, not with the distance by railway, but with the distance by ferry. High-street would be a mile and three-eighths from the Circular Quay.

3097. I do not want to compare the two routes; I merely want to find out, if possible, what proportion of the prospective population would be served by ferry-boats? We will take it in another way. There are 400 acres of land, the population upon which I say will be served by the railway; but suppose, for the sake of argument, that no one to the south-west of the line will travel by train, that will leave 300 acres to the north-east of the line, the population of which will use it.

3098. What do you estimate would be the population per acre? I think it is about ten people.

3099. If the population of 4,000 acres comes to 8,000 people, that is nearly twenty people to an acre? Yes.

3100. If you allow ten people to the acre, that will reduce your estimate from 8,000 to 4,000? Suppose I threw out 100 acres, which is altogether outside what could possibly be thrown out, there would be a population of 6,000 people to the north-east of the line who would use it, and 2,000 to the south-west who would not use it.

3101. Allowing twenty people to the acre? Yes.

3102. Do you think that North Shore will be populated by a class of people who would live as closely together as that? I think so. This area is adjacent to an area which at the present time carries twenty people to the acre, and which is by no means over-populated.

3103. Are the present outskirts of North Shore populated to that extent? Three-fourths of the Borough of Victoria is on the water-line—on the outskirts. In that borough a very large area is taken up by large houses—Mr. Dibbs' house, for example, and "The Towers."

3104. But are there not business streets which are very thickly populated? There are some business streets there, but not such as to make any great difference. The Borough of Victoria could carry double the number that it does carry.

3105. In your estimate, have you given the tram-line a fair proportion of the traffic—that is, have you estimated the traffic that would gravitate to the tram-line apart from that which would gravitate to the railway line? Yes, it is very clearly defined. I calculated that the people living on the Lane Cove-road would use the tramway, and the area which the railway would serve would not go as far as the Lane Cove-road, but only to within 4 or 5 chains of it.

3106. How far is the nearest point on the Lane Cove-road from the present tramway? From the North Sydney-road it is 24 chains, and from the Crow's Nest 10 chains.

3107. Would not the people a long way to the west of 10 chains be served by the tramway? From the tramway to the railway is only 48 chains, and my line is about a quarter of a mile from each. I made a very fair allowance.

3107½. You have no doubt that the Government would be justified in the expenditure of £250,000 in the construction of the proposed line? Most decidedly—to bring the whole line into use.

3108. You believe that the line would return working expenses, together with the interest on the capital? Yes; and if I may be permitted to give a reason for that I should like to do so. I find that at Burwood Station the inward and outward traffic is £28,500, which is sufficient to pay something like 6 per cent. on the working expenses of the Government line, and surely we could plant a population equal to that going to and from the Burwood Station between Hornsby and Milson's Point.

3109. Do you not think that the fact of having to leave Sydney by water to get to the railway would militate against the traffic on the line? I do not. I think it is far better to cross the water than to travel by the trams. You have to walk nearly a quarter of a mile from George-street to get to the tram which takes you to the Railway Station, and you will find that the bulk of the people in Sydney are situated nearer to the Circular Quay than to the trams.

3110. *Mr. Humphery.*] Do you mean to say that £28,000 represents the annual takings at the Burwood Station? Yes; I have the Commissioners' book with me, which shows that.

3111. That represents the returns from Burwood Station alone for one year? Yes—the inward and outward traffic. There have been several gentlemen who have given you wrong measurements with regard to the depth of water in, and the areas of, various bays. I have the correct information here about this, and should like to put it on record.

3112. *Vice-Chairman.*] Could you give it to us as a return? Yes, as an appendix to my evidence.

Charles Augustus Goodchap, Esq., M.P., sworn, and examined:—

C. A. Goodchap, Esq., M.P.,  
29 July, 1890.

3113. *Vice-Chairman.*] You were for a long time connected with the railway work of this country? Yes.

3114. You were for several years, I think, Commissioner for Railways? Yes.

3115. And you have a tolerably accurate knowledge of railway management? Yes.

3116. You have had a good deal to do with railway projects? Yes.

3117. Were you in office when the railway was constructed from Hornsby to the Crow's Nest? When it was projected and partly carried out.

3118. You know where that line terminates at the present time? Yes.

3119. Do you think that it is a suitable place to meet the traffic of that suburb? Well, I do not think that it is. I think passengers should have additional accommodation, and be brought down to the foreshores.

3120. Have you thought what description of accommodation would be the best to meet the emergency? I think it would be an unreasonable and extravagant policy to extend the railway from its present terminus to the foreshores at Milson's Point, or any other point, at the present time. My opinion is that the extension of the tramway from its terminus to the railway station at St. Leonards would meet all the just requirements of the case.

3121. You think that that would be sufficient for all the passenger traffic? For all the traffic that is in prospect for a great number of years.

3122. In giving this opinion, have you considered the favourable terms under which the trustees of the Berry Estate offer their land to the Government, if the Government will construct the line at the present time? Yes; and, notwithstanding that, I think it would be a most extravagant policy to extend the railway from its present terminus to Milson's Point. I think that an expenditure of £214,000, which, I believe, is the lowest estimate of the cost of the railway, would in no way be justified. 3123.

C. A.  
Goodchap,  
Esq., M.P.  
29 July, 1890.

3123. We have it in evidence that the lowest estimate for the construction of the railway would be about £250,000—the Government estimate is beyond that? The expense would be still more unjustifiable.
3124. As far as you have given attention to the proposed extension, do you think it likely that the railway will at some subsequent time be brought to the shores of the harbour? Not within the next ten years, if the true interests of the country are considered.
3125. Do you know the suburb pretty well, and the line between St. Leonards and Hornsby? Yes.
3126. Is it the case that the land along the line offers unusual inducements for settlement, from its healthy situation, for suburban residences? There is no doubt that it will be a fine country for residential purposes, but I think the obstructions towards that are so great that a large residential traffic will not be taken there.
3127. *Mr. Garrard.*] What are these obstructions? The obstruction is the necessity of crossing the water.
3128. *Vice-Chairman.*] And the tram? I do not apprehend that there would be very much obstruction there. I do not think that it would be a serious inconvenience to go from Milson's Point to St. Leonards Station by tramway. I think that too much importance is attached to the suggested difficulty and inconvenience of changing from tram to train.
3129. You are acquainted with the circumstances under which cable trams are worked at North Shore? Yes.
3130. Do you think that they are working successfully? They ought to work successfully, I think that, as population increases, that will be a reproductive line.
3131. Supposing the suburban traffic at the North Shore became as much as the suburban traffic is now to Ashfield or Burwood, Waverley, and Kogarah, a cable tramway would be sufficient to work with the railway in order to bring passengers to, and take them from the North Shore? Yes; quite sufficient.
3132. Do you think that there is likely to be a large industrial occupation there. We have it in evidence that there are large brickworks at North Shore? Yes. I think that pottery works and brickworks will extend in that direction.
3133. Do you think that the line is likely to serve a large fruit-producing area between St. Leonards and Hornsby? I believe that all the available spots are already occupied by orchards; but there is no prospect of the produce of the orchards being brought down by the railway. The inconvenience of handling fruit cases at so many places would prevent that.
3134. But if the railway were continued to Milson's Point, would not that lessen the objections considerably? I think not. I do not think that any fruit cases, with immaterial exceptions, would be brought by the railway even if it were extended to Milson's Point.
3135. You think that the producers would still bring their fruit to market by means of carts? I am quite sure they would—they would find it more economical to do so.
3136. Is there any other industrial occupation, which you think would spring up between St. Leonards and Hornsby? I think that the industries there would be confined to brickworks and pottery works. I do not know of any other industry which would prosper there.
3137. Do you think that this district generally, the whole of the North Shore and the country between St. Leonards and Hornsby, will become a favourite suburb, in the course of years? Yes.
3138. If it becomes a favourite suburb, the population must necessarily increase very largely? It would, no doubt, but not to an extent which would justify the construction of the railway. In reading over the evidence, I see that one of the witnesses, Mr. D. Thompson, estimates that shortly after the construction of the line 3,000 people would be going into Sydney from this locality and going back, daily. That gentleman must surely have arrived at his conclusion on very insecure grounds. He says, further, that these would be season ticket holders. Now 3,000 people travelling backwards and forwards daily would make 2,000,000 journeys in a year, and when it is known that the whole of the season ticket holders in the colony, including those on the Parramatta line, the Illawarra line, the line to Ryde, and the line between Newcastle and Maitland, do not make 6,000,000 journeys in the year, it must appear incredible that one-third of that number of journeys would represent the traffic on the nine or ten miles of country between Milson's Point and Pearce's Corner.
3139. You think that the passenger traffic is not likely to be anything like that estimated? I am quite sure that to produce such a traffic the population must increase from its present number to about 25,000.
3140. Does your experience lead you to think that the population of many of our suburbs has increased very largely by the creation of tramway or railway communication? Undoubtedly.
3141. That applies to most of the suburbs that have this communication? To those which have direct communication without the intervention of ferries.
3142. You think that the ferry service would always act as an impediment to a similar increase of population on the North Shore? I have no doubt about it.
3143. You are aware that if the population on North Shore increased as rapidly as it is anticipated the local consumption would give rise to a good deal of goods traffic? Yes; but I think that that goods traffic would be much better distributed from the present terminus of the line than from Milson's Point.
3144. The present terminus would be more central than Milson's Point? Undoubtedly, for the local trade.
3145. Do you think that a traffic in produce or coal is likely to spring from this extension? I think it very improbable.
3146. Do you think that Sydney is still likely to remain the centre for the northern goods traffic? Yes.
3147. There is now a considerable goods traffic from the northern districts by railway? Yes.
3148. You do not think that much of that would be diverted to the North Shore extension? I do not.
3149. Do you think that any wool traffic is likely to be developed on that line? I think not. I believe that there is a proposal to erect large wool stores at North Shore, but I think it will be found more convenient to take the wool intended for these stores to Darling Harbour, and send it over in punts, than to take it down to Milson's Point by railway.
3150. Have you given any attention to Mr. Hamand's alternative proposal? I have not given much attention to it, but I know its general direction. It reaches the same point by a different route.
3151. And it is something like a mile longer than the Government line? Yes.
3152. Evidence has been given to show that it would accommodate more traffic than the Government line? I understand that it would cost £80,000 more than the Government line.
3153. About £100,000 more? I think it would not be justified. I think that if the railway is taken down to Milson's Point it should be taken by the route proposed by the Government. 3154.

C. A.  
Goodchap,  
Esq., M.P.  
29 July, 1890.

3154. Are you aware that there will be a large prospective settlement at North Sydney? At Willoughby—yes.
3155. Do you think that there is a probability of a large population there which would justify the proposed route? The deviation. No, I do not think it would be sufficiently large to justify it.
3156. You are aware that there is a project in connection with the development of this new settlement to construct a tramway from there to St. Leonards, in fact the tramway is constructed? Yes, there is a private line.
3157. Do you think that that would be sufficient to give accommodation to the people travelling from that locality to the water? I am quite sure that it would. The population at this place could never equal the population at Waverley, and the tramway from Waverley to Sydney is found to do all that is required. No doubt a railway would be preferred by some, but I am quite sure that a tramway would be more convenient.
3158. The tramway answers all present purposes? Yes.
3159. Do you think that the favourable terms on which land at Milson's Point could be resumed at present, compared with what we should have to pay in ten or twelve years hence, should act as an inducement to the Government to construct this proposed line? I do not think that there will be much difference in the value of the land at Milson's Point. I think it will be just as cheap, or equally dear, in fifteen years' time as it is at the present moment, or that the difference in price will be immaterial.
3160. You think, viewing the proposed extension from all surroundings, that it would not be desirable to carry it out at the present time? It would not be desirable.
3161. *Mr. Trickett.*] A return laid on the table of the House recently, showed that for the first four months of this year the working expenses and interest on the line from Hornsby to St. Leonards were £4,165 and the earnings £464;—can you suggest any way by which that state of things could be improved? I do not think that it would be greatly improved even if the tramway were extended to St. Leonards Station, and I feel quite certain that the loss would be largely increased by the extension of the railway—that is to say, interest would have to be paid on a larger amount of borrowed money, which would make the returns more disproportioned to the expenses than they are at present.
3162. Seeing that the line is such a loss at the present time, is it worth while to spend £250,000 in making it available? I think it would be throwing good money after bad.
3163. If the railway were extended to the deep waters, the distance to Sydney from the Northern line, *via* Milson's Point, would be 8 miles less than by way of Ryde? Yes.
3164. Do you think that passengers to Sydney would save that 8 miles, or would they go right round to Redfern Station? The difference in time, which is the essential consideration, would be so immaterial that they would come straight on to Sydney. They would not put themselves to the inconvenience of changing trains—which is some inconvenience, though it is not very great—in order to save 10 minutes. The difference in time between coming from the Northern line to the General Post Office by way of Strathfield, and by way of Milson's Point, I have calculated would not be more than 10 minutes.
3165. If the railway were extended to the deep waters, do you think that there would be any large traffic in the shape of coal? I am quite sure that coal will never be brought along this line for export.
3166. Will it come by rail or by steamer? From Newcastle it would come by steamer.
3167. Or by sailing vessel? Or by sailing vessel.
3168. Is it your experience that it is cheaper to carry coal by sailing vessel or by steamer than by railway? The steep grades on the railway line, which only allow light loads to be taken, would make the charge for coal so high as to put it out of comparison with the steamer charge.
3169. Therefore you think that no large traffic in coal would spring up if the railway were brought to Milson's Point? Certainly not.
3170. *Mr. Hamand's* line has a grade of 1 in 70 as against a grade of 1 in 50 on the Government line to get to the same point, would that be a great advantage? You would have to take into consideration the ruling grade on the whole line. The ruling grade between Pearce's Corner and St. Leonards is 1 in 40, and if that cannot be improved there is no object to be served in getting a line from St. Leonards to the water's side with a grade of 1 in 70. The distance would be very short, and it would not be desirable to break up the trains because of it. The trains brought to St. Leonards would be taken on to Milson's Point, whether the grade was 1 in 70 or 1 in 40. Unless you make the ruling grade throughout 1 in 70 it is no use to have a grade of 1 in 70 just to finish the line.
3171. Have you considered at all the question of wharfage at North Shore. Various places have been suggested for wharfage sites, such as Ball's Head and Cremorne Point? Directly Ball's Head was suggested as a site for a coaling wharf, I brought under the attention of the Government the superior advantages of Long Nose Point as a coaling station. It was always doubtful whether coal would be brought along the Northern railway, but Long Nose Point would serve the coal traffic from the north, if there were any, and from the western collieries at Lithgow, and the southern collieries, on the Illawarra line. It would be a general coaling port, serving all the coal mining industries in the colony.
3172. It has come under the consideration of the Committee that the line might go to the head of Lavender Bay, and then tunnel out towards Cremorne Point, working in the whole of Cremorne Point for wharfage purpose? The scheme is altogether indefensible—it is inexpedient, undesirable, and certainly unnecessary.
3173. You do not think that it should weigh in taking a practical view of the line? I do not.
3174. We have had a good deal of evidence as to the population that would grow up upon the North Shore heights. From your knowledge of the growth of population in other suburbs, do you think that this would be a thick population;—would it be a working population, or a superior class of population? I think it would be a population composed chiefly of the leisure class, or the class above the working class. I am quite certain that if the working men whose avocations are carried on in Sydney were to contemplate residing on these heights, they would find that the cost of getting to their work would be too great for them. I have estimated that a working man would have to pay £12 10s. a year at least, for going to and from this place, and that, added to his rent, would be a sufficient obstacle to prevent him from contemplating settling on the North Shore.
3175. You say "from this place";—will you say what limit you would allow? About 6 miles from Milson's Point. The season-ticket rate would be about the same as the season-ticket rate from Burwood to Sydney, and to it would be added the cost of the ferry journey. I presume that a working man would walk from the Circular Quay to his destination, though he might not do so. He might have to take the tram, and at any rate the cost of transit would prevent him from living at such a distance.

C. A.  
Goodchap,  
Esq., M.P.

29 July, 1890.

3176. Would the class of population be similar to that which grew up so rapidly between Redfern Station and 6 miles out along the Illawarra line? No, I think the population would be of a different class.
3177. It would not be so numerous? It would certainly not be so numerous, and it would not be of the same description. I do not think that business men whose occupation required them to come into the city daily would seize upon that locality as a suitable place for a residence. I think the class of people who would go out there would be those who had more leisure, whose business would not require them to come to Sydney, and who would use the place more as a sanatorium; but that class is far from numerous.
3178. *Mr. Tonkin.*] Can you tell us approximately what amount of population the tramway, supposing it were extended to the present St. Leonards Station, would serve? I should say that it would serve nearly the whole of the population of St. Leonards.
3179. That is the present population? Yes, and any population that might grow up. There is a considerable population along the route that the tramway would take. Ridge-street, I think, is one of the streets and Falcon-street another along which the tramway would go. At the junction of the Lane Cove-road with North Sydney-road a large population would be served, and many people who would not be passengers by the railway would be benefited largely by the extension of the tramway.
3180. Do you think that if the tramway were connected with the railway it would be quite sufficient to meet the requirements of the population likely to be located there for some years? I am sure the tramway would be equal to the requirements of a population of from 30,000 to 35,000 people.
3181. Do you know what would be the distance from Milson's Point to St. Leonards by the tramway, supposing it were continued? About  $3\frac{1}{4}$  miles.
3182. How would it show in comparison with the Sydney tramways. What paying tramway line have we of that length. Would the Waverley tram compare with it? No, that is about 5 miles long. I think that the tramway to Enmore would compare with it—of course the distance to Marrickville is longer.
3183. Do you think Enmore is fairly served by the tramway? Yes.
3184. Is it probable that North Shore will be more thickly populated than is the country between here and Enmore? No, not so thickly.
3185. Do you know whether the Enmore line pays? Yes, it is that portion of the line which pays so well.
3186. Then there could be no great objection to people travelling the same distance by tram at the North Shore? I think not. I think they should be very glad to get such a mode of conveyance.
3187. Could you give the Committee an approximate estimate of the cost of continuing the tram line from its present terminus to the St. Leonards Station? I think the work could be done for about £25,000, assuming that the winding machinery already in use is sufficient for the extension. If additional engine power were required, the cost would in some degree be increased.
3188. Supposing the tram did not offer sufficient convenience to the population to the east and west of the present line, would there be any great difficulty in constructing a cross line on the plateau, so as to meet their requirements? No difficulty whatever, except that the population might be too small to support the tramway. There would be no engineering difficulties.
3189. Suppose the extension of the line were to cost £50,000—suppose the Government did not think the existing machinery strong enough, would you recommend the expenditure of £250,000 upon the extension of the railway in preference to the expenditure of £50,000 upon a tramway? I should not.
3190. Do you think that the tram line would really meet all the necessary requirements of the population, present and prospective? Fully.
3191. And that the Committee would not be justified, under the circumstances, in recommending the extension of the railway? I should be very sorry indeed if I thought it possible that the Committee would recommend the extension of this line. I know, of course, that they have already refused to recommend this extension, and I think they did a great service to the country in voting against an extravagant outlay of money upon such an unprofitable and altogether unreasonable work.
3192. You have stated that you do not think there would be much return from goods traffic if the line were constructed? No, I do not.
3193. If the Committee have had evidence from several reliable witnesses that this line would be constructed merely for the local passenger traffic, would you consider them justified in recommending it? Certainly not.
3194. Would the tramway, as suggested by you, meet all the requirements of the local passenger traffic? Certainly.
3195. Without any doubt it would meet all the requirements of the passenger traffic? All the reasonable requirements.
3196. At any rate, for the next few years to come? I should say for the next twenty years.
3197. *Mr. Humphery.*] Do you think that a tramway would create a traffic that would be the means eventually of making the railway pay, and as speedily as the extension of the line to Milson's Point would do? I think the line is an undesirable and disadvantageous line—a white elephant line, and, although the extension of the tramway will in some degree lessen the disadvantages, it will not make it a reproductive line. In my opinion it must always be a losing line.
3198. What do you think will most speedily create a traffic for the railway—its extension to Milson's Point, or the extension of the tramway to St. Leonards Station? I do not think that there will be very much difference. I do not think that the extension of the railway will bring a greater traffic than the extension of the tramway. I think that the tramway extension would answer all purposes just as well as the railway extension.
3199. How long do you think it would take to travel between St. Leonards Station and Milson's Point by rail, at the ordinary suburban rate? The grades are very severe, and if the train-loads were anything like those leaving Redfern for the suburbs it would take from 18 to 20 minutes.
3200. For  $2\frac{3}{4}$  miles? I think it is 2 miles 78 chains—within 2 chains of 3 miles. I do not think that they would travel up that grade with a full load at a greater speed than 12 miles an hour. That is the regulation speed of trains going up such grades. The trams would go at the rate of 8 miles an hour.
3201. That would be less than 15 minutes for 2 miles 60 chains? But I understand that there are to be stoppages.
3202. Two stoppages? They would take up about 6 minutes. The lessening of speed and the regaining of speed at each station may be estimated to take 3 minutes, though the dead stop would not be so long.
3203. You are speaking now of trains leaving Milson's Point for Hornsby? Yes; or for St. Leonards.

C. A.  
Goodchap,  
Esq., M.P.  
29 July, 1890.

3204. What would be the time occupied in coming from Hornsby to Milson's Point? The trains take 40 minutes to get from Hornsby to St. Leonards, and it might fairly take them 18 to 20 minutes to do the rest of the distance. The grades between the two points are very severe.
3205. Do you think the whole distance between Milson's Point and Hornsby would, in course of time, yield a traffic equal to that at Burwood Station? I certainly do not.
3206. Not even taking into consideration the traffic that would probably be created by the railway? No.
3207. You think that the returns from Burwood Station will be greater than the whole of the traffic which we must anticipate from the line between Milson's Point and Hornsby? Certainly. If 3,000 people were brought in and taken out daily on the line, instead of four trains now running, you would require twenty trains; and the working expenses, instead of being £6,000 would be £30,000.
3208. I am speaking of the earnings—the gross earnings, not the net earnings? I do not think that the gross earnings would amount to anything like that. No doubt, if there were 3,000 people travelling in and out on the line, the gross earnings would be £30,000 a year; but a traffic of that kind would necessarily entail a large increase in the working expenses.
3209. Is it more costly to carry passengers by tram than by train? No; it is cheaper.
3210. Is not the cost of maintaining a railway more than that of maintaining a tram-line? I have seen evidence given on the subject, but it seemed to me that those who inquired and those who gave evidence did not understand what they were talking about. It was said that railways cost £800 a mile to work, while tramways cost £4,000 a mile; but it all depends upon the volume of traffic. The line between Sydney and Parramatta costs £9,000 per mile to work, and the tramway at North Shore costs £4,000 a mile to work. The line of railway between Narrandera and Hay and Jerilderie costs £240 a mile to work; and, though I am not quite sure of the figures, the tramways in Melbourne cost from £11,000 to £12,000, £13,000, or £14,000 a mile to work. The working expenses depend entirely upon the traffic on the line. If you run five trains a day, the working expenses will probably not be more than £400 or £500; but if you run 100 trains a day, the working expenses will increase proportionately. While the average working expenses on our railways might not be more than £800 a mile, they vary from £240 to £9,000 a mile.
3211. Your evidence would indicate that tramways may be worked as cheaply as railways? I am certain of it; more cheaply, if you take it by train mile. You will find that the cost per train mile on the tramways is less than on the railways.
3212. Then the evidence that the Committee has already had upon the subject is not quite accurate? It is entirely fallacious.
3213. *Mr. O'Sullivan.*] You admitted just now that the line from Pearce's Corner to St. Leonards is what may be called a white elephant? Yes, if we are allowed to use Eastern imagery.
3214. Bearing in mind that fact, and remembering the probability that the North Shore will some day grow into a Brooklyn or Birkenhead, do you not think it is advisable to bring the line down to the waters of Port Jackson somewhere? No, I do not. I think that if you really wished to make the line reproductive, and immediately, you should construct a bridge across the harbour, and bring it to Wynyard-square or somewhere in that neighbourhood.
3215. If we have a city railway station, it will very likely be on the line towards the proposed bridge, and in that case this line of railway would be a direct line from Newcastle to the city? I think it would be availed of, if it came direct into Sydney.
3216. Then you think that the necessity for the line depends on the construction of a bridge? I do not see any necessity for bringing the line to the foreshores of St. Leonards. I could see very great advantage, lessened considerably by the fact that the railway has already been constructed from Pearce's Corner by way of Ryde to Strathfield, in carrying out the original idea proposed, when the construction of a bridge over the harbour was first mooted, about 1880, of bringing the Northern line down to St. Leonards and across the harbour. If the line to Strathfield had not been constructed this line would have been of great advantage to the country.
3217. Putting aside the bridge matter for the present, and treating the proposal as it is sent to us, I understand that you do not think it desirable to bring the line from St. Leonards down to Milson's Point? I do not.
3218. Do you think it would be desirable to bring the line down to the head of Lavender Bay as the first section of the circular railway to serve the whole of North Shore, and to make part of the line to Manly and Pittwater? This strikes me as a new aspect of the case altogether, and I am not prepared to give an opinion right away. I never thought of it in connection with a line from St. Leonards, over Middle Harbour, to Pittwater.
3219. In the future, some such line must be carried out to serve the population of North Shore? I would certainly not extend the railway at present.
3220. Do you think it would be better to run the tram to it for passengers? Yes.
3221. You do not anticipate any goods traffic? No; and if any came for distribution to St. Leonards, the present terminus of the line is admirable, and very much better suited for a terminal station than Milson's Point would be.
3222. If a bridge were carried across the harbour, do you think that the train might be run from St. Leonards Station to a central station about Wynyard-square? Yes.
3223. *Mr. M'Court.*] Were you in office when it was proposed to construct the line from Hornsby to St. Leonards? Yes.
3224. Were you in favour of it? No.
3225. Did you oppose it? Yes; it was proposed to construct the line to Ball's Head, to meet the coal traffic, and I at once projected, in opposition to that, a scheme for the construction of a railway to Long-nose Point.
3226. *Vice-Chairman.*] You have been connected with the railways, as Commissioner, for a number of years, and you have had many opportunities of judging of the merits of the different lines projected? Yes.
3227. Had the system of cable tramways come into vogue during your tenure of office? Yes; the cable tramway at North Shore was carried out under my directions.
3228. You were in office during the initiation of the present steam-motor system? Yes.
3229. You have seen the cable system as carried out in Melbourne? Yes.
3230. Are you of opinion that it could be worked as successfully here? Not as successfully; but I think more successfully than the present motor system.

3231. When you say successfully, do you mean as giving convenience to the public, or commercially? The return would be greater, and the system would meet the convenience of the public, though not quite as well as the motor trams do, apart from their cumbersomeness and unadaptability to the streets.

3232. It is the case that cable trams stop at any point where passengers wish to get in or out? Yes, in Victoria they do. It is quite an omnibus service.

3233. You regard that as an additional convenience? Yes.

3234. How about the cables themselves;—are they found to be a source of great expense in Victoria? I suppose the working expenses of the system are affected by the life of the cables. They are not a source of greater expense in Melbourne than they are elsewhere; I should say not as much.

3235. Are the streets in Melbourne more level than they are in Sydney? That does not affect the life of the cable. It does not matter whether the line is level, or whether the grade is severe.

3236. It is at the corners that the friction comes in? There is great friction when rounding curves.

3237. The Melbourne system of trams does not approach so closely to a railway system as ours does? No.

3238. They have suburban railways? Yes.

3239. Have you thought of our tramways as being semi-railways after all? They are, in some degree.

3240. Do you think the cable lines could do the same amount of traffic with equal success? You would have to increase the number of routes; you could not take the traffic by cable along Elizabeth-street as you can with motors, because there would be a continuous succession of cars. There would have to be two or three outlets for the traffic.

3241. You think the cable service could not come up to the requirements of the traffic from the different localities? It would not be found equal to the requirements, if the present routes had to be followed.

3242. If the tramway system were to be resorted to at North Shore, would you recommend the use of steam-motors, or cables? I would certainly recommend the cable system.

3243. You think it would do the whole service? Yes.

3244. After the consideration you have given it, you think it would be a most undesirable thing for the Government to take the railway from St. Leonards to Milson's Point? I am convinced of it.

3245. Either by the Government route, or by an alternative line by way of North Sydney and Miller-street? Yes. I think that a cable tram would more than meet all present requirements, and would meet all future requirements.

3246. Is it the case that considerable inconvenience to traffic has been found to result through the parting of cables? That is an inconvenience.

3247. Do you know if it has frequently happened? No; not on our line.

3248. On the Victorian line? No.

3249. But it has happened? Then they have changed from one cable to the other. They have two cables. The splicing of the broken cable occupies very little time. The system does not break down in any way, except through the parting of a cable occasionally.

3250. The cable works underneath a slot? Yes.

3251. And, if it parts, it is connected again by mechanical means? Yes.

3252. In that case the traffic is not delayed for any considerable time? No.

3253. How long would it be delayed—a quarter of an hour? Not more.

3254. The whole of the traffic would be delayed? The whole of the traffic on one line would be delayed.

3255. *Dr. Garran.*] You say that a cable tram is not equal to doing the work which our motors do on a single line? I think that a cable tram can do quite as much as a motor tram.

3256. But I understood you to say that the procession of cars would be so rapid that there would be no getting between them? The cable system would not do so well if the traffic were concentrated on one line.

3257. A cable tram from Milson's Point to St. Leonards would have to bring down the concentrated traffic from Hornsby? Yes.

3258. Do you think a tramway is capable of carrying the number of passengers which a railway would bring to it? I am not of opinion that the traffic would be very great. I think that the population in that part of the country will never be so great as to necessitate a greater number than 150 people being brought down in one train, and two or three cable cars, together with the dummies, could convey that number.

3259. You do not anticipate that the traffic between St. Leonards and Hornsby will ever outgrow the capacity of two cable cars? Say, at the outside, three cars with the dummies.

3260. For the next twenty years? It may increase more than that in twenty years.

3261. Supposing it does? You could have twenty cable cars on the same line without duplicating it. They follow in quick succession in Melbourne. There is not an interval of ten seconds there between the trams sometimes.

3262. Have you room at Milson's Point to manœuvre twenty cable cars, one after another? We should have to get an additional space to do that.

3263. Where are you going to get it? There is plenty of land at Milson's Point belonging to the Tramway Department. You could put the cars on what is called the gridiron, bringing them out by a loop line.

3264. Let us suppose that you have under-estimated the traffic, and that it does outgrow any possibility of the cable line, what would you do then? I think I should build another cable line.

3265. You would prefer that to going in for a railway? I should, as it would be cheaper. I can see no justification for such an outlay as is proposed for the railway.

3266. Suppose it to be necessary to continue the railway to Milson's Point, would it not be dearer to resume land that was built upon than it would be to run through the Berry Estate as it is? In my opinion there would be no requirements to bring the line down there for twenty years.

3267. But will not the resumption of land be twice as expensive twenty years hence as it is now? I do not think that it would be twice as expensive, and the interest that would be saved would pay for it if it were.

3268. You would rather face an extra expenditure twenty years hence than an expenditure now, which would be unprofitable for ten or twenty years to come? I would, for the reason given.

C. A.  
Goodchap,  
Esq., M.P.  
29 July, 1890.

WEDNESDAY, 30 JULY, 1890.

Present:

THE HON. JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

WILLIAM McCOURT, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

William Theodore Foxlee, Esq., M. Inst. C.E., Deputy Engineer for Existing Lines, Railway Department, sworn, and examined:—

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.

30 July, 1890.

3269. *Mr. Trickett.*] You are Deputy Engineer for Existing Lines in the Railway Department? Yes.
3270. Are you well acquainted with the Government proposal to connect Milson's Point with the St. Leonards Railway? Yes.
3271. Is that from a personal survey of the line? Yes; I have been over both routes.
3272. Over the Government route and the route suggested by Mr. Hamand? Yes.
3273. Have you a paper which you wish to read? I have made up some notes for my guidance. Do you wish me to read my statement, or will you choose to elicit the information you require by means of question and answer?
3274. I think it would be convenient for you to read your summary of convictions, and we might ask you some questions about them afterwards, but, before going further, I would like to know if your evidence will be from an engineering point of view? Wholly so.
3275. And will have no regard to the probable traffic on the line? No; it will be solely from an engineering point of view.
3276. What has been your experience as an engineer? I have had twenty-four years' experience as an engineer. Before I came to the colony I was engineer to the Great Eastern Railway Company for a system of new railways in the county of Essex. I was four years with that Company, but previously I had been with the London and North Western Railway Company for twelve or thirteen years, and had been connected more or less with all their large works. Before I left them they offered to me the charge of the Northern Section of their Railway—in fact, they proposed to put under my charge all the lines north of the Mersey—the maintenance of the main trunk road to Scotland, and all the branches; but I preferred construction to maintenance work. Before I went to the North Western Company I had been engaged for some years with the London and South Western Railway Company, and had the run over the whole of their system; and before that, again, I had been with an engineer in Westminster, with whom I served my articles, who had foreign as well as a general engineering practice. I am a member of the Institution of Civil Engineers of London, so that you will see that I ought to know something about railway work.
3277. How long have you been in the colonies? Since the end of February.
3278. 1890? Of this year.
3279. Since that time —? I have been engaged by the Railway Commissioners here in connection with the Existing Lines. They instructed me to look at the two schemes now before the Committee, and the first thing I did was to ascertain the cost of each. I found that the cost of the Government scheme to Milson's Point was for works £143,000, and for land resumptions £103,200—making a total of £246,200; and that the cost of Mr. Hamand's scheme was estimated at £350,677 10s. I then went over the two lines, and had sections taken. The result of my calculations is this: That the works on Mr. Hamand's scheme would cost £289,200—that is only approximate, but near enough for all practical purposes. Having prepared a rough plan, I asked the Government Valuator for a rough estimate of the cost of land resumption, which he made out to be £166,000, bringing the total cost of the line up to £455,200. I have looked carefully into the whole matter, and it appears to me that the Government scheme, which is cheaper and shorter than Mr. Hamand's scheme, would accommodate the present population better than Mr. Hamand's line would do. The statement which I have written out is as follows—

It will be seen that there is a difference of more than £200,000 between the two schemes; and unless it can be shown that Mr. Hamand's line would be more useful than the Government line, I submit that this additional expenditure should not be incurred. Let us examine Mr. Hamand's scheme. The station at North Sydney-road is not required, as the present station at St. Leonards serves the district. If, however, the population to the north should require further accommodation, a small station could, without difficulty, be constructed on the present line. This would be much nearer.

With regard to the station at Miller-street, the proposed tramway will serve the population much better than the line, this is, therefore, quite unnecessary.

At Willoughby Falls, Mr. Hamand's station is only 152 feet above sea level, whereas the bulk of the population reside on the plateau at a much higher level, and are much more conveniently accommodated by the tramway. This station could only be of use in the event of a population springing up in the future in the valley. As regards Bent-street, the population on the high ground to the west would continue to travel by the tramway to Milson's Point, whilst those residing below the station would use the steamer from the adjacent bay. No traffic could be expected from the high ground on the eastern side of Neutral Bay, as the station could not be reached from that side, owing to the precipitous nature of the ground. It is proposed to provide accommodation for goods here, but the approach to the yard would be very awkward, as the station would be at a very low level.

The station at High-street would certainly be useless, as those on the high ground, who have the tramway practically at their doors, would certainly continue to use it in preference to taking the train to Milson's Point; and those between the railway and the bay would undoubtedly take the steamer direct to Circular Quay. At Milson's Point, Mr. Hamand suggests a station about 600 feet long on the level, but this, I think, would not be found adequate to the requirements of a terminal station. Referring to the section, it appears that he is compelled to start his gradient of 1 in 70 much nearer Milson's Point than in the Government scheme, otherwise the length of tunnel would be very largely increased. But by commencing to rise so soon he practically cuts off the greater portion of the valuable frontage to Lavender Bay, which would have to be resumed. No one knows better than Mr. Hamand that this would be most disadvantageous. In the Government scheme there would be a length of about 2,360 feet of water frontage on the level.

I have prepared a section of Mr. Hamand's line on such a scale as will enable the Committee to realize the very heavy character of the earthwork. It will be seen that the cuttings on Mr. Hamand's scheme are really very much heavier than would appear at first, and I make the total quantity of excavation double as much as Mr. Hamand says it would be, and very much larger than the excavation on the Government line. Further, the cuttings are not such as could be got at and worked expeditiously

expeditiously. Some of them are long, and would take a long time to excavate, whereas in the Government scheme we could work at the little cuttings at each end, and pitch the excavation into the hollows, so that the work would be done in half the time.

It will be seen that much of the line is in far heavier cutting than shown upon Mr. Hamand's section, which is drawn to a very small scale. You cannot take out quantities by a section drawn to a scale of 100 feet vertical. I can only think that Mr. Hamand has prepared a larger section to enable him to take out his quantities, because any engineer knows that you could not estimate quantities accurately from a section drawn to a scale like this, where a thickness of a pencil line might make a difference of a foot in depth. (The section exhibited to the Committee is on a scale of 4 chains to an inch horizontal and 40 feet vertical, which is quite small enough.) This is especially the case between North Sydney-road Station and Willoughby Falls, and may be to some small extent due to the modifications suggested by Mr. Hamand since his first plan was submitted to the Committee, but not wholly so, especially that portion of the railway between Miller-street and the Willoughby Falls Stations, where it traverses the high ground between the Chinese gardens and Long Bay.

It may here be pointed out that there is a discrepancy of 10 feet between the figured and scaled heights in Mr. Hamand's section between Milson's Point and Bent-street; but this appears to be a clerical error, and I have assumed that he intends his line to be carried out as drawn, and not as figured. I have indicated this modification in blue colour on the section. I would further remark that there appears to be a considerable error in the positions of the streets on the south side of Long Bay marked upon Mr. Hamand's tracing. They are shown about 8 chains further north than they really are. This would, of course, considerably alter the centre line between Miller-street and Willoughby Falls' Station, and may to some extent account for the astonishing increase of cutting between those points. With regard to Mr. Hamand's suggestion, that his line would form part of an extension to Manly, and could be continued thence from Willoughby Falls' Station, I am not quite sure that this is the correct route for a branch to Manly, and it should be pointed out that by continuing Mr. Hamand's line it would involve the construction of a long tunnel under the high ground traversed by the Military-road, and consequently the line would be quite inaccessible for a considerable distance to the adjacent population; and further, the junction which is shown upon plan in tunnel would be most dangerous.

Mr. Hamand states that the increased distance trains would have to travel over his line would be more than met by the augmented speed due to the flatter grades. I have asked the Traffic Superintendent to prepare a time-table for the alternative routes, from which it will be seen that the journey from Milson's Point to St. Leonards, *via* the Government line would only occupy thirteen minutes, as against eighteen minutes by Mr. Hamand's route, thus effecting a saving of five minutes in favour of the former.

The following is a time-table which I have had prepared to show the time which it would take to run over the proposed extension of the Hornsby and St. Leonards line to Milson's Point:—

<i>Government Line.</i>				<i>Mr. Hamand's Line.</i>			
Milson's Point to St. Leonards, 2 miles 73 chains.				Milson's Point to St. Leonards, 4 miles 1 chain.			
M.	ch.		Noon.	M.	ch.		Noon.
0	00	Milson's Point, depart .....	12 0	0	00	Milson's Point, depart .....	12 0
1	42	Bay-road .....	12 6	0	55	High-street .....	12 3
2	16	Edwards'-road .....	12 10	1	32	Bent-street .....	12 6
2	73	St. Leonards, arrive .....	12 13	2	12	Cammeray-road .....	12 10
				2	64	Miller-street .....	12 13
				3	35	North Sydney-rd. .....	12 16
				4	1	St. Leonards, arrive .....	12 18

Speed for above time-table 20 miles per hour, allowing 1½ minutes for a stop.

Speed for above time-table 25 miles an hour, allowing 1½ minutes for a stop.

Mr. Hamand says in his evidence that the 1 in 50 gradient at Chatswood could be cut out for £4,000 or £5,000. It is by no means an easy matter, as Mr. Hamand must well know, to alter the gradient of an existing line whilst the trains are running, especially when that line happens to be a single one; and I am of opinion that this could not be done in the present instance for less than double the amount named by Mr. Hamand; and, supposing it were altered, what about the remaining gradients sharper than 1 in 70? To alter all these would be most difficult and costly, but, unless this were done, I fail to see the advantage to be gained by adopting Mr. Hamand's proposal in preference to the cheaper line suggested by the Government.

There are one or two other points to which I would wish to draw attention—one, that there will be about half a million yards surplus of excavation on Mr. Hamand's line. It would be interesting to know how he proposes to deal with the redundancy of excavation, in view of the high value of land on the North Shore. Also, that whereas Mr. Hamand's line could only be adapted to form a junction with a tunnel, the Government scheme could be utilized for either a bridge or a tunnel across the harbour.

With regard to the time required to complete the work—a glance at the sections will show at once that the Government line could be completed in a much shorter time than Mr. Hamand's, on account of the earthwork being situated in a number of short cuttings, divided by embankments; these cuttings, it is obvious, could be worked from the ends, whereas in Mr. Hamand's line, with its long cutting and tunnel, the progress could only be very slow.

These are my impartial views. I have taken a good deal of trouble in the matter, and have tried to find out all I could about it. This is all I have to say about the question from an engineering aspect, on which alone I feel myself confident to speak.

3280. You have stated that on the Government line the trains would travel at the rate of 20 miles an hour, and on Mr. Hamand's extension at the rate of 25 miles an hour? Yes.

3281. Why is that? That is the rate at which we work our trains over similar grades on the existing lines. I went to the Traffic Superintendent, Mr. Richardson, and asked him to prepare a time-table for these lines, assuming that he had to work trains over them, and asked him to let me know exactly the speed at which the trains would travel, and the time they would take to travel over the alternative routes. What I have given you is the speed at which we could travel over these grades.

3282. I presume that the difference in speed is caused by its being safer to travel fast over an easy grade than over a steep grade? It is a question of engine power. You cannot go up a steep grade as quickly as you can go up a flat grade.

3283. But is it not also a matter of safety? I do not think that that enters into the calculation.

3284. If the grade were reduced to 1 in 20, you could go as quickly down it as you could down a grade of 1 in 100? I am speaking of the up grade, and I say that the loads being the same, the grade rules the speed when you are travelling up-hill.

3285. Let us consider that we are going down hill. Is there any difference in safety between travelling down a grade of 1 in 50 and down a grade of 1 in 70, remembering that you are finishing up with a terminus at the water's edge? I think there is really very little difference. You could travel at a good speed down either grade with safety.

3286. At the same speed? Practically at the same speed.

3287. Suppose the grade got steeper? Of course, a line could be drawn. If you ask me if a train can travel 60 miles an hour down a 1 in 20 grade as safely as down 1 in 70 grade—I say no.

3288. But in going down hill you can travel over a grade of 1 in 50 and 1 in 70 at the same speed with the same degree of safety? Yes, practically.

3289. Would there be any difference on these particular lines? I do not think so.

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.

30 July, 1890.

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.  
30 July, 1890.

3290. You stated that your estimate of Mr. Hamand's proposed line was £289,200 for works—have you arrived at that after a pretty fair calculation? I have made a very careful calculation—as careful as one can make with a preliminary survey of this kind, and I have no doubt in my mind that my estimate is somewhere near the mark. I have not the slightest objection to giving you the details of it.

3291. I only wish to know if you have based your calculations on the same basis as the Government proposal is based on? I have, practically. I have adopted in some instances Mr. Hamand's own figures, and in other instances I have put the prices lower than he has, where I think he has rather over-done it. I may say that there is a very large excess of excavation on his line—a much larger quantity than appears in Mr. Hamand's estimate, I think.

3292. Do you think your estimate is very fair? I think it is as fair an estimate as an engineer can make under the circumstances.

3293. You also state that Mr. Hamand has only provided about 600 feet for station purposes on the level at Milson's Point, and that that would be quite insufficient for the traffic;—would you mind explaining that answer a little? The space in which a station can be put at Milson's Point is very narrow, and from what I have seen of the place it does not appear to me that you could get your goods and passenger stations alongside each other. Therefore it would be necessary to deal with the goods traffic at one end and the passenger traffic at the other; but they should all be on the level, not on a 1 in 70 grade.

3294. That is, if there is any goods traffic? If you are going to make any provision for goods traffic it appears to me that it must be dealt with not alongside the passenger station, but at one end of it.

3295. At which end? At whichever end you might decide, clear of the 1 in 70 grade. It does not appear to me that there is room between the water and the high ground to enable you to get your goods and passenger stations alongside. But the stations should be on the level, and by starting with a grade of 1 in 70 you cut off the possibility of extending the station lengthwise.

3296. That would be the case even if the goods traffic were very small? Certainly. If you were going to provide accommodation for goods traffic, it should be at one end or the other of the passenger station.

3297. You appear to have had large experience in the construction of railway lines and in railway matters generally;—how would a length of platform of 600 feet compare with the platforms which you know of at terminal stations? In a terminal station, the engine runs up to the buffer-stop at the end, and you must provide sufficient room for it to run round, and for a cross-over road, so that you have to allow more length than the actual length of the train. Further than that, you have to put up your station buildings, and so on, so that you would want more than the 600 feet.

3298. How would 600 feet compare with the length at Redfern? I cannot speak as to that without inquiry.

3299. Suppose the land at Milson's Point were widened, and more space made available for the line? If it were possible to widen it sufficiently—

3300. By building into the harbour or by cutting away the Government land? Even then you would lose by the 1 in 70 grade a great part of the water frontage, because you would be toiling up above the water, and thereby cutting off the approach to the frontage.

3301. When you come to your ultimate terminus you immediately begin to rise? Yes, and you are cutting off the approach to your water frontage.

3302. Mr. Hamand does not propose to rise before he gets clear of his 600 feet level? Exactly; but on leaving the end of the 600 feet he begins to mount up, and as soon as he does that he gets away from the water frontage, and you could not avail yourself of that frontage—although I take it you would have to resume it—because the line skirts the edge of the bay.

3303. Have you sufficient knowledge of the subject, from your short residence in Sydney, to be able to say whether 600 feet on the level at Milson's Point would or would not be sufficient for all the traffic which would be brought there by the railway? Judging by my experience of suburban lines at home, I think it would be very unwise to tie yourselves down to a level of 600 feet in a case like this.

3304. You could not undertake to say whether 600 feet would be sufficient for present requirements? From the experience which I have had, I should say that, in all probability, that space would not be sufficient.

3305. You know that it has cost a considerable amount of money to bring the railway to its present terminus at St. Leonards? I have heard so.

3306. Seeing that the proposed extension is to cost, in round figures, £250,000, what is your opinion as to its desirability? I am unable to form any opinion, as far as the probable traffic is concerned, although I should think there would be a good deal of traffic; but it appears to me that, having spent so large a sum of money in bringing the railway to St. Leonards, it would be a pity to leave it there without trying to make it pay. I should say, take the line on to Milson's Point.

3307. Even at the expense of £250,000? Most certainly; that is my conviction. But please understand that I am not in a position to speak as to the probable amount of traffic. Looking at the matter as an engineer, I should say that it would be folly to leave the line where it is.

3308. Have you considered the advisability of connecting the present tramway with the railway? I have heard that that connection has been suggested.

3309. What do you think of the idea? I do not think that it would answer, because you would then have a break in the journey, which you need not have, and which I am afraid would very seriously interfere with the prospects of the line. If people had to make a third change in the journey, it would prevent them from going to reside out on the line.

3310. Have you had much experience in tramway management or construction? I know something of tramway construction, but I have not had much experience in it. My experience has been chiefly in railway construction.

3311. If a tramway goes through a thickly-populated district, such as that at North Shore, between Milson's Point and St. Leonards Station, is it not more convenient than a railway? A tramway is all right for a short distance, but when you get beyond a limited distance, I think you are taxing people too much by it. The constant stoppages make the journey too wearisome, and I think I am right in saying that it has been found in practice that people prefer to travel by railway when the distance is beyond a mile and a half or two miles.

3312. Take the district between the present terminus of the railway and Milson's Point—do you not think that a tramway there would serve the people very well? The present tramway?

3313.

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.  
30 July, 1890.

3313. Yes? It appears to serve them admirably.

3314. A tram stops more often than a railway? Certainly; but in this case people would have to go on a considerable distance by railway after leaving the tramway, and therefore they would not care to take a long journey by tram.

3315. A tramway would, perhaps, serve the people living out about 2 miles from Milson's Point better than a railway would serve them? Yes.

3316. But a railway would come in for people who lived at a greater distance out? Yes.

3317. The top plan which you exhibit shows a section of the Government proposed line? Yes, as far as Lavender Bay.

3318. From St. Leonards Station to the head of Lavender Bay? Yes. The level portion of the line on to Milson's Point is not shown there.

3319. There is some tunnelling on the line? There is one tunnel.

3320. Do I understand you to say that the line is a much easier line to construct than that proposed by Mr. Hamand? It would be constructed much more quickly. [*Witness then explained that since the cuttings on the Government line were small, they could be taken in hand simultaneously, and the earth excavated could be thrown into the valleys, whereas the long cuttings on Mr. Hamand's line could not be dealt with so expeditiously. The earthwork required to fill up the hollow on the right hand side of the line at Milson's Point, marked green on Mr. Hamand's section, would not come from the adjoining tunnel, but from the side cutting.*] *Continuing*:—What are you going to do with the 500,000 cubic yards of surplus excavation on Mr. Hamand's line?

3321. Could you not follow out the general route of Mr. Hamand's line, and get rid of that? I think I am right in saying that however you took it there would be a very large amount of surplus excavation.

3322. But could we, by going a little to the right or left, avoid it? I have come here to help the Committee, if I may say so, and to tell them what I think of the line; I do not think you could.

3323. You do not see any getting over this difficulty? Perhaps, by varying the line a little, you might have a little less cutting, but I do not think that you will get away from a very large surplus.

3324. You do not see your way to reduce this surplus to any material extent? I think you could not do so. You might cut it down by dropping into the valley a little, but then you would get into difficulties with your roads, and I do not think that it would make any material difference.

3325. Have you considered Mr. Hamand's extension, with a view to the extension of the line towards Manly Beach? I have looked at it, but the hill under which the tunnel runs is parallel to the gully towards Long Bay, and Mr. Hamand has shown a junction somewhere in the tunnel, I think. Unless I was very much pressed by circumstances, I should never dream of proposing such a thing. The line would have to pierce this hill, unless it wandered right away down along the arm and round the bay. As it is shown on the plan, it would apparently have to pierce the high ground, and then you would have a long tunnel, so that the residents above would not be able to avail themselves of the railway.

3326. Do you mean to say that if Mr. Hamand wanted to branch off to Manly Beach he would have to do so in the middle of a tunnel? He shows a junction somewhere in the tunnel, and then curves round.

3327. I should like you to be particular about this. It appears to me to be a very undesirable thing to branch off in the middle of a tunnel? I am quite certain that the tracing which was given to me shows a junction in the tunnel. Mr. Hamand's tunnel is under Grassmere-road. It extends from the red mark, which represents Willoughby Falls' Station, to somewhere about Bent-street, and the junction is shown between those two points.

3328. That would be the junction of the line branching off in a north-easterly direction to Manly? Yes.

3329. And it would be in the middle of the tunnel? Yes.

3330. You think that would be very undesirable? Most undesirable, and Mr. Hamand knows it as well as anybody else.

3331. Are you prepared to say that you think the Government scheme is unmistakably the best? I say, roundly, that the direction shown by the Government in their amended plan is, to my mind, the best. Probably it might be improved a little, but, speaking generally, I think that if you want to extend the Hornsby line to Milson's Point you must follow the direction indicated by the Acting Engineer-in-Chief for Railways.

3332. Does it follow the natural features of the country? Very largely. You would get the lightest, shortest, and cheapest line there, and the line that will pay the best, taking all things into consideration.

3333. You say that the route might possibly be slightly improved? I have seen the route marked by a dotted line on the map, and it corresponds with the section which I have here. It might be possible to vary it a chain or two, and so reduce the cutting, making it a little bit cheaper, but, speaking generally, the route appears to me to be the best that you could get.

3334. *Dr. Garran*.] As Engineer for Existing Lines it is, I presume, part of your duty to plan station accommodation? It is.

3335. In bringing the line down to Milson's Point you are bringing the traffic down to tranship it into a steam ferry? Yes.

3336. Would you have a double line of rails at your passenger station—one for a departure platform, and the other for an arrival platform? I understand that the line is intended to be a double one from St. Leonards to Milson's Point.

3337. In any case you would have a double line? In any case I should have a double line at the station. It would not be absolutely necessary, but I think that it would be desirable.

3338. Would your departure platform be on the wharf side? The departure platform would be on the bay side.

3339. And the arrival platform on the inner side? Yes.

3340. You would expect your passengers to go round the end of the line when they landed from the steamer? Undoubtedly.

3341. You said that you would require an additional length of line to enable the engines to cross from one set of rails to the other, and you would still make you passengers go right round the end of that? Undoubtedly; that is the usual way of constructing a platform.

3342. You could do it by making the departure platform a little further down the bay, and over-running it to come to the arrival platform, having them both on the same line? That would be possible, but not desirable. We find that it is better to have the platforms opposite.

3343. Would there be any advantage in a case like this in having them linear? I do not think there would,

3344.

- W. T. Foxlee, Esq.,  
M.Inst.C.E.  
30 July, 1890.
3344. For the immediate purposes of the passenger work, you would not want more than 600 feet? I do not think I said that.
3345. Would you want that for passenger traffic only? I think more would be desirable, inasmuch as you want a circulating area at the end of your station, and you should also have your buildings at the end.
3346. If you were asked to plan a station, how much more than 600 feet would you take for it? It would be desirable to have a somewhat longer length than that; but I am not prepared to say how much longer. If I had the plans before me I could draw out a station in 10 minutes; but I would rather not give an answer without having all the details at hand. Every circumstance—the approach to the steamer, and so on—would have to be considered, and I should be misleading you if I tied myself down by saying how many feet are desirable.
3347. You would rather have more than 600 feet than less than that length? Yes.
3348. You like to have plenty? Yes.
3349. It has been given in evidence that there is no likelihood of anything like heavy traffic on this line at present? I have understood so.
3350. As an engineer, you would not waste money in making more wharfage accommodation than was wanted? Certainly not.
3351. What is the maximum wharfage accommodation which you think would be required at the start? It is impossible to say. I should reserve all my foreshore, so as to be able to accommodate any amount of traffic. I should not acquire the foreshore along the eastern side of Lavender Bay, and then throw it away by taking the line on a gradient above the greater portion of it. If this were my own enterprise I would bring down the line as quickly as I could, and get it on the level, as Mr. Deane proposes to do, because then I should have a chance of dealing with any amount of traffic.
3352. I am assuming that the Government is going to buy the whole of that frontage; but I asked you, as an engineer, how much we should require for wharfage purposes immediately? I am unable to tell you, but I think you should lay the line out so as to be able to use the whole of the frontage if you wanted it.
3353. We should not want more than 1,000 feet at first? For goods?
3354. For suburban goods? It might be desirable to have a little more than that for approaches and so on.
3355. The estimate given to us includes the expense of making wharves along the whole of the frontage from where Mr. Deane's line touches the wharf level, which it does not do until it rounds the head of the bay;—what I want to know from you is, shall we want that length of frontage at the start? Certainly not.
3356. We might make a saving on that to some extent? You would not want that length of wharfage at the present time.
3357. You have criticised the length which Mr. Hamand allows as insufficient;—what I want to know is, what would be sufficient? My point is that you should not throw away a yard of the frontage.
3358. But you would not utilize it all immediately? No; but I should be in a position to do so.
3359. You would have it in readiness for use, but you would not go to the expense of putting down piles and building wharves all along? Certainly not, at first.
3360. This expenditure on wharves might be minimised in the first instance? If it includes the reclamation of land and the construction of wharves for goods purposes all along one side of the bay, you might take something off it.
3361. Do you think that for a short time a moderate quantity of goods traffic could be dealt with at the passenger station? You cannot deal with it at a passenger station.
3362. You must have a certain length of wharf for it, and you cannot say, without local study, what length that would be? I would rather not say.
3363. Do you think that a continuous wharf for a passenger terminus is better than a dock. We have had two plans—one showing a wharf and the other a dock? A terminal dock station?
3364. Yes? I should think a terminal dock station would be the best thing, with an arrival and departure platform, and a circulating area at the end.
3365. Would you put your arrival platform at one side and your departure platform at the other? Yes.
3366. Then your passengers would not want to go round at all—not on the north end? Not on the north end. I am afraid I do not fully understand your question. I have had in my mind a terminal dock station with a platform on either side, and a circulating area at the end, beyond which would be the booking offices.
3367. But I am speaking of a marine dock. We have had plans for a dock station of that kind put before us, and I asked you whether it would be better than a wharf? I think that a station such as I have described would be the best.
3368. Your recommendation is that the Government should possess itself of the whole frontage? If either scheme of railway were carried out, I take it that you would be bound to possess yourselves of the whole frontage.
3369. You think it will all be wanted before very long? I am not quite prepared to say that, but I think that having acquired the frontage it would be a pity to render it inaccessible by commencing the grade near Milson's Point.
3370. The Government has put before us an amended plan, showing a station in Lavender Bay, some distance short of Milson's Point, do you think that there would be sufficient advantage in saving the extra expenditure which it would cost to go on to Milson's Point by stopping short? I do not. Milson's Point seems to me to be the right place to have your terminus.
3371. You think it is the natural terminus? Certainly.
3372. Any railway would have to go there sooner or later? Either of these railways would have to be taken there sooner or later, I think, if they stopped short of it. It is the point towards which the traffic converges.
3373. You think it is important to make the water journey as short as possible? Certainly.
3374. It would not do to have the passenger traffic near the head of Lavender Bay and the goods traffic near Milson's Point? Certainly not. I would rather put the passenger station near Milson's Point and stop the goods traffic at the head of Lavender Bay, where you have more room.
3375. Supposing the tramway as it exists now were continued to St. Leonards Station, do you think it would be equal to the probable traffic of the railway? I say that if you wish to make full use of the line you have

W. T.  
Foxlee, Esq.,  
M. Inst. C. E.  
30 July, 1890.

have already constructed, you cannot do better than bring it down to Milson's Point. I do not think that an extension of the tramway would meet the case.

3376. Supposing the line were your own property, would you borrow an extra £250,000 in order to continue it to the point, or would you content yourself with an expenditure of £50,000 in extending the tramway to the railway? I think I should continue the railway to the point, as I should then stand a better chance of getting a return for my outlay.

3377. You would have a better financial result, you think? I do, undoubtedly.

3378. Do you think that nine companies of directors out of ten, who were versed in the management of railways, would take the same view? I feel sure of it. I was never more astonished in my life than when I came to the colony and saw the railway stopping where it does. I asked why it did so, and I was told at once that there was a talk of continuing it down to the water, which is the natural thing to do with it. No railway company in England would ever think of stopping such a line at the top of a hill.

3379. We have stopped a line at the top of a hill for a number of years—at Redfern? That is rather a different matter.

3380. This is really a suburban line? Yes; and it is cut off from the city by the harbour, whereas the passenger station at Redfern is practically in the city.

3381. The city is the natural destination of the passenger traffic, and here we leave a gap? Yes; and by leaving the line where it is you throw your money away.

3382. You do not think that the cable line bridges the distance? I do not think it does a bit.

3383. If we spent £50,000 in going to St. Leonards with the tram, should we still have to continue the railway? Yes, eventually.

3384. It would only be putting off the construction of the railway for a few years? Yes; and it seems to me that you have at North Shore a better suburban district than any other round Sydney.

3385. You have seen some of the suburban lines round London? Yes.

3386. You recognise that the mere necessity for shifting into a steam punt at the point is a slight drawback to the North Shore Railway? Yes.

3387. Do you think that the double shift from the tram would increase the drawback? I feel sure of it.

3388. And would check people going out on the line? Yes.

3389. We had better facilitate traffic by giving the best convenience that we can? Certainly.

3390. You have been familiar with the suburban traffic of London;—what population ought we to have to work upon to make an expenditure of £250,000 profitable? That is a traffic matter upon which I do not feel competent to speak. I should rather attend to the engineering part of the question. What you really have to do is to spend more money in order to make a line pay which does not already pay. You have to induce people to go out on to the line. It is not the present population that you have to think of, but the population which you may induce to go out on to the line.

3391. You do not know of any instance exactly like this? Not quite analogous to this.

3392. *Mr. Tonkin.*] You stated just now that the trains could run at a speed of 20 miles an hour up and down the 1 in 50 grade; did you take into consideration the stations on the line, and the length of it? Yes. I should never attempt to lay a statement like that before the Committee without considering it thoroughly. I will give you the mileage of each station.

3393. I do not wish for the details, but I had no idea that such a pace could be got up between these short distances; the distance between one station and another is, I suppose, about three-quarters of a mile? On which line?

3394. On the Government line? The first station from Milson's Point on that line would be at Bay-road, a distance of 1 mile 42 chains.

3395. And from there to the next station? The next station is at 2 miles 16 chains from the point; nearly three quarters of a mile from the first station. The third station is at 2 miles 73 chains.

3396. A little over half a mile further on? Not quite three quarters of a mile.

3397. Taking into consideration the time it would take to draw up to and get away from a station, do you think trains could travel on that line at a rate of 20 miles an hour? I am quite sure of it. I have allowed one and a half minute for slowing down and getting up speed at each stopping-place.

3398. You are quite satisfied that the statement which you have made has been carefully considered, and is correct? Yes.

3399. Could you inform me whether the cuttings on Mr. Hamand's line are through solid ground, or are they side cuttings? They are through solid ground, undoubtedly, though part of the ground is sidelong.

3400. You could surely find some space for the surplus soil where there are side cuttings? It all depends. You may have a sidelong cutting, and still not cut out on either side, and in that case you have to get rid of your material. If you take a line along the surface, and the line is sidelong on one side, you have to bench it out, and on the other to throw down the soil; but the depth of cutting on the section is shown along the centre line, and there would be no slope that would clear it.

3401. There are none of these surface cuttings on the section? No; though I do not say that the ground is not sidelong somewhat. (*Witness here explained by sketching on the section.*)

3402. Have you had much experience with tramways? Not a large amount of experience with tramways.

3403. You could not, then, give us an idea of the amount of traffic which could be served by a tramway? No; it is a matter about which I would rather not speak.

3404. Then how can you form an opinion as to the advisability of expending £250,000 upon the construction of a railway, as against an expenditure of from £40,000 to £50,000 upon the extension of the already existing tram-line? You ask me as to the amount of traffic that a tramway would accommodate. That is quite another thing to asking me whether it would be a desirable thing to expend £50,000 in extending the tramway to St. Leonards. Since there must be a break in the journey, I know that that would be undesirable.

3405. This investigation is not into the possibility of constructing a railway—we want to know if, after the railway was constructed, it would pay;—what I want to get at is, would it be advisable under the circumstances of the case to lay out £250,000 in the construction of a railway, or would the extension of the present tramway to the terminus of the railway, at a cost of something like £40,000, meet all requirements? I have already said that I would rather not express an opinion on matters concerning traffic. I have come here to speak on engineering matters only, and, as an engineer, I say that it appears very undesirable to have an additional break in the means of conveyance to the higher portions of North

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.  
30 July, 1890.

Shore by extending the tram-line to St. Leonards, instead of bringing the railway down to Milson's Point. 3406. From the experience which you have had of tramways, have you come to any conclusion as to the advantages of a tramway system for a short journey in a thickly populated place, as compared with those of a railway, say, up to 2 miles? Up to 2 miles a tramway answers very nicely.

3407. Do you think that a tramway going through a township would be more advantageous to the local traffic than a railway? That depends upon a variety of circumstances—it depends upon where your railway is going to, together with other things.

3408. I am speaking only of the local traffic—that traffic to be served by  $2\frac{1}{2}$  or  $3\frac{1}{2}$  miles of line;—do you think that a tramway stopping at every street would in that distance better serve the traffic than a railway, which would only stop at certain stations, would do? I should like to know all the circumstances before I expressed an opinion upon an imaginary case; but if you ask me whether the North Shore cable tram would not serve the population better than Mr. Hamand's line, I say, yes; while, if you ask me if it would be better than an extension of the railway to Milson's Point by the Government route, I say, no, I do not think it would.

3409. We have evidence to show that an extension of the railway would have to depend upon the local traffic for revenue;—I want to know whether you think that local traffic would not be better served by the present tramway line, or an extension of it, say, crossing Long Bay, and on to the railway, than by the extension of the railway? I think that the existing population adjoining the present tramway on its extension towards Miller-street, would undoubtedly be better served by such a tram-line than by a railway. The people on the plateau would be better served.

3410. Suppose there is a distance of a mile between the present tramway and the railway, do you think that the people living on half a mile of that country, if not on three-quarters of a mile of it, would be better served by a tramway than by the railway? I am not prepared to say; but, looking at the map, I should think that the tramway would serve the population as far as the Lane Cove-road very nicely, while the traffic on the west would naturally gravitate towards the railway. Speaking broadly, it would appear that a tramway would very nicely serve the population on the high ground, and that any future population which might spring up to the west of Lane Cove-road, would be served by the railway.

3411. Suppose the railway were constructed with stations about a mile apart, would not the greater part of the local traffic still gravitate to the tramway, since the trains would not run more than five or six times a day? Speaking generally, people will take advantage of the tramway where it is convenient, and where the distance is not too great; but where there are houses adjoining a railway station, you may depend upon it that people will take advantage of the trains, especially if they have any great distance to travel. They will arrange their time for starting to suit the departure of the trains.

3412. Your idea of the construction of the line is that it would serve the people on the slopes? Yes; to the west of Lane Cove-road; and that it should be constructed, more especially in view of the traffic beyond.

3413. Your idea is that the line should be constructed for the purpose of bringing people down to Port Jackson from beyond Hornsby? No; I am thinking of a suburban traffic—a residential traffic.

3414. Still you think that a railway would serve better than an extension of the tramway to the present railway terminus? That is my opinion.

3415. *Mr. Dowel.*] Have you travelled over the Great Northern line to its connection with the Queensland line? I have not.

3416. How far up the Northern line have you been? I have not been on it at all; I have not had an opportunity of travelling on it, owing to the immense amount of business I have had to transact during the short time I have been in the colony.

3417. You are aware that it traverses a tract of country, nearly 400 miles in length? I believe that it does.

3418. Do you not think that it is desirable to connect a great line like that with the deep waters of a harbour, if practicable? If the main town were near the deep water, I should certainly extend it.

3419. If you had the opportunity of doing so, you would connect a great intercolonial line like that with the deep waters of a harbour? I would, speaking generally; but if I understand you correctly, this line is already connected with the deep waters of the harbour.

3420. It will be when this proposal is carried out? Is it not already at Darling Harbour?

3421. It may be to a certain extent. But the proposed extension would effect a saving of 10 or 11 miles in distance—would not that be a considerable advantage? It would appear to be, in distance.

3422. You have informed the Committee that there are some very considerable cuttings on Mr. Hamand's line—what are the depths of those cuttings? The section which I have prepared is only approximate; but, commencing at the Lane Cove-road, the cutting at the deepest place is nearly 40 feet. Then we get to the high ground between Cammeray-road and Miller-street, where the cutting is between 50 and 60 feet deep in the worst places. Following the line along, we get a cutting 30 or 40 feet deep, towards Neutral Bay.

3423. Knowing Mr. Hamand's route, are you of opinion that these deep cuttings would be objectionable as eye-sores and possible sources of danger to the residents of the district? I do not know how they could be sources of danger.

3424. Would not they be in the immediate vicinity of residences? Of course the line would have to be properly fenced. They could only be a source of danger if the batters were not properly trimmed, so that pieces of rock tumbled down and upset the trains.

3425. But they would be an eye-sore? Well; they would not improve the appearance of the country.

3426. In your opinion, would the traffic be safer on the Government line, where there is a level run of 2,360 feet, than on Mr. Hamand's line, which has a grade of 1 in 70, and a level run of 600 feet? If, when a train got to the foot of the grade, the brakes would not act, you would have a better chance of pulling it up in 2,360 feet of level, than in 600 feet.

3427. So that the Government line would be practically the safer? In an instance of that kind it probably would.

3428. In your experience as a railway engineer, you are aware that wherever passenger traffic exists, a considerable goods traffic springs up? Where a population exists there will be goods traffic.

3429. You are of opinion that the Government should have a greater length of level than 600 feet for wharfage purposes? What I said was that, assuming that the Government are compelled to acquire

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.

30 July, 1890.

- 2,360 feet of wharfage frontage, it would be desirable to reserve it for goods purposes should it be required, and not to throw it away by mounting the line upon a steep grade, along the greater portion of it.
3430. You have made no inquiries at all as to the goods traffic on this particular line? I have made none.
3431. Can you see any objectionable gradients or curves on the Government proposal, or are you aware of any defect in the scheme? As far as I can see, the Government line would be perfectly safe.
3432. You consider that it has a considerable advantage over Mr. Hamand's line in consequence of being shorter? In consequence of being considerably cheaper.
3433. And in consequence of being shorter? Yes; you would have the advantage of a shorter journey.
3434. And I understand that it would be constructed at a less cost of £209,000? Yes, roughly; those, of course, are only approximate figures.
3435. In round figures you consider that the Government proposal could be carried out for less than what Mr. Hamand's line would cost, by about £200,000? Yes.
3436. You have satisfied yourself that the North Shore people would be better served by the extension of the tramway, than by the construction of Mr. Hamand's line? By the proposed extension to Miller-street. You are not referring to the extension of the tramway to St. Leonards. I think the population on the plateau can be better served by the extension of the present tramway than by the construction of Mr. Hamand's line.
3437. You are clearly of opinion that the Government proposal is the best that has been submitted to the Committee? I am not aware of any other line which has been submitted to the Committee, with the exception of that proposed by the Government and that proposed by Mr. Hamand.
3438. Comparing the Government line with Mr. Hamand's? Comparing the two, I have no hesitation in saying that the Government line is by far the better.
3439. And, as an engineer, you have no hesitation in saying that it is necessary and desirable that the line should be brought from St. Leonards to Milson's Point? As an engineer it appears to me absurd to leave the line where it is, having already spent so much money.
3440. Even if the extension would cost £250,000? Yes.
3441. *Mr. O'Sullivan.*] Your chief reason in favour of the extension is that you desire to utilize the line between St. Leonards and Pearce's Corner? That is the main reason.
3442. By bringing the line down to the foreshores of Port Jackson? Yes.
3443. Would you not reach the foreshores by the Government modification at Lavender Bay? You would; but you would also increase the length of the trip across the harbour.
3444. But you would shorten the land trip? Somewhat, undoubtedly.
3445. Most of the passengers who would go by this line would be people residing in the new residential suburbs, on the western side of the North Shore? Yes.
3446. Therefore, a couple of hundred yards' increase of journey on a well-appointed steamer would not be a very great hardship to them? Possibly not.
3447. While at the same time the land journey would be shortened? Yes.
3448. Why should we spend £52,900 in bringing the line from its terminus on the Government modification to Milson's Point? You must have a certain amount of level, but I understand that it is quite possible to provide station accommodation in Lavender Bay, and it is for the Committee to decide whether it is better to stop at the head of the bay than to take the line on to Milson's Point. I should say, take the line on to Milson's Point.
3449. It was stated by Mr. Deane that we would save £52,000 by stopping at the modification;—the interest on that, at 4 per cent., would be £2,000 per annum;—why should we not save that amount every year when the line would give almost the same accommodation? There is something in that; but it is for the Committee to decide which scheme it would be desirable to carry out. I have not the slightest doubt that a station could be provided at the head of Lavender Bay giving the requisite amount of accommodation.
3450. *Mr. Lee.*] You are aware that the estimated cost of Mr. Hamand's line is £350,677? Yes, as estimated by him.
3451. Inclusive of land compensation? Yes.
3452. Do you know what Mr. Deane's estimate of the cost of Mr. Hamand's scheme was? I think I understood that he estimated Mr. Hamand's works at about the same amount as Mr. Hamand did, but that there was an increased price—I forget how much—for land resumption.
3453. The difference between his and Mr. Hamand's estimate was in the valuation of the land? Yes. I fancy that Mr. Deane did not have sections taken over his line; but I have had them taken and plotted to a good-sized scale, so that I can roughly estimate the quantities, and you can take my estimate as approximately correct.
3454. Mr. Deane's estimate for works on Mr. Hamand's line is the same as Mr. Hamand's? Yes.
3455. £221,000? Yes.
3456. Your estimate of the cost of Mr. Hamand's line is £455,200? Including land resumptions.
3457. You differ from Mr. Deane in the matter of compensation for land? No; I differ from Mr. Deane in the estimate of the cost of works.
3458. You differ from Mr. Deane in your estimate of the compensation for land on Mr. Hamand's line? The cost of the land is not my estimate; it has been supplied by the Government Valuator.
3459. You have given it as £166,000, whereas Mr. Deane's estimate was £200,000? The estimate, of £166,000 was supplied to me by the Government Valuator.
3460. You differ from Mr. Deane in the estimate of the cost of works, his estimate being £221,000, and yours £289,200? Yes.
3461. Have you taken the trouble to get out the quantities on the Government line? I have looked at Mr. Deane's estimate, and it would appear to be about correct.
3462. How did you get the figures to estimate the cost of Mr. Hamand's line? I have taken Mr. Hamand's own prices for earthwork. I made a section, and took out the quantities of the earthwork upon it.
3463. Did you do the same with the Government line? No; I have not analysed the Government proposal.
3464. You take the Government figures as submitted by the Engineer of the Department? Yes.
3465. If your estimate of Mr. Hamand's line is correct, there is a great discrepancy between it and Mr. Deane's estimate? For the works—yes; but, as I think I have explained,—
3466. I do not want you to explain; but there is a difference? Yes.

3467.

W. T.  
Foxlee, Esq.,  
M.Inst.C.E.  
30 July, 1890.

3467. Is it probable that the estimate for works on the Government proposal is insufficient? I do not think so. Looking at the two things, I do not think so.
3468. You are not in a position to say whether the estimate of the works on the Government proposal is correct or not? I cannot swear that it is correct.
3469. Because you have not taken out the quantities? No; but, looking at them generally, I think they are correct.
3470. Have you taken any section? There is a section.
3471. You have not taken out the quantities? I have not taken out the quantities. Looking at Mr. Deane's prices, they appear to be right; but I have not checked them.
3472. Inasmuch as Mr. Deane and Mr. Hamand concur in their estimates of the cost of works on Mr. Hamand's line, and inasmuch as your estimate is £68,000 over and above either of their estimates, is it probable that a mistake has been made in calculating the cost of construction on the Government proposal? I should not think so, looking at the thing broadly.
3473. *Mr. Humphery.*] You are aware that the line between St. Leonards and Hornsby leaves a very large loss on the working? I have understood so.
3474. What is your opinion—and you appear to have had a great deal of experience—as to the best way of making that line give a return that will cover working expenses in a few years, and ultimately pay the interest on the outlay? Bring your line down to the deep waters of Port Jackson.
3475. Would you do that by an extension of the railway, or by a connection with the tramway? By bringing the railway down.
3476. Although it would mean an increase in the interest of £9,000 a year, as against £1,700, by extending the tramway? Certainly; because you will get a far better return for your money.
3477. Have you any doubt as to the extension of the railway to Milson's Point creating traffic for the portion of the line already constructed more readily than the extension of the tramway to St. Leonards Station would do? I have no doubt in my own mind.
3478. *Mr. Garrard.*] I understand that you have gone over both of these routes? I have.
3479. Do you think that the stations, as marked on either line, are in their proper positions? On Mr. Hamand's scheme you have stations as close together as they are upon the Metropolitan Railway in London.
3480. I understand that you think that they are unnecessarily close? For the most part; and, as I have tried to explain to the Committee, it does not appear to me that they would be very much used.
3481. Do you think that the stations on the Government line are in right positions, and that there are not too many? I do not think that there are too many stations there, and I think that they are situated in the right positions. It might be advantageous to have a third station lower down, nearer Lavender Bay.
3482. You spoke of the difference between going up a grade of 1 in 70 and of 1 in 50;—I suppose that going down the difference would be of very little moment; it would be a mere matter of brake-power? There is nothing in it.
3483. All that you consider is the pulling-power going up? Yes.
3484. Coming down it is a mere matter of brake-power? All you have to do is to keep the train under control.
3485. Do you make your grade the same as Mr. Hamand? There is a small clerical error in figuring the heights, but the grades are drawn as figured for the most part, with the exception of one at the top, and another at Lavender Bay, which is figured as 1 in 70, when it is really a little flatter.
3486. The grade in the tunnel is 1 in 70? Yes; as Mr. Hamand has figured it.

Charles Billyard, Esq., sworn, and examined:—

C. Billyard,  
Esq.  
30 July, 1890.

3487. *Vice-Chairman.*] You know the locality in which it is proposed to take this railway extension? I know it well. I am a director of two companies who have invested half a million of money in property over there.
3488. Whereabouts? Partly on one side of where the bridge is marked on the map, and partly on the other side, at North Willoughby.
3489. That is the suspension bridge which is being built? Yes; one of the companies is building that suspension bridge at a cost of £34,000.
3490. Have they not also constructed a tramway? They have constructed a tramway to within a quarter of a mile of the bridge.
3491. To what point is it constructed? To Palmer-street, just at the top of the hill.
3492. How far is that from the present tramway? Very nearly three-quarters of a mile.
3493. Have you given much attention to the Government route, and to Mr. Hamand's scheme? Yes.
3494. What is your opinion with reference to them? My opinion is that the estimate of the cost of land to be resumed on Mr. Hamand's line is very much higher than it should be.
3495. You think the line should be constructed at altogether a less cost than is estimated? As far as the estimate for land is concerned.
3496. *Mr. Garrard.*] On what estimate are you going? I am not speaking about any estimate which I have seen.
3497. *Vice-Chairman.*] Your idea is that the land could be purchased for less than Mr. Hamand's estimate? Yes; because many of the owners there would take a small sum for their land. I have ascertained that from them.
3498. Can you say how much less the land could be obtained for? I estimate the cost of the land at £124,000. I will tell you how I arrived at that estimate, if you like.
3499. That is unnecessary. In constructing the tramway from your land down Miller-street, you considered that it would afford ample accommodation for the locality you are interested in? I thought it would for a time, but I believe that we shall have a very large population over there by-and-bye.
3500. Suppose that the population increased to the extent you anticipate, do you think the tramway would be sufficient? No; I think we should require a railway then for the goods traffic.
3501. Supposing a railway were to be constructed, do you think it would be desirable to carry out Mr. Hamand's proposal? Yes. If that were done, I think that instead of running the tramway we should

run

run a light railway over the bridge, and through our property to meet the Government line. We are going to put up a number of buildings over there.

3502. It is part of your project to build on this ground? Very largely.

3503. Have you given any attention to the Government proposal? I have given some attention to it. I have estimated the value of land upon that route.

3504. Do you think that the Government estimate is within the proper limit? I estimate the value of the land there at £148,960.

3505. You have had a good deal to do with land purchases in and about Sydney? Yes; more so than anybody.

3506. You think you are correct in the estimates you have given? I know I am.

3507. From every point of view, you think Mr. Hamand's line would be more desirable than the Government line? I think so. I think we should have a large goods traffic, and a grade of 1 in 70 would be better than a grade of 1 in 50 for it, while it would take less time to come up the flatter grade.

3508. Do you know the country between St. Leonards and Hornsby? I know it fairly well. I have often been along the road, and I was often out there during the construction of the railway line.

3509. Does it offer great inducements for suburban settlement? Yes; but I think the big settlement will be near Middle Harbour.

3510. Is Hornsby regarded as a favourite situation for residents on account of its altitude? No better than Middle Harbour.

3511. What is the height of the land at Middle Harbour? From 300 to 350 feet.

3512. Which do you call the Middle Harbour land? Land on the other side of the bridge; it is about 300 feet high there, and in places higher.

3513. Higher than Hornsby? No; but it is far nearer Sydney.

3514. What is the height of Hornsby? I could not say, but I think about 500 feet. Hornsby is 14 or 15 miles from Sydney Post Office, while the bridge is only 3 miles from the Post Office.

3515. What area do your companies hold? One holds 1,000 acres, and the other 670.

3516. It is contemplated to improve that land and make it suitable for residential purposes? One company are building a bridge, and are going to form a building society in connection with their property.

3517. Do you think that these sites are likely to be held in great favour for residential purposes? Yes; and I should think it will be a favourite place for excursionists. On a fine Sunday, hundreds of people go out to see the bridge. It is the third biggest suspension bridge in the world, and handsomer than the Clifton Bridge—the Brooklyn Bridge being the first. I look upon Middle Harbour as the recreation ground of Sydney.

3518. Do you think that having to cross the harbour will be an impediment to the increase of population there? I am in hopes that they will be able to bring the railway across the harbour in a steam ferry.

3519. You think, at all events, that the railway should be extended to the harbour? Yes; to open up Middle Harbour.

3520. Of the two schemes, do you think that Mr. Hamand's is the better? I think his the better to get the suburban traffic, and also, on account of its grade, for the goods traffic.

3521. *Mr. Dowel.*] How many acres to the mile have you allowed for land resumption? Sixteen.

3522. Did your company ask the Government to extend the cable tramway to the bridge? We had the right to lay a tramway from the present terminus on this side of the reserve, and the Government wished us to give up part of that right, and allow them to extend their tramway a quarter of a mile to the other end of the reserve. We tried to make the bargain that if we gave up that right they should construct the tramway to the bridge, and negotiations went on for some time, when we found that, since our bridge would cost £34,000 instead of £15,000, and would take longer to construct because of the bad weather, we saw that it would be necessary to ask the Government to let us have a Bill extending our time. The Government, seeing our difficulty, said, "If you do not give up your right to a quarter of a mile of tram we shall stop your Bill; and, on that threat, we had to give up our right, and it was no good asking them to construct the tramway to the bridge."

3523. You consider that the land owned by the company is very valuable, and that there will be a large residential population there soon? Yes.

3524. In your prospectus, did you tell the London investors that the land cost your company over £500 an acre? We did not issue any shares in London. There are very few London shareholders. I do not think that 10 per cent. of the shareholders are English.

3525. You issued debentures? Yes.

3526. Did you make the statement that the land cost the company over £500 an acre, and that therefore you considered it very advantageous for residential purposes? Yes.

3527. You anticipate a large population there in a short time? Yes; and we are going to build in anticipation of it. The Government have reserves at Middle Harbour, and we think that people would go down in our tram on holidays. We are going to build an hotel down there. An immense number of people go out there boating on Saturdays and Sundays.

3528. Quite independent of that, you think the Government is justified in constructing a railway to the deep waters of Port Jackson? Yes; it is no good where it is. I also think that they would be justified in taking the line to Middle Harbour.

3529. *Mr. Humphery.*] Is the best portion of your land to the north of the bridge? Some of it is on this side of the bridge, but most of it is on the other side.

3530. What distance is it from Milson's Point? The bridge is 3 miles from the Sydney Post Office.

3531. *Mr. Garrard.*] As the crow flies? The cable tramway is pretty correct.

3532. *Mr. Humphery.*] What is the distance from Milson's Point to your bridge? I think it is a little over 2 miles.

3533. *Mr. Tonkin.*] Can you form any estimation as to the probable population on your ground? I believe that the increase in population there would be as great as in the railway suburbs from 1869 to 1877.

3534. On what railway? If Mr. Hamand's railway is carried out, I believe that the increase of population about Middle Harbour will be as great as the increase was on the Southern line between 1869 and 1877.

3535. Do you not think that the inconvenience of water traffic would militate against that? I do not think so. At the present time, if you live on the Southern line, you have to change into a tram at Redfern, and in the summer time it is more pleasant to go across the harbour by boat than to travel by tram.

C. Billyard,  
Esq.  
30 July, 1890.

C. Billyard,  
Esq.  
30 July, 1890.

3536. Do you think that the land to the north of the bridge will be availed of equally with the land beyond St. Leonards terminus, towards Chatswood? I think so, because the water frontage will have a great attraction. There are many Government reserves there, and people could build on a road opposite the Government reserve; so that those who had not a water frontage, could have access through a reserve to the water.

3537. Would not the altitude of one district give it the preference? I do not think there will be much difference in altitude at Chatswood. The difference comes in when you get to Hornsby, where the altitude rises to 500 feet.

3538. You believe that if Mr. Hamand's line were constructed, it would, in a short time, pay for the construction and working expenses? I believe that it would. Its construction would have this effect upon us—that we should immediately put up a very large number of houses—very many more than we expected to do at once.

3539. If the line were constructed, it would induce you to build more largely than you would otherwise do? Certainly; and it would save us the expense of making the tram to the bridge, first of all.

3540. *Mr. Garrard.*] Is your estimate of the value of this land from a seller's or from a buyer's point of view? From a seller's. I have asked several owners what they would sell for, provided the railway went through their land. The line would go through some of our company's land, and we would sell at £400 an acre.

3541. When it cost £500? Yes. Caird, Maxwell, & Co. would take £400 an acre for their land; Jones would take £400 an acre for his land; Paling and the Assets Co. would take £100 an acre for their land, which is leasehold, having ninety years to run, and a ground rent of £7 10s. an acre, making it equal to £250 an acre; and Mr. Solomons, through whose land the tunnel goes, would take £100 an acre for tunnelling rights.

3542. How did you arrive at the estimate of the value of the land on the Government line—from personal inquiry, as on Mr. Hamand's line? First of all, the big Government resumption is along Lavender Bay, and, from Mr. Deane's evidence, I understand the Government would have to resume 52 chains in Lavender Bay, which, at £30 a foot, would come to about £102,960. Mr. Hamand's line would take 35 chains of frontage in Lavender Bay, and that, at £30 a foot —

3543. You are not charging Mr. Hamand with all the water frontage? With all that he takes.

3544. Mr. Hamand goes to Milson's Point? He only takes 35 chains of frontage in Lavender Bay, while the Government take 52 chains.

3545. Are you sure of that? Mr. Hamand says, "Mr. Deane took up twice as much again. He (Mr. Hamand) had about 35 —"

3546. What are you quoting from? From the report of the *Sydney Morning Herald*.

3547. I should not advise you to rely upon newspaper reports? —

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway to connect the North Shore Railway with Port Jackson, at Milson's Point.

APPENDIX.

A.

[To Evidence of H. Deane, Esq.]

Department of Public Works, Railway Construction Branch, Sydney, 8 July, 1890.

MINUTE PAPER.

Subject:—North Shore Railway Extension to the Waters of Port Jackson.

In accordance with your request, I have the honor to forward herewith a summary of Estimates of the proposals to connect the North Shore Railway with the waters of Port Jackson, furnished in my evidence before the Committee.

H. DEANE,

Acting Engineer-in-Chief.

The Chairman, Parliamentary Standing Committee on Public Works.

NORTH SHORE RAILWAY.

Extension to waters of Port Jackson.

Summary of Estimates furnished in evidence of Acting Engineer-in-Chief.

Extra cost through alteration of grade from 1 in 40 to 1 in 50 between present station and Lavender Bay—	£
Works .....	16,000
Land .....	5,700
	<hr/>
	£21,700
From head of Lavender Bay to Milson's Point, as per estimate of line submitted—	
Works .....	31,000
Land .....	67,760
	<hr/>
	£98,760
From head of Lavender Bay to passenger station, near head of bay—	
Works .....	21,000
Land .....	25,000
	<hr/>
	£46,000
From head of Lavender Bay, tunnelling under Alfred-street, heading Careening Cove, Neutral Bay, and Shell Cove, to Robertson's Point—	
Works .....	90,000
Land .....	22,830
	<hr/>
	£112,830
Cost of providing 3,500 feet frontage for goods at Cremorne, as above .....	£112,830
Cost of providing 1,560 feet frontage for goods in Lavender Bay— £98,760, less £46,000.....	£52,760
Loop round Kirribilli Point, not including resumption to the Point (say).....	18,000
Beyond .....	22,000
	<hr/>
	£40,000
Branch to M'Mahon's Point, not including resumption.....	£20,000

H.D., 8/7/90.

B.

PLAN PROPOSED BY A. S. HAMAND, ESQ.

North Shore Railway.

Croydon, Sydney, 21 June, 1890.

Gentlemen,

I beg leave to submit herewith a plan showing in red a route for the completion of the Hornsby line to Milson's Point, which possesses the following advantages:—

1. Better accommodation for the district.
2. Saving of 2 miles of the route to Cremorne.
3. Maximum grade 1 in 70, and it may, if wished, be made generally 1 in 80.
4. Middle Harbour can be opened up by steamer in connection.
5. It would form the first 2 miles of a railway to Manly.

The one disadvantage is that of 1 mile increased length to Hornsby, which is more than compensated for by increased speed of trains up the easier grade. Distances are measured by time rather than mileage in these days.

The Berry's Bay route is a one-sided line for collecting traffic, and even for that a water route will compete.

The cost, including land, of the line marked red, would be about £350,000; some portions of the route are remarkably easy, the only heavy work being half-a-mile of tunnel between 12 miles and 12½ miles.

I have, &c.,

ARTHUR S. HAMAND.

To the Chairman and Members of the Parliamentary Standing Committee on Public Works.

B 1.

## B1.

## DESCRIPTION OF LINE PROPOSED BY A. S. HAMAND, Esq.

## North Shore Railway.

## Extension to Milson's Point.

Sir,

Croydon, 14 July, 1890.

I now beg leave to transmit to you herewith, for the information of your Committee, a plan, section, and estimate of cost of the route recommended by me for the completion of the North Shore Railway to Milson's Point; also a detailed description of the route, and an estimate of traffic earnings for the same.

It will be observed that the plan and section show an alternative line making a junction with the southern end of St. Leonards' Station. The mileage to be constructed would be a quarter of a mile less, and the cost reduced by about £8,000, and if the Committee see no objection to it I consider it would be the preferable one to adopt, as it utilises the existing line. The difference in length of the Middle Harbour route over the Berry's Bay route will involve an extra payment per journey of '96 of a penny for all passenger traffic from St. Leonards and stations north of that, to or from Milson's Point.

With regard to estimate of cost, in this case as in all previous cases of estimates furnished by me to the Committee, I have fortified myself by obtaining an independent estimate from one of the ablest and most experienced contractors in the colony, who has for many years been carrying out government and municipal works with credit to himself and his employers. I need only add that his estimate has invariably been less than mine, and that I have sent in the larger to the Committee.

I shall be pleased to supply any further information the Committee may desire upon the subject, and

I have, &amp;c.,

ARTHUR S. HAMAND.

The Secretary, Parliamentary Standing Committee on Public Works.

*Description of Route.*

The line would commence at Milson's Point, near the steamer pier, which the platforms would adjoin. For three furlongs from Milson's Point Station the line would be built chiefly on land now covered with water. In order to avoid questions as to water frontage it is proposed to resume the frontage in Lavender Bay from Milson's Point to where the line leaves the Bay to pass into tunnel under Alfred-street. The surplus land so resumed would be available for resale, and would be, at any rate so far as the railway is concerned, an asset. A length of 600 feet to be retained, adjoining Milson's Point, would be ample for railway wharf purposes and local traffic.

The line would issue from the tunnel under Alfred-street into the valley at the head of Careening Cove, passing under McDougal-street and High-street. Between these two streets would be an embankment, on which would be placed a passenger station for the accommodation of the district between Walker-street and Neutral Bay, which is pretty well covered with houses.

The line would thence proceed by tunnel under the eastern end of Whaling-road, and then, emerging, would follow a rising contour round the western side of the head of Neutral Bay, crossing two or three minor roads, then passing under William-street, and occupying the site of the lower half of Alfred-street until it turns at right angles to the east, which part of Alfred-street would be diverted. Bent-street would be slightly diverted, and passed by bridge over the line. From Bent-street the line pursues the Valley until it enters the tunnel through the ridge. Between Bent-street and the tunnel would be a goods and passenger station, which would serve, on the west side of the line, the district lying between Berry-street, Miller-street, and Falcon-street, and on the eastern side of the line between Military-road, Shell Cove, and Neutral Bay. These districts are fairly well populated.

On the north side of the ridge the line emerges in the valley between Grasmere-road and Cammeray-road, with a station near Willoughby Falls, on the land now occupied by Chinese market gardens. The station here would be for goods and passengers, accommodating the district between Falcon-street, Miller-street, and the south arm of Long Bay. South of this station there is already considerable population. It would also be much used for pleasure traffic on Middle Harbour.

Leaving this station the line proceeds by bridge under Cammeray-road; thence skirting the slopes overlooking the northern arm of Long Bay, and passes under the northern extremity of Miller-street by a bridge. A station for goods and passengers is proposed here, which, adjoining the suspension bridge of the North Sydney Tramway and Investment Company, giving access to their land on the north side of Long Bay, and being fed by their private tramway, is destined to soon become one of the most important stations on the North Shore Railway.

From Miller-street the line proceeds with easy work to the North Sydney-road, which the railway passes under by a bridge. A station is proposed here to accommodate the district around, already partially built on. Within a mile to the north on this North Sydney-road is North Willoughby, with its attractive gardens, &c. Some estimate of the value of the traffic to North Willoughby may be made from the fact that between Milson's Point and North Willoughby there is an omnibus service—on week days ten times, and on Sundays seven times a day in each direction—which is always well patronised.

From the North Sydney-road the line proceeds to join the completed Hornsby and St. Leonards' Railway, the total length of line remaining to be constructed being a little over 4 miles.

No level crossings are proposed, being inadmissible on suburban railways. The sharpest curve is 12 chains radius, and the steepest grade 1 in 70.

*Estimate of Cost.*

4 miles 25 chains of double line.

N.B.—Credit land not required for railways, £45,000,

*Estimate*

*Estimate of Traffic Earnings.*

Where traffic does not exist at the time of an estimate being made the most reliable method is to arrive at it by analogy with some similar existing line.

The Illawarra Line seems to afford a fair basis for making a calculation of traffic earnings. Between Sydney and Hurstville 32 trains run in each direction daily of which number 29 stop at all stations.

On the North Shore Railway, within five years from its completion, it may safely be assumed that not less than 20 stopping trains in each direction will be required between Milson's Point and Gordon (9 miles, *via* Middle Harbour) and between Gordon and Hornsby, 10 trains a day each way.

The Railway Commissioners' Report for June, 1889, gives the average net earnings per passenger train mile over all the lines of the colony as being 28·38 pence. The net earnings of suburban trains would, generally speaking, be higher than the average, and those of the Sydney-Hurstville section are, probably, at least 31 pence per train mile. The Commissioners can supply the actual figure; but, taking the average as safe, the traffic figures would give:—

	Train Miles.
Milson's Point to Gordon—	
9 miles x 40 trains x 340 days .....	=122·400
Gordon to Hornsby—	
5 miles x 20 trains x 340 days .....	= 34·000
	156·400 train miles per annum.
156·400 train miles x 28·38 pence .....	£18,494 6 0
Goods and minerals, net earnings .....	5,605 14 0
	£24,000 0 0

This amount of £24,000 is the net product available for interest after payment of working expenses and may be reasonably expected to accrue within five years from the completion of the line when the district served has had fair time to develop.

The capital upon which the £24,000 has to pay interest may be reckoned as follows:—

Hornsby to St. Leonards, single line .....	= £180,000 0 0
Do. allow for doubling .....	= 75,000 0 0
St. Leonards to Milson's Point .....	£350,000 0 0
Add for engineering contingencies.....	70,000 0 0
	£420,000 0 0
Deduct value of surplus land .....	45,000 0 0
	375,000 0 0
Rolling stock required .....	120,000 0 0
	£750,000 0 0

Total capital involved..... £750,000 0 0

Upon this amount, £24,000 is equal to 3½ per cent.

ESTIMATE OF COST of connecting the Railway at Milson's Point with Circular Quay by tunnels in the rock on either side of the harbour, the length under the water being built in iron tubes bedded in the silt with their line of rails at about 60 feet below water level:—

Cost of tunnels in rock, length 1 mile 65 chains .....	£280,000
Tubular tunnels laid complete, length 27 chains.....	270,000
	£550,000

This would give for earning power 2 miles of railway, double line, at a cost of £275,000 per mile.

The above does not include the cost of stations at Dawes' Point and Circular Quay, which are provided for in the general scheme. The cost of these stations would be £35,000.

ARTHUR S. HAMAND.

Sydney, 14th July, 1890.

**B 2.**

[*To Evidence of A. S. Hamand, Esq.*]

North Shore Railway.

Sir,

Croydon, 28 July, 1890,

With reference to the difference in total length of line from Hornsby to Milson's Point by the two routes *via* Berry's Bay and *via* Middle Harbour, I wish to call the attention of the Committee to a point hitherto overlooked.

The Government line commences where the last contract ended, at 10 miles 51 chains. The Middle Harbour route begins at 10 miles 38 chains, so that the two routes are respectively 10 miles 51 chains added to 2 miles 60 chains, which is equal to 13 miles 31 chains; and 10 miles 38 chains added to 4 miles 2½ chains, which is equal to 14 miles 40½ chains, the difference between the aggregate length of both routes being 1 mile 9½ chains.

Consequently the whole difference of average fare per passenger to and from St. Leonards Station, and other places north of that point, will be only two-thirds of a penny.

I have, &c.,

ARTHUR S. HAMAND.

The Secretary, Parliamentary Standing Committee on Public Works.

**B 3.\***

North Shore Railway.

Sir,

Croydon, 28 July, 1890.

I beg leave to reply to Mr. Deane's letter, read to the Committee last Thursday.

Firstly: \* \* \* \* \* If Mr. Deane did examine the correctness of the figures by scale, he is aware that the surface line, the gradient line, and the marking of the gradient, are all correctly shown.

Secondly: As to platforms, I am in the habit of reckoning the dimensions of platforms by their useful length, and of discarding that portion of their length which points, and crossings, and lines to other platforms render useless. With that qualification Mr. Deane will find my statement was not far wrong. The longest platform on the Hornsby-St. Leonards line is 300 feet in length; and in answer to question No. 221, on page 9 of the published report on this matter, Mr. Deane states the platform he designs at Milson's Point to be 300 feet long.

Thirdly:

\* NOTE.—The asterisks in this letter represent certain eliminated statements of an objectionable character which the Committee do not consider it right should be published.

Thirdly : \* \* \* Mr. Deane has \* \* \* swelled his estimate of the cost of my line. That I anticipated, and therefore made mine needlessly liberal. \* \* \* Now he talks vaguely about cost of road approaches, and his doubts as to the accuracy of the section. \* \* \* If the Committee entertain doubts as to the substantial accuracy of my section and my estimate, I should be glad if they would have them checked by some independent, competent engineer.

Fourthly : Mr. Deane ventures to indulge in another statement as to "the impossible." \* \* \* I \* \* \* enclose herewith a plan showing several methods of access from the line proposed by me to Neutral Bay, and if these are not quite satisfactory I will devise a dozen other different methods.

I have, &c.,  
ARTHUR S. HAMAND.

The Secretary, Parliamentary Standing Committee on Public Wo

B4.\*

North Shore Railway.

Sir,

Croydon, 4 August, 1890.

As I had no opportunity of replying, *viva voce*, to certain evidence given in this matter I ask leave to do so in writing.

Mr. Bullock's evidence, \* \* \* was, no doubt, genuine. His engineering experience being evidently but slender, I will not comment on it. The chief point in his evidence was that the Government route would accommodate 8,000 persons, and the Middle Harbour route some very small proportion of that number—one-fifth, I think.

Taking an average width of  $\frac{1}{4}$  mile only on each side of the centre line of each route, and omitting in both cases the first  $\frac{1}{2}$  mile from Milson's Point—that is to say, taking a length of  $2\frac{1}{4}$  miles and  $3\frac{1}{4}$  miles respectively, and a width on either side of 20 chains only, there would be 1,040 acres on the Middle Harbour route against 720 acres on the Government route, which areas, when covered with houses, would carry, at 15 to the acre, populations of 15,600 and 10,800 respectively. The Government route is so close to the water that for a considerable length the width of 20 chains, or even 10 chains, does not exist, so that the comparison is, if anything, unfair to the Middle Harbour route. The Middle Harbour route, also, has the Middle Harbour traffic in its favour, as well as the North Sydney Land Company's tramway or railway to feed it, also the North Willoughby traffic.

In respect of the latter, Mr. Deane made a statement that the traffic could be accommodated by a new station situated between St. Leonards and Chatswood Stations, and that it would be nearer to the traffic than a station on the North Sydney-road at Chandos-street. The answer to that statement is that any such station would be situated in the 1 in 50 grade, which is inadmissible, and that, if the station were feasible there, it would be equally distant from the traffic, and in a direction further from Sydney.

One other point to be noted in Mr. Bullock's statement is that, while he decried the land in the Middle Harbour route as inferior for building, his estimate of resumption cost was very high—£20,000 above the Government Valuer's figures, based on Mr. Foxlee's inflated quantities.

Mr. Goodchap, as a traffic manager of some experience, gave very disappointing evidence. To propose to continue a train service by tramway strikes me as being suicidal. A train of six carriages will seat 360 persons; a grip car and two attendant cars (the maximum number) will accommodate 60 people; so that six trains of tramcars would be necessary to carry an ordinary train load. The rush for the first dispatch may be imagined. There would be an unequal strain on the cable and machinery, resulting in frequent break-downs, which often take three or four hours to repair. The time on the journey, if the present rate of travel is maintained, would be 35 minutes, and the fare, at present rates, 5d. This method would be well calculated to prevent development on the Hornsby line. However, there is no accounting for the views of traffic managers. The Committee will, probably, be surprised to learn how few use the cable tramway, the average number per day each way being 1,200, or about 17 per single tram journey, while the number who drive or walk to the boats must be about five or six times that number.

The working expenses of the Sydney tram system are about 91 per cent. of the gross takings; the working expenses of the cable trams are 80 per cent. of gross takings; the difference being mainly due to the higher rate of fare charged on the North Shore—2d. per mile; while the railways, providing a service at  $\frac{2}{3}$  of a penny per mile, are worked at 64 per cent. of the gross earnings. This is the answer to Mr. Goodchap's assertion that tramways are worked cheaper than railways.

I now come to Mr. Foxlee's evidence. \* \* \* It is to be noted that the scale of the plan and section supplied by me to the Committee is larger than the scale generally used before Parliamentary Committees in London, and may, therefore, be considered sufficient for all practical purposes.

The ordinary quantity of excavation for a railway averages from 30,000 cubic yards per mile of soft material with flat slopes (which is considered a light line) to 100,000 cube yards, and upwards, per mile for a heavy line. In rock with steep slopes, as in this case, the quantities of excavation are respectively much less. In my estimate the quantities of excavation are given, and average 83,000 cube yards per mile, exclusive of tunnel work. My section does not, in fact, show so great a quantity, but I added an allowance to provide for work which would appear in cross section. That is one way of looking at it. Another method is this: My line, except where in tunnel, is not continuously crossing spurs and valleys, as on the Government route, but follows the natural contours of the slopes of the hills for three-fourths of its length. Being situated on the slopes, a movement of the centre line laterally 10 feet would cause a difference of nearly 10 feet in the section, making a cutting or embankment 10 feet deeper or shallower, or changing cutting into embankment or *vice versa* as the case may be.

Mr. Foxlee's quantities of excavation show a surplus, after providing for embankment, of half a million cube yards, or a surplus of nearly 150,000 cube yards per mile.

The

\* NOTE.—The asterisks in this letter represent certain eliminated statements of an objectionable character which the Committee do not consider it right should be published.

The comparative time-table of the two routes given by Mr. Foxlee was \* \* \* unfair, as the Lavender Bay Station stop was omitted from the Government route. Moreover, the closer stations are to each other, while it gives more accommodation to the public, it must, of necessity, prolong the journey by the greater number of stops; but, with trains not stopping at every station, the advantages must remain with the Middle Harbour route. Mr. Foxlee's time-table of the Government route differed very widely from that furnished by Mr. Goodchap, which was 12 miles an hour, with 3 minutes added for each station.

With reference to Mr. Foxlee's remarks on the cost of altering grade near Chatswood from 1 in 50 to 1 in 70 \* \* \* the alteration of the grade would only be carried out by me at the time the line is duplicated; and the Committee must bear in mind that doubling the line to Gordon, if not to Hornsby, is a necessary corollary to the extension from St. Leonards to the harbour, if the suburban traffic is to be worked with punctuality. If the 1 in 50 grade up to Chatswood is altered when the line is being duplicated, it cannot cost more than £5,000, no matter how it is carried out. As I have had for some time past copies of the working plan, section, &c., of the Hornsby-St. Leonards line, I have every facility for making an exact estimate of the cost of this alteration.

In respect of the land resumption on the Middle Harbour route, as the Government Valuer's figures are based on quantities of land supplied to him by Mr. Foxlee \* \* \* the estimate for land must be increased correspondingly to an undue extent also. If the Government Valuer obtained his data of requirements from me, he certainly would give an estimate below mine for land. The Committee have not had complete evidence on this point.

Some witnesses have appeared to think that stations on my route at High-street and Bent-street are unnecessary and useless. That only shows they take a short-sighted view of the traffic. The traffic is not all in the direction of Sydney. It would be as reasonable to omit Eveleigh, Macdonaldtown, and Erskineville on the lines south of Sydney; yet those three stations earned for the year ending June, 1889, from passenger traffic alone, £8,530. The tramway competes with the railway to Eveleigh, Macdonaldtown, Newtown, Marrickville, Stanmore, and Petersham; and yet those stations earn from passenger traffic per annum £31,208. This goes to prove that a railway accommodates a different set of persons in a district from those served by a tramway, and that both may pay very well when they run side by side, as they almost always do in London and English provincial cities and towns.

I was asked by Mr. Lee whether if 1 in 50 grades were used on the Middle Harbour route the cost would be diminished. After due consideration, I am of opinion that the use of 1 in 50 grades in lieu of 1 in 70 would not reduce the cost by £10,000, because the route of any line is selected to fit a 1 in 70 grade.

In response to Mr. Dowel's request that I would furnish an estimate of the comparative cost of working the different routes, I have much pleasure in giving it below.

*North Shore Railway.*

Estimate of gross earnings and working expenses, Milson's Point to Hornsby, <i>via</i> Middle Harbour :			
	Maximum grade, Milson's Point to Gordon .....	1 in 70	
	,, Gordon to Hornsby .....	1 in 50	
Gross receipts—			
Passenger trains with 360 seats—			
Milson's Point to Gordon—			
	9 miles × 40 trains × 340 days × 80 pence per train mile = .....	£ 40,800	£
	Goods, &c., traffic over 9 miles .....	11,750	
		52,550	
	Deduct working expenses—62 per cent. ....	32,581	
		19,969	
Gordon to Hornsby—			
	5 miles × 20 trains × 340 days × 80 pence per train mile .....	11,333	
	Goods, &c., traffic over 5 miles .....	3,600	
		14,933	
	Deduct working expenses—73 per cent. ....	10,900	
		4,033	
	Total net earnings <i>via</i> Middle Harbour .....	£24,002	

Estimate of gross earnings and working expenses, Milson's Point to Hornsby, <i>via</i> Government route :			
	Maximum grade, Milson's Point to Hornsby .....	1 in 50	
Gross receipts—			
Passenger trains with 240 seats—			
Milson's Point to Gordon—			
	8 miles × 60 trains × 340 days × 53·3 pence per train mile = .....	£ 36,267	£
	Goods, &c., traffic over 8 miles .....	10,445	
		46,712	
	Deduct working expenses—73 per cent. ....	34,100	
		12,612	
Gordon to Hornsby—			
	Add net earnings as in Middle Harbour route .....	4,033	
	Total net earnings <i>via</i> Government route .....	16,645	
	Net returns by Middle Harbour route .....	24,002	
	,, Government route .....	16,645	
	Difference in favour of Middle Harbour route .....	£7,357	
	£7,357 per annum is equal to capital value, at 3½ per cent., of £210,189.		

The capital involved in the Middle Harbour route would be £750,000, in which £24,002 net earnings are equal to 3·2 or 3½ per cent.

The capital involved in the Government route would be £650,000, on which £16,645 net earnings are equal to 2·56, or rather over 2½ per cent.

Although I have, for purposes of comparison of working cost, assumed the earnings of both lines to be the same per mile per annum, I am of opinion, having regard to the difference between the districts served, that the earnings from the Middle Harbour route will always be 50 per cent. greater than from the Government route.

I have shown the difference in net earnings by the two routes, mainly owing to the difference in grades, to be £7,357 per annum. That difference will vary with the number of trains run. If the same number run as on the Illawarra Line, then the difference will be increased to £11,035 per annum, or, capitalized, £315,283.

The first 2 miles can be utilized as part of the route to Manly, and the Manly Line can easily diverge with a junction well clear of the north end of the tunnel. I never proposed to junction in the tunnel. It is complete misrepresentation to say I proposed it by referring to a small scale sketch plan. I have never said it is the only route. I say it is in my judgment the best available.

I have considered the possibility of reducing the grades north of Gordon. From Gordon northwards the line rises continuously with 1 in 50 and 1 in 60 grades for 1½ miles, Pymble Station being situated on the grade, and in the middle of it; consequently it would be expensive and difficult to reduce the grades, and as the traffic between Gordon and Hornsby will

will probably never be so heavy as on the line south of Gordon, I do not feel sure that the alteration would be worth the outlay, although it is evident the line might originally have been located so as to avoid the severe grades without costing a penny more than it has done.

In conclusion, I feel sure that if the Committee reject the very serpentine Government route, the Public Works Department will then be able by following my route to put before the Committee plans, sections, and estimates, which will show the Middle Harbour route to be better and cheaper than I have exhibited it to be. It rests with the Committee to make a stand against having any more lines with severe grades thrust upon them and the colony.

I have, &c.,

ARTHUR S. HAMAND.

The Secretary, Parliamentary Standing Committee on Public Works.

### C.

[To Evidence of H. Deane, Esq.]

MR. A. S. HAMAND'S PROPOSAL.

Department of Public Works, Railway Construction Branch, Engineer-in-Chief's Office,  
Sydney, 24 July, 1890.

Sir,

I have the honor to request that you will kindly direct the attention of the Committee to the fact that Mr. Hamand's section, although presumably giving a grade of 1 in 70, does not in reality do so, as the levels and distances given by him between his Bent-street and Willoughby Falls' Stations gives only a grade of 1 in 56½.

With regard to Mr. Hamand's statement that 300 feet is the longest platform in use on the New South Wales railways, I should mention that there are many longer than that; and at the Redfern terminus the platforms vary from 400 feet to 630 feet, with the exception of one platform, 305 feet, which is very little used.

In reference to my estimate for the works on Mr. Hamand's line, I pointed out the fact that it is calculated from data supplied by his section, about the accuracy of which I had considerable doubt. If the true section were taken it would certainly be found that the earthworks would be increased to a considerable extent, and there would be a very large item to add for the cost of the road approaches, as I mentioned in my evidence.

In conclusion, I should like to reiterate my statement that it will be impossible to get down from his line so as to utilise properly the frontage of Neutral Bay.

I have, &c.,

H. DEANE,

Acting Engineer-in-Chief.

The Secretary, Parliamentary Standing Committee on Public Works.

### D.

THE LAVENDER BAY PROPOSAL.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,  
Sydney, 9 August, 1890.

MINUTE-PAPER.

Subject:—"Extension to Milson's Point."

I HAVE the honor to call attention to the report of the proceedings of the Public Works Committee in yesterday's *Sydney Morning Herald*, page 3, wherein the scheme for stopping short of the Point is attributed to me, and, consequently, appears to have some of the weight of a Departmental proposal.

I thought I had sufficiently explained that the plan for stopping near the head of the Bay was only submitted by me with a view to meet a suggestion already made by some of the members of the Committee to stop at the head of Lavender Bay, but that, notwithstanding that suggestion, I urged strongly the desirability of carrying the railway down to the Point; and it was shown in my evidence not only that Milson's Point was the most favourable terminus, in that it gave the shortest distance for the ferry, but that the steamers now running would serve the traffic for some time to come, while, if the station were further up the Bay, a new landing-place would be necessary, as the Lavender Bay jetty would not serve, and, consequently, special arrangements would have to be made with the Steam Ferry Company, who, at first, would probably require a subsidy.

H. DEANE,

Acting Engineer-in-Chief.

The Under Secretary for Works.

Submitted.—J.B., 12/8/90. Forward to Parliamentary Standing Committee on Public Works.—B.S., 12/8/90.  
Secretary to the Committee.—J.B., 12/8/90.

### E.

[To Evidence of John Duff, Esq.]

REPORT of the Inspector of Forests upon the Timber Trees indigenous in the open and brush forests of the districts between Gosford and Newcastle, county of Northumberland, which timbers are growing in close proximity to the Great Northern Railway line, and with which an increasing trade may be expected to be maintained in future with Sydney, Singleton, Newcastle, Maitland, and other markets.

The above-named districts have always been noted for the large quantity and good quality of their timbers, and although a depression in the timber trade in these districts has existed for several years, this depression has been general throughout the colony, and the trade may be expected to increase in proportion to the revival in trade generally.

The districts referred to are better adapted naturally for the growth of timber than for most other purposes, the country generally being of an undulating and mountainous character, with usually only small areas of good level and sloping land suitable for agricultural, pastoral, and horticultural pursuits intervening; and as the districts referred to have been proved to be admirably adapted for the cultivation of fruit-trees, it is confidently expected that orchard culture will in future form another of their leading industries.

One of the causes of the recent depression in the timber trade may be partly attributed to the increased importation of cheap American softwoods, which, being more cheaply and easily wrought than our hardwoods, have therefore superseded them to a large extent, but for all purposes wherein strength and durability are required our hardwoods cannot be excelled, and rarely equalled, by any American timbers, so that the trade in the latter may only be expected to be continued for indoor and less substantial building purposes.

Some of the timber-getters complain that the high price charged for freight upon the Northern Railways precludes them from earning a comfortable living at cutting and forwarding timber to Sydney and other markets, and as the best of the timber in the most easily accessible parts of the forest reserves and Crown Lands, and in closest proximity to main and other roads, navigation, and railways, has already been cut, the timber cut for some time to come would chiefly be for fuel, fencing, and railway sleepers, &c., and for which purposes there is an abundant supply of timber to last for many years close to the railway line, so that if the freight be excessive it would be desirable, in the interests of the trade and revenue, that it be reduced.

Another matter worthy of considering in connection with the timber trade of the districts referred to, is that the distance from Newcastle and Gosford to Sydney, between the two former of which towns the best timber is growing, being much shorter (from 50 to 100 miles) than from Marulan, South Creek, and other places from which fuel is carried by rail to Sydney, if moderate freights are charged on the timber from the Northern districts, it would have the effect of creating a large trade for fuel, &c., and of reducing the cost thereof, which would probably ultimately lessen the demand for fuel, &c., from other more distant localities.

The

The leading useful timbers in the Northern districts are grey gum, blue gum, and turpentine, which grow most rapidly and abundantly in the rich moist brush forests; but the prevailing hardwoods in greatest quantity and most used in these districts are blackbutt and spotted gum, which inhabit the open forests.

Ironbarks, the strongest, most useful, and durable hardwoods, grow chiefly on the open forest ridges, and are now becoming scarce in these districts.

The largest, best, and most abundant supply of hardwoods obtainable in the Northern districts grow in the vicinity of Wyong, Wyee, and Cooranbong, from which localities the haulage of the timber to the railway stations, would range from about 2 to 7 miles.

The formation of a 24-acre plantation of timber trees at Wyong, during the present winter and ensuing spring, has been authorized, which area will contain about 29,000 trees, and it is proposed to continue the planting of red cedar and other timber trees annually on the Olney and other forest reserves on an extensive scale.

A plantation of over 3,000 trees was made two years ago on Hogan's Brush forest reserve, near Gosford, and the State Forest Nursery at Gosford will annually increase in usefulness and importance, where millions of young timber trees will be propagated yearly for planting in the forest reserves throughout the colony. It is also proposed to destroy the useless trees, saplings, and scrub on the forest reserves generally, so as to permit and facilitate the maturation of the useful trees and saplings left growing, and the germination or natural reproduction of useful species of timber trees.

The proposed railway line between Crow's Nest and Hornsby does not pass through any forest reserves, but is contiguous to many reserves which do not come under the Department to which I am attached. Some of these reserves contain timber of excellent quality, which will ultimately be greatly utilized by the residents on the north side of Port Jackson should this line be constructed to deep water or Milson's Point.

Timber being brought down the line as at present constructed would be very expensive, owing to the long distance it would require to be carted. Much valuable timber along the proposed line of railway is owned by private individuals. A glance at the map of the county of Cumberland will show the reserves near the proposed railway line.

Appended are lists of the Forest Reserves, with names, numbers, and areas of same in the district situated between Gosford and Newcastle; also of the hardwood and softwood timbers growing upon said reserves; and of revenue received for royalty and license fees for timber cut upon these reserves from the year 1883 up to 1889.

JOHN DUFF,  
Inspector of Forests.

Forest Conservancy Branch, Colonial Secretary's Department, Sydney, 8/7/90.

Names, Numbers, and Areas of Forest Reserves situated between Gosford and Newcastle, county of Northumberland.

## COST OF CONSTRUCTING SUBURBAN RAILWAYS.

Government Railways of New South Wales, Secretary's Office, Sydney, 30 July, 1890.

Sir,

As requested in your letter of the 17th instant, I have the honor to inform you that the original cost of constructing the several suburban railway lines is as shown below, viz. :—

	£	s.	d.
Sydney to Parramatta, 13½ miles .....	566,716	8	8
Sydney to Hurstville, 9 miles .....	135,000	0	0
Strathfield to Hornsby, 14 miles .....	297,288	0	0
Hornsby to St. Leonards, 10½ miles .....	203,352	0	0

I am desired to point out that since the opening of the above lines the original and subsequent cost has been kept in sections, of which those referred to (except Hornsby to St. Leonards) only form a part.

I have, &c.,

H. M'LACHLAN,

Secretary.

The Secretary, Parliamentary Standing Committee on Public Works.

## G.

[To Evidence of C. C. Bullock, Esq.]

## AREA OF LAVENDER BAY.

130, Pitt-street, Sydney, 30 July, 1890.

Sir, In accordance with arrangement, I forward the following information in connection with the extension of the North Shore Railway to Milson's Point. It has been stated by several witnesses that the area of Circular Quay is greater than the area of Lavender Bay, yet the fact is that the former contains only 63 acres, as against 70 acres contained by the latter. Moreover, the area of Darling Harbour on the southern side of the Pyrmont Bridge is only 40 acres. The width of Lavender Bay ranges from 820 feet at its head, 1,100 feet opposite M'Mahon's Point, to 2,500 feet between Blue's and Milson's Points. The width of Circular Quay is 910 feet, from and south of the Orient Company's wharf, while the distance is 2,200 feet between Dawes Point and Fort Macquarie. The length of the wharfage that can be provided on the Government scheme in Lavender Bay is 2,360 feet, as against 2,700 feet on the western side of Darling Harbour. The area of the Darling Harbour terminus comprises 27 acres, while the area that could be readily obtained in Lavender Bay would be 12 acres. It has further been stated that the fairway between Milson's Point and Dawes Point is the narrowest in the harbour, yet, although more traffic passes through the fairway between Miller's Point and Balmain than through any other fairway, the former is 1,480 feet in width, as against 1,220 feet for the latter. And with regard to the depth of water in the various bays. The depth in Lavender Bay at low spring tides ranges from 20 feet at its head, 46 feet off M'Mahon's Point, to 50 feet between Blue's and Milson's Points. In Circular Quay the measurements are—20 feet at its head, 40 feet off the Orient Company's wharf, and 50 feet between Dawes Point and Fort Macquarie. In Darling Harbour the minimum depth is 12 feet, and its maximum depth 21 feet.

These figures prove that Lavender Bay is more capacious than Circular Quay or Darling Harbour above Pyrmont Bridge; that its depth of water is equal to, if not greater than, that of Circular Quay, while it is considerably greater than that of Darling Harbour; and that the Milson's Point fairway is not the narrowest in the harbour.

I would further point out that to connect Mr. Hamand's scheme, from the station in Neutral Bay valley with the high-level bridge at M'Mahon's Point, by the least expensive route, would cost, approximately, £170,000. To connect the Government amended scheme with the bridge would cost about £70,000. That by making a junction at 12 miles 25 chains from Hornsby, on the Government amended route, and by shunting back, a branch line to Ball's Head could be constructed, on the ruling grade of 1 in 50, at a cost of about £40,000. Its length would be about 5,000 feet, and it would provide about 2,500 feet of shipping accommodation for coal.

There is one matter I would not have alluded to, but that other witnesses have been questioned regarding it. They have been asked, "Would you put your money into such a railway?" I am now authorized to state that within an hour of the acceptance of the offer a marked cheque for £1,000 will be handed in to bind a further deposit of £10,000, as a guarantee of the purchase of the completed Government line for £450,000. This is a genuine offer.

I have, &c.,

C. C. BULLOCK.

To the Vice-Chairman, Parliamentary Standing Committee on Public Works.

## G 1.

## Re North Shore Railway.

Sydney Chambers, 130 Pitt-street, Sydney, 7 August, 1890.

Sir, In my evidence on the 29th ultimo, I stated, in reply to Mr. Garrard, that there was a difference in grade between Wyong and Newcastle, meaning thereby that a 1 in 40 grade did not exist. I find, however, that there are nearly 5 miles of 1 in 40 grade between those places, and consequently if coal were found at Wyong it is fairly reasonable to suppose that it would find its way to North Shore, either for local consumption or for exportation.

I have, &c.,

C. C. BULLOCK.

The Vice-President, Parliamentary Standing Committee on Public Works.

## LAND REQUIRED FROM THE BERRY ESTATE FOR THE PROPOSED RAILWAY.

Sir, Department of Public Works, Sydney 6 August, 1890.  
 With reference to the question of the land required from your estate for the purposes of the North Shore Railway Extension, I am desired by Mr. Secretary Bruce Smith to ask whether you are prepared, in the general public interest, to give free of cost to the Government such land as may be required, as you have already done in the case of the Kiama-Nowra Railway.

I have, &c.,  
 J. BARLING,  
 Under Secretary.

John Hay, Esq., Crow's Nest, North Shore.

Sir, Crow's Nest, North Shore, 7 August, 1890.  
 In reply to your letter of the 16th instant, *re* lands required from the estate for the purposes of the North Shore Railway Extension, I have, with the concurrence of my co-executor, Dr. Norton, agreed, "in the general public interest, to give free of cost to the Government such land as may be required," assuming that the "Pearce's Corner to Milson's Point" route is decided upon, and that the area of land so required—in addition to that already occupied—will be about 20 acres, and that the railway be constructed within two years.

This offer is made on the understanding that it will be accepted by Mr. Secretary Bruce Smith as in no way influencing the Committee in the direction or construction of the line.

I have, &c.,  
 JOHN HAY.

The Under Secretary for Public Works

Seen.—B.S., 7/8/90. By direction of Mr. Secretary Bruce Smith, I forward this letter for the information of the Public Works Committee.—J. BARLING, 7/8/90.

AFTER the receipt of the above letter, Mr. Hay was asked in another letter from the Under Secretary for Public Works whether the offer to give the land required from the Berry Estate for the railway free of charge to the Government would hold good if the Committee approved of the extension of the line to Lavender Bay, and not to Milson's Point, and the following letter was received from Mr. Hay, in reply :—

My dear Mr. Barling,

Crow's Nest, North Shore, 12 August, 1890.

I have your letter of the 11th instant, and in reply thereto I see no reason to deviate in any way from the offer embodied in my letter to the Under Secretary of the 7th instant.

Yours, &c.,  
 JOHN HAY,

J. Barling, Esq., Under Secretary for Works.

Submitted.—J.B., 12/8/90.  
 Committee.—J.B., 12/8/90.

Forward to Public Works Committee.—B.S., B.C., 12/8/90.

Secretary to the

 Plan IV.—Pearce's Corner to Milson's Point. Parliamentary Section, Part No. 2.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY TO CONNECT THE NORTH SHORE RAILWAY WITH PORT JACKSON, AT MILSON'S POINT.

FIRST REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the last Session of Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway to connect the North Shore Railway with the deep waters of Port Jackson at Milson's Point," have, after due inquiry, resolved that it is not expedient the railway should be constructed; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway represents an extension of 2 miles and 21 chains of the line, the construction of which is almost completed from Pearce's Corner, at Hornsby, to St. Leonards, commencing at the present terminal point of the Pearce's Corner Railway, at Gore Hill, or Crow's Nest, and ending at Milson's Point. In other words, it is a continuation of the Pearce's Corner Railway, with the object of connecting that line with the deep waters of Port Jackson. Short as the length of the extension is, the work of constructing it would be very costly. Some portions of the route would be traversed on the level, but others would require somewhat deep cuttings and difficult tunnelling, and the estimated cost of the extension is £262,000. Starting from the point at Gore Hill, or Crow's Nest, to which the Pearce's Corner Railway has been brought, the line would pass under what is known as Edwards' Road, then cross Bay Road and Carr-street on the level, and passing thence under Union-street, sweep round to the left, and, by means of a tunnel 430 yards in length, cross to the head of Lavender Bay, the eastern shore of which it would skirt, until it terminated at Milson's Point. The extension as proposed, represents a double line, and the estimated cost, £262,000, is made up of £127,000 for the construction of the railway, and £135,000 as the cost of land and compensation. This estimate is, to a certain extent, modified in a memorandum by the Acting Engineer-in-Chief for Railways, which will be found in the Appendix, and which will be alluded to again further on, but the amount stated may be considered as that representing the estimated cost placed before the Committee when the proposed work was referred to them by the Legislative Assembly, and, as that, which in the end, would probably be found to be correct. It will be noticed in a report upon the proposed line by the Railway Commissioners that the estimated cost of its construction, exclusive of land and compensation, is set down at £106,000, but this, it is explained, refers to the cost of a single line. Since this report was written it has been considered desirable to substitute a double line, and this increases the estimate of the cost of construction, exclusive of land and compensation, to £127,000. It must increase also the amounts given in the Railway Commissioners' report to represent the annual cost in the shape of interest on capital and the expense of working the line when in operation.

2. Two routes have at times been advocated in opposition to the proposed line, but they have not been recommended by any witness before the Committee. One of these is a line with a terminus at Blue's Point, and the other a line terminating at Cremorne. Only one of these alternative routes enters in a direct form into the consideration

consideration which the Committee have given the question before them. Though no person has come before the Committee to advocate the construction of either a line to Blue's Point or one to Cremorne, it has been necessary for the Committee to regard each of these suggested lines as a subject for consideration in relation to the question generally of extending the North Shore Railway to the deep waters of Port Jackson, and in that way the suggested extension to Blue's Point becomes a matter of some importance.

Object of the proposed railway.

3. The object of the proposed extension to Milson's Point is principally to open up a new residential suburb between Pearce's Corner and Crow's Nest; Pearce's Corner being the starting point at Hornsby of the already constructed North Shore Railway, and Crow's Nest its present terminus. This object, which will be found distinctly stated throughout the evidence given by the witnesses examined before the Committee, it is important to bear in mind. There is no idea of meeting by the proposed extension any requirements of the population around Milson's Point, or of those to the eastward of the route of the proposed railway, or of the people between Milson's Point and the present terminus of the North Shore tramway, near the St. Leonards Reserve; though the great majority of the population of North Shore live in those localities. It is admitted that the tramway supplies the wants of a considerable number of the present population of North Shore. But, it is urged, the railway extension is required to enable people to settle upon the land beyond the present tramway terminus, and between Gore Hill, or Crow's Nest, and Hornsby, where there is an area of country so suitable for residence that the line will, in all probability, become in a few years a suburban railway, with as large a passenger traffic, and as profitably worked, as the suburban line to Hurstville, and to places between Hurstville and Sydney. The land, which it is said would be taken up, and upon which residences would be erected, is high, commanding in places attractive views, with a cool, health-giving temperature, and possessing on the whole satisfactory facilities for drainage. A more desirable locality for suburban residence could not, it is stated, be found anywhere within easy distance of Sydney. The construction of a little more than 2 miles of an extension of the railway now at Crow's Nest, at a cost of over a quarter of a million of money, so that persons deciding to take up their residence along this suburban line might enter a train at Milson's Point, instead of a tramcar, and travel uninterruptedly to their homes, would, it is maintained, bring into existence a suburb equal in extent and population to any along the suburban railways on the Sydney side of Port Jackson.

The land available for residences.

Little or no hope of a goods traffic.

4. Some witnesses have spoken of coal, bricks, and general merchandise being sent along the railway, but the idea that there would be anything of the kind, in any appreciable quantity, is at least very uncertain. The responsible officials of the Public Works Department do not expect it. One of the reasons for the proposal to extend the railway to Milson's Point, instead of to Blue's Point, or to Cremorne, is the probability of there being little or no heavy goods traffic; and the goods traffic which some of the witnesses examined anticipate is, as will be explained, exceedingly doubtful.

Through passenger traffic.

5. As for through passenger traffic, there is nothing at all to show conclusively, that, unless in the case of passengers resident at North Shore, anyone coming from places north of Hornsby will travel southwards by the North Shore Railway, and it appears just as improbable that anyone going to places north of Hornsby, unless a resident of North Shore, will start from Milson's Point rather than from Redfern.

How the proposed line should be regarded.

6. Regarded, then, as a short and very costly extension in connection with a suburban passenger line the proposed railway has to be dealt with, and in that light it is now necessary to consider it, in order to judge whether it ought or ought not to be constructed.

Evidence obtained, and visit of inspection made, by the Committee.

7. In the consideration of this proposed public work the Committee have endeavoured to obtain evidence from all sides, and all persons who, previous to the closing of the evidence, expressed a desire to be examined, and came forward in pursuance of that desire, have been heard. Furthermore, a visit has been made to North Shore by the Committee, and the route of the proposed railway, and that which would be taken by the tram line (if instead of the proposed railway extension being constructed the cable tramway were continued from its present terminus near the St. Leonards Reserve to Gore Hill, this possible continuation of the tramway being a matter incidental to the general inquiry) have been carefully inspected.

8. Twenty-two witnesses have given evidence before the Committee, the number consisting principally of residents of North Shore directly interested in the construction of the proposed line, and it will be well to state briefly what that evidence is, so that the nature of the testimony put forward may be understood, and afterwards its value fairly estimated. No person has attended to give evidence in direct opposition to the line, but this may be attributed to two circumstances,—one, that the proposed railway would not, as will be shown in another part of this report, serve the bulk of the present population of North Shore, who are consequently not particularly interested in it; and the other, that though the line would not meet any requirements on the part of these people, it would be to the general advantage of the district to have the money which the railway would cost spent there, and consequently, it would be impolitic for any resident of the suburb, unless he favoured some rival route, to come forward and oppose the proposal.

The witnesses examined.

9. The departmental witnesses, or those who attended before the Committee on behalf of the Department of Public Works, were Mr. Joseph Barling, Under Secretary for Public Works, and Mr. Henry Deane, Acting Engineer-in-Chief for Railways. The former made a statement in which appeared the following points :—

Nature of the evidence given by the departmental witnesses.

- (1) £173,221 16s. has been expended to date on 10 miles 51 chains of the North Shore Railway from Hornsby to Gore Hill, and that expenditure by the time the works on this length of railway are completed will probably have increased to £180,000.
- (2) Unless the proposed extension to Milson's Point be carried out, this large amount of money—£180,000—will lie absolutely idle.
- (3) The object of the proposed extension is not to serve the population settled around Milson's and other Points, but to open up a new suburb between Pearce's Corner and Gore Hill.
- (4) It is not at all likely that persons living in the vicinity of the harbour will use the railway.
- (5) There is no probability of any coal or heavy goods traffic on the line beyond what is required for local consumption, and the cost of conveying coal from Newcastle or its district by rail would be so much in excess of the rate at which it can be conveyed by water, that it is not likely it will ever pay to bring coal to Sydney harbour from the north by rail, and therefore it would be most unwise to expend money in making wharves for the shipment of coal which will never arrive.
- (6) There is not room at Milson's Point to make wharves, the harbour there being so narrow that wharves would be an obstruction to navigation, and, in any case, goods or coal and passenger traffic must be separated, so that the value of Milson's Point for the shipment of coal need not be considered.
- (7) If the North Shore Railway stopped where it is now, at Crow's Nest, and the communication between that terminus and Milson's Point were by tram, the change from train to tram, and from tram to steamer, would be fatal to the residential value of the district.
- (8) Ten or twelve miles of travelling would be saved passengers from the north if they came to Sydney by way of Milson's Point, instead of by way of Strathfield.

10. The principal features of the evidence given by the Acting Engineer-in-Chief for Railways may be summarized as follows :—

Evidence given by the Acting Engineer-in-Chief for Railways.

- (1) When the North Shore Railway was originally planned, the passenger traffic was to have its terminus at Crow's Nest, where it is at the present time, and there was to be a branch line to Ball's Head for goods traffic, as it was anticipated coal would be conveyed along the railway in considerable quantities for shipment.
- (2) The idea of having a passenger terminus at Milson's Point, or, in other words, a water terminus for passengers, is a Ministerial afterthought.

- (3) If coal were brought by the North Shore Railway to the harbour, Ball's Head would be the most suitable place to which to bring it.
- (4) The cost of extending the tramway from its present terminus, near the St. Leonards Reserve, to the terminus of the railway at Crow's Nest, would be something under £30,000, and the length of this extension of the tramway would be about  $1\frac{1}{4}$  mile.
- (5) The height of the hill upon which the Government Observatory stands, on the Sydney side of the harbour, is about level with that of the locality of the present terminus of the North Shore Railway.

Synopsis of  
the evidence  
of other  
witnesses.

11. Referring now to the evidence given by the other witnesses examined before the Committee, it will be seen that the chief grounds upon which witnesses directly interested in North Shore, and in the construction of the proposed line, advocate the proposed extension of the railway to Milson's Point, are the following :—

- (1) The land which would be served by the proposed railway extension and the North Shore Railway is elevated and salubrious, and, with the access from Sydney provided by this extension, would attract a large population.
- (2) The population would increase to an extent equal, if not greater, than has been the case along the suburban portion of the Illawarra Railway, and along the railways serving the western suburbs.
- (3) A not inconsiderable area of Crown land, partly the residue of past Crown land sales, lies within a convenient distance of the North Shore Railway, and, with the proposed railway facilities, would probably find purchasers at a largely increased value.
- (4) A through passenger traffic between Sydney and Newcastle would come into existence by this route.
- (5) With the railway to Milson's Point there would be, in addition to the passenger traffic, a goods traffic, brought about by the conveyance of fruit from orchards in the district, of bricks from the brick manufactories in the vicinity of Gore Hill, of coal for use at the brick manufactories, of household supplies to residents, and possibly of coal from mines in the north for shipment in Port Jackson, and produce from northern farms for sale at North Shore and Sydney.
- (6) Milson's Point could be made the terminus of the Great Northern Railway.
- (7) The land resumed under the proposal for extending the railway to Milson's Point would include 2,000 feet of deep water frontage to Lavender Bay, which could be utilised for wharfage purposes, and would greatly increase in value.
- (8) A tramway connection between Milson's Point and the present terminus of the North Shore Railway at Crow's Nest would not encourage settlement along the railway, or meet the requirements of travellers, as it would make the journey between places of residence and Milson's Point inconvenient and slow; it would be fatal to the prospects of a goods traffic; and it would repeat the difficulty apparent in connection with the stoppage of the railway at Redfern, and the efforts since made to bring that railway more into the city of Sydney.
- (9) Crown land adjacent to the North Shore Railway was purchased on the faith of a promise or statement made at the sale that the railway would be extended to Milson's Point, and land for the construction of the North Shore Railway was given to the Government free of cost, on the understanding that the railway would be extended to the deep waters of Port Jackson.
- (10) A postponement of the proposed extension of the railway to Milson's Point would result in the necessity for incurring greatly increased expense in the resumption of the land required for the extension, as this land must be constantly rising in value.

12. The foregoing synopsis will be found to contain the substance of the evidence given before the Committee; and the statements made, and opinions expressed in this evidence, have been as carefully considered as the points which primarily appeared to the Committee to be those that should in the course of the inquiry be kept in view.

13. The inquiry has been conducted with a desire to deal with the proposed railway extension in a comprehensive manner, and the Committee have sought information, and endeavoured to arrive at a sound judgment, in regard to the following questions :—

Manner in which the Committee have conducted the inquiry.

- (1) The details of the proposal, in respect of length of line, route, easiness or difficulty of construction, cost, interest, expense of maintenance, and reasons for proposing to construct the railway.
- (2) The exact relation in which the proposed connecting railway stands to the North Shore Railway already in course of construction and approaching completion.
- (3) The position in which the North Shore Railway would be without the connecting railway.
- (4) The extent to which the proposed connecting railway would meet the travelling requirements of the population of North Shore, and be likely to lead to an increase of population, and to a consequent larger railway passenger traffic.
- (5) The probability, or otherwise, of a goods traffic on the railway.
- (6) Whether, in view of the enormous cost of the proposed railway, the interest to be met, the expense of maintenance, the uncertainty of the receipts proving satisfactory for some time, and other circumstances, including an indication in the evidence that an extension of the tramway is regarded by the Department of Public Works as an alternative scheme to that of constructing the connecting railway, the existing North Shore Tramway, extended to the present terminus of the North Shore Railway, would be sufficient to meet public requirements for at least some years, and until the question of bringing the North Shore Railway to the waters of Port Jackson has been further and more minutely considered.

14. These principal points for investigation have included others which, though not so prominent, are essential to a right understanding of the various features of the proposal before the Committee, and have formed matters upon which witnesses have been examined, or which the Committee have duly considered.

Relative questions that have been considered.

The relative questions that in this way have been subjects of inquiry are :—

(1.) Details of the proposal :—

Details of the proposal.

- (a) Is the route for the connecting railway one that avoids as much as possible expensive works, in the form of cuttings, embankments, or tunnelling?
- (b) Has the route been so chosen as to escape the necessity for the payment of a large sum of money as compensation for land?
- (c) Does it appear that the estimate of cost in connection with the railway has been calculated with a proper degree of certainty.

(2 & 3.) The relation of the connecting railway to the present North Shore Railway, and the position in which the latter would be without the connecting extension :—

Relation of the connecting railway to the North Shore Railway.

- (a) Is it absolutely necessary, in order to make the North Shore Railway remunerative, to connect that railway, as proposed, with Milson's Point?

- (b) What were the objects in view when it was resolved to construct the North Shore Railway, and has there since transpired in connection with this railway anything to show that those objects were misconceived and therefore not now likely to be realised ?
- (c) Were the residents of North Shore satisfied with the intentions of the Government in regard to the North Shore Railway when its construction was decided upon, and are there now any circumstances in connection with the progress of North Shore to show that the requirements of the population, which it was intended to meet by means of the North Shore Railway, are greater than they were then estimated to be ?
- (d) To what extent will the North Shore Railway, as it is, meet requirements ?

Extent to which travelling requirements would be met, and population increase.

- (4.) The extent to which the travelling requirements of the population would be met by the proposed connecting railway, and that to which the population is likely to increase :—

- (a) Is the proposed connecting line wanted, or likely to be used by those whose places of residence are, or may be, between Milson's Point and the present terminus of the North Shore Railway, or by those who live, or may live, to the east of the route of the proposed line—by, in fact, two-thirds or more of the present and future total population of North Shore ?
- (b) What prospects are there of an increased population as a result of constructing the railway,—what are the grounds, if any, for thinking that the increase would be large ; whence would the additional population come, and what class of people would they probably be ?
- (c) The extent to which the line would be used by through passengers travelling to or from Sydney and stations on the Great Northern Railway north of Hornsby ?

Probability or otherwise of a goods traffic.

- (5.) The probability or otherwise of a goods traffic :—

- (a) What goods,—if in opposition to the expectations and intentions of the responsible officers of the Department of Public Works it is thought the proposed railway would promote a goods traffic,—is it said the railway would convey ?
- (b) The reasons for considering that the goods mentioned would be conveyed by the railway ?
- (c) Reasons why it is very unlikely there would be any appreciable goods traffic of the kind stated ?
- (d) Has this question of goods traffic been thoroughly and satisfactorily considered ?

Whether it would be sufficient to extend the tramway.

- (6.) Whether, in view of the enormous expenditure upon the proposed railway, the uncertainty for some time of the results, and other circumstances, it would be sufficient for the present to connect the North Shore Railway with Milson's Point by extending the cable tramway from its present terminus to the terminus of the railway at Crow's Nest :—

- (a) The interest upon the cost of construction, and the expense of maintaining the railway which would have to be annually met ?
- (b) Whether the probable traffic on the railway has been estimated with any degree of accuracy ?
- (c) The cost of extending and working the tramway ?
- (d) Whether the working of the tramway could be improved so that it should be satisfactory in point of speed and frequency of journeying ?

15. Taking these points in the inquiry in the order in which they are stated, and, afterwards, those which appear in the evidence of the witnesses who advocate the construction of the connecting railway, the Committee deal with the various questions that arise in a due consideration of the proposed public work in the following manner:—

How the questions stated in the plan of the inquiry are dealt with.

16. The proposed railway extension and its objects have been described with some fulness in what has already been said. It has further to be mentioned that the annual interest and cost of maintenance, which the complete branch railway would make it necessary to meet, would amount to £21,000—a sum which would represent the fares of an enormous number of passengers.

The proposed extension and its objects.

17. The route chosen for the proposed line, if it be admitted that the railway should be brought to Milson's Point, appears to be as good as any that could be adopted. The distance is short, and the locality over which the line must come is hilly and irregular. An expensive tunnel in the vicinity of Lavender Bay, is to a certain extent, the consequence of the idea that the shores of the bay may be utilised for wharfage purposes, but it does not seem probable that tunnelling of an expensive nature could be altogether avoided if any other route at all desirable were selected. But while it may be conceded that carefulness has been exercised in the choice of route, the necessity for the payment of a large sum of money as compensation for land exists. Almost the whole of the route passes through private property, and nearly half of it through the Berry Estate, which is about to be subdivided by the trustees of the late Mr. David Berry and sold. In a memorandum forwarded to the Committee by the Acting Engineer-in-Chief for Railways (published in the Appendix) it is stated that the land required for the purposes of the railway through the Berry Estate "would probably be given without charge in consideration of the enormous increase in value which would result from the construction of the railway"; but a reference to the evidence of Mr. John Hay, one of the trustees of the estate, who was examined on this point, will show that he does not consider the railway would materially increase the value of the land, and he is not prepared to give the land for nothing. Subsequent to giving his evidence, he informed the Committee by letter that he and his co-trustee would part with the land required for the railway at the rate of £500 per acre, a rate that might bring about some reduction in the total sum which it has been calculated the construction of the railway would make it necessary to expend in the purchase of land; but for all practical purposes in the consideration of the cost of the proposed railway, the amount for the purchase of land and compensation may be taken as estimated by the Department of Public Works, and placed by the Under Secretary of that Department before the Committee—£135,000.

Route of the proposed railway.

Compensation for land.

18. The estimate of the total cost of the proposed extension appears to have been fairly calculated, but in the memorandum from the Engineer-in-Chief, previously alluded to, a possible reduction to the extent of £28,000 is mentioned. It is there stated that the estimated cost of resuming the land over the tunnel near Lavender Bay, set down by the Land Valuer at £28,000, may, under the Lands for Public Purposes Acquisition Act, which gives power to the Government to make tunnels for railway purposes without resumption if the surface be uninjured, be saved, as the surface would be uninjured in this case. This would reduce the total estimated cost of the line to £234,000, a reduction of importance, not necessarily such as to induce a more favourable decision with regard to the line than that at which the Committee have arrived, but certainly one which might have been made known to the Committee at the commencement, instead of at almost the close, of their inquiry.

Estimate of cost.

19. The relation of the proposed connecting railway to the North Shore Railway is somewhat similar to that between the suggested City Railway extension and the railway terminus at Redfern. The distance at North Shore is rather longer, but, while there is that slight disadvantage, the population, present and prospective, which the North Shore Railway is expected to serve is infinitesimal compared with the population of the many suburbs the railways to which start from Redfern. For many years the residents of these suburbs were brought to the terminus at Redfern by rail, and there left to find their ways to the various parts of the city by omnibus or cab, or on foot. The connecting tramway which enabled the people after leaving the trains to travel by tram into or through the city is of recent date. North Shore

Relation of the proposed railway to the North Shore Railway.

Shore, more favoured, has a tram service which can be used in connection with the North Shore Railway from the time that railway is brought into operation. Consequently, the position which this railway would occupy without the proposed connecting line to Milson's Point, would be very much superior to that which the suburban railways on the Sydney side of the harbour occupied for a very long period, and it would be little or no different from that in which these suburban railways are now.

The North Shore tram service.

20. Whether the tram service at North Shore would prove as convenient and effective as that which connects with the railways at Redfern is a matter that will be referred to later on; but, judging from the success which has attended the connecting tram service at Redfern, and the probabilities of similar success at North Shore, it does not appear, if only for this reason alone, absolutely necessary, in order to make the North Shore Railway remunerative, to connect that railway as proposed with Milson's Point.

Intentions and ideas with regard to the North Shore Railway when that railway was proposed.

21. When it was originally proposed, and afterwards decided, to construct the North Shore Railway, there was no idea of bringing it to Milson's Point. It was considered by all concerned—Government, Government Officials, and North Shore people—quite sufficient for all passenger requirements to bring the line to its present terminus, and then, if provision were wanted for a goods traffic, to make a branch line from Chatswood to Ball's Head. It was at that time thought there might be considerable traffic in coal, and Ball's Head was regarded as the most suitable place for coal shipment. The proposal to have a railway terminus for passengers at the water's edge is admitted by the Acting Engineer-in-Chief for Railways to be a Ministerial afterthought. According to the original Departmental plan, the passenger traffic was to have its terminus at Crow's Nest, and there was not at that time any expectation that there would be a tramway down to the water. How then, it is necessary to inquire, has it come about that the original plan with regard to the North Shore Railway has been altered, and that it is now asserted that without the connecting extension, upon which must be expended the large sum of £262,000, the railway already constructed will be useless? The substance of the evidence of the Acting Engineer-in-Chief for Railways on this point is that the idea of a goods traffic and coal shipment at Ball's Head has been abandoned, and that being so, it has been thought advisable to extend the passenger traffic to Milson's Point, in order, he says, to bring that part of the North Shore Railway "which has already been constructed into some use, and to make it serve one of the purposes for which it was originally intended." Originally, and until it was decided to alter the original plan, there does not appear to have been any doubt on the part of the authorities that the North Shore Railway could be brought into use for passengers, and meet requirements by having its terminus where it is at present; now it is said, apparently only because opinions seem to have changed with regard to a goods traffic, that the railway will be useless for passenger traffic unless it be brought to Milson's Point.

Original plan with regard to the North Shore Railway not shown to have been misconceived.

22. Apart from these circumstances, it does not appear that since the time when the construction of the North Shore Railway was determined upon anything of importance has transpired to prove that the opinions then entertained, in regard to passenger accommodation, were misconceived to the extent indicated by the present proposal to bring the passenger traffic to Milson's Point. No protest was raised by the residents of North Shore against the railway terminating, as far as related to passenger traffic, at Crow's Nest; apparently everybody was satisfied, and they appear to have remained so until the change in the opinions of the railway authorities, in respect to goods traffic, and until certain representations were made to the Minister for Works by residents of North Shore, alive to the advantage which the extension of the railway would be in the expenditure of a large amount of public money in the district, and the increased value which the complete line would give to property in its vicinity. Those circumstances appear to have given rise to an impression in the minds of some persons that, viewed locally, it would be better to have the extension than to be without it; in those of others, who had speculated in land along the route of the present railway, that the extension must be to them a cause of greatly increased profit: and in the minds of some who had taken up their residence along the route of the North Shore Railway, that at least it promised more convenience to them, when leaving the ferry steamer at Milson's Point, to be able to step into a railway carriage instead of into a tramcar. So it has come about that the extension

is

is advocated. Local advantages and private interests would not of themselves be sufficient to put forward in support of the proposal, but to these were added what are urged as public advantages—benefits that are, in the opinion of the Committee, at least very doubtful—and thus the extension to Milson's Point became a proposal for submission to Parliament.

23. Five years have elapsed since the construction of the North Shore Railway was proposed to Parliament; and though the population of North Shore has increased considerably during that period, and the general progress of the suburb has been very satisfactory, the advance has not been of that kind which would lead to the conclusion that the accommodation intended to be afforded by the North Shore Railway is likely to be insufficient for requirements. The bulk of the increase of population has not been in the direction of the railway; it has been in parts of the suburb which will not be served by either the North Shore Railway or by the proposed extension to Milson's Point. A few people have taken up their residence in the neighbourhood of the North Shore line, and others have purchased land which they desire to sell for the purposes of residence; there are orchards in the district which send annually to market a considerable quantity of fruit, and there are a few brick manufactories, some of which are doing a good business. But nothing of this is of the nature of the unexpected. Residence along the route, land speculation, the growth and sale of a considerable quantity of fruit in the district, and an extensive manufacture of bricks were as apparent five years ago as now. That the probability of a large number of people residing along the route of the railway was not lost sight of by those who recommended the construction of the line is clear from the fact that special arrangements were made with regard to a terminus for the passenger traffic. The growth and sale of fruit were a known certainty, inasmuch as the district is specially suitable for this industry, and large orchards have been in a thriving condition there for many years; and as for the manufacture of bricks, most people know that the existence of valuable kinds of clay at North Shore has not been a secret, and that good bricks were being made in the district in large quantities before the North Shore Railway was thought of. It, therefore, does not appear that the circumstances in relation to the North Shore Railway are now any different from what they were when that railway was proposed and its construction decided upon, and the probability of its meeting public requirements is the same at the present time as it was then.

Progress of North Shore not such as to indicate that the North Shore Railway is insufficient to meet requirements.

24. It is necessary now to consider the extent to which the travelling requirements of the population will be met by the proposed connecting railway, and that to which the population is likely to increase. First, is the proposed connecting line wanted or likely to be used by those whose places of residence are, or may be, between Milson's Point and the present terminus of the North Shore Railway, or by those who live, or may live, to the east of the route of the proposed line—by what constitute two-thirds or more of the present and future total population of North Shore. A reference to the evidence, and a careful consideration of the subject, will show that the proposed line is not wanted, and will not be used, by the bulk of the residents of the suburb. Most of the increase which has taken place in the population of North Shore is principally to be found to the east of the proposed line to Milson's Point, and in parts of the suburb which are served by the present tramway. This increase eastwards will continue, and as it proceeds so will the number of people to whom the proposed railway will be useless become larger. The witnesses examined by the Committee say that the people who are likely to patronise the railway are those who do now, or will in the future, reside within about 3 miles of Milson's Point, and in the neighbourhood of the present terminus of the North Shore Railway, and between that locality and Pearce's Corner. For this portion of the population only the railway is wanted, and most of this population is prospective. The railway is expected to bring the people; at present the residents who would be served by the line are few and scattered.

Extent to which travelling requirements will be met by the proposed railway, and to which population is likely to increase.

25. It is urged that with a railway from Milson's Point to Pearce's Corner the railway route would become as thickly populated as has been the case with the suburban railways radiating from Redfern, and the Illawarra line is alluded to specially. Setting aside the circumstance that the tramway connection between the city of Sydney and the Redfern terminus does not seem to have interfered with the progress of the suburbs on the southern side of the harbour, it is well to inquire as to the nature of the locality along the North Shore Railway as compared with that

Differences as regards population between the Milson's Point and North Shore Railways and the suburban railways starting from Redfern.

fo

of the suburbs—and particularly those along the Illawarra line—served by the railways starting from Redfern, in order to judge whether it is probable the one district will become as populous as the others. In the first place, the people who are expected to be accommodated by the North Shore Railway are, according to the evidence—and this is apparent to anyone who is acquainted with the locality—not likely to reside nearer to Milson's Point than some 3 miles. Yet a very large proportion of the residents of the suburbs served by the railways running from Redfern reside within this distance of 3 miles. On the Illawarra line the populous suburbs of Eveleigh, Erskineville, St. Peters, and Marrickville are within that distance; and on the line from Redfern to Parramatta there are within the same distance of Redfern the still more thickly populated suburbs of Macdonaldtown, Newtown, Stanmore, and Petersham,—with Summer Hill and part of Ashfield within another mile. Furthermore, the population along these suburban lines is not to be found in any appreciable number beyond a distance of 8 or 9 miles, that being the distance from Redfern at which Hurstville is situated on the Illawarra line, and Homebush, on the line to Parramatta; and as it is not likely to be any different in the case of the North Shore Railway, and the length of that railway being rather more than 13 miles, at least 6 miles of the line—the first three from Milson's Point, and the last three from the 10 miles distance to Pearce's Corner—will be destitute of population to any appreciable extent, and the traffic returns of the railway affected accordingly. But there is another point of difference between the North Shore Railway and the suburban lines on the other side of the harbour in respect of probable population along the route of the former. The people who have taken up their residences in the suburbs served by the railways to Hurstville and Parramatta are in the main of the working or labouring class. The proportion of well-to-do residents, in comparison with the large number of people of small means and humble life, is very small. The suburbs within a distance of 3 or 4 miles of Redfern, are crowded with working people, the well-to-do residents living further out. But in the case of the North Shore Railway, while there may be many well-to-do people, who would take up their residence along the line, it is not at all likely that the locality will be favoured by a working class population. The journey across the water, as compared with that by tram to Redfern, would not, associated with other circumstances, be attractive, and the fact that to reap any of the benefits from the high land and the healthful atmosphere, which are put forth as the attractions of the line, residence must be taken beyond the distance within which the suburb could be a convenience, would be fatal to working men of moderate means and busy lives living there.

Reasons why  
the proposed  
railway would  
not be used  
by through  
passengers.

26. Whether the line would be used by through passengers travelling to or from Sydney and stations on the Great Northern Railway north of Hornsby is a question which, in the light of probabilities, can very easily be answered. It is put forward by those who say the railway would be used by through passengers that by coming to Milson's Point such passengers would, after crossing the harbour by ferry steamer, be in a much more convenient position for reaching hotels or any other place of destination in the centre of Sydney than passengers are who travel through from the north to Redfern. In the first place, much of this alleged greater convenience would depend upon whether the Railway Commissioners worked the North Shore Railway as a branch railway or as a part of the trunk line, and it will be seen that the intention of the Commissioners is to work the railway as a branch line. There is nothing whatever in what has come before the Committee to indicate any intention to make the line part of the main Great Northern Railway. That being so, passengers travelling to Sydney by way of Milson's Point would have to change from one train to another at Pearce's Corner,—under present arrangements at a very early hour in the morning,—and the inconvenience of this would be increased if, as is the case with most through passengers, there were luggage to be looked after. Next, there would be the change from the train at Milson's Point to the ferry steamer, with a further inconvenience, similar to what was experienced at Peat's Ferry before the opening of the bridge over the Hawkesbury River; and then, having passed through all this, it would be necessary for passengers to carry their luggage ashore from the steamer on the Sydney side of the harbour, or find and pay someone else to do it—for it is hardly likely there would be railway porters stationed there—and proceed to look for cabs. Is it at all probable that anyone would go through such experiences in preference to travelling comfortably

comfortably round to Strathfield and Redfern, though the length of journey that way might be a few miles more, and being landed at Redfern, where luggage is expeditiously handled by railway porters, and cabs are conveniently obtained through officers of the Transit Commission? And having arrived at Redfern, where is the difference between reaching from that point any part of the city and reaching any part from Milson's Point? The time occupied in travelling in a cab would be almost the same, and the fare would be no more from one place than from the other. Only in the case of persons residing at North Shore would any through passenger be likely to come or go by the North Shore Railway. To such a person as that it would be an advantage to change from one train to another at Pearce's Corner rather than be taken round to Redfern, and have to cross the harbour to Milson's Point; to anyone else it would simply be the beginning of a period of intolerable discomfort.

27. The probability, or otherwise, of a goods traffic on the proposed railway is the question next to be considered. In dealing with this subject it might very well be dismissed by merely drawing attention to the contradictory nature of the evidence regarding it. Most of the North Shore residents who came before the Committee to advocate the construction of the railway, urged that the conveyance of goods would be a very material matter in connection with the railway—that the goods traffic would be large and important. The railway authorities, on the other hand, say there would be no goods traffic beyond that required in connection with local consumption, that the railway is not intended to carry a heavy goods traffic, that it is only a suburban passenger line, and that, therefore, the question of a goods traffic can be left out of consideration altogether. These statements, again, are contradicted by an extract from the speech of the Secretary for Public Works at the time the proposed connecting railway was referred by the Legislative Assembly to the Committee, in which it is argued by the Minister that a cargo traffic may spring up between Newcastle and Sydney along this proposed line, and that in view of this provision for ample wharfage accommodation is at hand in the frontage which will be secured at Lavender Bay. Judged merely in the light of these conflicting opinions it would be difficult to conclude whether a large and profitable goods traffic would or would not follow the construction of the proposed railway; but by a careful scrutiny of the evidence the question can be better understood and decided. The witnesses who declare that there would be a considerable goods traffic if the connecting railway were constructed say this goods traffic would principally consist of—

The question of a goods traffic considered.

What it is said a goods traffic would consist of.

- (1) Fruit.
- (2) Bricks.
- (3) Coal for local consumption—for the use of brick manufactories and residents.
- (4) Coal for shipment.
- (5) Agricultural produce from the north for distribution about North Shore and Sydney.

28. Taking the article fruit first into consideration, it should be remembered that fruit was grown in large quantities, and sent away from the orchards, before the North Shore Railway was proposed, and that the requirements of this fruit industry were not overlooked when the proposed construction of that railway was under consideration. Apparently there was no idea then that the North Shore Railway with its termination at Crow's Nest would not serve the interests of this industry, or rather there would appear to have been an indifference on the subject, as the requirements of most of the large fruit growers in the district are met by the railway from Hornsby to Strathfield and Darling Harbour. Many, if not most, of the fruit growers have their orchards in the neighbourhood, or within easy distance of Hornsby, and send their fruit by rail from Hornsby to Sydney. Some living nearer to Milson's Point might prefer sending their fruit to Sydney by the Milson's Point line—it is said they would—but the necessity for unloading the fruit from the train at Milson's Point, and its subsequent conveyance to market, would certainly militate against any advantage looked for from the more direct and shorter route from the orchards to the distributing centre in Sydney, which this proposed railway might be expected to afford, and make this traffic in fruit exceedingly doubtful. Something has been said of the shipment of fruit from North Shore, but this is uncertain, and being so is not a matter which need at the present time be seriously considered.

Fruit.

Conveyance  
of bricks.

29. With reference to the conveyance of bricks it is said large quantities of bricks would be sent from the manufactories by the proposed railway; but here again—except in the case of one manufactory in connection with which a railway siding is talked of—there would be the loading of the bricks into carts, the unloading from the carts into railway trucks, the unloading from the trucks, and the loading into carts again, prior to crossing the harbour, in comparison with the far less laborious and quicker method of carting the bricks from the manufactories to the steamer, and taking the loaded carts in the steamer across to Sydney, or, in special cases, sending the bricks to Sydney by railway, *via* Hornsby and Strathfield. And the facilities for carting the bricks to Sydney by way of the Milson's Point Ferry would seem to be greater from the fact that the principal manufactories are at or close to Gore Hill, near where the present terminus of the North Shore Railway is situated.

Shipment of  
bricks.

30. One witness stated that bricks would be sent by the railway for shipment from Milson's Point to coastal ports; but this statement also may be replied to by drawing attention to the short distance between the brick-yards and Milson's Point, and the expedition in carting the bricks that distance after they are once put in the drays, as compared with the trouble and delay of carting them to the railway, loading them in the railway trucks, and unloading them again for shipment into vessels.

Coal for local  
consumption.

31. Coal for local consumption may be conveyed over the railway, but, if what is called mountain coal is used, only as far as the point at which the North Shore Railway now terminates, that point being central for both the brick-works and the houses of the bulk of the residents; and facilities for the conveyance of this coal exist without the extension of the line to Milson's Point. If Illawarra coal should be the article used for local consumption it would, it is said, be landed at Milson's Point from steamers, and sent along the railway from Milson's Point. But, with the exception of the evidence of the witness who is a director of a large brick manufactory, and who says that manufactory probably would use Illawarra coal if the Milson's Point extension were made, there is nothing to show that the residents of North Shore would prefer southern to western or other coal, and the fact that the railway authorities are totally against the construction of coal wharves at Milson's Point is decidedly against the probability of any coal being landed there.

Shipment of  
coal.

32. The shipment of coal conveyed along the proposed line to Milson's Point is also a matter of some doubt. The Under Secretary for Public Works points out that the cost of conveyance of coal from Newcastle or its district would be so high as to make it very unprofitable to bring the coal to Sydney Harbour for shipment; that, therefore, it would be most unwise to make wharves for the shipment of coal which would never arrive; that, if it were necessary to make wharves, Milson's Point would not be chosen; and that, in any case, goods or coal and passenger traffic must be separated. So that the value of Milson's Point for coal shipment need not be considered. The evidence of the Acting Engineer-in-Chief for Railways is equally emphatic against the Milson's Point extension being in any way regarded as a line which would be used for the conveyance of coal intended for shipment. It appears, however, to the Committee that coal raised, say at Wyong, may be conveyed along the North Shore Railway, and shipped in accordance with the original plan at Ball's Head or Blue's Point, conveyed thither by a branch line from Crow's Nest, and that, therefore, this question of the shipment of coal has not, in relation to the proposed work before the Committee, been satisfactorily disposed of by the evidence given upon it.

Agricultural  
produce from  
the north.

33. Respecting the next class of goods traffic which the proposed connecting line, it is urged, would encourage—the reception and distribution of agricultural produce from the north—the evidence bearing upon it has been given by Mr. M'Rae, M.P. This witness goes so far as to express the opinion that Milson's Point should be the terminus of the Great Northern Railway, and that a produce depôt at Milson's Point would be more convenient than such a depôt at Darling Harbour. That raises a large question, which it is not necessary to consider here; and with reference to the idea that, if the extension to Milson's Point were constructed, agricultural produce would be sent from the north, it does not seem necessary to do more than repeat what has already been said with regard to the ideas respecting the conveyance of other kinds

kinds of goods along the line—that, so far as North Shore is concerned, no distributing point more central and generally convenient than Crow's Nest could be found, and that it is most unlikely that produce of this kind would be sent over to Sydney from the railway terminus at Milson's Point, in view of the serious inconveniences inseparable from such a proceeding. For the foregoing reasons, it is very clear that the question of goods traffic on the proposed railway has not been thoroughly and satisfactorily considered.

34. As to the question whether it would be sufficient for the present to connect the North Shore Railway with Milson's Point, by extending the cable tramway from its present terminus to the terminus of the railway at Crow's Nest, there should first be borne in mind the reasons which have already been stated why the proposed extension is not required, and then a comparison should be made between the estimated cost of the proposed connecting railway and that of extending the present tramway so as to provide a tram connection. The cost of the proposed railway is set down at £262,000; the cost of the tram extension would be under £30,000. The annual interest and the expense of maintaining the railway would be very considerable; the interest on the cost of the tramway extension, and the expense of maintaining that short length of tramway, only  $1\frac{1}{4}$  mile, would, in comparison, be very small. Some evidence given by the Secretary for Railways is to the effect that the cost per mile of working a railway is much less than that per mile of working a tramway; but it must not be overlooked that in the case of the North Shore tramway the unavoidable heavy grades upon it, and other special circumstances, have conduced to the cost of maintenance being high, and that from the present terminal point, near St. Leonards Reserve, to the present North Shore Railway terminus at Crow's Nest, the route would be entirely free from these grades or any other features which would be likely to make the maintenance of the extension costly. Moreover, the Secretary for Railways says that the longer the length of cable at North Shore is, the less proportionately per mile would be the cost at which it could be worked.

Question of connecting the North Shore Railway with Milson's Point by extending the tramway.

35. In dealing with this question of cost, it was necessary for the Committee to ascertain as far as possible the probable revenue that would be derived from the railway when open for traffic; and the indefiniteness upon this subject throughout the evidence is remarkable. Some of the witnesses were actually ignorant of what the railway would cost, and in almost every instance they were unable to say anything definite—even so far as producing a calculation or estimate of their own—as to the revenue return which might be expected from the line. To anyone who carefully examines the statements made by the different witnesses who came forward as residents of North Shore, and direct advocates of the proposed railway, it will be apparent that in most cases their testimony is of a general character, and that the success of the line, judged from their evidence, is a matter of speculation or inference. Even the Railway Commissioners do not state what the returns are likely to be. They say "there is no basis upon which an estimate of the probable revenue can be formed," but they recommend the proposed line because they consider that without it the present North Shore Railway "can prove of but limited commercial value, having no outlet."

Indefiniteness with regard to the probable revenue from the railway.

36. This outlet, in view of all the circumstances, a majority of the Committee consider may be provided by connecting the tramway with the railway. The tram extension would cost very little; there would be no more land resumption required than two small and inexpensive corners, and the working of the trams could be improved so as to meet the additional traffic satisfactorily. The tramway would not carry a goods traffic, but the necessity for immediate provision for a goods traffic has been shown to be doubtful. That it may be made to carry its present passenger traffic and the traffic which may follow the opening of the North Shore Railway must be clear upon any careful examination of the matter. It is indicated in the evidence of the Under Secretary for Public Works that there has been for some time a determination to extend the tram line to the Lane Cove Road, in the neighbourhood of Crow's Nest, though, pending the decision of the Committee regarding the proposed connecting railway, the extension of the tramway has been delayed, and this contemplated extension could be utilised in the connection which the tramway would make with the railway. Objections are to be found in the evidence to

Reasons in favour of extending the tramway.

the time which would have to be spent in the tram, as compared with the time of the journey in a train, and to the inconvenience of changing from tram to train; but if a well-devised system of through trams were brought into operation morning and evening, between certain hours, the time of the journey might be so materially reduced as to remove all inconvenience on that ground to residents going to their business or returning to their homes, and the inconvenience of stepping out of a tram into a train need be no greater than is experienced daily by many thousands more people than for many years can be expected to travel along the North Shore Railway. It would be better, other things being equal, to be without this inconvenience, but to be without it means, as matters in regard to the proposal under the consideration of the Committee stand, the expenditure of over a quarter of a million of money, with a very uncertain prospect of the expenditure being remunerative.

The statements in the evidence with reference to Crown land, and the resumption of land.

37. Two points which appear in the evidence of witnesses directly interested in North Shore, and, therefore, in the railway, remain to be dealt with. One is that Crown land along the route of the North Shore Railway would, with the proposed railway facilities, probably find purchasers at a largely increased value; another is, that Crown land was purchased on the faith of a promise that the North Shore Railway would be extended to Milson's Point, and that land for the construction of this railway was given, free of cost, to the Government, on the understanding that the line would be extended to the deep waters of Port Jackson. These points can be answered very completely in a few words. If the Crown land available for residence does not sell for a time, in consequence of the want of the Milson's Point extension, it will remain a valuable asset in the hands of the Government for future sale, and its value, under any circumstances, must increase. With regard to the second point it is absolutely denied by the officer of the Lands Department, who officially attended at the Crown land sales in the neighbourhood of the North Shore Railway, that any promise of the kind stated was made, and a similar denial is given by the Under Secretary for Works in reference to what is alleged as to land given for the construction of the railway.

How the proposed Railway is affected by the question of a bridge between Sydney and North Shore.

38. Finally there is the subject of a bridge connection between North Shore and Sydney. A bridge from some point on the Sydney side of the harbour to some point on the North Shore side, connecting the suburb with the city, may be erected within the next few years, and the question arises where the connection is likely to be, and whether it will be assisted or retarded by a railway to Milson's Point. Wherever the bridge may be erected it is certain to be so constructed as to be able to carry a railway, and for that railway to join easily and well with the railway at North Shore the junction must be somewhere on a high level. A connection at Milson's Point will not be suitable, nor anywhere on the low level upon which the proposed railway to Milson's Point would run. The junction of the line crossing the bridge must be on high land, so as not to obstruct the harbour traffic, and as, so constructed, it would carry the traffic both passenger and goods, from suburb to city, and city to suburb, in the face of any facilities a line from Crow's Nest to Milson's Point might offer, the line to Milson's Point would consequently be less used, and the vast expenditure incurred in its construction would be proportionately wasted.

Summary of conclusions at which the Committee have arrived.

39. Shortly stated the conclusions at which the Committee have arrived are :—

- (1) The proposed railway is enormously expensive, and being so, every precaution should be taken before the expenditure is authorized, to see that, if constructed, the line will prove remunerative.
- (2) The circumstances attending the construction of the present North Shore Railway, and the present condition and prospects of North Shore being such as to show that the original plan in regard to passenger traffic on this railway was not misconceived, there is nothing on those grounds to prove that this railway, assisted by adjuncts other than the proposed connecting line to Milson's Point, will not meet public requirements for at least some years.

(3)

- (3) The proposed railway, if constructed, would be useless to the great majority of the present and future population of North Shore, inasmuch as most of the settlement in the suburb is, and will continue to be, to the east of the proposed line.
- (4) The prospect of a large population along the North Shore Railway, travelling to and fro, similar to what is to be seen on the suburban railways starting from Redfern, is not free from considerable doubt.
- (5) A through passenger traffic is a matter of great uncertainty.
- (6) The evidence respecting the subject of a goods traffic is contradictory and inconclusive, and generally of such a nature as to show that the question of goods traffic has not been thoroughly and satisfactorily considered.
- (7) By extending the present tramway for a short distance, at very small cost compared with the estimated cost of the proposed railway, and making provision for improving the running of the trams, at certain times of the day, in point of speed and frequency of journeying, public requirements could be met, the North Shore Railway utilised, and the great expense of constructing the proposed railway avoided.
- (8) As a bridge to carry a railway may be constructed between Sydney and North Shore within the next few years, it is necessary to provide for a connection of the railway crossing the bridge with the railway at North Shore on a high level, and this requirement would not be met by the proposed extension to Milson's Point.

40. The evidence taken in the inquiry was considered by the Committee on Tuesday, 5 November, and the following extract from the minutes of the meeting will show the resolution which was passed :—

The resolution passed by the Committee.

Mr. Dowel moved,—“That the Committee consider it expedient that the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point, as referred to them by the Legislative Assembly, be carried out.”

Mr. Garrard seconded the motion.

The motion was negatived, after discussion, on the following division :—

Ayes, 5.	Noes, 8.
Dr. Garran, Mr. Humphery, Mr. Garrard, Mr. Dowel, Mr. Hurley.	Mr. Abbott, Mr. Lackey, Mr. Trickett, Mr. Cox, Mr. Copeland, Mr. Tonkin, Mr. O'Sullivan, Mr. Lee.

Mr. Trickett moved,—“That the Committee do not consider it expedient that the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point, as referred to them by the Legislative Assembly, be carried out.”

The motion was seconded by Mr. Lackey, and passed on the following division :—

Ayes, 8.	Noes, 5.
Mr. Abbott, Mr. Lackey, Mr. Trickett, Mr. Cox, Mr. Copeland, Mr. Tonkin, Mr. O'Sullivan, Mr. Lee.	Dr. Garran, Mr. Humphery, Mr. Garrard, Mr. Dowel, Mr. Hurley.

J. P. ABBOTT,  
Chairman.

Sydney, 11 December, 1889.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY TO CONNECT THE NORTH SHORE RAILWAY WITH PORT JACKSON, AT MILSON'S POINT.

WEDNESDAY, 9 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY,

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

CHARLES ALFRED LEE, Esq.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Committee proceeded to consider the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Joseph Barling, Esq., Under Secretary for Public Works, sworn and examined:—

1. *Chairman.*] You are the Under Secretary for Public Works? Yes.
2. What can you tell us about the proposal to connect the North Shore Railway with Port Jackson, at Milson's Point? I have a statement here which I shall read to the Committee:—The proposal before the Committee is for an extension of the railway from its present terminus at Gore Hill to Milson's Point. The length of line already carried out, viz., that from Hornsby to Gore Hill, is 10 miles 51 chains, of which the last 51 chains is not quite completed. The expenditure to date on this line is £173,221 16s., and when the works are finally completed the cost will probably be £180,000. The first section was completed in May last. I would here point out to the Committee that, unless the proposed extension is carried out, the large amount of money that has been already spent will lie absolutely idle. The proposed extension may be described as follows:—

LINE TO CONNECT THE NORTH SHORE RAILWAY WITH THE WATERS OF PORT JACKSON, AT MILSON'S POINT.

Length, 2 miles 21 chains.

Estimated cost, £127,000 for a double line, exclusive of cost of land and compensation; average per mile, £56,133.

The route recommended for the extension of the North Shore line has its terminus at Milson's Point.

This line commences at 10 miles 51 chains on the railway from Pearce's Corner to St. Leonards, and terminates at Milson's Point, being a length of 2 miles 21 chains.

The line passes under Edwards Road at 28 chains. Bay Road and Carr-street are crossed on the level. After passing under Union-street it sweeps round to the left, and by means of a tunnel crosses to the head of Lavender Bay; then skirts to the eastern shore of this bay, and terminates at Milson's Point.

A platform can be provided at the crossing of the Edwards Road, and another at Bay-street. A platform at Walker-street, at the head of Lavender Bay, can also be provided.

Very little valuable land is interfered with in the whole distance, nor are any important houses seriously damaged.

The terminus at this point will give every accommodation to the travelling public, as it will meet the steamers to and from Sydney, and be close to and on the same level as the cable tramway running through the centre of St. Leonards, and will also provide for the transference of horses and carriages between the railway and the horse-ferry steamers.

One tunnel, 430 yards in length, will be constructed.

The estimated cost of land and compensation is £135,000.

August, 1889.

The principal routes which have been advocated in opposition to the proposed line are—one to terminate at Blue's Point, and another at Cremorne. The first of these is impracticable, by reason of the distance being too short to admit of the descent being made to the water at Blue's Point with a grade of 1 in 40, which is the ruling grade in the line proposed, and also in the line to Cremorne. The objections against the Cremorne route may be summarized as follows:—In the first place, it will be 1 mile 30 chains longer than the Milson's Point route; secondly, it would cost a much larger sum of money, the estimated cost for the works (exclusive of land) being roughly estimated at £250,000, as against £127,000 for the Milson's Point line. The arguments urged in its favour are: (first) that it would serve a larger population, and (secondly) that it would be better for goods and coal traffic. With regard to the first argument, it is not at all likely that persons living in the vicinity of the harbour would use the railway at all, as they would probably make their way to the various ferries which would bring them nearer Sydney. The majority would, of course, use the present tram. The object of the line proposed is not to serve the population settled round Milson's and other points, but it is to open up a new suburb between Pearce's

J. Barling,  
Esq.  
9 Oct., 1889.

Corner and Gore's Hill. With regard to the coal and heavy goods traffic, this is likely to be little beyond that which is required for local consumption. The cost of conveyance of coal from Newcastle and district would be 7s. to 8s. per ton, as compared with that from the nearest point of the Illawarra coal-measures to Darling Harbour, which would be 3s. 1d. per ton only. By water the carriage from Newcastle would amount to (say) 4s. per ton, and, with rate from collieries to wharf—1s. 6d.—would make a total of 5s. 6d. per ton; so that it is not likely that it will ever pay to bring coal to Sydney Harbour from the north by rail, and therefore most unwise to expend large sums in making wharfs for the shipping of coal which will never arrive.

3. *Dr. Garran.*] Have you charged anything for cramage at this end? We have not gone into wharfage charges. If there were any charge, of course that would have to be added. One shilling and sixpence includes both the railway and cramage charges, so that the cramage alone at this end would not come to a large amount.

4. What would it be? It would be not more than 2d. or 3d. a ton. To continue my statement:—If it were necessary to make wharfs, Milson's Point would not be chosen, as there is not room there, and the narrowness of the harbour would help to cause obstruction to navigation. In any case, goods or coal, and passenger traffic must be separated, so that the value of Milson's Point for coal shipping need not be considered. Milson's Point has been selected principally for passenger traffic, and for that purpose it is undoubtedly superior to Cremorne. The principal traffic will be that of passengers travelling to and from Sydney. The Lane Cove Road district is one of the finest residential areas near Sydney, and a large suburban population may be expected to spring up. Were the Milson's Point line constructed, Gordon, 500 feet above high water, would be as accessible from Sydney as Strathfield is now; whereas, if the line stopped at the Crow's Nest, the double change from train to tram and from tram to steamer would be fatal to the residential value of the district; and if passengers had to proceed *via* Cremorne it would take them a quarter of a hour longer than *via* Milson's Point, the former point being  $1\frac{1}{2}$  mile from Sydney as against  $\frac{3}{4}$  of a mile for the latter. Any one who wished to get from the Circular Quay to (say) Gore Hill would, by the Milson's Point route, require fifteen minutes only, including steamer; *via* Cremorne he would require thirty minutes. The ruling gradient is the same on both routes, but the earthworks on the Cremorne route would be heavier in proportion, as they would include three tunnels of an aggregate length of  $\frac{3}{4}$  mile. The cost for double line of railway for the Cremorne and Milson's Point routes respectively would be £250,000 and £127,000. The Cremorne route would be altogether out of the way of the suggested bridge to connect North Shore with Sydney, whereas the Milson's Point route is the only one from which such a bridge could be approached. With the permission of the Committee I would like to quote from a speech made by the Minister when explaining the project to Parliament on the 7th August last. It is as follows:—

I think I have explained that the extension is not merely for the suburban population of North Shore, but that it is for the whole of the population of the Colony. Any one who has been to the north, or knows anything about the northern traffic, cannot, I think, help acknowledging that to save the whole of the northern population 11 miles travelling is sufficient justification for constructing this line. Honorable Members know that, in order to do cargo business, it certainly will have to come from the country south of Newcastle, otherwise it will go by the Newcastle boats to Sydney, as ships can always compete successfully with the trains. Suppose a cargo traffic were to spring up between Newcastle and Sydney on that line so as to require shipment in Sydney? I should like to explain that the £135,000 for resumption includes the whole of the eastern side of Lavender Bay, which gives wharfage frontage of 2,600 feet, or 900 feet more than that of Darling Island, for which we paid £135,000. Honorable Members will see, therefore, that the whole of the land along the proposed extension, together with this 2,600 feet frontage to Lavender Bay—which is exceedingly valuable, and is 1,000 feet in width from one side of the bay to the other—will be obtained for the same price as we gave for Darling Island, which purchase is now admitted to be one of the best that this Government or any previous Government has made.

I may mention that something like 10 or 12 miles of train travelling would be saved to the passengers from the north if they came down to Milson's Point. It might be said that they would rather do the extra distance than make a change; but at Redfern they would have to take tram, bus, or cab, to get to the city, whereas at Milson's Point they are brought direct to the heart of Sydney by the ferry. With regard to the district through which the line passes, I should, with the permission of the Committee, like to read a report, written by Dr. Ashburton Thompson. He was asked to report on the suitability of the district for suburban residence.

5. *Mr. Lackey.*] Does that report apply to the whole length of the line, or only to the length now proposed to be constructed? To the whole district. The report is as follows:—

August 5, 1889.

I UNDERSTAND that the proposed railway line from Milson's Point to Pearce's Corner follows a course which is practically the same as that taken by the Lane Cove Road. I have traversed the latter, and am acquainted with much of the country to which it gives access.

The course indicated is along a high ridge which falls rather abruptly towards the south-west to Lane Cove, and it falls on the north-east also, but much less abruptly. It has therefore great natural facilities for drainage. The most valuable feature of this tract under local circumstances, however, seems to be its height above the sea-level. Being about 10 or 12 miles long, a height of 200 feet above the sea is reached so near the Point as St. Leonards Reserve. Gore's Hill, which may be 3 miles away, stands at 250 feet; Chatswood, a little farther off, at 350; Gordon, about 7 miles away, at 500; and Pearce's Corner at 600. Now, while the dwellers in the existing suburbs seek freedom from the city's noise and a purer atmosphere than they find there, they desire also in this climate some reduction of temperature, and this cannot be had except by ascending. But, unfortunately, all existing lines out of Sydney pass for many miles through country which rises only to a quite insignificant height above sea-level, and only attain a height at which the temperature is sensibly affected at some distance too great to be traversed twice a day. Thus the Parramatta line rises only at one point to 100 feet. The Illawarra line remains at about the level of its starting point, or 64 feet, until at about 9 miles it attains to 217 feet only, and after falling again reaches 353 feet at a distance of 15 miles. The Southern line traverses 31 miles before it reached even the moderate elevation of 140 feet, and the Western line does not top 150 feet until Emu Plains is passed, 38 miles away from the city. The proposed line, therefore, if it were carried out, would bring within a very easy distance of the city a locality which is much higher, cooler, more airy, and by natural conformation much better drained on the whole than any other equally accessible region with which I am acquainted, and I have therefore no hesitation in expressing the opinion that it would constitute a very great improvement in the conditions of life at present possible.

J. ASHBURTON THOMPSON,  
Deputy Medical Adviser.

6. *Mr. Cox.*] You said just now that the descent to the waters of the harbour from the high land would be very great at Blue's Point;—that is not an insuperable difficulty surely? It would be difficult to make a grade of 1 in 40 in that short distance.

7. Why could not a railway be made like Rigi in Switzerland to run down a grade of 1 in 14? Of course

J. Barling,  
Esq.,  
9 Oct., 1889.

course that could be done; but it is a point upon which the Acting Engineer-in-Chief for Railways would be more competent to give information than I am. I may also state that I am authorized to tell the Committee that it is not the intention of the Secretary for Works to take any further steps in connection with the extension of the tramway to the Lane Cove Road pending the decision of the Committee on this railway extension. I should like to point out—and I think it is a very important point—the desirability of coming to a decision on this matter as quickly as possible, because I have been informed that it is the intention of the executors of the Berry Estate to cut up their land, through a large portion of which the proposed extension runs. I think nearly half of it runs through the Berry Estate, and if the land were cut up before we carried out the extension of the railway we should have to pay a larger price for it. Every month's delay in connection with the work will raise the price of the land upon us considerably. The following is the report of the Railway Commissioners upon the line:—

Office of the Railway Commissioners of New South Wales, January, 1889.

Proposed Line of Railway to connect the North Shore Railway with the waters of Port Jackson, at Milson's Point.

Length of main line, 2 miles 72 chains.

In accordance with section 13 of the "Public Works Act, 1888," we beg to report as under:—

Cost of Construction—

The Engineer-in-Chief estimates the cost of constructing this line (exclusive of land and compensation) at ..... £106,000

Annual Cost—

Interest at 3½ per cent. on capital ..... 3,710  
Expense of working line, including permanent-way and traffic department ..... 2,775

Total annual cost..... £6,485

There is no basis upon which an estimate of the probable revenue can be formed. The construction of the line is however essential in connection with the line of railway from Hornsby to Pearce's Corner, now almost complete, as without the extension to the waters of Port Jackson the former line can prove of but limited commercial value, having no outlet.

The line from Pearce's Corner passes through country admirably adapted for residential purposes, and will probably, at no distant date, become, with the aid of railway communication, an attractive suburb, capable of furnishing a traffic which will make the line a profitable one.

The construction of this line is recommended.

The Common Seal of the Railway Commissioners of New South Wales has been hereunto affixed by the Railway Commissioners in the presence of—

E. M. G. EDDY,  
Chief Commissioner.  
W. M. FEHON,  
Commissioner.  
CHARLES OLIVER,  
Commissioner.

The amount £106,000, in this report of the Railway Commissioners, is for a single line. It was subsequently considered desirable to substitute a double line, which will cost £127,000. In referring to railway traffic having to be ferried across from Milson's Point, the Minister pointed out that New York is divided from Jersey City, where the terminal stations, with one exception, are, by twice the width of our harbour, and to this day all the traffic, vehicular and otherwise, is carried across in large ferry-boats which connect New York with the trains. The whole railway system of America, with one exception, is thus severed from New York. I would also desire to bring before the Committee a very important point, as showing the desirability of carrying out this extension as quickly as possible.

8. Mr. Lackey.] How long have you been Under Secretary for Public Works? About one year and five or six months.

9. Then I take it that this work was initiated before you became Under Secretary? Yes.

10. Are you acquainted with the initiation of the work in any way? I am not personally acquainted with it.

11. You are not aware how long it is since an agitation set in for the construction of a line from Pearce's Corner? I have no personal knowledge on the subject.

12. Have you any official information as to the opinion of the Department with reference to the line on its conception? I have the papers.

13. Are you aware whether Mr. Whitton concurred in the construction of the line? I would rather that question was asked of Mr. Deane. He is the personal representative of Mr. Whitton, and the information would come better from him.

14. It is not professional information; it is historical? I have not the early papers before me. I propose to send in a *précis* of the papers in connection with the line.

15. Are you aware that when the concurrence of Parliament was first asked for this line, it was argued, in support of it, that it would be a means of conveying coal from the Northern mines to Port Jackson? I could not answer that from my personal knowledge.

16. You do not recollect? I have some recollection of it; but not having anything to do with railways at that time I did not pay special attention to the matter.

17. You would not feel justified in saying that the principal reason why Parliament was asked to concur in the construction of this line, was that it would be a useful line for that purpose? No.

18. I think you say now that it would be quite useless for the purpose? Quite useless.

19. What is there to justify the construction of 10 miles of railway at a cost of about £18,000 a mile? I do not exactly feel in a position to justify the line as a whole, *i.e.*, if we had to face the question; but the position is, that a large part of it has been constructed, and my argument is that, as we have gone to that expense, it is essential that we should incur the further necessary expense to make it remunerative.

20. You are not aware that Mr. Whitton always opposed the construction of the line? I could not say from my personal knowledge.

21. From your own knowledge, do you think it was wise to build this railway for the immense amount which it will cost? Unless I had a return of the traffic which there is likely to be, I could not answer that question.

22. Did I understand you to say that the cost of the line now to be constructed would be something like a quarter of a million of money? It would cost £262,000.

23. That is for the construction and the purchase of land? For the construction and the purchase of land.

J. Barling,  
Esq.  
9 Oct., 1889

24. Do you think that the Committee would be justified in concurring in the construction of a line from that point, having in view the anticipated traffic? I think so, remembering, of course, that a very large expenditure has already been gone to which will probably be to a great extent useless unless we make the further extension.
25. The cost of this extension will be, in round numbers, about £130,000 a mile? Yes. A tunnel will have to be constructed, and the line goes principally through private property.
26. Are you aware what is the population of that suburb? I forget what it is now. I think I gave the information in connection with another inquiry, but I will get it for you.
27. You have no idea what the line will return? I cannot say what it will return—in fact, the Commissioners do not know themselves.
28. The Commissioners have recommended the line? Yes; on the same grounds as I do, I imagine—namely, that so much money having been spent, it will be folly not to carry the line further.
29. *Mr. Lee.*] Have the Commissioners reported upon the alternative route? I think I am right in saying that they have not. Under the Public Works Act it is not their function to report on alternative routes. They have merely to report on the route which is selected by the Government and is referred to them.
30. The other route has not been referred to them? Certainly not officially; but I may say that the Minister has been in frequent communication with them about it. It has been very thoroughly discussed, although there is no formal report on the subject to my knowledge.
31. Did I understand you to say that no estimate of the earnings of the line has been made? The Commissioners themselves say so. “There is no basis,” to quote from their report, “upon which an estimate of the probable traffic can be formed. The construction of the line is, however, essential in connection with the line of railway from Hornsby to St. Leonards now almost complete, as without the extension to the waters of Port Jackson, the former line can prove of limited commercial value, having no outlet.”
32. That leaves the quantity of traffic problematical? Yes.
33. *Mr. Garrard.*] Do you know the cost of the land on the portion of the line already constructed? I can put in a return showing it; but I cannot speak from memory. If I remember rightly, the return of which I speak was laid on the table of the House some months ago.
34. Who formed the estimate of the probable cost of the land on this extension? Mr. Thomson, the land valuer.
35. Has he gone over the ground? I imagine that he has, over and over again; but he himself is available to give evidence on that point.
36. Is there not a proposal to extend the Government cable tram to the Crow's Nest? There is a proposal to take it up to Miller-street and Bridge-street, and along Falcon-street to its junction with the Lane Cove Road; but I explained before that it was not the intention of the Minister to carry that out.
37. But there has been a proposal to carry the tram on to connect with the present terminus of the railway. The Government did intend to carry it along Miller-street and some other street of which I forget the name; but a private company had certain rights under an Act, and they occupied the ground before we commenced. Another route has been proposed; but the Minister does not intend to make the extension, pending the decision of the Committee on the work before it.
38. Then I understand that the Department expect that this will only be another suburban line? Yes; and it will also save 10 or 11 miles for the through passenger traffic.
39. Is it at all likely that the people coming from the north will tranship to take the ferry, trams, and then cabs on this side? Those who would have to come would probably have to take cabs from Redfern as well.
40. Only passengers who wanted to reach North Shore or some point on the shores of the harbour would come from Pearce's Corner? That I could not say. Ten miles at any rate would be saved by coming that way.
41. *Dr. Garran.*] I gather that the elevation of the Crow's Nest, where the railway terminus is at present, is about 300 feet? Two hundred and fifty feet. Dr. Thompson puts it at that.
42. I understood you to say that this route is the best with a view to having a high-level bridge over the harbour in future;—that was stated in the paper which you read? No; I did not read that to the Committee.
43. I understood you to say, and I presume it is the Departmental argument, that the principal, and in fact the almost exclusive, use of the line would be as a suburban line? With the exception of through passengers, to whom it would save 10 or 11 miles by coming to Milson's Point.
44. But if you transmute the mileage saving into time saving it will not be so great as it now appears? That I could not say. It would be a traffic arrangement.
45. A passenger from the north would have to get into the ferry boat; he might have to wait some time for the boat to start, and then he would have to take a cab;—would he gain very much in time that way? It is possible that he might not, although I suppose that, as a matter of fact, when such a service became established, the ferry-boats would be timed to meet the trains, and the cabs would be in readiness at this end, so that probably there would be a saving.
46. Still, in any case, I understand this line to be recommended as a passenger line? Yes.
47. And that the traffic will consist of two kinds—through traffic from the north, and the local residents between Pearce's Corner and the Crow's Nest? Yes.
48. So far as the through passengers are concerned, it is a question of the saving of time as well as saving of distance? Yes.
49. Coming from Newcastle, something might depend upon whether this line is made part of the trunk line, or whether it is a branch line? Quite so.
50. If not much used, it would be a branch line? Quite so.
51. Supposing that the majority of the passengers preferred to go round by Strathfield, the main train would go that way, and a branch train would be provided for those who preferred to go down to Milson's Point? Quite so.
52. Supposing that the majority preferred to come by this line, they would have to get out at the junction? Yes.
53. That would make one change? Yes.
54. Then they would have to get out at the wharf at Milson's Point, and make another change, and then at the jetty at Circular Quay—that would make a third change? Yes.

J. Barling,  
Esq.  
Oct., 1889.

55. Those changes all take time? They do.
56. Therefore, the question as to whether there would be a saving of time is not so clear as the mere saving of distance would seem to make it out to be? That is, providing a minority of the passengers preferred to travel by the line.
57. Then the question as to the through passenger traffic would depend upon whether the through passengers preferred to take this line or the existing line? Quite so.
58. That is a matter of conjecture largely? Yes.
59. Then we have to deal with the local suburban traffic on the 10 miles between Pearce's Corner and North Shore? Yes.
60. That, you say, is an exceedingly healthy district? Yes.
61. Well adapted for suburban residence? Yes.
62. And capable of accommodating half the suburban population around Sydney? It is capable of accommodating a very large number.
63. But is there, at the present time, any such demand for suburban houses as would lead us to suppose that the making of this line would cause a dense population there? I think the exceptional advantages, such as elevation and beautiful scenery—for I believe the scenery there is the most beautiful that can be found about Sydney—would probably attract a very large number of people.
64. Do you happen to know whether there are any suburban houses vacant between Sydney and Parramatta? I believe that there are plenty.
65. At the present moment, then, the suburbs are overbuilt? I should think that in the majority of cases they are.
66. If we open this line in two or three years time for the purpose of creating a new suburban traffic, do you think that the exceptional advantages would be so great that, if the houses were built, people would leave the existing suburbs and go to North Shore? Of course the present is a very depressed time indeed. I should think that the land would be taken up by persons who wanted to build houses of their own. I think that is pretty well the case now in the suburbs that are further out. You find that nearly every one in those suburbs is the owner of the house in which he resides. I refer to such suburbs as Strathfield and Homebush.
67. What I am wishing to get at is this: is the recommendation of the Department to make this line based on the expectation that when the line is finished three years hence there will be a suburban population clustering round it that will make the beginning of a remunerative traffic? I think so. Without having any statistics before me, I think the history of the Illawarra line suburbs—Hurstville, Rockdale, Kogarah, and so on—would show that in a short time there would be a very large population congregated on the line.
68. Do you think we can repeat the Hurstville experiment every three years? I could not say for certain. As a matter of fact, I think that every new railway suburb that has been opened up has been very quickly populated.
69. I am asking you, as the departmental exponent, whether the calculation is based on a new suburban population, or on a migration from the existing suburbs? I suppose it would be made of both. The natural increase of the city and new comers would probably choose that as the most eligible place of residence, and there would also be a certain migration from the existing suburbs.
70. The scheme as put before us contemplates ultimately a high-level bridge? It is one of the possibilities of it, of course.
71. Do you think that in the absence of a high-level bridge, providing a continuous land journey, there would be the same disposition for suburban residents to choose North Shore as there would be if there were a bridge? I should think that if there were a bridge the locality would offer a greater attraction than if there were no bridge.
72. The scheme before us, I presume, is based upon the supposition that there would be no bridge at present, and it stands on its own recommendation, leaving the ferry traffic? Yes.
73. For some persons the ferry traffic is a disadvantage? It is a disadvantage; but I should think it would be of very little disadvantage in such a short trip. It would be a disadvantage for those going for a distance like Manly Beach probably; but the disadvantage would be very slight indeed in the short distance to Milson's Point.
74. But in any case it will not be so convenient to passengers to go to North Shore as to get on to the existing line from Sydney? I suppose that it would not be; the majority would not think so.
75. The trams, omnibuses, and cabs that exist on this side of the water furnish a far greater convenience for getting to the Redfern terminus and to any point along the line than would exist in going to North Shore, if this railway were carried out? That, to a large extent, would be a matter of opinion and choice. I think a good many people would prefer the ferry steamer to the tram. I know that I should myself. I would rather go by the ferry steamers, and I think a good many would be of my opinion.
76. You think a great many persons would just as readily take a tram to Circular Quay and cross in the ferry as take the tram to Redfern? I think a great many would.
77. You do not look upon the water passage as an inconvenience? At any rate, not as a very great one. I think that what I have quoted as to the American practice shows clearly enough that there is no great inconvenience.
78. You are familiar with our tram traffic at present? Yes, as an every-day traveller.
79. You do not take the tramway down to the water side—it is some distance now between the tram terminus and the ferry;—do the North Shore people find that an inconvenience? It would be an inconvenience to any one travelling with a family.
80. You think it would be better if the tram were brought to the water? Yes.
81. Do you think that the inconvenience that now exists because the terminus is some distance from the ferry is greater than the inconvenience would be in getting out of Crow's Nest from the railway, and going into the tramway carriage? I think it would be.
82. You would rather walk one-sixteenth of a mile in all weathers than get out of one carriage into another? I think I should. Of course, in very severe weather I should take the tram.
83. Looking at the fact that the traffic on the North Shore line will be suburban traffic, do you think that it will be materially diminished if people have to change at Crow's Nest from the railway to the tram? I think so, because they would have to take train, tram, and ferry, without counting the conveyance on this side.

- J. Barling Esq.  
9 Oct. 1889
84. The existing experiment of connecting a tram with the railway at Redfern shows that the tram is very largely availed of? Yes.
85. They do not make any great difficulty of shifting from one to the other? No. In that case they are compelled to come to Sydney.
86. But the majority of the people years ago used to walk from Redfern? They did; but as facilities are offered, what at one time was considered a luxury becomes a necessity.
87. Thousands of passengers that used to walk ten or twelve years ago now take the tram? Yes.
88. Practically what I want to get at is this: The break between the tram and train service at Redfern has not made any serious diminution in the suburban traffic? I do not think that it has—that is to say; so far as the present population is concerned; but I think the fact of the break from train to tram at Redfern, involving as it does loss of time, and greater cost of conveyance, has decidedly a deterrent influence in the settlement of population in the western, southern, and northern suburbs.
89. You do not find people refusing to live at Ashfield, Burwood, and Homebush, because they have to shift from tram to train? I think a very great many would refuse to do it because of the break. My personal observation leads me to come to that conclusion.
90. I like as much as possible to gather up the fruits of experience. We have at Redfern the experience of a break;—has it been found destructive of suburban traffic? I do not think it has; but it is supposed, and I think with good reason, that with the railway to Sydney the traffic would increase.
91. If people are willing to get out of a railway carriage into the trams on the south side of the harbour, would they be less willing to do it on the north side? I do not think they would; but they would have the ferry travelling superadded.
92. You said that was an enjoyable break? I said that in connection with choosing North Shore as a place of residence.
93. You recommend this line to the Committee principally as a suburban passenger line, and the question is whether the existing tramway is sufficient for that suburban traffic. If the line connects with the tramway at the elevated point which it now reaches, we shall have a continuous line of rails all the way;—does the experience at Redfern show that the necessity of shifting from train to tram seriously damages the traffic? I do not think that it can be said that it does; but at North Shore there is a further change—there you have to get out of the tram into the ferry.
94. But we should have to get out of the train into the ferry? Yes; but then you will not have the change from the train to the tram.
95. Do you think that one shift more would neutralize the magnificent sanitary advantages which North Shore possesses? I do not think it would wholly; but I think that if any one were choosing where he should reside, it would be a serious objection to North Shore if he had to make so many changes.
96. If you were choosing a house for the first time, with all your knowledge of Sydney, and there were only a tram for part of the way to Hornsby, and a train for the other part, do you think that would deter you from choosing the North Shore? I do not know that it would in my individual case.
97. Now let us pass to the national point of view: I understand you to say that this line has cost £180,000 already, and that it will cost £262,000 to make the extension, making altogether £442,000;—do you think that the importance of making the rail communication from Crows' Nest by railway instead of partly by railway and partly by tramway is so great, and would have such an influence on the prospective traffic, as to be worth the expenditure of that amount? I think so. I think North Shore in time will become one of the most populous suburbs of Sydney, and I think that the construction of this line will hasten that time.
98. You think that it would be like spoiling the ship for a half-penny worth of tar not to put this £262,000 on the top of the other? I think so.
99. *Mr. Humphery.*] Do you know what are the earnings of the tram at North Shore at the present time? I could not tell you that; we have nothing to do with it. The railway traffic officers could tell you.
100. *Mr. Dowel.*] Can you tell us what is the amount of the contract entered into for the construction of 2 miles 21 chains? The expenditure to date on contract No. 1 is £168,092 17s. 7d. Contract No. 2 is for the short length of 51 chains, and the amount at the present time is £3,302 13s. 6d., and £1,326 4s. 11d. for repairs, making in all £173,221 16s., to complete the line, though the total amount will probably be increased to £180,000.
101. Can you tell us what the departmental estimate was previous to the contract being signed? I cannot say.
102. Do you know anything at all of the country between Newcastle and Milson's Point;—is any part of it, as far as you are aware, coal bearing? I have not been over it.
103. Have you any information on the subject? No, I have not; but I could obtain it from the Mines Department.
104. You have stated that you do not expect to get any coal traffic on this line? Yes. If coal-fields were opened up nearer to Sydney it would be a different thing; but I am only speaking of existing conditions.
105. Supposing coal were discovered half way between Newcastle and Milson's Point, do you think the line would carry a considerable amount of coal traffic? I dare say it would in that case.
106. You have estimated the freight of a ton of coal at 4s., which you think is a prohibitory rate in competition with water carriage? You are speaking of the water freight. The railway freight is 7s. or 8s.
107. If the freight were reduced by one-half, do you think any of the coal traffic would come this way? If it were reduced by one-half it would alter the existing conditions very materially.
108. If it were only a question of the cost of carriage, do you think a large amount of coal would be brought by this line? Of course the question then would be whether ships would take in their coal here, or go to Newcastle and take it in there. It is very much a shipping question. I may mention that the opinion of Mr. Powell—whom we have consulted in the matter—is that no coal under existing circumstances will be brought here.
109. You think then that no matter what the rates are you will not be able to get the coal traffic here? I do not say that. If the rates were reduced, so as to make the land carriage cheaper than the water carriage, of course it would alter the conditions entirely; but I do not know that there is any probability of that being considered. I question whether it would pay the Commissioners to reduce the rates.
110. What is the distance from Newcastle to Milson's Point? Ninety-four miles.

## MINUTES OF EVIDENCE—NORTH SHORE RAILWAY.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn and examined:—

111. *Dr. Garran.*] In originally planning this line, the terminus at North Shore was, I understand, left practically an open question? When it was originally planned the terminus was to be at the Crow's Nest.
112. A water terminus on the North Shore was not part of the original scheme? There was to be a branch line from Chatswood down to Ball's Head for goods traffic; the passenger traffic was to have its terminus at the Crow's Nest.
113. That was the original departmental plan? Yes.
114. Was there at that time an expectation that there would be a tramway down to the water? I think not.
115. Then the idea of the Department was that the passengers would come down by omnibuses and cars? I do not quite know what you understand by the Department.
116. The Ministerial Department provided only for the goods terminus? Yes.
117. And that is all the engineers surveyed? Yes.
118. The Minister for the time being did not provide for any passenger terminus at the water's edge? No.
119. And the Department has now been called upon to supply the deficiency? Yes.
120. The scheme before us is what the Department recommends? Yes.
121. The idea of having a passenger terminus is, so to speak, a Ministerial afterthought? Yes; in that way it is to be understood as an afterthought.
122. As the plan stands now, I gather from the paper which Mr. Barling read to us that the anticipation is that the traffic will be a passenger and not a goods traffic? Yes—that is to say, that heavy goods traffic is not expected.
123. Not through goods traffic—no coal traffic or heavy traffic for loading of ships? No.
124. What I want to get at is this: that the original design is changed in this respect—that when you were first called upon you had to provide a water terminus for goods only, but now you are called upon to provide a water terminus for passengers only? Yes.
125. Therefore, instead of marking out the line to Ball's Head, which, in your judgment, would be the best place for the terminus of the goods traffic, you now intend to bring it from Milson's Point as the best place for the terminus of the passenger traffic? Yes.
126. That is the explanation of the change of the water terminus from Ball's Head to Milson's Point? One reason why the Ball's Head branch-line was abolished was that it was considered that that would not be the best place to bring the coal traffic. There would be very little coal traffic from the north; and if coaling facilities were to be given in the harbour at all they should be given on the other side, so as to permit the Illawarra and southern coal to be brought in.
127. The original idea of its being a coal shipping place has been abandoned? It has.
128. Supposing there were such a thing possible as coal traffic on this line, Ball's Head would be the most suitable place for the terminus? It is suitable in this way, that there is deep water there. It is an excellent place for loading.
129. Do you know whether the Department was free to choose its goods traffic water terminus? That I cannot say. I should think it is certain that Mr. Whitton was consulted in the matter, and he probably recommended that place.
130. You do not know whether he was requested to bring the line to Ball's Head, or whether he was left free? I could not say. I believe I was in the field at that time attending to the construction of works. I could not give you any further information on the subject.
131. What I want to know is, whether the original design represented the mature judgment of the engineers, or whether it represented the best they could do under their instructions? Given the condition that it was necessary to bring the coal to the northern shores of Port Jackson, it was certainly the deliberate judgment of the engineers at the time that Ball's Head was the best place to which to bring it.
132. That was their untrammelled judgment? There is no doubt about it.
133. You, as an engineer, hold that opinion still? I do not believe in bringing the coal down to the harbour.
134. But if it were to be brought down, you think that that would be the best place to which to bring it? I believe it would be.
135. I suppose further reflection has satisfied everybody that no coal would be brought over the range between the Hawkesbury and Sydney at a rate which would compete with the water carriage? It is not likely.
136. Do you know whether the idea existed when the line was first designed that it would be available for coal traffic? It was supposed that there would be a considerable coal traffic.
137. Have you anything to refer to to show that it entered into the original conception of the line that it would be a coal line? The Ball's Head line?
138. The North Shore line altogether? I expect there are some papers.
139. Your memory does not serve you at the moment? I do not remember having seen any; but I expect that they could be found.
140. Apart from papers, do you recollect at all whether that was the justification for the line in any degree? You mean it was part of the reason for constructing the line as a whole to bring the coal traffic down to the harbour?
141. Yes? I believe it was.
142. There was an idea that the wharfs on the North Shore would be coal shipping wharfs? Yes.
143. That idea you think is now generally abandoned? Yes.
144. And it is as a consequence of that abandonment that the line has been altered from Ball's Head to Milson's Point? I do not think that you can say that it has been altered from Ball's Head to Milson's Point. Ball's Head was purely intended for coal traffic; but that has been abandoned. The object of continuing the line to Milson's Point is to bring that part of it which has already been constructed into some use, and to make it serve one of the purposes for which it was originally intended.
145. I understand that the Ball's Head terminus is recognized by the engineers as a good coal terminus, but not as a good passenger terminus; and that Milson's Point is looked upon as a good passenger terminus, but not as a good coal terminus? Yes.
146. The idea of the line now is that it is rather a passenger line than a heavy traffic line? Yes.
147. And therefore a new terminus is provided for it as more suitable for its present destination? Yes.
148. We really have to consider this line now as a passenger line, wanting a suitable water terminus? Yes.

H. Deane,  
Esq.  
9 Oct., 1889.

H. Deane,  
Esq.  
9 Oct., 1889.

149. That is the problem before the Committee: given the fact that the traffic is to be mainly passenger traffic, which is the more suitable terminus, and is it desirable that the money should be spent in bringing it to that terminus? That is the way I should look at it.
150. The question is, whether it is necessary to continue the line to Milson's Point, or to connect with the tramway? Yes; I think that is the main question.
151. Can you give me any idea what it will cost to extend the tram-line to the railway or the railway to the tram-line, so as to effect a junction between the two? It would cost something under £30,000 to carry the tramway up to the present railway station.
152. That is, supposing that the extension were wholly a tramway extension? Yes.
153. But it might be better to bring the railway a little nearer to the tram as well as to bring the tram a little nearer to the railway;—in your opinion, would the present terminus of the railway be the best place for the junction? That is assuming that that is all that is required to bring the two into conjunction?
154. Yes? The cheapest way would be to carry the tram-line on. I should certainly recommend that, if it were all that were necessary to form a connection.
155. If a connection between the two were adjudged to be sufficient, you would stop where you are with the railway and take the tram on? Yes.
156. The next point upon which I should like to get your opinion is whether, if we were to finish off the railway with a tramway, it would seriously interfere with the suburban traffic along the line? I think it would.
157. You think that a break would interfere with it? You see you have a double break from Sydney—a break at the ferry steamer, and again at the tram.
158. We have the one break in any case—the steamer break? Yes.
159. Assuming a passenger could be landed at Milson's Point, would the break further on at Crow's Nest discourage him from having a house upon the ridges? I am sure it would be a draw back.
160. There is just the same break at Redfern for the people who live at Burwood and have their offices in town? I consider that the ferry service across the harbour corresponds with the tram service from Redfern, and that if you made a journey on the other line, Milson's Point terminus would correspond to Redfern on this side.
161. Do you think that the inconvenience of the break between tramway and railway would so discourage the occupation of the North Shore for suburban residence purposes as to make it judicious, in the interests of the railway exchequer, to spend £262,000 upon continuing the railway to the water's edge? I believe that if the land along the Lane Cove Road belonged to the Government it would pay to make it, and that it would be far better to make it, because of the greater settlement that it would bring about, than to extend the tram.
162. You mean to say that if the Government were still the owners of the land to be built upon, and came in for the increment of value that the railway would create, you would have no hesitation in spending the money on the continuation of the line? Yes.
163. Under the present circumstances, where the Government has no land, but has to resume it to make the line, do you think that since the recoup would only be by the traffic, it would be worth while to put £262,000 on the top of £180,000 to continue it to Milson's Point? Is not that more a commercial than an engineering question?
164. Yes; but as an engineer you have had an opportunity of seeing the effect of these extensions? I believe in the extension of the line; but I think that it is a commercial question, and one that should be considered from a commercial point of view.
165. Still, as an engineer, you can say that there is no difficulty whatever in connecting the tramway with the railway? Yes.
166. The connection would be just as convenient at Crow's Nest as it is now at Redfern if you brought the two together—the break would not be greater? That is to say, supposing the business centre were at Milson's Point instead of in George-street or Pitt-street. If you merely wanted to get from Milson's Point to the Northern railway, it would be just as easy to do so as it is to get from Sydney to the railway at Redfern; but if you wanted to go from Sydney to the Lane Cove Road you would have a double break to consider.
167. You have seen a good deal of railway traffic in your time? Yes.
168. You have seen a good many branch lines worked? Yes.
169. Is it not the custom in a great many places for the passengers to get out of a through train into a branch train? Yes.
170. Have you ever known a case where the necessity of having to change has seriously diminished the amount of traffic on the branch line? On a suburban line I think it would be seriously affected.
171. Do you know of any suburban line that has been a branch? My experience of suburban lines is that if there are branches they are worked with through trains.
172. It is not for the convenience of working that they run through, but for the convenience of the passengers? Yes; and, of course, indirectly for the convenience of working.
173. Then your judgment is against having a break on the North Shore line? Yes.
174. *Mr. Humphery.*] You estimate the cost of connecting the tramway with the railway at £30,000? I said that it would be under £30,000.
175. What would the distance be? About 1½ mile.
176. Is your estimate for the cable tramway? Yes.
177. Would there be any land resumption? No; there would be no more land resumption than has been proposed for the extension up to the end of Falcon-street. There are two resumptions there—just small corners.
178. Would it be a branch tram? It would be worked as a continuation of the present line.
179. Would it be a continuation from the present terminus? Yes; there would be no break.
180. If the railway were constructed to Milson's Point, would it not diminish the earnings of the tram? I do not think that it would interfere with the tram at all.
181. You do not think that the railway would come into competition with the tram? No; I consider that the tramway would serve, as it does now, the residents at the top of the hill and along the route.
182. The people who use the railway do not at the present use the tram? No.
183. The railway would create a new traffic? Yes.
184. Traffic that at present is not served by the tram? That is not served at all adequately.

H. Deane,  
Esq.

9 Oct., 1889.

185. Have you any means of estimating what the earnings of the railway would be? No, I have not the slightest idea. I could only point to the effect that the construction of the Illawarra line has had.
186. That is a line from Sydney without any break? It has the tramway break.
187. Yes, but not the harbour? No, it has not the harbour.
188. As an excursion line, do you think that this would be as profitable as the Illawarra line? There are no places on the line where people would go for excursions much. You could not reckon on the Hawkesbury, because that is already served. The Illawarra line as far as Hurstville is a suburban line, and that part no doubt pays for itself, independently of the excursion traffic.
189. Do you think there is likely to be any comparison between the line from Sydney to Hornsby and that from Sydney to Hurstville, as a suburban line? I should think that the traffic in time along the Milson's Point to Hornsby line, if the connecting line is constructed, will be very great indeed. I am quite sure that it will be a very favourite district.
190. You think then that there would be suburbs between Sydney and Hornsby as populous as Arncliffe, Kogarah, and Rockdale? I think so. Gordon, which is 500 feet above the sea, is only about the same distance from Milson's Point that Strathfield is from Sydney.
191. How many miles? Seven miles, and Strathfield is only 50 feet above the sea-level.
192. You believe that a very large population would settle along this line if it were constructed? I am pretty sure of it.
193. Sufficient population to make the passenger traffic cover the working expenses without interest? I believe it would cover the working expenses, and the interest too in time. Of course it would not do so at first.
194. That would be a new experience? Some of the lines pay now.
195. *Mr. Dowel.*] What is the distance between Newcastle and the proposed terminus of the railway? Ninety-five miles.
196. Is there deep water at Milson's Point? Yes.
197. Can you tell us the depth? Just off the point there is between 50 and 60 feet.
198. Can you tell us the character of the country between Newcastle and Milson's Point;—do you know of any coal having been discovered or worked between these two points? There are some coal-mines south of Newcastle, near the line.
199. Can you say what is the nearest coal to Sydney from Milson's Point? I think the Great Northern Coal Co.'s mine is the nearest.
200. *Mr. Garrard.*] Teralba? That is not working. They have not finished sinking there yet. I think the Great Northern Company is the only one that is at present putting out coal. There are other companies sinking.
201. *Mr. Dowel.*] Do you know of any coal being discovered on the Hawkesbury, much nearer than the place of which you were speaking, by Mr. Alison? I know that he did not discover coal. I know that he sank 1,300 feet without coming to it.
202. Can you fix the distance of the nearest coal from Milson's Point roughly? You mean where coal has actually been found.
203. Where coal has been got, and where it is known to exist at the present time? You can get coal by sinking all the way across. Sydney lies on the coal-measures. No doubt if Mr. Alison had gone down another 1,000 feet, or something like that, he would have come on to the coal. But if you mean how near can you get coal on the surface, I believe that a little north of Wyong it exists at a depth of about 500 feet. I only speak from memory; but I could easily obtain the information.
204. Are the coal-mines near Wyong working at the present time? No.
205. What distance is Wyong from Milson's Point? There are no coal-mines there, but I believe that a bore has been put down.
206. Coal has been proved to exist there? I have heard so.
207. What distance is that from Milson's Point? Wyong would be about 55 miles, but I would rather that you did not take this information as accurate. I only speak from memory.
208. Supposing large workings of coal took place 50 miles from Sydney, is there a probability of a large coal traffic on the line? I do not think that the coal would compete with the Illawarra coal.
209. Not if it were only 50 miles away? No.
210. Do you think that you could compete with the water carriage from Newcastle to Sydney if you had only 50 miles to carry the coal on this particular line? Yes.
211. Now, as regards the construction of the line itself, what is the steepest grade? Between Newcastle and Milson's Point or on the new extension?
212. On the new extension? 1 in 40. I do not think we can get anything lighter than that. Of course the heavy traffic will be down-hill if goods are carried.
213. The 1 in 40 would be all down-hill from Newcastle? No, down-hill from the present terminus of the North Shore line. There is an ascent from the Hawkesbury. There are several miles of steep grades there. I think there are 4 miles of 1 in 40.
214. Under existing circumstances then, you anticipate no heavy traffic on this line unless coal is discovered about 50 miles from Milson's Point? I think I should scarcely put it in that way. As I said before, I do not think that Milson's Point would be a desirable terminus for the coal traffic. It would not be suitable. There is scarcely room to mix up the passenger and coal traffic there.
215. The terminus would not be suitable for both passenger and goods traffic? No, not if the goods traffic were very large.
216. You have made no particular preparation for goods traffic in this proposal? We have made none at present.
217. You do not anticipate any? Of course some goods traffic could be provided for, but in the estimate no provision has been made.
218. Not to any large extent? No.
219. The traffic has been based principally upon the number of passengers to be carried? Yes. I have here a plan showing the route of the line. There is a good deal of room in Lavender Bay for the goods traffic if it is required, but I do not think that it would be desirable to bring coal traffic there.
220. What is the extent of the platform accommodation? The platform on the plan is only a sketch.
221. It is not provided for in the estimate? Oh, yes; I have here another plan [*produced*] showing the platform. It will be 300 feet long.

THURSDAY, 10 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).  
 The Hon. ANDREW GARRAN. | WILLIAM SPRINGTHORPE DOWEL, Esq.  
 The Hon. FREDERICK THOMAS HUMPHERY. | CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Charles Lyne, Esq., Secretary to the Parliamentary Standing Committee on Public Works, sworn and examined:—

- C. Lyne, Esq. 222. *Chairman.*] You are the Secretary of the Public Works Committee? Yes.  
 10 Oct., 1889. 223. And you produce a copy of the Parliamentary Debates? Yes, volume XIV., 8th July to 11th September, 1884; session, 1883-4.  
 224. On the 24th August, 1884, Mr. Dibbs moved a resolution inviting the Legislative Assembly to approve of the plans and specifications of a line of railway from Pearce's Corner or to North Shore? Yes.  
 225. That resolution was passed without any explanation from the Minister or debate by the House? Yes; according to the report of the proceedings contained in this volume.  
 226. On the 10th September of the same year Mr. Dalley invited the Legislative Council to approve of the plans and specifications of the same railway? Of the plan, section, and book of reference.  
 227. And that was done without explanation and without debate? Yes.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn and further examined:—

- H. Deane, Esq. 228. *Dr. Garran.*] Can you tell me the height of the ground at the Observatory flagstaff? Yes; it is 134 feet.  
 10 Oct., 1889. 229. Where would the 134 feet level be on the North Shore line? It would be about  $11\frac{1}{2}$  miles.  
 230. That would be very near Bay Road? Yes.  
 231. Or the Crow's Nest? Yes.  
 232. Have you considered what would be the best place to make the junction between the tram and the railway, if you extended the tram to the railway? I think I said yesterday that I should recommend the tram being extended to the present railway station.  
 233. Why do you recommend going so far north as that with the tramway? Because if you carry the railway any further you have no option in the way of deviation. You are bound to that particular route. If you branch up to the Crow's Nest or into St. Leonards, you cannot get down to Milson's Point afterwards without going back on the line.  
 234. Before you could get the descent for the distance? Yes.  
 235. You could if you took 1 in 33? That I have not considered.  
 236. The present gradient is 1 in 50? One in 40.  
 237. Can you tell me the time it takes for the ferry steamer to go from Circular Quay to Milson's Point? I have not timed it; but about seven minutes, I think.  
 238. How long would it take to get from the Circular Quay to Ball's Head Wharf? It would be about three times the distance.  
 239. It would be a quarter of an hour's journey? Fully.  
 240. *Mr. Lee.*] The Under Secretary for Public Works gave us to understand that this proposed extension of 2 miles 21 chains would cost £127,000; but I see by the Commissioner for Railways' report that the Engineer-in-Chief estimates the probable cost at £106,000? That was for a single line; £127,000 is for a double line.  
 241. Could you tell me what is the estimated cost of the resumption of land on the route to Cremorne? No, I could not. An estimate has been made for the proposed route to Milson's Point. £135,000 includes cost of land and compensation. If we are obliged by the "Railway Act" to take the land over the tunnel, it may be regarded as an asset, and will be available for sale or lease.  
 242. *Mr. Humphery.*] Are you familiar with the route? I have been over it two or three times.  
 243. Have you surveyed the route to Berry's Bay for passenger traffic? We have surveyed a line to Blue's Point; but the distance was too short to get down to give a good level length of at the bottom.  
 244. Which is the most expensive portion of the line—that between the  $11\frac{1}{2}$  miles and Milson's Point, or between the Crow's Nest and the  $11\frac{1}{2}$  miles? Between the  $11\frac{1}{2}$  miles and Milson's Point.  
 245. Do you know the estimated cost of the portion between the Crow's Nest and the  $11\frac{1}{2}$  miles? I could not separate it now.  
 246. Will you send us in a return showing the cost of the two portions? Yes, I will. The cost to  $11\frac{1}{2}$  miles is as follows:—Works, £37,000; land (say) £24,000; total, £61,000.  
 247. *Chairman.*] All the trial surveys made by the engineer in charge of the branch, Mr. Alexander, have been submitted to you and you have been over the line? Yes; he could tell you nothing that I have not told you.

Henry Houghton Burton Bradley, Esq., solicitor, sworn and examined:—

- H. H. B. Bradley, Esq. 248. *Chairman.*] You are a solicitor? Yes.  
 10 Oct., 1889. 249. You reside at St. Leonards? Yes.  
 250. Have you given any consideration to the proposal to extend the line from Pearce's Corner to Milson's Point? I have.  
 251. Have you seen the plan of the proposed extension? I have not seen the Government plan; but I have seen a plan which I understand is a copy of it.  
 252. You know that where the railway is to come to now is 10 miles 51 chains? I believe that that is the distance.  
 253. Now it is proposed to bring it down to Milson's Point, to the edge of the water at 12 miles 72 chains? I understand so. 254.

254. At an estimated cost of £262,000? I understand that that will be the cost.
255. Do you know that it has already cost £173,000 to place the railway where it is? I do not know at all what it has cost to bring it to where it now is; but I thought that the cost was about £200,000.
256. The total cost will be about £180,000, including compensation, and to continue it from there to Milson's Point it is estimated will cost £262,000 more? Yes.
257. In view of those figures, do you think that the present traffic is likely to pay interest on the cost of construction or working expenses? The present traffic is nil.
258. Suppose the line were brought to Milson's Point, do you think the traffic would pay the interest on the cost of construction and the working expenses? I think it would in a short time.
259. Have you estimated how much the traffic would be? I have not.
260. How much do you suppose the interest and working expenses would be? I have not calculated that.
261. Then how can you say that the traffic would pay both? Because I know sufficient of the land up there to know that if there were ready access from Sydney a large population would be attracted there, and the reason for that is that within a very short distance of Sydney you reach an elevation which you cannot get in any other direction without going to the mountains. At about 5 miles from the Post Office you get an elevation as much as that at Springwood. I know that a great number of people are only waiting until access from Sydney is provided to go and build there.
262. The estimated interest and working expenses on this 2 miles and 21 chains is nearly £12,000 a year? But the line in its present condition is useless.
263. Do you think that there is any chance whatever of earning £12,000 a year on this 2½ miles;—if every man, woman, and child in North Shore travelled over it, do you think it would pay that amount? That is not the question, I take it.
264. That is the question I ask you? I do not suppose that the population that would travel on those 2 miles alone would pay anything like the amount named; but it is the passengers coming from a longer distance who would pay.
265. The longest distance which they could come would be 12 miles? Within 12 miles.
266. You base your calculation entirely upon the probable settlement that would occur if the line were completed? To a large extent.
267. The present population would not support the railway? I do not know that they would. I have an interest in some land up near Russell's, which under existing circumstances is absolutely useless to me. It is unsaleable; I cannot get £40 an acre for it. If a railway were made to Milson's Point I could get from my property to my office within such a short time as would enable me or some one else to live there. I know that there are people who would readily buy land and live there if they could get easy access to town; but if they are to be dropped a couple of miles from the steamer, it is the old Redfern difficulty in a very much accentuated form.
268. We are told that the tramway could be continued up to the present terminus of the railway for £30,000? I do not think that a tramway has been found to answer the wishes of the public. You may say that there is an almost perfect system of conveyance by 'bus, tram, and cab to the Redfern railway station; but the public are thoroughly dissatisfied with it.
269. Then your only reason for supposing that the line would pay is that people would go out and buy land beyond what I may call the limits of location at the present time? Not only that, but a large number of people bought land at a Government sale twelve months ago upon the faith of a promise made by the auctioneer—I was present and heard it made—that a railway would be constructed in a short time from Milson's Point. I think the Government sold £30,000 worth of land on that occasion, and people are only waiting to get access to it.
270. As a business man, you do not suppose that the statement of the auctioneer influenced anyone? As a business man I know that some people bought after hearing that promise made.
271. *Dr. Garran.*] Have you gone into any calculation as to the probable revenue that would be derived from this expenditure? I have not.
272. As it is between 2 and 3 miles, I suppose it is fair to assume that the fare from the present terminus to Milson's Point would be about 4d.? Yes.
273. You have not calculated how many fourpences would be required to pay the interest on the cost of the line and the working expenses? I have not. I have not looked at it from that point of view. I have looked at it as a necessary link in the railway. The line is at present useless, and in consequence of that the Government lost during last year, and will continue to lose until the extension is made, the interest on the money spent on the line.
274. I understood you to say that if the line were continued it would be a remunerative investment? I believe that it will be; but only as a part of that suburban railway.
275. To be remunerative it must pay the interest on the debt, together with the working expenses? Exactly.
276. What I want to know is, whether you have worked out a statement to show how many passengers would be required to make it remunerative? No, I have not.
277. Upon what, then, was your estimate based? Upon my general knowledge of the district, and upon my knowledge that people are wanting to settle there.
278. Did your general knowledge lead you to believe that there would be passengers enough to pay interest on the line? Not on this particular 1½ mile, or whatever it is; but upon the whole, as a suburban railway.
279. £180,000 has already been spent, and £262,000 is to be spent, making altogether £442,000, which will probably be increased to £450,000 before the work is completed;—do you think that the line as a whole will pay interest on the cost of construction and working expenses? I think that if any suburban line would pay this one would; and as other suburban lines have paid, I believe this one will.
280. That opinion is not based on specific calculation? It is a general opinion. I have not worked out any figures.
281. You say that you are quite sure that the railway will increase the value of the land along the route? I think that that is unquestionable.
282. Do you think that if the line were completed, and it did not pay, the owners of land along the route would be willing to bear a special taxation to pay off the loss? I cannot say. I should think that it would be almost impracticable to do that without further legislation.

H. H. B.  
Bradley, Esq.  
10 Oct., 1889.

- H. H. B. 283. Then you think that the general Government will have to take the risk in the matter? I do not think there is any risk.
- Bradley, Esq. 284. But supposing there is, the Government must take it? Yes.
- 10 Oct., 1889. 285. And if it finds itself in the mud, the local residents will not bear any share of the cost? The local residents are a part of the general Government, and a large portion of the revenue is collected from them. As far as I know, little or no Government money has been spent at North Shore hitherto.
286. £180,000 has been spent in bringing a railway from Milson's Point to St. Leonards, at the request of the inhabitants? I think the request was to bring it down to the harbour.
287. And £50,000 on the tramway? I think more than that.
288. We are told that it will take £30,000 more to connect the tram with the railway—that would be £80,000 to make a continuous rail connection with one break between Pearce's Corner and the harbour. Are you of opinion that that break would spoil the scheme? It would have the same effect as the break at Redfern has had upon the general railway scheme of the Colony. That break has been an endless source of worry and nuisance and public remonstrance.
289. Do you remember the opening of the railway as far as Parramatta? Barely; I do just recollect it.
290. You have seen the thickening of the population between Sydney and Homebush? I have.
291. Yet during the whole of that time the connection between Redfern and the city has been by omnibus, cab, and tram? Yes.
292. So that the population has increased in spite of the break? Yes; but I also know that for probably twenty years there has been endless agitation to get the railway into the city, and the greatest inconvenience has been felt because it has not been brought into the city.
293. But the number of persons to be served by a city extension is very large compared with the number of the North Shore residents to be served? It is not the North Shore residents that this railway will serve, but the people further out from the city, like those at Ashfield and Burwood.
294. I am alluding to the imaginary residents—the people between Milson's Point and Pearce's Corner? The people between Milson's Point and 2 or 3 miles out hardly want the railway at all. It is the people who wish to live, or who do live, from 5 to 9 miles out towards Hornsby who want it.
295. Your opinion is that the railway will serve the people who live between 5 and 10 miles out? Principally; the people living between 3 miles out and Hornsby.
296. That is the last 7 miles of the line? Yes.
297. The first 3 miles will not be much served by it? I do not think they will.
298. That somewhat reduces the question, because it makes the number of persons on the north side of the harbour who are to gain by the extension decidedly less? The habitation out there at present is small, because there are no means of access to the place.
299. But if we say that the great advance of this extension will not begin until we have come 3 miles of the road, we then get past the dense population to a more scattered population? Unquestionably; but that would apply to a railway to Wilcannia, Bathurst, or anywhere else except to the Circular Quay from Redfern. By that reasoning you should make no railway beyond Redfern, because you, in doing so, get away from the dense population.
300. Does it not occur to you that the earnings of the country railways are largely from goods traffic, and not from passenger traffic? From both.
301. We have been told by the engineer that the earnings of this specific line will be from the passenger traffic? It is only in that light that I have considered it.
302. Therefore your analogy with the great produce lines of the interior hardly holds? Then I would say a line between Ashfield and Sydney.
303. What made that line pay? The passenger traffic.
304. The large amount of it? Yes; but there were no more residents there when the railway was made than there are now anywhere along the proposed line. There are more people living now within a short distance of Russell's hotel than there were over the whole of Homebush, Burwood, Ashfield, and Croydon when that railway was constructed. Those suburbs have been made by the railway.
305. But you say you do not look for any traffic between Milson's Point and the 3-mile station, but that it would be beyond that? Yes.
306. You cannot therefore expect so large a passenger traffic to feed this line as feeds the line going into Redfern? Exactly, for the distance; but not at present. I believe I am correct in saying that there is already a larger population on the route of the proposed line than there was on the present suburban line when it was first made.
307. But the question which we have to consider now is the possible remunerativeness of this line as a passenger line? I do not think that it is a possibility; I think that it is an absolute certainty.
308. I understand your evidence to be that no remunerative traffic will arise until we have passed the 3-mile station? I do not think there would be much.
309. Do you think that there would be sufficient population between the 10-mile and the 3-mile stations to pay the interest on this extra £262,000? I do, and I think further that without that extension the Government will be losing heavily upon the line already made.
310. We all understand that the line at present made ends nowhere; but the question is—will this proposed extension add so much to the traffic as to increase the revenue of the line? That is my opinion.
311. You do not give any figures to prove it mathematically? I do not think any figures could be given to prove it mathematically, because it is to a large extent a matter of speculation or anticipation. I do not suppose anybody could for a moment have accurately prognosticated the enormous traffic that would occur between Sydney and Parramatta when that line was made.
312. *Chairman.*] Is it not a fact that more than two-thirds of the present population of North Shore would not be served by this line of railway at all? I quite think so.
313. That would be the whole of the residents to the east of the line, and up to the 3-mile point? Yes.
314. The bulk of the inhabitants of North Shore live at that part? The bulk of the inhabitants of North Shore live, you may say, within a very short radius of the Court-house, and do not require a railway at all. It is exactly the same thing with Sydney. I suppose that nine-tenths of the inhabitants of Sydney do not want a city railway at all.
315. What would you say is the present population that would be served by this line? I do not know.
316. Do you know the population of the North Shore? I do not.
317. *Mr. Dowel.*] Whereabouts in St. Leonards do you reside? About  $\frac{1}{2}$  a mile up the main road from Milson's Point.

318. You know the route of the proposed line? Pretty fairly.
319. You know the country through which the present extension has gone? I do.
320. The length of that is about 10 miles? Yes. I have not been all along the line; but I have been on it at several points.
321. What population do you consider there is on this line at present? I do not know.
322. Is there much settlement? There is a pretty fair amount of settlement.
323. What do you call a pretty fair amount? I know that about Russell's there are a good many houses, but I could not tell you whether there are 100, 200, or how many.
324. Along the line already constructed what settlement is there? There are people residing there—farmers and fruit-growers.
325. How many? I could not tell you at all.
326. No considerable number? There are a good number here and there. There are houses all about.
- 326½. From what you state then there is a very sparse population at the present time along the section already constructed? I believe there is much more population there now than there was between Sydney and Parramatta when that line was constructed.
327. Has the population increased since the line was constructed? Yes.
328. Much? Yes.
329. Can you tell me how much? No; but I know that several of my friends have gone out there to live.
330. You do not anticipate that there will be very much goods traffic upon this line? Not very much. It is a question about which I do not know much. I have looked upon this as a suburban line.
331. Are you aware that this route would be shorter from Newcastle than the present route? Yes.
332. How much? Ten or 12 miles, I believe.
333. Still you do not expect any revenue on it except from passenger traffic? I think there would be a slight chance of goods traffic, and there might be more hereafter; but I do not think that the goods traffic would be very great. I fancy that the coal traffic would probably stop at the Hawkesbury, where they have deep water. Wool and heavy bulk goods might be brought that way for the convenience of loading; but I know so little about goods traffic that I would rather say nothing about it. If there is a goods traffic there will be plenty of deep water frontage all round Lavender Bay. There will be an actual wharf area larger than that at the Circular Quay.
334. What area of land do you own on this particular route? I have a 1-22nd interest in 72 acres of land near Russell's—about 3½ acres.
335. Would many land-owners be benefited by the construction of this line? Unquestionably.
336. Do you think that the land along the route would be materially increased in value? Materially. If people could get an elevation of from 300 to 700 feet within 5 or 10 miles of the post-office, a very large number of them would go there, supposing they had railway communication which would bring them into their offices in about half an hour.
337. Do you think it a fair and reasonable proposal that the large land-owners, who you say would be materially benefited by the line, should be taxed to a certain extent? With regard to other people I cannot say; but I should be happy to bear my share of such taxation if there were any legislation which would render it feasible.
338. *Mr. Lee.*] You are acquainted with the existing tram-line? Yes.
339. Does it run through a fairly populated portion of North Shore? It does; it runs through the most populous part.
340. Are you aware whether it is paying interest on working expenses? I should say that probably it does not; but we must bear in mind that that tramway cost three or four times as much as it ought to have done.
341. Have you any idea of what it cost per mile? I have been told outside about £75,000; but Mr. Abbott, I think, said just now £50,000. It is generally considered over there that it cost vastly more than it had any right to have cost. It ought to have cost about £18,000 without rolling stock; and it would have paid very well on that.
342. It is very freely used by the residents living at some considerable distance from the Milson's Point Wharf? It is used all along. You find passengers taking it to reach the first stopping place, about a quarter of a mile along the road.
343. Do not a large number of the residents walk from Ridge-street? Unquestionably—the tramway cannot take them all down.
344. At the present time a certain proportion of the residents walk to and from the steam-boat? No doubt about it. I generally walk down from my place though the tram passes my door. I prefer to walk.
345. These people would still walk if the railway were constructed? All the people living near the Point, or at least a very great number of them would. I should think that when you get out to about the 11-mile—nearly 2 miles out—passengers would begin to use it, just as they begin to use the railway at Newtown.
346. From the 11-miles outward the population is the least—it is most scattered? Unquestionably.
347. Could you tell the Committee whether there is any quantity of land beyond the 11-mile? There is a good deal of land which was not sold last year, but how much I cannot tell you. There is Crown land there.
348. Within easy reach of the proposed line? The line, I think, impinges on one end of this Crown land. A subdivision was made near Roslyn and Lynfield last year, and the railway passed quite close to the corner of that. The land spreads out a mile or two from it. I think only part of the land there was sold.
349. I presume that your remarks in general apply to the traffic over the whole line between Hornsby and Milson's Point? Yes.
350. They will not apply principally to the small piece now under the consideration of the Committee? No.
351. You are dealing with the line as a whole? I am dealing with the suburban extension as a whole.
352. You call the extension from Hornsby to Milson's Point a suburban extension? Yes.
353. Do you think there is likely to be any amount of goods traffic to come in that direction? It is a matter about which I said I do not know very much. My own impression is that there will not be much goods traffic.
354. Then this line must be looked upon essentially as a passenger line? That is the point from which I have considered it. I have no doubt that there will be some goods traffic, and some through passengers, but I have not gone into that at all. It is as a suburban passenger line that I have looked upon it principally.

- H. H. B. Bradley, Esq.  
10 Oct., 1889.
355. Have you estimated what the interest and working expenses will be upon the section as a whole? I have not. I have not gone into any figures, because I have felt that they must necessarily be illusory. I think that nobody could possibly have calculated forty years ago, when the line to Parramatta was constructed, what the future traffic would be.
356. Because of the great amount of settlement that has taken place in the western suburbs in consequence of the railway extension there, you assume that the same thing will take place on the North Shore line? I do; and being able to get a great elevation so close to town, will be an extra inducement.
357. Do you know anything of the Illawarra extension within 11 miles of the city? No, except generally. I know that a large settlement has taken place there.
358. Do you know whether as much settlement has taken place there in the same proportion as on the suburban line? I do not think there has been time enough to show whether it will be as great. I think it has been faster, but we must bear in mind that Sydney is a larger city now than it was when the railway to Parramatta was built.
359. Taking the most favourable view of the matter, this line must necessarily be a losing concern for some years to come? I do not think that it can be a losing concern for very long.
360. The portion of the line immediately under consideration, the interest on the cost of which will be nearly £12,000 a year, must necessarily be a losing concern; but taking it as a whole it will not be? Taking it as a whole it will not. The Government have spent nearly £200,000 on the line already, and if it is not taken down to some place such as Milson's Point, it will be spoiling the ship for a pennyworth of tar. It would be like as if we had started our main railways from Newtown instead of from Redfern.
361. Would an additional cost of £262,000 place the country in a better position? I certainly think it would. If a man built a house at an expense of £2,000, and it would cost another £500 to put a roof on it, I should say that it would be better to put a roof on it; so I think that the Government having spent so much on the railway, should spend something more to make it useful.
362. The total cost of the line from Hornsby to Milson's Point would in round numbers be £500,000? Yes.
363. Is there a population along the route at the present time to pay the interest on that and the working expenses? I do not think there is.
364. Consequently the line must for some time be a losing concern? Yes.
365. But in your opinion the population will increase rapidly, and there will, therefore, be an increase in the traffic? Yes.
366. You think the passenger traffic will increase to such an extent that it will make the line payable? Yes.
367. This is simply your opinion; you have not worked the matter out? That is my opinion, based on what has happened with regard to the other suburban lines. With reference to the proposal to extend the line to Cremorne, I may say that the object of persons wishing to come by the railway will be to get to some point near the city Post Office, and Milson's Point is, therefore, the best terminus of the line. There is already excellent passenger and vehicular steamer accommodation from there to the city, and should it be intended to take the railway into Sydney without going to the expense of a high-level bridge it could be taken from there more readily by punts, and if the Sydney railway were brought to the Circular Quay as projected, there would be a through connection made.
368. *Chairman.*] Such a connection could not be made if the line were brought to Cremorne? No. I may also say that without any artificial encouragement at all the traffic has come down to Milson's Point, showing that that is the natural point for the traffic to come to. Any attempts to bring it from Dawes' Point and Windmill-street to Blue's Point have failed. The route to Cremorne by train would be  $1\frac{1}{2}$  mile longer by rail, and 24 acres of additional land would have to be resumed. I have heard that one of the proprietors of that land said that the railway would put £40,000 into his pocket. When the passengers by the train got to Cremorne they would have to come  $\frac{3}{4}$  of a mile back by water; they would be over-carried to that extent. Then the railway at Milson's Point would command the whole of the water-frontage, and could be extended from Lavender Bay around to Kirribilli; in fact there is as much water-frontage available there as there is on this side of the harbour. Taking the line round by Cremorne would be like taking the railway into Sydney by the back of Surry Hills to Potts' Point. Cremorne is also very much exposed to southerly winds from the north-west to the south-west. I have known ships to drag their anchors there and trail on to the rocks. Lavender Bay, on the other hand, is fully sheltered, and there is a large amount of Government land there already reserved and available for use.

TUESDAY, 15 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

James Hobson, Esq., sworn, and examined:—

- J. Hobson, Esq.  
15 Oct., 1889.
369. *Chairman.*] Are you a resident of St. Leonards? I am a resident of North Willoughby.
370. How long have you been residing there? About seven years.
371. You are a newspaper proprietor, are you not? I am. I also hold a seat in the Municipal Council of North Willoughby, and I am tolerably familiar with what is taking place.
372. You know the line that has already been constructed from Hornsby towards the Crow's Nest? I know every part of it.
373. And you know that it is proposed that that line should be carried to deep water at Milson's Point? I do.
374. Do you know what the line has cost up to the present time? I know it from the newspaper reports.
375. £180,000 in round numbers? Yes.
376. And there is a further estimated cost of £262,000 to extend the line 2 miles and 72 chains to the deep water. Will you tell the Committee what you have to say in reference to that proposal? I notice

notice one or two matters have transpired with regard to the carriage of coal, and also that no provision is being made for goods traffic. As a matter of fact, no Newcastle coal will travel along this line, but coal from the west for the supply of North Shore. The whole of the coal from the mountains will come by this line, and would be of great advantage to the local brick manufacturers, who muster in very great force, as you are probably aware, in St. Leonards, and particularly about Gore Hill and Chatswood. The cost of mountain coal at the railway station, Sydney, is 14s. per ton. The cost of trucking it round, say to Gore Hill, would probably be a couple of shillings a ton more. There would, therefore, be a saving to the brickmakers of 3s. per ton, as at the present moment Newcastle coal costs them 19s. a ton at the kiln.

377. Have you formed any estimate of what quantity of coal would be required to supply the brickmakers and the public of North Shore? There are at present on the North Shore five steam brick manufactories. At the largest of these the consumption of coal is 30 tons per week. I have not the figures as to the consumption at the others, but probably they would consume on an average one-fourth of what the land company's works consume. Thirty tons per week is their minimum consumption.

378. That would be about 60 tons per week altogether? Yes, that is for brickmaking purposes. Then, again, there is the supply of St. Leonards, which I think to a large extent will come by this railway; I mean the supply for household purposes. The population of the borough of Willoughby, as near as we can estimate it at the present time, is 2,650, and their supplies of fuel and stores would to some extent come by this railway.

379. What is the distance from Strathfield to Willoughby by this railway? Over 20 miles.

380. And what is the distance from the Railway Station, Sydney, to Willoughby by road? About  $8\frac{1}{2}$  miles. Another matter I would like to draw the Committee's attention to is the large amount of road metal that is used in St. Leonards. You are aware that every borough now is using road metal in preference to the ordinary sandstone, and that supply will also come from Emu Plains, for I understand from the Roads and Bridges Department that it can be got at a cheaper rate; in fact, the Department has already received its first consignment of road metal at Gordon. That cost 7s. per load at Emu Plains. I am unable to say what it is, as I have not gone into figures, but we may anticipate the whole of the supply of road metal for St. Leonards will come from that source. Last year the Government consumption of road metal at St. Leonards was 4,550 cubic yards. Another matter I would like to draw the Committee's attention to is the amount of Government land that would be benefited by the construction of this railway. About nine months ago the Government sold a subdivision at Gordon, consisting of 500 acres—Lindfield is the name of the station—and 567 acres of the same subdivision remain unsold. At Hornsby, about the same period, they sold 915 acres of a subdivision, and there are still 116 acres subdivided and ready for sale. The plan which I have here shows that within 3 miles of this railway at Hornsby the Government have 3,000 acres of land designed for public auction.

381. *Mr. Garrard.*] What is the area still unsold? The area unsold, irrespective of those 116 acres, is 3,000 acres, which are not yet subdivided.

382. *Mr. Humphery.*] Within what distance? The farthest distance is 3 miles from the line of railway.

383. *Chairman.*] Do you know what is the total population of the North Shore? About 30,000.

384. Does that include Manly Beach? Yes.

385. Gordon and Willoughby? Yes; the whole electorate of St. Leonards.

386. The bulk of that population resides to the east of this proposed line of railway, does it not? It does.

387. What proportion of it would you say resides to the east of this railway;—would you say five-eighths or six-eighths? I should say quite two-thirds.

388. Then this line of railway would not serve those two-thirds at all as a means of communication with the metropolis? No, it would not.

389. The denser part of the electorate of St. Leonards would not be served by this railway; I mean that part where the population is densest? No, it would not.

390. We were told by Mr. Bradley the other day that, as a matter of fact, this line of railway would not serve the population of St. Leonards at all except beyond 3 miles from Milson's Point? I don't agree with Mr. Bradley. I think this railway will serve a population a mile from Milson's Point.

391. From the Crow's Nest upwards? I think about the Euroka Estate, Bay Road; and Berry's Bush—that part which I understand is to be subdivided. Population settling there would be served by this railway.

392. How far is that from Milson's Point—about  $1\frac{1}{2}$  miles, is it not? A little over a mile, I think.

393. Do you know the estimated cost of working expenses and interest for this 2 miles and 72 chains? I don't remember the estimate as to the working expenses, but I think it was stated the interest would be about £12,000 a year.

394. £11,945 interest, and working expenses. What probability is there of any part of that being repaid by this railway? Certainly not any at the outset. I do not think it could be expected.

395. Do you think the working expenses would be paid by it? I would not like to say that.

396. We are told they would be £2,775 a year;—do you think that these 2 miles and 72 chains would earn enough to pay those working expenses? I do not think that the railway would pay at all at the outset, whether the terminus remains where it is or is removed to Milson's Point. £12,000 does not seem to me to be such a very large item, when I know, as a matter of fact, that a hotel now being built in the city will have to pay interest on £15,000.

397. *Mr. Garrard.*] You said just now you expected that goods would be brought down by this railway;—is it at all likely that goods will be sent round from the city of Sydney, a distance of about 27 miles? No, I did not mean that. I meant there will be a large amount of traffic from the Point to Hornsby, goods being conveyed for the use of those who are settled along the line. There is a large number of manufactories on the line—several large pottery works. There is one pottery works where £10,000 has been sunk by private enterprise.

398. But the principal portion of those works would be served by the line already constructed, without its coming any further down, would it not? To some extent it would.

399. The greater number of those brick-works are on the line at present constructed? Yes.

400. And therefore have nothing at all to do with the proposed extension? Oh yes, they would.

401. In what way? The shipment of bricks. At present a large number of bricks is taken away to the coastal ports.

402. Can you tell us the number of bricks that have been taken away by coastal boats from North Shore? Most of Manly has been built with bricks from North Shore.

403.

J. Hobson,  
Esq.  
15 Oct., 1889.

- J. Hobson,  
Esq.  
15 Oct., 1889.
403. That would not amount to many millions of bricks would it? No; but it is one item in the carrying. I do not think it would be a very large one, but it is one item in the matter, and road metal is another.
404. With reference to road metal;—you have spoken of road metal coming from the Emu Plains? Yes.
405. Are you aware that the bulk of the road metal used by the Roads and Bridges Department and also by the various Municipalities of North Shore comes from the southern quarries and not from Emu Plains? I am.
406. Are you aware that the southern quarries metal is far superior to the Emu Plains metal? I am not aware of the relative qualities of the two metals.
407. *Mr. Lee.*] You mentioned that there were five steam brick-works on the North Shore? Yes.
408. How many of these are located at Gore Hill? Three.
409. And the line at present being constructed from Pearce's Corner passes close to Gore Hill? Yes; the line passes almost through one of the works.
410. Consequently those brick-works would be supplied with coal irrespective of the extension of the line to Milson's Point? Yes; those three brick-works would.
411. So, in calculating the revenue to be derived from the extension to Milson's Point, the carriage for those three brick-works must be left out? As far as coal is concerned, yes.
412. Are not the unsold Crown lands at Gordon and Hornsby made accessible at the present time by the Homebush to Waratah line? Not those at Gordon.
413. Gordon will be rendered accessible by the construction of the line from Hornsby to the Crow's Nest, when the railway is finished to Gore Hill? No, it would not be accessible.
414. It is situated conveniently to Gore Hill, is it not? Yes.
415. How far is the unsold land at Gordon from the line at present constructed? It is by the side of the railway. A portion of that which was sold came right up to the railway line. The greatest distance would be  $2\frac{1}{2}$  miles from Lindfield railway station.
416. I presume you wish the Committee to understand from the tenor of your remarks that, if this line were constructed to Milson's Point, many persons would be induced to purchase land and settle at Gordon and other places? Undoubtedly.
417. And therefore create a certain amount of traffic over the line? Yes. I think a very large settlement would take place on this line. I know many people who are anxious to live in Willoughby or beyond, but who will not put up with the inconvenience of travelling by 'bus.
418. But under any circumstances only about one-third of the population of the St. Leonards electorate could possibly be served by this railway? I should think so.
419. Speaking of the line as a whole from Hornsby to Milson's Point, the estimated cost of which would be £443,000, and the interest upon which would be £15,470, and the working expenses (say) £6,000, or a total annual cost of £21,470—can you give the Committee any idea how this or any portion of this money is likely to be raised either by passenger or by goods traffic? I can only say that if the railway be extended to Milson's Point there will be a much faster settlement on that line than has ever taken place on any line in the Colony.
420. Can you give the Committee any figures as to the western extension or the Illawarra extension within an easy radius, so as to guide the Committee as to what the increase of traffic would be? I know it has been very great on the Illawarra line.
421. Can you give the Committee any figures? I have not prepared any figures.
422. It must be obvious to you that the amount per ticket received from passengers carried on a line 2 miles and 21 chains in length would necessarily be very small? It would.
423. Consequently the railway would have to carry a very large number in order to receive anything like a large amount of revenue? It would have to carry a great number.
424. Your idea as to the carrying of goods from Milson's Point towards Hornsby, along that route, is based upon an individual opinion of your own? Yes, on an individual opinion of my own; but I have watched the progress of the district very much, and it must be obvious to anyone watching it that the population is increasing very largely, and would do so still more if there were convenient means of communication with the places where people went to settle. The land which this line would open up is far superior to that already settled upon.
425. *Mr. Humphery.*] Do you think the population would be sufficiently served by an extension of the tramway to join the railway at the Crow's Nest? I do not think it would. I do not think any tramway in existence is satisfactory to the travelling public.
426. That is with regard to the cost of the extension? I think that if the tramway were extended, this proposed extension of the railway would eventually have to be carried out. I may be rather sanguine in my anticipation with regard to the future of North Shore, but I think an enormous population would be settled on that line.
427. That is beyond the Crow's Nest? Beyond Gore Hill—about Willoughby and Lindfield, and right out to Hornsby.
428. What is the distance from Milson's Point to Gordon? About 6 or 7 miles.
429. And you anticipate that the traffic that will eventually support this railway will be beyond the Crow's Nest? Yes; that is where I look for the largest settlement.
430. Between the Crow's Nest and Milson's Point there will be comparatively little traffic? Well, St. Leonards is already built on right up to the Berry Estate, and that is a block to the settlement of the district in that direction.
431. You anticipate all the profitable traffic will be beyond the Crow's Nest? Yes; I do not think the present population of North Shore worth considering compared with the prospective traffic.
432. So that although this extension, which will cost about a quarter of a million for 2 miles, will not be profitable in itself, it will carry traffic beyond which will be profitable? Yes; I look to traffic beyond Crow's Nest.
433. You look not to the present earnings, but to the future? I look to the future.
434. *Mr. Dowel.*] Can you say what distance coal from the mountains would have to be carried so as to be used by North Shore people? I am guided in my statement as to that by the fact that coal is delivered at Redfern and thereabouts at 14s. per ton.
435. But you cannot say what distance the coal would have to be carried? No; but probably the extra cost would be 1s. 6d. per ton, or perhaps 2s.
436. Supposing this line were constructed, would not the coal have to be carried a shorter distance than  
at

at present;—you have said that coal would be brought from the mountains for consumption by the North Shore people; can you say how many miles the coal would have to be carried before it reached North Shore? I cannot say the number of miles.

J. Hobson,  
Esq.

15 Oct., 1889.

437. What particular mountain coal do you refer to? What I said applies to all mountain coal.

438. On both lines? No, the Western line.

439. Can you say whether this extension would pass through any large estates? No, I do not think it would, except the Berry Estate. The Government is the largest proprietor, and I think Berry would come next.

440. The line, if constructed, would pass through a large estate? Not many, mostly small holdings, I think, such as orchards. I do not know any large estate that the line would pass through.

441. You anticipate that the land in the immediate neighbourhood of the railway would be very materially increased in value if the railway were constructed? I am sure it would.

442. Do you think it would be a fair thing to tax to a certain extent the holders of that land? I think it would be fair if all owners of land adjacent to railways were taxed.

443. But dealing with this particular line which would cost so much money for only 2 miles and a few chains, and from which you have shown that not much revenue could be anticipated, do you think it would be a fair thing to ask the owners of land who will be materially benefited by the construction of the line to contribute something in the shape of taxation? I do not think a proposal of that kind could be worked.

Charles Cyrus Bullock, Esq., sworn and examined:—

444. *Mr. Garrard.*] What is your profession? I am a licensed surveyor.

C. C. Bullock,  
Esq.

445. Are you a resident of North Shore? I am not now, but I was from 1877 to 1886.

446. You are familiar with the whole of the country round about? Yes, perfectly familiar with every part of it.

15 Oct., 1889.

447. You are aware of the proposed route for this extension of the railway from the present terminus at Crow's Nest to Milson's Point? Perfectly.

448. Do you think the best route has been chosen for the purpose of reaching the deep waters of the harbour? Yes; I think the Milson's Point route is the best. I have prepared a report which I have here and it might save time if I were to read it.

449. *Chairman.*] Yes; and we will take it as part of your evidence.

The witness then read the following report:—

NORTH SHORE RAILWAY.

*Objects of railway.*

To afford a means of access from Sydney to the lands lying between St. Leonards and Hornsby. To connect, eventually, the northern and southern railways, either by a high-level bridge across the harbour from Blue's Point to Flagstaff Hill, or by steam-punt to Fort Macquarie or Dawes' Point, to one of which places the city railway will probably be extended.

*Terminal point of railway.*

But little need be stated to show that of the two proposed routes to the waters of Port Jackson, that to Milson's Point is superior in every respect. The official estimate of the cost of construction of the Cremorne route is £285,000 as against £262,000 for the cost of the construction and resumptions on the Milson's Point route. The length of the extension to Cremorne Point is nearly twice the length of that to Milson's Point, and consequently the area of land to be resumed would be twice as great. Assuming the land to be only half as valuable as that on the Milson's Point route, the cost for resumptions would be £135,000, making a total cost of £420,000, or £158,000 more than the total cost of the Milson's Point route. The distance from Hornsby Junction to Cremorne Point is 14 miles 22 chains, to Milson's Point, 12 miles 72 chains, a difference of 1 mile 30 chains in favour of the latter route. The distance from Cremorne Point to Circular Quay is 1½ miles; from Milson's Point it is ¾ of a mile. Notwithstanding the greater length of the Cremorne route, better grades cannot be obtained than those on the Milson's Point route. This will be readily understood when it is remembered that it traverses for more than 2½ miles country which is more elevated than its point of departure. The Milson's Point route follows the natural features of the country, and gradually descends until it strikes the water-level of Lavender Bay. The Cremorne Point route would compel all persons travelling between Sydney and Hornsby and other places on the line, to be carried 4¼ miles further than they would be by the Milson's Point route. Neither would the Cremorne Point route suit local traffic. The cable tramway in Miller-street commands the traffic to within a half mile to the east of it, while the residents on the southern side of the Military Road would be better served by the ferry service in Neutral Bay. The residents of the Spit Road and Mossman's Bay would not travel by it, because they also would be better served by the ferry service to that bay. Neither would the residents of Cremorne patronize it, because they would be within a walking distance of a ferry. There is no ferry service to Berry's Bay, consequently the Milson's Point route would command all passenger traffic as far as 11¾ miles point. For passengers travelling between Hornsby and St. Leonards, stations at Walker-street, Bay Road, and Edwards Road, would be of great convenience to them. It is stated, as an argument in favour of the Cremorne Point route, that to the Government belongs the water frontage there. It is by no means certain that the Government could take possession of it without paying for it, but in any case it would only be 100 feet in depth, and that would be insufficient. At Bradley's Head, and at Middle Head there are several hundreds of acres of Crown lands, not in strips of 100 feet in depth, but in solid and compact blocks. Neither is there any doubt as to whom it belongs. If, therefore, the terminal point should be governed by the fact that the land belonged to the Government, either of the two places mentioned is superior to Cremorne. Should the Cremorne Point route be adopted, it would be necessary to connect with a bridge across the harbour from Blue's Point to Flagstaff Hill, to construct a branch line of about 2 miles in length. To connect the bridge with the Milson's Point route, the branch line would be only a ½ mile in length. It is also urged that Cremorne Point possesses superior advantages over Milson's Point for shipping purposes. Such is not the case, however, and the plans which I shall presently exhibit will prove it. The advocates for the Cremorne Point route endeavour to show that, if it were constructed to that point, a large amount of coal would be carried by it for exportation purposes. From inquiries I have made at Newcastle, I find that coal can be taken by steamers from Newcastle, and placed in a ship's hold or upon any wharf in Sydney harbour for a sum under but not exceeding 4s. per ton. From Newcastle to Cremorne Point, by the railway route, the distance is nearly 96 miles, and reckoning the freight at only 1d. per ton per mile, the freight for a ton would be 8s., or 100 per cent. more than by water. Another objection, which would render the carriage of coal by railway from Newcastle to Port Jackson impossible, would be the amount of money that would have to be sunk in the construction of coal waggons. In Newcastle the waggons are generally used twice a day, whilst if they were sent to Cremorne, they could not be used oftener than once a day, or probably only once in two days. Last year 667,000 tons of coal were exported to Melbourne alone, being an average daily export of 2,000 tons. To bring this amount to Cremorne Point would require about twenty engines and 330 coal-waggons. Such steamers as the "Wastwater," "Era," and "Age," can carry about 4,000 tons each, as much as could be brought by forty engines in 660 trucks. It is frequently stated that large coal is damaged by being carried in ships. I find, however, that the maximum amount of damage is 1½d. per ton.

*Necessity for extending the railway to Milson's Point.*

I take it for granted that the North Shore railway must touch the harbour at some point, and I consider that I am justified in assuming, from the evidence which I have adduced, that Milson's Point is the proper terminus; and I shall now proceed to show the necessity for, and the desirability of, extending it to that point.

C. C. Bullock,  
Esq.

15 Oct., 1889.

The present instalment of the line has cost £187,000, and to extend the tramway to meet it at St. Leonards station will cost, including permanent way, extra engine power, and land, at least £43,000—making a total cost of £230,000. To extend the railway to Milson's Point, the estimated cost, including £135,000 for resumption, is £262,000. From this sum, however, the value of the lands and houses over the tunnel, and of other properties which need not be destroyed, must be deducted therefrom. The value may be safely stated at £32,000, which brings down the cost to £230,000. I particularly desire to impress upon the Committee the fact that the resumptions include about 2,000 feet of deep-water frontage to Lavender Bay. This water frontage can readily be utilised for wharfage purposes, and I have no hesitation in stating that, should the railway be taken to Milson's Point, this asset alone will in ten years hence be worth at least a quarter of a million. I may point out that in consequence of the physical features of the land between the water frontage and the roads at back, the properties, as held by the present proprietors, are by no means as valuable as might be supposed, inasmuch as they can be approached only by water. In the hands of the Government, as a solid block, proper means of egress at the rear could be made.

Another important fact must be taken into consideration, viz., the Crown lands situated on the railway in the district of Gordon. Had it not been for the railway these lands would have had little value, and if the railway be not extended to the harbour, I am of opinion that their value will be reduced by one-half. In September, 1888, about 1,200 acres of land situated near Lindfield station were submitted to public auction, and about 500 acres were sold, realising a sum of £33,000. A little later about £3,000 was realised from Crown lands near Hornsby. Thus £36,000 has been actually received by the Government, and the cost of the railway may be credited with this amount. The balance of the Lindfield subdivision, at £50 per acre, is worth £35,000, at which sum it could be readily disposed of after the extension of the railway had been completed. There are about 10,000 acres of Crown lands improved in value by this railway, which are worth, at £20 per acre, about £200,000. It is thus seen that the Government is the largest landowner along the line, and that its interest in this respect should be considered with, not apart from, the railway proposal.

Whilst I am of opinion that the North Shore railway, if extended to the harbour, will, in the course of four or five years, be one of the best paying railways in the Colony, I am not of opinion that of the two proposals—the extension of the railway to the harbour or of the tramway to the railway—the question to be considered is whether either proposal will pay interest on capital and working expenses, but whether, taking other considerations into view, a better return will not be obtained by the larger expenditure in taking the railway to Milson's Point.

In order to make the line profitable it is self-evident that the greatest facilities should be afforded, not only for the creation of a passenger traffic but also for a goods traffic. Whilst the goods traffic in any case may not be large, should the line be not extended to the harbour there will assuredly be none at all. I have already shown that Newcastle coal cannot be brought by railway to Port Jackson, but as Newcastle coal is forwarded from Darling Harbour by train to the various stations on the suburban lines, it is reasonable to suppose that Newcastle coal would be brought by steamer to Milson's Point, there placed in railway trucks and forwarded to the various stations on the North Shore line. Agricultural produce of every description, as well as live stock, are carried by the Northern line to Sydney. The population of the district of St. Leonards is nearly 20,000, or nearly  $\frac{1}{10}$ th of the population of the country. So large a population must necessarily require large supplies of both kinds, and these at least should be carried by the railway. Mr. Edwards, a gentleman who will supply you with detailed accounts, has informed me that about 45,000 cases of fruit are annually sent from the Gordon district to Sydney. The freight on a case for the return journey would probably be 6d., in which case the revenue from this source would amount to about £1,100. There are also brickyards and potteries along the line, the products of which would be sent by railway to Sydney. Whether or not goods will be permitted to come from the north to Milson's Point largely depends upon the Commissioners for Railways. Considering that the distance to Milson's Point is 8 miles shorter than the distance to Redfern Station, together with the fact that splendid wharfage accommodation at Milson's Point would be available, there is no reason why some of it should not find its way there.

To connect the railway with the tramway, instead of extending it, would mean the infliction of the maximum amount of inconvenience upon passengers, and would retard to a very great extent the settlement of a population along the line. St. Leonards station is distant by road and tramway from Milson's Point a little more than 2½ miles. Passengers between Sydney and Hornsby would have to travel by steamer, thence by tram, and thence by train. To passengers without luggage this would be annoying, but to those with luggage, or accompanied by children, or to elderly persons, it would be simply intolerable. Should there be any goods traffic, which I doubt very much, it would have to be carted between the station and Milson's Point, and when it is remembered that a hill having an elevation of 325 feet above sea-level has to be surmounted on a road which has grades of about 1 in 12, it will be readily understood whether or not the requirements of the people would be met by such an arrangement. It may be stated that Redfern station is similarly situated as St. Leonards station, but a moment's consideration will prove the contrary. The physical features between the Redfern station and Port Jackson are such that one horse would draw as much as two horses between Milson's Point and St. Leonards station. The city railway also touches Port Jackson, in Darling Harbour. Redfern station is situated within the city, the objective point of the passengers travelling thereto, and it is only a mile from the centre of the heart of it. The objective point of passengers from North Shore is also the city, but St. Leonards station is several miles from it. Instead of that being the case, however, every facility should be given to reach the city. To passengers travelling to and from the north, the North Shore railway would, in a return journey, save 16 miles, and whilst the General Post Office, in the vicinity of which the principal hotels are situated, is within a walking distance from Circular Quay, Redfern station is not.

Between Milson's Point and the present terminus of the tram there are ten stopping-places, and I understand there would be eight more if it were extended to the railway, making a total of eighteen. The speed of the tram is about 6 miles per hour, but calculating it at 8, it would take twenty minutes without stoppages, and about twenty-five minutes with stoppages, to reach St. Leonards station. Another five minutes for delay in changing from tram to train brings up the time of the journey to twenty-five and thirty minutes for a fast and slow tram respectively. A fast train would reach it in five minutes and a slow train in ten minutes. A fast train would reach Hornsby station in the same time a fast tram would reach St. Leonards station. From these facts it is shown that, if the tram instead of the train be extended, the return journey between St. Leonards station and the other stations on the line will be increased by forty minutes.

I have previously stated that it is not a question as to whether either proposal will pay interest on capital and working expenses, but that it is a question as to which proposal would show the least loss or would yield the greatest profit, other circumstances being taken into consideration. I have no hesitation in stating, and I shall endeavour to show, that not only will the extension result in the least loss at the commencement, but that it will yield the greater profit in a very few years. It must be borne in mind that the same amount of rolling stock would be required to work the line to St. Leonards station as would be required to work it to Milson's Point. From the quarterly report of the Railway Commissioners, ending June last, I find that the working expenses per train mile is 4s. 3d., and for the tramways, 2s. 11d. The difference applies to only 2½ miles, so that for practical purposes the working expenses for both schemes may be deemed to be the same. The difference between the annual charges of the two schemes is obtained by calculating the interest at 3½ per cent. on the difference between the costs of the two schemes. This difference I have already shown to be £180,000, the interest upon which is £6,300 per annum.

It cannot be doubted for a moment but that the railway would eventually be extended to the harbour, and there can be no doubt but that the quicker it is done the cheaper the cost will be. In 1857 the city railway could have been extended to Hyde Park for £80,000. To carry out the extension now would cost £600,000. Should the extension be delayed for five or ten years the cost for resumptions would then be about 100 per cent. higher than the present cost. Indeed such improvements might be erected upon the properties as would make the extension almost impracticable. As it takes about 20½ years for money at 3½ per cent. to double itself, it would pay the Government handsomely to resume the land now, and let it lie idle until such time as it be required. As reasons for the extension of the line, it must be remembered that the resumptions are now obtainable at the minimum cost, that a direct and the most complete service would be obtained, and one that would provide for traffic of any description. It would settle twice the number of people upon the line, and would create an excursion traffic which should equal, if it should not excel, that upon the Illawarra line. The scenery on the North Shore line is equal, if not superior to that on the Illawarra line, and the Hawkesbury River is distant only 28 miles from Milson's Point. As many as 20,000 people patronise that line on a public holiday, and as there are ten during the year, probably 150,000 persons patronise it for pleasure purposes during the year. If, therefore, it be assumed that 50,000 excursionists, including those from St. Leonards, patronised the North Shore line on public holidays during the year and reckoning 20,000 to the river at 5s. per head and 30,000 at 2s. per head, the revenue derived from this source would be £8,000. Then again a large revenue would be derived from persons from Sydney and St. Leonards who would patronise the line on Sundays. It is scarcely reasonable to suppose that advantage would be taken of the railway if passengers had to change so often to get to their destinations as would be the case if the tramway scheme were adopted.

The

The increased cost of the railway scheme is £6,300 per annum, or about £17 per day. A first-class return fare to Gordon, situated about midway on the line, will be 1s., and 340 passengers at 1s. per day would cover the increased cost. I must again point out that by securing the water frontages in Lavender Bay a property is secured which can be made to return a revenue, and which in a very few years will be worth more than the cost of the extension.

C. C. Bullock,  
Esq.  
15 Oct., 1889.

*Population and character of the country through which the railway passes.*

In the immediate vicinity of Milson's Point there are three boroughs, and their populations are as follows:—East St. Leonards, 5,550; St. Leonards, 7,315; and Victoria, 3,470, making a total of 16,335. The Borough of North Willoughby, which extends from St. Leonards station to the parish of Gordon, and through the centre of which the railway passes, has a population of about 2,000. Within this borough, at Chatswood, is situated the site of the elevated reservoirs now in course of construction, and which will supply with Nepean water this and St. Leonards districts. The gas-mains are already extended within the boundaries of the borough, and the Council has authorized their extension to Chatswood. Chatswood station is situated only  $4\frac{1}{2}$  miles from Milson's Point, and is situated on a plateau at an elevation of 350 feet above sea-level. It is magnificently situated for suburban residences, and is infinitely superior, for this purpose to any locality on the southern side of the harbour. There are two hotels, three churches, and one Public school. There are also shops and stores and several very fine residences. Besides these there are tanneries, brickyards, and potteries. "The Great Northern Hotel" is a favourite training-ground for athletes, and with proper communication with Sydney, Sheffield handicaps and other sports, which attract large numbers of people to Botany and other places, will be inaugurated. Steps are being taken to secure grounds for a racecourse, the meetings of which will also attract large numbers of people. From Chatswood to Hornsby the country is magnificent in every respect, and has a gradual rise, the latter place having an elevation of 592 feet above sea-level. Within these limits there is a population of about 1,140, who are principally occupied in fruit-growing. There are five hotels, three churches, one bank, and three schools. From Porter's Hill, at Gordon, the South Head light-house and the Pacific Ocean can be clearly seen. Some of the surrounding hills there are over 600 feet above sea-level.

According to the Transit Commissioners there are at the present time running to Willoughby and Gordon four 2-horse waggonettes and four 4-horse 'buses. Another application for a new line of 'buses has also been recently received by the Commissioners. From these data some idea of the present passenger traffic may be obtained. Allowing for three relays of horses, cost of keeping them, interest and depreciation in stock, wages to drivers, and £500 for profits to the four proprietors, I estimate that the revenue received is about £4,000. This gives the daily average earnings of each 'bus at £1 7s. 6d., a sum which appears to me to be rather a low estimate. It should be stated that the greater number of residents, as well as visitors, ride or drive, and consequently do not patronise the 'buses.

*Comparison of North Shore districts with districts on the Illawarra line.*

According to information received from the Statistician, I find that in 1881 the population of the district known as Rockdale was 858, and at that time there was only one 2-horse 'bus running there. In June last, or about five years after the opening of the railway, the population of Rockdale, including Arncliffe, was 3,500, of Kogarah, 2,500, and of Hurstville, 2,000; making a total of 8,000. This development, it should be stated, took place without water and gas conveniences such as will be at once within reach of the North Shore districts. At the present time those places are not supplied with Nepean water. I would also point out that Arncliffe is 5, Rockdale 6, Kogarah 7, and Hurstville 9 miles from Redfern Station; Gore Hill is 3, Chatswood 4, and Gordon only 7 miles from Milson's Point. The elevation of Arncliffe is 47, of Rockdale 52, of Kogarah 66, and of Hurstville 214 feet above sea-level. The elevation of Gore Hill, however, is 300, of Chatswood 350, and of Gordon 500 feet above sea-level.

With a greater population, with better soil, with advantages in elevation and of proximity to Sydney, there are no reasons to suppose that settlement will not take place on the North Shore line in as great a ratio as that which has taken place on the Illawarra line.

In conclusion, I would point out that in order to obtain a proper conception of the country through which the railway passes it is absolutely necessary that the Sectional Committee shall examine the entire length of the line from Milson's Point to Hornsby.

The following information will give some idea of the vehicular traffic between Milson's Point and the districts beyond the junction of North Sydney Road with Lane Cove Road. The returns are for one day only.

From Sydney, towards Lane Cove .....	200
„ Lane Cove to Sydney .....	188
Total .....	388
From Sydney to North Sydney.....	100
„ North Sydney to Sydney.....	118
Total .....	218
To and from Sydney and Lane Cove .....	388
„ „ North Sydney.....	218
Total .....	606

450. *Chairman.*] Where did you get those returns about the vehicles that passed? I had a man there on a Saturday from 4 o'clock in the morning till 11 o'clock at night.

451. That is an unusual day, is it not? I understand a greater number pass there on a Friday.

452. *Mr. Garrard.*] Do you know the amount of land required for this extension along the eastern shore of Lavender Bay;—what depth from the water? I presume 2 chains; that is the usual width.

453. You spoke of the difficulty of getting up to the high land from the water, but said that if the Government held the land laying between the bay and the road above in one solid block the means of egress could be made much easier. If that were done it would be necessary to resume more lands? Yes, to get up to the top.

454. That would increase the cost? Not very much, for the water frontage is of the chief value.

455. Do you know at how much the cost of resumption has been estimated? £135,000.

456. Do you think that is a fair estimate? Yes, I think it is.

457. I suppose that the principal ground for this extension you think is because the present line is incomplete. Supposing that the present line to the Crow's Nest was not made, do you think we should be justified in recommending this North Shore line? I do. As a private individual I should only be too glad to put money in it myself. I think it would be one of the best paying lines round Sydney. There is no line outside Sydney that could compare with the North Shore line as far as Hornsby.

458. Have you any interest in North Shore? Yes, I have a very large interest on the North Shore, but not at Milson's Point.

459. *Chairman.*] I see that this railway runs through some of your property? Yes, but it makes no difference to me whether it goes down to Milson's Point or not. It is not because I have the land that I think it is a fine district, but I bought the land because I thought it was a fine district.

460. *Mr. Garrard.*] I suppose you are aware that through passengers would go right round to Redfern and

- C. C. Bullock, Esq.  
15 Oct., 1889.
- and the line from Hornsby to Milson's Point would merely be a branch line? That I think would depend chiefly on the Commissioners. If they ran through trains from Newcastle to Sydney perhaps those very flush with money would not take the trouble to come to North Shore, but if through trains were run to St. Leonards and Sydney I think a great number of people would come to Milson's Point, as the distance would be 8 miles shorter; a steamer could take them across the harbour to Circular Quay and they would be within walking distance of the hotels, which at Redfern you are not. If a through train went to Milson's Point and passengers were landed on the wharf alongside of which the Government provided steamers to take them to Circular Quay, they could be landed right in Sydney, whereas at Redfern you have to get into a tram which takes you at least a quarter of a mile from the principal shops in George-street.
461. I am referring to ordinary through passengers;—do you think that if these conveniences were offered to them they would go to Milson's Point, tranship into a steamer, and on their arrival on this side of the harbour get into a cab in order to go to their destinations? Anyone going to Milson's Point should be taken across the harbour in a punt the same as is done in America, and from the punt they could go to their hotel in less time than they could from Redfern.
462. That means revolutionising the present ferry traffic, does it not? I could not say what the effect would be. From Milson's Point to the Post Office by water and land is precisely the same distance as Redfern station is from it. There is no reason why we should not have steamers taking passengers and vehicles across the water and landing them at Circular Quay. One of the principal reasons for taking the line to Milson's Point is that there is a ferry service there.
463. I understood that you anticipated that in the near future there would be a bridge from Flagstaff Point to Blue's Point;—would it not be better therefore to take the railway to Blue's Point, and not to Milson's Point? I say that taking the line to Milson's Point would best suit the bridge. Milson's Point is higher than Blue's Point, and therefore more suitable for a junction with the bridge. If at any time the railway were extended from Redfern to Fort Macquarie, or Dawes' Point, trains could be taken across the harbour on punts as is done in America.
464. Do you know any part of the world where trains are taken on punts across such a narrow stretch of water with so much traffic? I myself have been across in going from San Francisco to New York.
465. I am only asking in reference to a narrow water-way;—at the place you have instanced there is a long stretch of water, 7 miles, I believe? I do not know of any place so narrow as our harbour, but I was speaking of the possibility of a train being taken across.
466. How long do you anticipate it would be before this line would return interest on capital, and pay working expenses? Seeing that the Illawarra line pays now, and has only been constructed five years, I think the North Shore line would pay in four or five years.
467. How long do you think it would take to make the line to the Crow's Nest pay without this extension? I do not think it would pay at all.
468. Were you one of those who agitated for the construction of the line to the Crow's Nest from Hornsby? No, I was not.
469. Then you think that the people who advocated that line, and were parties to the construction of it were simply madmen, or robbing the country? I think it was very unwise.
470. *Mr. Dowel.*] You say you do not anticipate any coal traffic on this particular line? Not from Newcastle.
471. From any other part? No, I do not think so.
472. Do you not think the mountain coal could be brought for consumption at North Shore? Mountain coal could be brought there for consumption by the North Shore people, but I do not think it would be for exportation. It would have to go to Strathfield first, and from Strathfield to Darling Harbour is about 7 or 8 miles, and to get from Strathfield to Port Jackson it would have to travel about 27 or 28 miles. For exportation purposes the coal would go to Darling Harbour.
473. But as regards the brickmakers, and the North Shore people generally, do you think they would use the mountain coal, or do you think it could be brought to them? I think it could be brought to them.
474. And then it would be a source of revenue to the railway? Yes.
475. *Chairman.*] You have said that in ten years you estimate that the water frontage in Lavender Bay would be worth £250,000;—what is to make it that value? There is bound to be goods traffic there. There is no reason why ships should not go there and load.
476. Don't you know as a matter of fact there is not a wharf there, erected either by the Government or the Municipal Council, which is paying in the shape of rent interest on the cost of construction? I did not know that. They are asking very high prices. The water frontage could be utilised for bonds.
477. Don't you know that on the eastern side of Milson's Point Mr. Milson erected a store with a view of making a bond, and has never been able to let it, although it has been there two or three years? I was not aware of that.

P. F. Richardson, Esq., sworn and examined:—

- P. F. Richardson, Esq.  
15 Oct., 1889.
478. *Mr. Lea.*] Are you a resident of the North Shore? Yes; I reside at Gordon.
479. Are you acquainted with the proposed extension of the railway from the Crow's Nest to Milson's Point? I have some idea of it, but I have never seen the plans.
480. Do you own any land on the proposed railway route? No.
481. Or on the route from the Crow's Nest to Hornsby? Between the Crow's Nest to Hornsby; I have a small piece of land at Willoughby.
482. Have you prepared any statement to lay before the Committee? No.
483. Any statement you have to make the Committee will be glad to hear, and we can ask you a few questions afterwards;—will you please give us your opinion about this proposal? The railway, as it is left at the Crow's Nest, would be almost absolutely useless to the residents in my neighbourhood along the line. Personally, I could make no use of it at all. From my own place now I have to drive 10 miles to North Shore, and I should have to drive 2 miles to a railway station further up the line, get out at the Crow's Nest, and take the tram to Milson's Point. There are a good many other people similarly situated. I think the great traffic on the line would be passenger traffic—the paying part of it would be passenger traffic—

traffic—and unless the communication was pretty direct to the Shore for business people and others going in and out of Sydney, it could not be used by them. Many people are waiting now to build out there so soon as the railway is carried to the harbour, so that they could get across to Sydney without difficulty either from Milson's Point or Blue's Point. I have always thought that Blue's Point was the best place, for I always had a bridge in view, but Milson's Point or Kirribilli Point would be nearer for communication with Circular Quay by means of horse or steam-ferris. With regard to the fruit-growers bringing their fruit to market, a railway to the Crow's Nest only would not be the slightest use to them. They would have to cart their fruit to a railway station, and then from the Crow's Nest. They go straight into Sydney now from my neighbourhood. Upwards of 50,000 cases of fruit come from the neighbourhood of Gordon.

P. F.  
Richardson,  
Esq.  
15 Oct., 1889.

484. Do I understand there are 50,000 cases of fruit produced annually in that locality? Yes; I think that is the lowest calculation, and the quantity is increasing.

485. With reference to the residents and business people of North Shore who have to visit Sydney, you do not wish the Committee to understand that the whole of the residents of North Shore are depending upon this extension of the railway, or that it would benefit the whole of them? Of course it would not so much affect the people near the Shore. I am speaking of people living at a distance.

486. All the people living a certain distance east of the proposed line would not use it? It could not be much benefit to people living near the Military Road and in that direction.

487. Consequently it could only be of benefit to those already living along the proposed route, and to those also who may in years to come settle along that route? Yes.

488. But they are not more than one-third of the present population? I could not say. I believe the construction of the line would encourage a very large population to settle along the route, especially from the Green Gate.

489. Have you any idea of the cost of the construction of this extension? I have no idea about it.

490. Do you think it would be a fair thing to calculate the interest solely on the cost of constructing that extension, or that the whole line from Hornsby to Milson's Point should be taken into account? I think the interest should be calculated on the cost of constructing the whole line.

491. Have you figured that out? No, I have not.

492. Have you any idea of what the first section of the line cost? I think I saw in the paper the other day a statement that the cost was about £200,000.

493. Not so much as that, but about £185,000; the cost to Milson's Point from Hornsby is estimated at £442,000, and the interest upon that (at  $3\frac{1}{2}$  per cent.) at £15,470, and the working expenses at £6,000, making £21,470 a year;—now, can you point out to the Committee any possible traffic in the near future which will pay a fair proportion of the working expenses and interest on the capital, and, if so, how do you arrive at it? I have not gone into the calculation so fully as that. So far as I can judge, I do not think the line will ever pay in its present state. I think that the only way to make it pay eventually is to extend the line to the Shore.

494. Am I correct in summarising your evidence in this way:—that in your opinion the line to the Crow's Nest would be perfectly useless to the country, or rather, that if it is ever to pay at all it must be extended to Milson's Point? That is what I meant.

495. But you are not prepared to show how the whole section from Hornsby to Milson's Point will pay the working expenses and interest? Looking at the estimated cost, I do not believe it will pay all at once, but I think that with a prospect of a large additional population it will pay eventually.

496. Now, about the carrying of fruit already raised there, and the quantity of which will no doubt be increased, is that sent at present to Redfern station by the main line? A small quantity of it may be sent from Hornsby Junction.

497. Does not the greater portion of it go that way? No; it is conveyed to Sydney by horse and cart.

498. And the whole quantity produced is estimated at 50,000 cases a year? Yes; and a very small proportion of it is grown near Hornsby.

499. Is there likely to be any other produce come from there? No.

500. Has any coal been discovered there;—are there any indications of coal? No. I think there would be nothing but fruit and passenger traffic from there.

501. Let me carry you back a few years; when the first agitation for this line took place a very powerful argument was that it could be used in connection with the shipping of coal sent from Newcastle, Lake Macquarie, Copper Creek, and other places; no doubt you have heard of that argument;—what is your opinion now? I have not touched on that.

502. No; but what is your opinion of that now;—do you think that coal would be carried along this railway and shipped at Port Jackson? I think there will be a certain amount; and, especially if proper wharfage is constructed at North Shore, there will be a very large traffic.

503. Having in view the cost of carriage by rail as compared with the cost of water carriage? I was coming to that, and I do not know what the railway carriage would be, as compared with the sea carriage.

504. Well, 1d. a ton per mile, and the distance will be about 100 miles? That would be 8s. a ton, and that does not seem in favour of the railway.

505. That would be almost prohibitory as against water carriage at 4s? Yes.

506. Supposing the tramway were extended to the Crow's Nest railway terminus, would that meet the convenience of the passengers using that line? There would always be the inconvenience of changing, and the delay caused thereby, and the tram would not run so fast as a train would. No doubt the tram service would be some assistance to the railway if it were extended to the Crow's Nest, but I do not think that extension will compare favourably with the extension of the railway itself to the Shore. The cost of a tramway would be very much less of course; but I think that the railway, if extended to the Shore, would eventually pay the extra interest.

507. Does the present tramway service on the North Shore meet the requirements of the residents there? Some people are better able to give an opinion on that matter than I am. I reside so far away.

508. You do not travel much by the tramway? About once in three months, not more.

W. H. M'Keown, Esq., J.P., sworn and examined;—

509. *Mr. Humphery.*] Where do you reside? At Gordon.

510. Are you an owner of land there? Yes.

511. A large area of land? About 120 acres.

W. H.  
M'Keown,  
Esq.

512. 15 Oct., 1889.

- W. H. M'Keown, Esq.  
15 Oct., 1889.
512. How far from the railway line? The railway line passes through my land and takes a portion of the frontage. I gave the Government the land they required.
513. Is it anywhere near the station? A part of it is.
514. What distance from Milson's Point? I suppose  $9\frac{1}{2}$  miles.
515. What elevation is it above sea-level? About 500 feet.
516. Do you know the proposed route for the extension of the railway from the Crow's Nest to Milson's Point, 2 miles and 72 chains? Yes.
517. Have you been over it? I have not travelled along the proposed route, but I know where it goes.
518. You know what the cost will be—over a quarter of a million? The extension will not cost that, will it?
519. The 2 miles will cost over a quarter of a million. Do you think that the traffic that will be created by this extension will pay the working expenses and interest on the cost of construction? I think the railway will not pay at all unless the extension is made. It is acknowledged on all sides that the line must go to the deep waters of Port Jackson at some time, and I consider that if its construction is delayed ten years you will have to pay double or perhaps treble the price that you will have to pay now for land. In ten years the land resumed for water frontage will be worth all the money that the extension will cost now. That is my idea.
520. Will the value of the water frontage be increased by the railway coming there? Yes.
521. Alone? Yes.
522. In what way will it be increased? For wharfage purposes, if the Government were desirous of selling or using it.
523. You think there will be goods traffic along the extension? I do not think there will be much coal traffic; but our district is one of the best districts in the Colony for clay and shale. I know beds of pipe-clay 20 feet deep, without a stain of iron in it, which would make very fine pottery, and that would create a traffic for coal, and then the goods would have to be conveyed to the water's edge.
524. Do you think a large population would settle between the Crow's Nest and Hornsby if this extension were carried out? I have reason to believe so. It is acknowledged to be one of the best suburbs that we have. If you travel along the Parramatta Road in the winter time you will see floods round the houses, but water can never lie upon the ridges on the North Shore side.
525. Do you think that the population would be well served by connecting the present tramway with the railway at the Crow's Nest? It would not serve producers at all. We are labouring under a great disadvantage now in connection with the getting of fruit to market. I can get a load of fruit from Wagga Wagga as cheaply as a load of fruit from Gordon. If I have to pay for it by the case I can get it to market as cheaply from Wagga Wagga as from Gordon.
526. Do we understand it costs as much to bring a case of fruit from Wagga Wagga to Sydney as from Gordon to Sydney? Some three or four years since I bought a lot of choice grapes at Wagga Wagga, and they cost me 9d. a gin case to get them to Sydney; and if I have to send a lot of fruit to Sydney, and hire a dray, it costs me 9d. a case, but of course not with my own teams.
527. Do you wish to make any general statement to the Committee with regard to the desirability or otherwise of constructing the proposed extension? I think that taking a business view of the matter the railway ought to be extended to the water's edge, and will never pay otherwise. Our land is very productive. If properly cultivated 5 acres will support a family.
528. You think there will be settlement up there for other than residential purposes—that people will settle there in order to cultivate the soil? The back land will be cultivated, and the ridges near the railway line will be occupied by business men. I know several business men who would build at once if they were positive about communication with Sydney being established. Several business men have come to the district, but got tired of travelling backwards and forwards along the road in wet weather in the winter-time, and I am positive we would have a large settlement of Sydney business men if we had a railway running to the water's edge.
529. *Mr. Lee.*] Have you any idea of the cost of this extension? I am not positive about the exact amount; of course it has been stated.
530. It is estimated to cost £262,000. Your remarks are of a general character, and you, like most of the other residents of North Shore, think it would be a great convenience to those residing there, and would probably lead to a large number of people settling there in course of years, do you not? Yes.
531. The only question now is, can the country afford to do this at a certain cost. Do you think the country is justified in doing it at an annual cost for interest and working expenses of £21,000? I think it would be a good speculation for the country.
532. But if it would be a good speculation for the country there must be traffic enough to give a return of £21,000 a year. Will there be that traffic? I cannot speak positively as to that. Of course the railway will make traffic.
533. Have you prepared any statistics to show what the traffic is likely to be? I have not.
534. Or what the revenue from that traffic is likely to be? I have not.
535. You simply hold an opinion of your own that in course of time the railway would pay? The railway cannot pay if it is not brought to the water's edge, and it is reasonable to suppose it will pay in time if it be extended. The money which is expended will, in a large measure, be a "dead horse" if the line be not extended to the water's edge.
536. But you are not prepared to state that if it is brought to Milson's Point it will give a return of £21,000 a year? No, I am not.
537. *Mr. Garrard.*] Did I understand that you gave the Government land through which the line passes? Yes.
538. Was that with the understanding that the line was to be constructed to the water's edge or to the Crow's Nest? To Blue's Point or Ball's Head.
539. You gave the land on the understanding that the line was to be taken either to Blue's Point or Ball's Head? Yes.
540. In other words, to the waters of Port Jackson? Yes. If I recollect rightly, at the time the land was given the survey was not made to Milson's Point.
541. When you promised your land was not the proposal that there should be a passenger station at Crow's Nest, and an export mineral station or goods station at Ball's Head? There was to have been a station at Ball's Head for coal, but we always expected the line would go to Blue's Point. But I was not influenced by that in giving my land.

542-3. That was the first project. Afterwards when the Ball's Head line was removed from consideration, was not the matter again submitted to the owners of land, and were they not asked whether if there were one station, and one only at Crow's Nest they would still be prepared to give their land? It was not submitted to me, and I did not hear of its being submitted to any others,

544. Supposing the station remained at the Crow's Nest would you use it for the purpose of bringing your produce to it? No, I would not; I could not.

545. Supposing this extension were made to Milson's Point would you use it? Every case of my fruit would come by rail.

546. How far is the nearest point of your place from the railway station? About a quarter of a mile.

547. Is that what is called Rosedale? The estate is.

548. But there is a station called Rosedale, is there not? It is not named yet, but I suppose that that will be its name.

549. If you brought your produce you would have to cart it a quarter of a mile to the railway station? Yes.

550. And from Milson's Point to the market? Yes.

551. Have you gone into a calculation so as to ascertain if it would pay you to do that double carting instead of having only one loading? I have.

552. When once you get a load on to your cart or waggon, as the case may be, an extra mile does not matter much. The cost is in the loading and unloading, is it not? Yes, but I have calculated that it would be to my advantage to send the fruit by rail.

553. You are  $9\frac{1}{2}$  miles from Milson's Point? About  $9\frac{1}{4}$  miles.

554. Do you think that people living 6 miles from Milson's Point would use the railway or put their produce in vehicles and bring it in as at present? There is not much fruit grown 6 miles from Milson's Point.

555. What is the nearest distance? The greatest quantity of fruit is grown near my place and between my place and the junction.

556. Supposing there is a fruitgrower at a distance of 2 miles from your place, do you think it would pay him to cart his fruit 2 miles to the railway station, and then from Milson's Point to the market rather than to bring it straight in? Men who have agents in Sydney will send their fruit that way. There are a few persons now near Hornsby who come in with their own loads of fruit and sell it, but the greater number send their fruit by rail.

557. That is round the other way? Yes.

558. How far towards Gordon do the people make use of the present line of railway for the carriage of their fruit? At the back part, where perhaps there are not many of them more than 2 miles from the station.

559. How far are you from Hornsby? Four miles or more.

560. But if you were within 2 miles of Hornsby would you send your fruit *via* Hornsby and Strathfield? Yes.

561. So it is only the people near your place and 2 miles beyond you who would send it by this line? They would send it.

562. It would be cheaper for them but not so profitable for the railway? Yes.

563. So if the Government provided this means for sending their fruit to market it would be so much money in their pocket, but out of the Commissioners? Persons on this side of Hornsby would send their fruit this way and the Hornsby people would probably continue to send it the other way.

564. At all events some of the traffic the Railway Commissioners are now carrying *via* Strathfield, would come a shorter distance? Very little of it.

565. You are an old resident of North Shore? I have been there between forty and fifty years.

566. A very large growth has taken place since you went there? Yes.

567. With your knowledge of the growth of the place during the last thirty, forty, or fifty years, how long do you estimate it would be before this railway if constructed at a total cost of £260,000 would pay working expenses and interest on that money? That is a question I have no right to attempt to answer. For years we could scarcely get across the water for there was only a little cockle-shell of a punt, and the progress of the north side of the harbour has been retarded through the want of proper communication, until within the last ten years.

568. To sum up then I understand you to be of opinion that if this station remains where it is the line will be practically useless, and the only means of making it pay will be to extend it to the Shore? That is my opinion.

569. Even at the large cost of £260,000? That is my settled opinion.

THURSDAY, 17 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

JACOB GARRARD, Esq.

The Hon. FREDERICK THOMAS HUMPHERY.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Dugald Thompson, Esq., sworn and examined:—

570. *Chairman.*] What are you? A merchant.

571. Where do you reside? At Kirribilli Point, North Shore.

572. Are you a land-holder in the district? I am to a certain extent. I have a statement here and it has been suggested to me that it would save the time of the Committee if I were to read it.

573. Very well, will you read it please?

I am induced to give evidence before this Committee because I have been a resident of North Shore for over twelve years, and I feel an interest in, and am well acquainted with, its characteristics, its resources, and its past progress; also because,

W. H.  
M'Keown,  
Esq.

15 Oct., 1889.

D. Thompson,  
Esq.

17 Oct., 1889.

D. Thompson, Esq.  
 17 Oct., 1889.

as a member of a local committee on the Railway question, I have given much consideration to the subject. It may be well to state that I have, so far as I know, neither direct nor indirect interest in any property along the route of the present line. Companies in which I have shares do own some land about Milson's Point, but my proportion of such holdings is not, I believe, at the most over £200 in value, and other properties are held in a similar way near the proposed Cremorne route, so that in giving a preference to a particular route, my opinion is at least free from any bias of pecuniary interest. In my evidence I will omit, so far as I can, the points I have noticed by published reports to have been fully pressed on your attention; and will avoid those strictly professional arguments which, whilst most important, have been, and will be, better urged by professional witnesses. Three main propositions have been put forward in connection with the railway. First.—That the line be opened with its present terminus, and that no connection whatever be made between it and Port Jackson. Second.—That an extension of the line be made to the deep waters of Port Jackson. Third.—That the railway be not extended, but that the tram line be extended to the railway. It is hardly necessary to refer to the first proposition, it being difficult to believe that it could be seriously proposed to leave a costly railway line with its terminus in an unpopulated locality, and a serious break between it and the traffic which it was meant to serve, and from which its revenue must be derived. If it is seriously urged, then the reasons in favour of the second proposition, and against the third, can be applied with greater strength against such a proposal. The second proposition meets, I undertake to say, with the almost unanimous approval of the residents of the Shore, any difference of opinion being simply one of route as affecting particular interests. Numerous routes have been considered, but owing to engineering difficulties, or other objections, only two—Cremorne and Milson's Point—have received any strong support. I will not repeat the arguments so fully used against the Cremorne route, of its circuitous course, which would certainly make travellers to the city leave the trains miles before reaching Cremorne, nor of the extra time of the journey, which extra time—itsself a loss—would have to be paid for, thus entailing a further loss to travellers; nor of the higher cost of the line, but would point out that if those who will use the North Shore line had to construct and run it (and it is from this point of view that Governments can most safely decide the various considerations in connection with the construction of railways) it would actually pay them, instead of spending the larger sum on the Cremorne route, to expend, in round numbers, £428,000 on the Milson's Point route over and above whatever the Cremorne route might cost. This is shown thus:—Taking the extra cost to passengers at 2d. each (1½ miles extra by land, and ¾ of a mile by water could scarcely cost less), and taking the passengers as 3,000 in and 3,000 out daily, to which numbers they should grow in a few years if the line is to be a thorough success, the extra expense would be £50 per day, which for, say 300 days in the year, is £15,000, and this at 3½ per cent. would yield interest on a capital expenditure of over £428,000. Thus the extra time and cost as compared with the Milson's Point route would not allow of as large a passenger traffic; but if the traffic did expand, the more it expanded, the greater would be the constant loss as compared with a line to Milson's Point. The third proposition—the extension of the present tramway to the railway, can claim but one advantage, viz.:—a lesser cost; but this lesser cost is only an advantage if the provision it gives is equal to the requirements of the service; and if, with such a connection with the water, the railway will be more profitable than it would be were the railway line itself continued to Milson's Point. Taking the figures as given, the saving by not extending the railway would be (cost of resumption included) £262,000. From this has to be deducted the cost of extension of the tram line said to be £30,000, and the resale value of the resumed land over the tunnel, say £30,000, thus making the extra cost of extending the railway over that of extending the tramway, £202,000. The interest on this at 3½ per cent. per annum would amount to £7,070. From this there ought to be taken the difference in the annual cost of working the rail and the tram extensions, the average annual cost of railway working being only about £750 per mile, whilst the working of the Milson's Point Cable Tramway has cost over £4,000 per mile per year. But, giving the tram service the advantage of this difference, it may be calculated that £7,070 is the yearly charge on the railway to be made good. Now, estimating the sum paid per passenger for each single journey as 4d. (which I think, even allowing for season-tickets, must be considered a low average) it will be found the receipts from 707 resident passengers going in and out once on 300 days in the year will realise the sum of £7,070. Again, estimating that every household settled along the line, the members of which gain their livelihood in the city, furnishes two travellers in and out per day (and this seems also a low estimate as several members of a household may be employed in the city, and some who are not employed there, have to visit it frequently, while each household has its visitors from elsewhere) then the amount in question will be furnished by an additional settlement, over all stations, of some 350 households. It seems to me impossible to come to any other conclusion than that: not only 350 households, but a very much larger number, would settle in the new suburbs, if the speed and convenience of a through railway were provided, in excess of what would settle there under the inconvenience of the slow, broken, and troublesome journeys furnished by the extension of the tram line. Indeed it seems to me that a tram connection must inevitably prevent the growth of any large railway traffic. The objections to it are, (1) The loss of time—a most important matter to those travelling daily. The present tram line (1½ miles) is travelled in about 18 minutes. A further 1¼ mile would bring the time up to about 33 minutes. Allowing for extra detentions, and for transfer, the tram would require to leave Milson's Point 35 to 40 minutes before the train started. Taking the time of the trains on the Parramatta line (stopping at every station) it will be found that 9 miles—with 13 stoppages—are covered in 36 minutes, so that by the time the passengers by the tram were in their train, a train starting from Milson's Point would be at least 9 miles out, and, allowing for fewer stoppages, would probably be a few miles further, or close to the junction of the Northern Railway. A second objection would be the great inconvenience of several transfers, accompanied as one of them would be by a rush for seats on the tram cars. A third objection, the difficulties on the trams with luggage; and the impossibility of the conveyance of goods. A fourth objection, the difficulty (experienced on all the tram lines) of providing season-tickets, or of giving a reduction to second-class passengers. A fifth objection, and a very serious one, is that the system would be weakest where it should be strongest, viz.: at that part which would get almost the whole of the traffic. Thus instead of the main artery being a strong railway service, with tram lines as minor feeding branches, the main artery would be a weak tram system, with a powerful railway as a feeder. For these reasons, the tram connection would be a constant drag on the very traffic it was meant to aid in producing, on which traffic, and its unimpeded increase, the results from the railway entirely depend. It may be said that the extension of the tramway will provide for present wants, and will not prevent the future extension of the railway. I venture to say, however, that in connection with lines in city and suburban areas there should be provision, rather than mere provision. If provision is left till the population grows to pay for it, then it will usually, in such valuable areas never come, because the increased value of land, and the erection of numerous and expensive buildings, make railway extension too costly to pay, whereas if done earlier, whilst there might be a loss at first, the increased population will soon not only make the line a paying one, but greatly increase the value of the land resumed. The mistake in not recognising this when the railway terminus was fixed at Redfern is acknowledged now; and I feel confident that the same causes which have prevented the extension of the City Railway will effectually prevent the extension of the North Shore Railway if it is not accomplished at once. No doubt the great question to decide is, will the line be a paying one? If it has to depend on a tramway connection with Milson's Point I doubt if it will pay in twenty years, or ever. If, on the other hand, the railway be extended to Milson's Point, I believe it will cover expenses in two to three years from date of opening; and in twenty years time will be one of the best paying railway properties in N. S. Wales. These opinions must, of course, be largely based on inference, but such inference is supported by the facts that all suburban railway extensions about Sydney have paid within a reasonable time after opening; that not only in good positions, but even in bad positions, suburbs have leaped into existence when speedy and comfortable transit has been provided, and that the district the North Shore railway taps is, in altitude, in beauty of aspect, in fertility of soil, in opportunity for good drainage, and in fact, in all the elements constituting a superior suburban area, certainly unsurpassed. In the calculations as to its payability, I consider it as essentially a suburban passenger line. For years the goods traffic, though gradually increasing, will not likely be large. There will be some coal for use in the manufactories and dwellings between St. Leonards and the Northern Line. There will be the products of the district (grown and manufactured) to be conveyed towards Sydney, and towards the north; and there will be supplies of all descriptions for the use of the suburban settlements. Gradually, however, as the Shore municipalities merge into a city, manufacture will increase, and commercial and shipping interests will come into existence, when, no doubt an exceedingly large goods traffic will gradually develop. I take no credit in my calculations for these developments, wishing to treat the line as its probable worst, and then to show that it will pay well in a reasonable time. Taking the total cost as £450,000 (an amount exceeding the estimate) the annual interest on this at 3½ per cent. will be £15,750. Allowing the yearly working expenses, including everything, to be £1,000 per mile (the average for the Colony is about £750) the annual cost will be less than £29,000. Call this £30,000, and it will mean that at 4d. each journey, 3,000 travellers in and out on 300 days per year will give that return in fares alone. This, at two travellers per household, will mean 1,500 households. Even without calculating those there now who travel in to and out from the city daily, it may surely be safely concluded that over all the stations on the line there will very soon be such an expansion

expansion, especially when it is remembered that there are great numbers of blocks already purchased on which the owners are ready to build when really good communication is established; and that, in addition to transfers from other suburbs, the natural increase of Sydney, representing as it does some 3,000 households per annum, should yield large additions to such excellent suburbs. By the railway returns for 1887 I observe that the inward and outward traffic realised at Petersham Station, £32,500; at Summer Hill and Croydon together, £34,000; at Croydon and Ashfield, £32,500; so that all necessary to support the North Shore Railway is, along its whole length, a population equal to Petersham or to Summer Hill and Croydon, or to Croydon and Ashfield. Can it be doubted such will quickly be realized? In the foregoing estimates nothing is credited for inter-station traffic, for the travelling of those now resident, for the carriage of goods, for holiday excursions; nor for the great crowds which would be drawn to the places of amusement which would be established along this line, as along other railway lines. The Sunday traffic has also been altogether omitted. All these items would swell the total receipts very considerably, but they are all dependent on a close and complete connection with the large centres of population, which connection only a railway to Milson's Point could give. The Illawarra line, as the most recent suburban one, and in many respects the most analogous to the North Shore line, fully supports my conclusions. Taking a distance on it equal to the North Shore line, when extended to Milson's Point, viz., to Como (13 miles), I find that two years after opening, or in 1886, this distance returned £43,500, which sum per annum would make the North Shore railway pay handsomely. In 1886 the Illawarra line—then open 24 miles to Waterfall—returned 3·18 per cent. interest on capital, showing that the 13 miles nearest the city must have returned a percentage considerably in excess of the cost of the money invested. I am confident that were it possible for capitalists to obtain such a line of railway, with its future possibilities, for £450,000, they would jump at the chance; and I am confident also that were private investors building the line they would not hesitate in extending to a traffic centre, at even a cost far exceeding the estimate of the extension to Milson's Point. An illustration of this is furnished in what is being done at Long Bay, where, in proportion to the land available, capitalists are expending a much larger sum than the North Shore railway extension will cost, in building a bridge and a tramway, and in other improvements, without a house on their ground, satisfied of reaping the benefit of the expenditure eventually. I would call special attention to the fact that in the considerations expressed I have not attempted to credit the Milson's Point line with any of the considerable traffic which it certainly would obtain from the main line, as this traffic is now carried on the line to Homebush. Nor has credit been taken for the increased value which will be given to the wharf property now owned by the Government at Milson's Point, nor for the gradually and largely increasing value of the wharf frontages embraced in the resumptions. Nor has the most important element of the increased value given by a through railway to the Government lands along the line been estimated, I have felt that, whilst all these and other advantages seemed to render the extension to Milson's Point a necessity, so favourable are the prospects of the line that it could afford to be judged stripped of every other advantage, except its suitability for the settlement of a large suburban population.

D.  
Thompson,  
Esq.  
17 Oct., 1889.

Michael M'Mahon, Esq., sworn and examined:—

574. *Chairman.*] You reside at Lavender Bay, St. Leonards? Yes.

575. You are a large landholder at North Shore? I own some land there.

576. Do you know the line from Hornsby to the Crow's Nest? Yes.

577. You have got land along that line, have you not—in that locality? As a matter of fact I sold nearly all the land I had along the line some years even before the line was started. I have some few pieces, but a very small quantity.

578. You know this inquiry is as to the extension of the line from the Crow's Nest to Milson's Point; will you make your statement in support of or against that to the Committee? I have not come prepared with any figures, but as an old resident of the district I think it would be a positive calamity if the railway were stopped at the Crow's Nest, for the reason that, as I understand, it is intended if it should stop there to bring the tramway within about a quarter of a mile of the railway, and let the tramway do all the passenger traffic, no provision being made whatever for goods traffic. If that is the intention, I think it would be a fatal mistake, and looking at the matter just as if I were engaged in it as a private speculation, I should say that at almost any cost the railway should be extended to the deep waters of the harbour somewhere about where it has been decided already, Milson's Point. If I might be permitted to say so I think that before a bridge is built the railway might be met by two large steam-punts similar to what we know are used between Brooklyn and New York, so as to connect the city with the North Shore at some point such as Dawes' Battery, where a large dock might be constructed into which the punts might run. If that were done the country might be saved the expense of a bridge for many years to come, and the service would be complete. I might state to the Committee that during the tenure of office by the Ministry of which I think Mr. Lackey was Minister for Works, money was voted for those steam-punts, but a gentleman from Balmain, named Hutchinson, moved a resolution in the House for the rescission of that vote, and in a thin House one night, to our surprise at North Shore, that vote was carried. I consider that North Shore has lost five years of its growth through that very circumstance. We are at present served by a private ferry company, whose boats run very well indeed, but the ferry company cannot possibly be expected to meet the traffic in view of the fact that a bridge or steam-punts will be constructed at no very distant date. If the railway were extended, even at a very great cost, to Milson's Point, and if steam-punts were tacked on to it, the service would be complete for many years to come. Doubtless a bridge or tunnel would ultimately have to be built, but steam-punts would, I think, do good service for many years to come. The little punt now running at the Spit is an unqualified success. The same arrangement, only on an extended scale, is exactly what I think would suffice for the North Shore. Anyone taking the trouble to go and see the punt at the Spit would find that it takes a minute and a half or two minutes to cross from side to side.

579. *Mr. Garrard.*] But you would not stretch a rope across Port Jackson the same as you have got at the Spit? I think that could be done. I am not sufficient of an engineer to know, but if you had the punts worked by very powerful steam-power I do not suppose that you would want a rope. They could run into a dock on each side. The distance from Milson's Point to Dawes' Point is very short. As an old resident of the North Shore, watching its progress for the last twenty years, I take it that if the railway is not extended to Milson's Point, or some other point in that neighbourhood, it will be a very great calamity.

580. *Chairman.*] And if it is extended, what about the country;—have you entered into any calculations? With all due respect, if we were to examine critically the cost of the railways in the early period of the Colony's history—for instance the Parramatta —

581. This is a new state of things. They did not examine them in the past as this Committee does now, or probably you would not have so many miles of railway at the present time. What I want to ask you is, if you have given any consideration to the financial position of this line? I have not. I am here more to speak of the matter in a general way, as an old resident of the place.

582. *Mr. Garrard.*] Do you think the line from Hornsby to the Crow's Nest will pay? I believe it will be one of the best paying lines in the suburbs of Sydney.

M. M'Mahon,  
Esq.  
17 Oct., 1889.

- M. M'Mahon, Esq.,  
17 Oct., 1889.
583. If it stops at the Crow's Nest? No, I don't believe it will. I think it will be a failure.
584. Were you not, with other residents, very urgent in requesting that the railway should be made from Hornsby to the Crow's Nest? As one of the railway committee who agitated pretty vigorously for the railway, I know that the original plan showed that the railway would be extended to Blue's Point. It was that line we agitated for, and succeeded in getting the Government to decide upon. Then the goods line was to go to Ball's Head, and the passenger line to Blue's Point. A change took place in the survey later on, and it was decided to construct the railway only to Crow's Nest. But the railway committee's efforts were put forth for the purpose of getting the line continued to the deep waters of the harbour at both points—Ball's Head and Blue's Point—and that was the line actually adopted.
585. Knowing that the railway could not possibly pay if brought only to the Crow's Nest, why did not you and others protest against its being constructed? I never expected the Government would stop the line there.
586. You thought that if you could get the Government committed to the carrying out of the railway to that point, the railway must come on? I knew it must come to the deep waters of Port Jackson, and that the only question was as to what place it should come to.
587. Do you look upon it as a suburban line or as part of the main line to the north? I look upon it both as a suburban line and as a portion of the northern line. I think that from Sydney to Hornsby is 9 miles shorter by this line than *via* Homebush, and doubtless passengers would leave the train at Hornsby and come on *via* North Shore, and thus avoid passing along that portion of the main line where the traffic is so much congested.
588. You know the estimated amount of the working expenses of this proposed extension and the interest on its cost of construction is nearly £21,000 a year. How long do you expect it will take before that would be recouped? We can scarcely imagine what will be the increase in the population along the line as soon as it is opened. I notice that Dr. Ashburton Thompson has reported to you that the district is very elevated, most healthy, and in every way suitable for a large population. I believe that on sanitary grounds alone the Government should encourage the settlement of people over there as early as possible, and that of course can only be done by the railway being completed.
589. Do you think any coal will ever be brought by that line? I think very little.
590. Was it ever urged as one of the planks in the platform of the railway committee over there that it would be the best place for the shipment of coal? Yes, and hence Ball's Head was decided upon.
591. That plank has broken down completely, has it not? I think it has pretty well.
592. Is it likely this plank of suburban traffic will break down in as easy a manner? No, I think not. That is looking very healthy.
593. Then I understand you consider it mainly in the light of a suburban line? And as a help of course to the Great Northern line.
594. Only so far as North Shore is concerned? It would not help passengers coming to the city, would it? I am pretty sure a great number of persons would get into the train at North Shore for Newcastle.
595. If you were coming from Queensland overland to Sydney do you think you would tranship at Hornsby, come by this branch line to Milson's Point, then get into a steamer, and afterwards into a cab in order to get to the city;—would you do it? I do not know that I would unless the service were complete—unless the steam-punts were running across the harbour.
596. The only through passengers would be those whose destination was North Shore? I think a very large proportion of pleasure seekers—persons out for a day's pleasure—would go that way, and they are becoming very numerous.
597. I am speaking of through passengers? Doubtless a great proportion of through passengers would come right on to Sydney.
598. Don't you think their wants would be met by having a tramway from the present terminus to the Crow's Nest? There is a large proportion of goods traffic along the line—oranges and other fruit of every kind.
599. Do you think it is at all likely that fruit would be brought down that line to be transferred into carts at Milson's Point and taken over the water by ferry? I have it from the fruit growers themselves, Mr. M'Keown and others, that the fruit growers would send it through that way, and it is expected that by-and-by a fruit market will be opened at North Shore.

William Thomas Muston, Esq., sworn, and examined:—

- W. T. Muston, Esq.,  
17 Oct., 1889.
600. *Chairman.*] Do you live at North Shore? I do.
601. How long have you been a resident there? Nearly forty years.
602. Are you a land owner? I am.
603. Where is your property situated? Between Milson's Point and Hornsby. I have interest right along.
604. You know the line is constructed now from Hornsby to the Crow's Nest? I do.
605. The present inquiry is touching the advisableness of extending the line to Milson's Point. You have been good enough to offer to give evidence to the Committee, and therefore you will tell us what you can about that? Professionally I can say nothing. I can only give my opinion as to the remunerativeness of the line. Having a very large experience on the North Shore, that is what I wish to do.
606. We may as well come to the figures at once. You know the line as it stands now will have cost £180,000? Yes.
607. The cost of the extension will be £262,000, making in round numbers £442,000. Will you tell the Committee how that line is going to be remunerative; you say you have come here to tell us that? Well, in the first place, I believe that the line by being extended to Milson's Point will create a residential city in the Lane Cove and Willoughby districts. I think you will find by reference to the plan that within some four miles of Milson's Point you attain an elevation of about 400 feet, and I should say about 8 or 9 miles from that point, you get an elevation of 600 feet—an elevation which cannot be reached upon any of the existing suburban lines, nor except by travelling a long distance outside the suburban area. There is already a settlement along the line. At the present time there are coaches running there, and there is no doubt that in the first place a large suburban city would be created by this extension, which would eventually

eventually make this line one of the best paying lines in the possession of the Government. In addition to that there is in Lane Cove itself a large fruit-growing industry even now. Within possibly a mile or a mile and a half of the railway line the land has been sold with a view to sub-division, but on the back blocks away on the Stony Creek Road and in that direction there would still be orchards. Therefore in addition to passenger traffic there would be a certain amount of fruit traffic. There is an immense quantity of timber in the Lane Cove district which would be brought to Sydney. There are gullies from 200 to 400 feet deep, in which the timber has never been interfered with, and in which you find many trees 10 feet in diameter. On account of difficulty in getting the timber to Sydney in olden times the people took it down by the Lane Cove River from the heads of the gullies, but afterwards finding the process too expensive they let it alone. However, an extension of the railway to Milson's Point would give them facilities for getting the timber to market, and would result in hundreds of thousands of tons of timber being brought out of the gullies by means of temporary wire tramways, and a very good trade would be developed between Peat's Ferry and St. Leonards. Then, again, the Government have some 16,000 acres of land up there, which if owned by any private syndicate would induce them to make the railway. Fruit growers who have sold out at Lane Cove, or at least a majority of them, have simply moved onward to Gosford, and are establishing orchards there. Nurseries are also being established there. Pearce Brothers have established a nursery there, and other people are about to do the same thing. Mr. Bartlett, of Tresseder and Bartlett, is about to establish a large seed nursery there.

W.T. Muston,  
Esq.  
17 Oct., 1889.

608. But the North Shore railway could not affect the industries at Gosford? It would make Gosford a suburb of Sydney, and it would practically make Newcastle a suburb of Sydney. The Gosford people have a great interest in this extension. The fruit-growing industry has moved forward to Gosford, which is a very rich district. The land is magnificent. Near Gosford there is also a vast quantity of timber which would come to Sydney. I venture to say that if the railway were extended to Milson's Point, at least twenty persons would travel to Newcastle in the place of one person travelling now. We have excursions to Goulburn and other places on the Southern line, and the same sort of thing would happen on the Northern.

609. Speaking approximately, what would you say the annual income from this railway, from all sources, would be within the next four years, supposing it were built now? That could merely be a guess. I don't think it would be possible for any man to name a sum.

610. Well, let us hear your guess. The whole thing is a guess as to settlement of people up at Gosford, and you say that where one goes now there will be twenty. That can only be a guess? It is a pretty shrewd guess, and I take it that this railway is of vital interest to all the Northern districts, even as far as the borders of Queensland.

611. Just give us a guess of what approximately the railway would pay in about three or four years from the date of construction? I should reckon that three or four years from the date of construction it ought to pay. I am certain that within four years from the date of construction it will more than pay its working expenses and interest.

612. What do you say that would be;—I want to see if you have given the matter financially any consideration at all? I have.

613. Now, what are the working expenses and interest? I do not know what the working expenses are.

614. And yet you say it will pay more than that in four years? I should think it would.

615. And you do not know what they are? I cannot tell what they are. I know what the line should do judging by the results obtained from other lines. I can only judge by comparison. I can remember the first line being opened. I can remember the Ashfield and Burwood line, and I know what those places were like when the line was opened. I would point out that North Shore at present contains something like 25,000 inhabitants, and thus the construction of this railway would give the people of the north a market for the disposal of certain goods used by those 25,000 people.

616. Do you think it is reasonable to expect that within the next four years the line would earn £21,000 a year? I am certain it would earn £25,000 the first year it ran. I may give you an instance of how traffic grows. I, myself, owned a lot of land in the district, and at an expense of something like £7,000 or £8,000, I put on a line of coaches to run to it some seven years ago. At first the coaches brought in about 10s. a week. After a year or two the amount increased to £20, and now it is over £40 a week.

617. Then it is against your interest to have this railway constructed? I did not put the coaches on because I wanted them. The moment their earnings reach £20 a week I turn them over to the man who ran the mail. I ran them on a bush track to North Sydney, and the road has had thousands of pounds spent upon it, because of the running of the coaches, and a wonderful effect has been produced in the district. That will show you what communication will do.

Myles M'Rae, Esq., M.P., sworn, and examined:—

618. *Chairman.*] You are Member for the Electoral district of Morpeth? Yes.

619. You have volunteered to give evidence in reference to this railway; will you tell the Committee what you know about it? I advocate the extension of the railway to the deep waters of Port Jackson, on behalf of the agriculturists of the whole of the Northern district, the constituency that I represent being an agricultural constituency, and I do so, because I believe that the use of this railway would result in a saving to the producers of the North to the extent of something like 7s. or 8s. per ton so far as regards tonnage to North Shore. Produce going to Darling Harbour and the Market Wharf would be subjected to 10 or 12 miles extra trackage, and then there is the cost of cartage from the wharves to North Shore, which is 7s. 6d. per ton. If the railway were extended from the Crow's Nest to Milson's Point, the farmers could send their produce direct, and they would save the 10 or 12 miles extra trackage.

M. M'Rae,  
Esq., M.P.  
17 Oct., 1889.

620. You mean the farmers would send the produce required for the North Shore? Yes, and also produce required for different parts of the harbour. The North Shore is growing very rapidly, and the consumption is increasing every year. Besides, I consider that the loop-line from Pearce's Corner to the Crow's Nest will prove unremunerative to the State, unless the extension be made to the deep waters of Port Jackson. If the railway be carried to Milson's Point the development from a suburban point of view, will, I believe, be five or ten times greater. An objection to living at North Shore at the present time, is that passengers would have to go down to the wharf, cross Port Jackson, and then get into the tram, and then trans-ship into the railway. If the railway were extended to the deep waters of Port Jackson, loss of time to a large extent would be obviated, and the development of the district would be much greater.

As

M. M'Rae,  
Esq., M.P.  
17 Oct., 1889.

As far as the character of the country between Milson's Point and Hornsby is concerned, I do not think that there is any other part of the metropolitan district which offers such inducements for settlement. The soil is exceptionally good; it is different from other parts of the metropolitan district, where the soil is very poor; and then the country is undulating and elevated, the elevation being from 200 to 700 feet. In fact you get mountain air there. Making a comparison between that country and the Illawarra district, I would point out that the development that has taken place along the Illawarra line of railway has been something marvellous. That railway has, in fact, paid interest on the cost of construction almost from the start. The country between Milson's Point and Hornsby is far superior to anything on the Illawarra line, and I am confident that the development will be much greater in consequence. I think it would be economy on the part of the Government to extend the railway now that the land can be resumed at a reasonable price. The apathy displayed by previous Governments in connection with the proposal to extend the railway from Redfern into the city has made it almost impossible to extend that railway now, and by extending the North Shore railway to Milson's Point now we shall avoid the great mistake that previous Governments have made in not extending the railway from Redfern to the Circular Quay when land could have been resumed for one-fourth of the money it would cost now.

621. Have you considered the financial aspect of this line of railway? Yes; I am in favour of the extension.

622. We don't want to know what you are in favour of, but we want you to give reasons why the railway should be constructed? So much public money has been spent on the line between Hornsby and the Crow's Nest, which I believe will not prove productive to the general taxpayers until the railway is extended to Milson's Point. That will, in my opinion, make it highly reproductive.

623. Do you know what the cost is? Yes.

624. The whole line nearly half a million; it would take a lot of traffic to earn that, and we are told there is no reason to hope for goods traffic? Well, I am almost sure that the goods traffic from the north would be increased rapidly to a large extent were the railway extended to Milson's Point.

625. Do you think goods would come down to Milson's Point for delivery in Sydney? I think so. There will be a saving of 10 or 12 miles extra trainage that they would be submitted to if sent to Darling Harbour. The agriculturists are not in a very prosperous condition, and any saving would be very acceptable to them—even 12 miles of trainage. I know also that by having the railway extended to Milson's Point an additional outlet would be given to farmers. The saving of the cost of the extra trainage and of the cartage to North Shore would be a big item to agriculturists who would supply that district. But, independently of the goods traffic, I am confident that if the railway were extended to the deep waters of Port Jackson the development of this district would surprise most people. It would be very rapid. I have been associated with that district for the last nine or ten years, and in my opinion it is the best district for suburban settlement within the metropolitan area. There is no country equal to it.

626. *Mr. Garrard.*] Do you know the amount of produce brought down from the northern districts to Darling Harbour at the present time, either in value or in tonnage, because you speak of this line as opening up a new field for the produce of the northern districts? That trade has only recently been opened up. The connecting link has only recently been completed by bridging the Hawkesbury, and the trade is increasing. Many people are not aware that the charges by rail are on a par with those made by the steamers. I believe the rate by rail is as low as it is by steamer, and a great number of farmers are now sending their produce by rail to Darling Harbour. The tonnage is increasing every day.

627. You do not know the tonnage or value? I cannot give the tonnage.

628. Do you know the tonnage or value of produce sent from the Hunter River to Sydney? The railway has only been opened a few months.

629. Independently of the railway? I believe that the tonnage shipped at Morpeth has, up to within a few years, been equal to the tonnage shipped at Newcastle.

630. Ordinary produce, excluding coal? Yes. The tonnage from the Valley of the Hunter amounts to hundreds of thousands of tons—it is something enormous.

631. I suppose you look upon this line more as a suburban line than as forming part of a through line? Yes; but as a through line as well.

632. Principally as a suburban line? I believe that the development that will take place if the railway be extended to Milson's Point will be greater than that which took place on the Illawarra line.

633. You have come to the conclusion that the increase of population at North Shore would be greater than it was on the Illawarra line if suburban communication were given? I thoroughly believe that.

634. We have it in evidence that it would take about £21,000 per annum to pay working expenses and interest on the construction of this line; how long do you think it reasonable to expect it would be before that amount would be earned if this line were constructed? I believe within a few years that amount would be realized.

635. Do you think that the present line constructed to the Crow's Nest could be utilised by extending the present tramway to it instead of incurring this expense of £262,000? There is the objection people would have to trans-shipping. People who live in suburbs do not like to trans-ship so often, and it would make the line unpopular.

636. But at present all the suburban passengers have to trans-ship into trams which bring them into town, do they not? Yes; but they object. The residents of the Western and Illawarra suburbs are to a man in favour of the city extension on that very ground. There is the loss of time and extra charges.

637. While they object, still they suffer? Yes.

638. *Chairman.*] And the suburbs grow? Yes; the suburbs grow. If this railway were mine, I would spend half a million. The Government have 15,000 or 16,000 acres of land in the district, and I believe that the Government would be recouped to the extent of the outlay by the advanced price they would get for their land if the railway were extended to Milson's Point. It would not cost the Government 1s.

639. *Mr. Garrard.*] Do you think there would be a large increase if this extension were made? I am confident there would be. I know a great number of people bought land over there, and intend to build.

640. I am speaking of Crown lands; has not all the best been sold within easy distance of this line? The Government have a large quantity.

641. Which would be largely increased in value if this line were extended to Milson's Point? I believe that the increase would amount to the total cost of the extension; that the Government would get as much as would recoup them the whole of the expenditure. If a private company had the railway, and if I were connected with it, the first thing that would be done would be to extend the railway to Milson's Point before I sold any land at all.

642. You would consider it a great blunder to have made the railway to the Crow's Nest unless it is to come farther on? There is no doubt about it.
643. It should not have been made? No, unless it be extended to the deep waters of Port Jackson, and the expenditure will, to a large extent, be a "white elephant" till the extension is made.
644. Do you know if it was urged by those in favour of the construction of the railway that we might expect a large amount of mineral traffic? I don't recollect that, but there is no doubt that a good deal of coal would be brought to the North Shore for consumption there.
645. Is it at all likely that coal will be brought to the North Shore from the Newcastle district; has not the bottom been knocked out of that thing a long time ago? They would not bring it from Newcastle.
646. Well, where from? There is coal at the Hawkesbury.
647. Where? I believe some seams have been discovered on the other side of the Hawkesbury.
648. Do you not think that if any coal were found at the Hawkesbury it would be shipped at Newcastle? No doubt; but I mean for local consumption. I thoroughly believe that this extension would prove highly remunerative to the country, and would develop the best suburban district within the metropolitan area.
649. If your contention is correct there would be a large amount of produce coming down to the North Shore if this line were constructed; would that not rob the line between Hornsby and Sydney of that same traffic? There is no doubt it would.
650. Therefore it would be a convenience and profit to the agricultural producer, but would take money out of the pockets of the Railway Commissioners? I do not see that it would, because the State has already constructed 11 miles of railway which will be useless without this extension. I am in favour of extending the railway to Milson's Point in order to make it reproductive.
651. *Mr. Lee.*] Are you pretty well acquainted with North Shore? Yes.
652. You are aware that the bulk of the population lies to the east of the proposed railway extension? Yes.
653. Do you know the route of the proposed extension? Yes.
654. Have you ever followed the course of the extension? Yes.
655. You are aware then that it runs along the foreshores for some considerable distance, then passes under ground, then comes out near the Berry Estate, then tunnels, and then climbs to the Crow's Nest? Yes.
656. Being acquainted with that route it must be clear to your mind that no amount of heavy traffic could be got out of that depth to serve the North Shore. If your contention is a sound one—that the produce of Morpeth and that locality, not the produce for the city of Sydney but what might be required for the North Shore—would be brought down by that railway, would it not be transhipped at the present terminus at the Crow's Nest—would it not be taken to the drays and conveyed to the various portions of North Shore from that point, and not from Milson's Point? A certain proportion would, but if the railway were extended to Milson's Point it would enable a greater tonnage to be distributed to the different water frontages all round the harbour and even up the Parramatta River, and 10 or 12 miles of trainage would be saved.
657. I am speaking of the North Shore? The same difficulty exists at Darling Harbour; they have got to cart there; but if the railway were extended to Milson's Point it would enable farmers to supply persons who have water frontages, and there are thousands of miles of water frontages in the city, and so they would have that patronage as well as the consumption at North Shore.
658. I am speaking more particularly as to the settlement of North Shore. Assuming, for argument sake, that produce would come down that line, I want to know would it not be transhipped on to the drays at the Crow's Nest station rather than at Milson's Point station, as in the first instance it would be conveyed nearly all down hill, whereas in the latter case it would have to be drawn up hill to the local settlement? The settlement at the present time is on the eastern side. The denser portion of the settlement abuts on the water frontage, and the extension of the railway to Milson's Point would give the agriculturists the advantage of communication by water as well as by land, whereas if the railway stops at the Crow's Nest they will only have land communication. By extending the railway to Milson's Point you give them both services. This is of great advantage to the agriculturists. That is the difference.
659. Have you gone into any figures as to the probable results from this line? I believe the results will be highly satisfactory.
660. Ah, yes; but have you anything more definite than that to lay before us? I have in my mind's eye the development which has taken place during the last twenty years within the metropolitan district, and I am confident that the development between Milson's Point and Hornsby will be greater than that which has taken place in any other suburban district, on account of the superior character of the country, the elevation, and the natural drainage that exists there.
661. You mentioned just now that the western and Illawarra suburbs had increased very rapidly since the railway was extended? Yes.
662. Is it not a fact that tram communication has been extended to some of those suburbs—to Marrickville, for instance? Yes; the tramway has been extended there, but that lessens the proceeds of the railway.
663. But is it not a fact that it has been a very important agent in the development of those districts? There is no doubt about it. Four years ago, on the Illawarra Railway, between Cook's River and George's River, there were only a few houses, but now you can count them by the thousand. Although that is very good country it is not equal to the Lane Cove Road district.
664. You have no tabulated statement or any data to lay before the Committee as to the probable returns of this line; what you have already stated is simply your own opinion, based on experience? Yes.
665. *Mr. Dowell.*] You have referred to agricultural produce, and it is a fact, I believe, that you have had very large transactions? Yes; I have been the largest hay-seller in the Australian colonies for a number of years.
666. You have a very considerable knowledge of the northern districts, have you not? Yes.
667. Can you see any reason why the whole of the northern traffic, including timber, hay, wool, and coal, should not come down to the deep waters of Port Jackson, and why that should not be the terminus of the Great Northern line? I do not.
668. Do you think that would be the proper place for the terminus of the Great Northern line? As a matter of fact I advocated the extension of the Great Northern line to Port Jackson in preference to the loop-line between Hornsby and Homebush. I thought that was an unnecessary expenditure.
- 669.

M. M'Rae,  
Esq., M.P.

17 Oct, 1889.

- M. M'Rae, Esq., M.P.  
17 Oct., 1889.
669. Then you considered that this would be the proper terminus of the Great Northern line on account, I presume, of the shorter distance to the deep waters of Port Jackson? Yes.
670. Supposing that were the terminus of the Great Northern line, do you think the railway policy of the country would suffer? No, I think it would be benefited.
671. Do you not think it would be of very considerable advantage in relieving the Redfern terminus from the northern traffic? A great advantage.
672. And instead of this line being only a suburban line for passengers, it would be a portion of the main line;—the Great Northern line? There is no doubt about it.
673. And you consider that would certainly be the best way of dealing with the matter? Yes.
674. *Mr. Humphery.*] Were you referring to passenger traffic or to produce traffic? Passenger and goods traffic—general traffic.
675. Do you think a depôt at Milson's Point or at Blue's Point would be more convenient for the distribution of the produce of the country than at Darling Harbour? Yes, I think so, because Redfern has to contend with the vast traffic of the north, south, and west, and the Illawarra Railway, and the congestion there is very much already, in fact the congestion is too much; and I think that if the railway were extended to Milson's Point it would relieve the congestion that exists at Darling Harbour at the present time.
676. That is a matter of convenience to the Railway Commissioners, but I am speaking of the public. Would it be more convenient to the public if the depôt were at Milson's Point instead of at Darling Harbour? Yes; I think it would benefit the public in many ways, because it would relieve Darling Harbour of some of the enormous traffic that it has to contend with at the present time, and which is increasing every year, and it would prove a benefit to the producers inasmuch as they would have two markets and they would save the cartage, which is a considerable item, between Darling Harbour and North Shore, and also the extra trainage.
677. How would produce received at Blue's Point be distributed in this part of the harbour? By steamers; water carriage is better than land carriage.
678. Will it be necessary to have a steamer to bring it to this side and then distribute it by means of carts in the same way that produce is now distributed from the various wharfs at Darling Harbour? Yes, so far as the distribution would refer to this side of the harbour.
679. As a matter of fact do you believe that this extension, if constructed, will be purely for suburban traffic—suburban passenger traffic chiefly? No; I advocate this extension in the interest of the agriculturists of the north as well as in the interest of persons who live along the line.
680. You think there will be considerable earnings from goods traffic? Yes, but the earnings from the passenger traffic will be something prolific. To give you an idea I may state that persons have bought land between Milson's Point and Hornsby at the rate of £200, £300, and £400 an acre in anticipation of proper facilities being given to enable people to live there. Any person who has travelled there can have only one impression as to the grandeur and the suitability of the district for residential purposes generally. I believe that if the railway be extended to Milson's Point it will in five years give a return of 10 per cent. on the expenditure, if the population of the country continues to increase at the present rate. I do not know of any place where an expenditure would be so reproductive as it would be between the Crow's Nest and Milson's Point. The Government have expended a large sum of money in constructing the loop line as far as the Crow's Nest, and if they left it there settlement would be prevented. If the extension is delayed it will simply mean that the State will have to pay double or treble or four times as much for resumptions, and I consider that the country is favoured now by the Berry Estate being locked up, for if that were not locked up but were built upon the Government would have to pay four times as much for resumptions at the present time as they will have to pay. The present is a very favourable opportunity for resuming the land at a low rate, on account of so much land being locked up there.
681. Do you consider the present extension of the tramway to the Crow's Nest to meet the railway, if a through service were established from Milson's Point to the railway, would serve the requirements of those living beyond? No, nothing in comparison with the extension of the railway.
682. Not in comparison, but do you think it would promote settlement so that the service would be profitable? Not to one-tenth the extent that it would if the railway were extended to Milson's Point. I have been living in the different suburbs for the last twenty years and I know how people have complained of the loss of time and inconvenience of transhipping from the railway to the tram.
683. Notwithstanding the inconvenience to which you refer, has there not been a very great settlement wherever the tramway has been extended into the suburbs? They only pay for the trams, but at North Shore they would first have to get into a 'bus to get to the harbour and then cross ———
684. We are speaking of a possible connection of the tramway with the railway and having a through service from Milson's Point to the Crow's Nest to connect with the railway, and so on? I consider that the railway would not be complete unless it were extended to Milson's Point, which would offer superior facilities for transit, and in my opinion the development would be ten times greater, and the expenditure of £200,000 or £300,000 in extending the railway to Milson's Point would make the line reproductive to the State.
685. You think that the tramway extension would impede settlement? Well, comparing it with railway communication, people object to get in and out, and the loss of time and inconvenience debars settlement.
686. You think that the interest on the additional cost of carrying the railway to Milson's Point would be very quickly covered by the increased earnings? I am almost confident it would. I only wish the railway were mine. I believe it will be a splendid investment.
687. *Mr. Dowel.*] You have referred to large estates through which this railway if constructed would pass? Berry's Estate.
688. And it has already passed through a number of private estates? Yes.
689. You stated that you believed that this railway will pay interest on the cost of construction as well as working expenses? Yes, within four or five years. The Illawarra Railway paid from the start, I believe, and I don't see why this line should not do so. I believe it will pay 10 per cent. within five years.
690. But you consider that the construction of the railway will very largely benefit the private estates to which you have referred? No doubt it will.
691. Supposing the line were not to pay working expenses and interest on capital within five years, do you think

think it would be a fair thing to rate those property owners whose property would be benefited by the construction of the line and whom it would serve, in order to make up the difference? Yes, I think it would.

692. It would be only a fair and equitable tax? Yes.

M. M'Rae,  
Esq., M.P.

17 Oct., 1889.

Hugh M'Lachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—

693. *Chairman.*] You are the Secretary to the Railway Commissioners? Yes.

694. You know the tramway from Milson's Point to Ridge-st.? Yes.

695. What is the length of it? About a mile and a half.

696. Do you know what it cost? The capital cost was about £72,000.

697. When was it opened? May, 1886.

698. Can you give us its earnings since then? In 1886, of course we had it opened for only a part of the year, and for seven months the earnings were £4,040. The expenditure was £4,700; thus there was a loss of £660. In 1887, the earnings were £7,274, and the expenditure £6,850.

699. *Mr. Lee.*] Does that include interest? No; that is simply the working expenses.

700. *Chairman.*] In 1888? For the year ending June, 1888, the earnings were £7,248, and the expenditure £6,833. For the year ended 30th June last the gross earnings were £8,178, and the working expenses £6,626. In that year there was £1,550 profit.

701. *Mr. Garrard.*] Which goes to the credit of interest on capital? Yes.

702. *Chairman.*] What is the interest on capital? Taking it at  $3\frac{1}{2}$  per cent. it would be about £2,500, in round numbers.

703. So that there has been a loss there? About £1,000, you may say, in round figures.

704. More than that? Last year we had a profit of £1,552.

705. I am speaking of right through? Yes, the loss has been greater in previous years. Last year the profit was greater and the expenses less. The earnings were much higher.

706. *Mr. Garrard.*] The expenditure was so much less? Yes, £207; but there has been a great increase in the earnings. It might be mentioned, in connection with the capital, that we had originally to pay a considerable sum for resumption of land which we have got now, and for which we could get more than we gave.

707. *Chairman.*] Is that the resumption at Milson's Point? Yes. That is charged in the £72,000.

708. *Mr. Garrard.*] And at your station you have got land? Yes; that is for the engine-house.

709. Does the building used by the ferry company at Milson's Point belong to the Railway Department? No; I think not. I think they have a lease from the Lands Department for that.

710. *Chairman.*] No; it is their own; and the Railway Department constructed the tramway on a small piece of their land.

711. *Mr. Garrard.*] Do you know how often the cable has been renewed on that line? I think our experience has been that the cable has lasted about twelve months. I think it has been renewed twice, and that the cable lasts twelve or fourteen months.

712. Are the engines working up to their full capacity? I believe the same engines could work nearly double the present length of cable line.

713. Do you know the cost of that wire rope? The present length of cable cost from £600 to £700.

714. What did you say was the reserve power of the engines? I think they could work nearly double what they are working, on a straight line. If the cable went on a different angle that would destroy the power to a certain extent.

715. *Mr. Lee.*] I would like to know exactly what that tramway cost per mile, exclusive of resumptions? The resumptions in round figures cost about £20,000.

716. Were there any other incidental expenses? Not that I am aware. I think the other expenses were construction and equipment expenses.

717. The balance, after deducting the cost of resumptions, would include the cost of the engines? Certainly, and the erection of the building and the running stock.

718. Have you any figures that would show the exact cost of the tramway track? No, I have not.

719. *Mr. Garrard.*] What was the original contract? I think from £30,000 to £40,000.

720. *Mr. Lee.*] Can you obtain that estimate? Yes. The contractors were to provide certain machinery. I think about £40,000 included the cost of the track and the engine-house.

721. *Mr. Humphery.*] Is the cost of renewal charged against earnings? Yes.

722. That is included in the working expenses? Yes.

723. Would the working expenses be largely increased if the tramway were extended to the present terminus of the railway at the Crow's Nest? They would to a certain extent be increased, but not proportionately.

724. Can you say in what proportion probably they would be increased? I cannot exactly say in what proportion. I think the same engine-power would pretty well control the extra length of line.

725. Have you formed any opinion as to the probable increased traffic that might be expected if the tram were extended to meet the railway at the Crow's Nest? No; but naturally there would be some slight increase of traffic. I do not know the district particularly well.

726. Do you know how many passengers travel daily between Hurstville and Sydney by the Illawarra railway? No; but I will be glad to get the return out.

727. Can you get a return showing the weekly passenger traffic between Sydney and the Illawarra suburbs as far as, and inclusive of, Hurstville? Yes.

728. *Mr. Garrard.*] What would the income represent in the way of passengers? About 1,000,000 passenger journeys.

729. *Mr. Dowel.*] What is the cost per mile per annum of working cable trams? The cost we find here for  $1\frac{1}{2}$  mile has been £6,626 for last year. That is about £4,300 per mile. It is an isolated line, and would not be a guide as to cable tramways as a whole.

730. What is the cost per mile per annum of working a railway? That varies, of course, according to the traffic. I think I gave you a statement of our expenses on different lines.

731. Can you say the average cost; is it about £800 per mile? It varies in every instance.

732. Name one place? The cost of our branches per mile would be much less than that of the main line. I think our average has been about £800 per mile.

733.

H.M'Lachlan,  
Esq.

17 Oct., 1889.

- H.M. Lachlan, Esq. 733. And our cables have cost us £4,300 a mile to work so far? Yes; in this case.  
 734. You are acquainted with the system that prevails in working the railways in Victoria? Yes.  
 735. The number of termini there? Yes.  
 17 Oct., 1889. 736. Do you think it would be an advantage to make the terminus of the Great Northern line at Port Jackson;—do you think it would relieve the traffic very considerably, and that it would be advantageous to have this terminus at Milson's Point for the whole of the traffic—passengers and goods? I do not think it would answer for general goods traffic—that is, for Sydney goods traffic. I do not think it would be so convenient as Darling Harbour, except for the local traffic on the Shore.  
 737. You do not think it would be a suitable place then for goods traffic, whatever it might be for passenger traffic from the north? I do not think it would be so convenient as Darling Harbour.  
 738. For what reason? There is the difficulty of getting across, the extra charges for ferrying, and one thing and another. A dray going to Darling Harbour takes a load into the city without there being any ferry dues to pay. It is a long round to Milson's Point.  
 739. There is nothing to prevent the use of water carriage from Darling Harbour to any part of Sydney? No, but a dray or other vehicle gets direct to any store in Darling Harbour, but ferry dues would have to be paid in coming across from Milson's Point, and then it is not a convenient place. I do not think it would be a suitable place for goods traffic for Sydney.  
 740. Would it relieve the goods traffic at Redfern to have a different terminus for the Northern line? No doubt it would.  
 741. It would be an advantage to relieve that traffic? Yes, it would to a certain extent, but I do not think it would be done very much.  
 742. For the reasons you have given, you think Darling Harbour more convenient? Yes.  
 743. *Mr. Humphrey.*] Can you say what are the average working expenses of the tramways to the eastern suburbs—to Randwick and Coogee? I think they are about £5,000 a mile.  
 744. Then there is practically very little difference between the cost of working the cable tram and the ordinary tram? There has not been a great deal of difference, but I do not think you can take the North Shore line as a typical instance of cable working.  
 745. Do you think that the cable could be worked at less cost than an ordinary tram? The location, &c., will affect the working cost. I think that if we had double the length of cable at North Shore we would work it at proportionately less per mile.  
 746. You say that the cost of working the cable tramway is about £4,000 a mile? About £4,300.

TUESDAY, 22 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

John Hay, Esq., sworn and examined:—

- J. Hay, Esq. 747. *Chairman.*] You know the Berry Estate at North Shore? Yes.  
 22 Oct., 1889. 748. Do you think it at all possible that any concessions would be made by the owners of that land in the event of the railway being extended from where it now terminates at the Lane Cove Road to the deep waters at Milson's Point? That is a matter that I have not discussed with my co-trustee, Mr. Norton.  
 749. Do you know how the line is staked out with regard to that estate? I have been over several lines that have been cut in connection with it. I think I know the last one.  
 750. Looking at the map produced, do you see that the proposed extension goes through what is known as Berry's Grant on the North Shore? Yes.  
 751. And you are not in a position, you say, to state what concessions the trustees of that estate would make to the Commissioners of Railways in the event of that extension being made? I am not at present prepared to say.  
 752. Could you let the Committee know at a later date? Yes, I could. It is a matter we would have to take into consideration in connection with the severance of the land and the injury that would be done at the same time.  
 753. You know the law is altered now; you can take the other side of the question and could set off one against the other;—the increased value given by the extension against the damage done? That may be true, but as far as the position of the land is concerned, it takes its value from its proximity to Sydney. I do not see that the railway itself will very materially increase the value of the land; but personally I am desirous and willing to do all that lies in my power for the public interest, as well as for the benefit of the estate, in meeting the Government in any shape or form so far as the powers that are vested in us will permit.  
 754. Well, then, you will let us know later on what you could do; you can communicate that to the Committee by letter? Yes.  
 755. *Mr. Dowel.*] Did I understand you to say you considered your property would be improved by the construction of the proposed line? That I could not say until I examined the cuttings or other works in connection with it. By severance there might be injury done.  
 756. From your knowledge of the particular locality, do you, generally speaking, think it an advantage that this particular line should be constructed? From my knowledge of the particular locality, generally speaking, I think it is the best line that could have been taken through the property.  
 757. Are you aware what this line is going to cost for construction? I have heard the general reports, but I have never given it serious attention. The late Mr. Berry did not look forward to any increase in the value of the land from the fact of the railway running through it, but was satisfied with the value of the land as it stood, without the railway.

758.

758. In the event of this line being constructed and its not paying interest on the cost of construction and working expenses, do you consider it a fair proposal that property owners who would be benefited by its construction should be called upon ratably to pay a certain amount of money in the case of a loss; would you be prepared to do so? That is a question I am not prepared to answer at present. J. Hay, Esq.  
22 Oct., 1889.

759. You are not prepared to say whether you would make any concessions at all as regards the value of this land through which the railway will pass? As far as estimating the value of the land through which the railway would pass, Mr. Berry had a desire to do what was right for the country and in the public interest, and in consequence of that we delayed the subdivision of the land so that no unjust or unfair claim would be made on the Government in connection with it, and in order to grant opportunities to the Government to take the railway in the best position. Mr. Berry's only desire was to see that the railway did go in a proper position. I know he was satisfied with the track as laid out at the present time.

760. In the event of its being determined to construct this line, and if the question of compensation were to arise, and your claim was found to be so large as to prevent the construction of the line, because of the large amount of interest that would be involved, do you consider the railway of so much importance to the district and to yourself that you would be prepared to give the Government the land free of cost? It is no use my saying what I myself would do. I am working in unison with my co-trustee, and we will decide on which course will be the best. I am satisfied that Mr. Norton will consider this matter in the public interest and in the same spirit as I myself will consider it.

761. *Mr. Cox.*] You yourself have no personal interest in this property? I am an executor under the late Mr. Berry's will, and this property belongs to the general estate.

762. Have you a personal interest in this property? I may ultimately have.

763. You have not now? I may ultimately have.

764. *Chairman.*] Legacies have to be paid out of this estate and you may have something to do with the residuary estate? That is so, I believe.

James George Edwards, Esq., sworn and examined:—

765. *Chairman.*] You are a resident of Gordon, are you not? I reside part of my time at Gordon and part of it at Ashfield. J. G.  
Edwards, Esq.  
22 Oct., 1889.

766. You have property at Gordon? I have an orangery at Gordon.

767. The Committee have been informed you wish to give some evidence to them in reference to this railway. Will you state what you have got to say? Having resided at Gordon and at St. Leonards for upwards of thirty-five years, and being familiar with the whole district between the harbour and Broken Bay and Hawkesbury River, I have been asked by residents of Gordon to give evidence upon the question of the North Shore Railway extension. The line has been made from Pearce's Corner junction to the Lane Cove Road, a point  $2\frac{1}{2}$  miles from Milson's Point, and the question now to determine is, what is the best thing to do to make the line in the highest degree useful and profitable. Three suggestions or propositions have been made:—1st. To make Cremorne the terminal point; 2nd. To extend the present tram service to the Lane Cove Road; and 3rd. To produce the present line on, and make Milson's Point the terminus. The Cremorne scheme is greater in length than the Milson's Point route by 1 mile 30 chains; it terminates at a greater distance from the city; its construction would exceed that of the Milson's Point line by £158,000; its expensiveness both in maintenance to the Department, and in fares to the public throughout all time, if made, greatly exceeds the alternate railway route; therefore we need not seriously consider its construction. The second proposition is to extend the tramway from the reserve to the railway at the Crow's Nest. It is claimed for such an extension that it would be a saving of public money; but I believe that such a connection would be the most extravagant waste of the funds of the country. The first objection against substituting the tram for the railway is that it would render the line utterly valueless and useless for the traffic of luggage and goods. The freights on the Milson's Point line, if made, will greatly exceed general expectation. In his evidence Mr. Hobson, I think, has mentioned that the brick-yards, potteries, tanneries, and timber-getters would supply the line at the start with a large goods traffic. Personally, I am largely interested in one of the brick-yards mentioned, and as I know all about that yard and its workings, I propose to show to what extent it would use a line to Milson's Point. At Gore Hill Brick Works we manufacture 200,000 bricks a week; burn 40 tons of Bulli and Mountain coal; and use 1,500 gallons of tar in the same time (week). Our latest prices for large coal at the mine was 7s. 6d., and for small 2s. 6d. When carted by other carts than ours, as back loading, we have paid as high as 7s. a ton to get this coal delivered at the works. Add to this the cost of freight and you will find that our large coal, delivered at the works, sometimes costs as high as 19s., and the small coal 15s. per ton; and the yearly quantity reaches 2,080 tons. Most of the bricks made by us reach Milson's Point, and in order that the Committee may have every opportunity of testing the accuracy of my statements, I will state some of our largest orders. To Messrs. Alexander Dean and Sons, for the erection of the "Australia Hotel", we have to send 5,000,000 ordinary and 200,000 double pressed bricks; to Messrs. Waine and Baldwin, for the Lands Office, we are sending 250,000; to the Crown-street Reservoir we are sending 50,000 double pressed bricks; to the "Wentworth Hotel" we are sending about 300,000; and we have only recently completed a large order for the Bulli Coke Co., which had to be delivered partly at Darling Harbour and partly at Blue's Point, to be transhipped to Bulli. Other large orders have been delivered during the last few months at Milson's and Blue's Points, and at the present time we are tendering to supply an order of over 4,000,000 which are to be lightered either from Milson's Point or Blue's Point, as economy can best be served. Seeing that the major part of our orders would be in Sydney and among our coast towns, and thinking that Milson's Point would be the terminus, and that the work would be completed at an early date, we considered the question of putting a siding into the works, and long ago applied to the Engineer-in-Chief for points to connect with. Our application was favourably considered, but we have since been kept in such a state of uncertainty that we have gone on with our horse and cart delivery at a very heavy expenditure. The wear and tear on the horses, particularly the shafters, is very heavy, and if we could have delivered the bricks by rail at Milson's Point a few horses could, from that Point, have done what it takes some dozens to do. To deliver bricks at Milson's Point costs us about 10s. a thousand. The Committee will therefore see that the railway completed would be advantageous to my company, also that our works would be an advantage to the railway. Taking the two large orders mentioned only, the Committee will see that we have 7,700,000 bricks

J. G.  
Edwards, Esq.  
22 Oct., 1889.

bricks to deliver. These, at a weight of 4 tons to the 1,000, gives us a total weight of over 30,800 tons, which we would only have been too glad to entrust to the railway. But the foregoing gives no idea of our future work. We have just completed the erection of fresh machinery, so that now we can start any day two Plott's machines, each making 20,000 a day; a Bradley and Coowen, making 18,000 a day; and a Plastic machine, making 10,000 a day; in all 68,000 a day, or 408,000 a week, being double the output up to the present, necessitating double the quantity of coal and other fuel. Of the other factories mentioned by Mr. Hobson I cannot speak, not knowing anything of their output; but I am convinced it is considerable, and as some of them are closer to the line than ours, I feel certain they would be compelled to use the railway. But if it is to terminate in a tram service, than it cannot be utilised by us nor by any other producer. I have taken some trouble to ascertain the quantity of fruit marketed from Gordon. Two most reliable fruit-growers carefully collected the number of cases taken from each orchard during the last year. The total is 43,990 cases. These consist of orange, lemon, peach, apple, pear, and plum, principally, but do not include the grape yield. Taking the average price of these at 7s. we have a sterling value of £15,000. I regret that I have not been able to get the quantities produced by Willoughby and Hornsby, which together would be considerably more than that grown at Gordon. And this I wish to emphasize, viz.:—that not only would a railway to Milson's Point bring the Gordon and Willoughby fruit, but it would bring the greater part of Hornsby fruit. I remember the time when the Hornsby line was being constructed, that the orchardists of that district laughed at the idea of sending their fruit to market by train, but they all do it now. And no marvel either; for it costs me to send oranges from my orchard, which by road is only about 10 miles from Milson's Point, four times as much as it costs Goulburn growers to market their apples. Possibly it may be objected that the railway would not carry the fruit to market. My answer is neither does the western line. The fruit is conveyed to Darling Harbour, and by vans conveyed to the George-street Market, and while the distance between Darling Harbour and the Market is less than between Milson's Point and the Market, yet the easier grades of Pitt and George Streets than of Market and Druitt Streets would enable each horse to take five or seven cases more than on the latter streets, and to travel at a more rapid rate, so that the difference in van carriage would not be great. If it be questioned whether any of the Hornsby fruit would come by the North Shore line let it be remembered that all orchardists north of the junction would have to pay freight on 8 or 9 miles less by using the line to Milson's Point, and that orchardists as far south as Thornleigh, which is only  $1\frac{1}{2}$  mile from the junction, would have less freight to pay by sending their fruit *via* the North Shore. As within a radius of 2 miles of Hornsby Junction lie all the best orchards in that neighbourhood, we believe that the bulk of Hornsby fruit would be conveyed by the line to Milson's Point. Further, I find the quantity of bone dust used in the Gordon orchards which now is carted from Sydney, amounts to about 560 tons annually. Assuming that a similar quantity would find its way by the Milson's Point route to Willoughby and Hornsby, we have over 1,000 tons. Again, with the railway to Milson's Point, mountain coal, which finds its way to outlying districts, such as Balmain, Waverley, and Concord, and other places, should be largely used for household purposes by the residents of St. Leonards, a large proportion of whom reside within  $\frac{1}{2}$  a mile of the head of Lavender Bay. To cart it from St. Leonards Station would increase its price considerably. Illawarra coal for steam purposes would be brought by steamer to Milson's Point and forwarded to various places along the line. Again, no blue metal for road-making purposes is found either at Willoughby or Gordon. Large quantities are used both in Willoughby and Gordon. It is punted to the Figtree bridge and conveyed by carts up to and along the various roads. The Illawarra metal, I am told, is used, and if the line to Milson's Point were made there would be an increasing traffic. I think I have shown that the goods traffic on the line would be considerable from the start, and with railway facilities it would grow, and as the tram service would make no provision for this its substitution for the railway would be most disastrous in its consequences. A second objection against the trams is:—It gives least accommodation where most is required. If the proposition were to start from Pearce's Corner with a tram and finish at the harbour with a railway something might be said in favour of the scheme, but to employ a railway as a feeder for a cable tram is out of all reason. The traffic on the line must be greatest near the city and least on the most distant part, therefore the accommodation where the greatest number travel should at least be equal to that supplied for the few. What would be thought of a coach proprietor who had a complete service for that part of his line where the travelling public were small who finished his last stage towards the centre of population with a gig? I have travelled through Europe, America, and all over the colonies, but I have never met with anything resembling the proposal which we are now considering. No one can imagine the confusion, jostling, and irritation which, on a holiday, would follow the arrival at St. Leonards station of a special train containing 400 or 500 persons. The more the line improved the worse would become the inconvenience, and I am convinced it would be better to take up the rails and sleepers and abandon the whole line altogether than to make this hybrid tram-railway. A third objection against substituting the tram for the railway is the loss of time which it would occasion. The tramway would be  $2\frac{3}{4}$  miles in length, and as it travels about 6 miles an hour, it would take passengers by tram, allowing ten minutes for stoppages and five minutes for changing, forty minutes to reach the Crow's Nest. A train leaving Redfern at the same time as the tram left Milson's Point would be at Strathfield,  $7\frac{1}{2}$  miles out, in fifteen minutes, and after making five stoppages would reach Auburn, 11 miles from Redfern, in twenty-eight minutes. Thus the tram would entail a constant loss of time, and inflict a hardship upon all travellers by the North Shore line, which should not be allowed, unless there are strong reasons in its favour. It has been objected that a terminus at Milson's Point would not give accommodation to even the passenger traffic. The Government officers and Railway Commissioners should be the best authorities on such questions, and they assert there will be sufficient accommodation. If, however, there is not sufficient space for the passenger traffic, if brought to the Point by rail, then, unless the tram is intended to keep down the traffic, there cannot be sufficient if it is brought by tram. It has been said that the water-frontage to Lavender Bay would be of little value for wharfage purposes because of want of shore width. I would point out how at Miller's Point and elsewhere on the southern shore wharfs have been formed on which a gigantic traffic has been carried on by cutting back the hill, filling the debris behind a sea-wall, and extending pile-piers, and this traffic has been conducted without the aid a railway would supply. But I would press this fact on the attention of the Committee, that if the railway had no water-frontage along its route, but simply reached the water at its terminus, and if, without such frontage, it cost as much as the estimate for the proposed line, then, I

submit,

submit, it has been shown the line would pay quickly and well. This is without taking credit for a penny earned from the water-frontages or for any increasing value, although no one can say that something would not be earned, and that water-frontages have no value. Therefore there is really nothing in this against the railway extension, even if it were admitted that the attempt to depreciate the value of its extensive water-frontage were justified by facts. A comparison of the cost of working the railway extension from the present terminus to Milson's Point, and of working the tram service between the same points, will, I think, show that it would be a terrible mistake to decide in favour of an extended tram-line. The cost of working the present  $1\frac{1}{2}$  mile of the Milson's Point tramway was, in 1887, £6,859. Taking the further extension of  $1\frac{1}{2}$  mile at the same rate per mile, it would cost to work, yearly, £5,716; but charging only one-half this amount as the cost, £2,858, the cost of running the whole line would be £9,717, with a traffic such as the present line carries. Calculating from the income of the tramway, there was an average of about 2,000 travellers per day carried in 1887, and supposing the railway travellers only amounted to 4,000 daily, it would mean, that at the same rate as the 2,000 travellers would be carried on the present line and its extension, the 4,000 extra railway travellers would cost £19,434 to convey the full distance. But again, charging only one-half this sum as the cost, it would amount to £9,717. Allowing only one-half for the extra cost of conveyance is giving an undue advantage to the tramway service, as the detailed yearly cost of working the tram service contains the following:—Wages of gripmen and engine-drivers, £1,337; cost of fuel, £681; repairing and maintenance, £2,327; wages of conductors, clerks, &c., £1,066; or in all, £5,411, which would be increased nearly in full proportion to the length of line and the passengers carried, so that it seems most moderate to allow only an increased cost of £9,717 for a line nearly twice as long as the present, and a traffic three times as large. Deducting from this £9,717, the outside extra cost of running the railway extension, viz., £2,000, there remains an extra cost of tram-running of £7,717, which soon would pay  $3\frac{1}{2}$  per cent. interest on an extra expenditure in the construction of the railway extension of over £220,000. Now the extra cost of the extension and resumptions is given as £262,000, less the cost of extending the tram, £30,000, and the resale value of land over the tunnel, £28,000, or only £204,000—showing a difference of £16,000 in favour of the railway. Therefore it is obvious that in itself it would be the wisest economy to extend the railway, even if it were not also a self-evident fact that the railway extension must tend to enormously increase the traffic, while the tram service would inevitably tend to retard it. Another point, however, which I have not seen referred to is that whilst the tram extension could at any time be constructed at the present cost the railway could not. With the exception of one small resumption, the tram would pass over public thoroughfares, and delay in construction would not increase the cost for resumption. The railway, however, passes through private lands for its entire length, and consequently delay in construction would enormously increase the cost for land, and improvements erected thereon. In the event of a high-level bridge being built from Blue's Point to Flagstaff Hill the Milson's Point route would be followed to connect the railway with it, and if the necessary land be not resumed until it be required for the purpose, the cost for resumptions will be twice or thrice the present value. In consequence of the distance from the northern districts to Milson's Point being 8 miles less than to Redfern station, and 9 miles less than to Darling Harbour, and the facilities which Lavender Bay offers for shipping purposes, I am of the opinion that Milson's Point should be the terminus of the Northern Line. The proposed railway skirts the eastern shore of Lavender Bay for nearly a half-mile on a level grade to a height of 5 or 6 feet above sea-level, and the whole of this water-frontage could be made available for wharfage purposes. Darling Island, purchased at a cost of £135,000, affords less wharfage accommodation by 900 feet. Lavender Bay contains an area of about 105 acres, being more extensive than Circular Quay or Darling Harbour, either above or below the bridge. Its depth of water far exceeds that of either Circular Quay or Darling Harbour, and large ships could now be taken to within a few yards of the shore. It is frequently stated that a ship could not be berthed at Milson's Point, because the point and the fairway are too narrow. Ships are not berthed at Macquarie Point nor at Dawes' Point, but in the bight. Similarly, ships would not be berthed at the extreme end of Milson's Point, but towards the bight. The narrowness or otherwise of the fairway does not affect the question, because ships would pass through it whether they berthed in Darling Harbour or in Lavender Bay. An erroneous impression seems to exist, to the effect that, although Milson's Point is well adapted for a large passenger traffic, it is too restricted to permit of sufficient accommodation being provided for a large goods traffic. An inspection of a plan which I propose to leave with the Committee, prepared by competent professional gentlemen, will show that if an average depth of 1 chain (only half the width elsewhere) from high-water mark be resumed, and the material available be used to fill up and reclaim as far as the depth of the water will permit, a wharf, extending from the head of Lavender Bay to the southern corner of Government land at Milson's Point, could be constructed. Its length would be 2,670 feet, and its minimum width 132 feet, while the depth of water at low spring tides would be such as would berth the largest ships or steamers which visit this port. Allowing 400 feet of wharfage for passenger traffic, there remain 2,270 feet for goods traffic, sufficient to berth five Orient steamers, and to meet the requirements of the public for years to come. Should this accommodation be found insufficient, the wharf could be extended across the head of Lavender Bay, and around the western side of it. Traffic of both descriptions should be permitted to flow in their natural channel, and if so permitted a very considerable amount of it would find its way to Milson's Point. I have been convinced for years, and am more strongly of the opinion now than ever, that the line to Milson's Point should be the main and not the branch line. Should the high-level bridge across the harbour from Blue's Point to Flagstaff Hill be built, the Milson's Point route makes admirable provision for it, a connecting line of only half a mile in length being necessary to connect the two. In the meantime, if the city railway were extended to Fort Macquarie, trains could be taken across the harbour in punts. Touching then the question of paying, I feel confident that the line in two years from completion to Milson's Point will pay well. As soon as it becomes known that it is decided to carry it to Milson's Point building and development along the route will commence. Illawarra line was not opened as far as Hurstville until October, 1884, and now it is paying splendidly. From the Commissioner's report for 1887, *vide* page 91, we find that the total inwards and outwards traffic for stations between Concord and Hornsby amounted to £9,000 within a fraction, and for the Hawkesbury River, £5,860 16s. 7d. In fact, past experience teaches that no railways pay better than our suburban lines. Surely there cannot be the slightest grounds for doubting the profitableness of the North Shore line. Besides the people of St. Leonards there are the prosperous districts beyond through which the line passes. The municipality of Willoughby contains already a population of over 2,000 persons, and is capable of containing twenty times as many.

Beyond

J. G.  
Edwards, Esq.  
22 Oct., 1889.

J. G.  
Edwards, Esq.  
22 Oct., 1889,

Beyond Willoughby is the elevated district of Gordon, extending to Hornsby, and bounded on the east and west by Middle Harbour and Lane Cove rivers, containing 228 residences, and upwards of 1,100 persons; most of the land is fit for agriculture, and what is not is adapted for residential purposes. The area of Gordon alone is about 19,000 acres, and every 5 acres of the agricultural land well cultivated would support a family. For residential purposes the district cannot be surpassed. Eight miles from Milson's Point we have an elevation of 500 feet, 9½ miles an elevation of 592 feet, 10 miles an elevation of 620 feet, and at 9 miles, on the Stony Creek Road, an elevation of 626 feet. It may be stated that because I have interests along the railway my opinions are biased. It is true I have an orangery at Gordon, which I have had for years, and will continue to hold, whatever becomes of the railway. I am also interested in the Gore Hill Brickworks as one of a Company; and as one of the directors of that Company, and because I am thus interested, and because I am always anxious to see that done which is for the public good, I am here to give evidence to-day. I would point out that there are two classes of persons whose opinions may be influenced by the railway. Those, like myself, who have interests on the line, and who are desirous of making it a success, and those who have interests elsewhere, and who are desirous of making it a failure. The railway will be a success or otherwise, in proportion to the ability of private owners to attract a population, and the ability to create a population depends upon the facilities offered by the railway. In conclusion, I beg to add, that if the Committee are doubtful about the profitableness of the undertaking, I am prepared to find a Company with a capital of £450,000 to take over the whole line, provided similar powers and privileges are given the Company to those possessed by the Crown.

768. *Mr. Garrard.*] Where did you obtain your figures as to the probable cost of the Cremorne line? I got the figures from an official source.

769. The Gore Hill Brickworks are the largest brickworks on the North Shore, are they not? They are.

770. How many brickworks are there immediately surrounding the Gore Hill Brickworks? There are two close to Gore Hill, and one beyond, and one this side. I think there are five altogether.

771. Would the whole of those put together have an output equal to that of your Company? I could not state; I do not know what their output is. I have never been over their works, except Mr. Magney's, and his output is fairly large, but nothing like ours.

772. As a matter of fact, does not the output of your brickworks equal that of the whole of the other brickworks, even if it is not larger? It probably is.

773. You have told us that your consumption of coal is about 40 tons per day;—how do you get that coal now? We draw it from Sydney—sometimes from Sydney. I think it generally comes from Darling Harbour.

774. You consume nothing but western coal? We also consume Bulli coal.

775. Is not that water-borne? Oh, yes.

776. Landed where? Some is landed at Grant's Wharf—a private wharf off Milson's Point Road.

777. The bulk of the coal you use comes from the western collieries? No; I think from Bulli.

778. All the western coal would reach you whether this line is made or not? We could get it *via* Hornsby—but look at the expense. We would first have to convey it to Strathfield, and thence to Hornsby, and thence to Gore Hill; but if we had the Milson's Point line we could reach the brickworks in 3 miles.

779. Do I understand that if this extension were made you would take delivery of your mountain coal at Darling Harbour and cart it across? That is a matter we have not determined upon.

780. Is it at all likely that you would carry your coal from Darling Harbour by ferry over the water, load it in trucks at Milson's Point, and unship it at your brickworks? Most certainly not. We would get it *via* Strathfield and Hornsby; but we would have to pay for the extra distance between Strathfield and Hornsby, which I suppose is about 12 miles; and also for the distance from Hornsby to Gore Hill, which would put 1s. 6d. a ton on the price of the coal.

781. Would that not be cheaper than going through the process I have enumerated? Most certainly; but not cheaper than from Milson's Point, if we had a railway.

782. Is the largest demand for your bricks on this side or on the north side of the harbour? During the last six months it has been on this side considerably.

783. Prior to that the largest consumption was on the Shore? I would not say that; but certainly during the last six months it has been considerably larger on this side.

784. Do you think there is a probability of that continuing? We must look to Sydney principally for our business, and also to towns on the coast district. We have sent a lot of bricks to Eden. We are in treaty for sending bricks up north, to the Clarence River; and there have been a number of orders given us for bricks to be delivered at towns in the coast district.

785. You are clearly of opinion that if this line were constructed to Milson's Point all the bricks for use in Sydney would come that way, and not still be carted by your ordinary carts? I am certain of that. I could not say all, but I am certain that the bulk of the bricks would be brought that way. It costs us now 10s. a thousand to get our bricks to Milson's Point.

786. 2½ miles? You are reckoning by the train; by road I suppose it is 3 miles.

787. But the principal item is the loading, and not the transit? We have considered the advisability of getting boxes made which would hold 400 or 500 bricks, and the bricks would be lifted by cranes on to trollies, and lifted off again.

788. That is only a thing for the future—you are not doing that now? No.

789. The present cost I suppose is largely made up of the handling? No; the carting is the great item, and the wear and tear of our horses. The down hill racks our shafters to pieces, and we have lately considered the advisability of getting trollies. One trolley we got from Hudson's cost £75 or £80, and two others are being made. The great expense of the bricks is occasioned by the wear and tear of the horses.

790. That does not exist when you get on the shore of the harbour, or go through the city? No, because we are on fairly level ground then.

791. After giving due consideration to this matter, as a director of your Company, you say unhesitatingly that the bulk of your bricks for use in Sydney would come to Milson's Point and then be transhipped? I believe they would. The board has discussed the matter, and we resolved to do that.

792. In reference to the fruit, do you say that 43,900 cases are grown near Gordon alone? Yes.

793. You think there is a likelihood of that fruit being brought to Milson's Point? I do.

794. Would the fruit growers all have sidings put into their orchards? It would not be necessary. There is to be a siding at Gordon and another in the centre of the fruit growing district.
795. These orchardists would have to convey their fruit from their orchards 1, 2, or 3 miles to the railway would they not? Not 4 miles. I don't know any case in which the conveyance would exceed a mile or a mile and a half at the outside.
796. They would have to load their fruit into their own carts, trans-ship it on to the railway waggons, and trans-ship it again at Milson's Point into carts to go to Sydney market? They would.
797. Do you think it is at all likely that the orchardists would do that; having once loaded their stuff into the carts would not they come 4, 5, or 6 miles direct to Milson's Point by road and then on to Sydney? I am certain as I am of my existence that they would use the railway. I have been connected with orchard work in the Lane Cove district for the last thirty years and have kept horses and men, and I am certain that it would be infinitely better to convey the fruit by rail to North Shore and have it taken delivery of there.
798. You reckon just now that if the line were constructed we might reasonably anticipate that fruit grown about Hornsby and as far south as Thornleigh would be conveyed by this line; but would not that benefit the fruit growers at the expense of the Railway Department? I think the public have to be considered, and I don't think the Committee would be anxious to see the Homebush-Waratah line pay at the expense of the Hornsby fruit-growers.
799. But if one of the reasons for making the Homebush-Waratah line and taking it through Thornleigh and Hornsby was to give access to those people, and they have had it for use a year or two, is it not fair to reckon on the produce of the district being sent that way? A fair share of the produce of the district would go that way, and that line would pay without carrying the fruit sent by the North Shore line. I don't think it would seriously affect the Homebush-Waratah line.
800. How far is Gordon from Hornsby? Nearly 5 miles by road.
801. What is the farthest place from Hornsby this way from which fruit is sent by Hornsby and Strathfield now;—I mean from the Gordon side of Hornsby? I cannot tell. I don't think we have any orchards of consequence, except one or two near to Hornsby, that send their fruit by that line.
802. How far from Hornsby are they? Probably a mile or a mile and a half.
803. You think that the Gordon orchardists would send their fruit by this line? I think so.
804. Do you think it at all likely that if this line were constructed there would be a large increase of population at Gordon, Willoughby, and other places? I do, and I have good reasons for thinking so.
805. You are taking the history of the Illawarra line as something to go by? It is something to go by. I think the increase of settlement along the Illawarra line points very strongly to the fact or the inference that a similar settlement will take place along this line.
806. But did not that line give access to the southern districts, whilst this is only a branch line and would not have the same amount of through traffic? I say this would be more than a branch line and would work into the northern line.
807. It is your opinion that this should be the terminus of the northern line? Yes, and that has been my opinion for some time.
808. Have you any land through which this line passes? I have three quarters of an acre. It was an acre and a half. I was one of the advocates of the railway and I offered to give my land and the department took three quarters of an acre for the portion constructed already, and I am left with three quarters of an acre without any frontage—with no access to any road or thoroughfare.
809. Do I understand you gave that land for nothing? I offered to give it for nothing, but the department offered me half-a-sovereign for it and I took it.
810. Was that given on the understanding that you would have railway communication with Port Jackson? That is what we understood—that the line was to be extended to the deep waters of the harbour; otherwise I would not have given my land. I consider the railway would be absolutely useless if it stop where it is now.
811. Is it not a fact that in the first instance the proposal was to bring the line down to the waters of Port Jackson and people were asked to give the land, but that that proposal was afterwards put on one side and a fresh one was made—to bring the railway to the Crow's Nest only and the people were again asked to give their land, and was it not on the last proposition that the land was given? Most decidedly not. I never heard of that proposition. It was simply considered to be one section of the work—the other section to be left till the Government could determine what was the proper approach to the deep waters of the harbour.
812. Then I understand your contention is that the Government will not have carried out their contract until they have brought the passenger and goods line to Port Jackson? That is my opinion. The first line surveyed was to Ball's Head. We thought that in all probability the line would be forked;—that one branch would go round to Ball's Head and the other to Blue's Point. Mr. Wells ran his first line to Balls' Head and the other to Blue's Point.
813. Do you think that if this proposed extension is made it will interfere with the productiveness of the existing tram line? I do not, for it will be required for the North Shore people.
814. Do you not think that until the Shore develops more the gap might be bridged by the extension of the tram? Most decidedly not. Look what the cost of resumptions will be at the end of a few years. I was present at the sale of part of Milson's Estate fifteen years ago, when in the very centre of St. Leonards land was bought at from £1 to £2 12s. 6d. a foot, and I have lived long enough to see that land sold some for £40 and some for £50 a foot.
815. In anticipation of the railway? No; away from the railway altogether—part of Milson's Estate close to the tram—and if land increases in value in anything like the same ratio between the Lane Cove terminus and Milson's Point the Government will have in ten years time to pay £500,000 or £600,000 for resumptions, which they could now make for £135,000;—that is if it increases in value one-fourth as rapidly in the next ten years as land has during the last ten years.
816. I think you said that in your opinion it would pay the Government better if this line were not extended to take up the rails and sleepers already put down, because the line would be useless? I meant the line would not pay unless extended to the harbour.
817. How long do you think it will be before it will pay interest and working expenses? I think from two or three years at the most from the time it is completed. Of course people will commence to build as soon as it is decided to construct the line. I should only be too glad to be one of a company to take  
over

J. G.  
Edwards, Esq.

J. G.  
Edwards, Esq.  
22 Oct., 1880.

over the line either from Lane Cove Road to Milson's Point, or the whole of the line. I already know some of the gentlemen to go to, and I would find gentlemen to take it over with a capital of £450,000, and make the line, provided we could get the same privileges the Government have.

818. Of course they know it is an impossibility for them to get that, and therefore that their offer is safe? I wished to put it in a business-like way. We could do it if we were not hampered, but allowed to get on with it the same as the Government would.

819. *Mr. Cox.*] You spoke about your brickyards;—is the clay in that neighbourhood so valuable that you can compete with everybody else round Sydney in the sale of bricks? We have a very superior clay at the yards;—in fact I might mention that there is superior shale and clay, or deposits of shale and clay, through most of that district. I think that Mr. Gibson, who has works opposite ours, has better clay and shale than we have. I do not think that there is in the western suburbs anything in the shape of clay and shale equal to Gibson's, Magney's, and our own, and there are deposits equally as good farther on. Take Fisher's Hill, for instance, and the Crow's Nest.

820. Do you think that your clay is so valuable that it would be desirable to go to the expense of making a railway to bring your bricks to Sydney when we have clay equally as good in the Western suburbs? How is it we are now doing it under most unfavourable conditions. We have to pay not only 10s. for haulage, but also the steamerage, which is a heavy handicap, and yet we are competing with those men, who have a very great number of bricks they can't dispose of, whereas we have been taking bricks so hot from the kiln that men could scarcely handle them.

821. So you are competing successfully with those men who have greater facilities? We are.

822. How far are your works from the proposed line? Roughly speaking, one-third of a mile.

823. Have you calculated what the probable returns by rail would be, presuming the railway were made to the deep water? I did not go into that matter, as I saw by the papers it had been gone into exhaustively by, I think, Mr. Thompson or some other witness, who has preceded me, and I did not wish to trouble the Committee by travelling over old ground.

824. Is there any traffic beyond Hornsby that would be likely to come into Sydney by this line? Yes, for instance, there is a good deal of traffic in wood. There is a great deal of bundle wood and other wood which could come by this line from north of the Hornsby Station.

825. When you are travelling on the Homebush-Waratah line, all the good land is left behind when you pass Hornsby? Soon after you get to Hornsby you get on very indifferent land. Wail's and Fear's are, I think, the two last places where there is good land.

826. Consequently there would be no orchards or settlement? It would not be suitable for orchard purposes beyond the area of good land.

827. In taking the Hornsby traffic by this line you would take traffic from the present Western line? Only a little of it, I think.

828. You would be "robbing Peter to pay Paul"? The Western line is showing it would pay well without the traffic this line would take.

829. What is the difference in length between Hornsby and Sydney, *via* Milson's Point and Hornsby, and Sydney *via* Redfern? To Darling Harbour from Hornsby Junction is, I believe, 9 miles longer than from the Junction to Milson's Point.

830. Do you think that that difference in length would be sufficient to make one line pay as against the other? I do not say that the other line will not pay. I believe the Hornsby line will pay. I think the revenue is increasing so rapidly that it will pay. I think both lines will pay.

831. This proposal is to take the railway to the deep waters of Port Jackson. In the event of a high level bridge ever being built—probably it must be some day or other—would not a large amount of unnecessary expense be incurred in taking the railway down to the water rather than letting it remain at the high level where a bridge would probably meet the North Shore? Not at all. I think it would be a great saving to the country inasmuch as land would be resumed for railway purposes and the Government would avoid the necessity of making resumptious at a time when they decided to go on with the bridge. To have the portion that goes to Milson's Point would be a decided advantage as it would give water frontages in Lavender Bay where ships could go and receive our produce.

832. What produce have you that ships could take away? We largely export oranges to Melbourne. Mr. McKeown, a very large grower in the Lane Cove district, carts his oranges to George-street market and sends them by van to the vessels and they are conveyed to Melbourne. If we had wharves at Lavender Bay the fruit could be sent direct to the ships, and handling and expense would be saved.

833. You mentioned just now that you gave your land through which the railway passes free of all charge? Yes.

834. And yet you only had  $1\frac{1}{2}$  acre? Only  $1\frac{1}{2}$  acre through which the line passes. I did not say I possessed only  $1\frac{1}{2}$  acre altogether.

835. That alters the case. I imagined that you had only an acre and a half and that the Government resumed half of it. Any person through whose land the railway passes, although a certain amount of land may be taken from him, benefits no more than his neighbour who has no land taken from him? You are quite right, I have said that many a time. Some of us gave land and lost by doing so. Mr. Frank Treatt gave a lot of his land and the balance could not be enhanced in value to any extent because it was so small. Sergt. Dawson's place lies half way between two stations and there is a tremendous embankment there and the construction of the railway instead of increasing the value of the land has really depreciated it. If some Bill could be passed by the Legislature enabling the Government to rate the land all round, assessors could be sent and the thing could be done more equitably.

836. *Mr. Dowel.*] You have stated that you consider Milson's Point should be the terminus of the Great Northern line? Yes, that it should be.

837. Have you any experience of the northern districts to justify you in making that statement? I have travelled all through the north districts; I know them very well; and one of the reasons why I think that Milson's Point should be the terminus of the Great Northern line is, because it is on the direct route to the metropolis and this line is 8 or 9 miles shorter than the line from Hornsby to Sydney, and would have cost less to construct than that line, and would greatly relieve the congested traffic on the western line. These are some of the reasons.

838. What is the length of the siding for which you have applied? We did not apply for a siding but for points to be put in, in order that we might make a siding.

839. You would construct the siding? We would; but we have not gone on with it yet because we are not certain the line will be extended to the water at Milson's Point. If the line were taken to Cremorne or Ball's Head it would be of no use to us.

840. Would there be any difficulty in constructing a siding from the railway to your brickworks? Mr. Norman Selve, the engineer, says there would be no difficulty. It would probably cost us £3,000 or £4,000.

841. There is no doubt, I suppose, that you would put in this siding if the railway were constructed to Milson's Point? I am one of a Board of three, and I would be only too glad to recommend it to-morrow, and I know my colleagues are of the same opinion.

842. What is the cost of loading bricks per thousand on the drays? I do not know that you can attach much value to the cost of loading bricks. They are run out in barrows, and if you did not load them on to drays you would have to stack them. If we had the railway trucks there the bricks could be taken direct from the kiln on to the trucks and run direct to the Point.

843. The cost of loading bricks is not a great item, then? It is not a great item. Of course if we had to load and unload, and load again, that would be an item.

844. You referred to the use of mountain coal in your brickyards—how do you find mountain coal serves your purpose for burning bricks? The brickmaker informs me that it is far superior to the Newcastle coal.

845. Is it not a fact that this mountain coal could be delivered at your brickyards at a much lower rate than Newcastle coal could, provided you had a siding constructed to the railway? Most decidedly, for if we got Newcastle coal we would have to pay freight by steamer from Newcastle, or bring it by rail something like 94 miles, and that would add 7s. or 8s. to the cost. Mountain coal could be got at considerably less.

846. Can you say what at the present time you pay for the cartage of coal, bricks, &c., per annum? I cannot give you that in a lump sum. The cartage of two of the orders I mentioned—that is Dean's and Waine and Baldwin's—will cost us something like £4,000.

847. *Mr. Garrard.*] Would half or a third of that cost be saved if this line were constructed? I think quite half of it would be saved.

848. *Mr. Humphery.*] In what way would it be a saving to you to get the western coal delivered at Darling Harbour, taken across to Milson's Point, and then conveyed to Gore Hill, instead of getting it direct from Strathfield? We could get it lightered by men like Batty and Shea, from Darling Harbour at a reasonable cost to Milson's Point. A lighter will take about 70 tons at a time. In that way there would be a very great saving to us.

849. Would it cost you more than 5d. a ton to get it from Darling Harbour to Milson's Point? I suppose it would cost us more than that.

850. What difference of haulage do you think there would be between taking coal from Darling Harbour to Gore Hill and from Strathfield to Gore Hill? The distance from Darling Harbour to Milson's Point cannot be more than 2 or 3 miles, I should think.

851. You would have to unload at Milson's Point and put it on the trucks? Just so; but we would have proper appliances—it could be done by a winch.

852. The distance from Strathfield to Hornsby is about 12 miles? As far as I know the distance, it is.

853. The western coal taken to Hornsby would be taken *via* Strathfield and would not be taken to Sydney, and there would, therefore, be 7 miles saved there. The total difference would only be 9 miles, and you would have to pay 1d. a mile per ton extra for taking it by way of Strathfield? Probably, then, it would pay us better to have the western coal *via* Strathfield.

854. Do you not perceive how erroneous your calculation was when you said that you would effect a saving by taking coal from Darling Harbour to Milson's Point, and then on to Gore Hill? If I remember rightly, I think I said the greater quantity of coal used by us was Bulli coal.

855. But that was what you stated in speaking of mountain coal? I was calculating we took the mountain coal from Sydney.

856. You think now you are in error? I am not sure I am, because I don't know what the cost would be for lightering or for railway freights.

857. Do you not know that the freight for coal is 1d. per ton per mile? I believe it is.

858. If there should be a distance of 12 miles from Strathfield to Hornsby, and 9 miles from Hornsby to your works, it would really cost you about four times as much to get your coal from Darling Harbour as to take it *via* Strathfield; is that not the case? The probabilities are we would find it cheaper to take all Bulli coal.

859. Therefore there would be no traffic of mountain coal along the line to your brick-works? Probably if we found that the mountain coal cost us more than the Bulli coal, and that the latter answered equally well, we would run on Bulli coal.

860. In your estimate of the probable traffic by rail, I think you stated that the traffic would be just twice as great as it is at the present time by tram—I mean that the traffic by rail from Milson's Point to Hornsby would be twice as great as that now conveyed by tram? I think so.

861. In what period do you think that traffic would be developed? In a couple of years.

862. Have you taken into consideration the fact that the bulk of the population of North Shore lies east to the proposed line of railway? I have taken that into consideration.

863. So it will have to be entirely new traffic that will be developed by the railway in order to realise your estimate? It would not have to be entirely new traffic. A number of passengers would use the line at holiday times, and there are also the residents of Willoughby, Hornsby, and Gordon, who would travel by the line from the start.

864. You think that the great saving of time effected by using this line would lead to such a rapid development at Gordon and beyond Gordon, that the working expenses and interest would be covered in the course of a few years? I think so.

865. What is the value of land about Gordon? It varies very much, according to quality.

866. In the immediate vicinity of the railway? Some of the land sold by the Government brought, I think, something like £200 an acre near Linfield. I suppose £150 an acre would be a fair price for good land.

867. *Mr. Lee.*] I understood you to deduct from the estimated cost of the extension of the railway the sum of £30,000, which is the estimated cost of the extension of the cable tram? Yes.

J. G.  
Edwards, Esq.  
22 Oct., 1889.

- J. G. Edwards, Esq.  
22 Oct., 1889.
868. Can you inform me on what grounds you reduced the estimated cost of the railway to the extent of the probable cost of the tram extension? Because that portion of the cable tram would not be required if the railway were made.
869. If the railway were made, it would still cost £262,000? Yes; but the cable tram extension would not be made.
870. I want to know why you deducted the cost of the tram extension? Because the tram extension would be unnecessary if the railway were made. If the railway is not constructed the tramway probably will be at a cost of £30,000, and probably at a later period when land resumption would cost much more it will be found necessary to construct the railway.
871. Do you think it is a fair way to estimate the cost of the railway by deducting from it a sum of money which is the probable cost of an alternative service? If the alternative service is certain to be carried out, provided the other is not, I think that is a fair way of looking at it.
872. But there are two contemplated services, one to cost £262,000, and the other £30,000. If the £262,000 service is adopted, how can you deduct from that the estimated cost of the other contemplated service? I look at it simply from a business point of view, and I think that that is a fair way to put it.
873. And do you consider it equally fair, if the tram service were decided on at a cost of £30,000, to attempt to reduce the sum by deducting £262,000, the estimated cost of the contemplated railway service? No; I do not.
874. What is the weight of 1,000 bricks? I am told it is about 4 tons.
875. At present then they are costing you about 2s. 6d. a ton to deliver them? Yes; that is about it.
876. On reference to the railway rate book, I find there is a special rate for the conveyance of bricks. It is set down here, from Liverpool to Darling Harbour, 21 miles I believe, at 11s. per truck of 6 tons. Now, the distance from Darling Harbour to Gore Hill is 28 miles, or 7 miles longer, which would make the rate probably 13s. a truck, or at the rate of 2s. 2d. per ton? Yes.
877. When the piece of line now being constructed is open for traffic, is it not extremely probable you would use it for the conveyance of your bricks to Sydney, instead of carting them as now? Not at all, as its terminus is not a very great distance from the works. It is only half way to the Point, and it would not be worth our while to load the bricks and convey them to the St. Leonard's station at Lane Cove Road, and then send our carts there. We should still have all the heavy shafting to do, and that is what is so detrimental to our horses.
878. Do I understand that when once the bricks were loaded, it would suit you better to send horses and carts across the ferry to Sydney? Of course, as we should only have to use a few horses.
879. When the present line is completed, are you not likely to use that in sending the bricks to Sydney, instead of sending them by drays? We would never put a brick on it; that would never pay us, for we could not compete with Goodlet, who has a siding at Merrylands, because of the freight we would have to pay.
880. How do you compete with him now you are sending the bricks by your own teams? I suppose he is doing a fair share of business. We have not closed him up by any means, and do not expect to do so, and we are doing a good business too.
881. Provided you could get your bricks taken by the railway, *via* Hornsby and Strathfield to Sydney, at about the same cost as that of sending them by dray, are you not more likely to use that railway than to send the bricks by your own teams? I do not think so at all, because there is the extra cost of travelling.
882. But if the cost were the same? It would not be worth our while, unless we could take a decided saving by it. I do not think we should send bricks round by that line, unless we had an order for some place like Burwood.
883. But supposing the railway rates would admit of your sending bricks at about the same cost as now by dray? I do not think that would pay, as we would have our bricks landed at the far side of the city.
884. Supposing the cost of sending bricks to Sydney, *via* Hornsby was the same as the cost of sending by dray to Sydney, which route would you use? It is hardly probable we would go to the expense of a siding, as there would be very little difference in the cost, and we might as well go on as now.
885. In that case you think you would not be likely to use it? I do not for one moment think we should.
886. What is the distance of the present line from your works? We have not had it measured, but I guess it is something like one-third of a mile.
887. Then no matter which way you sent the bricks—whether by rail to Milson's Point or by rail to Hornsby—you would have to cart them to the railway? No; we would put them on the siding.
888. That would necessitate their being transhipped at Milson's Point? It would.
889. Either into vessels for abroad or into carts to supply the city of Sydney? That is it.
890. You think that route would be cheaper than *via* Hornsby to Darling Harbour? Yes; for at Darling Harbour, we should still have to have drays to cart the bricks away.

Robert Edward M'Intosh, Esq., sworn, and examined:—

- R. E. M'Intosh, Esq.  
22 Oct., 1889.
891. *Chairman.*] Where do you reside? At Gordon.
892. Have you lived there long? About forty-five years.
893. You were born there, I suppose? Yes, I was.
894. What are you; have you got an orchard? I began orcharding, and am in business, having land and other business agencies.
895. You are a land holder in the district? I have not 40 acres in the district.
896. We are told you can give us some evidence in favour of this proposal? I don't know about "in favour."
897. Well against it, whichever way you like? I wish to say this much: When this line was first started from Pearce's Corner, it was surveyed to Blue's Point. A Committee came along the line and represented to the land holders that if we gave our land we would get a railway to the deep waters of Port Jackson. It was not said at that time exactly that the line would go to Milson's Point. I was asked if I would give land, and use my influence with others in order to obtain other land for the Government. I gave land 2 chains wide through my orchard for the railway.
898. The committee you speak of was a local committee of patriots? The Government accepted the land.

899. They were not connected with the Government at all; the Government were not responsible for what they did or said? The Government recognized them, inasmuch as the Government accepted the land, and did not pay for it. I used my influence with many, and I think Mr. Archibald, Mr. McIntosh, Mr. Cornwell, Mr. Edwards, Mr. McKeown, and Mr. Treatt also gave their land on the understanding, as I did, that we were to get the railway to the deep waters of Port Jackson. If the railway is cut short and left in Berry's Bush, it will be of no manner of use to us. We want many things there, as I do at the present time, such as building materials, which we cannot get. If we carted them from Milson's Point to Berry's Bush we might as well cart them the whole distance. I am well acquainted with both routes—the Cremorne and the Milson's Point routes—and also with the Government land in the district. The Government have, I think, many thousands of acres which a few years back were worth very little. I bought land from them for about £2 an acre a few years since, and I hear that at a Government land sale recently they sold at £200 and £210 an acre, people buying in the hope that this railway would be completed. I have not seen a single building going up on an allotment of the Government land that was sold, the simple reason for people not building being that they have no proper means of access.

R. E.  
M'Intosh,  
Esq.  
22 Oct., 1889.

900. *Mr. Dowel.*] Was the Government land to which you refer, and which realised over £200 per acre, of any better quality, or did it have any better advantages than the land for which you gave the Government £2 an acre? No; it had worse advantages. The land the Government sold for £200 an acre was nearly half a mile from the road. The land I bought is facing the road.

901. Have you a large acquaintance with the particular district through which the railway travels? Yes; I have a very large acquaintance with it. I know nearly every one in the district.

902. Are you aware that the Government have a large area of land in close proximity to this railway? I am.

903. Do you consider that that land will be increased in value if this railway is constructed to deep water? Most undoubtedly, and if the railway is not carried out the land will decrease in value.

904. You have stated that you gave your land on the distinct understanding that the line was to be continued to the deep waters of Port Jackson? I have.

905. If this line were not constructed, would you consider it a breach of faith on the part of the Government? I should, and that they ought to pay me for my land.

906. Because they took your land and gave you no compensation? They gave me compensation for other land and my orchards, but not for that 2 chains for the railway.

E. Du Faur, Esq., sworn, and examined:—

907. *Chairman.*] Do you reside at St. Leonards? No; I reside at Gordon at present—about 10 miles out from St. Leonards.

E. Du Faur,  
Esq.  
22 Oct., 1889.

908. Have you been living there any length of time? I have been about the district for the last twelve months, and have been living there with my wife and family about three months.

909. The Committee have been told that you wish to give some evidence;—would you be good enough to state what you have to say? I thought it well to put in an application, as I am permanently residing there, and am building my permanent home in that neighbourhood. I satisfied myself of the extreme salubrity of the neighbourhood, from the fact of its being about 600 feet in elevation above sea-level. In fact, it is like living in the western mountains for those who do not thrive in the Sydney air. I found it the case with my family and friends who went there. I determined to live out there, as I saw there was every prospect of a railway being constructed, but at the present time I am driving in every day. There is a very considerable traffic on the road—in fact, more traffic than there are public conveyances to meet, and I have very often to give people a lift. I have every belief that when once the communication by rail is completed, there will be a very large drain of population out of Sydney on to that ground. They can get in that direction what they cannot get anywhere else. They must go 50 miles on the Southern, 40 miles on the Western, and between 20 and 30 miles on the Illawarra line before they can get the same altitude, and to certain constitutions it is a question of life and death to get into a drier atmosphere than that of Sydney. That is the point I wished principally to bring forward. I knew the district seven or eight years ago, and went up there, but found it was useless to attempt to live there as I had my business to attend to, or I would have removed to it then.

910. You think that, by reason of its altitude, it would attract a large population, possibly from Sydney and the other suburbs? I am certain it will attract a great many of my own friends and also other portions of the public.

911. Who are living in the other suburbs? Yes, or closer to the water, which does not suit them—people who frequent the mountains whenever they can.

912. The line as proposed would not in any way serve the bulk of the population of St. Leonards at the present time as a means of transit? Except to let them get farther afield.

913. The route which it takes would not be any advantage to the bulk of the residents of North Shore? Well, they are living on the Shore itself, and therefore cannot want any railway at all. As the St. Leonards' population is scattered east and west along the shore, a line at right angles coming from the north could only strike that settlement at one point.

914. Is it not a fact that three-quarters of the population will be to the east? I am not in a position to speak as to that.

915. Would the present population which is on the line between Hornsby and Milson's Point be sufficient to justify the construction of the line? I think so undoubtedly. Experience shows that, not only here, but in every country in the world, railway communication increases population. You have your experience of the Illawarra line, which produced nothing the first year and paid a handsome dividend the third.

916. Do you know the estimated cost of this line? No, I do not.

917. Or the working expenses or interest? No. I think that the railway might be worked very economically for (say) six months or so—there would be no necessity to have station-masters and porters and gatekeepers at every place—in order first to prove the increase of traffic.

918. *Mr. Cox.*] Do you think that the traffic would increase to such an extent as to warrant the country in completing this somewhat expensive line? I feel as certain of it as one can feel of anything in the future. I know that numbers of my own friends are only waiting for it to go up there, and I believe a very large population will go on to the high ground as soon as they are enabled to get there, but not if they would be blocked by the tramway, which would be as great a nuisance as at Redfern, by which many of us have been driven from the western suburbs. If that is perpetuated on the North Shore, of course that district will be locked up till a railway is forced upon it.

- E. Du Faur, Esq.  
22 Oct., 1889.
919. The only traffic you anticipate for this railway is a passenger traffic? I anticipate that the whole of the northern traffic of the Colony will come there, as it would save 10 miles, instead of going by Ryde and Redfern. It is only between 12 and 13 miles from Hornsby to Milson's Point, and it is 21 miles to Redfern.
920. The trip across the harbour notwithstanding? The trip across the harbour is certainly pleasanter than that by tramway from Redfern. If you get out of the tramway you must get into a cab, and you would only have to do that at Circular Quay.
921. You are aware of the probable expense of this extension? I have seen in the Press that it will be an expensive undertaking, and it seems that any work done on the North Shore must, from the character of the North Shore, be expensive.
922. That is irrespective of resumption? Irrespective of the question as to the place to which you take it, the expense of taking the railway to the water must be expensive.
923. Taking that into consideration, you think it will pay to complete this work? I have every belief that in a very few years you would have to double the line.
924. In the event of a high-level bridge being constructed between the high land of Sydney and North Shore, would not a railway down to the deep water be so much money thrown away? Of course that is another question, if there is any possibility of a high-level bridge being built.
925. Do you think it is inevitable that it must come? Then I should think that starting from a level that would fit the bridge would be better. I am quite ready to say that.
926. *Mr. Dowd.*] What profession or business occupation do you follow? I am a land agent at present. I am only interested in the squatting industry. I am not a land agent in the ordinary acceptation of the term. I have nothing to do with suburban land. I am not interested in one single acre in the county of Cumberland, except what I am living on.
927. Would that traffic to which you referred be served by the construction of the line now under consideration? I fancy so. The omnibuses start pretty full from Gordon. A new one was started last week. I came down by it this morning for a change, and it was crowded. Others start from Chatswood, and they all come down to Milson's Point, and are generally full, and not infrequently I pick up people who have been unable to get accommodation in them.
928. You stated that you believed that Milson's Point should be the terminus of the Great Northern line, and have given as a reason that the line is 8 or 9 miles shorter than that to Redfern? Yes.
929. Have you any acquaintance with the northern districts? I have been in them.
930. Have you any large knowledge of them? No; I do not pretend to have a large knowledge of them, farther than Newcastle.
931. Are you well acquainted with the route along which the line now passes? Yes.
932. Do you think it likely that a large population will ever be called into existence in that part of the country between Hornsby and Milson's Point? I am very strongly of that opinion, and that in a very short time—in as short a time as it took population to settle on the Illawarra line—because this is more favourably situated than the suburban part of the Illawarra line.
933. Do you know anything at all of the probability of any goods traffic being carried on this line? I should think there would be a very considerable freight traffic—produce traffic. At present everything is brought down by horse team. There is a very large area under orchard cultivation.
934. Any other produce, excepting fruit? There is a large area of good land available for the production of fruit, dairy produce, and vegetables.

Edward John Smith, Esq., sworn, and examined:—

- E. J. Smith, Esq.  
22 Oct., 1889.
935. *Chairman.*] What are you? I am engaged in the Civil Service.
936. How long have you been living at the North Shore? Ten years last March.
937. The Committee have been informed you desire to give evidence in reference to this inquiry;—would you be good enough to state what you have got to say? I was a purchaser of five of the allotments of the subdivision of the Crown lands, situated near Lyndfield station, which were sold about twelve months ago, for which I paid the highest prices realized at the sale, viz., up to £210 per acre. Three of these allotments I purchased for relatives and two for myself, with the intention of residing there on the extension of the railway to Milson's Point. I have no hesitation in saying that it was the expectation that this extension was a thing of the immediate future that induced me, and other purchasers, to offer for these lands, and to give for them a price, I feel assured, they would not have brought had it not been thought that Milson's Point was to be the future terminus of the railway. I feel persuaded that every purchaser, as well as myself, on the occasion regarded the extension of the railway to Milson's Point as almost, if not altogether, a thing of certainty, and this conviction received strong confirmation from the language of the auctioneer, Mr. Greig, of Messrs. Richardson and Wrench, previous to the sale. These Crown lands in the district of Gordon, which were subdivided and sold in October of last year, consisted of 1,265 acres, and were offered in 296 allotments. Of the gross area, about 500 acres were sold, which realized about £33,000, or an average of £66 per acre. Now anyone who has gone over a portion of this land, as I did, must have noted the unfitness of the greater portion of it for anything but suburban residential purposes, being terribly broken country, and in many parts precipitous. I have been informed by a large holder of land in this district, and one quite competent to judge, that if this land had been offered for sale without the probability of railway communication, it would not have brought £10 per acre, and in this opinion I quite concur. Therefore, the railway at present constructed, together with its probable extension to Milson's Point, benefited the Government in the sale of these lands to the extent of about £56 per acre, or about £28,000 on the 500 acres sold. The unsold portions of the subdivision, about 765 acres, in the absence of the proposed extension, will, I submit, be almost unsaleable; but, if the railway is extended to Milson's Point, it will assuredly sell at an average of not less than £50 per acre, or a total of £38,000. As further evidence of the increased value of land along this line, I may state that I have seen the accounts of sales of land at Chatswood in the years 1879, 1881, and 1882, at the prices of £50, £140, and £150 per acre respectively; and lands adjoining the two last-mentioned lots have been purchased this year at the prices of £425 and £500 respectively. These increases I attribute principally to the railway and anticipated extension, as they are convenient to the Chatswood station and purchased for residential purposes.

purposes. I simply bring these statements under the notice of this Committee to indicate the probabilities of settlement along this line, in the event of its being continued to Milson's Point, and the almost certain results that would follow the public being put in possession of speedy transit and better communication with Sydney. Speaking for myself and those relatives for whom I purchased land, I may state that any circuitous route to Sydney or inferior means of transit, involving the loss of time and additional expense, would considerably reduce the prospect of our making the land a place of residence. This, I opine, is the case with many others. Milson's Point I look upon as the natural outlet for all the traffic coming from the western side of the present tramway, and looking upon the railway as mainly suburban, I think that the public convenience will be better served by its extension to Milson's Point than to any other place. Calculations in connection with the probabilities of this railway, if extended to Milson's Point, have been submitted to you, and it is not necessary, therefore, for me to attempt to go into this aspect of the question; but I would just refer to the rapid settlement that took place, and the great revenue now derived from the suburban portion of the Illawarra line, viz., Como to Sydney. The revenue received from that line, Hurstville to Sydney, in 1884, the 9 miles being all at that time completed, was £5,700. In 1886, over the 13 miles, Como to Sydney, an equal distance to that of the North Shore line from Milson's Point to Pearce's Corner, showed a revenue of £43,500. Now, if such an increase in the settlement along the Illawarra line took place in two years as to show an increase in the revenue from £5,700 to £43,500, surely it is not unreasonable to expect that this railway, through one of the most picturesque localities surrounding Sydney, and so naturally adapted by its altitude for suburban settlement, should in a comparatively short time show such a revenue as would, in addition to paying working expenses, pay a handsome return on the cost of construction, viz., £450,000. A revenue equivalent to that derived from the Illawarra line in 1886, after allowing £13,000 for working expenses, would show a net return of over 6½ per cent.

E. J. Smith,  
Esq.  
22 Oct., 1889.

938. *Mr. Cox.*] Of course the Illawarra railway only touches Sydney at Redfern, consequently people at Sydney have to go by tram or 'bus to and from Redfern;—would not the same apply to this railway, supposing it were met by tram at the top of the hill? No, I do not think so. First, because I think—and not only I, but the public also appear to think, as evidenced by the agitation for a city railway—that to travel by tramway as now in Sydney is a great disadvantage; and secondly, because I think an extension of the tramway on the North Shore would be about three times the length of the tramway in Sydney, and by having to travel by tram instead of by train I should lose about twenty-five minutes on every trip to and from Lyndfield station.

939. The tram has not stopped the Illawarra line from being a great success, and would the fact of the tram meeting the railway at the Crow's Nest not act in the same way in connection with this line as in the case of the Illawarra line? It is not because of the tram that the Illawarra line has become a success, but in spite of it.

940. Then, in spite of the tram, would not this line be, in a corresponding manner, a success? No, I don't think so, because the distance is three times as great.

941. What would be the distance? 2½ miles.

942. What is the distance between Circular Quay and Redfern? I believe the distance between Redfern and the present terminus of the tram in Bridge-street is a mile.

943. *Mr. Dowel.*] You made a comparison between the Illawarra railway and the North Shore line;—are you acquainted with both routes? Only that I have travelled on both routes.

944. You know the country, I suppose, tolerably well? Moderately well.

945. You pointed the Illawarra railway out as having been a successful line as regards the return it has made? Yes.

946. Is there anything as regards the country on the Illawarra line that there is not on the North Shore line? I think that the Illawarra line will not compare with the North Shore line for suburban settlement, because the land is too flat. The great advantage of the North Shore line is its altitude.

947. Then you consider the natural advantages of the North Shore line far superior to the advantages of the Illawarra line? I certainly do for the purpose of settlement.

948. Do you consider it will compare for residential purposes? I do, certainly.

949. And you are of opinion, I presume, that in all probability a large population will settle in that part of the country if the railway is constructed? I think so.

950. What is your opinion in reference to this proposed line being the terminus of the Great Northern line? I think that will very greatly depend on the Commissioners for Railways. If they say they will run their trains from Milson's Point to the Northern Districts it will become the terminus of the Northern line.

951. Do you think the shorter distance should induce people to travel by this line? I certainly think so, considering there is a difference of 8 miles which might be saved in time and expense.

952. And do you not think that its water-frontage is in favour of its being the terminus for the northern traffic? Viewed for passenger traffic, I should say not.

953. Goods traffic then? I don't know that we have a probability of a large goods traffic.

Henry Cornwell, Esq., sworn, and examined:—

954. *Chairman.*] Where do you reside? At Gordon.

955. How long have you been living there? About ten years.

956. What occupation do you follow? I am Secretary of the Southern Insurance Company. I have written my evidence; may I read it?

H. Cornwell,  
Esq.  
22 Oct., 1889.

957. Yes. What you read will be what you are prepared to swear to? Yes. My desire in attending before the Parliamentary Committee in connection with the railway from Hornsby to Milson's Point is to state, as a resident of Gordon for about ten years, that I agreed to give the land through which the railway passes where I am living, because I understood the line was to be constructed to the water at Blue's or Milson's Point. If I had known that the line was to have stopped short of the water, or if there had been any deviation contemplated, I would not have given any land—and on that understanding I advised some landowners to accept the Government valuation. In one instance a neighbour and myself induced one proprietor to give some 2½ acres, or thereabouts. I filled up the form supplied by the Crown Solicitor, and induced him to sign it. The line damaged my property considerably.

958. How do you travel in and out? I drive in and out.

959. Have you done that for about ten years? Yes.

960. For what distance? I believe it is 10 miles to my house by road.

961.

- H. Cornwell, Esq.  
22 Oct., 1889.
961. You would not use the railway if you had one? I would. I would be very happy to use one.  
 962. *Mr. Lee.*] Who induced you to give the land? Well, a committee of gentlemen called upon me to ask would we give the land if this railway were constructed.  
 963. Who appointed the committee? I do not know.  
 964. A committee of residents? I think Mr. M'Keown of North Shore was one.  
 965. I do not want to know the names. They were a committee of residents appointed by the North Shore residents? One of the gentlemen who came to me, I believe, was a Government official. I am speaking entirely from memory.  
 966. What I wish to know is, did that committee represent the Government in any shape or form? That I could not say.  
 967. Was any Government official instructed to wait on you to induce you to give your land for railway purposes? I cannot say that, but a form was brought from the Crown Solicitor and I was asked to sign it, and I filled up a similar form for Mr. Archibald to sign. The day before, or some time prior to that, Mr. Archibald had point blank refused to give any land.  
 968. Was it not in consequence of its being known that you intended to give the land that this committee obtained the form and submitted it to you for your signature? I do not know that. It may have occurred in other instances perhaps, but not in my own.  
 969. Were you under the impression that the Government were making the proposal to you to induce you to give the land? I viewed it partly in that way. In the first place, tenders were called in 1885 for the construction of a line from Hornsby to St. Leonards, and after that for the construction of a line from Hornsby to the Crow's Nest, and I understood that if we gave the land either one or the other would be carried out, and if I had known that the intention was not to carry out that line I would not have given my land.  
 970. The general impression abroad was that the line would be constructed from Hornsby to the deep waters of Port Jackson? I understood that. The feeling generally was so.  
 971. But there was no representation made to you by the Government of the day that if you gave your land the line would be constructed? No.  
 972. *Mr. Cox.*] What quantity of land did you give the Government? I think between 4 and 5 acres.  
 973. At what rate did you value that land per acre? I have not put any value upon it. About 2 acres was part of my vineyard—a chain or a chain and a half from the back of my house.  
 974. You gave that to the Government, believing that the railway would add considerably to the value of your property? Of course.  
 975. And that was given under the understanding that the railway was only to go as far as the Crow's Nest? I did not make any stipulation. I saw that tenders were called for to construct the line to the Crow's Nest, and I took it that that line would be carried out.  
 976. To the Crow's Nest, but not to deep water? Well, to that or to Blue's Point. The line was surveyed to Blue's Point, and I understood from the surveyor that a better line could be got to Milson's Point, and we thought the line would be carried to the water.  
 977. Did you give this land free to the Government on the understanding that that railway was to go to the Crow's Nest or be continued? I, like many others, had an idea that it would have been taken to Blue's Point or Milson's Point, but the last tender was only to the Crow's Nest.  
 978. If the railway was to have gone to the Crow's Nest only, would you have given the land? Oh, most decidedly.

John Francis Coffee, Esq., sworn, and examined:—

- J. F. Coffee, Esq.  
22 Oct., 1889.
979. *Chairman.*] You are a resident of Gore Hill, are you not? No—Mowbray Road, North Willoughby.  
 980. How long have you been living over that way? About six years.  
 981. We have been informed you desire to offer some evidence to the Committee;—would you be good enough to tell us what you have got to say? Some six months ago, in anticipation of this railway being built, we made an investment with the view of starting a nursery. We have spent £3,000 in purchasing the land and making improvements, and think of spending more if we should be able to ship from North Shore. We do not care much for a local market, and if the railway stops at the Crow's Nest it will be practically useless to us. I suppose we would be the largest shippers, excepting the brickmakers, on that line for the next few years.  
 982. How far out do you live? The nursery is about 10 miles out—1 mile 70 chains this side of Hornsby, at No. 4 cutting.  
 983. Can you send the produce from there into Sydney at Darling Harbour? It will eat up the profits if you make freights too dear.  
 984. Would you not be compensated by what you would save by not having to send across the water? My idea was to put it on the train near our nursery, take it to the foreshores, put it on a lighter, and load it on the different colonial and intercolonial steamers. My primary object was to save freight.  
 985. *Mr. Garrard.*] What is the nature of the industry you are starting? A nursery.  
 986. Do you anticipate very much produce from that being sent away? Yes.  
 987. Almost equal to the brickyards? Well, I do not say that; but I do not think there is any industry that will rival ours during the next five years, except the brickyards. I do not know what they would do.  
 988. Theirs would run into some thousands of tons—yours is not likely to go up to hundreds, is it? Oh, yes.  
 989. What is the extent of your holding? I think 17 $\frac{3}{4}$  acres.  
 990. It would be a very prolific output for such an area? You can grow 19,500 trees to the acre, each tree about 5 or 6 feet high. It is only about  $\frac{1}{2}$  mile to the nearest station.  
 991. How long is it since you purchased the land? In April this year.  
 992. Did the vendor of the land give you to understand the Government were pledged to take the railway to the waters of Port Jackson? No; I did not ask him any question.  
 993. Do you know if the vendor gave any of his land for railway purposes? I do not know. The vendor was a company near Pitt-street, near Bathurst-street—the Sydney Permanent. I see that some gentleman the other day suggested that there might be large ferry-boats to take the cars across the harbour, and Mr. Garrard interjected that there was not so much traffic in America, where these boats were used—not so much

- much traffic on the rivers and lakes in America as there would be in Sydney harbour. I beg leave to differ from that statement. In the city of Detroit there are seven large boats continually conveying cars across, and which hold from fifteen to twenty-four cars each. They convey all the commerce of Lake Michigan, Lake Superior, Lake Huron, Georgian Bay, and St. Clair River; and then, 60 miles above Detroit at Port Huron, there are four boats that transfer cars across the St. Clair River. J. F. Coffee, Esq. 22 Oct., 1889.
994. What is the distance? Half a mile in Port Huron, and three quarters of a mile in Detroit.
995. How often do those boats leave each side? As soon as they can get loaded—about every half hour.
996. Then the boats here travel to and fro twice as often as the boats to which you refer? You are talking of passenger service. I am speaking of freight service.
997. *Mr. Humphery.*] What sort of boats are they—double-ended transfer boats? Yes.
998. Do you know the cost of construction? No.
999. How many trains a day do they convey across? About every half hour they load up to go across.
1000. From what you have seen in Detroit and elsewhere, do you think it is practicable to have trains conveyed from Sydney to the North Shore in double-ended transfer boats? I do, and have thought so ever since I came here.
1001. *Chairman.*] How are they taken across the river? By steam.
1002. Are the waters as rough as Sydney Harbour? We do not consider Sydney harbour rough. There is a much stronger stream in the St. Clair River at Port Huron, and in Detroit River.
1003. *Mr. Lackey.*] What did you say was the extent of your nursery at North Shore?  $17\frac{1}{2}$  acres.
1004. Have you been working it very long? I commenced to clear about six months ago, and have now got about 11 acres cleared.
1005. How much have you under stocks? About 5 acres. I could not buy stocks this year.
1006. Have you taken this up as a new industry, or is it an old occupation of yours? A new enterprise.
1007. You employ skilled men; you do not do it from your own knowledge? No; except what knowledge a layman could acquire by close study the last couple of years.
1008. You say you intend exporting these young trees you produce in the nursery from the shore? Yes.
1009. To other countries or different parts of this Colony? To different parts of the Australasian Colonies.
1010. Are you giving your attention principally to deciduous trees or to evergreens? Both, and plants.
1011. Are you cultivating the orange and the lemon? Yes.

James George Edwards, Esq., sworn, and further examined:—

1012. *Chairman.*] What is it you wanted to say about that committee? It is by way of explaining what was said by Mr. Cornwell with reference to the giving of the land along the railway route. I was one of the committee who waited upon the residents of Gordon and Willoughby to see how many of them would give land. J. G. Edwards, Esq. 22 Oct., 1889.
1013. I suppose it was a committee appointed by people over there who wanted to get the railway? Yes. We waited on the Minister for Works in order to see if he would call for tenders for the construction of the line for which the money had been voted previously. The Minister asked how many of us would be prepared to give our land. I said I was, and had a list of other parties in the district who had also promised to give their land. He said he did not think there was sufficient, and that the agreement signed by them was not sufficiently binding, and he adjourned the deputation, I think, for a week or a fortnight.
1014. *Mr. Garrard.*] What Minister was that? I think it was Mr. Lyne, but I am not quite positive. We were then directed to wait upon Mr. Williams, the Crown Solicitor, to see whether the document we had signed was sufficiently binding. The Crown Solicitor thought it was not, and he prepared a document, and requested us to wait on the people again. We went from the Crown Solicitor's office and waited on Mr. Cornwell, Mr. Treatt, and other residents of the district. Some consented to give their land, and others refused to give theirs. That was the way the thing was done.
1015. *Mr. Cox.*] Upon that paper did the railway purport to be from Hornsby to the Crow's Nest, or whither? From Hornsby to the deep waters of Port Jackson, we understood.
1016. What was the exact wording of the paper? I cannot give the exact wording, but the purport, I believe, was from Hornsby junction to the deep waters of Port Jackson.
1017. Is that paper in the hands of the Government? It is. We lodged it with the Government.
1018. *Mr. Humphery.*] What is the bus fare from Milson's Point to the "Great Northern Hotel"? Sixpence.
1019. To Lindfield? One shilling, up as far as Waterhouse's, which is 8 miles from Milson's Point.
1020. To Stony Creek Corner? A mile further on, it is 1s. 3d.; and to "Jenkins' Hotel," very nearly another mile, it is 1s. 6d. The 10-mile peg is just beyond "Jenkins' Hotel."

James Banford Thompson, Esq., land valuer, sworn, and examined:—

1021. *Chairman.*] You are in the Government service, what is your position? At present I am a land valuer in the Public Works Department. J. B. Thompson, Esq. 22 Oct., 1889.
1022. Have you inspected this line from Hornsby to Milson's Point? Yes; I dealt with all the resumptions on the constructed part of the line, and furnished an estimate of the probable cost of the land between the terminus of the line that has been made and Milson's Point.
1023. What was that estimate? The total was £133,909.
1024. The whole of the land through which the proposed railway passes on the Berry Estate is not built upon? It is quite unimproved.
1025. The foreshores on the eastern side of Lavender Bay are practically unimproved? Yes.
1026. There are no improvements there of any value? Not much.
1027. Are those the only lands on these 2 miles 21 chains—from Milson's Point to the terminus at Lane Cove Road—which are unimproved? Berry's Estate is unimproved, and there is very little improved on the eastern side of Lavender Bay.
1028. Otherwise there is no unimproved land? No.

J. B.  
Thompson,  
Esq.  
22 Oct., 1889.

1029. So that if it were not determined to construct this line at the present time, and these lands were now resumed, it would not add much to the cost of constructing it hereafter? Except there were a rise in the value of property, as frequently occurs.
1030. But I am saying, suppose it were deemed inexpedient to construct the line of railway from the Lane Cove Road to Milson's Point now, but the Government were to resume the unimproved lands at the present time, with the view of ultimately constructing it at some time or other, do you think it would be a wise thing to do? I think it would be wise to resume the unimproved land.
1031. In proportion to the unimproved land, the improved land would not give it any increase in value? Nothing like in the same proportion.
1032. You have not got the reputation of valuing land too highly? No; I think I am rather extravagant.
1033. But the land-owners do not consider you extravagant? I would be very sorry to satisfy the land-owners.
1034. *Mr. Garrard.*] What is the width of the land proposed to be resumed? I think it is about 2 chains. That is the usual width taken.
1035. Have you allowed 2 chains on the water frontage for instance? Yes; I have a plan showing the width, and I have a book of reference.
1036. *Mr. Dowel.*] In your opinion, would the construction of this railway improve those unimproved properties through which it would pass? I think it would do so very largely. I feel certain of that, and there is the enhanced value, for which some credits will be taken, and which I have not taken into account. I estimated what I considered the fee-simple value at the time I made the estimate.
1037. But the enhanced value which you are entitled to take into consideration under the existing law you have not considered at present? No; I have not.
1038. *Mr. Humphery.*] Is the Lavender Bay frontage Crown property, or does it belong to private persons? It is nearly all alienated.
1039. Who are the owners? There are a great number of them. It reaches from Cavill's baths down to Milson's Point.
1040. It is all private property? Yes.
1041. The whole 2,000 feet? Yes; except streets.
1042. *Mr. Garrard.*] Do I understand you to say that the applications to reclaim and purchase have been granted to nearly all the holders on the eastern side of Lavender Bay? There are several applications to reclaim that have been granted.
1043. Are the reclamations carried out? Some of them have been carried out, and others have not.

WEDNESDAY, 23 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

William Cornelius Goddard, Esq., sworn, and examined:—

W. C.  
Goddard, Esq.  
23 Oct., 1889.

1044. *Chairman.*] You are Chairman of the Board of Directors of the North Shore Steam Ferry Company are you not? I am one of the directors.
1045. We were informed that you could give the Committee some valuable evidence as to the proposed extension of this line of railway from the Crow's Nest to Milson's Point;—do you know the length—2 miles and 21 chains? I know the proposed line. I would like to say I have very little information to give, but what I have to give I have written.
1046. You understand you are swearing to what you have written—that is your evidence? Yes.
1047. Very well then; will you read it, please? I have been resident at North Shore for the past nineteen years, and have been a member of the Board of the North Shore Ferry Company since its formation, over eleven years ago. Comparing the present traffic with that of ten years ago, the company could then efficiently meet the requirements of the trade, of which Milson's Point forms part, with steamers licensed to carry 640 passengers, whilst now more frequent trips have to be made with steamers in the same trade carrying 2,580 passengers. The traffic by the vehicular steamers during the same period has correspondingly increased. About fourteen months ago, shortly after the establishment of the uniform fare of one penny, a return was initiated, showing the removals to and from the North Shore by the Company's steamers, the result of which is that to date there have been 337 removals from and 554 removals to the North Shore during that period. As the North Shore bears the same relation to Sydney as Birkenhead to Liverpool, or Brooklyn to New York, which places have enormously increased in population, it is not too much to expect that in the course of a very few years the railway to Milson's Point will pay handsomely.
1048. I suppose you found that the better class of steamers developed the traffic? Well, of course, the facilities we gave the public developed the traffic and the population also.
1049. Have you any idea how much the number of passengers has increased during the last few years—take four or five years? I should say that in the last five years they have increased 33 per cent.
1050. Would you not say that the bulk of that increase is away to the east of this proposed railway line—that the people are residents to the east of this line, and it could be of no use to them; the growth of population is near Neutral Bay, Mossman's Bay, and up that way, towards Middle Harbour, is it not? I am not prepared to say that. Those living right up the North Shore might possibly not come over by our boats to remove there; very likely they do not.
1051. *Mr. Cox.*] What connection is there between this railway scheme and your North Shore ferry-boats? There is a tram-line for a certain distance, but there is really no connection between the tramway and the railway at present.

1052. Beyond the tram-line, what increase do you expect in the ferry traffic in the event of the railway being constructed? That is a question I can hardly answer. I can only speak as to the ferry service.
1053. The passengers going from shore to shore would have nothing to do with the interior of the country or with the country miles back—between Sydney Harbour and Hornsby on the Homebush line? I think they would, because it would become a suburban line.
1054. Have you formed any estimate as to the probable increase in the traffic on your boats in the event of the railway being constructed between Port Jackson and Hornsby? We have not considered that question, but we should be prepared to put on direct boats to Milson's Point instead of making that point as at present a port of call.
1055. Have you formed any idea as to whether there would be any traffic other than passenger traffic? The vehicular traffic would be sure to develop.
1056. Would there be any goods traffic? I take it that there would be a good proportion of goods traffic.
1057. In what respect? I suppose the fruit and produce from Lane Cove would come down by that way.
1058. You are aware, I presume, of the estimated cost of this extension from Crow's Nest? I am not.
1059. Therefore you are not able to say whether the increased traffic is likely to pay a fair percentage on the outlay? I am only speaking in a general way.
1060. *Mr. Dowel.*] Do you reside at North Shore? Yes; I have resided there for nineteen years.
1061. Then you have a considerable acquaintance with the whole of the district which the line traverses, and with the proposed route of the new section? I am sorry to say that my acquaintance is not very considerable. I simply reside across the water, and I have not seen as much of the upper part of North Shore as I might have done.
1062. Do you know anything of the country through which the line goes? I have seen it several times.
1063. From your knowledge of Milson's Point, do you think it is a suitable place to be the terminus of the Great Northern line? Yes, decidedly.
1064. Have you any knowledge of the northern districts at all—the districts beyond Hornsby? Yes; I have been over the line two or three times.
1065. You are aware that large quantities of wool, hay, and other produce are sent down from the north? Yes.
1066. Well, in view of that knowledge, are you still of opinion that Milson's Point would be a proper place for the terminus of the line? I am speaking more particularly in regard to the passenger traffic.
1067. I desire to know whether you, as a person having a large knowledge of the ferry service to Milson's Point, think that that point would be a suitable terminus for the Great Northern line for goods as well as passengers? I do, with the foreshores of Lavender Bay.
1068. You think it would offer more facilities for the transaction of business by the public than either Redfern or Darling Harbour? I do.
1069. *Mr. Lackey.*] Have you noticed any perceptible alteration in the ferry traffic since the establishment of the tram service? Decidedly. Before the establishment of the tram service, two-thirds of our traffic went to Lavender Bay, but three-fourths of the increased traffic now goes to Milson's Point.
1070. The increase in the traffic has been very marked generally? Undoubtedly; but of course that is largely due to the liberality of the directors of the North Shore Ferry Co.

W. C.  
Goddard, Esq.  
23 Oct., 1889.

James George Edwards, Esq., sworn, and further examined:—

1071. *Chairman.*] The Committee understand that you desire to make a statement concerning the evidence you gave yesterday about the expensiveness of the tram service over the railway service? Yesterday I do not think I made myself very clear. I have looked over that part of the report of my evidence to which Mr. Lee took exception. From my point of view, I believe the figures are correct; but at the same time I do not think I presented them in the clearest possible manner, and I desire now to present them in a way which will show that the result is the same. Yesterday, in referring to the cost of the tram service over the railway service I gave the following figures:—Working expenses of the tramway, £9,717; working expenses of the railway, £2,000; leaving a balance of £7,717 against the tramway, which sum, capitalised at  $3\frac{1}{2}$  per cent., is equal to £220,485. Now, with regard to the railway, the estimated cost is £262,000, and the value of the land over the tunnel is estimated to be £28,000, leaving a balance of £234,000, and deducting cost of tram extension, £30,000, we get a balance of £204,000. The tramway service would cost £220,485, and the railway service £204,000, leaving a balance of £16,485 in favour of the railway. The matter would have been less obscure if it had been stated in the following form, which I think the Committee will admit is fair, and which reaches the same deduction:—The working expenses of the tramway scheme would be £9,717, and the interest on cost of extension (£30,000 at  $3\frac{1}{2}$  per cent.), £1,050, making a total cost of £10,767. Now, taking the railway scheme, the estimated cost of extension is £262,000, minus £28,000—I am not taking the £30,000 equals—and the interest on £234,000 at  $3\frac{1}{2}$  per cent. is £8,190, and the working expenses are £2,000 a year. The total working expenses of the railway scheme are £10,190 a year, whereas the tramway scheme costs £10,760 a year, leaving a balance of £577 in favour of the railway; £577 annually is interest, at  $3\frac{1}{2}$  per cent., on £16,485. We have therefore arrived at the same result in another way, and I think in a far clearer and perhaps more logical way. There is only one other thing I wish to say. Yesterday Mr. Lee asked whether it would not be cheaper to take coal to the works from Strathfield than from Darling Harbour. I find that it would be decidedly cheaper to take the coal from Strathfield. At the same time, what I said yesterday was correct—we would rather take Bulli coal than mountain coal, because the carriage would be only 3s. 6d.

J. G.  
Edwards,  
Esq.  
23 Oct., 1889.

TUESDAY,

TUESDAY, 5 NOVEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Joseph Barling, Esq., Under Secretary for Public Works, sworn and further examined:—

J. Barling,  
Esq.

5 Nov., 1889.

1072. *Chairman.*] It has been stated here by some of the witnesses that some people gave their lands free of charge to the Government in consideration of their constructing this line of railway to the deep waters of Port Jackson;—do you know of any such gift? As I have explained before, I have had no personal knowledge of the earlier matters relating to this extension; but it having been intimated to me that such a statement had been made, and that the Committee required information on the matter, I instructed the officer who has the papers in his charge to go carefully through the whole matter, and see if any reference to any such promise having been made was to be found among the papers, and he could find none.

1073. Are you able to say that there are no documents among the papers showing any gift by anybody? So far as I know there are not; but a careful *précis* is being made of the whole of the papers, and I think we shall be able to have it ready to-morrow and I will put it, together with the whole of the papers, before the Committee.

1074. *Dr. Garrau.*] I understand that in recommending [this extension to the water's edge you are representing the views of the Department of Works? Quite so.

1075. Is this extension to the water's edge intended as a substitute for the bridge? I think not.

1076. Then I understand that it is the view of the Department that we should make the extension to the water's edge whether the bridge is made or not? I think so.

1077. Leaving the bridge as an open question to be decided hereafter? Quite so.

1078. But if a bridge should be made in the course of a few years, would it not, for the purposes of suburban traffic, which we are told would not begin till 3 miles from the water's edge, supersede this line to a certain extent? No doubt it would to a certain extent do away with the necessity for it; but I think there will be traffic for the extension for all time. No doubt there will always be traffic from this line to the region round about Milson's Point.

1079. We are told that this railway is not desired for what you may call the present North Shore residential population, but is to accommodate the existing residential population between the 3-mile post and Hornsby? Quite so.

1080. And it is to accommodate future traffic, which is expected quickly to develop, that this line to the water's edge is recommended? Quite so.

1081. And we are to spend £262,000 for that purpose? Quite so.

1082. But if we are to make a bridge, would not all the residents beyond the 3-mile post go straight over the bridge to Sydney? I daresay they would, but it must be remembered that eventually the railway would develop a very large city on the North Shore, and some time must elapse before we can have the bridge. We shall have a city to deal with then. The extension will be always available, always useful, and always needed in such an event.

1083. Can you tell me whether there has been any estimate made in the Department as to the cost of the bridge? Estimates, I believe, have been made with respect to the cost of a bridge, but I have not the papers before me. They are out of the office. I have tried to get them, but have failed to do so up to the present time, and I am searching for them now. They have been dealt with by several Departments, and I am trying to collect the papers together, and shall then have a connected account of the whole transactions with regard to the bridge.

1084. Have you any idea of the amount of the estimate? I should not like to commit myself unprepared to any statement.

1085. Do you know whether that estimate included the approaches on either side? I should not like to answer. I have not a personal knowledge of the papers. I have not had an opportunity to look at them, and I would not like to commit myself till I have prepared myself.

1086. From what you have seen of the papers, do you know if any scheme has been designed by the engineers for connecting the line with (say) the Observatory Hill? As a matter of fact, I believe Sir John Fowler prepared some sort of a scheme and estimate; but I have not the particulars before me, and I believe other schemes by other engineers have been propounded.

1087. Do you know whether there has been any alternative route for a bridge considered at all by the engineers? I could not say.

1088. You have only had a slight view of the papers? Yes, a very slight view of the papers.

1089. Is there anybody in the Department who would know? I very much question whether there is any one in the Department who could answer the question in the absence of the papers, which we are trying to collect together. As soon as I have the papers together I will be able to give a connected account of the matter.

1090. You know the goods route was at one time to go to Ball's Head;—was there ever a scheme to carry a bridge across from there to Balmain? I do not know. I hardly think there could have been, but I am not sure.

1091. If the proposal before us is to be looked upon as an alternative proposal, we have not the details of the other alternatives? We would hardly look at it in the light of an alternative scheme. Our contention is that it is desirable to take the line to Milson's Point.

1092. You treat it on its own merits? Yes, quite irrespective of the bridge.

1093.

1093. *Mr. Cox.*] Has there been any proposal to make a tunnel under the harbour, instead of constructing a bridge across it? There have been some proposals to make a tunnel under the harbour, but the matter is at present in such an experimental stage that I could not give any evidence on the point at all, and I do not know that any others could, so far as the Department is concerned.

J. Barling,  
Esq.  
5 Nov., 1889.

Robert Henry De Low, Esq., Clerk in the Department of Lands, sworn and examined:—

1094. *Mr. Copeland.*] You are in the Lands Department are you not? Yes.

1095. What position do you occupy there? Clerk in charge of the Miscellaneous and Alienation branches.

R. H. De Low,  
Esq.

1096. Did you occupy that position at the time of the Crown lands subdivision at Gordon? Yes.

5 Nov., 1889.

1097. At the time of the sale? Yes.

1098. Who were the auctioneers who sold that land? Richardson and Wrench.

1099. It has been implied in evidence taken before this Committee with reference to the construction of this railway that when the lands at Gordon were sold the auctioneers gave the purchasers to understand that the railway would be carried on to Milson's Point; as an officer of the Lands Department can you tell this Committee whether any instructions emanated from the Lands Department to the auctioneers to make such a statement? None whatever.

1100. Were you at the sale? Yes.

1101. You generally attend those sales, do you not? Yes.

1102. Did you hear any such statement made by the auctioneer? I did not hear any such statement.

1103. If such a statement had been made would you have been likely to hear it? Yes. I sat alongside the auctioneer, Mr. A. W. S. Gregg.

1104. And no such statement was made? Not that I heard.

1105. Either by the auctioneer or any lands official? No, sir. If it had been I, not having known of such a promise, should have deemed it my duty to have checked the auctioneers.

1106. *Mr. Garrard.*] Do you know what the auctioneer did promise the buyers who were there; were you paying attention to him all the time—before he commenced the sale and during the sale—so as to know what he did say? I was following him closely.

1107. Did you hear any promise made by the auctioneer in connection with this railway matter? I heard no promise whatever made.

1108. Were any other Lands officials there? Yes.

1109. Who were they? Mr. Marr was there.

1110. *Mr. Dowel.*] Were any statements made by the auctioneer to the effect that the land would, in all probability, be materially increased in value by the construction of this line to deep water? No, sir,—not that I heard.

**PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.**  
**Railway to connect the North Shore Railway with Port Jackson at Milson's Point.**

APPENDIX.

A.

REPORT BY MR. JOHN WHITTON, ENGINEER-IN-CHIEF FOR RAILWAYS, DATED 17 MAY, 1888.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 23rd October, 1889.

MEMORANDUM to the Secretary, Parliamentary Standing Committee on Public Works.

I FORWARD herewith for the information of the Parliamentary Committee, a copy of a report of the Engineer-in-Chief, on the subject of the "Extension of the Railway from the termination of the present contract from Pearce's Corner to St. Leonards to the deep waters of Port Jackson," dated May 17th, 1888.

W. H. QUODLING,  
Secretary.

Department of Public Works, Railway Construction Branch, Sydney, 17th May, 1888.

(*Minute Paper.*)

SUBJECT:—"EXTENSION OF THE RAILWAY FROM THE TERMINATION OF THE PRESENT CONTRACT FROM PEARCE'S CORNER TO ST LEONARDS, TO THE DEEP WATERS OF PORT JACKSON."

THREE routes have been surveyed, commencing near the termination of the contract now in progress, viz. :—1. To Cremorne Point. 2. To Blue's Point. 3. To Milson's Point.

1. *Extension to Cremorne Point.*

This line commences at 10 miles 13 chains on the railway from Pearce's Corner to St. Leonards, and terminates at Cremorne Point, having a length of 4 miles 64 chains.

The line crosses under the Lane Cove Road at 25 chains and again at 53 chains, then runs parallel to Burlington-street, passing under the North Sydney Road and Alexander-street. West-street and Miller-street are crossed on the level. Between Miller-street and Walker-street a station can be provided. The line afterwards crosses Alfred and Ernest Streets near their intersection on the level, and after passing under Grassmere-street sweeps round along the western side of Mossman's Bay, thence crossing the spur by a tunnel, runs along the northern side of Shell Cove, and terminates at Cremorne Point.

There are three tunnels on this line of an aggregate length of 56 chains.

As this line will be inconvenient for passenger traffic to the harbour, and provision is being made for the coal traffic at Long Nose Point, it has not been deemed advisable to further consider this scheme.

2. *Extension to Blue's Point.*

This line commences at 10 miles 13 chains on the Pearce's Corner St. Leonards Railway, and terminates at Blue's Point, being a length of 2 miles 37 chains; it follows for the greater portion of its course the same ground as the extension to Milson's Point, but the distance is too short to enable any satisfactory station arrangements to be made.

In addition, no passenger steamers are running to that point, nor a horse-ferry boat, and there is no tram to connect with the railway. It is therefore, in my opinion, unsuitable for a railway terminus, even had it been practicable to place a station at that point.

3. *Extension to Milson's Point.*

This line commences at 10 miles 2 chains 28 links on the railway from Pearce's Corner to St. Leonards, and terminates at Milson's Point, having a total length of 2 miles 71 chains and 32 links.

The line passes under the Lane Cove Road at 36½ chains. At 79 chains it passes under Edwardes Road; Bay Road and Carr-street are crossed on the level.

After passing under Union-street it sweeps round to the left, and by means of a tunnel crosses to the head of Lavender Bay, then skirts the eastern shore of this bay, and terminates at Milson's Point.

A station will be provided at the crossing of the Lane Cove Road, and a platform will be made at Bay-street.

A platform at Walker-street, at the head of Lavender Bay, can also be provided if necessary.

The terminal station, at Milson's Point, is intended for passengers, and no arrangements are contemplated for shipping coal, as provision is being made for that purpose at Long Nose Point.

Facilities will be provided for light goods traffic, and coal will be carried for local consumption.

The works include a tunnel 308 yards long under Blue's Point Road, and a viaduct 470 feet in length at the head of Lavender Bay.

The steepest gradient is 1 in 40, the distance being too short to admit of a flatter incline.

The sharpest curve is 10 chains radius.

For a mile and a half the line passes through unimproved property belonging to David Berry, Esq., and very little valuable land is interfered with in the whole distance, nor are any important houses seriously damaged.

The terminus at this point will give every accommodation to the travelling public, as it will meet the steamers to and from Sydney, and be close to, and on the same level as the Cable Tramway running through the centre of St. Leonards; and will also provide for the transference of horses and carriages between the Railway and the Horse Ferry Steamers.

The estimated cost of this line is £105,000, or at the rate of £36,207 per mile.

The tunnel—308 yards in length—will be constructed for a double line.

The Secretary for Public Works.

JOHN WHITTON.

B.

OBSERVATIONS ON THE PROPOSED RAILWAY, BY MR. HENRY DEANE, ACTING ENGINEER-IN-CHIEF FOR RAILWAYS.

Minute Paper.

*Subject* :—North Shore Railway Extension to Milson's Point.

To the Chairman and Committee of the Parliamentary Standing Committee on Public Works.

Department of Public Works, Railway Construction Branch, Sydney, 22 Oct., 1889.

AN examination of the details of the land valuer's estimate will show that the cost of resumption of the land over the tunnel has been put down at £28,000. Clause 18 of the "Lands for Public Purposes Acquisition Act of 1880," however, gives power to the Government to make tunnels for railway purposes without resumption, if the surface is uninjured, as it would

would be in the present case. Further—£21,000 has been taken as the value of the land on the Berry Estate, although the owner would probably be willing to give it without charge, in consideration of the enormous increase in value which would result from the construction of the railway. The cutting out of these two items would cause a reduction of £49,000, thus bringing the estimate for land down to £87,000, and the total cost of works and land to £214,000.

The extension of the tramway from the present terminus along Ridge-street (*produced*) and Lane Cove Road to the railway would cost about £30,000, its length being 1 mile  $12\frac{1}{2}$  chains. This amount includes the cost of extra engine power, which must be provided, and would probably also cover the cost of compensation for land and purchase of additional rolling stock.

I take the liberty of pointing out that such a connection as this would not have the effect of converting the districts situated along the Lane Cove Road into suburbs of Sydney, as the double change from steamer to tram and tram to train, and *vice versa*, would be fatal to any chance of extensive settlement, whereas if the railway were extended to Milson's Point it would be as easy to get to the heights of Chatswood and Gordon as it is now to reach the suburbs along the railway.

It is generally assumed that the Illawarra Railway, as far as Hurstville, is a good paying property. The length of this line is  $7\frac{1}{2}$  miles. It cost roughly £300,000, and when first constructed had about as little population on it as the country along the North Shore Railway; yet the residential attractiveness of the district it served is not as great as that of the country which the latter traverses. The revised estimate of the Milson's Point extension is as explained above, £214,000; and, with the already constructed portion added, £394,000—say £400,000 for  $12\frac{1}{2}$  miles of line; and mile for mile this is cheaper than the Hurstville Railway. The already constructed line has cost £180,000; but unless extended the revenue will be insignificant, so that it is not an expenditure of £400,000 that has to be considered, but £214,000 only for the opening up of  $12\frac{1}{2}$  miles of country.

In the event of the railway being extended to Milson's Point, traffic would begin to come in from the western side of Blue's Point, where there is already a large population, and there would appear to be little doubt that in a very short time the land on each side of the line between the present terminus at 10 miles 40 chains, and the tunnel at 12 miles, would become thickly populated, and a considerable revenue would result; while between the present terminal station and Hornsby, settlement would also largely increase as the altitude would be a great attraction to many.

The proposal to use the tramway for goods traffic is scarcely practicable. Although the tramway is laid to the same gauge as the railway, the rolling-stock of the latter is not fitted to run over it, as the shape of the wheels is not suitable, and the traction power could not be applied. Specially designed rolling-stock would, therefore, be required for the purpose, and the transfer of goods between train and tram would have to take place.

If the construction of a bridge over the harbour is to be considered as a rival scheme to the Milson's Point extension, it is, of course, to be assumed that it would be designed to carry a double line of railway as well as a road. The direction of this bridge could best be made, I think, in a line connecting M'Mahon and Dawes' Points; the railway would then naturally branch off from the present proposed Milson's Point line at about  $11\frac{3}{4}$  miles. Considering, however, the very large probable cost of the bridge with its approaches and land resumption involved, I would suggest that it might be well to consider the desirability of at least temporarily forming the connection with Sydney by railway to Milson's Point and thence by steam ferry to Fort Macquarie, especially as even after the construction of the bridge there would still be a large ferry traffic, and probably sufficient revenue to produce a fair return on the outlay.

H. DEANE.

The Chairman and Committee of the Parliamentary Standing Committee on Public Works.

### C.

#### PRECIS OF PROCEEDINGS IN RELATION TO THE PROPOSED RAILWAY.

FOR the extension of the North Shore line from its present terminus to the waters of Port Jackson three alternative routes have been suggested and surveyed—(1) with terminus at Cremorne; (2) with terminus at Blue's Point; and (3) with terminus at Milson's Point. The Engineer-in-Chief was in favour of the lastnamed route, and this was adopted by the Government.

There are not many papers referring to the matter, but the following is the purport of them.

9/5/88.—The Mayor of St. Leonards forwarded to the Minister, copy of a resolution carried at a meeting of the Council of that Borough, to the effect that any extension of the North Shore line towards the deep waters of Port Jackson, which did not pass through the centre of St. Leonards, and provide for a central goods and passenger station somewhere near the Reserve, would fail to be a remunerative undertaking, and would inflict a grave wrong upon the population of that Borough.

The matter was referred to the Engineer-in-Chief, who reported that he did not see how it was possible to comply with this request. The cost of land and compensation would be so great, that nothing would justify our incurring it.

13/6/88.—The Mayor was so informed.

17/8/89.—A deputation of the Corporation of St. Leonards waited upon Mr. Secretary Sutherland to urge the same point. They stated that the line as proposed would not serve the Borough;—the most important and populous part of North Shore, and it was moreover not the best route. It should pass through St. Leonards and touch the water at Neutral Bay or Cremorne. The line as designed would divert their trade to Sydney and seriously interfere with the prosperity and progress of the Borough. They believed the resumptions by the proposed line would be more costly than if the line were carried through St. Leonards. There was a consensus of opinion in favour of a central station at St. Leonards, and in favour of Cremorne as the terminus. They pointed out also that there was no room for shipping at Milson's Point.

Mr. Sutherland informed the deputation that Mr. Whitton was in favour of the Milson's Point route, and that to adopt the line they proposed would involve enormous expense. He was aware that the approved line would not serve the bulk of the population of St. Leonards. The Government would submit the line for the consideration of the Parliamentary Committee, when persons interested would have an opportunity of tendering their evidence.

October.—Mr. J. S. Edwards forwarded to the Minister copy of a resolution carried at a meeting of the inhabitants of Lane Cove, Willoughby, and Hornsby, to the effect that any deviation of the North Shore line in the direction of Cremorne would prove most disastrous to those districts, and that if such line did not terminate at some point between Careening Bay and Sugar Works Bay it would not serve their interests. Mr. Edwards went on to say that the places named were unanimous that the terminus should not be at Cremorne, and that three out of four of the Municipalities of North Shore were of the same opinion. They were aware that a small section of the public residing at Cremorne, or interested in property there, were agitating for such a deviation of the line as would render it impossible to have the terminus anywhere, but at Cremorne. Palpably absurd as the scheme was, some large landed proprietors were "working for its consummation." The line he was advocating presented manifest advantages: (1) it was shorter; (2) and cheaper; (3) and more direct for the city; (4) it would better accommodate the majority of the North Shore people, and meet the requirements of the fruit-growers; and, (5) would terminate near the terminus of the proposed city railway.

12/10/88.—A deputation waited upon Mr. Secretary Sutherland to advocate the views conveyed in Mr. Edwards' letter, *i.e.*, to condemn the Cremorne scheme and to urge that the line should be carried to some point between Careening Bay and Sugar Works Bay. The arguments urged by the deputation were identical with those employed by Mr. Edwards.

Mr. Sutherland informed the deputation that he concurred in their representations, and that the line would best serve its purposes if taken in the direction indicated by them, as the Government hoped ultimately to have better communication across the harbour, and a line into the city. They had not interfered with Mr. Whitton as to the route he might consider the best; but before anything was decided, the question would have to be submitted to the Public Works Committee, and to the House. The deputation, however, need not be under any apprehension, as the Government was not moving in opposition to their views.

20/10/88.—A *resumé* of the whole case appeared in an article in the *North Shore and Manly Times* of this date. The writer pointed out that this railway was never intended to enable the residents of North Shore in the vicinity of Port Jackson to get to the waters of that port. That could only be done by a system of cable-trams extending northerly from the several ferries towards the Military Road. The principal objects of the railway were to afford facilities for settlement on the splendid country between St. Leonards and Pearce's Corner, to connect the northern and southern railway systems, and to utilise the waterfronts of North Shore for shipping. The writer then proceeds to compare the several routes. Of the Blue's Point route, he states that the grades near the terminus are almost impracticable. The Cremorne route is condemned, because, while one mile

mile and a half longer than the Milson's Point route, it presents no better grades than the latter, and will cost at least half as much again. The cost of land resumptions would also be greater. A glance at the map would disprove the assertion of the advocates of the Cremorne route, that that route would meet the requirements of the bulk of the population. The flow of passenger traffic from Blue's Point to Mossman's Bay took a northerly direction, and no railway or tramway running east would serve even a minority. At least 90 per cent. of the present and future population would be located between the Cremorne route and the waters of Port Jackson. Was it reasonable to suppose that these people, in order to get to a given point, would consent to travel in the opposite direction? Again, would this route accommodate the residents of Hornsby, Gordon, or Willoughby? Would any person residing on the western side, or within half a mile on the eastern side, of Miller-street, travel by it? Would the residents of the Cooper Estate, or those near the Spit Road, or Middle Head Road, or those at Mossman's Bay, use it? Would anyone consent to travel unnecessarily a mile and a half by railway, and three-quarters of a mile by water, in order to get to and from Sydney? At no distant date North Shore would be connected with Sydney by a bridge either at Milson's Point or Blue's Point. If at the former a branch line would be required a mile and a half long; if at the latter a branch two miles and a quarter long would be needed to connect the terminus at Cremorne with the bridge. On the other hand, if the line were brought to Milson's Point and the bridge placed at Blue's Point, a branch line half a mile in length would connect the two. The writer thought he had conclusively shown that the Milson's Point line was in all respects the best, and he hoped the Government would quickly come to a decision in order that the 10 miles of line already constructed might be utilized.

A deputation from East St. Leonards waited upon Mr. Secretary Sutherland to advocate the construction of the line and the adoption of the Milson's Point route, but as no new arguments were employed details need not be given here.

8/4/89.—The land valuer submitted a valuation of the property required to be resumed for the extension to Milson's Point, the amount being £133,909. Mr. Thompson admits that his estimate may have to undergo revision. For instance, if the owners of the properties which overlie the tunnel, and which are not injured or affected by the works, waived their legal claim to have such properties taken, a reduction of £28,000 would have to be made in the amount; but if, on the other hand, the parties insisted on their rights the Government would be largely recouped by the acquisition of highly valuable properties. Was of opinion that if the viaduct were extended from 2 miles 26 chains to 2 miles 32 chains towards Milson's Point, a larger amount of compensation might be saved.

In connection with Mr. Thompson's remarks about the land which overlies the tunnel, reference is here made to clause 18 of the "Lands for Public Purposes Acquisition Act," which provides (in the absence of a copy of the Act, the *ipsissima verba* cannot be quoted) that no claim shall lie in the case of land overlying a tunnel, unless the soil, or the surface, has been damaged.

Dr. Ashburton Thomson reported to the Minister, representing the elevation and salubrity of the districts to which the completion of this extension would afford access; but as that gentleman's letter itself is before the Committee, it need not be further referred to here.

6/8/89.—Mr. Gerald Phillips, an advocate of the Cremorne scheme, in a letter published in the *Herald* of this date, states the case against Milson's Point and Blue's Point as follows:—(1) These points project into the narrowest portion, and the strongest tideway of the harbour, where any concourse of shipping would involve considerable risk to the general traffic. (2) The points are too limited in extent to afford sites for a railway station equal to the traffic, and wharfage for even half the shipping requiring it. (3) The cost of resumption would be immense. (4) The engineering difficulties being very great, the cost of construction would be so vast as to preclude the possibility of the line paying interest on capital. (5) If the terminus were placed here we must for ever abandon the hope of connecting St. Leonards with Sydney by means of a bridge. To these objections the following replies have been given:—(1 & 2) The line is not intended for shipping (and therefore wharfage would not be required, and there would be no concourse of shipping). (3) An accurate estimate of cost has been prepared. (4) There are no engineering difficulties. (5) It does not follow that the idea of a bridge must be abandoned. Mr. Phillips then proceeds to state his case in favour of Cremorne, as follows:—(1) The grades are easy, and there are no engineering difficulties. (2) There is a mile and a half of deep water frontage which belongs to the Crown. (3) There is ample space both for railway and shipping. (4) It is opposite the widest part of the harbour, and could never interfere with the proposed bridge. (5) It is the best site in view of the certain increase of the population towards Manly. The following replies have been given to these pleas:—(1) The gradients are no better than those on the Milson's Point line. (2, 3 and 4) The line is not intended for a heavy goods or coal traffic. (5) Is purely speculative. Mr. Phillips proceeded to quote the opinions of "Nauticus," but as these opinions are based upon the same erroneous idea that the proposed line is to carry a large goods and coal traffic, and to do a large shipping business they need not be followed here.

In the same issue of the *Herald* a writer, under the *nom de plume* of "Disinterested," maintains that the value of the North Shore line was always held to consist in its adaptability for the conveyance of heavy traffic, especially of coal, and that was, in fact, the *raison d'être* of the line. If, he says, the line is to pay, it must be by the carriage of freight, of which there is plenty rather than by that of passengers, of which there are few. He is of opinion that the advantages of Cremorne as a terminus are so remarkable and exceptional, that no unprejudiced person could fail to be struck by them, and he hopes that private interests will not be allowed to stand in the way of the public welfare. It is not, he concludes, only a question of saving £200,000 in compensation, but for providing facilities for carrying on the trade of the port, and enormously increasing that trade.

11/10/89.—Mr. G. M. Pitt wrote to the Under Secretary stating that he was nearly sure the North Shore line would not pay interest on the money expended upon it. As regarded the terminus, it was a mistake to have it at Milson's Point. Cremorne was the best place on account of the shipping. We already had a tramway which might be extended up to the present terminus, and it would carry the passengers and their luggage, while heavy goods and coal could be carried to Cremorne.

12/10/89.—The Under Secretary replied that the question before the Department was not whether the line to Milson's Point would pay, but what had to be done to make the line already constructed pay, and this the Department thought could best be accomplished by extending the line to the waters of Port Jackson. As regarded the location of the terminus, Milson's Point was only three quarters of a mile from Circular Quay, while Cremorne was 1½ mile, and the former would cost much less than the latter. It had been shown conclusively that the line would carry no coal or heavy goods. The freight by water from Bullock Island was 5s. 6d. a ton, while by railway it was 7s. to 8s.—a prohibitory rate. We had, therefore, to consider the passenger traffic only, and for this Milson's Point was unquestionably the best.

The report of the Railway Commissioners is before the Committee and *précis* of it therefore need not be given here.

Forwarded for the information of the Public Works Committee.—J. BARLING.

C. A. B., 31/10/89.

#### [To Evidence of H. M'Lachlan, Esq.]

STATEMENT OF PASSENGER TRAFFIC ON THE SUBURBAN PORTION OF THE ILLAWARRA LINE, AND ON THE NORTH SHORE TRAMWAY.

Sir,

Government Railways of New South Wales, Secretary's Office,  
Sydney, 31 October, 1889.

In compliance with the request of Honorable Members of your Committee, I beg to forward herewith statement showing the number of passengers travelling from the Illawarra line stations (between Hurstville and Sydney) to Sydney during the month of February, 1885-89. Also earnings and estimated number of passengers travelling on the North Shore line, July, 1886-89.

With regard to the power of the North Shore cable engines, our engineer reports that they are capable of exerting over 50 per cent. more power than at present.

The value of the original contract for the construction of the North Shore cable line was £35,500.

I have, &c.,

H. M'LACHLAN, Secretary.

The Secretary, Parliamentary Standing Committee on Public Works.

RETURN

RETURN showing the number of passengers from Illawarra Stations to Sydney during February of the undermentioned years.

## E.

STATEMENT OF THE DIFFERENCE IN THE COST TO PASSENGERS BETWEEN RAILWAY FARES AND COMBINED RAILWAY AND TRAMWAY FARES.

Sir,

Public Works Department, Sydney, 5 November, 1889.  
 In reading over my evidence before the Public Works Committee in regard to the proposed extension of the railway from its present terminus to Milson's Point, I noticed I have not referred to that portion of the argument which deals with difference in the cost to passengers as between the railway fare from Pearce's Corner to Milson's Point, and the combined railway and tramway fares for the same distance. Taking the fare by tramway, in the event of its being extended to the present terminus of the railway, at 4d., and adding to that the season-ticket rate (as at present in force for similar distances on other lines) for the remainder of the distance to Pearce's Corner, and then taking the season-ticket rates for the through railway to Milson's Point the comparison will stand as shown in the enclosed return, which I have had prepared, and which has been kindly checked by the Secretary for Railways. In the case of second-class fares only it will be seen that the through railway service would give an advantage over the combined tram and railway service, as follows:—

	£	s.	d.
Monthly—Through fares .....	1	4	0
Monthly—Combined fares .....	2	2	0
Quarterly—Through fares .....	3	1	3
Quarterly—Combined fares .....	5	16	0
Half-yearly—Through fares .....	5	10	3
Half-yearly—Combined fares .....	11	0	9
Yearly—Through fares .....	10	9	6
Yearly—Combined fares .....	21	11	6

If the first-class fares are taken into comparison, the difference, as will be seen from the return, is much greater.

I venture to think, therefore, that a very strong argument is presented in favour of the proposed railway by this return, the cheaper fares being certain to attract residents who would otherwise not settle in the district, were the combined tram and rail service only available. It should also be borne in mind that, in making this comparison, I have only allowed one journey by tram each way per day, whereas by the railway a season-ticket holder could make as many journeys as he wished.

I have, &c.

J. BARLING,

Under Secretary.

The Chairman of the Parliamentary Standing Committee on Public Works.

Pearce's Corner to Milson's Point, 12 miles 72 chains—say 13 miles.

## FIRST CLASS.

Season tickets.	Month.	Quarter.	Half-year.	Year.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Railway.	1 14 0	4 6 9	7 16 3	14 17 0
	1 4 0	3 1 3	5 10 3	10 9 6

Pearce's Corner to present terminus, 10 miles 51 chains—say 11 miles.

Forwarded for the information of the Public Works Committee.—J. BARLING, 5/11/89.

## F.

## PROBABLE COST OF TAKING THE RAILWAY THROUGH THE BERRY ESTATE.

Dear Sir,

Coolangatta, 4 November, 1889.

Adverting to evidence which I gave before your Committee in re the North Shore Railway, I have now the honor to state, after mature deliberation, that I am prepared to advise my co-executor to sell to the Government such lands as may be required for the construction of this railway at £500 per acre, conditionally, upon certain provision being made for stations and overhead bridges, as may be mutually arranged, and on the distinct understanding that such line of railway will be constructed within the next two years.

The Chairman of the Public Works Committee, Sydney.

I have, &amp;c.,

JOHN HAY.

## G.

## LETTER FROM H. H. B. BRADLEY, ESQ., WITH REFERENCE TO HIS EVIDENCE.

Sir,

60, Margaret-street, Sydney, 6 November, 1889.

I return notes of my evidence before your Committee, which, with some trifling alterations at the end in pencil, seem to be correct. I may add that since I gave my evidence my attention has been called to the fact of the very large number of passengers travelling on the suburban line between Eveleigh, Macdonaldtown, Newtown, Stanmore, and Petersham, all within 3 miles of the terminus, as indicating that my evidence was probably wrong when I expressed an opinion that the North Shore railway would not be much used within 3 miles of Milson's Point; and, were it in order to do so, I should desire to place on record my change of opinion in that respect.

I am, &amp;c.,

H. H. B. BRADLEY.

The Secretary, Parliamentary Standing Committee on Public Works, Sydney.

## PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

### RAILWAY FROM MOSS VALE TO ROBERTSON.

## REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "constructing a line of railway from Moss Vale to Robertson," have, after due inquiry, resolved that it is not expedient the proposed railway should be constructed, and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly :—

1. The proposed railway, which it is intended should be a light single line, would leave the Great Southern line at the southern end of the Moss Vale railway station, and crossing White's Creek, pass through the parishes of Bong Bong, Yarrunga, and Yarrowa, in the county of Camden, and the district of Wild's Meadows, running parallel to the Fitzroy Falls and Shoalhaven Road, at a distance of about 10 chains, and crossing the Yarrunga and Wild's Meadows Road; thence proceeding in a north-easterly direction to Yarrunga-street in the village of Robertson, where it would terminate. The length of the railway would be 14 miles and 20 chains, and the estimated cost, exclusive of land or compensation, is £84,900 or £5,953 per mile. The ruling grade is 1 in 40, but it is thought by the Acting Engineer-in-Chief for Railways that this might be improved.

Description of the proposed railway.

2. As far back as 1881 improved means of communication between Robertson and the main Southern line was advocated, the first suggestion being that a tramway should be constructed. The idea of a tramway gave way in 1882 to the proposal for a light railway, and since that period the matter has been the subject of considerable agitation on the part of the residents of the district, and various official examinations of the country which the railway would traverse, and inquiries as to the prospects of traffic, have been carried out. In the representations which from time to time have been made in favour of a railway there has been apparent a difference of opinion with regard to the most suitable point of departure from the Southern line, and, in some respects, as to the route that should be adopted in getting to Robertson; but the people of the district are unanimous in the assertion of their claim to a railway, and of the development which railway facilities would bring about.

Period during which the railway has been advocated.

3. The country which the proposed railway is intended to serve is principally of an agricultural character, at present devoted chiefly to dairy farming. The township or village of Robertson lies on an elevated plateau, the approach to which from the Great Southern Railway is by the Burrawang and Kangaloon Ranges. These ranges are covered with extensive tracts of rich chocolate or volcanic soil, and between them lies the Wingecarribee Swamp. The area of good soil is about 50,000 acres, and Wingecarribee Swamp roughly divides it into two portions, the situation of the swamp being such that some of the settled portions of the district are completely cut off from direct communication with others. The railway route passes on the

The country to be served by the railway.

the southern side of the swamp, and for that reason will not be of service to what is known as West Kangaloon and Kangaloon proper. Within a radius of ten miles of the route the line would serve, it is stated, "Meryla, the whole of Yarrunga, the Waterfall district, Barrangarry, Wild's Meadows, Burrawang, the Bong Bong River district, the Robertson district, East Kangaloon, the head of the swamp, and all along the top of the mountains as you go down towards Jamberoo;" but it does not appear likely to be as generally serviceable as, in the case of a branch railway of this kind, is advisable. East Kangaloon would find an outlet or depôt at Robertson, the country falling in that direction; West Kangaloon could be accommodated only at what is called the "Sheep-wash." Dairy farming is the principal industry in the district, because of the obstacle which the great expense of road carriage proves to enterprise in other directions. With railway facilities the land is capable of producing extensive and constant supplies of vegetables and fruit, and such production would probably be one of the immediate results of the railway being constructed. A Sectional Committee who visited the district report that as much as 5,000 acres of land are available for the cultivation of potatoes, for which the district is singularly well adapted, and an area of equal extent for the growth of general market-garden produce; a large part of the district is also admirably suited for fruit-growing. Added to these recommendations for railway communication are the circumstances that the climate is of the finest description, and the natural scenery of the district is very beautiful.

Railway Commissioners' Report.

4. The Railway Commissioners' report on the railway represents a difference of £4,734 between the estimated total annual traffic, £1,843, and the total annual cost, £6,577. The traffic, they point out, would have to develop largely before working expenses could be covered, and a considerable part of the district which the line would pass through is not of such a character as to enable such a change to take place rapidly; but they remark that the district around Robertson is very rich, and they are of opinion that if it were devoted more to the production of fruit and vegetables, a much greater traffic could be developed, and, in that manner, the construction of a railway be justified.

Prospects of traffic.

5. A profitable traffic on the railway is a matter that depends upon the development of the district in the manner in which the Committee are informed by the evidence and by the visit of the Sectional Committee it is capable of being developed. This development is, as it must necessarily be in all instances of the kind, not altogether certain, but it is very probable, and in the case of a district which has so much to recommend it as the one under consideration, probabilities approach to certainties. The Sectional Committee say "the district is so charming, the soil so rich, the land so well divided and so industriously cleared, the climate so beautiful, the rainfall so good, and the whole locality so likely to attract fresh enterprise and population," that it would be reasonable to do something towards relieving the inhabitants of the disabilities under which they now labour. Mr. J. B. Thompson, Land Valuer, Department of Public Works, who was specially instructed to visit the district, says in a report, which will be found with the evidence, "I am firmly convinced, if easily accessible, this district would attract more tourists than the Blue Mountains, as it has every advantage of scenery and climate possessed by the latter, with others peculiar to itself, such as the local production of farm, garden, orchard, and dairy produce in abundance, and of the best description, which is no small attraction to those who might visit the district as a sanatorium. I regard the certain and speedy recognition of the superiority of this district as a health and pleasure resort as a source of large revenue to the railway if constructed." The testimony in favour of the probability of a profitable traffic is supported also by evidence from Mr. John Harper, Railway Goods Superintendent, upon a report from whom the Railway Commissioners based their conclusions with regard to the proposed line. This officer, who states that the traffic question in connection with this railway was more thoroughly analysed than that of any other railway he has reported on, says that the line would lead to an expansion of both the dairying and the fruit industries, and that the fruit industry would prove a "paying concern"; and also that the railway would give great facilities for tourists. It should further be mentioned that there appears to be, on the part of the residents of the district, a willingness to pay higher carriage rates on this railway than are charged on the main line.

6. The estimated cost of the railway appears large when the comparatively small extent of the district to be served is considered; but the country is not favourable to the construction of a cheap line, the sections showing either cutting or embankment for nearly the whole of the distance. Originally the estimated total cost was £110,000; but that was revised, and a reduction effected to £84,900, in order to bring the railway as near as possible under the denomination of light cheap lines. The practicability of making a further reduction the Acting Engineer-in-Chief for Railways doubts. He believes the grades could be improved without increasing the cost, but he does not think the estimate per mile could be decreased. It is his intention, however, to subject the railway to further revision if the line should be approved of. A matter of importance connected with the question of cost is that the route of the railway as proposed runs for the whole distance through private property, and there is little Crown land to be brought under cultivation by the construction of the line. Cost of the proposed railway.

7. Two routes to connect Robertson with the Great Southern Railway have been surveyed—one that referred to the Committee from Moss Vale, and the other from Bowral. The line from Bowral would save 6 miles of carriage on the main line between Bowral and Moss Vale, and it may be made to accommodate a part of the district between the main line and Robertson that will not be served by the proposed railway from Moss Vale. It may, in fact, while saving the 6 miles on the main line, be so laid down as to serve a greater number of people than the line from Moss Vale would serve, and practically secure the whole of the traffic of the district. To do this it would pass the Wingecarribee Swamp on the northern side, cross what is called the Sheepwash, and then go over to Wild's Meadows, and thence to Robertson, by which means West Kangaloon would be accommodated. Question of route.

8. The Sectional Committee gave much attention to this question of route, and it formed a prominent feature in the examination of witnesses who gave evidence before them. It appeared to them desirable to secure for the railway the maximum amount of traffic available, and at the same time not to go further with the line at present than is absolutely necessary; and finding that the Moss Vale line would not accommodate the West Kangaloon farmers and the farmers of Kangaloon proper, they endeavoured to ascertain whether any alteration of route would be more generally serviceable. Such an alteration they found could be made by adopting the Bowral route for the line as far as the Sheepwash, and thence connecting with the Moss Vale route at Wild's Meadows, and proceeding from that point on to Robertson; or, which they think is more desirable, adopting this route as far as Wild's Meadows, and for the present stopping there. The Engineer-in-Charge of Trial Surveys, who was with the Sectional Committee during their visit to the district, states that by the alteration the length of the line to Robertson would be increased by 2 miles as against the Moss Vale route, and half-a-mile as against the surveyed route from Bowral to Robertson; and that as far as the Sheepwash the alteration would produce a line a little cheaper than that between Moss Vale and Wild's Meadows, but between the Sheepwash and Wild's Meadows the expense would be greater. At the same time, he regards the route by the Sheepwash as the best for the country around Kangaloon. The suggestion to terminate the line at Wild's Meadows for the present is made because that point is regarded as very suitable for catching the traffic of the district generally, including Robertson, and it is convenient to the Fitzroy Falls as well as for the traffic from Kangaroo Valley. By shortening the line in this manner, the cost will not exceed £50,000. On the return of the Sectional Committee to Sydney, and as a result of their Report, the Committee requested the Acting Engineer-in-Chief to have an examination of the country between Bowral and the Sheepwash made, in order to ascertain if it were practicable, from an engineering point of view, to effect the alteration suggested, and also whether the line could be continued from the Sheepwash, on the same side of the swamp, to Robertson. This examination has taken place, and it will be seen from the report of Mr. District Engineer Hutchinson that the alteration is both practicable and easy. A suggested alteration.

9. In view of all the circumstances, the Committee have resolved that it is not expedient the railway, as proposed, from Moss Vale to Robertson, should be constructed; but they are favourable to the construction of a line, in accordance with the Resolution arrived at by the Committee.

the suggestion of the Sectional Committee, from Bowral to the Sheepwash, and thence across to Wild's Meadows. Such a line, in their opinion, will secure most of the available traffic, both passenger and goods, and it will be more generally convenient than the line from Moss Vale. The resolution arrived at by the Committee, which was moved by Dr. Garran on Thursday, 27 March, 1890, and seconded by Mr. Garrard, was passed unanimously in the following terms:—

“That, in the opinion of the Committee, it is not expedient the proposed Railway from Moss Vale to Robertson, as referred to the Committee by the Legislative Assembly, be carried out, because the evidence shows that a line from Bowral to Wild's Meadows, *via* Sheepwash, would give more general accommodation to the district, and would be sufficient for the present.”

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 29 April, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM MOSS VALE TO ROBERTSON.

THURSDAY, 23 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway from Moss Vale to Robertson.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] You are Under Secretary for Public Works? I am.
2. Will you hand in the official documents relating to the proposed railway from Moss Vale to Robertson? Yes. I hand in the official description of the line, and the Commissioner's report.
3. Have you no *précis* of papers? No; I will produce that later on. I would suggest that the Committee take the evidence of our officer, Mr. Thompson, who visited the locality, and collected all the data.

J. Barling,  
Esq.  
23 Jan., 1890.

WEDNESDAY, 29 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	HENRY COPELAND, Esq.
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. GEORGE HENRY COX.	WILLIAM SPRINGTHORPE DOWEL, Esq.
JACOB GARRARD, Esq.	CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Moss Vale to Robertson.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

4. *Chairman.*] You are Acting Engineer-in-Chief for Railways? Yes.
5. Do you know the proposal which is before the Committee—to construct a line of railway from Moss Vale to Robertson? Yes.
6. Have you yourself inspected the proposed route? No; I have not been over the line.
7. What officers have been? The surveyor who surveyed that line is not here.
8. Is he in the service? No; he is not in the service; I believe he is in Tasmania. Mr. Stewart has been over the line with a view to making a deviation via the Fitzroy Falls.
9. When was it surveyed? It was surveyed in May, 1884.
10. And when was Mr. Stewart over it? He was over it pretty recently—in 1888.
11. Were these estimates of the Engineer-in-Chief based upon the surveys made in 1884? Yes.
12. That is £84,300 for the cost of construction? £84,900; I think that is a misprint.
13. Then when that estimate was furnished by the Engineer-in-Chief no engineer had been over the line at all? That is an estimate that was made last year. The plans and sections being in the office it was made from the plans and sections.
14. Without any engineer in the department having inspected the route? It was made by an engineer, but he did not go over to inspect it.
15. That estimate was made without any inspection of the proposed route by any engineer connected with the department? Mr. Bell, who made the survey in 1884, is an engineer and surveyor. I thought you wanted to know whether any engineer had been over it since to inspect it.
16. Has Mr. Bell laid out any other lines in the Colony? Yes. He surveyed the first line between Marrickville or St. Peters and Liverpool, and he was engaged, I believe, on part of the survey of the North Shore line. He then left the service.

H. Deane,  
Esq.  
29 Jan., 1890.

- H. Deane, Esq.  
29 Jan., 1890.
17. You were telling us that Mr. Stewart had inspected it since then? Yes. Mr. Stewart went over the line with a view of making a deviation. I can show you a plan of the deviation. It adopts very little of the line submitted.
18. You would call that a new line, would you not? Yes.
19. It is quite possible that this estimated cost may still be reduced considerably, is it not? I do not think it is very likely. Before the line came to be permanently staked it would be examined, and of course laid out in a proper manner, and more money would not be expended upon it than necessary, but the country is not favourable to a very cheap line.
20. The length of this line is 14 miles 20 chains, and I see according to the return here from the Department the cost is £5,952 per mile? Yes. You may depend upon that estimate, so far as it goes, for the particular line that has been surveyed.
21. *Mr. Copeland.*] Which is that—the red line or the blue? The red line.
22. *Chairman.*] The red line shown on the map produced by you is the one now under consideration? Yes. This map was made with a view of showing the deviation which leaves the old line at 90½ miles and joins again at 95½ miles, but that line is 3½ miles longer than the submitted line.
23. *Mr. Copeland.*] Have you any estimates for the deviation? No; but the character of the country would be about the same; that line would not cost any less per mile than the other.
24. *Chairman.*] This red line is the one now submitted by the Department? Yes.
25. And the blue is what? The deviation by Fitzroy Falls.
26. But that is the original survey, is it not? No, the red line is the original survey.
27. The red line is the one we are considering? The red line is the one submitted. It is the 14-mile long line; the other is nearly 18 miles.
28. *Mr. Copeland.*] Do the Department wish us to consider the red line or the blue one? The red one. I merely mentioned the other incidentally. I have a report from Mr. Whitton, dated 22nd October, 1888, about this line, wherein he says that the suggested deviation would lengthen the distance between those places to about 17½ miles, or nearly one-fourth. The survey was made in consequence of a deputation which waited on the Minister, and the representations of Mr. M'Court.
29. *Chairman.*] Have you any idea of the approximate cost of a survey of that kind;—what has actually been done, I mean? If it were necessary, I could get out the expense, but I should say about £200.
30. *Dr. Garran.*] Your answer just now to Mr. Abbott about cost referred to the deviation to Fitzroy Falls, did it not? About the cost of the survey—yes, it was the survey of the deviation to which I referred.
31. Taking the whole line from Robertson to Moss Vale, how much has it cost the Department to have all this surveying work done, and all these cuttings and embankments estimated;—have you any idea? I could only make a rough guess at it. Of course we have a record of all the expenses.
32. A rough estimate will do for what I want? I should think that from £20 to £25 per mile might be reckoned.
33. I observe from this cross-section that nearly the whole distance from Moss Vale to Robertson is cutting or embankment? Yes; it is not a surface line.
34. Do you cross ridges or go over the top of an undulating ridge? I think you will find there are two ridges to cross there. This is one of our parish maps, showing the course of the line from Moss Vale to Robertson. At about 94 miles there is a ridge to cross, and we cross another ridge just before getting into Robertson.
35. The line runs along the south side of the Wingecarribee Swamp, does it not? Yes.
36. And you cross the little streams running into that swamp? Some of them.
37. You do not keep on the head of a dividing ridge at all? You see we cross this ridge at 94 miles, and we are in another valley—Wild's Meadow—and we go up there to cross another ridge just before getting into Robertson. There has been no survey made from Burradoo. There has been a survey made from Bowral.
38. Would the Bowral line be a more level line? The Bowral line is a very costly one, according to the estimates made at the time.
39. Does it run over rougher country then? Yes, and it crosses a river.
40. This line seems to run through private property the whole distance? Yes.
41. There is no Crown land to be brought under cultivation by the construction of this line? No.
42. The cost of resumption is not at all included in your estimate? No.
43. Every inch of the ground would have to be bought? Yes.
44. Are there many road crossings? There are a good many road crossings.
45. Have you made any provision for gates or gate-keepers in the estimate of expenses? Yes, that is all accounted for. £2,427 for level crossings includes gate-houses at public level crossings.
46. Robertson is very near the edge of the plateau, is it not? Yes.
47. You could not continue this line beyond Robertson anywhere? No, I think not.
48. The road beyond that descends to Kiama rapidly? Yes.
49. Do you know whether there is a good main road along the line, between Moss Vale and Robertson? I believe there is.
50. There has been one made at the public expense by the Roads Department? I have not the slightest doubt of it.
51. It was not made at local expense? No.
52. You have not travelled on that road? No.
53. The costliness of this line arises entirely from the quantity of earthworks necessary? Yes.
54. What is the ruling gradient? The maximum gradient on this section is 1 in 40.
55. *Mr. Lee.*] Has there been any revision of this estimate made since it was referred by Parliament to the Committee? No, nothing since then. This is the latest revision. The previous estimate was £110,000; but it has been reduced in order to bring it as near as possible under the denomination of light, cheap, lines. So the estimate has been reduced to £84,900.
56. Was it at £84,900 when submitted to Parliament? Yes.
57. Do you think it possible to reduce this estimate to a still lower sum? I believe the grades could be improved without increasing the cost; but I should not say that the estimate per mile would be decreased. I do not think it would, because you see from the sections it is not at all favourable country for cheap railways.
58. What is the heaviest grade at present? One in 40.

59. To what do you think it could be reduced? Without examination, and only giving an opinion, "I should say it might be reduced to 1 in 60.
60. Is it the intention of the department to revise this line? Decidedly, if it is approved of.
61. *Mr. Tonkin.*] Have you any idea of the amount of compensation that would be required for the land through which this line is proposed to run? No, I have not considered that.
62. *Mr. Lackey.*] What do you propose ballasting with on this line? I think it will be necessary to ballast with blue metal.
- 63-4. That, I suppose, is about the best ballast, is it not? It is the very best.
65. That abounds all round that country? That is the most durable kind of ballast we can get.
66. What would you use for sleepers? Ironbark in any case.
67. *Mr. Cox.*] Where would you get it? It would have to be brought up from the country somewhere and imported into the district. The forests there are messmate chiefly.
68. *Chairman.*] I see the fencing is put down at £160 per mile—£4,480 for 28 miles of fencing? That is for substantial two-rail fence, two rails and four wires. If the ordinary wire fencing were used it might be done for half that sum.
69. *Mr. Copeland.*] It surely would not cost £160 per mile for two-rail fencing? I am quite sure it would cost that to make anything like a substantial fence, but I am not at all certain I would recommend a two-rail fence to be put up; I am rather in favour of wire fences in almost all cases on account of their cheapness.
70. They might be going to use mahogany or cedar? No. I can assure you that fences near Sydney according to specifications have cost over 10s. per rod, which is over £160 per mile.
71. *Chairman.*] The object of the fence is to keep stock off the railway? Yes.
72. That object is accomplished by local stock-owners putting up their fences? Not altogether. It appears to me that the circumstances are slightly altered. The local stockowners object is to keep the stock within certain paddocks; if they happen to get from one paddock into another it does not matter so much, for that can be easily rectified, but if stock get on to the railway-line they may cause a serious railway accident, or if the cattle or other stock are destroyed some considerable compensation has to be paid by the Railway Department.
73. You pay four times as much as local owners would pay? Still you see there are these difficulties.
74. *Mr. Lackey.*] You are fencing with wire on some of the outside lines? Yes.
75. It is found to answer the purpose? Oh, yes. Most of the other lines that have been submitted have included fencing at about 4s. per rod, which I think is a fair price considering that in the case of railways the fencing is not similar to what a squatter would put up. He runs fences for miles in a straight line sometimes. If we run a few chains then we have to turn off for a culvert or level crossing, and we have to run over just the country that the railway takes. It is by no means level country.

H. Deane,  
Esq.  
29 Jan., 1890.

James B. Thompson, Esq., Land Valuer, Department of Public Works, sworn, and examined:—

76. *Dr. Garran.*] What position do you hold in the Public Service? Land Valuer in the Public Works Department.
77. Have you valued any portion of the land for this railway? No sir.
78. Do you know the district? I know it pretty well. I know Moss Vale pretty well, but the Robertson district I have only passed through a few times. I passed through on my way to Kiama, and two or three times from Kiama to Moss Vale.
79. Then you have been on the coach road between those two places? Yes.
80. You know the character of the country? Yes.
81. Near Moss Vale, and for some distance parallel with the swamp, the land is of a rich character, is it not? Very rich.
82. Good dairy country? Yes.
83. It has cost a great deal to clear, has it not? It must have been an enormous expense to clear. It was a dense brush originally.
84. Do you know what the farmers value their land at? I know what it sells at. I think fairly good land there would fetch about £20 an acre. In fact there was a sale when I was in the district for about £20—either a little under or a little over.
85. Are the dairy farms mostly freeholds? I think they are.
86. Are they held in large or small blocks? All moderate size, not very large.
87. What do you call moderate size? I would call 100 or 150 acres a moderate-size farm.
88. If you intersect with a railway a farm of that kind for your own purposes, you may often do considerable damage to the land, may you not, in cutting it? Yes; sometimes, but the damage is not very great as a rule.
89. Even under the Public Works Act you would not be able to get much compensation from the Government—you would have to pay for the land? Of course.
90. What do you reckon you would have to pay for the land, and as compensation for severance of these dairy farms? I would not like to speak at random, and I have not considered that. The market value of the land now is about £20 per acre. From that, in the event of the railway being made, the enhanced value given to any properties traversed would be deducted, and that I have not considered sufficiently to answer your question.
91. If a man's farm is near a station to which he would take his milk the construction of the railway would enhance the value of his property? Very much.
92. If his farm did not happen to be near a station it might do him more harm than good? There are cases where harm might be done.
93. If you had to take land then you would expect to pay £20 per acre? Yes.
94. The part near Moss Vale is not good land? There are patches of good land, but you get into the volcanic soil near Burrawang.
95. How far from Moss Vale? 5 or 6 miles.
96. The first 5 or 6 miles from Moss Vale is not rich land? No, it is not.
97. It is the ordinary mountain land? Yes. It is poor compared with the Robertson land.
98. You would not expect to get much traffic in produce for a railway from those first 5 miles? I do not think so. I do not suppose it would support a dense population.

J. B.  
Thompson,  
Esq.  
29 Jan., 1890.

J. B.  
Thompson,  
Esq.  
29 Jan., 1890.

99. The real value of that land is, I suppose, for residential purposes? Principally.  
 100. Does a good deal of it lie in the hands of gentlemen? I think there are a good many large estates about there.  
 101. You would have to cut up these estates in going through with the railway? Oh, yes.  
 102. You think that the railway would add to their value? I am sure it would.  
 103. You would get back in additional value all it would cost for the land? I think so.  
 104. Between Moss Vale and Burrawang you think that the cost of the land would not come to anything material? I do not think it would.  
 105. You would get as much back? Well, if you take £100 worth of land, and you benefit the residue of the property to the extent of £10,000, you can only set that against the £100.  
 106. Of course you could not fine the land-owner, you only do not give him anything? That is all.  
 107. And so far as those 5 miles to Burrawang are concerned you do not think you would have to give anything? I do not think so.  
 108. Then the principal price you would have to pay for the land would be to the dairy farmers? Yes.  
 109. And that would be about 10 miles on the whole journey? About 9, I think.  
 110. Going into Robertson you would have some allotments to take up? Yes.  
 111. And have to pay for those at their full value? Yes.  
 112. You could not give us any estimate within £1,000 or so of what it would be likely to cost? No, I have not gone into that. The effect that the railway might have in enhancing the value of the property is a point that requires a great deal of consideration.  
 113. You could not say within £1,000 what the total would be likely to come to? No, I could not.  
 114. Would you say a minimum compensation payable for resumptions? I do not like speaking at random, sir. Speaking roughly I would fix the minimum at about £5.

THURSDAY, 30 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Moss Vale to Robertson.

John Harper, Esq., Railway Goods Superintendent, sworn, and examined:—

J. Harper,  
Esq.  
30 Jan., 1890.

115. *Mr. Garrard.*] Did you collect the information upon which the Commissioners based their estimate of traffic? Yes.  
 116. You are not in a position to check that statement at all—that is the Commissioners' statement;—have you a copy of it there? Of the Commissioners' report I have—yes.  
 117. Of course you are not in a position to check that;—you do not know upon what they have based their report? They have based it on the returns I obtained six months previously.  
 118. Is that your latest report? Yes.  
 119. Did you travel over the country from Moss Vale to Robertson? Yes; I was all over it.  
 120. Merely upon the line of the proposed railway or on the main road? In all the settlements. I spent a week there.  
 121. Have you had under consideration the report of Mr. Surveyor Bell, of 1884, in reference to this railway? I had it at the time; but it was not so much the question of route that I had to do with; I had to gather information as to the produce of the district and the character of the country through which it passed.  
 122. You are aware that Mr. Bell in his report went very fully into the matter, not only from the constructive point of view but also from the traffic point of view? Yes.  
 123. Did you agree mainly with the conclusions that Mr. Bell had arrived at, or had circumstances altered during the intervening years? We did not agree as far as I can remember, but he could not possibly have had the same sources of information that I had. I may say that the traffic in connection with this proposed line was more thoroughly analysed than the traffic of any other railway I have reported on.  
 124. How long were you in the district? A week on one occasion and four days on another.  
 125. Do you not think that Mr. Bell, who spent months in the district, would have as good an opportunity of judging of the traffic as you would in a week? No; simply because we had representatives from each of the townships who met at Moss Vale. They selected the best season, and went through item by item of every keg of butter and all the live stock that came from those districts.  
 126. How did they obtain them? From our invoices. I read it out and asked where it came from—from Yarrunga, Wild's Meadow, or wherever the case might be.  
 127. Did the produce of the districts show any marked increase during any number of years? We selected the most favourable season that they could think of—half of 1886 and half of 1887.  
 128. And your estimate is based on that very best year? Entirely upon that. We devoted three days and three nights in going through every item that fell in at Bowral, Mittagong, and Moss Vale.  
 129. But if this line is constructed much of that which goes direct to Bowral would still go there and not come to this branch line? On the other hand there is a good deal that would. I have a statement here of the traffic that fell in at Bowral which would go to this line.  
 130. Can you have a copy of that report made and sent in? Yes. There were 115 tons that went to Robertson via Bowral and 163 tons that went from Robertson through Bowral which were included.  
 131. Have you counted any of the produce or goods going outward to places between Bowral and Robertson which even if this proposed line were constructed would still go direct to Bowral and not use this line? Oh yes; we took the most favourable view of it in every way. I might explain that the local  
 Committee

Committee were dissatisfied with the previous report and they requested the then Minister to have the matter gone into more thoroughly, and in order that the thing might be thoroughly dealt with every concession was given them in selecting their traffic. J. Harper, Esq. 30 Jan., 1890.

132. Then have you taken into consideration to the credit of this line produce which now finds its depot at Bowral and would still find it there although this railway were constructed? No doubt a portion of this tonnage I refer to would still continue to go to Bowral.

133. On the Kangaloon Road, for instance, by Mr. Lamb's place, and that way? Yes.

134. You have included that traffic inward and outward which comes by Mr. Lamb's place, although as a matter of fact if this line were constructed that would go direct to Bowral? Yes—not much of it; the principal portion of this is Robertson traffic from Bowral.

135. Do you think that the district which this railway would serve is capable of very much expansion in the way of trade? I imagine it would grow fruit extremely well, and I was surprised to find they were not growing more fruit. Their facilities even now by road are as great as some of the orchardists have at the Curragong in reaching Richmond.

136. The land is principally employed for dairying purposes? Yes.

137. Is there a possibility of expansion in that direction or is it doing its very level best now? I think it is capable of expansion. I think more could be got out of the ground for dairy purposes than at present.

138. Would this line lead to an expansion of the dairying industry or the fruit industry? I think it would do both—the expansion of the dairying industry and the fruit industry; both would be gone into more extensively.

139. Do you think that the fruit industry would be a paying concern? I do. I had an opportunity of inspecting the books of one gentleman who grows fruit, and I imagine that he makes more out of his fruit than out of dairying.

140. Are you aware that Mr. Hordern has a very large area of land under cultivation as an orchard? Yes. That is between Bowral and Moss Vale.

141. You think that is likely to prove a paying concern? I did not pay much attention to the country within 3 or 4 miles of Moss Vale.

142. On whose statement do you base your opinion that it would be a profitable thing to grow fruit there? Mr. Blencoe's.

143. Where is his place? At Wild's Meadow.

144. Did you take evidence at or visit all these places besides Moss Vale, or did you confine your attention to the evidence submitted at Moss Vale? I obtained the Bowral books and the Mittagong books for two years—the two most favourable—and with the deputation, consisting of one from each place—one from Yarrunga, Wild's Meadow, Robertson, and so on from each settlement—went through the entries item by item of live stock and goods inwards and outwards.

145. You are familiar with the route this proposed line would take? I crossed it and recrossed it in several places.

146. Are you aware that there was an alternative route suggested, which is shown by the blue line on the plan submitted to us—from Moss Vale via Fitzroy Falls? Yes.

147. Do you think that that would serve more country than the line under consideration? I cannot say that I paid particular attention to it, for I was committed to one object, and that was to have a look into the general productiveness of the district and the traffic.

148. Do you estimate that you would get any of the traffic of Kangaroo Valley if this line were constructed? One portion of it.

149. Is it not possible if the south coast line is continued down to Nowra that the whole of the Kangaroo Valley traffic would go to Nowra? I think it is possible it might.

150. And that would take away some portion of the traffic you are depending on for this line? Yes; although we did not take very much Kangaroo Valley traffic in this. I had the details for that year, but I did not have very much, and I think that those at the interview were very conscientious in checking, and the stationmaster was present to say where the things came from or went to.

151. You think it is likely that if this line were constructed it would lead to a large increase of passengers to the Fitzroy Falls and surrounding sights? I think so, and I have also thought since that in view of an extension to Nowra it would be a very good tourist district down the Barragarry Mountain and down to the south coast railway.

152. But they can do that now? Yes, but it is a longer drive.

153. The road is good? Yes. It was not when I was there.

154. Do you think that the proposed line—to get the most traffic, do the most trade, bring the most grist to your mill—would be better taken from Moss Vale to Robertson, or from Bowral to Robertson? Moss Vale I should imagine.

155. Do you think that any intermediate place between Bowral and Moss Vale would be the best place to start from? I did not study the routes.

156. So far as trade is concerned you think that Moss Vale would have the preference over Bowral or intermediate places? Yes.

157. I see by the report that for passage traffic the Commissioners allow for each adult in the district making two double journeys each year and each child one double journey, and they speak of this as being a very high average for an agricultural district; is that based on statistics of our agricultural population, or of the old country? I imagine on our own.

158. Did you give them any information about this? Yes.

159. Is this estimate of the probable number of passengers that would travel your estimate? No. My estimate was arrived at in a different way. So far as passenger traffic is concerned of course it is purely a matter of conjecture.

160. On what then did you base your estimate of the passenger traffic? On the general averages we find in districts similar to this, and therefore on actual experience. I estimated 1,500 first-class fares and 3,500 second-class fares. There is a difference in this estimate of £160.

161. Yours is in excess of this? No, mine is less.

162. The goods traffic on this line, excepting the goods going out to Robertson, would be at one particular time of the year—that is produce such as fruit? Well, the butter is continuous, and fruit does not represent much. 163.

- J. Harper, Esq.  
30 Jan., 1890.
163. But you estimate an increase in the productiveness of the district more particularly in the matter of fruit and that would be confined to four months in the year? Yes. Four or five months in the year.  
164. Did you actually visit Wild's Meadow and Robertson? Yes, I stayed at Wild's Meadow and at Robertson.  
165. Did you go down the Kangaloon Valley at all? No.  
166. You did not go over that side of the swamp at all? No, I kept on the other side of Wingecarribee swamp.  
167. You did not anticipate drawing any trade from that side to this railway? We have some of it—from Burrawang; some portion of it would come in there.  
168. Do you think that the people of the district are favourable to the tapping of the main line at Mossvale as against Bowral or any intermediate place? Those I came across I think with one exception all appeared to be in favour of Moss Vale. Mr. Barrett, of Burrawang, was I think the only Bowral advocate I met.  
169. If the matter was one of giving the Robertson people access to the metropolis, and no other question arising, it would be better for them to tap at Bowral than at Moss Vale, having so much less distance to run, would it not? Yes, they would save mileage certainly.  
170. But you would not tap such a good district by a direct route from Robertson? No; it would not be so convenient for Wild's Meadow and Yarrunga and people on the south side.  
171. If the line were taken to Robertson how far would it be from Fitzroy Falls? I think about 2 miles the way I went.  
172. Do you think that if the line were constructed only as far as Robertson it would meet the passenger traffic, or would it be necessary to construct a line right to the Falls? No, I think not. I think the Falls would be reached from Wild's Meadow.  
173. How far is it from Wild's Meadow to the Falls? Three miles I should imagine.  
174. You think that these estimates of the Commissioners we have here would have every chance of being realized? Yes, I think so; that is in ordinary seasons. We selected an exceptionally favourable one.  
175. But to counterbalance that you estimated a large increase in the district because of the construction of this line? Yes.  
176. And so it is reasonable to suppose that what is the maximum in your case would become the minimum? Yes.

THURSDAY, 13 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway from Moss Vale to Robertson.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

- H. Deane, Esq.  
13 Feb., 1890.
177. *Dr. Garran.*] The Sectional Committee who have been to Moss Vale and Robertson would like some information about Bowral and the Sheepwash—a continuance of that to the surveyed line between Moss Vale and Robertson. Have you such information in the office as would enable you to tell the Committee what they want to know in regard to this matter? It would be better to send someone up there; I would much prefer that course.  
178. I do not consider it would be necessary to make a survey; I think if an officer were sent up to inspect the route by just walking over it that would be sufficient. Will you oblige the Committee by having that done? Yes.  
179. He would make a survey or an inspection as far as the northern side of the swamp, and see whether the route is very much easier, as some of the witnesses say; whether it could be possibly taken by such a route as that, on the northern side, or edge of the swamp. It would be enough for the surveyor just to walk over the route and see whether it would be practicable or not? I understand you wish to know whether it is practicable to make a line from Bowral to the Sheepwash Station, and then to connect up with the Moss Vale to Robertson line; also, whether it would be practicable to continue the line from the Sheepwash, on the same side of the swamp, to Robertson. I will have an examination of the country made.

WEDNESDAY, 12 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HUBLEY, Esq.

The Committee further considered the proposed Railway from Moss Vale to Robertson.

William Hutchinson, Esq., District Engineer, Department of the Engineer-in-Chief for Railways, sworn, and examined:—

- W. Hutchinson, Esq.  
12 Mar., 1890.
180. *Dr. Garran.*] Have you recently made a survey of the proposed line from Bowral to Robertson? I have recently travelled over the country without making a detailed survey.  
181. Are the blue and green lines on this plan the routes you have examined? Yes.  
182. Taking your blue line from Bowral to the Sheepwash is that a very easy route? With the exception at the Sheepwash, where there will be a cutting, the line is comparatively easy. 183.

W.  
Hutchinson,  
Esq.  
12 Mar., 1890.

183. And no difficulty with regard to water running under it? Nothing further than ordinary country.
184. That would be a cheap line to construct? Yes.
185. And it could be made without danger of any serious damage on the cheapest principles? Quite.
186. You would require a bridge at the Sheepwash? If you cross the river there, but not otherwise.
187. Have you formed any opinion as to what such a bridge would cost? I should think a wooden bridge on piles would cost from £3,000 to £4,000.
188. Before you get to the river you would have a station? Yes.
189. Would that station be a convenient place for both the roads which come from Kangaloon? It would carry the Mittagong traffic, and also the Kangaloon traffic.
190. It would be a great convenience to all these people? Yes.
191. There would be no engineering difficulties in placing a station there? None.
192. After you have crossed the river at the Sheepwash till you rejoin what is known as the trial line from Bowral is there any difficulty in ascending gradients? No, it is what I should call level country, it is easier country than on the north side of the river.
193. From Mr. Bell's line across is there any difficulty in that piece? I did not travel over that, but the department have a section of it, and it shows that there is a good deal of excavation.
194. It would be the only kind of difficulty you would meet in getting on to Bell's line? That is all.
195. Did you examine from Bell's line forward to the position where it will be necessary to make a station for the Fitzroy Falls traffic? No, my instructions were to go only over the trial line from Robertson to Bowral.
196. So far as this Bell's line is concerned you did not examine it at all? No.
197. You say you can make a line up by the bank of the swamp with only one or two difficult places? Yes, one at the Sheepwash, and the other at about 10 miles. Of course there would be small cuttings and banks all the way, more or less, but all light work.
198. Are there no lateral creeks going into the swamp? Yes.
199. No more difficult on that line than on the other trial line? No.
200. It will be quite possible to make a horse tramway from the Sheepwash station up to Robertson? I think so.
201. Can you make an easy ascent into Robertson? Yes.
202. From the head of the swamp can you make an easy ascent into Robertson? Yes.
203. Is not Robertson considerably above the bed of the creek? No; the aneroid barometer shows Robertson to be only about 50 feet above the level of the swamp.
204. The access to Robertson that way is very easy? Yes.
205. Suppose the railway were made to Wild's Meadows, the station there would accommodate the Fitzroy Falls traffic and the traffic from Kangaroo Valley? In speaking of that district I cannot speak with any authority.
206. A separate branch line could be made, if necessary, by the banks of the lake to Robertson? Yes.
207. No engineering difficulties whatever? No. I should like to point out in the case of the route on the north side you have a gradual ascent all the way from Bowral to Robertson, whereas by either of the other two routes you have to rise 190 feet above Robertson and then go down again.
208. By your line for the produce of the district you would have a descending grade all the way? Up and down all the way.
209. Where is the principal rise in the 190 feet? It would be about 12½ miles beyond Bowral.
210. On that route it is quite unavoidable? Yes.
211. *Mr. Humphery.*] What would be the length of the blue line? It would be 14 miles from Bowral to Robertson *via* the northern side of the swamp without crossing the river.
212. What is the length of the other line? Following the green line it would be about 15½ miles.
213. Crossing the river at the Sheepwash? That would be still longer; I should think it would be about 15½ miles.
214. Can you say, approximately, what would be the cost per mile of the blue line? No.
215. Can you give any estimate of the cost of the other line? No.
216. Which, in your opinion, would be the least costly? The blue line from Bowral to Robertson all the way.
217. Would there be an appreciable difference in the cost? I think there would be a considerable difference. It is shorter, it saves a bridge over the river, it involves less excavations, and the gradients are not nearly so heavy.
218. What portion of Kangaloon would be served by the blue line? The whole of Kangaloon.
219. How many miles is it from the Sheepwash to Bowral? It is 5 miles to that station.
220. What distance will that be from Kangaloon? I suppose another 5 miles.
221. How far is the Sheepwash from Burrawang? Close on 5 miles.
222. The Sheepwash is equi-distant from Kangaloon and Bowral? Yes; I should like to point out that if the blue line were constructed some better provision than at present exists would require to be made at the Sheepwash for getting traffic to the station proposed on that plan.
223. Although the blue line beyond the Sheepwash to Kangaloon would be the least expensive line, crossing the river and carrying the line in the direction of Bowral would better serve the traffic? It would better serve the traffic on the south side of the river, not on the north.
224. Where is there likely to be the most traffic? In the Kangaloon district, I think.
225. That will be served fully by the blue line? Yes.
226. *Mr. Garrard.*] Do you think a line from Bowral, by your blue line as far as the Sheepwash, crossing the Sheepwash and joining Bell's line at Wild's Meadows and terminating there—do you think that that line, for the present, will give the largest amount of accommodation to Robertson, Bowral, and Kangaloon if it were determined not to go on to Robertson in any case? Under these circumstances I think it would be the best line.
227. If it were thought to be too costly to extend the line to Robertson and it were proposed to make only a portion of the line, do you think that would be the best? I think so.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Moss Vale to Robertson.

APPENDIX.

A.

PRECIS OF PROCEEDINGS IN RELATION TO THE PROPOSED LIGHT RAILWAY FROM MOSS VALE, BOWRAL, OR BURRADOO, TO ROBERTSON.

THE advocates of the measure of giving to Robertson communication by rail with the main Southern line, at Moss Vale or elsewhere, at first proposed a tramway.

Some time in 1881 a petition was presented to Mr. Secretary Lackey by inhabitants of Moss Vale and surrounding district, praying for such a tramway, representing the productiveness of the land and the isolation of Kangaroo Valley, and pointing out that if a tramway were constructed the heavy expenditure on the main roads would be saved.

Feb, 1881

A deputation also waited upon the same Minister to present a petition from the inhabitants of Burrawang, Wild's Meadow, and Robertson, stating that they (the petitioners) represented an area of 325 square miles of the finest agricultural land in the Colony; that they were 1,200 adult males, occupied chiefly in dairy-farming; that they had farms varying in value from £500 to £5,000 each; that they paid 15s. to 20s. per ton for the conveyance of their produce 10 miles by road, double the charge by rail for the whole distance from Moss Vale to Sydney (86 miles); that the population of the district was 6,200; that the district contained eight public schools (average attendance 400), and the usual public offices; that at Burrawang there was a Farmers' Club, with over 200 members, a Race Club, and an Agricultural Society, ranking fourth or fifth in the Colony; that the mineral resources of the district were rich and abundant, that if a tramway were constructed there would be a great saving in the maintenance of ordinary roads and bridges; and that they were confident not only that a tramway would pay, but that it would add a considerable sum to the general revenue of the country. They therefore prayed for the construction of a tramway from Moss Vale to Robertson and Burrawang, and they estimated the cost of such a line at £25,000, and the annual earnings at £13,539 (up traffic only; down traffic one-third more). They pointed out that the construction of this line would give an impetus to many important industries. Valuable timber, which was now ring barked and destroyed, would be cut up and sent to market, and the great coal-measures existing along the line would be worked, and give employment to the surplus population of Sydney. Moreover, the certainty of access to a market would encourage further settlement.

Mr. Cowdery was instructed to send an engineer to examine the country, and Mr. Halligan was deputed for the duty.

24/4/81

Mr. T. Blencowe wrote to the Minister, suggesting that, if the line *via* Burrawang and Wild's Meadow, as asked for in the petition, were not approved, a line to Wild's Meadow by the lower road might be examined, and a branch from Wild's Meadow to the Cambewarra Road.

The Commissioner minuted, "To be considered at the proper time."

2/5 81

Mr. Halligan reported that he had examined several routes for a tramway. These, however, as the idea of a tramway has been abandoned, need not be described here. Mr. Halligan recommended the adoption of one of these routes, as being easier in grade and more central than any others, although through about  $9\frac{1}{2}$  miles of private land and was a mile longer than the high road. He thus described the route in question—From Moss Vale to point B (on plan); from B along an unused road to C; from C across a paddock to D; and thence by F to Robertson.

28/4/80

Mr. D. T. Smith addressed a letter to the Minister (Mr. Lackey), stating that Burradoo was a far better junction for the Robertson line than Moss Vale. It was a well known fact that when roads were surveyed in this district the land was too heavily timbered to admit of much selection of route, and that the surveyors, to save time, ran their lines over the steepest hills, regardless of grade. If, then, Mr. Halligan based his observations on the theory that the main road must be his line there was no alternative but to make Moss Vale the point of junction, to the marrying of the gradients of the proposed line and waste of public money. Mr. Halligan had been industriously "shepherded" by the Moss Vale people, and he feared that officer's report would be biased by them. He would point out that the route recommended by him (Mr. Smith) was perfectly level—"not a hill to impede nor a cutting to stay the road," while the Moss Vale route was continuous hill and dale from end to end, with grades of 1 in 5 to 1 in 20. By the Burradoo route the route to Sydney would be 5 miles shorter than from Moss Vale, and, in justice to the Upper Mattagong and West Kangaloon people this route ought to be adopted. He had no interest in one line more than another, and sought only "the greatest good to the greatest possible number," and desired also to prevent the waste of public money.

2 1/81

Mr. T. Garrett also forwarded to the Minister a letter which he had received from Mr. T. Blencowe dealing with the question of route, stating that the route over the range through Burrawang having been condemned by the Engineer, the persons who had petitioned wished Mr. Garrett's influence to be used in favour of the route by Wild's Meadow to Robertson on the ground that if constructed on the north side of the range it would be of no service to the district, and, so far as paying went, a complete failure.

9/12/81

A deputation waited on Mr. Secretary Lackey to ask for the construction of a tramway from Moss Vale to Robertson. The Minister said he was not unfavourable to the line, but he could not promise to make it until the result of the Camden tramway experiment had been ascertained.

22/7/82

Mr. Secretary Lackey received a highly influential deputation on the subject of a tramway between Moss Vale and Burrawang. They urged the construction of this line, alleging that it was required to meet the wants of a rich agricultural district, peopled by at least 1,000 farmers.

The Minister admitted the importance of the district, and was sure a line would pay there, but they could not construct it without a vote in Parliament. The route had been explored, and the report of the officer was not unfavourable, but it was very possible the Government might entertain a proposal for a system of light railways, which would be more serviceable than tramways. He had had a conversation with the Engineer-in-Chief, and he found such railways could be constructed for £2,000, £2,500, or £3,000 a mile. He would have a survey made between Moss Vale and Burrawang.

20 11/82

Mr. A. Osborne wrote to the Minister stating that if Kangaroo Valley and Kangaloon (the residents of which were among the original petitioners) were to be accommodated and the present proposal of a line from Moss Vale to Robertson was adhered to, branch lines would be necessary. He would therefore suggest the survey of a through line from Bowral through Kangaloon, crossing the range by a depression between Burrawang and Robertson; thence by Wild's Meadow to the top of Barrengarry mountain. This line would run through the centre of the rich farming lands, bring double the traffic to the railway, be financially a success, and satisfy the whole of the districts concerned. It would, moreover, shorten by 6 or 8 miles the distance to Sydney, whether 80 per cent of the traffic would tend.

3 11/83

The Hon. Secretary of the Burrawang Farmers Club addressed the Minister requesting the fulfilment of a promise said to have been made by Mr. Lackey to have a line surveyed from Moss Vale to Burrawang.

May 1883

The inhabitants of Kangaroo Valley presented a petition to the Minister praying for the construction of a light railway to the top of Barrengarry Mountain. They represented that the population of the valley was over 1,000, and rapidly increasing; that they sent weekly to Sydney large consignments of produce, and if proper means of transit were provided they would send a large supply of milk, that 30 tons of merchandise were received weekly, that the passenger traffic was considerable, and that the timber growing on the Crown land in the vicinity of the line would cover a considerable proportion of the cost.

Mr.

Mr. T. Blencowe addressed the Minister stating that his advocacy of the line originally proposed was based upon the assumption that a tramway following the line of road would be constructed, but as it had been found that tramways were not suited for heavy traffic, and a system of light railways had been adopted in lieu thereof, the question of a better route had to be considered. He would propose a branch line from near Bowral to Kangaloon, thence through the range between Burrawang and Robertson to Wild's Meadow, with the terminus at Barrengarrry Mountain. The first 5 miles of this route would be through good pastoral land devoted to dairy farming, &c., but the chief feature was the immense deposits of iron ore in the range and spurs; the next 4 miles was through thickly populated country to Kangaloon, whence the best dairy produce was sent to Sydney; thence across the Wingearrabee Swamp, where a large fresh-water lake would be formed above the embankment, while below the land was of the best description for dairy purposes. The next 7 miles was through splendid land capable of growing anything suited to a cold climate, and the last 2 miles was poor sandstone country to the Kangaroo Valley Road, on the top of Barrengarrry Mountain. Here (the terminus) a township should be laid out. Near this the mountain was broken down in perpendicular cliffs, and revealed splendid seams of coal. He wished specially to direct attention to the vast mineral wealth on this route, and to the splendid scenery and healthy climate of the district, which would, ere long, make it the favourite summer resort from Sydney. 16/5/83.

As regarded the route from Moss Vale to Robertson, the first 8 miles went through second-class pastoral country sparsely populated, and not capable of contributing much traffic to the railway, the next 8 miles was through splendid land densely populated, as already described in the Bowral route. This (the Moss Vale) route would run between the ranges and accommodate only one-third of the district, and would never pay interest on cost.

The line he suggested was opposed from interested motives, by Moss Vale, which was jealous of Bowral becoming the leading place; by Burrawang, because it took the line from their property, and by Robertson, because it did not place the terminus there. In submitting these remarks, he had only done what he conceived to be a public duty.

The Commissioner, in reply, informed Mr. Blencowe that, prior to the receipt of his letter, instructions had been given to survey a line from Bowral, via the Kangaroo Valley, to Robertson, and that he was glad to see by the valuable information given by Mr. Blencowe that it was more than probable that the survey would result in the adoption of a really good route. 30/5/83.

Mr. Halligan reported that he had made an examination of the country as directed from Bowral to Robertson, via Kangaloon. Several routes were examined by Mr. Halligan, and he describes and illustrates each of these by references to a plan, but as this plan is no longer on the file, it would be impossible to make his descriptions intelligible here. Suffice it to state that he recommends the adoption of route No. 4, which he says would be the easiest to construct, and would meet the requirements of most of the inhabitants. He points out that if a line were made from Moss Vale to Robertson direct, Kangaloon would be left out entirely, and on the other hand that a line from Bowral to Kangaloon would not serve the people of Burrawang, Yarrunga, and Wild's Meadow\*. Mr. Halligan adds that very likely it would be suggested to leave out Robertson, and carry a line to Kangaroo Valley and Barrengarrry Mountain, and he therefore mentions that his instructions were to examine a line from Bowral or Burradoo to Robertson. All the routes examined by him could start from either of those stations. 7/6/83.

\* Does not the route suggested by Mr. Blencowe in his letter of 16/5/83 (*quod vide*) provide for these places? 27/7/83.

Mr. Secretary Wright promised a deputation which waited upon him from Moss Vale, that a survey should be made for a line of railway from that place to Robertson. 27/7/83.

The Commissioner minuted in anticipation of a deputation which was about to attend, that in his opinion, the line should go by the Kangaloon Valley or near it, it being thence that the greater portion of the traffic would come. If the line went direct to Robertson, the Kangaloon Valley would be left out, and if taken by the Kangaloon Valley, Burrawang would be left out. The Commissioner therefore suggested what he termed a compromise by the adoption of a route starting from Bowral, which would in a measure serve all the places, but again in the absence of the plan, it would be impossible to describe the route. 24/7/83.

Does the Commissioner refer to Kangaloon or Kangaroo Valley? They seem to be two distinct localities.—C.A.B.

The Minister received the proposed deputation, and informed them that as a trial survey had been promised from Moss Vale to Robertson, he would feel justified in granting it. 25/1/84.

Another deputation waited on the Minister to urge the same matter, and Mr. Wright thereupon requested the Engineer-in-Chief to send up an officer to examine and report upon the country. Mr. Bell was accordingly deputed to examine the country from Moss Vale to Robertson, via Yarrunga, Wild's Meadow, and Burrawang. 25/1/84.

A deputation waited on Mr. Secretary Wright to ask for a trial survey for a light railway from Wild's Meadow to Barrengarrry Mountain. Wild's Meadow, they explained, was on the line in course of being surveyed from Moss Vale to Robertson, and the Mountain was about 6 miles distant therefrom. There was a considerable population, which would be largely increased if the means of conveyance were afforded, and the traffic would pay a good return upon the outlay. The Minister replied that he would grant the trial survey, but he could not promise that the railway would be made as they would depend upon the nature of the reports received. The experimental light line—that to Camden—had not been a success. 15/5/84.

A deputation from the localities interested waited on Mr. Secretary Dibbs (acting) to advocate the construction of a line either from Moss Vale or Bowral to Robertson. 8/8/84.

The Minister asked if the residents were prepared to give the necessary land, free of cost, to the Government.

The deputation did not approve of the suggestion, and Mr. Dibbs promised to obtain information from the Engineer-in-Chief as to levels, cost, &c., and submit the matter to the Cabinet.

Mr. A. Osborne addressed the Minister on behalf of the inhabitants of Kangaroo Valley, Wild's Meadow, and Yarrunga, with reference to the proposed line from Moss Vale to Robertson, with a branch from Wild's Meadow to the top of Barrengarrry Mountain, reviewing what had taken place, and stating that 5,000 gallons of milk were produced daily, which, if facilities were afforded, would be sent to Sydney; that the soil was specially adapted for the growth of potatoes and vegetables, and fruit of all kinds; that the climate was unsurpassed in New South Wales, and that this, with the scenery, would induce thousands to settle in the district if means of transit were provided. It would be seen, Mr. Osborne continued, that the construction of this line would amply repay the cost, and he trusted there would be no further delay in carrying out the work. 29/8/84.

A deputation from Kangaroo Valley waited on the Minister to advocate the construction of a railway from the Southern line to the top of Barrengarrry Mountain. They asked that this line might be included in the next list of railway proposals. It had been approved by the Stuart Government, and it was due to petty jealousy that it had been defeated. They were sure the line would prove remunerative. As regarded the point of junction they were quite willing to leave that to the Government. The Minister informed the deputation that probably no railway policy would be submitted that session, but he would obtain a report, and at a convenient opportunity submit the matter to his colleagues. 13/8/86.

Mr. Palmer reported that trial surveys had been made from Moss Vale and Bowral to Robertson, and that a branch line had been surveyed from the Moss Vale line to the top of Barrengarrry Mountain, 6 miles, and estimates had been submitted:—

Bowral to Robertson, 15 miles.....	£126,192
Moss Vale to Robertson, 14½ miles .....	106,770

Mr. Garrett, M.P., forwarded to the Minister a letter from Mr. T. Blencowe, in which the latter urged that the Barrengarrry and Robertson line might be included in the list of railways to be submitted to the House. It had, he said, been favourably entertained by past Ministries, and Messrs. Lackey, Wright, Dibbs, and Lyne pronounced it to be one of the most promising lines of any proposed. Mr. Blencowe, after reviewing what had been done in advocacy of the line, proceeded to give particulars of his own consignments to Sydney, but as he did not state the period to which his figures referred, they are valueless as statistics. He added that he could put on the railway 163 tons of milk and 25 tons of fruit and sundries per annum. 18/5/87.

A deputation interviewed Mr. Secretary Sutherland with reference to a railway from Moss Vale or Bowral to Kangaroo Valley. The deputation gave a *resumé* of what had occurred, and the Minister, in reply, intimated that they would have had their railway if the people could have agreed as to the route. He would obtain reports, and give the matter fair consideration. 6/8/87.

In accordance with the Minister's promise, Mr. Inspector Crawford was sent on a mission of inquiry in the district, and his report confirmed what had been before stated as to the extent and fertility of the country, the occupations of the people, &c. He stated that the places concerned are 10 to 15 miles from Moss Vale, with roads almost impassable in wet weather, the charges for carriage being very high in consequence. He estimated the population interested in the Moss Vale route at 6,000 or 7,000, having the usual complement of schools, churches, and public buildings, with Schools of Arts and other evidences of progress and affluence. The capabilities of the country were unlimited, but required transit facilities to develop them. Robertson, on an elevated plateau (2,000 feet), with a healthy climate, was cut off from the sea by the rugged

rugged nature of the country, and its only outlet was by Bowral or Moss Vale. Burrawang was situated on the range of that name, 10 miles from Moss Vale, and near the source of the Wingecarribee Creek. The country was undulating and fertile, and devoted to dairy-farming and grazing. Near by was Wild's Meadow, a tract of country also occupied by dairy-farmers. 3 miles further on was Barrengarry Mountain, with a road having a fall of 1,500 feet into Kangaroo Valley. The latter had two outlets for its produce—(1) by Barrengarry Mountain to Moss Vale, 20 miles; and (2) over the mountains to Broughton Creek (16 miles), the latter being an objectionable route, on account of the many transshipments. By reason of the extent of country opened up, the population served, and the cost of construction, he would give the preference to the Moss Vale route. The argument of the Bowral people that the route should be adopted because it placed Robertson 6 miles nearer Sydney, was valueless, inasmuch as it meant that while we were called upon to construct 14 miles of new line we should only get additional traffic for 8 miles. He estimated the financial result of the working of the line as under:—

Working expenses .....	£2,060 12 0
Interest at *5 per cent. on a capital of †£100,000 .....	5,000 0 0
	7,060 12 0
Estimated revenue from all sources .....	585 15 8
Annual loss .....	£6,474 16 4

The Commissioner did not think Mr. Crawford had made sufficient allowance for the development of traffic by the construction of a railway, but was of opinion that if three times the anticipated traffic were realized, the construction of the line could not be recommended on economic grounds.

Extracts from Inspector Crawford's report were sent to Mr. M'Court, M.L.A., at the request of the latter.

21/10/87. A deputation from Robertson, introduced by Mr. M'Court, waited on the Minister, for the purpose of impugning the accuracy of Mr. Crawford's return of traffic, and obtaining further inquiry. They were prepared, they said, to prove that officer's figures altogether inaccurate and absurd.

The Minister thought it proper to give the persons interested an opportunity of proving their case, and directed that an officer should be sent to the district to collect evidence and verify the statements of the objectors.

26/11/87. Mr. Superintendent Harper was appointed for the purpose to confer with a committee of residents; and after a visit to the district, submitted a report.

Mr. Harper mentioned in emphatic terms the fertility of the district, the beauty of the scenery, and the healthiness of the climate. He stated that after seeing the district he could understand the extravagant estimate formed by the residents of the traffic likely to be developed; and, doubtless, it was capable of great improvement. But the duty confided to him was that of enabling the committee to prove the present traffic, and in this view he arranged for an examination by them and himself of all invoices, way-bills, &c., at Bowral and Moss Vale stations. The examination, which was an exhaustive one, entirely upset the extravagant theory of the residents, and the committee frankly admitted that the figures were unchallengeable. There could be no doubt, however, that Mr. Crawford's estimate, both of goods and passenger traffic was considerably underestimated. As the result of an elaborate calculation he found the present value of the goods traffic to be £600 14s. 3d., which he thought in estimating for a railway might fairly be doubled. With a population of 6,000 or 7,000 persons, and with the attractions presented to visitors by the scenery and climate, it was not unreasonable to expect that at least 5,000 persons per annum would use the line. Taking these in the proportion of 1,500 1st class and 3,500 2nd class fares, and including £180 for the carriage of mails, and a return was shown of £1,071 13s. 4d. The account would then stand,—

Goods traffic .....	£1,201 8 6
Passengers and mails .....	1,071 3 4
Total earnings .....	£2,272 11 10

Notwithstanding this more favorable return, Mr. Harper was of opinion that the construction of a line to Robertson *at present* would add another to the list of non-paying lines. In this opinion Mr. Kircaldie fully concurred.

3/1/88. The Commissioner minuted that there was not much difference between Mr. Crawford's and Mr. Harper's estimate of goods traffic. The former on the basis of present traffic put it at £551, while Mr. Harper, taking the most favorable year the committee could select, brought it out as £601, and this he had doubled, because a railway would be likely to increase the traffic. Mr. Harper again had put down a sum for passenger traffic not based on present traffic, but on anticipated increase due to visitors, who, he assumed, would be attracted by the picturesque beauty of the district. If these somewhat fanciful sources of revenue were developed, the gross earnings would still be £4,000 per annum short of what would be required to make the line a self-supporting one.

13/2/88. Mr. M'Court, M.P., writing to the Minister, hoped the Robertson line would not be overlooked. He was sure a line costing £40,000 or £50,000 would pay well.

6/7/88. An influential deputation waited on Mr. Secretary Sutherland to urge the construction of a light line of railway to Robertson. They wished it referred at once to the Public Works Committee, feeling assured that they could make their case good before the Committee. Mr. M'Court thought that in view of the importance and population of the district, they were entitled to a railway. He was sure that a light line, costing £4,000 or £5,000 a mile would pay handsomely, and he did not fear the result of any inquiry. Mr. Blencowe pointed out that their produce was of such a nature as to require quick transit to a market. Their population was from 1,200 to 1,500 persons. He was satisfied that Mr. Harper had under-estimated the traffic. For instance, he had made no mention of milk, which would be an important item. Mr. Harper had put down the goods freight at 11d. and 1s. 3d. per ton, but they were paying 15s. to 20s. per ton, and an average of 8s. per ton would have enabled Mr. Harper to add £1,000 to his estimate. He (Mr. Blencowe) believed the line could be made to pay 3 per cent. on a capital of £70,000.

Mr. Sutherland informed the deputation that he believed this branch would pay as a light line, and if the plans were ready he would submit them to the Cabinet.

24/9/88. The chairman of public meeting held at Yarrunga requested the Minister—in terms of a resolution carried at such meeting—to have a deviation surveyed to meet the requirements of Kangaroo Valley and Fitzroy Falls traffic.

5/10/88. A deputation, with the same object in view, waited on the Minister. They pointed out that the line, as proposed, passed some distance from the Falls and was not convenient for Kangaroo Valley, and if the traffic of these places was provided for the line would have a better chance of paying. There was always considerable passenger traffic to the Falls, which would be greatly increased if railway facilities were given. Again, Kangaroo Valley, one of the most fertile districts in the Colony, sent its produce by sea from Broughton's Creek; but if the line were made it would all go by rail. Large quantities of goods would be sent away if the line were taken to the top of the mountain. They were satisfied to rest their claim on its merits, and would like an officer to be sent to report on the deviation.

Mr. Sutherland informed the deputation that from his knowledge of the localities he was quite prepared to comply with their very reasonable request, and would depute an officer accordingly.

Mr. Stuart was instructed to undertake this duty, and to place himself in communication with Mr. Alderman Hart, who would show him the localities.

It may suffice here to say that Mr. Stuart reported the deviation to be practicable, but that to reach the top of the Barrengarry Mountain a branch line would be necessary, and it would lengthen the present about 3½ miles.

28/10/88. The President of the Burrawang Farmers' Club forwarded to the Minister copy of resolutions carried at a meeting of the Club affirming—(1) that the district, from its position, population, and resources is entitled to a railway; (2) that the nature of its produce renders speedy access to Sydney a necessity; (3) that the produce of the district would be quadrupled if a railway were made, and the land would be worked up to its full capacity; (4) that the salubrity of the climate and the beauty of the scenery would attract visitors in large numbers; and (5) that Surveyor Wilkins' line be adopted as the most easily constructed, and the most direct, and the best suited for the accommodation of the majority of the people.

Mr. Thompson, the land valuer, paid a visit of inspection and inquiry to the district, and his report will be laid before the Committee.

The Railway Commissioners also reported on the line.

C.A.B., 6/2/90.

B.

## B.

## RAILWAY COMMISSIONERS' REPORT.

Office of the Railway Commissioners of New South Wales, 29 December, 1888.

Proposed line of light Railway, Moss Vale to Robertson, 14 miles 20 chains.

In accordance with the provisions of the "Public Works Act, 1888," section 13, we beg to report as under :—

*Cost of Construction—*

The Engineer-in-Chief estimates to cost of constructing this line at (this is exclusive of land and compensation) .....	£84,300
---	---------

*Annual Cost—*

Interest at 3½ per cent. on capital.....	2,950
Expense of working line (two trains per day each way), Permanent-way and traffic expenses .....	3,627
Total annual cost .....	<u>£6,577</u>

*Traffic Estimate—*

Goods traffic now passing through Bowral and Moss Vale to and from Wild's Meadow and Robertson Districts .....	2,504 tons.
Value to branch .....	£465
Live stock.....	115

*Passenger Traffic—*

Allowing for each adult in the district making two double journeys each year, and each child one double journey, which is an exceedingly high average for an agricultural district, value of traffic to the branch would be .....	1,075
Mails and parcels.....	188

Total annual traffic .....	£1,843
----------------------------	--------

It will be seen that the traffic would have to develop exceedingly before working expenses could be covered, and the district through which the line passes for a considerable part of its course is not of such a character as to enable such a change to take place rapidly.

The district around Robertson itself is very rich, and if it were devoted more to the growth of fruit and vegetables a much greater traffic could be developed, and so later on perhaps justify the making of a branch line.

The Common seal of the Railway Commissioners of New South Wales has been hereunto affixed by the Railway Commissioners in the presence of,—	E. M. G. EDDY,	(L.S.)
	Chief Commissioner.	
	W. M. FEHON,	(L.S.)
D. VERNON.	Commissioner.	
	CHARLES OLIVER,	(L.S.)
	Commissioner.	

## C.

## OFFICIAL DESCRIPTION OF THE PROPOSED RAILWAY.

Line from Moss Vale to Robertson.

Length, 14 miles 20 chains. Estimated cost of a light single line, £84,900, exclusive of cost of land and compensation, or £5,953 per mile.

THIS proposed branch railway leaves the Great Southern Line at 85 miles 60 chains, at the southern end of the Moss Vale railway station, and proceeds in a south-easterly and north-easterly direction, terminating at Yarrunga-street, in the village of Robertson, being a distance from Sydney of 100 miles, crossing White's Creek at 86½ miles; passing through the parishes of Bong Bong, Yarrunga, and Yarrawa, county of Camden, and the district of Wilde's Meadow; from 89 to 90 miles, running parallel to Fitzroy Falls and Shoalhaven Road at a distance of about 10 chains; crossing the Yarrunga and Wilde's Meadow Road at 93 miles; thence in a north-easterly direction to the terminus, running the latter portion of the way along the southern side of the road from Moss Vale and Burrawang, and along the south side of Congewoi-street, crossing West Wallungunda and Caalong Streets,—being a distance of 14 miles 20 chains.

January, 1889.

## D.

## DETAILS OF ESTIMATED COST OF PROPOSED RAILWAY.

Proposed Railway from Moss Vale to Robertson.

Estimated cost of constructing a single line of railway (exclusive of cost of land and compensation).

Length of main line, 14 miles 20 chains; length of sidings, 67½ chains. Total, 15 miles 7½ chains.

Class of Work.	Estimated Cost of Works of each Class.		Total Cost.

Acting Engineer-in-Chief.

## E.

## REPORT ON ROUTES FOR PROPOSED RAILWAY, BOWRAL OR MOSS VALE TO ROBERTSON.

[Ordered by the Legislative Assembly to be printed, 22 November, 1888]

Sir,

Trial Survey Office, Railway Department, Sydney, 12 March, 1884.

Instruction

On the 26th February I received instructions from the Engineer in Charge of Surveys to proceed to Moss Vale, examine the district towards Robertson, and report upon the most suitable route for a railway connecting Robertson with the Great Southern Railway.

Having made the examination, and devoted considerable time to inspecting the districts to be served by the proposed railway, I have the honor to report as follows—

Description of country.

The township of Robertson, about 14 miles east of Moss Vale, lies on an elevated plateau, and is approached from the Southern Railway at Moss Vale and Bowral by the Burrawang and Kangaloon Ranges, between which lie the Wingecarribee Swamp and the Bong Bong River. These two ranges are covered with extensive tracts of rich chocolate soil, eminently adapted for dairy farming, and this good land extends 3 or 4 miles past Robertson, gradually getting poorer, however. Around Robertson settlement is not so advanced as in the more westerly parts of the district.

Opposite the west end of the Wingecarribee Swamp the ranges die out about 5 or 6 miles from the Southern Railway, and are succeeded by grazing country.

On the Burrawang Range, 10 miles from Moss Vale, lies the private township of Burrawang, through which the line already surveyed from Bowral to Robertson passes. Three-quarters of a mile southward, at the foot of the hill, is the head of Joe Wild's Meadows, formerly a swamp fed by the Meadows Creek from the southern slope of the Burrawang Range. This meadow is now occupied by dairy farms; it runs out towards the Fitzroy Waterfall, a favourite resort of pleasure-seekers, and is crossed at its lower end by the road from Moss Vale to Shoalhaven and Broughton Creek, and is bounded on east and west by fertile ranges. The Shoalhaven Road, 3 miles after passing Wild's Meadows, descends the Barrengarry Mountain by a road 4 miles in length and falling more than 1,500 feet into the Kangaroo Valley.

This is the most important district in the neighbourhood, and comprises Kangaroo, Barrengarry, Broger's, and Camberwarra Creeks, and the district round Bendiela. Up each of these creeks are large tracts of fertile land, a great portion of which has been cleared of brush and dense scrub, and is occupied by dairy farms of from 40 to 100 acres and upwards. The tenure is largely freehold, and the land is already selected on the hillsides up to the foot of the cliffs. The climate is very mild, and the settlers could thus keep up the supply of produce throughout the winter, when the upland pastures were unproductive.

Between Wild's Meadows and Moss Vale is the parish of Yarrunga, containing the settlement of Manchester Square. The land is in small farms, but the soil is not so fertile as in the districts already described.

Description of route existing survey.

There is already a railway-line surveyed direct from Bowral to Robertson. Starting from the Great Southern Railway near the former place it runs in a south-easterly direction for 2½ miles, where it crosses the Bong Bong River in a flat half-a-mile across, and subject to floods upwards of 6 feet deep. Continuing in the same direction through pastoral land it crosses the Moss Vale and Robertson Road about 7½ miles from Bowral, and begins to ascend the Burrawang Range, keeping on the north side of the ridge until at 11½ miles it crosses a saddle, whence it continues on the south side of the road and ridge to near Robertson, which it enters from the south-west. It passes through Burrawang township at 10 miles, and the summit is reached at 12½ miles from Bowral.

The districts it serves are the Burrawang Range, Robertson, and through it East Kangaloon, while the West Kangaloon people would meet it about 6 miles from Bowral. The Wild's Meadows settlers would have to either travel uphill to Burrawang (at 10 miles), or go out to meet the line on the level, at the crossing of the Moss Vale Road, 7 miles from Bowral. The Kangaroo Valley and Manchester Square traffic would be entirely cut off.

Accommodation of districts

The various districts would be accommodated as shown hereunder.

Kangaloon

Kangaloon is completely cut off by Wingecarribee Swamp from communication with Burrawang direct; East Kangaloon has, therefore, an outlet by Robertson, the country falling in that direction, while West Kangaloon, sloping towards Bowral, would be accommodated only at the "Sheepwash" by the line as now surveyed; but considering the short distance saved, and the extra mileage to Bowral, it is doubtful whether the western settlers would avail themselves of the branch line.

In deciding therefore upon the route for a railway to Robertson, Kangaloon interests must be set aside, as nothing less than a railway through Kangaloon would serve the country properly, and the district is too rough and too circumscribed to justify the construction of a line.

The Burrawang Range is best served by the surveyed line, but the district is too small of itself to make a railway pay, there being actually only half-a-mile to a mile of land between the surveyed line and Wingecarribee Swamp, the virtual boundary on the north, whereas all the other districts lie to the south of the line, and to reach it would have to come uphill.

A line by Wild's Meadows would give the settlers  $\frac{2}{3}$  of a mile more to carry their produce, but as this is downhill, and as no part of the Burrawang District would be 2 miles from such a line they would have nothing whatever to complain of.

Their objections to such a line resolve themselves into a fear that the present township would be hurt, and that stores would have to be brought  $\frac{2}{3}$  of a mile uphill.

Of Wild's Meadows and the districts between Burrawang Hill and the Shoalhaven (Kangaroo Valley) Road, the centre is about  $2\frac{1}{2}$  miles from the surveyed line, and the carriage is uphill, whereas the proposed line would not be more than 2 miles from the centre, and would meet the traffic on the flat.

At present there are two modes of exit from Kangaroo Valley by which produce is brought out. The one is *via* Barrengarry Mountain to Moss Vale, about 20 miles from the valley township, and the other is over the mountains to Broughton Creek, about 16 miles.

At Broughton Creek the exports, consisting of butter, eggs, fowls, pigs, and cedar are shipped on a small steamer for Shoalhaven, where they are again transhipped to the coasting steamers. By this route there is great loss and deterioration, as after the heavy journey up and down the mountain the produce is much knocked about, and delayed in the several transshipments. One item of produce, viz., calves, cannot be transported either *via* Broughton Creek or Moss Vale, and farmers have consequently to destroy large numbers which might otherwise be a source of profit.

In coming out of the valley *via* Moss Vale there is only one hill to climb, but the distance is such that the double journey cannot be performed in one day. The settlers in the valley were unanimous in stating that their wants would be well satisfied by any line that came sufficiently near the top of the hill on the flat, so that each man could take out his produce by his own vehicle and return to the valley the same day.

This would be accomplished by a line at the upper end of Wild's Meadows, but the valley traffic could not be counted upon if, in addition to the long carriage up from Barrengarry, the carts had to climb another hill at the end. It is a matter for consideration how much of the traffic would be diverted from such a line by the completion of the Illawarra Line to Shoalhaven, but so important is the valley traffic that it might even be advisable to lengthen the proposed line by going so far down Wild's Meadows in order to bring it nearer to the Valley Road, and also to accommodate visitors to the Fitzroy Falls, which at holiday times are visited by great numbers of people.

One of the largest landowners in the valley has at present to devote a large part of his land to fattening cattle, whereas were there better facilities for getting to market he would lay it out in dairy farms. There is always a great amount of clearing going on, which will greatly increase the traffic in the district as the land is brought into use.

The Yarrunga and Manchester Square settlers would be accommodated only by a line from Moss Vale *via* Wild's Meadows.

There are three practicable routes other than the line at present surveyed; they would unite before reaching Wild's Meadows, which would be passed on the level ground, they would have easier gradients and a considerably lower summit level than the present line—

- 1st. Leaving Bowral by the line already surveyed, and following it for 7 miles, then bearing to the south so as to get on to the southern side of the Burrawang Range on E. Shipley's section of 378 acres, then keeping up to the head of Kelly's Creek through Stagg's 237 acres to water reserve where Meadows Creek crosses Wild's Meadows Road; keeping thence on the slope of Burrawang Range up the Meadows Creek to the saddle on William Hanrahan's land at head of the creek; thence in to Robertson nearly on the line of the existing survey.
- 2nd. Starting from Austermere, on the Great Southern Railway, keeping round the bend of the Bong Bong River, crossing the western boundary of Throsby's 4,000 acres, about 30 chains from the southern corner; thence straight to meet the first proposed line in Shipley's 378 acres; thence *via* top of Wild's Meadows to Robertson as before.
- 3rd. Starting from the Great Southern Railway, 20 or 30 chains to south of Moss Vale Station, and keeping up White's Creek; thence bearing eastwards through the 1,000 acres, originally Chas. Throsby's, along the southern side of the watershed separating the Bong Bong basin from that of the Meryla to a point about a mile to the north of Yarrunga School, where the selections of Messrs. T. Seery, Bath, and Hayter adjoin; thence keeping up by Kelly's Creek and joining the first proposed route between Shipley's and Stagg's land, whence it is continued *via* Wild's Meadows to Robertson as previously described.

The three proposed routes coinciding from near Shipley's 378 acres to Robertson the advantages of that portion over the surveyed route are:—It is more in the centre of the district, and from that part whence the line is diverted the traffic is downhill. The rise does not commence until after leaving Wild's Meadows, and the gradients up to Robertson are easier, the summit level being nearly 100 feet lower than on the present survey. There is a good permanent supply of water in the Meadows Creek.

- 1st. Of the portions of the proposed routes before they unite, the advantages of the first running on the surveyed line to Bowral are that it will save 6 miles of carriage on Sydney traffic over a line starting from Moss Vale, and it will partially serve West Kangaloon. The disadvantages are the scantiness of the population, and the liability of the Bong Bong River to floods.
- 2nd. The second route starting from Austermere will avoid the Bong Bong River entirely, and will save 2 miles on the Sydney traffic over the Moss Vale route. On the other hand the junction is away from a township, and the population for the first 8 miles from the Southern Railway is scattered.
- 3rd. The line to Moss Vale has the advantage of joining the main line near the township, which at present is the chief place in the district, and it also serves the Yarrunga residents. It is carried for some distance on the watershed, and thus avoids gullies and creeks. The only disadvantage is that the distance towards Sydney is 6 miles longer than *via* Bowral.

It therefore appears that the most payable line would be one from Robertson down the south side of the Burrawang Range, past Wild's Meadows, and that the most suitable junction would be at Moss Vale, unless the saving in mileage on the other routes would override other considerations. It would be necessary to open a road along the side of Wild's Meadows to enable the Kangaloon Valley traffic to come from the head of the mountain to the railway on the level, as the present road runs on the top of a range.

The lengths of all the routes do not differ greatly, but on the new proposals the heavy work commences on leaving Wild's Meadows; and it is worthy of consideration whether the line should be constructed to that point in the first instance, leaving its extension to Robertson to a future time. The drawback to such a course would be that it would very greatly retard the progress of East Kangaloon.

I have, &c.,  
WM. REID BELL.

I have attached to Mr. Bell's report portion of a county map on which I have shown the line already surveyed from Bowral to Robertson and the alternative routes that have been suggested and examined by Mr. Bell. It appears from this report that a line from Moss Vale to Robertson would pass through the most populated part of the district, and I think a trial survey of this route might be made, to compare with the route from Bowral. I do not see any necessity for surveying the intermediate routes, as I imagine the point to be eventually decided will be whether this line is to leave the Southern Railway at Bowral or at Moss Vale.—H.P., 14/3/84. The Engineer-in-Chief. Forwarded for the information of the Minister for Works.—J.W. (*per* W.H.Q.), 20/3/84. Under Secretary, B.C. Submitted, 21/3/84.—J.R. I approve of Mr. Palmer's suggestion that a trial survey be made from Moss Vale to Robertson.—F.A.W., 22/3/84. Mr. Palmer.—W.H.Q., 25/3/84. Instructions given to Mr. Bell to proceed with this survey without delay.—H.P., 26/3/84.

## F.

## REPORT BY MR. J. B. THOMPSON, LAND VALUER, ON PROPOSED RAILWAY EXTENSION FROM MOSS VALE TO ROBERTSON.

Department of Public Works, Valuation Branch, Sydney, 27 September, 1889.

In compliance with your instructions of 16/8/89, I have now the honor to submit a report on the proposed railway extension from Moss Vale to Robertson. 1. As to the character of the country on and near the proposed line. 2. The nature of settlement, and the principal industries of the district. 3. Respecting the traffic which is likely to be developed by the construction of this line; and 4. As to the character of the country and its attractions as a resort for tourists.

1. The character of the country on and near the proposed line:—

The country for a distance of about 6 miles from Moss Vale is of variable quality, most of it being open, forest, well-grassed, but light, sandy soil, with patches of good agricultural land on the rises, and some black flats. Thence to within about 1 mile of Burrawang, a distance of about 2½ miles, the country gradually improves, until at the point mentioned it becomes entirely volcanic, with chocolate-coloured soil of great depth and extraordinary fertility.

This volcanic eruption covers an extensive area, approximately about 10 miles from north to south and about 8 miles from east to west, or an area of over 50,000 acres, nearly the whole of which is of the very best description. The volcanic district now referred to has many striking characteristics. It is a plateau, within about 10 miles of the ocean, overlying the coal-measures, at an elevation of about 2,500 feet. Its surface is very irregular, as it is intersected by numerous ranges, with deep valleys and water-courses intervening. Many of the ranges are steep, with extensive outcrops of loose basaltic boulders on their summits and many of their slopes, but all fertile and well grassed. The volcanic country is sharply defined, and, except on the north, it is surrounded by sandstone country, which on the west and south forms a belt or fringe of a width varying from 1 to 3 miles, dividing it from the precipitous cliffs which hem in the fertile Kangaroo Valley on the west, and which fall towards Jamberoo and Albion Park on the south. The only approach to this district from the direction of the coast available for wheel traffic are the long and steep ascents of Barrengarry Mountain, from Kangaroo Valley, and Jamberoo Mountain, from Kiama. As might be expected from the great elevation of this district, and its proximity to the ocean, it has a most salubrious climate and a copious and regular annual rainfall. The most striking feature of the district, however, is, I think, its indigenous vegetation, notwithstanding its height above sea level, and its cold winters. It was originally covered, both on hill tops and valleys, with a forest of gigantic trees, with as dense an undergrowth of shrubs, creepers, and innumerable tree-ferns as I have ever seen in the coast brushes. The district has now been mostly cleared and sown with artificial grasses, which succeed admirably. The character of the country and its attractions as a resort for tourists I shall explain under another head.

2. The nature of settlement and the principal industries of the district:—

The district is almost wholly occupied by small farmers, whose principal pursuit is dairy-farming. There are seven or eight butter factories at work, and a couple of bacon factories, all of which turn out considerable quantities of produce.

3. Respecting the traffic, which is likely to be developed by the construction of this line.

There is a practically unlimited area of first rate agricultural soil, much of which would undoubtedly be brought under cultivation were there easy access to the Sydney market—the present rate of carriage from 15s. to 20s. per ton from Robertson to Moss Vale being a complete barrier to the conveyance of bulky produce. There would also be large quantities of sawn timber taken to market were there a railway, as the high rate of dray carriage leaves but little margin for profit to the mill owners.

4. As to the character of the country and its attractions as a resort for tourists.

This district is not only intrinsically valuable, but it is surrounded by some of the finest scenery to be found in the Colony. The Fitzroy, Belmore, Carrington, or Kangaroo River Falls are magnificent beyond description. I am firmly convinced, if easily accessible, this district would attract more tourists than the Blue Mountains, as it has every advantage of scenery and climate possessed by the latter, with others peculiar to itself, such as the local production of farm, garden, orchard, and dairy produce in abundance, and if the best descriptions, which is no small attraction to those who might visit the district as a sanatorium. I regard the certain and speedy recognition of the superiority of this district as a health and pleasure resort as a source of large revenue to the railway, if constructed. I should mention that the Falls are within a radius of 4 miles of Robertson, which may be regarded as the centre of the district.

The Under Secretary, Public Works, Sydney.

J. B. THOMPSON,  
Land Valuer.

## G.

## REPORT BY MR. DISTRICT-ENGINEER HUTCHINSON ON THE ROUTE OF THE PROPOSED RAILWAY FROM BOWRAL TO ROBERTSON.

Department of Public Works, Railway Construction Branch, Engineer-in-Chief's Office,  
Sydney, 5 March, 1890.

*Bowral to Robertson Railway.*

I FORWARD herewith for the information of the Parliamentary Standing Committee, a copy of Mr. District-Engineer Hutchinson's report on his examination of the route of the above proposed Railway.  
The Secretary Parliamentary Standing Committee, Public Works.

H. DEANE.

Railway Construction Department, Sydney, 3 March, 1890.

*Bowral to Robertson Railway.*

In compliance with your instructions I examined the country between Bowral and Robertson, for the purpose of ascertaining if a line of railway could be constructed *via* the Sheep-wash, to connect these two towns, and I have marked on the accompanying parish map, in blue and green, the two lines which I examined.

I consider that the point selected for the junction of the trial survey with the Great Southern Railway is the best, although by deviating about 5 or 6 chains closer to Bowral, a slightly better line could be obtained; but as some valuable property would have to be resumed, I do not think any saving would be effected.

For the first mile and a half the trial survey could be adopted; at this point the line would deviate as shown in blue, continuing on the south side of the main road for the next 3½ miles; thence close along the north bank of the river to the Sheep-wash; thence along the edge of the Wingecarribee swamp for 6 miles; the line would then cross the creek at the head of the swamp, and would follow the south bank of the Cualong Creek into Robertson.

On this route the gradients would be very favourable, the maximum being about 1 in 60; the earthworks would also be light, except at two places, one close to the "sheep-wash," and the other about 10 miles; at these places the range runs close down to the river and the swamps, and a good deal of excavation would be required to take the railway line past. Should this route be adopted, a siding at 5 miles would catch all the upper Mittagong traffic, and also, I believe, a good deal of the traffic from the south side of the river, and a siding at 10½ miles would be the best place for the Kangaloon district.

The other line would deviate from the trial survey at the same point as the blue one, and would follow the direction shown by green line in plan, passing over level country, and joining the trial survey again at 7½ miles. From that point to Robertson the lines as surveyed would be adopted, but in a few places improvements could be made, principally at 9½ miles, where a cutting 60 feet deep is shown, but which could be considerably reduced by keeping the line a few chains to the north; also at 13½ miles, when by twisting the line a little to the south, the cutting shown on section could be avoided.

By crossing the Wingecarribee River as shown on green line, instead of at the place selected for the trial line, the length of the bridge could be reduced quite one-half.

The earthworks on this line would be more expensive than on the blue line, and the gradients would not be so favourable. Should this line be adopted, a siding of about 6½ miles, near the "sheep-wash," would be the most convenient for the traffic on the north side of the river.

I have shown in black a line leaving the blue line at 5¾ miles, and joining the green line at about the same mileage; this line would cross the Wingecarribee River at a very oblique angle, but the length of the bridge required would be less than where the green line crosses the river.

When examining the various lines, I was accompanied by Messrs. Alcorn, Kennedy, and Brennan. These gentlemen are very old residents of the district, and gave me all the information and assistance in their power, and they informed me that the Wingecarribee River and swamp had not been in such a flooded state as it was at the time of my visit since 1870, and therefore I could not have examined the country at a more favourable time for railway construction purposes.

To the acting Engineer-in-Chief.

W. HUTCHINSON.

18th July, 1888.

JOHN WHITTON,  
Engineer.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM MOSS VALE TO ROBERTSON.

REPORT.

THE Sectional Committee appointed to "inspect, take evidence, and report upon the proposed line of railway from Moss Vale to Robertson," beg to report as follows:—

The Committee left Sydney on the afternoon of Friday, the 7th instant, and opened the inquiry in the Moss Vale Court-house on Saturday morning, taking evidence for three hours. They then proceeded by coach through Burrawang to Robertson, where they took evidence that evening in the School of Arts. The inquiry was resumed on the Monday following, and continued from 9 o'clock in the morning until 1 o'clock p.m. The Committee then drove from Robertson, through Kangaloon, to Bowral, and took evidence at the Town Hall there for two hours in the evening. Altogether thirty-two witnesses were examined.

The road for the first portion of the line, from Moss Vale towards Burrawang, is thus described by Mr. J. B. Thompson:—"The country, for a distance of about 6 miles from Moss Vale, is of variable quality, most of it being open forest, well grazed, but light sandy soil, with patches of good agricultural land on the rises, and some black flats. Thence to within about 1 mile of Burrawang, a distance of about  $2\frac{1}{2}$  miles, the country gradually improves, until at the point mentioned it becomes gradually volcanic, a chocolate, rich soil of great depth and extraordinary fertility."

This description the inspection of the route by the Committee substantially confirmed. The purpose of the railway is to reach and serve the area of volcanic soil, which is about 50,000 acres in extent. This area is roughly divided into two portions by the Wingecarribee Swamp. The proposed line runs on the southern side of that swamp, and fails therefore to give any accommodation to what is called West Kangaloon and Kangaloon proper.

For the first 10 miles west of Moss Vale little or no traffic can be anticipated. The prospects of traffic arise from the development of the productiveness of the volcanic area. At the present time that land is mostly devoted to dairying, and as a dairying district its existing traffic would not pay the working expenses of a railway. The Sectional Committee failed to obtain any evidence that destroyed the accuracy of Mr. Harper's calculations as taken from the railway books, but there are some small items of revenue which those books do not disclose.

The district is very largely limited to dairying because the cost of road carriage makes it precarious to send anything but dairy produce to Sydney. The cost of road carriage to Moss Vale and Bowral respectively is twice or three times as much as the cost of carriage from either of those stations to Sydney, and it is to reduce the cost of this road carriage that the railway is asked for. Road metal abounds in the district, and the cost of making a mile of road is stated by the Road Superintendent to be £800, the annual cost of maintenance being about £10 a mile. With the exception of about 20 miles the roads are now made, and they stand the wear of the traffic even in bad weather. The carriage of potatoes, even on such good roads, ranges from 10s. to £1 5s. a ton, according to the distance—the higher rate being almost a prohibitory one. Indeed, so great is the difference between road and train rates that the settlers in this district could well afford to pay on the proposed branch line an advance of 50 per cent. on the trunk line rates, and yet be immensely advantaged. Several witnesses stated that the inhabitants would be willing to submit to these charges rather than not have the railway. This is a case in which the principle of differential rates could be applied equitably, and with the consent of those who would pay them, and as the line is non-competitive the system would probably work successfully.

The

The country is singularly well adapted for the production of potatoes, and the Committee were informed that as much as 5,000 acres of land are available for the cultivation of this product. Evidence was also given to show that the land and the climate are equally suitable for the growth of market-garden produce, and that an area of about 5,000 acres was suitable for this industry. Already one enterprising settler is sending cabbages to the Sydney market at a profit, and there is every reason to believe that if better and cheaper means of transit were provided a considerable quantity of the land would be used for the cultivation of vegetables, and that the district would become a mountain market garden for Sydney. It was also shown that a large part of the district is admirably adapted for growing such fruits as would bear carriage to Sydney, but that at present the cost of the road transit offers little inducement for orchard cultivation.

Coal underlies the sandstone formation, and in one place a thin seam of kerosene shale has been discovered. No land has been taken up for mining purposes, nor are there any indications that a large coal traffic would pass over the line. Chrome of good quality, which, it was stated, could be obtained in abundance in the district, was shown to the Sectional Committee. The proposed line will go within a few miles of the Fitzroy Waterfalls, and will be available to some extent to settlers in the Kangaroo Valley, two-thirds of whose produce at present goes to Moss Vale.

It will be seen from these statements that the prospect of the line becoming remunerative depends entirely upon certain expected developments taking place. These developments are all highly probable, but there is no certainty about them, while the line, from the great quantity of cutting and embankment, will cost about £6,000 a mile, a large sum to tap a district of the area indicated.

The Sectional Committee, however, are disposed to take a very liberal view of the future. The district is so charming, the soil so rich, the land so well divided, and has been so industriously cleared; the climate is so beautiful, the rainfall so good, and the whole locality so likely to attract fresh enterprise and population, that the Committee, whilst unable to recommend immediately the large expenditure proposed, consider that subject to the differential rate heretofore suggested, it would be reasonable to do something towards relieving the inhabitants of the disabilities under which they now labour.

The first 10 miles of the proposed line runs through comparatively easy country, and would be the cheapest part of the work, the great difficulties and cost of construction being concentrated on the remaining 7 miles. The Committee therefore suggest that for the present only that part of the project submitted to their inquiry be carried out which would cover the making of a line to a point at or near Wild's Meadows,—the point selected to be the most suitable for catching the traffic to and from Fitzroy Falls and from Kangaroo Valley. This would not entail an expenditure of more than £50,000, a sum which might be fairly adventured in view of the resources of the district. A branch line to the point indicated would shorten the road carriage to all those who can make use of the railway by at least 10 miles, but as before pointed out the settlers at West Kangaloon and Kangaloon proper will receive no benefit from this railway. In order therefore to do some justice to them as well as to increase the traffic on the line, the Sectional Committee suggests that before any decision is arrived at by the Standing Committee a survey should be made of a line from Bowral to the Sheepwash, and thence to the nearest point on Bell's line. If a line by this route can be carried out economically the West Kangaloon people will reach the railway at the Sheepwash, the East Kangaloon people will get to it at Robertson, and the whole district will be more or less accommodated.

ANDREW GARRAN,  
Chairman.

12th February, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

RAILWAY FROM MOSS VALE TO ROBERTSON.

SATURDAY, 8 FEBRUARY, 1890.

[The Sectional Committee met at the Court-house, Moss Vale.]

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Moss Vale to Robertson.

Mr. Edmund Milne, railway station-master, sworn, and examined:—

1. *Chairman.*] What position do you occupy in the township? I am the railway station-master at Moss Vale. Mr. E. Milne.  
8 Feb., 1890.
2. How long have you been station-master here? Ten months.
3. Then you have not had an opportunity to make up a complete return of the traffic for the past twelve months? I have not. I was not aware that I should be called upon to do that.
4. Have you any subordinates who have been longer in the office than yourself? Yes.
5. Are they acquainted with the figures? Yes; I could obtain a rough estimate for you.
6. We want to know the quantity and the nature of the traffic from the direction in which the proposed railway would go? That traffic comprises agricultural produce of all kinds, such as butter, bacon, and eggs. We get cabbages from the Robertson district and various other kinds of produce.
7. Is most of it consigned to Sydney? Yes; that is our principal market.
8. Do the cabbages go to Sydney? Yes.
9. Is the traffic uniform in quantity, or is it heavier in some seasons than in others? It is continuous all the year round; but it depends a great deal on the seasons. Last month was a heavy month, owing to the excellent season we have had. I might also state, as far as the traffic to Moss Vale is concerned, that it comes principally from the Robertson district.
10. Robertson is the chief point from which you receive it? Not the township of Robertson, but the country to Robertson.
11. Does traffic come in from Wild's Meadows? Yes.
12. And from Kangaroo Valley? Yes, we get a fair traffic from there.
13. Do you know whether the traffic from Kangaroo Valley is equal to or larger than that from Robertson? A railway from here to Robertson would carry more traffic between here and Robertson than comes from the Kangaroo Valley.
14. Do you know the route of the proposed line? No.
15. Suppose this railway were made, where do you think the Kangaroo Valley traffic would strike the line? It should strike it somewhere between Burrawang and Robertson.
16. Eight or nine miles from Moss Vale? Yes.
17. How far would it be from Kangaroo Valley to that station? I could not say.
18. Do you think that the Kangaroo Valley people, after travelling the larger part of the journey by road, would avail themselves of the railway? I do. The advantage would be sufficiently great to induce them to do so. The roads along here are very heavy in wet weather, and I do not think the farmers would travel further on them than they were obliged to. They would catch the railway as soon as they could.
19. Has there been a large traffic in milk to Sydney since you have been here? From and around Moss Vale the new traffic is showing a decided increase, but I do not think that that would affect the Robertson traffic.
20. There used to be a large milk traffic at one time? Not while I have been here.
21. Does much milk come from Burrawang? No.
22. The dairy produce is principally butter? Yes, and bacon.
23. Have you any knowledge of the cost of carriage by road in this district? I have not, I think that in most cases the teams are employed in connection with the butter factories by private contract.
24. Can you state the annual tonnage that comes in from the district that will be served by the railway? No, I could not. I believe I should be within bounds in saying that 80 per cent. of our outward traffic comes from that district.

- Mr. E. Milne. 25. What you send to Sydney from Moss Vale comes from the district that would be served by this railway? Yes. If we include the Yurunga traffic it will be more than 80 per cent.  
 8 Feb., 1890. 26. What is the second class rate for the carriage of produce to Sydney? I think it is £1 9s. 6d. per ton.  
 27. Most of the traffic from this district is of that class? Yes; I can get you the exact rate.

Mr. Henry William Taylor, auctioneer, sworn, and examined:—

- Mr. 28. *Chairman.*] What are you? I am an auctioneer.  
 H. W. Taylor. 29. As an auctioneer are you well acquainted with the value of the produce of this district? Fairly well.  
 8 Feb., 1890. 30. Has that value been increasing or decreasing during the last few years? Increasing.  
 31. In quantity or in price? In quantity, and prices are more reasonable now than they were on account of the good seasons.  
 32. The farmers have more produce to sell, but they did not get such a high price for it as they do in dry seasons? Exactly.  
 33. But they make up in quantity what they lose in the price? Yes.  
 34. In the district through which the proposed line will go are cultivation and the use of the ground extending? The line starts from here and goes right through Yurunga, which is a dairying and farming district. Potatoes are grown between there and Wild's Meadows and the produce all along the route is increasing.  
 35. The line keeps to the south of the main road all the way? Yes.  
 36. How far from Moss Vale is it before you get into the rich land? The land is good from the start at Moss Vale for 3 or 4 miles; then there is a barren strip till you get into Yurunga. The distance to Wild's Meadows is ten miles and four of that is good land at the start.  
 37. When you say good country do you mean that chocolate-coloured soil? There is some of the best land in the world going through Mr. Gilchrist's and Mr. Throsby's properties for a distance of between 5 and 6 miles.  
 38. Mr. Thompson, the land valuer, in his report says:—"The country, for a distance of about 6 miles from Moss Vale, is of variable quality most of it being open forest with grass with light sandy soil and patches of good agricultural land on the rises and some black tracks. Then to within about 1 mile of Burrawang, a distance of about 2½ miles, the country gradually improves until, at the point mentioned, it becomes entirely volcanic, with a chocolate rich soil of great depth and extraordinary fertility."—Do you agree with that? Yes.  
 39. It is not what you call scrub land? No.  
 40. Not until you get about 7 miles out of Moss Vale? 10 miles; you would get very little scrub land before you get to Wild's Meadows. You touch it at Burrawang.  
 41. Is that 10 miles from here? Yes.  
 42. That is 10 miles out of 14? Yes.  
 43. And the best land lies beyond the 10 miles; and we should have to extend the line 10 miles before we could tap this rich chocolate scrub land? Yes.  
 44. And how much is there? I could not tell you. There would be a place on the route where tourists will leave the train for the waterfall, which will be a great source of attraction.  
 45. The line as laid out does not go close to the falls? No; it goes to the left.  
 46. It goes to richer country? Yes; but Wild's Meadows is not above a mile and a half from the falls—there will be a great passenger traffic to the falls.  
 47. You know where the line is laid out? Yes.  
 48. Which is the nearest point of the falls? Brcsnhan's place.  
 49. Would take the line for the first part of the journey, then travel the remainder by road? Yes, they would.  
 50. According to the map it is 3 or 4 miles to the falls—if it were 3 miles or more do you think tourists make use of the line.  
 51. You think that a station ought to be put at Wild's Meadows which would suit the Kangaroo Valley people? Yes.  
 52. That would accommodate the Wild's Meadows people also? Yes; and the visitors to the waterfalls.  
 53. And it would be the station at which the Kangaroo Valley traffic would reach the line? Yes.  
 54. How far from Kangaroo Valley? To the top of the mountain and about 4 or 5 miles from Wild's Meadows. From the mountain down to the Meadows is 2 or 3 miles. It will be between 7 and 8 miles from Wild's Meadows to the Kangaroo River, and the river is 2 miles down the other side of Barrengarry.  
 55. Taking the Kangaroo people as a whole they would have a journey of about 10 miles to the Wild's Meadows station? Yes.  
 56. And that station would suit them? Yes.  
 57. And you think that it would catch that traffic? I am certain of it.  
 58. How long have you been residing in the district? Fifty years.  
 59. And you saw the rise of the milk traffic? Yes.  
 60. How long is it since it ceased? It has not ceased at all; a large number of factories have been started, and the milk is being made into butter.  
 61. I mean the sending of the milk to Sydney? The milk trade with Sydney is falling off through the establishment of the factories and partly through the town Companies getting their milk from the Illawarra district, one of the principal reasons being the heavy cost of cartage.  
 62. What does it cost per mile to cart the milk? Something like 10s. a ton.  
 63. And about 30s. from Moss Vale to Sydney? Yes.  
 64. It takes one third of the cost to get it to the Station? Yes that has been the great stumbling block.  
 65. What is the proportion in weight of butter from a ton of milk? One third is butter.  
 66. Then this transformation of the business from milk to butter should reduce the cost to Sydney by two thirds? I do not think so, if facilities were afforded for transit the trade would increase enormously.  
 67. But if you send your produce as butter instead of as milk it will only cost you the same rate per ton? There would be a falling off in the cost to the producer.  
 68. And are the farms being as fully worked as they were when the milk was going to Sydney? They are not.

Mr.  
H. W. Taylor.  
8 Feb., 1890.

68. Why not? Because the factories do not take the whole of the milk, a lot of it goes to waste.
69. Then they only take certain quantities? There are certain agreements between the factories and the milk producers, the factories will not take anything like all the milk that the farmers can produce.
70. Are they co-operative factories? They are, and there is a loss to the producer.
71. Is the land which is held by private owners mostly cleared? Portions of it are cleared and a larger proportion of it would be cleared if the settlers had better means of transit.
72. Do you mean one fourth more? Yes, nearly.
73. What area belonging to the Government is there remaining to be sold and cleared? I think that the best of the Government land is of medium quality, there are thousands of acres within reach of the proposed railway, there are large timber reserves.
74. What is the area? I could not tell; it is very large.
75. If that land was sold as special areas what upset price would it reach? Land in Robertson has been fetching from £14 to £26 an acre.
76. That is cleared land? Yes improved.
77. I am speaking of the reserves? You can put down the lowest price as an average of £4 an acre.
78. The bulk of the unsold Crown lands would fetch that? Yes.
79. *Mr. Garrard.*] How many butter factories are there in the district? Four.
80. Where are they? There is one at Wild's Meadows a co-operative factory, and another co-operative factory at Barrengarry.
81. Does the produce of the Barrengarry factory come to Moss Vale? Yes, there are one or two factories in Robertson.
82. Do you think that if this line were constructed there would be a very large increase in the productiveness of the district? I do.
83. To the extent of one fourth, one half, or what? I think one fourth would be a reasonable estimate.
84. The Commissioners have stated that it will take £6,500 a year to pay the annual interest on the outlay and the working expenses of the line, and that the present traffic will produce a revenue of only £1,843, that does not look like paying, does it? There is this to be taken into consideration that that estimate must include only the dairy produce. The farmers can grow thousands of tons of potatoes.
85. But if they went into farming would not that reduce the revenue from the dairy produce? No; there is plenty of land for both.
86. If the line were made, and there is an increase of one-fourth in the dairying line, what do you estimate would be the quantity of the agricultural products? It must be enormous. At present there is very little agriculture; it would probably double itself.
87. Do all these people bring their produce into Moss Vale now? I do not know; I fancy that some go to Bowral.
88. And would if this line were made? Certainly not.
89. By going to Bowral would they not have 6 miles less of main line haulage? Yes, they would have that.
90. What portion of the community who now go to Bowral would the line serve? The people at Kangaloon.
91. Would the line serve them? It would serve the whole of East Kangaloon.
92. Is that a small area? It is an area that can be improved.
93. Has not the use of the milk for making butter decreased the earnings of the railway here? I do not think so; I think that you will find that the earnings of the railway have been on the increase.
94. You told us that one-third was butter as against two-thirds milk, is not that a striking off of two-thirds of the traffic? I said that the quantity produced would be one-third.
95. If the district has gone into that line of business is there not so much less to carry? You are right there; but the farmers would go back to the milk business if they had the means of transit.
96. Do you think that is likely, when milk is supplied from a district nearer to the metropolis? Not to compete with the Wingecarribee district, which is second only to the Illawarra district for milk.
97. Do you think that fruit could be grown here? Yes.
98. Is any fruit grown here? Yes, all over the district, Mr. Lackey and several others are starting orchards.
99. That produce would be for only one part of the year? Yes, there are minerals, a vast amount of coal all through the barren ground.
100. Is it likely that that coal can be profitably worked when there are coal-measures near to the metropolis? They are buying coal now to take into Burrawang from Mittagong.
101. What is the coal being taken to Burrawang for? For the butter factories—they have to make steam.
102. Are they taking coal from Mittagong to Burrawang? Yes, it shows that there is a demand for coal even now, and there would be a greater demand if there were better means of transit.
103. I have mentioned that the interest on the outlay for the construction of the line, and the working expenses will amount to £6,500 a year, whilst the Commissioners estimate that the revenue will be only £1,843, do you think that the country, under those circumstances, would be justified in making this railway? I do.
104. At that enormous loss to the general taxpayer? I do not believe there will be any loss; I believe the line will pay 4 per cent.
105. How long do you think it would be before the railway would earn £6,500 a year? About three years.
106. Then that district would have to go ahead? It will go ahead.
107. *Mr. Dowel.*] You are a very old resident of the district? Yes.
108. Do you know the route of the line? I do.
109. What localities within a radius of 10 miles will be served by the construction of the railway? There is Meryla, the whole of Yurunga, the Waterfall district, Barrengarry, Wild's Meadows, Burrawang, the Bung Bung River district, the Robertson district, East Kangaloon, the head of the swamp, all along the top of the mountains as you go down towards Jamberoo.
110. Does any of the Kangaroo Valley traffic go to Broughton Creek? Yes, and to Nowra.
111. If this railway were constructed do you think that that produce would be brought to the line? I am certain of it; we have had deputations time after time to the Minister on the subject, and the farmers have

- Mr. H. W. Taylor.  
8 Feb., 1890.
- have pledged themselves to bring the traffic to the railway. We sent in a petition bearing over 1,500 signatures four or five years ago.
112. Is there likely to be any timber trade developed if the line is constructed? There are enormous quantities of timber which will be available if the Government will cancel the reserves.
113. You think that if the reserves were cancelled this line would develop a timber trade? Yes, a large trade.
114. What kinds of timber are there in the district? Beech, yellow jacket, black butt, and various other woods. There is also stringy bark and grey gum.
115. Have you seen this timber? Yes.
116. Is it of good quality? Yes. There is in this district some of the finest timber in the world.
117. You have stated that the district could grow fruit; does it grow vegetables well? Yes, wonderfully well. A farm at Burrawang sends a couple of tons of vegetables a week to Sydney.
118. You said something about potatoes being very prolific? Yes; this district is equal to Warnambool for potatoes.
119. Can you say what quantity the land will produce? 25 tons per acre.
120. That is a great crop? It is a fact that the crop is produced in the Robertson district.
121. You have spoken about the coal-measures in the district; have you tested the quality of the thickness of the seams? No; various applications have been made by people wanting to take up the land for coal-mining; there are enormous quantities of coal and kerosene shale.
122. Where is there any shale about here proved? Joadja lies a few miles from Berrima; it is a continuation of the same country right through to the coast; all those measures run out to the coast.
123. But because the coal does that it does not follow that the shale does? It has been proved at Fitzroy where shale has been got.
124. What is the thickness? The shale is 2 or 3 feet thick and the coal 14 feet thick. You can get coal cropping out of the mountains.
125. The shale has been found in one place? Only in one place.
126. Would this district produce fruit at different seasons from those in which fruit is produced at Camden? The only difference is that this district is later than the Camden district.
127. How much later? From six weeks to two months. Peaches were ripe at Camden a month ago, but they are not ripe here yet.
128. This district could supply the market then a month later? Yes.
129. But it is not a better district than the Camden district? Camden is rather warm, the climate in this district is more moist.

---

Frederick Robertson Wilshire, Esq., Police Magistrate, sworn, and examined:—

- F. R. Wilshire, Esq.  
8 Feb., 1890.
130. *Chairman.*] What position do you occupy? I hold the office of Police Magistrate in this district and various other offices.
131. How long have you resided here? About eighteen years.
132. Do you know the district through which this railway will run? Yes, I have a very good knowledge of it though I have not traversed the line.
133. Do you concur in the evidence which has already been given to the effect that when the line gets 9 or 10 miles out of Moss Vale it comes to very rich soil? I should say about 11 or 12 miles out, the rich district commences in the neighbourhood of Burrawang, it is a district of extraordinary richness.
134. It is the cream of the district? That part of the country is the cream of the Colony; I do not think that anything could be better.
135. Do you know how much there is of it? It is overlaid by trap rock. I don't know the area.
136. It is the disintegration of the Trap Rock? Yes, I think it is the most recent trap formation to be found in the colony. The volcanic ashes are quite visible in places in cuttings, &c., on the road.
137. Can you trace the dyke itself? Yes.
138. Does it run north or south? No; in all directions it is one mass of upheavals forming knolls and hills.
139. Have you any idea of the extent of this rich land which would be reached by the railway? I have not looked it up, it is a narrow strip.
140. What would be about the length and the breadth of the district which the railway would serve? It would touch the Wingecarribee swamp on the northern side and the whole of the Macquarie Pass district up to the coast range.
141. And I suppose the eastern portion of Kangaloon? Yes.
142. How far west from Robertson do you think the East Kangaloon people would go? 3 or 4 miles.
143. You have no idea of the number of the population in the district to be served? I have not.
144. You could not tell us the area? I could not.
145. You would not pretend to form a judgment as to the tonnage of the traffic that would come in from that district? No.
146. Is there a very industrious population settled there? Yes, very industrious indeed.
147. All well-to-do settlers? All have made money; some have made small fortunes, some are absolutely rich.
148. And they succeeded in getting rich even without a railway? Yes.
149. Have the roads in the district been improved? The main road from Moss Vale to Robertson has improved, considerable sums have been spent on it.
150. Do you go to Robertson to hold a Court? I do.
151. You are frequently on the road? Yes.
152. Is the road in fair condition? It is a very good road.
153. Is there plenty of blue metal in the district? It is all blue metal after you pass Burrawang.
154. There is no want of road-making material? No; there is any quantity of it.
155. From what you have seen, do you think that fruit-growing here is payable? I do not think that attention has been devoted to it; I do not think that much has been made out of it. The country is capable of growing English fruits to any extent.
156. Dairying pays best at present? Yes; but it is only recently that dairying has been so profitable.
157. If it is profitable now would it be still more so if a railway were made? I am sure it would be.

158. If dairying is more profitable than an orchard, without a railway, it would be so with a railway would it not? I should not think so; I think that dairying will give way to orcharding.
159. You are acquainted with the trade in milk which was established by the Fresh Food and Ice Company? Yes.
160. They have transferred their trade to the Illawarra district? I have heard something about it.
161. Do you think that the milk trade with Sydney would revive in competition with the Illawarra district if the line were made? The line would foster the trade very largely; I did not know that it was extinct; I do not think it is; the railway would be a great help to it.
162. The scrub district was originally taken up by farmers from the Illawarra district? The Robertson district is one of the best; it is one of the coolest districts that I ever was in.
163. Is not the winter rather cold there? It is rather better for that.
164. Does the grass grow? In that part of the country the cold does not make much difference. The English grasses which are grown there stand the cold better than the native grasses; there are other parts of the district somewhat similar. In the dry time, particularly during the drought of 1888, it was surprising to see the difference between the grass at Robertson and the grass in other places. There the grass was green while everywhere else it was burnt up.
165. *Mr. Garrard.*] Do your duties take you to Bowral? I am often at Bowral, but not on duty.
166. To what do you attribute the extraordinary growth of Bowral as compared with Moss Vale;—is it because it is the best centre to which to send produce for the market? I do not think so; I think sentiment has to do with it. People take a fancy to a place and you cannot account for it.
167. There are many country residences there belonging to Sydney people? Yes.
168. Is it not that it is more convenient to send produce there? No; I think Moss Vale is more central.
169. From your knowledge of the district, you think that Moss Vale is the best place from which the line to Robertson should start? I could not say that exactly; I would rather leave that an open question.
170. Where do you think would be the best place? Without knowing the exact route I could not answer that question.
171. The primary object of the railway is to give Robertson access to a market;—would it not be better for the line to commence from Bowral, so as to save the 6 miles of haulage on the main line between Bowral and Moss Vale? It would seem so, but I think that the Robertson people will be the best judges of that.
172. If the line were made from Bowral to Robertson, would it pass through a smaller area of rich land than it would if it went from Moss Vale to Robertson? I think it would; I fancy that a line from here would be more accessible to the general public.
173. That it would serve a better country with a larger population? It would be more convenient for the Kangaroo Valley traffic.
174. Then the Kangaroo Valley people would reach the line at some point like Wild's Meadows? Yes.
175. Has there been a very large development of the products in the district during your residence there? Yes, there has been an extraordinary development during the seventeen or eighteen years that I have been here.
176. Do you think that there would be a larger increase still if the railway were made? Undoubtedly there would be.
177. Do you know what will be the interest on the expenditure and the working expenses of the line? I do not.
178. The annual interest on the outlay will be £2,950 and the working expenses will amount to £3,627, making a total of £6,577, and, after very careful consideration of the possible traffic from the district, the Commissioners estimate that the total revenue from the line will be £1,843 a year;—would there not be a large loss? Yes.
179. Do you think that that traffic would be likely to be exceeded? I have not given the matter a single thought.
180. Do you think that there would be such a large increase in the traffic in the immediate future as would soon overtake this large expenditure? I think there would be; the district is a most productive one; I know from what I have heard that there is a very large traffic, and this line will take the whole of the traffic from the Robertson district.
181. You have good roads and all the beautiful scenery, and the Fitzroy Falls are within 15 or 16 miles of this centre;—should not that be sufficient? No; it is different from having a railway running right out to this point.
182. The railway would not run to Fitzroy Falls? But there is just as fine scenery at Robertson, Belmore, and Kangaroo Valley.
183. You anticipate that if the railway is made there will be a very large increase in the products grown and in the passenger traffic? Yes.
184. As that is problematical, and seeing that a large annual loss is involved, do you think the country would be justified in incurring this expenditure? If the loss is likely to be kept up for any number of years I should say that it would not, but I consider that the loss would soon be recovered.
185. How many years do you think it would be? If the district progresses at the same rate as that at which it has progressed since I have known it, it would not take long. The whole of the population has been settled within the last eighteen years; Bowral has grown up in seven years, Moss Vale in ten years. I should say that the loss would not extend over more than four or six years at the outside.

Mr. Edmund Milne, Railway Station-master, sworn, and further examined:—

186. *Chairman.*] Can you give the figures of the actual traffic? I cannot.
187. Have you checked the railway rate which you gave us this morning? Yes; it is 30s. per ton from here to Darling Harbour. 30s. is the first-class rate. For small lots under 1 ton we charge at the rate of 37s. a ton.
188. If a farmer sends less he pays a higher rate? Yes, if he sends less than 16 cwt.
189. Are there not persons who accumulate the traffic and send it in bulk? No, with the exception of butter factories.
190. Your customers are the farmers themselves? Yes.

*Mr. E. Milne.*  
8 Feb., 1890.

- Mr. E. Milne. 191. Are there many farmers who send less than a ton? Yes; with the exception of the butter from the factories the produce is carried in lots of less than a ton, and is charged for at the rate of 37s. a ton.  
 8 Feb., 1890. 192. If they were to combine together could they send their produce at a cheaper rate? Yes.  
 193. *Mr. Dowel.*] Did you say that you furnished the particulars on which the Railway Commissioners based their estimate of the traffic? No; it was done long before I came here. I suppose that the estimate of £1,843 a year would be based upon the actual mileage carried on the route of the proposed new line. At 30s. a ton it should largely exceed the Commissioners' estimate.  
 194. There is a great difference between your figures and those of the Commissioners;—your estimate is 1,815 tons 1 cwt.? Yes.  
 195. How do you account for the discrepancy? Where they get 1 ton at Bowral we get 15 tons. Bowral only serves the two Kangaloons. I know this from the names of the people who send goods away.  
 196. *Mr. Garrard.*] Have you seen the railway returns, or are you only supposing that because certain districts would be served such and such will be the case? It is nothing to me; I know that teams come here from Kangaroo Valley, Burrawang, and Robertson every week.  
 197. *Mr. Dowel.*] What would be the value of this 1,350 tons to this branch line? The branch line would be 15 miles in length, and it would have to be estimated at the 15 miles rate.  
 198. Can you not tell us what it would be? I cannot. The whole of that tonnage would not be carried 15 miles. It would come on to the line at various points—some at Robertson, some at Wild's Meadows, some at Burrawang, and so on.

Mr. John Hadden, carrier, sworn, and examined:—

- Mr. J. Hadden. 199. *Chairman.*] How long have you been in this district? About eighteen years.  
 8 Feb., 1890. 200. Have you been a farmer in the district? No; I have been a butcher and a carrier on the road.  
 201. You have been a carrier for the settlers? I have.  
 202. Do you know whether any carrying is done now? Yes; large teams are employed—six and eight horse teams.  
 203. What is the carriage from the Robertson district to Moss Vale? That depends upon the produce. A person who has large quantities will arrange with the carrier to take it at so much per ton. The ordinary rate would be about £1 a ton.  
 204. What does the carriage of timber cost per ton? There is none carried.  
 205. What is the cost of the carriage of butter? That is much higher. In my time we used to carry it at 1s. 6d. a cask, the weight of the casks being from 80 to 112 lb. The tonnage is now 15s. by contract from Yurunga.  
 206. How much from Robertson? From 18s. to £1.  
 207. Has the cost of carriage diminished since the roads were improved? Yes; I commenced with a two-horse dray, and afterwards had a six-horse waggon. They are now driving eight-horse teams, but they have much larger waggons. My waggon was estimated to carry 2½ tons, but I should think the waggons of the present carriers will carry 4 tons.  
 208. Then they try the road more severely? Yes.  
 209. So as the roadmaker makes the road good they cut it up more? They put more weight on it.  
 210. Are the roads pretty good here now? Yes; very good on the whole.  
 211. And as the roads have improved between here and Robertson, has the carriage improved? Yes.  
 212. And is it cheaper? I should think a little dearer; the traffic is not so plentiful; they have to pick it up as they go along the road. In my time there were several places at which we picked up the traffic, and we had a separate rate for each place of picking up; there were no factories when I was carrying.  
 213. We have been told that the charge is 30s. a ton from Moss Vale to Sydney, and that it costs one-third of that amount to get the produce into Moss Vale? Quite so.  
 214. Would that charge be reduced if there was a railway? I should think so.  
 215. Then the farmers would have to take their produce to the nearest station? Yes.  
 216. Then the road carriage would be 3 or 4 miles? Some would be 5 miles; the Pheasants' Ground people would have to carry their produce from 5 to 10 miles.  
 217. Do you think it would reduce their rates by one half? I think it would.  
 218. If the railway were made the charge would not be more than 4s. or 5s. per ton would it? Not more.  
 219. It is now 40s. a ton to get their goods to Sydney, but if a railway were made the charge would be reduced to 35s. a ton? I should think so.  
 220. You know the rate very well? Yes.  
 221. Do you agree with the statement that the line will have to go 8 or 10 miles from Moss Vale before it gets to the chocolate country? Somewhere about that. You travel on good land, however, before you get there.  
 222. How many farmers would put their produce on the railway? I could not tell.  
 223. How many did you collect from when you were carrying? From about 40.  
 224. I suppose that number is about quadrupled now? Quite.  
 225. Would there be 160? I should think there would be over 200; they had not the opportunities at that time that they have got since of sending their stuff to market.  
 226. How many tons a year will each farmer send a year off his land? That is more than I can say.  
 227. You could not say how much produce per acre is sent to the station? No, they do not crop regularly; as a rule they do not grow produce; they are more for dairying; it suits them better.  
 228. Would dairying suit them better if they had better facilities for reaching the market? No doubt they would continue dairying.  
 229. Does nothing pay them better? I do not think so.  
 230. Would growing potatoes pay them better? I do not know whether it would or not; I do not think they would give up dairying for that.  
 231. Would fruit-growing pay them better? No one has given attention to fruit-growing; they have bought trees, but they have not carefully cultivated orchards.  
 232. Would market-gardening pay them? There are some who make it pay.  
 233. Have they any knowledge of that business at Bowral? They have larger scope and better land there.

234. Looking at the cultivable land between here and Sydney, do you think that people so far away as Robertson will be able to hold their own in competition with others? With the advantage of the seasons they may be able to do it. All through last season they were sending away cabbages when other people could not raise them at all.

235. You think that market-gardening pays well? Yes, it pays one firm and they are sticking to it.

236. Taking the district as a whole, you think that if additional accommodation were provided for the carriage of produce dairying would still be the industry of the district? I feel sure of it.

237. And we have to look to dairy produce for the traffic of the railway? Yes.

238. You know something of the traffic to the falls? I do.

239. How many in a year go there? I could not say—thousands.

240. And if the railway were made would the nearest station be at Wild's Meadows? That would be the nearest point for tourists.

241. How far is that from the falls? From 3 to 5 miles.

242. And if a railway were made there, there would be vehicles at Wild's Meadows station? Most likely there would be.

243. And the railway would get all that traffic? Yes.

244. And it would be a large traffic? I am satisfied that it would be.

245. You have heard something of the rival lines;—it is suggested that there should be one from Bowral, taking West Kangaloon, crossing at the Sheep Wash, or near there, crossing the ridge on the southern side, and passing through Wild's Meadows to Robertson? Yes.

246. Would that, on the whole, accommodate the large number of people? We have never considered that it would. We have always considered that the line marked out by Mr. Bell would be the weight-carrying line, as it would serve the Yurrunga people.

247. Would the Bowral line serve the West Kangaloon people? It is not likely to do so.

248. Do you agree with the statement that the East Kangaloon people would be within 3 miles of Robertson? Yes.

249. And whom else would it serve? There are a good many scattered round the district in the vicinity of the Macquarie Pass.

250. Then the concentrated traffic would be on the eastern and western sides and the end of the swamp? Yes.

251. And the district falling into the Kangaroo Valley? Yes.

252. That contains the really rich land? Yes.

253. Can there be much traffic between here and Burrawang? Not for a distance of some 5 or 6 miles.

254. This district is a favourite resort in summer, is it not? Yes.

255. And for 6 miles from here we may expect gentlemen's residences to increase? Yes.

256. That would increase the main traffic, but it would not particularly affect the branch lines? No.

257. The branch line would be for the produce and the tourists? Yes.

258. *Mr. Dowel.*] Have you explored the country much within a radius of 10 miles of the proposed railway? I have travelled over the whole district from time to time.

259. Do you know pretty well every part of the district that would be served by the railway? Yes.

260. You do not anticipate that country more than 10 miles from the line would be served by the railway? Only one particular point—the Pheasant Ground people and part of the Kangaroo Valley.

261. Is the whole of the country pretty fairly settled on? Yes.

262. What is the size of the holdings? I should think they would average from 150 to 200 acres. There are some larger, some farmers having commenced with 320 acres, and when people have shifted out of the district others have bought their land.

263. Are there signs of their holdings being permanent? There is every sign of it.

264. They are not likely to sell out to the pastoralists? No.

265. Have they laid down their land in English grasses? I think all the land has been sown with English grasses.

266. Do you know any large timber reserves in the district? Yes; there are some very large belts of timber.

267. Do you think there would be a traffic in timber on the railway? That is a thing which I could not speak positively upon. There are some exporters of timber who have got large forests.

268. Have you been over those parts of the country where the shale and coal are found? It is considered that the whole of the country holds kerosene and coal.

269. Have you seen any of it? No; but I have heard of it frequently.

Valentine John Stuart Blomfield, Esq., A.M. Inst., C.E., Road Superintendent, sworn, and examined:—

270. *Chairman.*] What position do you hold? I am road superintendent here.

271. Is the road from here to Kangaroo Valley in your district, and also from here to Robertson and Bowral, and the cross-roads? Yes. I have prepared a statement of the different roads, and I will put it in as my evidence. The road votes in the vicinity of Robertson were as follows:—Moss Vale to Kiama Municipality, 16 miles, £800; Moss Vale, *via* Fitzroy Falls, to Kangaroo Valley, 23 miles, £1,150; Fitzroy Falls, *via* Belmore Falls, to Rossgall Road, 8 miles, £400; Kiama Road to Wild's Meadows, 3 miles, £150; Burrawang to Robertson Road, 2 miles, £100; Robertson to Underhill (Rossgall Road), under trustees, 5 miles, £50; Jamberoo Road to Fountain Dale Public School, under trustees, 6 miles, £90; Robertson to Macquarie Pass, 3 miles, £120; Kangaloon Road to Macquarie Pass, 12 miles, £480; Alcorn's Store to Macquarie Pass Road, 1 mile, £50; Bowral to Robertson, 17 miles, £85;—Total, £3,475. All these votes, with the exception of the two under Trustees, have been reduced this year by 22 per cent.

272. Do you mean that the amount is £3,475 with the reduction? No, before the reduction; all these votes have been reduced this year.

273. You take the whole of the road to Kiama? No. But as far as the Kiama Municipality, 5 miles on the other side of Robertson.

274. You take all the descent? Only as far as the head of the Kangaroo River, about 5 miles on the western side of the Jamberoo Mountain.

Mr.  
J. Hadden.  
8 Feb., 1890.

V. J. S.  
Blomfield,  
Esq.,  
A.M.I.C.E.  
8 Feb., 1890.

V. J. S.  
Blomfield,  
Esq.,  
A.M.I.C.E.  
8 Feb., 1890.

275. The principal sum is spent on the road to the Kangaroo Valley? There was a large sum spent on the road to Kiama, but owing to a large part of the road coming within the municipality, it is not now so much, only the actual mileage outside the municipality being given.
276. How many miles of this line from here to Kangaroo Valley would be available for the Robertson and the Wild's Meadows people altogether? The Wild's Meadows people do not use that road to come to Moss Vale, they use the road through Burrawang.
277. The district which the railway is to serve, is served also by your road from Moss Vale to Kiama? Yes. The ordinary traffic goes on that road now.
278. What is the condition of that road now? It is in very good order, nearly all of it is metalled. There are only two or three gaps that are not metalled.
279. Do carriers cut up the road much? No, except on the unmetalled parts.
280. Have you a good supply of metal? Very good; the hills are full of metal.
281. What does it cost to make a mile of road in the first instance? About £800.
282. And what is the cost for annual maintenance, keeping the road in good condition? I think about £10 a mile.
283. In wet weather is the road pretty fair? It is very good in wet weather.
284. It sustains the traffic? Yes.
285. How much tonnage do the people bring in in one waggon? I have not particularly noticed that, but I daresay that they take from 3 to 5 tons.
286. Having got your roads into good order, all that you have to do now is to maintain them? Of course we are continuing to make the unmetalled portions.
287. Have you a cross-road made for the use of the Kangaroo Valley people to strike the Wild's Meadows station? They would be able to come up the Barrengarry Mountain, and then up the road to Wild's Meadows, which is only just formed, and is traversable in dry weather.
288. How much a mile will you have to spend on that road? There are 6 or 8 miles of it not metalled, and that will cost about £800 a mile.
289. How many miles is it from the top of the mountain to Wild's Meadows station? About 7 miles.
290. How many miles is it from the top of the mountain to Kangaroo Valley? 4 miles down the mountain 2 from there into the village.
291. And what is the distance by the ordinary road from Kangaroo Valley to Moss Vale? 23 miles.
292. It is 17 miles to Wild's Meadows, as against 23 into Moss Vale? Yes; it is very probable that most of the Kangaroo Valley traffic will go to Broughton Creek.
293. Have they not to go up a very steep mountain that way? Yes, but ultimately that very narrow neck of land will have to be pierced.
294. Can you tell what length of tunnel it would require? I cannot, but it could not be more than 1 mile.
295. A mile of tunnel and a road through it? No, not a road—a tramway into the Kangaroo Valley.
296. What is the distance from Broughton Creek? It is 6 miles from Broughton Creek to the valley.
297. Then there is no chance of the traffic coming to Moss Vale? Not the slightest.
298. It was stated in evidence in Sydney that Robertson was the practical limit of any line in this direction, do you believe that? No; if the country were explored I think it would be possible not only to have a line from Robertson through Bottle Forest to the Illawarra Line, near Waterfall, but also a very useful line from Robertson to Jervis Bay.
299. By what route? By way of Nowra.
300. Have you ever yourself travelled on the top of the ridge from Robertson to Waterfall? I have not been along the whole of it, but I have been on the top of the Jamberoo Mountain; I have been in the Macquarie Pass, and as far as one can see from looking up it appears to be feasible. I think a *prima facie* case can be made out of it, but speaking as an engineer, I should not like to commit myself without making a further examination of the country.
301. You do not know whether the mountain is pierced by deep gorges? I do not think it is at all likely.
302. It may be undulating? If there are undulations the line might be carried round the sides.
303. How far have you been from Robertson on the edge of that cliff? I have only touched it in particular places. I have been at the top of the Macquarie Pass, and at the top of the Bulli Pass, but I have never been past Mount Keira.
304. On the road from Robertson to Nowra what descent would you have to make? About 1,800 feet, by following the main range until you come to the top of the Jamberoo Mountain, and from there to Nowra there is a descent of about 1,800 feet. There is a dividing-range between the watershed of the Broger's Creek and the Kangaroo Valley on the one side and the watershed of the Broughton Creek on the other side, which I think is worth exploring. Of course I could not state whether or not the thing were possible without a survey, but from the appearance of the country I should think it would be quite possible to take a line from the top of Jamberoo Mountain through Nowra and joining the proposed Illawarra Line on to Jervis Bay. The whole of that country shows signs of coal, and a large area of it has already been taken up in mineral selections. Near the top of the Jamberoo Mountain signs of coal are showing in the cuttings going down from the top of the mountain towards Kiama. There is another point in reference to this line, it would be a most beautiful line, there would be a great tourist traffic through it, and it would bring the whole of the country to the west of Moss Vale 40 miles nearer the coast.
305. So far as the coal is concerned, could not that be got better by adits into the hill from the lower line? I daresay it could.
306. If we had to deal with it from this side we should have to sink shafts and then carry the coal to Sydney? There is some of the coal showing near the top of Jamberoo Mountain, and it is generally believed that the whole of that range which divides the watersheds of the coast and the Kangaroo River is full of coal.
307. But the fact that we have the rich land here is a sign of the disturbance that has taken place since the coal was deposited? Yes.
308. And the extent to which the coal has been tossed about by that upthrow is undetermined? Yes; the whole strata seem to have been thrown about in great confusion.
309. Close to the area of the disturbance the coal seems to have been too much disturbed to be workable? I have not sufficient knowledge of the working of coal-seams to express an opinion upon that point.
310. You have not geologically examined the area of this disturbance? I have not.

V. J. S.  
Blomfield,  
Esq.,  
A.M.I.C.E.  
8 Feb., 1890.

311. Can you trace the line of trap-dykes in the district? Yes; the whole of this district from the top of Cambewarra Mountain by the Nowra Road to Bowral is full of basalt thrown up.
312. It is full of dykes? Yes.
313. It has been a very much disturbed district? Yes.
314. Wherever you have the dykes you have the basalt on the top and this rich soil? Yes. Especially about Robertson, Kangaloon, Burrawang, and Cambewarra Mountain, the soil about Robertson is some of the richest that I ever saw.
315. You cannot say anything as to the commercial value of the coal? No, I have passed over the ranges, but that country is not properly in my district. I have never thoroughly explored the line, but I should like to do so.
316. But your notion of the profitableness of the line would depend on the coal traffic and the tourist traffic? Yes; and it would bring the whole of the country to the west of Moss Vale 40 miles nearer to the coast.
317. But, allowing for the edge of the cliff, would only draw the traffic from one side? Yes. I do not think that, with the exception of the fruit traffic, there would be much locally; but the line would take a large amount of traffic from the back country.
318. *Mr. Garrard.*] What does blue metal cost per cubic yard? We use the 2½ inch gauge, and it costs 7s. a cubic yard.
319. Where do you reside? At Moss Vale.
320. Do you think that the line proposed would accommodate the largest possible number of people, and reach the largest area of land? Yes, it goes right through the most populous part of the district between here and Robertson where there are the greatest number of small holdings.
321. Do you not think that a line joining the main southern line at Bowral and going by the Wingecarribee swamp would serve the people well? I dare say it would suit the Robertson people as well as this; but, looking at its probable future extension, I should say that this was the better line.
322. Extension to where? Its extension to Bottle Forest or to Nowra. It would tap the whole of the country from Moss Vale through Goulburn to Hay.
323. Looking at it regardless of its possible extension to Bottle Forest or Nowra, which do you consider the better place for the line to start from—Moss Vale or Bowral? I do not know the actual difference between the two surveys.
324. There is not much difference except that it would save 6 miles journey on the main line if the railway went to Bowral? Moss Vale is the most central portion of the whole district, but I daresay that the line to Bowral would suit the people of Robertson just as well.
325. To what do you attribute the phenomenal growth of Bowral as compared with Moss Vale? Simply to the visitors.
326. Not to its being the centre of the district? No; Moss Vale is the centre.
327. Have you any particular interest in Moss Vale? None whatever.
328. Would a line from Bowral to Robertson, *via* East Kangaloon, leave out Wild's Meadows? Yes; it would leave out Wild's Meadows and Burrawang entirely.
329. How long have you been in the district? Two years.
330. You have not seen very much progress in that time, have you? No; but I remember travelling through the district twenty-two years ago; it appears very different now from what it did then.
331. There has been a great advance? Yes, a great advance in population and in every way.
332. Have you considered the probable paying capabilities of the line? I have not.
333. Looking at it as a colonist do you think that the State would be justified in making this line if it was shown that there would be a loss of £4,734 a year on it? No, unless there would be a probable extension.
334. How would the extension make it profitable? By taking the Bottle Forest line you do away with the very heavy gradients that have to be traversed between here and Campbelltown. I have no doubt that the line could be constructed with very easy gradients from Robertson to the Illawarra line.
335. That would merely be taking the traffic from the main line and putting it on to another—what benefit would that be to the State? The present main line would then become only a local line, but the cost of sending goods into the interior would be less.
336. You do not anticipate any local trade between Robertson and Bottle Forest—your idea is to avoid the heavy gradients? Yes.
337. It is very rough country, I believe? Yes.
338. Is there much timber there? Yes, a large amount of hardwood.
339. It is not volcanic soil only sandstone formation? Yes. The land would be suitable for orchards.
340. I understand you to say that you do not think the country would be justified in incurring an annual loss of £4,734 by making this line? I should be very sorry to have to assist in paying the difference.
341. *Mr. Dowel.*] Have you been over the staked line? I have not.
342. Have you explored the country in the vicinity of the line? I know the country pretty well within a radius of 10 miles of it.
343. Is it good country? Not the whole of the 10 miles; the whole of the land on the top of the tableland is exceedingly good, the land below the mountain is very good, that for instance, in the Kangaroo Valley; but, as I said before, I believe the traffic will ultimately go to the Illawarra line, it goes to Broughton Creek at present. Undoubtedly most of it will come to the railway at Wild's Meadows, because there is a good road from Kangaroo Valley.
344. What proportion of the Kangaroo Valley traffic would be accommodated by the line to Robertson? I suppose not one-fifth.
345. Would the construction of this line relieve the Roads Department of any expenditure on the roads of the district? I do not think so at all.
346. Would it rather increase it? There would be a large tourist traffic, and when once a road is made the annual expenditure in keeping it in order is not very great. We have nearly finished making the road from here to Robertson, and whether the railway is made or not the gaps will have to be filled up.
347. How many miles of roads are there not made in the district that will be served by the railway? I suppose between here and Robertson 3 or 4 miles; on the road to Wild's Meadows, about 6 miles; on the road past the Belmore Falls it is now proposed to make another 4 miles. These roads will always be used whether the railway is made or not.

- V. J. S. Blomfield, Esq., A.M.I.C.E.  
8 Feb., 1890.
348. The construction of the railway would not relieve you of any expenditure on the roads? Of none whatever.
349. Do you anticipate that you would have to make many more roads to the stations? I do not think so; I think the present roads would do. There might be a road wanted at Wild's Meadows.
350. Can you inform the Committee why your roads estimate has been so much reduced this year? I have not the faintest idea.
351. Do you not require the money? I do, very badly.
352. How many years have you had in your hands this annual expenditure of £3,475—how long was it going on before you came into office? My predecessor was here twelve years, but the annual expenditure on the roads throughout the Colony has annually increased, so that what it was twelve years ago, I cannot say.
353. Could you say what has been expended on roads altogether in the district? I could not.
354. Can you say what is the area of the timber reserves? I do not know, they are of large extent.
355. Have you explored those timber reserves? No.
356. What is the character of the timber? It is very good; there is stringy bark, black butt, and other timbers suitable for bridge-building.
357. Do you think that if the railway were made, and that State forests were thrown open, a revenue would be derived from the carriage of timber? I should think so.
358. What distance would that be from the railway? The timber reserves are principally on the northern side of the railway from the head of the Mittagong and Nepean Rivers.
359. Can you say how many miles? The reserve extends from near Robertson to almost where the tunnel for the Sydney water supply commences.
360. Would that reserve be accessible from the railway? Yes, the distance is about 4 miles.
361. Are there any reserves on the southern side of the railway? I do not know of any on that side.
362. *Chairman.*] Although you cannot tell us the exact votes for the district, can you give any opinion as to the amount of money that has been spent on the roads to put them in their present condition? I could make a small calculation. I should think the expenditure on the roads cannot have been less than from £50,000 to £80,000—that is on the whole of the roads in my district.

John Alexander Badgery, Esq., sworn, and examined:—

- J. A. Badgery, Esq.  
8 Feb., 1890.
363. *Chairman.*] Were you born in this district? Yes.
364. Do you occupy an official position now? No.
365. What statement would you like to make to the Committee? Only a general statement as to the resources of the district and its productiveness. I do not reside in Robertson, but I frequently go there to do business with the inhabitants. I am acquainted with the people of that district, and with the products of the district. If the railway were constructed to Robertson the products of the district could be very largely increased. I think the inhabitants would go into fruit-growing more largely than they do at present. They would grow fruit for the markets. In their climate they can grow fruit which will not grow in other places.
366. Has that district any advantage over Bowral for fruit-growing? Yes; two advantages. The land is much richer at Robertson than the land at Bowral, and at Robertson they have a greater rainfall.
367. Has the rainfall been tested, or is the statement merely a guess? I make that statement from my own observations, and I think everyone residing in the district will know that on the coast range they get a great deal more rain than we get here. They get a constant drizzle on the coast range.
368. Does not the drizzle reach up to Bowral? No; nor does it reach Moss Vale so heavy as it is on the range.
369. Of course every additional mile that a fruit-grower is from Sydney is a handicap? Yes; but no one near Sydney can compete with Robertson district, because they have not the climate. In the Robertson district they can grow cherries, raspberries, and gooseberries, which cannot be grown near Sydney.
370. Do you think that at Colo Vale they could not grow apples? Apples are grown about Parramatta, but they are not equal to those from the Robertson district. They can grow good apples at Colo Vale. They cannot grow such fruit as we can grow at Robertson.
371. Is there not a good deal of risk in sending fruit long distances? Not if it is properly picked.
372. Do you think that fruit-growing will pay better than dairying? I think the settlers will combine the two. They will have to pay more attention to different kinds of cultivation.
373. Can you give us any ideas as to the profits from fruit-growing? I cannot.
374. What has kept the people from growing fruit? It is a new district, and when the inhabitants get a little ground cleared they go in for cows, because they get an immediate return from them. If they put in fruit-trees it will take time to obtain a return, and a poor man cannot wait so long.
375. We understand that many of the old settlers are now in a comfortable position—could they not afford to wait? Yes, and they are gradually going into fruit cultivation. They are extending their orchards, but I do not know of anyone who has gone into the business on a large scale.
376. Have those who are beginning to make orchards got fruit to send to market? I do not know anyone who has a large quantity.
377. There can be no business test then? No.
378. So that it is a speculation at present? Yes.
379. We have had evidence that the present cost of 10s. a ton for carting produce to Moss Vale would be reduced by one-half if a railway were made, thus reducing the charge to Sydney from 40s. to 35s. Do you think that that would be sufficient to induce people to go into the business of fruit-growing? A reduction of the cost of carriage would be some inducement.
380. Suppose this charge of 10s. for the carriage to Moss Vale were reduced to 5s., would that make a difference in the profits of the fruit-growers? No, I do not think that that would make much difference; indeed I think it would be no inducement.
381. Can you say whether the existing charge of 10s. is a deterrent to fruit-growing? I cannot say that such a reduction in the cost of carriage would be an absolute inducement to grow fruit.

382. Do you think the cleared land is carrying its full quantity of stock now? I think that the land has not been used to its utmost capacity.
383. Have most of the freehold settlers got their land pretty well cleared? There is a great deal to be done yet.
384. Do you think that one fourth of the land requires to be cleared? Yes, more.
385. And you think that a railway would stimulate the settlers to greater exertions in that direction? I think it would.
386. Do you know anything of those reserves to the south of the line? I do not.
387. If this remains a dairy district will the sale of calves be increased? I think so.
388. Are they obliged to destroy their calves now? Yes; some send them to Sydney, but most of the calves are destroyed.
389. What number annually? That I do not know;—hundreds are destroyed.

J. A.  
Badgery, Esq.  
8 Feb., 1890.

J. S. Ponder, Esq., Bank Manager, sworn, and examined:—

390. *Chairman.*] What position do you occupy in Moss Vale? Manager of the English, Scottish, and J. S. Ponder, Australian Chartered Bank.
391. How many years have you been here? About ten years.
392. During your time has the district increased in wealth? It has.
393. Are the settlers in the district which this railway is to accommodate fairly prosperous? They are.
394. Is your deposit account increasing? Yes.
395. Have you many bad debts? We have never had one since I have been here.
396. In spite of the bad seasons and bad roads the settlers have been steadily going ahead? They have.
397. They are mostly out of debt? Yes, and many of them have farms of their own.
398. Are the farms paid for? Yes, and they have some money to the good.
399. Are there many younger selectors who have not yet cleared themselves? There may be one or two who have perhaps not got such very good land as most of them. They are doing well. They pay 5s. to the Government, and then pay the interest on the balance.
400. It is better to pay 5 per cent. to the Government than to mortgage? Yes.
401. Is there any large class of selectors who have not yet struggled out of their early difficulties? No.
402. Most of them have been some years on their land? Yes.
403. And secured their position? Quite so.
404. And the only increase in the class of settlers could arise from the throwing open of any reserve land? Yes.
405. The available land is all taken up? Yes, the greater portion of it. A lot of land has been taken up recently at the top of the Merylan Mountain.
406. That I suppose is second-class land? It is very good land, but perhaps not as rich as the Burrawang soil.
407. Is it a further distance from the market? Yes; but the settlers there would be benefited by the railway.
408. The profits of occupation are such that the settlers are tempted to go greater distances and on to inferior land? Yes.
409. Farming is not a ruinous occupation in this district? No.
410. You do not know of any settlers who have thrown up their selections and gone away? No.
411. The young men growing up, do they find land in the district to settle on, or have they to go further afield? Some select further back, and some have gone up to the Richmond River.
412. On the whole you have to report very favourably? Yes.
413. *Mr. Downel.*] Have you explored the district well which the railway is to serve? Yes.
414. Is it good country? Very rich, the land is very rich chocolate soil, some of the richest being at Burrawang.
415. Do you know anything of the coal and shale seams that have been referred to? No; I have heard of coal cropping out of the Fitzroy Waterfalls, but I have not seen it myself.

J. S. Ponder, Esq.  
8 Feb., 1890.

Charles Lindsay Nicholson, Esq., J.P., sworn, and examined:—

416. *Chairman.*] Are you a magistrate of the district? Yes.
417. Are you a farmer? I combine grazing with farming.
418. Do you know the locality well through which the railway is to go? I do not live near the proposed line; I live at Sutton Forest.
419. You have been in the district a great many years? Yes.
420. Have you traversed the route many times between Moss Vale and Robertson? Yes.
421. Do you agree with what has been said as to the great richness of the soil? I think the soil is good from the very start to the finish, except an odd patch that the line would go through.
422. Can you tell me of any farm in the district that is utilized as it should be? No; there is not a farm that I consider to be farmed in a proper manner.
423. You do not think that the settlers have done justice to their land? Not many. Mr. Throsby, who has an estate near the line, is farming in a more modern style.
424. What has he done? He is growing maize and hay, and going largely into ensilage; and others also.
425. The principal improvement is to tackle the ground with the plough? Yes.
426. You have not tried irrigation? Messrs. Badgery tried it with success, I believe.
427. You have not tried it on your land? No.
428. What have you grown principally on your land? In the earlier years we used to grow thousands of bushels of wheat and oats.
429. Why did you give that up? In consequence of rust and the high price of labour.
430. What do you put in the land? Chiefly grasses for grazing.
431. Is this a good district for fattening stock? Yes, very good.
432. Is that the most productive use to which it can be put? No; I think dairying is superseding it fast.

C. L.  
Nicholson  
Esq.  
8 Feb., 1890.

C. L.  
Nicholson,  
Esq.  
8 Feb., 1890.

433. Even on second-class land? Yes.
434. Do you think that dairying would be best on the land held by your family and the Badgerys? Yes. I am dairying almost solely, and Messrs. Badgerys are, largely.
435. But your land is not so rich as the brush land? Not in some virtues, but in other respects it is as good. I don't think we could produce so much, but our land will hold better in bad seasons.
436. Can you grow as rich a crop of Italian rye-grass? Yes; but the land is more difficult to work.
437. Does your land produce well in cold weather? So long as it is reasonably stocked; we have to make preparation for the winter.
438. Can you keep cattle in as good milk by stall-feeding as by out-door feeding? We do not stall-feed.
439. By using preserved food you can keep your cows in as good heart in the winter as you can in the summer? Yes. The three worst months in the year for dairying are December, January, and February.
440. How much milk is being sent from Moss Vale at present? I suppose about 1,400 gallons a day.
441. Who are the buyers? Several companies. The Ice and Cool Storage Company receive large quantities, and the Fresh Food and Ice Company are doing business again in the district; also other companies.
442. I thought they had given up? That was rather a blunder.
443. Do not the Fresh Food and Ice Company get their produce from Kiama? Yes, a large quantity, I believe. The distance is less from Sydney, but the heat is greater. I do not think that they can cool their milk so well in the Kiama district as we can here.
444. You think there is a disposition on the part of some companies to return to this district? I am sure there is.
445. Are they sending away as much milk from this district as they were when the Fresh Food and Ice Company were buying here? Yes; many who were struck off went to other businesses, not having any consumer to take the place of the Fresh Food and Ice Co. Butter factories were then established, since which other milk companies have started.
446. You think that the second-class land is good dairying land? Yes; very fine. I consider my farm not the best land in the district, but if I farmed it better I should make more money. It pays now fairly well.
447. Taking the line from Moss Vale, do you think that the first 10 miles of the land could be increased in productiveness by making good dairy farms of it? Yes; it is good agricultural land too.
448. Could they not, for a distance of 6 miles, send their milk to Moss Vale? Within 4 miles.
449. From what distance between Bowral and Moss Vale have they been sending in milk? I should think that about 7 miles is the maximum distance.
450. Then none comes from Robertson? I think they sent some in two years ago. In winter time they can carry milk 12 miles, with a good road.
451. Wild's Meadows is nearly 12 miles? Yes.
452. If the proposed line from Kiama to Shoalhaven was carried out, will not that bring a large milk-producing district on to the Kiama line? I do not think it would be such a good district as ours would be with the line to Robertson.
453. Do you think there is a demand in Sydney for all the milk that the farmers down below and the farmers here can produce? I think so.
454. Suppose the competition so severe that prices had to be reduced, and that you had to reduce your price;—what would be the effect then? I should be glad to supply milk at 5d. a gallon now.
455. Would it pay? Yes.
456. Do you think that milk pays the best? I think so, and I employ labour. Many of the producers employ their own families, and prefer to make butter.
457. Do you think it damages butter to carry it long distances to the station? No; they carry 100 kegs in a van.
458. You do not think that the butter deteriorates? I do not think so, except when there is extremely hot weather. I think there will be a very large demand for butter in the south country immediately.
459. Taking the year all round, you think that the milk producers should be within 6 miles of a railway-station? Yes. 6 miles is rather too far; they ought not to be more than 4 miles from a station.
460. Would you like to make any statement about fruit-growing? I do not think they have gone into fruit-growing as they ought to have done. I am confident that fruit-growing can be combined with dairying to a very large extent. In the course of time fruit-growing will almost supersede other occupations. A number of farmers at Yurunga are making large orchards. There is one near the Fitzroy Waterfall. Alderman Hart has a nice estate there, and the man from whom he bought it made a considerable amount from fruit.
461. Do you know anyone who is making his living out of fruit now? No, not anyone who is making a living; but a man at Sutton Forest who is paying 15s. an acre for land makes more than half his rent out of fruit.
462. Do you think that the profits of fruit-growing would be such as to induce farmers to put down larger areas in orchards? Yes; but they are lazy. There is too much labour in connection with it.
463. The people have been very industrious in clearing their land? Yes; I think the people of Robertson, Burrawang, &c., ought to have had their land for nothing.
464. You think the country capable of greater development if people would develop it? Yes; if we could only get the labour.

Mr. Sam King Miller, journalist, sworn, and examined:—

Mr.  
S. K. Miller.  
8 Feb., 1890.

465. *Chairman.*] How long have you been in the district? Eleven years.
466. Do you wish to make a statement to the Committee? I may say with reference to this line that I was about the first to propose such a line for the part of the country I was then living in, in the interests of the farmers. I spent seven years at Burrawang, and we held several meetings on the subject. I drew up a petition based on data which I had obtained.
467. *Mr. Garrard.*] What petition are you referring to now? To the first petition which was ever presented in reference to the railway. The petition was presented to Parliament, a Committee was appointed to inquire

inquire into the matter, and after inquiry, the Committee said that we had clearly made out our case. This was during the time that Mr. Lyne was Minister for Works, I believe.

468. *Chairman.*] I will read you an extract from the official *précis* of matters connected with the proposed railway:—

Mr.  
S. K. Miller.  
8 Feb., 1890.

A deputation from Robertson, introduced by Mr. M'Court, waited on the Minister for the purpose of impugning the accuracy of Mr. Crawford's return of the traffic, and obtaining further inquiry. They were prepared they said to prove that officer's figures altogether inaccurate and absurd. The Minister thought it proper to give the persons interested an opportunity of proving their case, and directed that an officer should be sent to the district to collect evidence and verify the statements of the objectors. Mr. Superintendent Harper was appointed for the purpose to confer with the Committee of residents, and after a visit to the district submit a report. Mr. Harper mentioned in emphatic terms the fertility of the district, the beauty of the scenery, and the healthiness of the climate. He stated that after seeing the district he could understand the extravagant estimate formed by the residents of the traffic likely to be developed, and doubtless it was capable of great improvement, but the duty confided to him was that of enabling the Committee to prove the present traffic, and with this view he arranged for the examination by them and himself of all invoices, way-bills, &c., at Bowral and Moss Vale Stations. The examination, which was an exhaustive one, entirely upset the extravagant theories of the residents, and the Committee frankly admitted that the figures were unchallengeable. There could be no doubt however that Mr. Crawford's estimate, both of the goods and passenger traffic, was considerably under estimated. As a result of elaborate calculations he estimated the present value of goods traffic to be £600 14s. 3d., which he thought in estimating for a railway might fairly be doubled with a population of 6,000 or 7,000 persons, and with the attractions presented to visitors by the scenery and climate, it was not unreasonable to expect that at least 5,000 persons per annum would use the line.

The local Committee are there said to have admitted that the original figures were extravagant, those were your figures were they not? That petition was mine.

469. Were the figures of the second Committee in excess of or below yours? I never prepared the statement. Our data were based on the capabilities of the district. We know that some most important industries were suspended entirely for the want of a railway. We know that people left off growing wheat and potatoes.

470. *Mr. Garrard.*] One witness says it was because of the rust? Yes, they have had rust in other parts of the country, but here we have had to pay more for the carriage of wheat than it was worth.

471. Were you a grower of wheat? No.

472. If a grower of wheat had said that he left off growing wheat because of rust, that is not correct? He was wise to do so.

473. *Chairman.*] Your estimate of the revenue from the traffic was £13,539. The Commissioners' present estimate is £1,843, do you adhere to your original estimate? I think it will be ten times heavier now.

474. £130,000? Yes, I think it can be made 500 times greater if the railway were constructed.

475. You think it would turn in half a million of money? I do. I saw a representative of a firm here a short time ago whose expenditure formerly was only £1,000; now they have spent £22,000. Look at the factories that have been established? Land at the time I refer to was only worth £3 an acre, now you cannot get an acre under £25.

476. *Mr. Garrard.*] You say that your estimate was not based merely on the then productiveness of the district, but on its possible productiveness? Yes, from actual data I obtained from 300 farmers.

477. The anticipated productiveness of the district has been reached now? Our anticipations have been surpassed by a long way.

478. You estimate then that there would be a return from the railway of £13,539 a year? Yes.

479. But you go further and say that the amount will be very much increased? Yes.

480. The Railway Commissioners, after a searching investigation, have come to the conclusion that the revenue would be £1,843 a year instead of £13,000 a year—who is right and who is wrong? You are merely taking the fees payable for the traffic; that £13,000 is the total value of the products.

481. This is what you say "Your petitioners believe that the total receipts from the railway or tramway would equal the costs of the working and construction of the line and be considerably in excess of the figures here quoted, viz."—Then you give a total of £13,539, not the value of the products, but the revenue from the traffic; how do you reconcile that? There would be 15,000 tons of potatoes at 4s. a ton, £3,000 revenue; but the potatoes were not grown, for want of a railway.

482. Was that the estimated revenue or the value of the products? That was the estimated carriage, if a railway had been constructed through the district.

483. You say that the revenue would be £13,000 a year, but the Commissioners, after making exhaustive inquiries, estimate that it will be only £1,800 a year? I cannot help that.

484. Then the Commissioners are wrong, all the people who gave evidence are wrong, and you are right? I have conversed with far more men than the Commissioners did, and I have had data furnished by the farmers themselves.

485. Are you aware that the officers who were sent up here and all the witnesses had the invoices, way-bills and books of the two stations to go through? Yes; but that had nothing to do with our data.

486. Are not the actual invoices and way-bills far better than mere statements? This is not a mere statement, it is a fact that Burrawang used to send away immense quantities of produce that are not sent from there now owing to the want of a railway.

487. You told us that your estimate of £13,000 was not from the then productiveness of the district, but upon its possible productions? Yes.

488. Did I understand you to say just now in answer to the Chairman that that possible productiveness had now been reached? In one way, and in one way it has not. Let me deal with the figures.

489. I want you to answer my question? I cannot answer it, that is all.

490. I ask whether you did not say yes in answer to that question from the Chairman? I believe that it is surpassed five times over.

491. You believe that at the present time your figures, based upon the probable productiveness of the country, have been reached? I think so.

492. You think that the estimate of the Railway Commissioners is absolutely incorrect? As far as this return is concerned—the Commissioners took one kind of evidence and we took another.

493. *Chairman.*] Were you not both taking evidence as to the receipts on the line? I was not; the Commissioners were. I know they examined a document at the railway station. I say that there are different products which would be carried by the proposed line which have not been carried. There were

Mr.  
S. K. Miller.  
8 Feb., 1890.

were 2,000,000 gallons of milk per annum which was thrown away. If we had had a railway that would have been carried to Sydney. There would have been 15,000 tons of potatoes, but we know that there are not 15 tons taken to Sydney at present; the farmers ceased growing potatoes because they could not carry them.

494. *Mr. Dowel.*] When the petition was presented you said there were 300 farms in the district? Yes.

495. This was in 1881;—has the number of these farms increased? I do not know.

496. Has there been increased settlement? I think so.

497. Do you think there are more than 300 farms in the district? I believe there are many more.

498. I asked a question to elicit information as to whether the district is progressing? I think it has been going on rapidly.

499. You have been through the district, I presume? I am constantly going through it.

500. Visiting all the centres of population? I visit a great number of them.

501. Do you think the line, as proposed, is one which would serve the largest possible number of people? Yes; if from Moss Vale to Robertson.

502. And open up the country? The country is pretty well opened up.

503. Is there any Crown land in the district? Very little, I believe.

504. Are there no large timber reserves? There may be some, but they are comparatively small.

505. Have you made any inquiries as to the area of land under cultivation? The land is scarcely cropped at all for want of a railway, except to grow a few acres of green stuff. The 15,000 tons of potatoes have not been carried, but if we had had a railway they would have been carried.

506. Is it good soil for the cultivation of potatoes? It is the best in the world.

507. Have you any idea of the average crop? I have seen as much as 26 tons to the acre. I have seen them put in, grown, and taken out and weighed; and I wrote an article on the subject for the *Town and Country Journal*. There is a double crop every year. A new industry has cropped up lately—growing cabbages, 30 tons of which came in this week. This part of the country could supply Sydney, instead of Sydney having to get its supplies from other countries.

508. The soil is good, and the climate suitable? Yes; equal to Tasmania or England.

509. Do you anticipate that 40,000 passengers per annum would be carried by the line? I do.

510. On what grounds? I can see by the increasing traffic. It is increasing now at the rate of thousands a week.

511. Are there thousands a week travelling between Moss Vale and Robertson? Yes; at the different stages there is a constant stream.

512. Do you think the traffic is likely to be increased? I think it would pay for the line.

513. Do you consider, from what you know of the district, that the Commissioners' estimate of £465 for the carriage of the produce of the district is sufficient? That would not be my estimate.

514. You think the estimate could be considerably increased? Undoubtedly, a thousandfold.

515. In how long? In a very little time. It is only lately that the coaches have begun to run, and in different spots we see as many as 800 and 1,000 people.

516. How many coaches are there? Two from Bowral and two from Moss Vale, I think.

SATURDAY, 8 FEBRUARY, 1890.

[The Sectional Committee met in the School of Arts, Robertson, at 8 p.m.]

Present:

The HONORABLE ANDREW GARRAN (CHAIRMAN).

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Sectional Committee further considered the proposed Railway from Moss Vale to Robertson.

Mr. Denis Coston, farmer, sworn, and examined:—

Mr.  
D. Coston.  
8 Feb., 1890.

517. *Chairman.*] Where do you reside? At the Pheasant Ground.

518. How far from here? About 5 miles in the direction of Kiama.

519. Is it on the slope downwards towards the coast? It is on the table-land, 3 or 4 miles on this side of the descent.

520. Is it rich chocolate soil there? Yes; it is what we call brush country.

521. Is it as good as the land between here and Burrawang? Yes, as good, if not better.

522. Was it originally brush country? Yes.

523. Is it freehold? No, it is leasehold.

524. Would you mind saying what rent you pay? I took the land under clearing leases of fifteen and twenty years for ten years free and for the remainder of the time at from 7s. 6d. to 12s. an acre.

525. Are you now reaping the fruits of your early labour in clearing? Yes; but I am paying rent now and have been for four or five years.

526. Do your cows do as well in the winter as in the summer? No.

527. What is the difference in the quantity of milk they give? In winter they give only half the quantity that they give in summer.

528. Do you think the land on the top of the mountain here is as productive of milk as the land at Kiama? Not in winter.

529. Taking all the year round would you rather give a higher rent for land on the plains? For the convenience of sending produce to Sydney the land on the coast would be much more valuable, but taking it all the year round the cows are nearly as productive here as they are on the coast.

530. Do you think that you are compensated by the extra yield in summer for the deficient yield in winter? Well, hardly, in consequence of prices being so much lower in the summer time.

531. What do you reckon the quantity of land requisite to keep a cow on the average? About 3 acres all the year round, but with cultivation I daresay that less would do.

Mr.  
D. Coston.  
8 Feb., 1890.

532. Do you cultivate any hay? Yes, we have to grow a little to feed the cattle with in winter; we should grow more if we could send the surplus to Sydney. Some years we have plenty, but not having means of sending the surplus away we neglect even to make provision for bad seasons.
533. Would it pay you to use your ground to grow hay for Sydney instead of grazing cows? I believe it would.
534. Then it would be better to use the whole for that? I think the best would be a mixed system, such as they have in the old country.
535. Suppose you grew hay where you could cultivate, and grazed cows where you could not cultivate, which would pay the best? The hay and potatoes with a market would pay better than dairying.
536. How much hay do you think you can grow to the acre? About 2 tons.
537. What will that fetch you? It depends upon the market price. Kiama is our only market; the price generally ranges from £4 10s. to £7 a ton there.
538. That is a yield of from £8 to £10 an acre? Yes.
539. How much milk can you get off an acre? I have not tried that experiment.
540. What quantity of potatoes? I think a fair average is about 5 tons by using artificial manure. If we cultivated them carefully I daresay that we could grow more, but all we do is to plough the potatoes in at random.
541. You do not use manure? None whatever.
542. What do you generally get from potatoes? The market being so far away we hardly ever send any. In August we send some to the coast and sell them for seed potatoes. They prefer them in the Kangaroo Valley and at Albion Park for seed.
543. You do not send them to Sydney? No. Carriage is very expensive.
544. What do you get for them for seed purposes? From 7s. to 8s. a cwt. in Kiama, but this is only when they are planting potatoes.
545. Does it beat hay-growing? Yes.
546. Have you got any butter factories at the Pheasant Ground? No.
547. Do you make your own butter? Yes; we make it and send it to Sydney.
548. What do you get for your butter? The factory butter puts us altogether adrift; I get from 5d. to 6½d. a lb.
549. Do you know how many lb. an acre turns you in? No.
550. You would have about a third of one cow's produce to the acre? The produce of a cow is about 200 lb. per acre, and one-third of that would be about 70 lb.
551. Could you tell us what weight of milk goes to a lb. of butter? In summer time about 3 gallons, in winter time a little less.
552. What is the weight? About 30 lb.
553. Have you not enough ground in occupation at the Pheasant Ground to support a factory? We have not started one there. All the settlers there make butter in the usual style.
554. What quantity of milk do you send annually from the Pheasant Ground to Moss Vale? The only thing we send is butter, the produce of about 300 cows.
555. And how much does each cow produce per annum? About 140 lb.
556. You do not send pork or bacon? Oh, yes.
557. What quantity of dairy produce do you send, including pigs, pork, and bacon? We send a good few live pigs and a number of young cattle in spring.
558. Do you kill your calves? No.
559. Do you waste skimmed milk? Very seldom; we feed pigs and calves with it.
560. Where do you send your pigs and calves to? To Moss Vale and Robertson; some to Kiama and Jamberoo, and they find their way by various routes to Sydney.
561. Can you get a fair market for bacon and pork in the township? We get the best we can from the storekeepers; we are at their mercy.
562. Do you grow any Indian corn or planter's friend? Yes; as much as we require for our own use.
563. What proportion of your land do you cultivate in that way? Not more than 2 per cent. of our lands, because we cannot get rid of the produce.
564. Speaking as a practical farmer, you think that if you had a railway to Robertson it would pay to cultivate your land? Yes; and a small farmer could make an independent living then. Large farmers do well dairying; small farmers are in poverty.
565. Are the farmers round you on clearing leases? No; most of them are freeholders.
566. Are they living from hand to mouth? Those who have forty or fifty cows are independent; those who have less than 100 acres of land are poor, and have to take a job on the road occasionally; they cannot make a living on their farms; I cannot; I have to depend upon contracting, and one thing or another.
567. Have the freeholders been free selectors? Originally they were.
568. *Mr. Garrard.*] You say that you get rid of the calves and pigs by sending some here and some to the coast;—can you tell us how many calves come here and go on to Moss Vale in a year? I suppose that a farmer would send away one fat pig for every cow that he has. A farmer milking 300 cows would send away 300 fat pigs.
569. How many calves? Not so many calves; we do not send them direct; sometimes men from Goulburn will take them.
570. But they eventually go north or south? Yes; they are driven into the neighbourhood of Goulburn.
571. If the destination of the calves is north or south would they be driven or taken in the train if you had a railway? By rail, if there was a station here.
572. How would they go if you were sending to Sutton Forest? Some would go by rail, some would be driven.
573. The majority are driven? Yes; they travel by stages.
574. Do you look upon Robertson as a market for those living in your district? Yes, and for people considerably beyond.
575. Your potatoes are purchased on the coast only as seed potatoes? Yes.
576. If the Government constructed a railway from Moss Vale to Robertson, and there happened to be a better market on the coast than elsewhere, the Government railway would have to remain idle, because you would go to the coast to sell your produce? Only in the month of August.

Mr.  
D. Coston.  
8 Feb., 1890.

577. Do you think that if the railway were made a larger area of land would be put under cultivation in this district? The area would be more than doubled.
578. Would you do more? I believe I would sell my stock and go into cultivation.
579. Do you think those surrounding you would go in for cultivation? I am sure they would; those having large farms would reduce their stock, and those who have small farms would sell off their stock.
580. What is the size of the farms? 60 acres, 80 acres, some 200 acres, some 300 acres. Mr. Cullen, of Kiama, owns about 800 acres, and that land is simply waiting until people see whether they can make a living out of it, and if they can he will let it on clearing leases.
581. Do you know the estimated cost per annum of the proposed line? I have no idea.
582. The interest on the cost and the working expenses are estimated to amount to £6,577;—do you think that this district will be able to produce sufficient revenue to meet all that expenditure? I believe that in a very short time it would do more than that.
583. You have no idea of what the estimated traffic would be if that line were made? No.
584. The revenue from the traffic is estimated at £1,843 a year, leaving a deficiency of £4,734;—how long do you think it would be before the traffic would pay that amount? From three to five years.
585. Do you think if it was known that the line was being constructed the farmers would immediately begin to cultivate more land? They would make preparations to go into cultivation on an extensive scale.
586. If the first sod of the railway was turned, and contracts let, and the line was to be completed in a year, the farmers would commence to extend their cultivation, so that when the line was opened there would be more produce? Yes. Because there was a little increase in the price of potatoes last year many of the farmers have this year increased their areas by 15 or 20 acres.
587. Do you think that within three years of the opening of the line the revenue would amount to £6,577? That is my candid conviction.
588. Unless there is a reasonable prospect of that, you do not think it would be fair to the general taxpayer to have to make up the deficiency? It would be very wrong; but my conviction is that the railway would pay a very good interest on the capital invested.
589. Do you know anything about the district generally? I have been here fifteen years.
590. Do you know Wild's Meadows? Not so well as the mountains.
591. Is East Kangaloon a productive district? It is a good dairying district.
592. Is it similar to this? Yes, but rougher country.
593. Do you know anything of Yurunga? No.
594. Is that a good country? I prefer this part of the district. I consider that this is more fertile country.
595. *Chairman.*] What would your land be worth per acre without the railway? A farm adjoining it, with soil of a poorer quality, was sold, and it only realized about £6 10s. an acre. Had there been a railway in the district the price would have been double that.
596. You think that the effect of a railway would be to double the price of the land? Yes.
597. Are there any carriers who take your produce to Moss Vale? Yes; the storekeepers take fowls, eggs, and butter.
598. What do they charge per ton? So much that we do not trouble them; we scarcely send any away.
599. You cannot tell what they were taken to Moss Vale for? I think about 30s. a ton.
600. Do you send eggs and poultry? Yes.
601. What do the storekeepers charge for them? They simply buy them and we do not pay the carriage except of butter. We pay 1s. 6d. each for the carriage of kegs of from 60 lb. to 80 lb.
602. *Mr. Dowel.*] Do you know the country fairly well between Robertson and Moss Vale? I have traversed the country often, but I know the country from here to Kiama and the top of the mountain much better.
603. Have you been over any part of the State line? I have a very good idea of the route both from Bowral and Moss Vale.
604. Do you think the proposed route is the best? I think it would be as good as any.
605. What places would it serve within a radius of 10 miles? Wild's Meadows, Burrawang, East Kangaloon, Kangaroo Valley, and a number of settlers in other parts, including settlers in a south-westerly direction, also on the top of the table land between the Pheasant Ground and Jamberoo, who would go through Moss Vale instead of to Kiama. They have to pack their produce down the mountains a distance of 8 or 10 miles. It would only be 7 miles from there to here, and they would come this way.
606. Do you know anything about wheat producing in the district? I have not seen any wheat tried there.
607. Are there no threshing-machines or flour-mills here? None; when I came up here there was scarcely a road and you could scarcely travel.
608. Do you consider the district suitable for growing fruit and vegetables? There is not a better district in Australia; anything that will grow in the English climate can be grown here.
609. What is the average price that you obtain in this district for bacon? From 5d. to 6d. per lb. is what the bacon realizes in Sydney.
610. Hand-cured? Yes; it is sent by carriers to Moss Vale and thence to Sydney; we are all bacon curers more or less.

Mr. William White, butcher, sworn, and examined:—

Mr.  
W. White.  
8 Feb., 1890.

611. *Chairman.*] What is your occupation? Butcher.
612. Are your customers mostly occupied with land in the district? Yes.
613. Do you know any of the carriers between here and Moss Vale? Some of them.
614. Do you ever employ them? I have done but not during the last couple of years.
615. How much a ton do they charge for the carriage of produce between here and Moss Vale? From 15s. to £1 a ton; it depends on the character of the article.
616. What would they take potatoes for? I have heard they pay as high as £1 and 25s. a ton for the carriage of potatoes from Kangaloon. I do not know the charge from here.

Mr.  
W. White.  
8 Feb., 1890.

617. What would you expect to have to pay? £1 a ton.  
 618. You could not send them in cheaper in your own carts? No.  
 619. What is the charge for the carriage of butter? 1s. 6d. a keg.  
 620. Does that include the weight of the keg? They bring back the keg; that is the charge for both ways.  
 621. What is done with the calves in the district? A great many of them are killed.  
 622. Wasted? Yes.  
 623. Does it not pay to rear them on skimmed milk? If we had the facilities which they have on the coast the calves would be fed for a month or five weeks and then sent to market. The heifers alone are kept.  
 624. It will not pay to cart them to Moss Vale? No.  
 625. Would it pay to send them away to a railway? Twelve years ago they sent them from here in cases, two calves in a case.  
 626. How much did it cost? It cost about 6s. to send two to Moss Vale. The experiment was tried, but it was found difficult and troublesome and the farmers got little or nothing for their calves.  
 627. Are the farmers in the district prosperous or in difficulties? They are prosperous.  
 628. What have they made their money mostly out of? Dairying.  
 629. Principally butter? Yes.  
 630. Is any milk sent from here to Moss Vale? It used to be before the factories started; the Fresh Food and Ice Company took it.  
 631. Was milk sent a distance of 14 miles? Yes.  
 632. And did it arrive in good condition? It did.  
 633. We have been told that milk could not be carried more than 6 miles? It has been taken from here.  
 634. Were any complaints made of the condition of the milk? Sometimes it was bad; they cooled it here before they took it.  
 635. Did it pay better to send the milk 14 miles than to make butter? It did then, and the butter was cheaper then than it has been since.  
 636. Do the farmers cart butter to Moss Vale? No, the factories send the butter.  
 637. How many cows are supplying the butter factory here? I do not know.  
 638. Can you tell me what area of land one of these factories will take the milk from? I suppose they would take the milk from 2,000 acres.  
 639. And how much butter do you think they will supply in a year? I could not say.  
 640. Do you agree with the estimate made that 3 acres are required for a cow? No.  
 641. What is your estimate? I should think 2 acres of ground will carry one cow.  
 642. Then 2,000 acres will carry 1,000 cows? Yes.  
 643. How much butter will 1,000 cows give? I reckon 130 lb. on the average.  
 644. *Mr. Garrard.*] Have you any other information to give the Committee? I only came to speak about the bacon.  
 645. Is there much bacon cured here? Yes. Last year about 33 tons of bacon was made here and sent away *via* Moss Vale.  
 646. Do you think that if the railway were made it would cause an increase in the production of bacon? Yes.  
 647. To what extent? I should say double or treble the quantity made now. Except in one or two cases it has not been done in a business-like way for want of facilities to get the bacon to market.  
 648. Then the quantity would be about 100 tons a year? Yes.  
 649. It would not take many trains to carry 100 tons of bacon, would it? No.  
 650. Is there anything brought here that will bring grist to the mill of the railway? There are a great many other things that would have to be carried.  
 651. Will you mention some of them? There would be a larger production requiring increased carriage. There would be the calves and thirty head of cattle every year which I take myself which would be sent by rail instead of being driven.  
 652. Are you the principal butcher? There is another in the town.  
 653. Doing as large a business as you do? I believe so.  
 654. Then sixty head of cattle might be expected to come from Moss Vale to Robertson? Yes, we have to drive them here now.  
 655. How many trucks would they take? Six trucks.  
 656. That is 100 tons in the year and three trucks of cattle; what else? You would get about 1,300 live pigs; that is the number that went from here last year without reckoning what private parties have sent.  
 657. Independent of the bacon, of course? Yes; independent of the bacon 1,300 pigs went alive from here to Moss Vale and 300 went to the coast, which would probably have gone the other way had there been a railway.  
 658. Do you think that when there is a railway there will be a great increase in the cultivation of the land? Yes.  
 659. Do you anticipate a larger population here requiring more cattle for Robertson? Yes.  
 660. Is there plenty of room for more population here? Yes.  
 661. Do you know the estimated cost per annum of the proposed railway? No.  
 662. Do you think that the traffic of the district would give a return equal to £6,500 a year, the interest on the cost of construction and the working expenses? Not at present.  
 663. How long would it be before it would? Five or six years.  
 664. Then for five or six years the general taxpayer would have to pay £4,734 a year for the benefit of the people of Robertson? Yes.  
 665. Do you think that is a fair thing? Well, we have to pay taxes for the benefits that other people get.  
 666. Where? In different parts of the country and on the coast.  
 667. Does the coast line show a loss like that on the cost? Not quite.  
 668. Do you think that the estimate of the Commissioners that the revenue will amount to £1,843 is an incorrect one? I do not think it was an under-estimate at the time, but I think it would be now.  
 669. Has there been a large increase in the productiveness of the district during the last year? Yes.  
 670. How much—50 per cent.? More, I believe. Very nearly all that you see of the prosperity of this place has grown up within the last ten or twelve years.  
 671. If it has been stated in evidence that the district has not progressed, it has almost gone back; that is not true? I do not understand that.

Mr.  
W. White.  
8 Feb., 1890.

672. If a witness has stated to the Committee that the productiveness of the district has not increased during the last two years, that would be incorrect? I suppose the witness spoke of his own particular part, not of Robertson.
673. I am speaking of Robertson, the Pheasant Ground, Wild's Meadows, East Kangaloon, and all the district;—is the statement correct? I do not think it is.
674. Not if your statement is correct that there has been an increase of 50 per cent.? I spoke of the increase of population and other matters. There have been various matters taken in hand during the last twelve months. We had no butter factories before that time.
675. But instead of butter you used to send milk, did you not? It is three or four years since we sent milk.
676. Butter takes less room than milk in the way of carriage, does it not? I don't know.
677. Suppose, for the sake of argument, we say this district will produce 100 tons of milk, that milk would not make 100 tons of butter, would it? I could not say; I have not made any calculation.
678. Does a given quantity of milk yield the same weight of butter? Some gives a larger quantity of butter than others.
679. You have already told us how much butter can be made out of so many gallons of milk? I do not wish to state that for a fact, because I have never made a calculation. There is a difference of opinion as to the quantity of milk which it takes to make a pound of butter.
680. If you had never seen a cow would you suppose that a ton of milk would make a ton of butter? I could not say.
681. *Mr. Douel.*] Have you resided long in the district? About eighteen years.
682. Do you know the district through which the railway would traverse? Yes.
683. Do you think it is the best route that could be adopted? Yes.
684. Do you know anything about the agricultural produce of the district? I know nothing about the grain. Some oats, barley, and rye have been grown here.
685. Are there any threshing machines in the district? I know of one.
686. Is it a steam machine? No.
687. What is the cost of sending a pig from Robertson to Moss Vale? The carriers used to charge from 1s. 6d. to 2s. a pig.
688. That would be a considerable source of revenue to the railway? Yes.
689. If the railway would carry them at 2s. a head do you think they would be sent by rail? I do.
690. Don't you think that the Commissioners considerably under-estimated the revenue that would be derived from the line when they stated it at £1,843? Yes.
691. What do you think they have omitted? I do not think they have given credit for the carriage of all the various articles that go from here. They have only reckoned the carriage from a particular place.
692. What articles do you think they have omitted? Pretty well all in connection with the goods brought into the district by the storekeepers and others, and from private sources.
693. Do the storekeepers pay a considerable amount for carriage from Moss Vale? Yes.
694. From your knowledge of the district do you think that if the timber reserves were thrown open there would be a trade in timber? Yes.
695. What is the character of the timber? There is gum, messmate, and stringybark.
696. Would there be any difficulty in getting the timber from the reserves to the railway station at Robertson? No.
697. What is the distance? The principal reserve is 8 or 10 miles away.
698. Are there any Crown lands with good timber on them nearer the line? Yes; within 4 or 5 miles of them.
699. Is this a good fruit-growing country? Yes; they could grow fruit here equal to any in the colony.
700. Are there any large orchards in the district? A number of orchards have been commenced.
701. Of what area? From an acre upwards.
702. During your eighteen years experience in the district, although there has been no railway here, the district has advanced? Yes.
703. Has the population doubled? I believe it has. Eighteen years ago there was only one house in this town.

Mr. Joseph Scott Armstrong, journalist, sworn, and examined:—

Mr. J. S.  
Armstrong.  
8 Feb., 1890.

704. *Chairman.*] What is your occupation? At present I represent the *Robertson Advocate* newspaper.
705. How long have you been here? About three years.
706. Has your occupation brought you into intimate acquaintance with the people here? Yes; I have travelled all over the district among the farmers.
707. Have you had an opportunity of observing whether the district is progressing or stagnant? It certainly is progressing, although the inhabitants have not increased they have improved their land; I can see every few months trees felled and paddocks cleared.
708. More ground is cleared and more stock is being fed? I think so.
709. And more produce exported? Yes.
710. A steady increase is going on? Yes; in the township the number of houses has doubled in three years.
711. You have heard the evidence given as to the rate of carriage between here and Moss Vale? Yes.
712. We are told that the cost of the carriage of potatoes from here to Moss Vale is £1 a ton. Is that correct? Yes; the expense has been the great difficulty. I have heard many farmers say that they would cultivate a great deal more land if they had a railway.
713. We are told that the cost of carriage from Moss Vale to Sydney is 30s. a ton, only 50 per cent. more than this 14 miles between Robertson and Moss Vale;—do you think the farmers would pay a higher price for the carriage of their goods on the branch line than is charged on the trunk line? Yes; some say they would be glad to pay increased rates if they could have the benefit of the railway.
714. Would they pay 10s. a ton for the carriage of potatoes on this line? I should not like to state what amount they would pay; I know that they are willing to pay more than the ordinary rates.
715. If the line were made on that guarantee would they be content to pay the higher rates or would they agitate to get them reduced? I believe they would be content to pay the increased rates.
716. You do not pretend to be acquainted with the commercial working of a farm? No.

717. Is there any statement which you would like to make? The chief thing that I have taken an interest in is the scenery? I have heard opinions expressed by many who have compared the scenery in this district with that of other places and their opinion has been invariably favourable to this district. People from town speak highly of this district, not only on account of the beauty of the scenery but the coolness of the atmosphere and its freedom from mosquitoes. If we had a railway in this district the great attractions to be found here would make Robertson a place of resort preferable to Bowral and Moss Vale. I was hoping that the Committee would have taken sufficient time in the district to have visited Fitzroy Falls, Belmore Falls, and some of the other sights.

Mr. J. S.  
Armstrong.  
8 Feb., 1890.

718. You are of opinion that if the railway reached this place it would become a favourite summer sanatorium? I am confident that it would. All who have come here express themselves highly pleased with the district.

719-20. Do you have any visitors here for the summer? A few—Dr. Tarrant's family come every summer. I heard a gentleman from Tasmania say the other day that he considered this climate even superior to that of Tasmania.

721. Is it rather a changeable climate? It is to some extent.

722. Plenty of cold mists come up? A fog comes up from the sea, but I never heard that it produced any ill effects.

723. Are the people here healthy? Yes, very healthy.

724. *Mr. Dowel.*] Is there any considerable passenger traffic between Kiama and Robertson, and Robertson and Moss Vale? The coaches go at such inconvenient hours;—they pass through here during the night; the coach from Kiama to Moss Vale passes through here at 11 o'clock at night, and coming from Moss Vale it gets here at 4 o'clock in the morning.

725. Is there no day coach? No; they have to hire conveyances, and that is an expensive matter.

726. Is there any considerable passenger traffic independent of the coach traffic? We often have people coming through in hired vehicles from Moss Vale and Bowral.

727. Do you know the number per week? No.

728. Do you know the number of tourists who have been here at one time? No; the coaches proceed to the Belmore Falls without coming into the township.

729. Is the statement correct that there have been as many as 1,000 people at the Falls at one time? I believe it is correct with regard to the Fitzroy Falls. At the Belmore Falls the number of visitors is not so great, but still I have seen a great many there at times.

730. Was it on any special occasion? No, the ordinary holiday time. There are the Kangaroo Valley Falls. Very often visitors come from Jamberoo and Kiama way that we never see at all. I have seen three large waggonettes at a time there which must have brought twenty or thirty people.

731. Is public opinion in favour of the line marked out? Yes, most people consider it the best.

732. Has there been during your time any agitation for the construction of a railway? There have been public meetings; we have had this hall well filled several times lately, and the feeling in favour of the railway was unanimous.

733. Do you know where the railway station is to be? I do not; it is to be to the south of the township.

734. As a journalist, have you had an opportunity of observing the character of the timber in the reserves? Yes, there are a great number of reserves.

735. What is the character of the soil—is it good or bad? It is excellent soil.

736. Did you notice the character of the timber? I am not well versed in the names of trees, but I have noticed messmate and gum trees.

737. Do you know of any minerals in this district? I have seen traces of coal cropping out in a great number of places. Going down to the Belmore Falls you cross four or five seams; there is one about 14 feet thick; there are signs of coal in the Kangaroo Valley also.

738. What distance is the coal from Robertson? What I have seen in the valley would be about 5 miles away by road. The best specimens of coal that I have seen are those at the Fitzroy Falls, 3 or 4 miles from Wild's Meadows.

739. *Chairman.*] Do you know whether anybody proposes to open a coal-mine on the line of railway? I do not.

### MONDAY, 10 FEBRUARY, 1890.

[*The Sectional Committee met at the School of Arts, Robertson, at 9 a.m.*]

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Sectional Committee further considered the proposed Railway from Moss Vale to Robertson.

Mr. Thomas Blencowe, dairy farmer, sworn, and examined:—

740. *Chairman.*] Are you a resident in the district? Yes, I have been for the past twenty-seven years.

741. In which portion of it do you reside? At Wild's Meadows.

742. Are you a proprietor of land? Yes.

743. How much do you hold? About 350 acres.

744. Is most of that in practical use? Yes.

745. To what uses do you put that land? Chiefly dairy-farming, making butter principally; some of the land is used for growing fruit and green crops for fodder. Some years ago I grew large quantities of potatoes, but I found the roads so bad and the cost of carriage so great that I gave up growing them.

746. What is a fair average crop, taking all the seasons round? I should think about 5 tons per acre.

747. Where would be your market for the potatoes? Sydney.

748. What is the average price of potatoes in the Sydney market? I think the potatoes from this district, taking one season with another, will average £4 a ton.

749. How much do you pay for the carriage of potatoes to Moss Vale? £1 a ton.

750. And how much for the carriage from there to Sydney? I think about 10s. a ton.

751.

Mr.  
T. Blencowe.  
10 Feb., 1890.

Mr.  
T. Blencowe.  
10 Feb., 1890.

751. Taking the cost of carriage into consideration, and adding to it the cost of the seed potatoes, the cost of ploughing, drilling, hoeing and bagging, and all the other labour connected with their production, what do you think the gross outlay is in producing a ton of potatoes? I think you could put it down at £2 a ton, but out of the 5 tons to the acre, I should not consider that more than 4 tons would be marketable at £4 a ton.
752. And you think you would get £2 a ton profit? We have to pay commission, which would amount to 5s. a ton if the potatoes sold at £4.
753. You would have to take 45s. off the £4, and the balance would be profit? No.
754. Is that profit not sufficient to induce people here to grow potatoes? No.
755. Is the profit on dairying more than that? Yes; the produce from the dairy is much more valuable than the potatoes; and in getting the potatoes to market we have to contend with very bad roads.
756. What is the profit of dairying per acre? It varies, according to the price of butter; but I estimate the value of land for dairying at from 30s. to £1 an acre.
757. And unless you can get more than £2 an acre potatoes would pay better than dairy produce? Yes.
758. Unless you had a railway that would reduce the cost of carriage you do not think it would be worth while to go into the production of potatoes? No.
759. In your estimate of £2, I suppose you have not excluded the cost of carriage? No; but when the cost of carriage and commission are paid there is very little left.
760. You could well afford to pay 5s. for the carriage to Moss Vale? Of course, if we could get it done cheaper it would be all the better.
761. Would it pay the growers in the district if on the branch line they paid 50 per cent. more than the rates charged on the main line? Yes.\*
762. Do you think that to get the railway the people in the district would willingly pay twice the rate per mile between Moss Vale and Robertson that they pay between Moss Vale and Sydney? Yes, and four times the rate.
763. And would be better off then? Yes. On these goods the official charges are actually based on 11d. a ton from Wild's Meadows and 1s. 3d. from Robertson, and if the charge was four times as much it would amount to 5s.
764. The calculation of the railway officials is that the existing rates on the trunk line would be charged also on the branch line, and they think the produce would yield a revenue of £1,843 a year;—do you think the people would be willing to pay double, or even quadruple that amount to make the line pay? Yes, rather than not have the railway. Of course, if they could get it cheaper they would gladly do so.
765. You notice that out of this £1,843 £1,075 is for passenger traffic, and only £180 for mails and parcels, and £580 for goods traffic? Yes; Mr. Harper's calculation is at 11d. to the Meadows, and the same rate is continued on.
766. Have you also tried fruit-growing? Yes.
767. Is this district likely to grow fruit? It is one of the best fruit districts in the Colony.
768. What sort of fruit would stand the carriage to Sydney? We could send fruit away better by rail than by dray, on account of the jolting. The fruits that could be extensively grown are apples, pears, cherries, plums, strawberries, raspberries, and other fruits suitable for cold climates.
769. Supposing the railway were made, in most instances there would be 3 or 4 miles cartage, would there not? Yes; but we could send that class of fruit at a profit.
770. Out of the 50,000 acres of good land here how many acres would be suitable for orchards? I should pick out about 5,000 acres as being the most suitable land for orchards.
771. And how many acres do you think are fit for potato-growing? About 10,000 acres.
772. In addition to the other 5,000 acres? Yes. The land could be used for growing fruit and vegetables.
773. How many acres are suitable for market gardening? The best potato land is suitable for growing other vegetables as well as potatoes. I think altogether 15,000 acres would be a fair estimate.
774. Leaving 35,000 acres for dairying purposes? Yes. I think that the area for growing fruit and vegetables might be set down at 20,000 acres, leaving 30,000 for dairying.
775. You think that that would be an extreme calculation? No; I think it would be a fair calculation.
776. With regard to dairying, what is the average number of acres that will keep a cow all the year round? I suppose about 2 acres.
777. How many months of the year do you consider the land to be in first-class condition for feeding? About nine months. We have only three months of winter here.
778. Do you mean to say that it is equally good for nine months as a rule? Yes; of course we must expect drought seasons. I suffer nothing in a drought, and it is the same with some others.
779. You do sometimes have dry seasons? We suffer somewhat from droughts, but not like some parts.
780. You are exceptionally favoured as regards rainfall? Yes; I think we get something like 55 inches of rain annually.
781. Taking 2 acres to a cow, what is the annual yield of milk in the district? I took the milk yield from the statistics that we obtained at Moss Vale. The farmers would be paying on the butter.
782. What was the amount of butter to begin with? The quantity exported from Moss Vale to Sydney was 14,000 kegs a year, and it takes about a ton of milk to produce a keg of butter. This season, about double this quantity was sent to market.
783. What is the weight of butter in a keg? About 80 lb. without the keg.
784. One ton of milk will make 80 lb. of butter? Yes. I may point out that since the factories and separators have come into use I do not think it takes quite so much milk to produce a pound of butter as it did when the butter was made by hand.
785. Still it would not materially alter the calculation? Not much.
786. For some years you did a milk business with Sydney? Yes.
787. That has practically ceased? It has.
788. The milk companies are getting it from the coast line? Yes; I think the carriage is cheaper from

789.

\* NOTE (on revision):—Potatoes, @ per ton—

Labour, rent, and bags ... ..	£2	5	0	
Present carriage, commission, &c. ...	1	15	0	
		4	0	0 Profit, nil.
If railway constructed, cost 12s. ...	3	2	0	„ 18s.

789. Looking at the present low price of milk, even if there was a railway, do you think that the farmers would send their milk to town instead of to the factory? I think they would if a fair standard value could be obtained.

Mr.  
T. Blencowe.  
10 Feb., 1890.

790. What do you call a fair standard value? There is a company paying 7d. a gallon all the year round, and that is a remarkably good price.

791. If milk rose to 7d. the farmers would sell their milk instead of making butter? Yes.

792. Would it pay at 4d. a gallon? I do not think so.

793. Then at the present rate, even with a railway, you would prefer to turn your milk into butter? Yes; but this is an exceptional season.

794. Is there much freehold land here remaining to be cleared? Yes; a considerable quantity.

795. What proportion? I should think about one-third.

796. Some of the timber is left for shelter? Yes; but the country is in a very rough state yet. Considerable improvement could be effected, and a far larger quantity of grass could be grown.

797. You think that the existing holdings are capable of producing a great deal more than they do at present? I think so.

798. *Mr. Dowel.*] Have you come into contact with the large number of residents in the district in reference to this particular railway route? I know a great many in the district.

799. Is the general feeling in favour of the proposed route? Yes, from Moss Vale to Robertson.

800. Have you been over the staked line? Not all of it; but I know the direction in which it goes.

801. Do you think the line staked out is the best to serve the various centres of population? Yes; a better line could not be found if the cost of construction is taken into account.

802. *Mr. Garrard.*] Were you not at one time in favour of a line from Bowral, *via* Kangaloon? Yes.

803. Why have you altered your opinion? Because of the expense of the route. I understood from Mr. Bell that that line would cost half a million of money.

804. I suppose it does not matter to the inhabitants where the branch joins the main line as long as they get to the metropolis? I do not think so.

805. If by going to Bowral they could save 6 miles of haulage, would not that be an advantage? Of course it would.

806. Do you know anything of the country about the Sheepwash? Yes.

807. Do you think it practicable to bring a line along to the north side of the Wingecaribee Swamp? Yes, but more expensive.

808. Would it serve the Kangaloon people better? It would serve Kangaloon.

809. If the line was constructed from Robertson to Moss Vale the East Kangaloon people would make Robertson their depôt? Yes.

810. But if the line went to the Sheepwash the West Kangaloon people would be able to use it as well? Yes.

811. A line from Bowral would serve a greater number of people and save 6 miles of main line haulage? Yes.

812. That is a consideration? Yes, but we have gone for the cheapest line, the line that will accommodate the greatest number of people at the least expense.

813. Suppose it is a question of railway or no railway, and the raising of the rates to three-fourths more than is charged on the main line, do you think the people are prepared to pay it? I think so.

814. There are good agitators in the district are there not; do you think that if a line is constructed we shall not then have deputations going to the Government and asking for a reduction of the rates? No doubt they would try it as they did on the Illawarra line.

815. Then if the railway were made on the understanding that higher rates were to be paid we should have to provide for that by Act of Parliament because peoples word cannot be trusted? My own opinion is that higher rates should be charged on the branch line than on the main line.

816. You made us believe that the people here had no conscience, that immediately after the line was made they would commence to agitate for the reduction of the rates? Exactly as they did on the Illawarra Line; there is one thing which I wish to mention. I was engaged with Mr. Harper in ascertaining the amount of the goods traffic from this district as far as could be found out at the Moss Vale Station. Matters were gone carefully into, all the names called out of residents in the Moss Vale and Bowral districts, but there were farms in this district which were omitted because it is impossible to know everyone, and a considerable traffic with Moss Vale was not taken into account, and we do not get credit for it in Mr. Harper's report.\* Further, the tourists' tickets issued in Sydney are not credited to Moss Vale but to the place where they are issued. The returns from Moss Vale station alone make £22,000. Mr. Harper gave us no credit for what we may put on the main line because the main line is not paying. As far as it is possible to ascertain, of that £22,000 the people of the Robertson district contribute about £16,000. If the railway were constructed the growth of vegetables, potatoes, and other crops would become more profitable than dairying and that would give the railway better returns.†

817. *Chairman.*] Your object is to show that Mr. Harper under-estimated the revenue? Yes.

818. *Mr. Garrard.*] Where were the Local Committee when Mr. Harper under-estimated the revenue. Did he go through the figures with them? Yes.

819. And did they not agree that it was a correct statement? Yes, from actual reports at Moss Vale station, but no allowance is made for the tourists' tickets. I go to Sydney ten times in a year but no credit was given by Mr. Crawford for anybody going anywhere.‡

820. These facts having occurred to you since Mr. Harper left, have you put them before him? I put them before him at Moss Vale. 821.

\* NOTE (on revision):—The residents within 3 miles of Moss Vale and Bowral stations are omitted from Mr. Harper's report, as they are near existing stations.

† NOTE (on revision):—Potatoes—I would like to point out to the Committee that the soil and climate of this district are especially favourable to the growth of potatoes. In my twenty-seven years' experience I have never known a crop to fail; notwithstanding the severest droughts there is always sufficient moisture from the frequent mists and fogs to ensure a crop. I have grown varieties for more than twenty years in this district that have not deteriorated, but remain true to name. The quality of the potatoes is superior to the famed Circular Heads, and they realize the highest price in Sydney market. In my estimate of 20,000 acres, as being suitable for growing potatoes, to prevent misunderstanding I may state that the 50,000 acres would all be available for that purpose—the drawback being the heavy expense—removing the heavy whinstone and drainage of other portions. The great obstacle to the cultivation of potatoes, successfully, is *bad roads* and *high costs of carriage*. I have taken some trouble to ascertain costs and profits which are given on "margin of form." At present there are no profits, but if the railway was constructed, and the product taken by rail at 12s. per ton, this would leave a net profit to the grower of about 18s. per ton. This would be a great inducement to cultivation, and I have no hesitation in stating that 10,000 tons per annum could be relied upon, coming by rail from this district alone. We have the soil, the climate, and a hardworking industrious class of people—give them the necessary facilities and they are able to compete in the market against their more favored rivals from other colonies.

‡ NOTE (on revision):—I do not place any value on Mr. Crawford's report.

- Mr. T. Blencowe. 821. He had them under his consideration at that time? Yes.  
 822. Do you think that if this line were constructed now it would give a return of £6,577 a year? No, I do not think it would.  
 10 Feb., 1890. 823. Believing that the line would mean a large increase in a productiveness of the district how long do you estimate it would be before it would pay the interest on the capital and the working expenses? I think that it would pay in the course of two or three years.

Thomas Seery, Esq., J.P., timber merchant and farmer, sworn, and examined:—

- T. Seery, Esq., J.P. 824. *Chairman.*] Are you a resident in the district? Yes.  
 825. What is your occupation? Farmer and timber merchant.  
 10 Feb., 1890. 826. How long have you been engaged in the timber trade here? About seven years.  
 827. Is the softwood timber of any commercial value? Yes, but there is very little of it now.  
 828. Then as far as the brush land is concerned the timber trade is done with? Pretty well done with.  
 829. Is the remaining timber, hardwood, growing on poorer land? Yes.  
 830. How much of it is there left? A good deal if there was a railway we could shift back on the face of the mountain and get a great deal of hardwood there.  
 831. And to what station on the proposed line would you draw that hardwood if the railway were constructed? To Robertson and Wilds' Meadows.  
 832. What class of timber is remaining? Hardwood, gum, and messmate.  
 833. How many years would it take to clear that off? That is more than I could say—perhaps a life-time.  
 834. What quantity would you estimate that you would be sending down per annum? We are cutting about 4,000 feet a day.  
 835. Would most of that find its market in Sydney? No; it would go up the country. We send timber to Young, Yass, Cootamundra, and Goulburn.  
 836. Is there a good market? A fair market.  
 837. Could you easily glut that market? We might, but there is a fair consumption at Moss Vale, Bowral, and Mittagong.  
 838. If the railway were made, would that increase the cutting of wood in the district? I think it would increase it, because it would increase the population.  
 839. Would that 4,000 feet of timber per day be carried by rail? Most of it.  
 840. Say 3,000 feet? I think so.  
 841. How much a foot do you pay? We pay 2s. 6d. per 100 feet.  
 842. From where to where? From here to Moss Vale by road.  
 843. Have you any idea what the cost would be from there per 100 feet? 100 feet of timber is about 6 cwt.; 1,000 feet is about 3 tons. We pay about 25s. for 1,000 feet by road to Moss Vale.  
 844. Can you supply Sydney with hardwood from this district cheaper than it can be supplied from other parts of the colony? I do not think so.  
 845. And you have no market in Sydney practically? I do not think it.  
 846. *Mr. Dowd.*] What is the extent of this timber country? I could not say the number of acres, but there is a great deal of timber on the top and face of the mountain.  
 847. Do you know anything of the timber reserves? Yes.  
 848. Are they extensive? Yes.  
 849. Is the quality of the timber good? In some places good and some inferior.  
 850. If the reserves were thrown open, would a large quantity of timber be taken from them? I think so.  
 851. Would you consider 10s. per 100 feet for the cartage of timber to Moss Vale an exorbitant price? I should think it high.  
 852. How many thousand feet of timber per week are cut in the district now? We are cutting 24,000 feet a week. I do not know what the other mill is cutting.  
 853. Do you think that if the railway were made the output of timber would reach 50,000 feet a week? I could not say.  
 854. Is there any likelihood of an increase in the quantity at all? I think there is, because when you get more population there will be more building.  
 855. Is there a probability of 50,000 feet of timber per week being cut in the district and being sent away? I think there is a probability of it.  
 856. And at 5s. a ton the carriage would come to over £1,000 a year? Yes.  
 857. Do you think the trade likely to get up to that amount? I do not think it will.

Mr. Charles Tilsley, storekeeper, sworn, and examined:—

- Mr. C. Tilsley 858. *Chairman.*] What are you? Storekeeper, residing at East Kangaloon.  
 10 Feb., 1890. 859. How long have you resided there? About sixteen years.  
 860. How far is it from Robertson? About 2½ miles.  
 861. If this railway were made, how far would it suit the people of East Kangaloon? Up to the Wesleyan Chapel, just on this side of West Kangaloon.  
 862. And how far by the main road? About 3½ miles.  
 863. Then between 3 and 4 miles from Robertson this railway would take the trade of East Kangaloon? Yes.  
 864. West of that the trade would go to Bowral? Yes.  
 865. Supposing the railway were made, as some suggest, from Bowral crossing at the Sheepwash, then crossing over to Burrawang, and coming on to Robertson, would a station at Sheepwash be any use to West Kangaloon? Yes.  
 866. Is there any access? The roads are not good, but the traffic would go there.  
 867. Is it a hilly road? Yes, very.  
 868. Could it be made easy of access? Yes.  
 869. Would it be of any use to East Kangaloon? No.  
 870. Suppose that a railway were made to the Sheepwash, Burrawang, and Robertson, would Robertson accommodate the East Kangaloon district? Yes.  
 871. And the Sheepwash the West Kangaloon district? Yes.  
 872. And the Wild's Meadow Station would accommodate the southern side of the swamp? Yes.  
 873. At present the West Kangaloon people are left out altogether? Yes. 874.

874. Do you think that that proposal would be more satisfactory to the West Kangaloon people? The *Mr. C. Tilsley*. Bowral route would.
875. While it would accommodate the people on the west side of the swamp the same as if it had started *10 Feb., 1890* from Moss Vale? I could not say that.
876. Would it not take all the Fitzroy traffic as if it came from Moss Vale? I do not think so.
877. Are not the Kangaloon people in a line from Moss Vale to Robertson? I cannot say.
878. *Mr. Garrard.*] What is the population of West Kangaloon? I could not tell.
879. Is it a large district? Yes.
880. Is the land there equal in fertility to that about Robertson? A great deal of it is.
881. And the principal industry is dairying? Yes.
882. Do they send milk or butter to Bowral? Butter.
883. Is there a factory at Kangaloon? Yes.
884. Do you think it would contribute largely to the freight on the railway at West Kangaloon? Not largely.
885. As much as Wild's Meadows? No, certainly not.
886. As much as Burrawang and Robertson? No.
887. As much as East Kangaloon? No.
888. But for the East Kangaloon people it would be better to have the junction with the main line at Bowral if it would save some miles of main line haulage? I dare say it would; but in any case East Kangaloon people would come to Robertson.
889. But if they should shorten their route to Sydney, would not that be to their interest? Yes.
890. Do the people of East Kangaloon bring their milk to the factory at Robertson? No; they make butter themselves.
891. Are there any other products there? It is a large potato-producing district.
892. Where do they take the potatoes to? Bowral.
893. What quantity is grown in a year? I do not know.
894. Is there any other produce? Large quantities of vegetables and fruit.
895. Which all go to Bowral? Yes; and some to Robertson. A great deal would go to Sydney if they could increase the area of the orchards, but that would not pay.
896. Would it pay if there was a railway to Robertson? Decidedly.
897. *Mr. Dowel.*] Can you give the Committee any information in reference to the rates of carriage in the various parts of the district from Moss Vale to Robertson? Yes; from East Kangaloon we have to pay 15s. a ton to Bowral, and the same from Robertson in some instances, and in other instances £1 a ton.
898. Is that the average rate for potatoes and butter? No; they pay more for butter—9d. a keg.
899. What is the charge for pigs, cows, and calves? 1s. each.
900. And for market garden produce? There is a good deal grown, and it goes principally to Bowral.
901. Fruit? There are large quantities, and the charge is 1s. a case.
902. I believe you have done a good deal of carrying in the district yourself? Yes.
903. Do you think 15s. is about the average rate for potatoes? Yes.
904. From various parts of the district? It is much more from some parts.
905. Do potatoes find their way to Moss Vale and Bowral at a cost of 15s. a ton? Yes.
906. What is the rate from Wild's Meadows to Moss Vale? I understand that if they fetch the potatoes from the farms they get £1 a ton. From the store we generally got 10s.—that is, on the main road. I believe £1 a ton is the usual rate.

Mr. William Barrett, storekeeper and timber merchant, sworn, and examined:—

907. *Chairman.*] Where do you reside? At Burrawang.
908. What are you? I am in the timber trade.
909. How long have you been resident there? Eighteen years.
910. How much timber a day do you saw? At present we are not sawing any; we were cutting *10 Feb., 1890* 4,000 feet a day, but we have closed the mill.
911. Where did you get your timber from? From the hills.
912. From the scrub land or the poorer land? From the forest land; it is mostly hardwood.
913. If the railway were made where would you put the timber on the line? At Burrawang.
914. Is the market as lively for the timber as it was when you began? No; there is more competition.
915. Can you get the same price? No.
916. There is not the same inducement to cut timber that there was? No.
917. Is that the reason why you have ceased? We are reserving the timber for better prices.
918. Is it on your own land? Some; and some we can easily buy.
919. Is there any Crown lands timber within reach of you? Yes, within 4 or 5 miles.
920. What does it cost to send your timber to Moss Vale? 2s. 6d. per 100 feet.
921. If you had a railway brought close to you do you think it would stimulate the production of timber? Yes; we cut such a quantity that it would make £1 a day difference.
922. Do you expect to get the timber carried for 2s. 6d. per 100 feet? I expect to get it carried for 1s., it would then pay us handsomely to cut it.
923. Do you mean that you would give part of the profit to your customers? We should be able to compete with the other mills. There is one at Gerald's Crossing, one at Barber's Creek, two or three mills between Moss Vale and Goulburn, and we have to pay so much for land carriage that we can't compete. Our principal trade is between Goulburn and Wagga Wagga.
924. And there are mills nearer to the market than you are? Yes.
925. You are handicapped by distance? Yes; and we have closed for the present.
926. If the railway were made you would save 1s. 6d. per 100 feet? Yes.
927. You could then sell timber cheaper? Yes, we could sell the timber as cheap as our competitors and get a fair share of the market. The oatmeal mills and the corn mills were closed because it did not pay owing to the expensive cartage.
928. You do not grow oats in the district much? We could grow ten times the quantity if we had better means of communication.
929. Do you think it would pay better to grow oats than to go in for dairying? I do not suppose that it would; but it would pay to occupy part of the land with oats.
930. Your market is up the line? The principal market is. We could send timber to Picton. There is a great demand for timber there, at Bowral and at Mittagong.

Mr.  
W. Barrett.

*10 Feb., 1890*

- Mr. W. Barrett.  
10 Feb., 1890.
931. Have not the other sawmills a larger area of hardwood to work on than you have? I do not know. I have been a storekeeper for eighteen years at Burrawang. We have done a large trade, and our average for years past from Moss Vale was 6 tons a week.
932. For the supply of your customers? Yes.
933. How much have you sent in? Not much. We only buy fowls and eggs from the farmers.
934. Is it a good poultry district? Yes.
935. Could you supply eggs to the Sydney market better than other districts? I do not think so.
936. Can you send poultry in cheaper? No. We cannot beat the northern rivers. The only advantage is that once the poultry leave this district they reach Sydney in a few hours, but from the northern rivers they have to go by steamers. Our eggs sell for fresh eggs, but the eggs from the northern rivers are only case eggs. At present we supply a lot of people in Bowral with eggs.
937. Are there many farmers round you who keep poultry? Yes, a great number.
938. Is there any difficulty in getting eggs from them? No.
939. Could they increase their produce? Yes.
940. How many sawmills are there in the district? Four.
941. Do you think that the sawmill proprietors will object to pay a shilling per 100 feet for the carriage of the timber? I think not.
942. Do you think that the output is likely to be increased if the railway is made? I believe that three times the quantity of timber that is sent away now would be sent if we had a railway.
943. That would make the quantity 50,000 feet a week? Yes.
944. That would give a revenue of £1,000 a year? Yes; and we have a grand district for making bricks. There is also freestone in the district, and if we had a railway any quantity of that would be sent away.
945. The Commissioners estimate that the goods passing through Mossvale and Bowral to the Robertson district would be only £2,504, and that the revenue from the produce of the land would amount to only £465—do you consider that an under-estimate? Certainly. If we had a railway it would create new industries. We should send away more timber.
946. Your estimate of 50,000 feet of timber would give £1,000 a year—a large estimate as compared with that of the Commissioners of £465? Yes.
947. Could that be kept up for a considerable time? I believe so.
948. Do you know anything about the timber reserves of the district? I do.
949. Are they extensive? I believe so.
950. Have you been through them? Not many of them.
951. What other sources of revenue would there be for the railway? There is nothing that would pay the railway so handsomely as the passenger traffic. The climate of this district is very healthy. I have heard many visitors say that if there was a railway to Burrawang they would prefer the place to Bowral.
952. Are there many passengers to Robertson and Burrawang? No. There is no accommodation there; no one will build.
953. Are the holdings in the district large or small? Most of them are small ones, from 80 acres to 100 acres.
954. Are the owners prosperous? Yes.
955. Are the improvements good and permanent? Yes. When I came to Burrawang you could buy land at £2 10s. an acre which will now bring £27 an acre at auction.
956. Would the proposed railway increase the value of the land? Yes; very much.
957. What is the value of the land in the district now? The average is about £25 an acre.
958. How much would the value be increased by the railway? I think by about £10 an acre.
959. Then taking into consideration the various resources of the district, you think that the Commissioners have very much underestimated the revenue that would be derived from the railway? I do not think that their estimate is a quarter of what it ought to be. There is another thing which I may mention. We are going to have a brewery at Burrawang, the water there having been found to be very good for brewing purposes. When the brewery is started it will materially increase the traffic.
960. How many tons a year do you think the brewery would cause to be brought to the railway? I could not estimate the quantity.
961. What is the quality of the water that makes it so suitable for brewing? I do not know. It will make excellent beer.
962. Has the district progressed during the last eighteen years? It has.
963. Has the population doubled itself? It has more than trebled itself.

Mr. William Saunders, senior constable, sworn, and examined:—

- Mr. W. Saunders.  
10 Feb., 1890.
964. *Mr. Dowel.*] What is your position? First-class constable in charge of this district.
965. So far as you have observed, is the population of this district industrious and prosperous? Yes.
966. What is the population of the district? 5,000 or 6,000.
967. Do you collect statistics here for the Government? Yes, the statistics have been collected, but not kept.
968. What is the area of your district? I take the district for 3 miles on this side of Moss Vale out to Kangaroo Creek up to Robertson, and half of East and West Kangaloon, also Yurrunga, Wild's Meadow, and Burrawang.
969. How long have you collected the agricultural statistics? I have collected them twice in this district.
970. Did they show a distinct increase on the second occasion? Yes.
971. Then your statistics show that the district is going ahead? Yes.
972. Was that general? Yes. There was an increase of fifty in the occupiers' schedule in two years.
973. How many butter factories are there in the district? Three, in my portion.
974. Does there appear to have been any increase in the stock of the district? Yes.
975. Are the stock pretty good? Yes; very good. There are about 9,000 dairy cows, showing an increase of about a thousand during last year.
976. Any increase in the orchards? Yes; they are extending the orchards.
977. Is there any increase in the land put under cultivation for vegetables? Yes, in vegetables, not including potatoes.
- 978.

978. Have you been able to compare this district with any other? Yes.
979. With what result? Rather in favour of this district. Potatoe-growing here is far ahead of that business in the Illawarra district.
980. What about cabbages? The cabbages grown here are far superior to any others. Everything in the market garden line produced here is of superior quality.

Mr.  
W. Saunders.  
10 Feb., 1890.

Mr. John Curtis, dairy farmer, sworn, and examined:—

981. *Chairman.*] Have you had anything to do with the butter factories in the district? Yes.
982. Which one? The one at Robertson; I managed it.
983. How long? Twelve months.
984. How many farmers send their milk to it? I think the number is thirty-two.
985. You are not now the manager, are you? No.
986. Do you know the quantity of milk per acre that the farmers send to the factory? No.
987. Do you weigh the milk as it comes in? Yes.
988. How much milk is there in each of the cans? About 11 gallons.
989. What does that quantity of milk weigh? The cans weigh about 116 lb. each when full.
990. How much butter would that quantity of milk produce? It takes from 21 lb. to 24 lb. of milk to make 1 lb. of butter.
991. Shall we say that the quantity of milk in the cans will produce an average of 22 lb. per can? Yes.
992. Is there any great difference in the supply in winter and in summer? Yes.
993. During how many months of the year are cows at their best? About six months.
994. They are worst in the coldest months? They give as much milk in winter as they do in summer, except that in summer they are generally newly calved, and that makes a difference.
995. Something is due to the fact that they are fresh in milk? Yes, and the grass is fresher too.
996. It is only cold weather that tells? Cold weather makes no difference. The cattle in this district will milk as well in winter as those in any other district.
997. Is the milk richer in winter than in summer? Yes.
998. Could the factory deal with more milk than it takes at present? Yes.
999. Do you think that one factory is sufficient for the district? Yes.
1000. What area of land do you think a factory serves? I should think that our area is  $2\frac{1}{2}$  miles square. There are some farmers a little further away.
1001. One factory for every  $2\frac{1}{2}$  miles would be enough? Yes.
1002. Have you calculated how many acres one factory would satisfy? No.
1003. Do people bring their milk a distance of  $2\frac{1}{2}$  miles in each direction to the factory? Yes, some further than that.

Mr. J. Curtis.  
10 Feb., 1890.

Mr. James Lackey, market gardener, sworn, and examined:—

1004. *Chairman.*] What is your occupation? I am a market gardener.
1005. Where is your market garden? At Burrawang.
1006. How long have you been growing market garden produce? About two years and five months.
1007. Is it your own land? No; it is rented land.
1008. Did you select the land as being specially suitable? Yes.
1009. Did you think the slope of a hill better for your purpose than the flat ground? In this district we get the water on the hill as well as on the flat ground. There is never as much frost on the hills as there is on the flat.
1010. Have you any spring in the side of the hill? Yes, we have springs all over the place.
1011. Do you water the vegetables by hand? Last year we did.
1012. In the dry season you could irrigate that slope? Yes. There is water running along the bottom which came out of the hill.
1013. But you want it on the top? We can send it up with a water-mill.
1014. You have no spring on the top of the hill? Yes, we have; but we could not get the same quantity of water there.
1015. Where is your market? Sydney is our principal market.
1016. What do you pay for the carriage of cabbages to Moss Vale? 10s. a ton. We formerly paid 15s., but, as we have been sending such large quantities, we got the charge reduced. The charge by railway from Moss Vale to Sydney is 8s. 8d. a ton, making altogether 18s. 8d.
1017. Can you pay those rates and sell your cabbages in Sydney at a profit? Yes.
1018. If the proposed railway were made, what would be your rate? About 2s. a ton.
1019. The 10s.-rate would be reduced to 2s. a ton? Yes.
1020. Giving you an advantage of 8s. a ton? Yes, and on the day that we cut the cabbages we shall be able to truck them if we have a railway. At present the cabbages are not trucked until the day after they have been cut, and this lowers their price in the market.
1021. What other garden produce can you grow? Peas, French-beans, potatoes, and parsnips.
1022. Any carrots? It would not pay to grow them at present.
1023. What will pay? Peas, beans, cabbages, cauliflowers, and potatoes.
1024. You have tried all these? Yes.
1025. Which is the most profitable? The cabbages.
1026. And which the next? Peas at this time of the year. They are dear in Sydney now.
1027. Are you a month behind the Sydney season? In the spring about two months.
1028. Then you have an advantage? We have an advantage from Christmas up to May. The gardens about Sydney from Christmas to May or June are without cabbages.
1029. Practically you have a different climate and can take advantage of the off seasons? Yes; cabbages grow better here in dry than in wet seasons.
1030. You have never had a drought? We have been two months without rain, with nothing but slight fogs from the coast.

Mr.  
J. Lackey.  
10 Feb., 1890.

- Mr. J. Lackey.  
10 Feb., 1890.
1031. Do the fogs give moisture enough for the cabbages without watering? They do.  
1032. Did you suffer from want of water in the dry seasons? We had a great deal more labour to do.  
1033. In what way? We had to water the plants when they were put out. When they are established in the ground they require no more watering.  
1034. How many crops of cabbage can you take off in a year? Two.  
1035. Do you change the crops each year? Yes; we put the crops in in rotation.  
1036. You do not put the same crop in twice? We have done it.  
1037. But you do not think it a wise thing to do? The soil is very good, and at first it would do no harm.  
1038. Suppose you could expand your cultivation tenfold, would you still have as good a market or would you flood the metropolis? I think we should get a better market. The Chinese are decreasing in number, and that makes a better market for Europeans.  
1039. At present you are beating the Chinese? Yes. There is not a gardener in the colony who sends to market the sort of vegetables that we send. Since Christmas we have sent about 140 tons of cabbages alone.  
1040. What is the area of your garden? About 20 acres.  
1041. Is all that used as a market garden? Yes. We have 43 acres altogether, but we are cultivating only 20 acres.  
1042. How much of this district is suitable for market gardens? A great deal. On the tops of the hills cabbages grow better than on the flats. It is difficult to make some of the land ready for vegetables. The stony ground is richer than the other.  
1043. Is it better to leave the stones in the land? Stones will make the ground hold moisture, but you cannot cultivate where there are stones.  
1044. Is the stony ground better for fruit-trees? Fruit-trees do not require rich ground.  
1045. You say that you can grow vegetables and sell them to a profit, notwithstanding the heavy cost of carriage? We are doing it.  
1046. Do you pay 10s. a ton for the carriage of your produce to Moss Vale? Yes. We are selling our potatoes in Sydney at 4s. 9d. a cwt.  
1047. What do you reckon a fair crop of potatoes? Six tons an acre.  
1048. Is that a fair average? Yes, on good ground. On very good ground we can get 8 tons or 9 tons to the acre.  
1049. What does it cost you to get a ton of potatoes off your land? About 15s. for the labour, 10s. for the carriage to Moss Vale, and 8s. 8d. by the railway to Sydney. Of course we can take another crop off that land.  
1050. Have you reckoned for the bags and commission? We sell the stuff ourselves.  
1051. If you can make potatoes pay why cannot your neighbours? We have an advantage, because there is generally one of us in Sydney. When you sell your own stuff you get a better price than you would from an agent.  
1052. You can do better for yourselves than anyone will do for you? Yes.  
1053. Still it takes your time? Yes, but it pays.  
1054. You think that potatoes could be grown here even under the present conditions? Most decidedly. The dairymen here have to keep hands to milk the cows morning and evening, and those hands could put the potatoes in in the middle of the day.  
1055. The same hands could do the potato patch? Yes; and it would not make the area of grazing land any less. They have to grow green stuff for the winter; and they could have the potatoes out in time to put in the green stuff for the cattle.  
1056. Would that not exhaust the land? No; they have manure.  
1057. Do you think that if they had a railway it would stimulate the production of potatoes? Most decidedly it would. I do not think that there is a district in the country more suitable than Burrawang and Robertson for the production of potatoes.  
1058. You think that many who are not growing potatoes now would grow them if they had a railway? Yes. At the present time potatoes from this district are bringing 15s. a ton more in the Sydney market than any other potatoes.  
1059. Is that in virtue of their good quality? Yes, and their freshness.  
1060. And could you keep up the supply of potatoes all the year round from this district? We could.  
1061. Every month you could send something down? We do send stuff every month, but not potatoes.  
1062. Could you keep up the supply of potatoes? No. We have not sufficient land.  
1063. Could the district keep up the supply? Yes. We keep up a supply of vegetables. We are only growing 5 acres or 6 acres of potatoes.  
1064. Do you grow cauliflowers? Yes.  
1065. Do they fetch a good price? They do.  
1066. Does the crop ever disappoint you? No; sometimes we are disappointed with the seed that we get.  
1067. Mr. Dowel.] How long have you been in the country? Since 1882.  
1068. Where did you gain your experience of growing vegetables? In Ireland.  
1069. Are the potatoes in the Court here a fair sample of what you grow in this district? Yes.  
1070. Would you consider them good enough for any market in the world? They are a little too large to bring the top price.  
1071. Do you think you can grow all kinds of vegetables in the district if a railway is made and compete successfully with the Chinese? Yes; we are doing it now.  
1072. Have you had any experience in the growing of fruit? Yes.  
1073. Do you consider this climate suitable for fruit? Not for all kinds. It is suitable for pears, apples, plums, strawberries, gooseberries, currants, raspberries, and cherries.  
1074. Do you think that orchards would be profitable? Yes, very profitable. A great number of people are planting orchards in the district.  
1075. In anticipation of the railway? Yes.

Mr. George Schlaadt, dairy-farmer, sworn, and examined:—

- Mr. G. Schlaadt.  
10 Feb., 1890.
1076. Chairman.] I understand that you have paid some attention to the minerals in this district? I have.  
1077. Where do you see the minerals cropping out? About 2 miles from Robertson.  
1078. Always in the gullies, is it not? Not always.  
1079.

Mr.  
G. Schlaadt.  
10 Feb., 1890.

1079. What is the smallest depth below the surface of any coal-seam that you know of? 70 feet.  
 1080. What is the thickness of the thickest seam? 16 feet.  
 1081. What is the quality of the coal? It is good bright coal.  
 1082. Not the same as the Illawarra coal? Better.  
 1083. Do you know of any shale in the district? Yes, in one place.  
 1084. What thickness is that? It is 16 inches at the outcrop.  
 1085. Is it below the coal? Yes.  
 1086. Is it in the same seam as the coal? No.  
 1087. Would it be difficult to get it out? Not very.  
 1088. Would you mine a 16-in. seam? No. I expect it would get thicker as I went further in.  
 1089. Do you think that the coal-seams in the district will be worked by tunnels in the sides of the cliffs? Yes.  
 1090. Will it be cheaper to take it to the upper or to the lower railway? It would be folly to take it to Sydney.  
 1091. Is mining taken up in the district? I am waiting to take it up, and when I do so others will.  
 1092. Will it pay to mine coal here and send it to Sydney? No.  
 1093. Would it pay to mine the shale? Yes.  
 1094. What is the quality of the coal? I have not tested it; it burns bright.  
 1095. You cannot say whether it would find a market against the Newcastle coal? No.  
 1096. It would do for locomotive purposes? Yes.  
 1097. Do you know the Berrima and the Mittagong coal? Yes.  
 1098. Is the coal here superior to the Berrima coal? Yes.  
 1099. As far as you know the coal here is the best in the district? Yes.  
 1100. Are there any bands visible in the 16-foot seam? None visible where I have seen it.  
 1101. How far have you cut into it? I have not cut into it at all.  
 1102. Then you have only seen the surface of it? I took some of the coal away in bags and burned it.  
 1103. How far would the proposed railway be from the coal? About 3 miles.  
 1104. A branch 3 miles long would take you to the mine? Yes.  
 1105. Is it easy country in which to make a branch? Yes.  
 1106. Do you think there would be a sufficient market in the town, and along the railway, to keep a mine going? Yes, on a small scale; and it would give a few families a good living.  
 1107. But it would want certain appliances would it not? Nothing considerable; as the consumption increased the appliances would be increased.  
 1108. Do you know that a small trade does not pay? It would not pay in some cases; but we should not go too elaborately into the business at first.  
 1109. You would have to sink your pit? No pit would have to be sunk at all.  
 1110. You would have to draw the coal up a distance of 170 feet? That would easily be done.  
 1111. By an inclined railway? No; by water power—hydraulic lifts. We have the water power provided by nature, and the machinery would not cost much.  
 1112. Have you that water power all the year round and in dry seasons? Yes.  
 1113. The coal is sufficiently near the waterfall for you to get all the power that you want? Yes; there is another product of this district, a sample of which I have with me—chrome.  
 1114. What is the value of it in the Sydney market? £1 per cwt.  
 1115. Is there any large quantity of it? It is quite inexhaustible.  
 1116. Is there any market for it? None until we can get it away.  
 1117. Would this be saleable? Yes; it would go to England. They take chrome from New Caledonia.  
 1118. Is this equal in quality to the article obtained from New Caledonia? Yes.  
 1119. How far is this deposit from the proposed railway? 2 miles, and about 1 mile distant from the coal.  
 1120. The same branch railway would do for the two? It would carry both.  
 1121. How much could you supply? At present a ton a day. If there was a railway I could employ labour and get 30 tons a day.  
 1122. Have you tested this deposit? It has been tested by the Government Analyst.  
 1123. I mean as to the quantity? It actually lies there wasting away.  
 1124. Is there enough of it exposed to enable you to fairly estimate the quantity? There is a reservoir where it comes; it is deposited in clear water. If you take out a ton, on the following morning there will be just as much more. The outcrop shows that it is inexhaustible.  
 1125. You would take it from the deposit? From the original spring.  
 1126. *Mr. Dowel.*] Are there any other minerals in the district? Any quantity of iron.  
 1127. Is there much iron ore about here? Hundreds of acres of it.  
 1128. All in close proximity to the coal? Yes. You can pick up ore containing 70 per cent. of iron.  
 1129. There are large quantities of coal, ironstone, and chrome? Yes; and magnesia.  
 1130. Do you think that any iron industry could be started here? The stuff is here; it only needs the expenditure of capital. I have been for years fossicking about in the district. The place is full of minerals. There are diamonds, but they are very small.  
 1131. Have you ever obtained any diamonds? No; I thought I had one, but it turned out to be a garnet.  
 1132. Is the ironstone chiefly in pockets or is there a mountain of it? It is an immense mass.  
 1133. And there is no great distance between the ironstone and the coal? No; there is coal under this building 80 feet deep.  
 1134. Is there timber in this district? Any quantity.  
 1135. Is it good timber? Yes.  
 1136. *Chairman.*] You know that this district has been formed very largely by dykes of basalt? Yes, it is all volcanic country.  
 1137. Have you noticed whether there has been very much disturbance of the coal? In my judgment none, because it lies on the level.  
 1138. Wherever you see the coal it is undisturbed? Yes.  
 1139. *Mr. Dowel.*] Have you had any analysis made of the kerosene shale? I sent some to Sydney, and we burned some on a candle.  
 1140. What opinion is expressed about it? They say that the seam is too small, but I am in hopes of finding a better seam.

Mr.

NOTE (on revision):—For 12 miles the land is taken up for mineral leases—about 4 miles south-east of Robertson as coal lands—mineral lands on the north.

Mr. William Moses, auctioneer, sworn and examined:—

Mr.  
W. Moses.  
10 Feb., 1890.

1141. *Chairman.*] Where do you reside? At Wild's Meadows.
1142. What is your occupation? I am an auctioneer.
1143. Do you sell produce and land? Land and stock, principally.
1144. What is the average value of farming land here? From £20 to £25 an acre.
1145. What does it fetch in its unimproved state? £15 an acre. Near the township here it has been sold at £70 an acre.
1146. What does it cost to clear the land? £10 an acre.
1147. It would come to £25 an acre before it was cleared, and take three years to do it? Yes.
1148. If the proposed railway were made would it increase the productiveness of the district? I believe it would very much.
1149. Would it increase the value of the land? Yes.
1150. How much? I believe it would make a difference of 50 per cent. on the average.
1151. More than that near the railway stations? Yes, 100 per cent. in some cases.
1152. How long have you been here? Twenty-five years.
1153. Has the quality of the dairy stock improved while you have been here? It has, and is improving yearly. People are taking more trouble in breeding and in the selection of their herds.
1154. Do you think that the district is in its fullest condition of productiveness? It is not.
1155. Would the productiveness of the district be increased by new land being brought under cultivation, or by the improvement of the land now held? It would be increased by new sources of industry on the land now held.
1156. The good land is taken up? It is occupied, but not all cleared yet.
1157. Do you think that a railway would greatly increase the productiveness of the district? I do.
1158. What would people go into in preference to dairying? I do not think they would relinquish dairying, but there are other things which could be carried on in connection with it—market-gardening and other things would be gone into. Market-gardening was never thought of formerly.
1159. Then the market-gardeners who came into the district have taught the old settlers something? Yes, as far as produce is concerned.
1160. Perhaps a few more immigrants would be an advantage? I have not the slightest doubt about it. The settlers have perhaps not had any opportunity of doing more than make a living by dairy farming. They probably have not been able to embark in any other enterprise.
1161. You mean that they have been struggling into a position? Yes.
1162. You think they are now able to go into other industries? Yes. If they had railway communication they would grow potatoes and go into market gardening. I do not think that those who are engaged in dairy farming would grow vegetables, but others would do so. Farmers can grow potatoes.
1163. Any ordinary dairyman could grow potatoes, but not cabbages and cauliflowers? They have not the knowledge and time for that.
1164. It would have to be done by special market gardeners? Yes.
1165. Do you think the fruit industry would stand on the same footing? Yes.
1166. You do not think the dairymen would have orchards? Not to any great extent.
1167. You think that that would have to be gone into by orchardists? Yes.
1168. What would you consider a fair quantity of land here fit for growing potatoes? I believe about three-fourths of the land is fit for that.
1169. It would pay better than dairying? Not better.
1170. What land do you consider to be embraced in the 50,000 acres of good land in this district? A portion of Kangaloon, Burrengarry, the portion within reach of the proposed railway line to the Pheasant Ground, and all the other country within easy distance of the line.
1171. You think that this line would accommodate about 50,000 acres of good land? Yes, about 500 holdings.
1172. What proportion of the land would be fit for orchards? If the orchards will grow as I have seen them, the whole of it. I believe that the meadow land is more suitable than the high land; but I have seen good fruit on the high land.
1173. Considering the present price of milk, do you think the farmers are acting wisely in turning their milk into butter? Yes, under existing circumstances. They have no proper means of transit between here and Moss Vale.
1174. Suppose that the railway only came to Burrawang or Wild's Meadows, would it pay the farmers to send their milk to Sydney at 4d. a gallon? It would not pay at 4d. per gallon. They get 3½d. and 4d. a gallon at the factories.
1175. The milk trade has gone off. Is that not owing to the competition of the Kiama line? I don't think so. It is owing to the difficulty the farmers here have in getting their produce to the market.
1176. Did they give up the Fresh Food and Ice Company or did the company give them up? I think it would not pay the company, the cost of haulage is too great.
1177. Did the company collect the milk? In some cases they did.
1178. In other cases did the farmer send it in? Each sent his own.
1179. Do you consider the roads bad in this district? Not at the present time.
1180. They have improved since you came here? Yes, very much.
1181. As far as you know the people here are fairly prosperous? Yes.
1182. And they are still prospering? Yes.
1183. The district is steadily going ahead? Yes.
1184. It is better now than it was two years ago? It is better than it was twenty years ago.
1185. Is it better than it was five years ago? Oh yes.
1186. And your business is increasing? It has increased.
1187. *Mr. Garrard.*] Do you know anything about the Kangaloon district? I do.
1188. Do you think that if the line was brought along the northern side of the Wingecarribee Swamp it would serve the West Kangaloon people? Undoubtedly.
1189. Would it benefit the people here more to have the connection with the main line at Bowral than to have it at Moss Vale? It would make very little difference. It will accommodate more people if the connection is at Moss Vale. It will pass through more populous country than it would by the Bowral route.

Mr.  
W. Moses.  
10 Feb., 1890.

1190. The country between Moss Vale and Burrawang is comparatively worthless? The country between Bowral and Burrawang is the same.
1191. The only difference is that a line starting from Bowral, traversing the northern edge of the Wingecarribee Swamp, crossing the Sheepwash going over to Wild's Meadows, would tap all the rich lands, leaving out only the inferior country between Burrawang and Moss Vale? There is very little difference between the two. The line from Bowral to Robertson would be half-a-mile longer than the other.
1192. Then, by having the connection at Bowral, 6 miles of haulage on the main line would be saved? It may be that a large amount of traffic will go up the country. To a great extent the Yarrunga traffic will.
1193. What is there at Yarrunga? A considerable quantity of good land. It is a large potato-producing district.
1194. It will be tapped nearly 5 miles from Moss Vale? No; at Wild's Meadows, 10 miles from Moss Vale.
1195. Then, if the line comes by Bowral, will it not do as well? Yes.
1196. At the Sheepwash we should catch the West Kangaloon traffic? Yes; Bowral gets that traffic at present.
1197. Would not West Kangaloon people sooner put their goods on the railway at the Sheepwash than pay for cartage? Yes.
1198. Then over that branch the traffic would go? Yes.
1199. Coming over the Sheepwash to where the line for Moss Vale is, it would catch the traffic you anticipate for the proposed line at Wild's Meadows? Yes.
1200. So that, in addition to the traffic you expect to get by the present route, it would take the West Kangaloon traffic? Yes.
1201. And all the Burrawang and Wild's Meadows people would be saved that 6 miles of haulage? Yes, in sending to Sydney.
1202. Is not Sydney the principal market? Yes.
1203. Would it not be better to take the Bowral route? It may be, but there is considerable difference of opinion about it.
1204. You have no interest in Moss Vale? At present I have very little interest in the district at all.
1205. I suppose that the people of the Robertson district do not love the people of Moss Vale any more than the people of Bowral? I do not suppose that there is any love lost among them. Moss Vale is our legitimate centre. The roads lead to it, and the Court of Petty Sessions and the Land Office are there.
1206. You want to get to Sydney as cheaply as possible? Yes.
1207. And you want to see as much traffic as possible for the local line to justify its construction? Yes.
1208. Do you think that the people will be prepared to pay on the branch line rates 25 or 50 per cent. higher than those charged on the main line rather than not get the proposed railway? Yes, I believe so.
1209. How long do you think it would be before the line would pay the interest on the outlay and the working expenses—£6,577 a year? I believe it would pay within two years.
1210. The construction of the line would lead to a great deal of trade and productiveness? To developments of all sorts.
1211. *Mr. Dowel.*] Do you know the route of the line? I do.
1212. Do you think that the line, as staked out, will serve most of the population? Yes, it will serve the bulk of the inhabitants.
1213. Are the people in favour of this line as it is staked out? I can say without hesitation that the great majority of the people are in favour of the line from Moss Vale to Robertson.
1214. Do you think that the Commissioners' estimate of £465 as the revenue to be derived from the goods traffic on the line is a fair estimate? No; I think it is an absurd estimate.
1215. What would your estimate be? I have not made any calculations.
1216. The quantity of goods to and from Moss Vale is estimated to be 2,504 tons? That is too low an estimate.
1217. What articles could you name that would increase it? Live stock. There would be about 1,500 pigs and 6,000 calves a year which at present are killed.
1218. What do you pay for calves? A shilling a head.
1219. What would these bring if carried on the railway at 3d a head? About £100.
1220. What would be your estimate for the carriage of live stock between Robertson and Moss Vale? I should say about £250 a year.
1221. I suppose there are storekeepers in the district? There are.
1222. And they take a considerable number of tons of stuff, don't they? Yes. Another source of revenue has been overlooked. In winter time a great deal of fodder is brought into the district, but not as much as would be brought if there was a railway. If we had a railway not only would fodder be carried but also large quantities of maize for pig fattening and manure for improving the land.
1223. Can you say how many storekeepers would be served by the line? Nine or ten.
1224. Do you think that on the average they pay £50 a year for carriage? I think they pay a little more.
1225. Do they pay £100? Yes.
1226. That would be £1,200 a year, would it not? Yes.
1227. At half rates the revenue would amount to more than the Commissioners' estimate? Yes.
1228. Besides the storekeepers' goods there would be a considerable traffic to the settlers, would there not? Yes.
1229. Do you think there could be a traffic in timber between Robertson and Moss Vale? I think there would considering the large output of timber at present.
1230. Are you satisfied that the route of the proposed line is the best that could be adopted? I am, taking all things into consideration.

Mr.

Mr. W. R. Hindmarsh, sworn, and examined:—

- Mr. W. R. Hindmarsh.  
10 Feb., 1890.
1231. *Chairman.*] How long have you resided in this district? Seven years.
1232. I understand that you can give us some particulars as to the number of cattle in the district? Yes. At the present time we have in the district 9,097 milch cows, 2,696 ordinary cattle, 908 horses, and 1,800 pigs. There are four factories in operation in the district, producing 450 tons of butter per annum. Private dairies in the district are producing 130 tons of butter per annum, making a total of 580 tons per annum, or 61,986 kegs of 60lb. each.
1233. Is that without the weight of the keg? Yes. In twelve months we send out of this district 692 cases of eggs and 178 coops of poultry. Two-thirds of the calves from the 9,097 milch cows would be sent to Sydney if we had railway communication, but under present circumstances they are all killed.
1234. How many are killed each year? About 6,000.
1235. *Mr. Garrard.*] How did you get these figures? I collected the information from the statistics which have been taken.
1236. From the "Statistical Register?" I got part of the information from returns that were sent to the stock inspector.
1237. Does he provide the official statistics for publication? I do not know that he does.
1238. How does he collect his information—by going round to the farmers? The figures in regard to the butter were got from the factories and from the carriers.
1239. But a large quantity of the butter is the product of private farmers? We get the information about that from the storekeepers who carry it in.
1240. Can you rely on the figures as being correct? Yes; except some for the cattle in the Mittagong and Pheasant Ground districts. I had to make them up, as they had not been taken.
1241. What area does that embrace? Part of Kangaloon, Burrawang, Wild's Meadows, Robertson, and the Pheasant Ground.
1242. You have only included that district which will use the line if it is made? Yes.
1243. Had you anything to do with the Committee who conferred with Mr. Harper when he was collecting information? No.
1244. Do you know what is the Commissioners' estimate of the interest on the outlay and working expenses? Yes; £6,500.
1245. Do you think that the traffic would pay that? Not at present.
1246. How long would it be before it did? I should say from two to three years.
1247. Of course you are taking the most hopeful view of it? We have calculated what the increase would be if we had a railway.
1248. If you had a railway would the calves which are killed now be sent to Sydney? Yes; just as they are on the coast.
1249. We are told that the present cost of carriage for calves is 1s. a head;—if the railway carried them for 9d. would that lead to their being sent to Sydney? Yes; if we kill the calves we only get the skin.

Mr. Henry Kennedy, farmer, sworn, and examined:—

- Mr. H. Kennedy.  
10 Feb., 1890.
1250. *Mr. Garrard.*] What is your occupation? Farmer, at Central Kangaloon.
1251. How long have you been residing there? I have lived in the district since 1862.
1252. What area of land have you? 150 acres.
1253. What are you engaged in? Dairying.
1254. Any cultivation? Yes; I have between 7 and 8 acres of potatoes in.
1255. Where do you find a market? In Sydney.
1256. What portion of the main line do you take them to? To Bowral.
1257. How many miles have you to go? About 11 miles.
1258. How far is the centre of Kangaloon from this place? 4 or 5 miles.
1259. Do you make your own butter? No; I send the milk to the factory.
1260. How many cows are you milking? Between thirty-five and forty.
1261. Did you at any time send milk to the metropolis? I supplied the Fresh Food and Ice Co., who took delivery at West Kangaloon.
1262. What did you get then? It is so long since that I cannot tell.
1263. The establishment of the factory has caused you to leave off sending milk to Sydney? The Fresh Food and Ice Company did not remain long in the district.
1264. If a line was constructed to Robertson by the route now before us would you send any of your produce to Robertson to go to the metropolis? No, if I was in the farming line I would not.
1265. Supposing the line was constructed to Robertson\* from Bowral and the Sheepwash route and the station there, do you think the Kangaloon people would send their produce there? It is most likely that they would. If they had to go that far with the team they would, perhaps, almost as soon go to Bowral.
1266. How far is Kangaloon from the Sheepwash? About 5 miles.
1267. It is possible that a large number would avail themselves of a station at the Sheepwash? Yes.
1268. Do you know the district round here? Yes, all of it.
1269. Has there been a large increase in the productiveness of the district? Yes, and there would be a still greater increase if the farms were all thoroughly cleared, but they are not.
1270. Do you think there is sufficient trade in produce to justify the construction of a line, the annual expenditure in connection with which would be £6,577? I do not know.
1271. If the estimate of the Railway Commissioners, after due inquiry, is, that the present trade of the district would cause a loss of £4,000 a year, do you think that in the course of a few years the revenue would be increased up to £6,500 a year? I could not say.
1272. Do you think that the East Kangaloon people would bring their produce here if there was a railway to Robertson? I think some of them might; it is no great distance.
1273. How many miles is it? About 3 miles.
1274. You think that people 3 miles from Robertson would bring their produce here if a line was constructed? Some of them would.
1275. Do they bring it here now? No, it goes to Bowral.

Mr.

\* NOTE.—The last clause of my reply refers to the present surveyed line from Bowral to Robertson.

Mr. Henry James Balch, grazier, sworn, and examined:—

1276. *Chairman.*] How long have you resided in the district? Twenty-eight years.
1277. I understand that you have given some attention to the character of the soil in the district? Yes.
1278. Are you a horticulturist? No; my horticulture is confined to the production of things for my own use.
1279. Can you speak as to the value of the soil for plants, flowers, and fruits? Yes.
1280. Is this a good district for fruit-growing? I am situated to the east of Robertson, facing the sea—our land is well suited for market-gardening.
1281. Do you think it is better than Wild's Meadows? It would be a month earlier, as we have less frost.
1282. Would you be earlier than the Sydney market-gardens? No; we should come in a little later.
1283. Then in this district you have practically two climates? Yes. Where I am situated the climate is something between those of Illawarra and Burrawang.
1284. It is not so warm as the Illawarra climate, but it is warmer than the Burrawang climate? Yes.
1285. The soil is the same as in the district generally? Yes.
1286. Have you experimented in the growing of vegetables? Yes; from the first for my own use, and to see what the land would do. The first thing that I grew was broccoli—that was in 1864. I took a couple of heads to Sydney, and showed them to a person there, and he said he had never seen anything like them before. He offered me 30s. a dozen for them. The heads which I took down weighed 9lb. each.
1287. Can you grow cabbages successfully? Yes.
1288. Can you grow endive? I have not tried.
1289. Parsnips? Yes.
1290. Can you grow spinach, onions, and lettuce? Yes, and asparagus. In England this article requires the highest cultivation, and you can get nothing like the result that we get here. I have never seen anything equal to it.
1291. Do you grow celery? I have not grown it, but it could be successfully grown. I have not succeeded so well with cauliflowers.
1292. Have you tried artichokes? Yes, with success.
1293. You can only speak as to the facilities for growing these things, not as to the chance of selling them at a profit in the market? Asparagus would be a most profitable vegetable to grow, and rhubarb also. I could grow it by the ton.
1294. How much per acre do you consider a fair yield for potatoes? I have grown 10 tons to the acre. I should consider 6 tons a fair average.
1295. Have you sent any to Sydney? No. Before the roads were opened here I grew a great many potatoes, and sold them in the district.
1296. Your land is dairy land? Yes; but at the present time I am fattening stock.
1297. Does that pay as well as dairying? No; but it suits me better, as I am getting advanced in years.
1298. Could your land be used profitably for fruit-growing? Yes; but the principal factor is left out in considering this matter. To attempt to grow crops without a liberal supply of manure is ridiculous.
1299. Even in this rich soil? It would be impossible to grow good potatoes without giving a liberal supply of manure.
1300. What manure do you think would be required? I should use as a compost bone-dust, lime, salt, and slaughter-house manure—2 or 3 cwt. to the acre.
1301. If a railway were made, and improved farming gone into, it is your opinion that manuring must be resorted to? Yes; it would be an utter failure without it.
1302. Do you think that those who have calculated the returns have made a fair allowance? I do not think they calculated it at all. If the railway were made we should send down a great deal more goods. It is not only the quantity of the produce, but also the quality that must be considered. Potatoes cannot be grown on exhaustive soil.
1303. *Mr. Garrard.*] We have been told this morning that with railway communication some things which it does not at present pay to send to market would be grown and sent to Sydney; do you think that is a fact? Yes.
1304. But if you were going to add the cost of manure, would not that swallow up the margin which the railway facilities would give? No; I think that if I spent 10s. in manuring I should get 20s. or 30s. back for it.

Mr.  
H. J. Balch.  
10 Feb., 1890.

Mr. Joseph Paul Lawler, builder, sworn, and examined:—

1305. *Chairman.*] How long have you resided in the district? About twenty years.
1306. What is your occupation? I am a builder.
1307. You are thoroughly intimate with the quality of stone and brick required for building purposes? Yes.
1308. Can you produce good bricks in this district? Yes, as good as can be got.
1309. What sort of soil do you make the bricks of? Almost from the surface—down 7 or 8 feet.
1310. Of this chocolate soil? No; from Moss Vale down to Burrawang.
1311. Of that inferior quality of land? Yes, the poorer land.
1312. They can make as good bricks at Moss Vale as you can make at Wild's Meadows, can they not? They can make a good brick at Moss Vale; there is no difference.
1313. Then the local demand can be supplied in Moss Vale? They have not a great supply in Moss Vale.
1314. Then there is no need for the railway to be made in order that Moss Vale should be supplied with bricks? No.
1315. The only demand for bricks here is for their use in the district? Yes.
1316. A brick-making company would not give much traffic? The only thing I was thinking of was that bricks might be supplied for the making of the railway itself.
1317. Would the brick industry supply business to the railway? It would from Moss Vale across the mountains.
1318. What about the stone in the district? It is equal to the Pyrmont stone.
1319. Has it a fine grain? Yes, and cuts well.

Mr.  
J. P. Lawler.  
10 Feb., 1890.

- Mr. J. P. Lawler.  
10 Feb., 1890.
1320. Does it harden with exposure? Yes; it is harder than at first.  
1321. How far is the quarry from the proposed line? There are several of them. There is one at Burrawang.  
1322. There is only one on the line of route? Yes, on the reserve.  
1323. This is in the sandstone? It is proper freestone, not sandstone.  
1324. I suppose there are only patches of this superior stone? That is all. At the back of Robertson there is an unlimited quantity of stone on the top of the coal-measure.  
1325. Have you worked any of this stone? Yes, a large quantity. A lot of it is used in Robertson, but it is got at Burrawang. Some has gone to Moss Vale. It wears better than the Sydney stone, and is more easily cut.  
1326. Is the stone on private property or on Government land? On Government land.

Mr. Robert Mansfield Graham, auctioneer, sworn, and examined:—

- Mr. R. M. Graham.  
10 Feb., 1890.
1327. *Chairman.*] Where do you reside? At Robertson.  
1328. What is your occupation? Auctioneer.  
1329. How long have you been in business? Four years.  
1330. Do you find that the value of stock is improving in the district since you have been here? Yes, very much.  
1331. Do you find that the farm is improving? Yes.  
1332. If you had to let a farm what rent could you get for it? A great deal depends upon the position of the farm. The usual rent of farms fairly well cleared is £1 an acre. They are not thoroughly cleared.  
1333. Do you know what is the difference between renting here and renting in the Shoalhaven District? Yes. Rents are much higher in the Shoalhaven District—in some cases double what they are here.  
1334. Would you think from that that the land in the Shoalhaven District is twice as productive as the here? No.  
1335. Then the farmers there must be worse off than the farmers here? Yes.  
1336. They must slave hard to make money? Yes; but they have water communication.  
1337. If you had to sell a fairly-cleared farm, what would it fetch? I have been selling them at an average of from £22 to £25 an acre. We have sold them up to £27 10s. an acre.  
1338. If a railway were made to Robertson, what additional value would it give to the land? From £5 to £10 an acre at least.  
1339. What is the most? I have no hesitation in saying that if a railway were made good farms would bring £40 an acre.  
1340. If you had a piece of original scrub still left, say a 40-acre patch, what would that fetch at auction? From £13 to £15 or £16 an acre, according to the position.  
1341. Is it your opinion that this district is steadily improving? It is.  
1342. And occupiers are prosperous? They are.  
1343. Do you think that if the railway were made that dairying would be given up for market-gardening, orchard cultivation, or potato-growing? I believe there would be dairy-farming, because it is less expensive to the producers than anything else, but I have no hesitation in saying that fruit and potato growing would be much more extensively gone into.  
1344. Suppose the railway were made to the foot of the good ground, say Burrawang or Wild's Meadows, do you think that would be sufficient to give a stimulus to cultivation? Yes.  
1345. And that would be the cheapest part of the line to make? Yes.  
1346. And if the country spend only the comparatively small sum necessary, that would be a great benefit? Yes, to Wild's Meadow, Yurrunga, and Burrawang residents.  
1347. Would that railway do for the district? It would not be of great benefit to Robertson residents, because if the terminus were at Wild's Meadow the railway would then be 6½ miles from Robertson by the present main or mail coach road; and the cost of cartage is at present (and would be) 7s. 6d. per ton—the road is very hilly and only partly metalled.  
1348. Do you think such a line would be a payable one? Not just at present, but I am perfectly satisfied that it would pay in a short time.  
1349. Your knowledge of the district makes you say that confidently? Yes.  
1350. *Mr. Dowel.*] Have you made yourself well acquainted with the district and the people? Yes.  
1351. Do you know the staked line? I do.  
1352. Do you know the end where it is staked out for a terminus? Yes.  
1353. Is that a suitable place for a terminus? It was simply measured to the boundary of the township. It was afterwards thought of having the terminus further in the town.  
1354. Do you know where the site of the terminus was to be? It was not decided upon.  
1355. Do you think that the present terminus is a suitable one? I daresay it would be fairly suitable.  
1356. Could it be carried further with advantage? It might be carried with advantage to the Government reserve at the back of the town—that site would be the most suitable for the majority.

Mr. James Alcorn, dairy-farmer, sworn, and examined:—

- Mr. J. Alcorn.  
10 Feb., 1890.
1357. *Mr. Garrard.*] What is your occupation? Dairy-farmer, residing at East Kangaloon, about 3 miles from Robertson.  
1358. What area of land have you? I have 200 acres of my own and I rent 100 acres.  
1359. Do you use your land for grazing? I do at present; some time ago I was dairying.  
1360. Are you fattening cattle? They are principally young cattle that I have. I sell them in spring.  
1361. If this line was constructed to Robertson, do you think that the people of East Kangaloon would use it, or would they go to Bowral as they do now instead of coming to Robertson? It would depend a great deal on the difference in the carriage. We are much nearer to Robertson than Bowral.  
1362. May I ask the reason why you left off dairying? There is not so much hard work in connection with what I am at at present.  
1363. Then you think that if the railway rates were the same as they are on the main line the East Kangaloon people would come here? Most of them would.  
1364. If a line were constructed from Bowral to Wild's Meadows and Robertson, *via* the Sheepwash, do you think that the people of West Kangaloon would send their produce to a station at the Sheepwash? I do not think it would be any improvement, where the line is surveyed.  
1365. It would save 5 miles? The carrier would not make any difference, as he would have to go off the main line for a distance of one and three-quarter miles.  
1366.

1366. How far is Kangaloon proper from the sheepwash? About 5 miles.
1367. And about 10 miles from Bowral? Not quite,—about 7 miles. It is 11 miles from Bowral to Kangaloon, and about 7 miles to the Sheepwash.
1368. You think the probabilities are that when the Kangaloon carriers have got their load on they would as soon go to Bowral as stop at a station at the sheepwash? Yes.
1369. Do you know the district about Wild's Meadows? Yes.
1370. Do you think that if a railway were constructed it would be likely to yield a return of over £6,000 a year? It might not at present, but if connected with the Illawarra line it would; I mean with the Illawarra line at Bottle Forest.
1371. Have you been over the land between here and the Forest? I have been half way.
1372. Does not that run through the Sydney water supply reserve? Some of it does.
1373. You could not get much from that to make the line pay? No; it would shorten the distance very much from Moss Vale to Sydney,—it is supposed to be 30 miles shorter.
1374. But if the country is not contributing revenue to the line it would be rather a dear line, would it not? I think it would more than pay the cost of construction in the shape of land which they would sell between here and the Forest.
1375. How could they sell the land if it was reserved for the water supply? The Government could easily revoke the reserve.
1376. *Chairman.*] Is the country level between here and the part you have referred to? Yes.
1377. Is it an easy route for a railway? Yes, as far as I have been.
1378. Is it not intersected with gorges? With very few—none, considering.
1379. How far have you been? Out on the mountains opposite Dapto.
1380. Have you any idea of the distance from here to Waterfall, on the Illawarra line? I cannot say.
1381. How do you know it will save half the distance? Surveyors who have been over it have reported so.
1382. What surveyor? I could not say just now.
1383. Do you know anyone who has ever been over the whole length of it? A man named Shipman, and a man named Coleville, have been right through it.
1384. And they have told you that there would be no difficulty in constructing a line? No engineering difficulties.
1385. Where do you send your produce now? I generally sell my stock to the auctioneer, or sell them privately in the neighbourhood.
1386. Do you think the district would by-and-bye be able to pay the working expenses of the line, and the interest on the cost of construction? I think it would increase the traffic very much.
1387. Would considerably more land have to be brought under cultivation before the railway would pay? More and more land is coming under cultivation, by clearing and so on.
1388. Do you think the Kangaroo Valley people would send their produce to the line at Wild's Meadows? It would be nearer to them than Moss Vale, of course.
1389. Where do they send it now, to the coast or to Moss Vale? Both ways.
1390. If the railway were continued from Kiama to Nowra would they take their produce there? Nearly half of it.
1391. You think that half the produce of the Kangaroo Valley goes to Moss Vale, and that if the railway were constructed it would go to Wild's Meadows? Yes.
1392. You do not think that, like the Kangaloon people, once having the load on they would go on to Moss Vale? I could not give an opinion on that question.

Mr.  
J. Alcorn.  
10 Feb., 1890.

Mr. J. W. Timbs, dairy farmer, sworn, and examined:—

1393. *Chairman.*] Where do you reside? At the Pheasant Ground.
1394. How long have you been there? Twenty-five years.
1395. To what use do you put your land? It is mostly used for dairy purposes.
1396. Have you tried potato-growing? Yes.
1397. Did it pay you? Oh, yes, except for the freights.
1398. Did potato-growing pay better than dairying? We can use some land for potato-growing and some for dairy purposes.
1399. How much land have you this year under potatoes? About 5 acres. A great many are rotting through this last rain.
1400. Do you feel that you have an inducement to extend your potato-growing as matters stand now? No; it is not advisable to grow many, the freight is so high. We have to pay over 30s. a ton for the produce that we send away.
1401. Suppose you were at Wild's Meadows and could get your potatoes carried for 10s. a ton, would it pay you to grow them then? No doubt it would. At present the storekeepers are the only carriers, and they do as they like.
1402. Would it pay you if your potatoes were carried for 10s. a ton? It would.
1403. As well as dairying? We could do a little of each.
1404. If you could be certain that you could get your potatoes carried for 10s. a ton, would you grow potatoes every year? Yes.
1405. How many? About 10 acres.
1406. How large is your property? 120 acres freehold, and 140 acres of leasehold.
1407. About one-tenth you put under potatoes? Yes.
1408. And you think that that is about what each farmer would do if the carriage were reduced to 10s.? No doubt.
1409. Do you think a farmer could carry on market gardening as well as potato growing and dairying? Yes, if he had any family.
1410. Do you think that growing vegetables for the market requires special skill? I think most farmers could do it if they liked to turn their minds to it.
1411. Do you think that if a railway were made any considerable number of farmers would put any quantity of land into market gardening? Yes.

Mr.  
J. W. Timbs.  
10 Feb., 1890.

- Mr. J. W. Timbs. 1412. Would you? I would put 10 or 12 acres in at least.  
 1413. If you had railway communication would you put 20 acres of your land under cultivation? Yes, that would be as much as I could keep going.  
 10 Feb., 1890. 1414. And other farmers would do the same? Yes.

Mr. Hugh Johnson, dairy farmer, sworn, and examined :—

- Mr. H. Johnson. 1415. *Chairman.*] Where do you reside? Two miles out of Robertson, to the east.  
 1416. How long have you been there? Twenty-seven years.  
 1417. How much land have you? 250 acres, freehold.  
 10 Feb., 1890. 1418. To what use do you put it? Dairying and cultivation.  
 1419. What do you cultivate? Potatoes.  
 1420. Does it pay you to send potatoes to Moss Vale? Not at present.  
 1421. How much have you lost by it? I cannot exactly say.  
 1422. Did you pay for the carriage, or did you sell them in Robertson? Some I sold here and some I sent out by teams.  
 1423. Which paid you best? Those I sent by teams.  
 1424. Were they fetched from your farm or did you bring them into Robertson? If the carrier had come to my place the charge would have been £1 a ton?  
 1425. Have you paid £1 a ton? Yes.  
 1426. If you could get them carried for 10s. a ton would it pay? Yes.  
 1427. What proportion of land will it then pay you to put under potatoes? It will be according to the inducement.  
 1428. What would you risk? I would risk 10 or 15 acres.  
 1429. And you could manage that, in conjunction with your dairy farming? Yes.  
 1430. That would be as much as you could manage, I suppose? Yes, at present; but if there were more inducements, I would go into it more largely.  
 1431. Suppose you had better inducements, how much more land would you cultivate? The whole of it except a few acres which are too rough to clean up.  
 1432. How many years could you work without manure? I think, two or three years. The land would have to be occasionally manured.  
 1433. Then the best way would be to cultivate a fresh 10 acres each year? That is what we do.  
 1434. Then a certain portion of the land is fit for potatoes? But we do not account for more than that land being under potatoes every year. It would not pay to put the whole under potatoes.  
 1435. Although the land here is good, only a portion of it would be under potatoes if the market were ever so good? Only a portion.  
 1436. What else could you grow? We could grow hay.  
 1437. Would it pay you better to grow hay than to grow grass? I think it would some years.

Mr. John Thomas Hayter, farmer, sworn, and examined :—

- Mr. J. T. Hayter. 1438. *Chairman.*] Where do you reside? At Yurrunga.  
 10 Feb., 1890. 1439-40. How much do you farm? About 100 acres.  
 1441. If the railway were made what station on the line would you go to? No doubt there would be a station near Kelly's Creek.  
 1442. The line goes right through your property, does it not? Yes, this does, and also the one from Bowral to Wild's Meadows.  
 1443. That is a cross-line? Yes.  
 1444. You know that country well then. Suppose that the cross-line instead of being where it is marked on the map were more to the east, would it not go on a more level route? No, on a rougher route.  
 1445. Do you think that that connecting line between the two is the best that can be marked out? Yes.  
 1446. Did you see the surveyor when he was marking that line? Yes.  
 1447. You went and showed him what you thought would be the best line? Yes.  
 1448. Suppose he came through Baxter's land would that be an easier route? No, it goes into a hill.  
 1449. Is your farm on the rich land? No, it is on the poor land.  
 1450. Have you any of the rich land? Yes, 500 acres.  
 1451. To what use do you put it? Dairy farming.  
 1452. You have not tried potato-growing? Yes, twelve years ago.  
 1453. The roads were bad then were they not? Yes.  
 1454. Do you find any inducement at the present time to grow potatoes? Yes.  
 1455. Do you think you can grow them and make them pay? Yes, I have tried them and they have paid.  
 1456. Do they pay as well as dairying? Dairying is not so laborious as growing potatoes. Potatoes will grow well and pay well, even at the present rates.  
 1457. What does it cost you to get your produce to market? 10s. a ton from Yurrunga.  
 1458. Have you grown potatoes at both places? No, only at Yurrunga.  
 1459. Is it good potato land? Yes, it yields 6 tons to the acre.  
 1460. And you are keeping up that industry? I have let it drop a good deal lately.  
 1461. What are you doing? Auctioneering.  
 1462. What do you mostly sell? Property and cattle.  
 1463. Is there much property changing hands here? Yes.  
 1464. Have you heard the evidence given here this morning? Most of it.  
 1465. What do you consider to be the value of a cleared farm? From £20 to £25 an acre.  
 1466. At what rate can it be improved? £10 an acre.  
 1467. Is the quality of stock improving here? Yes.  
 1468. And people have more money with which to buy? Yes.  
 1469. And they will not keep inferior stock as they used to do? —

1470. Supposing the railway is not made in one direction will the improvements go? They will keep on dairy farming.
1471. Do you think the railway if made would be a good national investment? Yes.
1472. How soon would it pay the interest on the cost? Not for three years.
1473. Suppose the railway were made only as far as Wild's Meadows do you think that would give a stimulus to the district? I think it would, but the other 5 miles of it would go through richer land.
1474. But the other 5 miles are the most expensive. If the line went to Wild's Meadows would it be a benefit? Yes, it would suit Fitzroy and Barrengarry.
1475. And bring Robertson within 6 miles of a railway? Yes.
- 1476-7. Do you think that would pay? I think that a line right through would pay better.

Mr.  
J. T. Hayter.  
10 Feb., 1890.

Mr. William Rutter Hindmarsh, Senior, farmer, sworn, and examined:—

1478. *Chairman.*] Were you one of the early selectors in this district? Yes; I came from the Illawarra district.
1479. How much land have you got? About 1,200 acres.
1480. Do you farm yourself or let it? I farm about 500 acres, and the rest is leased to tenants.
1481. Did you let it on clearing leases? I let it at first on clearing leases, and now it is let on partially-cleared leases at a nominal rent, which with the improvements we consider will be equal to about 35s. an acre.
1482. Do your tenants consider it a nominal rent? They must or they would not have taken it.
1483. How much do you charge the tenants? We adopt a sliding scale—four years, 10s. an acre, and then up to ten years at 18s. an acre.
1484. You have no fully cleared land? Yes—a couple of hundred acres.
1485. What is the value of cleared land? Near the township about £30 an acre.
1486. What additional value do you think the railway would give you? From £10 to £15 an acre.
1487. Do you think that the additional productiveness of the land will enable the tenants to pay 10 or 15 per cent. more for it? I should imagine so.
1488. And for that reason you think that the landlords are in favor of a railway? Yes.
1489. And it would add from 10 to 15 per cent. to the value of every freehold? Yes.
1490. Do you think that the railway would pay? Yes, it will pay. I was one of the delegates in reference to the Illawarra line and also to this. It was my idea that the Illawarra line would pay from the commencement, and it has done so. I believe that this would pay too.
1491. Has not the Illawarra line taken some of the milk traffic from here? No; the main cause of that branch of trade being given up was the reduced price of the article. It was not worth the carriage.
1492. Was it not owing to the long land carriage? I believe it was.
1493. What is your idea of the distance that milk can be carried? About 5 miles; beyond that it is not good.
1494. There ought to be a factory within 5 miles of every dairy? If possible.
1495. Which pays best—to sell the milk or to make butter of it? I never sold the milk. As regards potato-growing, we can grow potatoes like these in the room in abundance, at least four months later than the potatoes grown in the hot climates, and they fetch a good price. If we had a railway here we could grow 2,000 acres of potatoes annually; that would give us 12,000 tons of potatoes, the carriage of which on the railway at 10s. a ton would yield a revenue of £6,000. We should require 1,000 tons of manure annually, which would be carried between Moss Vale and Robertson at the same price, giving another £500.

Mr. W. R.  
Hindmarsh,  
Senior.  
10 Feb., 1890.

MONDAY, 10 FEBRUARY, 1890.

[The Sectional Committee met in the Town Hall, Bowral, at 7 p.m.]

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Sectional Committee further considered the proposed Railway from Moss Vale to Robertson.

Mr. Copeland Bennett, station-master, sworn, and examined:—

1496. *Chairman.*] What is your position in Bowral? Station-master.
1497. How long have you occupied that position? Ten years here.
1498. You have watched the traffic coming into the station from Kangaloon? I have.
1499. During your time has it much increased? Not very much.
1500. Does the whole of the Kangaloon traffic come to Bowral? The whole of East and West Kangaloon does.
1501. How far do you penetrate into East Kangaloon? I think to Mr. Tilsley's and Mr. Alcorn's stores.
1502. How far from Bowral? I could not say. I think 12 miles to East Kangaloon, and about the same distance to West Kangaloon.
1503. If a railway were made to Robertson do you think you would lose some portion of the Kangaloon traffic to the station? I do not think it would affect us as far as East and West Kangaloon are concerned.
1504. Do you think that those living within 3 or 4 miles of Robertson would prefer to go to a station there? I think they would prefer to come here. The farmers would rather come here than go to Moss Vale.
1505. You mean that their ties at Bowral are such as would bring them here? Yes. They also say that they prefer the railway to be somewhere between Moss Vale and Bowral. They would prefer the junction to be midway between.
1506. On what ground? They say it would benefit the whole of the district much more.

Mr.  
C. Bennett.  
10 Feb., 1890.

1507.

Mr.  
C. Bennett.  
10 Feb., 1890.

1507. Suppose a line were made from here to the Sheepwash and across from there to Wild's Meadows, would a station at the Sheepwash be of any use to the West Kangaloon people? I desire to say particularly, that a station at Sheepwash would be of immense benefit to East and West Kangaloon.
1508. You do not know, as a railway officer, whether they would be likely to take the nearest station or to come on to Bowral? I should think they would take the nearest station.
1509. Would you recommend that the line be brought to Bowral, or that there should be a separate junction station? I should recommend a separate junction station.
1510. On what ground? I think the route would be much more favourable as regards gradients. I think that there might be a junction station between here and Burradoo.
1511. Could you tell us the quantity of traffic that comes in from Kangaloon? Yes, just now we are getting about 240 kegs of butter a week—about 180 kegs in winter; and at this time of the year we are getting about 16 tons of potatoes a day—about 100 tons a week.
1512. For what period of the year does the potato industry last? Another two or three months.
1513. They do not keep you supplied all the year round? No.
1514. Could they do that? I daresay they could.
1515. But this is the favourite season? Yes. The goods traffic inwards for East and West Kangaloon is very light.
1516. Are these potatoes grown on rich land? Yes.
1517. Are some of them grown before you reach the rich land? Yes.
1518. Which turns out the best potato? West Kangaloon. The whole district is very rich. The red soil produces the best and the largest crop.
1519. Do any of these returns of traffic relate to this side of the Sheepwash, or to traffic which would gravitate down to the Sheepwash Station? I think it might gravitate down to the Sheepwash Station.
1520. Is there any other traffic? A few pigs, calves, bacon, eggs, and poultry.
1521. What is the total value per week of these extras? About £25.
1522. Do you think that if a railway were made as far as the Sheepwash it would bring any more of the traffic on this side? I think it would encourage the farmers to do a great deal more than they are doing at present.
1523. You think it would increase your receipts? I think it would.
1524. Is there any considerable passenger traffic from here to Kangaloon? I cannot give any definite information as to that.
1525. There is no coach running from here to Kangaloon? No.
1526. Are there any carriers? Only those employed by the storekeepers.
1527. *Mr. Garrard.*] Where is Alcorn's store? That is in East Kangaloon.
1528. Is that where you get traffic from? Yes.
1529. Then if we have been informed that nearly the whole of the produce of East Kangaloon goes to Moss Vale, *via* Robertson, that is a mistake? I should think so.
1530. Do you think that if a railway was made, *via* the Sheepwash on to Robertson, the East Kangaloon people would go to Robertson, or would they come to the Sheepwash? I should think they would come to the Sheepwash.
1531. Why? I say that from conversations which I have had with the farmers.
1532. Does that apply to East Kangaloon? East Kangaloon people would never think of going to Robertson, as it would be out of their way to do so.
1533. Has there been an enormous growth of railway traffic at Bowral? Yes. In 1881 the coaching alone was £442.
1534. What do you attribute that to. Is it sentiment, as explained by some people, or is it the development of the district outside the town which attracts such a large number of passengers? I think that the principal cause is the development of the district.
1535. Merely as residential sites or the development of the agricultural and dairying interests? I do not think it is attributable to the dairying industry.
1536. More to the residential sites? Yes; the place has become a sanatorium. In 1881 the coaching revenue was £442, and now it is £4,000.
1537. *Mr. Dowel.*] What distance are the Fitzroy Falls from here? About 17 miles.
1538. Are there many tourists to that place? A great number.
1539. If a railway went within 2 or 3 miles of the Falls do you think there would be an increase in the number of the tourists? I think it probable that they would increase largely.
1540. And do fruit and vegetables come from any part of the Bowral district? No great quantity at present; but I believe that with railway facilities that sort of thing would increase.
1541. Can you inform the Committee what the railway rates are to Sydney for fruit and vegetables? To Sydney, 8s. 1d. a ton, but we send to Darling Harbour—8s. 2d.
1542. What are the railway rates from Bowral to Sydney? 8s. 1d. a ton.
1543. What are the rates from Moss Vale to Sydney? About 8s. 7d. a ton.
1544. Would that apply to potatoes? Yes, to produce generally.
1545. What is the charge for maize? 8s. 1d. a ton.
1546. What price do you charge for calves? So much per quarter of a truck—say 4d. a mile.
1547. How much a head would that be? We send a single calf at 1d. per head per mile.
1548. What is the charge for pigs? Half-penny per mile.
1549. What is the difference in the rates between Moss Vale and Bowral? The rates are the same, but there is a difference of 6 miles in the distance.
1550. Are you aware that if a railway is made *via* Bowral instead of Moss Vale it would shorten the distance to Robertson by 6 miles? I have heard it said so.
1551. It would rob the main line of a little traffic? Yes.
1552. Have you been over the surrounding country within a radius of 10 or 15 miles of here? I have been to Fitzroy Falls, East and West Kangaloon, and one or two other places.
1553. What is the character of the soil? Red soil, very rich.
1554. Have they a good rainfall? Fairly good.
1555. Are you aware that there are large crops growing in the district? From what the farmers say, with plenty of rain they could grow anything.
1556. *Mr. Garrard.*] Do the tourists to the Fitzroy Falls go principally from Moss Vale or from Bowral? I think they go from Moss Vale.

1557. Have you any idea of the number of tourists who go to the Falls during a year? I have not.
1558. I suppose that visitors to Bowral and Moss Vale go on to the Falls? —
1559. *Chairman.*] Have you any further statement to make? Yes. The goods traffic for the past twelve months has been £4,255 7s. 9d., but in 1886 it was £3,659 16s. 7d.
1560. Has the passenger traffic much increased? Yes, equally.
1561. Could you say how much? In 1881 the passenger traffic was £1,442 18s. 5d., but for the past twelve months it amounted to £3,333 3s. 1d.
1562. Is your passenger traffic greater than that of Moss Vale? Yes, and greater than Mittagong. We do a larger business in everything than Moss Vale and Mittagong, but Mittagong can show a larger outward traffic in shale and coal.
1563. *Mr. Garrard.*] 25 per cent. more? Yes, quite that.

Mr.  
C. Bennett.  
10 Feb., 1890.

John Joseph Campbell, Esq., late Mayor of Bowral, sworn, and examined:—

1564. *Chairman.*] Have you been Mayor of Bowral? I have.
1565. How long have you resided in Bowral? Twenty-six years.
1566. Then you are thoroughly familiar with the trade that comes in and goes out of the township? Yes; it passes my door.
1567. Are you familiar with the Kangaloon country? I am fairly well acquainted with it.
1568. Do you know the settlers in that part of the country? Yes.
1569. Do you know how far from here the settlers bring in their produce to Bowral? I think from 15 to 16 miles.
1570. Knowing the road as you do, do you think that the making of the railway from Moss Vale to Robertson would divert part of that trade from Bowral? I do not think they would go to Robertson.
1571. Do you not think that the people would go to Robertson, a distance of 3 miles, instead of bringing their produce over these hills? I have heard some farmers say that they would prefer to come into Bowral. They say that four horses bring more into Bowral than eight horses would take into Robertson.
1572. That is by the lower route, I presume? Yes.
1573. Do you think that the people of Kangaloon take any interest in this railway project? I am not aware.
1574. There have been no meetings in the district? None whatever.
1575. Do the people of Bowral take any interest in the project? I am not aware.
1576. Have there been any meetings in the district? None whatever.
1577. The people of Bowral are quite indifferent whether the railway is made or not? Quite.
1578. Or whether it goes from here or Moss Vale? Yes.
1579. They are happy whatever happens? I do not say that.
1580. Do you think that the junction of the railway at Bowral would increase the importance of the place? Yes. I understand that railways always increase the importance of the places where they go.
1581. You do not think it would damage Bowral as a place of business? I cannot see how it could.
1582. Do you know the country between here and the Sheepwash? Yes.
1583. Is it pretty level? Yes.
1584. Suppose a railway were made from here instead of Moss Vale, and were to cross the river at the Sheepwash and make for Wild's Meadows, and go round to Robertson, would not that accommodate the whole of this producing district? It would.
1585. Would not the traffic of West Kangaloon come down to the Sheepwash? Yes. And you would get the traffic of East Kangaloon too.
1586. A railway through there would practically secure the whole of the traffic of this rich country? I feel certain that it would.
1587. If it went from Moss Vale, how would the Kangaloon people benefit? They would not benefit at all that I can see.
1588. Do the people of Kangaloon take any interest in the matter? Not that I am aware of.
1589. Are the Kangaloon people particularly prosperous? They are.
1590. And they are getting on so well that they do not mind about the railway? Oh, yes; they want to get their produce away.
1591. Would they be satisfied to see the produce of Burrawang and Robertson carried at a fourth of what it costs them to get their traffic carried? I do not think so. If you had a station at the Sheepwash the railway would take the whole of the East Kangaloon traffic.
1592. Do you know the Sheepwash district? I do.
1593. Do you think that a better road could be made to the Sheepwash than the present road? Not to the Sheepwash station. You could only come along the edge of the flat.
1594. By doing that, could we get better access to the Sheepwash station? You could by coming further down on that round hill.
1595. Are you quite positive? I am positive that there could be a better road this way than the Moss Vale route.
1596. I meant the other way? No, I do not think so.
1597. If such a line as that proposed were made—and this is a line marked out by Allingham the surveyor, who surveyed the country—and you had a line to Wild's Meadows, the tourists could go straight to the Falls from here, could they not? I do not know whether the proposed line passes the Falls or not.
1598. It goes within a few miles of them? Then people all round the district would go direct that way.
1599. The tourist trade from Bowral and Moss Vale to the Falls would go direct? I do not think they go to Moss Vale—they hire vehicles here and go straight away.
1600. How far is it from Bowral? Sixteen or 17 miles.
1601. How far from Moss Vale? About 12 miles.
1602. *Mr. Garrard.*] How do the Kangaloon people who come into Bowral bring their produce? Right across the Upper Range road.
1603. The East Kangaloon people do not come that way, do they? Yes; all come along the Upper Range.
1604. Does not the East Kangaloon traffic come by the lower road? Sometimes.
1605. How do the Central Kangaloon people come? By the upper road. They are more on the top of the hill.

J. J.  
Campbell,  
Esq.  
10 Feb., 1890.

J. J.  
Campbell,  
Esq.  
10 Feb., 1890.

1606. What is the distance from East Kangaloon to Bowral by the lower road? I do not know.  
 1607. Do you know whether there is much traffic between East Kangaloon and Bowral? Yes.  
 1608. Do you think that more of the traffic of East Kangaloon comes to Bowral than goes to Moss Vale via Robertson? No; I think more of the produce of East Kangaloon comes here than goes to Moss Vale.  
 1609. Do you think that if there was a station at the Sheepwash the East Kangaloon people would use that or go to Robertson? Of course, I believe they would. There are some steep hills between East Kangaloon and Robertson.  
 1610. Is there not a steep hill going into the Sheepwash? No; they come down hill.  
 1611. Do they not have to rise considerably before they get on to the upper ridge? They come on the upper road. Any one in East Kangaloon who has to pass that long hill of Alcorn's would go to the Folly Road, and come back round to the Sheepwash.  
 1612. To some extent coming back on their road? Yes, but it is a more level road.  
 1613. They would come that way? Yes.  
 1614. But if the East Kangaloon people got as far as the junction of the upper road with their loads they would come right on to Bowral instead of going to the Sheepwash station? I think not.  
 1615. You think they would go to the Sheepwash? I do.  
 1616. To what do you attribute the progress of Bowral of late years? To the prosperity of the farmers out there, who own the land they occupy.  
 1617. Do you attribute the wonderful progress Bowral has made to the development of agriculture in the outlying district of Kangaloon, or do you attribute it to its being a favourite place for city residents? I think it is attributable more to the city residents.  
 1618. As a matter of fact there is comparatively little country to benefit above Bowral? Oh, yes, there is a good deal of country.  
 1619. Productive country? Yes.  
 1620. Where? Out here, at the back.  
 1621. That goes to Mittagong? No; it comes to Bowral.  
 1622. But Kangaloon is the country which backs up Bowral? Yes.  
 1623. Do you know anything about the Wild's Meadows district? No.  
 1624. Where do the Kangaloon people trade with? With the business people of Bowral.  
 1625. Is there any fear on the part of the people of Bowral that if the railway is made, and the Kangaloon people are able to send direct to Sydney, it will diminish the trade here? I believe that that is the opinion.  
 1626. Do you think that it would be likely to increase the trade of Bowral? I do.  
 1627. What they would lose that way they will gain in freight from other places, such as Wild's Meadows and Burrawang? We receive no direct benefit from either Burrawang or Robertson at present, so that we could lose nothing.  
 1628. *Mr. Dowel.*] Do you know the route of the proposed railway? No; I have not been over the country.  
 1629. Do you know the country between Moss Vale and Robertson? No.  
 1630. Have you paid any attention to the agricultural resources of the district? No.  
 1631. Do you know the capabilities of the country? I know that Kangaloon is noted for its productive qualities.  
 1632. Do you know whether the holdings are large or small? Some are large, some 200 acres, some 300 acres.  
 1633. Can you say whether the selectors on these small holdings are fairly prosperous? To all appearances they are.  
 1634. Can you say whether they have paid the Government their balances? No, I could not say; I believe they pay interest.  
 1635. During your twenty-five years' experience, have you seen any marked progress in settlement in this agricultural district? Certainly. I knew the country when it was nothing but brush, which men must have had hearts like lions to tackle. Now the country is covered with grass.  
 1636. Have you been to Robertson? I have.  
 1637. Have you been many times to Robertson? Two or three times.  
 1638. Do you think that that railway would serve the largest number of people? I do.  
 1639. From Moss Vale to Robertson? No, from Robertson to Bowral, via the Sheepwash.  
 1640. From your knowledge of the district, do you think that the proposed railway will pay the interest on capital and working expenses? That I could not say. I know that it would cost a great amount of money, but I know it is cheaper than the one proposed from Moss Vale.  
 1641. Was a line ever proposed from Bowral? Yes.  
 1642. You favour the route from Bowral to Robertson, I suppose? I should favour it.  
 1643. Do you think that it would serve the largest number of people and be the most advantageous to be constructed? Yes.  
 1644. Having fewer engineering difficulties? I believe so. It would go through more level country.

Andrew C. Alcorn, Esq., landowner, sworn, and examined:—

- A. C. Alcorn,  
Esq.  
10 Feb., 1890.
1645. *Chairman.*] How long have you resided in the district? Between twenty-seven and twenty-eight years at East Kangaloon.  
 1646. Are you a landed proprietor there? Yes.  
 1647. How much land have you? 300 acres; two blocks, one in East Kangaloon and one in West Kangaloon.  
 1648. Was that scrub when you took it up? Yes.  
 1649. Did you clear it yourself? I bought one part cleared, and the other I cleared myself.  
 1650. Is the land used as a dairy farm? Yes.  
 1651. Is there any other productive use that you could put it to? I think that dairying and potato-growing are the most profitable uses to which the land can be put.  
 1652. Have you calculated the average profits of dairying? As a whole I think it would take about 3 acres to keep a cow, and we get about £10 a year from a cow.  
 1653. What would the net profit per acre be? I do not know.

1654. We have had it in evidence that it is about £2 an acre;—do you think that is correct? Yes, A. C. Alcorn, Esq.
1655. Is there any ground in Kangaloon which is being let at £1 an acre? About that; I have 100 acres let for £90 a year. 10 Feb., 1890.
1656. What is the value of cleared land? Some of the Kangaloon land has been sold as high as £30.
1657. If a railway were made from Moss Vale to Robertson, do you think that would increase the value of the land at Kangaloon? I think not.
1658. Do you think it would add to the value of the land on the other side? Yes.
1659. As a proprietor of land at Kangaloon, are you prepared to see the land on one side go up in value, while on your own side it remains as it is? I would rather not. I think a railway could be made that would suit both.
1660. You have heard the description of a proposed route by Mr. Allingham, surveyor, from Bowral to the Sheepwash, and then across to Wild's Meadows? Yes.
1661. The country between here and the Sheepwash is level? Yes.
1662. And sufficiently above the swamp land? Quite so.
1663. Supposing there was a station at Sheepwash, would you send your produce there, or would you prefer to bring it straight on to Bowral? If there was a station at Sheepwash, I do not see why we should bring it on to Bowral.
1664. Some people have great doubts as to whether you would use the Sheepwash station? I have not the slightest doubt about it.
1665. You say you have property in East and West Kangaloon? Yes.
1666. How far is Robertson from East Kangaloon? Three miles.
1667. Is you were there, and a railway were made by the other route to Robertson, would you prefer to go to Robertson, or would you come by road to Bowral? I would still come to Bowral. There is a steep hill on the road to Robertson, and going that way would make it a distance of 20 miles round to Bowral. I draw the butter now for 9d. a keg, and I charge 15s. a ton for potatoes. The charge for butter from the Kangaloon Factory is 6d. a keg.
1668. We are told that they pay 1s. 6d. by the other route? I do not think they do.
1669. We have it in sworn evidence that the cost of the carriage of potatoes is from 20s. to 25s. a ton, and butter 1s. 6d. a keg? From Yurunga they are drawing produce at 19s. a ton.
1670. Do you know what they charge at present from Robertson? I am nearly sure that the charge for butter is 9d. a keg to Moss Vale. They were carrying produce at from 11s. to 12s. a ton, but when the wet weather came on the carriers gave it up.
1671. Do you know what the charge is for carrying potatoes from Robertson to Moss Vale? Very few are carried from Robertson.
1672. Very few from the south side of the swamp? And Wild's Meadows.
1673. The Kangaloon people have done more than the people on the other side in growing potatoes? Oh, yes.
1674. What is the reason of the difference? From Kangaloon to Bowral the road is nearly all down hill, and it is quite easy to bring the produce.
1675. Do you consider growing potatoes more profitable than dairying? It certainly cleans the ground for artificial grasses.
1676. When you have artificial grass, will it pay to dig it up and put in potatoes? Yes; every five years.
1677. Do you think it would be a good thing to take 10 acres every year for crop? Yes. Rye-grass will work out in five years in the best land. The conditions of the lease for our farm is that only two crops shall follow each other, and then put in rye-grass.
1678. After that year's change it is fit again for the grass? Yes.
1679. Without manure? No manure.
1680. You have not been in the habit of growing potatoes for two years running on the same land? I have not; some of them have done so.
1681. Does that exhaust the ground? Yes.
1682. Do you think this Kangaloon side of the district is good for orchards? Yes; they are growing apples; and in Kangaloon we used to grow good peaches, but lately we have not been able to grow them well.
1683. Have many gone in heavily for fruit? Some have as many as 100 trees to grow fruit for their own use.
1684. Do you think it pays to grow fruit for the Sydney market? I think winter apples would pay.
1685. Do you think this district could supply vegetables and market-garden produce? We have got a rainfall and land that will grow anything. A man at Kangaloon this year raised 14 tons to the acre. Several years ago Mr. Roberts grew 10 tons to the acre.
1686. We saw potatoes to-day;—can you tell us the difference between the yield in the inferior land as compared with the rich land? It is all good, you may say, till you come within 5 miles of Bowral.
1687. Have the Kangaloon people attempted to grow cabbages or cauliflowers? No; for the Sydney market they could not do it.
1688. Suppose that a railway were made as proposed, do you think that any number of people near the Sheepwash station would go in for market-gardening? I think so. They will go in for anything that will pay.
1689. You think they are wide awake to their own interests? Yes; but they have been backward about the railway. I think that all the produce from the top of Alcorn's Hill would come to Bowral if the railway to Robertson were made.
1690. *Mr. Garrard.*] That does not hold good as far as East Kangaloon is concerned? I do not know where the traffic from there would go.
1691. Do you think that the East Kangaloon people would bring their produce to the station at Sheepwash by the lower road? I think they would.
1692. It is a long way round, is it not? They would not go round; they would go over the top. I come that way two or three times a week.
1693. Is it not as bad as the hill to Robertson? It is not nearly so bad.

- A. C. Alcorn, Esq.  
10 Feb., 1890.
1694. And you think that there would come to the station at Sheepwash not only the West Kangaloon people and the people from Kangaloon proper, but also the East Kangaloon people? I do.
1695. Do you send the largest quantity of produce from East Kangaloon? I draw all the butter. I have just sold the business.
1696. Does your successor? Yes; he is doing the same business at the same rates.
1697. And you feel sure that the traffic would go up to the Sheepwash if there was a station there? Yes.
1698. Do you know anything about the country on the other side of the swamp? Yes.
1699. What is the nature of the country between Burrawang and Moss Vale? From Wild's Meadows to Robertson it is the same country as this.
1700. Between Moss Vale and Wild's Meadows? Very inferior country.
1701. Is it worse than the country between Robertson and Bowral? I think it is a shade worse.
- 1702-3. And it is a greater distance from Moss Vale to Wild's Meadows than it is from Bowral to Robertson. It is 5 miles one way and 10 the other, is it not? That is somewhere near it.
1704. If we had it in evidence that the whole of the East Kangaloon produce and part of the produce of Kangaloon proper would be taken to Robertson if a railway were made there, that is wrong? No one could say that any of the traffic from Kangaloon proper would go to Robertson.
1705. Do you know the Wesleyan church? I do not think any one would go from the neighbourhood of the Wesleyan church to Robertson.
1706. If a witness said so, is it incorrect? I do not think people would go so far.
1707. Have you had experience in carrying? I have. I should never go from the Wesleyan church to Robertson if I could get as good a road to Bowral, and I could carry a load with two horses less to Bowral.
1708. You would have a shorter railway journey for your goods? If we go to Robertson we shall have 20 miles more railway carriage to pay for.
1709. If it is necessary to charge increased rates on the branch line to the Sheepwash, will people be prepared to pay them? You can form an idea yourself from the rates at which we are drawing goods.
1710. How would they compare with the main-line rates? It will take the traffic; the railway would knock the teams off.
1711. After you got as far as the Sheepwash, having good roads, would it not be just as well to carry your goods by road for the remainder of the distance? I think not.
1712. If some witnesses have expressed that opinion, do you think they are in error? Yes.
1713. Knowing the Kangaloon, Wild's Meadows, Burrawang, and Robertson districts, do you think that if this line were made, incurring an annual cost on capital and working expenses of some £7,000, it would pay? I do not know what the income would be from the traffic.
1714. Do you think that the trade of the districts I have mentioned would yield a revenue of £7,000 a year? I should think not.
1715. Do you think the district is capable of such development if a railway were constructed that within a few years it would reach that sum? I do not know, but I think there would be a great deal more produce grown everywhere.
1716. Have you any idea of the area of good land which would be served by this railway. It has been estimated by one officer that there are about 50,000 acres of good land which was brush land;—do you agree with that estimate? I think that is about it.
1717. If this line were constructed with a station or a platform at Wild's Meadows, do you think any Kangaroo Valley traffic would come there? My idea was that the proper way would be to bring the line out to the Sheepwash, strike straight on to Robertson Valley, keeping along the edge of the swamp on the Kangaloon side.
1718. I want to know whether any of the Kangaroo Valley trade would go to Wild's Meadows, or whether it would continue to go into Moss Vale? The traffic will go to the first station that they meet.
1719. Do you know where the trade of Kangaroo Valley goes to now? Some goes to Moss Vale.
1720. One-third to the coast, and the rest to Moss Vale? I should think about that.
1721. You think that if there was a station at Wild's Meadows the Kangaroo Valley people would go there instead of going to Moss Vale? Yes.
1722. *Mr. Dowel.*] Can you tell us what is the population of East and West Kangaloon and Kangaloon proper? No. They are nearly all small holders having 40 acres, 60 acres, 100 acres, and some 200 acres. I do not know of any farm in the Kangaloon district that exceeds 200 acres.
1723. Would you think there are 3,000 people in that district? I could not form any idea.
1724. What is the average yield of potatoes in this particular district? Taking one year with another, about 5 tons to the acre.
1725. I understood you to say that the rate for the cartage of potatoes was about 15s. a ton? That is from East Kangaloon.
1726. Do you know what average price your potatoes fetch? Our potatoes generally head the market. They can be shipped again, but the Warrnambool potatoes cannot be transhipped.
1727. They are of exceedingly good quality? Yes.
1728. Can you say what price they realized this time last year? Yes—£17 10s. a ton.
1729. What is the price this year? About £4 a ton.
1730. What would be a fair average price? We think we do well if we get £5 a ton.
1731. I suppose you have seen the rise and progress of the district which the railway is to serve? Yes. I came with a brushhook in my hand, and cut my way into the farm.
1732. Were there many settlers when you arrived? No; I was among the first.
1733. When was that? In August, 1862.
1734. What is the value of land in this particular district? Some of the farms in the Kangaloon have been sold at £30 an acre lately.
1735. Do you know the proposed route from Moss Vale to Robertson? Yes.
1736. Does the staked-out line pass Burrawang? Yes, through Wild's Meadows.
1737. What particular centres of population would that line serve as surveyed now? Wild's Meadows, Kangaroo Valley, and Robertson.
1738. Which route would you be prepared to advocate in the interests of the settlers? In the interests of the public, I do not think that the line from Moss Vale to Robertson is the best.

1739. What are your objections to it? It leaves Kangaloon out altogether.
1740. Any other objection? It leaves out half of the good country.
1741. What are your objections to the route from Bowral? It is better as far as Kagaloon is concerned, but if it was made as it was surveyed it will not go to the Sheepwash.
1742. What line would serve that district the best? I think one alongside the swamp, with a branch line from the Sheepwash into Wild's Meadow.
1743. *Chairman.*] If a line were made to the Sheepwash, as Mr. Allingham laid it out, could it at any future time be carried up the swamp? Yes; but if it was done that way it would not suit; we should have two lines running into Robertson.
1744. You know that the difficult part of the proposed line, as it has been laid out, is through the richest country. The line from Moss Vale is comparatively easy for 9 or 10 miles. Suppose the Government, for the sake of economy, were to make the line only for that 10 miles as far as Wild's Meadow, do you think that that would be enough to give great advantages to the settlers beyond? No; I do not think it would.
1745. How far would they have to travel from Robertson to Wild's Meadow? I suppose about 6 miles.
1746. Do you not think it would be a great gain to have to travel only 6 miles instead of 15? Yes; it would be better.
1747. You think that the policy of the railway cannot be tested unless it goes right through? If the line stopped at Wild's Meadow it would only be touching the good land. Every farmer would have to draw his produce to the station.
1748. It would bring the railway within 6 miles of Robertson instead of being 15 miles off? Yes.
1749. Would that not be an advantage to the people of Robertson and Wild's Meadow? Yes.
1750. And they would all make use of it? I think so.
1751. Have you any other statement to make? Mr. Roberts told me that he would give the ground free of expense if the railway is made through his property to the Sheepwash.
1752. How far does it go through his estate? I suppose close upon 2 miles.
1753. Do you know that under the Public Works Act the value which a railway gives to an estate through which it passes is taken into account by the valuator? I understood that the owners were paid for the land.
1754. Do you think that the additional value given by the railway to the estate would be greater or less than the value of the land taken for the line? I think it would be greater.
1755. *Mr. Garrard.*] You spoke about a line from the Sheepwash on the Kangaloon side of the swamp;—how far would you take it? Right into Robertson.
1756. But when you get to the head of the swamp you are still very much below Robertson? It is perfectly level into Robertson.
1757. You think the line could be taken right into Robertson very easily? Yes; there is nothing to stop it.
1758. Your scheme of going on to Wild's Meadow would leave Burrawang out? No; the line could go right through Burrawang.
1759. You are of opinion that it would be an easy thing to take the railway up the side of the swamp to Robertson? There would be no difficulty about it at all.
1760. How would the people of Kangaloon get to the swamp? There are good practical roads.
1761. As passable as those that we came over to-day? Equally so.
1762. And you could touch the railway at several points? Yes.
1763. The people of East Kangaloon would still have to climb, would they not? They would have to get up that hill.

A. C. Alcorn,  
Esq.  
10 Feb., 1890.

Mr. W. R. Hindmarsh, junior, farmer, sworn, and further examined:—

1764. *Mr. Garrard.*] You have heard the statement made by Mr. Alcock, that there would be very little difficulty in running a railway up the Kangaloon side of the swamp—do you know that locality? I do.
1765. How high do you think the butter factory at Robertson is above the swamp? It is a great many feet higher. Between the butter factory and the swamp there is a good sized hill in the forest by the creek.
1766. I thought the creek found its way down by easy descents to the swamp? Yes; if you were to follow all the curves.
1767. How far is the swamp from the butter factory? I suppose about  $1\frac{1}{2}$  mile.
1768. Is the country very rough there? Not very rough. It is intersected by one or two small gullies.
1769. What is the nature of the ground on the edge of the swamp—is it precipices running down into spurs, or is there any sort of a plateau above the swamp? Precipices in some cases; in other places flats.
1770. How far do you think it would be from the Sheepwash to the Robertson butter factory, skirting the Kangaloon side of the swamp? I suppose about 8 miles.
1771. Do you think it is practicable to make a line there that would serve the people of Robertson instead of a line to Wild's Meadow? It might serve Robertson, but not Burrawang and Wild's Meadow.
1772. Another part of the fork is to go across to Wild's Meadow—would that do? I think it would.
1773. If that fork could be constructed for less expense than the proposed line through Wild's Meadow to Robertson, would that be better? It would; but I do not think it can be constructed for less.
1774. If the proposed line is only constructed to Wild's Meadow for the purpose, do you think that that would be any benefit to the people of Robertson? It might on the western side; but those on the eastern side would have 8 or 9 miles to go, and on the Pheasant Ground 12 and 14 miles.
1775. You know that it has been an expensive line to make from Wild's Meadow to Robertson? Do you not think that rather than lose the railway altogether it would be better to try a section to Wild's Meadow first? I daresay; but the farmers would not go in for growing potatoes so extensively as they would if the line went in to Robertson. The railway would not get the extra traffic reckoned on.

Hindmarsh  
junior.  
10 Feb., 1890.

Mr. John George Morris, storekeeper and auctioneer, sworn, and examined:—

- Mr. J. G. Morris.  
10 Feb., 1890.
1776. *Chairman.*] You have been many years resident at Bowral? Yes.
1777. What are you? Storekeeper and auctioneer.
1778. You know most of the Kangaloon settlers I presume? Yes.
1779. How far does the produce from Kangaloon come in by this road? I should think the farthest would be about 16 or 17 miles.
1780. If a line were made from Moss Vale to Robertson how much of the Kangaloon traffic would it deprive Bowral of? I could not form an opinion on that matter.
1781. Of the two routes—Moss Vale to Robertson, and Bowral to Robertson—have you any opinion as to which would be the better one? I think that the Bowral to Robertson line would take a good deal of the Kangaloon trade.
1782. Would the people of Kangaloon use the station at the Sheepwash? Yes, a large proportion of them.
1783. Do you agree that good access could be obtained for that station? I am decidedly of that opinion.
1784. And you think that a station there would take a great deal of traffic? I do.
1785. Which do you think the better line—the one from Bowral to the Sheepwash, or the line from Moss Vale? I think the Bowral line, because it must catch a great deal of the Kangaloon traffic that would not go to Robertson.
1786. Even though it were 2 miles longer? Yes.
1787. If you were a speculator which line would you put your money into? The line from Bowral.
1788. All the settlers on the south side of the swamp would save 6 miles of haulage on the main line by coming to Bowral? Yes.
1789. You think the Government would make up what it would lose in that respect by the extra profit on the Kangaloon trade? I think they would.
1790. Looking at their project, do you think that the Government would find this a paying line? Not at present, I think.
1791. The mere dairy traffic certainly would not pay? No.
1792. Do you think there would be a sufficiency of potatoes to pay? I do not think that the whole of the present produce would pay the working expenses and the interest on the line.
1793. We have been told that if they had a railway the farmers would put 5,000 acres under potatoes? I could not form an opinion about that.
1794. You do not know enough of the working of the farms to say whether the railway would stimulate the production of potatoes? It would, but I do not know whether it would to that extent.
1795. You have sent many potatoes to Sydney have you not? In former years, not lately.
1796. Was it a paying trade? Yes.
1797. Do you think that if a farmer put 10 acres of land under potatoes it would pay as well as 10 acres of dairy grass? Yes; but I do not think that he would continue to cultivate the same 10 acres; if he did he would wear it out.
1798. That 10 acres would not be the least profitable of his holding? By no means.
1799. You think that the railway would stimulate potato growing? I do.
1800. Are these potatoes a first class article? The potatoes of this district are very good indeed. I never could get as good anywhere else.
1801. Have you ever exported fruit from here? No.
1802. Can eggs, bacon, and pork be sent from Bowral to Sydney? Decidedly.
1803. Can you compete with the steamers? I think water carriage is cheaper than railway carriage, but still a large quantity of eggs and bacon is sent down to Sydney from here.
1804. Is the price the farmers now get for eggs and bacon a paying price? Yes.
1805. Even without a railway? Yes.
1806. And these articles would pay much better with a railway? No doubt.
1807. What price would these scrub lands fetch in their original state? It is almost impossible to say what they would bring. They would bring high prices. Plenty of that land would bring £15 an acre, as brush land.
1808. What would you get for a well cleared farm? Good farms average from £20 to £30 an acre.
1809. Would a station at the Sheepwash improve the Kangaloon district? Yes.
1810. How much per cent.? I should think about 20 per cent.
1811. And if this line were to go through Moss Vale to Robertson what effect do you think it would have on the land on that side of the swamp? I think it would increase the value of the land proportionately.
1812. By 25 per cent.? Yes.
1813. And you think that the making of this railway would be a clear gain to all the land proprietors in the district of 25 per cent.? Ultimately I believe it would be.
1814. Have you ever forwarded any market garden produce from Bowral? No.
1815. Have there been any market gardens here? The Chinese are going in for that.
1816. Sending the stuff to Sydney? Yes, it pays them well.
1817. Is their produce a little behind the season at Sydney? Yes, their produce comes in when the Sydney crops are done.
1818. You are sure that they are working at a profit? I know it.
1819. Do you think that the European market gardeners could carry on the business at a profit? I believe they could if they understood their business and were industrious.
1820. Why do not more Europeans go in for market gardening? Because they are too lazy, I suppose.
1821. Do you think that a man who has cleared a lot of the scrub is a lazy man? No, but he takes his time over it.
1822. Have you ever cleared any of it yourself? No.
1823. You think there is an opening for market gardens here? I do.
1824. And you think that a railway would stimulate that business? I do.
1825. The railway would be a great benefit in every respect to the district? Yes.
1826. As a storekeeper and an auctioneer do you think that Bowral would be injured if a junction were made here? No.
1827. You would not be afraid of it injuring any business here? No. I should think it would tend to improve matters.
- 1828.

1828. You would rather see it here than at Moss Vale? Yes; for the benefit of the people of West Kangaloon.

1829. The people who do not want a railway are making a mistake? Yes.

1830. Do you know any such? No. We were to have had it, and the matter was as good as decided, and when it was thrown over the Bowral people seemed to lose all interest in the matter. They seemed to take it as a foregone conclusion that the railway will go from Moss Vale.

1831. Do you know why it was altered? Yes.

1832. *Mr. Garrard.*] What were the reasons? Interested reasons, I think, on the part of those who would personally gain by the railway going from Moss Vale.

1833. Does the produce of the district which will be benefited by the railway find a market at Sydney? Sydney is the principal market.

1834. Therefore, the quicker and cheaper people can get to Sydney with their produce the better for them? Yes.

1835. How far is it from East Kangaloon to Robertson? From Alcorn's store, about 3 miles.

1836. How far is it from Alcorn's store to the Sheepwash? Between 5 and 6 miles.

1837. From the Sheepwash to Bowral?  $6\frac{1}{2}$  miles.

1838. So that if the East Kangaloon people were compelled to go *via* Robertson, they would have 3 miles to travel in that direction, 15 miles from Robertson to Moss Vale, and 6 miles from Moss Vale to Bowral, making a total of 6 miles, as against a total of 12 miles, by road and 6 by rail, if they went to the Sheepwash? Yes.

1839. Would not that be a pretty heavy handicap to the East Kangaloon people? Yes.

1840. If the Wild's Meadows and Robertson people are compelled to go to Moss Vale, and have 6 miles of extra running on the main line as compared with the Bowral route, they would be handicapped? Yes.

1841. Is there any timber from the Kangaloon district? Very little.

1842. Is any timber from the Robertson district sent away? Not that I am aware of. A mill at Kangaloon sends a little away principally up the line.

1843. I suppose it is a very small traffic compared with other products? Very small indeed.

1844. I suppose that all the timber is nearly done in the Kangaloon district? I should think so.

1845. Are there any Government reserves of good timber? Beyond Kangaloon there are; but I do not think there is any large extent of good timber country.

1846. In view of the line not paying for some years to come, would it be any benefit to the people of Robertson if the terminus of the line was at Wild's Meadows? It would bring them much nearer to a railway.

1847. Do you think they would use it? Yes.

1848. Do you know anything of the Kangaroo Valley trade? To a considerable extent their traffic goes to Moss Vale.

1849. Do you think half of it goes to Moss Vale? Yes.

1850. Do you think that if there is a station at Wild's Meadows the Kangaroo Valley people would go there instead of into Moss Vale? Yes, and save that distance of haulage by road.

1851. You have heard the proposition of Mr. Alcock about a line on the side of the swamp;—what do you think of that project? I am not sufficiently acquainted with the country to judge of it from an engineering point of view. It would serve a lot of people.

1852. From East, West, and Central Kangaloon, and also from Robertson? Yes.

1853. Do you know of many tourists visiting the Falls? There are a great many.

1854. Do people staying at Bowral go out there? Yes.

1855. *Mr. Dowel.*] How many years have you resided in this district? Permanently—about sixteen years; but I have known the district about twenty-two years.

1856. Then you remember the time when some of the selectors took up land in this brush country? Yes.

1857. Had they great difficulties to contend with? They had indeed.

1858. Do you know the grazing properties in this locality? Yes.

1859. Are there any large estates here? Yes.

1860. Have their properties been improved to an equal extent with the small properties? No, they have not.

1861. Do those large graziers keep as many stock to the acre as the selectors? I think not.

1862. They do not manage to get as much out of the soil, do they? Certainly not.

1863. Do you think that if a railway were constructed it would materially advance the interests of the selectors in the district? I do.

1864. That it would cause them to further develop their property? Yes, I think so.

1865. And it would be of considerable advantage to themselves and the State? Yes.

Thomas Rhodes Firth, Esq., Engineer-in-Charge of Trial Surveys, sworn, and examined:—

1866. *Chairman.*] What position do you hold in the Public Service? Assistant Engineer-in-Charge of Trial Surveys.

1867. Before you came with the Committee had you inspected the district? No; I was never over it before.

1868. Before coming to Bowral did you examine the plans and statements? Yes.

1869. And the line of route? Yes.

1870. From what you have seen now, what would be the relative cost of the line between Moss Vale and Robertson for the first 10 miles and the rest of the line to Robertson? The first ten miles from Moss Vale would be about as five to seven—say £5,000 a mile, making an average of about £6,000 a mile for the whole distance.

1871. Then the first 10 miles of the line could be made for £50,000? Yes; I believe it could.

1872. And the remaining 7 miles would cost about £49,000? Yes; about that.

1873. From what you have seen of the route do you think that if the line were made only as far as Wild's Meadows it would draw the traffic of the 5 miles beyond? I think there is no doubt about it.

1874. Would that be a fair test of what the railway is capable of doing in the way of earning? Not a full test. The further you carry the railway the greater the advantages and the greater the increase of traffic.

Mr.  
J. G. Morris.  
10 Feb., 1890.

T. R.  
Firth, Esq.  
10 Feb., 1890.

T. R.  
Eirth, Esq.  
30 Feb., 1890.

1875. But there must always be a large number of people who would be 3, 4, and 5 miles from the station? Yes; but the further you extend you afford accommodation to the greater number.
1876. But if you were making a railway at your own expense would you experiment on the first section as a test or go straight through? Well, I scarcely know.
1877. You have seen the character of the country to-day between Bowral and the Sheepwash Road? Yes.
1878. Would that make a fairly level line? Yes; tolerably level.
1879. Did you go down to the Sheepwash? Yes; I saw the crossing.
1880. Would it require a very extensive bridge? Not at that place; but I am doubtful whether we could get a line on this side as far as there. We should have to cross lower down.
1881. How much further? Probably we should have to cross 2 or 3 miles from here, otherwise we should be hugging the swamp and there are a lot of water-courses coming in from the right which would cost as much as the bridge lower down. I think the land on the other side seems more suitable for carrying the railway parallel with the river than this.
1882. But if you took your bridge lower down the line would be no use to the people of Kangaloon? By going along on the other side of the river you would still come to the Sheepwash.
1883. The crossing is a quarter of a mile long? The present one is half a mile long, but I think it possible to find a shorter one than that.
1884. You would still move your station some further distance from the Kangaloon people? I should have the station near the Sheepwash, but on the other side.
1885. You have heard what was said about having a railway on the Kangaloon side? Yes; but I do not think it would be a very simple matter to do it. It seems to me that the range runs down very steep into the swamp.
1886. If the railway were to stop in the first instance at Wild's Meadows it would be very easy for the Government to consider the expediency of continuing by the expensive route to Robertson, or even of making a line to the Falls from the top of Kangaroo Valley? It would be a little extra expense in the first instance having a terminal station there.
1887. But where the traffic is small the extra cost would not be large, would it? It would not be for the traffic alone, but you cannot always run an engine back again from the terminus of your line. Sheds would have to be provided for both rolling stock and goods. A larger goods shed would be required for a terminal station than would be required for an ordinary station. The extra expenditure would amount to £4,000 or £5,000.
1888. Have you formed any opinion as to the probable profit from the line? Only from the evidence I have heard.
1889. Do you think that the Commissioners' estimate is much out? I think that they have rather underestimated the probable revenue.
1890. From the passenger or the goods traffic? From the goods traffic.
1891. You think that the line would be a more promising one than their estimate shows? I think so.
1892. Do you think it could be made payable at all? Not with the present traffic.
1893. Do you think there is a reasonable probability of there being such an increase in the traffic as would make the railway pay? I think it would pay in four or five years.
1894. *Mr. Garrard.*] What was the estimated cost of the bridge across the Bong Bong River by the survey from Bowral to Wild's Meadows? I have not seen the detailed estimate. I should think it would be something over £20,000, looking at the difference in the total cost of the two lines.
1895. If it were possible to take the line along the Bowral side of the swamp as far as the Sheepwash, would that increase the total length of the line to Robertson by a mile or so? It would increase the length of the line by 2 miles. That is to go by Wild's Meadows.
1896. As against the Moss Vale route or the surveyed Bowral route? It might lengthen it half a mile as against the surveyed route from Bowral to Robertson, or 2 miles as against the Moss Vale route.
1897. Do you know the name of the surveyor who surveyed the Bowral line? No.
1898. What do you estimate that it would cost per mile for a line between Bowral and the Sheepwash? That is a very difficult question.
1899. Without the bridge? A little over £4,000 a mile would do it.
1900. Would it be cheaper than a line between Moss Vale and Wild's Meadows? Yes; I think it would be a little cheaper than that, but between the Sheepwash and Wild's Meadows there would be more expensive works, making the cost £5,000 a mile.
1901. That would leave you a little margin for any extra work that might be required to get to this side of the bridge at the Sheepwash? Yes, and I think it would run out pretty heavy. Several timber bridges would be required, and we could not get close to the Sheepwash without great expense. We might get within three-quarters of a mile of it.
1902. Having seen the country and heard the evidence, and having expressed the opinion that you do not think the line would pay for some time, do you not think it advisable to get all the traffic we can upon the line? By all means.
1903. And that it would be worth trying to get the traffic from Kangaloon on the line? I do. I think the route spoken of by the Sheepwash would be the best route for that district.
1904. But if the line is to be miles off you will not be likely to get the traffic? The line, as I propose, would be close to the Sheepwash, on the other side of the water.
1905. At all events you are of opinion that it is worth while to examine the country particularly about the matter? I do.
1906. *Chairman.*] You think that before coming to a decision on the subject it would be expedient to have the country near the Sheepwash examined? Yes.
1907. *Mr. Douel.*] Within the last day or two you have been over the country between Moss Vale and Robertson? Yes.
1908. From your observation do you think it likely that the engineer's estimate will be exceeded? No; I think the cost of the line has been fairly and fully estimated.
1909. Are you aware that some of the gradients are 1 in 40? Yes, some of the gradients near Robertson.
1910. Do you think it possible that some of them can be made easier? I doubt whether they can without considerably increasing the expenditure.
1911. You have had an opportunity of seeing what a large watershed there was in the vicinity of the proposed

proposed line—do you think that those 3-foot culverts will be large enough? I do not think that they will be in several places where I saw them marked.

1912. You would recommend that they should be increased in size? Yes, and put in timber.

1913. How many stations are there to be on the line? I think two, besides the terminal station.

1914. Would you recommend that some platform be put up for the convenience of settlers? Wherever there is a leading road I should recommend it.

1915. What would be the estimate of a line which would serve East and West Kangaloon, Wild's Meadows, and Burrawang, a distance of 10 miles? I don't know the estimate of the line that would go down to Wild's Meadows. I know the estimate of the line from Bowral to Robertson.

1916. You are of opinion that before any decision is arrived at it would be good policy to make another examination of the route from Bowral? Yes.

1917. *Chairman.*] With regard to the gradients—if this is only to be a branch line the gradients will not be very important? No.

1918. You have seen Robertson and the country beyond it—do you think there ever would be any extension beyond Robertson? No.

1919. You have heard what was said about the possibility of going down to Nowra? Yes, but I do not think that it is at all likely.

1920. You have heard what was said about the possibility of going to the Waterfalls? I do not think that is probable.

1921. Then the line will never be anything else but a branch line? No.

1922. And the traffic is not likely to be more than an ordinary engine can take up a gradient of 1 in 40? No.

1923. On a purely branch line of this sort a gradient of 1 in 40 is not very important? No.

1924. It being a short line, and the stiff part of it only in the last 7 miles? Yes; I think it would be bad policy to spend money in making easier gradients.

Mr. John George Morris, storekeeper and auctioneer, sworn, and further examined:—

1925. *Chairman.*] Are you well acquainted with the country between here and the Sheepwash? I am certain that a shorter route from Bowral could be got which would give sounder ground than that over which the proposed line goes. I do not think there would be any difficulty in getting to the Sheepwash from this side of the river.

1926. Do you think Mr. Firth's plan would be less favourable to the traffic—would the people cross the Sheepwash? It would be a decided disadvantage to the Kangaloon people. I should propose that the line should go between the road and the river.

1927. What route do you propose to take? Instead of crossing the river, as proposed by the red line on the plan, I should keep along between the road and the river, and I believe that there is quite a practicable route.

1928. Do you think the ground is sound enough to carry the railway? For the most part it is sounder than the ground over the river.

1929. Would you have very wide watercourses to cross where the water comes on the flat ground and spreads out? I know of only two considerable watercourses.

1930. You think that there would be no difficulties? There would be no difficulties that would not be encountered the other way.

1931. The other side is as bad as this? Yes. I should like to say, with regard to the Robertson people using the Wild's Meadows station, that my answer to that question referred only to the Robertson people proper. There are a number of Robertson farmers who would be more than 5 miles, in fact nearer 10 miles, from the station.

[Three plans.]

T. R.  
Firth, Esq.  
10 Feb., 1890.

Mr.  
J. G. Morris.  
10 Feb., 1890.

NEW SOUTH WALES.

---

PARLIAMENTARY STANDING COMMITTEE ON  
PUBLIC WORKS.

---

REPORT

TOGETHER WITH

MINUTES OF EVIDENCE, APPENDICES, AND PLANS,

RELATING TO THE

PROPOSED RAILWAY

FROM

MUDGEE TO GULGONG.

---

Presented to Parliament in accordance with the provisions of the Public Works Act,  
51 Vic. No. 37, section 8.

---

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

## MEMBERS OF THE COMMITTEE.

## LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Vice-Chairman.  
 The Honorable ANDREW GARRAN.  
 The Honorable FREDERICK THOMAS HUMPHERY.  
 The Honorable WILLIAM JOSEPH TRICKETT.  
 The Honorable GEORGE HENRY COX.

## LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Chairman.  
 JACOB GARRARD, Esquire.  
 HENRY COPELAND, Esquire.  
 JAMES EBENEZER TONKIN, Esquire.  
 WILLIAM SPRINGTHORPE DOWEL, Esquire.  
 EDWARD WILLIAM O'SULLIVAN, Esquire.  
 JOHN HURLEY, Esquire.  
 CHARLES ALFRED LEE, Esquire.

## MEMBERS OF THE SECTIONAL COMMITTEE.

JACOB GARRARD, Esquire, Chairman.  
 The Honorable FREDERICK THOMAS HUMPHERY.  
 EDWARD WILLIAM O'SULLIVAN, Esquire.  
 JOHN HURLEY, Esquire.

## GENERAL INDEX.

Report by the Committee.  
 Minutes of Evidence taken by the Committee.  
 Appendix to Evidence taken by the Committee.  
 Report by the Sectional Committee.  
 Minutes of Evidence taken by the Sectional Committee.  
 Appendix to Evidence taken by the Sectional Committee.  
 Plans.

## LIST OF WITNESSES.

[Examined before the Committee.]

	PAGE.
Joseph Barling, Esq., Under Secretary for Public Works .....	1
Henry Deane, Esq., Acting Engineer-in-Chief for Railways .....	1-2
John Harper, Esq., Railway Goods Superintendent .....	2-3
Thomas Rhodes Firth, Esq., Assistant Engineer-in-charge of Trial Surveys .....	3-4

[Examined before the Sectional Committee.]

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## RAILWAY FROM MUDGEES TO GULGONG.

### REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "constructing a line of railway from Mudgee to Gulgong," have, after due inquiry, resolved that it is not expedient the proposed railway should be constructed, and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway is described as a continuation of the branch line from Wallerawang to Mudgee, extending from Mudgee through fairly easy country, and across the Cudgong River, to Gulgong, a distance of 18 miles 67 chains 55 links. The only expensive work on the extension would be the bridge over the Cudgong River, and the principal difficulties along the route would be met with in crossing the range of hilly ground to the north of the river. The grade would probably be 1 in 75 or 1 in 80. Description of the proposed railway.

2. The estimated total cost of the line is £109,330, or £5,800 per mile. Originally the estimate of cost was £131,800, or £6,988 per mile, this estimate having been based on a trial survey made some time ago. Since the date of the original estimate the matter has been looked into more carefully, and it has been found that the line can be constructed for the reduced amount stated. Estimate of cost.

3. The report of the Railway Commissioners upon the proposed railway represents, in a comparison between the annual cost and the traffic estimate, an annual loss of £6,126, but the Commissioners say that as the district is adapted for agricultural purposes "it is only reasonable to anticipate that the construction of this piece of line would largely increase the area of land brought under cultivation, and so considerably augment the revenue of the railway." This traffic, they further state, while benefiting the extension would also bring an accession to the parent, or Mudgee to Wallerawang, line. Railway Commissioners' report.

4. Published with the evidence obtained on the proposed railway, and attached to this Report, will be found a *précis* of proceedings in relation to the line from as far back as 1883,—by which it will be seen that associated with the proposal to connect Mudgee with Gulgong, there has all along been a conviction that the line must not stop at Gulgong, but must be extended in order to join with the Great Northern, or the Great Western, Railway. History of the proposal.

5. The character of the country through which the proposed railway would go can be understood from the report of a Sectional Committee who visited the district. That report represents that the line would pass through some large estates in which Character of the country to be traversed by the railway.

which there is only limited agricultural settlement, the land being used chiefly for grazing purposes ; but that a few miles east of the surveyed route there is a tract of agricultural country known as the Canadian and Springfield, which is well settled and cultivated, and west of the route there are a number of agricultural holdings on M'Donald Creek. The land in these agricultural areas is of a superior kind, producing wheat to the extent of from 18 to 20 bushels per acre, and large quantities of maize and hay. Fruit growing is also followed, and dairy farming has been commenced and is likely to be extended. The grazing industry on the pastoral lands is carried on successfully, and the district is a favourite one for sheep in seasons of drought. Mining though in the past a very flourishing industry in and around Gulgong, at the present time is extremely depressed, but there is hope of improvement.

Traffic prospects.

6. Traffic prospects in connection with the railway do not appear to be satisfactory. The Sectional Committee are of opinion that the receipts from the line "would fall short of meeting interest on capital and working expenses, but would probably exceed the Railway Commissioners' estimate." That estimate was based upon information obtained by Mr. John Harper, Railway Goods Superintendent, who travelled from Mudgee to Gulgong for the purpose of collecting it. This officer was examined by the Committee, and he considers that by the construction of the railway "there would be an interchange of commodities between the two towns which does not take place now," together with a passenger traffic. He also contends, as the Railway Commissioners, in much the same terms, do in their report, that the present railway to Mudgee being a non-paying line all the traffic that can be brought to it, if it will only pay working expenses on the railway bringing it, will help to meet the interest and working expenses of the Mudgee line. At the same time, however, he admits that when at Gulgong it was represented to him that the best market for the district was westward rather than eastward, and that an extension of the railway from Mudgee to Gulgong and thence into the interior would be far more serviceable to the population in and around Gulgong than a railway which merely connected them with Mudgee.

Nature of the evidence respecting the railway.

7. The want of facilities for finding markets in the interior of the Colony westward of Gulgong is a prominent feature in the evidence given by most of the witnesses examined. To construct a railway from Mudgee to Gulgong and let it terminate there, it is emphatically stated, will not pay. It will be unprofitable to the State and of little use to the people of either Mudgee or Gulgong. What the population of Gulgong and the district surrounding it require is means for sending their produce into the interior, where, they say, they can supply less favoured districts with wheat and fodder, advantageously to those districts and profitably to themselves, as well as to the railway conveying the produce, and at the same time in successful competition with other agricultural centres already enjoying the benefits of railway communication with some of those markets. To merely construct a railway as proposed, from Mudgee to Gulgong, with no definite idea of carrying it further, would be to repeat the mistake apparent in the construction of the railway from Wallerawang to Mudgee. Evidence in plenty will be found as to the agricultural capabilities of the Gulgong district and of country within a convenient distance of it, and of the unprofitableness of sending produce to Sydney, and the effect of this in restricting the amount of production. Westward and north-west are the directions in which the people desire to trade, and only in these directions, they say, can they trade satisfactorily. Coonamble is a point which many persons in Mudgee and Gulgong regard as that to which a railway westward from Gulgong should be taken, but great advantages are also seen in an extension which, by connecting with a line from Werris Creek to Dubbo, would give to Gulgong and Mudgee the opportunity for sending produce both westward and north-west. In times of drought a suitable market could be found westward at Dubbo, or even as far as Bourke or Cobar ; and north-west, produce could be sent to districts less favoured by nature than that of Gulgong, and with which it is believed a profitable trade could be carried on. By railway facilities of this kind, it is urged, the people of Mudgee and Gulgong would be benefited, new country would be opened, settlement would extend and production increase, and the railway itself would undoubtedly pay.

8. The Acting Engineer-in-Chief for Railways has endeavoured to effect as much improvement as possible in the line as it was based on the original trial survey. Like many other surveys of the kind this one was made merely in order to show that the railway was practicable, and not with the object of laying down the best line; and since the original estimate of cost was submitted the country through which the railway would pass has been more closely examined with a view to improvement. In the improved line the earthworks are considerably less, the estimate for a bridge over the Cudgegong River has been very much cut down, and the grades have been reduced, without increasing the cost, from 1 in 40 to 1 in 80. The difference between the results of the examination with the object of improving the line, and the line as it was represented by the original trial survey, appears to have impressed the Railway Construction Department with the necessity for a change in the practice hitherto followed in connection with surveys of proposed railways. "The old method," the Acting Engineer-in-Chief says, in his evidence, "was just to run a trial line as quickly as possible, and leave it to the surveyors who did the permanent staking to improve it. . . . I am now adopting a different plan. . . . I see now that it is most desirable that the trial surveys should be conducted with as much accuracy as possible, so as to show what the country is capable of; but at that time it was not considered necessary. A trial survey was run only for the purpose of showing whether a line was practicable or not."

Improvements  
in the con-  
struction of  
the railway.

9. In the course of the inquiry made by the Sectional Committee they became aware that a survey was in progress of a line from Gulgong to Wellington, and they came to the conclusion that as the construction of such a railway would be very expensive, while the line would not serve the interests of the Gulgong district, the survey should be discontinued. This conclusion they stated in their report, and subsequently, at the instance of the Chairman of the Sectional Committee, this portion of the report was forwarded in a letter from the General Committee to the Minister for Works, who expressed his thanks to the Committee for having drawn his attention to the matter.

Survey from  
Gulgong to  
Wellington.

10. The Committee, after carefully considering the evidence, together with the report of the Sectional Committee, are of opinion that the railway, as proposed, ought not to be constructed, and on Thursday, 24th April, 1890, they passed the following resolution:—

Resolution  
arrived at by  
the Commit-  
tee.

Moved by Mr. Garrard, and seconded by Mr. Humphery,—

"That in the opinion of the Committee it is not expedient the proposed railway from Mudgee to Gulgong, as referred to the Committee by the Legislative Assembly, be carried out, they being of opinion that any extension of the Mudgee Railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after a suggestion for a connection of the Northern and Western systems by a line between Dubbo and Werris Creek has been dealt with."

The resolution was passed on the following division:—

Ayes, 10.  
Mr. Lackey,  
Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Cox,  
Mr. Garrard,  
Mr. Tonkin,  
Mr. Dowel,  
Mr. Hurley,  
Mr. Lee.

Noes, 1.  
Mr. O'Sullivan.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 6th May, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM MUDGEES TO GULGONG.

THURSDAY, 23 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.
CHARLES ALFRED LEE, Esq.	

The Committee proceeded to consider the proposed Railway from Mudgee to Gulgong.

Joseph Barling, Esq., Under Secretary for Public Works, sworn and examined:—

1. *Mr. O'Sullivan.*] You are the Under Secretary for Public Works? I am.
2. Will you give us the particulars relating to the proposed railway from Mudgee to Gulgong? Yes, I hand in the papers, a *précis* of the documents relating to the line, the Commissioners' report upon it, and the official description of the line. [*Vide Appendix.*]
3. *Chairman.*] That is an historical record of the action of the Department in reference to the line? Yes.
4. *Mr. O'Sullivan.*] Can you tell the Committee whether it is in contemplation to take the line beyond Gulgong? I am not in a position to say anything with regard to that. I shall be on a future occasion. I have not had an opportunity of consulting the Minister on it.

J. Barling,  
Esq.  
23 Jan., 1890.

TUESDAY, 28 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. JOHN LACKEY.	HENRY COPELAND, Esq.
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. GEORGE HENRY COX.	WILLIAM SPRINGTHORPE DOWEL, Esq.
JACOB GARRARD, Esq.	CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Mudgee to Gulgong.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn and examined:—

5. *Mr. Tonkin.*] You are Acting Engineer-in-Chief for Railways? Yes.
6. Can you give us any information on this proposed line from Mudgee to Gulgong? Yes. I can give you the length of the line and the estimated cost. Since this estimate of cost was submitted I have had the country examined with a view to improvement. The estimate and description that were given were merely from a trial survey that was made some time ago.
7. What was the length then? About 19 miles.
8. And the estimate? The estimate then was £131,800, or £6,988 per mile.
9. Since that survey was made have you in any way altered the course? I have no detailed estimate made; there has not been time to do it; but I find that the estimate could be reduced to £109,330 for the total, or £5,800 per mile.
10. In what manner has that been reduced from the original estimate of cost? It has been reduced in two ways: the earthworks are considerably less, and the estimate for a bridge over the Cudgegong River has been cut down considerably.
11. What were the grades? The grades on the original line were, I think, without referring, 1 in 40, but on this line we can get 1 in 75 or 1 in 80 without difficulty. That trial survey was made some time ago, and like many of the trial surveys, it has been made just for the sake of showing whether the line was practicable or not, without regard to the object of showing what the best line might be.

H. Deane,  
Esq.  
28 Jan., 1890.

- H. Deane, Esq.  
28 Jan., 1890.
12. Is the proposed line now before us less or more in distance? It is about the same distance.
13. Can you tell us where the material deviation takes place that alters the cost so much? It does not deviate very much from the present line. On this map the pale red line shows the line surveyed originally, and the dotted line shows the improvement proposed by Mr. Firth, who has recently been over the line.
14. Is this what you term a light line of railway? The permanent way is composed of 60-lb. rails, and so on.
15. Is it fenced? Yes; fencing is allowed for.
16. Are the reduced earthworks in this construction consequent on the deviations you have made? Yes, in some measure.
17. Have you been over the line yourself? No, I have not.
18. You do not know, of course then, whether material for the construction of the line can be easily got? I have only Mr. Firth's report.
19. Have you a detailed statement of the cost of this line which you could give us;—how do you reduce the cost of the bridge? I find that the cost of the bridge was put down at £17,500, at the original site, but on the plan there is a very bad crossing there. The crossing we can adopt on the improved line will very much reduce the length of the bridge, and make a better crossing altogether, and the bridge at that place could be made for £5,500.
20. When was the original survey made—the survey that makes this cost so much more—the first survey we have before us with grades of 1 in 40? I have not got the date here; it was some years ago.
21. How long is it since you made this alteration? I have revised it since Mr. Firth was over the line, and that was last month I believe.
22. Can you tell us how far the new site for the bridge is from the old site? About 1¼ mile. This is a map showing the deviation.
23. I suppose that that would be about the greatest deviation you have from the original survey? The line does not deviate from the other to that extent, and not more than a quarter of a mile, but by keeping on one side of the river and crossing higher up there is a difference of a mile and a quarter in the two crossings.
24. You have gone up on one side of the river with the new line, and were on the other side with the old line? Yes. The new line crosses the river sooner than the old line did.
25. Do you know who was the original surveyor of this line? Mr. Carter, who is not now in the service.
26. Was this deviation made at your suggestion from looking over the plans or the specification or anything of the sort? Yes. I examined these plans with Mr. Firth before he went over the line, and discussed the matter with him. I thought it was quite evident that the line could be materially improved; even without examination I was quite sure it could be done; in fact I have always thought so.
27. Do you know whether Mr. Whitton approved of this proposed line as surveyed originally? I do not think it was ever exactly approved of.
28. But it was accepted in the office, I suppose, as the proper surveyed line for that railway if one were to be constructed? No. The old method was just to run a trial line as quickly as possible, and leave it to the surveyors who did the permanent staking to improve it.
29. Has this permanent staking taken place? No, it has not. But I am now adopting a different plan, for I saw the necessity of it. There was not the necessity at that time; but I see now that it is most desirable that the trial surveys should be conducted with as much accuracy as possible, so as to show what the country is capable of; but at that time it was not considered necessary. A trial survey was run only for the purpose of showing whether a line was practicable or not.
30. Have we not had many lines constructed purely on the original survey without any alteration or attempts to reduce the grades? No, I do not think there has been one which has not been altered to some extent.

John Harper, Esq., Railway Goods Superintendent, sworn and examined:—

- J. Harper, Esq.  
28 Jan., 1890.
31. *Mr. Cox.*] What are you in the Public Service? Superintendent of goods.
32. Have you visited the country between Mudgee and Gulgong on this proposed railway route? I have travelled from Mudgee to Gulgong for the purpose of gathering information for the Commissioners.
33. How did you gather the information? At the Mudgee station by an inspection of the books, and from local sources at Gulgong.
- 33½. Did you go along the surveyed line? No.
34. You are able to speak only as to traffic statistics? Yes.
35. Have you seen the Commissioners' report on the supposed traffic? Yes.
36. Was that taken from your report or was that an independent report? That report was made from the figures obtained by me.
37. Do you think that continuing the line from Mudgee to Gulgong would gather any more traffic than is already gathered at Mudgee? I think there would be a local traffic between Gulgong and Mudgee which does not at present exist.
38. What kind of traffic? Well, passenger traffic, and I also think that there would be an interchange of commodities between the two towns which does not take place now.
39. But the only means for the Gulgong people to get their produce to market is to take it to Mudgee to be transmitted on? Yes, to its destination.
40. Did you hear any of the inhabitants there say that their market was outside rather than to the coast? I heard a great many statements made there; I heard the inhabitants say they expected to get a market in the western interior if they had a railway.
41. And do they point to this proposed line with the idea that it would be extended hereafter to the western interior? That was the idea of those to whom I spoke.
42. Very few there would be inclined to support 19 miles of line unless it was the commencement of a railway to the western interior? I would not like to say that. I think they would be quite satisfied to get the line under any circumstances.
43. Which people? The Gulgong people.
44. What interchange of commodities do you suppose would take place between the two towns? At the present time the Gulgong people get their goods in bulk from Sydney, and we also find that where there is short railway communication between two towns like that there are interchanges of commodities carried to storekeepers, which would not occur with road carriage.
- 45.

45. Since the first estimate was sent in to the Commissioners are you aware that a new survey has been made very much lessening the cost? No.
46. Therefore if the cost is lessened something more than £1,000 per mile, it will make a great difference to the estimate you have formed of working expenses? I have not made any estimate of working expenses; that is the Commissioners' estimate.
47. You have merely estimated what you suppose would be a fair amount to put down for increased traffic on the line? I took the actual traffic which had been carried to Mudgee and districts, which would be supplied were Gulgong the terminus.
48. Have you heard that it was in contemplation to construct a railway from Gulgong westward, and in what direction? I have not heard it mentioned.
49. Do you think it would be desirable in the interest of the community that the railway should be carried from Mudgee to Gulgong and there remain a terminus for ever? My impression is that, the Mudgee line being a non-paying one, all the traffic we can bring to it, if it will only pay working expenses, will help to pay the cost of interest and working expenses.
50. How could the working expenses be lessened, say, on a railway from Mudgee to Wallerawang, if you only had traffic from Mudgee to Gulgong? Simply because we would expect to double the traffic of the 18 miles bridged over.
51. Would that help to pay for the non-paying railway between Mudgee and Wallerawang? Yes.
52. In what way? If it realised the average working expenses it would assist to pay it, because the extension of 18 miles would be a cheaply-worked line.
53. Do you know the country beyond Gulgong? No.
54. Did you travel much round Gulgong? No; my visit was purely for statistical purposes.
55. This estimate, sent in by the Commissioners, is dated 4th September? Yes.
56. We have just heard from another witness that the estimate has been very much reduced, by the re-marking of the line, consequently the estimate given here by the Railway Commissioners would not be of any value in estimating the probable receipts from a line so constructed? The receipts would be altered.
57. So much per cent. if the capital expenses and other expenses were lessened? I think that only working expense was given.
- 57½. Have you a copy of the Commissioners' report? Yes, it says that the permanent way expenses would be £1,900, the traffic expenses £750, and the locomotive expenses £500. The traffic expenses I do not think would be diminished in any way by any deviation, and the locomotive expenses I take it represent one-third of the working of a locomotive.
58. So the annual working expenses would be £3,150? Yes.
59. In trying to make a non-paying railway pay, you would do so by inducing traffic either to or from that particular point to which it then had arrived? Yes.
60. I asked you just now whether you were aware that people in the neighbourhood were very desirous to continue the railway on into the western interior; do you know in which direction they are most in accord that it should be carried? I heard so many different opinions expressed; one wanted to junction at Wellington, another at Dubbo, another wished the line continued out to Coonabarabran.
61. Was there a fairly universal expression of opinion that the market for that part of the country should be westward rather than eastward? That appeared to be the general impression.
62. Consequently, for any large extension of traffic the line should be continued westward in order to bring the products of an agricultural district into a purely pastoral district, and enable the products of the pastoral district to come in by the same line that took out the cereals? No doubt that was the theory of the supporters of the line.
63. You think that is feasible? Yes, it sounds feasible.
64. Do you think that that is the only way in which this line could be made to pay? I would not be prepared to say that. One strong argument at Gulgong was, that owing to such a large area of wheat-growing land being held under mineral lease, they were unable to produce as much as the district was capable of producing.
65. Do you know as a fact that a very large portion of exceedingly rich land round Gulgong is locked up as a gold-field reserve? I have heard it stated, and have no reason to doubt it.
66. Consequently the area under cultivation is very much less than it would be if this land were thrown open to selection? That is the statement.
67. Do you know the nature of the soil near Gulgong? Yes, I saw some good wheat growing.
68. It is what is called a chocolate soil? Yes.
69. At what season of the year were you there? On the 5th August.
70. I presume that in your travels about there you saw that a comparatively small proportion was under cultivation, compared with the large amount in a state of nature? Yes.

Thomas Rhodes Firth, Esq., Assistant Engineer-in-charge of Trial Surveys, sworn and examined:—

71. *Mr. Dowel.*] Are you in the Government service? Yes.
72. What is your position? Assistant-engineer in charge of trial surveys.
73. Will you be good enough to give the Committee any information you have respecting this proposed line from Mudgee to Gulgong; you surveyed the line I believe? I went over the line about six weeks since, with a view to see if any improvements could be made on the old line. I had nothing to do with the original survey.
74. What was the result of your visit? I found that the gradients could be considerably eased, and the works lightened altogether.
75. What did you find the gradients? On the original section there was a long piece—I think about 2 miles—1 in 40, up from the Cudgong River. That I could reduce to 1 in 80.
76. Without increasing the cost very materially? Without increasing the cost at all.
77. Did you propose to alter the curves as well? Not to make them any sharper. There will be a few more curves but none any sharper than in the old survey.
78. Did you propose to improve the line at all as regards excavations or embankments? In one or two places I noticed we could considerably lighten the earthworks, and ease the grades at the same time.
79. You went over the whole of the proposed route? Yes, as near to it as the fenced lines would allow me to go.

J. Harper,  
Esq.  
28 Jan., 1890.

T. R. Firth,  
Esq.  
28 Jan., 1890.

- T. R. Firth, Esq.  
28 Jan., 1890.
80. What is the character of the country through which the line would pass? It is good soil.
81. What about the timber? In the close neighbourhood of the line I did not see any very good timber; fencing timber might be got, but I think that bridge timbers, and probably sleepers, would have to come some distance.
82. Did you make any exploration of the country any distance outside the proposed line? No; not any distance from the proposed line.
83. Can you give the Committee any information in reference to bridges on the line? The only bridge of importance is the one over the Cudgegong River, and another over the Three-mile Creek; the others will be 12-foot openings at the largest, I think.
84. What is the estimated cost of the bridge over the Cudgegong? I think that about £12,000 has been put down for that. A detailed estimate has not been got out of the cost of that, because the line I proposed to take has not yet been surveyed; but I am certain that amount can do for the bridge.
85. Of what material do you propose to construct that bridge? Timber.
86. As an engineer do you find any great difficulties in the construction of this line? No; no great difficulties.
87. Do you know what the estimated cost is per mile? The original estimate, I think, is £6,988.
88. And your proposed alterations will bring the amount down something like £1,000 per mile, will they not? About that.
89. Would you consider this really a branch line or a trunk line? At the present time, if it is not carried beyond Gulgong, of course it is a continuation of the branch line.
90. Does it not strike you that £5,000 per mile for a branch line is rather a large amount? Not for that country—not at all.
91. As an engineer, do you think that this Committee is warranted in recommending the Government to construct branch lines at a cost of £5,000 per mile? I do not know anything at all about that. You may call the line whatever you like; that would be the cost of it whether it is a branch line or a trunk line. A branch line to-day might be a trunk line next week.
92. From its position is it likely to be carried farther, so as to make it a trunk line (say) to Coonamble or some other route? I think it is very probable.
93. You think there is a probability of this line being extended from Gulgong, and that that will not remain a terminus? I do not think that Gulgong will remain a terminus.
94. Have you explored the country at all beyond Gulgong? I came across from Dubbo over the route now being surveyed; a trial survey was being made, and I examined that route.
95. Do you think it is likely that route will be adopted by the department? That I cannot say. I should look upon it as a political question.
96. What is your opinion with regard to the route; is it a practicable route? Yes, and it is a very good line. My estimate in going through without any figures or dimensions, but based on my own knowledge and judgment of the country, was that it would cost £5,800 a mile.
97. So even a probable extension would not be done under £5,000 or £6,000 a mile? To Dubbo.
98. In reference to ballast on this particular line did you find a sufficient quantity? I think that ballast could be got out of all the ranges—the different spurs that are gone through. I could find no real ballast pit but I do not think there would be any difficulty in getting ballast.
99. Is there not natural ballast through which the line would pass—gravel hills or stone? I do not think that there is much gravel about. There is some near Dubbo, but I do not remember seeing much between Mudgee and Gulgong.
100. How far do you anticipate that the cartage of your ballast would be? A mile and a half or 2 miles perhaps. I expect some ballast would be got in almost every hill.
101. How long were you employed in making this recent examination of the line from Mudgee to Gulgong? Three days.
102. Was there anyone with you assisting you in the matter? I had a surveyor with me. I brought him with me because it is very probable that if the survey is completed he is the one who will have to do the work, and he knows a little about that part of the country, and so I had him with me the whole of the time.
103. I presume that you are a railway engineer well accustomed to the usual modes of constructing railways? I have been constructing railways all my life.
104. Can you say whether the man who made the original survey was an engineer or a surveyor? I would not say that he was an engineer.
105. You would be inclined to say that he was a surveyor? Yes, I believe he was a surveyor.
106. Do you think it judicious on the part of the department to send these surveyors in the first instance to deal with such an important matter as the laying out of a line; don't you think it is more a matter for an engineer? Yes, I do. I may say with regard to this portion where I take out the 1 in 40 gradient and reduced it to 1 in 80, originally the line surveyed did not go through Gulgong but afterwards the survey was ordered to be made into Gulgong, and thus it was a branch from this other line. My alteration is that I go 2 miles farther back to start the branch, and then I get on to the same point and follow the same line as the other. I think it was through the surveyor being altogether in a hurry to get the work done that he started at the nearest point he could get to make a branch line. I think that was the reason.
107. As an engineer can you tell me what is the difference between the haulage power on 1 in 40 and on 1 in 80? I have not come prepared to give you correct figures as to the haulage power of any locomotive.
108. Is it a very difficult calculation for an engineer to make? No; it is not a difficult calculation to make but a formula that every engineer does not carry in his head when not accustomed to make use of it, and it is a calculation I am not in the habit of making and therefore do not carry in my head.
109. How long will it take you to make it? Not very long.
110. You say a reduction from 1 in 40 to 1 in 80 would not entail any great cost? I think not.
111. Who was the original surveyor? I do not know.
112. *Chairman.*] It was Mr. Carter? Mr. Carter is not now in the department.
113. *Mr. Dowell.*] You will furnish the Committee with a statement of the difference in haulage power on a grade of 1 in 40 and on a grade of 1 in 80? Yes.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Mudgee to Gulgong.

APPENDIX.

A.

PRECIS OF PROCEEDINGS IN RELATION TO THE PROPOSED RAILWAY, MUDGEE TO GULGONG, AND EXTENSION TO DUBBO OR WELLINGTON.

THERE would appear to have been earlier action in this matter, but the papers in connection therewith are missing. The following is a *precis* of the papers which are now on the file.

The Municipal Council of Gulgong wrote to the Members for the district, requesting them to use their influence to obtain a survey of a line from Gulgong to Mudgee. A survey had already been made as far as Slasher's Flat, and they desired to have it completed. They added that the Mudgee and Coonamble people were agitating for a line to the latter place, via Gulgong. The Members were informed by the department that a survey to Coonamble had been authorized, and would go as near to Gulgong as possible. May, 1883

The Council Clerk wrote to the Engineer-in-Chief in connection with the statement last referred to, that if the survey then being made, via Rouse's Guntawang Paddock and the Cobborah Road, were adopted, it would place the station  $3\frac{1}{2}$  miles from the town. Another route then in course of being marked out from Rouse's paddock to near the powder magazine, would bring the station within  $\frac{1}{4}$  mile of the town, and would pass nearly all the way through Government land. Again, if a line were surveyed from the back of Hutchinson's farm by the Three-mile to the cemetery, and thence to the powder magazine, the station would be close to the town. 15 Sept., 1883.

Subsequent to this other documents bearing on the subject were received, but are not now on the file. Mr. Wall, M.P., wrote to the Minister, reminding him of a promise made by him (as alleged) to a deputation which waited upon him the previous year, to the effect that he would instruct Mr. Townsend to carry out the Colo Valley survey to Wellington, and intimating that the persons concerned had it in view to form another deputation to wait upon the Minister to urge the performance of that promise. 26 Sept., 1883

Mr. Whitton, in reply to the Minister, stated that, unless expressly ordered by the Minister, he did not intend to carry out the survey in question. The report of the deputation referred to above is one of the missing papers, but on the paper now under notice the Minister's utterance on that occasion was quoted for the Minister's information. "He thought he could promise a continuation of the survey (to Wellington.) The country could not lose much by that. Whatever the result, the information thus gained would always be available." The Minister directed that the matter should stand over.

Mr. Wall, M.P., addressed Mr. Secretary Fletcher, pointing out that his predecessor had given a definite promise that he would authorize the completion of the Colo Valley survey from Mudgee to Wellington, via Gulgong, and pressing for early attention to the matter. The Minister minuted that, as he found by the papers that a promise had been given, the survey must be put in hand as soon as the business of the Department would admit. 17 Jan., 1889.

Messrs. Wall and Black, M's.P., waited on Mr. Secretary Bruce Smith to urge the same matter. They stated that the market for produce from the Mudgee district was up the Western Line, and that to reach Wellington by rail involved a detour of 220 miles, via Wallerawang and Bathurst, while the actual distance was only 47 miles. They had asked for this survey as a continuation of the Colo Valley route, but it was immaterial whether it were done so, or as an independent work. Mr. Whitton was of opinion that, if a line were surveyed from Mudgee to the Western Line, via Gulgong, it would be desirable to connect at Dubbo instead of Wellington, adding that, as a line had already been surveyed from Mudgee to Coonamble, via Gulgong, it would only be necessary now to make a trial survey from the latter place. The Minister, on the strength of this opinion of Mr. Whitton, authorized a trial survey from Gulgong to the Western Line at Dubbo. 22 Mar., 1889

Mr. Haynes, M.P., forwarded to the Minister resolutions carried at a public meeting held at Gulgong, to the effect— (1) that the Government be urged to put the work in hand immediately on the completion of the above survey; (2) that the proposed extension would be an important feeder to the Mudgee line, and make it a paying concern, while it would relieve the Western Line of a great part of the heavy traffic, and effect a saving in fares and freight for the people of the western districts and Bourke; and (3) that they were prepared to lay before the Railway Commissioners and the Public Works Committee statistics proving that the line would pay from the outset. 5 June, 1889.

A public meeting was held at Goolma, at which resolutions in favour of a line from Gulgong to Wellington via Goolma, and condemnatory of the Dubbo line, were carried. 15 June, 1889.

A public meeting was also held at Wellington, at which similar views were affirmed, and it was shown by a quotation from an official document that Mr. Commissioner Goodchap was in favour of Wellington as the point of connection with the western line. 14 June, 1889.

Mr. Ferguson, M.P., waited on Mr. Secretary Bruce Smith to advocate the Wellington route. He maintained that the adoption of that route would save 30 miles of railway construction, and that the quality of the land was not surpassed in the whole Colony. He urged that a surveyor might be sent to examine the two routes, and report which of them was the preferable one. The Minister promised to confer with the Engineer-in-Chief, and to consider the question of having an alternative survey made—Gulgong to Wellington. Mr. Deane reported that no survey had been made from Gulgong to Wellington, but that only 20 miles of survey would be required to connect with the line already surveyed from Wellington to Werris Creek. Recommended that that survey should be put in hand on the completion of survey Gulgong to Dubbo. It was most desirable to have full information as to the best route before adopting any. The Minister approved, and the surveyors on the Gulgong-Dubbo survey were instructed accordingly. 25 June, 1889.

Mr. Haynes, M.P., wrote, urging early action in connection with the extension to Gulgong.

Mr. Deane reported that the survey from Mudgee to Gulgong was completed, but before anything further was done the two surveys—Gulgong to Dubbo, and Gulgong to Wellington—must be finished, as the connection of Mudgee with the western line would have to be considered as a whole. They would be completed in about five months, when a full report would be submitted. 4 July, 1889.

The Railway Commissioners were asked to report on the line Mudgee to Gulgong, and, in anticipation of their own visit, they despatched Mr. Superintendent Harper on a tour of observation over the district. Mr. Harper reported that besides Gulgong the settlements of Coolah, Cobbora, Mundooran, Denistown, and Coonabarabran would be served by the proposed line. The following were particulars of traffic which passed through Mudgee from and to these districts in the most favourable season (1887-1888).

To—	360 tons special class traffic.
	1,000 tons 1st, 2nd, 3rd, and 4th classes.
From—	750 tons wheat, flour, &c.
	50 trucks hay, straw, &c.
	100 tons skins, hides, &c.
	60 tons 1st, 2nd, 3rd, and 4th classes.
	500 trucks cattle.
	400 trucks sheep.
	1,250 tons wool.

These

These goods, if carried the whole distance of 18 miles, would bring us £912 13s. of additional revenue. He estimated the passenger traffic at £425, and adding £300 for possible increase of local traffic we had an estimated total traffic, amounting to £1,637 13s. The district was a good one, having large areas of fine land, and well-known mineral resources. Opinions (locally) were divided as to the course which any extension beyond Gulgong should take. Until the northern system was connected with the south and west the question of the direction the traffic would take must remain an open and debatable one. The population of Gulgong was said to be 1,200.

The Railway Commissioners submitted a report on the line, but as the document itself will be laid before the Committee it need not be condensed here.

C. A. B.,  
22/1/90.

### B.

#### RAILWAY COMMISSIONERS' REPORT.

Office of the Railway Commissioners of New South Wales, Sydney, 4 September, 1889.

Proposed Line of Railway from Mudgee to Gulgong, 18 miles 68 chains.

IN accordance with section 13 of the Public Works Act, 1888, we beg to report as under :—

##### Cost of Construction—

The Engineer-in-Chief estimates the cost of constructing the line (exclusive of land and compensation), at ..... £131,800

##### Annual Cost—

Capital expenditure, at 3½ per cent. .... £4,613

The estimated cost of working would be as under—

Permanent way expenses .....	£1,900
Traffic expenses .....	750
Locomotive expenses .....	500
	£3,150

Total annual cost ..... £7,763

##### Traffic Estimate—

Coaching and mails .....	£525 0 0
Goods and live stock .....	1,112 13 0
	£1,637 13 0

It will be seen from the foregoing figures that the extension of the line from Mudgee to Gulgong would not, if based on present number of passengers and tonnage of goods passing through Mudgee *en route* to Gulgong, and places beyond, pay even the working expenses of the line, but as the district passed through is adapted for agricultural purposes, it is only reasonable to anticipate that the construction of this piece of line would largely increase the area of land brought under cultivation, and so considerably augment the revenue of the railway.

The Mudgee line does not pay its working expenses, and there is no immediate prospect of it improving, except by its extension in the direction indicated, as most of the expected increased traffic would not only benefit the proposed extension but would also pass along the line at present in use, and so bring an accession of revenue to the parent line.

The Seal of the Railway Commissioners of New South Wales was hereunto affixed this 4th day of September, in the year of our Lord 1889, in the presence of,—	}	E. M. G. EDDY,	(L.S.)
		Chief Commissioner.	
		W. M. FEHON,	(L.S.)
		Commissioner.	
		CHARLES OLIVER,	(L.S.)
		Commissioner.	
H. M'LACHLAN.			

### C.

#### OFFICIAL DESCRIPTION OF THE PROPOSED RAILWAY.

Mudgee to Gulgong; length, 18 miles 67 chains 55 links.

The estimated cost of constructing a single line of Railway is £131,800, or £6,988 per mile, exclusive of cost of land and compensation.

THIS proposed line is a continuation of the branch line from Wallerawang, which is now terminated in Mudgee, at 189 miles 13 chains 15 links from Sydney.

The proposed line is terminated alongside Caledonian-street in Gulgong, at 208 miles and 70 links, being a length of 18 miles 67 chains 55 links.

The country traversed is fairly easy throughout. The only expensive work would be the bridge over the Cudgegong River, which is crossed at 199 miles; and the chief difficulties on the route are the crossing of the range of hilly ground to the north of the river.

A trial survey is now being made to connect Gulgong with Dubbo. The extension northwards from Gulgong to Coonamble, and also a branch from this at Mendoran to Narrabri, *via* Coonabarabran, have already been surveyed.

August, 1889.

### D.

[*To evidence of T. R. Firth, Esq.*]

#### LOCOMOTIVE HAULAGE AND GRADIENTS.

Department of Public Works, Railway Construction Branch,  
Engineer-in-Chief's Office, Sydney, 29 January, 1890.

#### MEMORANDUM.

I HAVE the honor to inform the Committee, in reply to a question asked me yesterday during my examination respecting the line from Mudgee to Gulgong, that a locomotive will haul a gross load of 74 per cent. more on a gradient of 1 in 80 than on a grade of 1 in 40, all other things being equal.

The Chairman, Public Works Committee.

THOMAS R. FIRTH.

H. DEANE.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM MUDGEE TO GULGONG.

REPORT.

THE Sectional Committee of the Parliamentary Standing Committee on Public Works, for whose consideration and report was referred, on the 13th March, 1890, the examination of local witnesses, and the inspection of the route of the proposed railway from Mudgee to Gulgong, beg to report to the Parliamentary Standing Committee on Public Works:—

That they left Sydney on Friday, March 21st, 1890, and opened proceedings at the Mudgee Court-house on Saturday, March 22nd, by examining the following witnesses:—Messrs. J. Atkinson, D. Cassin, G. Crossing, J. Loneragan, J. Janes, J. Barry, J. W. Townsend, J. Parker, T. W. Connelley, C. J. Horsley, E. Daley, and J. C. Carter. On Monday, March 24th, the Committee left Mudgee for Gulgong at 9 a.m., accompanied by Mr. Kennedy, railway surveyor, by the road nearest to the amended route of the proposed line, examining the site of the proposed bridge over the Cudgegong River, and arriving at Gulgong at noon. The Committee took evidence in the Court-house from 2 p.m. to 10 p.m., examining the following witnesses:—Messrs. C. Zimmerler, T. Kennedy, J. F. Plunkett, R. Rouse, jun., Sergeant Steele, J. Tuxford, A. C. Garling, J. Hollow, F. Gilbert, C. Young, R. Stear, W. F. Russell, W. Fletcher, H. D. Voss, and R. Heard. On the following morning the Committee left Gulgong at 9 o'clock, and inspected the route of the surveyed line to Dubbo, as far as Wialdra or Reedy Creek Bridge. Subsequently—at 11 a.m.—the Committee met in the Court-house, Gulgong, and examined Messrs. R. Rouse ("Guntawang,"), J. F. Baylis, F. Taylor, W. R. Benson, A. Cross, J. Curran, and T. F. Fletcher. The inquiry was closed at Gulgong at 1 p.m. The Committee returned the same day to Mudgee, *via* Canadian and Wilbertree, and concluded their inquiry at Mudgee in the evening. The Committee left Mudgee for Sydney at 9.30 a.m. on Wednesday, March 26th.

The Committee observed that the proposed line from Mudgee to Gulgong passes through a few large estates where there is but limited agricultural settlement, the land being chiefly used for grazing purposes, and portions of it being adapted for agriculture. A few miles east of the surveyed line, however, is a tract of agricultural land known as the Canadian and Springfield, which is well settled and cultivated. To the west of the proposed line are a number of agricultural holdings on the M'Donald Creek. The line, therefore, although passing through private estates, will serve the areas referred to upon either side. The agricultural land is of a superior character, averaging, in a fair season, from 18 to 20 bushels of wheat per acre. Maize and hay are largely cultivated, whilst a variety of fruits are successfully grown.

Dairying has been entered upon, and is likely to be extended. The proprietor of the Guntawang estate intimates his intention of offering facilities for the development of that industry, and has established a butter factory upon his property with that object in view.

Grazing is carried on successfully in the district. A considerable number of cattle are raised and fattened, whilst the horses are of noted excellence. In seasons of drought sheep are brought down to the district from less favoured country.

The mining industry is in a condition of extreme depression, but there is hope of a revival. Efforts are being made to trace the lost leads, and there are anticipations by the mining community of a successful development of the mineral resources in the vicinity of Denison town.

Evidence pointed to the fact that Gulgong is a trading centre for a number of outlying localities in which agriculture and grazing are combined. It may also be noted that timber, suitable for railway and general purposes, has been obtained, and still is obtainable, within 15 miles of the town.

It was confidently asserted that the extension of the proposed line would provide a market for the productions of the district.

The Committee are of opinion that the receipts from the proposed railway, if constructed, would fall short of meeting interest on capital and working expenses, but would probably exceed the Railway Commissioners' estimate.

The Sectional Committee do not recommend the construction of a railway from Mudgee to Gulgong, as proposed, being of opinion that any extension of the Mudgee railway should form part of a more comprehensive proposal, the consideration of which should be deferred until after a suggestion for a connection of the northern and western systems by a line between Dubbo and Werris Creek has been dealt with.

The Committee are of opinion that the survey of a line from Gulgong to Wellington should be discontinued. The line would be a very expensive one to construct and would not serve the interests of the district.

March 26th, 1890.

J. GARRARD,  
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM MUDGEE TO GULGONG.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

SATURDAY, 22 MARCH, 1890.

[The Sectional Committee met at the Court-house, Mudgee, at 10 a.m.]

Present:—

JACOB GARRARD, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. | EDWARD WILLIAM O'SULLIVAN, Esq.  
JOHN HURLEY, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Mudgee to Gulgong.

Mr. James Atkinson, grazier, sworn and examined:—

1. *Chairman.*] How long have you resided in Mudgee and district? Thirty years.
2. What is your occupation? A small grazier.
3. How far from Mudgee is your holding situated? In two or three small places, from 10 to 12 miles from Mudgee.
4. In what direction? Partially towards Gulgong, but principally between here and Bathurst.
5. Would the proposed line, if constructed, be of any advantage to you in connection with your holding? I do not know whether it would or not. I notice from the map that the railway would run right through my holding, and it would be a disadvantage to cut me off from the water.
6. How many acres do you possess? 960 acres.
7. How many acres are devoted to grazing purposes? About 80 acres are cultivated.
8. What is the nature of the product? Lucerne.
9. Where do you find a market for it? I use it principally for my own stock.
10. What market do you send your stock to? Principally to Sydney, when I send anything at all.
11. Do you use the Mudgee line for that purpose? Yes.
12. Do you know the country between here and Gulgong? Yes, intimately.
13. Is it good country or indifferent country? Very good country.
14. Is it good grazing country or fit for agricultural purposes? Nearly all of it is fit for agricultural purposes.
15. Has much of it been taken up for agricultural purposes? A fair amount has been taken up, but on account of the reserve of a mile on each side of the trial survey line, it has only been taken up under conditional purchase.
16. Are there a large number of reserves immediately adjacent to the trial survey? There are none, with the exception of a few small stock reserves.
17. What was it that first brought Gulgong into existence. Was it on account of its good land, or on account of the mining mania? It was brought into existence by a large amount of gold being obtained there, in the first instance. That, however, is now pretty well exhausted, and it is the farming interest which now supports it. There is very little mining about the place.
18. We may consider, then, that as far as mining is concerned, Gulgong is dead? Yes; if it were not for farming pursuits there would be a very small population indeed there.
19. But there is a large area of good ground fit for agricultural purposes which would suit a large population? Yes.
20. Do you think, if the line were constructed, that it would give an impetus to settlement in the Gulgong district? It would to a certain extent; but the line would require to be extended still further. I am intimately acquainted with the country beyond Gulgong—between Gulgong and Dubbo, and between Gulgong and the Talbragar. The country beyond Gulgong is equally as good as it is about Gulgong itself. About 30 miles beyond Gulgong the valley of the Talbragar opens out, and there is more agricultural land in that valley than there is round about Gulgong.
21. What is the nearest point of any existing railway to this place? Mudgee, at present.
22. Then whatever produce goes from there at present finds its way to Mudgee? Yes, principally.
23. If the railway is taken 18 miles further, the produce would still go to Mudgee, and the construction of the line would probably lead to greater production? Yes. I cannot speak too highly of the country in the Talbragar district. It is excellent land, and it is quite as good as any in the Mudgee district.
24. Is it true that the people of Mudgee do not look upon the proposal to extend the line further west as one of benefit to themselves? I was chairman of the Railway League from the time of its initiation until

Mr. J.  
Atkinson.  
22 Mar., 1890.

Mr. J.  
Atkinson.  
22 Mar., 1890.

- until the railway was constructed to Mudgee. The people of Mudgee are decidedly of opinion that unless the line is continued out north-west it will never pay. The extension to Gulgong will be a step in the right direction; but if it is to stop at Gulgong it will be of very little service. I do not think the line would pay any better from here to Gulgong than any portion of the line between here and Wallerawang.
25. You were chairman of the old Railway League? Yes.
26. Did you and the members of that league advocate the extension of the line from Wallerawang only as part of a further extension? Always.
27. Did you never say that if the line were extended to Mudgee it would pay? No.
28. No such representations were ever made by the league? No. We looked upon it that our market for produce would be outwards—to the west. We considered that if the line were extended there would be a better chance of getting a fair price for our wheat than if it stayed at Mudgee. At present we have only the Sydney market to depend upon.
29. According to that the line was started at the wrong end—it ought to have started here and gone out west? But we still want it to be connected with Sydney.
30. Then this railway, which has been constructed at such an enormous expense, and which is a white elephant to the State, is a mistake altogether so far as to the giving you access to your markets, which are all out west, is concerned? It would have paid to construct the line from Mudgee outward.
31. Do you think that if the line is only taken from Mudgee to Gulgong it will assist this non-paying line from Wallerawang to Mudgee? If it stops at Gulgong I do not think it will materially assist that line.
32. Will it assist it at all, or be an additional drag on the State? I do not think it would pay any better if it were extended from here to Gulgong alone.
33. Where do you think it should be extended to? There have been some surveys made of lines to connect the northern with the western systems between Dubbo and Wellington. Such a line must necessarily come down the valley of the Talbragar. If the line were carried on beyond Gulgong, and were connected with the rich country of the Talbragar, a cross line from the Northern line could come into it at right angles. The whole of this rich district would then be connected with the west.
34. If the line were carried out in the direction referred to, it would not benefit Mudgee at all, because the good land of the Talbragar would come into competition with yours, and being so much nearer the western markets, the settlers there would cut you out altogether? I think there is room for all.
35. Do you think there is a sufficient market to the west to take all the products of the Mudgee, Gulgong, and Talbragar districts? In a great measure.
36. Are there many settlers in the district you speak of? There is a large number, but they are so taxed by dray carriage that they cannot compete with those who send to Sydney. They have to carry about 50 miles by road, and that would be reduced to 30 if the line were extended to Gulgong. Even that 30 miles is a heavy tax upon them. Before I came to Mudgee, thirty or forty years before the line was constructed, I paid a charge of £1 per ton, or 6d. a bushel, for carrying grain from Windsor to Sydney. Under existing arrangements I can send grain or maize from here to Sydney, a distance of 185 miles, at 3½d. per bushel. From Windsor, which is less than 40 miles distant, it used to be 6d. per bushel.
37. But still, you do not use the Sydney market very much? We do use it.
38. But not sufficient to make the line pay? No.
39. *Mr. O'Sullivan.*] You are aware that one of the reasons for the proposal to construct the line between Mudgee and Gulgong, is to assist the present Mudgee line? I think it will only do so to a certain extent, unless it is carried further out.
40. You tell us that the Mudgee people look to their market in the west and north-west? As their best market.
41. If their produce goes out that way, it cannot assist the line between here and Wallerawang? Sometimes the produce will go to Sydney. The most profitable way for us would be out west.
42. That being so, the major portion of the produce would go out west? I anticipate so.
43. Which line would be to the best interests of your district? A line from here to Coonamble, or to connect with a line which would run between Dubbo and Werris Creek, and give access to the western and north-western markets. We have endeavoured to get an extension from here to Coonamble, and have failed. The interests of other people were very much against it. The best thing, as an alternative, would be to connect the line between the cross line which runs from the northern line to somewhere about Dubbo. If it were carried as far as Talbragar, it would be 50 miles towards Coonamble.
44. You are aware that the Railway Department entertains the idea of constructing a line between Dubbo and Werris Creek? Yes.
45. That being so, a line running from Mudgee and touching that line, would be of great assistance to the people of this district in getting their produce to the north-west? Of great assistance indeed.
46. You do not suffer so much from drought in this district as they do in the back country? No.
47. You are able to produce fodder? Yes; if we had a market for it.
48. Then there would be good markets for the fodder in the western and north-western districts if you had access to them? Yes, we could produce more than we do at the present time.
49. A line from Mudgee, touching the Dubbo and Werris Creek lines, would be likely to develop a large fodder trade in the north and north-west? Yes; a large amount indeed. At one time, when the drought was severe at Coonamble, hay was selling there at £35 per ton, and here it was only from £3 to £4 per ton.
50. If the Dubbo to Werris Creek line is not carried out, which is the best point on the western line for the line under consideration to touch at? Somewhere close to Dubbo.
51. Between Dubbo and Wellington? Yes.
52. Then the Gulgong route would be available? Yes. At the same time, if it were determined to make the most direct route from Mudgee to connect with the western line, it would leave Gulgong considerably to the right. It would mean a distance of from 5 to 6 miles being added to the line from Mudgee to Dubbo, *via* Gulgong.
53. Is there any agricultural settlement between Dubbo and Gulgong? Yes; principally small sheep farmers.
54. Is the land good along that route? Not so good as it is about Talbragar.
55. Would a line to serve the Talbragar district come to Gulgong? Yes; but still there would be the dray cartage to contend with.

Mr.  
J. Atkinson.  
22 Mar., 1890.

56. You are aware that the probable working expenses of this line will be £7,130 per annum. That includes £1,900 for permanent way expenses; £750 for traffic way expenses; £3,150 for annual working expenses; and locomotive expenses, £500. The probable receipts, as stated by the Commissioners, are, for coaching and mails, £525; goods and live-stock, £1,112 13s. 6d.; or a total of £1,637;—you see that there is a great disparity between the probable receipts and the probable working expenses? Yes.
57. Do you think we would be justified in recommending the construction of a branch line to Gulgong, knowing there would be a loss of nearly £5,000 a year upon it? Not unless it were determined to carry the line further. I do not think the Government would be justified in constructing the line, unless it were intended to extend it.
58. Then you only recommend the line to Gulgong with a view to its future extension? Decidedly.
59. *Mr. Humphery.*] Do you know that a survey was applied for between Gulgong and Wellington? Yes.
60. Are you familiar with the country between the two points? Yes.
61. What is the distance? Nearly 50 miles.
62. What is the distance between Gulgong and Dubbo? Between 60 and 70 miles.
63. Dubbo is 20 miles further than Wellington? Yes.
64. Do you know the character of the country between Wellington and Gulgong;—is it superior to that between Dubbo and Gulgong? The country between Wellington and Gulgong is superior to that between Gulgong and Dubbo, unless it is on the cross route from the northern to the western line. That line would come down the valley of the Talbragar, which, as I have already stated, contains a large amount of good agricultural land.
65. Has the Talbragar land been taken up by small settlers, or is it all in large areas? There are some large settlers, but there is a great number of small settlers upon it.
66. Would the Talbragar district be served by a line between Gulgong and Wellington? No; the Talbragar district would not be within 20 miles of the line.
67. What distance would the Talbragar district be from the nearest station on a line between Gulgong and Wellington? Gulgong would be the nearest point to the Talbragar country which I speak of.
68. What is the nearest station at present to the Talbragar? Mudgee.
69. Is there any settlement between here and Gulgong? Only ordinary farms.
70. Where the railway is accessible to within a distance of 5 or 6 miles, would not that sufficiently serve a farming population? Yes. There is a great farming population within 5, 6, or 10 miles, and even further than that.
71. Is there much land under cultivation? A great deal.
72. For what? Grain, in small portions. Wheat is principally grown, and corn, maize, and oats.
73. *Mr. Hurley.*] You recognise the fact that you require a larger population in the district to create a revenue for the railway? Yes.
74. Do you know whether there is any land between here and Gulgong available for the agricultural traffic? A large amount. The difficulty has been on account of the different trial surveys, and on account of the reservation of a mile on each side of the trial survey line.
75. Do you look upon those reservations as a wise provision? Undoubtedly.
76. The reserves would be readily taken up in the event of the railway being constructed? Yes; in the event of the line being decided upon.
77. What is the value of land within 5 miles of Mudgee? It all depends on the description.
78. Agricultural land? On the flats, between here and Broombee, it is worth between £30 and £40 an acre. Between here and Gulgong the land would be worth at least £2 an acre.
79. If the Government were to offer the land for sale by auction, would it readily realize that amount? Yes, close to the line.
80. You have some knowledge of the country between here and Dubbo? Yes; I have been over the country frequently.
81. And the proposed survey line from here to Dubbo? I do not know whether there is to be a line to connect the Western, or Dubbo line. I know a survey has been made from Dubbo to Gulgong, and also from Wellington to Gulgong.
82. But, knowing the country through which a line to Dubbo would pass, and knowing the Gulgong district, do you think there would be sufficient trade in Gulgong to cause the Department to recommend a detour of something like 5 miles in order to reach that place? The line would serve a larger amount of agricultural land by going to Gulgong. I think they would be justified in making the recommendation, although the people of Mudgee want to be connected with the Western line. It would suit them better to be connected between Dubbo and Wellington, rather than go to Gulgong at all.
83. You were chairman of the Railway League for some years? Yes.
84. I suppose you have always had the idea that the railway should extend further west than Gulgong? I have never had any doubt but what it will be necessary to extend the line, to make it pay.
85. Have you ever given any consideration to the question of connection with the metropolis, through the Colo Valley route? Yes; but the expense would be a great objection.
86. Have you taken the question of expense into consideration? Yes.
87. You are aware of the congested traffic on the mountains at the present time? Yes. The line would be a very desirable one indeed, were it not affected by the question of expense. It would be an advantage to the whole of the western interior if the Colo Valley line could be carried out, because it would lessen the distance for all the western traffic to Sydney from Dubbo.
88. What are the industries which would be benefited by an extension of the line beyond Gulgong? The farming interest, principally, which would have a command of the country to the westward and northward.
89. Would it cause any other resources to be developed? I do not know that it would. It would increase cultivation, which is of paramount importance to this place.
90. Have you any knowledge of the grades between Lithgow and Orange? No.
91. You have not studied the question of grades on the railway there? I have only read communications on the subject.
92. Have you heard anything as to the advantages likely to accrue to the Cobar copper-fields and to the Barrier, in the event of the railway being constructed from Nyngan to Cobar, and from Cobar to Wilcannia and Broken Hill? We have large coal-fields within 30 miles from here, and there is an immense coal-field close to Rylstone.

- Mr. J. Atkinson.  
22 Mar., 1890.
93. On this side of Rylstone? Yes, and on the other side also. There are unlimited seams there. I have seen one or two of them 8 or 10 feet thick.
94. And that would be on the falling grade westward? I do not know that it would; but I presume that it would, on account of the westward district being lower.
95. It would be to the advantage of the coal industry if the line were constructed to Dubbo? Yes.
96. And there is every probability of a good trade opening up west, especially for coal measures? I think so.
97. Do you know anything of the gold-field reserve around Gulgong? There is a large amount of gold-fields reserved. I find that the miners almost prefer to dig upon private land rather than upon Government land. They are surer of the private land. If the Government land turns out rich, there are always disputes. I think the Gulgong reserve is monstrously large.
98. Do you consider the land would be suitable for other purposes than searching for precious metal? Undoubtedly. It would be better for agricultural land; but at the present time it is shut out from occupation.
99. If the reserve were thrown open, do you think it would be readily sought after by agriculturists? Yes; the whole of it would be at once taken up for farming purposes.
100. But, in the event of no railway being constructed to the district, it would be utterly valueless for farming purposes? Not altogether. It would pay well to grow wheat at 4s. a bushel.
101. In your opinion, the construction of a railway solely to Gulgong would be a national mistake and a waste of public money? I do not think the country would be justified in going to the expense of taking the line to Gulgong and stopping there.
102. You look upon it as a greater national incubus than the line from Wallerawang to Mudgee? You put words into my mouth which I do not utter. It is true that the line to Mudgee may not pay directly, but indirectly it does pay. I am able now to send grain to Sydney by rail, a distance of 180 miles, at 3½d. per bushel; whereas in years gone by, before the railway was constructed, I had to pay 6d. a bushel for carrying it a distance of 40 miles—from Windsor to Sydney.
103. Are you not aware of the fact that, with the exception of the Junee-Hay railway, the line from Wallerawang to Mudgee is the worst paying line in the country? It may be. I do not know whether it is, or not. I believe it pays indirectly, though not directly.
104. If the line were extended to Gulgong, you would look upon it as a still further national loss? It would be, directly, but not indirectly.
105. Mr. Humphery.] Would there be a considerable saving in haulage between Bourke and Sydney if a line were constructed between Dubbo and Mudgee? Yes. It would be at least 20 or 30 miles shorter than by the present route.

Mr. Daniel Cassin, flour-mill manager, sworn, and examined:—

- Mr. D. Cassin.  
22 Mar., 1890.
106. Mr. Humphery.] What is your occupation? I am manager of a flour-mill.
- 106½. How long have you been in this district? Upwards of forty years.
107. Have you examined the map showing the proposed extension? I have.
108. Can you say whether any deviation in the proposed route is desirable in the interests of those who are settled on the land between here and Gulgong? I do not think so. I think the line, as proposed, would suit the district.
109. You think the line, as proposed, would suit the district? I do.
110. Do you know how many settlers there are along the proposed line of railway? I could tell you how many landowners there are.
111. About how many holdings are there? About 1,559 holdings, and the greater part of them would be benefited by the construction of the line between Mudgee and Gulgong.
112. Are there 1,559 holders, or a population of 1,559? There are 1,559 holders. I give you the information as it has been given to me. It is Government information. There is also the acreage which is held.
113. Can you verify that statement from your knowledge of the district and the people who are settled on the land? I should not like to do so, because this information is obtained by the aid of the police—the officer in charge.
114. Then it would be better for the officer to give evidence, instead of yourself? Yes.
115. Do you know Gulgong? I do.
116. Do you know how many acres are under cultivation between Mudgee and Gulgong? I could not tell you, but I could tell you what there is about Mudgee, and what there is about Gulgong.
117. It is desirable to ascertain how many people will be served, and the area of good land which will be brought under cultivation, in the event of the railway being so constructed? It would be difficult for me to say.
118. Can you state approximately? A portion of Gulgong, leaving out Tallewang, has 1,826 acres under wheat, yielding 35,009 bushels.
119. That is an average of about 19 bushels to the acre? Yes. Our average this year, notwithstanding the rust, is close on 20 bushels. One-third of the crop has been destroyed.
120. Does the whole of that wheat come into Mudgee? No doubt.
121. Has it to go to Sydney? Some of it.
122. Does not local consumption absorb a portion of it? Yes.
123. Do you know what is the cost of carriage for wheat from Gulgong to Mudgee? That will depend upon whether the carriers could go back loaded. We send flour out for 10s. 6d. per ton from Mudgee to Gulgong, and I imagine it would not be more than 10s. 6d. to bring wheat back.
124. That would be a little over 6d. per bag? Yes. I have known 1s. a bag to be paid for wheat.
125. What has been the price of wheat in Mudgee this year? 2s. 10d. and 3s.; less for wheat that has been injured.
126. Do you know what other crops are grown in the district? Hay is largely grown between Mudgee and Gulgong, and around Gulgong.
127. Has any fruit industry been established? Yes. There are fine vineyards all along the Pipe-clay road, leading to Home Rule and Gulgong. One man—Mr. Bucholtz—is making excellent wine, which will rank with any in the colonies.
128. Where is his vineyard? 7 or 8 miles from Gulgong.

Mr. D. Cassin.  
22 Mar., 1890,

129. On this side of Gulgong? Yes.
130. Do you know how many acres are under vine cultivation? I could not tell you, but there is a large quantity.
131. Do you know the district between Gulgong and Dubbo? I know something of it.
132. Have you ever been over it? No.
133. Do you know the district between Gulgong and Wellington? I do not.
134. Your knowledge is confined to Gulgong and Mudgee? Yes.
135. Are you prepared to confirm the evidence given by Mr. Atkinson that it will not be desirable to construct a railway to Gulgong, unless it is extended to Dubbo? The opinion of the men of Mudgee has been expressed by a resolution at a public meeting.
136. I would rather have your own opinion? My opinion is, that it would be of very little benefit to carry the line to Gulgong and leave it there. As a section of the extension, it would be exceedingly desirable. I am one of the old members of the league, and formed one of a deputation to wait on the Minister. I assured the Minister that if the railway were commenced at Mudgee, and carried to Coonamble, it would answer the interests of this district, and the colony in general. You will find, from an article written in the *Herald*, that a deputation advocated the extension of the line outwards from the very first. We never pretended that it would pay, unless it was carried to Coonamble and Walgett. During the time I have managed a mill—upwards of thirty years—I have seen flour trucked to Walgett, and have supplied Coonamble and other places. The Dubbo railway cut off my connection. In 1878, hay was selling here at £3 4s. to £4 per ton, and it was worth £30 to £40 in Coonamble, and we could not get it there. In a season of that kind the carrier would have to carry large quantities of forage and water, and it is impossible to travel. The *Herald* admitted that our argument in favour of carrying the line to Coonamble was more in the interests of the country, than it would be if carried from Wallerawang to Mudgee. We never contemplated that the line should be left at Mudgee. The expense of the line to Mudgee is due to faulty construction. There is no question about that. Six miles away from Mudgee Hunt's cutting fell in, and it took £30,000 to clear it. Within a fortnight the contractors ran the line round the base of a hill, showing that there was no occasion for the cutting at all. Again, a short tunnel at Broughton's Creek would have saved a distance of 5 miles of railway. That can be proved by documentary evidence. Therefore the cost of the line is in a great measure due to its faulty construction.
137. Are you of opinion that the line should be taken from Mudgee to Gulgong, and on to Coonamble, or on to Dubbo? If the line were taken from Mudgee to Coonamble, *via* Gulgong, it would be one of the best paying lines in the country.
138. You think that would be a better route than the line to Dubbo? No doubt of it. At Tallewang there is the finest wheat growing soil in the colony, and it is lying there without being cultivated, because we have not a market.
139. What is the distance of Gulgong from that district? About 6 miles.
140. Is there a large area of land of that description? I believe there is about 20,000 acres.
141. You think the residents would be likely to benefit by the construction of a line from Gulgong to Coonamble? If we got to the outside districts, where they want agricultural produce, we would be benefited. At present we have to send our produce to Sydney to contend with the whole of the colony, and the neighbouring colonies around. You can see the disadvantage at which we are placed. If we had this outside market, we should have it pretty well to ourselves.
142. Then the traffic along the railway would be confined to the line between Mudgee and Coonamble? Exactly; or you could connect it with Dubbo.
143. Would there be any increase in the traffic along the Northern line, or between Mudgee and Sydney? No doubt there would be. In the first place it is 22 miles shorter from Coonamble to Sydney, *via* Mudgee.
144. Would not it lessen the results of traffic if you diverted the goods and passengers from the existing line to the Mudgee line? I do not think it would interfere with them.
145. Would it increase the revenue of the railway? I am satisfied it would.
146. What, by taking the traffic from one line and carrying it on another a shorter distance? It would benefit the community, and the Government would not lose, because if they did not carry it on the Dubbo line they would carry it on the Mudgee line. Besides, if we had a railway outside, the Government could supply all their stations from our place with coal. We have coal in abundance.
147. How far from Mudgee is the nearest coal-field? We have it at Tongbong, on the other side of Lue Station.
148. How far from Lue Station? About 10 miles.
149. Has it been developed at all? Yes; it supplies all the mills here, and our gas-works.
150. *Mr. Hurley.*] How far is Coonamble from Gulgong? The distance from Coonamble to Sydney is 283 miles, against 383 by Dubbo. It is 190 miles from Sydney to Mudgee.
151. What is the distance from Mudgee to Coonamble? 175 miles.
152. You formed one of a deputation to wait on the Government in regard to the construction of a line of railway from here to Coonamble, and you were pretty well supplied with statistics to back up your arguments in favour of that line? Yes.
153. You formed calculations and produced statistics to prove the productive character of the line, if constructed? There can be no doubt about it. The Minister we waited upon admitted them, and the survey was ordered.
154. How could he admit them when he could not have been in possession of the facts you were seized of. You must have based your calculations upon information gathered from some source? Sir John Robertson, from his personal knowledge, was able to tell the character of the country through which the proposed line was to run.
155. You went to Sydney seized with certain facts. You state that an article appeared in the *Herald* in advocacy of the action of the deputation. I want to be told what were the facts which resulted in that article being written, and what induced the Government to give a favourable reply to the deputation? The statement that a large tract of country, including Coclah, Denison Town, and all that country would be benefited by railway construction.
156. Is not the district you have mentioned sparsely populated? There were, at that time, 5,000 souls between Gulgong and Coonamble.
157. Were not the majority of them of the migratory class—nomadic in their habits? I do not think so.
158. The population you mention—which was then very large—would include the population of the district of Gulgong? There was not a large population then. If we had gone to the Government when there was a large population in Gulgong we should have carried our point.
- 159.

- Mr. D. Cassin. 159. Do you believe the population has increased above the number you have mentioned? I do not think it is much below it. It will be about the same.
- 22 Mar., 1890. 160. But it would be necessary to increase the population in order to make a railway productive to the State? No doubt you will be able to ascertain the exact population at Gulgong.
161. You think the non-productiveness of the line from Wallerawang to Mudgee is attributable to the fact that the engineers made mistakes? There is no doubt about the large cost of the line being attributable to mistakes. Hunt's Gap is a standing evidence of that.
162. Have the people of Mudgee, or the Railway League, ever taken any interest in the survey and probable construction of the Colo Valley line, to relieve the congested traffic of the Western line? I believe if that line can be constructed it will be a national benefit.
163. As well as a great advantage to this district? Yes.
164. You look upon the extension of a line westward as an immense advantage to the mineral resources of this district? Yes; and to the agricultural district.
165. You have heard what has been said about the value of agricultural land in the immediate vicinity of Mudgee. Can you give us an idea as to what rental is being realised per acre in this district at the present time? On an average, about £1 per acre per annum.
166. Has the land been held under lease for many years? A great many.
167. So that the rental gives a high percentage upon the first principal cost of the land? There is no doubt about it. I believe myself that the average value of agricultural land under cultivation will be £6 per acre.
168. And the land between here and Gulgong, which is held in reserve, would, if thrown open for selection, be readily seized by agriculturists? There is no doubt about it, if we can get a market outwards, but we are confined to Sydney, and have no other place to go to.
169. What would be a fair price to pay for the land, if thrown open for selection? I am satisfied there would be no difficulty in getting 35s. or £2 an acre.
170. Are not the holdings generally of a large character around Mudgee? There is no doubt about it.
171. Held by monopolists? That is a strong term. We do not begrudge the land to men who have been good men to the district.
172. You are aware that if a railway is constructed to Gulgong it will be a national loss? Knowing the traffic between Mudgee and Gulgong, I do not think it could pay.
173. Therefore if the line were to go to Gulgong only, you would not recommend it? I certainly would not.
174. *Mr. O'Sullivan.*] Can you state whether this line is likely to serve the agricultural population, or only a few of these large land monopolists? You cannot well serve one portion of the population without serving the others in some measure, but there is no question that our farming interest is the poorest and the lowest, and that arises from the fact that we have no market but Sydney.
175. Then the Sydney market is not of much use to the people here? No, it is ruinous. I have sent 700 tons of flour in one year to Sydney market, and it has scarcely paid; but I had to send it away, because I could not let it perish.
176. Has the proposed line between here and Gulgong been laid out in the interests of the farmers, or in the interests of a few land monopolists? Some of the land on the surveyed line belongs to a large land proprietor, but I do not think it would be difficult to come to terms with him. I refer to Mr. Cox.
177. What I want to arrive at is whether you think this line is laid out in the interests of the people? I do, on the whole.
178. It has been stated in a letter to the Committee, that there are 300,000 acres of agricultural land around Gulgong? I have no doubt of it.
179. Is this land owned at the present time by anyone? There are a number of small farmers, some of whom grow 1,000 bushels of wheat in a year. Others do not grow quite so much.
180. What I want to arrive at is whether much of this 300,000 acres of agricultural land is still available for settlement? A large portion of it.
181. Is it Crown or private land? A good deal of it is Crown land.
182. Can you tell us whether the intervening townships of Canadian, Home Rule, and Slasher's Flat are thriving? No; they are not. They are falling away.
183. I suppose Canadian and Home Rule simply depended on the gold diggings? No. They depended a good deal on the agriculturists around. Of course there are some fossickers who get a little gold now, but as an industry it is very poor.
184. But still you say there is a little settlement along the proposed route? No doubt about it.
185. The country is admirably suited for agriculture and vineyards? Yes.
186. Are there many vigneronns like Mr. Bucholtz? Yes. The Germans are all engaged in the trade. Mr. Wirth, for instance, makes wine. He has a fine place for wine.
187. There is an extensive gold-field reserve around Gulgong? Yes.
188. Is that reserve held in the interests of the people, or of a few monopolists? I do not think it should be held at all. I think it should be thrown open for the public.
189. You think it ought to be thrown open for selection? I do.
190. Do you know of any auriferous country in this neighbourhood which would probably attract population? There is no telling when a fresh field may be discovered. There are lots of gold about there, which have not been discovered.
191. There are indications of gold all round? Yes.
192. It has been stated as an argument in favour of the construction of a railway, that it will lead to an exchange of commodities between Mudgee and Gulgong. What commodities are likely to be exchanged? Butter, eggs, poultry, &c.
193. You have referred to the railway as being likely to prove of assistance to pastoralists in relieving stock in times of drought? Yes.
194. Is there any land available here to which starving stock could come? No; but if we were connected with either of the other railways, they could be sent to land which would be available.
195. Then your argument is that this line will afford a quicker transit to the mountain runs? Yes.
196. Would not it be more to the interest of the Mudgee district to have a line running from Dubbo to Werris Creek, and connecting with Mudgee by railway through Gulgong, than to have a straight line through

- through to Coonamble? I would rather go to Coonamble. If you take us to Werris Creek you bring us into connection with the Northern line. We could not send our produce there, and do not want to. During Sir John Robertson's time we could have been connected with Willowtree, but we did not go in for that, for the reason that there is a large agricultural community living on the northern side, who could not send their produce here, and we could not take ours to them.
- 196½. Would it not give you access to two markets instead of one—the north-western and the western markets? No doubt; and I am quite sure that the people in this district will be satisfied if you carry us to that proposed cross route, or to Dubbo. You must take the railway out of Mudgee, if you want it to pay. It will not pay if it is taken to Gulgong alone.
197. You are strongly of opinion that if the railway is to pay it must give you access to the north or north-western districts? That is so. It would be the salvation of the district, and a benefit to the colony at large.
198. Do you grow lucerne out here? Yes.
199. And a great deal of oats, wheat, and hay? Yes.
200. These would be valuable, as fodder, to the pastoralists in the interior? Yes.
201. Do you know the site of the proposed bridge—the original survey—across the Cudgong? No.
202. Were you connected with the Railway League at the time of the agitation for the construction of the line to Mudgee? Yes.
203. Have you any other statistics which were worked up at that time to induce the Government to construct the line? I could give you Mr. Lackey's statement, as submitted to the House, and the speeches made on the occasion.
204. But statistics were furnished by the League, were they not? Yes.
205. And they were coloured up by the League? No. They were honest and truthful. They were not coloured up at all. Neither Mr. Atkinson, nor myself, ever made a coloured representation.

Mr. D. Cassin.  
22 Mar., 1890.

Mr. George Crossing, miller, sworn and examined:—

206. *Mr. Hurley.*] What are you? A miller.
207. Have you been long in the district? Over 30 years.
208. Are you a landowner? Yes.
209. Do you own a large area? Not very large.
210. Give us an idea as to the acreage you hold? About 190 acres.
211. Does the proposed railway pass through any of your land? Yes, right through.
212. Then you are an interested party in the construction of the line? I do not know; but it will pass through my land.
213. How far is the land from here? About 2½ miles.
214. It would be an advantage to you to have the line constructed past your door? I daresay it would. It will be a decided advantage to me in other respects, independent of the increase in the value of my land.
215. It would give an increased value to your land? No doubt it would.
216. By 25 per cent.? I could not tell you. The land is not very good.
217. Is it grazing or agricultural land? It is only grazing. It is not fit for agriculture.
218. You are conversant with the quality of the land between here and Gulgong? Yes.
219. Can you say what it is suitable for? I think the greater portion of the land suitable for agricultural purposes has already been taken up.
220. If a market were available, it would give an opening for increased population? No doubt, but not to a great extent, between this and Gulgong.
221. Can you speak as to the quality of the land about Gulgong, and especially in regard to the gold-field reserve? The land is very good about Gulgong, and also about the reserve.
222. Have you formed any opinion as to the paying qualities of the line, if constructed? I do not think it would be of any great advantage to the Government to construct it from here to Gulgong only, for all the traffic from Gulgong comes to the railway now.
- 222½. You have heard it stated that the cost of working the line, including permanent-way traffic and locomotive expenses, would be over £7,000, and that the revenue would be a little over £1,600. Considering these figures, could you say that the Government would be justified, even in view of the probability of an increased population, in constructing the line? Not if it were to remain at Gulgong terminus.
223. What do you think would be the most beneficial thing to do in regard to the construction of a line westward? My idea is to construct it direct to Dubbo, and then on to Coonamble. I have entertained the idea for a long time that it should go right on to Coonamble. It would open up a large country, and benefit a large population. By going to Dubbo first it would give an opening to the farmers of this district to send their produce, in times of drought, to that place, and on to Bourke and Cobar, and it might even eventually tap Broken Hill. I think it would be a wonderful help to the farmers in this district.
224. You could not speak as to the advantages which would accrue from the connection of a line from Werris Creek across to Dubbo, and the extension of a line from here to Dubbo? There is no doubt that a line from Werris Creek to Dubbo would be a great advantage to stock going towards Melbourne.
225. Leaving the various stations westward, in order to get their stock to the mountain runs of the north in times of drought? In times of drought it would be a great convenience.
226. Can you give us any idea as to the timber districts between here and Dubbo? The timber would be good, and the country is fairly good. The line I would propose would go through Two-mile Flat, across Yamble, and would touch the Western line a little to this side of Dubbo. You would find the country travelled through very fair, and there would not be many engineering difficulties to encounter. There would only be one large bridge at Yamble.
227. Would the line go chiefly through Government land? I think it would pass through Government land, principally.
228. Suitable for agriculture? It would be suitable for agricultural purposes.
229. Have you been to Coonamble? I have.
230. What is the character of the country between here and Coonamble? Good country, especially near Warrunbuncle.

Mr.  
G. Crossing.  
22 Mar., 1890.

Mr.  
G. Crossing.  
22 Mar., 1890.

231. Do you not think that the lack of success in regard to the development of these districts is the want of population? That is all that is required, and until we have the means of bringing it here we shall never thrive. The country is fit to maintain a very large population. There is land in the district almost equal to anything on the Hunter flats.
232. Is the land well timbered? Yes; all through there are patches of valuable timber.
233. Is the railway likely to open up any other resources in the Coonamble district? I think it would principally advantage the grazing and agricultural interest.
234. Were you connected with the railway league which agitated for the line from Wallerawang to Mudgee? I was not. I was rather young at the time.
235. You do not know anything about the statistics which were gathered at that time in order to induce the Government to construct the line? I do of the statistics compiled in 1884, when the line was opened. I have a carefully compiled comparison with other districts written by Mr. Clark. It gives a comparison of Mudgee with Orange.
236. Can you say whether the representations made by the agitators have been borne out by facts since the railway was constructed? Well, yes. The representations made by the agitators were in favour of an extension of the line. It never was intended to leave it at Mudgee. It was never thought that it would pay if left at Mudgee. The object was to connect it with Coonamble.
237. You believe that if the line were extended westward, and not left at Gulgong, it would be of a productive character? I do.
238. Having this land in such close proximity to the town of Mudgee, what would you be prepared to take per acre for rental if you were about to let it? There are about 160 acres, for which I am getting £53 a year.
239. That is for grazing purposes only? Yes.
240. What would be a fair and equitable price to place on your agricultural land? About £6 or £8 per acre.
241. So that the early settlers of this district have made a good investment by getting such land from the Crown, and receiving such dividends from it? Yes.
242. *Mr. O'Sullivan.*] What is the rainfall of this district? This year it has been very heavy; I think the average is about 20 inches.
243. Then this is a more moist district than that about Dubbo, or anywhere else north of Wellington? During the droughts we always seem to have abundant produce, but no means of sending it to where it is required.
244. Do you grow produce here, when it fails in Wellington? Yes.
245. If you were connected with Dubbo by rail, you could, in the event of a drought, send your fodder to Cobar, Wilcannia, and Louth, and all along the western line? Yes, that is the idea.
246. So that, notwithstanding that a little might come from the Orange and Wellington districts, you would still have a fair market for the fodder grown in the Mudgee district? We can compete favourably with Orange and Wellington. Wellington, of course, is not so reliable as this district in times of drought.
247. Your position appears to be that although you have a fine district which will grow wheat and fodder, you cannot find an outlet for it? Yes. You would find that a great many more acres would be put under cultivation if we could find a profitable outlet.
248. Your natural market appears to be away to the west, where there is little or no competition for produce in dry seasons? Yes. Yesterday a farmer showed me his returns upon a truck load of pumpkins sent to Sydney, which will give you some idea of the small profits which the Mudgee farmers have to put up with.
249. *Chairman.*] Do you mean to say there is any man insane enough to grow pumpkins, and to send them from this town to the metropolis. If he does he ought to suffer? Yes, he did. He cleared 7s. 1d. out of the truck load.
250. *Mr. O'Sullivan.*] It evidently does not pay to grow pumpkins here, but would it pay to grow fodder for the stations in the back districts, if you could get an outlet for it? Yes.
251. The desire of the people here appears to be to have cheap and speedy means of access to those districts? Yes.
252. Which, in your opinion, would suit best, connecting the line between Dubbo and Werris Creek, or a line straight to Coonamble? The Dubbo and Werris Creek line would be of no benefit at all, unless we were connected with it.
253. I am presuming you to be connected by rail to that cross line? It would be better for us to go right through to Coonamble.
254. Why? Because it would open up a lot of really good country, and would serve a lot of stock and people who require fodder in times of drought.
255. But there is not a great population out there? When you come to look at all the little centres you will find that there is a great population. If you pass through Gulgong, you come to Cobbora and Denison Town. There is a great future before Denison Town. It is now being opened up for mining purposes, and I am satisfied there will be a large population there. From there you go on to Mundooran. Then there is the Myall Plains, where there are a number of small settlers, squatters, and farmers. There is no mountainous country to travel through, and there are no engineering difficulties to face, excepting the river.
256. And you think it would be better for this district to have the monopoly of the Coonamble market, than to have the chance of serving the western line, and a fair share of the traffic of the northern line through Dubbo, and then on to Coonamble? If we had the Werris Creek line, and the line to Coonamble, it would decidedly be of benefit to us.
257. You evidently want both lines? Yes.
258. If you had to make a choice between the Coonamble line, direct from here, and a connection between Dubbo and Werris Creek, which, in your opinion, would be most advantageous? I think the line to the cross-line—Werris Creek and Dubbo—would be best.
259. Is the land towards Coonamble very good? Yes.
260. That being so, it will, in the course of time, be cultivated, and you may have competitors for the Coonamble fodder trade? Yes.

261-2. So that, if you get a line out there, you are not certain of a monopoly of the trade? No; but I think there is room for all in times of drought.

263. Do you fatten any stock in this district? Yes; bullocks and sheep. It is a famous district for wool.

264. Where do you send your fat stock to? Mostly to the Sydney market. I may mention that we have sent fat stock to Wellington from this district.

265. Is there much wool coming down this way, from the back district? Yes, a great quantity.

266. Does the Coonamble wool come this way? No; it is mostly taken to Dubbo. It used to come this way.

267. I suppose the extension of the line to Gulgong would tend to draw a little of the wool traffic back in this direction? No doubt it would lessen the distance.

268. What is the distance between Gulgong and Coonamble, and the distance between Dubbo and Coonamble? The distance between Gulgong and Coonamble is about 140 and 150 miles, and the distance between Dubbo and Coonamble is 30 or 40 miles less.

269. Is there not a strong agitation to take the line from Dubbo to Coonamble? Yes; in the Dubbo district.

270. And the line has been surveyed from Dubbo to Coonamble, has it not? I believe it has.

271. *Mr. Humphery.*] Is there any timber between Mudgee and Gulgong suitable for fencing, sleepers, and bridge construction? I think it has been pretty well culled out. There is timber, but you would have to go beyond Gulgong to get it.

272. How far would it be necessary to go? To Tallewang, 12 miles on the other side of Gulgong.

273. That would be 32 miles from Mudgee? Yes. There is plenty of timber out there.

274. *Mr. O'Sullivan.*] Who owns the good agricultural lands at Tallewang? A great deal of it is Government land. I do not think much of it has been taken up.

275. These lands, then, which are fit for agriculture, are not held by private persons? Not by monopolists, towards Tallewang.

276. And there is room there for agricultural settlement? Yes.

277. Do you know the country between Gulgong and Coonamble? Yes.

278. Could you say, as a layman, whether there would be any difficulty in constructing a line there. Would it be as expensive as the line between Mudgee and Wallerawang? No, the country is very much flatter.

279. Is it liable to flood? There is only one part they would have to contend with, and the only river would be the Castlereagh River.

280. There would be a number of creeks to be bridged? There are places which could be bridged.

281. You think the line could be constructed at a less cost than the line between here and Wallerawang? Yes.

282. And that the mistakes Mr. Cassin spoke about on that line could be avoided? Yes.

283. How often do they have such a drought in the Coonamble district that they are compelled to use your fodder—once in five or ten years, or what? They may have three or four good seasons, and then a season in which we can supply them.

284. We may assume that a line, if constructed to Coonamble, would be used during drought, and that for the rest of the time the people would see the trains passing to and fro? The line would always be paying when we used it. When we were not placing stock upon it we could be sending produce.

285. During bad seasons they would be sending their stock to a more favourable locality, and you would be supplying their absolute necessities? Yes.

286. Do you think there would be sufficient trade to pay interest on working expenses on a line out there? I am satisfied it would spring up, because the country is so good.

287. Do you know that it is estimated that there will be an absolute loss on a line between Mudgee and Gulgong of £5,490 per annum? I would not be at all surprised if there was a loss on a line between this and Gulgong only.

288. Do you think that by extending it to a district which only occasionally interchanges its products, there would be any reason to hope it will pay better? In the first place, is that estimate reliable. £7,000 seems a tremendous cost for running a line 19 miles long.

289. It is very reliable. It is the estimate of the Railway Commissioners themselves. The line originally was to be constructed for £131,800, and it has been reduced to £109,330. The Commissioners allow capital expenditure at the rate of 3½ per cent., which amounts to £4,613. The estimated cost of working the line is as follows:—Permanent way expenses, £1,900; traffic expenses, £750; locomotive expenses, £500; total, £2,150; or a grand total for the annual cost of working, and interest upon capital, of £7,763. The estimate of traffic is as follows:—Coaching and mails, £525; goods and live stock, £1,112 13s.; making a total of £1,637 13s., or a loss of £5,363 per annum. This estimate is made after careful examination on the part of special officers sent to inquire as to the amount of trade between Mudgee and Gulgong; and it also takes into consideration a liberal allowance for increased productiveness, which would follow upon the construction of the railway? I never anticipated that the line would be to Gulgong only.

290. In view of this loss, do you think there is likely to be a similar loss on the line from Gulgong to Coonamble? I am satisfied that the cost of the construction of the line beyond Gulgong would not be anything like the cost of construction between here and Gulgong.

291. But the country between here and Gulgong is more expensive, from a railway point of view, than that beyond? Yes.

292. You know that from actual observation? Yes.

293. You told Mr. O'Sullivan that you were of opinion that, in the interest of Mudgee and the colony generally, it would be better for a line to go from Werris Creek to Dubbo, and a line from Mudgee on to Coonamble, making a cross line? Yes.

294. That would give you access to the more western markets, if necessary? Yes.

295. And you would then come into competition with Molong and the other fertile districts out there. What would you do there? I think we can compete with them.

296. You have the New England table-lands to compete with in the northern district? I remember the time when we have sent produce from here to Forbes.

297. That was when yours was an old settled district, and there was no settlement on the Molong lands? Yes.

- Mr. G. Crossing.  
22 Mar., 1890.
- 298-9. How long is it since you sent them produce? 1871.
300. *Mr. Humphery.*] In expressing an opinion that the cost of constructing a line between Gulgong and Coonamble would be less than between Mudgee and Gulgong, have you taken into consideration the bridges which would have to be erected? There would only be one bridge of any magnitude.
301. Would it be an expensive bridge? I think it would be fairly expensive. It is rather a large river, and is of a sandy nature.
302. If that were added to the cost per mile, do you think the average cost per mile would be less than £5,000? Yes; I think they could construct that line easily, because material is so convenient. Timber is very handy all along the line.
303. What is the exact distance between Gulgong and Coonamble? Between 140 and 150 miles.
304. The cost of constructing that line at £5,000 a mile would be £700,000. The interest alone would be about £24,000. Do you think the traffic between Gulgong and Coonamble would cover the working expenses, and £24,000 of interest? I look at it in this way. There are certain towns in the centre which must have railway communication,—towns such as Coonamble, Walgett, and this place. I think it would be cheaper to connect them with this district than with other districts. I think the cheapest line which could be constructed would be here to Coonamble and Walgett. In the course of time, there is no doubt the mountain line will have to be duplicated, or the Colo Valley line will be constructed. According to the present estimates of haulage upon that line, one engine will take 500 tons gross, as against 150 on the mountain line, and the grade will be 1 in 100, as against 1 in 30, or 1 in 33 on the mountains, and a curve of 20 chains radius, as compared with one of 8 chains radius. That would bring us closer to the metropolis. If connected with Dubbo, it would bring Bourke closer to Sydney by 30, 40, or 50 miles.

Mr. James Loneragan, storekeeper, sworn and examined:—

- Mr. J. Loneragan.  
22 Mar., 1890.
305. *Mr. O'Sullivan.*] What business do you follow? A storekeeper.
306. You are pretty well acquainted with the condition of the farmers out towards Gulgong? Fairly well.
307. Do you consider the settlement in that neighbourhood to be of a permanent character? Yes.
308. I suppose the holders are likely to remain there, even as they are? I think so.
309. Would a railway between here and Gulgong materially aid them in developing the resources of the soil? No; not if it stops at Gulgong; but I think it would be of benefit if constructed beyond.
310. Are you of opinion that a line between here and Gulgong could be made to pay? I do not think so.
311. You do not see any prospect of making up the difference between £1,600 receipts, and £7,000 working expenses? I could not offer an opinion; I really do not see how the traffic could be increased to make the difference between the two amounts less.
312. Is there any interchange of commodities between here and Gulgong? There occurs, at times, an interchange of produce.
313. Gulgong is pretty well supplied with the same agricultural products which you have around Mudgee? Yes.
314. In your opinion the line, to be made profitable, should be extended beyond Gulgong? Yes.
315. In what direction do you think it should go? Now that I have heard of the possibility of this cross section of the railway from Werris Creek to Dubbo, I should be an advocate of going on with that.
316. You know that such a line has been mooted? Yes; I heard Sir John Robertson make reference to it on the hustings, in Mudgee.
317. Then you think the line from Gulgong could be taken on to connect with that line, when it is constructed? I think it will be beneficial to the district; even if it were constructed at a loss and went ultimately to Dubbo, it would give us an interchange of commodities between these places and beyond.
318. There would be an exchange of commodities if you could obtain access to the western district and the north-western district by means of this proposed railway? Yes, a great exchange.
319. You would have an excellent market out there for your produce? Yes.
320. What products would you receive in return? In return, we would receive live stock.
321. I suppose the chief commodity you would receive in return would be hard cash? Yes; or wool and sheepskins.
322. There would be a little trade in store stock to be fattened in this district? I look upon it in this way—that instead of being of benefit for the interchange of commodities, it would open up a market which we do not at present possess. We are shut out. We are not in the position of the farmers in the Dubbo district or the Maitland district. We have no market but Sydney, which is open to all the world. Dubbo has a market. In every direction they can find an open market for any commodities which they can produce. We have not the same facilities which they have. Therefore, I argue, it would be of benefit to this district and the places which we would be able to approach by railway communication.
323. Your district is exceptionally situated, inasmuch as it is able to supply fodder and agricultural produce to the dry districts at the back;—do you think you would be able to compete with other districts, such as Molong, Orange, and Dubbo? I am decidedly of opinion we would be able to compete with them. We can grow the stuff as cheaply as they can; and, having the same facilities of transit, we could deliver it.
324. Do you think there would be room for the three districts in the market? Yes; because the country, when it becomes opened out between here and there, will increase in population. Population is bound to grow along the line.
325. You are aware that, every dry season, enormous sums of money are spent on fodder to be sent to the western districts? Yes.
326. Have you heard of fodder having been brought even from the coastal districts and from Victoria? I have got fodder myself from Kyneton, Victoria, and have sent it to Bourke. When the railway was being constructed to Bourke I held a contract, and I had to get fodder from Kyneton and have it shipped to Sydney, and then sent on to the nearest place to Bourke by rail.
327. The fodder came by water from Victoria to Sydney, and was sent to the Western district? Yes.
328. That implies that there is room in the western market for the produce of the Mudgee district? I think there is a large extent of territory which would supply the trade if we could open up the line through that territory.

Mr. J.  
Loneragan.  
22 Mar., 1890.

329. Do you think you could obtain a foothold in the markets of the north-western district? I am not very well acquainted with the northern route; but I should say that in times of dry seasons we would have a good trade round by Coonamble.
330. Do you suffer very much in this district from the effects of drought? Yes; last year we lost the whole of our crops.
331. But you do not suffer to the same extent as the districts more to the westward? No; the seasons here are not so exceptionally dry but what we can produce something.
332. Your sheep and cattle do not die in thousands, as in the west? No.
333. Therefore, there is not the same severe strain on you, even in the worst seasons, as there is in a district like Dubbo? No; because Dubbo has less water.
334. Dubbo, although a fine agricultural district in a good season, is not a reliable one in a bad season? No.
335. Therefore, in time of drought, the western graziers would have no assistance from Dubbo? Very little. As a matter of fact they do not get it. Dubbo is not to be considered in the same category as Mudgee. The crops are not so reliable.
336. If the line were run from Dubbo to Coonamble you would be able to command the Coonamble trade, or a share of it, in a dry season? We would be in as good a position in trading with Coonamble, even if the line went round by Dubbo, as the Orange or Bathurst farmers who grow large crops.
337. That being so, it would be more to the interests of this district to have the connecting line between Werris Creek and Dubbo, than a direct line to Coonamble? I think so, although I formerly held a different opinion; but since the cross line has been talked about, I think it would be better to be linked on to it than to go to Dubbo and on to Coonamble.
338. This connecting line would give you access to three markets, instead of one? Yes.
339. Therefore it would be more advantageous to the producers of this district? It would.
340. Your misfortune is, that although you have a splendid district around Mudgee, you are so isolated by heavy railway expenses on the one side and want of access on the western side, that you cannot get a sale for the produce you are able to grow? That is an unfortunate fact, as far as Mudgee is concerned. The markets we had a few years ago, before the line was opened to Dubbo, are shut up to us, and the grass is growing on the track we used. Between Coonamble and Mundooran there is little traffic, and we have to wait, probably for a fortnight, for a team. Our trade is limited, and anything produced in the district must be sent to Sydney, to compete with the open markets of the colony and the world.
341. Are you a buyer of produce as well as a merchant? Yes.
342. What produce do you generally buy? Wheat, corn, and all kinds of cereals.
343. Any tobacco? Yes.
344. Is that grown here to any extent? Very largely.
345. Any maize? Yes; it is grown very largely.
346. We may look upon this as an exceptionally favoured agricultural district, producing almost all the agricultural products? Yes; except potatoes.
347. I suppose you do a considerable trade with the farmers around the district and in some of the out-lying towns? Yes.
348. What is your opinion as to the commercial condition of this place? The commercial condition of this district is very bad, for the simple reason that we have not any market. I think the annual value of cereals in this district is something like £75,000. The wheat averages about 200,000 bushels per annum in the Mudgee district alone, and the only market we have is Sydney; and when the price is low there we have very little value for it; whereas, if we had an outside market to which we could send our ground wheat or flour, we would be in the same position as the farmers in Orange, Wellington, or Dubbo, who are in a far better condition at present than we.
349. Directing your attention to the probable annual cost of working this proposed railway, and the probable annual receipts, the difference betwixt the two being about £5,000, do you think we would be justified in recommending the construction of this line? I do; and I form that opinion upon these grounds; that if there is a district opened up in any portion of New South Wales, that district should be connected with the markets by a road of some kind. Large sums of money have been spent on macadamized roads throughout the country, and, although they cost the country a lot of money we get nothing from them, so that they are an absolute loss. Take, for instance, the road from Wallerawang to Mudgee, before the line was built. It cost not only a large amount to build, but a large amount to keep in repair, and the country received no benefit, and the State got nothing in return for the money expended. I maintain, then, that if there is a loss between here and Gulgong, or beyond, it will be of benefit all round to the colony generally.
350. I take your argument to be this, that railways are only iron roads, and that they should be constructed more with the view of giving accommodation to settlers than with a view to commercial profit? I would go further, and say that they should be constructed with a view of opening up country from which large sources of wealth are likely to be derived by people living somewhere in those districts.
351. Then you hold that although the construction of the line would not pay working expenses the indirect advantages would be so great as to justify the expenditure? I am strongly of that opinion.
352. You think there would be a probability of it paying in time, if it connected with the Dubbo and Werris Creek line? We can justify that opinion by taking the line constructed to Bathurst. At first there was a great loss upon it—as heavy as upon the Mudgee line. It is now, however, a paying line. If a line is constructed to a remote district, and opens it out and aids commerce, it will, I think, in a few years pay a fair interest on the cost of construction. I do believe that at present there would be a considerable loss upon the line, but even if there should be, I think it is only fair to this portion of the country that it should be constructed.
353. *Mr. Humphery.*] Will you specify the indirect advantages which you think will be derived from the construction of the line in the direction of Gulgong? It will open up an extent of country which will offer great inducements to people to settle upon it. It must benefit the colony generally to open up the country and offer means of settlement to the people.
354. Are you speaking of agricultural land? Yes, of agricultural and pastoral country. I think it is more suitable for pastoral than agricultural land, because 50 or 60 miles beyond Gulgong you get into a warmer climate, something like Dubbo, and it is not so suitable then for the growth of cereals. The crops are not so reliable. You get into the warm, dry country, which requires more moisture than it seems to get.

Mr. J.  
Loneragan.  
22 Mar., 1890.

355. Is it not a fact that in all pastoral districts the population is small? Generally speaking, but we have the experience of places increasing in population by the opening of railways. For instance, take Bourke, and Nyngan, and many other places.
356. Can you say that Nyngan has increased in population by reason of the railway being opened? I think so. It has received a benefit through the Cobar mines and in other ways.
357. But that would not be in consequence of the line passing through a pastoral district;—it is in connection with the mineral resources of the district? Yes, of course.
358. Are there any other indirect advantages you can name besides the increase of population in the pastoral district? It would open up trade between here and there, and would allow of an increase in our farming population, and would enhance the value of the holdings of the people. For instance, if farmers are now dissatisfied with 50 acres of cereals under present conditions, they will, by having the line constructed, be able to produce cereals of different descriptions, which would pay better than by having only one market to send to. It does not pay to grow lucerne hay in this district.
359. Where would you find a market for lucerne hay, if the railway were constructed to Gulgong? It would not be of any benefit to construct it to Gulgong. I would argue that it should be constructed beyond.
360. In what direction beyond Gulgong? On to Dubbo, by means of the cross line, and then on to Bourke and the Queensland border.
- 360½. If the railway were connected between Dubbo and Werris Creek, would you not come into direct competition with all the northern and western farmers? Yes.
361. Would you get a better market for your produce? Yes; we would have the same markets to supply which they would have, but we have not them now. The only market we have now is Sydney.
362. You think you would get a better price from Dubbo and Bourke than from Sydney? Yes. There are several things we grow here which they cannot grow at Dubbo, and they depend upon us for the market, notably lucerne seed, of which there are tons grown in the district. I have no doubt factories of various kinds would spring up in the district, if we had outside communication. For instance, a jam factory would be helped to the extent of about 1s. per lb., which means the cost of the carriage from Sydney to Mudgee, so that if we have access to those other places which use fruit largely, we could preserve the fruit and send it out.
363. You say you would get live stock in return for the produce sent out? Yes.
364. Do you mean live stock for the consumption of the population here? Yes.
365. Do not you raise sufficient for your own consumption? Ordinarily speaking we do, but not always. We often had to truck fat cattle from Sydney here.
366. When do occasions arise when you require fat cattle to be brought to this district? In times of drought.
367. And then you would get the cattle from Sydney? No; from the outside.
368. If you were suffering from drought here, would they not suffer from it at Coonamble or Dubbo? No, not always. Travelling fat stock are brought through Mudgee in dry weather from the Queensland border, where there may have been a large amount of grass, and they are well fattened. I have known the Dubbo district to be in a flourishing condition, and the Mudgee district starving for want of water.
369. Is there any other traffic which would yield a return to the railway besides live stock? Yes. There would be a large quantity of traffic in coal. There are large coal-mines near the town, and if the line were opened out to Dubbo, ours would be the nearest coal-pits. The nearest they have on the Dubbo side are those of Lithgow. A large trade in coal would be opened for us, and it would annually increase.
370. Are you aware that the price of coal in Lithgow is 3s. 8d. a ton? Yes.
371. And you think you can compete against that price? I think so, and reap a good profit.
372. *Mr. Hurley.*] Are you interested in the coal mines? Not at all.
373. I suppose you are conversant with the principle which induces American railway companies to stretch out their railways into an unpopulated country, with the object of inducing population to follow? Yes. I think that is exactly what we want here.
374. Are you interested in carrying? No further than the transport of my own stuff.
375. What is the freight of carriage from here to Gulgong? Generally about 12s. 6d. a ton.
376. And from here to Coonamble? It is difficult to fix a price, because there is no traffic; but in ordinary seasons the price would be about £4 10s. or £5 a ton.
377. Are you interested in any land through which the railway would pass? No.
378. You believe the fruit in this district would be helped by increased population and the extension of the railway? Yes. Fruit is one of the most prosperous industries in this district. I have known the grape to be grown here within the last three years, and sent to Sydney and sold at 1s. per lb. Generally it is sold at 6d. 8d., and 10d. a lb. One small vineyard, on one occasion, benefited to the extent of £200 by the high price obtained for grapes.
379. What is your idea of the price this season? It is low, because the grapes are not so good, on account of the wet. We are in a position of advantage, because we are able to send grapes and other fruits into market, when other portions of the colony fail.
380. What class of persons are engaged in that industry? Generally Germans.
381. Do you know anything about the existence of shale in this district? Yes, 16 or 18 miles from here.
382. And you are using it in your local gas-works? I think we are trying it; but on account of the mine not being opened out, it is of no advantage to us.
383. Have you obtained an analysis from it? I cannot speak from my own knowledge.
384. Have you been over the route of the proposed railway? No.
385. Have you been to Coonamble? No; I have been to Dubbo, and know the country right down to Bourke.
386. You practically follow the course of the Cudgegong from here to Dubbo? No; the road from Werris Creek to Dubbo would take us out to Tallewang, which is a rich district, and which will be a great help to the railway as a feeder, because it will be a large agricultural centre. I do not think agricultural settlement is much carried out there now, because it is too far from the market. This is the only market they can send to, and to Sydney. Therefore the farmers have to carry their produce in from Tallewang, a distance of 50 miles.
387. Have any of the farming population from Victoria come over to this portion of the district searching for land upon which to make a home? I am not aware of their having done so.

388. Have you heard of any? No.

389. Do you think the throwing open of these reserves is likely to bring about an increase of population? I do; I believe, if the land could be thrown open for the production of cereals, and for pastoral pursuits, it would be likely to lead to a large increase of population.

390. What would you consider a fair value for land suitable for cereals? Close to the railway, I consider it would be quadrupled in value. For instance, land which would be worth £1 per acre to the State, should be worth £4 or £5, when they had the advantage of railway communication.

391. You look upon the railway as increasing the value of land 300 per cent.? I hold the opinion that if the line is constructed from here to the cross section, there are enough lots on the road, which, if secured in time, would pay to the Government the whole cost of construction.

392. Are you not aware that the reserves made on either side of the line are for the purpose of returning to the State the cost of constructing? Yes.

393. You look upon it as a wise provision, and likely to give a large amount of money to the Government, and pay them for the cost of construction? Yes, if advantage is taken of it.

394. *Mr. Humphery.*] You have mentioned a loss to Mudgee of the Coonamble trade. How did it come about? By the railway line being opened to Dubbo.

395. Has the trade of Coonamble gone to Dubbo now? Yes.

396. *Chairman.*] You mentioned just now that the railway, if constructed, would bring grist to the Government mill, and that the expenditure on roads did not do anything of the kind. As an instance, you referred to the road from Wallerawang to Mudgee. Is it not a fact that that road is still maintained for use? Yes.

397. There is no saving, then, in the road vote? The roads have to be maintained in the same way as a person finds it necessary to try and keep good an old suit of clothes, in case they should be required. I maintain that if a certain amount of money were not spent on the road between here and Wallerawang, it would fall into such a state of repair that it could not be used at all. It was required to be used the other day.

398. That goes to show that there is no saving to the State by the construction of a railway. You inferred that if we constructed a railway, we should save money spent on roads. Does not your experience lead to the conclusion that the construction of railways renders necessary a larger expenditure, in order to give access to those railways from different points? Not necessarily. It does not cost the same amount of money to keep the road in repair between here and Wallerawang that it used to cost.

399. But have not other roads to be made to give access to the railway? That is a necessary consequence, as the country becomes populated.

Mr. James Janes, produce dealer, sworn and examined:—

400-1. *Chairman.*] What is your occupation? A produce dealer.

402. Residing in Mudgee? Yes.

403. How long have you resided here? Seventeen years.

404. Do you know the details of the proposal to construct a line from Mudgee to Gulgong? Yes.

405. Do you think it will be of benefit to the district of Mudgee, and the people generally? Not if it stops at Gulgong.

406. It will be of benefit to the people of Gulgong, but not of benefit to the people of Mudgee? I do not think it will be of benefit to either.

407. If the people of Gulgong have to travel 19 miles to get to the railway station, would it not be more convenient to them to have a station at their door? I do not think it would be of much benefit.

408. If you had to use a railway station, would it not be better for you to be close to it, instead of 19 miles away from it? Yes.

409. You do not think the line would pay unless carried further than Gulgong? No; I think it would be of great benefit to this district if it were extended. We would have a market all along the Western line.

410. Where do you think it would be best for it to go to? I think one part of it should join the Western line at Dubbo or Wellington.

411. *Via* Gulgong? As near to Gulgong as possible, but I have not thought much about that.

412. You think the line, to be of most benefit to the Mudgee district, should go to Wellington or Dubbo, to give access to the Western line, instead of going down to Wallerawang? That would save us a distance of nearly 100 miles.

413. What would you send to the western district if it were opened? I am at present sending eggs and butter, *via* Wallerawang.

414. Does it pay you to do that? I make it pay me, but the question is whether it pays those who get the goods, through their having to go so far down.

415. You can successfully compete against those who occupy fertile districts nearer this place, such as Molong? Yes.

416. How long have you had the Bourke market open here? I have been sending to Bourke for five or six years, ever since the line was opened. In fact I was carrying from Nyngan to Bourke before the line was open. I was carrying also to Bourke and Cobar.

417. Have you a regular trade? They only get stuff from me when they cannot get it from anywhere else. I have a regular trade, of course, but when they are pretty well off in other districts they do not trouble me so much.

418. If there were cheaper means of getting to market you would be able to supply large quantities? Yes.

419. Do you know of any other produce in the district which would go there? I have mentioned the chief articles I send away. We cannot compete with Orange in chaff, corn, cereals, or flour.

420. If a line were constructed you could compete with them? Yes.

421. You think there is a large trade between Bathurst and Orange, and the more western districts? Yes.

422. Only on occasions of drought, I suppose? Yes.

Mr. J.  
Loneragan.  
22 Mar., 1890

Mr. J. Janes.  
22 Mar., 1890.

- Mr. J. Janes. 423. All the year round? Butter, eggs, and poultry are sent all the year round, whether there is a drought or not.
- 22 Mar., 1890. 424. But chaff and corn only goes when there is a drought? Yes.
425. You know it will cost a large sum of money to make a line to Dubbo? Yes.
426. If it will take £7,000 to pay working expenses and interest on a line 19 miles long to Gulgong, it will take a larger amount on a line to Dubbo;—do you think there is trade enough to pay the interest on capital and working expenses? It may not be a question as to whether there is trade at present, but whether it will be of benefit to the whole of the community to construct a line. I have no doubt it will pay eventually.
- 426½. How can it be of benefit to the whole of the community to lose £7,000 a year? I think, in time, there will be no loss. Population is bound to increase.
427. You do not believe in a line going straight from here to Coonamble, but rather from here to Dubbo? I think we ought to join the western line somehow.
428. You are clearly of opinion that, unless the proposed line goes further than Gulgong, either to Dubbo or Coonamble, it would be folly to construct it? I think it would. I also think it should go to two places—to Dubbo or Wellington, and on to Coonamble.
429. Do you know the country between here and Dubbo? Yes.
430. Is there much Crown land unoccupied? I could not say.
431. The value of land would be increased by the construction of the line? Yes; double, or more.
432. *Mr. C'Sullivan.*] You do not appear to trade in cereals? No; I buy quinces.
433. You appear to trade more in the delicacies rather than the necessaries of life? I do, if you call butter a delicacy and not a necessary.
434. From what you know of the district and its productions, are you of opinion that, with a line running from here, and somehow connecting with Dubbo, this district could compete in the market with the agricultural districts of Molong and Orange? Yes.
435. You think there is room for more than what Molong and Orange can supply? Yes.
436. Have you ever heard that in the Nyngan district fodder has been brought from Victoria and New Zealand? No; I heard what Mr. Loneragan said about that, and I agree with him.

Mr. John Barry, mail contractor, sworn and examined:—

- Mr. J. Barry. 437-8. *Mr. Hurley.*] What are you? Mail contractor and publican.
- 22 Mar., 1890. 439. Have you been long in the district? About twelve years.
440. Are you acquainted with the proposed line of railway from Mudgee to Gulgong? Pretty well.
441. You know the route through which the line travels? Yes; I have seen the land which it goes through.
442. As one of the taxpayers of the country, do you think it is a wise investment on the part of the Government to construct a railway from here to there? No.
443. What is your reason for saying no? Because it will not pay by itself.
444. A line by itself, as a feeder to the railway at Wallerawang, is not, in your opinion, a line which will warrant the expenditure of money? No.
445. Will not the construction of the line give facilities to increased settlement? No.
446. Why? There is no land between here and there for settlers.
447. Is it all taken up? Yes; anything that is of any good.
448. Will not the persons possessed of that land devote the land to agricultural pursuits, supposing a railway is made to carry their produce to market? The line, as surveyed, will go through private property.
449. Do you not recognise the fact that if facilities are given for reaching market, the owners are likely to let their land, or develop it themselves? I do not know whether they will develop it or rent it, but there is nothing for a poor man to settle down upon along that road.
450. If the gold-field reserve around Gulgong were thrown open for settlers, do you think it would be taken up? I daresay it would.
451. If it were limited to certain areas—say, half a section, do you not think plenty of persons would avail themselves of the opportunity of securing it? I daresay they would, but a poor man would not get it.
452. You are firmly of opinion that the construction of the railway is not likely to bring about a settled population? Not between here and Gulgong.
453. Or beyond Gulgong? Yes; beyond Gulgong.
454. What do you say about Coonamble? I say that a line from here, to hitch on to Dubbo, and from there to Coonamble, is the only one; but you must liberate Mudgee from bondage.
455. You are running a line of coaches between here and certain places outside? Yes.
456. Where do you run to? From here to Cassilis, from here to Gulgong, from Gulgong to Coolah, from Gulgong to Cobbora, from Coonabarabran to Gunnedah, and from Gunnedah to Walgett.
457. Do you do this as a matter of philanthropy or a matter of speculation? Everything is a speculation in this country.
458. Do you look upon the railways as interfering with your right as a speculator? Not at all. I consider the railways open up the country.
459. Give us an idea of your year's takings? I produce my returns of traffic and receipts from the 1st of December, 1889, between here and Gulgong.
460. Do you look upon it as a payable speculation? I do not, if I were dependent upon the traffic between Mudgee and Gulgong. I depend on the outside traffic.
461. That is between Gulgong and other places? Yes.
462. Is the traffic increasing at all? Not at all.
463. Has it fallen off? Yes.
464. What is that attributable to? The traffic is not so large on account of the weather at present. It may improve by-and-bye, but we must take one month with another, and strike an average.
465. Where do you get your fodder and home stores from? Here, and in Gulgong.
466. Do you ever have to bring it up the line from any other place? No.
467. There is sufficient grown in the district to supply you? Yes.
468. And to supply all the wants of the district? Yes.

469. Have you any knowledge of the various mineral deposits in and around the district? The miners say it is very rich.
470. You do not know much about it yourself? No.
471. But you look upon the introduction of a railway over the routes you travel as a very destructive competitor? Yes.
472. Therefore, you will be much injured by the introduction of a railway? I would like to see a railway, because it would open up the country.
473. But you do not believe it would be productive, or pay interest on the cost of construction? Not between here and Gulgong.
474. Have you any land between here and Gulgong? No.
475. Have you any beyond Gulgong? I have a little, but it is too far away from Dubbo or any of those places to do me any good.
476. Have you any knowledge as to the value of land immediately around Mudgee through which this railway will pass? That all depends. People put different prices on their land.
477. I am speaking of agricultural land? I could not form any opinion. Some people say it is worth £7 an acre when it is only worth £2.
478. Were you connected with the railway league, which was instituted some time ago? No.
479. Have you ever heard any persons holding land through which the railway would pass say whether they were favourable to give that land in exchange for the benefit and advantages which the construction of a railway would give them? No.
480. You have never heard the matter discussed amongst those who were advocates of the line? No.
481. You cannot form any idea as to the probability of the increased trade which would be given by the construction of a railway beyond Gulgong towards Coonamble, or towards Dubbo? A line from Gulgong to Coonamble, or Dubbo, is the best which can be constructed.
482. Upon what grounds? All the traffic from Wallerawang goes through Mudgee, and all the produce of this district goes right on to Walgett; and then there is a large amount of sheep on the line between Walgett and Coonamble and between Coonamble and Dubbo. If the sheep came this way it would ease your line at Dubbo. At one station last year there were 250,000 sheep shorn, and 3,500 bales of wool were obtained. Sheep have actually to come to Mudgee, because they cannot put them on the trucks at Dubbo. They are smashed about and shunted from one end of the country to the other.
483. Would they not meet with the same abuse by a line connected with Dubbo? No.
484. Why? Because we would have a separate line. In going through Wellington you would find that there is more travelling-stock than what the line can carry. They are shunted about from one station to another, and are knocked about and reduced in price in the market. If a line ran from Dubbo to this place, we might pay a little more for stock carriage, but we would realise more for them in the market.
485. Have you ever given any consideration to the probability of cattle being killed in the country and the meat being brought down by cool cars; would not such a system favour the grower as well as the consumer? I agree with you that it would, if it were done higher up. There is nothing better than the cattle killed on the stations.
486. Do you think the small farmers would take advantage of such a process if it were instituted in this district? I am sure they would.
487. It would be better for them and the consumer in Sydney? Yes.
488. Does all the wool you speak of come through this place? It goes through Dubbo.
489. Instead of through here? Yes. When I ran the mails from here to Walgett, I had eight teams on the road. As soon as the Dubbo line was opened we lost all that trade. I had to pay £30 a ton for chaff in Coonamble, when I could have bought it here for £4. If we had a line from here which would carry us on to Dubbo, we could supply all the back country. The best of wheat and chaff is grown in this district, and we have no means of disposing of it. We have to go from here to Wallerawang, then up to Bathurst, Blayney, Orange, Wellington, and down to Dubbo, when we could get to Dubbo direct—a distance of 70 miles.
490. You think that the high freight charges, and the circuitous route to market are an incubus? Yes.
491. Are you one of those who advocated a line to Mudgee in the first instance? I was dead against it.
492. On what grounds? On the same grounds that I am dead against the extension to Gulgong only. Messrs. Cobb & Co. produced their books of traffic, but the merchant people of Sydney said we must have a line to Mudgee.
493. You looked upon the construction of that line as a national mistake? Decidedly.
494. And the returns prove your opinions to be correct? Yes. Until you extend the line further out it will never pay.
495. Can you give any idea as to the position of farmers in the district;—as to whether they are in a healthy financial position or not? I think they are.
496. Notwithstanding the difficulties they have to contend with in reaching market? If we had a market for produce, Mudgee would be the best inland town in the west.
497. You are totally opposed to Gulgong being the terminus of the line? Yes.
498. *Mr. O'Sullivan.*] Is there an opposition coach to Gulgong? Yes.
499. And they get a share of the traffic as well as you? I allow them to take just one-half.
500. Are the people of Gulgong in the habit of travelling here by their own buggies? They may be; but that will not bring revenue to the railway.
501. By travelling in their own buggies, do they save the necessity of paying you coach fare? Yes.
502. Would not the people who owned buggies, and who run by the opposition coach, be likely to form customers for the railway? No.
503. Do you mean to say that people would rather travel to Gulgong by buggy than by railway? The people who come in by buggy are from Home Rule and Canadian.
504. How far would these people be from the line? 6 miles.
505. And how far from Mudgee? About 17 miles.
506. Would not they go to the railway and save a 10 miles drive? They might.
507. There is a probability that the figures you have put in do not represent the actual traffic between here and Gulgong? They only represent the people who travel by my vehicles.

- Mr. J. Barry. 508. And that is half of what goes by the opposition coach? Yes.
- 22 Mar., 1890. 509-10. The return makes no allowance for those who travel by buggies and other vehicles? No.
511. *Chairman.*] Did you give Mr. Harper, the Railway Inspector, any information when he was down here collecting statistics, as to the probable traffic? No; he did not communicate with me.
512. How long have you been running a line of coaches between Mudgee and Gulgong? Eight or nine years.
513. Are you always in Mudgee, or are you sometimes on the road? I am on the road sometimes.
514. Do you know of anyone connected with you, or the firm you represent, who gave any information to Mr. Harper? No.
515. Do you think the other line of coaches between Mudgee and Gulgong carries as many passengers and parcels as you? Yes.
516. How long has the other line been running? Perhaps twelve months.
517. Does it make a daily journey, the same as yourself? Yes.
518. One journey each way? Yes; his goes through Canadian, and I go along the main road.
519. Would the Canadian population use the line if it were constructed? No.
520. How far would they be from the nearest point of the line? 5 or 6 miles.
521. How far is that from Mudgee? About 16 miles.
522. Would not they travel the 5 or 6 miles to the nearest station, instead of travelling 16 miles by road to Mudgee? They might.
523. What would you do, supposing you were residing at Canadian, and wanted to come in to Mudgee or Sydney, and were 6 miles from the nearest railway-station;—would you not go to the nearest station? I would take my buggy and drive in.
524. That is because you have plenty of horses? Yes.
525. But the usual run is one buggy and one horse? If a man went across to the station he would have to take his servant with him to bring the buggy back.
526. Your estimate of receipts is £291 Os. 7d. for the year? Yes.
527. You estimate that the other coach proprietor realizes the same amount? I do not; I consider he only gets one-half of that.
528. Then £450 would be the total realized by both coach proprietors? Yes.
529. If the Railway Commissioners have made inquiry, and have arrived at the conclusion that the coaching and mails per year would realize £525, they are not under the mark, but a little over? The contract for the mails is under £100 per year.
530. Then this does not include the mails? No.
531. What are the mails? £90 a year.
532. Then £90 is to be added to this return? Yes.
533. That will equalize your estimate with that of the Railway Commissioners? Yes.
534. You do not think the Railway Commissioners have under or over estimated it? No; they have given a fair estimate.
535. Do you think their estimates for goods and live stock between Gulgong and Mudgee would reach £1,112 during the year? I do not think so.
536. You think they have over estimated the traffic? I am confident of it.
537. You are not biassed in the matter? Not at all.
538. You really think an over estimate has been made, and that the country between here and Gulgong could not improve to such an extent that it would give the return estimated in a very short time—that is for live stock and goods? I would not say about goods. They get their goods from here to Gulgong by carriers, at 7s., 8s., and 9s. a ton.
539. Can you give an estimate of the amount of tonnage which goes from here to Gulgong by carriers? I cannot.
540. I understand you are in favour of a line from here to Dubbo rather than from here to Coonamble? I am in favour of a line from here to Dubbo, although there is no line in the country which would pay better than a line direct from here to Coonamble, and then to Walgett.
541. Would not Walgett be better served by being attached to the Northern line than to this? No; they condemned that line.
542. Who? The Commissioners. They never can get a line down there. If we had a line from here to Dubbo or Coonamble, we should get all that trade. We have all the northern members boxed up against us, and they say we must lose our trade if Mudgee gets a line out. Therefore we want to hitch on to Dubbo.
543. Do you think if a line were constructed from Mudgee to Dubbo, or Coonamble, there would be a reasonable prospect of its paying interest and working expenses? I do.
544. Even if the interest on cost of construction and the working expenses amounted to over £40,000 per annum, you think there would be sufficient trade to pay that? I do. I can assure you there is no line in the western district which will pay so well.
545. You must have been altogether overpowered in connection with the agitation for a line from Wallerawang to Mudgee? I was dead against it.
546. And they would not allow you to have a show? No, they would not. They know the mistake they have made now.
547. You referred, just now, to being connected with a firm running several lines of coaches—one to Cassilis? Yes.
548. You do not go from Gulgong to Cassilis? No; we go from Gulgong to Coolah.
549. If a line were constructed to Coolah, and on to Coonamble, would the Coolah people be benefited by it? Yes.
550. What other line do you run? To Coonabarabran. That is further on still.
551. Do I understand you to leave Mudgee to touch at Gulgong, that you then go to Coolah, and that your terminus is Coonabarabran? No. We leave Coolah on the right, and go into Redbank. That is 6 miles from Denison Town, and it is 20 miles from Denison Town to Coolah. We go right on, and cross the Castlereagh, to Coonabarabran.
552. Then you urge that the line should be constructed direct from Mudgee to Dubbo, or Coonamble? Yes.
553. Which one do you prefer? I prefer the one direct to Coonamble.

554. But that would not give you any access to any surplus trade with the western district? We shall have quite enough if we get the Coonamble trade. Mr. J. Barry.  
22 Mar., 1890.
555. What is to come from Coonamble? All our surplus stuff, grown in this district, could be sent there.
556. But they grow enough for their own requirements, except when there is a big drought? How do they grow it.
557. Who supplies them now? They get it all from Orange and Bathurst.
558. Do not they grow anything for themselves? Sometimes.
559. Do they not meet their own requirements, except in dry seasons? No.
560. They are always dependent, more or less, on somebody else for supplies? Mudgee is the place they always depended upon, until the railway went to Dubbo, and then they went to the nearest place.
561. And is that the reason why Mudgee has not progressed? I consider that it is dead against our interest.
562. That is to say that trade has been taken from you? Yes.
563. Is it not a fact that the reason Mudgee has remained at a standstill is because the Gulgong gold-field has fallen away, and where there were thousands of people whom the Mudgee farmers used to supply there are only hundreds now? Nothing of the kind.
564. Did not the Mudgee farmers supply that large gold-mining population at Gulgong some years ago? I suppose they did.
565. And now that large mining population is gone, Mudgee has been deprived of those consumers? Yes. They have only one market now to go to. You give other parts of the country means of going to the back country. You give them railways to enable them to go out to Cobar, Bourke, and Wilcannia, and you shut Mudgee out.
566. If a line were constructed to Coonamble or Dubbo, we should construct a line to enter into competition with the Great Western line? I do not think so.
567. You have told us you wanted to sneak away some of the trade from Dubbo? We do not want to sneak away the trade from Dubbo.
568. Well, then, to share it with them? We will share it with them.
569. And your share would of necessity take away from them? If I were sending stock from Coonamble I would truck them *via* Mudgee, because they would not get knocked about so much.
570. If the construction of this line would lead to a very large trade, would not the trade on the new Mudgee-Dubbo line be so great that stock would be subject to the same knocking about as they are on the Western line? No, because you would avoid the traffic at Dubbo.
571. I understand, then, that all the people between Wallerawang and Dubbo would be prepared to let their passenger traffic stand on one side, and their ordinary produce stand on one side, to allow of these poor beasts from the north and north-western portions of the colony to be taken to Sydney without shunting? Most decidedly. When they cannot send them on by trucks from Dubbo, they cannot send them on at all. I have seen cattle in the trucks for a day, because they could not be sent on.
572. And the people between Wallerawang and Dubbo would be prepared to put up with any inconvenience to allow the stock to go right through? I can assure you that Dubbo is prepared to join hands with us to-morrow to have a line constructed to Dubbo.
573. *Mr. Humphery.*] Is there any other traffic, excepting live stock, from Coonamble to Mudgee? Only live stock.
574. For what period of the year would that traffic continue? Three or four months.
575. What would the traffic be for the other eight or nine months? Look at all the stuff which goes to Coonamble and on to Walgett.
576. What other traffic would there be from Coonamble for the remainder of the year? They would be sending their cattle and sheep. Every week of your life you can see thousands of sheep going from Coonamble to Sydney.
577. But that only lasts four months of the year? That is for the wool trade.
578. The live stock goes over the whole of the year? Yes. There is not a more prosperous district in the country than Coonamble.
579. What is the distance from Gulgong to Mundooran? 53 miles from here.
580. What is the distance from Mundooran to Coonamble? I think about 120 miles. At any rate it is 100 miles. The distance from Gulgong to Coonamble will be about 150 miles.
581. Then a railway at £5,000 a mile would cost £750,000? Yes.
582. Do you think the Government would be justified in incurring an expenditure of three quarters of a million, to construct that railway, when the only traffic between Coonamble and Gulgong, and Mudgee, would be live stock and wool? I consider that until you make a line from here, the Mudgee line will never pay. It is bound to pay, if you go out into the back country. Look at the population there now. Hundreds of men are coming from Victoria every day, and are taking up land along those roads. Four men from Victoria the other day took up 20,000 acres of land.
583. And you think it is advantageous that the land should be taken up in large areas? I think, if a man can get hold of a large piece of land, he should settle upon it.
584. Would that land be taken up for agricultural or pastoral purposes? For whatever they can grow upon it. I have seen some of the finest wheat in the country grown between Nevertire and Warren, by a man from Victoria.
585. What increase of population has there been between Gulgong and Coonamble within the last five years? I could not tell you. I know that within the last five years a mill has been put up at Mundooran, and a couple of public-houses, and five or six private buildings have been erected. It is the same all along the road.
586. In reply to Mr. O'Sullivan you said that there are no holders of small areas between Mudgee and Gulgong who would be served by the proposed railway? According to the present survey, I do not believe any man can take up a piece of land for the benefit of himself between here and Gulgong.
587. Are there not a considerable number of holders of small areas within a radius of 10 miles of Gulgong? Yes.
588. Would not they be served by the railway? Of course they would.
589. How do you reconcile that answer with the one given to Mr. O'Sullivan? I meant between here and Gulgong.

- Mr. J. Barry. 590. Are there no holders of small areas within 5 miles of the line between here and Gulgong? I do not know. I think there must be between 4 and 5 miles.
- 22 Mar., 1890. 591. Do you know Guntawang? Yes.
592. Are there any small holders there? Yes.
593. Who does it belong to? Mr. Richard Rouse.
594. Do you know Wilbetree? Yes.
595. Are there any small areas there? Yes; there is any number of farmers about there.
596. How far is Wilbetree from the proposed line? 6 or 7 miles.
597. If they are 6 miles from the railway, will they not be served by it? I do not think so. It would be easier to come to Mudgee than to cross over there to bring their produce.
598. How far is Wilbetree from Mudgee? 10 or 12 miles.
599. And you think the farmers would prefer to go 12 miles into Mudgee, than to go 6 miles to the nearest point of the line? It would be cheaper for them to do so. They would have to go to Gulgong with their produce, or come in here.
600. Do you know Eurunderee? Yes.
601. How far is that from Mudgee? About 5 miles.
602. Would the railway serve any settlers there? Not at all.
603. Do you know Barragandoon? Yes.
604. To whom does that belong? To Mr. Richard Rouse.
605. How far is that from the proposed railway? Alongside of it.
606. That has not been thrown open? No; it is private property.
607. Do you know that run? Yes.
608. Is it good land? Yes, pretty good.
609. Is it fit for agriculture? Yes.
610. Do you know the extent of agricultural land there? Yes.
611. Do you know Home Rule? That is still further on to the right. It is within 6 miles of Gulgong.
612. Is there any good land there? Yes.
613. About what area? I could not say. Mr. Rouse has the greatest part of it.
614. Are there any holders of small areas? Yes.
615. Would not they be served by the railway? Yes; they would go to Gulgong.
616. Gulgong would be 6 miles away? Yes.
617. Would the line be more difficult to construct between Gulgong and Coonamble, than between Mudgee and Gulgong? There are only one or two difficult places on the road. It is level country all the way.
618. Do you think it would be less expensive? I do.
619. Do you know the country well? I have been over a part of the line, which was surveyed right through to Walgett.
620. Assuming that the line between Mudgee and Gulgong would cost £5,500 a mile, what should be the cost of a line between Gulgong and Coonamble? It would be less.
621. Do you think there would be a large passenger traffic between Coonamble and Mudgee? I do.
622. How is Coonamble supplied at the present time? There are two lines of coaches running. A daily mail runs to Warren. There are these coaches on the road, and they go right across to Nevertire. Another daily mail goes from Dubbo to Coonamble.
623. What is the distance from Dubbo to Coonamble? About 100 miles.
624. Do you think Coonamble would prefer to be connected with Dubbo or with Mudgee? With Mudgee.
625. What is your reason for saying so? Because they can buy their produce cheaper in Mudgee, and they can depend upon our seasons more than in the other district.
626. Would it not suit Coonamble equally well to be connected between Dubbo and Wellington assuming that the line could be carried from Gulgong to that point? Not to Wellington, because the distance would be shorter, but between Coonamble and here it would be shorter than going the other way, and when you came to reckon up at the end of the year the extra haulage which you would have to pay for your goods, and the fares of passengers, you would find it would be cheaper to come this route than any other.
627. Would it not be an advantage to Coonamble to be connected with the northern line as well? I do not think so.
628. Assuming it probable, or possible, for Dubbo to be connected with Werris Creek, would it not be to the advantage of Coonamble to be connected with Dubbo, rather than with Mudgee? It may be; but they have no connection up north. Their business goes between Sydney, Coonamble, and Walgett.
629. Do you give it as your opinion that the railway should be carried from Mudgee to Coonamble? I do. Otherwise, get on to the Dubbo line. Get on to Dubbo at the nearest point, and then we will get the Cobar trade and the Bourke trade. The day has come when we must get a line from Dubbo to Coonamble. If we have a separate line for ourselves, all the better.

George William Townsend, Esq., C.E., sworn and examined : --

G. W.  
Townsend,  
Esq., C.E.

22 Mar., 1890.

630. *Mr. Hurley.*] You are a civil engineer? Yes.
631. You were under engagement to the Government some time ago? I was employed in the Railway Department for thirteen years.
632. You were sent out to do some special work in connection with the western survey? The Colo Valley survey.
633. You sent in your reports in regard to the class of grades, &c., and they were printed? Yes; in a Parliamentary paper.
634. You made up your quantities and ascertained the exact cost of the construction of the line? Yes; and in the same paper is a statement, which has never been disputed, as to the amount of traffic which would be likely to be carried.
635. Has anything occurred since you made up those quantities, and gave in your returns, which has altered your opinion in regard to the suitability of the line? Not as to the suitability of the line. The recent slips, during falls of rain, have forcibly impressed upon my mind the necessity for that line. I was very

very careful throughout the whole of my survey, wherever any dangerous ground was crossed, to throw the line back into gallery tunnels—traversing the face of the hill and keeping on the sound ground, instead of having cuttings in the open ground.

G. W.  
Townsend,  
Esq., C.E.

22 Mar., 1890.

636. If I remember rightly, in your report there were many miles of tunnels? Nine miles of tunnels were put on the section, for the purpose of avoiding which I could have shown moderate cuttings and banks, which could have been made for from £10,000 to £12,000 a mile; but instead of cheapening the estimate by showing that, I threw the line back into tunnels over nine miles—the object being to secure ground free from landslip. That is what increased the estimate beyond what I first anticipated. I was for three years in the valley, and saw a great deal of the ground. One day my camp was nearly swept away by a landslip, so that the necessity for some protection was forced on my mind.

637. Am I correct in anticipating that you made out that you could make a gross haulage of 74 or 75 per cent. more on the gradient you had made, than on the gradient on the Western line? More than that—nearly 300 per cent. The amount one large engine will take from Dubbo to Lithgow is eighteen loaded trucks. The same engine will take thirteen trucks from Lithgow to Penrith. On the Colo Valley line, it would take, from Dubbo to Penrith, fifty trucks, if my gradient were adhered to.

638. *Chairman.*] By your line you pass by the worst grades on the Wallerawang-Mudgee line? Almost all the heavy grades are about Penrith, and do not touch the Western line again until near Dubbo.

639. You do not avail yourself of the Wallerawang and Mudgee line further than in its best places? No, and that only at the Mudgee end.

640. There are some heavy grades there? Yes; 1 in 40.

641. *Mr. Hurley.*] Coming up the Colo Valley to the east of Rylstone, which part of the Cudgegong do you touch first? Near to Fitzgerald's station.

642. How far is that from Rylstone?  $4\frac{1}{2}$  miles.

643. You are aware that there has been a great deal of controversy in the Department in regard to your calculations of cost? Yes. I can explain how those figures were swollen to such an extent, and the Parliamentary papers will bear out my statement. When I submitted my estimate, Mr. Whitton also submitted one. Mr. Sutherland, the Minister for Works, asked him whether it was for a double or a single line, and he said for a double line. Mr. Sutherland then asked me what my estimate was for, and I said for a single line, except in regard to the bridges, which were for double lines. To prevent confusion, I distinctly stated that although there were many miles of viaducts, they were not to be confounded with the bridges, the viaducts being for a single and the bridges for a double line. Mr. Whitton then said he was quite sure I originally intended to estimate for a double line, and he persisted in doing so.

644. So that that increase on the estimate is through Mr. Whitton's intervention? Yes; estimating for a double instead of a single line, as I did. Taking his figures for a double line, and mine for a single line, you will find that mine is the more liberal price of the two.

645. Did you provide for double lines in the tunnel? No, single; intending in case of duplication to have a duplicate tunnel running parallel with the other one.

646. Looking at the line over the mountains, and the line surveyed by yourself, you are aware of the release it will be to the congested traffic of the Western line? It will be an enormous release to the Western line. It will take the whole of the western and the north-western traffic, no matter how largely it becomes developed hereafter.

647. You are conversant with the necessity of a duplicate or separate line? Yes; a separate line.

648. Looking at the high grades on the Western line, it would be madness, in your opinion, to attempt to duplicate it? Nothing short of that.

649. Have you given any consideration to the Southern line, *via* Blayney? I surveyed that bit from Carcoar.

650. But you have not given that consideration to it which you have given to the other, believing it did not deserve it? No; I do not think it did.

651. Looking at the line surveyed by yourself up to this point, have you given any consideration to the probabilities of trade accruing by the construction of a line beyond this point, westward? Yes.

652. What is your opinion, or advice, as to what would be the best course to take, to get out of this place, westward? I think we should go from here to Gulgong, and from Gulgong to Dubbo. From Dubbo, I would extend to Coonamble, and thence to Walgett. From Dubbo, I would also extend, *via* Parkes and Forbes, to Young, and would so connect the Southern district. From Nyngan, I would extend to Cobar, Wilcannia, Broken Hill, and Silvertown, making a complete system, centering on the Colo Valley. Further, I would connect somewhere from Coonamble with the Northern system, so that we should have a complete connection from south to north, without going across the Dividing Range more than once.

653. Why would you make the detour from Gulgong onward to Dubbo? Because the people would have it so. A better line could be made without touching Gulgong.

654. Would you always bend to public clamour? I would not, if I could help it.

655. In this instance you are prepared to give way because the public require it? My first idea was not to take in Gulgong; but I found it necessary, in the interests of the people. I think it is wise for an engineer, in designing lines, to take into consideration the greatest amount of good to the greatest number.

656. Where do you propose to touch the Northern line? I do not say where; I merely mention the fact that I would have a connecting line from one point to another.

657. Have you given any consideration to a proposal which has been submitted and spoken of, for a line from Werris Creek right across? It would be well if Werris Creek were connected with Dubbo. It would be a good line by which to take the traffic from Bourke to Newcastle; but it would not be a good line to take the southern traffic north, because it would come too far east. You would be making too much of a base of a triangle, instead of the hypotenuse of the triangle. I would go further north—north of Armidale—somewhere Tenterfield way.

658. Do you think, viewing the circumstances of the Western line round by Orange, and looking at all the circumstances of the probable progress of the country and increase of population, that the country would be warranted in constructing the Colo Valley route, and making it the Western line out to Dubbo? Yes, no doubt about it; so much so that if that line were made, it would pay to take traffic from Wellington back to Dubbo and along the Colo Valley, and it would be shorter than from Wellington and over the mountains.

G. W.  
Townsend,  
Esq., C.E.  
22 Mar., 1890.

659. Have you given any consideration to the freight now chargeable upon those heavy grades, as against the freight chargeable on heavy loads on easy grades? Yes; it is contained in my report in the Parliamentary paper; but as I have not looked at it for eighteen months or more, I could not say anything about it.
660. To the producer inland, and to the agriculturist and pastoralist, it would be an advantage of at least 50 per cent.? Yes, at least that; and it would leave a large profit, instead of a loss, over the mountains. Every ton carried over the mountains is carried at a loss. With the other light grade line we could pay expenses, reduce freights one-half, and in time pay for the line. In my estimate I stated that the line would be paid for in forty years.
661. You made that estimate after careful examination? Yes; and it was never contradicted by Mr. Whitton, anxious as he was to contradict everything I said. Mr. Goodchap bore me out entirely.
662. Having in view the probability of the construction of the Colo Valley line, do you think it would be wise to defer any extension westward until the completion of that route to this part of the district? No; I would push forward the extension westward as rapidly as possible. A place like Mudjee would be largely benefited by intercourse with the west and north-west. Another thing, as soon as we get to Mudjee, we get into what may be termed the bottle-neck system of the present westward line. Still, it would be an advantage to have the traffic from Mudjee to the west and north-west, and it would be a portion of the line made. It would also have a further advantage, because it would impress on the minds of the authorities the necessity of making the Colo Valley line. They would find such a constriction of traffic on the Blue Mountains that they would be obliged to make another line.
663. Am I right in thinking you spent a great number of months in the Colo Valley? About three years.
664. Therefore you are in a position to give an opinion as to the various deposits of coal? Yes.
665. Have you any experience of minerals? Yes; I practised as a mining engineer for about ten years.
666. What is your opinion as to the probability of petroleum existing there? I do believe there is petroleum there; and I will tell you why: There is a hole on the river called the Bubble Hole. When my attention was drawn to it, I observed it frequently. I have spent half a day closely observing it. There is an oblong sunken island (the top of which comes near the surface of the water) of fine silt, 50 feet in length, and about the centre it comes up to a high ridge. This ridge is in the centre of the hole, exactly in the place where any light deposit would be swept away by flood. All along the centre ridge there is a constant line of bubbles. I swam off on one occasion with a bottle to the bank, but the soil was so soft that I could not get a foothold. I endeavoured to get some of the gas in a bottle, with the object of having it analysed, but failed. I feel certain it is natural gas coming from some petroleum spring.
667. How is the country timbered? In some places there is very good timber; in others it is very scrubby. Upon some of the hills there is remarkably good timber.
668. Any cedar? Very little; nothing to speak of. Out on the Bulga track there is magnificent timber.
669. Any coal? Coal is very common there. You can get chunks of coal and shale all down the river.
670. Of good quality? Some good and some poor.
671. Have you any knowledge of the mines within 18 miles of Mudjee? I have been in Mr. Standish Cox's place.
672. What are the measures? I cannot tell you.
673. What class of coal is it? It is of good quality.
674. What would you call it? It is good cooking coal and good gas coal; but they are spoiling it. It is an immense seam, 22 feet, and they were putting in bands. If they dressed it better, it would have a better market value. I know the gas works were refusing to take it on that account.
675. Have you been over the district between here and Coonabarabran and Coonamble? No.
676. Between here and Dubbo? Yes; the Minister for Works is in possession of a letter from me, written about the time the survey was started, in which I offered to make that survey as portion of my Colo Valley survey, adhering to the same grades, none above 1 in 100, and the cost per mile from Mudjee to Dubbo not to exceed £7,000. I offered to make the survey for £1,200, being paid £600 whilst the work was going on, and leaving £600 as a guarantee that I would carry out what I stated. I had an acknowledgment of the receipt of the letter, and no more.
677. Is the land suitable for agriculture between here and Dubbo? Some of it is very good.
678. Can you give an idea as to its value? About £2 10s. per acre.
679. And the price, if the railway were constructed? It is hard to say.
680. It may be quadrupled, at all events? Certain to.
681. If they put all the available labour possible upon the line, in what length of time could it be constructed—that is, the Colo Valley line? About six years.
682. *Mr. O'Sullivan.*] What is the distance between Dubbo and Sydney, by the Colo Valley route? 237 miles, as near as I recollect.
683. What is the distance from Dubbo to Sydney by the present line? 278 miles.
684. It would therefore be 41 miles shorter by the Colo Valley route? Yes.
685. Has not Mr. W. E. Abbott made a proposal to run a line from Dubbo to Cassilis, and Muswellbrook, on to Newcastle? Yes.
686. What is that distance? 237 miles to Newcastle.
687. That would be the same distance as the Colo Valley route to Sydney? Yes.
688. There would be this advantage in favour of the Colo Valley route, that the distance would be shorter between Sydney and Newcastle? Yes.
689. What is the distance to Sydney by Newcastle? By Mr. Abbott's proposal to go by Newcastle to Sydney it would be, as near as I recollect, 331 miles against 278 miles by the present route to Sydney from Dubbo.
690. Therefore this proposal of Mr. Abbott's is not likely to successfully compete against the Colo Valley route? I do not think so.
691. Has not Mr. Gipps made a proposal for a line *via* Blacktown on to Cook's River? Yes; and to Blayney.
692. Is that a feasible route? I have not been over it. I have had a talk with Mr. Cummings about it. He went to inspect it with Mr. Gipps, and after that nothing more was said about it.
693. If your proposal *re* the Colo Valley route were carried out as far as Dubbo, it would conflict with the

the proposal for a line from Dubbo to Werris Creek? No; I do not say it would. From Dubbo to Werris Creek would be a connection from the north.

694. Is there any likelihood of both lines being given? No.

695. Could not your proposal for a line from Penrith to Dubbo be fitted on to the connecting line between Dubbo and Werris Creek, going from Gulgong to some point on the connecting line? I do not know enough of the country to say; but I think not.

696. Why not? You would get into some very rough country, and it would be very expensive.

697. If a line can be taken from Gulgong to Coonamble, can it not cross the proposed line? The dividing ranges to the north run very flat.

698. But there is no occasion to go to the north? But you are going to the north, going to Coonamble, and the range is low and flat there.

699. Is there no other point to the south where you could join this connecting line? I do not know enough of it to say.

700. If the connecting line between Dubbo and Werris Creek is carried out, as it probably will be, you are not likely to get your line from Dubbo to Gulgong, and therefore I ask you whether you can fit on the Colo Valley line, running through Mudgee and Gulgong, to the connecting line between Dubbo and Werris Creek? Yes; but I do not think it would be less distance than you could get by connecting with Dubbo.

701. It would probably be more, but even so, it will be shorter from Dubbo to Sydney than the present route? Yes; but I fail to see your object. If I can get to Dubbo by a more direct and shorter route, what is the good of joining to the Werris Creek line.

702. The Government is not likely to give both lines;—if they construct the line from Dubbo to Werris Creek they are not likely to construct another line from Dubbo to Gulgong, when they get so near to Gulgong? But how near do they get?

703. I cannot exactly say, but it is not very great.

704. *Chairman.*] 20 miles.

705. *Mr. O'Sullivan.*] Then I should say it would certainly be wise to connect with the other, although it would make it rather longer in the through distance;—had not you better be prepared to modify your scheme in that direction? Yes.

706. *Chairman.*] That is, instead of going from Gulgong to Dubbo, you go to some point on the Western line? Yes.

707. *Mr. O'Sullivan.*] And by that means have access to Dubbo on one side, and Werris Creek on the other? Yes; that is to the west and to the north.

708. Do you think there is a probability of the Colo Valley line being carried out? I should like to see it, but I am afraid somebody's carriage blocks the way for the time being.

709. In plain terms, you want a new Engineer-in-Chief? That is about it.

710. The necessity will become so strong for a relieving line for the mountain line that some line must be adopted? Yes. That is why I should be anxious to see the line made from Mudgee to the north-west, because it will emphasise the necessity for the Colo Valley line.

711. Coming back to the line under consideration, I understand you to be of this opinion—that it will be wise, pending a decision in regard to the Colo Valley line, to proceed with this line as a portion of the Colo Valley line of the future? Yes.

712. *Mr. Humphery.*] You estimate the cost of construction will be £7,000 a mile between Mudgee and Dubbo? Yes.

713. What grade do you estimate for? A ruling grade of 1 in 100, and no curve sharper than 20 chains.

714. What would be the difference in the haulage power of a locomotive over a grade of 1 in 40 and over one of 1 in 100? The ruling grade from Dubbo to Lithgow is 1 in 40, and upon that a large engine will take eighteen loaded trucks. Upon a grade of 1 in 100 the same engine will take fifty trucks.

715. What would the haulage be over a grade of 1 in 80? About thirty to thirty-five trucks.

716. Nearly double? Nearly double the 1 in 40.

717. You do not know the country between Dubbo and Gulgong? I have been over it, and know it pretty well.

718. Do you know if the land is fit for agriculture? A good deal of it is.

719. Is there any timber suitable for sleepers? It is sometime since I was over it, and I could not say.

Mr. James D. Parker, manager for Wright, Heaton, & Co., sworn and examined:—

720. *Chairman.*] What position do you hold? Manager for Wright, Heaton, & Co.

721. How long have you held that position? Twelve years.

722. You are intimately connected with the trade of the district? Yes.

723. Did Mr. Harper obtain information from you, when he was making up his reports as to the probable traffic on the line? He came to me, but I do not think the information obtained was of much use, because we did not go into details.

724. Are the goods which come from Mudgee station for Gulgong addressed to Gulgong, and sent direct by carriers, or is bulk broken here? It is sent direct to Gulgong.

725. Do the goods go in the name of the person they belong to? The bulk goes direct to the consignees.

726. Do they use firms such as yours to get them carried? Yes.

727. Any knowledge you have of the quantity of goods sent would not embrace the whole of the goods which have gone from Mudgee? No.

728. Can you give an estimate of the tonnage inward and outward passing through your hands to Gulgong and the district which would be benefited by the line under consideration? I could have given the information if I had known it was necessary.

729. How far distant would people be benefited, if the line were made to Gulgong;—do you think people living 10 miles further north-west of Gulgong would be benefited by it? Decidedly.

730. How far do you think the influence would extend? As far as Coonabarabran.

731. Does the Coonabarabran trade now come to Mudgee? Yes; a lot of it.

732. And some to Quirindi? Yes; on the Northern line.

733. How far is Coonabarabran from the nearest point on the Western line? Dubbo will be the nearest station.

Mr.  
J. D. Parker.  
22 Mar., 1890.

- Mr. J. D. Parker. 734. If the line were made to Gulgong, you think the Coonabarabran people would avail themselves of it? Yes.
- 22 Mar., 1890. 735. Is there much trade from Coonabarabran to the metropolis? We cannot tell. We get a lot of it, but not the bulk.
736. If this line were constructed, and the Coonabarabran trade came through Mudgee, *via* Gulgong, it would rob the Northern line? Of course, but the Railway Department would obtain a great advantage.
737. How? Because a lot of the wool taken by the Northern line is taken direct to Newcastle.
738. But is not the haulage much smaller from Quirindi to Newcastle, than it would be from Gulgong to Sydney? It would be a longer distance from Gulgong to Sydney.
739. What is the distance from Quirindi to Newcastle? 144 miles.
740. And what is it from Gulgong to Sydney? 210 miles.
741. Do you think it likely that the Coonabarabran people would come to Gulgong and pay for the extra carriage? They would gain over the road carriage.
742. What is the distance from Quirindi to Coonabarabran? 100 miles, I think, and from Gulgong it is less.
743. And from Coonabarabran to Gulgong? About 90 miles.
744. There would not be much difference between the two in the way of land carriage? I go by the rates. It would be 10s. difference.
745. How do you form an opinion—from figures, or from conversation with the people in the Coonabarabran district? I take it more from carriers' rates. You are taking the Newcastle distance against the Sydney distance for Mudgee.
746. But is not Newcastle as good as Sydney for a market for wool being sent home? It should be. It is only a question of extra mileage.
747. It is only a question of cost as to whether people would send it these extra miles? With a very little difference they would.
748. Can you give us an idea of the goods, inward and outward, to the district beyond Mudgee? I have not the total tonnage.
749. The estimate of the Railway Commissioners is that coaching and mails would give a revenue of £525 per annum, and goods and live stock £1,112 per annum, or a total of £1,637;—do you think that is an under or over estimate? I should take it to be an under estimate.
750. Even if they tell us they have taken into consideration a possible trade from Coolah, Cobbora, Munderoran, Denison Town, and Coonabarabran? Of course, they get the Coolah and Cobbora trade now.
751. The railway people are of the same opinion as you, namely, that they would get some of the Coonabarabran traffic, and, taking that into consideration, their total estimate is £1,637 per annum;—do you think that to be an under estimate? I should think so.
752. I suppose you do not think the total revenue would reach £7,000 per annum? I should think it would.
753. If the line were constructed between Mudgee and Gulgong, it would tap a trade sufficient to give a revenue of £7,000 a year? I think it would.
754. Do you know anything of the country between here and Gulgong, and beyond? Yes.
755. Have you been as far as Coonamble? No.
756. Do you think if the line were constructed to Coonamble the trade would come this way? I should think so.
757. What is the nature of the trade at Coonamble? It is out of our line.
758. You think, at all events, that the line, if constructed to Gulgong, would in all probability give a revenue of £7,000 a year, owing to its tapping an enlarged district to what the present line will do. I think so.
759. Are there any other carrying agents besides yourself? Yes; Tarrant & Crossing.
760. Do they do as large a business as you? Hardly, I think.
761. *Mr. O'Sullivan.*] Does much wool traffic come into Mudgee from the back districts? A good deal.
762. What districts does it come from? From Coolah, Coonabarabran, Munderoran, and all round there. Two years ago we had some from Cassilis, but not since.
763. How was it you got the Cassilis wool? On account of the bad roads between there and the Northern line.
764. Do you think that the natural route for the wool traffic is through Mudgee? Yes.
765. What is the value of the wool freight per year? The total number of bales which passed through here last year, would be between 11,000 and 12,000. 1,500 bales would be for the stations around about Mudgee.
766. Can you give an idea as to what that would amount to in freight to the Railway Department, if carried to Sydney? The trainage is £2 14s. 5d. for greased, and £3 11s. 9d. per ton for washed wool.
767. If the line went to Gulgong, you would open up a still wider region for wool traffic? Yes.

Thomas Willans Connolly, Esq., Government Surveyor, sworn and examined:—

- T. W. Connolly, Esq. 768. *Chairman.*] You are a Government Surveyor? Yes; located at Mudgee.
- 22 Mar., 1890. 769. How long have you been here? Four and a half years.
770. Can you furnish the Committee with parish plans of the country between this and Wellington, *via* Gulgong; this and Dubbo, *via* Gulgong; and this and Coonamble, *via* Gulgong? I have no parish maps out of the Orange Land Board District.
771. How far does your district extend? To Reedy Creek, at Gulgong.
772. Are your office maps charted up to date? No. Information, as I require it, is supplied by the district office at Orange.
773. Cannot you furnish us with parish maps as far as your district extends in the direction of Wellington, Dubbo, and Coonamble? I have not anything which would be reliable.
774. Do you know anything of the country between here and Gulgong? Yes.
775. Is it good country, or what? Two-thirds of it is agricultural country.
776. In the hands of a few holders? I think, perhaps, one-third is in the hands of a few.
777. Is there much Government land between here and Gulgong? Not much, except the gold-field reserve at Gulgong.

778. Is there any recommendation that the reserve be cancelled? It has been several times recommended.
779. Do you think it would be advisable to do it? Yes.
780. Would it be advisable to make it a special area, if it were cancelled? Yes.
781. Will not the cancellation of it limit the mining community somewhat? The areas which were proposed by our Department for cancellation were not occupied by miners. No objection was raised by the Mining Department, or their officers.
782. *Mr. Humphery.*] Did you hear Mr. Barry's evidence? Yes.
783. Is it a fact that between here and Gulgong, there are few holders of small areas who would be served by the proposed railway? The line, as laid out, passes chiefly through the large estates; but I think one-half the area is held in small holdings not immediately adjacent to the line—say within four to five miles of the line.
784. What will be the average of the small holdings, say within 4 or 5 miles of the line, on either side? I should say one-half of the land is held by small holders, who hold from 160 acres downwards.
785. Are they occupying the land and cultivating it? Yes.
786. They are *bona-fide* settlers? Yes.
787. Can you say what the small holders would aggregate within 4 miles of the line? About 20,000 acres.
788. What proportion of that do you think is suitable for agricultural purposes? I would hardly venture to say. Taking the district generally I know what the proportion is, because I had to work it out.
789. Is this land similar to the land you refer to? The farming land is better away from the railway line—to the east, chiefly.
790. The railway would not pass within 4 or 5 miles of the best land between here and Gulgong? Yes; that is held by small farmers.
791. Have you examined the proposed line between here and Gulgong? Yes.
792. Can you suggest any deviation or alteration which you think would be advantage us? I could not. I do not know what engineering difficulties there would be.

T. W.  
Connolly,  
Esq.

22 Mar., 1890.

Charles John Horsley, Esq., Crown Lands Agent, sworn and examined:—

793. *Chairman.*] You are Crown Lands Agent in the district of Mudgee? Yes.
794. How long have you occupied that position? Since February, 1885.
795. Could you furnish the Committee with parish maps within your district which would embrace a proposed line between here and Wellington, *via* Gulgong, the same to Dubbo, and the same to Coonamble? I may be able to furnish some within my district, which ends at Reedy Creek. I have not all of them. The Railway Department applied for some the other day, and I sent some.
796. There is not a great demand for land in your district? No.
- 796½. Then, if you are tied up for one or two plans;—if anyone came in for a parish plan you could not furnish it? Most of them, but not all.
797. Do you not generally keep a larger stock? Yes; I am told to apply for what are in demand, and it is impossible to say what is the demand.
798. Then Mudgee is dead, so far as applications for land are concerned? It has been for some time.
799. You could not furnish us with a complete set? No; not unless they are the office set, which are not supposed to go out; but I could give you all but one.
800. Will you produce that—starting from Mudgee towards Gulgong;—give us them in the order in which they should be? In the county of Wellington you take a portion of the parish of Mudgee, and then the parish of Munna. These are the two parishes immediately on this side of the river, the river being the boundary of the county of Wellington. The portions marked with green are all reserves. [*Witness indicated on the plans the position of the proposed line.*]
801. Have you estimated the quantity of unalienated land which would be served by this line? No; it is a matter of impossibility to do so at so short a notice.
802. I suppose what lands are remaining are principally reserves? A good deal. A good portion is held under annual leases, for grazing purposes.
803. Is there much demand for Government land in the district? There has not been since I came here.
804. Have any special areas been put up here? Yes.
805. They have been taken up? Yes.
806. What has been the price realized? 3s. an acre in the parish of Wilbetree and Eurunderree. Special areas have been opened out, and that is the best land in the district for wine-growing.
807. Do you think if the large gold-field reserve were thrown open there would be any demand for it? I believe every inch of it would be taken up.
808. Do you think it ought to be made a special area of? For settlement, I should decidedly say no.
809. Do you think if it were made a special area it might be taken up? If the ground is allowed to be taken up by 40 acres, it might all be taken up.
810. Do you think, if the railway were constructed, and the reserves were not cancelled until after its construction, it would add materially to the price they would bring? It should do so.
811. *Mr. O'Sullivan.*] This district is in the Eastern Division? Yes.
812. And the leasehold areas for that division will be thrown open for selection on the 1st July next? I believe so.
813. Have you any leasehold areas here? No.
814. This is one of the old nineteen counties in which grants were given in the early days? Yes.
815. I suppose there never was much land up here for selection? The principal land has been taken up years ago by grants on both sides of the river, leaving only the poorer class of land available.
816. It was all taken up under the Act of 1861? The lands I speak of have been taken up since the Act of 1862. An area of about 33,700 acres has been taken up under conditional purchase.
817. So that we can hardly gauge the prosperity of the district by the demand for land during the last fifteen or twenty years? The best of the land has been held under large grants.
818. The best of the land was given away in the early days under grants? Apparently so.
819. And the remainder was taken under the Land Act of 1861? Yes.
820. So that, beyond the reserve and the large common near Gulgong, there is very little land to obtain? Very little.

C. J. Horsley,  
Esq.

22 Mar., 1890.

821.

- C. J. Horsley, Esq.  
22 Mar., 1890.
821. *Mr. Humphrey.*] How many acres do you think would be served by the proposed line from Mudgee to Gulgong? The line would hardly hit the land people could get hold of. It is nearly all through the property of individuals who have got it by grants.
822. Then do you confirm the evidence of Mr. Barry and Mr. Connolly, that few owners of small areas would be served by the proposed railway? I think so, unless the gold-field reserve is thrown open.
823. Can you say how many *bona-fide* settlers there are between here and Gulgong, within 4 miles of the side of the proposed line? Not exactly. I have taken the railway line as a centre, and going 8 or 10 miles on each side, it gives an average of 34,700 acres taken up under conditional purchase. The majority of these areas are 40 acres. Put it at 60 acres, and it will give from 300 to 400 people.
824. And they, you think, are not within 4 or 5 miles, but within 10 miles of the line of railway? Some are nearer, but the majority are 3, 4, or 5 miles away.
825. Would half the number you mention be within a radius of 10 miles of Mudgee? I think so.
826. So that the proposed railway would be of very little benefit to them? I do not think so.
827. Do you know the country beyond Gulgong, towards Mundooran? Yes.
828. And from Mundooran to Coonamble? Yes.
829. Can you speak as to the character of the soil and its suitability for grazing purposes? From Gulgong to Mundooran—the way, I suppose, the line would go—the country, generally, is poor. From Mundooran to Coonamble—the way the railway would also probably go—the country is very good.
830. What is the character of the country between Gulgong and Dubbo? A small part of it is good for agriculture—from Sandy Creek to Gillis's, 40 or 50 miles—but the general run of the country is not good until you come close to Dubbo. It is scrubby and hilly.
831. Do you think the cost of constructing a line between Gulgong and Dubbo would be greater per mile than constructing a line between Mudgee and Gulgong? The distance is greater, and the cost of constructing to Gulgong would be very short of what it would be from Gulgong to Dubbo.
832. The cost per mile from Mudgee to Gulgong is estimated at £5,800;—do you think it would cost more, or less, to continue the line from Gulgong to Dubbo? Less, I should think, judging from the nature of the country.
833. Very much less? I am not prepared to say, but there are not many difficulties in the way.
834. Is it pretty level, or undulating country? It is undulating, right into Dubbo.
835. Do you know whether there is plenty of timber between Gulgong and Dubbo suitable for railway purposes? I should think from Gulgong to Larry's Creek the timber would be difficult to get, but from there on to Dubbo, I think the timber would be fairly good. It would be larger and heavier.
836. *Mr. Hurley.*] What is the sum you received last year for lands taken up under conditional leases, from all sources? I have not made up my return.
837. What is the approximate value? It would be impossible to tell, but I will furnish you with the amount. [*Witness subsequently handed in the following statement*]:—

	1889.	£	s.	d.
Conditional Purchase Applications .....		788	10	8
Interest, Instalment, and Balance.....		4,182	11	9
Auction Sales.....		246	6	10
		5,217	9	3

Mr. James D. Parker, sworn and further examined:—

- Mr. J. D. Parker.  
22 Mar., 1890.
838. *Chairman.*] The £7,000 to which you referred, as being likely to be derived as revenue, was an estimate of traffic from Sydney, right out, and not merely from Mudgee to Gulgong? Yes.
839. What do you think of the estimate of the Railway Commissioners of £1,600 per annum as the earnings of a line between Mudgee and Gulgong? I think that would be nearer the mark.
840. You do not think they have formed an under-estimate? No; I think not.

Mr. Eugene Daly, butcher, sworn and examined:—

- Mr. E. Daly.  
22 Mar., 1890.
841. *Chairman.*] What is your occupation? Butcher.
842. Where do you reside? In Mudgee.
843. How long have you resided in Mudgee? Thirty-three or thirty-four years.
844. What is the nature of the evidence you desire to give to the Committee? I have not heard anything said about the stock travelling from the outlying districts to Sydney by rail. People would not put their cattle in trucks, when they could come through this district.
845. Are we to understand that there is a large amount of stock which is at present driven to Sydney, and does not avail itself of the railway at all? Yes.
846. Would the construction of this extra 19 miles of rail induce them to avail themselves of the railway, instead of travelling by road? Yes.
847. Why? Because they would only be a short time in the train. They would be put into the train at dinner-time, and on the following morning they would be at Sydney. They will travel through the night. If the market is good, they would truck at Gulgong, and send cattle by rail. If the market is bad, they crawl along the road to Sydney, until the market gets good.
848. You mean to say that if, upon reaching Gulgong, it is found that there is a good market in the metropolis the sheep would be at once trucked, but if the market is not good they would continue their journey by road? Yes.
849. They do that now, so far as Mudgee is concerned? If the market is good, they truck at Mudgee.
850. It will only be the cattle at present trucked at Mudgee which will be trucked at Gulgong? If the line went further on, they would be trucked further on.
851. The Railway Commissioners, in forming their estimate of traffic, have taken these matters into consideration. They estimate that from goods and live stock they will receive £1,112 a year? I do not see how they can form an estimate at all. There are a number of cattle along the road which they cannot calculate upon at all. They only know of the cattle which come upon the lines. There are sheep which never go on the line at all.
852. Would the construction of this line cause any more sheep to be carried to market than are carried now? I believe it would.

853. *Mr. Hurley.*] Do not you think you have made a mistake in asserting that the construction of the railway would increase the stock traffic to the metropolis? It would not increase, but they would go by rail.
854. As a butcher, if you bought a lot of stock beyond Gulgong, and there was a railway, and if you had a good road, would you put your stock in the train in preference to driving? Certainly I would, for a day and a night.
855. Is not the meat better after being driven than after being trucked? It depends on the distance travelled.
856. Say between here and Sydney? The cattle would be better trucked here, and would arrive in better condition in Sydney.
857. Do you think it would be to the advantage of the consumers in Sydney, as well as to the producers, if the cattle were killed inland, and sent to market in cool cars? Certainly.
858. Do you think this system would be taken advantage of, if facilities were given for reaching market? I am sure it would.
859. *Mr. O'Sullivan.*] I understand you to say that, if a line is taken to Gulgong, it will be used by stock-drovers, because it will save them two days' journey on foot, and thus enable them to take advantage of a rise in the market? Yes.
860. What district do these cattle come from? Off the Macquarie and the Castlereagh, and from Queensland.
861. Is this the regular stock route? Yes; this was the principal stock route in the colony until the Western line was opened.

*Mr. E. Daly.*  
22 Mar., 1890.

George Chapman Carter, Esq., Inspector of Police in the Mudgee District, sworn and examined:—

862. *Chairman.*] You are Inspector of Police in the Mudgee district? Yes.
863. How long have you been in the district? Fifteen years.
864. And you are intimately acquainted with it? Yes.
865. How far does the district extend? I go to Mundooran, which is 70 miles north from here.
866. And that includes Gulgong? Yes.
867. Has the population of Gulgong receded of late years? Considerably.
868. Is it still receding, or is it at a standstill? I think it is at a standstill.
869. I suppose the character of the population has changed; at one time it was a purely gold-fields' population, and now it is an agricultural one? Yes. A great deal of land has been taken up during the last five or six years. Large families are settling down where there was no one before.
870. Are the large areas being utilised for agricultural and grazing purpose? To a large extent. Ten years ago there was hardly any agriculture about Gulgong, and now there is a good deal.
871. Is it good land? Very.
872. Do you know the route of the proposed line to Gulgong? Yes.
873. Do you think it takes a good course for serving the people at present in the district? I should say it does.
874. Do you know anything of the country between Gulgong and Dubbo? Yes.
875. Is it good, or indifferent country? A great deal of it is good country.
876. Is it difficult country through which to construct a railway? I should imagine it is very easy.
877. Is it as difficult as between Mudgee and Gulgong? I do not think it would be so difficult.
878. Do you know the country between Gulgong and Coonamble? Yes.
879. What is the nature of that country? Some good, some fair grazing country.
880. The character of the country for the construction of a line would be similar to that between Gulgong and Dubbo? It would even, perhaps, be easier.
881. Easier than it is between here and Gulgong? About the same. There would be one or two bad places, and then it would be almost a dead flat.
882. Would there be many creeks to cross? Very few, excepting the Talbragar.
883. Has the population of the district advanced, or has it receded? On the whole, the population has grown larger within the last five years.
884. If the line were extended to Coonamble, would it benefit both Coonamble and Mudgee? I think it would.
885. There are two lines of coaches between here and Gulgong? Yes.
886. They are not extensively patronized? Not to a great extent.
887. Do many people use their own vehicles? A great many. In fact, the Gulgong people usually come to Mudgee by their own vehicles, and have someone to drive them out again.
888. Do as many people come in to the railway station by private as by public vehicles? More, I think.
889. How often are the statistics of population compiled? We compile them for our own purposes.
890. How is the statistical register made up? A register of the stock crops, &c., is collected every year, but the population is not collected.
891. Is it not included in the statistical register, based on your previous census returns? It is only on the census returns.
892. The District Registrar gives an account of the births and deaths in the district? Yes.
893. *Mr. Humphery.*] Are there many small holdings between here and Gulgong, within 4 or 5 miles of the proposed line? A good many.
894. Do you know what the proposed area will be? 50 or 60 acres.
895. What means have they at the present of earning their living? The farmers do a little dairying business.
896. Do they grow wheat? Yes, pretty largely. It is a good wheat-growing district about Gulgong.
897. Do you know what is the population? I make the population of Gulgong to be altogether about 2,300.
898. Within what radius of the town? 10 miles, or something like that.
899. What population do you think there is between here and Gulgong—say 10 miles out from Mudgee? There is Canadian and Home Rule—fully 1,000, I should say.
900. And you think 3,000 passengers would be served by the proposed railway? I think so.
901. But if you go a little further to Talbragar, there would be a larger population, but that is more than 10 miles away? Yes.
902. There would be 3,000 people within 10 miles of the proposed railway from Mudgee to Gulgong? I think so.

*G. C. Carter, Esq.*  
22 Mar., 1890.

MONDAY, 24 MARCH, 1890.

[The Sectional Committee met at the Court-house, Gulgong, at 2 p.m.]

Present:—

JACOB GARRARD, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. | EDWARD WILLIAM O'SULLIVAN, Esq.  
JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Mudgee to Gulgong.

Charles Zimmer, Esq., chemist, sworn and examined:—

- C. Zimmer, Esq.  
24 Mar., 1890.
903. *Chairman.*] What is your occupation? A chemist. I am secretary of the Gulgong Railway League.
904. How long have you been residing in Gulgong? Since 1870 or 1871, when it was opened.
905. Then you have seen Gulgong in all its varied stages? Yes.
906. What is the present population? From 1,200 to 2,000.
907. What is the largest population you have seen in the district? The largest population which has been here amounted to about 14,000.
908. How long ago? Fourteen or fifteen years ago.
909. If a railway had been constructed there, it would have had a greater chance of paying than now? It would, and it will pay now, in my opinion, if it is properly put before the House.
910. Do the people of this district look upon the proposed railway from Mudgee to Gulgong as likely to remain at Gulgong? We do not wish it to remain here. We mean to have it extended to the west—to Coonamble, Dubbo, or Wellington. The produce of this district, which is very great, cannot be got away unless we have an outlet to the west.
911. Where does the produce of the district at present go for a market? To Mudgee. Five-eighths of the produce, which is now sent from the Mudgee railway station, comes from around Gulgong and the north-west. It would all go to the Gulgong station, if one existed.
912. Do you know whether the Mudgee line is a white elephant, and is not paying? Everyone knows that, and if it is left at Mudgee it will never pay.
913. Does Mudgee get the whole of the produce from this district? No.
914. Where does it go to? It goes to Muswellbrook, Wellington, and Dubbo. Some of it goes to Cassilis. Some of the people come here, and others go and take it to the Dubbo station. The Coolah and Munderoran people would bring their produce here, if there was a station.
915. How do you know that? Because it is nearer for one thing, and the people would prefer it.
916. If the line were constructed through Gulgong only, from how far do you think people would bring their produce—10, 15, or 20 miles? All the people come here from Uarabry.
917. How far is that? 25 or 30 miles.
918. In which direction? Towards Cassilis. The people from Eulon, Green Hills, Reedy Creek, and Talbragar, all come here. There is a numerous population between here and Coolah, Cobbora, and Dubbo. Some part of their produce would go to Dubbo, but the rest would come here. People on the Cudgegong, Two Mile Flat, and Spicer's Creek, would come here, whereas now they go to Wellington. This station would be nearer, because Wellington is 50 miles away.
919. Do you think people living 20 miles to the north and north-west of this place, would, if there was a station here, bring their produce here instead of going to Cassilis, or the Western line? Undoubtedly.
920. Would you fix 20 miles as the radius within which the trade would be attracted to Gulgong? More.
921. How much more, taking Gulgong as a centre, and making a radius? 35 miles.
922. How far is it to Dubbo? 70 miles.
923. Then you think that, from a distance of more than half way between here and Dubbo, people would bring their traffic to Gulgong? Half way between here and Dubbo there is a country which is far away from Dubbo. There is the country between here and Coonamble, Munderoran, Coolah, and all round the Talbragar.
924. But you state that Dubbo is 50 miles from here, and that if there was a line to Gulgong, people would bring their produce from within a radius of 45 miles. In other words, people would, for the pleasure of dealing with Gulgong, travel an extra distance of 5 or 10 miles, rather than go to Dubbo? I did not mean to say that. Those who live at Talbragar, Munderoran, and Coolah, and between Cassilis and Dubbo, would prefer to come here because it is a shorter route.
925. We understand then, that Dubbo would be the depôt for people within a radius of 30 miles north and north-west? Yes.
926. What is the nature of the country you have included within the 30 miles radius? It is splendid country for grazing, or agriculture.
927. Do you know of any railway, constructed to grazing land only, which has paid? No; but there are squatters living out towards Coolah and Munderoran, and towards Slap Dash Creek, and in that direction. I know of one station alone which sends over 6,000 sheep and 900 cattle to the Mudgee railway station. They would be brought to Gulgong if there were a station, because they would not take the trouble to drive them to Mudgee.
928. What proportion of the land in the district you have referred to is good agricultural country, and what proportion is grazing country? I could not tell you; but I am prepared to say, that within a radius of 10 or 12 miles there is a population of 183 farmers.
929. That radius includes the east, as well as the north and south? Right round Gulgong.
930. You are including the people away to Mudgee, as well? No; Mudgee is 20 miles from here. I only take them on this side of the bridge about 7 or 8 miles.
931. The people living 7 miles in the direction of Mudgee would not come to Gulgong railway station? Yes, they would. They would not travel 12 or 13 miles to Mudgee.
932. They would not come to Gulgong if they could tap the line nearer? There are very few living there. Most of the people are living around here, and most of them would come to Gulgong.
933. Will you enumerate the districts in which these knots of people reside? Some of them are living at the Canadian.
934. But that is between here and Mudgee? It is only 5 miles from Gulgong.
- 935.

935. And how many from Mudgee? About 14.

936. How many miles would they be, in a direct line, from the nearest point of the railway, if constructed? About 3 miles. Then there are the farmers round about Springfield.

937. Where is that? Three miles from here, north-east of the line. There is a number of farmers within 5 miles of Gulgong, down by Reedy Creek and Stubbo.

938. You wish to hand in a list of the names of *bona-fide* farmers resident within a radius of 10 miles of Gulgong, and who would be benefited by, and would use the railway, if constructed? Yes.

939. You referred just now to the people at Canadian, which is about 5 miles from here in a south-east direction, and then you came to a place called Springfield, about 3 miles in the same direction;—what other places are there? Reedy Creek and Wyaldra Creek.

940. Reedy Creek runs past what is known as the Wyaldra Township? Yes.

941. What is there past Reedy Creek? There are a number of farmers at Stubbo.

942. That is on the other side of Wyaldra Creek, going further north? Yes; it is not much more than 7 miles.

942. Is there much settlement at Stubbo and Wyaldra Creek? Yes; a good many farmers.

944. What other settlements are there, or what other population is there which would feed the railway? There is Sandy Creek, on this side of Cobbora.

945. Is it anywhere near Slap Dash Creek? No; it is further towards the north-west—towards the Werris Creek line. Then there is a number of farmers on the Cudgegong Creek, which is about 12 miles from here, and there is a number of farmers who come in from Spicer's Creek.

946. Where is Spicer's Creek? Close to Two-mile Flat, near Wellington? Then there is a number of farmers within a radius of 2 or 3 miles. Their names are all on the list handed in. Surely, when there are 188 farmers within 10 or 12 miles, the reserve should be thrown open. There are 50 or 60 square miles of country from Pinebone to the Talbragar River. It was wise to keep it locked when there was gold, but it has all been proved. There is a common of 33 square miles around this town.

947. Is it good land? Yes; splendid.

948. Is the common all around the town, or away to the westward? It is right round for 33 square miles.

949. How about the gold-fields' reserve? That is further. It is splendid land all about Reedy Creek. It is also splendid land from Home Rule to Guntawang and towards Talbragar. You could not find better land in the country. If that were thrown open there would be room for more than 1,000 families. The extent of the municipality is 33 square miles. The value of the property in the municipal area is assessed at £87,000. The population in the municipality is estimated at 2,000. We have mails running here three times a week. When you look at the extent of the country to the back, there should be no hesitation whatever on the part of the Government in granting a line.

950. Do you know the estimated cost of constructing a line between Mudgee and Gulgong? I have heard that it would be something like £100,000.

951. It is estimated to cost £109,300, and the interest upon capital, and the working expenses, would entail an annual loss of about £5,400. The total expenses will be £7,130, and the estimated revenue is £1,637, leaving a total loss of £5,400? How did they arrive at the estimate of revenue?

952. You know Mr. Harper? Yes.

953. Did he get any information from you when he was here? Yes; and he took all his information from the Mudgee railway station. He had not any of the returns which will be handed in here.

954. But you tell us that all the produce of the district goes to Mudgee; and if he took his figures there, and credited you with the trade done here, he would be pretty correct? He took it for last year from the Mudgee station. The information he obtained will be supplemented by what will be handed in, and it will put a different complexion on the result of the estimated revenue.

955. I think you will find that Mr. Harper was looking at things as they exist, and you were looking at them in the light of the future? I am looking at them as they exist.

956. Mr. Harper estimates that £525 will be derived from coaching and mails. The Committee have assured themselves, from evidence, that that estimate is correct;—do you think it is a fair estimate? There is nothing said about private teamsters, and private conveyances.

957. You think, then, that it is an under estimate? I think so.

958. You think that more than £525 per annum would be obtained from coaching and mails? I could not say so, of my own knowledge, but a railway is not made to pay at a jump. If the railway were extended, the revenue would be better.

959. Do you think the estimate of £1,112 for goods and live stock is excessive? There are plenty of storekeepers who will be able to tell you. I know what I am paying per ton to get goods from Mudgee. I do not think any storekeeper pays less than 15s. or £1.

960. You would not pay that if the railway were constructed? No; we pay that from Mudgee, and the railway would get the benefit of it.

961. But it would not get the benefit of 15s. a ton;—you would not be prepared to give 15s. per ton if the railway were constructed? Was not evidence given in Mudgee that goods could be carried to Gulgong at 8s. or 9s. a ton.

962. Who told you that? I only heard of it.

963. According to the estimate of the Commissioners, there would be an enormous loss on the line. Then there is the loss on the Mudgee to Wallerawang portion of the line. It therefore becomes a serious matter for the taxpayer? Yes; but the question is, "Will the extension of the line make the Mudgee line pay better?" and I am sure it will.

964. Where do you think this line should be extended to—to Dubbo, or straight to Coonamble? I would not like to say. The line could be extended from Gulgong to Mudooran and Coonamble. A branch line could be constructed from Mudooran, by Coolah and Coonabarabran. That would shorten the line to the metropolis by 30 or 40 miles. The line to Mudgee is acknowledged to be a white elephant and a national loss. If it is not extended it might just as well have never been made at all.

965. Do you think, if the line is constructed, more people will settle in the district, and more produce will be grown, and that competition will be entered into with the producers nearer the metropolis? Certainly.

966. If there is the same character of land nearer the metropolis, and the producers have only half the distance to carry their produce, will not the producers in your district be heavily handicapped, or do they expect to find a market in the opposite direction? They will find a market both ways, towards the west, and towards Sydney as well.

- C. Zimmier, Esq.  
24 Mar., 1890.
967. What market is there west? Right round from Cassilis, Coolah, Munderoran, and Coonamble.
968. But the people there are producers, and want a market themselves? There are few agricultural districts round about there, except Cassilis.
969. Then you think the railway should be extended towards Coonamble? Towards the north-west.
970. So that in time of drought you could supply the district with the necessaries of life? Yes. Besides that the country would be opened up, and it would be a national benefit even if there were a little loss.
971. *Mr. Humphery.*] You believe the railway will create a traffic which, in the course of a few years, would pay working expenses and interest on the cost of construction? I think it would.
972. What would be the immediate source of revenue to the railway? I cannot tell you. The construction of the railway would cause a great increase of population in the district.
973. *Chairman.*] Of navvies? No, not navvies—farmers.
974. *Mr. Humphery.*] Is there any vacant land within a radius of 10 miles of Gulgong available for occupation other than the reserves you have mentioned? There is some, but the reserve would have to be thrown open to make anything of it.
975. Are the holdings in the immediate vicinity of Gulgong in large or small areas? Some of them have 640 acres, some 320, some 80, some 40, and so on.
976. What use do the holders of 640 acres make of their land at the present time? I cannot tell you.
977. Is there much cultivation close to Gulgong? The 188 names on the list handed in refer to farms which are cultivated.
978. Do you say all these farms are under cultivation? The greater part of them are, but other witnesses will swear to that.
979. Then you do not know if they are under cultivation? The greater part of them are.
980. What do they grow? Wheat, maize, potatoes, and hay.
981. Do they keep live stock in connection with their agricultural holdings? Yes.
982. Then a portion of the holdings are under cultivation, and the rest are used for grazing? Statistics will be put in which will give you the information.
983. *Mr. Hurley.*] You were chairman of the Railway League? No; I was the secretary appointed by a public meeting.
984. You gathered all the statistics possible to warrant the construction of the line? I and others gathered them.
985. You have been associated with the Railway League for a long time;—have you made inquiries in regard to the land through which the line would pass between here and Mudgee? I have inquired about the land all about Gulgong.
986. Do you know whether the line passes through private or Crown lands between here and Mudgee? From the bridge to Gulgong it passes nearly all through Government ground, excepting, perhaps, at two small places.
987. Have you consulted the owners of that land as to whether they would give it to the Government, in view of the immense value the construction of the line would add to their property? I could not say.
988. You said just now that the project would pay from the start? That is my opinion.
989. Upon what do you base it? Upon the statistics gathered by the police.
990. Can you tell us whether the farmers you have referred to are residing on their own land, or leased lands? They mostly have free selections.
991. Are there any lands in the district within a distance of 10 or 15 miles, held under lease from any landlord? I cannot tell you.
992. Is the land suitable to the growing of vines? There are any number of vineyards about here now.
993. Are they making wine? Some of them are.
994. Do I understand you to say that all the alluvial ground about the district has been proved, and that it was not good for anything else but agriculture? The diggers have been proving the mining reserve for the last eighteen years.
995. You consider the field exhausted? The miners, or the greater part of them, have left. I think if the reserves were thrown open, they and their families, would select for themselves.
996. You believe there is no further use for it as a gold-field? I do not think so, except in the very deep ground, where there is very wet sinking. It would have to be put into companies. The individual miner would not touch it. On the other side of Reedy Creek the body of water is very great, and it would take a large amount of money to prospect.
997. You believe that in the interests of the public those reserves should be thrown open to induce agricultural settlement? Yes.
998. Do you believe it would be readily taken up? Yes, all taken up.
999. What will it be worth per acre? Some of it from £1 to £2 per acre. I think it ought to be thrown open under the special area clause.
1000. You believe the land is admirably suited for agriculture? Yes.
1001. And yet you believe it is only worth from £1 to £2 per acre? Yes.
1002. You know that for that kind of land you have to pay from £4 to £10 per acre? That may be in some places, where there is a larger population.
1003. Will not the throwing open of the reserves, and the construction of the railway, and its extension further west, give increased population? I am sure it would.
1004. Would not that give an advanced value to the land? I am sure it would.
1005. *Mr. O'Sullivan.*] If the gold-mining is nearly exhausted around Gulgong, what sustains the town? The back country, the agricultural settlement, the squatting, grazing, and agricultural population.
1006. You think there is room for the extension of agricultural settlement around this town? Yes.
1007. On the gold-field reserve and the common? Yes.
1008. Do the large landowners show any desire to give up their properties and let their land on lease? I do not think they would do that.
1009. Do you think all the gold has been got out of the private properties around Gulgong? No.
1010. Are you aware that an Act was passed last Session giving the right to mine on private property, by giving notice, and paying for surface damage? Yes.
1011. Are any miners likely to avail themselves of this Act? It wants a large amount of money to find the deep leads. There is one company in Rouse's paddock, where they have been working for the last ten years.

1012-13. Then you think the mining around Gulgong in the future will be deep leads? Yes; by companies. Twenty-five of us have made application, and have found a syndicate to pay £1 a week for twenty weeks, to obtain a diamond-drill to prospect the leads.

C. Zimmer,  
Esq.  
24 Mar., 1890.

1014. There is not likely to be any further rush of settlement, on account of alluvial fields? No.

1015. Whatever development takes place will be through deep sinking? Yes.

1016. And will require capital? Yes.

1017. If a line were constructed from Dubbo to Werris Creek, which would suit you best—to go out and touch that line, or to go straight to Coonamble? I think the Coonamble line would open the country better. If the Werris Creek line were joined to the Mudgee line, and the Werris Creek line came into Gulgong, it would shorten the distance wonderfully.

1018. But you are aware that a line from Dubbo to Werris Creek, connecting with a line into Mudgee, would give you the command of markets on the Western line, and also on the Northern line. Would not that be better for this district, than having one market at Coonamble? Certainly; if the line is extended to Gulgong, it does not matter where it goes to afterwards.

Thomas Kennedy, Esq., Railway Surveyor, sworn, and examined:—

1019. *Chairman.*] What is your position in the Government service? A railway surveyor.

T. Kennedy,  
Esq.

1020. You are engaged on the survey of the proposed line from Gulgong to Wellington? Yes.

1021. You have already surveyed an extension of the line from Gulgong to Dubbo? I have.

1022. Has that survey been completed? Not yet. I think it will be in a few days. We are making a few alterations at the Dubbo end.

24 Mar., 1890.

1023. That survey was commenced at both ends—you at Gulgong, and other surveyors at Dubbo—you have finished your portion of the work and the other is nearly finished? Yes.

1024. Can you inform the Committee what is the length of the line from Gulgong to Dubbo? About 67 miles,—I did not finish up to meet the other surveyor.

1025. What is the ruling grade upon the line? 1 in 80.

1026. Would it be an expensive line to construct in the way of viaducts, tunnels, or cuttings? No. The deepest cutting would be a little over 30 feet.

1027. Would the country be somewhat similar, so far as works are concerned, to that between here and Mudgee? It would be easier country.

1028. So that if the line between here and Mudgee is estimated to cost £5,800 per mile, this line will probably not exceed £5,000? No.

1029. Does the survey from Gulgong to Dubbo go in a straight direction to Dubbo, or does it tap what is supposed to be a probable line of the future, between Werris Creek and Dubbo? It utilizes about 22 miles of the proposed Werris Creek line.

1030. So that if the Werris Creek to Dubbo line were constructed, this branch from Gulgong would tap that line at 20 miles from Dubbo? Yes.

1031. If that line was not constructed, and it was determined to construct this line from Gulgong to Coonamble, would you take the same route up to the intercepting point of that line, or would you come further north-east? It could be tapped further out to the north-east.

1031½. So as to make a straighter line? Yes; straight to Coonamble.

1032. That would be 40 miles from Dubbo? Yes.

1033. Would the country on that more direct line be easier than the country you have passed over to within 20 miles of Dubbo? I should think so. There is nothing after you cross the Goodaman Range.

1034. What is the nature of the country on the line you have already surveyed;—how far from Gulgong did you go on that line? To Spicer's Creek, 35 miles from Gulgong.

1035. What is the nature of the country along there? Grazing country.

1036. Good, or second class grazing country? Good, excepting a portion about the head of Sandy Creek, where there are some ironbark ranges; 5 or 6 miles off it is sour country.

1037. Is there any considerable area of agricultural country on that line? Very little where I went, except towards Cudgebegong, which is 3 or 4 miles off the line.

1038. Is it alluvial flats or chocolate soil? Good chocolate soil and wheat-growing land.

1039. At present there is little settlement? There is a good deal of settlement in Cudgebegong.

1040. Where do the people bring their produce to? To Gulgong. They generally bring in wheat, and it is ground in the mills here.

1041. Are there mills in Gulgong? Yes; Mr. Rouse has a mill, at Birangambil Station, and I think there is another small one in the town.

1042. The survey of the line from Gulgong to Wellington makes use of the proposed line from Gulgong to Dubbo, for some miles out of Gulgong? No; it leaves it at the town.

1043. And strikes out towards Wellington? Yes.

1044. How far are you out? About 16 miles.

1045. Is the country, so far as you have gone, more difficult than on the Gulgong-Dubbo line? Yes; much heavier.

1046. Consequently, it is less valuable for agricultural or grazing purposes? Yes. Following the Cudgegong River for 8 or 10 miles there is good land, but it is of no width, being short flats. It opens out into better country after going 15 or 16 miles.

1047. Do you anticipate coming on to better country;—had you explored it before? I had explored it. There would be 8 or 9 miles of good country, and then you get into rough ranges again, about Spicer's Creek.

1048. Expensive to construct? Yes; I think there will be two tunnels upon it.

1049. Have you been through from Gulgong to Wellington? No; I have been to the second crossing on the range.

1050. How far is that from here? 27 or 28 miles.

1051. Then the country along there is rather rough? Yes.

1052. And expensive for railway construction? Yes.

1053. What is the best grade you have, so far? 1 in 80, but I have been following the river round, and have not gone on to very rough country.

1054. Do you anticipate you will have to give up that grade? I have a tunnel to get it.

1055.

- T. Kennedy, Esq.  
24 Mar., 1890.
1055. That will be expensive? Yes; because we are keeping the grade to compare with the Dubbo line.  
1056. So far as you can see, the line to Dubbo will be constructed for less than the one to Wellington? Yes, at per mile.  
1057. What is the distance from Gulgong to Wellington? About 50 miles.  
1058. It is a shorter line than the other? 17 miles shorter.  
1059. And the country it passes through is less valuable—less suited for population and settlement than the country between Gulgong and Dubbo? Yes.  
1060. Have you had anything to do with the survey of the line from Mudgee to Gulgong? I went over it with Mr. Firth when we were examining the plans, and saw where the grades could be reduced and the line improved.  
1061. Mr. Firth and yourself suggested improvements, as to a dotted line on the plan? Yes.  
1062. The improvements suggested by Mr. Firth and yourself show a considerable reduction in the cost of the line, and reduced the grades? Yes; we reduced from 1 in 40 to 1 in 80, and we do away with the crossing at Macdonald's Creek.  
1063. That is about half way between here and Mudgee? Yes.  
1064. And the bridge over the Cudgegong is in a different position, and it will be constructed at less cost? It is a shorter crossing than the other.  
1065. Are you aware of the estimate of cost of the original survey for the bridge—£17,000? Only from what I read in the papers.  
1066. And you know Mr. Firth has estimated the cost of the bridge on the new crossing at about £5,000? I only read it in the papers.  
1067. Do you think the bridge could be constructed over the crossing for £5,000? I could not say.  
1068. If Mr. Firth has made that estimate, he will not be far out? He would know very well, having had a lot of experience.  
1069. Have you been anywhere else about this district, except on the lines you are now surveying, and have surveyed? I have been to Home Rule and Canadian.  
1070. What sort of country is that? Around Home Rule and Canadian, there is good farming land.  
1071. Do you think the people in those districts, if the line were constructed, would use it by going to Mudgee, or tapping it at some intervening place between this and Mudgee? I think they would come in here, because they would have good loads, and would be able to load goods better than at the platform.  
1072. Do you not think they would soon begin to agitate for a direct road to the nearest point of the railway? I do not think so. If you take Home Rule as a centre, Gulgong would be as near as any place on the line. They are only 5 miles from Gulgong, and they would be 5 miles from any point of the line.  
1073. You know nothing about the Colo Valley route? No.  
1074. *Mr. O'Sullivan.*] Has a line from Mudgee to Coonamble been surveyed? Mudgee to Gulgong, and Coonamble—yes.  
1075. Has a line from Dubbo to Werris Creek been surveyed? I do not know about Dubbo to Werris Creek.  
1076. *Mr. Humphery.*] How far is Canadian from Mudgee? It is opposite Home Rule—about 16 miles I should say.  
1077. Is it correct that the line by way of Wellington would be 30 miles nearer than by way of Dubbo? Would the route to Wellington, instead of to Dubbo, save 30 miles of railway construction? No; it would save the difference between 50 and 67—17 miles.  
1078. Is it correct that the land is superior to any land which the railway would pass through by any other route between Gulgong and Wellington? No; it is not superior.  
1079. Neither of these statements would be correct? No.  
1080. What would be the distance from Sydney to Dubbo, by way of Mudgee, if a line were constructed between Gulgong and Dubbo? One is 274 miles and the other 276 miles.  
1081. What is the distance by the present route from Sydney to Dubbo? I fancy it is 276 miles; but I am not sure.  
1082. It would make a difference of 2 miles? Yes.

James Francis Plunkett, Esq., sworn and examined:—

- J. F. Plunkett, Esq.  
24 Mar., 1890.
- 1082½. *Mr. Hurley.*] You have been a long resident of Gulgong and district? About thirty-five years.  
1083. You are conversant with the country within a radius of 50 miles, I suppose? I am.  
1084. You have taken part in the agitation for the construction of a railway from Mudgee to this place? Yes.  
1085. Do you think the construction of a line solely to Gulgong would, as a national investment, be of a productive character? I think the construction of a line solely to Gulgong, or solely to Mudgee, would be a complete mistake. I have always considered that it has been a public calamity that a railway should be constructed to Mudgee and end there. Although it has been called a political railway and a white elephant, it has only been made that by being allowed to remain in rusty idleness where it is.  
1086. But as one of the advocates for the extension of the line, you have been advocating its extension solely through Gulgong? Certainly not. We want an outlet for produce.  
1087. Where do you think the line should be extended to beyond Gulgong? I produce a map, issued under the authority of the Government, showing projected lines of railway westward.  
1088. Will you point out which, in your opinion, is the most beneficial line as a national investment? If the railway is to be considered from a national point of view, it would most decidedly be best to go to Walgett, touching at Coonamble by the way.  
1089. You believe, looking at the matter from a national point of view, it would be a mistake to construct a railway from Mudgee to Gulgong? If I said yes it would not convey my meaning, and if I were to say no it would not. If you ask me whether it is to remain at Gulgong for all time, I should say it would be a great mistake. Every mile of this railway constructed outwards from Mudgee will be an advantage.  
1090. What population is an extension of the railway westward likely to serve? Since the discoveries of gold in the district a great deal of land has been taken up by free selectors for farming purposes. Settlement on the soil has gone on slowly, because, with bad roads, it did not pay the farmer to bring his produce to market. Although I fear to touch a political question, I may say that without protection to the farmer, it will not pay them.

1091.

J. F.  
Plunkett,  
Esq.  
24 Mar., 1890.

1091. The construction of a railway from Mudgee to Gulgong westward would benefit the pastoralist as well as the agriculturist? Largely.

1092. The difficulty of reaching market at the present time is the reason, I suppose, in your mind, why there is not a larger area under agriculture? If there were more access to market the area would be quadrupled.

1093. You know that the land about here is suitable for agriculture? I know every acre of it.

1094. What value should be placed upon the land? I value the land around Gulgong, at present, at £4 or £5 per acre.

1095. You are aware that there is a large area of land held in commonage and under the gold-field reserve, and in proximity to the town? Yes.

1096. Do you think if the commonage and reserve were thrown open they would be readily taken up? I do. There is also a travelling-stock reserve, extending from Reedy Creek, within 3 miles of this town, to the Talbragar River, 25 miles in length and 5 miles in breadth. That is magnificent land, fit for agriculture, and if it were thrown open it would give room for a large population.

1097. If this large area of land were thrown open for selection, are there people in the district who would readily secure it? Yes, and people would come from other places.

1098. Seeing that you have a difficulty in reaching a market, and that there is practically no market for you, how do you make it out that a large population is ready to seize the land for agriculture? I know that for years people who made money on their gold-claims waited with the view of securing homes and farms, and could not do so because the land was locked up.

1099. You look upon this district as a future agricultural and pastoral district? And a mining district.

1100. You are of opinion that there are still payable leads, or portions of land suitable for mining? I am of opinion that there is payable gold. I produce a map drawn by the Geological Surveyor, Mr. Wilkinson, who was sent up here. It is dated the 11th March, 1889. This is a geological map of a portion of the Gulgong gold-fields. Upon this map there are fifty-two quartz reefs marked and laid down. The majority of them have not been tried. I know from my own knowledge that some that have been tried have varied from 7 to 8 dwt. to 5 oz. per ton. It is the opinion of most people that those alluvial leads had their source in the reefs, and that the source which fed them still remains, and though the valley may have been scooped out and denuded of its gold, the reef which supplied that gold still exists. Taking that as data, or evidence, it satisfies me that the source which supplied the gold still exists, and that so far from being exhausted as a mining centre, it is simply in its infancy.

1101. Shortly put, you anticipate future successful developments in regard to the gold deposits of the district? I do.

1102. Do you know anything about the land held by freeholders or private monopolists in the district? I do.

1103. Have you ever heard owners say they were willing to give the land through which the railway would run, in view of the increased price which would be given to their property by the construction of the line? I have never put that question to them.

1104. In advocating the construction of the line, and in obtaining all the favourable estimates to lay before the Government, would it not have been wise to have obtained that information? I do not know.

1105. Do you not think it would be an inducement to the Department? I think it ought not. I think it would be an improper proceeding. I do not see why the Government should beg the land from them.

1106. There are many instances in which people give their land in return for the advantages which railway construction brings them. Therefore it was that I asked whether you had ascertained that the land through which the railway would pass would be given to the Crown? I made no inquiry. If it were my land I would not give it.

1107. Do you know anything about any other cereals, besides wheat grown in the district? Maize and oats are grown.

1108. Is there any fruit within 16 miles of the district? Yes.

1109. Is the fruit-growing industry entered upon systematically as a speculation? In a small way, but not for export or canning. We cannot do it, and I could tell you the reason why, only I should enter into politics.

1110. Have you heard pastoralists say whether, in the construction of a railway westward, they would take advantage of the opportunity of sending their stock by rail instead of by road? They do that now. They send to Mudgee.

1111. Do you not know that a large number of stock finding its way to Sydney is driven by road? I do not know otherwise.

1112. Do they not prefer travelling by road, if the road is favourable? I do not know. I think they would take advantage of the rail, if there were proper facilities for trucking.

1113. Have you contemplated the construction of the line *via* Gulgong to Dubbo or Wellington? I have.

1114. What is your opinion in regard to that? I should advocate the Coonamble line, from a national point of view; but of two choices I should say Dubbo.

1115. You know the locality of Dubbo, Mudgee, and Gulgong? I do.

1116. You are aware that in the construction of a line to Dubbo you would have to make a detour of some miles in order to reach Gulgong? I have no knowledge as to how the line may go, but I have a knowledge of the country. For instance, you have surveyed a line from Mudgee to Gulgong through the very worst portion of this country. I do not say it is not the best route, but had it come through Canadian it would have come through magnificent country.

1117. You think the best route has not been secured? It may be the best route to construct a line; I do not say it is not.

1118. Knowing the locality of Gulgong, Mudgee, and Dubbo, and the detour which a railway would have to make to reach Gulgong, do you think Gulgong is of such importance, and likely to bring such an amount of trade to the railway, that the Department would be warranted in making that detour? I think they would.

1119. Why? If the farmer is connected with the Western line, he will have a market out at Bourke and other places.

1120. You look upon Gulgong as a place centrally situated for the establishment of a large population? I do.

J. F.  
Plunkett,  
Esq.  
24 Mar., 1890.

1121. And you think it is likely to increase in the future? I think it has a great future before it.
1122. Is the town well supplied with water? Badly with water, but we have an abundance of underground supply.
1123. One of the necessities for the building up of a town is, of course, the water supply? Certainly.
1124. Where would you get your water from? I am not an engineer. There is an abundance of underground streams.
1125. Is there a permanent river or creek? No, excepting the Cudgegong, and, of course, that would be a sewer in the course of time.
1126. Have you any knowledge of the timber country between here and 50 miles westward? I have.
1127. Is it good? In parts.
1128. What class of timber is it? Ironbark, blue-gum, slaty-gum, box, stringy-bark, and some pines.
1129. Timber favourable to settlement, and for sleepers, in connection with the railway? Very good for sleepers.
1130. *Mr. O'Sullivan.*] I understand you hold the opinion that if the railway is constructed, it will stimulate agricultural settlement? I do.
1131. Amongst the places likely to be taken up by the agriculturist you mentioned a travelling-stock reserve? I have.
1132. Is not this a travelling-stock route? No; a little stock comes, but very little. I think that reserve was made in the interests of an individual some years ago, as travelling-stock reserves frequently are.
1133. Is that reserve used much now by travelling stock? Very little.
1134. You think it is required for travelling stock coming this way? I do not.
1135. Has not this long been a route for travelling stock, to be trucked at Mudgee, or lower down the line? Of course, stock travelled for many years before we thought of having a railway that way to Mudgee. I have been an old grazier myself, and we were never very particular to half a mile as to the country we travelled. When the runs became fenced, and stock owners had to keep to the road, it was considered that there should be travelling-stock reserves, but the quantity of travelling stock coming that way now is not very large.
1136. In your opinion, that travelling-stock reserve might well be thrown open for settlement? Yes.
1137. You think it is good agricultural land? I know it is.
1138. In addition to that there are 50 square miles of gold-field reserve? I believe so.
1139. In your opinion, should that land be no longer reserved for gold-mining purposes? In view of the passing of the Bill which you referred to a short time ago, I think it should. At the same time I am not one of those who think the miner should be shut out from the small privileges he possesses.
1140. Do you think the large common you have around Gulgong could safely be curtailed? I think so.
1141. If the travelling-stock reserve were thrown open to the public, and the gold-field reserve was also thrown open for settlement, and the common curtailed, there would be ample room out here for the settlement of 700 families? Yes.
1142. What would be the available area for settlement? It would be very large, but I have not gone into the matter.
1143. What are the agricultural productions of the district? Wheat, corn, oats, oaten hay, and the other kind of hay.
1144. You produce all the ingredients for fodder? We do.
1145. And if you had access to the western and north-western districts, you could do a large business in fodder? Undoubtedly.
1146. I presume that, like the Mudgee people, you look to the west for a market, rather than to the metropolis? Yes.
1147. And that is one of the reasons why you continually agitate for a line to Coonamble? Yes.
1148. You mentioned just now that the line ought to go to Walgett? Yes, from a national point of view.
1149. Are you aware that a line has been surveyed from Narrabri to Walgett? Yes.
1150. You are also aware that a line has been surveyed from Dubbo to Coonamble? Yes.
1151. There is a strong agitation to obtain that line? It has been strong.
1152. If the Walgett line were carried out from Narrabri, and the Dubbo to Coonamble line was also carried out, and a line was taken from Mudgee to a cross-line between Werris Creek and Dubbo, would not that line be more advantageous to this district than any other? I cannot say.
1153. A line from Mudgee to the cross-line to Dubbo from Werris Creek would command all the trade on the Western line, and if it were running to Coonamble it would give you the Coonamble trade as well. A line running to Werris Creek would give you the north-western trade, and a line from Narrabri to Walgett would give you the Walgett trade also? Yes.
1154. Would not that be more advantageous to you than a straight line to Coonamble? We may be all dead and in our graves before that is carried out. Of course, if it were done, it would be admirable.
1155. Is not there a stronger probability of the line from Dubbo to Werris Creek being constructed than one round to Coonamble? I do not consider that at all.
1156. It is absolutely necessary to connect the Western and Northern lines, and to give access to Broken Hill by the Broken Hill line. Is it not more likely that a cross-line will be constructed first, than a line to Coonamble? Very likely, but if it is necessary to connect the western with the northern system, connect Mudgee with somewhere.
1157. If you were connected with the cross-line you would achieve all your objects? I think so.
1158. Then you would not require the line to be taken to Dubbo or Wellington? I do not say so.
1159. You would achieve all your objects by the cross-line to Dubbo? Precisely; only I hope this line will not be held in abeyance.
1160. You said that the line from Mudgee to Gulgong, as proposed, would come through the worst country? Yes.
1161. Is that because it is a straighter line, or has been taken away to serve private property? I suppose it was taken away from an engineering point of view.
1162. *Mr. Humphery.*] You say that if the line is not constructed beyond Gulgong, it will serve very few people, and will not serve the township of Gulgong much? It will serve Gulgong. At present we have to go 20 miles to a station.

1163. If the line were constructed from Mudgee to Gulgong, would it not serve the residents within a radius of 20 miles of Gulgong? Yes, within a radius of 50 miles, right up to Coonabarabran.
1164. Would not it serve the whole of the people between Gulgong and Mudgee,—Canadian and Home Rule? Certainly.
1165. You think Gulgong and the surrounding district will be served if this line is constructed? Yes.
1166. Even if the Government does not contemplate extending it? Certainly.
1167. You are not in favour of the non-construction of the line to Gulgong? Certainly not.
1168. Even though it were to stop at Gulgong? For a short time, but not as has been the case at Mudgee, that it should stop here for years.
1169. Did you mention that there would be any wool carried by railway, in the event of a line being constructed to Gulgong? No.
1170. Would there be any? Yes.
1171. Where would it come from? From the outside and around here.
1172. Will you name the places? It will come from all the farmers round about. They have all more or less sheep. In the valley of the Talbragar the farmers have from 1,000 to 3,000 sheep, and all the little settlers have 50 sheep. They will come and dispose of their wool to Mr. Young, Mr. Tuxford, and others.
1173. Are there any large stations which would be served by the railway? Yes, Biragambil and Guntawang.
1174. The wool would come from Biragambil to Gulgong? Yes, certainly.
1175. Are there any stations in the direction of Coonamble which would be served? Yes, the whole of them would be served.
1176. Do you think the wool would be sent by way of Gulgong, instead of Dubbo? Yes.
1177. What distance is Cooramble from Gulgong? About 140 miles.
1178. What is the distance of Mundooran from Gulgong? About 50 miles.
1179. And from Mundooran to Coonamble? About 100 miles.
1180. What is the distance of Coonamble from Dubbo? About 100 miles.
1181. Do you think it probable that Coonamble would trade with Gulgong in preference to Dubbo, the distance between Coonamble and Dubbo being so many miles less than between Coonamble and Gulgong? I cannot answer that. They would trade wherever it would suit them best.
1182. We want your opinion? I cannot answer.
1183. It is necessary to ascertain, as far as we possibly can, what sources of revenue there will be for the railway, in the event of the Government deciding to construct it. The Commissioners have represented that the probability is that there will be about £500 obtained from passengers fares, and about £1,000 from live stock and goods. We wish you to show us, if you can, all the sources of revenue, in order that we may ascertain whether the Commissioners have been accurate in their estimate, or whether they have under-estimated the probable sources of revenue? I have not collected any statistics at all.
1184. Have you any knowledge of the probable quantity of wheat grown in this district? Only from the estimate I have seen taken by the police.
1185. *Mr. Hurley.*] Are you interested in, or have you in your own right, any land through which this railway will pass? Not enough to bury me.

J. F.  
Plunkett,  
Esq.

24 Mar., 1890.

Mr. Richard Rouse, junior, sworn and examined:—

1186. *Mr. O'Sullivan.*] Where do you reside? At Biragambil.
1187. What are you? A grazier; I am acting as executor in my father's estate.
1188. Do you desire to make a statement in regard to the prospects of the railway paying, if constructed to Gulgong? I was asked to produce some statistics from our own books in regard to the produce and stock sent by us from the district and brought to it. In 1889 we sent, from Biragambil to Mudgee, 738 bullocks, 39 calves, and 6,256 sheep.
1189. *Chairman.*] Was that sent to Mudgee for the purpose of being carried from there by rail to the metropolis or other places? Yes. A few might have been sold, but the bulk went on to Sydney.
1190. If the railway had been here, they would have been sent by rail from Gulgong? Yes. Of wool, we sent 34 tons 3 cwt. 2 qrs. There were 379 bales of wool and 33 bales of sheepskins. We also received in Mudgee, by rail, and carted to Biragambil, 34 tons 3 cwt. 2 qrs. of goods in the same year. In 1888 we carted from Biragambil to Mudgee 22½ tons of bran, 20 tons of pollard, and 30 tons of flour. These goods would have gone by train from Gulgong if there had been a line. In 1889 we carted from Biragambil to Mudgee 4,345 bushels of wheat, of a gross weight of 117 tons 7 cwt. Of mill produce, we carted from Biragambil to Mudgee about 829 bushels of wheat, 58 tons of flour, and 5 tons of bran and pollard. The amount of mill produce carted from Mudgee to Biragambil, Guntawang, or Gulgong during 1889 was 118 tons of flour and 2 tons of bran and pollard.
1191. *Mr. O'Sullivan.*] Do these returns give a fair indication of the trade your station does, or would do, with the Gulgong line, if the railway were brought here? I think so.
1192. And yours is only one of several stations in this district? Yes.
1193. I presume you always truck your stock from Mudgee? Yes.
1194. Do all the other graziers in the district do that? No; but fully two-thirds do.
1195. And the other third, I suppose, travel on to Sydney? Yes; some to Sydney, and some to Wallerawang.
1196. I suppose a good deal depends on the state of the market? Yes; and the grass on the road.
1197. If there is a good market and little grass, they will truck? Yes.
1198. But if there is plenty of grass and a low market, they will travel with them? Yes.
1199. Is this district a natural travelling-stock route for the stock of the west? Yes. A number of stock come by Gulgong, and others go by Rylstone, and truck there.
1200. But do the stock about Coonamble and Coonabarabran come this way? Yes.
1201. And this is their natural way to the Sydney market? Yes.
1202. I presume, if the railway were opened to Gulgong, it would carry a considerable proportion of the travelling stock? I certainly think advantage would be taken of the line.
1203. Do you know whether the graziers out towards Coonamble send their wool this road? Some do, and others do not. They send it to Dubbo. Others send to Wellington.

Mr.  
R. Rouse,  
Junr.

24 Mar., 1890.

Mr.  
R. Rouse,  
Junr.  
24 Mar., 1890.

1204. It is 30 miles nearer from Coonamble to Dubbo, than from Coonamble to Mudgee? Yes.
1205. A line brought to Gulgong would shorten the distance by 20 miles. Do you think that would induce them to come this way? I do, because it is a better travelling road.
1206. I notice you have given a high return for wheat. Do you cultivate much yourself? Not a great deal. We have two mills—one in Mudgee, and a small one at Biragambil, about 5 or 6 miles from here.
1207. You buy wheat from the surrounding farmers? Yes.
1208. What is your opinion as to the character of the agricultural settlement around here;—is it likely to be permanent? At present the farmers are almost in a state of distress. I think, if they had a market open for them in the north-west, we would have a larger population. For my own part, we have lands which we would be glad to lease to the farmers, but if we did so under existing circumstances, we would have great trouble in collecting the rents, and it is a question whether grazing sheep upon them will not pay us better.
1209. Do you think that is the reason why the large landowners prefer to carry on grazing to letting the land? I think they would go in for what would pay them best.
1210. Do you think if a cheap and speedy access to a market in the west and north-west were given, it would lead to the large landowners letting their lands to tenant farmers? Probably such portions as would be suitable for agriculture.
1211. It would pay better to do that than to carry on grazing? I think so. I must explain that a farmer is scarcely likely to give more for land than the squatter can make out of it with sheep or cattle, when the farmer can conditionally purchase land at 2s. per acre deposit.
1212. You know there is very little land to be selected in this district? There is a fair quantity yet, and if some of the reserves were thrown open, and a portion of the common curtailed, you would find a good many agriculturists would settle upon it.
1213. Do you think the travelling-stock route is required for travelling stock? I do not think there are many stock travelling by that route now.
1214. Do you think it would be in the public interest to cancel that reservation, and throw it open for settlement? No inconvenience would be felt by its being cancelled. It is made use of now by private individuals.
1215. Would the bringing of the line to Gulgong obviate the necessity of retaining the reserve? I think it would almost increase the necessity for retaining it, because, if quantities of stock come here, they will require some place upon which to graze whilst waiting to be forwarded to the agents.
1216. How far distant is that travelling stock reserve from the town? I scarcely know the boundaries of it. I suppose it would be 5 miles to where it commences.
1217. Could not a portion of the gold-field reserve be kept for that purpose? Yes.
1218. If that were so, the travelling-stock reserve might be thrown open? Yes.
1219. *Chairman.*] Did Mr. Harper, the goods superintendent, obtain any information from you? No.
1220. *Mr. Humphery.*] Do you know the gold-field reserve—the 50 square miles referred to by Mr. Plunkett? I have a fair idea of it.
1221. What is the character of the land? Certain portions would be good for agriculture. There are many other portions which would not be so good.
1222. Can you say, approximately, what area would be suitable for agricultural settlement? I should not think more than one-tenth.
1223. That would be about 3,000 acres? Yes.
1224. How many acres do you think would be sufficient to support a family? It all depends on whether they went in for agriculture, or whether they combined it with a little sheep-farming.
1225. Assuming that they used it for agricultural purposes? About 100 acres.
1226. Some thirty families could settle on the reserve? I should think so.
1227. Is the common included in the 150 square miles? Yes.
1228. What is the area of the travelling-stock reserve? I am not certain about that.
1229. Is it all good land? Fully two-thirds of it is.
1230. Have you considered in which direction it would be advisable to extend the line from Gulgong? My idea would be to tap the North-western line at Dubbo. Whilst the grass is growing the horse is starving, and if we were joined to Dubbo we might at once open a market for produce to Bourke and those out-lying districts. We hope that the line, about which I heard you speak a short time ago—the connection between Dubbo and Werris Creek—will also open up another market to us. Therefore I doubt very much whether individual interests in this district would not be much more benefited by that line than any other. At the same time I agree with Mr. Plunkett's idea, that the country would be more opened up by a line from here to Coonamble and Walgett.
1231. Coonamble, *via* Dubbo? No; straight on.
1232. In that case would not you be deprived of the Northern line? Yes. As I said before, I think our individual interests would be more benefited by our being tacked on to the North-western line, at Dubbo, or wherever it might be thought necessary.
1233. If connected at Dubbo, and continued to Coonamble, you would have two markets? Yes.
1234. What area of land do you hold in connection with the family estate? There will be about 20,000 acres freehold.
1235. How far is the most distant portion of it from Gulgong? I ought to explain that we have property also at Cobbara—5,000 or 6,000 acres freehold.
1236. How far is that from Gulgong? 32 miles.
1237. Say within 10 miles of Gulgong, on the proposed line between Gulgong and Mudgee? It all lies adjacent—within 15 miles.
1238. What proportion of that is suitable for agriculture? 5,000 or 6,000 acres, I should think.
1239. What portion of it have you under cultivation? What do you mean by cultivation. We have some under artificial grasses.
1240. Under cultivation for wheat or oats? 100 to 150 acres.
1241. In the event of the line being constructed between Gulgong and Mudgee, would you be prepared to lease the 5,000 acres suitable for agricultural settlement? Perhaps not the whole of it, but a very considerable quantity, if we could get anything like fair rentals.
1242. What would you consider a fair rental for it? It would depend on the locality—from 5s. to 10s. an acre.
- 1243.

1243. Supposing there may not be land suitable for agricultural purposes within easy distance of the railway, do you think settlers would be able to make a living? I think so, if favoured with fine seasons.

1244. Have you any idea of the yield per acre of the agricultural land in this district? 18 bushels to the acre.

1245. Would that be the average yield, or a yield only in good seasons? Taking one season with the other, I think the Gulgong district would yield 15 to 18 bushels to the acre.

1246. Is much hay sent from this district to Mudgee? I believe so. I think it has been sent away more in the form of chaff.

1247. You mentioned, in reply to Mr. O'Sullivan, that you received a quantity of wheat from Mudgee during the year, and at the same time you sent a large quantity to Mudgee? We received flour. The wheat is really in excess of what we can grind at our small mill with one pair of stones. At Mudgee we have five pair of stones, and send our surplus wheat to be ground there.

1248. I did not understand why you should send wheat to Mudgee and bring it back to Gulgong? That is the reason. Last year, owing to the drought, we could not keep the two mills going, so we closed the Biragambil mill, and sent the wheat to Mudgee, and after being ground, the produce was brought back.

1249. *Mr. Hurley.*] Have you any miners on any of your 20,000 acres? No.

1250. But you had some time ago? Two or three parties of men.

1251. Not a large number? We have never been sufficiently successful in inducing them to go there. They are perfectly welcome to go.

1252. I understand you have a lot of your land under grass? Yes; lucerne and prairie-grass, and Italian rye-grass.

1253. Have you practised ensilage at all? No.

1254. *Mr. O'Sullivan.*] Do you think this line will aid in the removal of starving stock to the better grass districts of the south? I think they would be benefited by being brought to this district. I contend we have never suffered from extreme drought in this district. When we have suffered heavy losses on the Macquarie and the Castlereagh, we have had 15,000 sheep extra here, and have pulled through without serious loss. The fact shows that we could not have suffered very severely here.

1255. To a certain extent the Mudgee and Gulgong district would serve as a relieving ground for the stock in the west? Yes.

1256. *Mr. Humphery.*] Do you know if any farmers are engaged in dairying? A few are. My cousin, at Guntawang, has a butter factory, and might give you some information.

Sergeant Steele, sworn and examined:—

1257. *Chairman.*] You are Sergeant of Police, stationed at Gulgong? Yes.

1258. How long have you resided in the district? Three and a half years.

1259. Is it part of your duty to collect the statistics of the district? Yes.

1260. What does your district embrace? Rather a small area. We have a small portion of the Mudgee electorate.

1261. And how far towards Mudgee do you go? About 8 or 10 miles—that is south-east.

1262. How far north do you go? To Reedy Creek—3 miles.

1263. How far west? About the same distance—3 to 5 miles. We go east 12 miles.

1264. Have you a return as to the number of farmers in your district? Yes; I compiled a return for the Statistical Registrar, and I made up the return I now hold in my hand for the local Railway League.

1265. It is not the Government return then? I copied it from the Government return.

1266. Which you furnished to the Registrar-General for statistical purposes? Yes.

1267. When was that taken? In January last.

1268. What population does it show within your district? I have not taken the population. I have only taken the acreage.

1269. Have you any means of knowing the population? Within that area it will be about 2,500.

1270. Within the whole area? Yes.

1271. Has the population of the town itself decreased or increased during the last year or so? It has increased slightly.

1272. Although the gold-mining section of the town during that time has not? It is in about the same condition now as it was when I came to the district.

1273. Then the increase will be in those who have gone into agricultural pursuits? Yes; when I came to the district first I took an actual return of the population in it. There were about 1,000 in the town and about 1,500 outside, within the electoral roll area.

1274. Will you read the statistics you have collected? [*Witness put in statistics collected during the month of January, 1890.*]

1275. You have reason to believe these statistics are correct? Yes.

1276. How far is Denison Town from here? 30 miles north.

1277. In the direction of Coolah? Yes; Cobbora is about 30 miles west from here, and Mundooran is about 50 miles from here. Coolah is 50 miles north.

1278. How did you gather the statistics? From each individual.

1279. You visited almost every man in the district? Yes, personally.

1280. Did you find a tendency to magnify belongings or to increase them? They did not magnify them. In some instances they decreased them. In large stock they decreased them as much as possible.

1281. The districts referred to in the statistics you have put in are within a distance of 20 miles of Gulgong? No; Coolah is 50 miles from here.

1282. But the produce of these different places would come to Gulgong for transhipment? Yes; they all have a trade connection now with Mudgee or Gulgong.

1283. The returns are applicable only to the places which would send their produce here, and which would receive their supplies from Gulgong if a railway were constructed? Yes; but there is a large area in the Cassilis district—Uarbry, Uhlan, Sportsman's Hollow, &c.—which is not included, and which would be served. At present they trade with Gulgong and Mudgee.

1284. But some of them at present trade with other places—with Cassilis for instance? No; I believe they all come this way.

Mr.  
R. Rouse,  
Jun.

24 Mar., 1890.

Sergeant  
Steele.

24 Mar., 1890.

Sergeant  
Steele.  
24 Mar., 1890.

1285. You believe that they send their produce, and that if a railway were constructed, the circle might be extended? Yes.
1286. That is to say, that if the line is brought 20 miles nearer, a larger circle will be embraced? Yes.
1287. Are the people engaged in agricultural pursuits in a fairly prosperous condition? No.
1288. Owing to the difficulty of getting to market? Yes.
1289. Do you know anything of the country between this and Coonamble? Yes.
1290. Is it good land? Yes, as you go far out it is very good. After you get to Cobbora the land is good.
1291. Is it good between here and Cobbora? There is a great portion which is not very good about the Goodaman Ranges; it is only fit for grazing, and not very good for that.
1292. Do you agree that the gold-field reserve and travelling-stock reserve might well be cancelled and throw open for selection? Yes.
1293. Do you think they would be taken up? Yes.
1294. Even with the railway only as far as Mudgee? Yes.
1295. Would they take it up for speculative purposes, or *bona-fide* settlement? All the land selected here is within a radius of 10 miles, and it is pretty nearly all farms. A great portion is cleared, and some cultivated. Some of it is not cleared yet.
1296. *Mr. Humphery.*] Did you hear the evidence of Mr. Rouse? Yes.
1297. Do you confirm what he said in regard to the area of land within the gold-field reserve which would be suitable for agriculture? I do not know the boundaries of the gold-field reserve. I know the boundaries of the commonage. I could not tell you the exact acreage.
1298. Mr. Rouse said he thought about one-tenth of the reserve, or 3,000 acres, would be suitable for agriculture;—do you think that is a correct area? I should imagine, including the commonage, that there is more than that.
1299. How many acres do you think would be suitable for agricultural settlement? 3,000 to 5,000.
1300. What area would be sufficient to support a family? I could not say.
1301. What is the average size of the small holdings of the district? A great number have only 40 acres.
1302. Supporting a family? Yes; they make it a home, and those who are able to go out labouring and shearing do so. They take contracts on the road, and so on.
1303. You stated that in gathering the statistics you visited the whole of the farmers, from whom you received information? Yes.
1304. What did you find most of them engaged in? As a rule, they were harvesting.
1305. Wheat cultivation? Yes, principally wheat.
1306. Where did you find most of the farmers living—how far from Gulgong? Springfield and Canadian.
1307. Within what distance of Gulgong? 7 or 8 miles.
1308. Would they be served by the proposed line from Gulgong to Mudgee? I think they would.
1309. Do you know the country between Mundooran and Gulgong? Yes.
1310. Is much of that fit for agricultural settlement? I should say that about Cobbora there is a lot fit for agricultural settlement, and also about Mundooran.
1311. How far from Gulgong? Mundooran is from 40 to 50 miles.
1312. Then the land nearest to Gulgong is not fit for settlement? No.
1313. Where is the good land? About Cobbora.
1314. How far from Gulgong? 30 miles.
1315. Then, between Cobbora and Gulgong the land is not very good? A few miles out it is fair. I suppose there will be 15 or 18 miles which is not very good between here and Cobbora. You go over the Goodaman Ranges.
1316. Is the land about here suitable for fruit-growing? Yes.
1317. Are many people engaged in fruit cultivation? Yes; there are a great number of small orchards.
1318. Can you say what kinds of fruit are grown? Apples, peaches, nectarines, apricots, plums, quinces, and so on.
1319. Has the business of Gulgong increased during the last five years? I think it is better than when I came here.
1320. How many storekeepers are there? Five.
1321. How many public houses? Eight.
1322. How many were there when you came? Nine.
1323. How many were there in the early times, during the gold rush? I was not here then, but almost every second house was a public-house or a shanty.
1324. How many banks have you? Two.
1325. *Mr. O'Sullivan.*] Did you notice, when you took the last electoral roll, if there was an increase? A slight increase.
1326. Of how many? About 20.
1327. Did any of the miners of this district go to Peak Hill, or any of the new fields, last year? Not many.
1328. So that the increase on the roll was a natural one, and there was no loss? No.
1329. Did you gather the statistics for the league in the ordinary way in which you gather them for the Government? Yes.
1330. I understand these figures are taken from the figures you compiled for the Government? Yes.
1331. Therefore, you can swear to them as being correct? I can swear to them as being the same figures which I obtained from the different owners and occupiers.

Mr. John Tuxford, produce dealer, sworn and examined:—

Mr. J.  
Tuxford.  
24 Mar., 1890.

1332. *Mr. Humphery.*] What is your occupation? Produce dealer, in the town of Gulgong.
1333. How many years have you been here? About sixteen.
1334. Do you wish to make any statement to the Committee? No.
1335. Are you in favour of the construction of the line from Gulgong to Mudgee? Certainly.
1336. Have you seen the proposed route? Yes.
1337. Can you suggest any deviation or alteration which would be to the interests of the people to be served by the railway? No.
- 1338.

Mr. J.  
Tuxford.

24 Mar., 1890.

1338. Can you say what quantity of wheat has passed through Gulgong to Mudgee during the last year? No.

1339. Do you know anything about the position of the farmers in the district? Yes.

1340. How many holdings are there? About one hundred and eighty.

1341-2. How are the majority of them occupied—in pastoral or agricultural pursuits? They combine the two occupations.

1343. What is the average return from the wheat land? 18 to 20 bushels per acre.

1344. What price do you give for wheat? From 2s. 8d. to 2s 10d.

1345. What do you pay for carriage to Mudgee? 2½d. per bushel, or 10d. per bag.

1346. Where is your market for wheat? Sydney.

1347. Is that where you send your wheat to? Yes.

1348. What other markets have you? Mudgee.

1349. There is a local demand at Mudgee? Yes.

1350. Did you hear the evidence of Mr. Zimmerler to the effect that five-eighths of the produce from Mudgee to Sydney came from this district? Yes.

1351. Do you think he has under-estimated or over-estimated the quantity sent from this district through Mudgee? I can tell you what I sent during the last two years. [*Witness put in the following statement*]:—

	Tons	cwt.	qr.	lb.
Goods received from Sydney, 1888 and 1889.....	247	7	2	23
Chaff sent to Sydney, 1887 and 1888 .....	113	0	2	0
Corn sent to Sydney, 1887 and 1888 .....	64	12	3	18
Wheat sent to Sydney, 1887 and 1888 .....	55	10	1	0
Wool, sheepskins, sent to Sydney, 1887 and 1888.....	31	15	3	15
Wheat sent to Mudgee, 1887 and 1888 .....	70	11	2	15
Corn received from Mudgee, 1888 and 1889 .....	57	10	1	7

1352. Is most of the produce of the district purchased at Gulgong and sent on to Mudgee? No.

1353. Is there anyone besides yourself engaged in the purchasing and forwarding of produce? Yes; Mr. Young is a larger dealer than I am.

1354. Do any of the farmers send their produce direct to Mudgee? Yes; even from Tallewang, which is 12 miles out.

1355. That is surplus produce? Yes.

1356. Is there not a large local consumption? Formerly, before the railway went to Wellington and Dubbo, we used to send our wheat in, and bring it back in the shape of flour. I send it to Coonabarabran, and as far as Coonamble, but since the railway has gone to the other side we have sent none out to the north-west.

1357. Your principal trade has been with Mudgee? It has been diverted to the Dubbo line.

1358. Before the line was open, what price did you get for produce. I have got as high as 15s. for chaff at Coonabarabran.

1359. Deprived of the north-western market, the produce fell in price? Yes.

1360. Do you think it would be in the interests of Gulgong and Mudgee if the line were carried from Gulgong to Dubbo, instead of being carried, as has been suggested, from Gulgong to Coonamble direct? It would be an advantage, both to Gulgong and Mudgee, if it were carried to either place.

1361. Which line would best serve the district—direct to Dubbo, where you would command the western and northern markets, or from here to Coonamble, without touching Dubbo? I could not tell you.

1362. You do not know sufficient of that district? No.

1363. Do you think this district will be served by the construction of the proposed line as far as Gulgong, even if it is not extended beyond? I do, considerably.

1364. Do you think there is any prospect of the earnings of the railway covering the expenses and the interest upon the cost of construction within a few years of its completion? Yes, I believe there is.

1365. Do you think the railway would create a traffic which would largely increase the returns? It would create a traffic even from the outside. You would get the benefit of the wool traffic even from Coolah and Coonabarabran.

1366. You think that wool would be sent by way of Gulgong? Yes.

1367. How is it sent now? A great deal comes to Mudgee now, and some goes to Dubbo.

1368. Of course the wool that goes to Dubbo would not increase the traffic returns of the railway, because it would be simply taken from one line to another, but would the additional 20 miles of railway be a source of revenue for the carriage of wool? Yes.

1369. You think the wool now going by road would go by rail? A great deal of the wool that goes to Dubbo would come here.

1370. *Mr. Hurley.*] Are you a landowner? Yes.

1371. What acreage do you hold? 150 acres.

1372. Under cultivation? Yes.

1373. What value per acre do you put upon it? I could not say. If I were parting with it I should value it at £10 per acre.

1374. Is there any other land in the district equal to yours? Yes.

1375. A large area? There are small farms. There is no large area of ground here cleared and under cultivation.

1376. You have heard what has been said about the commonage and the gold-field reserve? Yes.

1377. Is there any land there equal to yours? Yes, plenty.

1378. If it were thrown open, do you know whether there are persons who would avail themselves of the opportunity of securing land? Yes.

1379. Do you think they would pay anything like the price you are willing to sell at? No, I should say not, when they can get it for less.

1380. But how do you know it would be got for less? They must get it for less. If it were thrown open for selection it would cost £5 to clear it.

1381. But if it were a special area, do you think they would be willing to pay £4 an acre for it? That depends on its position.

1382. Do you think they would take it up at anything like £3 and £4 an acre? I do not think they would, but they would take it up at £1 per acre, in a very few days, if it were thrown open. 1383.

- Mr. J. Tuxford.  
24 Mar., 1890.
1383. *Mr. O'Sullivan.*] If you had access to the west, what would be the chief product you would be likely to sell out there? Chaff and corn.
1384. Would you do any trade in wheat and flour? Yes, in flour.
1385. You are aware that, sometimes in a dry season, the graziers have to send long distances to get chaff? Yes.
1386. Have you heard of chaff being brought from Wangaratta, in Victoria, and from New Zealand, and sold at Cobbara and Nyngan? I have had chaff from New Zealand myself.
1387. Does it pay better to send to that country for chaff than to send to Mudgee for it by vehicle? Yes.\*
1388. You think if the railway were opened up to give access to the western districts on the one side, and the north-west on the other, and out to Coonamble, you would be able to supply all the fodder required there in dry seasons? Yes. We would be able to compete with Bathurst, Blayney, or Orange, because we would have the same market as they have at present.
1389. You are aware that Molong and Orange are nearer the Dubbo district than you? Yes.
1390. Can you compete with them? Yes.
1391. Do you think they supply all the demand? They supply a good deal.
1392. Do you think they could supply all the demand on the Western line? I could not say.
1393. Do you think you could keep up competition with them if you had to pay more for railway freights than they had? We would be able to compete with them.
1394. Which, as a business-man, would suit you best—a line running away to Dubbo, a line running to Coonamble, or a line touching a cross-line between Dubbo and Werris Creek, and giving you access to the Western and the Northern line? I could not say.
1395. Which would be the best outlet for your trade? There would be little difference between Dubbo and Coonamble.
1396. Do you think you would be able to serve the Coonamble trade from Dubbo? I believe so.
1397. Would not it be an advantage for this district to have a connection with the cross-line, which would give three markets instead of one? Certainly.
1398. Should not that induce you to give a preference to the cross-line from Dubbo to Werris Creek? Yes.
1399. You think that a line would give you a greater outlet for trade than any extension of this line to Coonamble? I believe it would.
1400. You say you send your produce to Sydney? Some of it.
1401. Do you always get any profit upon it? Not always.
1402. Have you heard of cases of men sending produce to Sydney, and being let in for expenses? Yes. I have known of it myself.
1403. Do you know that chaff and hay has been sold in the open market, and expenses have had to be paid upon it? I have sent 23 tons of chaff myself, and I was £18 in debt after I had sent it.
1404. Therefore you cannot look upon Sydney as a certain market for the sale of your produce? The difficulty we have to contend with is the carriage from here. We have 20 miles of carriage. We have to pay 15s. a ton for chaff, and that is a great drawback.
1405. What I want to know is this,—you do not look to the east or south for your market, because there is no certainty of a profit; but you do look to the west, where there is a good outlet for the produce of this district? I look to Sydney for a market, too. If we have a low rate of transit, we can compete with the Victorian market.
1406. Have you not often heard of Mudgee farmers and dealers losing by sending consignments to Sydney? Yes.
1407. Might not the same thing happen to you? Of course.
1408. Which is your more important market—to the west or east? I cannot tell you. There is no market for us now.
1409. Which would be your market, if you had access to the Northern district? It would be best for us if we had the two markets.
1410. *Chairman.*] Your experience is not singular. Every man of business I suppose makes bad bargains? Yes.
1411. What will it cost to clear this land of yours which you spoke of just now? £5 an acre.
1412. Is it heavily timbered? Fairly.
1413. Did you sell the timber which came off it? No.
1414. And you think all this good land in the district would cost £5 an acre to clear? Yes, to clear and fence it.
1415. You think all this best land in the colony should be sold at the ordinary rate, 20s. an acre? I do not think so, but I say it would be better to be thrown open and sold. At present it is of no good at all, even to the Crown.
1416. It would be of no benefit to anybody if you cannot get to market? But if we have a railway we will have a market.

Mr. A. C. Garling, farmer, sworn and examined:—

- Mr. A. C. Garling.  
24 Mar., 1890.
1417. *Mr. Hurley.*] What are you? A farmer.
1418. Where do you reside? At Springfield, about 5 miles from Gulgong.
1419. Have you many acres under cultivation? One hundred and twenty.
1420. What does it give you per acre? From 17 to 18 bushels. This year I averaged 29·18 bushels. I have had as high as 35 bushels.
1421. Where is your market? Mudgee and Gulgong—principally Gulgong.
1422. Do you find your calling remunerative? Not for the last few years.
1423. What is the drawback? The want of cheap carriage to Sydney.
1424. Does the projected railway pass through any of your land? Three lines have been surveyed.
1425. How about the eastern line? It runs about a mile from my ground.
1426. You have heard the evidence in regard to the projected railways westward; would the opening up of the western interior be of advantage to you as a grower? Yes.
1427. It would enable you to increase your acreage of agriculture? Yes.
1428. Are you engaged in anything else, such as dairy-farming? A little. 1429.

\* NOTE (on revision):—Meaning July, 1882.

1429. Where do you find a market for your dairying? We have a little market here.
1430. Owing to the difficulty of reaching market you find it non-productive? Just so.
1431. Have you any knowledge of the land immediately surrounding this district? Yes.
1432. Is it similar to your own? Yes; most of it is fine chocolate soil.
1433. Have you any knowledge of mining? Very little.
1434. You cannot say whether the country is likely to develop into anything which would be beneficial to the mining industry? I should imagine there are some very good reefs, but the alluvial is nearly all done, because it is well prospected.
1435. Have you met anyone in the district searching for land in order to enter into agriculture? Yes; I am frequently asked if I know of any ground open for selection. It has all been locked up in the Gulgong reserve and the common.
1436. If that were opened it would be taken up? Very quickly.
1437. What do you think that land is worth per acre? £1 to 25s. The expense would be in clearing and fencing it.
1438. If you were parting with any of your land which is not improved, what per acre would you ask for it? 25s.
1439. Then you do not place a high value on your land? Yes, on part of it. That which I have not cleared is hill land, unfit for cultivation.
1440. You would be satisfied with 25s.? Yes, for the hill country. The ground I would take 25s. for is not fit for cultivation. It is only quartz and rocks.
1441. Do you look on the construction of the railway as likely to increase population, and be beneficial to the place? Yes.
1442. As a taxpayer, do you think it would be to the interests of the general community that such a line should be constructed? Yes.
1443. Upon what grounds? On account of the great area which will be thrown open for occupation. Population would settle in the district.
1444. If the place remained as it is now you could not anticipate a fair return? No.
1445. Eighteen miles of railway would not give you that facility for reaching market which would enable you to increase your agricultural acreage? No.
1446. But you are looking ahead to the probability of a market westward and northward, and an increased population? Yes.
1447. Have you suffered from drought at all? Very severely. Last year, out of 120 acres of ground, I had not a straw of hay or wheat.
1448. Then you had difficulty in keeping live stock? Yes; I had to travel them about.
1449. Have you any knowledge of ensilage? Yes, from reading.
1450. Has the advantage of that system never forced itself upon you? It has of late. It is only recently that it has been brought forward. I believe most of the farmers will enter into it.
1451. Then you think you will adopt the system for the purpose of saving your stock in the future? Yes.
1452. *Mr. O'Sullivan.*] I gathered from your evidence that you consider that though the line will not pay, commercially, for some time, the indirect advantages it will confer upon the district will justify its construction? Yes.
1453. What are the indirect advantages, outside the probable further agricultural settlement upon the reserves? The great advantage will be to the farmers already on the ground, who will obtain an outlet for their produce. They will enter more largely into sheep and cattle rearing and dairying.
1454. Do you think the Government would be justified in constructing the line to Gulgong alone, seeing that your market is not down to the south or east? No.
1455. I understand your opinion is expressed contingent on the line going further to the west? To the west or north-west.
1456. What do you grow generally? Wheat, corn, potatoes, hay, and grain of all kinds.
1457. And your neighbours grow the same? Yes; and vines and fruit. If we had a better outlet for fruit more would be grown.
1458. Do you consider this a good fruit-growing district? Magnificent; especially for apples and grapes.
1459. Do you think it is likely to be a wine-producing district? I do.
1460. Which of the lines would you prefer to see carried out, as the best means of extending the trade of the district? The one to Coonamble; but it would not matter whether we tapped Dubbo first, and then Coonamble. As long as we get away north or north-west we shall have a market.
1461. Would it not be better to have a line connecting you with the Narrabri district as well? Yes; if we could get it constructed in a reasonable time.
1462. Do you not think you are more likely to get a cross-line from Dubbo to Werris Creek than a straight line to Coonamble? I am not acquainted with the country.
1463. But you know that urgent necessity exists for connecting the Western with the Northern line? Yes.
1464. And if a line be constructed from Nyngan to Broken Hill, a short cut will be made from South Australia to Queensland; therefore this connecting link will have to be carried out? Yes.
1465. Would it not be of advantage to you to be connected by rail from Gulgong to the cross-line, and to have your western markets at Nyngan, Bourke, and Cobar on the one side, and from Dubbo to Coonamble on the other? Undoubtedly.
1466. *Chairman.*] You say you reside at Springfield? Yes.
1467. How many miles from Gulgong? Five, and 1 mile from the line.
1468. Is there much settlement about? Yes, on pretty nearly all the land within 2 or 3 miles. There will be 2,000 acres fit for cultivation.

Mr. James Hollow, farmer, sworn and examined:—

1469. *Mr. Humphery.*] Where do you reside? On the Canadian.
1470. What is your occupation? A farmer.
1471. How many miles from Gulgong is your land situated? 5 miles.
1472. How many acres have you? 180.
1473. Are you in the centre of the settlement known as Canadian? Yes.

Mr.  
A. C. Garling.  
24 Mar., 1890.

Mr.  
J. Hollow.  
24 Mar., 1890.

1474.

- Mr. J. Hollow.  
24 Mar., 1890.
1474. How many acres have you under cultivation? Nearly 100.  
 1475. What quantity of wheat did you produce last year? Between 400 and 500 bags.  
 1476. How many bushels? About 1,700.  
 1477. That is about 17 bushels to the acre? It was not all under wheat.  
 1478. What average did you obtain? About 20 bushels to the acre.  
 1479. Where was your market? At Gulgong and Mudjee.  
 1480. What price did you obtain? I have not sold yet. It is about 3s. per bushel now.  
 1481. Would you be served by the proposed line from Mudjee to Gulgong? I should.  
 1482. Which would be the nearest point on the railway which you would touch? Gulgong.  
 1483. Do you find a good market for your produce at the present time? Not so good as it would be if we had the railway.  
 1484. Would the railway be the means of giving you a better market? Yes.  
 1485. In what direction? We would have cheaper carriage.  
 1486. You would not obtain any better price for your produce? No.  
 1487. But you would pay less in carriage? Yes.  
 1488. What do you pay now for sending produce to Mudjee? 3d. or 4d. a bushel.  
 1489. Is your produce sent on to Sydney, or is it sold in Mudjee? I have had it sent on to Sydney, and sometimes it has been sold in Mudjee.  
 1490. Have you seen the surveyed route of the proposed line? I know exactly where it is.  
 1491. Do you think the best line has been selected? I cannot say.  
 1492. Can you suggest any deviation or alteration, which you think will be more beneficial to those whom the line is intended to serve? No.  
 1493. How many farmers do you think there are within 5 miles of your holding? Over 100.  
 1494. Are they all growing wheat? Yes.  
 1495. Do you keep any live stock? Cows.  
 1496. Do you do any dairying? Yes.  
 1497. What is your experience of dairying—has it been profitable? Yes, during some seasons.  
 1498. Where has your market been? Gulgong.  
 1499. What price have you been obtaining for butter? From 6d. to 2s. per lb.  
 1500. Sixpence per lb. in the summer? Yes, and 2s. in the winter.  
 1501. Have you grown any fruit? Yes.  
 1502. What kind? All kinds; I have an orchard of 5 acres.  
 1503. Have you grown any quantity of grapes? Yes.  
 1504. How many acres? About half an acre—they have had the disease this year.  
 1505. What disease? The blight odium.  
 1506. You are favourable to the construction of the railway, as proposed? Yes.  
 1507. *Mr. Hurley.*] Have you gone in for the jam industry? Not yet; I am going to do so.  
 1508. Are you aware that a large quantity of fruit is imported into the district from California and the Colonies? Yes.  
 1509. If you went into the local stores, you could find fruit from America, as well as from Tasmania? Yes.  
 1510. Do you think you can compete with those importations? Yes, when we get protection.  
 1511. Seeing that you have such a large acreage under cultivation, do you not think you might successfully enter into that industry? I will by-and-by, when I get a little older.  
 1512. *Mr. Humphery.*] Without protection? Yes, I am going to have a try.  
 1513. *Mr. Hurley.*] Do you know anything as to the quality of the land in the district, within a circumference of 15 miles? I believe it is very good.  
 1514. For carrying out the same pursuits as you follow yourself? Yes.  
 1515. Your chief difficulty is the want of a market? Yes.  
 1516. Annual expenses, charges levied upon you by Railway Department and by agents, prevent you from competing with other places? Yes.  
 1517. Is it not a fact that the heavy freight charges upon our railways act as a preventative to your competition with persons outside the colonies? I believe so.

Mr. Francis Gilbert sworn and examined:—

- Mr. F. Gilbert.  
24 Mar., 1890.
1518. *Mr. Hurley.*] What have you been engaged in? Mining, chiefly.  
 1519. For how long? For twenty years,—for nearly nineteen years in this district.  
 1520. What is your opinion as to the future mining outlook of this district? The shallow alluvial workings are pretty well worked out. There are several leads within a few miles around Gulgong which have never been prospected.  
 1521. The shallow mineral deposits are all exhausted? I would not say they are. We are prospecting now for a deep lead.  
 1522. Is much gold being obtained in the district now? Not a great deal.  
 1523. Can you give an idea as to the amount? No.  
 1524. Can you give an idea as to the acreage held under gold-mining lease? I believe 100 acres have been taken up on the Black Lead and some four or five leases on the Star by the late John Sutherland.  
 1525. Are these leases lying idle, or are the labour conditions being enforced? The Sutherland leases are lying idle.  
 1526. Then they ought to be cancelled? Yes; the Black Lead has only just been taken up.  
 1527. Do you hear many complaints as to the non-enforcement of the labour conditions? Yes; frequent complaints have been made about the Star Lead, because it is supposed to be one of the best about here.  
 1528. Then some action should be taken by the Mining Department in order to destroy the monopoly of the mining leases? Yes; certainly.  
 1529. Are you prospecting out of your own pocket? Out of our own pockets.  
 1530. Do you look on the district as one worthy of an attempt on the part of the Government to render assistance to the development of the deep leads? Undoubtedly. The lode deposits are much after the style of the Lucknow. We find the gold associated with pyrites. Most of the rock formation about here is diorite. From what I have seen, and from what I have read, all the diorite formation is associated with pyrites. At Wentworth they are still getting very rich deposits. I think we have the same descriptions of mines about here.

1531. Are there any bonanzas amongst the lode formation? Yes; where the first gold was obtained on the Red Hill.

Mr.  
F. Gilbert.

1532. Then your reef formations are of a fractious character? Yes—difficult to treat. That is one reason why I am so much in favour of the railway. If we can get the deposits treated, there must be some way of sending them to Sydney.

24 Mar., 1890.

1533. Have you attempted chlorination at all? No; the gold is of a coarse nature.

1534. Have you heard any complaints amongst the mining community as to the way in which grants have been given to the various districts by the Mining Department, and as to the way in which the money has been spent? The Mining Board was to have been here three or four months ago.

1535. Do you think the Mining Board satisfactory? No.

1536. Would it be more satisfactory if persons were elected by the miners to recommend the expenditure of Government money? Undoubtedly.

1537. Do you think that system of expending public money would meet with general approval? I may state that when the second amount of money was to be voted, we had a large meeting in the Municipal chamber. It was unanimously resolved to write to the Government to ask them to expend a certain portion of the votes—under the supervision of the miners, or those who might be appointed by them—the money to be left in trust with the Municipal Council.

1538. Do you think that would be likely to lead to more beneficial results than from the way it is expended now? Yes; because the miners living about here have a better chance of knowing the country than people who come from Sydney.

1539. Are there any crushing batteries in the district? None.

1540. Therefore mining is at a standstill? It is, but I have still great belief in Gulgong. I have been here for nineteen years, and I have seen most of the gold-fields of New South Wales and Queensland, I believe there will be a revival before long. When they hear of one or two good things about here we shall find any amount of capital to come in.

1541. I suppose the construction of the railway would, in the event of the mining industry progressing, be of immense advantage in bringing coal from the eastern parts of the country? Undoubtedly.

1542. How far is Denison Town away? To the Mount Stuart mine it is 26 or 27 miles.

1543. They have had satisfactory returns from some of their prospects? Yes. I was managing a silver mine near there myself, and the lode I was trying had a fair show of silver and gold. The money of the syndicate was partly expended when they stopped operations, although it was well worth developing.

1544. It only requires knowledge and capital to bring the matter to a successful issue? I think so.

1545. Do you know of any other minerals within a radius of 50 miles which are likely to be developed? There is gold on the other side of Denison Town, and silver and lead within 7 miles of Gulgong.

1546. To what do you attribute the non-development of the various deposits? I think there is very little capital in the district. We have only a few storekeepers, and the miners as a rule are poor. Want of capital is the cause of the present state of affairs. A short time ago I was speaking to a gentleman from Victoria, who said that if they had this district in Victoria they would be rushed with capital.

1547. Are you not aware that all Victorians say that? They say so. At any rate, I am satisfied that it is worth spending capital to develop the field.

1548. Is any land held by miners on lease from any landowners in the district? Yes; a company is at work now.

1549. Upon what royalty do they work? I could not say.

1550. About what percentage? About 10 per cent.

1551. Are you aware that the mining community have complained for many years of the difficulty of getting on lands, other than Crown lands, for the purpose of mining? Yes.

1552. Have you known of the privilege which has been given them by law recently? This is the first time I have heard of it.

1553. Therefore, they have not been made conversant with a law actually passed for their advantage? I never heard of it before, and I know of no one in this district who has heard of it.

1554. As a miner, you believe that the construction of this railway will be of immense advantage in developing the various mineral deposits of the district, including Denison Town and other places? Certainly. I may also mention there are two antimony mines near the town.

1555. What width of lode? Not very wide.

1556. What percentage? 60 or 70 per cent. of antimony.

1557. That is a very high percentage? It is. Another one has been started at Goodaman, where there have been some grand assays, not only of antimony, but of gold.

1558. *Mr. O'Sullivan.*] How many miners are working in the neighbourhood? They are very scattered.

1559. Cannot you give an estimate? Some time ago, when an attempt was being made to get certain land thrown open for free selection, I got up a petition which was signed by over 200 men in a very short time. There must be between 150 and 200 men at work.

1560. Seeing that an Act was passed last Session providing that any miner may, upon giving notice to a landowner, go upon his land and prospect, paying for surface damage, is there any necessity to keep the gold-field reserve closed against settlement? Not the slightest; but I will tell you what we object to. Under the 14th clause of the Act you had to get permission from the Minister for Mines. A party of men sent down for permission to mine on a property between here and Home Rule, and it was nearly twelve months before permission was obtained.

1561. Was that on Crown lands? On lands under the selection Act. It was land taken up by a selector. We want someone on the ground to give permission to mine on the land, without sending to Sydney. The miner wants to get to work at once without waiting for six or twelve months.

1562. Of course he would have to give such notice that no expense or inconvenience might be caused. For instance, it would not be right for him to stick a shaft through a person's parlour-floor? But this is a gold-field, and there is a right which the goldminers ought to have. The goldminers made this place.

1563. All you want is the gold? Yes.

1564. If you can get gold upon any man's property upon compensating him for surface damage, there is no necessity for the remainder of the reserve to be locked up? The question arises as to what damage would have to be paid.

1565. That would be settled by arbitration in a fair way. The Act makes provision for it. You are evidently

Mr.  
F. Gilbert.  
24 Mar., 1890.

evidently desirous of securing what is already law. Having the right to mine on private property, I ask you whether there is any necessity for keeping this great reserve shut up from agricultural settlement? With the exception of a small portion, which could be easily mapped out and defined, I believe most of it could be taken up. The exception includes the lode formations, of which there are not many.

1566. If a fair reservation is made of the probable rich lodes, the miners would have no objection to the reserve being thrown open to the farmers for settlement? No.

1567. You are aware of a clause in the last Land Act providing that any miner may get a lease of 10 acres, upon which he may build his house, and reside there, upon paying a small rental? Yes.

1568. I suppose this reserve could be opened under that condition? It is opened now, but it is no good.

1569. Why? A man may go to the expense of building a place upon the 10 acres, and at the end of the time he has taken up the ground for he can be thrown out without any compensation for improvements.

1570. Do you mean to say that a man who took up 10 acres for fifteen years, and occupied and improved the ground during that time, would obtain no benefit? The rent he would pay would be almost as much as he would pay for any other land.

1571. Have you read the clause in the Act? I have read the clause relating to the 10 acres.

1572. Do you mean to say that it would not be a boon to the miner to have his home settled here? We would rather have 2 acres. It would be much better if we could only get that and be certain of it.

1573. *Mr. Humphery.*] Will you state, briefly, in what manner the construction of the railway between Gulgong and Mudgee will stimulate the mining industry of this district? I am informed, on good authority, that Sunny Corner and Lewis Ponds could take all the galena we could get together. There would be a chance of selling this galena to different companies if the railways were pushed out. Another thing—we shall have an opportunity of sending pyrites to Sydney for treatment. I do not suppose the deposits are big enough to justify people in erecting furnaces to deal with it here. Again, I think the deep leads must eventually come to the front, and there would be a better chance of getting our machinery cheaper from Sydney. It would be a great benefit to us to get everything we required from Sydney. I was in Mudgee the other day, and heard some of the evidence given there. One gentleman stated that there were no farms between here and Mudgee which would be benefited by the railway. I was assessor for this municipality last year, and, as such, I know there are fifty-seven farms within a radius of 5 miles which would be benefited, and which would use the railway if constructed.

1574. *Chairman.*] Has not Gulgong had assistance from the Mining Board in years gone by? Every year there has been a vote.

1575. But you are aware that it is not possible to give assistance to every place which requires it in the shape of prospecting? We were informed we would get a certain amount this year.

1576. Then you think you are on the list as a permanent endowment? Those who have sent in applications have been told they would be dealt with.

1577. There are other fields which have applied for help, and which have not had a penny spent on them, whilst you seem to have had a fair share spent upon you? Promise of aid was given.

Mr. Christopher Young, storekeeper, sworn and examined:—

Mr.  
C. Young.  
24 Mar., 1890.

1578. *Mr. O'Sullivan.*] What are you in business? A storekeeper.

1579. Do you deal in produce? A little in wheat and cereals.

1580. How do you get your stores to Gulgong? *Via* Mudgee, by railway.

1581. I presume all the other storekeepers do the same? Yes.

1582. You say you deal in wheat? I would like to make a few remarks before you ask me any question.

1583. You may make a statement, and I will examine you upon it? I have had the privilege of listening to most of the evidence. It has been held that Mudgee is the market-town for Gulgong, but I beg to dispute it. Mudgee is an agricultural district. The Committee arrived in Mudgee, but saw nothing of its agriculture. In coming to Gulgong the Committee travelled merely on the verge of the Mudgee agricultural district. You are only on the verge of it now. The evidence has been given in a weak spirit. Within the municipality of Gulgong there will be 5,000 acres taken up and fit for agriculture. I have heard several questions asked as to the competition between Dubbo, Gulgong, and Molong. I have heard that the distance from Molong to Dubbo is more than from Gulgong to Dubbo, but I say it is nearer. The wheat in this place, and I say it without romancing, is worth 3d. a bushel more than the wheat from the Orange or Molong district, but we will put it at 2d. I do not include this year, as we have had a wet harvest. I think you have been led astray in Mudgee. They call Mudgee the agricultural district, but this is the agricultural district.

1584. *Chairman.*] But you are not in a position to know what we heard at Mudgee unless you were there? I have read the newspapers. The Railway League had a reporter in Mudgee. Mudgee is not the market-town for Gulgong.

1585. *Mr. O'Sullivan.*] You say you are a produce dealer? I am a storekeeper, and I deal a little in produce.

1586. Am I right in saying you are a storekeeper and wheat-buyer? Yes.

1587. Which is the natural trade centre for the farmers of this district? Gulgong.

1588. Do the people obtain their stores from Gulgong? Yes.

1589. What is the area of your municipality? About 5 miles by 6 miles square; 30 square miles.

1590. Which is the area of agricultural land within a radius of 15 miles of Gulgong? If you want to know the radius of agricultural land which does business with Gulgong, I should put it at 30 miles.

1591. What is the area of agricultural land within a radius of 15 miles of Gulgong? I do not know.

1592. How many farmers do you think have holdings within 15 miles radius? About 200.

1593. What outlying districts trade with Gulgong at the present time? Cobbora, Munderoran, and Coolah.

1594. Does Denison Town trade with you? Yes.

1595. Have you regular communication with it by mail? Yes.

1596. Are the people there in the habit of sending to Gulgong for stores? Yes.

1597. And they sell produce in Gulgong? Yes.

1598. We may look upon Gulgong as their trade centre also? If you will ask me the question I will tell you who sells the produce going along the Cobbora-road. I would like to correct some of the evidence which has been given. I heard Sergeant Steele say there was no good land between Cobbora and Munderoran.

1599. But he corrected that evidence? There are rich farmers from the Talbragar to Denison Town.

1600. How far is Talbragar from Gulgong? 30 miles.

1601.

Mr.  
C. Young.  
24 Mar., 1890.

1601. Are Denison Town and Talbragar one and the same place? Denison Town is on the Talbragar River.
1602. In speaking of Denison Town we are speaking of Talbragar? Yes.
1603. Is there a large agricultural settlement there? Yes.
1604. Is there more land available? Yes.
1605. What is your opinion of the financial condition of the farmers? They are in a grand condition.
1606. You consider the financial position of the farmers is a sound one? As sound as a bell.
1607. Have many farmers left the district within the last five years? About one. There is not a farmer to my knowledge who, within the last five years, has gone insolvent.
1608. I presume you deal here, as in other agricultural districts, on the credit system? Yes.
1609. And the farmers pay up at harvest time? Generally, when they get their crop.
1610. Therefore you have reason to know they are in a sound financial condition? There is no one better.
1611. You tell us Gulgong is nearer to Dubbo than Molong? I am sure it is.
1612. Do you know the exact distance? I think it is 70 or 80 miles to Molong.
1613. Between Molong and Dubbo lies the thriving agricultural centre of Wellington? Not very thriving.
1614. It is a fine agricultural district? Yes, on this side of it.
1615. Could Gulgong compete with Wellington in the Western market? Easily, if we have the railway here.
1616. You tell us that the quality of the wheat here is so good that it is worth 2d. a bushel more than the Molong and Orange wheat, which has a good reputation in the markets of New South Wales? Yes.
1617. What leads you to believe that? From selling it.
1618. What are you giving for wheat here? Up to 2s. 10d. and 2s. 11d.
1619. Do you give 2d. a bushel more than the buyers at Molong and Dubbo? I do not know.
1620. Then it is only your opinion that it is better? I know it is better on the Sydney market.
1621. It will sell 2d. a bushel better than any wheat in the Sydney market? I think so, as previous years have shown.
1622. Are you in the habit of dealing in chaff, or hay, or produce? Not much.
1623. Do you know the district away to the west? Yes.
1624. Do you think that the surrounding district, including the old Mudgee district, is naturally fitted to provide fodder for the western district? Of course.
1625. Do you suffer from drought here to the same extent as they do further west? No.
1626. What is the reason? Because we are blessed with thunder storms. We have grass here when outside people have to bring in cattle and stock. A lot of money is made here in paddocks, by people agisting stock from the outside.
1627. You have a more moist climate? Yes.
1628. The mountains and the hills have to do with that? Yes, the average rainfall is far more than outside.
1629. *Chairman.*] What is the rainfall? The average is about 24 inches. This year we have had our average already.
1630. *Mr. O'Sullivan.*] You have constantly flowing streams? Yes.
1631. And fairly good grass, even in dry seasons? Yes.
1632. Therefore, you are exceptionally situated for the growth of fodder for the parched districts at the back? We have proved that for twenty years.
1633. That being so, a railway from Mudgee to Dubbo would open up a splendid market for your fodder? Undoubtedly.
1634. Do you look upon the fodder trade as likely to make the line a productive one? Yes.
1635. Do you think the line is likely to pay if it is not extended beyond Gulgong? The line to Mudgee has stopped at the beginning of civilization. Speaking allegorically, you might sink a shaft 300 feet deep, at a cost of £300, and you might get an ounce of gold from it, but that would not pay for sinking the shaft. Drive out and get the gold. Every mile you add to the railway must tend to make this white elephant a shade darker.
1636. You think that the only way of making the Mudgee line pay is by extending it to the western district? Yes.
1637. You are aware that the working expenses of the line to Gulgong are estimated at £7,000 per annum, and the probable receipts at only £1,600? Yes.
1638. Do you think that estimate of £1,600 is a true one? It would be much larger if the line is extended.
1639. It is an under estimate? Yes.
1640. By how much? About £1,000 to start with.
1641. Do you think the receipts would be more than £1,600? I know that every mile added to the Mudgee line must make it less of a white elephant.
1642. Do you think the receipts on a line between Mudgee and Gulgong would amount to more than £1,600 per annum? I am sure they would.
1643. How much more? That is a matter of calculation. You do not wish me to jump at conclusions. It is under-estimated by a tremendous lot.
1644. You are not prepared to say how much? Speaking outside my oath, I would say it is under-estimated to the extent of £2,000 or £3,000—that is taking into consideration the advance of trade.
1645. You tell us that estimate of £1,600 is below the mark? Yes.
1646. And you think the receipts would amount to a certain sum more, which you are not prepared to mention? Yes.
1647. Do you think, if the line were extended to Dubbo, or to the cross-line between Dubbo and Werris Creek, it would pay within a reasonable period? I am sure of it.
1648. You think that such a trade in produce would be opened up with the western district, and that such a number of stock would be brought down, that the railway would be kept busy? Yes.
1649. And within a reasonable period it would pay working expenses? I am sure of it.
1650. Putting aside the immediate prospect of the payment of working expenses, do you consider that the indirect advantage to be given to this district in the way of promotion of settlement, the opening up of new country, and the improvement of trade, and the prosperity of the people, would justify the construction of the line to Gulgong? I am positive of it.

- Mr. C. Young.  
24 Mar., 1890.
1651. *Chairman.*] Did the representative of the Railway Commissioners interview you when he was here? I met him.
1652. Did Mr. Harper, the goods superintendent, obtain any information from you? No; I introduced him to Mr. Zimmler, and he obtained what information he wanted from him.
1653. How many tons of goods do you send annually to Mudgee, and what do you receive from there? I think I receive between 400 and 500 tons from Mudgee, and send about 200 tons to Mudgee.
1654. To make use of the line? Yes. Of course, a lot of our wheat goes to Biragambil to grind.
1655. Do each of the five storekeepers in Gulgong do as much trade as yourself? I do not think so.
1656. Do you do the principal trade? I think so.
1657. Do you think you do one-half of the trade of the district? No.
1658. One-third? No.
1659. A fourth? Perhaps a fourth of the total.
1660. What do you pay per ton for carriage to Mudgee and backward? From 10s. to 15s., and £1.
1661. Do you think the Government would be justified in constructing a line to Gulgong? I would say yes, undoubtedly, with the prospect of it being extended west or north-west.
1662. Do you consider the Government would be justified in constructing to this place a line, which, according to the estimate of the Railway Commissioners, would involve a loss of £5,000 per annum? Yes.
1663. Then you think the general taxpayer has a perfect right to bear this burden for the benefit of the people of Gulgong? I do.
1664. You would have no hesitation in saying that, even though you might have no interest in Gulgong, but formed one of the general community in another place? I would say the same; I have more property in Mudgee than in Gulgong. It is part and parcel of the grand trunk line. Every mile constructed from Mudgee must lessen the whiteness of the elephant I have heard you speak of.
1665. You have already admitted that there is a great loss on the line from Wallerawang to Mudgee, and it is estimated that there will be a loss of £5,000 per annum on the line from Mudgee to Gulgong if constructed;—how can you, by adding to your loss, decrease your loss? On the principle that the postal service does not pay the country. It accommodates the country. We each contribute towards the revenue to pay for the service. We ought to be accommodated, as well as any other part of the community. The railway ought to be made, even at a loss, because that loss will be made up by further extension.
1666. Are you in favour of an extension of the line to Coonamble, or to Dubbo, *via* Coonamble? I am in favour of the line going direct to Dubbo.
1667. That would only give you access to the western markets then? No. I know the survey strikes the Werris Creek to Dubbo line, and that will give us two markets.
1668. The Werris Creek to Dubbo line is not an existing fact;—it is only on paper? It is surveyed.
1669. As the matter stands now, are you in favour of an extension to Dubbo or Coonamble? I would say the same as Mr. Plunkett—from a national point of view, go straight to Coonamble.
1670. You are in favour of the line going to Coonamble? Yes, from a national point of view.
1671. I suppose that will give you a better market in the upper district? Well, we will have the two lines the other way.
1672. But you have discarded the other two lines? I would say that I wish the railway to come to Gulgong, and to go out further; I do not care where you go to, so long as you give us another market.
1673. *Mr. Humphery.*] What quantity of wheat did you purchase this year? About 10,000 bushels up to date.
1674. Do you think that would represent one-third of the wheat purchased in Gulgong? I do not know what has been purchased in Gulgong.
1675. Can you say what quantity of wheat has been sent from this district to Mudgee this year? Not much wheat has been sent yet. The wet weather set in, and the threshing operations did not come off.
1676. The wheat has not yet been taken away? No.
1677. How many bushels have been grown? I could not say.
1678. Have you any idea of the quantity of wheat which has been grown this year? I could not tell you. I would not like to implicate myself.
1679. Have you any idea as to how many tons of loading passed through Gulgong to Mudgee during 1889? I could not answer that question properly for the simple reason there were no crops last year. For the first time in twenty years they missed. I should say myself that I sent 200 tons in 1889.
1680. Would that be one-fourth of the total tonnage? I think so.
1681. So that from this district about 800 tons were carried between Gulgong and Mudgee? Yes.
1682. Would that include wool? Yes; that is from Gulgong direct, not from the outside district, or what came through Gulgong.
1683. I want to know what came through Gulgong, also? I cannot tell you what passed through Gulgong. The railway statistics will tell you. I was at the railway station one night with Mr. Harper. We had a conversation, and judging from the fact that Mudgee has not an acre of agricultural land, I came to the conclusion that Gulgong contributed 99 per cent. to the Mudgee trade. Nearly all the trade from Mudgee to Sydney comes through Gulgong.
1684. From Gulgong and the surrounding district? The trade of the Talbragar River comes to Gulgong, and we have also the trade of Munderooran. Since the railway has been opened some of it has gone to Dubbo, but we shall have it here if the railway is opened to this place.
1685. Does the greater portion of the trade and produce between Mudgee and Sydney come from and beyond Gulgong? Yes; 75 per cent. of it.
1686. Then three-fourths of the whole of the produce sent from Mudgee to Sydney comes from and beyond Gulgong? Yes.
1687. Do you send much flour from Gulgong? There is no market in Mudgee for wheat, flour, barley, or cereals. We send our surplus to Sydney. We send all we cannot use to Sydney, because we have no other market.
1688. What do you pay for freight from Mudgee to Sydney for wheat? Current rates; about 16s. 2d. per ton.
1689. How much a bushel will that be? We put 6 tons in a truck. There has been a little reduction since the first of this month.
1690. Are you right in saying you pay 16s. 2d. per ton? I think so.
1691. Then you pay about £8 for a truck load? I will not be positive as to the amount.

Mr.  
C. Young.  
24 Mar., 1893.

1692. Have you not made a calculation as to how much a bushel it costs you to send wheat from Mudgee to Sydney? About 5½d. to 6d. or 7d. altogether, with commission.
1693. It costs you 7d. a bushel to send your wheat from Gulgong to Sydney? Yes.
1694. Does it cost the people at Inverell and Glen Innes less than that? I do not know.
1695. Do you know the distance of Glen Innes from Sydney? No.
1696. You know that it is greater than the distance from Mudgee to Sydney? Yes.
1697. Can you compete against Glen Innes and the New England district in the Sydney market? We can compete with any one, for the simple reason that we must get rid of our surplus at any market.
1698. Would you not find a better market for your produce in Sydney, carried at 7d. per bushel, than the people of Glen Innes, who are some hundred of miles further from Sydney than you are? We are glad to get what we can in Sydney. That is the position we are in now.
1699. What price are you getting in Sydney this year for wheat? The top price is 3s. 7d.
1700. Does that leave you 3s., less agents charges? No.
1701. What does it leave you nett? 2s. 10d. and 2s. 11d.
1702. What price per bushel will pay the farmer for growing wheat? It depends on the crop.
1703. Your average crop is stated to be from 18 to 25 bushels to the acre? Then it depends on the size of the farm.
1704. Do not you desire to assist us in arriving at some conclusion? I do.
1705. What price in an ordinary season will pay the grower? I desire to explain that there are farmers and farmers. There are farmers who spend their time, between the planting of the crop and the harvest, in shearing or fencing, and they make it pay. I have heard it said that the farmers here are in a poor condition; but I say that they are in a sound condition. They make wheat growing pay, at 2s., 2s. 9d., and 3s. a bushel. Of course, if they get 4s., they are "in it," and they make money at it.
1706. Do you purchase any butter from the farmers in the district? Yes.
1707. Can you give an idea as to the quantity of butter which is made in the district? It is not a thriving business, although it used to be. Of late Mr. Rouse, of Guntawang, has started a butter factory. The butter coming in now is worth about 6d. a lb.
1708. Is much land used for dairying around the district? Not much.
1709. Do you think the establishment of butter factories would lead to increased dairying in the district? It would.
1710. Is the district suited for dairying? It is.
1711. Do you think it will be a profitable industry here? It will.
1712. That is if the farmers have facilities for sending butter to Sydney and outwards, west? Of course.
1713. Is the land between here and Mudgee, say, in the direction of Home Rule and Canadian, suitable for dairy farms? Yes.
1714. Do you know if many farms have been put under artificial grasses? Not many, unless you go down to the river towards Mr. Rouse's.
1715. How far is that from here? 5 or 6 miles.
1716. Do you know what extent of land has been laid out? On the Guntawang estates there are large paddocks. They have started a dairy there, and it is paying well.
1717. *Mr. Hurley.*] I understood you to say there were 5,000 acres of land under agriculture in the district? Yes, taken up and fit for agriculture, within six miles of Gulgong, towards Mudgee.
1718. Can you give an idea as to how many bushels per acre the land will give? 14 or 15.
1719. That would be 75,000 bushels? There is more than that grown here. But what do you mean by the district?
1720. I took the statement from you that there were 5,000 acres under agriculture in the district? There are 5,000 acres on the Mudgee side of Gulgong, within the municipality, taken up and fit for agriculture.
1721. What did you mean by saying there were 5,000 acres under agriculture within the district? I meant within the municipality.
1722. With an average of 15 bushels to the acre, that would yield 75,000 bushels? Exactly, providing it was all under crop.
1723. You believe you could quadruple that by taking in a circumference of 15 miles? I think so.
1724. You have heard what has been said in regard to the locked up areas on the gold-field reserve and the common? Yes.
1725. Do you think, if they were thrown open for selection, applicants would be found? It would increase the population twofold.
1726. That would be an advantage to you as a populous, and a source of revenue to the railway? Yes.
1727. What value do you place on the land per acre already under cultivation? I do not think Mr. Tuxford was far out when he said £10. I think the lands which are exempt now will be worth from £3 to £4 per acre.
1728. And the lands are equal to those already under cultivation? Yes. Mr. Rouse said one-tenth was fit for agriculture, and I say one-half.
1729. You are prepared to verify Mr. Tuxford's statement as to the value of the land? He said £10 an acre, but I do not suppose he would take £10 an acre for what he has.
1730. That is the improved value? Exactly.
1731. What is the unimproved value of the other lands? £4 an acre.
1732. And there would be ready applicants for it? They would rush it.
1733. Are there any other industries, besides farming, in the district which would result in revenue to the Railway Department? If you see Mr. Clark, in Mudgee, he will tell you all about a lead mine in Denison Town.
1734. Have you any knowledge of minerals yourself? Yes.
1735. Can you say whether there is likely to be, in the future, a mining population within 15 miles of this place? Something great will be turned out from Denison Town district; the prospects are good.
1736. Putting aside the probability of the developing of the mineral resources of the district, are there any other sources of income which will prove remunerative to the Railway Department? There are the vineyards and the fruit industry.
1737. Have you been over the country between here and Coonamble? Yes.
1738. Is the country similar to that which you eulogise so loudly around Gulgong? Do you mean on the route of the railway track?
1739. No; but taking in the circumference of 10 miles alongside the line? To tell the truth, you have not seen the agricultural country of the Mudgee district.
1740. Have you any land on the proposed line of railway? Not an acre. 1741.

- Mr. C. Young.  
24 Mar., 1890.
1741. Are you interested in land between here and Coonamble? No.  
1742. You are not interested in any land? I may have liens on land.  
1743. You are no further interested than that? Not at all.  
1744. Putting aside all local prejudices, do you think the Government would be justified in constructing a line, at a cost of some hundreds of thousands of pounds, through this district? I do, honestly, if I died to-night.

Mr. Richard Stear, baker and produce merchant, sworn and examined:—

- Mr. R. Stear.  
24 Mar., 1890.
1745. *Mr. Humphery.*] What is your occupation? A baker and produce merchant.  
1746. Have you been long in the district? Nineteen years.  
1747. Can you speak as to the area of land within a radius of 10 miles of Gulgong under cultivation for wheat? I have a pretty good idea.  
1748. How many bushels of wheat do you think are produced annually within an area of 10 miles of Gulgong? I may say that, taking the proposed line back towards Mudgee, to the boundary of the municipality, which is about 5 or 6 miles away, and taking 6 miles to the eastward, which will give about 6 square miles from here towards Mudgee, there are within that area fifty-seven farmers, with 5,207 acres of cultivated land.  
1749. Would the whole of those fifty-seven farmers be benefited by the construction of the proposed line between Gulgong and Mudgee? Undoubtedly. They are within 6 miles of where we are standing, and their trade connections are principally with Gulgong.  
1750. How many will there be to the north and west—within 10 or 15 miles beyond Gulgong? My trade connections—and I am only a small man—extend as far as Coolah, 50 miles in a northerly direction.  
1751. Is wheat brought 50 miles beyond Gulgong? No.  
1752. How far beyond Gulgong does it come from? About 35 miles.  
1753. Can you say what quantity of wheat is brought in? I should think that, within an area of 15 miles from where we are standing, omitting the country between Gulgong and Mudgee, there will be at least 400 or 500 farmers. I think I could name that number within an area of 15 miles, without going back towards Mudgee.  
1754. Would all those producers be served if the railway were constructed to Gulgong? They would. They come here now. Some might not stay, but would go through to Mudgee. Some of them have their trade connections with Mudgee, and might go there.  
1755. The whole of the producers have trade connections with Gulgong or Mudgee? Certainly.  
1756. And their produce at the present time passes through Gulgong? Yes.  
1757. Do they take their stores from Gulgong? A good many of them.  
1758. The stores come either from Mudgee or Gulgong? Yes.  
1759. And would be carried by the railway between Gulgong and Mudgee? Yes; there is no other possible way for them to go.  
1760. Do you know the district beyond Gulgong, in the direction of Coonamble and Dubbo? I have been a good way out—30 or 40 miles.  
1761. Can you say whether the land is suitable for agricultural settlement? Ten or eleven years ago I used to drive a baker's cart for 25 miles in the direction of the proposed line. There was scarcely a farm to be seen at that time. Twelve months ago, when I went that way, I found it was nearly all farms for the 25 miles.  
1762. For wheat? Principally wheat.  
1763. Are there any mills in that direction? No, none nearer than Mundooran, which is 50 or 60 miles from here. It has been built within the last year.  
1764. If the wheat were required a greater distance than 25 miles from Gulgong, would not the districts requiring it be supplied by the farmers you speak of, who have settled about 25 miles from here? It is seldom a mill of any size is erected, excepting at a railway town.  
1765. Would not growers of wheat, a considerable distance from Gulgong, come into competition with Gulgong for the trade beyond? They may.  
1766. They would hardly send their wheat to Gulgong, if it were required in Coonamble? They would send it where they had the best market.  
1767. What produce would be placed on the railway from Coonamble and the district between Mundooran and Coonamble? Wool and sheep skins.  
1768. Do you think any cattle or sheep would be trucked? Thousands. There are thousands of sheep and cattle passing here every week. 10,000 sheep passed through during the last three weeks.  
1769. Do you know whether they went by rail from Mudgee? I think they trucked at Rylstone.  
1770. Do you think that the railway, if constructed to Gulgong, and ultimately extended, would obtain the benefit of any live stock freight? There is do doubt about it. Most of those who have stock about here truck them direct from Mudgee. Of course some still adhere to the old style of travelling, but it is very difficult to travel during wet weather and in times of drought. The probability is that three-parts of the stock would be taken by train.  
1771. From Gulgong, if the line were constructed? Yes, or further.  
1772. The Railway Commissioners; in making an estimate of the probable earnings of the railway, have given the following figures:—360 tons special class traffic; 1,000 tons 1st 2nd, 3rd, and 4th classes; 750 tons wheat, flour, &c.; 50 trucks hay, straw, &c.; 100 tons skins, hides, &c.; 60 tons 1st 2nd, 3rd, and 4th classes; 500 trucks cattle; 400 trucks sheep; 1,250 tons wool;—that is an estimate of traffic which passed through Mudgee from and to these districts in the most favourable season—1887 and 1888? I think I sent ten trucks to Mudgee myself last year.  
1773. Do you think that is a fair, excessive, or under estimate? I think it is considerably under-estimated.  
1774. Will you state which of the classes of goods enumerated are under-estimated? There are 750 tons of wheat, flour, &c. I do not know how anyone could possibly calculate it without inquiring from all the people in the town.  
1775. It is assumed that the agent who prepared the statistics obtained information in the district? I am aware that Mr. Harper came to Gulgong, and went back.  
1776. Why do you think he has under-estimated the quantity of wheat and flour which would be sent by

Mr.  
R. Stear.  
24 Mar., 1890.

by rail from Gulgong? These quotations mentioned 750 tons of flour, wheat, &c. I suppose that means wheat, flour, corn, bran, pollard, barley, and oats. Taking one year with the other, I have 200 tons of flour brought to my store, and I am only in a small way of business, and the quotation only gives a full total of 750 tons. It would be impossible for Mr. Harper to know anything about that 200 tons without coming to me.

1777. How would he get that information? I do not know. I do not think anyone in the world knows it but myself.

1778. Do you get flour from Sydney, or Mudgee? I have had some from Sydney, but I do not get it from Sydney when I can get it in the district.

1779. Do you have 200 tons brought from Mudgee to you? I get it from there or Biragambil.

1780. We want to know whether this is a fair estimate? I do not think it is, because I would carry almost half of the amount mentioned myself, if the railway were constructed.

1781. You think the return is very much under estimated? The portion I have referred to is ridiculous.

1782. If a railway were built between here and Mudgee, would it not render unnecessary the forwarding of wheat to Mudgee for grinding? Certainly. There would be double the traffic if a large mill were erected here, because we would send flour to Sydney as well as any other place. If the wheat grown here could compete with other mills, I am certain there would be four times the amount of traffic referred to between here and Mudgee.

1783. You would send it to Mudgee, instead of having it brought from there? We would send it to Sydney and the westward.

1784. If the wheat were ground in Gulgong, you would not want to get 200 tons of flour from Mudgee? No.

1785. Therefore there would be no traffic for the railway for that 200 tons? No. I would buy the wheat here, and have it ground and sent to Sydney.

1786. What, in your opinion, would be a fair estimate of the number of tons of wheat, flour, &c., carried by the railway, if constructed to Gulgong? I feel certain, from the amount of business I do myself, that the 750 tons could be increased to 2,000 tons.

1787. Take the next class of goods—"fifty trucks, hay, straw, &c."? I have sent hay to Sydney four or five different times, and I have always obtained the top price, but it does not pay. It has to be sent to Mudgee, and transhipped there, and you must send a truck load at a time. I have no doubt, if the railway is constructed, that the 50 tons estimated will be increased to 500 tons. The hay is here to be sent at any time.

1788. Do you think it would be sent? I feel quite certain of it.

1789. What is the freight for hay from Mudgee to Sydney? £2 12s. per truck.

1790. And from Gulgong to Mudgee? 15s. per ton.

1791. How many tons go to the truck? A good deal depends on the quality of hay; but you can say from 3½ to 4 tons.

1792. The distance between Gulgong and Mudgee is 19 miles, and between Mudgee and Sydney 190 miles? Yes.

1793. Then it would cost you more to send your hay from Gulgong to Mudgee, than from Mudgee to Sydney? Yes; and then there is the difficulty of shipping it.

1794. Take the next item—"100 tons, skins, hides, &c."? I do not know anything about that.

1795. Take the next item—"500 trucks, cattle"? I am aware that most of the cattle trucked in Mudgee come through Gulgong.

1796. How many cattle do you think would be sent by railway if the line were constructed? The quantity mentioned in the estimate. The closer the railway gets to the various stations about here, the more likely are they to take advantage of the market.

1797. Do you think the Commissioners' estimate is correct? I think it might be increased, but I would not be certain.

1798. How many cattle would 500 trucks represent? They put about nine in a truck.

1799. That would be 4,500 head? Yes.

1800. Do you think more than that number would be sent? I do, because I am aware that the business is one which several are entering into around here.

1801. What increase do you think might fairly be made in the Commissioners' estimate of cattle? I should say 750 trucks, instead of 500.

1802. And sheep? I do not know. I have no knowledge of the sheep business any further than that there is a great number of sheep to the westward and that there are some hundreds of stations between here and Coonamble.

1803. You think you have now given us a fair estimate of the probable traffic between Gulgong and Mudgee, in the event of the proposed railway being constructed? I think the item of wool would be increased a great deal if the railway were extended 20 miles further.

1804. Why? Because it would be 20 miles nearer to the stations towards Coonabarabran.

1805. Is not the wool already sent to Mudgee? Where there were twenty-five loads of wool sent nine years ago before the railway was made to Dubbo, there are not above fifteen loads sent now.

1806. You say there would be a considerable increase of traffic over the line between Mudgee and Gulgong, because it would be 20 miles nearer to the stations? Yes; the nearer it gets to the producers the greater the traffic will become.

1807. If there could be a saving in haulage to the producers the wool would come this way instead of by Dubbo? Yes.

1808. Can you state anything as to the probable passenger traffic, which is estimated by the Commissioners to return between £500 and £600 a year? I do not think it would be possible for the Commissioners to form an estimate.

1809. Do you know how many passengers travel between Gulgong and Mudgee weekly, at the present time? I know two coaches are running.

1810. How many passengers would they carry? I have seen them carry ten or twelve, and at other times I have seen them empty. They both seem to do about an equal trade.

1811. Do many passengers come into Gulgong from Coonamble, Mundooran, and Talbragar? Yes.

1812. Do they come through Gulgong to get to Sydney? Yes.

1813. They do not go to Dubbo? Of course they do not like travelling by coach, if they can possibly travel by rail. 1813½.

Mr.  
R. Stear.  
24 Mar., 1890.

- 1813 $\frac{1}{2}$ . Do you think there would be a considerable increase in the passenger traffic? I do.
1814. Do you think, in the event of the railway being constructed, that the earnings within a few years would be sufficient to cover the working expenses, and the interest on the cost of construction, the whole being about £7,000 per annum? I believe, within five years of the opening of the railway, the part of the line from Gulgong to Mudgee would pay.
1815. *Chairman.*] Some of the traffic upon the proposed line would be taken from the Western line, so that we should be simply robbing Peter to pay Paul? That may be. It is not likely that people will travel 45 miles to Dubbo when they can meet with a railway terminus at 30 miles.
1816. But still, if one line serves the traffic, where is the necessity for building another? There is no doubt that the Northern line robs the Western line now.
1817. Those are trunk lines, and that can hardly be said of the one under consideration? Still I am under the impression that there is sufficient settlement in and about where this line is surveyed to warrant its construction. Of course it is impossible to enumerate the farms. I do not suppose there are many people who have the slightest conception of what is produced within an area of 40 miles.
1818. You have every reason to believe that the line will pay working expenses and interest upon capital to the extent of £7,000 per annum within five years of its construction? It all depends on the cost of construction. The line from Mudgee to Gulgong will be constructed cheaper than any other part. The greater part of the timber used on the Mudgee line came through Gulgong. The sleepers for the Dubbo and Bourke line came from within 40 miles of this place.
1819. Then there is plenty of timber available for the purposes of a railway? There is an immense amount of timber between 10 and 40 miles from here. The contractors for the Mudgee line cut thousands and thousands of feet, and it all came through here.
1820. You seem to challenge the figures of Mr. Harper;—if these figures are obtained from the Mudgee railway station do you not think they are more likely to be correct than any supposition on your part? What I say is that Mr. Harper could not possibly calculate the trade between Gulgong and Mudgee, unless he went to the trouble of going to all the business people and finding out.
1821. Did he make inquiries? I believe he did, but I can vouch that he could not know the correct estimate in regard to flour.
1822. It is stated in an appendix to evidence taken before the Full Committee some time ago that “Mr. Harper reported that, besides Gulgong, the settlements of Coolah, Cooborra, Mundooran, Denison Town, and Coonabarabran, would be served by the proposed line. The following were particulars of traffic which passed through Mudgee from and to these districts in the most favourable season (1887, 1888)” ;—then follow the figures which have been already referred to by Mr. Humphery;—of course, as you have stated, Mr. Harper could not obtain information unless he made certain inquiries; Mr. Harper tells us that he did make inquiries in Gulgong? He may have done so, but if he did very few in Gulgong know anything about it.
1823. Mr. Harper was asked how he gathered his information, and he replied, “At the Mudgee station, by an inspection of the books, and from local sources at Gulgong”;—Mr. Harper is generally a live man? I am aware of that. He did not waste much of his valuable time here.
1824. Are you basing your calculation on the increased traffic on the supposition that the gold-field reserve, and the commonage, and the travelling stock reserve, will be thrown open? I am not placing much dependence upon that. Even if the line is constructed there is no certainty that they will be thrown open. There is a large country which can be taken up, apart from those areas. There are thousands and thousands of acres of land within an area of 30 miles from here, which would be snapped up very quickly by selectors, if it were thought the railway was going to be constructed.
1825. If they thought there was a probability of good land nearer to town being thrown open for selection, I suppose they would wait a little before taking it up 30 miles away? Yes, I think the reserve here is a small item, in comparison with the land which will be taken up if the railway is likely to be constructed.
1826. What is your opinion in reference to any future extension of the line from Gulgong outward. Do you think it would be desirable to make straight to Coonamble, and the intermediate places, or to connect with Dubbo? To connect with Dubbo.
1827. For what reason? For the reason that we could reach Bourke.
1828. Would you not, by going out to Coonamble, tap the Western pastoral district, whilst by going to Dubbo you might come into competition with others? There is, no doubt, a great deal to be said in favor of constructing the line direct to Coonamble, but that will depend very much on where they take the Northern line.

Mr. Christopher Young, sworn and further examined:—

Mr.  
C. Young.  
24 Mar., 1890.

1829. *Chairman.*] Did you go through the books at Mudgee station with the station master, and Mr. Harper? I had a rough look at them. I got statistics from the station master, Mr. Day.
1830. Do you recognise the quantity of goods referred to in Mr. Harper's report, as a correct statement of the produce which was recorded at Mudgee from the Gulgong district? Of course, Mr. Harper did not take in what is sent to the mills from Mudgee and here.
1831. I want to know whether the statement of Mr. Harper tallies with your knowledge of the books at the Mudgee station—of the produce coming to Mudgee from this district? I forget now.

Mr. Frederick William Russell, storekeeper, sworn and examined:—

Mr. F. W.  
Russell.  
24 Mar., 1890.

1832. *Mr. Hurley.*] What are you? A storekeeper.
1833. Have you been long in the district? About 18 years, though not in business for myself.
1834. You are aware of the agitation to induce the Government to construct a line to Gulgong? Yes.
1835. Are you identified with the league? Yes.
1836. Were any statistics worked up for the Railway Commissioners and the Government? Yes, they were worked up to show the produce of the town and district.
1837. As far as you know, were they correctly collected? Yes.
1838. Have you a knowledge of the country between here and Dubbo? I cannot say that I have, except with regard to the surroundings of Gulgong.
1839. Have you been identified with agriculture? As a storekeeper, I am mixed up with agriculture a good deal.

1840. You buy a quantity of produce? Not largely, but still I have a good deal to do with the farmers of the district.
1841. Can you say whether the farmers are in a flourishing condition, or whether they have a difficulty in carrying on their labours? As far as I know, they are in a very fair position—that is, when they have favourable seasons. Of course, last year they were not.
1842. Notwithstanding the difficulties they have to encounter in reaching market, they are in a fair and prosperous condition? I think so.
1843. But they are labouring under disadvantages, are they not? Yes, so far as a market is concerned.
1844. Where are your chief markets? We can hardly say we have any markets at all. We are obliged to take what we can get.
1845. Then you are labouring under the disadvantage of having no market? No access to a market. A farmer, having 500 or 600 acres suitable for wheat-growing, only puts in about 100 bushels of wheat, because he has no means of reaching a market to get rid of more. He is obliged to take the price ruling in the town.
1846. I suppose that the existence of the mountain barrier in the western district, the high freight charges, and other obstacles in reaching the station, handicap him against other portions of the country? Yes.
1847. If the construction of a railway through the Colo Valley is carried out with a light grade, facilities will be given to agriculturists in this district to reach market? Yes.
1848. And with such facilities the farmer would be likely to succeed in competing in markets outside? I think so. We have everything to compete with if we only had access to the markets.
1849. Have you considered the question of grades in regard to mountain lines? No. Of course, I have heard of them. I have heard that the Colo Valley line will suit the country well, and that the haulage will be easy.
1850. If freights were reduced one-third, would the farmers have much to grumble about in regard to the railways? Getting the grain to Sydney is the trouble. If the farmers could get their grain to Sydney at a price, it would no doubt suit them.
1851. You will have heard that a number of the mining community, having failed to obtain a livelihood by means of mining, are desirous of securing homes upon agricultural areas? Yes.
1852. Do you think if the lands termed commons and gold-field reserves are thrown open, miners will avail themselves of the opportunity of getting land to make a home? No doubt.
1853. Have you any knowledge of the lands in and around Gulgong? Yes.
1854. Are they suitable for agriculture? Yes.
1855. Have you any knowledge of the lands between here and Coonamble? No.
1856. What do you think is the most desirable project for the extension of the railway westward,—should it go to Dubbo, to a line intermediate between Werris Creek and Dubbo, or to Coonamble? I would say to Dubbo.
1857. You recognize that you would bring yourselves into competition with the western markets? It would give an outlet to our produce.
1858. Do you not recognize the fact that you have the Orange, the Molong, and the Wellington farmers to contend with? We should have to row in the same boat with them. We would all have to compete for the same trade.
1859. Is there any other industry likely to spring into existence by the construction of this railway? If the railway is constructed through this glorious country it will open up the land, and it will cause people to take up ground which is now locked up.
1860. As a general taxpayer, would you recommend the construction of the railway if it were to stop at Gulgong? No.
1861. You believe the extension beyond Gulgong is where the remuneration will come in? Yes.
1862. Have you any knowledge of the timber within a range of 10 or 15 miles? Most of the timber used in the construction of the Mudgee railway came from this district.
1863. There is abundance of good timber in the district? There is plenty of it left yet.
1864. In the event of the railway being constructed, you look forward to this town becoming a promising centre? There is no doubt about it. It will improve both Gulgong and Mudgee.
1865. *Mr. O'Sullivan.*] What kind of timber was used in the construction of the Mudgee railway? Various kinds—blue-gum, box, ironbark, &c.
1866. What distance was that timber drawn? 16 to 18 miles.
1867. How far down? As far as a place called Barney's Reef. That was where the principal timber was obtained.
1868. How far was it drawn down the line? It was drawn to Mudgee; I could not say how far down the line.
1869. What distance is it from Barney's Reef to Mudgee? About 40 miles north.
1870. Is there plenty more of that timber there? To the best of my belief, there is.
1871. You are aware of the probability of a very long line of railway being constructed from Nyngan to Cobar, Wilcannia, and Broken Hill? Yes.
1872. Do you think that that timber could be availed of for that line? I would not like to say.
1873. Do you think the construction of that line would further develop these timber resources? I could not say.
1874. How far is it from that timber district to Dubbo, or the nearest point on the Western line? 60 or 70 miles, if not more.
1875. Have you any market in Lithgow for the produce of this district? No.
1876. Nor Bathurst? No.
1877. *Mr. Humphrey.*] Do you send any wheat to Sydney? I do not.
1878. Do you know the cost of sending wheat from Gulgong to Sydney? From Gulgong to Mudgee it will cost 3d. or 4d. a bushel. I could not say what it will cost from Mudgee to Sydney, because I have not sent any myself.
1879. *Chairman.*] Who else sends wheat from here besides Mr. Young? Mr. Tuxford.

Mr.  
F. W. Russell.  
24 Mar., 1890.

Mr. John Tuxford, sworn and further examined :—

- Mr. J. Tuxford.  
24 Mar., 1890.
1880. *Mr. Humphery.*] Did you hear the evidence of Mr. Young as to the cost of sending wheat from Gulgong to Sydney? Yes.
1881. He stated it would cost about 7d. a bushel? Yes.
1882. Do you not send wheat to Sydney? I do.
1883. What does it cost you? I believe it costs about 7d. a bushel.
1884. *Chairman.*] From Gulgong? Yes.
1885. What proportion of that 7d. will be swallowed up between Gulgong and Mudgee? 2½d.
1886. That makes it 4½d. per bushel from Mudgee to Sydney? Yes; that is what I give, delivered from truck.

Mr. William Fletcher, miner, sworn and examined :—

- Mr. W. Fletcher.  
24 Mar., 1890.
1887. *Mr. O'Sullivan.*] You are a miner by calling? Yes.
1888. Are you a mining manager? No.
1889. I suppose you have been an alluvial miner for some time in this district? Yes.
1890. Were you here in the best days of the gold-fields? Yes.
1891. And you have remained here since? Yes.
1892. You are able to give an opinion as to the auriferous resources of the district? Yes.
1893. What do you think of the prospects of mining in this district? I think there are prospects of mining in deep alluvial ground in several parts of the field; also of reefing.
1894. What leads you and other miners to believe the prospects to be good? I am aware that, a number of years ago, an engine and plant were removed to another part of the district, which was bought because it was supposed to be a better claim. Payable gold was left in the old claim. It is now half a mile or a mile away from any of the claims. There are other parts too—the Star—which have been occupied by a Sydney syndicate for some time, and it has been locked up under the leasing system. That ground I believe to be payable as well.
1895. Is the Star in work? No; it is locked up.
1896. Which of these deep leads are in work? None, beyond a portion of the old Black Lead—that is, Scully's claim; and I almost believe it is idle too.
1897. Was Scully's claim being worked three years ago? Yes.
1898. Has it ceased to work? I think it is not working now, but I am not sure.
1899. What depth have they driven in the leads? I think about 170 feet, in Scully's claim; I think the Black Lead was pretty well exhausted.
1900. What indications justify you in believing these deep leads will eventually pay? The fact of gold having been obtained on the claim I alluded to, from which the machinery was removed for what was supposed to be a better spec. That claim had payable gold in it, and probably it is only the tail end of the Star, which has been locked up for a number of years.
1901. Were they not working at Canadian some time ago, with a view of going through the limestone? Yes.
1902. Did they succeed in getting any good gold that way? No, they did not. I have worked in that direction myself, and I find that the further you go down, the worse it gets. The gold becomes finer, and eventually it runs out altogether.
1903. That theory proved unsound then? Yes.
1904. Is there any deep sinking around Canadian or Home Rule? There may be around the Home Rule country, but I am not acquainted with it.
1905. Is there any alluvial at all in the neighbourhood? There are alluvial parties working out there. There is one party at a place called the Red Lead. They are working, not on a true bottom, but on a wood bottom. There is a wood roof, and a wood bottom, and the gold is between. It is a most singular thing.
1906. What do you mean by a wood bottom;—do you mean that it is petrified? It is not petrified. It is simply decayed wood, and that forms a bottom. If they could trace that upon a true bottom—a slate bottom—they would be likely to get more gold.
1907. Who are those parties who are working on the road a few miles out from Gulgong? There is a party working at Ford's Creek; I do not know what they are doing.
1908. You cannot say whether they are getting gold or not? I have heard that some of them were, but what it is I could not say. They said it was payable at first, but I have not heard since.
1909. I suppose this district has been thoroughly prospected? No; it has not. The reefs have not been much prospected; only partially.
1910. Do you think there is a chance of finding any more rich deposits on private land? I think so; on Mr. Rouse's land.
1911. He is not unwilling that miners should go there? No; as long as they pay him a substantial royalty—about one-fifth.
1912. You seem to look to the future of mining in the Deep Lead? Yes.
1913. Although, up to the present, you have not had anything very rich from the deep leads, or any sound indication that gold is there? Such a thing as £2 5s. a week was left in the claim I spoke of, away from any of the mining claims.
1914. *Mr. Hurley.*] What do you mean by the Star Lead being locked up? It has been locked up. It was held by Mr. Sutherland and a few more in Sydney.
1915. Has it been locked up for a number of years? It has been for four or five years.
1916. Has the matter been represented to the Warden, or to the Mining Department? The Mining Department has been written to year after year, I believe.
1917. Asking for its cancellation? Yes.
1918. The fact of it being locked up keeps a number of miners from prospecting? No doubt, it does.
1919. Do you think, if it were thrown open, and the leases cancelled, that it would be taken up? No doubt it would be worked.
1920. How do you account, seeing that such a large quantity of gold has been taken off this field, for so little being done in further prospecting? The fact is that people got rather too much of it. If they had got a little less gold they might have settled here; but they got too much, and went away and spent it at other places.
- 1921.

1921. Has not a large amount of money been spent in the district in prospecting the reefs? Not a great deal. The Red Hill was only partially prospected.
1922. Have you not had machinery, such as stamp-batteries, in various parts of the district? Yes.
1923. Have they not tended to the prospecting of the country? Some of the batteries used were worse than none at all.
1924. But still it is a fact that you have had batteries here which were eventually taken away? Yes.
1925. And they have not proved a success? They have principally earned their money, and dividends, by crushing cement wash-dirt and tailings.
1926. Have you any knowledge of the mineral resources of any other part of the district but Gulgong? Only Gulgong and the surrounding district.
1927. Have you been to Denison Town? No; but I know of it from hearsay.
1928. Have not companies been formed to secure outside capital in order to develop the district? Yes; but I think they have been put in the worst places possible.
1929. So that the public have been induced to go into speculations which were not likely to be remunerative? I have been on the gold-field from the beginning, and I would not have given 1d. for most of the speculations.
1930. They were called "wild cat" speculations? Yes; I was surprised that they could be floated.
1931. Then the public were gulled by the speculations placed on the market? Yes; and the best things were left untried.
1932. And that has been detrimental to the proper development of the district? Exactly so.
1933. Someone has done well out of them? No doubt of it; but harm has been done. For instance, if I wished to float a genuine thing, and required assistance from a syndicate, I could not obtain it, on account of the bogus affairs which have been floated in the past.
1934. You are aware that the Government renders assistance to those who are desirous of prospecting alluvial or reefing fields? Yes.
1935. What would best suit the mining community in regard to prospecting aid;—would you be better satisfied by having the money expended under a committee appointed in the town, or would you prefer to have it spent as at present—under the superintendence or direction of the Inspector of Mines and the Geological Surveyor? I should certainly be in favour of the expenditure of the money being supervised by a committee of practical men.
1936. Local men? Yes; I know a lot of money has been thrown away.
1937. Local men would be more likely to make more out of the money? Yes; knowing the district, we could spend it to advantage, and should not go to places which had been prospected, and which are not worth trying.
1938. At the present time the field is practically dead? Yes; and it will remain so until these leases are unlocked, and until capital is brought into the district to revive it again. There is no doubt there is plenty of gold here. The reefs have been neglected very much. I am told there is likely to be a large silver field in the Talbragar district.

Mr.  
W. Fletcher.  
24 Mar., 1890.

Harold D. Voss, Esq., bank manager, sworn and examined:—

1939. *Mr. Humphery.*] You are manager of the Bank of New South Wales? Yes.
1940. How long have you been in the district? Nearly seven years.
1941. Can you say whether the deposits of the bank have increased in the past five years? Yes, slightly.
1942. Has the number of your fixed deposits increased? Yes, slightly.
1943. Can you say whether the settlers around here are more prosperous now than they were five years ago? I think they are much about the same.
1944. Has there been any improvement in the district during the past five years? There has been more settlement.
1945. Do you know anything in regard to the railway under consideration;—do you know the district sufficiently well? Pretty well.
1946. You have heard the evidence which has been given as to the probable number of holders of agricultural areas likely to be served in the event of the railway from Mudgee to Gulgong being constructed? Yes.
1947. Do you confirm that evidence? I fully concur with that of Mr. Stear. I think his is the most correct.
1948. You think a large number of holders of small areas which have been cultivated, will be served by the railway? A very large number.
1949. Is a large quantity of wheat grown in this district? Yes.
1950. Do you think the estimate of the Railway Inspector as to the probable traffic between Gulgong and Mudgee is a fair one? I do not think I am in a position to tell you that.
1951. Will you look at Mr. Harper's statement;—do you think it is a fair estimate of the probable traffic, if constructed? I have nothing to do with the trucking of cattle.
1952. Have you any knowledge as to the extent of loading which passes through Gulgong? I know that an immense amount of wool passes through or near Gulgong to Mudgee.
1953. Do you think that would be carried by rail from Gulgong? Certainly.
1954. Do you think many cattle would be carried by railway? Yes; if the railway were extended from Mudgee outwards, a large quantity of cattle would be brought direct from Queensland.
1955. That is on the assumption that the railway would be connected with the Northern line? No; on the assumption that we should be nearer the Queensland border, and it would be handier to come down here for a market than to go to Dubbo.
1956. Then you think a market for Queensland stock would be established at Gulgong? No; I think they would be sent through here for Sydney.
1957. You are speaking of fat stock? Yes; and all kinds of stock which would probably come here for sale.
1958. You think it is possible that a market for stock would be established at Gulgong in the event of the line being brought here? Yes.
1959. Is there any market at Mudgee at present? Yes; there is a considerable market for store stock.
1960. The distance between Gulgong and Mudgee being only 18 or 19 miles, do you think there would be

H. D. Voss,  
Esq.  
24 Mar., 1890

- H. D. Voss, Esq.  
24 Mar., 1890.
- be any appreciable increase in the quantity of cattle which would be sent, in the event of the railway being brought to Gulgong? I think there would be an increase, but not to any great extent.
1961. Do you think a great number of sheep would be sent from Gulgong by rail? Yes.
1962. I suppose you have no idea of the quantity which travel from this district to Mudgee at the present time? There is a large quantity. Some mobs of 10,000 and 14,000 passed here within the last fortnight.
1963. On their way to Sydney? I could not say where they were going.
1964. You do not know whether they were travelling from here to be sent by rail? I could not say.
1965. *Mr. Hurley.*] Can you give any idea of the quantity of gold you receive from the district per month? Not a very large quantity. Very little gold is being obtained in the district now.
1966. But striking a contrast between the present, and the returns of ten or fifteen years ago, can you give any idea as to the quantity of gold you buy in a month? Not very well; because one parcel of 50 oz. would make all the difference—1,000 oz. a year.
1967. Am I right in anticipating that a large number of deeds are hypothecated with you from time to time in regard to arcas in the district? Yes.
1968. *Mr. O'Sullivan.*] Have you many bad debts in your business? No; I have not had a bad debt since I have been in Gulgong.
1969. Have you had to foreclose on any mortgages on any selections? Very few; only once. The majority of the selectors around here are in a good position, and I find that every man who has been able and willing to work has got on well and has improved his property.
1970. How many other banks are represented here? One; the Joint Stock.
1971. Was any other bank represented here? Yes; the Oriental Bank was represented, and it closed eight or nine years ago.
1972. Before the general break up of the Oriental Bank? Yes.
1973. These were the only three banks which ever did business here? Yes.
1974. The Oriental branch did not withdraw because of the general closing up, but because of the falling off in business here? Yes; they only did gold-buying, and as it fell off they closed the bank.

Mr. Richard Stear, sworn and further examined:—

- Mr. R. Stear.  
24 Mar., 1890.
1975. *Chairman.*] I understand you wish to make an explanation? Yes. The Railway Commissioners estimate that fifty trucks of hay and straw will be carried on the Gulgong and Mudgee line, if constructed. My idea is, that that amount will be increased to 500 trucks. I may state that fifty trucks represents 200 tons. One witness who has given evidence here has, this year, standing within his paddocks, within  $1\frac{1}{2}$  miles of Gulgong, nearly 300 tons of hay and straw.
1976. Would it pay him, if a line were constructed to Gulgong, to send it to Sydney? He would have to send it there, or to somewhere else, unless that amount was required for local consumption.
1977. That is the amount he has stacked this year? Yes. I mention it to show the absurdity of fifty trucks of hay only being likely to be sent from Gulgong to Mudgee. With reference to timber, a witness was asked a question as to where the timber for the Mudgee line came from. The Committee ought to be aware of the fact that there is a steam engine and saw-mill, 16 or 18 miles on the route of the surveyed line from here to Dubbo. That supplies Mudgee with timber—red-gum and ironbark.
1978. The timber for the Mudgee line came from the neighbourhood of the surveyed route to Dubbo? Yes; the whole of the timber which was put into the viaduct across the Mudgee River came from there.

Robert Heard, Esq., Mayor of Gulgong, sworn and examined:—

- R. Heard, Esq.  
24 Mar., 1890.
1979. *Chairman.*] You are Mayor of Gulgong? Yes.
1980. How long have you occupied that position? About fourteen months.
1981. How long have you been an alderman? About seven years.
1982. How long have you resided in the district? For the last nineteen years.
1983. Do you furnish a copy of a statement, which you have already furnished to the Government Statistician, as to the population, &c., of the Borough or Municipal District of Gulgong? Yes.
1984. To the best of your belief that statement is correct? Yes.
1985. What is the area of your municipal district? About 33 square miles.
1986. Do you still receive the Government endowment? We still receive the Government endowment of 5s. in the £. We also receive a special endowment.
1987. Have you any statement to make in reference to the proposed railway? I believe that if the railway were extended to Gulgong, and westward, it would ultimately prove a paying line.
1988. But not if it stops at Gulgong? I think not. There is no desire on the part of the people of Gulgong that the line should remain here.
1989. Do you think the line should be constructed direct to Coonamble, or to Dubbo? If it were constructed to cut the line at Dubbo, it would suit our purpose admirably. We would then have a market for produce in either Bourke or Coonamble.
1990. If the question is one of constructing a line giving you a connection with Dubbo, as against giving you a connection with Coonamble, pure and simple, which would you prefer? The best thing for the colony at large would be to extend the line direct to Coonamble.
1991. With the view of going further still? Yes; with the view of going right to the Queensland border.
1992. Has the surveyed line taken the best route between here and Mudgee? I am not acquainted with it. I have never been over it.
1993. You know the site of the proposed station at Gulgong, at the foot of the Magazine Hill;—do you consider it a suitable site for a terminus? I believe it would be about as suitable a place as you could have in Gulgong, unless the terminus were made at the junction of Medley and Herbert Streets, although I do not think sufficient level ground could be obtained there.
1994. Do you know that the engineers do not care for that site, as it means that they would have to dip down again when constructing a line outwards? I think the Magazine Hill terminus would suit all requirements.
1995. Is the land between here and the Magazine Hill likely to be flooded? No; the water does not remain there long. I have seen water on the ground there after heavy rain, but it soon drains off.
1996. There have been heavy rains lately? Yes.
1997. But no serious damage has been done? A good deal of damage has been done to the roads.

TUESDAY,

TUESDAY, 25 MARCH, 1890.

[The Sectional Committee met at the Court-house, Gulgong, at 11 a.m.]

Present:—

JACOB GARRARD, Esq. (CHAIRMAN).

THE HON. FREDERICK THOMAS HUMPHERY, | JOHN HURLEY, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.

The Sectional Committee further considered the proposed Railway from Mudgee to Gulgong.

Richard Rouse, Esq., sworn and examined:—

1998. *Mr. Humphery.*] You live at Guntawang? Yes.
1999. How many miles from Gulgong? About 4.
2000. Did you, at one time, represent the electorate of Mudgee in Parliament? Yes.
2001. How many acres of land do you own within a radius of 10 miles of Gulgong? About 10,000.
2002. Have you a leasehold area as well? None at all;—all freehold.
2003. What area have you under cultivation? About 700 acres.
2004. Under crop or artificial grasses? Artificial grasses, principally.
2005. How many acres do you put in crop? About 150.
2006. Principally wheat? Wheat and oats; grain of some sort. I principally grow for hay. I have a small quantity of wheat, but not much. I do not consider myself a wheat grower.
2007. Can you state the average yield per acre of the agricultural land for wheat? In anything like a fair season a moderate crop will yield 25 bushels to the acre,—that is within a radius of 20 miles of Gulgong.
2008. Would that be the average of the whole district? I think so, in a good season.
2009. What will the average be in ordinary seasons, taking one year with another? It might not be quite as much, but taking one year with another it will be nearly 20 bushels to the acre.
2010. Do you grow hay? A great deal.
2011. What is the average yield per acre? The hay I have grown generally yields about 2½ tons.
2012. Do you grow it for your own use? Yes.
2013. How many acres of land, included in your freehold area, are, in your opinion, fit for cultivation and crop growing? Nearly the whole of it.
2014. Have you rented any of it? No.
2015. Have you let it to tenants? No.
2016. Have you had offers from people willing to take your land for agricultural purposes? I have.
2017. What do you think would be a fair rental? That all depends. There is a difference between upland and river land. A portion of my estate embraces the Cudgegong River, which, of course, is equal to anything in Australia. The upland—the ordinary wheat-growing land—is of a different character altogether. People have offered to rent small farms from me, but I have never opened up negotiations with them in reference to rental. I am trying to work out my property on a different plan.
2018. What use do you make of the river land? For feeding stock. I have been feeding a good many sheep upon it of late years, and I have been a great horse breeder. At present, however, I am engaged on a scheme for turning the whole of my estate into an immense dairy farm, and with that object in view I have started a factory.
2019. Would it not be more profitable to let your river land to tenants for crop-growing? No. I am inducing people now to rent my land on the river, and to bring their cattle there, with a view to dairying. Otherwise I intend to put stock upon it myself to a considerable extent. In fact, I intend to make a dairy farm of the whole of the estate.
2020. What rent have you fixed upon for the land which will be required by those from whom you have been inviting applications? The lands I refer to are the lucerne fields. There is a difference between improved and unimproved land. The lucerne paddocks are worth from 15s. to £1 an acre; that is for dairying purposes.
2021. That is the improved land? Yes.
2022. When you speak of improved land, do you refer to land you have had under grass? Yes.
2023. Land that has been under the plough? Yes.
2024. What would the upland be worth? I do not know what it would be worth if it were clear. I have never turned my attention to it. I have always improved the better portion of the land with the view of growing lucerne. I could not say what the value of the upland would be in rental. At all events I should think any good farm ought to be worth 8s. or 10s. per acre, if it were well improved.
2025. But in its present constitution? That all depends.
2026. You say the whole of the land is suitable for agriculture and wheat growing? Yes.
2027. What would be a fair rental for it in its present state? I could not say.
2028. About how many acres would support a family? No man can very well make farming a success, unless he has 100 acres under cultivation.
2029. And you think 100 families could settle, and comfortably subsist upon your estate of 10,000 acres? Yes.
2030. What means of subsistence would they have if they could obtain land of that character—dairying or wheat growing? Growing crops, in conjunction with dairy farming.
2031. How many cattle would a farm of 100 acres carry? That all depends on the way in which it is cultivated. The paddocks with grasses on the river would carry nearly a beast to the acre, but it would take 5 or 6 acres of upland to do the same thing.
2032. How long has the factory been established on your estate? A few months.
2033. Do you receive the milk from the farmers around, and convert it into butter? I have only one supply, and I milk all my own cows.
2034. Then the farmers do not send in the milk to your factory and sell it there? They are too far away to do that. In addition, they have not the faintest conception of the advantage of it.
2035. What distance from your factory will the nearest land actually used for dairying purposes be? 4 or 5 miles.

R. Rouse,  
Esq.  
25 Mar., 1890.

2036.

- R. Rouse,  
Esq.  
25 Mar., 1890.
2036. Do you know the system pursued in the Illawarra district in regard to these factories? I cannot say that I do. I have been down to the coast to see some of the factories, but I am working my own upon my own ideas.
2037. You know there are a great many public factories and a great number of separators used by private farmers. The small farmers send in their milk to the factories, and receive 4d. or 5d. a gallon, and they share in the profits according to arrangement? Yes.
2038. Would not the co-operative system enable a dairying population to settle here? Yes.
2039. Do you think, from the results of your own experiments, that that would be more profitable than cultivating the land for wheat? Infinitely more.
2040. Have you a market for your butter at all times? We have the Sydney market, and the world besides. I see that they send butter from Sydney to London and all over the world.
2041. Do you send the butter you manufacture to Sydney? Yes; I am just raising enough to send to Sydney.
2042. What profit does it leave you in the summer? I have not sufficiently worked the matter out, but I am so satisfied with the results of my dairy farm that I intend to go in for it solely.
2043. You are satisfied that you can make more profitable use of the land by dairying than by using it for wheat production? I am positive of it; there is no comparison.
2044. If you used it for dairying purposes, would you then be prepared to let your land to small dairy farmers, or would you use the whole of it under your own management? I would sooner let it to dairy farmers, or, if opportunity offers, cut it up and dispose of it. My idea is that there is an immense amount of money to be made out of it. It only requires capital and labour to be brought together. People have not the faintest idea of the advantage of the system.
2045. Do you know the surveyed line of railway from Gulgong to Mudgee? Yes.
2046. Does that line pass through your land? Yes.
2047. For what length? One survey, I believe, goes straight through the middle of a portion of my estate for something over 2 miles.
2048. The land is yours on both sides of the line? Yes.
2049. Can you say, whether the line, as proposed, will serve the population in and around Gulgong? As far as coming to Gulgong is concerned, it would be the best line; but, if it is a question of going beyond Gulgong, it is not the best line.
2050. What deviation or alteration can you suggest which would better serve the district? By going straight past Guntawang, along the Cobbora-road. A line was surveyed, about a mile and a-half to the west of the proposed line. It went from the river, along the road, and across Reedy Creek, and passed Gulgong, about 3 miles to the west.
2051. What are your reasons for saying you think that would be a better line than the one proposed? Because it would be cheaper and shorter.
2052. That is from Mudgee to Coonamble? I know, as a matter of fact, that a survey has been made from Gulgong to Dubbo, to join the Werris Creek line; that is what I am alluding to.
2053. Then you think, if it should be proposed to extend the line in the direction of Dubbo, it would be better to pass about 3 miles to the west of Gulgong? Yes, on the line surveyed to Coonamble, past Gulgong.
2054. That is to the west of the township? Yes.
2055. Would it not be extremely inconvenient for the people of Gulgong to have to go 3 miles to the railway? I say that if the line is going to Gulgong direct, the route, as surveyed, is the best; but if the line is to be extended, the way I suggest is the best. Of course it goes through my property under any circumstances. In one instance it would go right through, and in the other it would keep along the road.
2056. Have you considered whether it would be desirable to extend the line to Dubbo, in preference to taking it to Coonamble direct? It is a case of "Hobson's choice." We are satisfied to be able to get to the Western line somehow.
2057. Do you know the country between Gulgong and Dubbo? Yes.
2058. Can you say whether much of it is suitable for agricultural settlement? Nearly the whole of it.
2059. Would the line be difficult to construct? No, it would be very easy, after leaving Gulgong.
2060. Do you know the land comprised in the reserve and in the common, close to Gulgong? Yes.
2061. About what extent is it? The acreage of the gold-field reserve is 14,000 or 15,000 acres.
2062. Can you say if it is suitable for agricultural settlement? Most of it is.
2063. Do you know anything of the farming population around Gulgong, in the direction of Canadian, Home Rule, and Tallewang? Yes.
2064. About how many farmers are there cultivating their holdings? I could not tell you; I have no business with them; but I know there are a great many.
2065. There are a great number? Yes; a great many.
2066. Do you know whether they use their land for grazing, as well as for wheat production? They use some of it, but this common question has been very much against their interests. In consequence of this unnecessary area of commonage, they are pretty well confined to their farms.
2067. Can you say whether the farming population are fairly prosperous? I consider they are. Some of them are excessively prosperous. Those who are in poverty have themselves to blame.
2068. The industrious portion of the population is in fairly good circumstances? Some of them are, I consider, in exceptionally good circumstances.
2069. *Mr. Hurley.*] Whilst you were the representative of Mudgee, were you not a strong advocate for the construction of a line from Wallerawang to Mudgee? I was.
2070. Did you advocate the extension of the line beyond Mudgee at that time? I did.
2071. Where did you consider it should be extended to? I considered it should get to the Western line somehow or other. I always considered that the natural features of the country indicated that the line to Bourke should have come this way, but as a line was being constructed to the west, my advocacy was to join the Mudgee line to the Western line. We want a market outwards, if we can get it. I say without fear of contradiction, and it can be proved by statistics, that there is no district in the Australian colonies better adapted for agriculture than the Mudgee district. The Western is a better market than the Northern market, because we would have less competition. In addition, the line would be easier of construction. In any case, all that the people in this district desire is that the line should join the Dubbo and Werris Creek line.

R.  
Rouse, Esq.  
25 Mar., 1890.

2072-3. You know the land between Werris Creek and Dubbo? I know this end of it.

2074. You are conversant with the land between this and Coonamble? Yes.

2075. And Walgett? I have not been to Walgett much, but I know most of the country between here and Coonamble.

2076. Do you think, if the railway were constructed to Walgett, Coonamble, or any other place westward, it would be likely to lead to settlement, say on the land for a distance of 50 miles beyond here? I believe so.

2077. So that the construction of a railway anywhere westward, *via* Gulgong, would probably lead to a large increase of settlement? Most certainly it would.

2078. And the land is suitable for agriculture? Most distinctly.

2079. Will the properties and holdings in Gulgong, whether large or small, have an increased value given to them by the construction of the proposed railway? Certainly.

2080. In view of the advantages gained by private holders, are you prepared, as a landholder, to concede anything to the Government for the advantages accruing to your estate by the construction of a Government railway? If the Government made the line of railway where it was surveyed for Coonamble—that is, to go along the main road, which is the easiest and best route, and passing through about 3 miles of my property, I should be perfectly satisfied to make the Government a present of the land they wanted, provided they fenced it off. I have always contended that if the Government do not interfere with a man's best interests, by destroying his land, and if they improve his property, he is entitled to nothing more than what the land was worth before the railway was constructed. The railway, if constructed to Gulgong, will cut a valuable piece of my ground in half. I am perfectly certain that for cheapness, and everything else, the line lower down and nearer the river, is infinitely better.

2081. Do you not think that the survey of that line is to meet a pressure which was being brought to bear by political supporters of the Government for the time being, and also the pressure brought to bear by the Railway League of this place? With a view to what?

2082. The construction of a line direct to Gulgong. Being an old politician, you are aware that railway surveys are sometimes carried out through the pressure of a township. Representations by constituents sometimes induce members to advise the Government to carry out a certain survey. It does not necessarily follow that the line will be constructed according to that survey? No.

2083. In view of your proposed development of the butter manufacturing industry, you will necessarily require a population in order to create a market? Certainly.

2084. And you believe a market is likely to be created west, more than east? I do. The special value of our railway would be in times of drought.

2085. Therefore, it is from no selfish motive that you recommend the construction of a railway by a different route, in lieu of the one under consideration from Mudgee to Gulgong? Not a bit. I only desire to see the best interests of the district advanced. Being a large property holder, I naturally desire to see the place go ahead. I feel, after all the years I have worked and laboured here, with others, that it is about time some value could be placed upon our property. There can be no value placed upon it unless it can be settled upon. The idea I have in view is to create an industry which will force itself upon the people, so that if I or my family wish to dispose of the estate, we can do so. I am not so wrapped up in New South Wales as to want to live here for ever.

2086. You are aware that the advocates of the line at Mudgee and here do not necessarily ask that it should be extended to Gulgong solely, but that it should be extended towards the west? I know the feeling in regard to the latter. A railway to stop here would be of no use. I know there is a certain amount of feeling and jealousy between Mudgee and Gulgong. For the size of the place, this little town is in an infinitely more prosperous condition than Mudgee. There is any quantity of land around here for settlement, and if the common arrangements can be broken up, a population will settle down, no matter whether the line stops here or goes on to Dubbo. This place must go ahead, because there is an immense amount of unalienated land in and around Mudgee. It is all large estates, and is likely to remain so. The Mudgee people do not like the idea of a terminus at Gulgong. Personally, I do not care which way the line runs, so long as it is extended. With regard to my allusion to the line going purely to the westward, it is simply a matter of £ s. d. I believe it would make a difference of £40,000 or £50,000 in the construction of a line going down there, and coming up here.

2087. You are looking forward to future settlement in connection with the extension of the line south-west, and you consider that the detour recommended now is not necessary? I do not think it is, because all the country skirting on the supposed line to Dubbo, is most valuable. If the Government took the line the other way they would be put to little expense, so far as private property holders are concerned.

2088. Therefore you would consider that a branch line, from a line extending westwards to Coonamble or Walgett, would be quite sufficient to meet the requirements of this place? I think so. I do not think the line need necessarily go through this town. You have to get up here about 300 feet, and then down again, across the Reedy Creek. If the line passes Gulgong, it will traverse for miles and miles a level piece of ground. There will be less expense to the Government in purchasing from private property holders. You have to get into Gulgong through private property, and out of it as well. The line, as surveyed, cuts through a piece of ground of about 1,000 acres, on the other side of the town, belonging to a relative of mine. I speak from a patriotic point of view when I say that it is a wasteful expenditure of money to bring the line here.

2089. Are we to understand that if the line takes a direct course, and does not take the detour to Gulgong, you are prepared to concede the land necessary for the construction of the line to that town? I am; provided the Government fences it.

2090. You have estimated that, upon certain pieces of land upon which you grow artificial grasses, you would require a rental of 20s. per acre per annum, and your estimate for the wheat-growing lands is from 8s. to 10s. per acre;—what do you think would be a fair value for the Crown to ask for the lands termed the gold-field reserve? Of course, immediately in and around the town, a special price could be put upon it; but so far as the other portions of the land are concerned, the sooner it is settled under the present Land Act the better. What we want on the ground is population.

2091. What value would you place upon improved land within 5 miles of Gulgong? Do you mean the land which has been alienated—the upland?

2092. Yes? I should think it is worth about £5 an acre.

2093. You think that the throwing open of the common and reserve for the purpose of affording agriculturalists the right of securing a homestead would lead to a large settlement? Yes; I am certain it would.

2094.

- R. Rouse, Esq.  
25 Mar., 1890.
2094. *Mr. O'Sullivan.*] I understood you to say that if your scheme of converting your property into a dairy-farm is carried out, your property will carry about 100 families? Yes.
2095. Therefore, that will be a considerable addition to the population of the district? Yes.
2096. You are aware that the town of Gulgong is the natural trade centre for the farmers and graziers of this and surrounding districts? Yes.
2097. Would it be right to take a railway 3 miles away from them—from their natural trade centre—even though it would cost a little less? I think the Gulgong people are entitled to a railway. I am unprejudiced as to the question as to which is the cheapest way to take it, but most certainly Gulgong is entitled to a railway, or to railway communication—not that I think it makes much difference whether the railway is in the town or a little way out of it.
2098. You know that the Government are building a tramway from the station to Yass, simply because they made a mistake in leaving the station 3 miles out of the town—they are undoing a mistake there; and what you would suggest in regard to Gulgong would create a similar mistake? I do not care myself what course is taken. It will benefit me just as much one way as the other.
2099. I understand you only to be swayed in giving your opinion in view of the interest of the country? Yes.
2100. You think it would be more advantageous to construct the line 3 miles from the town of Gulgong, because it would be constructed £40,000 cheaper, and would be more direct for the extension of the line to Coonamble? Yes.
2101. Do you think that cheapness is the only matter which the Government should consider in constructing a line? That is a matter for the Government to determine themselves. If the Government have the money, and intend to spend it, well and good. Of course the Government have a certain amount of public land in the district. I wish it to be understood that I am not saying what I have to say with a view of getting the railway close to my door, because I would infinitely sooner that it did not pass it at all. If the railway were taken through my rich flats, I should require a large sum of money to compensate me; but if it does not interfere any more than an ordinary road does with a man's estate, I should only be entitled to small compensation.
2102. I understand that whichever way the railway goes, it will go through your property; therefore, it will benefit you whichever way it goes? Yes. I want to see a railway to Gulgong, but I want to see it carried on further. A railway to Gulgong alone would not be worth 2d. to the people here, because the matter of carriage between here and Mudgee is not worth talking about. There is a feeling in Mudgee against this place, because Nature has placed Gulgong in an infinitely better position than Mudgee. Wherever the railway goes to, Gulgong will go ahead.
2103. That being so, is it not essential that this thriving and prosperous town should be served by a railway? Certainly.
2104. Therefore it might be more conducive to the national interest, apart from the question of cheapness, to run the railway through Gulgong? Certainly.
2105. Supposing the railway taps a line between Dubbo and Werris Creek, and by so doing gives you access to the western as well as the north-western markets, and does not go to Coonamble, do you think it would be better to do that than to tap the town of Gulgong? I still think the idea I favour is the best.
2106. Even if the railway stops at the connecting line between Dubbo and Werris Creek? Yes; the more you get to the left the closer you get to another line.
2107. You expect an influx of about 100 families? No; I say the estate is capable of bearing that number. I have only established a small industry, which I am doing my best to stuff into the ignorant people of this district, for their own advantage. I am certain farming can be carried on in conjunction with dairy farming, if they will only take it up.
2108. If your anticipations are realised, and the common and reserves are thrown open for settlement, Gulgong must become an important trade centre for agriculturists, dairy farmers, and graziers? Certainly.
2109. It is essential, then, that the line should touch this important centre in going out westwards? Certainly.
2110. What do you anticipate will be the return on land carrying a beast to 2 acres? I think that, to any man who will take care of his cattle, a dairy cow of any good at all is worth £5 a year.
2111. You are aware that on the south coast, where the land carries one beast to the acre, £10 per annum is realised? Yes.
2112. In mentioning £5 you have placed the amount within the mark? I calculate it in regard to upland. I am quite certain of the value of the Cudgegong River. It is nearly all alienated. It is as good for dairy purposes as the best in the country. Of course we have to deal with a large area of upland country; and I say that every cow is worth £5 a year to any man who will keep his cattle well, and who will employ his family in the business.
2113. I suppose, when your dairy scheme is in full operation, this is likely to become a great dairying district? I am certain of it.
2114. Because it would be more advantageous to follow dairying than cultivating? They would amalgamate the two. I calculate, when it comes to a question of having to feed cows, that all the stuff they can raise to feed them is worth £5 or £6 a ton, and butter would be worth 1s. 6d. a lb. If I established a dairy, and I was in a good position, I should like to see a drought. That is when I should make money.
2115. And you would succeed when other people were in distress? Yes.
2116. *Chairman.*] Do you know the survey which has been made from Gulgong to Wellington? Yes.
2117. Do you think it is justifiable or a waste of money? It is a ridiculous waste of money.

Harold D. Voss, Esq., sworn and further examined:—

- H. D. Voss, Esq.  
25 Mar., 1890.
2118. *Chairman.*] I understand you desire to make some addition to your previous evidence? Yes. Mr. Hurley asked me the question, "Are there many deeds hypothecated at the bank here," and I said "yes," meaning, of course, that if we had not our deeds hypothecated here we could not do business here. The very fact of our doing a certain amount of business in that way would give the impression that the district was very prosperous. I think, as a matter of fact, that nearly the whole of our deposits are farmers deposits, and nearly the whole of our advances have been made for the purpose of improving farmers properties, all of them more or less prosperous. 2119.

2119. *Mr. Hurley.*] But you recognize the fact that the hypothecating of deeds would not show the poverty of the people? Exactly; but people outside do not recognize that fact. A few knowing people have remarked outside that I had insinuated that the whole district was insolvent.
2120. A man's greatest success may be at a time when he is under an indebtedness to the bank? He may be more successful than the man who owes nothing.
2121. You have heard some of the evidence in regard to the value of land in the district;—can you in any way corroborate the statement made as to improved land being worth £10 an acre? I think land in the immediate vicinity of Gulgong would be worth from £8 to £10 an acre.
2122. And if the areas in the gold-field reserve or commonage were thrown open, a high price might be placed upon them? I do not know. They are not improved.
2123. But what ought improved land, suitable for agriculture, to realize? I could not say exactly.
2124. £3, £4, or £5 per acre? I think it ought to be worth £3 or £4 per acre.
2125. And improved land would, as represented by others, be worth £10 per acre? Yes, around Gulgong; I have known it to be sold within a quarter of a mile of Gulgong for as much as that.
2126. I saw an advertisement in the local paper of Saturday, 22nd March, in reference to a sale by the mortgagee of some land known as Michael Hickey's farm;—am I right in the information I have received to the effect that that land had only a reserve upon it of £3 to £4 an acre? I believe so.
2127. Is it improved land? Partially so.
2128. Is your bank the mortgagees? Yes.
2129. There was only a reserve of between £3 and £4 an acre upon the land;—how is it that it is not sought after? There are a good many reasons. In the first place, only a portion of it is fenced. Part of it is in selections. It is a very old selection, twenty or thirty years under cultivation. I think there was nobody present to buy. They thought there would be a heavy reserve upon it.
2130. Does this not indicate that there are no persons in the district anxious to secure land for agricultural purposes? I do not think so.
2131. Is that not the inference to be drawn? I do not think so.
2132. Are you prepared to dispose of this land now at anything like £4 an acre? Yes.
2133. Will you accept a buyer at that rate? If you will give me £4 an acre I will accept it.
2134. *Mr. Humphrey.*] What number of farmers have you in your books? Over 200.
2135. They keep their accounts with you? Yes.

H. D. Voss,  
Esq.  
25 Mar., 1890.

Joseph F. Bayliss, Esq., station manager, sworn and examined:—

2136. *Mr. Hurley.*] Where do you reside? At Tuckland's station, near Cobbora.
2137. Are you a land-owner? No; I am manager of a station. It is a sheep and cattle station.
2138. What distance is it from Gulgong? To this end of the station it is about 20 miles.
2139. Where is your market for stock? Mudgee chiefly, and Sydney.
2140. Do you truck your sheep and cattle from Mudgee to Sydney? Yes.
2141. Would the construction of a railway beyond Gulgong, towards Coonamble, be of advantage to your station? Yes.
2142. You would utilize the railway for the conveyance of stock to market direct from the station? Yes.
2143. Do you send a large quantity of wool to Sydney? Yes.
2144. Can you give an idea as to the number of bales or their weight? Last year we sent something like 200 bales.
2145. What quantity of stock did you send? About 100 head of bullocks and 1,000 sheep. We have disposed of some in and around the district.
2146. What is the area of your station? 40,000 acres.
2147. How much of freehold? About 3,000 acres.
2148. Have there been many selectors on your station? Yes; all the resumed area available for agricultural purposes has been taken up.
2149. Have you carried on any agriculture on the station? Only a small portion.
2150. Has it been successful? Yes.
2151. Is there plenty of water on the area you hold under freehold? Yes; but dams have to be constructed. Water can be obtained by sinking about 14 feet. By doing that we had permanent water during the drought.
2152. So that there is everything to induce an agricultural settlement, in the event of means of reaching a market being given? Yes.
2153. *Mr. O'Sullivan.*] Your station is in the Central Division? Yes.
2154. Are all the resumed areas about there settled? The great portion of them are.
2155. As the leasehold areas are now locked up for five years extra, it will be ten years before any more are open for selection? Yes.
2156. So that there will not be much room out there for future selections? Not until the end of the ten years.

J. F. Bayliss,  
Esq.  
25 Mar., 1890.

Mr. Frederick Taylor, blacksmith, sworn and examined:—

2157. *Mr. O'Sullivan.*] Where do you live? At Mundooran.
2158. How far is that from Gulgong? About 55 miles.
2159. Are you always in the habit of bringing your produce into Gulgong? Not always.
2160. Where else do you go? We look towards Coonamble, as much as possible, for our market.
2161. What do you produce? Nothing at present. I am a blacksmith, but I have been carrying on farming.
2162. Then you are not a farmer at all in the full sense of the term? No; I cultivate a little—about 15 or 16 acres.
2163. For your own accommodation? Chiefly.
2164. Where do the people of Mundooran go for their stores? Gulgong and Mudgee. They send to Sydney, too. I was in the habit of sending to Sydney for my goods.
2165. How did you get your goods? I used to get them from Sydney to Mudgee, and then have them carried out by teams.
2166. So that Mudgee and Gulgong is the natural route for you for your traffic? Yes.

Mr. F. Taylor.  
25 Mar., 1890.

2167.

- Mr. F. Taylor. 2167. Is that the case with all the settlers around Mundooran? Yes, within a certain radius. When you get further out, you find they go to Dubbo, because they are much nearer and have a better road.
- 25 Mar., 1890. 2168. Is much farming carried on out there? Yes, a good deal.
- 2169-70. In wheat? Yes; wheat, hay, and corn. There is not so much corn grown, because there is no market for it, excepting at Coonamble; and there is not sufficient consumption in the Coonamble district to warrant much to be grown.
2171. What do you think is the area of the wheat cultivation? Within 5 miles of Mundooran, from 2,000 to 3,000 acres.
2172. Have there been many new settlers out there lately? Not a great many. Of course people in that part of the country find it is of very little use growing grain, as they have no market. One year I grew 100 tons of hay, and cut it for chaff. I sent part of it to Coonamble, and sold parts of it in the neighbourhood. My wheat I sent to Mudgee. I had to pay 15d. a bushel to cart it to Mudgee.
2173. What did you get for it in Mudgee? 3s. 3d. for part of it, and 3s. 9d. for the other part.
2174. Would it pay you to send your wheat in from Mundooran to Gulgong, if a railway were constructed to Gulgong? Yes.
2175. You think wheat growing at Mundooran would not be a great success? It would be a success, provided there were some way of getting rid of it. Within the last three years a mill has been erected there. Previous to that, some of the farmers only grew about 100 to 200 bushels of wheat, and this year they have grown about 1,000 or 1,500 bushels. The consequence is that the mill cannot make use of all the wheat, and they are compelled to carry it away, paying as much as 10d. and 1s. a bushel to have it taken to Coonabarabran for disposal.
2176. What do they do with the flour ground at Mundooran? They send it to Coonamble, and supply the neighbourhood and district, Walgett, and so on.
2177. So that if a railway were taken out that way, they would not be very great patrons of it? They would be likely to become so, because instead of a man growing 500 bushels, as he does now, he would grow 2,000 bags. The land in that part of the country, on the Castlereagh, and through the Warranbungle Mountains, is mostly fitted for it.
2178. You think they would go in for a more extended cultivation? By far. Several settlers have come there within the last two or three years from Victoria. When they came there they spoke of going into wheat growing largely; but when they got one season's produce on hand they found they had no market. They were, therefore, compelled to reduce their growing to smaller quantities—to what they could get rid of.
2179. What size were the holdings out there usually? From 40 acres to about 640 acres.
2180. But you could take up 2,560 acres? No.
2181. You are in the Central Division, are you not? Yes.
2182. You can, by law, take up 2,560 acres? Yes, *bona-fide*.
2183. But a man could not possibly live on 40 acres out at Mundooran? Not in wheat or corn growing.
2184. I suppose the 40-acre holders are shearers, or men working on the roads, or engaged in fencing? Yes.
2185. Are there any resumed areas occupied there? No.
2186. Is there ample room for settlement out there, even though the leasehold areas will not be thrown open for ten years? Yes; there is plenty of land in the resumed areas. A large amount of land has been taken up towards the mountains.
2187. *Mr. Humphery.*] What is paid for carriage between Mundooran and Coonamble? I have paid 4s., 3s., and 3s. 6d. 3s. is the lowest I have ever paid, and that was with carriers who were going on to Coonamble about the time of the wool season. I have paid 4s. 6d. for chaff.
2188. For what quantity? Per cwt. I have paid from £3 to £4 per ton. I would like to say, with reference to a statement which has been made as to the quantity of stock trucked at Mudgee, that an investigation was recently held at Mundooran in regard to a bridge. Mr. Gilliatt came up and took evidence in reference to the disputed bridge. We collected the signatures of sheep-holders in the neighbourhood, on the western side of the Warranbungle Mountains. Something like 200,000 or 300,000 sheep have crossed the river at Mundooran backwards and forwards within twelve months.

William R. Bentzen, Esq., bank manager, sworn and examined:—

- W. R. Bentzen, Esq.  
5 Mar., 1890
2189. *Mr. Humphery.*] What is your position? Manager of the Joint Stock Bank.
2190. How many years have you been in this district? Two.
2191. Have you any objection to state the number of farmers transacting business with your bank? Between fifty and sixty.
2192. *Mr. Hurley.*] Can you say whether the farmers are in a healthy financial position or otherwise? They are in a very good position.
2193. In a very fair prosperous position? Yes. I may add that the rents for this month, in this district, including Cassilis, and from the selectors out Tallewang way, will amount to about £1,000.
2194. They have no difficulty in finding their rents? No.
2195. Can you say whether your deposits from the farming population have increased during the last few years? Yes.
2196. Can you give us an idea as to what percentage of increase there has been? No; I could not.
2197. Have they doubled themselves? I do not suppose they have.
2198. But they are on the increase? Yes.
2199. *Chairman.*] What quantity of gold have you bought within the last twelve months? About 1,000 oz.
2200. Where does it come from principally? Home Rule.
2201. Is the largest portion from Home Rule? No; Gulgong, and the surrounding district. We buy it in small quantities all over the district.

Mr.

Mr. Alfred Cross, common ranger, sworn and examined :—

Mr. A. Cross.  
25 Mar., 1890.

2202. *Mr. Hurley.*] What are you? Common ranger.  
 2203. Have you been long in the district? Nineteen years.  
 2204. What is the acreage of the common? 36,000 acres.  
 2205. The common, of course, is used by persons living in Gulgong and district? Yes.  
 2206. Have you any idea as to the suitability of land for agriculture? Yes.  
 2207. Is it adapted for agriculture? Yes; most of it is very good land.  
 2208. Have you heard of any persons desirous of securing homesteads upon it? Any amount.  
 2209. You believe they would seize the opportunity of securing the land for making homes upon it? Yes.  
 2210. Have you any knowledge of the district beyond Gulgong? Not a great deal.  
 2211. Have you been out to Coonamble or Walgett? Yes; but it is many years ago.  
 2212. Have you any knowledge of the gold-field reserve? Yes; parts of it.  
 2213. Can you say whether the soil there is adapted for agriculture? Yes.  
 2214. A large area? Yes.  
 2215. One-third of it? About that, or a little more.  
 2216. Have you been engaged in mining at all? A little.  
 2217. Have you heard that the gold-field reserve is likely to prove beneficial to the mining class? No; but I have heard a little rumour about silver mines out at Denison Town.  
 2218. There is no probability of the immediate opening up of any fresh mines on the gold-field reserve? I am not aware of it.  
 2219. Can you say whether a railway constructed to the west *via* Gulgong would prove productive to the people? I think it would.  
 2220. It would give an impetus to farming? Yes.  
 2221. It would open up new markets, and would be likely to lead to increased population and the development of various industries? Yes.  
 2222. Can you give an idea as to the quantity of stock on the common? Between 800 and 900 head.  
 2223. Do you include horses, cows, and goats? I do not include the goats, but horses, sheep, and cattle.  
 2224. *Chairman.*] I understood you to say there are 36,000 acres in the common? Yes. I wish to make a remark in reference to the number of travelling stock passing over the common, bound for Sydney.  
 2225. Do you make a charge upon the travelling stock passing through? No.  
 2226. Do you take an account of the number which pass over? Yes.  
 2227. What number pass there in twelve months? In 1887, nearly 200,000 sheep and cattle passed.  
 2228. How many passed in 1889? I have no account.  
 2229. Why did you not keep an account for other years? It was simply because I had to furnish the Trustees with a report. After I had supplied them with a report for some years, it appeared to me to be unnecessary, and I did not continue it.  
 2230. *Mr. Humphery.*] For how many years did you keep the record? About three years.  
 2231. What number of stock passed during 1885 and 1886? I have misplaced my book. I could only find the record for 1887.  
 2232. Would it be greater or less during those years? About the same—about 200,000 each year.  
 2233. Were they bound for the Sydney market? Not all.  
 2234. Could you tell us whether they were put into railway trucks at Mudgee, or whether they went by road? Most of them were trucked at Mudgee.  
 2235. How do you know? From what the drovers said.  
 2236. The greater portion were trucked there? About one-third. The rest were trucked at Rylstone, Wallerawang, and other places.  
 2237. Do you think those which were trucked at Mudgee would have been trucked at Gulgong if the railway had been constructed? Yes.

Mr. James Curran, cordial manufacturer, sworn and examined :—

Mr.  
J. Curran.  
25 Mar., 1890.

2238. *Mr. O'Sullivan.*] What are you? I keep a cordial factory and a farm.  
 2239. Where? Between here and Springfield.  
 2240. How many acres have you? 200 in one paddock—300 altogether.  
 2241. Do you cultivate largely? I used to do so; but have not done much last year.  
 2242. Why? On account of the high rate of carriage to Mudgee.  
 2243. What did you grow? Wheat and hay.  
 2244. Which is your market? Either here or Mudgee.  
 2245. I suppose you would look for your market to the west if a railway were constructed out there? Yes.  
 2246. What do you average per acre in a good season? This year I got 30 bushels.  
 2247. How many acres did you cultivate? About 30. I cut 5 or 6 acres for hay, and I have 24 acres left for wheat.  
 2248. And that yielded 30 bushels per acre? I got 195 bags of wheat from it.  
 2249. Is your land better than the ordinary run of land about here? About the same.  
 2250. You think that is what good land would produce in this district in fair seasons? I believe it would.  
 2251. Have you sold your wheat yet? Yes.  
 2252. What did you get for it? 2s. 10d.  
 2253. In Gulgong? Yes; I have got about 100 acres cleared and ready for wheat, but the market is low, and in consequence of the high carriage to Mudgee I will wait until I get a better market.  
 2254. *Mr. Hurley.*] Where do you carry on your trade? In the town.  
 2255. Do you do a large trade? Middling. I used to do a large trade.  
 2256. Do you employ many men? Two or three; it depends on business.  
 2257. *Chairman.*] Are you an original selector. Did you take up the land originally? Yes; between here and Springfield.

Mr.

Mr. Thomas Frame Fletcher, mining engineer, sworn and examined :—

- Mr. T. F. Fletcher.  
25 Mar., 1890.
2258. *Mr. Hurley.*] What is your occupation? Mining engineer.
2259. Have you been long in the district? Eight years.
2260. Are you in a position to tell the Committee anything concerning the mining industry? I have formed a high opinion of the future of this place in regard to the working of the deep leads. I have been to London twice, and I have succeeded in inducing the English mining people to try this place in a straightforward manner. At the present time I am representing a syndicate, who have underwritten a company in London, with a capital of £17,500. We have now laid out close on £3,000. I have a considerable amount of money under my control in the bank.
2261. Have you expended £3,000 in the Gulgong district? About £2,500 up to date.
2262. Where? In Rouse's paddock. I took home a lease of 500 acres?
2263. Of reef? No, alluvial ground. My object is to explore the deep ground—the extension of those reefs which have been so rich at the source.
2264. Can you say in what way the mining interests of this district will be stimulated or improved by the construction of the proposed railway? It will give facilities for traffic. If I had been, when in London, in a position to say that there was a railway to the place, people would have listened to me more freely.
2265. It would only have been useful to you in connection with any representations you might have made to people desirous of investing? It would give increased facilities for mining, and would enable machinery and material, &c., to be conveyed. There are 1,750 acres of this district leased in my name, in London, and we are looking forward to employing about 1,000 men very soon.
2266. What amount do you think it is probable you will expend in this district? The capital I have for this one lease is £17,500.
2267. How many men do you employ? Only twelve at present. I am putting in machinery. At the end of the week I shall go into shafts and employ twenty men.
2268. Have you purchased the machinery? Yes.
2269. Has it been delivered to you? Yes.
2270. You have confidence in the future of this district? I have great confidence, and I have gone for it straight. I need not tell you what Mr. Wilkinson and Mr. Slee said in their Blue Book. Backed up by that I have succeeded in raising money in London. I have played entirely from my own bat, and have had nothing to do with Sydney or Melbourne people.
2271. Do you not think you are favourably situated in comparison with other fields in the country, for reaching market or obtaining machinery? Because one district is badly off, there is no reason why another should be.
2272. Are you not better situated than any other gold-field in the country for getting your machinery? Possibly.
2273. You have a good road nearly all the distance to the mine? Of course the freight would be lower by rail than otherwise.
2274. Can you point out a gold-field in the country which is better situated for reaching market than the one you represent? No.
2275. Therefore, in the matter of access to market, and obtaining machinery, you stand in a better position than any other place in the country? Yes; all the better for Gulgong. All we want is cheaper transit, and facility of intercourse.
2276. But you do not deal with any market? We are looking forward to importing a large amount of machinery. This matter is not altogether in one nest. These deep leads are branching in various directions. There are now three companies formed at home. I am revealing my hand to a certain extent, but if the affair goes ahead, there is no reason why we should not float more. A great deal depends on the success of the first, but in the meantime the capital is subscribed.
2277. You are not selfish in character? Not more than is general.
2278. Is the country of a virgin character? Entirely, and through basalt.
2279. So that you are merely speaking theoretically in regard to probable developments? Just as theoretically as men like Mr. Slee and Mr. Wilkinson. I have been mining for thirty years.
2280. But you have not proved the country? Yes, we have. We have gold at both ends, and the supposition is, that there is gold in the middle. I believe the connecting link is in the middle.
2281. You generally find "where it is, there it is"? Not here.
2282. Have you any idea how much gold has been taken out of this district—can you tell us? We have had upwards of 18 tons weight of alluvial gold, certified by the banks and the escort returns.
2283. Do you look upon the district as having a greater mining future before it than it has had in the past? Yes. It will require capital and combination. It will be wages to the men, and success or heavy loss to the capitalists.
2284. You employ eight men on 1,700 acres at present? No, I have eight men working on one lease—carpenters and engineers, who are finishing work. We have sunk a shaft through basalt, at an expense of £1,000. Whilst sinking I had seventeen men working.
2285. How is this land held? Freehold property from Mr. George Rouse, of Guntawang. Then I have leases, taken from the Government, of 100 acres.
2286. Do you look upon yourself as a land monopolist? No; I want to explore the country. It is a straightforward trial, and I believe we shall get our money back with profit, and that it will employ labour.
2287. What is the class of machinery you have now? Pumping, winding, and driving machinery,—the ordinary alluvial mining machinery.
2288. Are you likely to give employment to some hundreds of people within the course of the next four months? In the course of the next six months I may have fifty men in one place and fifty in another. The areas I have secured are miles apart.
2289. *Mr. O'Sullivan.*] What indications have you had that you are successful? Because I am close to where the last gold was obtained, and because of the geological configuration of the ground. The out-crop of the basalt shows the indications.
2290. Are these deep leads anything like the deep leads in Victoria? Yes, partly. Ballarat halted for a time, after being successful, and then they worked favourably under the basalt.
2291. Are you alluding now to the Baldanabin? I am speaking generally.

2292. After years of hard work they proved great successes? Yes.

2293. And paid handsomely? Yes.

2294. And you think you have a similar country, which is likely to have a similar result? It is upon that ground that the London people are finding all this capital.

Mr.  
T. F. Fletcher.  
25 Mar., 1890.

Thomas Kennedy, Esq<sup>n</sup>, sworn and further examined:—

2295. *Chairman.*] You have heard the statement of Mr. Rouse—that, in his opinion, the line to Dubbo should not go near Gulgong, but at the back of the Guntawang Estate. Do you know anything of that survey? I have been on the road, and I know it pretty well.

T. Kennedy,  
Esq.  
25 Mar., 1890.

2296. Would it be an easier country from the river, than the line under the consideration of the Committee? The summit level would not be so great. It would be easier to construct.

2297. With easier earthworks? No; the earthworks are not heavy upon this line through Gulgong.

2298. The distance, I presume, would be shorter than going through Gulgong. To go through Gulgong it is necessary to make a detour is it not? Yes, I should say about  $1\frac{1}{2}$  mile. This would be only in case of going to Dubbo; if to Coonamble, the distance would only be about 1 mile.

2299. Do you think that detour is justified with the view of giving Gulgong railway communication? I think so.

2300. You think that you are justified in going  $1\frac{1}{2}$  mile further, for the purpose of giving direct access by railway to Gulgong? Yes.

2301. *Mr. Humphery.*] What would be the difference in the cost of construction, if the line were taken by way of Guntawang? It would only be the same per mile. It would make £8,000 or £10,000 difference.

2302. Would the compensation to be paid be very great if a line were constructed through Gulgong, near the Magazine? No; there are only a few paddocks between Gulgong and Reedy Creek.

2303. So that the probability is that £12,000 would cover the increased cost of construction? I think so.

2304. And give facilities to the residents of the town of Gulgong? Yes.

2305. What would be the cost of constructing a branch line from Gulgong to meet this line if it were constructed as suggested from the Guntawang Road? Between £5,000 and £6,000 a mile.

2306. What would be the cost of the branch line to cut the suggested line past Guntawang? £15,000 to £20,000.

2307. So that it would cost more to construct a branch line from here to Guntawang than to carry the line as proposed through Gulgong? Yes.

2308. *Chairman.*] If the line Mr. Rouse referred to were constructed, with a branch to Gulgong, it would be much steeper than 1 in 80;—where is your summit level? About  $3\frac{1}{2}$  miles from here. They have got 1 in 40 on the trial survey by way of Guntawang.

2309. Did we understand you, when giving evidence previously, to say that the survey to Wellington, which you are engaged on, is likely to be a somewhat difficult one? Yes; 15 or 16 miles will be through rough country.

2310. Necessitating tunnels to keep the grades you have on the other line? Yes; at least two tunnels.

Mr. John Tuxford, sworn and further examined:—

2311. *Chairman.*] I understand you desire to amend certain portions of your evidence? Yes, in regard to the value of land. I understood Mr. O'Sullivan was referring to outside land. I stated that it was worth the Government price—that is the selectors' price; but of course I was not aware of the inside land.

Mr.  
J. Tuxford.  
25 Mar., 1890.

2312. What do you call outside, and what do you call inside? It is outside land at a distance of  $2\frac{1}{2}$  miles or 3 miles.

2313. You think it would be worth £1 per acre—the Government price? Yes.

2314. What do you think the land inside would be worth? From £2 to £3 per acre.

2315. I suppose there is not much of that inland left? Yes, there is a good deal.

2316. And the outside land is worth £1 per acre, and the inside land £2 to £3 an acre? Yes.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Mudgee to Gulgong.

SECTIONAL COMMITTEE.

APPENDIX.

A.

STATEMENT OF PASSENGER AND PARCELS TRAFFIC BETWEEN MUDGEE AND GULGONG, FROM 1ST JANUARY TO 31ST DECEMBER, 1889.

John Barry's Line of Mail Coaches.
