the nearest depôt, there being a difference of from  $4\frac{1}{2}$  to 6 miles between that point and Parkes, from Condobolin, but they represented that unless the line was taken to Cowra, it would be of little or no benefit to them. One witness stated that goods could be delivered at Forbes, by teams, at the same price as would be charged on the railway, *via* Molong and Parkes. It was stated that the traffic between Condobolin and Forbes had been actually stopped by flood for only one week during the last twenty years. The wheat crops near Condobolin were sworn to yield an average of  $14\frac{1}{2}$  bushels to the acre, and the soil was described as very suitable to the growth of hay, oats, and fruit. At the present time local requirements are not fully supplied by the crops grown. The District Surveyor at Forbes stated that, on his recommendation, the Mines Department had decided that 22,000 acres of gold-field reserve should be thrown open to selection. This area commenced at a point 7 miles from Forbes, and extended to within 3 miles of Parkes. The whole of the available land in the district had been taken up; constant applications were made for holdings, and whenever an area was thrown open to selection a great rush of applicants took place, applications being often made by persons outside the colony. 5,000 acres had recently been taken up to the south of Forbes in special areas, not exceeding 160 acres. From 70,000 to 80,000 acres had been taken up to the north of Parkes, and 90,000 acres at Trundle, north-west of Parkes. This land was held by *bona-fide* selectors. Mr. Gatenbey, the lessee of a run 20 miles below Forbes, on the southern bank of the Lachlan, said he had 200 acres under cultivation, irrigated by means of extensive machinery. Wheat, oats, maize, fruit, vegetables and lucerne grew in abundance. The wheat averaged 40 bushels per acre, and he had stacked 300 tons of hay grown upon a portion of this area. He was of opinion that land, irrigated, would carry ten sheep to the acre for eight months of the year. As an instance of the value of the river frontages, he mentioned that he had placed under offer 1,000 acres suitable for irrigation purposes at £6 per acre. The intending purchaser had subsequently offered £6 10s. per acre for a similar area of land further down the river, but the price offered had been refused. The Committee were placed in possession of valuable returns, showing the number of sheep in the district, together with the sheep traffic through Forbes; also as to the extent of the alienated, unalienated, and reserved lands in the Forbes district; these appear as appendices to the evidence. The post and telegraph returns exhibited a steady increase within the past three years.

The Committee continued to take evidence at Forbes on the morning of the 4th March, examining twenty witnesses. As on the previous day, the majority of witnesses were in favour of the line from Forbes to Borenore. Some of them went so far as to state that the line *via* Parkes and Molong would be useless to them. Mr. Reymond, miller and selector, stated that he had 500 acres under crop, the land being irrigated, and yielding 20 bushels to the acre. In a fortnight after the natural grasses were irrigated, sheep and cattle could live upon them. In some paddocks on the river frontages ten sheep to the acre had been carried without irrigation for seven months. He had himself 1,600 sheep on 200 acres of land. All kinds of fruit grew luxuriantly, and very superior wine could be made from the grape. Splendid timber—pine particularly—was to be found in great abundance. The witness thought that if a railway were constructed *via* Parkes and Molong Forbes would be ruined, inasmuch as Parkes would become the main outlet to the west, Forbes being the terminus of a branch line. By paying for all work in its production, wheat could be raised at 2s. per bushel. Mr. Thomas Leslie, a large selector, said that during the last four years, without irrigation, his land had carried a sheep to  $1\frac{1}{8}$  acre. A steam thresher in this district in the present season threshed 18,000 bushels of wheat; it was estimated that a much larger quantity was taken off by the stripper. The agent for Wright, Heaton, & Co. said the loading received through his office in the last twelve months was as follows:—Forbes, 1,180 tons; Condobolin, 380 tons; Mount Hope, 26 tons; Borambil, 24 tons; and Burrawang, 90 tons. The firm had despatched 10,000 bales of wool during the season. A wool-scourer had scoured in eighteen months 180 tons of wool, and he said he could scour double that quantity if he had means of getting it away. He had wool standing six weeks through the want of means of carriage. Another scourer said he sent away 215 tons annually, but that he would rather send it by team to Cowra than by train *via* Parkes and Molong. From one station, Burrawang, this season, 4,184 bales of wool, the clip of 246,000 sheep, were sent to Sydney, there being back loading

loading to the amount of 100 tons for station supplies. Most of the witnesses agreed that the surveyed route *via* Borenore, as also the route *via* Parkes, were out of the reach of floods, although one witness said that land at the junction of the Eugowra Creek with the Lachlan was very subject to them. Mr. Tozer, who exhibited magnificent samples of peaches and apples grown on irrigated land on the banks of the Lachlan, said that if the railway were constructed to Parkes he could send tons of fruit to the metropolitan market. The Committee examined several witnesses from Grenfell. They advocated the line from Young *via* Grenfell, Forbes, and Parkes, to Dubbo. Mr. Vaughan said that 10,000 to 12,000 tons of goods annually went into the town, and that one firm paid as much as £2,000 freight during the past twelve months. Mr. Greene, the member for Grenfell, said that in that district 7,913 acres had been under wheat this season, producing the largest average in the colony, *viz.*, about 20 bushels per acre. The total wheat yield of the district was 157,984 bushels. There had been a steady increase in agriculture and in general prosperity for some years. Last year's rainfall was 32 inches. Wheat could be grown remuneratively at a cost of 2s. 6d. per bushel on the ground.

Your Committee left Forbes at 8 a.m. on the 5th March, and arrived at Eugowra shortly before noon. The road passed through very good pastoral country with a fair percentage of land suited to agriculture. At Eugowra they examined thirteen witnesses, four of whom were from Canowindra. The witnesses were unanimous in the opinion that the line should not be constructed *via* Molong, Parkes, and Forbes. They were divided in opinion, however, with regard to the routes *via* Borenore and Cowra. It was represented to the Committee that the land of the surrounding district was particularly fertile, in many instances carrying over two sheep to the acre. The average crop of wheat was set down at 18½ bushels, and the population was stated to be 200. Timber—red gum and pine—both suitable for building purposes, was said to be available. Fruit of excellent quality was also grown in the district. The Canowindra witnesses testified to the fertile nature of their district, and said that no line, other than that *via* Cowra, would be of service to them.

The Committee started from Eugowra at 7.30 a.m. on the 6th March, and arrived at Murga shortly after 10 o'clock. The road followed the course of the Mandagery Creek, within a short distance of the surveyed routes to Borenore and Cowra. The land being for the most part reserved there was very little settlement by the roadside, but the country appeared well adapted to pastoral and agricultural pursuits. At Murga nine witnesses were examined. Their evidence went to show that a large area of land in the district was under cultivation, and that the average yield of wheat was about 15 bushels to the acre. One witness said that rather than utilise the proposed line *via* Parkes to Molong he would cart his produce 40 miles to Cowra. An experienced farmer said that wheat could be grown at 2s. 6d. per bushel on the ground, and that many farmers at Reedy Creek, to the northward, would be well served by the line which the Committee had had referred to it for investigation. We left for Cudal at 1.15 p.m., and diverged southward from the main road as far as Barragin, a fine agricultural district. Arriving at Cudal at 5 p.m. we examined two witnesses, by whom it was shown that Cudal is to some extent served by the existing railway to Borenore, a distance of 15 miles from the township. In the event of the proposed deviation, *via* Bocoble Gap, now being surveyed, being made, they would be brought within 6 miles of the proposed line. Statistics were exhibited showing that an average of 2 tons of hay, 25 bushels of wheat, 40 bushels of oats, 50 bushels of barley, and 20 bushels of maize were grown to the acre. The Committee were also informed that at Borenore during the past twelve months £13,000 had been paid by Wright, Heaton, & Co., for trainage from Sydney and intermediate stations; also that the following quantities of wheat had been transmitted through them this year, *viz.*, January, 1,400 bags; February, 6,300 bags; March, 1,990 bags. The Committee started at 6 a.m., on the 7th March on a visit of inspection to the country round Bowan Park. It was all of a very fine description, and was mostly under cultivation. At 9 a.m. they met at the Court-house, to take further evidence, and examined sixteen witnesses. With one or two exceptions, the witnesses testified to the absolute necessity for the line being constructed, *via* Borenore, and so adverse were some of them to the line referred to the Committee for investigation that they stated that rather than take their produce to the nearest point of that line about 10 miles distant, they would cart it from 30  
to

to 40 miles to avoid the railway. It was shown that the land in the district was of the highest quality for agriculture and that wheat could be grown profitably at from 2s. 6d. to 3s. per bushel. One witness, Mr. A. G. Peterson, J.P., gave details as to the cost of the production of wheat, which he estimated at 21s. per acre. The progress of the place was illustrated by the postmaster and several of the business residents, although it was pointed out that traffic had considerably decreased since the opening of the railway to Cowra, Nyngan, and Molong. It was suggested by one gentleman that the railway should be taken from Borenore to Eugowra, *via* Cudal, and that it should there branch to Parkes and Forbes, and by another witness that the starting point should be Amaroo, instead of Borenore, with a view to the reduction of grade as well as of the distance to be constructed. It was admitted that a large number of the farmers in the neighbourhood of Cudal, being not more than 14 miles from the existing line at Borenore, by a first-class road, were already served.

The Committee proceeded in the afternoon to Orange, which they reached at about 6 o'clock p.m. At 8 o'clock they examined Mr. Alley, agent for Wright, Heaton, & Co. at Orange, whose evidence confirmed that already given at the same place on 1st March.

Your Committee arrived at Cowra early in the morning of the 8th March, and commenced to take evidence at the Court-house, on the morning of the 10th March, examining sixteen witnesses. The principal number urged the immediate construction of a railway from Cowra to Forbes, *via* Canowindra. The district was represented to comprise exceptionally rich agricultural land. The police returns for the year ending 31st December included the following items:—269,988 bushels of wheat, 12,000 bushels of oats, 1,800 tons of hay, and 150,000 bushels of corn. It was stated that by the construction of a line from Cowra, the Melbourne as well as the Sydney market would be rendered more accessible to the west and north-west portions of the colony. The postmaster said that within the past eight years the postal business had considerably increased, and that the rainfall was 29 inches. Mr. D. C. J. Donnelly, J.P., storekeeper and miller, informed the Committee that great improvements had been made in the town during the last twelve years; that the district was rich in minerals—iron, copper, silver, and gold; and that a line westward would be of still greater benefit to it than the existing line eastward. The actual cash receipts at the railway station were sworn by the station-master to be, for the year 1889, £21,164; 15,375 bales of wool, and 6,461 bags of wheat had also been despatched from the station. This showed a large increase upon the traffic of preceding years. The average returns of wheat were sworn to be over 15 bushels to the acre. Good timber of all kinds was obtainable in the district, and land selections had been sold recently at from £2 to £3 per acre. Several witnesses from Canowindra were examined. They were, without exception, of opinion that the line from Cowra to Forbes should receive priority in construction. It was shown that the pastoral country between Cowra and Canowindra was capable of carrying over one sheep to the acre; that the population of Canowindra and Belmore was fully 400; that land in that district was worth from £2 to £4 an acre; that the postal returns, together with the population, showed a decided tendency to increase; that the average rainfall was 24 inches; and that the proposed railway would pass through several large as well as a number of small holdings.

The Committee continued to receive evidence at Cowra on Tuesday, 11th March, and examined eight witnesses, who unanimously pressed upon their consideration the route from Cowra to Forbes, *via* Canowindra. It was demonstrated that in three years and one month—the period for which the Murrumburrah and Blayney line has been open—the sum of £84,500 had been taken at the Cowra Station for freight. One miller (Mr. Reuben) said he had had passed through his hands this year 20,000 sacks of wheat, and that last year he sent to Forbes 300 tons of flour. Mr. Phillips, a solicitor practising at Cowra, acknowledged that although the Borenore line would, in his opinion, serve a greater number of people, he believed that the Cowra line was the proper one to construct. He appeared, however, to have no knowledge of recent settlement to the north of Parkes. Mr. Muir said that although he had but a small holding, he found grazing more profitable than agriculture. He had no doubt, however, that one of the effects of railway communication would be to place a larger area under crop.

Your

Your Committee, in travelling over the scene of their investigations, were fully impressed with the richness of the soil generally, and believe that the returns of wheat are exceptionally large. But they desire to direct special attention to the fact that the statistics handed in to the Committee at the various points (and appearing as appendices to the evidence) cannot be taken as representing accurately the acreage, the yield, or the population, inasmuch as the desire has been manifested by the parties interested in rival routes to exhibit their particular portion of the district in its most favourable light. They have, in almost every instance, collected their statistics without due regard to boundaries, and have therefore overlapped each other.

Your Committee viewed with regret the absence of settlement on a very large area of first-class agricultural land between Parkes and Forbes, which is accounted for by its being locked up in the Billabong gold-field reserve. We are of opinion that the interests of the miners might be duly conserved, and yet a large portion of this reserve be thrown open to settlement.

It will be observed that your Committee have been exceedingly careful and even minute in their investigations concerning, not only the proposed line, but also the rival routes, Borenore to Forbes and Cowra to Forbes. The necessity for a line of railway connecting both Parkes and Forbes with the metropolis is beyond doubt, as both are large and important centres, which would be materially assisted by railway communication. The line would at the same time be an extension of what must become one of our most important railways, viz., the south-west line to the Darling River. In making their recommendation, your Committee have had some doubt as to the relative merits of the line *via* Cowra to Forbes and the proposed line. The line *via* Borenore was dismissed from consideration upon the following grounds:—First, the steepness of its grades; secondly, that it would not serve as large an area as either of the two other routes; and, thirdly, that its most thickly populated portion, viz., Cudal, is already fairly served, and would, by the proposed deviation, *via* Bocoble Gap, on the Molong to Parkes line, be brought within 6 or 8 miles of a railway. The proposed railway from Molong to Parkes passes through a country composed of rich alluvial flats and gullies. There are, however, some stony ridges with a barren ironbark ridge here and there. Parkes, which is the centre of a very large district, is surrounded by extremely rich agricultural land. To the north and north-west a large number of selectors have just settled. These will no doubt materially affect the returns derived from the proposed railway. The whole of the distance between Parkes and Forbes is also covered with rich agricultural land, which, if thrown open, would, without doubt, be taken up immediately. Forbes is also the centre of a large and important district, but the land in its vicinity appears to be held in much larger areas than does the land in the neighbourhood of Parkes. The Committee were satisfied that the whole country from Parkes to Forbes and Cowra is eminently adapted to agricultural pursuits. The evidence showing that wheat could be grown profitably at from 2s. 6d. to 3s. per bushel, points to the fact that with the existing tariff a large supply would be sent from these districts in the event of railway communication being established. The Committee were also greatly impressed by the very superior quality of the fruit grown in these districts. The prolific growth of the grape justifies the expectation that in the near future an extensive wine industry will be developed.

In conclusion, your Committee have determined to recommend the construction of the proposed line, in preference to the line from Cowra to Forbes, for the following reasons:—Firstly, that Parkes is at the present time a most flourishing and largely increasing town; secondly, that at Trundle, to the north-west of Parkes, about 90,000 acres, and at Kadina, direct north of the town, from 70,000 to 80,000 acres of land have very recently been taken up in comparatively small selections, principally by Victorian farmers, for the purposes of agriculture; and, thirdly, that in the event of it being found desirable to extend the line to the Darling River to the south-west, the extension could be made with equal advantage from Parkes or Forbes.

19th March, 1890.

JAS. E. TONKIN,  
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM MOLONG TO PARKES AND FORBES.

[TAKEN BEFORE SECTIONAL COMMITTEE.]

SATURDAY, 22 FEBRUARY, 1890.

[The Sectional Committee met at the Court-house, Orange, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Molong to Parkes and Forbes.

Henry Augustus Crouch, Esq., District Surveyor, sworn and examined:—

1. *Chairman.*] What is your position? I am a District Surveyor. I have the Orange Land Board district. H. A. Crouch,  
Esq.
2. How long have you been in that position? Eight years.
3. Can you give us any information as regards the alienated and unalienated lands on the route of the proposed railway? I can produce a plan showing, on a small scale, the land that has been alienated in the district. The plan also shows the reserves—that is the position of the two routes and the reserves on those routes. The plan shows, in the red tint, the land in the district alienated on the two routes. It shows by green tint the reserves, and the untinted portions are unalienated land. The two lines have been shown from the trial surveys. 22 Feb., 1890.
4. Your district extends where? As far as Eugowra on the Cudal line, and as far as the range near Bumberry on the other line.
5. *Mr. Lee.*] Your boundary is defined by the blue lines on the plan produced? Yes. I have also shown in red circles the number of electors, as shown by the last electoral roll, approximately in each parish.
6. I see the circles are numbered? Yes. The numbers inside show, approximately, the number of electors in the parishes.
7. The figures only denote the number of the electors approximately? Approximately. In some cases I could not determine them exactly; but they are approximately correct.
8. Could you, from memory, give the Committee a rough estimate of the number of acres alienated? No, I have not had it made up. Of course I should want to know how far you would go—to what distance on each side of the lines.
9. Would the land shown to be alienated upon this map come within the influence of either of these railways if constructed? Well, a great deal of it would. Of course some of the alienated land is already provided for by the Molong terminus. I could not say that that would be influenced by the line which it is proposed to construct.
10. Have you any idea of the acreage of the unalienated land in your district in the vicinity of the two lines? No; but I could have it made up if the Committee desired.
11. Are you acquainted with the character of the unalienated land in the district? I am.
12. What is the quality of it? Generally inferior.
13. Is any portion of it suitable for agriculture? But very little; probably not above 7 or 8 per cent. of the unalienated land.
14. How should you class the land at the present time? Some is next to useless; other of it is inferior grazing land, and the other would be fair grazing country.
15. Is there any rough country? Some, very rough.
16. Is any of it flat? Yes; there is some flat country towards the north, but there is not a great deal of it. Probably the flat country would not be more than 10 per cent.
17. I see the unalienated land in proportion to the alienated land is very small? Yes.
18. I presume the best land in the district has been taken up? Yes.
19. I see there are a number of small reserves dotted all over this particular locality—could you tell this Committee for what purpose they were made? Different purposes—water reserves, travelling stock reserves, and forest, principally.
20. Are there any railway reserves along any of the two routes? There is a quantity of land, especially on the Parkes line, which has been reserved for railway purposes.
21. Between what points? Between Meranburn and Bumberry. Any land not reserved for other purposes has been reserved for railway purposes.

- H. A. Crouch, Esq.  
22 Feb., 1890.
22. About how much has been reserved for railway purposes? I should prefer to give you the exact quantity.
23. Do I understand that most of the Crown Land along the railway surveys was reserved under the Railways Act? No; under the Land Act.
24. I notice that the surveys do not run entirely through the reserves? No. I may say that I was instrumental in having a large reserve made for forest purposes, in anticipation of a line being ultimately constructed. We have some good ironbark timber where you see one of the reserves.
25. According to the map a large portion of the surveys are made where there are no reserves? Quite so.
26. I suppose that is in consequence of the land being alienated before the survey was made? Yes.
27. Are all the reserves shown here required for public purposes? Yes; I think so.
28. In the event of either of the lines being constructed, do you think any portion of these reserves would be thrown open to the public? Well, there is a considerable travelling stock reserve between here and Forbes. The stock inspectors have always opposed any part of that reserve being revoked, but perhaps some of it might be revoked if the line were constructed. There are about 12,700 acres reserved within 1 mile of the Forbes line, and there are 17,100 acres of reserve within 1 mile of the Parkes line.
29. There appears to be a large stock reserve between Eugowra and Toogong—would that be necessary if a line were constructed? It would probably be in excess of requirements. I think some part of it might be revoked.
30. What are the prospects of settlement in this particular district, having in view the small quantity of unalienated land, and the small percentage of reserves to be thrown open? I do not think the prospects of further settlement are very good, unless some of the larger estates now held were thrown into the market privately. So far as the Crown Lands are concerned, I do not think there would be much larger settlement.
31. Are there many large estates in the district which would be served by these surveyed routes? Well there is a large quantity of land on the Forbes route held by the Smith family—the land from Boree to Toogong is private property.
32. Are there many estates between Molong and the boundary of your district on the northern route? No.
33. Or between Parkes and Forbes? That is out of my district. I think the largest holder on the northern route would be M'Callum.
34. Is there much small settlement in the district? Yes, a good deal in places.
35. Is it of a *bona fide* nature? Of a *bona fide* nature.
36. Has dummieing been practised to any extent in the district? I think a good deal. A portion of the Smith estate was, I believe, acquired in that way.
37. But the people now settled on their farms, are they good *bona fide* farmers? Yes, I think they are *bona fide*.
38. They have made their farms their *bona fide* homes? Yes, as a rule.
39. And consequently are likely to be permanent settlers in the district? Yes.
40. Do you know much of the levels along the proposed lines? No; I would have made a note of it, but I thought you would have it from the railway plans. I noticed the other day that there was a fall from Borenore to Boree bridge of 600 feet.
41. In what distance is that? About  $5\frac{1}{4}$  miles.
42. Will you give the Committee a return showing the number of acres alienated in your land district, the number unalienated, and the number in the reserves—if you will send it to Sydney we should like to have it as an appendix to your evidence? Yes; I suppose you would like to have it within a certain distance of the line.\*
43. We should like to have it as shown on the map handed in by you? Yes.
44. *Mr. Douel.*] Do you know the route of the proposed railway from Molong to Parkes and Forbes? I know it as far as it runs through my district.
45. What is the character of the country through which it passes? It is very largely an agricultural country. There is also some first-class grazing country.
46. Is the country fairly settled? Fairly settled—yes.
47. The holdings are not likely to revert to pastoral purposes? Not those at present in existence, I think.
48. You think there is every probability of a permanent population residing on the land now occupied? I do; I think the country is capable of carrying a very much larger population.
49. Does the proposed line pass through many large estates? No, it does not.
50. Through small holdings? Generally speaking, through small holdings.
51. Will the reserve to which you have referred as having good timber upon it be traversed by this route? Yes.
52. What is the character of the timber upon it? It is principally ironbark in largish quantities, and good quality.
53. Do you think that if these reserves were thrown open for timber purposes, any trade would be developed to supply a revenue for the railway? I have anticipated that if the railway were constructed, a large quantity would be required for railway purposes.
54. But would there be a sufficient quantity of timber to be worked up and sent away for market purposes? I think so.
55. You think that some railway revenue might be derived from the timber? Yes.
56. Can you inform the Committee whether any portion of the route through which the railway passes is liable to be flooded? I think not—none of it.
57. It is all on good sound dry land? Yes.
58. Are there any great engineering difficulties on the route that you know of? Nothing to speak of—nothing at all.
59. You think the line could be constructed at a reasonable cost? Yes.
60. You have resided in the district for a considerable time, and have had an opportunity to judge of public opinion in the matter? Yes.
61. Can you say of your own knowledge whether public opinion appears to favour the construction of this railway? Public opinion certainly favours the construction of one railway. 62.

\* NOTE (on revision):—With reference to the return referred to in question No. 42, I would explain that it has not been forwarded, as, when returning through this town after visiting Parkes and Forbes, the Chairman of the Sectional Committee informed me that it would not be required.

62. But I mean the route we are now considering? It is a very difficult thing to say. Of course, when you refer to public opinion, you must remember that there are different interests to be considered. Public opinion in one place would decidedly favour the route before you, whereas public opinion in another place would not do so. At Parkes, for instance, public opinion is strongly in favour of the route before the Committee.

H. A. Crouch,  
Esq.  
22 Feb., 1890.

63. Can you give the Committee any idea as to what action the public have taken in regard to the construction of the line marked red on this map? No.

64. I think you informed Mr. Lee just now that the land remaining to be alienated was of a poor character? Generally speaking, of inferior character.

65. Suitable only for pastoral purposes, and then only in a secondary degree? Yes.

66. What, generally, is the character of the alienated land? It is very good.

67. Is it capable of growing all sorts of crops? Anything, according to its climate.

68. What is your experience of the climate in this particular district? It is a very good climate along the line, very suitable for wheat-growing.

69. What else? Or fruit suited to a semi-tropical climate.

70. You do not think there is any probability of the district retrogressing? No; I do not think so.

71. You think rather the reverse? I do.

Edye Hayles Stobo, Esq., Crown Lands Agent, sworn and examined:—

72. *Mr. Cox.*] What is your position? I am Crown Lands Agent in the Orange district and Clerk-in-charge of the Land Board Office.

E. H. Stobo,  
Esq.  
22 Feb., 1890.

73. How long have you been here? Five years.

74. I suppose a large amount of land has been selected during your residence in the district? A fairly large amount.

75. How much a year on the average? I could not give you the number of acres from memory.

76. Your books would show? They would. But the Land Board Office has to deal with eight districts. I could single out Molong. I could ascertain for you, however, in a short time, what the acreage is.

77. Will you let us have the number of acres alienated by conditional purchase in the whole district, specifying the area in the Molong as well as the Orange district? Yes.

78. Is there much land sold here by auction? No; very little. There is a demand for land to be sold by auction, but it is seldom offered by the Government now. If the land were offered, however, I think it would be sold.

79. About what quantity of land is usually taken up? In areas of from 40 to 320 acres or 400 acres. Most selectors avail themselves of the provisions of the Crown Lands Act of 1884 to take up the maximum area by conditional lease.

80. Has there been an increase or decrease in the last year or two? A slight decrease, I should imagine, on account of the leasehold areas not being open to selection, and on account of there not being sufficient land.

81. All the good land is taken up, I suppose? It is nearly all gone. All, in fact, except that which is locked up in reserves and leasehold areas.

82. But in the Eastern Division the leasehold areas are shortly to be thrown open? Very shortly.

83. You anticipate a large rush for land then? Yes, I have many and frequent inquiries as to when the land will be thrown open. Many persons say that they intend to take some up.

84. Approximately, how many acres will be thrown open to selection? I should scarcely like to hazard a guess. I should say at least 20,000, and probably 30,000 acres. At all events, something between those two areas. I am referring now to the Molong district.

85. In what part of the district is this land chiefly situated? It is about equally divided through the district.

86. How much land will be thrown open in a similar manner in the Orange district? There are no leasehold areas in the Orange land district proper—that is, within a radius of 15 or 20 miles round Orange.

87. Then there will be no land available for selection in the Orange district? No; the Orange district is nearly all sold. The bad land is being taken up now, because they cannot get any better.

88. I suppose your books will show the total area taken up since 1861? Yes. Returns are made up every year, and they would only require a little adding to bring them up to date.

89. Have you been over the land you have been describing? No, I have no personal knowledge of it, but I know it from reports, and from general information.

90. Have you been over the two rival lines of railway? No, I have not been beyond Borenore.

91. I suppose your duties do not lead you out into the country, and that you cannot tell us anything as to the amount of traffic and so on? Well, I know there are a number of people living on the line from Borenore to Eugowra, but I have never seen any of the land—my duties do not take me there.

92. I suppose the traffic centres in Orange? Well, I cannot say that altogether. There is a good deal of traffic from below Cudal—passengers and goods—which does not come to Orange at all.

93. But it eventually comes through Orange? On the railway line, previously, people used to come here by teams; that was before the Molong line was constructed. I have no doubt the land agent at Molong would be able to give you more information on this point.

94. *Chairman.*] You think that 20,000 acres to which you have referred will be selected when it is thrown open? All the good parts of it, and a fair amount of the indifferent parts. Judging from the inquiries I hear, people are quite eager to obtain the land.

95. You cannot tell me what proportion of good land there is? No, but I think a large part of it is good, because there are so many persons inquiring about various parts.

96. *Mr. Dowel.*] During the five years you have been here, have you made yourself acquainted with the outlying districts? Only by inquiry, not by visit—that is, I have not been beyond Borenore.

97. Does the district appear to you to have been progressing since your residence here? Yes, certainly.

98. It has been going ahead? Yes, both Orange and Molong—but on the Molong side particularly, because there is more new settlement there.

99. The settlement appears to be of a permanent character? Yes, as far as I have seen.

- E. H. Stobo, Esq.  
22 Feb., 1890.
100. You have made no estimate of the area included in the leasehold areas likely to be thrown open to selection in June and July next? No. I have only guessed it approximately.
101. Is not the area you have given us somewhat small? Well, I do not know. There is a great deal of land available in the Molong district in the leasehold areas, but none here. I think my figures will be found something near the mark, although, as I have said, they are only a guess, as I had no notice to attend here as a witness.

Mr. Samuel Landauer, storekeeper, sworn and examined:—

- Mr. S. Landauer.  
22 Feb., 1890.
102. *Chairman.*] What are you? I am at present a storekeeper at Cudal.
103. How long have you been in the district? I have been living in the district between Forbes and this place since 1862.
104. How long have you had your present store? Nearly fourteen years.
105. Have you found very much difference in the population of Cudal since you started there? Yes; a considerable difference.
106. Is it increasing now? Yes.
107. Is the difference appreciable? Well, it is hard to see any difference when you see people day after day, but the population is increasing.
108. Is your business as good as it was a year or two ago? Yes, fully.
109. Has the construction of the line to Molong decreased traffic and affected your business? The combined influence of the different lines has taken traffic from the place, of course.
110. But it has not decreased the number of residents? No; I do not think so. I am alluding principally to road traffic.
111. What forms the principal support of Cudal? Well, that is a farming district.
112. It does not depend upon the road traffic? No; but that is a great help to blacksmiths, bakers, butchers, and storekeepers. The Cowra line has taken a portion of it away, and the traffic to the Lower Lachlan has been completely cut off, through the south-western line from Junee to Whitton.
113. Can you give us the number of acres in the Cudal district under cultivation? I can give you the exact number in 1883. The total holdings were 136,249 acres, and of that area 11,092 acres were cleared.
114. Under crop, you mean? Yes.
115. Was that much in excess of the previous year? It was in excess of the previous year, and it has increased since.
116. To what extent has it since increased? Fully 25 per cent.
117. Under crop? Yes.
118. You know the proposed route from Molong to Parkes and Forbes—would that railway assist the Cudal people much? It will not assist them at all; it will be anything but assistance to them.
119. How far is it from Cudal to the nearest point of the proposed line? About 10 miles.
120. And what distance is it from Cudal to Orange? Well, we have Borenore. By taking the railway on to Parkes, we should have about another 32 miles of railway carriage.
121. But when you speak of this large area being under cultivation does not a portion of it extend towards the proposed line? It is comprised within 10 miles east and 8 miles west; that would not affect the Parkes line.
122. Do you mean that there would not be any settlement within 8 miles of the proposed line coming up from Cudal. There is a little.
123. But you said that if this line were constructed it would not benefit the Cudal people? It would benefit a few, not the bulk of the settlers.
124. You mean it would not benefit them to the extent to which they would be benefited by the suggested line from Borenore to Forbes? Yes, exactly. Although it is only 10 miles from the Parkes line to Cudal, the distance from Cargo and Barragin is so great that it would be utterly impossible for settlers there to use it. Borenore would be nearer for them.
125. You say it is only 10 miles between the surveyed route from Molong to Parkes and the route from Borenore to Forbes—that is at Cudal? It is about that distance, I think.
126. The lines run nearly parallel? Up to Cudal.
127. Do you not think that residents 5 miles on each side of a line are materially served by that line? I admit that, but a majority of the settlers are on the southern side of Cudal, while the people of Manildra would get shorter railway carriage and a better road.
128. The people of Toogong would not be materially affected by the construction of the proposed line? They would get no benefit at all from it.
129. Do you know what class of country it is about Cudal? Yes. It is not to be beaten as an agricultural country.
130. Is it much superior to the same class of country on the other line? There is more of it. It is true that at Manildra and Meranburn there are some good patches, but they are small. The country further on about Coate's Creek is like the Blue Mountain country.
131. Do you know the route from Borenore to Forbes? Every inch of it.
132. Is the whole of it good country? The line has to cross two spurs of the Canoblas; the land there is not good, but the line is within a mile of good land.
133. The whole of the traffic to Forbes goes through Cudal? Yes.
134. And the whole of the traffic to Parkes through Molong? Yes. I heard a gentleman to-day giving some evidence about the timber on the reserves. I was sawing timber for nearly twenty-five years. I put up the first saw-mill at Forbes. In 1870, I went to the country to which the witness referred to saw ironbark, but I could not find a sound stick in 20 acres—so much for the Dungeon.
135. Are you referring to the timber reserves to which the previous witness referred? Yes; the timber looks very nice to the eye, but wait till you get your axe in you will find it is rotten; you cannot find a sound stick for miles; some of it might do for splitting but not for sawing.
136. Is there any good timber on the line from Borenore to Forbes? There is good timber on the Lachlan, and there is good stringybark within a few miles of Orange.
137. Could the timber of which you speak as rotten timber be utilised for railway sleepers? It might do for splitting for post and rail fencing, but I do not know about sleepers.
138. Do you think you could find timber fit for sleepers? I do not know. It is possible, but not very likely.

Mr. S.  
Landauer.  
22 Feb., 1890.

139. And on the other line is there timber fit for sleepers? Yes.
140. *Mr. Lee.*] Do you know the country between Molong and Parkes? Yes.
141. And from Parkes to Forbes? Yes.
142. Are you well acquainted with the whole traffic from Borenore to Forbes? Yes.
143. Do you know the country between Cowra and Forbes? No. But I know the country between Eugowra and Canowindra.
144. Is the country between Borenore and Forbes flat or undulating generally? Undulating.
145. Is it subject to flood? I have seen the country flooded, but it does not come up to the level of the railway line.
146. Does the river frequently overflow its banks? About once every ten or twelve years. I have seen no floods since 1870.
147. Have you seen a flood sufficient to stop the traffic through that country? Well; I have seen a flood sufficient to necessitate the mail being sent through on horseback instead of by coach.
148. Then team traffic would be stopped? For a time, but they could get round it if they liked.
149. Do the same circumstances apply to the route via Molong? I do not think so.
150. What is the chief route used by teamsters to get to the main line? Up to Borenore.
151. But I mean from the country to the west of Forbes? That traffic is divided. Most people below Forbes are Victorians, and the stuff they get from Melbourne comes through Cowra. From the time you leave Forbes till you reach Balranald you meet nothing but Victorian people.
152. I presume you are best acquainted with Cudal and that neighbourhood? Yes.
153. Is there much grain grown there? Yes.
154. About how many bushels of wheat were there last season? I have not seen any statistics, but I believe the total quantity grown was close upon 200,000 bushels.
155. Which market is that sent to? We have to cart it the best way we can to send down to Sydney.
156. I presume it finds its way into various markets? Yes; but the carting is a great drag upon the growers.
157. As a matter of fact however it finds its way to market? It does.
158. Supposing a line were made from Forbes to Cowra, is it possible that grain would be sent in that direction? From the extreme southern parts, but the quantity would be trifling. Another thing to be considered is the enormous quantity of hay and straw to be found further to the northward. In the country about Boree there are over 20,000 tons of straw allowed to rot annually.
159. Could that be sent to market and utilised if there were a railway? Yes. I suppose it is worth from 40s. to 60s. a ton.
160. What price obtainable in Sydney for straw would pay the residents of Cudal? Well, I do not know. In many instances I know they had to burn it to get it out of the road.
161. Is the wheat crop a regular crop in this district? Yes, on the average; last year was a total failure.
162. What was the failure owing to last year? Want of rain.
163. Is there any rust? A little, this year, very trifling.
164. As a rule is wheat rusted in this district? No.
165. Generally then, the wheat crop is a certain crop? Yes.
166. In anything like an average season? Yes. I suppose it would average somewhere about 17 bushels.
167. Are the settlers chiefly free selectors in your locality? Almost entirely.
168. What is the size of their holdings? It varies from 40 to 2,000 acres.
169. In your experience are these men gradually increasing their area under agriculture, or are the agricultural areas dying out and being replaced by stock? One or two men have given in.
170. What is the general tendency? The general tendency is to increase the area. If we had a railway it would be increased three-fold. At the present rate the carriage to Borenore is within 2s. of the trainage from Borenore to Sydney.
171. In your opinion, if the facilities for getting to market were greater more land would be brought under cultivation? There would.
- 171½. In your judgment, the best facility would be afforded by means of a railway? Yes, both sides would benefit from it.
172. Is any other grain besides wheat grown? Yes, oats and maize.
173. To any extent? Yes, there have been some good crops of maize.
174. Where does the district get its supply of maize? The district is self-supporting in maize.
175. Does Orange and the immediate district absorb what is grown in your district? Not all.
176. I suppose you will find a market at Goulburn for a portion? For some of it. There is a man now buying wheat for Young.
177. Where else do you send it? Sydney, some of it is sent north and some south.
178. Are there not markets for your grain between here and Sydney? Not sufficient to take it all.
179. If grain is shipped from here it must go to Sydney? The bulk of it.
180. That is after local requirements are supplied? Yes.
181. Do you own any land upon the railway you suggest? Well, I have some town allotments.
182. I mean, have you any large area on the Forbes line? No.
183. Are you a selector? No.
184. *Mr. Cox.*] The last witness said there were no leasehold areas in the district of Orange, in which district is Eugowra? That is in the Forbes district.
185. Of course, there are leasehold areas there? I think so.
186. And they will be thrown open for selection in the middle of the year? Yes, I suppose so.

James Torpy, Esq., M.P., sworn and examined:—

187. *Chairman.*] You are a representative of Orange in the Legislative Assembly? Yes.
188. And you reside here? Yes.
189. For how long have you been here? Twenty-five years.
190. *Mr. Dowel.*] You know the permanently staked route from Molong to Parkes and Forbes? I know the road.
191. But do you know the way it is proposed to take the railway? Tolerably well—it is on the edge of the district.

J. Torpy,  
Esq., M.P.

22 Feb., 1890.

- J. Torpy,  
Esq., M.P.  
22 Feb., 1890.
192. What is your opinion on that particular route—is it the most advantageous which could be made for the district? I am quite certain it is not.
193. What line do you consider should be constructed in the interests of the country generally? The Borenore and Cudal route, on the score of population, particularly.
194. On the route to which you refer, what centres of population would be served by the construction of the line? Cudal, Eugowra, Toogong, Cargo, and the country lying between Cudal and Canowindra.
195. Have you any personal knowledge of that country? Yes.
196. What is the character of it? It is equal to any agricultural land in Australia.
197. That is, the bulk of it is? Yes.
198. Is it settled upon extensively? Extensively.
199. With good permanent holdings? Very permanent—it is a deep chocolate soil, about 5 or 6 feet in depth, admirably suited for wheat, maize, and for wine growing.
200. Does the route you advocate pass through any large estates? I think it does at this end—that is between here and Cudal.
201. Are the holdings very large? Yes.
202. Do you think that if this railway were constructed the proprietors would be likely to have these estates cut up for sale or occupation? I think it is extremely probable that they would.
203. Do you know of your own knowledge whether there is any land upon the route you refer to available for settlement? It is nearly all selected, I think.
204. Are there not, within the leasehold areas, land, which might be available for settlement? I understand there are large reserves.
205. On the leasehold areas? Yes.
206. And if the Government were to throw them open to settlement, would it not induce population to come there? Certainly.
207. Can you give the Committee an idea of the population likely to be served by the line you propose within a radius of 10 miles? I have a fair knowledge of it. I know the population of Cudal is 300, of Cargo 280, of Eugowra 150 or 160.
208. Do I understand that is the number of holders of land? That is the number of residents in the towns I have named.
209. Including men, women, and children? Yes.
210. Do you know anything of the country beyond Forbes towards Wilcannia? Yes; but not far that way. I know the country between Forbes and Condobolin.
211. Is it practicable to carry a railway in that direction? It is almost a plain.
212. Do you think it will be practicable to carry a railway from Forbes to Wilcannia, and thence on to Broken Hill? I am sure that is the best route.
213. Would it go through a good class of country? Splendid country.
214. And it would be the means of supplying to another portion of the colony that which they do not produce themselves? Yes. In fact, the railway would travel almost parallel with the Lachlan River.
215. Is that river navigable? No.
216. Can you give the Committee any information as to the number of steam-threshing machines in the districts to which you have referred? No.
217. Do you know the number of flour-mills? Yes.
218. How many are there? I think only two. There is one at Cudal—a steam flour-mill—and another at Cargo.
219. Are there any sawmills? There is one sawmill.
220. Have you any knowledge of the timber on the route? Yes.
221. What is the character of it? Box and gum.
222. Do you know anything of the ironbark timber on the reserve already referred to? No; I do not.
223. I suppose that in your capacity as member, and during your long residence in the district, you have come into contact with a large number of residents? I have.
224. Can you inform the Committee what, generally, is the state of public opinion as to the advisableness of constructing this railway? I think there can be no doubt that the majority of the public are in favour of the Borenore and Cudal route.
225. And that it is strongly opposed to the construction of a line from Molong to Parkes and Forbes? Yes. I think the passenger traffic between Orange and Forbes is as two to one, compared with that between Molong and Parkes.
226. Have there been any public meetings in the district, and any agitation by petition as to the construction of this railway? For many years.
227. Has the opinion expressed at these meetings been unanimous? I will not say that, but I think I might say almost unanimous.
228. Resolutions have been carried in favour of the line? Repeatedly. I think the Committee ought to understand this clearly, that the Molong district is an extensive one—it overlaps Cudal, and it extends away between Toogong and Cudal. The bulk of the fine country is south of the proposed line.
229. Are there any minerals on the proposed route, or within a radius of 10 or 15 miles? Cargo is a township which is the centre of a small gold-field, quartz and alluvial.
230. Now, coming back to the line from Molong to Parkes and Forbes, *via* Flagstone Creek—you know it is 71 miles? Yes; so I have been informed.
231. And that the cost of construction would be £433,000? That is what they state.
232. Do you think, in the interests of the public, that the line should be constructed at that cost? I distinctly say—no.
233. You do not think that it would pay interest on the capital expenditure and on the working expenses? I do not think it could for many years.
234. It is estimated that the annual cost would be £26,055—do you think revenue approaching that cost is likely to be obtained? I do not think so.
235. When the Commissioners estimate that the working expenses of the line would be covered by the traffic, do you think that is a correct statement? I do not think so by any means.
236. Then you have no hesitation in saying that the route now before the Committee is not one which should be recommended for adoption? I unhesitatingly say that the evidence is overwhelmingly on the side.

J. Torpy,  
Esq., M.P.  
22 Feb., 1890.

side of the other route on the score of amount of land cultivation, settlement, and population—the number of towns, and the passenger traffic demonstrate conclusively that the line should go *via* Borenore and Cudal to Forbes—I state that, after very careful inquiry. There is a large reserve at Cargo waiting to be thrown open—that, of itself, would cause a great deal of increased settlement.

237. Do you think it is desirable to construct a light line of railway from Forbes to Parkes? That is, I think, the right course to take. Parkes is the centre of a fine agricultural district. There is magnificent country around Parkes—it is splendid soil, and is largely settled upon by men from Victoria. The country between Forbes and Parkes is a regular bowling green. A pair of good horses will trot the distance in 2 hours.

238. Then your opinion is that the railway should be constructed *via* Cudal and Eugowra to Forbes? Yes; and that a light line should connect Parkes with Forbes.

239. Forbes would be the terminus of the main trunk line to Wilcannia and Broken Hill? Yes.

240. *Mr. Cox.*] There is a difference of some 16 miles in the length of the two lines? About 17 miles, I think.

241. Are you aware that although there is that difference in the distance, the cost of the Cudal line would be much greater? From my researches I understand less.

242. Are you aware that the highest grade on the present projected line from Molong to Parkes and Forbes, is 1 in 70, and that there are some miles of line between Borenore and Cudal where there is a grade of 1 in 40? Yes.

243. Well, is not that objectionable? I think it is an objection.

244. So that, although that line might go through better country, there would be this great disadvantage in connection with it—that there would always be this steep grade, over which all the traffic of that grand country—the Lachlan valley—would be carried for all time? It is an objection; but the grade is only for a short distance.

245. Do you think it would be possible to remedy this steep grade? Well, it is, of course, a difficulty which cannot be put out of sight.

246. There is a fall from the range which you must negotiate in some way? There is; but although there is this disadvantage you mention in bringing the traffic over the steep grade, I think the increased number of passengers and the increased quantity of wool and produce would more than compensate for it.

247. You are aware of the character of the country all round here? I am.

248. I understand that it is fairly good country from Molong some few miles out? Yes.

249. You then get into indifferent country? Yes.

250. When you get to Flagstone Creek, it is indifferent country until you reach Parkes? Yes.

251. What kind of country is there on the other line—is it all good country? No; a small portion of it is very hilly, but not much.

252. There are a number of stations about Eugowra? Yes.

253. And in the middle of the year all those leasehold areas will be thrown open to selection? Several of them will, I understand.

254. We heard that some would be thrown open in the Molong district, and that they would be influenced by the railway to Parkes? Our argument is, that we have a larger population in our district; that we have a bigger area of valuable country; and that the Meranburn people would be within 10 or 11 miles of the route I advocate.

255. You think that the Borenore line would accommodate more people? That can be proved beyond possibility of doubt.

256. And you think it would fairly serve the people to the north as well as to the south? Yes.

257. You think it would fairly divide the district? Yes. Except that the bulk of the superior land would be on the southern side.

258. Supposing the line were taken to the north? Then it would be on the northern edge of the good country.

259. I presume there is a good rainfall about Cudal? A fair rainfall.

260. Potatoes, I presume, would grow there? Yes; but they are not a certain crop. The wheat grown there is of a superior character, and commands rather a higher price than any other wheat in this district.

261. *Mr. Lee.*] The agitation in reference to this Borenore line, I presume, is confined chiefly to the Orange people and the people residing about Borenore and Cudal? Yes, and the people of Forbes.

262. And they have been almost unanimous? Almost unanimous.

263. Do the Parkes and Molong people hold with you in regard to the route? No; they are strongly opposed to it.

264. Is the object of this proposed extension *via* Borenore and Cudal to serve the Forbes people, chiefly? The object is to serve the people living to the south of Cudal and the Forbes people as well, of course.

265. Is not Forbes an important centre? Yes.

266. A more important centre than Cudal or any place along the line of route? Yes.

267. And important in so far as it is the largest town in that direction out west? Yes.

268. Consequently, it would offer a fair market for produce grown in the district? A fair market.

269. Consequently, the claims of Forbes would be greater than those of places along the route? I think so.

270. If that is the case, should not the population be served by a line from Cowra, thence to Eugowra, Forbes, and Parkes? That would pass through a district with scarcely any population—at least, with a very small population.

271. Is there much population between Cowra and Eugowra? Straight across there would be, I suppose.

272. What is the population between Eugowra and Forbes? I could not say. It is on the score of settlement and population that we lean to the route I have named.

273. *Chairman.*] You mentioned that the people of Cargo would be greatly assisted by the construction of a line from Borenore? Yes.

274. Would they not be equally served by a line from Cowra through Canowindra? No; they would be further from that line—the distance is much greater; nearly double, I think.

Mr.

Mr. Edward Nathan, manager for Messrs. Cobb & Co., sworn and examined:—

Mr. E.  
Nathan.  
22 Feb., 1890.

275. *Chairman.*] What is your position? I am manager for Cobb & Co.
276. How long have you been at Orange? Orange has been my home since 1868. I came to Orange first in 1861.
277. How long have you held your present position? Seventeen years on the 8th of next month.
278. During that time you have had the entire management of traffic under Cobb & Co.? No; only within the last eight or nine years.
279. Previous to that, however, you were connected with the firm? Yes; I did the office work.
280. What is your experience of the traffic between Borenore and Forbes, and Molong and Parkes at the present time? From July, 1888, to June, 1889, we carried on the Orange to Forbes line, 2,480 passengers—there we were running opposition against the mail. The mail coach carried a lot of passengers; we will allow that we carried 75 per cent. of the traffic; that will give the mail coach 600 passengers, making a total of over 3,000 passengers from Orange to Forbes. In the same time we carried, on the Molong and Parkes line, a little over 1,100 passengers.
281. You had no opposition on that line? No; we had the whole of the traffic to ourselves.
282. Have you found the traffic decreasing between Orange and Forbes? No.
283. Is it quite up to what it was a few years ago? It is more now.
284. Do you find an increase in the Parkes route? Yes. The increase on the Parkes route is caused by a new rush on the other side of Parkes, to the north. It is the nearest route to Alectown. I have seen coaches go loaded with diggers only.
285. Do you know the road on both routes—that is between Molong and Parkes, and Orange and Forbes? Intimately.
286. What is the position of the two routes in regard to townships and population? Let us commence with the Molong route—the first township is Meranburn—it consists of one small public-house, one blacksmith's shop, two small stores, and what they call a farmer's hall; then there is Cobb & Co.'s stables, and that is the township. The next place is called Bumberry; it is called a postal town; it is a receiving office. It consists of one public-house only, and Cobb & Co.'s stables. There is a little hut beside it.
287. Between that point and Parkes is there any other township? There is a place called Job's, 9 miles from Bumberry. There used to be a public-house there. Then there is Bindogundra, about 6 miles from Job's.
288. What townships are there on the Borenore and Forbes line? The first township is Cheeseman's Creek, then there is Cudal, a largely populated place, with churches, schools, telegraph office, and post office.
289. What is the next place? Toogong. There are public-houses, one called the "Royal Hotel," a couple of stores, a hay and corn store, a public school, and a blacksmith's shop.
290. Then as to Murga? That is a postal town, consisting of one public-house.
291. And Eugowra? There are three public-houses, one large store, and several other stores, a blacksmith's shop, and a wheelwright's place, a public school, a convent, and several other places of the kind.
292. Are there any other places between here and Forbes? No.
293. You have no hesitation in saying which line should be constructed? Not the least.
294. The Forbes line, you think? Certainly.
295. Do you know Cowra? Yes.
296. Do you know the country between Cowra and Eugowra, *via* Canowindra? I do.
297. Is it a fairly populated country? There is no comparison between it and the route I have just given you.
298. Would the population there compare favourably with the population on the route from Molong to Parkes? No.
299. It is not equal to that, you think? No; I speak from experience. I have taken the particulars from the passenger traffic on the line.
300. Is there a road through Canowindra? Yes.
301. Do you know the traffic? I have an idea of it. There is a coach from Cowra to Forbes, but the passenger traffic on the Parkes line is infinitely superior to the traffic carried there.
302. How long is it since you have taken notice of the traffic? This last year or two.
303. Has it been since the railway was constructed to Cowra? Yes; because we had not the coach running until then. There is a two-horse coach on the Cowra line.
304. Does that run daily? Three times a week.
305. And on the other lines? They run every day, except Monday.
306. *Mr. Dowel.*] Do you know anything of the country from Forbes to Wilcannia? As far as Condobolin.
307. What is the character of it? It will grow anything on earth, if it has rain.
308. Do you think it desirable that if the line were taken to Forbes it should be extended? I do.
309. The country is sufficiently good to offer every inducement for the construction of the line? Yes.
310. Do you think the line should be constructed from Wilcannia to Broken Hill? I think that would be the best paying route.
311. The line we have under consideration—from Molong to Parkes and Forbes—have you been over the route? Hundreds of times.
312. You know the permanently staked-out line pretty well? Yes.
313. You also have a large acquaintance with the country between Cudal and Eugowra? Yes.
314. Knowing both parts of the country, what opinion have you formed as to the route which should be adopted? I say the Borenore to Forbes route, because the settlement is near and the traffic is on the spot.
315. The traffic that way is larger? It is 3 to 1 as compared with the other way. I can give you some idea of the traffic on the other line from the receipts of our agent at Parkes in connection with the traffic from Parkes to Molong. The months given are in the year 1889:—January, £53 9s.; February, £36 11s.; March, £50 17s. 6d.; April, £63 8s.; May, £42 7s. 6d.; June, £34 3s. 6d.; July, £37 15s. 6d.; August, £49 7s. 3d.; September, £65 1s. 6d.; October, £61 10s. Total, £494 10s. 9d.
316. You think the country on the Forbes line is more settled? Yes.
317. And that that is better country? No, I will not say better. There is land on the Molong to Parkes route as good as any land on the other route.

318. What kind of country is there between here and Manildra? Splendid country.
319. Nearer to water? There is a permanent creek at Manildra. I have never seen it dry.
320. If you were to have regard to the traffic and to settlement, however, you would take the line via Cudal? Well, I would take shares in one line, and I certainly would not take any in the other. I have heard a great deal said about the floods on the Lachlan. Some years ago the flood-waters came over the banks of the river, and they made a metal road about 12 inches high—that is supposed by the Roads Department to be above the highest flood-mark.
321. How do you know that? From the Department. It was built expressly to be above high water-mark; they say it is above the flood-mark.
322. Who says so? The Road Superintendent.
323. Have you not seen roads made with floods running over them afterwards? Yes, but this road is supposed to be above the highest flood which ever occurred on the Lachlan. It was intended to be so built, I believe.
324. Is there any other information you would like to give the Committee? Well, as regards the goods traffic, I obtained from the Borenore station information which shows that from January 1st to December 31st, 1889, 570 tons of goods arrived for Borenore, 500 for Cudal, 17 for Toogong, 25 for Murga, 130 for Eugowra, 1,180 for Forbes, 90 for Burrawang, 34 for Borambil, 380 for Condobolin, and 26 for Mr. Hope, making a total of 2,952 tons. The wool received from 1st September, 1889, to December 31st, 1889, amounted to 8,989 bales. The outward goods for the year 1889 amounted to 4,294 tons. The coaching came to £855 12s. 10d., and the passengers to £530.
325. Do you know the road from Forbes to Parkes? Yes.
326. Does it go through good country? Yes.
327. Are there any engineering difficulties? No. The land is as level as this floor.
328. A railway could be constructed at a cheap rate? Yes, I should think so. It is a 10-miles-an-hour road.
329. Do you think a light line of railway between Forbes and Parkes would answer all requirements? Yes; they are only running two passenger-coaches three times a week. We are running four-horse teams on the Molong-Parkes road, using 24 horses in all, and 44 horses on the Orange and Forbes road.

Mr. William Moulder, auctioneer and commission agent, sworn and examined:—

330. *Chairman.*] What are you? I am an auctioneer and commission agent.
331. Residing where? At Orange.
332. For how long? I was born here—that is thirty-seven years ago.
333. You have a good knowledge of the country and the district through which the railway will pass? Yes, I have.
334. *Mr. Lee.*] You have heard the evidence given as to this line? Yes.
335. What is the nature of the evidence you wish to give respecting it? Touching the country on both lines and the traffic.
336. You have lived here for many years, you know the development of the inside and outside districts, as well as the outlet of the traffic—will you give the Committee some proof of the progress of the district? I have not seen the line from Molong to Parkes since the survey was made, but I know the road well enough. The country from Molong to Meranburn is good wheat-producing country—in fact, it is good for any purpose; but from Meranburn to near Parkes the country is not so good. It is some years since I was along that way, and it was then thinly populated. The country round Parkes is good. With the exception of a little bit of mountainous country, the country on the Borenore and Cudal line is very good. In most cases, however, the mountains are on one side and the good country on the other side of the Eugowra Creek—there are long valleys running up, and the land is all good. On the road from Forbes to Eugowra all the land on the southern side in towards the Lachlan for a distance of 8 miles is good. On the eastern side of the Eugowra Creek there is also good country. I think some of the best land in the colony is to be found in that district. The land all about Cudal is very good—in fact, from Cudal to Cargo it is thickly populated with farmers. I understand the line goes through private holdings to the extent of about 7 miles. I have lived on the Lachlan, and all the way along, as far as I have been, it is good country. I have obtained some particulars from an official source with regard to the traffic.
337. To what traffic do you refer? I find that the trainage paid for merchandise *en route* from Sydney to Forbes and Parkes districts during 1885 was considerable. I will show the amounts derived from each route separately. The trainage paid to Forbes via Cudal in 1885 was £7,424 9s. 5d; whereas the trainage paid via Parkes and Molong was £1,878 13s. 3d. Quantities of wool, flour, and copper were received for conveyance by rail to Sydney. The quantity received *via* Forbes and Cudal was 11,000 bales of wool, 52,788 ingots of copper, and 300 tons of flour, hides, &c. There was received *via* Parkes and Molong 3,000 bales of wool, no copper, and 50 tons of flour, hides, &c.
338. Do you know the surveyed routes between Borenore and Forbes? Yes.
339. But not the survey between Molong and Parkes? No.
340. Take the line from Molong to Parkes first—what is the nature of the agricultural settlement along that line? From Molong to Meranburn the country is well settled.
341. And at any other point between there and Parkes? Not until you come right up to Parkes,
342. And between Parkes and Forbes? I was 15 miles along the line three or four months ago, and there were then a few settlements.
343. Now as to the agricultural settlement on the line from Borenore to Forbes? There are settlements from the moment you leave Borenore station till you get to Mrs. Keenan's boundary.
344. Where is that? At Keenan's bridge, about 14 miles from Orange. For about 2 miles after you leave Borenore the land is settled with farmers, then there is grazing property till you get 6 miles from the railway, where there is a public-house and a Chinaman's garden and farms; then a mile and a half further on there are farms along the bank of the creek, and a public-house and post-office. Then you fall in with Mr. Smith's property, which continues for about 4 miles, then on either side of the road there are farms; on the right-hand side they go down to Mandagery Creek.
345. That is on the north side? Yes. Then on the south side the farms continue through to Davy's Plains; then there is a small break of a few thousand acres; thence on to Cudal it is all populated country. There are farms all down the Mandagery Creek on the north side of the line, and they continue right on to Eugowra.

Mr. E.  
Nathan.  
22 Feb., 1890.

Mr. W.  
Moulder.  
22 Feb., 1890.

- Mr. W. Moulder.  
22 Feb., 1890.
346. And between Eugowra and Forbes? There is not much settlement along the road—it is a new road. The old road went round by the Lachlan. There are farms for about 4 miles.
347. I suppose some of these farms have been established for some years? Yes.
348. What do they produce? Wheat, hay, corn, and fruit.
349. More than sufficient for their own consumption? Yes.
350. What do they do with the balance? Send it to the nearest market.
351. Where is that? The nearest point would be Borenore.
352. Where is the market? Orange or Sydney.
353. Is Orange an available market for produce grown there? I think it is.
354. Are there any flour-mills in the town? Three.
355. They would absorb some of the produce? Yes. There is a flour-mill at Cudal that would take a lot of wheat.
356. What I chiefly want to ascertain from you is this: All the evidence so far goes to prove that there is a surplus of produce in the district; the Committee want to know where the market for that produce is? It must be Sydney; that would be the market for all surplus.
357. Is it a market at the present time? It is.
358. Are there any intercepting markets on the line? There are some markets along the line, but I do not think much wheat goes there. Bathurst is a market which grows wheat for itself, and some to spare too.
359. Have the farmers on this proposed line to Borenore any difficulty in getting their produce to a railway-station? They have the ordinary carriage by teams. Of course they would have to pay a certain rate for it, but there would be no difficulty.
360. What is the state of the roads? The greater part of them are in good order.
361. Macadamised? Yes.
362. Have you any idea of the rate of carriage from Toogong to Borenore? No.
363. You do not know the rate per bushel? No; it varies very much. It is much cheaper in some seasons than in others.
364. In bad weather more—in good weather less? It is always more in winter.
365. During your long residence here, have you known wheat and other produce to spoil on account of the farmers not bringing it to market? Not on account of their getting it to market.
366. What I mean is, the state of the roads being such that they could not haul their produce to the nearest railway-station for a market? Well, we have had so many dry seasons lately that we have not had enough rain to make bad roads.
367. You hold, I suppose, that railway extension creates settlement? I think it does.
368. Have you noticed that settlement has increased along the line from Orange to Molong? Well, a great deal of that land is held by Keenans and the Hon. John Smith.
369. Has settlement increased in consequence of the line? Well, the land is held by two individuals.
370. Have they subdivided their land to put it into market? Not that I am aware of.
371. So far as you know, they hold their lands intact? Yes.
372. The construction of the line, so far as the public are concerned, has not assisted the settlement of the country. No.
373. Do you happen to know if it is the intention of these landowners to open up their land? No.
374. To what purpose do they put it? Grazing.
375. Do they cultivate? Not to any extent.
376. I believe there are similar estates on the line from Borenore to Forbes? Yes.
377. And what has happened in one case may happen in the other? Yes. But then there are also estates upon the line from Molong to Parkes.
378. *Mr. Dowel.*] What is the distance between Orange and Molong? About 22 miles by road, and by rail I think about the same distance.
379. You think a considerable amount of surplus produce will be sent to Sydney? Yes.
380. Can you inform the Committee how many acres of first-class agricultural land will be served by the construction of the railway from Orange to Forbes? No.
381. Do you know anything of a petition sent down to Mr. Secretary Lackey in 1879, setting forth these particulars? No, I do not.
382. Is there a large quantity of agricultural land on the line you have been referring to? A great deal of it is splendid agricultural land.
383. Do you think there would be 20,000,000 acres? I could not form an idea.
384. Have you any knowledge of the number of stock in that particular district? Not the number.
385. Do you think there are 5,000,000 sheep in it? No, I do not.
386. If the petition said that 20,000,000 acres of agricultural land would be served by the construction of the railway from Orange to Forbes, and that there were 5,000,000 sheep upon it, is that statement likely to be correct? I think it is over-estimated, but I have no knowledge of it.
387. Considering that the cost of the line from Molong to Parkes and Forbes would be £433,000, and that working expenses and interest would amount to £26,000 a year, do you think the Committee would be justified in recommending the work to Parliament? No, I do not.
388. Do you think it more probable that the other line would pay that sum? Yes. I do not think any line would pay better than the line from Borenore to Forbes.
389. From your long residence in and knowledge of the district, do you think it is fairly progressive? Yes.
390. And is settlement continually going on between Orange and Forbes? Yes. I did not go to Forbes for several years. When I went I stopped there ten days, and I moved round the district. I never saw such an improvement in any town in the same time. The district generally had improved greatly.
391. There was good, sound, substantial settlement? Yes.
392. Do you know the country between Forbes and Wilcannia? As far as Nymagee.
393. Have you been to Wilcannia? No.
394. How far on this side of it? I do not know the distance.
395. So far as you know the country, is it capable of maintaining and supporting a line forming portion of the trunk line to Broken Hill? I think it is. The line would run through magnificent country, so far as I know it.
396. Do you know the Lachlan River? Yes.
397. Could it supply a fair quantity of water for irrigation in the district? Yes. The irrigation is carried on

on very largely by Mr. Edols, of Burrawang, and Mr. Gatenby of Towyal; Messrs. Reymond & Nichols of Forbes also irrigate. There are several small plants around Forbes for orchards and small plots. It is a very good river for the conservation of water—there are many lagoons along its banks, which hold a large quantity.

Mr. W.  
Moulder.

22 Feb., 1890.

398. Have the irrigation plants to which you refer been a success? When I went down the Lachlan they told me they were. The crops I saw at Gatenby's certainly looked well.

399. You think the construction of a line from Orange and Forbes, *via* the townships you describe, would serve the largest number of people? Yes.

400. And that it would also act as a feeder to the main trunk line? Yes.

Mr. Augustus Coulson, auctioneer, sworn and examined:—

401. *Chairman.*] What is your occupation? I am an auctioneer.

402. At Orange? Yes.

403. How long have you been here? Over thirty-five years.

404. You have been nearly all that time in business? Yes; over thirty years in business.

405. Has the nature of your business placed you in communication with the districts affected by the several routes of this railway? Yes; I have travelled through them a good deal.

406. You know the country well on both routes? I know it better on the Cudal route, because I have been doing more business there. I have been on both routes.

407. Will you give us, in your own language, your idea of the relative merits of the two routes? I think that if you have regard not only to the country, but to the benefit of the largest number of the people, there is no comparison between the two lines. I suppose there is no better agricultural district in the colony than the Cudal district, and it is very largely populated. I know it because I have travelled right along the Lachlan nearly as far as Forbes, round by Canowindra and these places.

408. What class of country is it south of Cudal, in the direction of Canowindra? It is all good useful country, and it is all populated.

409. Is it all held in large estates? Principally in small areas.

410. Who are the holders of the largest estates through which either of these lines will run? Well, there is Mr. Lance Smith and Mr. Bowman.

411. What proportion of Mr. Lance Smith's property does the Borenore line pass through? I do not know what portion the line would take in. His place is Boree-Cabonne.

412. Does his station run as far as Boree-Nyrang? I am not sure whether his property joins it or not. There is a creek just on the north of Boree, I do not know whether that divides the properties.

413. Does Boree-Nyrang belong to his father? Yes; but the railway line does not go near it.

414. Does Mr. Lance Smith's property reach as far as Cudal? No.

415. How far from Cudal? I think about 4 miles. His father's property reaches near Cudal, but the principal portion of it would still be to the north.

416. Is that the largest estate on the Borenore line, or are there any other large estates there? There is one at Toogong. I do not know which would be the largest, Toogong or Boree. Toogong belongs to Mr. Bowman, Mr. Jago Smith sold it to him a short time ago.

417. Then from Boree-Nyrang, or the point of the railway nearest to that place, right away to Toogong, the land is in the hands of two large estate holders—the line runs through that land for the whole of that distance? Yes.

418. With the exception of a little private land at Cudal? Yes.

419. Now let us come to the Molong and Parkes route—what large estates does that run through? I think the only one is that of the M'Callum Brothers. I do not think it runs through much of Mr. John Smith's.

420. Where is the M'Callum Brothers holding? About 10 miles from Molong.

421. And where does the estate terminate? I do not know.

422. According to your evidence, there is no doubt that of the two lines the line from Borenore to Forbes would pass through the larger number of large estates? I do not know how many large estates there are near Parkes.

423. Do you know the country from Toogong to Eugowra? Yes.

424. Is it in large estates or small holdings? Small holdings.

425. And from Eugowra to Forbes—is it in large estates? No I think not. I do not know, however, that the line does not go through Goimbla.

426. From your knowledge of this country do you think that if the Borenore line were constructed it would tend to a very much larger settlement? I do.

427. In what way could it do that if it passed almost entirely through large estates? It is not nearly all in large estates. Round the Cudal district the land is all in small holdings.

428. But from Borenore to Toogong, with the exception of a few small holdings at Cudal, there are two large estates? There is a large population of small holders at Cudal.

429. I suppose there is no doubt that Cudal is a larger and more important town than any town between Orange and Parkes or Forbes? Yes, excepting Molong.

430. What is the nature of the country at Eugowra? Very good, it is in small holdings.

431. Would it be fit for agriculture? Yes, I saw that by the stripper the other day they got 40 bushels of wheat to the acre.

432. Do you think that if the railway were taken to Eugowra it would tend to increase the area there under agriculture? Yes, I have no doubt about it.

433. Do you know Bumberry, on the other route? Yes.

434. Is it country similar to the country at Eugowra? Yes, good useful country, but I do not think the soil is as good.

435. Is it held in large or small areas? Small areas.

436. If a railway were constructed there the area under cultivation would be increased? Yes, I daresay it would.

437. And how many miles on either side of a railway would the farmers or agriculturists be served by its construction? I could not tell you; I should say from 15 to 20 miles.

438. Do you know the country north of Molong, along the Parkes line—Dilga, Gumble, and Bell for instance? I know the Dilga property, that is very inferior.

Mr.  
A. Coulson.

22 Feb., 1890.

- Mr. A. Coulson. 439. *Mr. Dowel.*] What are the chief products that would be carried on the proposed line from Borenore to Forbes? Well, a great quantity of stock and produce of various kinds.
440. Wheat, oats, and hay, I suppose? Yes; and there is a splendid corn-growing district at Cudal.
- 22 Feb., 1890. 441. There will be considerable traffic in wool? Yes; there are a tremendous lot of small holders of sheep there.
442. Stock of all descriptions? Yes.
443. Is there any wine-growing in the district? There is a splendid vineyard just off Cudal, at the Big Flat. A German has it, and has made it a big success. There is a small vineyard of  $1\frac{1}{2}$  acre. I was talking to the man about it, and he said he had made more off it than off all his agricultural land. He said the season was not very good, and that he had made £150 off  $1\frac{1}{2}$  acre of grapes.
444. You think the soil and climate are admirably adapted to wine-growing? I do not think there is better land in Australia for wine-growing than the land in the Cudal district. Now I come to think of it, I should like to amend my evidence with regard to the land between Boree-Cabonne and Toogong. I think I stated that, with the exception of some settlement at Cudal, the whole of the land on the railway in that direction was in the hands of two large estate holders. On reflection, I can remember that a great deal of the land is largely populated with farmers.
445. Are there farms on these large estates then? I suppose it is land selected out of the estates. There is one of 2,000 or 3,000 acres belonging to the Irving Brothers.
446. From what you say, the whole of the land from Orange to Forbes, is suitable to agricultural pursuits? Yes.
447. I suppose you would have a good knowledge of the other route also? Yes; I have travelled upon it a great deal, but not so much as upon the southern route.
448. Can you inform the Committee what is the comparative value of land on both routes—what, for instance, would be the difference in the price of an improved farm, supposing you had one, to submit to auction? The land in the Cudal district is more valuable and fetches more money, I believe, than land in the Molong district.
449. How much per acre do farms sell at in the Cudal district? I have known selections and improved farms sold for £4 per acre—it would be equal to £4 15s.—there would be 15s. owing to the Government.
450. Do you know the value of unimproved land in the Cudal district? I know land there worth £5 or £6 an acre—it is black soil.
451. Most of the holdings on the Cudal route are small, are they not? Yes. I think that from 2,000 to 3,000 acres would be about the largest holding.
452. I suppose some of these large holdings you have referred to are between Cudal and Forbes? Yes.
453. Having a large and extensive knowledge of this district for many years—what is your opinion in reference to the merits of the two routes? I think the Cudal route is superior.
454. In every respect? Yes.
455. Both as regards the population and the soil, the character of the soil itself, and the probable revenue from the railway? Yes. I do not think there is any comparison between the two lines.
456. Do you know anything of the country down the Lachlan to Wilcannia? No; but I have been as far as Condobolin.
457. You know the country between Forbes and Parkes? Yes.
458. What is its character? It is good, useful country.
459. Is it settled upon to any large extent? Yes.
460. Chiefly agriculturists? Yes. The only drawback is want of water.
461. Is there any dairying in the locality? Not that I know of.
462. Nor is there in the Cudal district? Not to any extent.
463. What are the principal products grown on the land between Borenore and Forbes? Wheat and oats.
464. First, as to wheat—Can you give the Committee any idea as to the average crop of wheat obtained from that country? I cannot; but the greatest crop I ever saw was in the Cudal district.
465. Have you any idea as to how many bushels to the acre the crops go? Some 50, some 30, some 25 bushels.
466. Do you think 20 bushels to the acre would be a fair average? I think so.
467. Of course you are aware that that is a higher average than is obtained in other parts of the colony? I think there is an average of over 20 bushels this year.
468. Then it is good wheat-growing country? Yes. The wheat is superior to our Orange wheat; I think the millers give more money for it.
469. What is the price now? Three shillings a bushel.
470. Is there much hay or oats grown? Yes; they grow a great quantity of hay.
471. What do the farmers do in the produce line? Well, I know they have to let a lot of straw go to waste through being unable to get it to the railway. In one year they burnt hundreds of tons. There is of course plenty of consumption for it, if it can be got to the railway.
472. What other produce do you think they could reckon upon to give revenue to the railway? Well, there is the stock.
473. Would there be much stock? Yes. There is a lot of live stock traffic in these parts.
474. Would there be much wool? Yes; they would grow a good deal of wool.
475. Do you think the railway would be the means of drawing wool from outlying districts which now send it elsewhere? Yes; I do.
476. Then you think that the permanently staked-out route *via* Cudal is the best that could be constructed in the interests of all parties? I do.
477. Supposing the line were constructed, would it not to a large extent serve a number of persons settled to the south of the proposed Molong and Parkes line? It might.
478. Would it not serve the people at Manildra? Yes.
479. And at Dulladerry? Yes.
480. All these people to a certain extent would be served by your proposed line? Yes.
481. Have you heard of any strongly expressed opinions among the public generally in favour of this line? Yes, I have. I was speaking to a stranger, Mr. Cassidy, just now, and he said he did not think there could be two questions about the line.
482. He knows the country? Yes, the Chairman of the Committee knows him very well.
483. Knowing the line from Molong to Parkes and Forbes, knowing that it would cost £433,000, do you think it likely that sufficient revenue would be obtained to pay working expenses and interest? I do not think so, at present.

484. Or for some considerable time? No; but I think that if a line were started *via* Cudal, there would soon be a tremendous population in that district. It is very largely populated now.
485. The district is a progressive one? Undoubtedly.
486. You see no probability of its retrogressing? Not the slightest.
487. You think that a line of railway, if constructed, would offer larger inducements to agriculturalists than to pastoralists? Yes, but I may say that a small property of 1,500 acres sold for £3 10s. per acre; it was principally grazing land, and it was near Cudal.
488. *Chairman.*] Is there land available for an increased agricultural population, if the line you speak of were constructed? That I cannot say, unless the owners subdivided or sold portions of their holdings. There is nearly a continuation of farms right on to Cargo.
489. Then unless these large landholders subdivide their holdings, there can be no fresh settlement? I am not aware of any land now available, but if there is any land for sale it will be snapped up very quickly as soon as people discover that a railway is going that way.

Mr.  
A. Coulson.  
22 Feb., 1890.

Mr. Patrick Kenna, hotelkeeper, sworn and examined:—

490. *Chairman.*] You reside at Orange? Yes.
491. What are you? An hotelkeeper.
492. How long have you been in the district? I have been a resident for thirty-three years.
493. You have a thorough knowledge of it? I have.
494. *Mr. Cox.*] You are aware that there has been for many years a desire to have a railway connecting this portion of the country with the Lachlan Valley? I am aware of that.
495. What is the reason you have been unable to obtain the railway? Well, there has been a deal of rivalry. It was decided by Parliament, some seven or eight years ago, that a railway should be taken to Forbes. There were only nineteen against it. Mr. W. H. Suttor moved an amendment for a trial survey from Cowra, and the work was thus shelved; but for that, we should have had a railway to Forbes to-day.
496. Now there is a third rival route? Yes, from Molong to Parkes.
497. So that this very thickly populated and fine agricultural country has been suffering an injustice from the want of unanimity among the people in the surrounding districts? Yes, the railway was carried by a large majority in the Lower House, but it was shelved in the Upper House, through an amendment moved by Mr. W. H. Suttor.
498. What was his objection to the Forbes railway from Borenore? I do not know that I can remember it now.
499. Did he not contend that the line from Borenore was an expensive one to construct, whereas the one from Cowra was an inexpensive one? Yes, I think it was, but the line from Cowra to Forbes was, and still is, thinly populated. It is nearly all squatting country.
500. And it would not have served a large number of farmers in the country round about Borenore? Well, if they made that line they would have to make another line to Eugowra.
501. What is your objection to the line proposed by the Government *via* Molong? I think in the interests of the country it ought not to be made, because it is not as good a paying line as the other line.
502. Why? I cannot tell you very much about the land from Molong to Parkes, but I know that the population is not nearly so great as it is on the other route.
503. Is not the fact that the country is thickly populated proof that it is better country? There is no doubt about that. The most people will settle where the best land is.
504. Which would develop the country most, a line *via* Cudal or a line *via* Molong and Parkes? Well, four or five places would be benefited to the south of Cudal if you took the line to Borenore. There would be Big Flat, Cargo, Canowindra, Davy's Plains, Barragin. It is all good agricultural land at those places, and they all lie to the south of the proposed line from Borenore. If a railway were taken from Molong to Parkes those places would not participate in its benefits—they would be too far away. They would have to go either to Borenore or to Cowra.
505. Suppose the line were carried from Borenore *via* Cudal—would not all the people to the north be left out in the cold? No. Most of the people on the north side, as far as I can hear from the information I have, until you get within 25 miles of Parkes, would be benefited by a line going *via* Cudal—they would only have to come some 9, 10, 12 miles to meet the Cudal line. They would participate for a certain distance, as much as the people in the south, in the benefits of the line.
506. Have you any interest in the country on the Cudal line? No.
507. You are speaking in the interests of the country generally? Yes.
508. Which is the shorter line—that *via* Cudal or that *via* Molong? Well, if you take into consideration the line from Molong to Parkes there would be 20 miles made, there would also be 10 miles made of the Forbes line up to Borenore. When completed, however, the Molong line, although shorter in construction, would be 17 miles longer from Sydney than the other line.
509. Consequently, all the residents of the Lachlan Valley for many miles down would have to pay some 17 miles of carriage more by way of Molong than by way of Borenore? Yes.
510. You think that ought to be taken into consideration in the construction of a railway? Yes; because it will be a charge for all time.
511. Is there any really poor country on the Cudal line? Well, there are some ranges which come into the creek about Giombla, Long's Corner, and the Eugowra Creek.
512. Is the country there well timbered? Yes; there is good box and ironbark. I know of two men who have taken up a selection at Pretty Plains, the fencing stuff is bad there, and I have seen them bringing down beautiful ironbark from near Toogong, as good as any you would get near the Nepean.
513. Do you know the country between Eugowra and Forbes? I know it all, it is a level, flat country. At present, however, it is only a sheep run. I believe some selectors have taken up 3,000 or 4,000 acres, combining farming and squatting.
514. What do they do with their produce? There is a mill at Forbes which turns out a large quantity of flour. They send their wheat there.
515. Is that a better market for them than the Sydney market? Yes, the carriage kills them sending to Sydney.
516. If a railway passed through this country then, they would not take advantage of it except to send their produce to Forbes? That would depend upon the price. If the price were higher in Sydney they would send it there.

Mr.  
P. Kenna.  
22 Feb., 1890.

- Mr. P. Kenna.  
22 Feb., 1890.
517. Are you aware whether there are any leascholds likely to be thrown open on the line between Toogong and Forbes? There are large reserves about Cargo. I know people have been waiting for the last two or three years for them to be thrown open to selection.
518. You spoke a little while ago of the fine country about Canowindra, but the people there would not be benefited by either of these two routes, because they would be nearer Cowra? From Canowindra to Cowra the distance is 22 miles, but from Canowindra to where this line would go there would be a distance of only 12 miles. There would be a difference of 8 or 10 miles between the two places.
519. Where are the engineering difficulties in the making of a railway *via* Cudal? There are only 6 miles which are bad.
520. Where do they start? From the other side of Borenore down to Keenan's bridge.
521. The grades would necessarily be somewhat heavy there? Yes.
522. When you once get down to Boree-Cabonne you are in level country? Yes.
523. There are no difficulties between that and Forbes? There are some ridges coming into the creek, and there might be a little cutting at places, but there would not be any long cutting.
524. When you once get down to the flats on the Lachlan, is there no danger from floods? I think they made two surveys there some years ago. After making the first survey they found that the flood would come up above it, then they took a circuit, and went round outside flood marks, to a certain extent. I do not think the flood will interfere with the last route chosen.
525. Is not the town of Forbes subject to flood? Some parts of it.
526. There are two or three large estates on this line, Boree-Cabonne and Toogong for instance—they are at present merely sheep walks? There are sheep and cattle there.
527. But it is, nevertheless, distinctly good agricultural land? I do not think you would find finer agricultural land in the colony, not even in the valley of the Hunter than you would find at Cudal. It is splendid wheat growing land in a fair season.
528. Of course if that country were taken up by agriculturalists the probability is that the proprietors would be only too glad to allow human beings to live on it instead of sheep and cattle? It will come to that in time, when the old people are dead and the estates are cut up.
529. Speaking as a citizen, you say distinctly that the line *via* Cudal will serve the greater number of people, and would be more conducive to the welfare of the community than that *via* Molong and Forbes? Well, if the two lines were in the hands of companies, and I were asked to take shares, I should much prefer taking shares in the Cudal line than in the other.

Mr. Frederick Richardson, Railway Station-master, Orange, sworn and examined:—

- Mr. F. Richardson.  
22 Feb., 1890.
530. *Chairman.*] What is your position? I am Station-master at Orange.
531. How long have you been in that position? Nine years.
532. Can you give us any idea of the goods traffic from your station to Forbes and Parkes? I suppose you mean before the Molong line was open. If so, the figures Mr. Moulder gave you are those which I should give; mine would only be a repetition of his.
533. Did you hear Mr. Moulder's evidence? Yes.
534. And you confirm the statements he made? I do.
535. Since the railway has been opened has the amount of traffic to Forbes increased or decreased? I could not give you reliable information, for this reason, that a large proportion of the traffic has gone Cowra-way. The traffic at Borenore this year is greater than it was last.
536. Has not the Cowra traffic made a decrease in your traffic, so far as Forbes is concerned? Well, we do not see the Forbes' traffic, it never touches Orange, it only runs through. The records as to actual traffic are those Mr. Nathan gave you.
537. Have you noticed a great falling off in the goods traffic at your station since the railway to Borenore was opened? Undoubtedly.
538. You lose the whole of the Forbes traffic? We lose Forbes and Parkes as well; it is equivalent to £10,000 or £11,000 a year, probably a little more, but it would depend upon the season.
539. Could you give us any idea of the amount of traffic which comes through from Borenore? I could supply you with a statement of the number of trucks passing through, but I should have to go through my books to compile the statement.
540. Could you give us an idea of the class of goods? There would be, principally, four or five different sorts; there would be wool, flour, grain, and such things as hides and skins; that would be the principal traffic.
541. Is there much of that traffic left in Orange, or does it go through to Sydney? A fair proportion of the wheat is left in Orange, about 20 or 25 per cent. of the wheat would come to us, I suppose. There is a little flour, but nothing very startling. We get a little flour, I think, from Cudal.
542. I suppose you have no knowledge of the country outside? Not on the Parkes line. I have been on the Forbes line, to a place called Boney's Rocks, beyond Cudal and Canowindra. I have also been round by Davy's Plains. The land I have seen is very superior.

Caieb Robertson Barry, Esq., bank manager, sworn and examined:—

- C. R. Barry, Esq.  
22 Feb., 1890.
543. *Chairman.*] What are you? I am a bank manager.
544. Residing where? At the present time at Blayney, but for seven years I was residing at Cudal. I was then secretary to the Cudal Railway League.
545. Were you in a bank at Cudal? Yes.
546. Can you give us any information as to the rival routes now before us? I know a good deal of the country about Cudal.
547. What class of country is it, and what are its products? Well, from Molong to Canowindra, with the exception of one small patch, you may say that it is a wheat-field. Every acre is fit for wheat. It is rich red volcanic soil.
548. *Mr. Lee.*] How long were you managing a bank at Cudal? Seven years.
549. What was the state of the small settlers of the district at that time? When I first went there the district was a comparatively new one, and the settlers had, of course, an up-hill fight in clearing their land. Then they were much handicapped by the cost of carriage—they were confined to one crop. Being, as they were, 28 miles from Orange, it would not pay to grow hay, and, of course, the local population

was not sufficient to absorb it—the result was that the farmers had either to let the crops grow grain or to let them rot. I have known dry seasons in which, under ordinary circumstances, the crops would have been cut for hay, but the farmers, sooner than cut them for hay, which they knew they could not sell, risked losing everything, and allowed them to grow for grain.

C. R. Barry, Esq.  
22 Feb., 1890.

550. How far would that be from Borenore? Seventeen miles and some chains.
551. You say that good land extends down as far as Canowindra? Yes, with the exception of small patches about Sandy Creek, near Molong. The land from Molong to Canowindra is of the same character.
552. Does it extend still further south? I know nothing beyond that.
553. How far would Canowindra be from Cowra? I could only make a guess—it is supposed to be half-way between Cudal and Cowra.
554. Can you, as a bank manager, give us some idea of the financial position of the settlers about Cudal—you need not answer the question if you think it would trespass upon your private business as manager? Their financial position, when I was there, was good. All that they had was expended in clearing the land and erecting improvements. They were in a good position, but the greater part of their wealth was lying in their land.
555. They were able to sell some crops to enable them to get along? Yes.
556. And the crops, you say, were wheat? Yes; they had to depend entirely upon that.
557. Were the settlers of a good *bona-fide* character? Certainly.
558. Had they selected to make homes for themselves and families, or were they, in a large degree, the representatives of capitalists? I do not know of an exception to their being all good *bona-fide* farmers.
559. As a rule they were? Yes, certainly.
560. And you think that if there were a fair outlet to enable these persons to get their stock to market the district would still further progress? Yes; and a number of other things would be grown there which they cannot grow at the present time, because they cannot bring them to market.
561. A railway would give them the necessary outlet? Yes. They must leave New South Wales, it seems to me, if they cannot get an outlet.\*
562. These people are so shut up at present they cannot get access to the main thoroughfare? Yes; and it does not pay to send a great deal of the produce by teams.
563. Have they any difficulty in disposing of their grain at present? No, except that they have to cart it a long distance.
564. But they can find a market? Yes.
565. And you have no doubt that larger quantities would be grown if they had a better outlet? Yes.
566. Are you aware whether any capitalists have banded themselves together as syndicates on the line of route you advocate? Not that I am aware of.
567. Are you aware of any extraordinary influence that has been brought to bear to get the line carried in that direction for the benefit of syndicates? No.
568. As a bank manager, you would be in a position to know that such syndicates were in existence? Well, there were none before I left, and I think I should have known if there had been any since.
569. Do you know the route the line has been surveyed from Borenore to Forbes? A large portion of it.
570. How far have you been along it? As far as Eugowra.
571. What is the nature of the country? Not as good about Eugowra as it is at Cudal, but it is good country, and there are a number of farmers settled about Eugowra.
572. Are there any large portions in the neighbourhood as good as the Cudal land? The land down as far as Canowindra to Molong is the same; from Borenore to Murga there is much the same character of red land.†
573. *Mr. Dowel.*] Do you know the surveyed route from Molong to Parkes and Forbes? I have been on a portion of it. I have been from a few miles on the Parkes side of Manildra into Molong.
574. Have you had an opportunity to observe the character of the country? I did notice it. There is very good land, indeed, from Molong to Garra, and getting in towards Manildra. Beyond that, the character of the land I saw was very inferior.
575. In your capacity as secretary to the Cudal Railway League you have had special opportunities to obtain a large amount of information as to these various lines? Yes.
576. Is the preponderance of evidence you have obtained in favour of the Cudal line? Yes, or I would not have advocated it.
577. You refer to evidence independently of your own personal observation? Yes.
578. You have informed Mr. Lee that you have considerable knowledge of the position of the early selectors of Cudal;—you have said that when they first settled on the soil they had considerable difficulties to contend with;—have they improved their position or not? I have been two years away, and I cannot say exactly, but I take it that they are improving their holdings every year. Their wealth is in their holdings.
579. Were the improvements you saw made substantial? Yes.
580. The agricultural settlement appeared permanent—that is, as far as you could judge, the land was not likely to revert back to pastoral purposes? The majority of the improvements were of a superior character. The fencing was very good indeed;—first-class fencing. There were also good orchards and homesteads.
581. Do you think a railway *via* Cudal and Toogong is likely to pay? I think it is likely to pay the Government better than any other line.
582. Do you know the estimated cost of the railway to Parkes and Forbes? I know it is estimated to cost about £60,000 more than the other line.
583. Do you think the line would give as good a return for the outlay as the other line? No. If you look at the map you will see that it comes out due west to Borenore from Orange. It then goes north-west to Molong, and comes down again to Manildra, within 7 miles of Cudal. That is the best point on that line. The majority of the population is settled south of Cudal; and, taking Cudal as the starting point, if a line were constructed *via* Molong, through Manildra, the people would have 10 miles to go to Manildra and 26 miles round to Borenore or Orange. The difference going from Cudal to Orange by Manildra and by Cudal direct would be 20 miles.

584.

\* NOTE (on revision):—This question was—"If the farmers had railway communication (*i.e.*, with the metropolis *via* Borenore), could they dispose of their produce?" My reply was—"Yes; if they cannot, they had better leave New South Wales."

† NOTE (on revision):—From Molong on the north to Canowindra on the south, and from Borenore on the east to Murga on the west, there is the same character of rich, volcanic soil.

- C. R. Barry, Esq.  
22 Feb., 1890.
584. That would be a considerable disadvantage? Yes. A man would have to go 10 miles to get to Manildra railway-station, and he would then have to pay carriage round to Borenore. That applies to all places situated south of Cudal.
585. You have a special knowledge of the country round about Cudal; it is stated that that country presents engineering difficulties;—what do you know of the matter? There is a difficult portion between Borenore and Keenan's Bridge, but I think the line there could be improved. I think it could be made straighter. I could never understand why the line was brought so far north. I believe that if the gradient was lengthened slightly, and if you took a longer time to come down, the grades would be considerably eased.\*
586. Do you think the engineering difficulties arising out of the physical features of the country are sufficient to prevent the construction of a line? Well, the Committee have the permanent survey to judge by.
587. You do not think there is any great difficulty to contend with. As far as I can see, there is not.
588. *Mr. Cox.*] Did the League of which you were secretary make up a fair estimate as to the probable receipts of a railway to Forbes, *via* Cudal? Not the probable receipts, but we had statistics collected showing the number of farmers and the quantity of wheat grown at the time, and so forth.
589. Have you seen the estimate of the Commissioners as to the receipts on the Molong, Parkes, and Forbes line? I have not.
590. It appears that the annual charge upon the line will be £26,000; the traffic is estimated to be worth £11,000, so that the country will be mulcted to the extent of £15,000 a year? I can quite understand that.
591. Do you think you could show better figures than that in respect of the Cudal line? I have not made them up, but I am sure we could.
592. And the Cudal line would be 17 miles shorter than that *via* Parkes? 17 miles shorter to Sydney. Of course it will not be shorter to construct. I heard a question asked with regard to the settlement round about Cudal. The statistics we collected showed the number of farms within 9 miles of Cudal to be close upon 200.
593. *Chairman.*] How far is Cudal from the nearest point on the Molong and Parkes line? As the crow flies, about 7 miles—about 10 miles with roads.
594. That is the township? Yes.
595. For how many miles does agriculture extend northward up towards the line? Up as far as Manildra.
596. Then if a line were constructed from Molong to Parkes it would materially serve the Cudal people? No, I do not think it would. They would have to go 10 miles to Manildra with their teams, and then pay 26 miles of railway carriage to Borenore—whereas they could reach Borenore direct, by a good metal road, in 17 miles.
597. How far northward of Cudal do you reckon belongs to the Cudal District? It would be hard to say. Of course some of the Cudal farmers go to Molong.
598. Then if this line were constructed to Molong a portion of it would run through what is virtually a part of the Cudal District? That would be the nearest point, and it is the best point on that line.
599. The advantages of the line from Borenore to Forbes are derived principally by the farmers to the south of Cudal? It would also benefit those to the north. If a man were living 2 or 3 miles from Manildra, he would save expense by taking his produce down to Borenore, saving the railway carriage between Manildra and Borenore. If a railway were constructed from Borenore to Cudal, there would probably be a station at Boree, which would be the station for the Manildra people.
600. Have you any other information to give to the Committee? Well, in regard to the compensation for land, when a question was asked in the House, it was stated that there were 24 miles of purchased land on the Cudal line. The highest price for a highly-improved farm on that line would be £4 an acre. One farm, which the railway traverses, was sold at £3 10s. per acre. If you add 25 per cent., you would have £2,000 for the whole distance. The whole compensation ought not to exceed £5,000.

MONDAY, 24 FEBRUARY 1890.

[*The Sectional Committee met at the Court-house, Molong, at 10 a.m.*]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX. | WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Thomas Kennedy, Esq., surveyor, sworn and examined:—

- T. Kennedy, Esq.  
24 Feb., 1890.
601. *Chairman.*] What is your position? I am in the Railway Survey Branch.
602. Where are you at present stationed? Near Gulgong.
603. Do you know the proposed railway from Molong to Parkes? Yes.
604. Had you anything to do with the survey of it? Yes; I made an improved survey on the permanently staked line.
605. When was this? Last January; I finished it in January of last year.
606. Did you make any material alterations in the original survey? The grades were 1 in 40 before, and I reduced them to 1 in 50. The first alteration I made was at the town of Molong.
607. What did that deviation consist of—in which direction did you go from the originally-surveyed line? Across the creek; that would be to the north.
608. How far did you go to the north from the originally-surveyed line? About one mile and a-half.
- 609.

\* NOTE (*on revision*):—I explained, that if the line was taken more to the south than the present surveyed line, I believed a shorter line would be obtained, and that, in addition to this, I believed that an easier grade would be obtained by the southern route from the high land by coming down a longer spur from the Canoblas than that taken by the present surveyed line. This spur runs out on the low land at Mouse Hole Gap, near Ryan's farm, about three miles further on than Keenan's Bridge, where the present survey reaches the low land, and from that point on the lines would be identical.

609. And you then returned to the same line? At about  $1\frac{1}{2}$  miles on from Molong I connected with the line again. T. Kennedy, Esq.
610. And by so doing what was the advantage you gained upon the original survey? I reduced the grade from 1 in 40 to 1 in 76. 24 Feb., 1890.
611. Did that increase the distance much? It increased it by over a mile.
612. What is the ruling grade of the entire line from Molong to Parkes? There was a short bit of 1 in 40 in the rough survey; in the improved survey the grade was 1 in 50, *via* Bumberry, and 1 in 40 *via* Flagstone Creek.
613. You know of a short piece of 1 in 40? Yes, but it could be avoided.
614. 1 in 50 is the steepest grade that you left? Yes.
615. What would be the extra expense of crossing the creeks in connection with the first deviation you made at Molong? I could not say. I see there is an opening of about 30 feet.
616. Is it likely that the deep cutting attached to the originally surveyed line would counterbalance the cost of the two bridges? I should think so. An advantage is gained in this way. The original survey left about three-quarters of a mile on the Orange side of the Molong station.
617. Are we to understand that this deviation was made for the express purpose of bringing the line into Molong itself? Yes, a short branch line was constructed into the town of Molong—the surveyed line never came right through the town—that is the line from Molong to Forbes as it is here. An alteration was made just here at the station, taking the line on, and making a continuous line of it; to do that it was necessary to cross these creeks.
618. Do you understand anything about the cost of construction? No, I do not.
619. You could not tell us whether there would be any material difference between the cost of the deviation and the cost of the line as originally surveyed? I could not tell. I daresay estimates have been taken out by the Department from the two pieces. I should say it would be cheaper to come round through the town, else you could not possibly reduce the grade of 1 in 40 to 1 in 70 without tunnels.
620. Where is the next deviation made? Very little is made; it runs in and out of the line nearly all the way till you reach 241 miles.
621. Then you branch off to the north? Yes. Going through Bumberry there is a rough range to cross. On the other side of Bumberry the country is very rough all round, but there is a low gap in the range.
622. By that deviation you reduce the grade to 1 in 50 from 1 in 40? Yes.
623. Was the distance increased by that deviation? I think it is about the same—there may be a difference of about a mile.
624. Do you know anything about any other survey that has taken place in addition to these two? I know of one through Bocoble Gap.
625. Do you know anything of the country there? Yes, I went down and had a look at the country; it is an easier gap to get through than the other.
626. Is it a different gap to the one you went through? Yes.
627. You do not mount so high? No. It is lower than Lord's Gap.
628. In the event of a line going through Bocoble Gap, would it place the deviation further to the south than by any other survey? Yes, it would bring it nearer Cudal.
629. How many miles nearer Cudal than the present line? My deviation would go further away, but Mr. Stuart is making a deviation, and would be able to give evidence on that point.
630. *Mr. Lee.*] When were you sent to examine this staked line between Molong and Forbes? Last September twelve months.
631. That was before the proposal was referred by Parliament to the Public Works Committee? Yes.
632. Have you made any investigation since the matter was referred to the Committee? No.
633. The sketch survey, as shown on this map in the blue line, is the line that was submitted by the engineer of the department to the Public Works Committee? I am not sure; I think it was submitted up to 241 miles.
634. Is the red line shown on this map the line described? The blue line up to 241 miles, I think, and the red line afterwards.
635. The blue line from Molong to the point you name is as near as possible along the route of the originally staked line? Yes.
636. Describe the line from point 241 miles along the line *via* Bumberry? At 241 miles it takes a north-easterly direction till you reach 249.
637. At that point the blue line is how far from the permanently staked line?  $1\frac{1}{2}$  miles. It takes a northerly direction up to 257 miles.
638. At point 257 how far is the blue line from the permanently staked survey? About 7 miles; the line then follows the main road right into Parkes.
639. Till it junctions with the staked survey at 262 miles? Yes.
640. And the widest point between the original survey and your survey is 7 miles? Yes.
641. What was the object of making a deviation so far from the original line in that direction? The country between the red and blue lines is rough broken country.
642. And what is the nature of the country through which you have taken your detour. For about 4 miles at the back of Bumberry it is very rough country. After that it goes into good grass country; that extends down until you get on to the Billabong Creek, and then it is good land.
643. Is there much agricultural country along that route? I think most of the flats along the Billabong Creek could be cultivated.
644. How much of the country has been taken up? It is nearly all held in selections or leases.
645. Are there many large freehold estates along that route? I do not think so; it is nearly all selections.
646. The land is chiefly in the hands of conditional purchasers? Yes.
647. Have you been along the main surveyed line from point 241 miles to Parkes? No.
648. What were your instructions when you were sent into the field;—were they to avoid the piece of line between 241 miles and Parkes? My instructions were to improve the whole length of the line from Molong to Parkes.
649. Did you go along the original survey to see if you could improve it? When I got to point 241 miles I was instructed to run an alternative route to Parkes. I believe a deputation went down to Sydney and asked for it.

- T. Kennedy, Esq.  
24 Feb., 1890.
650. Is your deviation from 241 miles to Parkes much longer than the originally staked line? 2 miles.  
651. What is the heaviest grade on the existing survey between 241 miles and Parkes? 1 in 40. There are short pieces between 251 and 252, between 249 and 250, and between 244 and 245.  
652. Then you have not examined that portion of the permanently staked line to ascertain whether you could reduce these grades or not? No.  
653. From point 241 miles to Parkes, you have confined your attention solely to a new survey? Yes.  
654. And you have done nothing towards improving or reducing grades on the permanently staked line from that point to Parkes? No.  
655. Has any other engineer been employed upon the work? I do not know.  
656. Are you still on this section? No, I am surveying a line from Gulgong to Wellington.  
657. *Mr. Cox.*] Is the deviation you have made more or less settled than the original survey? I fancy it is more settled, but I can only tell from the plan.  
658. You have not been through the country? Well, I could not tell you what settlement there is except from the alienated portions on the plan.  
659. *Mr. Dowel.*] How long have you been in the employ of the Government? Ten years as a surveyor; before that I was a draughtsman in the Department for two years.  
660. Have you any knowledge or experience of railway construction? None whatever.  
661. How long were you employed on this particular line from Molong to Parkes? From September to January—about four months.  
662. During that time did you explore the country pretty well between those two places? Yes, I explored all that country.  
663. Is there any good land between Molong and Parkes? It is very fair country right through. Of course; there is some good land and some bad land.  
664. Does the line present many great engineering difficulties? No; there is nothing very difficult about it.  
665. Where does the rough stony country commence? At Bumberry.  
666. At what distance from here? About 32 or 33 miles.  
667. Did you make an examination of the timber through which the line would pass;—did you notice whether it was suitable for railway construction—that is for sleepers, fencing, culverts, or bridge work? I think you could get good timber for sleepers and fencing, but I do not know whether you could get good timber for bridge work.  
668. But there would be no difficulty about getting sleepers? No.  
669. And short lengths for culverts? No.  
670. What is the distance of the line from Molong to Parkes and Forbes? About 71 miles 52 chains.  
671. If I were to inform you that it was to cost £6,000 a mile—would you consider that a large or a reasonable amount? A reasonable amount.  
672. You would not think it too high? No.  
673. Can you suggest any mode of cheapening the cost of permanent way construction? None whatever.  
674. Would it not cheapen the cost of construction if half-round sleepers were used instead of the sort now used? It might be cheaper at first, but it would probably be dearer in the long run, because I do not think the sleepers would last so long.  
675. Are you aware that on many railways in England and America half-round sleepers are used? I have heard so.  
676. Can you inform the Committee what is the distance from Borenore to Forbes, *via* Cudal? I know nothing about the Borenore line.  
677. Do you know that the line from Molong to Parkes and Forbes is 11 miles shorter than the Cudal line? I believe it is a little shorter.  
678. Your experience is confined to railway survey? Yes.  
679. Railway engineering you have had nothing to do with;—you have been trying to improve the line in respect to some of the grades? That is all.  
680. Who is engaged upon the line at the present time? Mr. Stuart.  
681. What is he doing? He is making a deviation through Bocoble Gap. He is getting a fresh line, and reducing the steep gradient off Lord's Gap.  
682. Will that line bring the railway any nearer Cudal than it is now? It will.  
683. Can you tell the Committee what is the distance of the line you surveyed from Cudal? About 9 or 10 miles.  
684. Do you think the people within a radius of 9 or 10 miles would use a railway? I think they would.  
685. Do you not think the Cudal people might as well come to that line as people from other points go to Cudal? Well, it would be just as easy.  
686. You do not know the intermediate country? No; I do not.

---

Henry Harold Septimus Chippendall, Esq., Clerk of Petty Sessions and Crown Lands Agent, sworn and examined:—

- H. H. S. Chippendall, Esq.  
24 Feb., 1890.
687. *Chairman.*] What position do you fill? I am Clerk of Petty Sessions and Crown Lands Agent at Molong.  
688. How long have you been stationed there? Between seventeen and eighteen months.  
689. Can you give us any information as to the amount of land alienated and unalienated or reserved through which the proposed line will pass? I can give you approximately the area unalienated and the area under reserves, but the alienated land I have not taken a note of.  
690. Can you give us a map showing the unalienated land? I can show you the parish maps through which the railway passes.  
691. Where does your district terminate? At the parish of Terara, where it joins that of Bumberry. The parishes in my district are Brymedura, showing the proposed line to the parish of Gregra. The next map shows the proposed line through a corner of Gregra, thence through the parish of Dulladerry; then the line goes from Dulladerry through Terara.  
692. Could you give us the aggregate area of the land in your district held under leasehold area within 7 or 8 miles of the railway? Roughly, the leasehold area of the runs through which the railway passes, or within

within a few miles of the railway, is 12,000 acres. The leases of this will expire on the 8th July, 1890. The available land unalienated on Brymedura is 450 acres; Gregra, 750 acres; Dulladerry, 1,700 acres; Terara, 1,247 acres. The reserves in Brymedura amount to 2,640 acres; in Gregra to 1,060 acres; in Dulladerry to 4,600 acres; and in Terara to 300 acres. This gives a total of 24,747 acres available in reserves and leasehold areas. H. H. S.  
Chippendall,  
Esq.  
24 Feb., 1890.

693. What do these reserves consist of principally? In Brymedura the largest area is a water reserve; the others are quarry reserves. In Gregra it is principally water reserve; in Dulladerry, water reserve, railway reserve, and camping reserve. There is one forest reserve in Terara, principally on leasehold area. That is the only forest reserve of any size. It is of considerable extent.

694. Do you know what class of land is contained in these reserves and leasehold areas? I know nothing about that.

695. Have you had many applications from persons willing to select country and not able to obtain it? Yes, I have had a good many applications for land. Persons will say, "I should like to take up this and that piece," and I have to tell them that it is not open for selection.

696. I was speaking more particularly of the leasehold areas? I have had a considerable number of applications to select on leasehold areas in this direction.

697. Do you believe that the majority of these 12,000 acres of which you speak would be selected as soon as thrown open? I do not know that I can say the majority, but at all events a considerable portion of it.

Mr. Edward Aland, Railway Station-master, Molong, sworn and examined:—

698. *Mr. Cox.*] You are station-master here? Yes.

699. How long have you been in the district? A little over four years.

700. Since the railway was opened, I suppose? I came here about three weeks afterwards.

701. Can you give the Committee any idea of the amount of traffic which has taken place during that time? Not during the whole of the time. I have made an estimate of the goods traffic for the past six months, and an estimate of the coaching traffic for twelve months. Mr.  
E. Aland.  
24 Feb., 1890.

702. Have you previously made up the returns for the Government? The returns are made up monthly and forwarded to the audit office. For the twelve months ending 31st December, 1889, 4,060 passengers were carried; the inward goods for the six months ending 31st January were 2,395 tons 18 cwt; there were 5 trucks of cattle and 65 sheep vans; the outwards goods were 2,713 tons 18 cwt. 3 qrs.; there were 20 trucks of cattle and 90 sheep-vans; about 830 tons of grain were forwarded in the month of January.

703. Where does this produce come from, chiefly? I am not in a position to say. I simply take delivery as it comes in. I think the majority of it is from Parkes, or along the road to Parkes. Wright, Heaton, & Co.'s representatives would be able to tell you where it comes from.

704. Do you know the country through which the line passes? I have not been more than 5 miles out of Molong since I have been here.

705. Has the traffic increased during the last four years? It has been increasing every year.

706. Largely? Yes.

707. In what percentage? I could not say. I know that in the present season we have had over 800 bales of wool more than in any previous year.

708. Is the passenger traffic increasing? Yes, but I have made no estimate. I think it will reach at least 200 passengers more—that is, taking the past twelve months and comparing them with the previous twelve months.

709. Does much produce find its way by rail to Sydney? To January last month there were 830 tons 14 cwt. 1 qr.

710. I suppose the quantity of wheat is in excess of the previous years on account of the good season? Yes, but I think the wheat which has already gone away is nothing compared with what will go away. I am given to understand that people have only just commenced to bring it in.

711. *Mr. Lee.*] What is the nature of the goods traffic you refer to? Well, the outward goods as a rule consist of various skins (sheepskins and marsupial skins), potatoes, wheat, and things of that kind.

712. Any flour? A good deal of flour.

713. Can you tell the Committee where these goods are booked to? As a rule to Granville and Darling Harbour. I have a deal of grain going to Millthorpe, and some to Orange. The bulk of the grain, however, goes to the metropolis.

714. Do you say you send grain to Orange? Not a great deal.

715. Is the flour sent to Sydney? A good deal is sent to Darling Harbour.

716. Is the wheat and flour traffic increasing? Yes.

717. Is that since the rates have been reduced for the carriage of grain? I could not say; I have not taken particular notice. Last year there was very little grain in the district. As far as the rates are concerned, the wheat must go, even if we adhered to the old rates.

718. But have not the rates for the carriage of grain been reduced on this line? Yes.

719. There are special rates? On the up-grade.

720. Has that induced a large quantity of grain to be sent to the metropolis? I could not say; but I know a lot of grain goes.

721. Prior to the reduction of the rates large quantities of grain and flour went to Sydney? Yes.

722. Would the Committee be safe in assuming that under these rates the farmers can send grain to Sydney and sell it there at a profit? Yes, I think so.

723. Is there any local market? There is a local market at the present time. There is always some market here. There are buyers in Molong who buy the grain and forward it.

724. In your opinion, is the reduced rate for the conveyance of grain likely to result in greater quantities being carried upon the railway? I could not say.

725. Still, if the farmers could send their grain at the higher rates, they are more likely to send it at the lower rates? Yes.

726. Is any hay or chaff sent from here? Yes, in any sort of a season.

727. Have you been able to form any idea as to where the passengers who travel from this station come from? No.

728.

- Mr. E. Aland. 728. Do any number of them come from Parkes, Forbes, or Condobolin? In my opinion, the majority of them come from Parkes and the Molong district. Some, of course, also come from Manildra, Garra, and Meranburn.
- 24 Feb., 1890. 729. Do you know if there is any traffic to speak of between Forbes and here? I have no idea.

Henry Harold Septimus Chippendall, Esq., sworn and further examined:—

- H. H. S. Chippendall, Esq. 730. *Chairman.*] I believe you have some fresh statement to make to the Committee? In answering a question as to the amount of leasehold area which would be available in a short time, I desire to say that my reply had reference to the parishes through which the proposed railway passes. The leasehold area of the runs is, of course, very much larger.
731. Taking 7 miles of the line on each side, can you give us a rough estimate of the aggregate area of the leaseholds? I could not say without scaling the maps. I know that the leasehold area of Brymedura is about 40,000 acres.
732. How far would that be from the line? A portion of it would be within a few miles.
733. Will you furnish the Committee with an accurate account of the numbers of acres held in the leasehold areas in your district? Yes. I will have it made up and furnished at some future date.

Mr. John Black, miller, sworn and examined:—

- Mr. J. Black. 734. *Mr. Dowel.*] What position do you hold? I am a miller. I have a mill here.
735. How long have you resided in the district? Twelve years.
736. I believe you are an alderman and a Justice of the Peace? Yes.
- 24 Feb., 1890. 737. Do you know the proposed route from Molong to Parkes and Forbes? I know it up to Parkes.
738. Have you been over the country? Yes.
739. I suppose you know it all very well? Yes.
740. What is the character of the country between Molong and Parkes? Well, as far as I am a judge, I should call it a very good country. There are barren patches and good patches all the way along. It will compare with any other 50 miles between here and Sydney. It is fair average country.
741. Would it be correct to say that some of it is exceedingly good? I think the first 15 miles is exceedingly good. I call it A1.
742. Further on from that there is the Bumberry Range? Yes; the country there passing over the mountains is pretty rough.
743. What is the character of the country from the Bumberry Range to Parkes? I do not think you could find much better than you see when you get over the range all the way into Parkes. Away to the north-east of Parkes it is also good.
744. Is the wheat you buy here of good quality? Yes.
745. Were you engaged in milling before you came here? Yes.
746. Is the wheat as good as the wheat you were in the habit of grinding before? Better, I think.
747. Is there a good area of wheat under cultivation? Yes.
748. How many steam threshers are there in the district? I could not say. Most of the wheat is taken off by strippers.
749. How many are there? There must be hundreds.
750. How many mills are there in the district? I do not know; there are two in this town.
751. How many at Parkes? One.
752. Do you know of any mill between Parkes and Molong? No.
753. Are the mills to which you refer of large size? A middling size.
754. What quantities of wheat would come into a mill in a good season? I could not say. We do not use up all the wheat grown in the district. Up to last Saturday night, I have sent over 1,000 tons away during the last few months. I sent the biggest part of it to Granville. In the early part of the season I sent some to Bathurst.
755. What is the price of wheat at the present time? 3s. a bushel.
756. From what you know of the proposed route, can you say what places would be served, principally, by this line? The whole of the country to the west and north.
757. But will you name some places within a radius of 10 miles of the line? I am not so well acquainted with the country to the right and left. I know the good country goes parallel with the line to the north.
758. There is Peak Hill and Alectown, for instance? There is fine country through there; there is a good deal of leasehold area, but the leases will expire directly.
759. A lot of selectors are coming there, I understand, and a large number of persons in that direction will be served by the construction of this railway? Yes.
760. Can you give us any details as to the population that would be served by the line? No.
761. Are the holdings in this district large or small? Most of them along this route are small—from 200 to 300 acres up to a section, or 1,000 acres.
762. I suppose you know a large number of the farmers along this line? The best part of them.
763. Are the improvements on these holdings of a permanent description? Yes.
764. The holdings are not likely to revert to pastoral purposes? No; they are held chiefly by farmers with families, who are anxious to make homes for themselves.
765. What are the principal products of the district? Wheat. Of course, maize is grown, but it is not a reliable crop. Most of the farmers combine a little grazing and dairying with their farming.
766. Are oats and potatoes grown here? It is not a great district for potatoes and oats, but a good bit of hay is grown.
767. Are there any vineyards in the district? Some small ones.
768. Is the land suitable for vineyards? I believe it is.
769. What is the average crop of wheat? Some farms get 40, 30, and 20 bushels; other go down to 12 and 10. I suppose the average this year will be from 17 to 20 bushels.
770. Do you know anything about the timber in this district? In the immediate neighbourhood of Molong it is good only for firewood.
771. Do you know the land comprised in the leasehold areas in the district? No. 772.

772. But is all the land you have been over suitable for agricultural purposes? Plenty of it is. Of course, there are patches of bad land. Mr.  
J. Black.
773. From your knowledge of these leasehold areas, do you think it is likely that when they are open to selection they will be taken up in a *bona fide* manner? They are sure to be. 24 Feb., 1890.
774. I suppose during the time you have resided in this district you have come into contact with a large number of persons who have discussed the question of these rival routes? Yes.
775. In what way has public opinion been expressed? Well, all the people on this side of the country are in favour of the line going from Molong.
776. Do they think that the route, as staked out, is the best? Certainly.
777. Do they think it will serve the largest number of persons? I believe it will myself, although it is against my interest, I believe, to advocate a line from here.
778. Do you know what the cost of the line is estimated at? £6,000 a mile, I believe.
779. Do you think there will be sufficient revenue from the goods and passengers to pay the interest on the capital and the working expenses? It would hardly be expected that a new line should pay from the start. After a few years I have no doubt it will, because a railway to some extent makes traffic for itself.
780. You know the character of the settlement in this district—do you think it is likely that the farmers would put more land under cultivation if the line were constructed? Yes.
781. You think there would be more grain crops? Yes.
782. Is there much dairying in the district? It is carried on in a small way.
783. Are there any butter factories here? No.
784. Do you think that the Commissioners, in estimating that the revenue derived from the railway will be £11,254, have under or over-estimated the amount? I do not think they have estimated it sufficiently high.
785. You think their estimate is a low one? Yes.
786. Do you think the Government will be justified in constructing this line upon the supposition that it will involve an annual loss of £15,000? Well, it would open up the country, and in time it would pay; it would increase the value of land—Government land as well as private property.

Joseph Wren, Esq., J.P., sworn and examined:—

787. *Mr. Lee.*] You are an alderman of the Municipal district of Molong, and a Justice of the Peace? J. Wren, Esq.,  
J.P.
788. How long have you been here? Thirty-four years. 24 Feb., 1890.
789. What is your occupation? For twenty years I was in charge of Brymedura and other stations; but for fourteen years I have been farming.
790. Are you farming at the present time? Yes.
791. Are you a conditional purchaser? Yes.
792. In what direction from the town of Molong does your town lie? It is about 8 miles in towards Cudal from the Parkes road.
793. Do you know the route of the proposed line from Molong to Parkes? Yes.
794. Does it pass through your land? The original line is about 4 miles from my farm.
795. Are you acquainted with the land round about Molong? Yes.
796. And with the land in the immediate neighbourhood of Parkes? I have been over it hundreds of times. I know the land there, but I do not know much about the population.
797. Do you also know the country between Parkes and Forbes? Yes.
798. What have you been producing during the last fifteen years? Wheat, oats, hay, barley, and maize.
799. Which is the chief crop? Wheat.
800. Is wheat a tolerably certain crop in this district? Yes.
801. Is the rainfall sufficiently large for the cultivation of land here? Except in exceptional seasons. In twenty-three years I have only known one year in which we have not had a fair average season, as far as wheat is concerned. That was the crop before last, and even that was not quite a failure.
802. Do you ever have a total failure in the crops? Never.
803. Then, notwithstanding the most adverse seasons, you have a crop of some kind? We never had on an average less than 12 bushels per acre until the season before last.
804. Would 12 bushels per acre be a bad return? Yes.
805. What is the average? As high as 20 and 22, up to last year.
806. Is more wheat grown here than can be consumed? Yes.
807. What is done with the balance? It is sent to Sydney, and to other places between here and Sydney.
808. But chiefly to the metropolis? Yes.
809. What do you do with your corn? There is generally sufficient local consumption. Sometimes a little is sent away.
810. Are there any potatoes? There has not been a great crop of potatoes. They grow potatoes well here, but they are not cultivated to any extent on account of the low price and the trouble of getting them away.
811. Can you give me any idea of the average area cultivated by the selectors? From 30 acres up to 400.
812. Are there as much as 400 acres under wheat in one man's holding? Yes.
813. Is the tendency in this district to increase or decrease the cultivation in favour of grazing? To increase it.
814. Consequently, the surplus must be larger every year? Yes.
815. At present the line from Molong to the main Western line gives you an outlet for your surplus? Yes.
816. And the construction of a railway from here to Parkes would be of no immediate benefit to the farmers round about Molong? Yes, it would, when it gets out 8 or 9 miles.
817. Supposing it were decided to construct this line on to Parkes, would there be a still further increase in cultivation? I am sure there would.
818. Is the land sufficiently good to admit of its being cultivated generally? Yes.
819. Is the rainfall good all the way through? Yes, right on to Parkes.
820. Is it your opinion, then, that larger areas will be cultivated, and that a larger amount of traffic will be furnished for the railway? Yes.
- 821.

- J. Wren, Esq.,  
J.P.  
24 Feb., 1890.
821. Can you tell the Committee anything about the country from Dulladerry Creek to Flagstone Gap? Yes. As the line runs it is a rough country, but a little to the left—about 1 mile from the main line—it is splendid country, as good as any within 6, 8, or 9 miles of Molong.
822. Do you know the country from Flagstone Gap to the point at Bindogandri, where it passes through Thomas Ashbole's selection? There is good land on both sides of the range—on the Parkes side and the other side, but I have not been up there for some years. I could not say where the land you speak of is.
823. Cutting a straight line from that point, and running south to the permanently-staked line a distance of 7 miles, can you tell us the nature of the country between these two points? No; I have not been over that country lately.
824. Are there any more large reserves in this district? Yes.
825. Notably gold-fields reserves? Yes.
826. Do they interfere with settlement? Yes.
827. Do you think they embrace much good land? Very good land; a large proportion of it is good.
828. Would it be settled upon if available? Yes.
829. Do you know the route taken by what is known as the blue-line survey? I cannot say that I know much about the survey on the other side of Bumberry. I do not know where the line goes there, although I know the country very well. I could not tell you on which side of the line the cutting would be.
830. But up to the point you do know, do you think the permanently-staked line would serve the people better than the blue-line survey? I could not say. I do not know the blue line.
831. Have you any suggestion to make of a practical character, showing what way the original line can be improved, or in what way any better line can be found? I believe it will be a good thing if the line could be taken from Bocoble Gap to Manildra. I think a line in that direction would suit the whole district. Consideration would also be shown for the people at Cudal, and other places in that direction. It would place the line more in the centres of population and agricultural areas.
832. Are the farmers in your neighbourhood likely to be permanent men? They are all permanent selectors.
833. I suppose you have heard of dummied in this district? Of any amount of it.
834. The land that is dummied usually reverts to pastoral purposes, does it not? Yes.
835. But the men who are cultivating their land can be looked upon as permanent selectors? Yes.
836. Have you any other information to give to the Committee? Well, I was appointed by the Railway League to collect statistics in order to refute statements made by those who are advocating another line. The district from which my statistics are gathered commences 4 miles west of Molong, extends 9 miles along the proposed line through Garra to Mandagery Creek, near Manildra, and 2 miles to the south and 4 miles to the north of the proposed route, embracing 111 holdings. A portion of the Brymedura holding is in that area.
837. In the statistics you have collected, is the whole area of the pastoral leasehold of Brymedura included? Only a portion of it.
838. The enrolment of school children which you hand in you will swear to be correct? Yes.
839. I see you give 7,355 acres under wheat, 846 acres under hay, 978 acres under corn, 64 acres under freehold; 161 acres under orchards; the total area of freehold and conditionally purchased land, 42,484 acres; the total area of leasehold, 39,289 acres; horses, 756; cattle, 1,310; sheep, 24,783—and the total number in families, 689? Yes. Those figures are correct.
840. Will you read the enrolment of school children within the same area? Sandy Creek, 36; Peabody, 25; Garra, 56; Manildra, 45; Gregra, 49; Bocoble, 29—total enrolment, 240. I may say that I have collected the number of farms and leaseholds north of the line immediately outside of 4 miles. The holdings are 139, and the children number 567. In 1885, the total area under cultivation between Molong and Bumberry, 20 miles from Molong, was 7,950 acres, producing 135,150 bushels of wheat. In 1889, this area had been increased about double; 9 miles now give 7,350 acres under wheat, 846 under hay, 978 under corn, 64 under barley, 161 under orchards; or a total of 9,399. This is within 2 miles south and 4 miles north of the Molong-Parkes route. I was asked a question just now about dummied. In this particular part of the district there has been very little; I do not think there has been more than one or two cases in the whole distance between here and Parkes.
841. Have you anything further to say? Well, I believe that if the line were constructed from Molong to Parkes it would assist the district much better than if it were taken in any other direction. It would go through the centre of the district, and would benefit all parties. If the Bocoble Gap deviation was made, the line will be within 5 or 6 miles of Cudal in a straight line; there is a road to Cudal in that direction. The distance, if the deviation is not adopted, would be about 8 miles. I think the Committee should also have some regard for the large tract of good country lying some 10 or 12 miles to the north of the proposed line.
842. *Mr. Dowel.*] You say you know the country between Parkes and Forbes very well? Yes.
843. What is it like? It is level country all through. There is some pine scrub, but it is fairly good country.
844. Would there be any difficulty in constructing a railway there? I do not think there would be any difficulty until we got within a short distance of Forbes—that is, until you reach the flooded country.
845. Can you tell us anything about the country between Forbes and Condobolin? Yes; it is all good country, but liable to be flooded.
846. Would the produce from that part of the country be brought to a railway-station at Forbes or Parkes? Yes.
847. Do you know the country between Condobolin and Wilcannia? I know nothing further than 20 miles below Condobolin.
848. Do you think that if the railway were brought within 6 miles of Cudal the Cudal people would use it? Yes.
849. You think it would answer their purpose very well? I think so. The principal cultivation is between Cudal and this line.
850. Is Cudal one of the principal centres of the farming population? No; very little farming is carried on within a few miles of Cudal, excepting between Cudal and Manildra.

851. So far as you know the line as staked out, you think it will serve the largest number of persons? Yes. J. Wren, Esq., J.P.  
 852. Will you name the centres of population it will serve, taking the whole line as staked out to Parkes? Garra, Gregra, Manildra, Gumble Flat, Wallagolong, Cumnock, Dilga, Rocky Ponds, Mandagery Creek, Meranburn, Dulladerry, Coate's Creek, and Goimbla. 24 Feb., 1890.  
 853. These centres would contribute considerable revenue to the railway. Yes.

Mr. John Francis Wynne, hotelkeeper, sworn and examined:—

854. *Chairman.*] What are you? I am an hotelkeeper at Molong.  
 855. How long have you resided there? Thirty-five years.  
 856. During those thirty-five years have you travelled much over the district? Yes.  
 857. You know it intimately? Yes.  
 858. Have your travels extended to Cudal and Toogong? Yes.  
 859. So that you can compare the Molong district with those districts? Yes.  
 860. Has the cultivation of wheat and other produce steadily increased in those districts? It has increased very fast.  
 861. Particularly since the railway has been carried to Molong? Yes, very largely.  
 862. You think the continuation of the line will still further develop the agricultural resources of the district? Certainly.  
 863. Can you give us any idea as to the points from which the traffic which converges at Molong comes from? Well, chiefly from the direction of Parkes. We get a little traffic from Wellington way.  
 864. A large proportion of the heavy goods comes from this direction, I suppose—all cereals, for instance? Yes.  
 865. Is there any traffic between Molong and Forbes in the way of flour? We send flour to Forbes. I have taken flour to Forbes and got £60 a ton for it, but not lately.  
 866. I suppose the Parkes people have cut this market out? Yes.  
 867. Starting from Molong, how far does the really good country extend towards Parkes? There is good country right away to Dungeon Hill at Bumberry.  
 868. How far is that? About half-way from here to Parkes—about 25 miles.  
 869. And from Bumberry towards Parkes? From there into Parkes it is all splendid country again.  
 870. For what distance does the bad country at Bumberry extend? The width of the range, I suppose, would be about 4 or 5 miles.  
 871. Do you know that this line is to be considered a grand trunk line to serve the valley of the Lachlan? Yes.  
 872. The proposed line of railway from Molong to Parkes and Forbes would form three sides of a square as it were, starting from Borenore to Molong, and from Molong to Parkes, and from Parkes to Forbes—that would be three sides, as it were, in opposition to one side *via* Cudal? Yes; that is if you go to Forbes—but what about Parkes?  
 873. I am regarding the line as a traffic line to serve the valley of the Lachlan;—why should people be asked to send their goods by three sides of a square instead of by the more direct route *via* Eugowra and Cudal? If the line is to serve the Wilcannia people it should not go near Forbes at all.  
 874. But I am speaking of the Valley of the Lachlan and Condobolin? Still, I think it should not go to Forbes taking a direct line.  
 875. Do you know that from Sydney to Forbes, *via* Molong, the distance is 285 miles, whereas *via* Cudal the distance is 268 miles, making a difference of 17 miles in favour of the Cudal route? Yes, that may be so, but it would not be the case if you were to go direct from here to Forbes.  
 876. In that case you would be leaving Parkes? Yes.  
 877. What is the distance from here direct to Forbes? Well, I have often had breakfast here, and been at Forbes in the evening.  
 878. Would it be further from here to Forbes than from Borenore? Eight or 10 miles shorter from here. The proposed line takes in Parkes.  
 879. With regard to the agricultural capabilities of the country, do you think the country about Molong is superior to that about Cudal? No, I do not. The land is equal in every respect; but at the same time the land about Cudal and Toogong is owned by one or two persons, whereas the land about Molong is owned by hundreds.  
 880. A very much larger area here is in freeholds belonging to farmers than on the other line? The first 19 or 20 miles from Borenore, on the other line, is owned by two people—the Keenans and Smiths, principally freehold-owned. Excepting two public houses and a few farms, the whole land is freehold until you get close to Cudal.  
 881. A mere sheep walk? There are a few boundary riders. The road traffic supports two small hotels in the 18 or 20 miles.  
 882. Are you aware of the relative amounts of traffic, taking the traffic between Molong and Parkes, and Orange and Forbes? I have often heard it stated, but I could not give you the particulars.  
 883. We took certain evidence the other day at Orange on that point, and we want to have it verified? The statements made to you, I believe, are quite correct, as far as the coaching is concerned; but between here and Parkes there are a great many special conveyances running. The majority of the people living at Parkes—farmers and squatters—use their own waggonettes and conveyances to bring them to the railway station, so that really the coach traffic is no criterion.  
 884. But what about the other traffic—the goods traffic? I could not tell you about that until I had seen the traffic returns at Borenore.  
 885. The Railway Commissioners have made, apparently, a careful estimate of the probable cost and receipts of the proposed railway. They have given the annual cost as £26,065, whereas the estimated traffic returns are £11,264, making a loss to the country of nearly £15,000 a year. Do you think the Committee will be justified in recommending the construction of the railway at a cost of £15,000 per annum to the community? I understand that railways are made for the purpose of opening up country, and causing population to settle on or near them.  
 886. That is true to a certain extent; but railways, after all, must be constructed on lines which are likely to pay, if not immediately, in the near future? I have no doubt in my own mind that this line, if constructed *via* Parkes, and on to Forbes, will be one of the best paying lines in the west—it will be better than

Mr. J. F.  
Wynne.

24 Feb., 1890.

- Mr. J. F. Wynne.  
24 Feb., 1890.
- than either the Mudgec or the Bourke line. As far as I know of the population likely to settle, I believe that before long we shall have, at Peak Hill, another population like that at Broken Hill. All the traffic from that centre would go on to the Parkes line.
887. How do you think this loss of £15,000 per annum to the country will be made up? I think that after a short time the line will be a paying one, and will return good interest on the outlay.
888. In how short a time? I should say within three years.
889. You do not think we should have to put up with a loss of £15,000 a year for more than three years? No, I think not. There is one thing which will make up for some part of the loss which I may as well mention. At the present time the train which comes in from Molong lies idle from the time it arrives in the morning until twenty minutes to 7; that occurs every day. During all those hours it is doing nothing. If the proposed railway were constructed the engine and the staff of men could be turned to use and would be earning something for the railway. That would be one way of assisting to reduce the liability upon the line. Then there is a great increase in settlement to the north of Parkes;—some of the finest land in the colony is there. It quite makes one's mouth water to look at that fine land, and at the present time a great deal of it is not being made any use of.
890. But a good deal of it is shut up as a gold-field reserve? That, I have no doubt will be thrown open after a time. The mining population at Alectown and Peak Hill would all assist to make this part of the railway pay.
891. How far is Peak Hill from the proposed railway line? It is about 28 miles from Parkes.
892. How far is it from Dubbo? About 48 miles.
893. How far is it from Molong to Peak Hill? About 52 miles by the circuitous route we go.
894. All the traffic goes *via* Dubbo? No; it is commencing to go from here. A coach is starting to run from here now. If the railway is constructed to Parkes that would be the nearest railway point to them. They could do all the business there and the passenger traffic would go that way, too.
895. I suppose there will be another source of revenue to the railway when these leasehold areas are thrown open for selection? Every inch of the land between here and Parkes will be selected or taken up for agricultural or pastoral purposes. The farmers find it very profitable to run a few sheep. Every inch of Dungeon Hill would be taken up if it were not a timber reserve. I understand the timber is very good and valuable.
896. Can you speak personally as to the value of the timber? I know it is good; some of it is carted in here and is sent down Orange way. There is a sawmill which cannot a quarter supply the demand about 20 miles from Molong.
897. This Committee was informed that the timber about Dungeon Range, although valuable to the eye, was comparatively valueless when it was cut down? Perhaps the party who told you that would take you on to stony ground, but in the gullies I think you would find the timber sound. To the north of the proposed line there is some splendid timber; a lot of it is brought in and sent down to Orange and Bathurst. Away to the north of Parkes there are trees 40 and 50 feet high, straight as an arrow, without a branch out of them for that distance. Then there would be another source of revenue to this railway from a large mine at Delaney's Dyke; some immense machinery is going up there and I think the mine will be the means of bringing a large amount of traffic to the railway. Then there is the tin mine—as soon as that is in work some hundreds of thousands of tons will be sent away from there.
898. You think the line we are investigating will best serve the interests of the whole district? I think that the proposed deviation from Bocoble Gap will suit better. It ought to suit the Cudal people splendidly.
899. *Mr. Dowel.*] Do you know the country between Forbes and Condobolin? I have never been below Forbes.

Mr. John M'Groder, hotelkeeper, sworn and examined:—

- Mr. J. M'Groder.  
24 Feb., 1890.
900. *Chairman.*] What are you? Hotelkeeper and I have a produce store.
901. Where do you reside? Molong.
902. How long have you been here? I have been here all my life pretty well. I was born in Molong.
903. You have an intimate knowledge of the whole of the country round this district? A very intimate knowledge.
904. And also of the country between Orange and Forbes? Yes.
905. Do you know where these proposed lines of railway run—the one from Molong to Parkes and the one from Borenore to Forbes? Yes.
906. Which line of these two will serve the greater number of people if constructed? I do not think there can be two opinions about it. I think the Molong to Parkes and Forbes line is much the best.
907. What makes you say that—what is your reason? My chief reason is that when you get out 3 or 4 miles from Molong there is nothing but a net-work of farms. They continue for about 20 miles, and they are all *bona fide* selections.
908. Are there many farms to the north of the proposed railway from Molong to Parkes? Yes.
909. And those farms will not be served by the construction of the line from Borenore to Forbes? No.
910. Do you know Cudal? Yes.
911. How far is that from the nearest point on the Molong to Parkes line? The township of Cudal is about 6 or 7 miles distant.
912. In a direct line? I think there is a nearer point than that again—that is from Manildra.
913. Are there many farms round about Cudal? When the line leaves Borenore there are a few farms, and after you go 2 or 3 miles you come to Keenan's station property—it is a sheep station. Then I think you come to Hughes' public house. There are about four farms between Keenan's and Smith's property. The Smiths own Boree-Nyrang and Boree-Cabonne. There are very few farms there. Some shepherds and employes of Mr. Smith took up some land at Boree-Cabonne, but they sold out to Mr. Smith. The consequence is that there are few farms from where the line comes into Keenan's property until you get into Cudal.
914. Do the farms extend to the north of Cudal towards the proposed line? The principal farms go from the north of Cudal right on to the Molong line.
915. Do you believe that those persons who are called the Cudal farmers would be materially benefited by the construction of the Molong to Parkes line? Most undoubtedly; the principal part of the Cudal farms would be within 2 or 3 miles of the line.

Mr.  
J. M'Groder.  
24 Feb., 1890.

916. Do you know the country south of Cudal? Yes. I have some knowledge of it.
917. Is it a large agricultural district? It is not very large, but there are a good many farms on it.
918. Are there more farms on it than in the district which will be served by the railway from Molong to Parkes? Nothing like it; there is no comparison.
919. Do you know Toogong? Yes.
920. Are there any farms there? No. Mr. Jago Smith owns from just the other side of Cudal into Long's Corner.
921. From Borenore right into Toogong, with the exception of a few farms at Cudal, the land is in large holdings? Yes; very few farms.
922. In the hands of four men? Yes.
923. Then you have no hesitation in saying that the line, if constructed from Molong to Parkes, would be the best line to construct in the interests of the general public? Yes.
924. Do you know the timber reserve near Bumberry? I do not know the boundaries of it.
925. But you know the timber there? Yes.
926. What class of timber is it? Principally ironbark.
927. Have you seen the trees cut down? I have seen the timber come to the railway-station.
928. Is it good timber? Splendid timber.
929. We have had it in evidence that it is perfectly useless;—would you believe that statement? If that evidence was given it is false evidence. I never saw better timber. I saw some of it go to Blayney.
930. Have you seen much of it? Yes.
931. You are not speaking of one or two sticks, but of a large quantity of the timber? I saw heaps of it waiting to go away two or three years ago.
932. Have you seen any big logs? All the timber I saw was posts and rails.
933. Then you could not say if the trees were hollow or not? When I was over that country seven or eight years ago, I had the impression that it was the finest belt of timber I ever saw. I am speaking of the Dungeon.
934. You believe that it is first-class timber? I believe that if a railway is constructed from here to Parkes there will be a large timber industry started. I believe sleepers could be obtained there to construct, not only this line, but hundreds of miles of other lines of railway. I believe ample timber could be found here, instead of fetching it from Dubbo and other places. I believe a large trade would be done in fencing-stuff in parts of the country where timber is scarce.
935. You have had large experience of the carrying business? Yes.
936. Have you anything to do with it now? No.
937. Do you supply teamsters from your produce-store? Yes.
938. Can you give us any idea of the merchandise traffic between here and Parkes? I have not made any calculation, but there is continuous traffic backwards and forwards.
939. You have heard that there will be a loss of about £15,000 a year upon the construction of this railway. Do you believe that if a line is shown to pay working expenses immediately that would be a fair reason for constructing it? I believe that if a line can be shown to pay working expenses immediately that is a good reason for its construction. I do not agree with the estimate of the Commissioners that there will be a loss of £15,000 a year. I cannot see where the loss would come in.
940. Do you think they have under-estimated the returns? Yes.
941. In what way. The passenger traffic is estimated at £4,000 a year? I think they have under-estimated the traffic. I do not think they have considered the Borenore or the Cowra traffic. It would take 90 per cent. of the traffic that now goes to Borenore, and 50 per cent. of what now goes *via* Cowra; it would take all the traffic from the Lachlan Valley.
942. You think the estimate of the Commissioners is based entirely upon the traffic going from Molong to Parkes and Forbes? Yes. I do not think they could have considered the Cudal traffic at all.
943. Is the country for a considerable distance after you leave Molong, going towards Parkes, of a rocky nature? No. I have been in the Parkes District lately. I have been to the north of Parkes, to Alec-town and Peak Hill—the whole of that country is likely to be taken up, and I think it will some day carry a large population.
944. What traffic is there with Peak Hill? No doubt if a line is constructed to Parkes it will command all the traffic to Peak Hill. Of course, it must be borne in mind that round about Parkes there are 60,000 acres of gold-field reserve. Further to the north, however, there is the Coobang Run. Although it is in the Central Division, and will not be thrown open for selection for some years, it will be available for future settlement. It is one of the finest pieces of country I ever saw. The country to the north of Parkes is a magnificent country. I believe that if this line is constructed it will be found that Parkes will be one of the most thickly-populated districts of New South Wales. There is selection all the way—*bona-fide* selection—the holdings are well fenced in and ringbarked, and there appears to be a most prosperous class of settlers.
945. Are there any large holdings on the line from Molong to Parkes? The only place I know of is Mr. Leslie's, at East Billabong. I think he has two 5-mile blocks, but I do not think there is more than 2,000 acres of freehold property in the lot.
946. Do you know if there is much purchased land on the Brymedura holding? I do not think there is much.
947. *Mr. Dowel.*] Can you give the Committee any information about the mineral resources of the district through which the line would pass? Of course the most important mine in the immediate neighbourhood is Delaney's Dyke. There is a ten-head stamp-battery there, but they will have thirty head of stampers at work shortly. Then there is mineral land at Red Hill. No doubt that will be opened out soon. From there to Parkes I do not know of any other. There is a flag quarry right on the line, so to speak, only a few miles from here.
948. Have you any copper in the district? Several mines have been worked for copper, close to the line, but they have not been developed to any extent.
949. What is the population at Delaney's Dyke? There are not above twenty or thirty at the mines at present, but when extra machinery is provided there will, I have no doubt, be an increase of population.
950. Do you know the country between Forbes and Condobolin? Yes.
951. Of what character is it? It is good country.

- Mr. J. M'Groder. 952. Is the settlement likely to feed a railway to Forbes? Undoubtedly; but if a line is constructed to Parkes, I do not think the traffic will go to Forbes.
- 24 Feb., 1890. 953. It is proposed to construct a line to Parkes and Forbes? Even if you construct a line to Parkes and Forbes, I think the main traffic to and from Condobolin and Burrawang would come through Parkes. Condobolin is closer to Parkes than Forbes, and a good deal of the traffic must come to Parkes. The traffic will either come on the line at Parkes, at Forbes, or at an intermediate station.
954. You know the country between Condobolin and Wilcannia? No, but I believe it is very good country.

Mr. John Lohan, agent for Messrs. Wright, Heaton, & Co., sworn and examined:—

- Mr. J. Lohan. 955. *Chairman.*] What position do you occupy? I am agent here for Wright, Heaton, & Co.
- 24 Feb., 1890. 956. How long have you been here? Four years since last January.
957. *Mr. Lee.*] Had you been living in any other portion of this district before you came here? At Orange.
958. How long had you been there? All my life.
959. Are you a native of Orange? I am.
960. Were you acting for Wright, Heaton, & Co. there? I was a clerk in the office.
961. Are you prepared to give the Committee any statistics? Well, I have made up different returns, for the accuracy of which I can swear.
962. Have you any by you in duplicate form? No; but I know the amounts.
963. Did you come here when the railway was opened? Yes.
964. Will you give the Committee some idea of the extent of the forwarding business during the first year the line was opened? In the first year we paid for freight between £400 and £500—that would be freight to Molong and Sydney and intermediate stations. At the present time we are paying £1,000 a month.
965. Does that £1,000 per month embrace inward and outward freight? We pay nothing on the outward freight—that is all paid at the other stations.
966. But you send outward freight, I suppose? We send it away; but we pay no freight on it at this end.
967. So that, really, the £1,000 a month represents only the inward business? Yes.
968. What is the nature of the goods you receive here? General store goods and station supplies—such as wire and rock-salt.
969. Do you receive any wheat or flour? Very little.
970. I mean from Sydney? Yes.
971. In consequence of the shortness of crops in this district? Yes.
972. To what portion of the country do you send any? Well, we have sent to Parkes.
973. Have you sent any beyond? No.
974. Is any portion of the goods coming through you consigned to Forbes? No.
975. Will you, briefly, give the various districts to which the goods have been consigned? Parkes is the principal district. We also have goods for Bumberry and Bindogandri.
976. Do you send any to Condobolin? No, none to Condobolin. The principal reason is that the road is not suited to bullock-teams, and the goods consequently go from Cowra and Borenore.
977. Are the roads there macadamised? I believe the country is more open for them. If we get a bullock-team once we do not see them again.
978. Does any of the traffic from Forbes or the intermediate traffic come here? No.
979. Nor is any inward carriage consigned to this place? No; some of it has reached here, but it has been forwarded back to Borenore.
980. Irrespective of the outside districts I have named, the traffic is steadily increasing upon the railway to Molong? It is.
981. I suppose your business is about as good a pulse as you can have of the traffic on the railway? Yes.
982. Do you know anything of the country between this and Parkes? I do not.
983. You are not prepared to give evidence as to the route or as to the productiveness of the country? No.
984. You say you were engaged in Wright, Heaton, & Co's. office in Orange? Yes.
985. And how does the increase in traffic here compare with the increase in traffic there? Of course everything went from Orange to Molong, Parkes, and Forbes—it was the terminus for all those places.
986. Since the line has been opened to Molong, the Parkes traffic has been sent from here? The increase in the Parkes traffic has been very large.
987. Then the construction of the line from Orange to Molong has served Parkes and the intermediate districts? Yes.
988. There is little or no traffic between Orange and Parkes by dray at the present time? No, there is none now.
989. Your firm deal largely in grain, particularly in maize, in bad seasons? Yes.
990. Have you had to import much maize here? Only for consumption in Molong.
991. Have you had occasion to consign any quantity of wheat, flour, chaff, or potatoes from Molong to other districts? We have.
992. Is there a tendency on the part of that traffic to increase? I should think it was on the increase.
993. I suppose the carting of grain from this district is almost invariably done by the producers themselves? Yes.
994. It does not necessarily pass through your hands? Certainly not.
995. Consequently, you cannot speak authoritatively as to the quantity of wheat and stuff sent from the district? I could not.
996. About how many teams load here in a month? I have made up a return. I find that there has been an average for the last six months of 250 tons a month going away on the Parkes route. The average number of teams loading would be from twelve to fourteen a week.
997. Do you know whether, in the wool season, any quantity of wool comes this way from beyond Parkes? From no distance beyond Parkes, I think.
998. Could you tell us the names of the stations that send wool to the railway here? The names of the stations are the Troffs, about 40 miles from Parkes, Coradgery, Nelungaloo, Bartley's Creek, Wanera,

Wanera, Coobang, East Billabong, Gunningbland, and Moura. A great number of selectors have lately taken up land, and of course that makes some difference.

999. Supposing a line were constructed from Molong to Parkes, which would be the nearest station along that route for the majority of the runs to use? I have never travelled it. I could not say what the various distances would be, but most of them are pretty close to the line. Webster's would strike at Bumberry, and so would Winera; East Billabong and Coobang would be about Bindogandri.

1000. Are any of these stations situated in the vicinity of Cudal, or between Cudal and Forbes? No.

1001. Do you receive any goods for forwarding to any portion between Cudal and Forbes? No.

1002. Your traffic is confined to the line influenced by the Molong railway station? Yes; we neither receive traffic nor send traffic along the rival route.

Mr.  
J. Lohan.  
24 Feb., 1890.

Mr. James Haslam, storekeeper, sworn and examined :—

1003. *Mr. Cox.*] Where do you reside? In Molong.

1004. What is your occupation? I am a storekeeper.

1005. How long have you resided in the district? A little over twenty years.

1006. Has your occupation as storekeeper brought you into contact with many people in the neighbourhood? It has.

1007. You must have learnt a good deal from them? Yes.

1008. Have you travelled much in the district? Over a portion of it.

1009. Which portion? I know the district as far as Meranburn pretty well. I have been to Parkes, but I do not consider that I know that end of the district.

1010. Do you know Cudal, Boree-Cabonne, and Toogong? No.

1011. Do you know the country to the north of the proposed line of railway from Molong to Parkes and Forbes? I know a good portion of it.

1012. Is it fairly taken up by selection now? It is nearly all taken up; everything available is taken up.

1013. And when the leasehold areas are thrown open, as they probably soon will be, a large quantity of land will be taken up? I think almost all of it will be taken up.

1014. We had evidence this morning from the land agent to the effect that only some 450 acres are left in the parish of Brymedura? That is very likely a reserve. Even in this district ordinary looking land is good for grazing. If it is not fit for agriculture the farmers will take it up as an additional selection, so that they may have it for their stock.

1015. The production of wheat has materially increased since the railway was constructed? Yes, during the last seven or eight years.

1016. Have you ever made a calculation as to the cost of growing wheat? No; but I have heard calculations made.

1017. What conclusion have you come to? There is one gentleman in particular in the district who pays for all he does in connection with his farm, and who reckons that it costs him from £1 to £1 1s. per acre to sow, reap, and bag his wheat; I refer to Mr. Petersen, of Ghewang.

1018. Consequently, if a man has 20 bushels to the acre the cost would be only 1s. per bushel? That is all.

1019. Does he allow anything for the land? No; that is simply the labour of ploughing, harrowing, sowing, and taking the wheat off with strippers and putting it into bags.

1020. What is the price of wheat? Three shillings per bushel.

1021. But that would be for a first-class sample. Yes.

1022. You would not buy inferior wheat at any price? We buy it, of course. All wheat is of some value, even as fowls' feed. I have gone into figures with other farmers and have given them a liberal allowance, and the cost comes to about 25s. per acre, although many of them will not admit that it can be done at that price.

1023. Making considerable allowance, that would still leave a fair balance of profit to the farmers? Yes; it has been found by the farmers that the only way in which they can make wheat-growing pay is to grow large quantities. At one time a man with 50 acres was supposed to have a large farm—now there are many of them with 250 acres under wheat. Anything under 100 acres is regarded as a small farm.

1024. I suppose even these small farms get the best of machinery? Yes.

1025. Using human labour only they could not farm profitably? No; I think not.

1026. Would your estimate of £1 per acre include seed? It would include seed, ploughing, harrowing, sowing, stripping, and putting into bags. They use double-furrow ploughs.

1027. Then, in an exceptionally dry season, wheat-farming on a large scale will pay? Yes. In the old days a farmer ploughed 20 acres of land, loafed about the rest of the year, and said that farming would not pay.

1028. Having got the grain to market he still has a balance on the farm, he has the straw, which I suppose he can sell or can use in some manner? If strippers are used the straw is of no use; it is left on the ground. This year it would have paid them better to cut it.

1029. It forms manure? I think it must do; they burn it off, and sometimes plough it in.

1030. Does any other farming besides wheat-growing pay in this neighbourhood? Yes; oats or wool.

Occasionally you get a fair corn crop. As a rule, however, corn is an uncertain crop. Hay grows very well—we get some fine crops of hay.

1031. But the cost of carriage takes away the profit? During the last two or three years hay and wheat-growing has not been a very profitable thing. Last year the crops were almost a failure. The year before they were not very heavy, but a great portion of them was spoilt in the harvest—the farmers have had a bad time for the last three years.

1032. But in a fairly good season wheat-growing is a profitable thing? Yes.

1033. I suppose you are sufficiently unprejudiced to speak of the neighbouring districts as you know them—do you know Cudal? I have been there twice.

1034. Have you seen growing crops there? I do not think I have. I know there is good land there as well as here. I have bought Cudal wheat, and very good wheat it has been, too.

1035. Do you make any use of the limestone here? Well, lime is used, but to a very small extent.

1036.

Mr. J. Haslam.  
24 Feb., 1890.

- Mr. J. Haslam.  
24 Feb., 1890.
1036. What about timber? There is very good timber in the locality you heard mentioned this morning. The timber exhibited to the Committee at luncheon time was received by me as a consignment from the Meranburn sawmill.
1037. Are potatoes a profitable crop? They are not always a successful crop. It is not a good district for potatoes. I have seen good potatoes grown here, but they are not a certainty.
1038. And with regard to orchards? I believe it is a good district for orchards. I have planted five orange-trees in the bush 3 miles from Molong; two or three of the trees are still alive, though I have never had them dug round or anything else done to them—they have never been cared for from the first. I have seen some good oranges grown in this district.
1039. Would it be profitable to grow such fruit as the apple, the pear, and the plum? I should think so. The fruit grow prolifically; grapes grow here well.
1040. Is any wine made here? Mr. M'Nevin, of Cardington, used to make wine for several years.
1041. Do you think that in the event of a large tract of country being thrown open here there would be sufficient inducement for an increased farming population? I think so. In the course of a few years the land at present in the hands of large holders, deducting 25 per cent. for stony ground, will be brought under cultivation. I speak particularly of selectors. I might add that now-a-days they get 100 acres ready for the plough more quickly than in former times they could get 10 acres ready. Instead of taking out all the stumps as formerly, they take out the small saplings, ring-bark the large trees, and plough between—they get a quick return from the land, and are able to spend their money afterwards in taking out their large trees. That plan has been found to work very successfully. Some men in the district have from 600 to 800, Mr. Bradley, at Garra, has 1,500, and Mr. Boardman has 1,400 bags of wheat.
1042. The Railway Commissioners, speaking of the proposed line, say—"We are of opinion that an extension from Molong to Parkes could not be recommended except as the means of opening up an admittedly good agricultural district around and north of Parkes, but we would rather favour a line from Cowra or Young to Forbes, and from thence to Parkes, which would run through fairly good country, and give the residents the choice of either the southern and western lines for business purposes." Do you agree with that? The Commissioners also say—"On leaving Molong, after the first four miles, the character of the country changes, being of a rocky nature for a considerable distance?" The best part of our district lies at Garra—there is a regular garden there. You find farm after farm joined together and producing large crops of wheat. Leaving Molong for the first 2 or 3 miles there is stony ground. Garra commences at a distance of about 5 miles from Molong. Any man looking about him can see that immediately you get outside the common, and, indeed, before you get outside of it, the country is of a good character. I know almost every holder in this list collected by Mr. Wren—they live almost exclusively between here and Meranburn. If what the Commissioners say is true, these men must have been fools to take up the land.
1043. Of course you are aware that this proposed railway is to be a grand trunk line to the valley of the Lachlan, consequently it is not for this Committee or for the country to consider the interests of any particular section of the people. The question is not whether the people of Cudal will be served or not—the great question we have to consider is the promotion of the greatest good for the greatest number. We want to avoid any mistake in initiating this line. Mistakes have been made in the past, and our great object is to prevent such mistakes in the future.—we should therefore like the gentlemen we examine to throw off any prejudice with regard to any particular locality, and to look at the matter from a broad point of view. We want to determine which is the best line to serve the valley of the Lachlan? That I could not say, I do not know enough of the other line to offer an opinion.
1044. The Commissioners think that there will be a loss of about £15,000 a year to the country consequent upon the construction of this railway. Unless you can see your way clear to make up this loss in the immediate future; do you think the Government will be justified in expending this large amount annually? Unless there was some immediate prospect of making up the sum, I should say the Government would not be justified in doing so.
1045. Do you think there is an immediate prospect of the line paying? It is evident that the settlers included in the list handed into you by Mr. Wren must contribute a large amount of revenue to the railway. So far as the Commissioners are concerned, I might as well inform the Committee that they were reported to have driven through from here to Parkes in one day in a covered trap. I am informed that the day being dusty they went along with the curtains down—that would account for their not seeing the line.
1046. Is there any other information you desire to give the Committee? Mr. Sharkey said in Sydney, I believe, that the amount of traffic on the other line was so great that men were constantly metalling the road, while the traffic on the Molong line was so small that all the traffic was taken by a four-horse van twice a week. I want to contradict that statement. As a matter of fact I had two ten-horse waggons between here and Orange. Mr. Black had two similar teams, and Mr. Parslow had a seven-horse van. All these conveyances were going to and fro from the town alone, to say nothing of the out-side teams.
1047. Would that be at the time to which Mr. Sharkey refers? Yes; apparently. If his evidence is worth anything at all, it should be all truthful. If one portion of it is wrong we can value the remainder at the same price.
1048. I see Mr. Sharkey also says in his evidence that very little of the land in the vicinity of the line passing Molong is fit for settlement beyond Meranburn? I know there is cultivation beyond Meranburn. I think it can be proved that there is a large amount of cultivation there.
1049. This was written in 1883? I know there was cultivation there then.

Mr. John Robards, miner, sworn and examined:—

- Mr. J. Robards.  
24 Feb., 1890.
1050. *Chairman.*] What is your occupation? I am a miner residing in Molong.
1051. Have you lived there long? Thirty-four years.
1052. *Mr. Dowel.*] Can you give any information about the mineral resources of the district? There is a little mining going on at Delaney's Dyke. We have had several shows of copper, and there are some tin mines about fourteen miles from Molong.
1053. Is Delaney's Dyke likely to employ a large number of men? I think so.

1054.

Mr. J.  
Robards.

24 Feb., 1890.

1054. What do you think is the population engaged in mining at Delaney's Dyke? I think there are about twenty persons.
1055. Where are the tin-mines to which you refer? I have not been there for twelve months. I do not know what persons are there now.
1056. Have you visited the ground to find whether tin is there or not? No.
1057. Is the copper industry likely to become a large industry, and to supply any revenue to the railway? I think so; there are good indications of copper within 2 miles of the town.
1058. Has anything been done to test these mines? A copper hill was worked some years ago.
1059. Was copper obtained? Yes, some was got.
1060. Where have you worked yourself? Mostly about the Dyke. I have prospected at Main Horse Ridge, between Garra and Delaney's Dyke.
1061. Do you know the district through which this railway will pass to Parkes and Forbes? Yes.
1062. You have explored it? Yes.
1063. I suppose there are a few parts of the district with which you are not acquainted? I know it all pretty well.
1064. Can you give any further information as to its mineral resources? I do not know that I can.
1065. Do you know the Parkes District? When the first rush took place at Billabong I was there, but never dug there.
1066. Have you been to Peak Hill? Yes.
1067. What distance is that from Parkes? Thirty miles.
1068. Do you think there would be much traffic from Peak Hill to Parkes if the railway were constructed? I am sure there would.
1069. Do you think it would be a permanent field? Yes.
1070. And carry a large population? The greatest drawback is want of water.
1071. You think the mineral resources are so good that a large population will eventually be carried there? Yes.
1072. More especially if the railway is constructed? Yes.
1073. Speaking generally of the whole district, from your experience of thirty-two years as a miner, you think the mineral indications warrant the expectation that a large mining industry will spring up? I think so; I think there will be a large population right through from Parkes to Alectown; in a direct line from Parkes to this place there will be a large population.
1074. Speaking of the country between Molong and Parkes now, would you call it rich in minerals? I like the look of the country in some places. I have obtained some fine gold in several places, but none payable. I got fine gold at Dulladerry Creek, at Coate's Creek, and at Goimbla.
1075. Have you done any carrying in your time? That has been my principal occupation.
1076. What is the character of the country between here and Parkes, and what is the nature of the settlement? The country is very good, and the settlers are from small to moderate holders.
1077. What do you call small? From 200 acres up to a section.
1078. Is the land they are working good for agriculture? For the first 17 or 20 miles; then it is not so good for a few miles.
1079. But you have seen sufficient of the country to know that a large population may settle upon it? It is nearly all settled for the first 20 miles; then there is a blank for a few miles.
1080. Would you call it a large population? Yes; the farms are pretty close to one another.
1081. Do the farmers all seem to be thriving? Yes.
1082. Do they combine grazing with agriculture? Yes.
1083. What is their chief crop? Wheat and corn.
1084. Are there any fruit-trees or vines growing in the district? I have seen some gardens, but have not taken much notice of them.
1085. You have been over the whole of the staked-out line? Yes; I drove an engineer, Mr. Alexander, over the line just before Christmas last.
1086. You had a good opportunity to see where the line went? Yes.
1087. Do you think this would be the best line to serve the majority of the people? I think so.
1088. I suppose you know all the centres of population within a radius of 10 miles of the line? Yes.
1089. What places will be served by the construction of the railway? Well, there would be Cudal, if the line is taken by Bocoble Gap, which would come within 6 miles of Cudal.
1090. But when the Cudal farmers had their produce on their waggons is it not most likely they would go to Borenore? I do not see why they should cart their produce 12 miles to a railway when they can get it there in 6.
1091. Would it pay them to take the loading off the waggons and to pay the additional railway carriage? I think so.
1092. There are a large number of farms in the Cudal district? I have not been there for twelve or fifteen years. I could not say now what the population is there.
1093. I suppose you have come into contact with a large number of persons in this district in your time, and have heard frequent discussions as to these various rival routes? Yes.
1094. What do you take to be the consensus of opinion as regards the merits of the rival lines? Well, opinion is pretty well divided, I think.
1095. Have any public meetings been held in this district, or have any petitions been sent in? Not lately.
1096. You have told us about the settlement between Molong and 20 miles out. Now, is there a large population settled further on? There is a considerable population settled to the north, in from Bumberry, and south of the Flagstone Creek.
1097. Have you observed the timber in the district? Yes.
1098. Would you call it good or bad? There is a good deal of good timber in the district—ironbark, for instance.
1099. Is the district capable of turning out timber fit for fencing and for railway-sleepers, and for culverts? Yes.
1100. You think that if mills were established and a railway were constructed, the timber trade would develop? Yes.
1101. At what distance would the bulk of the timber be from the line? What I take to be Mr. Kennedy's blue line, runs right through a portion of it.

- Mr. J. Robards.  
24 Feb., 1890.
1102. Have you paid particular attention to the timber? I have done. I called Mr. Alexander's attention to it when we were passing through it.
1103. But I mean as regards its quality? I have seen slabs at Delaney's Dyke, 2 in. x 8 in., that appeared to me to be first-class timber. A number of loads of it have come into the town.
1104. Do you know Forbes? Yes.
1105. Have you been down to Condobolin? Yes.
1106. Does the country between these two places appear to you to be of a good character? Yes.
1107. Do you know the country further on towards Wilcannia? No.
1108. Is there any other information you would like to give? I forgot to mention an ironstone lode. I think it is a continuation of a blow of copper now being worked at Garra, on the north side of the Mandagery Creek. The lode I am speaking of is on the south side of the Mandagery, and close to the Parkes Road.
1109. What is the quality and quantity of the stone? I heard Mr. Blakefield say years ago that he had had an assay made showing 75 per cent. Mr. Bennett is working there now.
1110. Is it a large lode, or a blow? It crops up in two or three places about a chain or two in length. The width varies from a few feet up to a chain.
1111. Is it likely to be a valuable discovery? I think so.

---

Mr. John Lohan, sworn and further examined:—

- Mr. J. Lohan.  
24 Feb., 1890.
1112. *Mr. Lee.*] You spoke of £1,000 a month as being the freight you pay on the inward goods; do these goods include the goods imported for the use of the town? Yes.
1113. Can that be taken as a fair estimate of the value of the goods brought to Molong station for the use of the town of Molong, the town of Parkes, and intermediate places? Oh, dear, no; there will be a lot to be added to that.
1114. How much? I suppose you can add about £200 a month.
1115. Are you in a position to state the money value of the outward freight per month? No.

---

Mr. William Croasdaile Finch, land agent, sworn and examined:—

- Mr. W. C. Finch.  
24 Feb., 1890.
1116. *Chairman.*] What are you? I am a land agent, residing at Molong.
1117. How long have you been here? Three years lately. It is upwards of thirty years since I first came to the district. I have not been continuously here.
1118. Can you give any evidence as to the reserves and other land in this district likely to be thrown open in a month or two? No.
1119. What evidence do you wish to give? Well, I could describe the country from here all the way to Parkes along the surveyed line.
1120. What class of country is it to the north of this line? From here to Meranburn, 16 miles, or further than that, a distance of say 6 miles, it is all good agricultural country with the exception of the Lord's Gap Range—a narrow range of hills going towards Bocoble. Immediately you get over the range you come to Garra; then the land is first class for a good distance on both sides, north and south. At Meranburn, on the north of the line, the hills come in close to the creek, but there are open flats, good land, in between the hills.
1121. Do you know the country about Bumberry? Yes.
1122. Do you know the forest reserve concerning which we have had so much evidence? Yes.
1123. What class of timber is there in it? It is principally ironbark; there is some stringybark there.
1124. Is it good? As far as I can judge, the ironbark is good.
1125. You do not know of your own knowledge the quality of the timber—you have not used any so good in town? I have not used it myself, but I have seen a good deal of it used for fencing. It is first-class timber for fencing. I have seen some logs being carted into Parkes to the saw-mills.
1126. Were the logs pipey? No; they were solid, quite sound.
1127. What class of country is it after you pass this place into Parkes? From Flagstone into Parkes it is good agricultural country.
1128. The whole of it? Not the whole, but a great part of it. There are a good many farms on the lower end of Flagstone Creek; the upper part is rough.
1129. How many miles of the proposed route *via* Molong would pass through poor country—that is, country not fit for agriculture? Well, as I have said, there is Lord's Gap Range, which is only a small range to go through; then on this side of Dulladerry Creek there is a pine ridge, but it is not of any extent; the first real rough country the line goes through is between Dulladerry Creek and Bumberry, Croker's Range.
1130. Between Bumberry and Flagstone it is rough? Yes.
1131. Do you know the whole of the country on the line from Borenore to Forbes? Yes.
1132. Would this country bear favourable comparison with that country? I think so.
1133. Would it be quite equal to it? I think so—in fact I think it is superior.
1134. Which line would serve the greater number of people? The line from Molong to Parkes.
1135. Why do you say that? There is a large population between here and Parkes, and in the neighbourhood immediately surrounding Parkes, especially on the north-east and north-west sides, that is, in between Parkes and the head of the Bogan.
1136. Is there not a larger population on the other line, between Borenore and Forbes? I do not think so.
1137. I understand you to say you believe this line, if constructed, would serve a greater agricultural area than the other line? I think so.
1138. Have you any idea of the value of these holdings of agricultural land per acre? I could not tell you.
1139. Are there many of these farms changing hands—have any changed hands lately? No.
1140. The original holders are still working there? A few have changed hands, but not many.
1141. What is good agricultural land in this district selling for? I do not think a great deal has been sold lately.

---

Mr.

Mr. Edward George Finch, Inspector of Stock, sworn and examined:—

1142. *Chairman.*] What is your position? I am Inspector of Stock in the Molong District.
1143. How long have you been here? Twenty-eight years.
1144. Have you been long in your present position? Between four and five years.
1145. *Mr. Lee.*] How far does your district extend? Towards Parkes about 25 miles, to the Lachlan on the south, and to Wellington on the north.
1146. You do not go on to Forbes? No; Eugowra is the furthest along the Orange and Forbes-road.
1147. Then your occupation brings you into contact with the settlers a good deal—is the settlement in your district of a satisfactory character? Yes; there are chiefly small holdings between here and Parkes, that is holdings from 50 to 100 acres up to 1,000 acres.
1148. Have you any reason to believe that these settlers are not *bona fide*? No.
1149. Do they go in for much stock? Yes; they combine stock with farming, chiefly sheep.
1150. I presume you would have a very good opportunity to judge as to whether this settlement is of a proper character, or whether the settlers are simply there representing someone else? Yes.
1151. I suppose your occupation takes you about the country a good deal? Yes.
1152. Have you ever been over the railway route from here to Parkes? I have not followed the line right along; but I have been backwards and forwards across it.
1153. You have been to and fro on the road at all events many times? Yes.
1154. You have a fair idea as to which way the line is going? Yes; I know pretty much where it is surveyed.
1155. Do you think it is going on the right track? I think so.
1156. Do you think deviations could be made which would better serve the people between here and Parkes? No; I do not know that that could be done, unless the proposed deviation through Bocoble Gap is adopted. I do not know that that would make a great deal of difference to most of the people.
1157. Do you know Dulladerry Creek? Yes.
1158. Are the stock increasing in the district? Yes; this year there is an increase in horses, cattle, and sheep in my returns.
1159. Are they fat stock or store cattle usually in this district? Well, we have small lots of fat stock.
1160. Are many stock sent from the district? Yes.
1161. By road or train? Some by road to Orange and Bathurst, and chiefly by train to Sydney.
1162. I suppose that fat stock are sent to Sydney? Yes.
1163. And the store stock to any of the other markets? During the drought, but not from here—very little from here.
1164. Were you here in the recent dry season;—did the stock suffer? Many had to remove their stock to places where there was grass.
1165. Did they send any number by train for that purpose? Not from Molong. Some of them were travelling stock going to Albury, and down south, trucking from Dubbo; they would pass through part of my district.
1166. Were many stock sent away by train during the dry season? No; I do not remember many.
1167. Were any stock sent into the district by train during that season? One station got between 30,000 and 40,000 chiefly by train.
1168. The train is used as a means of transporting stock? Yes.
1169. Both for fat stock and, in time of drought, for transporting poor stores to a more favourable climate? Yes.

Mr.  
E. G. Finch.  
24 Feb., 1890.

Mr. John Burgess, auctioneer and commission agent, sworn and examined:—

1170. *Chairman.*] What is your occupation? I am an auctioneer and commission agent.
1171. Have you been long in Molong? I have been in the town thirty years, and in the district nearly forty years.
1172. *Mr. Cox.*] During that time you have become thoroughly acquainted with the district? Yes.
1173. You know the country between this place and Meranburn? I do; I lived for ten years close to Meranburn—Davy's Plains.
1174. All the available land is taken up there? Yes, with the exception of the reserves.
1175. Are there any leasehold areas which will fall in this year? Yes.
1176. With the exception of the reserves and leasehold areas to which you refer, no land is now open for selection? There may be some land fit for grazing purposes, but not for agricultural purposes.
1177. Consequently a railway constructed between Molong and Forbes would have no more traffic upon it than is now wanted by the agricultural settlement, unless people were induced to farm to a greater extent than they now do? Every year they are clearing more land; they commenced on a small scale, and, as their means admit, they enlarge the area.
1178. Presuming that all the available land is taken up, a very small proportion of that land is cultivated? Yes.
1179. For what reason? They are so far from a railway that they cannot make wheat-growing pay.
1180. Supposing they had a railway, would it not help them to clear the land? I do not know about that; but it would make wheat-growing pay, and they could pay labour. It is uphill work for one or two men to clear.
1181. Do you know the Cudal and Borenore country? Yes.
1182. Is that country fairly taken up by settlers? Yes.
1183. Is there much available land there? None.
1184. I presume a large quantity of the land, however, is fit for agricultural settlement? Yes; but I do not know of any available with the exception of that in the reserves.
1185. All the land which could be farmed is not being farmed now? No; most of it is used for stock. The greater portion is in large holdings. Between Borenore and Cudal there are four or five farms near the marked line, and there are a few within 3 or 4 miles of Cudal; after that there are very few indeed along the line.
1186. To the north and south of these large estates, how is the land taken up? It is taken up mostly on the north side. In towards the Parkes line there is a large tract of very good country, called Grega, that is all in the hands of small holders.

Mr.  
J. Burgess.  
24 Feb., 1890.

Mr.  
J. Burgess.  
24 Feb., 1890.

1187. South of the Borenore and Cudal line there are places called Barton and Bowan;—is the land there taken up by large holders? Well, there is Davy's Plains,  $1\frac{1}{2}$  miles from Cudal, and adjoining that there is another large holding of 4,000 acres, which is held by Mr. Couch; and near him comes the Cargo gold-field reserve.

1188. Are the holdings in the parish of Bowan large or small? Davy's Plains has an area of nearly 3,000 or 4,000 acres of purchased, independently of the lease; Couch has 4,000 acres.

1189. Are there any leasehold areas there? It is all selected land.

1190. There are no leasehold areas? I do not think so.

1191. So that you think the railway *via* Molong and Parkes would accommodate a larger number of agriculturists than that *via* Borenore and Cudal? I am sure it would, because on the Borenore line the holdings are very large, and it is not likely that they will be cut up. There has been a great increase in the farming population in the Parkes District; nearly all the land from Parkes to the Bogan River is taken up. There are a great many new settlers from Victoria and other places.

1192. Your chief objection to the Cudal and Borenore route is that it passes through large estates, and would not benefit a large number. I do not think it would. It is a hard line to construct. From the Boree country to Long's Corner there is a bluestone formation, which is very hard to work, and from Long's Corner to Eugowra the country is of very little use.

1193. Is there more bad country between Long's Corner and Eugowra than between Meranburn and Parkes? I think so; the mountains there are so high and rugged, there are no good patches in between. On the other route there are some good patches on the rugged hills.

1194. *Mr. Dowel.*] Being an auctioneer, can you give any opinion as to the value of the land? That would depend a great deal on what improvements there are; but from 25s. to £2 5s. an acre is the general average.

1195. Is that for agricultural land? Yes.

1196. That is exclusive of the balance to be paid to the Crown? Yes.

1197. Is the settlement in this district of a permanent character? I think it is.

1198. Are the holdings, as a rule, small or large? There are no large holdings on the line the Committee are considering; if there are any they must be near Parkes.

1199. The land is not likely to revert to pastoral purposes? No.

1200. Do many of the farmers combine sheep-farming with agriculture? Most of them do.

1201. That appears a most successful mode of farming? Yes. They mostly have some fallow ground; when they are not making use of it they find sheep the most profitable thing they can put on it.

1202. Knowing both of these routes, which do you think is the best in the interests of the largest number of people? The Parkes line. It would serve the whole of the valley of the Lachlan. If it comes the proper way it should not go into Forbes. We should keep clear altogether of the river and strike Condobolin.

1203. Do you know the country about Condobolin? I have been through to the Cobar country and across, but not to Broken Hill.

1204. Is that good country? Yes.

1205. Would it contribute revenue to a railway? Yes; I think Mount Hope and other mines will become very good mines.

1206. What is the character of the country on the Lachlan River? It is good grazing country, but not agricultural country. All cereals grow too rank in wet seasons and fall down, and they will not stand dry weather in the dry seasons.

1207. Supposing a railway is constructed to Parkes, would the wool from this pastoral country come to Parkes? Yes.

1208. Live stock and produce generally? Yes.

1209. Which does not come to Molong at present? It comes to Cowra, on the other line, at the present time.

1210. You think the Parkes line would be the most payable, and would be most beneficial to the residents in the district? Yes.

1211. Do you know the character of the country between Condobolin and Wilcannia? No; but I know it upwards from Condobolin through the Upper Bogan.

1212. Coming into contact with the residents of the district I suppose you have discussed this line with them? Yes.

1213. What is the consensus of opinion on the subject? There is a great difference of opinion. A great many persons speak from the point of view of their own benefit, and do not think of the country as a whole. I am not speaking for myself; I have no motive or interest whatever; I am speaking from the point of view of the best interests of the country. Persons have given evidence on this matter who are connected with land syndicates on the other line.

1214. But I am speaking of people in this district? The Cudal people say their line is the best, because they would get the most benefit from it. Making every allowance for personal interest, however, I think this line would be the most beneficial so far as the country is concerned, and if it were constructed to-morrow I should have no hesitation in saying it would commence to pay from the day it was opened.

Mr. William Joseph Windred, hotel-keeper, sworn and examined:—

Mr. W. J.  
Windred.  
24 Feb., 1890.

1215. *Chairman.*] What is your occupation? I am an hotelkeeper and general dealer, residing in Molong.

1216. Have you been here long? On and off, I have been in the Molong, Orange, and Cudal districts for twenty-six years.

1217. You must have a good knowledge of the country? Yes; my business takes me through it.

1218. What is the nature of the information you wish to give? I do not think sufficient mention has been made of the north side of the proposed line. I was a resident at Cudal for eight years, and have been on this side for twelve years. I do not know much about the other side of the line when it gets away from Merildra; but I know all the rest of the country pretty well.

1219. Are there many farms to the north of the proposed line? From 12 to 20 miles out it is thickly-populated country, and there will be still more when the leasehold areas are thrown open. I know plenty of persons who are waiting to take up land.

1220. Is the country to the north of the proposed line good agricultural land; is it as good as the land to the south, down towards Cudal? I should think they were about equal. It is land which could be taken up for almost every purpose.
1221. When you speak of the country to the north of the line, what do you particularly refer to? I mean from about Dilga to Parkes, and from Parkes through to Alectown. Last week I was all over the Rocky Ponds country.
1222. Do you know the country to the west of Dilga? Yes; the Rocky Ponds.
1223. What sort of country is that—good agricultural country? There is a good deal of settlement on it.
1224. But there is a great amount of unalienated land there; I suppose the country is pretty rough? On the south of the Dilga country it is rough—there is a range running through there; but the other land is as fine agricultural land as you could find in the country.
1225. Do you know Benya? No.
1226. Do you know the forest reserves near Rocky Ponds? No.
1227. The country between Rocky Ponds and Parkes? I have been over it years ago, but I cannot say that I know it well.
1228. The country directly south of Rocky Ponds going towards Bumberry? No.
1229. Is it not rough country? It is rough through there; there are places, however, which could be cultivated.
1230. Do you know Bumberry? Yes; I have been there.
1231. Do you know the forest reserve there? No; but I know the Dungeon, if that is what you are referring to.
1232. Is there any good timber there? I know more of this side of Bumberry than I do of the other side.
1233. What sort of timber is there at Dulladerry Creek? Pretty good.
1234. Plenty of it? Yes, it is ironbark. I have heard it said that the timber there is rotten; but if some of those who say so had shed as much perspiration as I have shed in splitting it they would form a very different opinion.
1235. You have worked that timber then and you know of your own knowledge that there is solid timber there? Yes.
1236. Is it fit for sawing? Yes?
1237. Should you say it was marketable? Yes.
1238. Would not that timber be of assistance in contributing to the railway revenue? Yes.
1239. Would it bring much traffic on to the line? A good deal, I think. Of course, if you get on to the stony ridges you get hollow timber; but on the flat ground you get very solid logs.
1240. Do you know the proposed line from Borenore to Forbes? I know the Cudal country. I have lived at Forbes for eighteen months.
1241. Do you know the land about Eugowra? I have been through it; all the land I was through was mountainous, except the frontage.
1242. Is there any timber in that district? That I cannot tell you.
1243. What is the distance from Cudal to the nearest point on this line? It is about 7 or 8 miles to Moranburn, where it is proposed to put the station. I lived halfway between the two places for six years.
1244. Are the principal farms in the Cudal district to the north or south of the township? There are a lot on both sides. I believe the principal ones are to the north. I was at Cudal before there were half-a-dozen farms at Bowan Park, and now there are a good few farms on that side. All the land from that down is in the hands of Jago Smith and others. The bulk of the agricultural land is on the north side, I think.
1245. *Mr. Lee*] I understand that you know the country pretty well between here and Bumberry? Yes.
1246. Do you know the route the rival line takes? I have a general idea of it. I know the country at Job's very well. It is very good land for cultivation—good grazing land, also. As you get away past Job's there is a fair, good, open country; there are large ridges in it, but it is good for cultivation.

William Ross, Esq., sworn and examined:—

1247. *Chairman*.] What is your occupation? I am doing nothing in particular at present. I have been engaged at squatting. I am living in Molong at present.
1248. How long have you been here? A little more than five years.\*
1249. *Mr. Cox*.] Do you know much of the surrounding country? Yes; I know the general character of it.
1250. What distance from Molong, out westward, towards Parkes? I know it 80 miles out that way.
1251. Do you know the country west of Borenore and Cudal. No. I have not been much in there.
1252. Then you cannot say whether the line *via* Cudal or that *via* Parkes would best serve the inhabitants of this locality? I could not.
1253. Looking at the matter from a broad point of view, the question is how best to serve the greater number of people—we must not consider this or that locality? I think the line from here to Parkes would best serve the largest number.
1254. For what reason? In the first place it passes through a good country. It is generally equal to any land the railway is running through yet. I do not see, however, what right you have to go to Forbes to take the line down to Condobolin. Coming from Condobolin, people would be at Parkes as soon as they would be at Forbes, and all the distance between the two places would be saved.
1255. But would it not, at that rate, be rather foolish to go to Molong at all, having regard to the angle which has to be made in order to reach Sydney? We already have a line here from Orange, and it is more direct from here to Parkes than through Borenore.
1256. But I am speaking of the Lachlan valley generally? There are 20 miles from Parkes to Forbes of nearly level country; but if you are considering the people out further west, as I have said, I do not see why you want to go to Forbes.
1257. Do you know that the line from Forbes *via* Molong is 17 miles longer than the line *via* Cudal? I hear it said that is so, but I cannot say it myself.

31 (a)—E

1258.

\* NOTE (on revision) :—I am but a little over five years living in Molong, but I have been in this district over forty-one years (within 25 miles of Molong). I am all but the father now of the district—few or none know it better. From here to Condobolin, from thence to near Bourke, viz., Nyngan, Cobar, all were alike a few years ago pretty familiar to me. I also know the general character of the country from here to Cowra and thence to Forbes. So I have no hesitation in saying that the line from here to Parkes is the proper route for a railway. As for the Cudal route, it would suit a few people about Orange and Cudal, but not the colony in general. The line from here will pay for construction at £5,000 exceedingly well. I am an old surveyor, and can work such problems with any man in the colony. This £15,000 of loss on this line is but a supposition, and such I cannot see or yet believe in.

Mr. W. J. Windred.

24 Feb., 1890.

W. Ross, Esq.

24 Feb., 1890.

- W. Ross,  
Esq.  
24 Feb., 1890.
1258. Are you aware that the Railway Commissioners have made an estimate showing that the country will lose £15,000 a year by making this line? I cannot see how they arrive at that conclusion. I do not think the line will cost £5,700 per mile from here to Parkes. I think it will be one of the cheapest lines we have made, from what I know of the country.
1259. Will the country be justified in incurring the expenditure? I think so. I think the line will give a very much better return than is estimated. Then, again, we should not have to pay so much money for the land on this line as will have to be paid for the land on the other line.\*
1260. Is there any other information you desire to give? With regard to the stock trucking from here, I desire to say that there is far more stock trucked from here than is supposed, but the yards are in a very inconvenient site, and the owners object to them very much. I have had experience of the yards for the last two years, and I know what has come in and what has gone out. The trucking yards are badly constructed.
1261. Have any representations been made to the Commissioners on the subject? Yes; an officer was here the other day looking at the yards.
1262. You think that if the traffic were more fostered it would increase? Yes; to the north of Parkes there is plenty of land for many miles, right away to the head of the Bogan. As I have said, the stock-yards are a very great drawback, the sheep and cattle get knocked about so much before you can get them in.

George Cochrane, Esq., J.P., sworn and examined:—

- G. Cochrane,  
Esq.  
24 Feb., 1890.
1263. *Mr. Lee.*] You are a Justice of the Peace, residing at Borenore? Yes.
1264. How long have you been residing in the district? Nineteen years.
1265. What is your present occupation? I am a farmer and a grazier. My chief holding is in the Molong District, although I live at Borenore.
1266. Are you a conditional purchaser? Yes.
1267. Do you know the proposed railway from here to Parkes? I cannot say; I have been over the whole route, but I know the country it passes through pretty well.
1268. Have you simply ridden over the route? Yes, before the country was fenced in. I have a general knowledge of the country and its capabilities.
1269. You are intimately acquainted with the land in the vicinity of Borenore, I suppose? Yes.
1270. Do you know much of it thence towards Cudal? Yes.
1271. What are the relative qualities of the land in this immediate district and in the districts of Borenore and Cudal? On the Molong and Parkes line, until you get to the other side of Meranburn, it is open good country—good agricultural and grazing country; then the line descends through Croker's Range; it is not quite so good there, but it is all valuable for some purpose or other. When you get through the ranges you fall into the head of the Billabong; from the Billabong into Parkes there is no better land in the colony for agricultural and grazing purposes. On the other side, starting from Borenore, there is fairly good country until you get to Long's Corner, on the other side of Toogong, but the line passes through large freehold estates, and there are few farms upon it. There are a good many farms on both sides of Cudal, but there are very few after you pass that place. Although there are some at Eugowra, there is a great deal of inferior country about Eugowra. Between Eugowra and Forbes there is good country, but it is subject to flood.
1272. Are there as many selectors and settlers on the various parts of the Cudal route as there are on this route? Certainly not.
1273. Is there as much land available there for the people to settle on in the future as there is on this line? No.
1274. But supposing the large estates were cut up? That might make a difference, but we have no guarantee at present that it will be done.
1275. At present, however, there is no large quantity of Crown lands available? No; there are a few reserves.
1276. Are there any pastoral leaseholds? I am not sure; there may be some leasehold at Davy's Plains.
1277. If these were to fall in shortly, would they not be taken up? There is no doubt about that.
1278. I suppose that, having as much patriotism as most people, you would not like to see the country construct a line which would be of very little benefit to the people? Certainly not; I should recommend the line which would pay the best.
1279. Now, as a patriot, tell us which line you think should be constructed in the interests of the country? Without doubt the line from Molong to Parkes and Forbes; I make that reply without any hesitation.

Mr. Joseph Jefferis Morris, District Court Bailiff, sworn and examined:—

- Mr. J. J.  
Morris.  
24 Feb., 1890.
1280. *Chairman.*] What is your occupation? I am bailiff in the District Court.
1281. Have you been here long? Since 1854.
1282. Have you held your present position long? About thirteen or fourteen years.
1283. *Mr. Dowel.*] What was your previous occupation? I was a policeman first, and subsequently, in an interregnum, I was a farmer.
1284. Have you a good knowledge of the district through which the line will pass? A tolerably fair knowledge. I have not followed the line closely. I do not know the staked part of it.
1285. Do you know the country from Molong to Parkes and Forbes? Yes.
1286. You have heard to-day's evidence;—do you endorse what has been said as to the good quality of the land? I think so, generally.
1287. And also as to the extent of the settlement? Yes.
1288. Is the settlement of a permanent character? I think so.
1289. Are the settlers in a fairly prosperous condition? I think the greater portion of them are.
1290. Do you know anything about the rival route? I am acquainted with that part of the district.
1291. Is the country there similar to the Molong country? A part of it—between Borenore and Long's Corner—the character of the land is tolerably good.
1292. Do you know anything of the district of Forbes? I do not know anything beyond. I have not been to Parkes for many years.
1293. Have you any new information to give? Well, the people in this district have been expecting this railway for the last ten or fifteen years. Many persons selected confidently expecting that a railway would be constructed, and if the line should be made from Molong to Parkes, I have no hesitation in saying that a very large addition will be made to the cultivation of the district.

Mr.

\* NOTE (on revision):—This line, when made, will, I am certain, pay as well as any line yet constructed, and far superior to some that are constructed to the interior.

Mr. John Rubie, farmer, sworn and examined :—

1294. *Chairman.*] What is your occupation? I am a farmer, residing about 9 miles from Molong, on the Mr. J. Rubie. Parkes Road.
1295. What size is your farm? I think 640 acres. I have 250 acres under cultivation this year. 24 Feb., 1890.
1296. What is the principal crop? Wheat.
1297. What sort of crop did you have? A very good crop.
1298. What is the average crop on your farm? About 20 bushels to the acre. If I could have cropped the whole this year I would have had 30 bushels, but it was knocked about by the storm.
1299. Do you usually have pretty good crops on your farm? I never had a bad one until last year.
1300. That was an exceptional year all over the colony? We always had good crops in the district up to last year.
1301. Taking one year with another, does your crop average anything like 20 bushels to the acre? I cannot say it does. Some years we get from 12 to 15 bushels, but on good and cultivated land you can get 20 bushels.
1302. What we want to get at is the average crop, taking one year with another? I should say 16 or 17 bushels.
1303. Is your farm a fair average of the farms round about you with regard to the quality of the soil? It is better than some, and not so good as others; I suppose you would call it an average farm.
1304. Do you know the country between here and Bumberry? I have gone along the public road coming from Parkes, but I know the lay of the country pretty well.
1305. Will your farm bear comparison with the ordinary run of land right through to Parkes,—is your land better or worse than that land? It is not by any means the best. There is land at Manildra Flats and Coate's Creek which is superior to mine.
1306. Do you make a fair living off your farm? Yes. I have had a great deal of expense, though. I am sorry to say, I had to get into debt through making necessary improvements on it, but I can make a living on it, and I hope to make a still better one.
1307. Do you keep any stock? Yes, but only dairy stock.
1308. If this line of railway were constructed from Molong, would it do much good to you and neighbouring farmers? I think we should be as well off again, not only in my vicinity, but further along the line. To begin with, we should put half as much again under cultivation.
1309. And you would be able to get your grain and produce to market more easily? Yes.
1310. Have you reaped any advantage from the construction of the Molong railway? Yes.
1311. And you imagine that if the railway were extended on to Parkes it would be of equal benefit to the farmers and you? Exactly.
1312. Have you a pretty good knowledge of the farms, as a rule, around this district? I know them pretty well. There are very few with which I am not acquainted.
1313. Are the farmers in a prosperous condition, or are they heavily in debt? I cannot speak about their indebtedness, but judging from appearances I should say they are all very comfortable.
1314. There is no cause to fear that the farmers are in such a condition that they are likely to give up farming? No; I think it is likely they will increase.
1315. Have you noticed whether they have increased the area under crop within the last few years? We all have increased as much as we could, in anticipation of this railway being made, and it is a disappointment to a great many that it has not been constructed.
1316. Are you not getting a better price for your wheat than you did before the railway was here? Yes, a good deal.
1317. Do you know that on the only run where there is any chance of much selection taking place—the Mendagery Run—a great many selectors have sold out to the squatters? A few have done so, but only those who have not much mind to work. A number seemed disinclined to do any work.
1318. You think these weeds have nearly all gone from the district? I hope so. There is a good deal of land called mountainous between here and Parkes, much of which is superior to the flat land. Some of the stone ridges would make excellent vineyards. Within a mile or two of Molong there are ridges which, if trenched and planted with grape-vines and fig-trees, would produce some of the finest fruit grown in the colony. I do not think sufficient importance has been attached to the mineral resources of the district. I know there are millions of tons of ironstone here, and I have very little doubt that some of the stone between here and Parkes will be found to contain gold.

Henry Samuel Marsden Betts, Esq., Mayor of Molong, sworn and examined :—

1319. *Chairman.*] What is your position? I am Mayor of Molong.
1320. What is your occupation? I am a grazier. I have resided here on and off for twenty-five years. I have been requested by Dr. Ross to give some evidence as to the place I know least. H. S. M.  
Betts, Esq.  
24 Feb., 1890.
1321. Do you confine yourself to pastoral pursuits? No; I have done a good deal of farming as well, being close to the railway.
1322. Can you make money at both pursuits? Yes.
1323. Do you find the two combined more profitable than one alone? Yes; my time is fully occupied. Were it not for cultivation, I should not do as well as I do.
1324. Do you find any occasion to use manure? Not the least; the land is too rich.
1325. So that your pastoral pursuits are not carried on in conjunction with your agricultural pursuits? No.
1326. What do you grow? Lucerne, wheat, and hay.
1327. Your chief occupation is sheep-farming? Yes; I cultivate to fill up my time.
1328. This interest has been a successful one in the neighbourhood? Yes.
1329. All who have followed it have done very well? Yes.
1330. Are you aware whether the selections taken up on pastoral holdings have been largely purchased by the lessees? I do not think largely, but they have to some extent.
1331. Does not that go to prove that farming is a profitable occupation? Yes.
1332. If it were not a profitable occupation the selectors would only be too glad to sell to the pastoral lessees? Yes. A few who have not cultivated the soil properly have cleared out. If they cultivate and expect to get good crops and do not get them, then they are disgusted, and are very glad to clear out.
1333. But all these farmers make a good living? I think so. 1334.

H. S. M.  
Betts, Esq.  
24 Feb., 1890.

1334. They have occasionally to contend with bad seasons? Yes.
1335. But as a rule they are fairly prosperous? Yes.
1336. Is there a considerable desire to select upon the leasehold areas and reserves which it is expected will be thrown open? I have heard so.
1337. I suppose you have heard the estimated cost of the line to Forbes *via* Parkes, and that the Railway Commissioners have estimated that the annual loss will be £15,000;—do you think there is any prospect in the immediate future of the line being made to pay? I think so.
1338. In what way would the revenue be made up? Both from sheep-farming and from agriculture. I think there will be a great deal of produce taken to the railway which is not grown now extensively owing to the want of railway communication.
1339. You think production will be increased very largely? Fully 100 per cent., I should think.
1340. How long will it take to produce that result? It would be hard to say. It would depend on the time the line was in construction. As soon as the line was constructed the district would commence immediately to increase the area under cultivation. I have no doubt the railway would at once commence to make good returns.
1341. Although we are told that the line *via* Parkes to Forbes would not pay, it has also been stated that the line *via* Cudal would commence to pay immediately after its construction? I do not think that is the case. I think this line is just as capable, if not more capable, of paying than the Cudal line.
1342. Do you know the country between here and Parkes? For about 20 miles.
1343. I suppose it is first-class agricultural land? With the exception of a few pine ridges.
1344. Are there many people who would benefit by that line of route to the north of the line who are not benefited by the extension already made to Molong? I think they would commence to benefit directly you pass Garra, 7 or 8 miles from Molong.
1345. You think the line will begin to gather traffic at that point? Yes.
1346. Do you know the route surveyed *via* Borenore and Cudal? I only know a portion of the route.
1347. Do you know the number of large estates through which that line passes? It goes right through three or four of them, I believe. The line to Molong I may say would drain a larger area of country. The people at Garra and Cumnock, for instance, would come in. When you get to Cudal you get into the Cowra and Camowindra country. A very little south of Cudal the people begin to go to Cowra.
1348. What route will best serve the bulk of the alienated land? Looking at the map, I should think the Cudal line would.
1349. Who owns the larger portion of the country through which this line passes? Although it is alienated, it is in large estates. Toogong is nearly all private property; then there are Davy's Plains, Borec-Nabonne, and Boree-Eyrang.
1350. The Molong line passes through no station property? I believe not.
1351. Do you know how much land has been purchased by the lessee of the Brymedura Estate? I have no idea.
1352. The owner has not taken the same advantage of his opportunities as have the owners of other leases? No; I do not think so. With regard to the land I now occupy, within two and a half years the whole of it will be cut up and sold in farms, I believe. There are 5,000 acres, and it is on the Ironbarks-road.
1353. It is in contemplation, you say, to cut it up and throw it in the market? I believe at least a half of it will be cut up. I have noticed that in two years I am to give up the other half, so I suppose that will be sold also.
1354. What is the value of that land? Some of it is amongst the finest agricultural land you could possibly get. The flats will produce 70 bushels of corn to the acre.
1355. The sale of that land would tend to increase the population? It would increase it considerably. I also think the mining interest would be largely developed if we had a railway; Copper Hill and places further on would be developed.

Mr. George Cochrane, Esq., J.P., sworn and further examined:—

- G. Cochrane,  
Esq.  
24 Feb., 1890.
1356. *Mr. Lee.*] I believe you have some further statement to make to the Committee? I forgot to tell you that I know of 270 acres of land which have sent away by the bag 5,800 bushels of wheat.\*
1357. That is the produce of this year? Yes.
1358. Where is it situated? On the Mendagery Creek.
1359. What was done with the wheat? Most of it came to Molong.
1360. Was it sold here? Yes; it passed through Mr. Black's hands.
1361. Do you send your grain to the metropolitan markets? Not directly.
1362. Or to any markets outside of Molong? We sometimes send to Cudal; but it is not a good market.
1363. Could you, with the existing rates for grain, send your wheat to Sydney and sell it at a profit? Yes; and we should be still better able to do so if the proposed railway were constructed.
1364. Would the line come close to the farm of which you have been speaking? Yes; it comes within a mile of one of my boundaries; I should save about 15 miles of haulage.

Andrew Ross, Esq., M.D., M.P., sworn and examined:—

- A. Ross, Esq.,  
M.D., M.P.  
24 Feb., 1890.
1365. *Mr. Dowd.*] You represent this district in the Legislative Assembly? Yes.
1366. How long have you resided here? Thirty-three years.
1367. You have had a large experience of the whole of the district traversed by the proposed line? Yes.
1368. Is the report of the Railway Commissioners with regard to this part of the country correct? I think it is not. Some portion of the line is of a rocky character, but it does not extend for any considerable distance. There would be a large amount of settlement as soon as the leasehold areas are thrown open in July. As you have already heard to-day, there is a great amount of settlement here already, and there is a large amount of produce taken off the land.
1369. The Commissioners say that after leaving Molong the character of the country changes, being of a rocky nature for a considerable distance between Molong and Parkes, and that, therefore, but little revenue can be expected from local traffic, the settlement *en route* being limited? I do not believe it is correct. As the representative of the district, I place no reliance upon it.
- 1370.

\* NOTE (on revision):—The 270 acres abovementioned are a portion of my own farm.

1370. The Commissioners go on to say:—"We are of opinion that the extension from Molong to Parkes could not be recommended except as a means of opening up an admittedly good agricultural district round and north of Parkes, but we would rather favour a line from Cowra, or Young, to Forbes, and from thence to Parkes, which would run through fairly good country, and give the residents a chance of either the Southern or the Western line for business purposes;"—do you think that report as a whole is a fairly correct one as regards the capabilities of this district? I do not think the gentlemen who take, so to speak, a bird's eye view of the district can be so well versed in its resources as those who have spent their lives in it. In the first place these gentlemen get their information from secondary sources. I do not think they have taken into consideration the revenue that would come upon the railway which now goes from Forbes to Cowra.

A. ROSS, Esq.,  
M.D., M.P.  
24 Feb., 1890.

1371. Do you think they are right in recommending that the line should be taken from Cowra or Young to Forbes? I do not think so, because the country, I believe, is subject to flood, and would be expensive in maintenance, if constructed. I have seen the flood-marks at Eugowra, on the Mendagery. The Belabula River often overflows.

1372. You know that the railway from Molong to Parkes and Forbes would be 11 miles less in construction than the Cudal route? I should put it down at 13, because the line is already constructed to Borenore. It would save so much construction, compared with the other route.

1373. You think it has the advantage that there would be 11 miles less of construction? I certainly think so. There would not only be a saving in expenditure but in the working expenses of the line afterwards.

1374. I observe that on one occasion you furnished the Minister with certain statistics, and you said, among other things, that if the Cudal route were adopted it would be found to pass through 30 miles of private land;—is that correct? It is, I believe, about that from Cheeseman's Creek to Long's Corner. I have never measured the road, but to the best of my belief it is about that distance.

1375. Would that line pass through much country which is liable to be flooded? It would, I believe, from Eugowra, that is, from the Southern Cross into Forbes.

1376. You said on one occasion that the line would be longer than the other route, and would serve fewer people;—is that correct? I am not a competent judge; I am not an engineer or a surveyor. I only go by what appears in official documents, and the quotations in the documents to which you refer were made from official sources.

1377. But from your knowledge of the district you would say the information you give is to the best of your belief correct? I could not say positively.

1378. Do you think there are more people on the Cudal line? There may be a trifle more, but I do not think the line *via* Cudal would benefit the Canowindra people. I have always understood that the residents of Canowindra have preferred the line going from somewhere in the vicinity of the Sheet of Barks, through Canowindra, and thence to Goolagong and on to Eugowra and Forbes. They advocate that line for the purpose of bringing themselves nearer to the metropolitan market. If the Cudal line were adopted as a means of getting their produce to the metropolitan market they would have to go north to get to it, and would not be going towards the market at all.

1379. As a representative of the people, having a certain sense of responsibility for the expenditure of public money, do you think this Committee would be justified in recommending the construction of this Molong to Parkes railway? I have every reason to believe from my long residence here that it would be a good paying line. I have known the people here for years. They are a good class of settlers, and I believe they will support the line if it is constructed. Besides that, when the line goes to Parkes it will take the Upper Bogan, the traffic of which now goes to the Dubbo station.

1380. But that would be robbing Peter to pay Paul? Yes, but if that traffic went to Dubbo it would be going north in place of east, and towards the metropolitan market.

1381. Would the construction of a line to Parkes materially increase the settlement and tend to produce revenue? I think so, considerably. The line has done so since it has been extended to Molong.

1382. Has more land been put under cultivation? Well, the line would open up the country better.

1383. You have heard the evidence given to-day as to the richness of the soil and the capabilities of the district, so far as the growth of cereals and fruit is concerned; do you endorse that evidence? I do.

Henry Harold Septimus Chippendall, Esq., sworn and further examined:—

1384. *Chairman.*] I understand that you desire to give further information about the leasehold areas within a radius of 10 miles of the proposed line? I have scaled the maps, and I should say the area would be about 30,000 acres. So far as the Cudal line is concerned, I could show the Committee the maps applying to that portion of the district, if it would be of any value.

H. H. S.  
Chippendall,  
Esq.  
24 Feb., 1890.

Mr. Jonathan Atkinson, senior-constable, sworn and examined:—

1385. *Chairman.*] What is your position? I am senior-constable, stationed at Molong.

1386. Did you collect the returns of wheat production handed in by Mr. Wren? I compiled them for the whole of the Molong electorate.

1387. You know the proposed railway from Borenore to Forbes? I do not.

Mr. J.  
Atkinson.  
24 Feb., 1890.

1388. The returns of wheat, I see, give the total area cultivated at 22,049 acres, the total area under wheat at 16,363 acres, the total yield of wheat at 292,300 bushels, the average of wheat per acre at 17½ bushels;—are these figures correct? Yes.

1389. Then again the acres cultivated in the districts of Cudal and Toogong are said to be 13,410, the acres under wheat 10,766, and the number of bushels of wheat produced 206,399;—are they correct? Yes.

1390. Then as regards Canowindra, the acres cultivated are said to be 3,137, the acres under wheat 2,265, and the total number of bushels produced 42,104; these give the following totals:—16,547 acres cultivated, 13,031 acres under wheat, and 248,503 bushels produced. You are sure that these figures are correct as applying to these particular districts? Yes.

1391. Now the totals given for Molong are as follows:—Acres cultivated 22,049, acres under wheat 16,363, and the number of bushels of wheat produced 292,300;—are they correct? Yes.

1392. Are the statistics for Cudal, Toogong, and Canowindra so collected that they represent the whole of the land right up to the railway? The boundary of the collecting district of Molong, Cudal, and Toogong is the Boree-to-Parkes road, which is close to the proposed railway.

1393. And the quantity shown here as from the Molong District is the north of that road? Yes.

TUESDAY,

TUESDAY, 25 FEBRUARY, 1890.

[The Sectional Committee met at The Assembly Hall, Manildra, at 4.15 p.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Charles MacDonell Stuart, Esq., civil engineer, sworn and examined:—

C. M. Stuart, Esq. 1394. *Chairman.*] What is your position? I am a civil engineer. I have been in the service of the Government for the last seven years.

25 Feb., 1890. 1395. Where are you now stationed? I am stationed in Manildra. I am surveying a deviation from Bocoble Gap through to Meranburn.

1396. Will that deviation make the line longer than the original surveyed line? They will be as nearly as possible the same length.\*

1397. What grades will you have? The worst grade will be 1 in 60.

1398. Will that deviation bring the line in closer proximity to Cudal than the original surveyed line? It will bring it about half of that distance.

1399. What is the distance between the township of Cudal and the nearest point on your line, as surveyed? I could not exactly say, but I have been told 4 miles. I think it is more like 6.

1400. Where does your junction take place at the Parkes end? Just this side of Meranburn, about 1½ miles from here.

1401. You have no engineering difficulties? No serious difficulties.

1402. Are you permanently staking the line? No.

1403. It is a flying survey? It is something better than that. I am doing it in such a way that a very little more will make it a permanent survey.

1404. You are confident, however, that the line will reduce the grade to 1 in 60? Yes.

1405. What is the ruling grade of the original survey? I believe it is 1 in 40.

1406. Do you know whether, from where your junction takes place at Meranburn on to Parkes, there is a grade on that portion of 1 in 40? I do not know—I have not seen the place.

1407. You have not been over it? No.

1408. Would the construction of this line, with your deviation, serve the people of Cudal? I think so, fairly. It would certainly serve them better than the old line, it would bring them so much nearer.

1409. Can you state the distance from the railway line at which people are likely to be served by its construction? No.

1410. *Mr. Lee.*] Have you any plans? Yes; I have a plan of my deviation, as far as it is finished.

1411. Do you recognize the maps containing the survey of the staked line from Molong to Forbes? Yes.

1412. Will you describe your deviation, commencing at a certain point, and indicate the prominent points where it touches the original line again? Starting at Bryant's Flat, opposite 216 miles 20 chains, on the old line, you go up the flat and get to a summit at block 92; there is a gradient up to here of 1 in 60. From that point you run down with a gradient of 1 in 66 to Bocoble Gap; you pass through the gap and rise to another summit at allotment 56; you run from that at a gradient of 1 in 60 down to Petersen's, you follow the flats from Petersen's until you get to Flash Jack's Dam with a flat gradient; from Flash Jack's Dam down to Manildra you have a gradient of approximately 1 in 60—that will be the ruling gradient; then you cross the Mendagery Creek, and you rise from that until you meet the old survey at about 1¼ miles beyond the creek, at a ruling gradient of 1 in 60. This point would be 228 miles 20 chains; it is about half a mile this side of Meranburn.

1413. The length of the deviation is as nearly as possible the same length as the permanently-staked line? 1¼ miles longer.

1414. What was your object in leaving the permanently-staked line, and going so great a distance from it? To try and get a better gradient, to avoid the hills at Lord's Gap; the gradient there is 1 in 40.

1415. Have you examined the permanently-staked line from Molong to Manildra? No.

1416. Have you examined it at Lord's Gap? No; I have only been over the gap.

1417. Are you prepared to say whether that grade can be reduced? No, I am not. Mr. Alexander is supposed to have examined it thoroughly, and he suggested this route.

1418. What is the greatest distance from the bow of your deviation to point 224 miles of the staked line? Three miles.

1419. Could you recognize that point indicated in the deviation? It is just at Wren's house.

1420. Consequently your deviation will be 3 miles closer to the Cudal residents than the permanently-staked line? Three miles in a direct line, and rather more by the road.

1421. You have already sworn that the distance from that point is approximately 6 miles? I spoke only from hearsay.

1422. Have you made observations as to the nature of the country, and the character of the settlement you have passed through? All the ground that is fit for cultivation is settled upon.

1423. Would your deviation serve as great a number of the residents of the district as would the permanently-staked line? If you combine the Cudal people with it I should say it would. It is not as convenient to the people living at Garra. I presume there are more people living at Garra than there are on this deviation.

1424. But your deviation will be a considerable distance from the people living north of the permanently-staked line;—it would not be so convenient to them? No.

1425. Are the bulk of the residents on the northern or the southern side of the staked line? I could not say.

1426. Your main object was to obtain a better line, I presume? Yes.

1427. You did not have in view the interests of the public? No.

1428. You were endeavouring to improve the existing line? Yes.

1429. *Mr. Dowel.*] How long have you been engaged in this work? Since the end of the first week in January. I expect to get it finished about the 20th March.

1430.

\* NOTE (on revision) :—Should have said 1¼ miles longer.

1430. You say you have improved the grades, and got them down to 1 in 60? Yes.

1431. What have you done with the curves? The worst curve is 24 chains radius;—that is, as far as I have gone. I may have worse.

C. M.  
Stuart, Esq.  
25 Feb., 1890.

1432. Have you been over the permanently staked line from the point of your deviation to the end of it? I have not been over it at all.

1433. Do you think the cost of the line you are now working on will be anything more than the cost of the permanently staked line? I think the cost and the length would be about the same, but I happen to get a better gradient and better curves.

1434. Those are the advantages you claim? Yes.

1435. At any point of your deviation have you made provision for any siding or station? No further than that the stations will go where the grade is best suitable for them.

1436. At what mileage do you propose to put platforms and stations? Opposite Petersen's place, on the flat—at about 223 miles.

1437. And you think, from such information as you can gain, that that would be a good and useful locality to serve the residents of Cudal? Yes.

Mr. Daniel M'Innes, storekeeper, sworn and examined:—

1438. *Chairman.*] What is your occupation? I am a storekeeper, at Meranburn. I also have the Post-office.

1439. *Mr. Lee.*] How long have you been living there? Thirteen and a half years.

1440. Have you lived in any other part of the district? No.

1441. What is the population of Meranburn? That I can hardly tell you, but my son will be able to give you full particulars.

1442. What is the class of settlement in the district? Farming and grazing.

1443. What kind of farming? Wheat-growing principally.

1444. What is done with the produce? It is taken to Molong chiefly.

1445. For consumption in Molong? It is generally bought by millers and sent into Sydney.

1446. Is your market in the other direction, out towards Parkes? No; they grow sufficient at Parkes to supply themselves.

1447. And the produce that is raised for sale in and about your district finds its way to Molong for consumption or for shipment to larger markets? Yes.

1448. Do you know the proposed railway route from Molong to this point? I have been over the best part of the road.

1449. Have you been over the line itself? I have not followed the staked line itself.

1450. Do you know the settlement between here and Molong to the north of the permanently staked line? About Garra and round about there.

1451. It is under consideration as to whether a deviation should be made from the permanently staked line, 2 miles this side of Molong, by way of Petersen's selection, to Meranburn, passing close to Wren's selection? Yes.

1452. Do you think that line would be a greater benefit to the larger number of selectors? I could not say for certain. I have not been over that part of the road for some time.

1453. You are not prepared to give any evidence as to that deviation? No.

1454. Supposing the line were constructed according to the permanent survey, how would it suit the people in your district? Either would suit our district. The only thing is that the survey, as at present staked out, would suit the people of Garra better—that is, the people to the north of the line.

1455. I am speaking of your own district—you have no feeling one way or the other? No.

1456. Supposing this line were constructed, would not the farmers and others in your district be likely to use it? Decidedly.

1457. For what purpose? For carting away their produce.

1458. How do they get their produce to market now? By teams.

1459. Are the roads good? Some of them.

1460. Do the farmers own the teams? Some do; some are engaged teams.

1461. Suppose the line were constructed, would not the farmers still cart their produce to Molong, or would they use the railway? They would send it by train, of course.

1462. Why? Because it would be cheaper.

1463. And would they get their goods back by train from Sydney? I should think so; I know I would myself.

1464. Do you happen to know the number of letters passing through your office in the course of a year? I made out a list yesterday of all the letters posted.

1465. Do you keep the rain gauge officially for the observatory? Yes.

1466. And the returns you are able to give as to the fall of rain we can accept as being accurate? They are the daily returns.

1467. In 1889 you had 120 wet days, giving 29 inches 28 points? Yes.

1468. In January, 1890, you had five wet days, giving 64 points, and in February, 18 wet days giving 7 inches 50 points? Yes.

1469. I see you had 6,305 letters posted, 108 parcels, and 3,321 newspapers? Yes.

1470. You had 169 money orders received, representing a value of £342 7s. 9d.; 21 savings bank deposits, of the value of £99 11s. 3d.; twenty-nine money orders paid, of the value of £118 1s. 3d.; three savings banks payments, of the value of £12 10s.—are these figures correct? Yes.

1471. What is your average rainfall? I have only had the gauge since April the year before last.

1472. During your long residence you must have observed the rainfall—has it been sufficient to enable the farmers to cultivate their land? Within a year or two I cannot say for certain, but I think they have only missed their crops for two years. On one occasion, that is the year before last, the crops were absolutely spoiled by the rain. In the other year the land was cultivated, but the drought spoilt the crops.

1473. Has there been such a thing as a total failure of the crops? No, I do not think so, although we have had almost a failure.

1474. What is the average return of wheat per acre in the district? For this season it would be from 30 to 20 bushels.

Mr.  
D. M'Innes.  
25 Feb., 1890.

- Mr. D. M'Innes.  
25 Feb., 1890.
1475. Is this considered a good season? Yes.
1476. What is the general average? From 15 to 17 bushels.
1477. Is agriculture on the increase in your district? Yes.
1478. Do the individual farmers cultivate a larger portion of their areas than they did five years ago? Decidedly. They produce wheat and even maize, when the climate is suitable.
1479. Are the farmers gradually increasing their agricultural areas? Yes.
1480. They are not putting stock in the place of agriculture? No; each farmer is increasing the area for agricultural purposes each year.
1481. Are the settlers of a permanent character? Yes.
1482. They are not holding for purposes of speculation or on behalf of others;—in other words, they are not acting as dummies? No. Most of them hold their own farms and have been living here for years.
1483. I suppose farms do occasionally change hands? Yes.
1484. What is the average price per acre obtained when they do sell? It is according to situation—sometimes it is £1, sometimes 3s., and some ask more.
1485. It would depend to a certain extent upon the number of years they had held the land and upon the amount of improvements made? Yes.
1486. The price you give will be exclusive of the unpaid balance to the Crown? I have known as much as £3 per acre given adjoining the township.
1487. *Mr. Dowd.*] What is the rate of carriage from your township to Molong? About 1s. a cwt.—£1 per ton.
1488. What is the size of the holdings, generally, in this district? They are of all sizes—from 80 to some thousands of acres.
1489. Who holds the thousands of acres? Well, Mr. Cockram, who combines agriculture and grazing. Then there is Mr. Charles Miller.
1490. On which side of the line are these properties situated? Some on the south and some on the north.
1491. But at what distance from Molong? Cockram's is about 18 miles and Miller's about 15 miles.
1492. These are the only large holdings on the whole line from Molong to Parkes? No, there is the Brymedura station; there are some thousands of acres of freehold there. Then Mr. Gosper, living some 7 miles from here, has a good large holding of from 1,200 to 1,500 acres.
1493. Are these areas to which you refer leasehold areas from the Crown, or freehold properties? Most of those I am speaking of are selections, with the exception of Brymedura station.
1494. Are there no Crown lands through which the line would pass or which would be served by it? On the Brymedura Station, I believe, there is a large quantity of land in the leasehold area.
1495. Which as you are aware will be thrown open for selection in a few months? Yes.
1496. Will it be taken up? I am sure of it. I know a number of people who are now ready to have a try for it.
1497. Are they *bona fide* men likely to cultivate the soil? Yes.
1498. You think this line would be the means of increasing traffic on the railway, and therefore contributing to its revenue? Decidedly.
1499. Are all the holdings you know of, of a permanent character? Yes.
1500. They are not likely to revert to pastoral purposes? Not that I am aware of. We cannot tell what the future may bring forth, but I do not think so.
1501. They have every appearance of remaining permanent holdings? Yes.
1502. Do you know the character of the soil? As far as I have seen it is chiefly red loam.
- 1503-4. Is it suitable for vineyards and orchards? Yes. I can prove that myself from my own garden. It has occurred to me that in speaking just now of Cockram's selection, I should have told you that he has a leasehold attached to his holding. Cockram's sons are, I believe, working it.

Mr. Charles Augustus Miller, farmer and grazier, sworn and examined:—

- Mr. C. A. Miller.  
25 Feb., 1890.
1505. *Chairman.*] What is your occupation? I am a farmer and grazier residing at Manildra.
1506. Are you an old resident? Yes, I have been here for 18 years.
1507. *Mr. Cox.*] What is the extent of your holding? 4,000 acres, partly purchased land and partly leasehold.
1508. Do you cultivate largely? We have done in the past, but not for the last few years.
1509. What is the extent of your cultivation? We have none in this year at all.
1510. What do you graze? Sheep, and some cattle.
1511. Why did you cease cultivating your land? We found that it paid better to grow wool and cattle than wheat.
1512. Do you not think it is desirable to combine the two things? If a man has grown up sons, or if labour were cheaper it might pay, but if a man has to employ labour I do not think it is cheaper—that is my experience.
1513. You think that only those farmers who can employ their own labour can make a profit out of wheat? That is so, until labour gets cheaper.
1514. Do you know that there are some farmers in this district cultivating 300 and 400 acres? Yes.
1515. Do they not find it profitable? I could not say, I do not think they do.
1516. Do you not think it could be made profitable by the employment of machinery? It is possible. I should prefer, at the present price of wool, to graze sheep.
1517. Do you think railway communication would tend to make wheat-growing more profitable? I think it would.
1518. We have had it in evidence that it costs £1 a ton to take wheat from here to Molong—is that the case? It costs 1s. a bag.
1519. That would be only 10s. a ton? Yes, but if you get goods out you have to pay 1s. a cwt.
1520. When you were engaged in agriculture did you keep a correct return of your outgoings and incomings? Yes. For the first few years when we first came up here prices were much better, but since wheat has gone down to 2s. 6d. per bushel we find that it does not pay, and we have therefore ceased cultivating it.
1521. Is that price all you get by delivering wheat in Molong? Yes; and then we have to run the risk of seasons.

1522. The previous two years were calamitous to the farmers? Yes.
1523. So that the loss or one year is the gain of another? Yes. We do not think there is much in it.
1524. Do you know the Cudal country? I know a good part of it, from Borenore to Toogong, and from Eugowra into Forbes.
1525. You know the country between Orange and Cudal? Yes. Some of it is very good country, and some of it is very mountainous.
1526. Hilly and rocky? Yes—unfit for cultivation.
1527. How many persons are engaged in agriculture in the Cudal district proper and in the Manildra district? It depends upon where you draw the line of the Manildra district. The Cudal people claim right up to us.
1528. How far is Cudal from Manildra? Eight miles by road.
1529. In the estimates made of the produce from these two districts, where is the line drawn between the two? At the Parkes-road.
1530. So that the Cudal people claim up to the Parkes Road? Yes; all the way.
1531. Did you hear the evidence given just now by Mr. Steuart. It is proposed by him to make a deviation, carrying the line 3 miles east of the present line;—would that benefit or damage the Manildra people to any extent? It would not damage them—it would make the distance no greater. It would be all the same to the people here.
1532. Is the place where we are now sitting the centre of the Manildra district? Yes.
1533. Is there much cultivation from this place inward towards Parkes? There is a good bit. You do not see it on the road, but there is a good bit off the road.
1534. How far does this good arable land extend towards Parkes? It is good land for 8 miles; then there is a ridge to the left of it, but there is a large tract of good land at Reedy Creek and Mowra.
1535. That is towards Toogong? Yes.
1536. How do these people living 8 miles beyond fare with regard to their agricultural produce? I think they bring it into Molong.
1537. Does that make much difference in the expense? It nearly doubles it. It is a bad road also.
1538. They have great difficulties to contend with in getting their produce to market? Yes.
1539. If the line were constructed from Borenore to Cudal, and thence to Eugowra, would it serve those people we are now speaking of? I could not say—I do not know where the line goes. There is rough country between these places and Mandagery and Toogong.
1540. Is there a range? Yes.
1541. How far would this proposed line run from your property? About 1 mile.
1542. That is the present staked line? Yes. My property is on the north of the proposed staked line.
1543. The deviation would be still further away? No, because it goes into the old staked line.

Christian Miller, Esq., J.P., sworn and examined:—

1544. *Chairman.*] You are a Justice of the Peace? Yes.
1545. What is your occupation? I am a farmer and general dealer residing at Manildra. I shall have been here for about eighteen years next September.
1546. *Mr. Dowel.*] Do you know the permanently-staked line from Molong to Forbes? Yes.
1547. Do you know what is termed the rival route *via* Cudal and Eugowra? I know a portion of it.
1548. You have a considerable knowledge of the whole district? I think more than anyone else in the district.
1549. Which route do you think should be constructed in the public interest? Of course this line answers my purpose, but if I were living at Bourke or Goulburn I should say it is the line which ought to be constructed in the public interest. It is the proper road to Parkes.
1550. From your knowledge of the various people settled on the land, which line do you think would serve the larger number? We live on the Dividing Range, as it were, and we have an influx from both sides of the range. The district proper is really hidden from the public road. The high ground, I take it, would make a line cheap in construction, and we should have feeders on each side for some considerable distance.
1551. Which route would serve the greater number of persons? I have no hesitation in saying that the proposed line would do so, because it strikes the centre as it were.
1552. What centres of population will it serve between Molong and Parkes? Garra, Burrawong, Gregra, Meranburn, Coate's Creek, Bindogandri, and thence to Parkes, besides Dilga and those places lying 15 and 17 miles to the north. Gumble is also to the north.
1553. These persons could not be served by railway in any other way? No. Wellington is much further than this place would be.
1554. Taking a circumference of 9 or 10 miles, the persons resident in the localities you have named would use the railway? Yes. It would also serve Bulderodgery.
1555. Do the places to which you refer contain a large population? Yes. I have witnessed the growth of all these places; I am one of the pioneers of the district. Taking into consideration the few years the place has been settled, I think the population is a large one. If railway facilities were offered to the place, I think it would progress in five years as much as it has progressed in the past eighteen.
1556. Is nearly all the land in these districts occupied? Yes. I think this district contains the most *bona-fide* settlers you could find.
1557. Not only is there a large population in the places to which you have referred, but the intervening country is occupied by *bona-fide* settlers? Yes; even the Brymedura Station is all conditionally purchased.
1558. I suppose they have done a bit of dummies there? It is possible. I think it is all purchased. I heard the previous manager say they had given up the leasehold.
1559. As regards the character of the country, I suppose you had some considerable experience in such matters previous to coming here? Yes; since 1857, at Bathurst.
1560. Would you call this country good, bad, or indifferent? I think it is a good average country, taking the climate combined with the soil. It will compare favourably with any other district.
1561. What do the farmers produce? Wheat, oats, maize, and fruit. We can succeed with potatoes early and late—in fact, this year I am going to prove that we can grow three crops instead of two.

C.  
Miller, Esq.,  
J.P.  
25 Feb., 1890.

1562. If this line were constructed, would there be any traffic in stock upon it? Yes. I have trucked myself from Molong 2,000. There would also be traffic in store stock.
1563. Will the railway increase that description of traffic? I do not know that it would diminish. As we are still so close to the metropolis, I think agriculture will out-do stock.
1564. But when there were greater facilities for sending stock to market, would they not be availed of? Yes.
1565. You know there is a large quantity of wool grown in the Parkes district;—would it come upon this railway? A great deal of the wool all along would. I am told that this year, and I know it for a fact, that wool has gone to Narromine, Borenore, and Cowra, on account of the bad state of a short piece of road here. The whole of that wool would have gone to Molong *via* Parkes, had there been a railway.
1566. The freight would have represented a considerable amount? Yes. There would be a lot of wool that now goes to Borenore *via* Forbes.
1567. Do you know anything of the land between Parkes and Condobolin? Not to any great extent. I know the Bogan and Forbes and Young very well. I have been down the Lachlan as far as Hillston.
1568. A large quantity of legitimate traffic would be brought to the Parkes station? Yes.
1569. You know the country between Parkes and Peak Hill? Yes.
1570. Is there considerable settlement in that country? Yes, and the right sort of settlement—farmers combining grazing with agriculture.
1571. A large number of people are permanently settled in that direction? Yes, with fair-sized holdings, that is, holdings up to 20,000 acres. I have always contended that these men are the best colonists, and they supply the fattest and best stock for market.
1572. Knowing the country so well, do you think the Peak Hill traffic can be legitimately brought to Parkes? It can go nowhere else.
1573. Do you know anything of Peak Hill itself? Not as a mining township, but I have travelled through it with stock. A person travelling with stock sees as much of the land as anyone can, and being a farmer and grazier, I have taken notice of it.
1574. During the last few years you have come in contact with persons with whom, no doubt, you have conversed about this line? Yes.
1575. What is the general opinion expressed? That this is the best line.
1576. You yourself are of that opinion? Yes.
1577. You think that all interests will be best served by its construction? Yes, and I should say so if I were an inhabitant of Queensland.
1578. Do you know what it is estimated to cost? I think about £6,000 a mile.
1579. Do you think the country is justified in incurring that expenditure, in face of the Commissioners' report that there will be a loss of £15,000 per annum? I should think that is over-stated from what I know of the country. There are no bridges or creeks to speak of, and I do not think the line will cost so big a sum per mile.
1580. Do you think the revenue for the line will exceed £11,000 per annum? When a line has feeders on both sides for many miles it seems to me it must pay. The persons to whom I refer have to avail themselves of the railway. The Parkes end is a very good end, and taking all things into consideration I do not see how the line can help paying.
1581. But you must consider also that the line includes the Forbes end as well;—I suppose there will be some considerable traffic from Forbes? Yes; I do not think the Commissioners' estimate is any too high.
1582. What does the passenger traffic on this line represent? I am a contractor for conveying the mails this year from Molong to Parkes—that is, I am one of two. I bought in, and after the tender was accepted two coaches ran here daily, and I have often seen them full of passengers. Mr. Nathan gave us £300 to have nothing to do with the contract; I believe if we had asked £600 we could have got it.
1583. In your estimation, then, the passenger traffic would be a considerable item? Yes.
1584. Can you say anything about the merchandise traffic? That has also been heavy.
1585. There are a large number of waggons and teams going to and from Parkes? Yes.
1586. In addition to the traffic you know of, would not a large amount of wool traffic be brought to Parkes which does not go there now? Yes.
1587. Do you think the live stock traffic will represent £800 in twelve months? A lot more to the good, I think. It would represent the Bogan and places north from here. There would be more traffic from Parkes alone than there is from Molong at present.
1588. Then you think the Commissioners' estimate for Molong should be increased? Yes.
1589. Knowing the district as you do, you think that although the line may not at present pay interest on capital and working expenses it would nevertheless do so ultimately? I am confident it will surpass all expectations.
1590. You think that in a short time it will pay? Yes.
1591. Now with regard to the price of the land? I have myself given within a short distance of this place £4 10s. per acre for 100 acres of conditionally-purchased land; the balance to pay would make it £5 5s., I have been offered £2 in cash per acre for 1,000 acres. If I offered to sell I think I could get £3. I know a man who paid £2 5s. for a good-sized holding ten years ago.
1592. *Chairman.*] Is land more valuable now than it was ten years ago? Yes; it is increasing in value. When we get a hard year there is a bit of a check, but this year will give land values a great impetus.
1593. Did the tender you put in for conveying the mails allow you to carry the mails with a one-horse vehicle if you chose? Yes; but there have never been less than four horses running.
1594. Although you could carry the mail itself with a one-horse vehicle, the passengers necessitated a four-horse coach? The mail could not be run with one horse. It is always carried by four horses. Even fifteen or sixteen years ago the carriage from here to Molong was £1 per ton; we pay 1s. a cwt. for flour.
1595. *Mr. Dowel.*] The land has increased considerably in value since you first came to the district? Yes.
1596. You think it would be still further increased by the construction of the railway? I think it would more than double itself in value.
1597. Then suppose the line did not pay, would the settlers be prepared to give an additional rate for the mere convenience and advantage derived from the railway? If the farmers had to pay on the freight per

per train the rate they pay the carriers now, the Government would be paid handsomely, and would have a large profit. The farmers would still produce as they have done heretofore.

1598. *Mr. Cox.*] Taking into consideration the Western line and the Cowra line, how would you best serve all the people in between the Molong and the Cudal line? I think the Molong extension would serve the greater number.

C.  
Miller, Esq.,  
J.P.  
25 Feb., 1890.

Mr. William Williams, farmer, sworn and examined:—

1599. *Chairman.*] What are you? I am a farmer and publican, residing at Meranburn. I have resided there for seventeen years.

1600. Have you a good knowledge of the country? A fair knowledge.

1601. Do you know the proposed route of this line? Yes.

1602. You know where it is staked? Yes.

1603. Do you know anything about the proposed line from Borenore to Forbes? Yes.

1604. Which line should you think would serve the greater number of people? I think the line to Parkes and Forbes, from Molong.

1605. Do you know that by going *via* Molong to Parkes and Forbes people would have to travel 17 miles further to get to Sydney than if the line were taken the other way? I did not know that. I always understood that the line ran down Flagstone Creek, within 2 miles from Parkes, and direct to Forbes.

1606. But going to Orange from Parkes and Forbes you would have three sides of a square? Yes.

1607. Taking that into consideration, do you think the Molong to Parkes line would be the best line to construct in the interests of the general public? I do.

1608. Do you think Parkes is as important a centre of population as Forbes? Yes.

1609. Is there as large a population at Parkes as at Forbes? That I cannot say. I know a good deal of the country on the right and left of Parkes.

1610. Do you think Parkes has a greater outlet round it than Forbes? I think it is a better agricultural country than Forbes.

1611. Do you know Cudal? Yes.

1612. What is its population? That I do not know.

1613. Do you know there are more people living there than there are about here? I believe there are.

1614. Do you think this railway would serve the people of Cudal, if constructed? I believe it would.

1615. And the people of Toogong? Yes. The Flagstone Creek route would not be a great distance from Toogong. It is a bit of rough country, but still I think the road could be macadamized through there right enough.

1616. Do you know whether the country between Cudal and Toogong is better for agricultural purposes than the country about Manildra? No. I think the country at Manildra and Gregra is about as good as any I have seen in my travels.

1617. Is the population about here increasing or decreasing? Increasing, I believe.

1618. That is to say, there are more people living here than used to live here? Yes.

1619. Have you noticed any increase in population in the last year or two? Yes. Our school seems to tell us there has been an increase. There are something like sixty in attendance here; there were only about fifteen or sixteen some two or three years ago.

1620. Is the agricultural industry here paying—are the people satisfied with it—are they living well by it? Fairly, I think. I grew 400 bags of wheat this year.

1621. From how much land? I could not exactly say. I reckon the crop went about 18 bushels to the acre.

1622. What did it cost you to put it in? I disked a good quantity of it in. I do not think it cost me over 15s. an acre on the whole.

1623. Will you state the cost of disking and the cost of seed, and so forth? The seed cost me 5s. 3d. a bushel, and I put in one bushel to the acre.

1624. What did the disking and putting in cost per acre? About 2s. an acre.

1625. Did you reap it or strip it? I stripped it.

1626. What did that cost per acre? I had my own machine and horse. Perhaps it cost 2s. an acre.

1627. What would be the expense of bagging and carrying it off the ground? About 5s. an acre.

1628. That makes only about 14s. 3d. per acre;—would there not be any other expense? Not that I am aware of.

1629. What quantity of land had you under this crop? I should say approximately about 120 acres, but I could not be sure; I know I cut 8 acres, and it turned sixty-nine bags; about 40 acres were cut for hay.

Mr. Daniel Percy M'Innes, assistant storekeeper, sworn and examined:—

1630. *Mr. Lee.*] What is your occupation? I assist my father in his store at Meranburn.

1631. What information do you desire to give? I collected the statistics in this district.

1632. Did you go from farm to farm? Not in all cases; I met some on the road.

1633. You have not taken your statistics from any official returns? No.

1634. Are you aware that the residents of Cudal are also collecting statistics? Yes.

1635. Are any of the names in the list you produce contained in the Cudal statistics? I think so—some halfway between. I collected the statistics 5 miles on each side of the proposed line.

1636. Where did you start? At Mandagery Creek, past the bridge. I went as far as Coate's Creek, and I collected them 5 miles on each side of the permanently-staked line. Mr. Stuart had not started with his deviation when I took these statistics.

1637. When did you take them? In October.

1638. You think some of these names will be found in the Cudal list? About three or four, I think.

1639. Have you any reason to believe that any of these figures are incorrect? No.

1640. Were they given to you willingly? Yes.

1641. Were the people aware for what purpose you required them? Yes.

1642. I see you give the number of holdings as 72, the number in families as 433; the acres in holdings, 37,055; the acres under cultivation, 4,120; sheep, 23,119; cattle, 749; horses, 512; pigs, 227—they are correct? Yes; I ought to add that Mr. Ashcroft would not give me his statistics, as he had given them to the Cudal collector, but he was nearer Manildra than the former places.

1643. I see your schools are Manildra, Fair Hill, Meranburn, and Gosper's Downs? Yes.

Mr. D. P.  
M'Innes.  
25 Feb., 1890.

Mr.

Mr. Richard James Gosper, farmer and grazier, sworn and examined:—

- Mr. R. J. Gosper.  
25 Feb., 1890.
1644. *Chairman.*] What are you? I am a farmer and grazier, residing at Meranburn.  
1645. *Mr. Cox.*] What is the size of your holding? It is a little over 2,400 acres. I have 150 acres under wheat and oats this year, and about 40 acres under corn; altogether I have about 200 acres under cultivation.  
1646. How much wheat per acre do you get? I have only threshed this year a small part of my crop as yet; I expect to get about five bags per acre.  
1647. Do you think it will go 20 bushels to the acre? Yes; it is not a large crop; it is not a general crop.  
1648. I suppose a good crop of oats would more than double it? Yes.  
1649. What else do you do with your land—do you keep sheep on it? Yes—sheep and cattle.  
1650. Which do you find most profitable—cultivating the land or keeping sheep? Having regard to the difficulties of getting to market, I think grazing is the most profitable occupation.  
1651. If you had a railway immediately to your door, I suppose agriculture would be more profitable? Yes.  
1652. You would make more per acre? Yes.  
1653. Do you take into consideration the risk you run occasionally of losing the crop altogether? We have a suitable soil for all seasons. We have a soil which, if properly cultivated, would scarcely ever give us a failure in a crop. A failure would be a very great exception.  
1654. What do you think you can clear per acre by cultivating it? It is just according to the seasons.  
1655. But taking this year, something over £1 per acre, I suppose? I reckon we will clear 30s. an acre this year from arable land.  
1656. Do you know the Cudal country? Not a great deal of it.  
1657. Do you think agriculture would increase if you had railway communication? Yes, greatly.  
1658. There is ample land suitable for the plough if people could get to market with their crops? Yes; the area under cultivation would be more than quadrupled.  
1659. Are there good timber forests in this neighbourhood? Yes; as good timber as you will find in any part of the colony.  
1660. Have you had much to do with splitting or sawing? I have a saw-mill. I have been working timber nearly all my life.  
1661. Have you a steam saw-mill? Yes.  
1662. How much do you turn out a year? If we keep going regularly we cut from 800 to 1,000 feet a day.  
1663. Have you a market for it at Parkes? The market generally goes eastward. We send timber to Orange, Molong, Cudal, and Blayney. It is principally ironbark and pine.  
1664. Is the ironbark sound timber? Yes.  
1665. Is it not pipey, or hollow? No.  
1666. Is it a fact that in cutting the road across the Dungeon nearly all the timber that was cut there was found to be worthless? I believe not. I never got any in the ranges, but I have been close to them. You can see some timber at my mill which has been grown just this side of Bumberry, and judge for yourselves.  
1667. If the timber was pipey on the top of the range there would be plenty under the range sound? There is plenty of country with good profitable sound timber.  
1668. Is there enough timber to last there for many years to come? For a generation.  
1669. There will be no difficulty in getting ironbark sleepers to run from here down to Menindie? Not the slightest.  
1670. *Chairman.*] If the railway were here, would it not create an industry in this timber business? I am sure it would.  
1671. You would do a larger trade if you had facilities for taking your timber to market? Yes.  
1672. *Mr. Dowel.*] What do you pay for carting timber to Molong? 3s. per 100 feet.  
1673. Is this timber on a reserve? Some part of it. There is a good deal of pine country under reserve. Some timber has gone from here for Blayney this morning—girders for bridges, &c.—that cannot be got in other places.  
1674. What lengths are they? 30 odd feet, about 1 foot square—12 x 12 and 14 x 14.  
1675. You can get lengths of that timber up to 30 feet? Yes.  
1676. No longer? Oh, yes, you can get longer. We have got them 30 feet odd.  
1677. Do you know that some of the timber bridges in this colony take girder lengths of 30 feet? Yes.  
1678. But you think the whole of the timber for bridges and sleepers can be got at a reasonable distance from the proposed line? Anything required for this line can be got upon it.  
1679. And a large quantity of timber 12 x 12 and 14 x 14 can be obtained to send away? Yes.

Mr. William Heper Cockram, grazier, sworn and examined:—

- Mr. W. H. Cockram.  
25 Feb., 1890.
1680. *Chairman.*] What are you? I am a grazier and agriculturalist. I have been here for nineteen years.  
1681. *Mr. Lee.*] Where do you live? At Mackay's Creek, which is about 4 miles from here and 17 miles from Molong.  
1682. How long have you been growing wheat there? About sixteen years.  
1683. What have you done with it? I have sent it to Molong by teams.  
1684. Has it paid you to do that? It pays, but not a great deal. By putting in a great quantity we make a little out of it.  
1685. Do you know the route of the proposed line? I believe I know the principal parts of it.  
1686. How far is it from your place? It is only about a mile from my land.  
1687. Would the line, as surveyed at present, benefit you and others in your immediate locality? Yes.  
1688. Would it benefit the greater number of people residing in this locality? I believe it would.  
1689. How would it serve the residents of Cudal? It would be about 7 miles to the nearest point on the line.  
1690. But how would it serve them? I should think fairly well.  
1691. If you are able to cart your grain 17 miles to Molong, would not the Cudal people be able to cart their grain 7 miles to the railway-station? I should think they ought to. 1692.

Mr. W. H.  
Cockram.  
25 Feb., 1890.

1692. On the other hand, supposing it were decided to construct the line *via* Borenore, the same remark would apply with equal force to you and your neighbours—if the Cudal people can cart theirs 7 miles, you could cart yours to Cudal? Yes, that is true, but I think the Parkes line would benefit the colony generally.

1693. Why? Well, as regards settlement, I have travelled the Parkes country with a threshing machine, and I have also threshed in the Forbes district.

1694. What distance can a farmer advantageously carry his wheat to market? If the roads are good he can cart a middling distance, but if the roads are bad he cannot make anything out of it.

1695. Are the roads always passable in your neighbourhood? No.

1696. Are there any macadamised roads other than the main roads? There is very little macadam on the road between here and Toóngong.

1697. It matters not which route may be determined upon, it will be absolutely necessary for the farmers to cart their grain to various railway stations from various points? Yes.

1698. And, consequently, these roads will have to be kept open and made? Yes.

1699. It is, then, only a question as to which is the best route to adopt to serve the greater number of settlers? Yes.

1700. You will admit, I presume, that it is impossible for the country to take railways to every farmer's door? Of course.

1701. Do you know the Cudal country? Yes.

1702. Do you know the number of settlers in the locality? I believe most are on the other side of Cudal—in the Barragin country.

1703. Do you know whether there is any large amount of land available for settlement there? No.

1704. Is there any large extent of land available for selection between Molong and Parkes? There is a good bit fit for selection. It is not available at present, but it will be thrown open directly, I presume.

1705. You are aware that the object of constructing a railway into the valley of the Lachlan is not to serve only the Molong and Parkes people, but also the Forbes people and the people west of them? Yes.

1706. You will admit that residents of Forbes and to the west of Forbes, about Condobolin, should be put on the same footing as other residents? Yes.

1707. Having that in view, which route do you think would be the best in the interests of the country? This one, I maintain.

1708. Why? On account of the population—the farms at present existing; the farming population about Parkes is increasing very fast.

1709. What has been the progress of Molong during the past five years? Agriculture has increased, and stock also has increased.

1710. Do you wish the Committee to understand that, in your opinion, the construction of the line will induce settlement—that it will cause people to take up more land? Yes.

1711. To increase the size of their cultivation areas and to purchase more stock? Yes.

1712. You think that ought to be the outcome of railway construction? Yes.

1713. Has it had that effect upon the lines already opened? I believe it has.

1714. Do you know the country between Orange and Molong? I do.

1715. Has railway construction had the effect you name there? It has had the effect of increasing the value of the land.

1716. But has it increased the area under cultivation and the number of stock? That I cannot say. I was not acquainted with the line before it was surveyed.

1717. Then, in the absence of any previous knowledge of the kind, what makes you think that the construction of this railway would have the effect you name? Look at the land on the other side of Orange, at Spring Grove. There is a vast difference between the population there now and the population that was there before the construction of the line.

1718. Are there any outside influences there to induce rapid settlement? There was mining there in the first instance, but there has been mining there for many years.

1719. So far as the farmers in your locality are concerned, it would not trouble them much which way the line went, so that it went close to them? I do not think it would; it is only a matter of a small distance.

1720. But the object of our investigation is to ascertain, on behalf of the country, the best route to select in order to serve the majority of the settlers? I maintain that this is the best line.

1721. Would not a line from Condobolin to Forbes, and thence to Parkes, serve the great majority of the population? I do not know that part of the country.

1722. But can you give any reason as to why the line should go all the way to Parkes—take your magnificent agricultural district;—supposing the railway were extended from Molong to that district, would it not answer all purposes? I do think so.

1723. You think the line should go to Parkes? Yes.

1724. And beyond Parkes? Yes.

1725. Although you do not know the country? Yes; I have been beyond Parkes several times.

1726. Have you any interest there? No.

1727. Do you think the permanently-staked line which you have heard referred to would serve the majority of the farming population between Molong and Meranburn? I believe it would.

1728. Do you think it fairly suits the convenience of all on either side of the line? I believe it does; it cuts the population in two.

1729. You think it will bring the residents on either side within easy distance of the railway? Yes.

1730. And that it is likely to be used by them? Yes.

1731. *Mr. Douel.*] Are there any industries, besides agriculture, in this district? Yes. I have a little experience in timber.

1732. Do you think that would develop into a large trade? Yes.

1733. Is the quality of the timber good? Yes. We have sawn a good bit ourselves.

1734. What distance is the timber from the staked line? It is pretty well on the line.

1735. There would be timber available immediately adjoining the line? Yes.

1736. What is the character of timber in the tract of country to which you refer? Ironbark, principally.

1737. Suitable for what? For bridge or house building, fencing, or sleepers.

- Mr. W. H. Cockram. 1738. Is there any other industry, besides the timber industry, other than those which have been named? There is a little dairying, but it is not carried on to any extent.
- 25 Feb., 1890. 1739. There are no butter factories? No; although a good deal of butter is made among the farmers.
1740. You are not acquainted with the mineral resources of the district? No.

Mr. Michael O'Donnell, farmer and storekeeper, sworn and examined:—

- Mr. M. O'Donnell. 1741. *Chairman.*] What is your occupation? I am a farmer and storekeeper.
- 25 Feb., 1890. 1742. Where do you reside? Sometimes here, and sometimes on the farm.
1743. Where is the farm? Two miles out.
1744. What is its area? 236 acres.
1745. Have you all of it under cultivation? 110 acres.
1746. What crops do you grow? Wheat and hay, and corn.
1747. Could you give the Committee any idea of the quantity of wheat you take off it? About 20 bushels to the acre.
1748. How many acres have you under wheat? I could not say.
1749. How much hay do you have per acre? About 25 or 30 cwt.
1750. Your corn is still in the ground? Yes.
1751. Are you likely to have a good crop? Some of it is pretty good.
1752. As a rule, is this climate suitable for the growth of corn? Not every year.
1753. But it is for wheat? Very suitable.
1754. Is this part of the country as good as any other for growing wheat? It is as fine agricultural country as any I have ever been in. I grow grapes, and part of my land is under orchard; it is well adapted for the growth of fruit.
1755. How do the grapes grow? There is a heavy yield this year.
1756. If this railway were constructed you would do a good business in fruit? We should do fine business if we had a railway; it is what we have been expecting for a number of years.
1757. Do you know where the proposed line is staked? Yes.
1758. Do you think that that line will benefit a greater number of persons than any other line which could be made in the district? I do not know so much about that, but I consider that the justice which has been promised to us should be meted out to us.
1759. Who promised you the line? We were promised it when Sir Henry Parkes was in power before. We have been looking to the rising sun for this railway for fourteen years.
1760. Have the Forbes people been promised a railway? Yes, by this route.
1761. Have the Cudal people been promised a line, do you know? I do not think so, except when Sir Henry Parkes was out of power.
1762. When did Sir Henry make his promise about this railway? He made it when he was first in power—before he went home to England.
1763. Did the House agree to the construction of any one of these railways, do you know? To the best of my belief, the money was put upon the Estimates and borrowed.
1764. Do you know much of the country about here? Yes.
1765. Is there Crown land? None, except at Brymedura.
1766. Do you know the country from here to Bumberry? Part of the way.
1767. Do you know whether there is any Crown land to the north of the line before you get to Bumberry? I do not.
1768. Do you know whether there are any farms there? There are farms all along the road. There is some beautiful country a little back from the road.
1769. Do you mean that the farmers are on each side of the macadamised road, or that they are on each side of the railway line? On each side of the road.
1770. Where do you send your wheat to? Molong.
1771. How do you get it there? With my own teams.
1772. Do you grow much fruit? Yes.
1773. Do you send any fruit to market? I sell it about the neighbourhood.
1774. You do not send it to Molong? No; I think Molong is glutted with fruit.
1775. Would it pay to send it to Sydney? If the railway were here.
1776. Do you know anything about the timber industry here? As far as my experience goes, very good sawing timber can be got about Gosper's mill.
1777. *Mr. Dowel.*] Did you hear Sir Henry Parkes make the promise of which you speak for the construction of this railway line? It was reported, when he was first in power, that we were promised this route.
1778. Did Sir Henry come here? He was in this very hall.
1779. He did not promise the railway then? No; it was promised years before. I may say that the grapes and pumpkin I exhibit were grown upon my land.

Mr. Jeremiah O'Brien, sawyer, sworn and examined:—

- Mr. J. O'Brien. 1780. *Chairman.*] What is your occupation? I am a sawyer.
- 25 Feb., 1890. 1781. Where do you reside? At Meranburn.
1782. You are with Mr. Gosper at the saw-mill? Yes.
1783. You are a practical sawyer? I am a blacksmith by trade, but I have been sawing this last six years.
1784. Yours is a steam saw-mill? Yes.
1785. Where do you get the principal part of your timber? About 5 miles from the mill, towards Bumberry.
1786. Is there an unlimited supply of timber there? I think so.
1787. What is the quality of the timber? Good.
1788. What kind of timber is it? Ironbark, stringybark, red box, red gum, and pine.
1789. *Mr. Dowel.*] Do you get good large logs? Yes, as a rule.
1790. Is the timber very pipey? No, it is not. I have some I can show you in the morning at the mill. It is perfectly sound, and it is 22 feet long.
1791. It is good solid timber, as a rule? Yes.
1792. Have you a good market for this timber? Yes.

1793. Where do you generally send it? To Molong and Cudal. We have even sent some to Gunningbland, 12 miles on the other side of Parkes. We had an order from Eurambia, from Mr. Ormsby, to saw about 3,000 feet. We had to reject the order; we could not cut it, we were so pressed with orders.

Mr.  
J. O'Brien.  
25 Feb., 1890.

1794. Is there any other mill in this district? No.

1795. What do you attribute the rush of trade to just now? I put a great deal down to speculation, on account of the railway.

1796. Do you ever send any of this timber towards Sydney? To Orange; we have just delivered 9,000 feet to Orange. When the Post and Telegraph Office was built at Cudal the contractor was getting timber from Eugowra. I supplied him with timber for the Molong goods shed. I supplied him with four pieces 30 feet long.

1797. Is this timber fit for railway-sleepers? There would be an unlimited supply of them.

1798. What could you cut them for? I could not say without railway communication. There would be no difficulty in supplying the sleepers; if the railway were here we could get an unlimited supply.

1799. Have you been in this timber country yourself? Yes.

1800. What area does it cover? As far as I have been over it, it covers 14 miles each side of the proposed railway.

1801. What distance the other way? You can go from 4 miles above our mill to below the Dungeon and get ironbark all the way.

1802. Do you think you could square by axe sticks 40 or 50 feet long, 12 x 12? Yes. I had it brought into the mill the other day 36 feet long, and there was not the sign of a pipe in it.

1803. Could you not get it larger and longer than that? No doubt, if we went out and looked for it. I have seen logs 36 feet long which I could have squared 14 x 14.

WEDNESDAY, 26 FEBRUARY, 1890.

[The Sectional Committee met at Packham's Hotel, Bumberry, at 11.30 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX. | WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Henry Packham, farmer and innkeeper, sworn and examined:—

1804. *Chairman.*] What is your occupation? I am a farmer and innkeeper; I am also postmaster.

1805. How long have you been in this district? About sixteen years.

1806. Have you seen much increase in the population during the last two years? Oh, yes. When I first came here there were only one or two persons here.

1807. There has been a recent increase? Yes.

1808. What description of population have you? Farmers, principally; some are graziers, and some are farmers only.

1809. Has any land been taken up lately for farming purposes? Not a great while ago a good bit was taken up. Many inquiries for land have been made, I believe, within the last twelve months. A selection was taken up not many weeks ago down on the creek here in the Bumberry parish.

1810. Has more land been put under cultivation lately than was under cultivation a few years ago? A great deal.

1811. Could you give the Committee an idea of the number of acres under cultivation within a few miles of you? I think some 1,500 acres. It has been cleared for cultivation, at all events.

1812. What is the general size of the holdings? I hold 200 odd acres. Some hold 400 and 500, and some as much as 600 and 700.

1813. What is the average? About 500 acres, independently of the conditional leases.

1814. Is there a large leasehold area in this neighbourhood? We are in the very heart of it.

1815. If it were thrown open for selection, would it be selected? A good deal of it.

1816. What run is it on? East Billabong.

1817. There is a good deal unfit for selection? Yes.

1818. Do you know that there would be a certain quantity taken up if it were thrown open? I am certain of it.

1819. What crops are grown here? Wheat and hay, principally.

1820. What is the average yield of wheat? About 20 bushels.

1821. This is a good year? Yes; the average this year will go more, although the rust has interfered a little.

1822. What do you do with your hay? I sell my hay to Cobb & Co.

1823. What do the other farmers do? They take it to Parkes and Molong. If we have more wheat than the Parkes millers will take, we take it to Molong. If we have more than is required at Molong, it goes on to Sydney.

1824. I was speaking of hay; but as to your wheat;—what does it cost to send wheat from here to Molong? About 9d. a bushel.

1825. What is the average price of wheat? The last few years it has averaged about 3s.

1826. You are not getting that price now? Not this year.

1827. Out of the price you name you pay 9d. carriage to Molong? Yes, and about 6d. to Parkes; but going to Molong there is back carriage, and going to Parkes there is none.

1828. Do you think that if you had a line through to Parkes and Molong, more land would be put under cultivation? I do. Not, perhaps, just at this spot, but there are places where you could get hundreds and thousands of acres of land fit for cultivation. We are just here in a sort of so-called barren wilderness, a part of which has been cleared.

1829. And this is where you grow 20 bushels to the acre. Yes; and they are running about 30,000 sheep on this so-called barren wilderness.

Mr.  
H. Packham.  
26 Feb., 1890.

- Mr. H. Packham.  
26 Feb., 1890.
1830. Are not the wheat paddocks you speak of right up to the road? Yes; but down the road farther on you cannot see them. In some places you can see the stacks going along, but you cannot see the land. When Sir Henry Parkes was here a great crowd assembled. He said, "I see a great crowd here; where do they all live?" I could not show him the houses. I could only point in the directions in which they lay. A lot of land lies back over one of the ridges. You cannot see it from the road, but it is magnificent land for cultivation.
1831. What class of timber is there? All sorts.
1832. Any ironbark? Plenty.
1833. Good ironbark? Not first-class. It is getting an old place now, and the first-class timber is getting taken out, but there is plenty yet.
1834. How far is it from here where the good ironbark is? There is ironbark all along the road, almost from Manildra to Parkes.
1835. How far off the road on either side does the ironbark extend? At some places the road goes through it; at others it does not.
1836. But how many miles into the bush would you go before you got through the ironbark belt going cross-ways? At some places 4 or 5 miles; at other places 2 or 3 miles.
1837. You have not had anything to do with cutting this timber yourself? Yes; I got it for all the culverts along the road.
1838. Is it full of pipes? Some of it is pipey. As a rule the best timber has a small pipe in it, although the Government will not have it in their works.
1839. Can you get it without the pipe? It is very hard to get.
1840. Is there any other timber about here? Yellow box, white box, stringybark and red gum.
1841. Any pine? Yes; black pine here, and further on white pine.
1842. Is it good timber? For building purposes.
1843. What about the box? That is also good timber for building.
1844. Is it sound timber? Some of it is and some of it is not. You will find the same kind of thing in all timber.
1845. Is there any industry here besides the farming and pastoral industries? Not at present.
1846. You have no saw-mills here? No, there is nothing of that sort.
1847. How long have you been keeping an hotel? For about ten years.
1848. During that time, have you noticed any increase in the traffic? There has been an increase for the last two years.
1849. A perceptible increase? It is not a large increase, but the traffic is gradually increasing.
1850. More passengers and more goods traffic? Yes. If that had not been the case I should not have had the house open now. I have had it open now for two years.
1851. Are we to understand that you closed it at one time, because there was not sufficient business? Yes.
1852. But you find it pays you now, on account of the increased traffic? Yes.
1853. Do you think that this railway line will greatly benefit the people here if constructed? Yes.
1854. Do you think it will be largely patronised? It might not benefit me, but it would benefit the public at large.
1855. Do you know the country between here and Cudal? Yes.
1856. Is it good country? Yes. But when you leave the road between here and Cudal it is not so good.
1857. How far is it from here to Cudal, across? 22 miles, or thereabouts.
1858. Do you know any of the country here to the north of the staked line? I think so; but there are so many lines that I do not know the staked line you are inquiring about.
1859. I mean the line going *via* Flagstone Creek; do you know the country north of that line? Yes.
1860. Is it country suitable for agriculture? Not a great deal. We are in the heart of the worst of it, where you are at present.
1861. Does it improve when you leave the Dungeon? Yes.
1862. And also when you go towards Manildra? Yes.

Mr. Alfred Townsend, farmer, sworn and examined:—

- Mr. A. Townsend.  
26 Feb., 1890.
1863. *Chairman.*] What is your occupation? I am a farmer.
1864. Where do you reside? At Bumberry.
1865. How long have you resided here? I have been living here now for the last three years, but I have been here, on and off, for the last fifteen years.
1866. *Mr. Lee.*] Are you a free-selector? No. I am looking after a place for my father.
1867. Is he a free-selector? Yes.
1868. What area does he hold? About 1,700 acres altogether.
1869. That would be conditionally-leased as well as the conditionally-purchased land? Yes.
1870. Does it come up to the Parkes-road? Yes.
1871. Is that the land we saw as we passed through? Yes.
1872. To what purposes does your father turn that land? To agriculture and grazing.
1873. What kind of agriculture? We grow wheat, oats, hay, and corn.
1874. How long has he been cultivating it? Most of it the last twelve years, or more.
1875. Has he had the same land continuously under wheat? Very nearly the same, on and off.
1876. Does he restore the land by adding manure? No; we keep sheep on the land.
1877. Do you combine the two things, then? Yes.
1878. What is the result of your agricultural pursuits? We have grown 400 bushels of maize off 8 acres of land—that is sometime back—we had 50 bushels to the acre.
1879. What is your average wheat crop? We have gone up as high as 30, but the average, taking one year with another, would be 18 bushels.
1880. Have you had a total failure of the wheat crop? No, not with us.
1881. Have the seasons been such that you have been able to cultivate the land every year? Yes.
1882. Are you troubled with the rust at any time? This last year has been the only year.
1883. Did it diminish the yield? We do not know; we have not threshed yet, but I should think so.
1884. What do you do with your wheat and maize? We send it to Parkes. We have sent some to Molong. 1885.

1885. But you look upon Parkes as your market? Yes, because it is the nearest.
1886. How much nearer is it than Molong? Twelve miles nearer, I suppose.
1887. Has the occupation your father has followed for the past twelve years been a profitable one? Yes.
1888. Wheat-growing has been profitable to him? Yes; it has paid him very well.
1889. I presume that if your father's occupation had not been a profitable one you would have given it up? Yes.
1890. It is fair to assume that he would not have continued the occupation if it did not pay him? Yes.
1891. Am I right in assuming that the occupation has been so profitable that your father is likely to continue it? Yes.
1892. Have the farmers in this part of the district a tendency to increase their area under cultivation? They are increasing it every year.
1893. Is there a tendency to decrease the quantity of cultivated land and to put on more stock? No; I do not think so; more land is cleared here every year.
1894. Do you, of your own knowledge, know that wheat and maize growing is a profitable occupation? - It has been with us.
1895. Has it been so with other people? Yes, I think so; they manage to live very well.
1896. Can an ordinary farmer—one of the class of men who go selecting,—take up land here, and in the process of time clear and cultivate, and make a comfortable living? Most of them are doing so.
1897. Do any of them remain on the land for the term of residence and then sell to the pastoral lessee? Odd ones sell out, but as a rule they do not.
1898. Do you know the prices at which land has changed hands? No; I could not say.
1899. What immediate benefits do you anticipate from the construction of the railway? I think we should have a better market. I suppose we should cultivate 500 acres if we had a railway here.
1900. That is, it would be worth your while to cultivate that area? Yes.
1901. How much do you think it worth your while to cultivate now? We cultivate 200 acres now.
1902. Why do you not cultivate more? I do not think the market is good enough.
1903. You think the supply would be in excess of the demand? Yes; we generally hold our wheat. We held about 1,000 bushels here last year, and we sold it eventually for 6s. a bushel—it was a dry season.
1904. And your grain is transported by team to Parkes or Molong? Yes.
1905. Do you grow much hay? Yes.
1906. What do you do with it? We generally send it to Parkes—mostly into the western country—where less hay is grown.
1907. Is the soil suitable to the growth of hay? Yes; we have grown 3 tons to the acre.
1908. Do you think it costs 9d. per bushel to take your wheat from here to Molong? I should think so—very nearly.
1909. The inference is, that if you had better and quicker communication, with lower rates, you and other farmers would cultivate larger areas? Yes; we have the land to cultivate, if we had the means of communication.
1910. And every penny per bushel you could save on the carriage would be so much profit to you? Yes.
1911. Have you worked among the timber in the district? I have not done any work myself, but I have seen a lot done.
1912. Have you been in parts of the country where railways are constructed? Yes.
1913. Do you know the kind of timber used for sleepers? Yes.
1914. Do you know the size? Yes; but I do not know the exact measurements; it is about 4 x 8, I think.
1915. Is there much timber in this district suitable for sleepers? Yes, ironbark and red gum.
1916. Is the timber sufficiently large and sound to give any quantity of sleepers? Yes. I was speaking to a gentleman here the other day, a contractor from Cowra, who said that he had come up from there for logs.
1917. Have many sleepers been obtained from here? Not that I know of as yet; but most of the timber here is very good.
1918. Is it sound? Most of it is sound; the very large trees might be a little pipey, but the small trees on the flats are pretty sound.
1919. Could you get ironbark sticks here, 40 feet long, squaring from 9 to 12 inches? It is quite possible you might; that I could not say. I know they have got sound logs 32 feet long.
1920. Do you know the country at present included in the pastoral leasehold here? Yes.
1921. I mean on the East Billabong run? I think I know it; but I could not tell where the dividing line is.
1922. Is there any Crown land available at the present time for selection? Yes, there is some Crown land here.
1923. Is free selection on the increase? Yes; some selections have been taken up lately.
1924. Are they new selections, or additional conditional purchases? The persons who have taken up the land are residents in the district.
1925. Are they old selectors? No. They are going in for a bit of land for themselves for the first time.
1926. Do you know anything of the country beyond Parkes? Yes; I have been down Condobolin way.
1927. Where were you born? I was born near Molong.
1928. You have been in this district most of your time? Yes.
1929. You are old enough to have noticed whether there has been an increase or decrease in the population in the district within the last ten or fifteen years? There has been a large increase lately.
1930. Does the district appear to be opening up permanently? Yes.
1931. Are there many so-called selectors in the district better known as dummies? I could not say as to that.
1932. Is the settlement about here of a *bona-fide* nature? It has been, as far as I know.
1933. You do not know of any selectors who are selling out to a pastoral tenant? No.
1934. *Mr. Cox.*] You say that taking one year with another 18 bushels per acre is a fair average for your wheat? Yes.
1935. What crop did you reap in 1888 in the time of that terrible drought. We had only 60 acres in that year, and we reaped 60 bags—we had about 4 bushels to the acre.

Mr. A.  
Townsend.  
26 Feb., 1890.

Mr. James Sharp, farmer, sworn and examined :—

- Mr. J. Sharp. 1936. *Chairman.*] What is your occupation? I am a farmer.  
 26 Feb., 1890. 1937. Where do you reside? On Rocky Creek.  
 1938. How long have you been residing there? On Rocky Creek 5 years, on Bumberry 19—24 altogether.  
 1939. *Mr. Cox.*] What occupation have you been following most of that time? I have been farming and carrying.  
 1940. Do you find farming more profitable than carrying? It would have been all along if we had a market to go to.  
 1941. Where has your carrying been done—between Parkes and Molong, or further down? I used to carry to Orange, before the railway came to Molong.  
 1942. How many acres have you under cultivation? I had only 30 in this last year.  
 1943. Had you never more than that quantity of acres in? Never more than 40.  
 1944. Do you not find it sufficiently profitable to cultivate more largely? When you have to pay so much to take the grain to market, and when the market price is so low, we do not think it does.  
 1945. What do you do with the quantity you grow? It goes to Parkes.  
 1946. What is the fair average price of wheat at Parkes? They are offering 2s. 9d. this year; last year the price was 6s. and 7s. per bushel.  
 1947. That would be very profitable? Yes. If the price were only 5s. it would be profitable enough.  
 1948. Do you keep any stock? No.  
 1949. You give your whole attention to farming and carrying? Yes, farming, not carrying now.  
 1950. Do you know anything of the Borenore and Cudal line of country? Yes.  
 1951. Do you think that country, taken as a whole, is equal to or superior to this? No; but I do not know them both equally well. I have been in the Orange district forty odd years. Taking the country down there as a whole, I do not think it is as good as this.  
 1952. Is it a well-populated country? Yes. It is not so here just for these few miles, but all the rest of this line is thickly populated. When you get down a few miles further you will find it so. There are over 100 persons within a few miles of this place.  
 1953. Which of the two routes do you think would have the greater population? I think this line, taking it all the way through to Molong.  
 1954. On account of the large population of Parkes? There is a great population round about Parkes for miles and miles.  
 1955. Do you think the land about Parkes would beat the land about here for the growth of wheat? I do not know that there is much difference between the land here and the land at Parkes. I do not know that the land is better at Parkes for the growth of wheat. I do not know that it could be much better than it is about here.  
 1956. In the event of a large population settling at Parkes, would it shut up your land here? No, I do not think so.  
 1957. You could always compete against Parkes? Yes.  
 1958. Have you a better rainfall among these hills than there is at Parkes? We have more odd showers than they have at Parkes—the hills draw them.  
 1959. That gives you an opportunity to grow wheat here when they are parched up in that country? It will grow here when it will not grow anywhere round about. I have seen 18 bushels grown here, when out Cudal way the wheat would not grow above 6 inches high—they could not even cut it for hay.  
 1960. What did you grow in 1888, in the terrible drought? I cut all mine for hay.

Mr. Charles Townsend, selector, sworn, and examined :—

- Mr. C. Townsend. 1961. *Chairman.*] You are uncle to one of the previous witnesses? Yes.  
 26 Feb., 1890. 1962. *Mr. Dowell.*] How long have you resided in the district? For twenty years, off and on. I have been for sixteen or seventeen years settled down here. I keep a few cattle, and I do some farming.  
 1963. You are a selector? Yes.  
 1964. What is the extent of your holding? About 800 acres.  
 1965. Where did you reside previous to your coming here? Down at Orange.  
 1966. You know the whole of the country in this district? Yes.  
 1967. Do you know the route from Molong to Parkes and Forbes suggested for this railway? Yes.  
 1968. Does the line pass through good country? Yes. There is not much difference between the three lines between here and Parkes.  
 1969. What is the character of the country through which they pass here? Timbered country, well cultivated in patches.  
 1970. Is the land good for agricultural purposes? There are patches in it.  
 1971. What occupation did you follow previous to coming here? I used to be carrying backwards and forwards to Sydney, over the mountains.  
 1972. Will this country compare favourably with any country you have travelled over? I think so. In most seasons when the crop has been very scarce in other places they have generally had a little crop here.  
 1973. Generally speaking, you consider this country will compare favourably with any other country you knew in the olden time? Yes.  
 1974. Can you tell us whether this soil is suited to the growth of vines or orchards? They do very well if you attend to them for twelve months—that is vines.  
 1975. Have you any experience of vine-growing? Yes. I have grown about a quarter of an acre of grapes, but a lot of cattle got in among them, and I have not troubled about them since. They yielded very well for the first two or three years they were in. The grapes round Parkes yield finely.  
 1976. Have you any special knowledge of timber in the district? Yes; I have split a lot, and put up a lot of fencing.  
 1977. What is your opinion of it—is it good or bad? It is good lasting timber—pretty tough; fine fencing timber.  
 1978. What is the character of the pine in this district? There is any amount of it, but it is not very heavy pine. There are patches of it, but the timber is not very large. 1979.

1979. Is it good sound pine? Yes. There is a great scrub of small pine all growing up.  
 1980. Can you get sticks 15 to 18 inches through? Yes, in patches.  
 1981. Have you been in the habit of carrying for this particular part? Yes, backwards and forwards.  
 1982. What is the rate of carriage from here to Molong? 2s. 6d. and 3s. per cwt. In the wool season 2s.; sometimes 1s. 6d.  
 1983. Have you observed much traffic when you have been upon the road? Yes. There is a quantity of stuff coming this way from Molong.  
 1984. Does the goods traffic appear to be increasing? Yes; the inhabitants are also increasing.  
 1985. Do you know the country beyond Parkes? Not far out; but I think I ought to mention that there is a good deal of agricultural land at Reedy Creek, about 3 miles off the road.

Mr.  
C. Townsend.  
26 Feb., 1890.

Mr. John Schnabel, farmer, sworn and examined:—

1986. *Chairman.*] What is your occupation? I am a farmer.  
 1987. Where do you reside? At Bumberry.  
 1988. How long have you been here? Twelve years.  
 1989. Have you been farming all the time? Yes.  
 1990. How much land have you under cultivation? About 40 acres; my holding is 100 acres.  
 1991. What do you grow, principally? Wheat and corn; I have a good-sized garden.  
 1992. How much wheat did you grow last season? We expect 250 bushels.  
 1993. Off how much land? About 16 acres.  
 1994. What is your average crop of wheat? The average would be from 15 to 20 bushels an acre.  
 1995. Where do you find a market for it? At Parkes.  
 1996. Does the price at Parkes rule higher than the price at Molong? Sometimes it is more at Molong, and sometimes less.  
 1997. But it is easier to get to Parkes? Yes.  
 1998. Do you know whether there is more land under cultivation here than there was a few years ago? Yes, three times the quantity.  
 1999. Are the farmers putting more land under cultivation every year? Yes, they are improving their holdings every year.  
 2000. What do you grow in your garden? Apples, peaches, pears, and grapes.  
 2001. What kind of fruit is it? Very good.  
 2002. What do you do with it? Some we take to Parkes, and some we use ourselves.  
 2003. You do not grow enough to send it to market? No, but I am improving my garden every year.  
 2004. And would you grow fruit more extensively if you had a railway? Yes.  
 2005. You think you would then get a market to the eastward? Yes; I have no doubt we should.  
 2006. Do you know whether there have been more people living here within the last year or two than used to live here? Yes. When I came here first, and the school was opened, there were 12 or 13 school children on the roll—now there are nearly 40.  
 2007. *Mr. Dowel.*] Do you produce any vegetables in your garden? Yes, all kinds.  
 2008. Do they appear to do well? Pretty well—yes.  
 2009. Do you anticipate that if a railway were constructed you could grow vegetables, as well as fruit, for market? Oh, yes.  
 2010. Do you know the surrounding country? Yes; up and down the road for about 10 miles round.  
 2011. You consider the character of the country pretty good? Yes; there is very good soil, and if there is only a fair season, Bumberry is a good growing place.  
 2012. *Mr. Lee.*] You are a German, I suppose? Yes.  
 2013. Did you know anything of the growth of the grape in your own country? Yes.  
 2014. Do you think the grape would ripen here sufficiently to make wine? Yes.  
 2015. Have you made wine? No; but the grapes are quite ripe and good enough to make it.

Mr. J.  
Schnabel.  
26 Feb., 1890.

Mr. Henry Packham, sworn and further examined:—

2016. *Chairman.*] I believe you have some further information you desire to give the Committee? As I told you, I occupy the position of postmaster here, and I thought you might like to have a return as to the number of letters, packages, and papers posted here for 1889—it would enable you to form some idea of the population. The number of letters posted was 4,557, the number of packages 30, and the number of papers 147.

Mr.  
H. Packham.  
26 Feb., 1890.

THURSDAY, 27 FEBRUARY, 1890.

[The Sectional Committee met at the Court-house, Parkes, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

John Alexander Rose, Esq., Mayor of Parkes, sworn and examined:—

2017. *Chairman.*] What is your occupation? I am an auctioneer.  
 2018. I believe you are also Mayor of Parkes? Yes.  
 2019. Have you resided long in this district? Fifteen years on the 2nd of last January.  
 2020. Have you noticed much progress in the district of late years? I have.  
 2021. Will you please give in your own way any evidence you wish the Committee to accept? I may state that statistics have been gathered often during the past ten years, and have been printed at considerable expense without any good result. Upon this occasion the signatures of many of the new selectors have been

J. A. Rose,  
Esq.  
27 Feb., 1890.

J. A.  
Rose, Esq.

27 Feb., 1890.

been obtained, with particulars of their holdings. Our case has appeared to us to be so good that we have incurred no expense for printing. I may explain at the outset that the reason why more wheat is not grown here is that there is no local markets and that it will not pay to cart it to Molong, at an expense of not less than 1s. per bushel. The postal return, which will be supplied, will give you some idea of our rate of progress, while the returns of Cobb & Co., the mail contractors, will show that the road is largely used. The difference between the area of land selected, as shown from the sheets taken from the books in the Lands Office, and the area gathered by collectors is caused by many returns not having been sent in. I may state here that the electoral roll lately taken by the police shows that there are 396 more names on the roll in this portion of the electorate. Of course, as the Committee are aware, considerable areas of land have been alienated in the neighbourhood of Forbes under the repealed Acts, but that land is now for the most part in the hands of the monetary institutions of the colony and of a few individuals. I will give the Committee some particulars concerning one station for sale—it is a fair sample of many cases of the kind near Forbes. Little or no selection has taken place at Forbes during the past five years. The station to which I refer is Wandary, for sale by Strickland Brothers, Forbes. It is situated about 3 miles from Forbes, on the Lachlan River, in the Central Division. The area is about 24,652 $\frac{3}{4}$  acres, consisting of 1,481 acres of freehold; 14,345 $\frac{1}{2}$  acres of certificated conditional purchases; 4,300 acres of leasehold, at an annual rent of 4 s. 6 d. per acre; 3,100 acres of resumed area, at an annual rent of 70s. a section; 546 acres of conditional lease; and 880 acres of annual lease. The country is of deep rich black plain, with open box forest; it is very heavy-carrying country, and fattens very fast. It is watered by 3 $\frac{1}{2}$  miles of frontage in a straight line to the Lachlan River, Trungle Creek and Muddy Lagoon. There are fourteen tanks and several never-failing wells, constituting an abundant supply. The first-class improvements are, homesteads, large eight-roomed house, with pantry, kitchen, laundry, bath-room, office, &c., stables, harness-rooms, buggy-rooms, woolshed, and huts for twelve shearers. The stock consists of about 21,240 sheep. There are about twenty-two head of working horses and seventy head of mixed cattle. It is all securely fenced and subdivided into over twenty paddocks by first-class wire fencing. The price is £50,000, and the terms may be arranged. Wandary is said to be infinitely the best property for sale in the Lachlan district. Its fattening qualities are proverbial. During the whole of the severe drought of 1888 and 1889 it was the mainstay of the Forbes district of fat sheep, besides sending others to other markets. It is well adapted for cheap irrigation, and the soil is A1 for the cultivation of wheat and grain of all descriptions. I do not know that I need read you any further particulars about the station, but the particulars I have read will give you some idea of the size of the holdings in that district. I may state that I received a requisition early in January in the following words:—

Sir,—We are suffering most materially from the want of railway communication to this district, and we beg that you will call a public meeting at Parkes some time in January, so that we may be enabled to express our views on this important question.

The requisition is signed by about 200 persons.

2022. *Mr. Lee.*] Are all these signatures those of selectors? They are the signatures of men to the north, west, and north-west of this place. I also received the following communication from Mr. Balcombe of Coradgery. He was asked to come and give evidence, but he had to go to Melbourne. You will see what the firm say in this letter:—

Dear Sir,

I am sorry I will not be able to attend the reception of gentlemen forming the Committee *re* railway, but beg to inform Mr. Rose that we will guarantee, the first year, £600 worth of carriage from Sydney and to.

H. & A. BALCOMBE.

They are only medium sheep-owners—there are many larger, and of course a great number smaller. I can give you some of the actual totals of the police returns. The reason I took them out was that I thought the returns of the Government would not be ready. I think the officer in charge of the police will admit that they are correct. The returns themselves will be handed in by the police officers. There are 1,950 acres under wheat, yielding 59,000 bushels. There are 3,659 acres under other crops, yielding 3,496 tons of hay, 1,400 bushels of oats, 900 bushels of barley, and 54 tons of potatoes. There are 467,376 sheep, 4,583 cattle, 2,503 horses, and 815 pigs. Already there is nearly twice the acreage ready for wheat-sowing, and the area will be trebled if means are given to get the wheat to market. This is a correct return of the whole of the land alienated since the coming into operation of the Land Act of 1884 up to the 31st January, 1890. It is taken from the office of the Parkes district. I may state that nineteenth-twentieths of this land is taken up to the north-west and west of Parkes. The total area is 858,814 acres.

2023. *Chairman.*] Is this area taken up in large or small areas? The greater portion of it is taken up in areas of 2,560 acres, but a considerable portion is in less areas; all the new men have endeavoured, where possible, to get 2,560 acres.

2024. Do you know these men personally? Yes, every one of them.

2025. Do you think they are *bonâ fide* settlers on the land? I have every reason to believe they are.

2026. Do you not think they have taken up the land for the purpose of speculation? I think I may safely say that they have not.

2027. *Mr. Lee.*] Out of the total of 232,410 acres conditional purchases, 15,704 acres are conditional lease? Yes.

2028. I see by this return that there is a great increase in the last year? Yes.

2029. I see that in the first year you have given us—1885—there were 42,868 acres conditionally purchased? Yes.

2030. But in 1886 it fell considerably? Yes; that year was a dry year; it fell to 17,690 acres.

2031. What is the reason of that? I think the selectors began to get frightened at the outlook. I daresay the probability of some alteration being made in the Land Act had something to do with it.

2032. Still there is a large increase in 1887—it goes up to 53,439 acres? Yes.

2033. In 1888, however, it fell off again to 32,898 acres? Yes; there was dry weather again.

2034. But there is an immense increase in 1889—the area is 85,515 acres? Yes.

2035. Do you attribute that great increase in any measure to the new Land Act? No; I do not think so. You will notice in connection with the area taken up in 1889 there is only one month of 1890, when the present Act had been in operation only two months. I think the men who came over here at first were so satisfied with the country that they wrote to the different centres from which they had come, asking their friends to follow them.

J. A.  
Rose, Esq.

27 Feb., 1890.

2036. You do not think that this was owing to the fact that, although the new law was not actually passed, the selectors felt certain that it would be passed? No doubt they thought it would. No doubt that had something to do with the increase.

2037. You think that the facilities given to the selectors by this particular Act has induced a large increase in the acreage under free selection? Yes; and as far as we have gone, even since the last day of January of this year, more than the average area has been kept up. 19,000 acres were taken up last Thursday. I am prepared to say that the figures I have handed in are correct.

2038. I see that the totals are 232,410 acres of conditional purchase, and 615,704 acres of conditional lease, or a total of 858,114 acres? Yes.

2039. Have you any other information you desire to give the Committee? I have another return. Possibly the officer in charge of the police can tell how the difference arose between the actual area returned to him as cultivated, and the area returned by the holders. I am not prepared to swear as to the cause of the difference, but possibly the officer in charge will be able to give you good reasons for it. The area cultivated is nearly 3,000 acres larger than the area shown by the police returns. The reason, I think is this—they had a larger area ready to be cropped, but they did not care to put it all under crop this season; that is the only reason which I can give for the difference. I hand in a complete return, as far as I could get it, of all the holders of land round about Parkes. Of the sheets which I hand in as exhibits—I may state that the names on Nos. 1 to 18 are all located to the north, west, and north-west of Parkes. The returns from Bullock Creek, Burraburra, Gobendary, and Mungery are not here. The population at each place is large, and the area of land alienated is great. The attached sheets, which I hand in as exhibits, have the signatures of the holders, with the exception of sheets 21 and 22 which are copied; the originals were destroyed with wet. They were in pulp when they came here, and I had difficulty in obtaining particulars from them.

2040. *Mr. Cox.*] I see there are no grain returns here? No; they will be found in the returns taken by the police. The wheat return is only about 60,000 bushels. There are witnesses who will say why the return is not greater. I hand in a return showing the number in the family, the number attending school, the area of holding, the acreage cultivated, and the number of sheep, cattle, horses, and pigs. This gives a grand total under each head respectively of—1,493; 340; 707,985; 7,773; 265,785; 4,807; 2,333; and 912—these figures in detail have been furnished by the holders themselves, under their own signature.

2041. *Chairman.*] Is there any material increase in your population? Yes.

2042. What would be the percentage of increase in a given time, say, during the last twelve months or two years, in the town? I will go back four years. About four years ago the population of the town was about 1,700, to-day it is about 2,700; four years ago, the population of the district, including the number I have already given you for the town, was 4,000; to-day, it is between 6,000 and 7,000.

2043. How far does that calculation extend towards Forbes? About half-way.

2044. In what direction has the principal increase in population taken place? I wish to emphasise this—no increase has taken place on the south between here and Forbes.

2045. Where has the principal increase taken place. To the north-west, to the north and west, and in the town itself.

2046. Is mining progressing with you? It is, very much.

2047. What mines have you in payable condition here? Practical miners will follow me who will give you that information.

2048. If this line were constructed, do you think the traffic from Peak Hill and Alectown would be concentrated in Parkes? Yes; but I may mention that in the returns I have given, I have not taken in Peak Hill.

2049. How far is that from here? About 30 miles.

2050. How far from Dubbo? About 44 miles. The road between here and Peak Hill is better than the road between Dubbo and Peak Hill. The traffic would come here, if there were a railway near here.

2051. Putting aside all personal feeling in this matter, which line do you believe would serve the greater number of people—the line from Molong, the line from Borenore, or the line from Cowra? There is no doubt that the extension of the line from Molong would be considerably in favour of the population in this district, as well as of the population out north and west—the whole of those portions of the electorate are progressing. There is not much progression in other parts of the electorate, except that which takes place among themselves. There are no new people coming into many portions of the electorate, but in the portions to which I have referred large numbers are coming in weekly and monthly.

2052. You advocate the construction of this line in preference to either of the other lines? Yes; and if I had nothing to do with the place I should still advocate it.

2053. Do you think the country would be justified in constructing the line if it could be shown that by its construction it would lose £15,000 a year? I think we can prove that the country will not lose anything like it. The postmaster is not here just now. Before he left for Sydney I asked him to take out some figures—they are an exact copy of some figures which will be sent to the Postmaster-General. They show a great increase in the postal revenue, and that, I take it, is an evidence of an increase in the community. So far as the telegraph office is concerned, the receipts for July, August, and September, 1887, were £57 8s. 3d.; the receipts in the same months of 1888, were £66 10s. 3d.; and in the same months of 1889, £118 0s. 4d. The revenue, as shown by the Postmaster-General's report for 1888, was £297. The estimated revenue for the quarter ended September of the present year is £472; the number of messages transmitted, as per the Postmaster-General's report for 1888, was 4,617. The number of messages, estimated from business done for the quarter ending September, 1889, for the present year is 7,288. The Post Office revenue for 1888, as per Postmaster-General's report, was £750; the cash remitted for stamps for the quarter ending September, 1889, was £260. The estimated revenue for the present year is £1,040. The number of letters for September, 1888, posted at Parkes, was 7,992; packets, 210; and newspapers, 1,871. On the same basis, the total for the year 1888 would be 95,904 letters, 2,520 packets, and 22,452 newspapers. The number of letters posted in September, 1889, was 10,645; packets, 249; and newspapers, 5,174. Upon the same basis, the letters for 1889 would be 127,740; packets, 2,988; and the newspapers, 62,088. The number of mails despatched weekly is seventeen, and the number of bags, not including any private bags made up weekly, is seventy-five. So far as the Money Order Office is concerned, the money-orders issued for the quarter ending September, 1888, were in number 354; the amount was £1,008 14s. 7d.; the number paid was ninety-six, and the amount £426 2s. 4d. For the quarter ending September, 1889, the number issued was 459; the amount paid £1,289 17s. 3d.; the number paid was 140, and the amount £526 19s. 1d. I have another return of Cobb & Co.'s traffic for ten

J. A.  
Rose, Esq.  
27 Feb., 1890.

ten months in 1889. For some reason I could not get it for the whole year. I do not know whether instructions were given that it should not be given, but I could not get it. I have it from the month of January up to the end of October. The money received during that time at the Parkes end, which, in my opinion, is clearly the smallest end of the line as far as traffic is concerned, was £1,014 14s. 9d. Taking it for granted that the same rate of traffic would be kept up for the remaining months, the total for the year would be £1,215 7s. 2d. Then there is all the money taken at the Molong end. A considerable portion of through traffic cannot be here, because the money does not reach the hand of any person here.

2054. *Mr. Lec.*] From whom did you receive that return? I received it from the agent of Cobb & Co.'s stationed at Parkes. I also wish to remark in connection with the traffic upon this line, that the reason so many more horses are required upon another line in this district is, that that line is 30 miles longer than the Molong line. I have a memorandum here showing the number of sheep, from which wool now goes to Molong *via* Parkes, and the number of sheep from which the wool would come to Parkes to be conveyed by train, should the railway be made—the return also shows the probable revenue.

2055. Will you read a few of the figures? The sheep, from which the wool now goes to Molong *via* Parkes, number 548,000; the sheep, from which the wool would come to Parkes, if the extension is made from Molong to Forbes *via* Parkes, number 1,113,000.

2056. Are you including Forbes? I have not taken 1 oz. of anything belonging to Forbes.

2057. Are you keeping in your land district? Yes. I may say, however, that the wool from Burrawang at present goes to Sydney *via* Forbes, but if the line is made from Molong to Forbes, through Parkes, every ounce of that wool will come here. I have taken only one station on the Bogan. I take it for granted that the wool from all the sheep there will all go to Narromine, although I know it will not be the case. Allowing ten bales for 1,000 sheep, which is reasonable, although the wool this year went more, it will give 11,130 bales. Allowing six bales to the ton you have 1,855 tons of wool. At 70s. per ton, the rate through to Sydney, you will have a revenue of £6,492 10s. I reckon that there will be 50,000 fat sheep on the line, at 1s., or £2,500; 2,000 fat cattle, at 10s., or £1,000. As to goods—supposing there are 90 tons a week, or 4,680 tons for the year, at 60s. a ton, that would give you a revenue of £14,040. That is, of course, right through to Sydney. I take credit for £3,000 for mails, and as to grain, I reckon 100,000 bushels, at 6d. per bushel, or £5,000. I take it for granted that if the population in and around Parkes is 5,000; one-fifth of that population will travel once a year. I think that is a moderate estimate. One-fifth of the population, at 60s., gives you £3,000. I take credit for miscellaneous traffic to the extent of £5,000, and I make a total of £40,032. I take credit for one-third of that, considering my small figures for the new portion I made. I anticipate that the rates charged on the new portion will be considerably more than the rates charged on the portion now made. I admit that it will be in a position to pay a greater rate.

2058. *Chairman.*] You know from your personal experience that one town does not like to be imposed upon more than another, and that the rate for a certain distance is a certain amount. You will expect to be treated the same as the people at Bourke or at other places are treated in proportion to the distance? I think we are entitled to this credit, on account of the low figures I am giving—a third of the figures I have given will be £13,344.

2059. What will one-fourth of it be,—if these estimates of yours are not as high as they ought to be, that is not any reason why you should take a third of the distance instead of one-fourth? A fourth will be £10,008.

2060. Your figures are very low—it will certainly be more than 6d. per bushel on wheat—your estimate should be £10,008? Up to this point.

2061. That is about £1,260 under the Commissioners' estimate? Yes, as far as Parkes.

2062. How do you account for that? They have added a considerable portion for revenue between here and Forbes that I have not taken in.

2063. Do you think the Commissioners have included in their estimate the traffic from Forbes to Sydney? I am sure of it. I take it for granted that the report is correct.

2064. Then, according to your statistics, the Forbes district would only return about £1,000? Yes; that is up to the limit of the Commissioners' estimate; but I think there will be considerably more than that.

2065. Your estimate is for the traffic on the Parkes line, quite independently of Forbes? Yes.

2066. Whereas the Commissioners' estimate of £11,264 includes both Parkes and Forbes? Yes.

2067. Do you think that the Forbes traffic would be equal to the Parkes traffic on the railway? I think their returns to-day will be as great as ours.

2068. Then you will have a total of £22,000 instead of £11,000? It will be nearer £20,000 than £11,000.

2069. Then you would not show a loss of £15,000 a year on the line? I am satisfied there will be no loss upon it.

2070. Do you know that the Commissioners make the interest on the capital expenditure and working expenses amount to £26,000 a year? I am satisfied that their estimate of £11,000 is totally incorrect.

2071. *Mr. Lec.*] What do you estimate the traffic will be in connection with Forbes and Parkes, and the country between here and Molong? I think that after the railway had been running six months the revenue would exceed £20,000.

2072. *Chairman.*] Suppose this line were constructed there would be no other means for the Forbes people to get their produce to market? Unless they liked to cart it to Cowra.

2073. These estimated returns must include the total returns of the Forbes traffic as well as yours? I think so.

2074. Are you not over the estimate in putting it at £20,000? No. I know from the great progress this portion of the district is making that the revenue must be very much bigger.

2075. Have you anything to add to the information you have already given? I should like to give some arguments as to why this line should be constructed.

2076. You know Young? I have been there.

2077. Do you know the position it holds with regard to Parkes and Forbes? Only by looking at it on the map. I have never travelled the country between Young and Forbes.

2078. Do you know whether a line direct from Young to Dubbo would pass through Grenfell, Forbes, and Parkes? I believe it would.

2079. Would not that line serve Parkes and Forbes equally well with the proposed line? I think it would, but that is a line which must be constructed, even if this line is made. If the line you refer to is constructed,

J. A.  
Rose, Esq.  
27 Feb., 1890.

constructed, I believe it will carry more stock than any other line in the colony. I was going to remark, in connection with the distance of new construction, that 71 miles would give us railway communication from Molong. From Borenore to Forbes and Parkes there would be 86 miles of construction; from Cowra to Forbes and Parkes 84½ miles. I think that as the line is now made to Molong there can be no two opinions but that this is the correct extension to make. Of course, the argument will be raised that the line from Borenore to Forbes will give them a few miles less to have their goods conveyed, compared with this route; but we must look at every side of the question, and we should have so much further to take our goods. What is sauce for the goose is sauce for the gander.

2080. Is the population of Forbes greater than that of Parkes? The population of the town must be greater, but it is not getting greater, except by reproduction among themselves. We are increasing outside, in addition to our own natural increase.

2081. Would not the construction of this line increase the haulage for the Forbes people by about 17 miles? About that.

2082. It would increase the line by that length for all the people to the west of Forbes—for the Condobolin people for instance? If you adopted the other line a greater hardship would be inflicted upon the places to the north and north-west of Parkes.

2083. Is there no traffic between here and Condobolin? Not much at present. Some years ago we had good markets at Condobolin, Nymagee, Mount Hope, and Cobar. The railway now conveys goods as far as Nyngan. The Cobar and Nymagee people get their goods from there. Condobolin, for the last few years, has been growing broadstuffs of its own, possibly enough to supply itself. Some years ago, I myself sent hundreds of tons of produce to Cobar and Nymagee.

2084. How far is Condobolin from here? About 60 miles.

2085. How far is it from Forbes? I am not prepared to say of my own knowledge. I have travelled from here to Condobolin, but I have not travelled from Forbes to Condobolin. There is a better road from here than down the river—a more passable road at all times.

2086. If this line were constructed, would not the people of Condobolin have to pay for 17 miles further haulage on their goods for all time? No.

2087. You think they would send from Parkes instead of from Forbes? There is no doubt about it.

2088. Is not Condobolin the centre for the Lachlan Valley traffic? No.

2089. Is it not the centre to which traffic gravitates in the Lachlan Valley? Not at present; it may ultimately do so.

2090. Where does the traffic of the Lachlan Valley go to? Some goes there and some comes here.

2091. In coming here from a point direct west, would it not come through Condobolin? Within a certain number of miles it would come through Condobolin, but a portion may drift away through Hillston.

2092. What I wanted to know was the important township beyond Forbes and Parkes in the Lachlan Valley to which most traffic would gravitate in order to come eastward? Condobolin, of course.

2093. Then, if Condobolin is the centre, would it be served by this railway if they had to pay the extra 17 miles of haulage? No, certainly not; but they would not have to pay that haulage—the traffic would come to Parkes instead of Forbes.

2094. You said just now that the wool which would come upon this railway would be from 1,113,000 sheep? Yes.

2095. Do you know that in a petition which has been sent in, a statement has been made that the wool from 5,000,000 sheep would be served by a railway to Forbes? It is quite possible, but I do not know where they are coming from. I do not think they are in the district. I have taken credit for nothing but what I know would come here.

2096. Where are the principal part of the sheep to which your statistics refer? They are all north, west, and north-west. There are a few to the east and about 1,000 to the south. I have gone out as far as Trundle—that is about 14 miles. I have no doubt that they have taken credit at Forbes for everything all round. I have only taken credit for everything that must come here.

2097. *Mr. Lee.*] Can you tell us how many flour-mills there are in this district? There is only one in the Parkes portion of it.

2098. How many banks are there in the town of Parkes? Three.

2099. What is the population within the municipal boundaries? About 3,000.

2100. What is the annual amount of your rates? Last year they were only about £500. They are very much greater this year.

2101. How long has the town been incorporated? For about five years.

2102. Is the population increasing within the municipal boundary? Very much.

2103. Is the capital value of taxable land increasing? Yes; in the last twelve months it has increased 300 per cent.

2104. Is the value likely to still further increase? Very much.

2105. That is an evidence of increased and improved buildings? Yes. I might remark that we have had little or no public money spent here. We have been left to go the best way we could. A lot of public money has been spent elsewhere, but I will not say anything about that.

2106. *Mr. Douel.*] You have handed in a return showing the holders of land in the district;—do you think they will contribute materially to the revenue of the railway? Every one of them.

2107. In your capacity as auctioneer and stock agent, can you inform the Committee whether many stock pass through Parkes from Queensland? An immense number.

2108. Is it not possible that some portion of this stock, in times of drought, would use this railway, thus creating a revenue? A great number of them would use it.

2109. In your position as Mayor you have come into contact with a large number of residents, and have had an opportunity to gauge public opinion as to the route which should be adopted? Yes.

2110. What is the consensus of public opinion on the subject? Of course, they all say here that this is the correct line. At the same time we have residents who own property at Forbes, who also say that it is the correct line.

2111. Have the public meetings which have been held been in favour of this line? Always.

2112. I understood you to say just now that there would be 17 miles longer haulage to Sydney if this line were constructed? To serve the Forbes people—from their standpoint.

2113. Is there not 11 miles less of construction upon the Molong line? Yes.

Mr.

Mr. Mark Coleman, gardener, sworn and examined :—

- Mr. M. Coleman.  
27 Feb., 1890.
2114. *Mr. Lee.*] What is your occupation? I am principally gardening at the present time.
2115. How long have you resided in the district? Twenty-eight or twenty-nine years. Part of the time at Forbes, and the remainder of the time at Parkes. I have lived at Forbes eleven years and here about eighteen years.
2116. Have you come here prepared to furnish any statistics to the Committee? No statistics whatever. Mr. Rose has been supplied with them all.
2117. On what particular point do you wish to give evidence? One point upon which I should like to give some evidence has reference to the flooded country. I see by the evidence given to the Committee in Sydney that one of the Government engineers has been led astray, or has been confusing one line with the other. This gentleman was reported to have said that on the line from James' Dam to Forbes there was flooded country, requiring culverts and embankments, whereas any one here knows that there is not an inch of flooded country upon the whole distance from Parkes. There are a few little gullies where the water backs up in times of flood, but the road is never flooded, except for a short distance crossing these low gullies. The survey from Cowra to Forbes and the survey from Borenore to Forbes junction with the Parkes line is about  $3\frac{1}{2}$  miles on this side of Forbes. They have to come to this particular point to get into Forbes in order to avoid the flooded country.
2118. That is to say, the country in the immediate vicinity of Forbes is liable to floods? There is no other way of coming in, except by way of this junction.
2119. Do you know the country between this and Molong? Yes; I have travelled it at different times.
2120. Have you ever been off the road? No, I cannot say I have, except on one occasion, when the surveyor was here, surveying through the gap.
2121. You know the track from Forbes to Eugowra and Borenore? Yes.
2122. Have you been along it often? Only once or twice.
2123. What is the quality of the country on that line, as compared with the quality of the country on the line to Molong? In my opinion, there is very little to choose between them. I think there is good and bad country on both lines. In travelling this way the difference is that you travel over the rough country, leaving the good country on either side. Going the other way you travel through the gaps, and through the best land, leaving the hilly, ridgy country away from the line.
2124. Are you a property-owner in Parkes? Yes; I have town property in both Parkes and Forbes—suburban property also.
2125. Does the railway survey in either case affect your property? Yes.
2126. Does it pass through it? Part of the survey of the line from Molong comes through the lower portion of two pieces of suburban property. The present survey is through it, but the line may, perhaps, be made without going through it.
2127. Are you gardening on a large scale? I have 6 acres.
2128. What do you do with the produce of the garden? We generally get rid of most of it locally. The year before last was a bad year, and there was not much to get rid of. We sent some fruit this year to Orange, and to Peak Hill and Alectown. I sell a good deal of my own fruit in a shop I have in the town.
2129. How does fruit flourish in this district? If we only get a moderate season it flourishes as well as it does anywhere.
2130. What kinds of fruit do you grow? Oranges, lemons, peaches, pears, and apples.
2131. Do grapes grow to perfection? They could not be grown better.
2132. Do you grow for wine? Yes; I make wine every year.
2133. Is there a market for local consumption? Yes. Very little wine is made here, except that which I make myself. The year before last I made about 600 gallons.
2134. Which line would best serve the larger portion of the community—the line from Borenore or the line from Molong? My opinion is that the public generally would be best served by the line from Molong. In the first place the number of people to be served is much larger. There are a large number of settlers who have taken up land to the north, to the west, and to the north-west of this place. They are all, I think, good *bona fide* settlers—men who would produce and cause traffic.
2135. Do your oranges grow well here? We have good oranges in good seasons; but the seasons have been bad here lately.
2136. Do you think that if either of these lines were constructed it would give a proper outlet for the produce of the district? Yes.
2137. So far as your individual interest is concerned, would a railway constructed from Young to Forbes, through Grenfell, and on to Parkes and Dubbo, answer your purpose better? I have no doubt it would answer general purposes as well as my own. Of course, it would be a good way round to get to Sydney.\*
2138. But it would be an advantage, as far as wheat and local produce is concerned? I can hardly say that. I think the Molong line would be more advantageous to the general public, on account of the metropolitan market for grain.
2139. You look upon the metropolitan market as being the best for grain? Yes.
2140. Which would be the best line for wool? I should imagine the Molong line. The wool must go to Sydney.
2141. There would be less haulage than by the cross line? Yes.
2142. And the same argument would apply to passenger traffic? Yes.

Mr. Angelos Pholoros, storekeeper, sworn and examined :—

- Mr. A. Pholoros.  
27 Feb., 1890.
2143. *Mr. Cox.*] What is your occupation? I am a storekeeper at Parkes.
2144. How long have you been residing in this neighbourhood? Since I came to the colonies, about eleven years ago.
2145. I presume you have seen Parkes go up and down more than once? I saw Parkes go up eleven years ago, when there was gold-mining. When the gold-mining came down, the place came down also. I saw it afterwards far better than I had ever seen it before.
2146. What is the cause of its present prosperity? I attribute it to the large quantity of land taken up. Many selectors have come here from Victoria. They are wealthy men, and they have spent many thousands

\* NOTE (on revision):—I meant the line in question would open a market, *via* Dubbo, to the back country.

- thousands of pounds in this place. Then there is the mining and the increased agriculture. These three things have contributed to the prosperity of the place.
2147. Have you prepared any statistics? I have been for some time agent for Wright, Heaton, & Co. in this town, and I have prepared you some statistics in reference to the traffic. Now, as to the goods coming from Molong to Parkes: They amount to 3,448 tons for the twelve months ending December last. The goods going down—that is, hides, skins, beeswax, and many other things of that kind (I do not include wheat and wool)—were about 1,500 tons. I cannot swear to the quantity of wool going from Parkes, but I think there were about 6,000 bales.
2148. It has not all passed through your hands? No; but I think about that quantity went to the Molong station. The principal thing to which I wish to draw your attention is the condition of traffic at present, compared with what it was three or four years ago. At that time we had about six or seven teams to draw our goods from Orange and Molong. Many a time they had to wait there a week or two for a load. At the present time we have about seventeen teams—that is, fourteen carriers and three private teams. These are constantly going without any delay, and they are all from 5 to 6 ton teams. We cannot keep the station clear of goods. It is often crowded with Parkes goods. In the month of December there were 404 tons of goods at Molong station. Out of that 404 tons there were 112 for Molong, 42 for Cumnock, and 250 tons for Parkes. I also wish to give you some little proof of the increase of my own business. I used to pay to the Government from £100 to £200 trainage per year; at present—I cannot swear to £1 or £2—it is close upon £1,000—that is, for goods up and down, and it is quite irrespective of Wright, Heaton, & Co.'s business. In proof of it, I can show you the way-bills and railway vouchers.
2149. If you could tell me what the trainage would be from Molong to Parkes, I could tell you what amount of trainage would be paid from Parkes and Molong? I reckon that the Parkes line will pay the Government about £8,000, independently of wool and grain. I am referring to goods coming only to Parkes. My estimate is independent of the passenger traffic. There are a lot of goods coming through this way for the squatters; then there is the Alectown and Peak Hill traffic. I think Mr. Rose was wrong in the distance he gave you—it is 15 miles from here to Alectown, and 30 miles to Peak Hill.
2150. Does it pay the people of Peak Hill to pay the road carriage from Molong to Parkes and then from Parkes to Peak Hill, a distance of 80 miles, instead of paying only for the 50 miles of road carriage from Dubbo? It would pay better to bring it from Dubbo, if the roads were not so bad. In wet weather they are obliged to bring the goods through from Molong.
2151. Are not your roads bad in wet weather? Not so bad as theirs.
2152. You said that there had been a large influx from Victoria, and that men with capital were settling down in the Parkes district? Yes.
2153. There is nothing which tends to diminish the number of people coming here? Nothing except the difficulty of getting land. There is a great deal of land shut up in the gold-field reserve. If that were thrown open I am sure plenty of selectors would come here.
2154. Do you think a great impetus would be given to the material prosperity of the town? Yes.
2155. I suppose the same difficulty arises in regard to people settled in the town? There are a number of allotments which people cannot take up for residence on account of their being reserved in the gold-field. If they take up the land they never get it. They sometimes have to wait ten or fifteen years before they can get it from the Government. If the Government would sell the land by auction, not one inch of ground in the town would be left.
2156. What would it realize per acre? The town allotments are from £14 to £15 for a quarter of an acre. If the upset price is £15, people run it up to £50 or £100, according to the position.
2157. The demand is much greater than the supply? Yes.
2158. Do I understand that land has brought extreme prices in the town of Parkes? Very large prices.
2159. Can you give me an instance? The other day a gentleman sold several allotments. He had three reserved, and they brought about 50 per cent. more than the price he put upon the land.
2160. Do you know of any other instance in which land in the town has been sold at a high price? The Union Bank bought from 38 to 50 feet of frontage for £1,000, it may be a little less.
2161. Does that adjoin "Foster's Hotel"? Yes.
2162. Is not that an excessive price to give for land here? Considering the business doing in the town, it was not thought too dear.
2163. If the Government would throw open more of the land, such a price would not be obtained? I do not know; there are plenty of people taking up land here. Every day you find people looking for quarters and unable to obtain them.
2164. Have any representations been made to the Government, setting forth the disabilities under which you labour? Yes, but the Government take no notice of it.
2165. Do not the Government want money? There is plenty of money in this town if the Government want it; there is plenty of land to be sold here.
2166. You know the country between this town and Forbes, and between this town and Molong? Yes.
2167. Do you know the country between Forbes and Borenore? Partly.
2168. Do you know the country between Young, Grenfell, and Forbes? I never was there.
2169. Have you been over the country between this place and Dubbo? No.
2170. Is there any other statement you desire to make? I heard you asking a question of another witness as to whether this railway, if constructed, would pay expenses. From what I can see of the progress of the place, if the railway were constructed from Molong to Parkes and Forbes, I am prepared to swear that it will not only pay expenses, but will, within a few years, pay the cost of the railway. I am sure that £26,000 would be received from this district.
2171. You have seen this district rise up to a high state of prosperity and descend again to very low depths? Yes.
2172. Do you not think that is likely to occur again? No.
2173. What about the bad seasons? The selectors we have here are doing very well. I know that as a fact. They have dealings with me, and I know how they stand. In case of drought they are well supplied with water. They have dams and have spent a lot of money upon their holdings. The stock might be a little injured in time of drought, but nothing to speak of.
2174. How did they get through the terrible drought of 1888? They did get through it.
2175. Did they suffer much loss? Not much.

- Mr. A. Pholeros. 2176. They have recouped it since? Yes. I know the case of one selector who, whatever he lost in the drought, cleared this year £1,200.
2177. If they could do so well without a railway, do you think they would do much better with one? I believe that if a railway were brought here it would be one of the most wealthy places in New South Wales.

Mr. John Medlyn, miner and hotelkeeper, sworn and examined:—

- Mr. J. Medlyn. 2178. *Chairman.*] What is your occupation? I am a miner and hotelkeeper.
2179. How long have you been here? About fourteen years.
2180. *Mr. Dowel.*] You have a pretty general knowledge of the district? I have a knowledge of a good part of it—that is, for about 15 or 20 miles out.
2181. What occupation have you chiefly followed since you have been in Parkes? Mining.
2182. Is the Parkes gold-field a large one? Yes.
2183. Can you state the number of acres on the gold-field reserve? No; I was not aware that I was expected to give evidence on that point.
2184. Is there any alluvial mining going on in your town? Well, there is the Tichborne, M'Guinness, and other leads.
2185. Has it been of a profitable character? Yes; we have had rich leads.
2186. What is the description of mining now being carried on? Reefing; very little alluvial.
2187. Can you give us any information as to the reefs? There is the Dayspring, down about 300 feet or a little over. I visited it a short time ago. The reef was fully 6 feet wide and is very easily worked. I was informed that it crushed 7 dwts.—a handsome return for such a reef.
2188. Was that without the pyrites? That also would yield considerably, although I have not heard the returns.
2189. Have you heard of any assays from pyrites? I have heard of some, although I do not exactly remember them. I have heard of from 30 to 40 oz. to the ton—for instance, there is Mr. Haselhurst's claim.
2190. Is that a profitable mine? It has been and is still, I believe. It is in the hands of a company now and is paying well. It is a substantial reef, keeping down well, and likely to go to a great depth.
2191. What is the yield from that reef? I do not know. I have heard that it crushed from 1 oz. up to 20 ozs. to the ton.
2192. Are there any other special reefs to which you wish to direct attention? There is Quayle's claim, adjoining Haselhurst's on the same line of reef. It goes down to about 220 or 230 feet. The reef is going down, and is keeping good as it goes.
2193. From your knowledge of this country, are you of opinion that the reefs are of a permanent character? I think it will be one of the largest reefing fields in the colony—equal to Bendigo or Ballarat.
2194. Are the reefs of great extent? Yes; the reefs extend, although they are not payable, up to Peak Hill. There is a reef at Alectown which would pay now, if there was machinery on it.
2195. You think the country between Parkes and Peak Hill is auriferous? Yes; I think there will be a great gold-mining industry there.
2196. Have you visited Peak Hill? Not within the last two years, but I have prospected there.
2197. Do you know the country intervening between Parkes and Peak Hill? Yes; I have done a good deal of prospecting there.
2198. And it all appears to you to be of an auriferous character? Yes; it would be a large reefing district.
2199. Can you say how many miners are employed in this district? I could not say.
2200. Is the number now larger or less than it was a few years since? I think it is double what it was a few years ago.
2201. Have you seen the mining industry here in a more prosperous condition? At the time of the alluvial mining; but, since there has been reefing, I do not think it has been so prosperous.
2202. How many batteries have you in the district? Two—one with twenty head, and another, the Huntingdon, equal to fifteen or twenty head.
2203. Have you a sufficient number of batteries to meet the requirements of the district? We might have at the present time, but there would have to be more.
2204. How much a ton do they charge at these batteries? The price would average from 8s. to 10s. a ton. Some stone would crush for less. The batteries crush by the hour.
2205. Do you know that there has been a considerable demand for land in the gold-field reserve? Yes.
2206. Do you think it desirable that the reserve should be cancelled for the purposes of settlement? I think a portion of it might be cancelled, with great care and consideration. I should be very careful in cancelling it in the vicinity of the reefs.
2207. Have you been over both routes of the railway? I have not been over both.
2208. Have you been over the route from Molong to Parkes and Forbes? Yes.
2209. You know the country? Pretty well.
2210. Is it of a good character? Very good.
2211. Suitable for what purposes? For agriculture.
2212. Is it suitable to the growth of fruits? Yes. There is splendid fruit almost all the way along. The Parkes district is a great fruit-growing district.
2213. Do you know the condition of the settlers in this locality? Yes.
2214. Do they appear to be in a prosperous condition? Yes; they are all getting on very well, judging from appearances.
2215. If a railway were constructed would they put more land under cultivation? Yes; I should say you would have double the area under cultivation within twelve months.
2216. Is it not a fact that there are a large number of other reefs being worked besides the two to which you have referred? Yes. There is the Koh-i-noor, the Bonnie Dundee, the Gladstone, and the Bushman's Hill.
2217. As an experienced miner, you think the reefs are of a permanent character, and are likely to give employment to a large number of persons? Yes; they are employing more every month. There is the deep shaft on the Bonnie Dundee line of reef, which, in my opinion, will open up the field to a great extent, and will give employment to a great many more than other reefs which have been proved to be payable.

2218. Had you been working on any other gold-fields previous to coming to Parkes? Yes; in New Zealand and Bendigo.
2219. Making a comparison between the fields upon which you have worked and this particular field, do you think Parkes will compare favourably with other places? Judging from the formation of the country, I think the Parkes reef will turn out equal to those at Bendigo, such as the Garden Gully and Husslers. There is the same formation there as can be found in these reefs.
2220. Has settlement in the town and district of Parkes improved lately? Very much within the last three or four years.
2221. You can see a great improvement? Yes. There is a piece of property I bought four years ago for £450, for which I was offered, and refused, £2,000.

Mr.  
J. Medlyn.  
27 Feb., 1890

Mr. Sydney Ephraim Close, auctioneer, sworn and examined:—

2222. *Chairman.*] What are you? I am an auctioneer.
2223. Where do you reside? At Parkes.
2224. How long have you been here? Nearly eight years in the town of Parkes.
2225. Have you been in business as an auctioneer all that time? Yes.
2226. What is your opinion of the progress of the town since you have been here. It has made wonderful strides during the eight years I have been here. I have known the place ever since it has been a town. I have resided in the district twenty-one years.
2227. Have you noticed whether this progress has been marked within the last year or two? It has been marked since 1884 or 1885.
2228. It has been gradually progressing each year? There has been an improvement in the value of all properties in the district up to the present time.
2229. Can you give us some idea of the value of allotments in the town several years ago, compared with their present value? I can speak of one lot which I bought five years ago at public auction for £250. I have refused £1,000 for it during the last five or six months.
2230. That is not an exceptional case? No.
2231. Would that be a fair average taking into consideration the improved value of the other properties? I think so.
2232. To what do you attribute this increase in the value of property? To the increase of population we have had during the last few years. In 1883, if you went out west, north, or north-west you could ride all day without meeting a person; now you cannot go a mile or couple of miles without seeing some place—it is all new settlement. There is land out there of which it would take at one time 30 or 40 acres to carry a sheep, but since the land has been selected and improved it would carry a sheep to 2 acres.
2233. What class of improvements has made that difference? The land has been scrubbed and ring-barked.
2234. Has there been any water conserved? They could not occupy the land otherwise, because they are so far away from the creek, the improvements in the water-line have been in the way of tanks, principally.
2235. Have you seen much improvement in the area under cultivation in the last year or two? Yes, nearly every selector is cultivating, more or less.
2236. What is the average value per acre of a small selection for agricultural purposes, say a selection of from 300 up to 640 acres? A great deal would depend upon the locality in which the selection was situated—whether it was ridgy country or in flat country.
2237. But take what you term the best agricultural land in its natural state? From £3 10s. to £4 an acre.
2238. Without any improvements? Yes.
2239. Do you think it is as valuable as that? Yes, I have given a higher price for it myself.
2240. Do you know the class of country on the leasehold areas which will shortly fall in? Yes.
2241. Do they contain any land of the quality you were just speaking of? The principal part of those areas is further from town. When I said £4 per acre, I was speaking of land at a comparatively short distance from town.
2242. At what distance? 4 or 5 miles from the town.
2243. The actual value of it for farming purposes, 10 or 12 miles away, would be reduced? Yes. I know the land in the leaseholds to which you refer.
2244. Will you describe it? It varies. Some of it is very rough and densely timbered, with underbrush as thick as it can possibly be. In fact I know an instance in which a family took up a large area adjoining the leasehold, and to which the leasehold is similar, where they had to clear a place to put up a house.
2245. Is that the general run of the leasehold areas? That is an exceptional case.
2246. Will you describe the rest? Some is very fine country, and some is good open country. I should reckon the market value of it at about £2 per acre.
2247. For agricultural purposes? Yes.
2248. You are satisfied there is a good deal fit for agricultural purposes? Yes.
2249. Have you any idea as to the proportion of good and bad land on these areas? I think myself it would be about half-and-half. Those who come into the field first would, of course, get all the good land.
2250. Do you know the number of acres which would be thrown open? I do not.
2251. Do you think the construction of this railway will materially increase the value of property outside the town as well as in it? I think so.
2252. Have you any knowledge of the proposed route of the railway from Borenore to Forbes? I have travelled that line.
2253. Do you know the country between that line and the proposed line from Molong to Parkes? Not all through, but I know a considerable portion of it.
2254. From your knowledge of the country, which line do you think will serve the greater number of people. I want you to consider the country to the north of this line, and the country which will be served south of the line from Borenore to Forbes, leaving the centre of the land to be served by either line? I certainly think the line from Molong to Parkes and Forbes would serve the greater number of people.
2255. Do you know anything of the country between here and Peak Hill? Yes.

Mr.  
S. E. Close.  
27 Feb., 1890.

2256.

- Mr. S. E. Close.  
27 Feb., 1890.
2256. What class of country is it? Principally good agricultural country.  
2257. It is at the same time mineral country? Yes, it has been tried all the way through to Peak Hill.  
2258. And it is all the gold-field reserve now? Yes.  
2259. Have you any other information to give the Committee? I heard you ask another witness as to the value of town lots. I had a sale on the 1st of the month, and I could tell you the size of the land, its situation, and the price it brought. The first was a lot of 56 feet frontage to Clarinda-street, but outside the town altogether—it was sold for £60; it contained 39 perches. The next block of 39 perches sold for £43; the next block, 48 perches, for £45 5s.; then 38 perches sold for £46, 38 perches again for £48, and 38 perches again for £52 10s.; that was all the land in that locality. The next blocks were at the other end of the town—they were blocks of 13 perches, at the extreme end of the town, on the southern side—one sold for £68 15s.; a block of 12 perches adjoining sold for £66 10s.; a block in the third street from the main street, of 1 rood, sold for £93 10s. The next block of the same size sold for £133—that was in Hill-street; the next block was in the same street but further on; it sold for £170 10s.  
2260. All these sales have taken place lately? Yes.  
2261. Can you tell the Committee whether any of these blocks would be materially affected by the construction of the railway line—would the railway station be near any of them, or would there be anything of that kind inducing a higher price? No, I do not think so. The railway itself would not go through any of them, and the railway station would not be near any of them; the proposed place for the railway station would not be within 400 yards of the nearest.

Mr. Thomas Bridle, selector, sworn and examined:—

- Mr. T. Bridle.  
27 Feb., 1890.
2262. *Mr. Lee.*] You are a selector? Yes.  
2263. How many acres do you occupy? 2,560. One of my sons holds 1,153 acres, and the other, like myself, has a full block.  
2264. Where is your place situated? Nearly at the head of the Bogan, from 36 to 38 miles from here.  
2265. How long have you been there? Four years.  
2266. You have not yet complied with the residence clause? No.  
2267. Had you been living in the district prior to your becoming a selector? Only about two months before.  
2268. Where did you come from? The Tumut.  
2269. Had you been living in that district? Yes, off and on for thirty years.  
2270. Do you cultivate much ground? No, I cultivate about 10 acres of wheat or hay, that is all.  
2271. Have you tried to grow wheat, or grain? No.  
2272. Why? It would not be worth our while to grow it, on account of the distance to take it to market.  
2273. It would be cheaper to buy flour and to cart it out than to grow wheat? Yes, considering that it would have to be reaped and then threshed with a flail.  
2274. Do you grow sufficient hay for your own consumption? I have not done so yet.  
2275. What are you grazing? Sheep.  
2276. Which way do you send your wool? By Parkes one year, and by Narromine the next.  
2277. Which is the cheapest? At present, Narromine.  
2278. You know the proposed railway route? Not from Molong to this place; but I know the district to the west and north-west of this.  
2279. Will the construction of the proposed line bring you closer to a railway than you are at present? Yes, a little closer; it will save extra railway freight. It will be better for me to bring all my produce to Parkes.  
2280. As being the shorter and less expensive route? Yes.  
2281. The whole of your produce, at present, must find its way to the Sydney market? Yes.  
2282. No matter who you sell to in the district? Exactly.  
2283. Are there many selectors in your part of the country? Yes; all the land available for selection in my part is taken up, although four years ago I was by myself—there was not one selector within 8 or 9 miles of me.  
2284. Is there much land available for selection? There will be when the leasehold areas of the runs are resumed, but not until then—there will be a great deal then.  
2285. How much will be available then? I do not know the extent of the runs. There are thirty selectors where I am, on the run, and I suppose there will be room for as many more when the leasehold area falls in.  
2286. Are these runs in the Central division? Yes.  
2287. Consequently the leasehold area will not be available for some years to come? No.  
2288. Is there any Crown land at the present time outside of the pastoral leasehold? There are some small reserves, that is all.  
2289. All the other land is gone? Yes, all round that part of the country.  
2290. Your district, for a few years to come, is pretty well filled up? Yes; but in another locality, where the land is not so much talked of, there is land available, for instance on Boolgandramine, and on the Troughs. There were four or five different lots taken up there not long since.  
2291. What run are you on? Genanagie.  
2292. Is it a sheep run? Yes.  
2293. How many sheep are carried by the lessee? I cannot give you the exact number; but I think about 35,000 this year.  
2294. How many sheep have you and your sons? At the present time not many—about 2,500.  
2295. Do you say you have thirty neighbours on the one run? Yes.  
2296. How many sheep have your neighbours? The number varies from 1,500 to 2,000.  
2297. Will they average 500? Yes, they will go closer to 1,000. I should say that at the present time they would average from 800 to 900.  
2298. In the aggregate, then, thirty selectors have about 34,000 sheep? Yes.  
2299. While the lessee has 35,000? Yes.  
2300. Had you any sheep in 1888? Yes.  
2301. Was that not a very dry year? Yes. I had 4,000 sheep then.  
2302. How did they stand the dry season? Water was our only difficulty.  
2303. Was the grass short? No.

2304. Did you lose your sheep from starvation? A few old ewes.
2305. Had you to remove any to better pastures? We removed 1,200 just as the drought was breaking up.
2306. Do you happen to know how the lessees' sheep fared—were his losses heavy? Yes; there were great losses on that station. I heard that they lost 5,000 or 6,000.
2307. Had they to travel their sheep? No.
2308. I suppose I need hardly ask you whether you are a permanent, *bona-fide* settler? I had every intention of being so when I first came, and I am of the same opinion still.
2309. As far as you can judge of the seasons and the quality of the land, do you think you will make a good living off your selection? Yes, not only a living but a good deal beside.
2310. Do you think you will do as others have done in the dry country—that is, stick to your place for years and then have to sell it? I have not the slightest thought of doing so. I see no reason to suppose that I shall have to do so. I can not only live upon the land, but I think I can do well there.
2311. Are there many dummies in your locality? I do not believe that on that resumed area there is one dummy. I am positive there is no dummy belonging to the station. There are two exceptions, concerning which I do not know very much, but so far as all the rest are concerned, I feel confident that they have taken up the land with a view to make it their home.
2312. So far as the construction of this line to Parkes is concerned, the only difference it can make to you is that it will make Parkes your terminus instead of Narromine? Oh yes, it will make more difference than that; it will give me less freight, and you must also consider the distance to the railway.
2313. But I thought that so far as cultivation is concerned you would be as far away from the railway station as you are now? No; it would make a difference.
2314. What difference? I do not know the exact distance from Narromine; but I think that if there were a railway to Parkes it would be 10 miles shorter to come here than to go to Narromine.
2315. Consequently Parkes would be your railway terminus? Yes.
2316. Would it be sufficiently close to enable you to grow grain and cart it to the railway? Yes; I should feel encouraged to start the cultivation of grain, if there were a railway at Parkes.
2317. If a line were made across from Forbes to Dubbo, how would that suit you? Of course that would suit me best, because it would come within 15 miles of me.
2318. Are you near Peak Hill? About 14 miles in an easterly direction.

Mr.  
T. Bridle.  
27 Feb., 1890.

Mr. Edward Nathan, sworn and further examined:—

2319. *Chairman.*] I believe you wish to make a statement to the Committee? Yes; I am informed that the Mayor of Parkes, Mr. Rose, told the Committee this morning that the local agent of Cobb & Co. at Parkes had informed him that he had taken, from January to October, 1889, £1,141. I told this to Mr. Cottingham in the presence of Mr. Harwood and Mr. Strickland, and Mr. Cottingham said that Mr. Rose had sworn a lie.\* As the Committee will be in Orange in the course of a few days, I will give them an order to look at our books. That will prove to you that the statement made to you this morning is not true. We never took the money named by Mr. Rose, in even fifteen or seventeen months, from Parkes. Mr. Cottingham tells me that he never gave anyone any information about the matter; in fact I do not know the actual receipts myself without going over the books. Mr. Cottingham used stronger language than I have used, and denied *in toto* that he had told Mr. Rose or any other person breathing his cash receipts. The firm's books in Orange will show that the Committee had been told a palpable untruth. The highest money ever taken between Molong and Parkes in one month was taken when the diggers were running, and that was between £70 and £80. The Committee also have our permission to go to the bank where our money is deposited.

Mr.  
E. Nathan.  
27 Feb., 1890.

John Alexander Rose, Esq., sworn and further examined:—

2320. *Chairman.*] You have heard what Mr. Nathan has said with reference to Cobb & Co.'s receipts at Parkes? Yes; the figures I supplied as being the returns of Cobb & Co. were brought up to my place by Mr. Cottingham.
2321. *Mr. Dowel.*] Is the handwriting you produce that of Mr. Cottingham? Some of it is; I think a portion of it is in the handwriting of his wife. When he is examined by the Committee, I do not think he will deny that. Mr. Nathan has said that to the best of his belief the highest monthly return was about £70 or £80. The figures I have here show for one month £97. If you like, I can give you each month as it has been given to me. The figures are not mine, and it is a matter of indifference to me. I am sure Mr. Cottingham would not give me the figures if they were not correct. The total given by Mr. Nathan is not correct. The total I gave this morning, as far as I can recollect, was £1,041—not the amount stated by Mr. Nathan.

J. A. Rose,  
Esq.  
27 Feb., 1890.

Mr. John M'Grath, sheep farmer, sworn and examined:—

2322. *Chairman.*] What is your occupation? I am a sheep farmer, residing at Genanagie.
2323. What holding have you? 2,360 acres.
2324. Has any land been taken up by your family? None.
2325. How long have you been a resident on this station? About three years last November.
2326. What use do you make of your land? I graze sheep, principally.
2327. Is it all fenced in and improved? Yes, now.
2328. Is there sufficient water? There is not a permanent supply yet, but there is a pretty fair supply.
2329. How many sheep have you? 1,060.
2330. What number do you expect to be able to keep when the land is fully improved? About 1,500 ewes—about one sheep to 2 acres.
2331. Do you think that is a fair instance of the grazing capabilities of the whole of that part of the country? I think that would be a fair estimate.
2332. You have not an exceptionally good selection? No; it is an average selection.
2333. How many selectors are there on that run? About thirty altogether, I think.

Mr. J.  
M'Grath.  
27 Feb., 1890.

2334.

\* NOTE (on revision):—The fact is, that Mr. Cottingham has not taken that amount from all the roads during the time—that is, Parkes to Molong, Forbes, Cowra, Grenfell, Young, and Condobolin.

- Mr. J. McGrath.  
27 Feb., 1890.
2334. Are their holdings improved? Some are, but some have only lately come to the district; some have only fenced in and have not stocked.
2335. When they are all improved, do you think the grazing capabilities will be at the rate of one sheep to 2 acres? About that.
2336. What is the average holding of these men? They nearly all hold 2,560 acres—all with the exception of six. There are about thirty selectors on the resumed area.
2337. You are speaking of the resumed area of the Genanagie holding? Yes.
2338. I make the area you named about 70,000 acres? Yes.
2339. And that you keep 35,000 sheep? That would be about it.
2340. Do you know the number of sheep on the leasehold area? I do not.
2341. Which is the best part of the run? I think the leasehold area is the best. They have taken in the permanent water.
2342. As far as the grazing capabilities are concerned it is equal to the resumed area? Oh, yes; but the leasehold area is more improved.
2343. You really believe that in the course of a few years, when all these holdings are fairly improved, the land will carry the number of sheep you have just stated? I believe it will.
2344. Where do you send your wool to? I sent it to Narromine last year.
2345. In the event of a railway being constructed to Parkes where would you send it? To Parkes—that being nearer to Sydney.
2346. Although the land traffic would be the same, the railway haulage would be considerably less? Yes.

Mr. John Cusack, selector, sworn and examined:—

- Mr. J. Cusack.  
27 Feb., 1890.
2347. *Chairman.*] What is your occupation? I am a selector, residing at a place called Trundle, about 40 miles to the north-west of Parkes.
2348. *Mr. Douel.*] How long have you been in the district? Nearly five years.
2349. Have you any local knowledge respecting other portions of the district? I have a fair knowledge of the country between Condobolin and Young.
2350. What is the area of your holding, and what use do you make of it? It is 2,560 acres. At present it is running sheep. I have some cattle.
2351. Is it improved and fenced in? Yes; it is fenced in.
2352. Is the land in your immediate vicinity occupied? Yes; by selection. Of course the squatter occupies the leasehold.
2353. What is the character of the country? There is good land out there, both for agricultural and pastoral purposes.
2354. Have you put any land under agriculture? Ten acres, I think, on my place.
2355. What crop do you put in? Wheat, but for a hay crop only.
2356. Was it for your own consumption? Yes.
2357. Is your experience sufficient to satisfy you that the land might be turned to good advantage under agriculture? I am satisfied that it will grow an excellent crop in a fair season.
2358. How far is your holding from Parkes? About 35 miles direct, but as we go, about 40 miles.
2359. Suppose a railway were constructed, would you bring your produce to market? I should.
2360. Is there any particular point upon which you desire to give information? No. All that I desire to say is, that the district I am in is a rising district. I could give you a good deal of information about it. Even out there we shall soon have a town. The only place that is left available for settlement is a reserve on the main road. Within the last two years we have had a public-house, a store, and a blacksmith's shop; a church and school were erected more than two years ago; now another public-house is going up, and I believe another church is about to be erected. Men who own some of the land fronting the main road are able to get a rental of £1 per acre per annum. I believe the Government contemplate establishing a telephone station there.
2361. Your experience in the district convinces you that it is a rising and thriving place? Yes, certainly. When I came here first there was only one selector between here and Condobolin, but now upon one run alone I can count sixty-five—I refer to Burrawang.
2362. Do you know the country between Forbes and Condobolin? I do. It is very good country indeed.
2363. Is it fairly settled upon? Yes.
2364. In large or small areas? On the direct road from Forbes to Condobolin there are a good many men holding from 320 to 640 acres.
2365. Suppose a railway were constructed to Forbes, would these people in Condobolin and along the valley of the Lachlan use the Forbes railway station? It would be just as easy to go to Parkes as to Forbes. As far as I know the country, by keeping out in this direction you avoid the flood waters.
2366. Under these circumstances Parkes and Forbes will be the two towns at which traffic will converge? Yes; they cannot get to any other place.
2367. Do you know the country between Condobolin and Wilcannia? No.
2368. Have you grown vegetables in your district? Yes; they grow very well in a good season. In this season most excellent vegetables have been grown in the district.
2369. Are there any orchards or vineyards planted in that direction? No; but there are gardens, with a few vines.
2370. Generally speaking, the character of the settlement would be permanent? Yes.
2371. Do you think the soil is sufficiently good to induce the present occupants to remain there? There can be no question about the soil. Of course the climate might be improved upon. The soil is as good as you could see anywhere.
2372. Have you had a fair rainfall right through? Last year we had 13 inches—it is the driest year I remember. I had plenty of water—enough to last me six months longer than the drought. I think a few settlers who had just come, and who could not make water, had to leave, but that was all.
2373. *Chairman.*] Do the selectors or the lessees carry the greater number of sheep on a certain area? I was told on the Burrawang run there is a 90,000-acre paddock, of which Mr. Edols holds a third now. On the total area I believe he had more than 20,000 sheep. I know that there are selectors on the land now who had 10,000 a man with four blocks. I refer to the Berry Brothers.
2374. In your case, do the selectors carry more sheep to the acre than the lessee? I think so, decidedly, because the selectors as a rule have improved their land and have scrubbed it.

Mr.

Mr. James Drake, selector, sworn and examined:—

2375. *Chairman.*] What is your occupation? I am a selector, residing about a mile and a half from Mr. J. Drake Trundle.
2376. In the same district as the last witness? Yes.
2377. What is the size of your holding? Eight hundred acres.
2378. Have you any children or brothers adjoining you? No.
2379. What do you do with your holding? I am doing nothing at present. I have not been here a great while. I think it is a little over two years since the "confirmation."
2380. What have you taken up the land for? With the prospect of a railway coming to this district. I intend to farm it. I do not think it would pay me to run sheep upon it alone.
2381. How many miles are you from Parkes? Thirty.
2382. If a railway were constructed, would it pay you to farm at that distance, and to cart your produce into Parkes? I am sure it would.
2383. What sort of land is it? The land I have is the general run of the country. I do not suppose it is any better or any worse than anyone else's land. It is a fair average holding. It is nearly all fenced in. I have 6 acres grubbed.
2384. Have you had any crop in? No.
2385. What do you think of growing? I was going in for wheat and maize.
2386. You think you would be in as good a position as people who are within a few miles of Parkes? I should not be in as good a position, because I should have to cart further to the railway.
2387. What sort of road is there between here and Parkes? A bad road, at present.
2388. How would you cart in wet weather? We should have to wait until it got dry. Going over a portion of the road this morning, it took my horse all his time to get out of it.
2389. The size of your holding would make it of no use for any other purpose than agriculture? No.
2390. You have not taken up the land for the purpose of selling out again? No.
2391. You intend to reside on it? Certainly.
2392. You think that with the construction of this railway you would be able to grow crops upon it, and that it would pay you? Yes.
2393. Have you ever done any farming before? Well, I have acted as a farm labourer in Victoria, South Australia, and New South Wales. I have farmed upon soil which is far inferior to the general run of the district I am now in. If farmers elsewhere can make farming pay I am sure I can.
2394. How far are you from Peak Hill? About 40 miles.
2395. Then Parkes will be your natural market? Yes. I have travelled all around the district, and I must say I never went over a better sample of country in the colonies.
2396. How long have you been in the colonies? About fourteen years.
2397. Do you reckon you are a good judge of agricultural country? I have had a very large experience. I have been in the best farming districts in Victoria. I have ploughed the soil, reaped the crop, and put it into the machine afterwards. I have never seen better crops in Victoria than I saw at Kadina, about 30 miles from here.
2398. Do you mean wheat crops? Yes. I saw them stripping one crop in a paddock where they said it would average from 27 to 30 bushels to an acre. I could quite believe that, from the way it was coming out of the winnowing machine. I had been standing there hardly any time, before they had to put on another bag.
2399. You believe that the greater portion of this district would go in for agriculture if there was a means of getting to market? I am sure of it; it is a certainty. Most of the 2,560-acre men have nothing to do half the year, and they are not the kind of men who will sit down for six months; they will till the soil, and get something out of it.
2400. All this good land is to the north-west and north of this township? Yes.
2401. Were you here in the drought of 1888? Yes.
2402. What was your experience during that year? Very few of the men had made any provision for a dry season—in fact, they had no time to put in any tanks.
2403. Did you see any of the crops about here at that time? Yes; I saw two crops, if not three. I saw Skinner's, which was a very fair crop, considering the season. I saw two others. I know that Francis stripped 12 bushels off his portion.

Mr. Henry Alfred Croft, grazier, sworn and examined:—

2404. *Mr. Lee.*] Where do you reside? At Trundle.
2405. How long have you been there? Since 1882.
2406. What is your occupation? I am a grazier.
2407. Are you a free-selector? I am a conditional purchaser. I hold two 1,280 acres. I and my family hold 2,560 acres.
2408. You have heard the evidence given by other residents of Trundle? Part of it.
2409. Is there any particular point upon which you desire to give evidence? None whatever.
2410. To what use do you turn your land? Largely, grazing sheep.
2411. What is the outlook in that part of the district? Very good.
2412. To what do you look in the future as your chief means of support? Grazing and agriculture, if we have a market.
2413. How far are you from Parkes? Thirty-two miles.
2414. Is that not too great a distance over which to cart grain to a railway? No. Usually, the settlers consider that if they are within 20 miles of a railway, and can make one day's stage with a load of wheat, they are all right. This line would be within 32 miles of us.
2415. Is there any nearer point on the line than Parkes which you could touch? No.
2416. Do you know anything of the route of the line between here and Forbes? Yes.
2417. Have you seen that country in very wet weather? Yes. I have known it for the last twenty-eight years.
2418. Have you known it to be in a flooded state? Only at one place, and that is about 1½ mile this side of Forbes, which is known as Thomson's Lead.

Mr.  
H. A. Croft.  
27 Feb., 1890.

- Mr. H. A. Croft.  
27 Feb., 1890.
2419. Although you have been a conditional purchaser for only a few years, you have been a resident in the district for a number of years? Yes.
2420. You have seen something of the seasons? Yes.
2421. Have you seen the country almost deserted in consequence of the drought? Yes.
2422. As that has happened before, may it not happen again? I do not think so. There is better provision now, so far as water is concerned—more water has been conserved.
2423. Have you known times in which many stock have perished in the district from starvation? Yes.
2424. I suppose the stock get so weak that they are unable to travel? Yes.
2425. Do you think that if that kind of season were to happen again, and there was a railway here, it would be made use of by the stock-owners to send their starving stock to more favourable pastures? I could not say. In some parts of the district there would be plenty of grass and water, when in other parts stock were perishing for the want of it.
2426. Supposing that in the near future the country were thoroughly opened by the railway, you would be able to send stock from Dubbo to Werris Creek, and thence into the New England country;—do you think it likely that the owners of starving stock would send their sheep in that direction? Certainly, if they had the opportunity.
2427. Would it pay them to do so? Yes.
2428. Can you assure the Committee that many thousands of stock have perished in consequence of their being unable to get away? Yes.
2429. Still you think that the same straits are not likely to occur again, inasmuch as better provision of water has been made? Yes.
2430. Do you not think, however, the district is likely to suffer in the event of our having a long drought? Yes. No doubt we should suffer indirectly, but I think we could hold our own here, situated as we are now. I am judging from my experience of the drought of 1888.
2431. How do you conserve water? By tanks.
2432. About what size? Two thousand yards would be about the average.
2433. How many months' supply would that hold? A tank of that sort would supply from 1,200 to 1,500 sheep for twelve months.
2434. An ordinary selector of about your standing would have about that number of sheep? Yes.
2435. If he had two years' drought, where would he be? I have never known a season without having a stray shower, and with tanks well supplied with drains, 1 inch of rain would give a good supply. Where you depend on the natural courses it will all disappear in two or three days.
2436. As a rule, water is conserved in good seasons? Well, you could not conserve it in bad.
2437. Could you make provision for bad seasons? Yes.
2438. Consequently, you would make provision for what in your judgment would be as long a dry season as you would be likely to have? We should try to do so.
2439. But a two years' drought is an unusual drought? Yes.
2440. Consequently, you would, as a rule, provide for one year's drought? Yes.
2441. In which case a two years' drought would be disastrous? Yes.
2442. Could you cultivate land in your district in a dry season? Fairly well.
2443. Would there be any certainty of getting a crop? I saw a fair crop of good land in 1888.
2444. But the season might have been moderate when the ground was tilled and planted? No doubt it was a fairly moderate season when the seed was sown.
2445. Having the knowledge of the country which you possess, and knowing the object of our inquiry, can you conscientiously say that the line proposed from Molong to Parkes and Forbes is the line which will serve the largest number of people in this district? I could not say that. I can only tell you of the progress of my own district. In 1882, I was the only selector within 15 or 20 miles.
2446. Do you think the railway could be carried in a better direction—that is, in a direction which will better serve the interests of this part of the colony? No.
2447. Supposing you were constructing a line yourself, expecting it to be a paying speculation, into the Lachlan Valley, which way would you take it? The nearest route.
2448. Which would be the nearest route? From Molong.
2449. Going into the valley from Forbes? I mean as far as Trundle is concerned.
2450. But I mean a railway having in view the opening up of the Lachlan Valley? I think the route *via* Parkes would be the best, having regard to the settlement outside of Parkes itself. You can start from Parkes, and to my knowledge there is only about 9 miles of a blank in the line of settlers all the way to Condobolin; there is a continuation of settlements, all adjoining one another.
2451. If the line were constructed to Forbes, would not the residents of Condobolin be more likely to use Forbes as a railway terminus? Beyond Condobolin people might, but the people to the north would not.
2452. Are there many selectors between here and Condobolin? Almost all the way; there is a blank of only 9 miles, and that is about 15 miles from Parkes.
2453. A fair proportion of selectors, then, would be as close to Parkes as to Condobolin? Yes.
2454. How would they stand between Condobolin and Forbes? There are no selectors between those places.
2455. What is the character of the country? It is very good grazing country, but most of it is flooded country.
2456. Is it cultivated to any extent? Only on the banks of the river.
2457. Is the land between Condobolin and this place cultivated to any extent? No.
2458. It is used chiefly for grazing? Yes.
2459. But it is more largely settled upon than the country between Forbes and Condobolin? Yes.
2460. You regard yourself as permanently settled in this district? Yes.
2461. Is your occupation a profitable one? Yes; it has been for the last two years.
2462. Have you had a sufficiently lengthy experience of the dry seasons in this part of the country to be able to form an opinion as to whether your occupation can be carried on profitably for a term of years? Yes.
2463. You are quite satisfied upon that point? Yes.
2464. What applies to you will apply to others? Yes.
2465. If you can make it pay others can? Yes.
2466. Do you think there is any probability that in the course of a few years you will find yourself subject to such droughts and other drawbacks of that kind that you will be glad to sell to the pastoral tenant?

Four years ago I was in difficulties and tried to sell out, I offered my land for 15s. an acre, and could not get a buyer. I was the only selector in the district until 1884, that is on the north portion of the Burrawong run, it consists of about 16,000 to 180,000 acres. All that resumed area is now taken up, and there is not a block left on it to my knowledge.

Mr.  
H. A. Croft.  
27 Feb., 1890.

2467. I suppose you remember Parkes when it was a very small place? I remember it from the first.

2468. Has it increased of late years? Very much during the last three years.

2469. How do you account for that? The increase of population—the increased area of land taken up to the north, to the west, and to the north-west.

2470. *Mr. Dowel.*] Have the settlers in your district improved the country to such an extent that their lands will now carry more sheep than the lessee carries? Yes; in the paddocks I selected there are supposed to be 96,000 acres. I had it on the authority of the overseer, that there were from 8,000 to 12,000 sheep there. That was as much as the station could carry. It is called "Trundle Paddock." Since the place has been selected and improved, I suppose you would find there something like 60,000 sheep. I do not consider that it is more than a third stocked as yet, in fact a great many selectors on it have no stock whatever. Those with a few stock would carry, in a fair season, a great many more.

2471. Generally speaking then, the selectors have improved the carrying capacity of their holdings? Yes. In the drought of 1888 there were three brothers holding selections in one of the scrubbiest places in the country—they were pretty good judges of the soil. They paid 3s. 6d. an acre to get the land rung and grubbed. All through the drought they carried 6,000 and 7,000 sheep on their three blocks.

2472. Are you of opinion that produce from the holdings to which you refer would be brought to Parkes, in the event of a railway being made here? Certainly.

Mr. James Fox, grazier, sworn and examined:—

2473. *Mr. Cox.*] What is your occupation? I am a grazier, residing on the Bolderodgery pastoral holding, about 18 miles to the north.

Mr. J. Fox.

2474. Do you know the country between Molong and Parkes? Not particularly well.

27 Feb., 1890.

2475. In the event of a railway being constructed to Parkes and Molong, would it be nearer your place than Parkes, at any point? No; Parkes would be the nearest place.

2476. You are a grazier only? Yes. There is no market for produce if we go in for agriculture.

2477. You have not tried agriculture? No; only on a very small scale.

2478. What is the area of your land? 1,000 acres.

2479. How long have you had it? Since 1886.

2480. Is it well improved? Yes.

2481. What stock do you keep on it? I am renting some country adjoining, upon which nearly one sheep to the acre has been kept for the last two years, on an average.

2482. Did you suffer much from the drought of 1888? I had no losses.

2483. What was the cause of the losses in that year? Want of water.

2484. So that if you have made due provision for water you can defy any ordinary drought? Yes. It is very good land when it is ring-barked and water is made. It is as good agricultural land as any I have ever seen.

2485. Will it be profitable for cultivating your land in the event of a railway being constructed to Parkes? I should cultivate very largely. Neighbours of mine have put in crops this year and last year.

2486. Where do you expect to find a market? Parkes will be our market, I suppose, in the first instance. We are depending on a railway for the conveyance of our produce further.

2487. Would it pay you to grow grain at your place and to send it to Sydney? Yes.

2488. At how much per bushel could you grow it? I think it could be grown at 3s. a bushel.

2489. Deducting 9d. for trackage that would still leave a profit? Yes. We could not grow it under 2s. 6d.

2490. If you got 3s. 6d. in Sydney you could grow it at a profit and grow it largely? Yes.

2491. What sort of crops did your neighbours get? From 20 to 30 bushels per acre.

2492. In a season like this, or in a fair average season? In a fair average season.

2493. It would pay you to cultivate in the event of your getting a fair price? Yes.

2494. You keep nearly a sheep to the acre? Yes.

2495. What is the profit on a sheep? 3s.

2496. You can make much more by cultivating? Yes. My neighbours have been paying attention to the subject. This year and last they have been growing crops. The whole of the Bolderodgery resumed area, about 70,000 acres, has been taken up and selected since 1885, principally by agriculturists—men from Victoria and the Riverina.

2497. Has it not struck you that your market should be out west and north rather than to the coast? It would depend upon circumstances, sometimes it would pay to send flour to Nyngan and to the north, it would depend upon the price.

2498. How much further to the west can grain be profitably grown down the valley of the Lachlan? I think it can be grown about 40 or 50 miles west of Parkes, out the Troffs way.

2499. So that west and north there is an enormous area capable of being cultivated profitably? An immense area. A large area has been taken up within the last few years.

2500. In the event of a railway being constructed it would be largely taken advantage of by agriculturists? Yes, we have the right sort of men in this district—they have taken up larger holdings, so that they can eventually combine grazing with agriculture.

2501. Is there any further information you desire to give the Committee? I should like to impress on their minds the large area of land which has been taken up to the north and to the north-east—all the available land on Coobang, Bolderodgery, Genanagie, and Coragery. They are all something like 30 miles from Parkes, and every available acre has been taken up.

2502. Are you aware that a large area of land round about Parkes is locked up in a gold-field? Yes; and there is a great deal in railway reserves.

2503. Do you think that in the interests of the country this land should continue to be locked up? No; especially under the more recent Act, having regard to the rights given to the diggers.

- Mr. J. Fox. 2504. It is an immense loss to the country, you think, to have this immense area locked up? Yes.  
 2505. In the event of a large portion of this land being thrown open, you imagine a material addition would be made to the welfare and prosperity of Parkes? Yes.  
 2506. Do you know whether any steps have been taken to apply to the Government to have this land thrown open? Yes, I believe so. I think it would realize a very large figure if it were put up at auction.  
 2507. Has any land been sold by auction here within the last few years? Only town allotments; very few in the country.  
 2508. Are you aware what the allotments realized? No.  
 2509. The land round here, having an exceptional value, would fetch more than that upset price, if it were sold at auction or proclaimed as special areas? Yes; certainly.

Mr. James Grimmett, selector, sworn and examined:—

- Mr. J. Grimmett. 2510. *Chairman.*] What are you? I am a selector.  
 2511. In this district? Yes.  
 2512. *Mr. Dowel.*] How long have you resided here? About four years.  
 27 Feb., 1890. 2513. In what part of the district is your holding? On Bolderodgery, at Kadina.  
 2514. Is the country in your district pretty well occupied? Yes.  
 2515. Are the holdings of a good character? Remarkably so.  
 2516. Are they well improved? Yes.  
 2517. Is a permanent population settled there? Yes.  
 2518. What is the population engaged in? Grazing, combined with agriculture.  
 2519. What crops are generally grown? Wheat, corn, and oats. The oat crops were remarkably good this year, also the wheat crops.  
 2520. What was the yield of those crops? About 40 bushels of oats to the acre, and from 27 to 30 bushels of wheat.  
 2521. Does that agree with your experience of the past four years? It has been my experience for three years.  
 2522. Have you any of your own holding under cultivation? Eighty acres.  
 2523. What have you grown? Wheat and corn.  
 2524. What distance are you from Parkes. Twenty miles.  
 2525. In what direction do you lie? Direct north.  
 2526. Supposing this railway were constructed from Molong to Parkes and Forbes, would all the settlers in the district to which you refer be served by it? Yes; they would bring their produce to Parkes.  
 2527. Have you a good knowledge of the country round about here? I have in the immediate district, but not at a great distance from Parkes. I have travelled within 30 or 40 miles of Parkes.  
 2528. Are you of opinion that the people will be served by the construction of this line? I am sure they will go largely into cultivation within that radius. I think they would combine agriculture with grazing; that is what they are talking about—that is what I think will be their future occupation.  
 2529. What would be the cost of the carriage of wheat from your district to Parkes? If times were hard I think we could get it done for about 3d. a bushel. If a farmer carted his own produce it would not cost him more than 1d. a bushel; he could cart it with his own team for 20 miles at that price. I have carted my produce this year to Quin's mill with my own team, and I have done it inside 1d. a bushel.  
 2530. Since you have been cultivating have you found any difficulty in disposing of your crops? No difficulty so far, but the demand has not been so very great.  
 2531. Do not you think that the putting in of a few more thousand acres would glut the market, and that there would be no sale for the produce here unless there is a railway to convey it? Certainly.  
 2532. Under these circumstances you will not cultivate any more until you are satisfied that the railway will be brought to Parkes? Yes, that is the opinion of almost every individual in my district—they are just waiting for a railway to be constructed and then they will go into cultivation largely. There are one or two who have been very sanguine in the past who have believed that the railway would come at some time, and who have gone in for agriculture. I shall have 100 acres in this year, and I hope to see a railway to take the produce down to Sydney.  
 2533. Then I understand that the construction of a railway would be of material advantage to all the settlers in your district? Yes.  
 2534. It will very much stimulate the agricultural industry? Yes.  
 2535. What is the quantity of the grain you grow? I believe it is equal to anything grown in the world.  
 2536. And you have no fear about competing with people in other districts? None whatever. We could compete with any district in the world in the growth of grain, and I say that, having been connected with agriculture for the last twenty-five years. My experience in the district has not been so very large, but I believe we can grow here crops which for quantity and quality will be equal to anything grown in any wheat-growing country in the world.  
 2537. Have you had any flour made from your wheat? I have. I have sent some to a baker at Peak Hill. I sent there a good quantity which had been ground at Quinn's mill. One baker told me it was the best new flour he had ever made up in his life, and another said it was quite equal to anything he had ever made up.  
 2538. Then the quality of the flour made from your wheat is very good? First-class.  
 2539. Do you know anything of the Peak Hill country? Yes.  
 2540. Do you think the Peak Hill people would do business with Parkes if a railway were constructed? If a railway were constructed they certainly would. The greater part of their business would be done with Parkes.  
 2541. What is the distance of Peak Hill from Parkes? About 30 miles, and it is about 35 miles from Dubbo.  
 2542. Have you been over the country between here and Peak Hill? Many times.  
 2543. Do you know its character? I know it well; it is all chocolate loam of first-class quality. There are a few patches of a sand-stony nature, and some of slate; but the land is suited for agriculture and pasture combined. It is a fairly watered country.  
 2544. What is the timber like? Yellow box and pine, and there is a good deal of ironbark on some of the ridges.  
 2545.

2545. Is the pine good? Yes; very good.  
 2546. Were you cultivating in 1888? Yes.  
 2547. What crop did you get? I got 8 bushels to the acre that year, and I got 7s. 6d. a bushel for it.  
 2548. So that it paid you? Very well indeed.  
 2549. Have you heard that in 1888 some of the farmers were gathering what little wheat they had with their hands and putting it into bags? I never heard of that.  
 2550. Getting as much as two and three bags of straw and wheat combined to the acre? I think that is a false report.  
 2551. If a Government official told you that would you be inclined to believe him? No; I think it is a misrepresentation.

Mr. J.  
Grimmett.  
27 Feb., 1890.

Mr. Joseph Westcott, farmer and grazier, sworn and examined:—

2552. *Chairman.*] What is your occupation? I am a farmer and grazier.  
 2553. Where do you reside? At Kadina.  
 2554. What is the size of your holding? I have a small farm—about 1,700 acres.  
 2555. How much have you under cultivation? About 100 acres.  
 2556. What have you on the rest of the land? Cattle and sheep.  
 2557. How many sheep? About 3,000.  
 2558. Have you any rented land besides that? No.  
 2559. How long have you had that number of sheep? I bought some some little time ago. I have not had 1,000 of them very long. I carry about 2,500 all the year round.  
 2560. Do you constantly carry that number? From 1,000 to 2,500.  
 2561. What do your improvements consist of? The land is fenced, ringbarked, and scrubbed.  
 2562. Have you many artificial waterholes on it? I have an undercurrent running through my farm. I do not know the extent of water in it.  
 2563. You have had no difficulty with water? None whatever. There were over 10,000 sheep all through the drought of 1888 watering at my place.  
 2564. How long have you had this land? I have been living here about sixteen years.  
 2565-6. Do you intend to extend your agricultural area? I do.  
 2567. Do you think that farming would pay you better than sheep, when you have land that would carry such a large number? Farming would pay me very well on account of my having a family, if I could only get away the produce.  
 2568. The reason you have not more than 100 acres under crop is that you have not a ready market? Yes.  
 2569. If there were a railway here, so that your produce could be sent away from the district, it would pay you to farm more? Yes; I could go into any extent of farming then.  
 2570. Your land is quite good enough for farming? Yes. I have just done threshing 45 hushels of oats to the acre.  
 2571. Had you any wheat in this year? Yes; it returned from 25 to 30 bushels to the acre.  
 2572. Is not yours an exceptional piece of land? It was chosen by myself, and I have had some little experience.  
 2573. You must be a pretty good judge to choose a piece like that? I think I am. I was brought up to farming, and I have some idea as to what a piece of land is worth.  
 2574. What part of the old country do you come from? Devonshire.  
 2575. What other parts of this colony have you been in? I landed in Melbourne in 1859, but since 1862 I have been in this district.  
 2576. Did you do any farming in Victoria? No; I was at the gold-fields there.  
 2577. Do you know much of this district beyond your own place? I know it pretty well for 100 miles round.  
 2578. You know that there is also a projected line from Borenore to Forbes? Yes.  
 2579. Which line of these two do you believe to be the best in the interests of the general public? The line from Molong to Parkes. On the northern side of that line there is a large tract of agricultural land. I occasionally have business in Sydney, and I go by Cumnock on to the Bell River into Molong. The distance from Kadina to Molong is only 45 miles, and it is 20 miles north of Parkes; the whole of the road from Molong to Bolderodgery is settled with farms—there are farms on either side of the road. The line from Molong would assist the northern settlers about Dilga, Cumnock, Goodritch, and Bolderodgery; it would serve all the farms there.  
 2580. How far would Goodritch be from this proposed line? It would be the furthest of any of the places I have mentioned. I reckon it would be fully 25 miles from the nearest point on the line.  
 2581. How far is Goodritch from Wellington? About 30 miles.  
 2582. You do not know anything of the country south of the other line towards Canowindra? I have been over that country.  
 2583. From your knowledge of that country do you think that the country you speak of, to the north of the proposed line, is equal to it? I am satisfied that it is equal to it for purposes of agriculture.  
 2584. You think it would be quite as much settled upon, and that quite as large an area would be put under cultivation? I believe as much, or more. I have been through the district twice this spring, and I saw large and heavy crops.  
 2585. Have you ever known a total failure of the crops in your district? Never.  
 2586. Even in 1888 you still had something to gather? I reaped a fair crop in that season, but of course, not half the crop I reaped this year.  
 2587. Do you know the rainfall in your district? I am not quite sure about it. I do not keep a register.  
 2588. *Mr. Lee.*] You know Bolderodgery? Yes.  
 2589. There appears to be a large quantity of Crown lands there? Yes.  
 2590. Is the pastoral holding pretty large? Yes.  
 2591-2. Are you sure that there is a continuation of farms all the way through from Kadina to Molong? Yes. But I may state that there is a large leasehold area at Bolderodgery and at Warraberry.

Mr. J.  
Westcott.  
27 Feb., 1890.

Mr.

Mr. Richard Wright, mining manager, sworn and examined :—

- Mr. R. Wright.  
27 Feb., 1890.
- 2593-4. *Chairman.*] What is your occupation? I am mining manager of the Bushman's Hill Company.
2595. *Mr. Lee.*] Where is that mine situated? About half-a-mile from where you are sitting, due north.
2596. Has it been in work for any length of time? It was worked twenty-six or twenty-seven years ago, and I believe some £40,000 or £50,000 worth of gold was taken out of it.
2597. How long have you been managing the mine? A little over eighteen months. I have just finished cleaning up from a new make of stone, quite different from anything that the original workers got; it gave a yield of 2 oz. 4½ dwt. to the ton.
2598. How many tons of stone? There were 12 tons at the trial.
2599. What depth are you working at? About 140 feet, underlay measurement.
2600. This mine, in particular, is showing every sign of permanence? Yes, I am satisfied on that point.
2601. Is it being worked profitably to the shareholders? It will be.
2602. Is there any special reason why the mine was knocked off some years ago? I do not know; I was here seventeen years ago.
2603. As mining manager? Yes.
2604. What was the state of the field then? My opinion is that they did not understand the formation of the country, and I do not think the majority of the people understand it now.
2605. You have had considerable experience since then on other gold-fields? Yes, since that time I have been endeavouring to get capital to come back here and test the place. I am trying to prove that I am right in my idea as to the formation of the country. I am quite satisfied that we have a belt of country from half-a-mile to 2½ miles in width, which will show anyone who understands mineralogy or geology that we have a formation running from Forbes upwards—it is alluvial upon the river flats; it shows itself at the Pinnacle, and from that point to Tom Ingly you have a dyke formation. It may seem exaggeration on my part, but I am quite satisfied that I am right in my idea. You have a formation of from half-a-mile to 2½ miles in width, with leaders running through and intersecting it in all directions. You may be under the impression that you are working in a particular reef, but if you drive a few feet to the north or south you will cut another one—you will say "I have got another reef." You have no such thing, you are working in an immense dyke formation. When people understand this formation I am satisfied that they will come back to this district, and that in fifty years time you will see no less than 10,000 men at work in it.
2606. How far does this formation extend through to the north? It extends through from Cooper's Creek. If the land on either side of this belt of auriferous country for 40 miles were absolutely barren, and would not grow a pumpkin, I am satisfied that the district from Forbes to Tom Ingly, from its mineral resources alone, is sufficiently rich to demand a railway.
2607. In your opinion then, the auriferous nature of the country in itself would be sufficient to justify the Government in extending the railway system to Parkes? Yes, we have had convincing proof of that within the last twelve months. Look at the Hazelhurst property. I am given to understand that there are twenty-five men now working on it; when in full work forty men will be employed. I have an interest in a mine in which Melbourne capital is involved, where they propose putting in twenty-five men. A little south of that there is the Koh-i-noor, and between Koh-i-noor and Hazelhurst there is the Parkes Deep Sinking Company, Freeman and party, Moulden and party, and the Gladstone Gold-mining Company. These companies are in existence to-day. Then there is Quayle's on the other side, the Bushman's, the Dayspring, and Burt's. All these mines are at work. I am quite satisfied that within twelve months there will be twenty-five men employed in almost every one of these mines.
2608. Mining has revived of late years? Yes.
2609. Is there much alluvial mining being done now? There is a great revival at the Peak and Alectown.
2610. From your previous knowledge of this district many years ago, and the knowledge you have subsequently gained, you are of opinion that its auriferous deposits are very great, and that there is every probability of its sustaining a large population? Yes. Judging from the description I have heard of Delaney's Dyke, if anyone would come underground with me who has seen the dyke, I think I could show it to him here; there is a very similar formation, 40 feet wide, at the head of the old London lead. It is in this belt of auriferous country I have been speaking of.
2611. What is the formation you have here? Quartz.
2612. *Mr. Cox.*] As a practical miner, are you aware that there is a large extent of the country barred from selection in this neighbourhood—some 160,000 acres? I did not know that.
2613. Presuming that to be the case, would it not be to the interests of the community that it should be thrown open, reserving only those particular pieces of country of which you have spoken? If it were necessary for agriculturists to have it, most certainly. The miners, I understand, are protected under the new Act.
2614. You know of no reason why all this grand piece of country should not be thrown open at once for settlement? Certainly not.
2615. You, as a digger, have no objection to the land being thrown open to selection? I think you would have to reserve a tract of country 5 or 6 miles wide.
2616. Suppose you did that, and that you threw open all the rest, would not that be advantageous to the community? I have not given the matter my consideration. If the miner is protected, and can get on to reserved land or selected land, then, of course, you could throw it all open.
2617. *Mr. Dowel.*] You are aware that the discovery of gold caused Parkes to spring into existence? Yes.
2618. Are you aware that the gold-field reserve, to which reference has been made, comprises 166 square miles? No.
2619. Are you quite sure that it is desirable that all this land should be thrown open to selection? I would not throw open the whole of it for selection, certainly not.
2620. But you said just now that you would? If you would be robbing the miner in any way, or would be putting him to any trouble, I should say no. If the miner would have no trouble in getting on to the land when he wanted to look for gold, I should say let it be thrown open.
2621. You know that under the recent Land Act, to which reference has been made, the miner will have great difficulty in getting on to the land? Then I would not throw the land open for selection. I would keep it a reserve.
2622. You have prospected a good deal in this country? I have taken a good deal of notice of the country, as I have been through it, and I have worked in many places in it, 2623,

2623. From your general knowledge, should you say that the country round here for a radius of 20 miles was auriferous? Certainly.
2624. Still, you think that the mining interests should be sacrificed to the agricultural interests, and that the land should be selected in preference to the miners having full possession of it? I should say give the miners full possession of it.
2625. What is the width of some of these reefs? 40 feet.
2626. What is the width of the reef in the mines to which you have referred as being worked at the present time? The formations are from 4 to 7 feet.
2627. What is the width of the reef in the mine of which you are the manager? It will average about 1 foot of stone.
2628. Is the ore of a refractory character? No.
2629. Do you know the pyrites of the district? No. The Dayspring, I believe, contains a fair percentage.
2630. What is the distance from Tomingly to the Pinnacle? I believe the distance from Parkes to Tomingly is 45 miles; the distance from here to the Pinnacle would also be 45 miles—a distance in all of 90 miles.
2631. You anticipate that in the course of a few years there will be 10,000 miners in this district? I am sure of it. I think thirty years time will see that number employed between the two points I have named.
2632. You believe in the permanence of the mining industry of the district? Yes. The mineral resources are developing themselves, and are proving themselves to be of greater value every day.

Mr.  
R. Wright.  
27 Feb., 1890.

FRIDAY, 28 FEBRUARY, 1890.

[The Sectional Committee met at the Court-house, Parkes, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Francis Nicholls, farmer, sworn and examined:—

2633. *Chairman.*] What is your occupation? I am a farmer.
2634. Where do you reside? On the Coobang Creek.
2635. Have you resided there long? Fourteen years.
2636. How far is it from Parkes? About 4 miles.
2637. Are your neighbours all farmers? All farmers. They are there as thick as they can stick. The whole of the land is taken up. My holding, including my son's, is 1,200 acres.
2638. In what way do you utilize it? We farm. I started farming about fourteen years ago, and I have had a good deal of experience as to the quality of the land. I have about 100 acres under crop. I am combining farming and grazing. I have sheep, horses, and cattle. My sheep number about 600.
2639. What cattle have you? About twenty head of cattle.
2640. And horses? About twenty.
2641. Is that the ordinary quantity of stock you carry? That is about it.
2642. Will you give us your idea of the capabilities of this part of the country? Yes. I have machinery; I go out stripping, threshing, and chaff-cutting, and I have an opportunity to see other people's crops as well as my own. I know pretty well what the yield has been for the last fourteen years. I heard some questions asked about the drought of 1888. We had one bad year beside that, in fourteen years. Even in those years we grew as much as the general average in South Australia. That is what I like this place for; in the greatest drought we get a fairish crop.
2643. Then in the bad seasons you would average 8 or 9 bushels? That is my experience, and it is the experience of my neighbours as well as mine. We have gone up to 40 bushels to the acre. With the exception of two years, I have seldom had under 18. About six years ago there was a dry year, and the crops then were much the same as they were in 1888.
2644. Have you done any farming in any other part of the colony? In Victoria. I was born and bred a farmer in England. I know what good land is when I see it.
2645. What comparison does this land bear with the land you were farming in Victoria? I never saw two districts more alike than this district and the Ovens district, for the produce of wheat and fruit, also minerals. I have been mixed up a little in mining in the thirty-eight years I have been in the country.
2646. Do you think this portion of the country is in a progressive state? There can be no mistake about that.
2647. Have you seen a large increase in the population since you have been here? I have seen it go back, but it is gradually increasing now. I am settled upon one of the old farms. You may say, "How is it you are not making a better show?" We found we were growing more than we had a market for. To my own knowledge there have been hundreds of tons of hay destroyed for want of a market. I have known cases in which persons have had to throw off half the stack through the mice getting into it. The wheat has stood for two or three years for want of sale. I have a neighbour who has thrown all his land out of cultivation for the last two years, because there is no market. He has gone in for dairying and grazing.
2648. If you had this railway would you be able to pay the cost of transit to market where there would be always consumption? I do. I pledge my word, if I live, that if this line from Molong to Parkes is made, I will have 2 acres under cultivation for every 1 I have at the present time. I am expressing the intentions of the other farmers in the district, judging from my conversations with them.
2649. You think that the market price for farm produce in Sydney and other places where there is a large consumption, will be such that you will be able to grow here at a profit? I wish I could send away a few hundred tons of hay and chaff at the price which is now ruling in Sydney. I may say that I have spent twenty-eight years in the neighbourhood of Forbes, a few years at Grenfell, and the remainder of my time at this place,

Mr.  
F. Nicholls.  
28 Feb., 1890.

- Mr. F. Nicholls.  
28 Feb., 1890.
2650. Is the Forbes district equal to this district for agricultural purposes? I think not. I tried a small piece of cultivation at Forbes myself. As soon as the dry weather sets in, the soil commences to bake and crack; it will not stand the dry weather as well as the soil in this district.
2651. Mr. Dowel.] You have had considerable experience in threshing;—how many steam threshers are there in this district? As far as I know there are no steam threshers in the district. Mine is a horse thresher. As I said before, farming has been going backwards rather than forwards through the want of a market. I would have a steam-thresher instead of a horse thresher next year, if I thought the railway was coming here.

Mr. James Maher, miner, sworn and-examined:—

- Mr. J. Maher.  
28 Feb., 1890.
2652. Chairman.] What is your occupation? I am a miner. I have an orchard and vineyard 2 miles out of Parkes.
2653. Mr. Dowel.] How long have you resided in this district? Fourteen years.
2654. What occupation have you followed? Mining and farming.
2655. Have you a selection? No; but I have an orchard and vineyard.
2656. What is the extent of your holding? About 2 acres.
2657. Have you prospected the country round Forbes? No; I was on both routes with Mr. Sharkey for eighteen months.
2658. You know both routes? Yes; all but two sections on the other line.
2659. Were you employed by Mr. Sharkey? Yes.
2660. He was then in the Government service? Yes.
2661. Have you had many opportunities to explore the country? Yes, a good deal. I was on both sides of the line during the time I was with Mr. Sharkey.
2662. Having been over the line from Molong to Parkes and Forbes, will you tell the Committee what is the character of the country generally on that line? It is very good country. I have done a good deal of farming, and I have not seen better. To my mind this line has four advantages. It is well timbered for 22 miles with ironbark. In the next place it cannot be beaten for stone for making culverts; there are blocks of stone on the Flagstone Creek line of from 5 tons to a cwt.; it is a sort of freestone. Then, again, the country is never liable to be flooded, and it cannot be beaten for agriculture. There is not above 6 miles which can be truthfully described as barren country.
2663. The line is settled fairly well then? Fairly well. There is only a break of a few miles, and if the railway were constructed all the land would be taken up on both sides if it were available for selection.
2664. Does the settlement to which you refer appear to be of a permanent character? Yes; the farmers are all *bona-fide* selectors.
2665. You were with Mr. Sharkey on the survey from Borenore to Forbes? Yes.
2666. Can you give the Committee any information about that line? We surveyed from Borenore to within half a mile of Cudal. In that portion of the line you come across Keenan's swamp, about 15 miles from Orange.
2667. Did you go over the survey through the swamp? Yes, I was over every bit of it. The marked line goes through some very bad country. There is no bottom at some places. No trial holes were put down, but we could not avoid the swamp. We had to cross about 12 chains of it, and on a part of that I think there is no bottom. Mr. Sharkey was standing by while we were chaining this place, and he got bogged up to his breast. It took both of us to pull him out.
2668. Having noticed that swamp, did you see any signs of flood marks? Yes; I took particular notice of all the flood marks as we came along.
2669. Is that part of the country liable to be flooded? Yes.
2670. Did you notice the height of any of the marks? Yes; I noticed that in some places the railway, unless it ran pretty high, would be covered.
2671. Do you know of any country through which the line could be taken to avoid the swamp to which you have referred? No, except under great expense.
2672. Do you know that at certain times the traffic on the road from Forbes to Eugowra has to be abandoned? I was at Murga with a team, and could not get by for a week.
2673. Is that often the case? Pretty often, I think.
2674. Have you heard of the height to which the water rises in flood time? Mr. Sharkey has the records of some of the places, but I cannot remember them now.
2675. Which of the two lines do you think it is advisable to construct? I would take the Flagstone Creek line in preference to the other line. We crossed the Mandagery Creek five times, from Long's Corner to Eugowra.
2676. Independently of every other consideration, you consider that the line from Molong to Parkes is the safest and best to construct, from an engineering point of view? By all means.
2677. Did you take any particular notice of the country on the Cudal line? Yes, I took particular notice. From Long's Corner to Eugowra, at places, the land is not more than a quarter of a mile wide, from range to range; that lasts until you get the Forbes side of Goimbla.
2678. Have you seen the settlement of both lines? Yes, right through.
2679. On which side does settlement exist to the largest extent? I think on the Molong line. In the first place there are three large land-holders from Borenore to Eugowra, and there are not many *bona-fide* selectors that I know of.
2680. Can you give the Committee any further information as to the settlement? Well, I think the land from Eugowra to Forbes is also likely to be flooded, although I never was along the line there. I know the country from here to Condobolin, and out north for about 50 miles round.
2681. Supposing the railway were constructed to Parkes, would the Condobolin traffic come here? Yes.
2682. Do you know the country between Forbes and Condobolin? The road on the river is always liable to be flooded; it is a very bad road in winter time.
2683. Do you know the road between Parkes and Condobolin? Yes.
2684. Which is the best route—from Condobolin to Parkes, or Condobolin to Forbes? From Condobolin to Parkes you pass through better country, and it is not likely to be flooded.
2685. Does it contain as large a proportion of settlement as the other road? It is now well populated by selectors.
2686. Is the character of the soil good? Yes.
- 2687:

2687. You have told the Committee that you have had considerable experience in mining? Yes.
2688. Have you prospected the country in these parts? Yes.
2689. Do you know the country between here and Peak Hill? I have been to the 10-Mile Ridges—no further.
2690. What is the character of the auriferous belt you can speak of from your own knowledge? It is a sandstone and slate formation.
2691. Do you know of any good yield of gold being obtained? Yes, at Alec Flat.
2692. What is the population there at the present time? I could not say. I suppose there would be between 700 and 800 *bona-fide* miners as nearly as I can remember.
2693. Do they trade with Parkes? Principally with Parkes, I think.
2694. From your knowledge of the country between here and Peak Hill, should you say it was likely to sustain a large mining population? Yes; it is very likely to do so, I think.
2695. Do you know of any particular yields of gold being obtained in this district? The reefs have turned out well; they have given from 8 to 10 oz. to the ton.
2696. Has the alluvial been rich? Pretty fair. There is M'Guigan's, the Tichborne, and the Wapping Butcher.
2697. Are the principal portion of the miners engaged in alluvial sinking or reefing? In both, pretty well, I think.
2698. What is the position of the miners;—do they seem to be doing fairly well? Some are making a fair living, I think.

Mr.  
J. Maher.  
28 Feb., 1890.

Mr. John Charles Quin, miller, sworn and examined:—

2699. *Chairman.*] You are a member of the firm of M'Gee and Quin, and you have flour and saw-mills? Yes.
2700. *Mr. Lee.*] Can you give any information respecting the wheat received at your mill? Yes.
2701. Have you the information in the shape of a return? Yes. In 1887 we received 27,582 bushels of wheat; in 1888, 21,707 bushels less than the year before.
2702. Why? In 1887 we were doing a big business at Mount Hope. We were sending stuff there that year—flour, chaff, bran, and pollard. That ceased, and that is the reason of the falling off.
2703. Had the bad season anything to do with it? A good deal of the wheat was spoiled that year, and a lot went to Molong. The bad season had something to do with it.
2704. Then the wheat was not good enough for Mount Hope, but it was good enough for Molong? Bad wheat will always sell in Sydney. The farmers take it down themselves to Molong. We would not buy.
2705. What about 1889? That was a poor year. We received 14,500 bushels. That was the quantity which went through our mills. This year, up to date, we have received 11,700 bushels.
2706. Has the threshing been completed in the district? No. The steam thresher is starting at Bum-berry at the end of this week.
2707. How many pairs of stones have you in your mill? Two pairs. It is a combination mill—stones and rollers.
2708. Any other mills in the district? There are no other mills at Parkes.
2709. Are you able to buy all the wheat produced by the farmers in this district? I have not been doing so up to now. Last year there was not enough. We had to import some from New Zealand and other places.
2710. The crops were short in consequence of the drought? Yes.
2711. Can you estimate the number of bushels in the district this year? About 50,000, I think.
2712. Is this a good year? It is a fair average year. We have had better years.
2713. Is there a larger area of land under cultivation this year? There is a larger area than there has been for a few years. The district over-produced some seven or eight years ago.
2714. What is the quality of the wheat round about here? Very good.
2715. What do you do with the wheat after you have grown it? Our market is local, to the west and north-west? We send flour as far as Mount Hope, Alectown, and The Peak.
2716. Do you send away to Sydney? It will not pay—it would cost us about 1s. 3d. a bushel.
2717. The larger portion of it would be taken up by the dray carriage? Yes; we could not get it down from here to Molong for less than 9d. a bushel.
2718. What is the distance from Molong to Sydney? About 216 miles; and it is 50 miles from here to Molong.
2719. How many bags of wheat would go to a ton? About ten bags—that is, 40 bushels.
2720. What are the present rates for the carriage of grain on the railway? I do not know.
2721. Are you aware that the Commissioners have made a special rate for the conveyance of grain? No.
2722. You have already sworn that it would cost you about 1s. 3d. a bushel on your wheat from here to Sydney, 9d. of which would be for the carriage from here to Molong, and 6d. for trainage thence to Sydney. I cannot understand that very well, because under the Commissioners' rate the trainage to Molong would not be more than 4½d. a bushel? We had New Zealand wheat up from Sydney, delivered on our waggons at Molong. It cost us close upon 6d. on our waggons there. That includes Wright Heaton's commission and incidental expenses.
2723. That explanation is very necessary. Now, supposing a line were constructed to Parkes, bringing you within 266 miles of the metropolitan market, and you could forward your wheat from here to Sydney for 4½d. a bushel, would a large trade grow up in consequence? Yes.
2724. Could wheat be grown here and sent to Sydney at that rate at a profit to the growers? At a large profit.
2725. What profit? I can give you some idea from the returns in my own paddock in 1886. We have not grown largely since then. In 1886 we had two paddocks—122 acres. The cost of sowing and ploughing, including the seed, was £120 16s. 8d.; the stripping cost £83 10s.; or a total cost of £204 6s. 8d. We got 2,254 bushels of wheat. At the time it came into the mill we were giving 3s. a bushel. It would amount therefore to £368 2s. The wheat averaged, for 122 acres, about 20 bushels an acre. There were about 14 bushels over.
2726. Then you made a profit of about £164, or £1 7s. 2d. per acre net? Yes.

Mr.  
J. C. Quin.  
28 Feb., 1890.

Mr.  
J. C. Quin.  
28 Feb., 1890.

2727. If you could forward your wheat to Sydney by train at a profit, would you be likely to compete in Sydney with the imported flour? We could compete with flour and wheat as regards quality with any market in the world.
2728. But in the open market, under a rate of 4½d. per bushel from here to Sydney, would you be able to compete with the imported wheat? Yes.
2729. And with wheat from the southern and northern districts? Yes. If wheat in 1886 had been 2s. 6d. instead of 3s. per bushel we should have had a profit of £102 8s. 4d. on 122 acres.
2730. Can this district be relied upon as a wheat growing district? Yes; we have had only one failure since I have been here, and that was not a total failure.
2731. You think the grain crops can be relied upon? Yes.
2732. Is not the cost of stripping high? Of course, farmers could produce wheat at a less cost, putting in their own labour and the labour of their families; but we have had to pay 8s. per day for wages. There is one man who has been with us for years to whom we are paying £2 10s. a week. The amount we paid for labour sent up the cost of our stripping.
2733. Of course, as a dealer in grain, you know that the market fluctuates very much? Yes.
2734. Do you know that if we happen to have a magnificent season the price becomes very low, and that it is difficult to get a market? Yes.
2735. Under a low rate of carriage, would the outer markets offer a market to you under ordinary conditions, supposing the supply was very great? Under all conditions we should have a market here for wheat.
2736. Do you not know that there are districts in the country with no railway communication where grain has to be held for one or two years, because it cannot be got away? Yes.
2737. If you had direct railway communication to Sydney, do you think that the yield, no matter how much it might be, would filter into our market, or that it would be held in the district? From my experience of the district, I think it would go to market. I do not think there is any doubt of our getting a market. All these new men were in the first instance going in for wheat growing very largely. They thought the railway would be given at once, but now they find it is almost as far off as ever. I may say that on three farms—Burgess', Woods', and my own—there are 350 acres of ground, cleared and fenced. This was done eight or nine years ago, at a cost of from £2 5s. to £3 10s. per acre. In the first year or two it was under wheat, but since that time the market has been so glutted that it has not paid to put it in. No doubt this would be all under wheat if we had a market. We had a better local market this year than we had had for some time.
2738. In consequence of the great cost of getting the grain to Molong for shipment, there is only about sufficient grown in the district for local consumption? That is all.
2739. And if greater facilities were given there would be a larger area cultivated? I believe it would be one of the largest wheat producing districts in the colony.
2740. And the rates would enable you to make use of the railway and to send the surplus to the outside markets, leaving the producers still with a good profit? Yes.
2741. Then, as to other items of produce, such as hay, chaff, bran, and all that sort of thing, I suppose that would also find its way to the places which required it? Yes.
2742. Would the railway bring you into contact with the markets of the west? We should have to go into Orange.
2743. But that would be approachable? Yes.
2744. Supposing there was a bad season in the far west, and a great demand arose for forage, would you get a share of the trade? Yes.
2745. That would be another outlet for your produce? Yes.
2746. But you cannot compete for it now on account of the dear carriage? No; the 50 miles of cartage stops the produce from going that way.
2747. *Mr. Dowel.*] What are your appliances for making the flour? A combination mill.
2748. What quality of flour is made out of Parkes wheat? Very good.
2749. Have you tested it by public competition? Yes.
2750. How did you come off? I came off second best here this year, but I did not know there was any competition. I did not prepare for it.
2751. Have you put the Parkes wheat and flour into competition with wheat and flour in other parts of the world? Yes; we sent some home to London, and we got a certificate and a medal.
2752. Have you put your wheat into competition with other wheat in the Colony? Yes; at Parkes this year we got beaten at the show by the Molong flour.
2753. Not in the wheat? No.
2754. What wheat was the Molong flour made from? I do not know.
2755. But yours was made from Parkes wheat? Yes.
2756. Does it ever happen to you to have a large surplus of which you cannot get rid? Often.
2757. Have you any large surplus now? Of bran and pollard, but not flour.
2758. You would dispose of it if you had a railway? Yes.
2759. What is the average price of wheat in Sydney all the year round? I do not know the average, but I think about 3s. 6d. We have not been doing business with the Sydney market.
2760. If that rate were maintained steadily, do you think you would be able to hold your own? Yes, and make money.
2761. What is the highest rate you have paid for wheat in your district? 6s. 6d.
2762. Where is Wallengudgery? 361 miles from Sydney, or nearly 100 miles further from Sydney than Parkes.
2763. Are you aware that wheat can be sent from that place to Sydney for 5d. a bushel, or nearly one-half the rate you have to pay, although you are 100 miles closer? I was not aware of it.
2764. If you could get your wheat sent to Sydney at 4½d. a bushel you would be in a better position than those further along the line? Yes.

Mr. Frank Cottingham, hotel-keeper, sworn and examined:—

Mr. F.  
Cottingham.  
28 Feb., 1890.

2765. *Chairman.*] What is your occupation? I am an hotel-keeper. I am also agent for Cobb & Co.
2766. Could you tell us the returns of passenger traffic to Molong for the past twelve months? I could if I balanced them up, but I have not done so.
2767. Have you furnished any returns to any one? I did, some three or four months ago. Two gentlemen called upon me and got them written out.
- 2768.

2768. You had no idea at the time that Cobb & Co. had any objection to your allowing it to be done? None whatever. Mr. F. Cottingham.
2769. Consequently you furnished certain returns, thinking there was no harm in your doing so? I gave them the books. I believe my wife copied the returns out. They were never balanced up. 28 Feb., 1890
2770. Do you know the handwriting in the book produced? Yes; it is the handwriting I think of a cousin of my wife's.
2771. Do you know that it is the book from which Mr. Rose read the returns with which he furnished us? No.
2772. Do you believe that if those returns are copied from your books they are correct? I believe they are, but there are a lot more here than the Molong district. There is the Euabalong, Grenfell, Cowra, and Young traffic. I do not say it is all in this, but it is partly so.
2773. Could you state, approximately, what percentage of the returns would come from the other places? I could not exactly say.
2774. Suppose that in March you took £310, how much of that money would go to these other places outside of the Molong traffic? In all these returns I should think about a fourth of the money had gone the other road—that is, as near as I can bring it.
2775. Is there a coach traffic from here to Cowra? There is one to Forbes, another from there to Cowra, and another to Condobolin.
2776. You think that fully a fourth of these returns would go to that other traffic? Yes, reckoning parcels, passengers, and everything.
2777. Have you not had the coaches pretty full from Molong within the past twelve months with miners and speculators going to Alectown and that way? For two months they were very well loaded.
2778. At any rate, these figures from the book, you believe, are correct? Yes; but there has been a misrepresentation to this extent—the whole of these returns are not between Molong and Parkes.
2779. They include business done in your office with other branches? Yes.
2780. The total would be 911, according to your estimate, instead of 1,215? It would be something near that, I think.
2781. Have you made up any exact return of the traffic between Molong and Parkes? Only monthly.
2782. Could you let us have it? Yes, I copied it out when I heard that the information would be required. It is from January, 1889, to October, 1889, inclusive.
2783. I see that in January the amount is £58 14s., in February £40 10s. 6d., in March £55 2s., in April £73 7s., in May £47 4s. 6d., in June £38 10s. 6d., in July £40 2s. 6d., in August £56 6s. 3d., in September £77 6s., and in October £85 9s.? Yes; they are correct.
2784. *Mr. Lee.*] Do these returns include any special amounts that were received for carriage? I do not think so.
2785. Did you receive any special amounts yesterday? No.
2786. Does the return include any special coaches? None; it is for general traffic.
2787. Is there much passenger traffic between Parkes and Molong, outside of your coach traffic? There is a good deal of private traffic.
2788. Does your firm provide for any considerable amount of private traffic? They have specials.
2789. There would be a good number of specials in twelve months? Not a great many—perhaps one a month.
2790. Are there many private conveyances of any description running between Parkes and Molong? Yes; I believe there were two or three coaches running from Parkes at different periods of the ten months at a reduced rate. They took two days, while the company carries in one.
2791. Still they all carried passengers? Yes.

Mr. Robert Nicholl Leslie, grazier, sworn and examined:—

2792. *Chairman.*] What are you? I am a grazier, residing at East Billabong. I am the managing partner of the East Billabong holding. Mr. R. N. Leslie.
2793. What is the area of your holding? About 60,000 acres. The leasehold area and the resumed area are about equally divided. There are 20,000 sheep. The whole of the run is not enclosed. 28 Feb., 1890
2794. Do you expect to carry more when you are fenced? Yes.
2795. Have you much improved in the shape of water conservation? Very little; the run is naturally watered.
2796. How far is it from here? Thirteen miles east of Parkes.
2797. Is there much land fit for agriculture on the leasehold area? I should say about half.
2798. Would this railway increase the value of your holding? As a pastoral holding it would not. It would affect the land values of the purchased land for agricultural purposes, but it would do a slight damage to the pastoral holding I think, if you except the benefit derived from the easy transit of wool.
2799. *Mr. Lee.*] How do you send your wool at present? By dray, to Molong station. It is 50 miles from the shed to the railway station.
2800. Is there a tolerably good road? A fairly good road.
2801. Do you get your supplies back by the same road? Yes.
2802. Do you know the railway track between here and Molong? Fairly well.
2803. And the country between here and Molong on either side of the proposed line? Yes.
2804. Do you think the survey has taken the right track? I do, decidedly. A great number of farmers and agriculturists would be served by that line.
2805. Do you think the greater number would be served by it? I do.
2806. Do you know that in some parts the settlement is very thick? Yes.
2807. Do you happen to know anything about the survey, at Garra, for instance? Yes.
2808. Do you know anything about the rival route—the Cudal route? Not the surveyed line, but I know the route. I know the country fairly well.
2809. How does that country compare with the land along this track? There is some very good land along the other track, and also some very bad land, but the bad land lying off the road does not appear to any one travelling along the road. I think the line from Molong to Parkes and Forbes would be decidedly the best, on account of the flooded nature of the road on the other side by way of Eugowra. In fact, I have known wool teams during wet seasons to bring wool round this way which, in other years, would have gone *via* Forbes to Borenore.

- Mr. R. N. Leslie.  
28 Feb., 1890.
2810. In order to avoid the water? Yes; they could not travel the other way.
2811. Do you know Keenan's Swamp? I have passed it on several occasions; I do not know much about it.
2812. What special advantage would this line be to you as a pastoral tenant? None whatever, any more than that we should have an easy means of transit for our wool and goods. We should not benefit in any way, because the line only passes through a small portion of the leasehold area; it does not touch any secured land of ours.
2813. Of course you are looking forward to the day when the leasehold areas will fall in? Yes, of course; from that point of view the line will damage us.
2814. There will be a big scramble for land then? Yes.
2815. And the more the district is opened up between this and then the more people will come in? Yes.
2816. Individually, you have a very small purpose to serve indeed by the construction of the line? Yes.
2817. Of course you know on public grounds there seems to be a necessity that the line should be sent into this rich country, and into the valley of the Lachlan. It must be apparent to you that the line cannot be carried to everybody's door. The object of this Committee is to ascertain as nearly as possible which will be the best way to serve the people and to develop the country;—Which of the three routes do you think offers the greatest attractions to the greatest number of people, and would be most likely to reimburse the State for its outlay, and lead to the development of the county? I know very little of the proposed line from Cowra to Forbes. Between the two lines—the one from Borenore to Forbes and the one from Molong to Parkes and Forbes—I am decidedly of opinion that the Molong route would serve the greater number of people.
2818. The district is progressing just now? Yes.
2819. How do you account for it? I think it is due to the large amount of settlement during the last few years. We have had a number of men come from Victoria with a little capital, and settled on the land to the north and north-west of Parkes. I believe they are combining grazing and farming, or intend to do so. I attribute the progress of the district to that principally.
2820. Principally to that, and not so much to the mining industry? No; not so much to the mining industry.
2821. Still the mining industry is reviving? Yes; within the last two or three years.
2822. Have you had any experience in other parts of the colony? On the Murrumbidgee.
2823. How does the class of settlement here compare with the class of settlement there? Very favourably, I think.
2824. So far as you can see, the farmers here appear to be of a very *bona-fide* character? Yes.
2825. A large number of settlers have brought money with them? Yes; all had some little means when they came here—from £2,000 to £5,000, say.
2826. Do you find among the settlers the class known as "black-mailers"? I have not.
2827. I mean the class of people who have been in the habit of going from run to run and selecting, with the object of harassing the pastoral tenant, and compelling him to buy them out? I have not seen any.
2828. Your experience is that the men really settle down and make homes of their own? Yes.
2829. Do you find them bad neighbours? No; on the whole very good.
2830. Mr. Dowel.] What distance is the staked-out line from your head station? About 5 miles.
2831. In what way would this railway injure your pastoral property? During the time of construction we should have a lot of navvies all over the place, and we should have to remove the sheep out of certain paddocks. Then the line, when constructed, would open the land up to settlement, and people would be coming here who would not otherwise have come.
2832. But would not the railway cheapen the carriage of your produce to market? Yes.
2833. If the line were constructed to Parkes, would a large quantity of wool from the surrounding districts be brought on to it that now goes elsewhere? I believe it would.
2834. You think a large revenue would be derived from the carriage of wool? Yes.
2835. Have you any other information to give? A statement was made by a member of the Committee yesterday, I believe, in reference to a petition sent down from Forbes, in which it was stated that if the line were constructed from Borenore to Forbes the clip of 5,000,000 sheep would be guaranteed. I wish to point out that the whole of the Forbes and Parkes districts are included in one sheep district, and the returns for the whole of these two districts are only 1,500,000 sheep. If they also take credit for the sheep in the next district, which would be Condobolin, there would only be about the same number of sheep in that district as in the Forbes district, which, in my opinion, would gravitate to this centre. Taking credit for the whole of the Parkes, Forbes, and Condobolin districts, you would have a total of only 3,000,000 sheep. The better part of the Condobolin traffic would come here, however. It stands to reason that all these are worked as economically as possible, and it would save the haulage of 15 miles, and the teams would have at the same time a better road to travel. Under the circumstances, the wool-growers of that district are not likely to send their wool to Forbes.
2836. Is there any other district beyond Condobolin which would be affected by the line from Molong to Parkes and Forbes? I think not.
2837. The figures you have given include all the sheep likely to be served by the railway? Yes; a few in the Molong district might be served.

Mr. William Metcalfe, sworn and examined:—

- Mr. W. Metcalfe.  
28 Feb., 1890.
2838. Chairman.] What are you? I am not following any occupation at present.
2839. Mr. Dowel.] Where do you reside? At Parkes. I have resided there about fifteen years, with the exception of a break of fourteen months.
2840. Where were you living previously? At Goolagong.
2841. You know the whole of the district through which the proposed line is to pass? Yes.
2842. How long were you living at Goolagong? Some time; I was mining there.
2843. Have you done any mining at Parkes? I have been speculating in mines here. I have been doing some mining also. I have been hotel-keeping for six years.
2844. You are generally acquainted with the route of this line? Yes; I have been along the route several times.
- 2845.

Mr.  
W. Metcalfe.  
28 Feb., 1890.

2845. From Borenore to Forbes? Yes.
2846. What is the character of that country? There is some good country on the route and some bad country. It is of a different formation from the Parkes country. You will see, as you are going through to Cudal, that the line passes through a valley—the ground rises on each side. There is not a great extent of valley either. It is very different country from the country on this side. If a selector took up 640 acres, he could not plough from one boundary to the other. There is only a portion of the land good for cultivation. You will get 20 or 30 acres good, and then you would have a break with rocky and stony ground. You would have to have several farms in one, as it were.
2847. Which route would be the most advantageous to construct having regard to the public interests—I mean both as regards cost of construction and number of people who would be served? I think the line from Molong to Parkes would be the far superior route. There are less engineering difficulties, and it passes through better country. I may say that a considerable portion of the Cudal route is very rocky. There is some very good land to the north, at the Borenore end of the line, and then as you go into Murga there is rough country. It is also rocky at Eugowra. There is some good land when you get from 4 to 6 miles out of Eugowra towards Forbes. The country, however, is flooded; the flooded country runs 10 miles, to a farm once kept by Mr. Stain.
2848. You have no doubt in your mind that the Molong-Parkes line would be the best one to construct? None whatever; it will benefit the country at large.
2849. There would be a larger revenue from that line than from the Cudal line? I do not think that that will be so at the present time; but in the course of a few years there will be a great deal more revenue upon this line than you will have upon the other. I have been talking of this line to parties from Victoria and other places, and they have often told me that in their opinion, railway communication, with this would be one of the best districts in the country. If they had a railway they say they would be prepared to go in for wheat growing on a large scale.
2850. Why do you think the revenue at first would be larger on the Cudal route than on the Molong route;—is not the country as well settled on the Molong route as on the other route? Yes.
2851. Under any circumstances, however, you strongly favour the route from Molong to Parkes? Yes.
2852. Do you know the country lying between Parkes and Cudal, and Forbes and Condobolin? Yes. When you leave Forbes, at about 16 miles you come to Gunning Gap; you then come into flooded country. From there to Condobolin it is all flooded country, with the exception of a pair of broken mountains that go in a little bit from the river. I have seen where a bullock team went down and got smothered. This flooded country runs back for a distance of 7 miles from the river out towards Burrawang homestead; then you come on to the dry country. I can produce witnesses who can prove there were ten days when the mails could not go on the road. From Condobolin, they had to be carried by Burrawang homestead up here to Parkes, and thence to Forbes.
2853. Will you give some information about the route from Parkes to Condobolin? I know it very well. The route passes through fairly good country; it is open box and pine country—something similar to that which you see about Parkes.
2854. Is it fairly settled upon? Fairly.
2855. Do you know the population of Condobolin? No; I have visited the place, but I could not give you any idea of the population.
2856. Are there only a few houses there? It appears to be pretty nearly as large as Parkes—not quite so large. There are several public-houses and stores.
2857. What occupation do the people round about Condobolin follow? Chiefly pastoral.
2858. Combined with agriculture? Very little.
2859. Do you know anything of the country between Condobolin and Wilcannia? No; but I know it as far as Mount Hope.
2860. Do you think any traffic could be brought from Mount Hope and Condobolin into Parkes if this line were constructed? I think there would be some.
2861. Do you think the Mount Hope and Condobolin people would make Parkes or Forbes their terminus if a railway were constructed to these places? When the Mount Hope mine was working they brought some of the copper through here and some on to the Macquarie. If we had a railway here the distance would be much shorter, and I think they would be almost certain to bring their produce here.
2862. You have had considerable experience of mining? Yes.
2863. What are the mineral resources of this district? There is good quartz and alluvial. We also have some copper, but it has never been worked to any extent to prove whether it is payable or not.
2864. Do you think the gold-field is of a permanent character? Yes.
2865. Have you had any experience in gold and other mining before you came to Parkes? I have been to New Zealand, Gulgong, and Home Rule.
2866. You feel competent to give an opinion? As far as my judgment goes, I have every belief that this will be a permanent gold-field.
2867. What is the area of the gold-field reserve? I have an idea, but I could not give you the exact mileage.
2868. In the interests of settlement, is it desirable to revoke any portion of that reserve? I would not revoke it unless an Act were passed enabling the miners to go on to the revoked portion and mine for gold with their miners rights. Under any other circumstances, I, for one, would oppose the revocation.
2869. Has the mining industry progressed in this district? Considerably, in the last few years. After the alluvial gold was wrought out the miners went away. In the last few years, however, they have taken more to reefing, and mining is reviving very much.
2870. Do you know the country between here and Peak Hill? Yes.
2871. Is it auriferous or otherwise? Auriferous. I have been to Alec's Flat. I have a mine there myself. There is some very good gold there. I think it is likely to be a permanent field; it is spreading out there. They are getting fresh finds.
2872. You think there are large auriferous deposits, and that the mining industry is likely to be permanent here? I have every confidence in it. It runs from here 7 miles out. I am speaking now of the reefing; then it goes 7 miles to Alec's Flat; they get it again at the Ten-mile Ridges, and then it goes on to Peak Hill; there is another 10 or 15 miles, and then it goes to Tomingly. There are gold-bearing reefs right through the country.
2873. Would these mining centres be served by the railway? Yes.
2874. Would they contribute considerable revenue to the line? Yes, a good deal.

James

James Miller, Esq., Mining and District Registrar, sworn and examined:—

- J. Miller,  
Esq.  
28 Feb., 1890.
2875. *Chairman.*] What position do you hold? I am Mining and District Registrar.
2876. Can you give us an idea of the miners rights and mineral lease applications in this district? Yes. The miners rights issued in 1889 numbered 958; and in January and February of this year, 533.
2877. To what do you attribute this extraordinary increase? In the first instance, it was in consequence of the rush at Alectown, and, subsequently, in consequence of the greater development of the quartz reefs in the district.
2878. What mineral licenses have you issued? I have issued only three since I came here; but 174 applications have been made for gold-mining leases.
2879. When were they made? Since Parkes was made a separate division. That was fifteen years ago. The areas are from 1 to 22 acres. The total acreage would be 945 acres.
2880. How many leases have been applied for within the last six months? Twenty-four.
2881. Principally from Peak Hill? None of the Peak Hill applications come to this office.
2882. From the figures you have given, I should imagine that this particular district is improving? It is rapidly increasing.
2883. Are there many leases on which work is not now going on? I am not aware of any.
2884. Have many leases been cancelled, after the application was made to you? A few have been cancelled and have been taken up again.
2885. By the same parties? Not always.
2886. Do people hold the land from year to year without fulfilling the labour conditions? Not within the last six months, but it has been done here.
2887. Have many of these leases been worked in the district? A good many of them were worked as mining tenements previous to the applications for lease. A great amount of quartz reefing has been going on under miner's rights.
2888. That accounts for the small number of applications for leases? I think generally the leases are applied for when they find they are worth floating. They apply for the leases so that the concerns may be floated into profitable companies.
2889. Have you any returns that would be of value to the Committee? I may state that the gold bought by the banks in Parkes in 1889 amounted to 8,427 ozs. 10 dwts. 12 grains—that includes alluvial and quartz gold. I do not know the number of miners in the district, but at Christmas I estimated there were 1,000 men in and around Parkes.
2890. Including the miners in and around Peak Hill? No, that is beyond my division. My division extends from Bartley's Creek to the Bogan. These quartz reefs are all within 40 miles of Bartley's Creek, north and south, east and west 12 miles.
2891. How long have you been here? Since last June.
2892. Have you seen any increase in the mining industry? Yes; in 1888 the miners' rights issued in the Parkes division were 521, while in 1887 the total number was 378.
2893. *Mr. Dowel.*] Can you say whether any gold has been obtained on this gold-field which is not included in the returns compiled by the banks? I do not know, but I should suspect so, because the quantity of alluvial gold stated to have been purchased by the banks, does not correspond with my return from the puddling machines. Some of the gold, I take it, therefore, has not gone through the banks.
2894. A considerable amount of gold may have been obtained which has not gone through the banks? Yes.

Arthur William Tempest, Esq., bank manager, sworn and examined:—

- A. W.  
Tempest,  
Esq.  
28 Feb., 1890.
2895. *Mr. Lee.*] You are manager of the Joint Stock Bank at Parkes? Yes; I have been manager of the bank for the last twenty-one months.
2896. Does your bank purchase gold? Yes.
2897. Have you prepared any statement to the Committee? I have a statement showing the amount of gold which has passed through the hands of the banks for four years.
2898. How did you obtain the statistics from the other banks? They were given to me to-day by the other managers.
2899. You are giving evidence on behalf of the banks, then? Yes. There passed through the banks in 1886, 5,844 ozs.; in 1887, 5,429 ozs.; in 1888, 4,354 ozs., and in 1889, 8,339 ozs.; or a total for the four years of 24,016 ozs., which at the lowest valuation would be worth £90,000. I direct special attention to the figures for 1889—8,389 ozs., valued at £31,000—that is at a very low valuation, viz., £3 1s. There is a good deal worth more than that, but perhaps that is a fair valuation taking the gold all round.
2900. This is alluvial as well as reefing gold? Yes.
2901. Within what radius would the gold be obtained? Within 16 miles of the town of Parkes.
2902. So that it is possible that gold obtained outside that distance may filter into Forbes and Dubbo? Yes, Dubbo gets most of it. It gets most of the Peak gold now.
2903. It does not follow that this return of gold embraces the whole of the gold obtained within the police district of Parkes? No.
2904. It is only the portion which goes through the banks? Yes; it is from Parkes proper—from the township and immediate district.
2905. *Mr. Dowel.*] Are you in the habit of visiting Peak Hill? I go out sometimes. I have been out four or five times.
2906. Is there a considerable population settled there, mining? About 1,500, I think, and the population is rapidly increasing.
2907. If a railway were constructed to Parkes, would the Peak Hill diggers do business with the Parkes people? I think we should get a fair percentage of the trade. I do not suppose we should get it all.
2908. Do you know the country between here and Peak Hill pretty well? Fairly well, all of it.
2909. Do you know all the mining centres along that road? There are only two—Alec's Flat and the Peak.
2910. What is the population of Alectown? I think I am safe in saying that there are 800 people engaged there in mining operations. Of course the rush drew a great many of the miners from Parkes out there.
2911. Have you visited and inspected the mines yourself? I have seen them all nearly.

2912. Did they present to you the appearance of permanency? I think so. Of course, when a banker visits the place he has, to a certain extent, to go by what the miners tell him, and from what the miners say there is a permanent field at the Flat and at the Peak.

2913. You have seen a considerable amount of gold at various times? Yes.

2914. You have been pointed out some exceedingly good spots, I suppose, on these mines? Yes.

2915. Is it not a fact that several companies send their gold direct, without going to the banks at all? I hear one company—the Haselhurst Company, of Parkes—does so. The gold taken out of their mine should be credited to this district; but Orange claims the output, at present.

2916. You do not get credit for it at Parkes? No.

2917. As a banker, can you say whether the district presents the appearance of progress and prosperity? I do not think there is a district in the Australian colonies progressing as rapidly as we are. Weekly, new arrivals are coming here from Victoria and other parts of Australia, and are settling here. With them they bring large sums of ready money. That certainly speaks volumes for the district. They are selling out from homes in which they have lived for twenty, thirty, and forty years in other places, in order to take up land here and in the surrounding districts.

2918. You consider that settlement of a very desirable character is going on here? Yes.

2919. You have come into contact with a good many of these settlers? Yes.

2920. Do they speak favourably of the results of their labours so far? Yes; I have not heard any of them grumbling. The only trouble they have seems to be this difficulty about the railway.

2921. What is the value of land? It has increased considerably in the town and district of late years.

2922. The population has been materially added to since you came here? It has increased, I suppose, about 50 per cent. in twenty-one months.

2923. Do you think the new arrivals are here for speculative purposes, or for *bona-fide* purposes? I think they are *bona-fide* residents.

2924. As a bank manager, you think that the residents of the district and the inhabitants of the town are in a fairly prosperous condition? Yes.

2925. Do you think business will be improved and settlement increased by the construction of a railway from Molong? Certainly I do, and I take into special consideration the outside country.

2926. Of which you know a great deal? Yes; and which, I am sorry to say, the Committee will have very little chance of seeing.

Mr. Robert Thornbury, grazier, sworn and examined:—

2927. *Chairman.*] What is your occupation? I am a grazier and dealer in stock.

2928. What evidence is it you wish to give to the Committee? I have been in this district twenty-eight years—that is, in Forbes, Parkes, and Condobolin. On several occasions I have known large floods on the Lachlan. I have known people travelling from Condobolin to Forbes, to come round by Burrawong and Parkes and thence on to Forbes. It has been impossible to travel along the Lachlan River on account of its flooded state. The plains for about 9 or 10 miles out from the Lachlan have been covered with water from 2 to 4 feet deep. In 1879, I travelled from Condobolin to Forbes, and tried to come up the river road on horseback, but it was impossible. I then came round by Burrawong, and thence on to the Carriboblin woolshed. I then found that I could proceed no further in that direction. I went into the water until the horses were swimming, and then I had to turn out on to the plain and skirt round the edge of the flood waters and so on to Forbes, leaving the Lachlan Valley some miles to my right. On another occasion I recollect that the only communication with Forbes—that is, with the town proper—was by boat. I forget the exact date, but it was previous to 1879.

2929. Your statement shows that the country between Forbes and Condobolin is subject to floods? Yes.

2930. The line of railway we are now considering does not go there at all. Could you tell us whether any part of the Borenore and Forbes country is so flooded that it would be impracticable to take a railway along there? From the Southern Cross to Forbes it is all flooded country. The Lachlan River overflows its bank at the Southern Cross.

2931. Where is that? Twelve miles from Forbes, towards Borenore.

2932. Does this line between Parkes and Forbes pass through flooded country? Not between here and Forbes. There may be slight floods, but there is nothing to interfere with the railway line. It is all comparatively high ground.

2933. Is the country between Canowindra and Forbes liable to floods? Part of it.

2934. But none of the railway line from Molong to Parkes and Forbes is at all subject to them? With the exception of small floods in the creeks there would be nothing to interfere with the railway line.

2935. Do you think this part of the country is likely to contribute traffic and revenue to the proposed railway? Most decidedly.

2936. To a considerable extent? Yes.

2937. What would it consist of? All the wool, I take it, would be brought into Parkes and Forbes. Of course, all the traffic from the north-west would come to Parkes.

2938. Within a radius of how many miles would the traffic be brought to Parkes? Within 40 miles.

Mr. William Aloysius Holbert, Public School Teacher, sworn and examined:—

2939. *Chairman.*] What position do you hold? I am teacher of the Parkes Public School.

2940. *Mr. Dowel.*] How long have you resided in this district? Two years and two months.

2941. Have you any statistics prepared with reference to your school or the schools of the district? I have the number of pupils enrolled at the Parkes Public School, and the average attendance there.

2942. What is the number of children attending the Public School? The number of boys on the roll for the quarter ending 31st December, 1889, was 110, and the number of girls on the roll for the same quarter was 98, making a total of 208. The average attendance of boys for the same quarter was 78·6, and of girls 61·8, giving a total average attendance of 140·4.

2943. Can you say whether this number shows an increase upon that of previous years? No; I could not say that—it does not show an increase.

2944. During the time you have been in charge of the school at Parkes, has the number of children increased? The average attendance has not increased.

2945. Has it decreased? No; what I have given you there is the same as the quarter before I came.

2946.

A. W.  
Tempest, Esq.  
28 Feb., 1890.

Mr. R.  
Thornbury.  
28 Feb., 1890.

Mr. W. A.  
Holbert.  
28 Feb., 1890.

- Mr. W. A. Holbert.  
28 Feb., 1890.
2946. Can you give us any reason why the attendance of children at the Public School has not increased in these two years? There has been a private school established within the last four or five months. I should say there might be twenty-five children attending it. There is also a Convent school; I do not know the attendance, but I should think it is pretty large.
2947. Are the schools you have enumerated the whole of the schools in Parkes? Yes; I think so.
2948. Do you know of your own knowledge whether there are any schools outside of the town within a radius of 10 miles? Yes.
2949. How many? I could not tell you the number, but I know there are several.
2950. Have you visited any of them? I visited one.
2951. *Chairman.*] You know the rainfall? No; that is taken at the Court-house.

Mr. James Cusack, senior-constable, sworn and examined:—

- Mr. J. Cusack.  
28 Feb., 1890.
2952. *Chairman.*] What is your occupation? I am senior-constable, stationed at Parkes.
2953. I believe you have collected certain statistics? Yes.
2954. Will you kindly let the Committee know what they are? They are as to agriculture, stock, and crops. What I am now about to read you is in regard to the wheat growing. Several small returns came in afterwards, but I believe these are correct. There are 1,950 acres under wheat, yielding 59,000 bushels. There are 3,659 acres under crop for hay, oats, barley, and potatoes. There are 467,376 sheep, 4,583 cattle, 2,503 horses, and 815 pigs.
2955. That return you believe to be correct? I believe it to be under the actual quantity.
2956. Within what distance from Parkes are these returns collected? There is no Parkes police district, it is in the Forbes police district, and the Forbes electorate. The Parkes police collected at Gobondery and Murrumbogie—that will be north-west about 60 miles; at Trundle, north about 38 miles; at Mr. Lackey's, to the west, 16 miles; south, in the Forbes direction, 9 miles; Bulgandramine, to the north-west, Homill's and Kadina, 30 miles due north. The Parkes boundary goes within 3 or 4 miles of the Peak. That is the dividing line of the Bogan and Forbes electorates. They also collected at Warraberry, 15 miles almost east, and on the Molong road, 24 miles, as far as the Porcupine Range. That is the radius within which we collected the returns.
2957. Then nearly the whole of them are collected from the east, north-east, and west of Parkes? Yes; very few were obtained south. With regard to the private schools, you might like to know that there are in the Convent school sixty-five boys and seventy-five girls; another private school has been started this year.
2958. Did you collect the electoral roll? I am the chief collector in the Parkes portion. Some of those under me collected at Nymagee and Dandaloo.
2959. In your immediate district, has there been an increase on the electoral roll for this year. Yes; I put on 396 new names this year. At Alectown, I put on ninety-eight. I refused three for every one I put on. Some persons had been there only five months, and had no other qualification. Then there were some new selectors, who have not any qualification, who were also refused. They had not been six months in the district.
2960. Do you know of your own knowledge whether selection in this district is increasing? Yes; it appears to me to be so. New selectors are springing up everywhere.
2961. *Mr. Dowel.*] What was the number on the last electoral roll? 1,310. In the present year there are 1,615.\*
2962. *Mr. Lee.*] You have sworn that the increase is 396? That is the new names added. I have had to strike a number off the old roll.
2963. *Mr. Dowel.*] What is the number on the electoral roll at Forbes? I have not got the whole portion; I have only the Parkes portion.
2964. *Mr. Lee.*] What is the actual increase for the year 1890, over that of 1889? 206.
2965. How long have you been here? Since November of last year. I came here about the middle of November.

Arthur John Kingsmill, Esq., Crown Lands Agent, sworn and examined:—

- A. J. Kingsmill, Esq.  
28 Feb., 1890.
2966. *Mr. Lee.*] What is your position? I am Crown Lands Agent at Parkes and Clerk of Petty Sessions.
2967. How long have you been in that position? Since last July.
2968. The Committee are desirous of obtaining information respecting the land held under conditional purchase and conditional lease;—could you furnish us with a return? I could give you a return for the time I have been here. I find that the land work is increasing tremendously.
2969. Every land day more selections are being taken up? Yes.
2970. Are many conditional leases being taken? Yes.
2971. Are there many transfers of conditional purchases? Not so many transfers as I have had in other districts.
2972. Could you state, so far as you know, in what direction these transfers are tending;—are they being made from selectors to capitalists, or are they being made from one selector to another? They are being transferred to the banks, chiefly.
2973. By way of mortgage? Yes.
2974. Many by way of absolute sale? There have been two or three small sales.
2975. The transfers are more in the way of mortgage to monetary institutions? Yes.
2976. And there are not any great number, even under that head? No; in fact the people in this district appear to be more wealthy than in any other district I have been connected with.
2977. What other district have you been in? I have been Land Agent in the Gosford and Brisbane Water district.
2978. There are not many conditional purchasers there? No.
2979. Is this the first time you have held your position in a large country district? Yes.
2980. Consequently your previous experience outside of metropolitan influences has not been very great? No; but we have to go through the same forms.
2981. But your district would be very limited? It was 30 miles long by 30 miles wide.
2982. But many portions of it would not feed a bandicoot? No.

2983.

\* NOTE (on revision);—The evidence given was 1,515; but the new electoral roll shows 1,532.

2983. Will you prepare a return from your books and send it in to the General Committee, showing the number of acres alienated under conditional purchase in 1886, 1887, 1888, and 1889, and the number of acres put under conditional lease since the Act came into force? Yes; I will send that return in.
2984. Have you a map in your office showing the land alienated in the land district of Parkes? I have not, but there are the parish maps.
2985. *Mr. Dowel.*] In what part of the district to which you have been referring is the land chiefly applied for? Chiefly in Kennedy.
2986. Where is that? In the Central Division.
2987. Is it to the north of Parkes? Yes; I think it lies to the north.
2988. Have you any land in the Eastern Division applied for? Yes, some.
2989. Can you say what land is available for selection in the Eastern Division? No.
2990. But the land chiefly applied for is in the Central Division? Yes; all the land in this land district lies in the Central Division.
2991. Would not applicants for a portion of the Eastern Division come to your office? I think not.

A. J.  
Kingsmill,  
Esq.

28 Feb., 1890.

Mr. Edward M'Gee, miller, sworn and examined:—

2992. *Chairman.*] What is your occupation? I am a miller and produce dealer.
2993. *Mr. Dowel.*] You are a member of a firm of millers at Parkes? Yes.
2994. How long have you resided here? About sixteen years. I have been twenty years at Grenfell, and six years at Toogong.
2995. During the sixteen years you have resided in this district, have you had an opportunity of observing the character of the country and the rise and progress of the place? Yes.
2996. Will you give the Committee some information about it? Yes. I may state that during the dry seasons we have supplied Mount Hope and Nymagee to a very large extent, also Condobolin and Forbes. We have sent chaff from here to Forbes in a dry season, and there were then not nearly the number of farmers in the district that you will find here now.
2997. During the sixteen years you have been here has the population materially increased? Yes. I myself have had to get flour from Bathurst and other places. I have given as much as £3 3s. a bag. It was difficult at one time to get it, and now it is difficult to get rid of it. It is hard to find a profitable market.
2998. You over-produce in this district now? Yes.
2999. What is the cause of this over-production? It is due, partly, to the copper mines knocking off; and partly to there being more farmers in the district.
3000. Do you know the country between Molong and Parkes which will be traversed by the proposed railway? Yes.
3001. Do you know the settlement on that particular line? Most of it.
3002. Is the country fairly settled upon? Yes, I know it is, because I have been down there buying produce at different times.
3003. Have you visited the holdings of selectors? Yes.
3004. And what opinion did you form with regard to the permanence of their settlement? I could only form a very good one.
3005. They appeared to be fixed upon the soil? Yes; many have been there for years, to my own knowledge.
3006. Do you know the country between Parkes and Forbes? Yes.
3007. It is comprised in the area of the gold-fields reserve? Yes.
3008. Are there any mines at work there? A few; not a great many.
3009. What is the character of the country between here and Forbes? Very good.
3010. Is it suitable for agriculture? Most of it.
3011. If it were open for selection, would it be occupied? The greater part of it.
3012. Can you give the Committee any information as to the Cudal line? I lived there at one time. I lived 5 miles from Toogong, between that place and Canowindra.
3013. Do you consider the country through which that route was surveyed as good as, or equal to, the other route? The last part of it is good, but the land is held by a few persons only.
3014. There are a few large estate owners? Yes, nearly all the good land is freehold. There are a few settlers between Toogong and Canowindra and up to Cargo.
3015. To what purpose are these large estates devoted at the present time? Grazing of sheep and cattle, principally.
3016. Do you think the population is as large on the Cudal line as it is between Molong and Parkes? I do not think so.
3017. The country is not as closely settled? No.
3018. Do you know of any engineering difficulties in the way of the construction of a railway on that route? Only by hearsay. I know that there is rough country at Long's Corner. They cross a creek there three times. The rough country extends from Long's Corner and Murga.
3019. Is any portion of that country likely to be flooded? It may be flooded if there are heavy rains.
3020. Have you heard of its being flooded? Yes; I have been at Forbes, and I have had to be taken out in a boat for a certain distance in order to get away.
3021. Do you know whether any portion of the route from Molong is likely to be flooded? Only on small creeks.
3022. Knowing both routes as well as you do, what opinion have you formed as to the one that should be adopted in the interests of the settlers, and having regard to revenue? I think this line ought to be constructed. To begin with, it is a shorter distance.
3023. Do you know the country between Parkes and Condobolin? Yes.
3024. Is it settled? Yes; if you go that way to Condobolin. If you keep in towards the river, it is not. There are settlers all the way along the track from here to Trundle and to Burrawang.
3025. If the line were constructed to Parkes, do you think that part of the country would bring its produce here? Some would, I suppose.
3026. It would be their best market? Yes.
- 3027-8. And their best road to market? Yes.

Mr.  
E. M'Gee.

28 Feb., 1890.

Mr.  
E. M'Gee.  
28 Feb., 1890.

3028. What would be their chief produce? Wool and agricultural produce. The greater part of the returns from the Mount Hope copper-mine would come this way.
- 3029-30. Are there any minerals in this district or in the surrounding districts which would be brought to Parkes and Forbes? Yes; there is a copper-mine within 12 or 13 miles. The assay of a sample sent down was 29 $\frac{3}{4}$ .
3031. Is that mine working now? No.
3032. For what reason? Copper went down in the market. They had men working, and they had to knock off.
3033. Is it likely that if this line were constructed, and the cost of bringing the copper to market were reduced, the mine would be worked? I do not think that it would be started, unless copper went up in price. It costs a lot of money to start a copper-mine.
3034. What is the price of carriage between Molong and Parkes, and Parkes and Molong? It averages from 2s. 6d. to 3s. 6d. per cwt. It is 4s. when the road is bad—that is on merchandise; but it is seldom 4s.
3035. Can you say if there is any considerable amount of merchandize passing between Molong and Parkes? There are always a good many teams on the road to and fro.
3036. And that traffic would be carried by the proposed railway? Yes.
3037. You know the centres of population on the staked line from Molong to Parkes? Yes; the line goes fairly well through the population.
3038. It would serve a large settlement? Yes.
3039. During your residence in this district, have you had anything to do with the mining industry? Yes.
3040. Have you visited any of the mines? Yes.
3041. Both reef and alluvial? Yes.
3042. Have you worked, practically, in any as a digger? I have done a little, but not a great deal.
3043. Have you observed any increase in the mining industry of this district? I have noticed an increase in the last twelve months.
3044. Have you observed any special increase in the size and progress of the town? Yes.
3045. To what do you attribute it? To the number of selections taken up, and also to the mining.
3046. Are the selectors who have recently come into this district a desirable and good class of settlers? Yes; I reckon they could not be beaten—they are all practical farmers. A good many of them came from Victoria. They sold out over there. They appear to like the country here better.
3047. Have you had any conversations with these men respecting their holdings? Yes.
3048. What do they say? They reckon that they want railway communication, and that they will then be able to go in for wheat-growing. At the present time most of them are pastoralists.
3049. From your observation of the produce of the district, should you say that cereals, and fruits generally, did well here? I believe it is as good a place in which to grow grapes as you could find anywhere in New South Wales. They make very good wine here too.
3050. You have had an opportunity to compare the Parkes wheat with wheat grown in other parts of the colony? Yes.
3051. What is your opinion of the Parkes wheat? I do not think you could beat it. In 1886 we sent home a sample of flour to the Colonial Exhibition, in England, made from Parkes wheat. We obtained a certificate and a commemorative medal. I have seen a great deal of flour in my time. I worked up a good deal of Adelaide flour, as a baker, years ago. I have handled no better flour than the Parkes flour. I believe no better flour is made, and I have heard other bakers say the same thing.
3052. Is it likely, do you think, that if this line is constructed it will pay interest on capital and working expenses? I think it ought to pay a lot more than that.
3053. Do you know what it will probably cost? No.
3054. It is estimated by the Commissioners that there will be an annual charge of £26,000;—do you think there will be sufficient revenue to pay that amount per annum? I could not exactly say. I know that the traffic will be very large. I do not know whether any of our lines are paying, as far as that goes; but from what I have seen of other districts, and from what I know of the large amount of traffic passing between this and Molong, I should say that this line would have quite as good a chance of paying as any other line in the colony.
3055. Would any large amount of wool be brought to the railway? Yes.
3056. Where would it come from? A good deal would come from Condobolin way.
3057. In large quantities? Yes; a large quantity has gone down on teams through here. Wool would come this way from Burra Burra, Melrose Plains, Boona West. That wool would all come through here, instead of going on to the other line. It would be nearer. That would be independently of the quantity which goes through here by team now. The Burrawang wool would also come through here. I think the Geuanagie wool goes to Dubbo at present; that also would come here.
3058. Taking a radius of 40 miles on the northern side, all the wool would come to Parkes? Yes.
3059. Would a portion of the Peak Hill traffic come here? A portion of it. We do a good deal of business now with Peak Hill. We are supplying them with flour at the present time.
3060. Would the produce grown round about Peak Hill and the intervening country come to Parkes, *en route* to Sydney? The settlement does not go out as far as Peak Hill, but the intervening country would supply a certain amount of traffic to the railway. You have also to consider the Cudal traffic. Cudal would be about 7 miles from the nearest point on this railway, and the people there would send their traffic this way.
3261. And if the line were brought within a distance of 4 miles of Cudal, it would serve them still better? I think so, seeing that people in this district would be satisfied with having a railway within 30 miles of them.
3062. You think the Cudal people would have no cause for complaint if the railway were brought within 4 miles of them? No; the outside limit of their farming district would be 21 miles from the proposed line—that would be on the Belabula River.

Mr. Dennis Toohey, hotelkeeper, sworn and examined:—

Mr.  
D. Toohey.  
28 Feb., 1890.

3063. *Chairman.*] What are you? I am an hotelkeeper, at Parkes.
3064. Have you observed much progress in the district? A great deal.
3065. In what respect? There has been an increase in settlement and population.
3066. What class of population is there? A farming population.

3067.

3067. Have you not seen more people here than you see now? Yes.
3068. When was that? About eighteen years ago.
3069. That was when a great deal of digging was going on here? Yes.
3070. I suppose the place went down to very nearly nothing? Yes; there was a very small population.
3071. And now the population is steadily increasing? Yes; it has been for the last four years.
3072. The increase in population has arisen principally from new settlers? Yes.
3073. Do you think there is likely to be a more permanent settlement than you would have in the case of a gold rush? Yes.
3074. Do you know whether there is much Crown land between Molong and this place which could be taken up? No; there is very little.
3075. On what portion of the line between here and Molong have you resided? At Manildra, within a mile and a half of Brymedura.
3076. Is there much agricultural settlement there? A great deal.
3077. Has it taken place during the last few years? Within the last ten years, the greater portion of it.
3078. Do you know the country between here and Brymedura? Yes.
3079. What sort of timber is there between Parkes and that place? It is principally ironbark.
3080. Have you had anything to do with the timber trade? I have used a good bit of it.
3081. Have you ever cut any yourself? No; but I have used it for building purposes.
3082. Have you seen any of it cut and sawn? I have.
3083. Have you noticed the Bumberry timber? That is particularly good.
3084. Have you noticed, as you have driven along the road, that the timber which has been cut was pipy? I know that some seven years ago some bridge builders came from the Gundagai country, and they got piles and beams on the Bumberry mountains about 12 miles from where I live. They said it was the finest timber they had ever worked. I think they got it at Coates' Creek.
3085. Do you think that the construction of this line will be of great benefit to the inhabitants of this district? I do.
3086. And do you think it will benefit people to the south of the line as far as Cudal? I think it would.

Mr.  
D. Toohy.  
28 Feb., 1890.

Mr. Robert Murphy, constable, sworn and examined:—

3087. *Mr. Lee.*] What are you? I am a member of the police force, stationed at Parkes.
3088. How long have you been here? About eighteen months.
3089. What is the nature of the evidence you wish to give? It is as to the number of public schools within a radius of 10 miles of Parkes.
3090. How many are there? Seven. There is one at Tichborne, 7 miles distant, one at Parkesborough, 2½ miles distant, one at Goobang, 6 miles distant, one at Trelowarren, 1½ miles distant, one at Bindogandy, 9 miles distant, one at Deep Lead, 3 miles distant, and one at Flagstone Creek, 10 miles distant.
3091. Do you happen to know whether the population in the municipal boundary has increased with the last year or two? I believe it has. During the time I have been here a great many new houses have been put up, and they are always occupied as soon as they are erected.
3092. The population has not decreased? It has not.
3093. Taking the worst view of it, it would be stationary? Yes.
3094. Can you give any reason as to why the attendance should fall off so much in the principal school in the town? I believe a number of children have gone from here to Alectown and the Peak—some are attending a private school, where I understand there are about twenty-five pupils, and some go to the Convent school.
3095. Is there any other reason? Not that I know of.
3096. *Chairman.*] You say there is an increase in the population of the town, and that there is nevertheless a decrease in the attendance at the public school? Yes; for the reasons I have given.
3097. Are we to infer that the persons leaving the town are married men with families, and that those coming in to it are single men? That may be the case to some extent. I know of some families who have left the town.

Mr.  
R. Murphy.  
28 Feb., 1890.

Henry Harry Cooke, Esq., M.P., sworn and examined:—

3098. *Chairman.*] Are you the senior member for the Forbes electorate? Yes.
3099. *Mr. Dowel.*] How long have you resided in the district? Since 1862.
3100. You are one of the oldest residents, I take it? I came here as a digger from Victoria.
3101. Did the discovery of gold cause Parkes to spring into existence? Yes; it was just after the Forbes rush; the Forbes rush was in 1861, and the rush here was in 1862.
3102. I take it that you have had many opportunities of exploring the country for a good many miles round, and of observing the settlement? Yes; I should like to say at the outset that I should prefer not to be examined upon any point which would be in the nature of putting one of the rival lines against the other, I should like to give evidence as to the resources and the settlement of the district, but I would like not to give evidence of the nature I have described, from the peculiar position I hold.
3103. As an old gold digger, you have prospected, I presume, a considerable area of this country? I have been over a good part of it.
3104. Will you give the Committee what information you have as to the mineral resources of the district? Since I came here, in 1862, I have been over a good deal of the country. In the last three or four years, I have had an opportunity of seeing a great area. Being interested in mining I have observed the character of the country and its resources. From my experience as a digger, for some years I have taken an interest in that industry. From my observations of the different portions of the district I am persuaded there is no district in the colony offering such good prospects in gold-mining as this district. I was Mining Registrar for five years here. At the time of the rush here, it was my duty to register mining claims of all kinds. I think the old register will show something like twenty-five more reefs and gold-bearing veins. I suppose within 5 miles of this place there are fifty gold-bearing veins, or reefs, which will be payable when we have machinery capable of treating the stone, and of saving the pyrites, containing a great percentage of gold. There is no doubt that every one of these veins will pay.

H. H.  
Cooke, Esq.,  
M.P.  
28 Feb., 1890.

H. H.  
Cooke, Esq.,  
M.P.  
28 Feb., 1890.

3105. The portion of the country to which you refer is, I presume, a dyke interlaced with veins and reefs? It has been called a diorite dyke, from a quarter of a mile to 3 and 4 miles wide. It extends from near Grenfell to beyond Tomingly, in the north. Outside of this formation there are gold-bearing reefs, but the principal gold-bearing reefs are within the formation—the richest of them certainly are. The course of the formation is north and south, and the gold-bearing reefs traverse this formation obliquely. The course of the lodes from south-east to north-west.

3106. Can you give the Committee any information with reference to the yield of gold from these veins or reefs? I know the Pioneer reef was first discovered here in 1862. It is not being worked at the present time. The highest yield was 20 ounces to the ton; it dwindled down afterwards to about half an ounce, and there it stayed.

3107. What is the size of these reefs? They vary from 10 feet to 10 inches, and less.

3108. Outside of these reefs is there any alluvial digging? The alluvial digging is somewhat patchy; it has been worked out. There is very little alluvial digging being done now in the district. It has been very rich in places. It was in working the alluvial flats that some of the richest of our reefs were discovered. The alluvial deposit in some places was from 50 to 60 feet deep. In working the alluvial, the boulders were discovered containing gold; this led the miners to look for the reefs on the bottom, or rock. The Haselhurst reef is the best of those discovered in this way. In looking round the country you will see it is covered mostly with a deep alluvial soil wherever the hills crop above the soil. If you do not see reefs you will see rocks sufficient to induce any man to search for them. There are gold-bearing reefs in nearly all these hills. They continue under the alluvium. It has been a work of years to discover most of these reefs.

3109. Is there any special difficulty in the working of these mines? None whatever.

3110. Have you had experience in gold-mining in other parts? Yes.

3111. How does Parkes compare with other mining centres where you have worked? This district has considerable advantages. I have been north, where it is difficult to get machinery on to the ground, on account of the mountainous nature of the country. It is just as difficult to get the ore to the machinery. It has to be drawn down in sleighs and bullock drays, and carted down on horseback in some precipitous places. Here the drays come right to the shafts.

3112. Butas regards the working of the mines themselves, are there any difficulties? We are not down deep enough to reach the water; we would rather we had met the water. We regard it as a boon, rather than a hindrance.

3113. Will you give the Committee any information as to the gold-mining reserve surrounding Parkes? In Mr. Warden Dalton's term of office I was Registrar, and on his recommendation this large area was reserved from sale on account of the gold.

3114. Can you say to what extent? 166 square miles.

3115. You have a pretty good knowledge of the whole of the reserve? A fair knowledge.

3116. Do you think if a certain proportion were thrown open to settlement—that is to conditional purchase and conditional lease—it would be of advantage to residents of the town of Parkes? It would have to be done carefully. Anything that would tend to limit the area available for the operation of the miners would militate against the commercial interests of the town and district. The desire of the more prominent men in the district has been to serve the two industries as much as possible, without injuring either. I refer to the industries of mining and farming.

3117. Are you aware that a large portion of this reserve is good agricultural land? Some of the best in the country, I believe, for wheat, for grapes, and for every fruit.

3118. In all probability in the future this good agricultural land on the reserve will be utilised for agriculture? As soon as it is found not to be needed for the miners. I know of places growing good crops of fruit—of places where there are very good orchards, and underneath there are gold mines. That is the nature of the country. I do not wish to be understood to say I am in favour of cancelling this reserve altogether, but I think some parts of it might be cancelled. The work would have to be undertaken with extreme care. If great care were exercised, I think a portion of it might be set apart for settlement, in special areas.

3119. On this large reserve of 106,240 acres, do you think a large mining population could be maintained? I think there will be a large mining population here for many years to come—for a far longer period than we shall live to see.

3120. You think permanence can be put in this place as far as the mining industry is concerned? Certainly.

3121. That is one reason, you think, why a railway should be constructed? Yes; and a very good reason too.

3122. Are there other minerals besides gold in the district? None which have been worked payably. There are a number of copper lodes a little way from here, and there are lodes containing silver which have assayed pretty well, but gold has more attraction for the miners, and as the price of copper has been low of late there has been little or no attention paid to that branch of mining.

3123. You know the country between Molong and Parkes and Forbes? Yes.

3124. And the route which will be taken by the proposed railway? Yes.

3125. Is it a class of country which is likely to carry a permanent population? Yes; and it has done to my knowledge for the last twenty-five years.

3126. A class of men who will combine agriculture with pastoral pursuits? Yes.

3127. Do you consider that is the best class of settlers you can have? It is a class of settlers I have always been trying to get to come here when it has been in my power to do so.

3128. Is it within your knowledge that between Parkes and Molong there is a considerable number of acres of Crown lands locked up in leasehold areas? Yes; in the Eastern and the Central Division. The land district of Parkes does not include any part of the eastern division that is included in the land district of Molong. In a short time all the leasehold areas in that division will be thrown open to settlement.

3129. You think that this land between Parkes and Molong being thrown open to selection is likely to contribute in the future a large revenue to any railway which may be made? No doubt. Every day people are coming here in search of land from the more thickly and densely populated parts of the colony. A part of a family, or perhaps a whole family, will come here and settle. I think if you had time to see these men in their homes—the great improvements they have made, and the comforts of home life around them—bearing in mind that all this has been accomplished within the last three or four years—you would

say

say that we had obtained eminently the right class of settlers. In these farms round about Parkes, I think you will see more genuine settlement—and it has taken place in the last four years—than ever existed among the best class of occupiers who preceded it.

H. H.  
Cooke, Esq.,  
M.P.  
28 Feb., 1890.

3130. Is the country to which you refer situated north of the line? I am referring to the country to the north, east, and north-west of Parkes, in the Central Division.

3131. From your knowledge and experience of this district, have you anything which you can add to the evidence already given? I heard much of the evidence given yesterday and to-day. I believe it is true in the main. There are some little matters as to the geography—which are not of much importance after all—concerning which I differ, but in the main, the evidence has been good, and it has certainly been true in every particular, as regards the resources and returns of the district. I know the men, and I am sure they have given truthful evidence.

3132. As regards the general policy of the construction of this line, will you, as one of the representatives of the people, having an important duty to discharge, say whether, in your judgment, it is necessary that this line should be constructed;—can you conscientiously advocate its construction? That is ground I do not wish to traverse. I will tell you why: There is a considerable amount of local feeling and jealousy between these two towns I represent—Forbes and Parkes. I have good friends in both places. I think the railway will serve a large majority of the people in this district. It will serve a larger number of persons in the electorate of Forbes than any other route I know of.

3133. Do you think the Government will be justified in expending £433,000 in constructing this line? I think the Government would be justified in spending that sum, without going into figures as to the cost of the line and interest.

3134. If the matter came before you in Parliament you would not hesitate to vote for it? I should not have the slightest hesitation in doing so.

3135. Without going into the merits of the rival routes, I will ask you this question;—do you consider that the route, as proposed, will serve a large number of settlers? As I said just now, I think it will serve the largest number of persons in this electorate.

3136. And if it does not at present pay interest on the capital, expenditure, and working expenses, it will do so in the future? I have no doubt it will. There is one matter upon which I have not yet touched, and that is the growth of fruit here. When I came to the diggings at Forbes first, the settlers were growing nothing. The land was supposed to have no value except for the growth of bullocks, sheep, and black-fellows. If you were here a day or two I could show you fruit which is equal to fruit grown in any part of the world. I am not referring to ultra English fruit, such as gooseberries and currants, or to tropical fruits, such as bananas, which do not do well here, but to grapes, oranges, lemons, citrons, apples, pears, apricots, and figs, which all do splendidly here.

3137. You think the district is increasing in population? Certainly. I used to know everyone here, but now I do not know one half of the people.

3138. Do you think the southern or northern portion is increasing most? I think the largest increase is to the north and north-west. The Forbes electorate terminates at the Lachlan River, at Forbes, and then Grenfell begins.

3139. But the largest increase, you think, is at the Parkes end of the electorate? Yes.

SATURDAY, 1 MARCH, 1890.

[The Sectional Committee met at M'Millan's Hotel, Tichborne, at 2:30 p.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. James Thomas Corbett, Public School teacher, sworn and examined:—

3140. *Chairman.*] What position do you hold? I am teacher of the Broogan Public School.

3141. How long have you been here? It is four years to-day since I took charge.

3142. How many children have you on the roll? Sixty.

3143. What is the average attendance? There were fifty, for a portion of the last quarter.

3144. Has there been any increase in the attendance since you first came here? An increase of twenty on the average.

3145. What is the cause of the increase? I think it arises principally from a natural increase in population. There is a school further away, and sometimes the creek is up and they come down from the Welcome. There are only three at present however attending from there.

3146. What is the furthest point from which the children come to your school? Six miles. There is a boy coming from that distance, and he rides.

3147. Where do the majority come from? Within 2 miles.

3148. Are there many families about here? A great many.

3149. How do they live? The parents generally have little homesteads on the creek, and the father lives as a rule by labouring work.

3150. What is the name of the creek? The Billabong.

3151. What is the size of their holdings? From an acre to 3 or 4. Several have applied for 10-acre blocks, but I am not sure whether they will get them. Many have remained on the strength of getting them.

3152. Are there any persons fossicking about here? Yes; when they can earn money from bush work, in order to put food into the place, they generally seek for gold.

3153. If these persons were to get 10-acre blocks, do you think they would settle down and become permanent residents here? I do.

3154. You think they can get a living here? Yes; by occasionally doing bush work, provided they get the 10-acre blocks.

Mr.  
J. T. Corbett.  
1 Mar., 1890.

3155.

- Mr  
J. T. Corbett.  
1 Mar., 1890.
3155. Do you know the country round about here? Yes; I know the country out towards the Bogan, 30 miles.
3156. Is that country locked up as a gold-field reserve? I think most of it is contained in pastoral holdings and reserves.
3157. There are not many settlers in that part? No.
3158. What is the class of country to the south of this place, and how is it held? It is splendid agricultural country, I should say, but it is locked up in pastoral holdings, and then there is the gold-field reserve.
3159. Are there no selections between here and Forbes that you know of? No, except out back towards the Euro Mountain, there are two on the main road.
3160. In what direction do those mountains lie from here? Due east.
3161. Do you know the land to the west of this road going towards Forbes? No.
3162. *Mr. Lee.*] What is the width of the gold-field reserve at this point? I cannot say.
3163. Do you know the Spicer family here? Yes.
3164. What do they do? They have an orchard.
3165. Is it of any extent? It is very small—about 2 acres.
3166. In what way would the construction of a railway to Forbes benefit this part of the country? Providing that the land were unlocked it would offer facilities to persons to get away their produce. I suppose ultimately the reserve will become unlocked.
3167. I suppose the reason of there not being more people resident here is that they are really unable to obtain land? Exactly.
3168. And the few here are the remains of the miners? Yes.
3169. Is there any tendency on the part of the mining population to increase;—are there any new comers? I do not think there is much increase.
3170. Supposing that 10-acre blocks are granted under the new Act, do you think they will be taken advantage of to any extent? I think nearly every family residing on the creek will take advantage of them. They will not only obtain the blocks if they can do so, but I think they will make very good use of them.
3171. Is there any valuable land on the creek? Yes.
3172. Would it provide for 200 of these blocks? Yes.
3173. What do you think the people would be likely to do with them? I suppose they would cultivate wheat, and keep a small number of stock.
3174. Do you think their produce would feed the railway to any extent? Yes; especially if fruit were grown. I think there would be a good deal of that description of freight.
3175. Is the soil capable of growing fruit? Yes.
3176. If the ground were available there would be a large population then? Yes.

Mr. Alfred Daines, storkeeper, sworn and examined:—

- Mr.  
A. Daines.  
1 Mar., 1890.
3177. *Chairman.*] What is your occupation? I am a storkeeper and farmer.
3178. *Mr. Lee.*] How long have you been here? Fifteen years.
3179. Were you here in the gold rush? Yes.
3180. How many men were there in the locality then? From 4,000 to 5,000 in the heat of the rush; that was the estimated population.
3181. About how many are there now? I do not suppose the population about here would amount to more than 100 or 150 at the outside.
3182. Are they chiefly miners? I cannot say that; I do not suppose there are more than twenty miners here at present.
3183. How do the remainder get a living? They work in the bush, and sometimes they go fossicking.
3184. Are they settled on the reserve in mining tenements? Yes.
3185. Where do you farm? Down at the bridge; I have 4 acres.
3186. What do you grow? Potatoes, turnips, wheat, but principally potatoes.
3187. Has the mining industry revived in this district of late years? No; it has been about the same as it is now for years.
3188. Are there recent discoveries made in the neighbourhood calculated to cause a rush? No.
3189. Is it purely alluvial mining? No, it is alluvial and quartz. There is a quartz mine working here now by Barnett and party. They have got some very good stuff out of it, but it is patchy. I cannot tell you what they are getting now.
3190. You are an old miner yourself? Yes.
3191. What is your opinion about the throwing open of this reserve? It would cause a great population to come here I have no doubt. Under favourable circumstances you can grow anything in the way of grain; it is splendid land. I have not the slightest doubt that you would have a very large population here if the land were available.
3192. In what areas would you suggest that the land should be thrown open? About 40 acres. I think anyone with 40 acres could make a living from it.
3193. Is the rainfall pretty certain? No; we are subject to lengthy droughts. When we have anything like a season we can grow anything.
3194. Suppose the land were thrown open for selection, would that not interfere with the mining industry? I do not know. It would not do to interfere with the miners. If there was not a law to provide for the miners going upon the land after it had been selected, I think the land round about here for miles would be taken up.
3195. Is this goldfield reserve used by the pastoral tenants along the route? Yes.
3196. What freight is this portion of the district likely to contribute to the railway? I think it will contribute a lot of wheat.
3197. But there is no land available for the farmers? No; that is the worst of it.
3198. Taking things as they are, supposing the line were constructed, would the freight be forthcoming? There would be very little from this district; there would be a certain amount of fruit. It is a grand place for fruit.
- 3199.

3199. The land is capable of growing fruit, wheat, and other grain, and, if available, would settle a large population? Yes.

3200. You think the land might be thrown open judiciously without interfering with the mining industry? I do not see why it should not. I have a couple of allotments over the way. I am obliged to let the miners go on to my ground whenever they like, as that is a proviso in the deed.

Mr.  
A. Daines.

1 Mar., 1890.

Mr. John Leonard, farmer and contractor, sworn and examined:—

3201. *Chairman.*] What is your occupation? I am a farmer, and contractor on the roads at present

3202. *Mr. Dowel.*] How long have you resided in the district? About fifteen years.

3203. What occupation have you generally followed? Mining, principally.

3204. What part of this gold-field reserve were you working on? Not quite a mile from here, at a place called "The Wapping Butcher."

3205. Was there a large quantity of gold obtained there? Yes, a lot of gold. Taking the general run there, they got a return of over £1,000 a man.

3206. Did the diggers lose the lead? No; they worked it out.

3207. Has much prospecting been done since to pick up the gold leads in this locality? A good deal.

3208. Is it the opinion of the gold diggers that the leads can and will be picked up at some future time? Some are of that opinion, some think they will not—the only thing to prove it is the pick and shovel. The old lead has been lost here, and it has not yet been found.

3209. How long did you follow the occupation of a digger? About twenty years; I still have an interest in mining.

3210. From your knowledge of mining, do you think any discoveries of gold are likely to be made in the immediate vicinity of this place? There is no alluvial gold of any consequence about here. I believe there is some gold; but it will take some time to find.

3211. Do you know of any reefs here yourself? Not at present.

3212. What is the size of your holding? 40 acres.

3213. How long have you held it? It is about twelve years since I bought it. The land was selected before this was proclaimed a gold-field reserve, and I purchased it.

3214. You have been an occupier for twelve years of these 40 acres of land? Yes.

3215. How much have you under cultivation? About 10 acres.

3216. What kind of crops have you been growing? Hay chiefly; I also grow potatoes and other vegetables, and some wheat.

3217. What is the average yield of the crops? I think I took about  $3\frac{1}{2}$  tons of hay off this year to the acre. I believe it would have given a return of 25 bushels to the acre, if left for wheat.

3218. Have you had the rust in this locality? I never had any.

3219. What is the general crop of potatoes? I have had none lately; but in one year on 3 acres I had over 30 tons—there were 10 tons to the acre—it was a very large crop. We sold about 30 tons out of it.

3220. Have you planted any vines in this locality? A few.

3221. Do they thrive? Very well.

3222. Do they produce good grapes? They have only lately been put in.

3223. Have any of your neighbours planted vineyards? One of my neighbours has a vineyard, Mr. Spicer. I have just started a garden—everything seems to be going on very well.

3224. Do you know Spicer's land? Yes.

3225. In what condition are his vines? In very good condition. Another garden here produced very good grapes.

3226. Do you know the staked-out line between Parkes and Forbes? I have not been over it: but I know most of it.

3227. Is the land suitable for railway construction? I think it will be an easy line to construct.

3228. As a contractor and road-maker, you know of no engineering difficulties? Not the least.

3229. Can plenty of ballast be obtained? Yes, materials of all descriptions.

3230. What is the character of the timber on this line, between here and Forbes? Chiefly white box and pine.

3231. Is there any iron-bark in the locality within a radius of 10 miles? I think within that distance, if not less.

3232. There would be no difficulty in obtaining all that is necessary to construct a railway between Parkes and Forbes? No difficulty whatever.

3233. Do you know the country any distance out from this place? I have not been a great way off.

Mr. David M'Millan, publican, sworn and examined:—

3234. *Chairman.*] What is your occupation? I am a publican.

3235. How long have you resided here? About sixteen years.

3236. Have you any land here? A few acres. I purchased about 5 acres altogether.

3237. Do you grow anything? No. I have a piece of ground enclosed here, about 4 acres; I only use it as a horse paddock.

3238. You have not grown anything at all on your ground? No.

3239. You have no garden? No.

3240. Is the land about here fit for agriculture? It is.

3241. If it were thrown open to selection would a large number of persons come here to take it up? I have no doubt of it. There were three men here last night, who are only waiting to get land here. They came from some distance away. They said they would be quite satisfied to get a small holding here instead of going further back and getting a larger holding. They said they would be satisfied with 640 acres.

3242. Do you think the 10-acre blocks would be of much use to the miners? It will be very good so far as making homes for those located in the district is concerned, but it is not large enough to induce persons to come from a distance to take up land.

3243. Have you noticed any substantial increase in the population of the place within the last year or two, or any improvement in the prospects of the place? No. There has been very little revival in the way

Mr.  
D. M'Millan

1 Mar., 1890.

- Mr. D. M'Millan, 1. Mar., 1890. way of gold-mining. Barnett and party, I believe, have found rich gold on a reef, but it seemed to fail; they have got dyalite rock. They propose to take a small crushing, and if they get any gold in it it will be a good thing.
3244. That is the only excitement in mining you have had for some time? Yes.
3245. Is it your opinion that there will be payable reefs round here? I do. I think there are some fine reefs in this locality. The Wapping Butcher is one of the richest leads in the Parkes district.
3246. The construction of the railway line would be of no benefit, unless land were thrown open for selection? None whatever.
3247. You know the country between here and Forbes? Yes. There are only two selectors there, I think.
3248. What is the size of their holding? Judd's is 160 acres, and Mrs. Green's about 200 acres. A portion of the land was about to be thrown open for selection. Since then a prospecting party commenced work, and it has been stopped for the present. It will be all proved between the next five or six weeks.
3249. Do you know what indication the prospecting party have? We are getting gold; we are sinking a shaft 160 feet; we are now working a puddling machine.
3250. Are you working a puddling machine before you know whether you have payable dirt? We have had 5 dwt. to the load. We have 18 inches of wash in a face of 30 feet.
3251. What is the bottom? Sandstone and slate.
3252. Is this a new discovery? Yes. It is a place which was rushed twenty-seven years ago, but there was a rumour that the prospectors had salted it, and consequently the miners all abandoned it. Since then some miners in looking over old heaps have washed as much as 6 dwt. and 8 dwt. This induced us to sink, with the result I have told you.
3253. Do you think it will prove payable? I think so.
3254. In the event of it proving payable, is there plenty of ground to create a rush? Yes.
3255. Then it may prove a very important discovery to the district? Yes.
3256. *Mr. Lee.*] The country from Parkes to Forbes is a gold-field reserve? Yes. There is an auriferous line from Parkes to Forbes. In the place I am speaking of there may be a big rush of people at any time.
3257. Under these circumstances, would it be wise to throw the land open for selection? It might be if the miners had access. It would not do to lock it up from the miners.
3258. You think the surface can be used advantageously for agricultural pursuits? Yes.
3259. The reason why the population is so small at present is, that the land is locked up? Yes.
3260. Supposing this land had not been a gold-field reserve during the last ten or twelve years? It would have been settled on, and you would not have been able to-day to obtain an inch of it. It would have been in the hands of selectors all the way from Parkes to Forbes.
3261. How is the land near Forbes, is it equal to the land here? Yes.
3262. It will grow anything that can be grown near Parkes? Yes.
3263. Until the land is thrown open there is not likely to be much traffic for the railway? No.
3264. What may happen as regards mining is quite problematical? Yes.
3265. But the ground you know to be auriferous? Yes. If the miners could have settled on the land fourteen years ago you would not have been able to get an inch of land anywhere now.
3266. *Mr. Dowel.*] What is the name of the pastoral tenant occupying the land in this locality? Mr. Thomas Thom.
3267. Do you know what rent he is assessed at? 2½d., I think.
3268. Does he occupy a large proportion of this land? It is only lately he has taken his sheep away from here; he was running them here until the last fortnight.
3269. Are there any transactions in stock in this locality? No.
3270. But does any travelling stock pass through this district? Yes. There is a good deal of travelling stock passing along this road—more than on any other road in the district, I think.
3271. What market are they generally making for? Albury *en route* for Melbourne. Of course the sheep travel north to Queensland.
3272. Have you any knowledge of the carrying capacity of the country? I have some idea.
3273. How many acres to the sheep? This land ought to carry a sheep to 2 acres.
3274. And with improvements, such as scrubbing and ringbarking, more? It would carry a sheep to the acre if improved. In a little paddock of 120 acres I kept 150 sheep for six months. It was a good season, and you could hardly notice that they had been on it.
3275. Did you rent it from the Crown lessee? Yes; at a 1s. an acre; that was my own proposition.
3276. Do you know the route through which the proposed line goes? Pretty well.
3277. You have seen most of it? Yes.
3278. In your opinion, is it a suitable one for a railway? Yes. I understand there are two surveys—the principal one is, I think, about a quarter of a mile from here. I think that route is suitable. The object in going this way was, I think, to get a good place at the creek for a bridge.

MONDAY, 3 MARCH, 1890.

[The Sectional Committee met at the School of Arts, Forbes, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq., (CHAIRMAN).

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

George Fairhurst Hutchinson, Esq., Mayor of Forbes, sworn and examined:—

- G. F. Hutchinson, Esq., 3. Mar., 1890. 3279. *Chairman.*] You are Mayor of Forbes? Yes.
3280. How long have you been in this position? I have served two whole terms, this is the third term. I have been Mayor five terms altogether.
3281. How long have you been an alderman? Since 1872.

3282. Can you furnish the Committee with any statistics? Yes. I will give you in the first place the ratable value of the property. The general rates for 1889 amounted to £913 13s. 10d., at 1s. in the £; the water rates amounted to £971 10s.; and the grants to roads, &c., to £666 6s. 3d., or a total of £2,551 10s. The number of ratepayers was 659; the estimated population of the municipal district was 3,200; the value of the property in the municipality is estimated to be £325,655. I cannot vouch for its strict accuracy, but that is the approximate estimate.

G. F.  
Hutchinson  
Esq.  
3 Mar., 1893.

3283. Do you see any marked improvement in Forbes during the last few years? I think it has improved wonderfully during the last few years. Our ratable values are increasing constantly. We commenced at £176 twenty years ago—in 1870—when the place was proclaimed a municipality, and now they amount to over £900.

3284. Has there been any material increase in the population of the place within the last two years? I think there has. This last year there was a falling off for a little while.

3285. Of what kind of population has the increase consisted? As far as I can see, of business people in the town.

3286. Has there been much increase in the population outside of the township? I can cite one case, so far as population and value of property are concerned. A little while ago a special area was proclaimed. There were 31 portions of 160 acres each. The whole of that land has been taken up by people living about the district. It is now all settled upon.

3287. In what direction is that from Forbes, and at what distance? It is about 3 or 4 miles distant.

3288. In which direction? To the south—on the Grenfell side—on the other side of the Lachlan River, but within the boundaries of the municipality. That land is valuable, because water can be obtained anywhere by sinking from 40 to 100 feet. The same sort of land extends towards Grawlin Plains, about 12 miles out, and it may go further for all I know. There have been several selections taken up about Eugowra lately. All the available land which can be taken up has been taken up to the west of us; it was taken up years ago. All the river land was settled upon years ago.

3289. Have you noticed that the seasons have had any serious effect on the prosperity of the town? We have wonderful vitality. We get knocked down one year, but we get up the next. The seasons do not seem to make any lasting difference—that is to say, there is no retrogradation.

3290. As Mayor of the town, have you called public meetings here to consider the construction of the proposed railway? We have had meetings times out of number.

3291. What has been the general feeling expressed at these meetings with regard to the different routes proposed? Forbes, up to late years, has been unanimously in favour of the Borenore line, going through Cudal, Toogong, Murga, and Eugowra to Forbes, and thence to Condobolin; from that we think it should go to Menindie, not to Wilcannia. That has been agitated for years, but a certain revolution of feeling has taken place of late in favour of another line—the Cowra line.

3292. What reasons are advanced in support of the Cowra line? It is argued that it is the cheapest in construction, that there will be easier gradients, and that the line passes through a splendid country. It also gives this additional advantage: that you have two markets—on the one side the Wagga, Albury, and Melbourne markets as it were, and on the other the Sydney market. Then in case of a congestion of traffic on the Western line, you can go to Sydney on the Southern line by means of Cowra, or some other point near there which may be selected.

3293. I suppose Woodstock would suit you as well? Yes.

3294. The majority of your inhabitants are of opinion that that would be the best line for them? The majority of the district, but not the majority of the town, I think. The majority of the townspeople are, I think, in favour of the Borenore line.

3295. Has that line been advocated at more than one public meeting? Of late we have not been considering any particular route. We have been in favour of allowing the whole of the evidence to be submitted to this Committee, and of letting it determine the best. We think that the line to which I have just referred is the best, on the ground of settlement, of population, and of fertility of soil.

3296. As a representative of the people of Forbes, speaking on behalf of the majority of the people, may I ask what is your objection to the proposed line now being investigated by the Committee. The main reason is this: we have been used to getting our goods by the shortest road, *via* Borenore, for thirty or forty years, and we think that is the line the railway should take now. Then we also think that the settlement of population determines the best route. Undoubtedly there is more population on either of the lines I have just mentioned—that is, on the line from Borenore, or the line from Cowra—than there is on the Molong line.

3297. The whole of the land between here and Parkes is a reserve? A gold-field reserve. I believe 7,000 acres are to be proclaimed a special area next month; the Government, I believe, have determined on that course. It is on the western side of the railway reserve between here and Parkes; it commences about 3 miles from Forbes, and extends 9 miles. That will be proclaimed a special area, I believe, in 320-acre blocks. We advocate this course for the reason that the other special area of 160-acre blocks was a success. We think 320 acres would be quite sufficient. We find that small holdings are the best for the district after all.

3298. Is not this town surrounded, as a rule, by very large holdings? There are large reserves and leasehold areas, especially to the north and south. A good many of the leasehold areas will be falling in within the next five years, and I do not think the lessees will get a renewal, in consequence of the importance of our town and district; they might get an extension of one-half.

3299. Are there any particular points which you wish to bring under our notice that I have not touched upon? I desire to refute some evidence given at Parkes. Mr Leslie is reported in the *Daily Telegraph* to have stated at Parkes, that he held 50,000 acres of leasehold land, which is carrying 20,000 sheep, and that that land is suitable for agriculture. In rebuttal of that evidence, I may say that I have been a member of the Land Board in this district since 1884. We have had to consider the appraisalment of Mr Leslie's run. It was appraised at the minimum in the first instance, but he appealed under Section 100 of the Act of 1884 for a re-appraisalment. The Board reduced the appraisalment from 1½ an acre to three-fifths of a penny for the leasehold area, and the resumed area from £2 to 16s. a section. The report of the Government officers, and other evidence, went to show, so far as the carrying capabilities of the run were concerned, that it took 15 acres to keep a sheep on the leasehold area, and on the resumed area, of course, the land was declared unsuitable for agriculture. What I am saying is perfectly correct. Land of which

it

G. F.  
Hutchinson,  
Esq.  
3 Mar., 1890.

it will take 15 acres to keep a sheep can hardly be considered suitable for agriculture. As showing the barrenness of the country, you will notice the reduction made. I will give you the area:—The leasehold area is 33,359 acres; the resumed area, according to the last *Gazette*, was 29,187 acres last year. That shows that the land was not taken up by selection. There are still 29,000 acres open to selection on the resumed area, exclusive of the reserve. That shows at once that the land cannot be very valuable; if it were it would be taken up.

3300. *Mr. Dowel.*] How long have you resided in the district? Over twenty-seven years. I came here in September, 1862.

3301. What is your occupation? I have a saddlery business.

3302. You have seen Forbes make considerable progress? I have seen it in its palmiest days, and I have also seen it in its depressed state.

3303. What is the number of the largest population you have seen here? When I came here first it was 30,000.

3304. What is the population now? 3,200.

3305. Has it materially increased of late? When the old leads were worked out the population cleared just as fast as they came. We are depending now upon the pastoral and agricultural interest.

3306. Do you think the population settled upon the land is of a permanent character? Undoubtedly.

3307. They are not likely to leave? No.

3308. Are the holdings large or small? There are some very small holdings and some very large holdings, but I may state that some of the wealthiest and best people in our district are men who commenced here with 2 or 3-acre blocks—they had small gardens, and by dint of perseverance and industry they have enlarged their holdings to 30 and 40 acres. In some cases they have bought holdings outside up to 640 acres—there is Besgrove, Tozer, Shied, Reed, Reymond, J. Farrand, and a number of others I cannot think of—these men are fairly well to do.

3309. There is no probability of the holdings which the selectors now have reverting to pastoral purposes? Certainly none of those I mentioned.

3310. What is the tendency of the pursuits of these selectors—do they combine sheep-farming with agriculture? The small ones go in chiefly for agriculture and fruit-growing.

3311. What is the size of their areas? From 5 acres up to 200 or 300 acres.

3312. What do they principally grow? Various kinds of produce—wheat, hay, and potatoes.

3313. Are the crops of a good character? Yes. In fair seasons they are very prolific.

3314. What is the average crop of wheat? In some parts of the river the crops grown by irrigation are very good—those outside are not so good. It depends in a measure upon the season. We have had as high as 40 bushels an acre of wheat.

3315. You cannot say what the average crop is? The average crop, right through, taking one year with another, would be 18 bushels.

3316. You mentioned irrigation—have you any irrigation works close to the town or in it? There are several. Reymond's, Martin's, Farrand's, Gatenby's, and Edols'.

3317. Has the irrigation to which you refer proved a success? Undoubtedly. A few miles out of the town the holdings go up to 5,000 acres. The holders combine agriculture with grazing. They are within a few miles of the town.

3318. About what is the carrying capability of the grazing estates to which you refer? That I could not say exactly. I am informed that there are ten irrigation plants altogether. I should think the bulk of the estates would run from 3 acres to 6 acres to the sheep—that is as far as unimproved land is concerned,—that is, land which has not been ringbarked. Land which has been improved will run one sheep to the acre. I may mention that all the lands in the Forbes district, extending to the Condobolin district to the southward, have been more highly appraised—they have been re-appraised this last year. I speak as a member of the Land Board.

3319. How many flour-mills do the agriculturalists keep employed here? I know of only one at present.

3320. Do you know of their sending wheat to any other place excepting Forbes? I do not of my own knowledge.

3321. It all comes to Forbes? A great deal of it does? I think they sometimes send flour and stuff to Parkes.

3322. You informed the Committee just now that the Forbes people were in favour of constructing a line from Condobolin to Forbes? A good many are.

3323. What is the distance? Sixty miles—about that.

3324. Do you know the route from Molong to Parkes and Forbes, *via* Flagstone Creek? I cannot say that I am intimately acquainted with it. I have been over it only once.

3325. Do you know that the line requires 11 miles less to construct than the line *via* Cudal? Not starting from Borenore. I do not think that is true; it is 66 miles from Borenore to Forbes, *via* Cudal.

3326. Supposing a railway is constructed to Forbes, do you think there will be any traffic from Condobolin to Forbes? I think so.

3327. Of what will that traffic consist principally? There will be any number of persons travelling, and any amount of stock sent.

3328. Do you know the district between here and Condobolin? Yes.

3329. Do you know that it is held largely by pastoralists? Well, the Burrawang holding is a considerable holding.

3330. Would any quantity of wool come to Forbes? Yes.

3331. And that will give revenue to the railway? The Burrawang holding alone had about 4,000 bales this last year.

3332. Whatever route may be determined upon for the construction of a railway to Forbes you think a large amount of traffic would be brought here? Yes. Of course, if you go to Parkes, the line would be longer *via* Cudal. The Borenore line is only 1 mile longer from Sydney, going to Forbes and Parkes, than the other route.

George Henry Sheaffe, Esq., District Surveyor, sworn and examined:—

3333. *Mr. Lee.*] What position do you occupy? I am District Surveyor, stationed at Forbes.
3334. How long have you been at Forbes? A little more than five years.
3335. You produce a tinted map showing the alienated and unalienated land, and the reserves in your district? Yes.
3336. That is within the land district? Yes.
3337. What is the distance it runs in any direction from the town of Forbes? It extends 20 miles north of Parkes and 20 miles south of Forbes. In an easterly direction it extends to the Land Board district of Orange; in a westerly direction it goes about 10 miles west of the towns of Forbes and Parkes.
3338. Could you furnish the Committee with a return showing the land alienated in this district? Well, the map I exhibit shows the alienated land.
3339. Is that according to parishes? It is taken as to parishes; some are divided by the line equidistant between Forbes and Parkes.
3340. Will you take the map marked exhibit 1? Yes.
3341. Now, is there any portion of the land shown upon exhibit 2, included in the map marked No. 1? No; this is confined to the Land Board district of Orange.
3342. The land as shown on both of these maps does not overlap? No.
3343. Will you be good enough to give the totals? The totals I give you refer to the alienated reserved and unalienated land between the line east and west 20 miles north of Parkes, a line east and west half way between Parkes and Forbes, and a line east and west 20 miles south of Forbes. I will take the Parkes portion first. The alienated land there amounts to 225,770 acres—there are reserved 197,699 acres—and unalienated 211,344 acres. In the Forbes portion there are alienated 435,976 acres, reserved 197,302 acres, and unalienated 95,499 acres—these totals are only approximate.
3344. Is the large gold-field reserve between Parkes and Forbes included in the unalienated return you give? Yes.
3345. It is unalienated land of all sorts, strictly Crown land? Now I come to think of it, the unalienated land does not include the gold reserve.
3346. Could you tell us the stations in the districts of Parkes and Forbes which now hold leasehold areas? Not from memory. There is the Billabong gold-field reserve of 100,000 acres; and as far as my judgment goes, I think 80,000 might be revoked; there is a timber reserve between here and Eugowra of about 18,000 acres. I think 10,000 acres might be revoked. When the railway line is going to be constructed, timber will be required. On the Lachlan gold-fields, south of the river, 5,000 acres have recently been approved for revocation after survey; then there are large railway reserves in all parts of the district.
3347. Along the various surveyed routes? Yes. Between here and Eugowra there are about 25,000 acres reserved for railway purposes. The reserves in this district are composed chiefly of good land. In other districts I have known large timber areas worthless for any other purpose to be reserved; in this district nearly all the land reserved is good.
3348. And suitable for agricultural as well as pastoral purposes? A large proportion is suitable for agriculture, but there is no worthless land, no unused land as there is in many other reserves. I am speaking now of the whole of the Land Board district. I can give you some road distances. From Forbes to Parkes it is 21 miles by road; from Forbes to Condobolin 58 miles, that is from town boundary to town boundary; from Forbes to Eugowra, by road, it is about 20 miles; from Parkes to Condobolin by road 62½ miles—the whole of these distances are from town boundary to town boundary. They are scaled from the map, and are approximately correct. From Forbes to Marsden, to the south-west from here, it is about 40 miles. I have taken the area of the land district of Forbes at 1,124,000 acres, Grenfell 1,252,000 acres, Parkes 2,500,000 acres, and Condobolin 2,500,000 acres. These are all given roughly; they give a grand total of 7,290,000. I have noted that the land district of Forbes extends from 10 to 40 miles from Forbes—a mean of about 20 miles; the Parkes district extends from 10 to 104 miles from Parkes—three quarters of this area is as close to the Bourke railway line as it is to the town of Parkes. 5 per cent. is about all the unavailable country in the Land Board district of Forbes.
3349. Is that all the useless country in the district? It is useless, except for poor pasturage.
3350. What is the nature of the soil on the timber reserve between here and Eugowra? Very good.
3351. Was it reserved specially as a timber reserve for the requirements of the people, or is it a fancy reserve? It was reserved specially for the use of the timber.
3352. Then there is timber on it? Yes.
3353. What is the nature of the timber on it? It is chiefly pine away from the river, there is very good gum on the frontage.
3354. Is that large area still required on behalf of the general public? Part of it is on the leasehold area; it has been considered as to whether it was required for the public. Some of it is approved for cancellation as a special area.
3355. About how many acres? About 1,200 acres.
3356. You should be in a position to state whether this large area included in the Billabong gold-field reserve is required in the mining interests? I think not. I recommended the cancellation of 20,000 acres in one portion, and 7,500 in another was absolutely revoked, but re-notified, pending survey, to be dealt with as a special area. I believe 20,000 acres is ready for sale, and that the Mines Department have approved of the cancellation of it also, but it is not yet decided in what way it shall be disposed of.
3357. In what part of the district are these 20,000 acres recommended for cancellation? They extend from within 7 miles of Forbes to about 3 miles of Parkes.
3358. I suppose that in your capacity of district surveyor you recommended that this area should be revoked? Yes.
3359. Consequently you must be of opinion that it is required for purposes of settlement? Certainly.
3360. And that that settlement will be no detriment to the mining interest? I think not.
3361. The small settlement between here and Parkes is owing to what? To the whole of the land being reserved.
3362. The land at the same time being very good? Yes.
3363. Had it been opened for selection would it have been settled upon? There would not be an acre not taken up.
3364. If the land had been thrown open between here and Parkes a few years ago there would be there now a continuous line of selections? Yes, the whole of the land would have been taken up.

G. H.  
Sheaffe, Esq.  
3 Mar., 1890.

- G. H. Sheaffe, Esq.  
3 Mar., 1890.
3365. As to the area of conditional purchases and conditional leases in your district are they taken up to the maximum allowed under the Act? As a rule they are, in the western part of the district. Many in the eastern part are too close together. The whole of the land was taken up before.
3366. I suppose you take a turn through the district occasionally? Yes.
3367. Is there a tendency to bring the land under cultivation? I think a good deal of land would be brought under cultivation if carriage were easy.
3368. Is this land fit for cultivation within an easy distance of a market? Yes, and a large area of it would be cultivated.
3369. Do you know of your own knowledge anything as to the nature of the various settlers—do you think they are *bonâ fide* settlers taking up the land intending to make it their homes, or are they acting on behalf of syndicates or capitalists? I think a great many are taking it up solely in their own interests—almost the whole are in that position I think.
3370. If a selector will fence, improve, and cultivate his land it is strong *prima facie* evidence of his *bonâ fides*? Yes. I think the class of settlers we have now are *bonâ fide* men.
3371. Do you know the railway route from Parkes to Forbes? Yes.
3372. Is any portion of it subject to inundation? I should think not.
3373. Is there no portion of it close to Forbes subject to flood? Yes, a little piece.
3374. Do you know the flood levels? I have seen nothing during the last five years approaching these lines; we hear of floods twenty years ago, but I could not give you evidence about them.
3375. But you know the flood levels in and about the town of Forbes? Fairly well.
3376. Do you know where the line enters the town? Yes; but I think none of the line approaching this town from Parkes is subject to flood. Some of the town allotments through which the line passes will be subject to flood, but I have not seen any flood there.
3377. You have seen the Lachlan come over its banks? Yes.
3378. Does the flood enter the town? It runs through the lagoon.
3379. Will you describe the lagoon where the flood waters enter? It is a billabong of the Lachlan. The flood waters leave the river about 12 miles from here, and on the east of the town; they run round the district and back into the river about 2 miles below the town.
3380. You have seen the flood waters come round there? Yes, but only over a very little of the town land.
3381. Have you seen the flood sufficiently high to prevent horse and vehicular traffic? No; it is not a foot deep over that land in most places. There is a very slow current. The rivers here are very slow when in flood.
3382. Do you think that that portion of the line could be improved in any way? Hardly, I think; I do not think it could, coming in from Grenfell from the river.
3383. You think the line, as staked, is about the best which can be brought inside the town boundaries? I could not suggest any improvement.
3384. Do you know the site selected for the terminus in the town? No, I am not aware of its position.
3385. Do you know anything of the country between here and Condobolin? Yes.
3386. Is any portion of it subject to inundation? Yes; some of the country is subject to it, but I think it is easily avoided.
3387. The greater part of the country is very flat? Yes.
3388. Once the river comes over the bank, the water extends for some distance? Yes, but not as far as the trial line, I fancy.
3389. Do you know the country between here and Eugowra? Pretty well.
3390. Is it subject to flood? Not where the trial line is laid out.
3391. And then again from Eugowra to Cowra what is the nature of the country between those places? That I do not know.
3392. Do you know anything of Cudal? Only from passing through it.
3393. Your official duties do not take you there? No.
3394. Do you know Eugowra? I know the town well.
3395. It is in your district? All on this side of the creek is in my district—that is, the chief part of the town and the alienated land.
3396. Do you happen to know whether railway reserves have been made along all the trial surveys relating to this district? Some have not been made until quite recently. Some of the land was taken up before the reserves were made.
3397. Some of the surveys were made years ago? Yes.
3398. And were the reserves made then? Not in all instances, I think. There is a railway reserve, 2 miles wide, between Forbes and Eugowra.
3399. Is there a reserve thence to Cowra? That I do not know.
3400. Is there a reserve between Cudal and Borenore? I could not say.
3401. These reserves having been in existence for so many years have no doubt retarded settlement? Yes.
3402. Had the land been available, would it have been selected? Yes.
3403. And is it closed now purely on account of its being railway reserve? Yes. There are also timber reserves here.
3404. Does the travelling stock reserve run through any portion. Very little; it is almost all south of it.
3405. I mean along the line;—as shown by the survey on the map the travelling stock reserve runs along the line for a portion of the distance and parallel with it for the remainder? Yes.
3406. Are applications being made to you to revoke any of the reserves? Constantly.
3407. Of course all the applications for the revocation of reserves in this district made to the Minister are sent to you for report? Yes.
3408. Have you any in your office at the present time? A few; but generally all on resumed areas have been dealt with. I have 5,000 acres in one reserve to measure up now. I think I alluded to that before.
3409. Can the Committee take that as an evidence that there is a demand for land? There is a great demand for these reserves.
3410. And are they to be thrown open in special areas? Nearly all near Forbes and Parkes are in special areas.
3411. The pastoral leaseholds, as you know, are shut up for some little time to come;—do you think that  
as

as these leaseholds fall in they will be availed of by small settlers? All the land on the leasehold areas will be taken up, I think, as the leases fall in.

3411½. Is the land good enough for selection? Undoubtedly it is.

3412. As land has become available in the past, it has, as far as your knowledge goes, been taken up by small holders? Yes.

3413. Is there any tendency in the district to aggregate large estates? There are one or two large estates. There is a large estate at Burrawang. It is the largest in the district. I do not remember the area of it, but it is a very large one. There is a large one also at Condobolin. Then there is Wandary, near Forbes; Carrawobbity and Nelungaloo, between Forbes and Parkes—nearer Parkes.

3414. And along the other track, between here and Eugowra? There are no large estates along there.

3415. And between Eugowra and Cudal? I could not say.

3416. *Mr. Dowel.*] What is the distance between Eugowra and Parkes? I think it is 24 miles.

3417. Do you know the country between Eugowra and Parkes? Not the whole of it.

G. H.  
Sheaffe, Esq.  
3 Mar., 1890.

James Wilson Taylor, Esq., Crown Lands Agent, sworn and examined:—

3418. *Mr. Dowel.*] What position do you occupy? I am a Crown Lands Agent.

3419. How long have you been in the district? About four years.

3420. Can you say what Crown land has been alienated in the district previous to 1885? About 200,000 acres in this district. I am referring now to conditionally purchased land.

3421. What area had been sold by auction up to 1885? 209,000 acres.

3422. What was the area of the pre-emptive leases? It was very small.

3423. Would they amount to 150,000 acres? I do not think so.

3424. Can you inform the Committee what area of conditional purchase has been made since 1884? About 65,000 acres.

3425. What area has been conditionally leased? About 150,000 acres.

3426. What area has been sold by auction? Very little.

3427. Do you find that there is much inquiry for land here? Almost daily—weekly, at any rate.

3428. Is the demand sufficiently large to cause persons sometimes to go to the ballot? It always is, in cases of reserves being revoked or special areas being thrown open.

3429. Have you had any special areas thrown open recently? We had a large area within 3 miles of the town, on the east of Wongajong.

3430. Can you say how many acres? Close upon 5,000.

3431. Is that land taken up? All of it.

3432. At what price? £1 10s. an acre.

3433. What was the size of the areas? 160 acres; three were of less area.

3434. What is the character of the land? It is very good land.

3435. Good agricultural land? Yes.

3436. Was it taken up chiefly by residents of Forbes? A large part of it was.

3437. By men who knew the land well? Yes.

3438. Does any portion of the Eastern Division come within your district? None at all.

3439. Yours is all Central? Yes.

3440. Could you say the number of acres locked up in your district in leasehold areas? I could not say without the reserves.

3441. But with the reserves? 524,000 acres.

3442. When do you anticipate that the leasehold areas will be available for selection or for purposes of settlement? According to the Act, in ten years.

3443. Is the statement made, that some of the land would be available in five years, correct? Quite correct, I think. Probably some of the large estates, such as Wongajong, will be refused the extension.

3444. And some of the land will be available in five years and some in ten? I think that is almost a certainty.

3445. *Mr. Lee.*] Have many of the holdings been transferred? Yes, backwards and forwards.

3446. In what proportion by way of mortgage and in what proportion by way of absolute sale, approximately? I should say, half and half.

3447. Would you infer from that that the conditional purchaser, from special circumstances, has been compelled to raise money? That is all I could infer.

3448. Have you any reason to infer that any of these absolute transfers are being made by persons who have simply held for larger men? I have not seen it myself. I have no reason to infer that.

3449. What is the general impression you have received as land agent as to the position of settlers here? My general impression is that the banks, owing to bad times since 1885, have given little advances to struggling persons, and that they are all redeeming.

3450. Have you had occasion to arrive at the conclusion that there has been any large area of land held by dummies? Not the slightest.

3451. Therefore you think the nature of the settlement is of an absolutely *bona-fide* character? Very much so. 200,000 acres of purchased land is all certificated land upon which there has been made improvements to the value of 10s. per acre, showing that £100,000 has been expended by small settlers upon improvements.

3452. Do you receive any applications for land from persons out of the colony? Very often. Last week we had inquiries from Victoria, and from the Victorian border, from persons seeking to get land.

3453. Applying to you to know if there were any land available? Just so—by letter.

3454. So far as you can see, there is a growing demand? There is no doubt of it.

3455. What is the land revenue of your district? Last year it exceeded £19,000.

3456. From all sources? Yes; £12,000 of that sum was made up of instalments upon conditional purchases alone; the balance was for first deposits, and there were a few auction sales of allotments.

3457. Have you taken out the returns for the last five years? The average would be £15,000.

3458. Some years, I suppose, would be much less? I think it never comes to less than £14,000.

3459. Would a dry season affect the returns? No, not to any extent. I have looked up my books, and I find that since 1861 over £400,000 has gone to the Treasury from this district alone. With reference to the

J. W.  
Taylor, Esq.  
3 Mar., 1890.

J. W.  
Taylor, Esq.  
3 Mar., 1890.

the land selected lately at Parkes, I may mention that it has been taken up in large areas, and that nearly every selector who went there called at my office before he went to see if he could get land in this district. These men would have preferred to select here, but they had to go further on as we had not an acre to give them. I could not give a full area of good land in my district to any man. If a railway were made through this district, and especially from Borenore to Forbes, there would necessarily be large railway reserves thrown open. On the Borenore line there is a railway reserve 30 miles in length, and a mile each way in breadth. That would give an area of 20,000 acres available if a railway were constructed, and it is all good country.

3460. That would apply also to the construction of the Cowra line? I am not quite safe in saying that I think, but I am under that impression. Alongside these reserves often there are timber reserves. They are made for the purpose of supplying timber for the railway.

3461. Do you know the class of timber upon the reserves you speak of? There is fair gum and good pine.

3462. There is no ironbark there? I am not aware of it.

3463. *Mr. Dowel.*] Can you account for there being more land available in the Parkes district than in the Forbes district? Because it has not been taken up, I suppose.

Arthur Sharp, Esq., Government Surveyor, sworn and examined:—

A. Sharp,  
Esq.  
3 Mar., 1890.

3464. *Chairman.*] What is your position? I am a Government surveyor.

3465. Stationed where? In the Forbes Land Board district.

3466. How long have you been in this district? Thirteen years.

3467. Have you been in your present position the whole time? I was licensed surveyor for two years after I came into the district.

3468. I suppose you have a pretty intimate knowledge of the class of country in this district? I have been pretty well all over it.

3469. Is there any material difference between the class of country round about Forbes and that round about Parkes? Yes, there is a difference. The soil about the river is of a black, loamy nature; while out about Parkes it is more sandy.

3470. After you leave the river, do you find the class of country similar to the Parkes country? Very similar.

3471. Has there been, to your knowledge, much alienation in small areas in this district during the last few years? Yes.

3472. Can you tell the Committee where most of these small areas were selected? From 2 to 4 miles to the south of Forbes.

3473. What has been the area selected to the south of Forbes? About 5,000 acres altogether, each holding being limited to 160 acres.

3474. Do you know anything of the country to the north-west of Parkes? Yes.

3475. Do you know a place called Kadina? Yes.

3476. What class of country is it there? Box and pine forest and sandy soil.

3477. Is there much land selected? Yes; all that is available.

3478. Can you tell us what has been selected there within the last few years? From 70,000 to 80,000 acres, I believe.

3479. Do you know Mickibri? Yes; I was including that when I mentioned Kadina.

3480. Do you know of any settlement within the last year or two to the west either of Parkes or Forbes? Not exactly to the west, because it is leasehold area; but to the north-west of Parkes, at Trundle, there has been a good deal of selection.

3481. How far is Trundle from Parkes? Where the new settlement is, at the lagoon at Trundle, I should say 32 miles.

3482. What distance would that be from Forbes? About 43 miles.

3483. Then there would only be 11 miles difference between the two places? About that.

3484. Is it a class of country suitable for agriculture? Yes; the soil is good enough if the climate is suitable.

3485. Do you know what the settlers generally are doing there—whether they are grazing, or whether they are going in for agriculture? They are nearly all graziers at present. There has been very little agriculture so far.

3486. What is the average size of the holdings? They are mostly the full area—2,560 acres.

3487. Could you tell us the aggregate amount of land which has been selected there? In the Trundle paddock there are about 90,000 acres. This has all been selected, with the exception of the stock reserve which goes through it, about 1 mile wide.

3488. Is there any similar settlement near to Forbes? The holdings about here are generally smaller.

3489. They are absolutely taken up for agriculture? Yes. There are a number of men who have settled to cultivate in a *bona-fide* manner. So far as I know, they are all *bona-fide* men.

3490. Are they going in for agriculture? They have hardly had time yet; they have had barely time to fence in and build their homes.

3491. What is the number of acres under crop within a radius of 10 miles of this place? I could not say.

3492. You have had a good deal of experience in the Forbes district? Yes.

3493. In which direction does most of the agricultural land lie from Forbes—north, east, south, or west? I think most to the south, on the other side of the river, in the Grenfell electorate.

3494. How far does the agriculture commence from Forbes? At the river.

3495. Is there a continuation of it in any particular direction? No; there is not a continuation. There is good land close to the Cowra-road, and also on the Grenfell-road.

3496. What class of land is there in the railway reserve between here and Eugowra? It is first-class land for agricultural purposes.

3497. You are sure it would be suitable for that? Yes.

3498. Consequently, there can be no doubt about its being selected immediately it is thrown open? No; it would be all taken up at once.

3499. *Mr. Dowel.*] When the pastoral holdings were divided in the Forbes district, did the squatters obtain,

- obtain, in the leasehold areas, the principal water-frontages? Yes, especially at Burrawang. They obtained in that instance 35 miles of water-frontage.
3500. When that land is thrown open for settlement you think it will be taken up by *bona fide* settlers? Every inch of it.
3501. For the purpose of genuine settlement? Yes.
3502. Do you know the proposed railway route to Cudal? Yes; I used to work there. Until the 1884 Act came into operation it was part of my district.
3503. What is the character of the country along the proposed line? There is rich agricultural land—there is a great deal of it about Cudal especially.
3504. Is it true that the line would pass through 30 miles of private land? I do not think there is so much as that. From here to Eugowra it passes through no private land at all. I do not think it could pass through so much as you say; it might pass through 20 miles.
3505. If Dr. Ross, M.P., made that statement to the Minister it would be incorrect? I think so.
3506. Would it pass through barren hills and miles of bottomless swamp? Certainly not.
3507. You know the route? Yes.
3508. Is any portion of it liable to flood? No.
3509. Do you know Keenan's Swamp? Yes; the line keeps to the south of that.
3510. Did you ever hear of a surveyor being bogged in it? No.
3511. Did you not hear of Mr. Sharkey being bogged there? No.
3512. Do you know the distance between Eugowra and Parkes? By road 26 miles, but the road is not the shortest route.
3513. Would there be any engineering difficulties in constructing a railway from Eugowra to Parkes? Not any if they turn off 3 miles this side of Eugowra, at the foot of the mountains—from there to Parkes there is similar country to that which you find between here and Parkes.
3514. What is the distance of that line from the starting-point you have just mentioned? 21 miles, by shortest route.
3515. And the distance from Eugowra to Forbes is 23 miles? Yes.
3516. Then Eugowra would be about equidistant from both places? Yes.
3517. Do you know the country between Woodstock and Eugowra? Yes, all but the last 10 miles. I know the country between Eugowra and Canowindra, and I have been about 10 miles beyond.
3518. Would there be any engineering difficulties in constructing a railway in that direction? No. From here to Eugowra there is level country, and from Eugowra to Canowindra there is one small gap.
3519. Do you know the distance from Woodstock to Eugowra? 42 miles by road.
3520. Then the total distance to Forbes would be 65 miles? Yes.
3521. The country you know of there is of an exceedingly good character? Yes.
3522. Is it in large estates? No. Where the line would go, from within a mile this side of Canowindra right up to Forbes, there will be Crown land all the way. There is a stock reserve a mile wide from Eugowra to Canowindra.
3523. Is there any considerable population on the route to Woodstock *via* Eugowra? Yes; it would tap both sides of the river from Canowindra down.
3524. Is that country liable to be flooded? No, not a bit.
3525. And when the Crown lands are available for settlement are they likely to be occupied? Yes, with the exception of a small portion.
3526. Do you know the various routes which have been proposed to serve Forbes? Yes.
3527. Having a knowledge of the route from Molong to Parkes, also the Cudal route and the Woodstock route, which do you think would be the best to adopt in the interests of the country? I think the Woodstock route would be the best, for the reason that the line would be most easily constructed.
3528. At a less cost? Yes; and it would also be close to the main watercourse of the Western District.
3529. Do you know the country between here and Condobolin? Yes.
3530. Do you think a large portion of the Condobolin traffic would be brought to Forbes? I think all of it from Condobolin would come here. In the first place, they would follow along the watercourse, so that they might always have water in dry times.
3531. Do you know the country as far as Mount Hope? Yes.
3532. Do you know of any resources in that district which would be likely to bring revenue to a railway at Forbes? I do not think so, because it would suit them better to go across to Carathool.
3533. With their copper, and also to obtain produce? Not to obtain produce.
3534. Would they come to Forbes for their produce? I think so.
3535. Do you not think any of the copper or wool would come to Forbes? I think on consideration that some of it might come here—they could reach the railway a trifle closer by going to Carathool, but they would have considerably extra trainage.
3536. Do you know the country between Condobolin and Wilcannia? Only as far as Mount Hope, about 100 miles.
3537. Do you know the character of the country on the Billabong East run? Yes.
3538. What class of country is it? A large part of it is bad, but there is some good land which has been alienated.
3539. Is it not fit for agricultural purposes? No; most of it is the worst country I ever saw—it is wretched country.
3540. Is any portion of the line between Forbes and Eugowra subject to floods? Not an inch of it.
3541. You know where the proposed line goes? Yes. In 1879, I was here when a road was asked for by the Council to be reserved for the use of the townspeople of Forbes in flood time to bring their mails in. I reported on the application, and got all the information I could from good authority. I suggested where the road should be reserved, and I notice that they have taken the railway right outside that, and have gone so high that I am sure it must be outside the reach of any flood.
3542. Is there any chance of floods interfering with the line between Forbes and Condobolin? There might be some, because there would be a certain amount of water to contend with, but it is only shallow, and there is no current as far as I know.
3543. What depth has the deepest flood that you have known there been? About 2 feet, I suppose, in the deepest part, except, of course, in the watercourses.
3544. I suppose there would be miles of that flooded country? Not a great deal; there might be a couple of miles perhaps.

A. Sharp,  
Esq.

3 Mar., 1890.

- A. Sharp, Esq.  
3 Mar., 1890.
3545. Can you tell us the distance between Parkes and Condobolin? About 66 miles.  
3546. And between Forbes and Condobolin? 60 miles.  
3547. There is 6 miles difference then? Yes.  
3548. We have had a witness who has sworn that the distance from Forbes to Condobolin is 58 miles, and from Parkes to Condobolin 62½ miles, making a difference of only of 4½ miles—are you sure that you are right and that he is wrong? I am going by the road. I am not speaking of the railway line; I am speaking of the traffic road.  
3549. Has that been measured and marked? It has not been measured continuously, but I have taken it off the maps.  
3550. Mr. Sheaffe also has taken the distance off the maps;—would he be likely to be right? Perhaps he did not allow for bends. I have taken my distance very carefully. The distance from Forbes to Condobolin has always been known as 60 miles since I have been here. Perhaps Mr. Sheaffe took the distance from the town boundary of each place, whereas I took it from the centre of each town.  
3551. But the centre will give the same difference in each case? Yes, I see; I did not look at it in that light. It used to be called 70 miles from Parkes; but I do not reckon it is above 66.  
3552. Do you know the character of the country to the north of the proposed line between Molong and Parkes? Yes. For some 17 or 18 miles from Molong there is very good country on the north side, and from that it is very bad. There is a good deal of very bad country between Coates Creek and Bolderogery.  
3553. That is the Dungeon Range? Croaker's Range; the ranges junction.  
3554. Have you been on the other side of the range north-west towards Parkes? Yes.  
3555. What class of country is it? Very poor barren hills.  
3556. What sort of land is there from Bumberry to Bindogandri? There are 4 miles of bad country along the road, but when you get to Bindogandri you open out into good country. The bad country I speak of is in the ranges.

Edward Chapman, Esq., Post and Telegraph Master, sworn and examined:—

- E. Chapman, Esq.  
3 Mar., 1890.
3557. *Mr. Lee.*] What is your official position? I am Post and Telegraph Master stationed at Forbes.  
3558. How long? Seventeen years and a few months.  
3559. Have you prepared any statistics for the Committee? Yes.  
3560. Will you read them? Yes. This is a return showing the business transacted at the Forbes Post-office for 1887, 1888, and 1889 respectively. The money received for money orders and Savings Bank transactions for 1887 was £6,957 19s. 9d.; the money orders and Savings Banks warrants paid amounted to £4,475 15s. 6d. For 1888 the amount received was £9,322 6s., and the amount paid £4,582 7s. 9d. In 1889 the amount received was £10,147 4s. 5d., and the amount paid £4,027 8s. 3d. The telegraph revenue for 1887 was £921 6s. 7d.; in 1888, £923 5s. 3d.; and in 1889, £1,017 6s. 5d. The letters posted at Forbes in 1887 numbered 167,046, and the newspapers 50,634. In 1888 the letters posted numbered 189,465, and the newspapers 55,890. In 1889 the letters posted were 239,040, and the newspapers 61,305. The sale of postage-stamps for 1889 amounted to about £3,000.  
3561. During the period for which these statistics were furnished was there any mining rush in the district? Not that I know of. Parkes had broken out twelve months before I came here.  
3562. But during the last three years? No, not to my knowledge.  
3563. Do the posts for the mining centres round about Parkes affect your returns in any way? Not in the least.  
3564. Can these returns be taken as a fair indication of the steady progress of the district? Yes.  
3565. Do the letters received and distributed in the district bear favourable comparison to the number posted? They are about the same.  
3566. How many mail-bags do you dispatch weekly from here? We interchange with, as nearly as possible, twenty post-towns.  
3567. Some daily and some weekly? Yes; and some bi-weekly and some tri-weekly.  
3568. How many officers in your department are included in the telegraph branch? Four, exclusive of myself; that does not include letter-carriers or messengers.  
3569. Go five years beyond 1887, what would the returns be, approximately, at that period? About one-half of what I have given, I should say.  
3570. Where do you reckon the great increase has taken place? There has been a steady increase since I have been here. Every year I have noticed an increase in every department.  
3571. Was there a mining population when you came here seventeen years ago? No; only the remnants of the old rush.  
3572. To what do you attribute the increase in the correspondence? To increased population and settlement.

Mr. Matthew Bolton, storekeeper, sworn and examined:—

- Mr. M. Bolton.  
3 Mar., 1890.
3573. *Mr. Dowel.*] Where do you reside? I am a storekeeper, residing at Condobolin.  
3574. How long have you been there? Twelve years. Previous to that I lived in Forbes.  
3575. How long were you in Forbes? Seventeen and half years.  
3576. Do you know the country between Molong and Parkes and Forbes? Yes.  
3577. Have you any statistics you wish to lay before the Committee? I have particulars of the amount of carriage passing to and from the district, which I obtained through the carrying agents—it is an approximate estimate of the trade to Condobolin, and the Lower Lachlan.  
3578. From what agent did you obtain the information? From Wright Heaton's agent.  
3579. Is the agent here? The man who acts there is here.  
3580. I understand that you wish to give evidence in favour of the proposed line from Cowra to Forbes? Yes. I have been storekeeping in Condobolin for over ten years. During that time all the goods I have received from Sydney came *via* Borenore until the Cowra extension opened. As soon as the Cowra extension opened I obtained all my goods in that direction, and in comparing what I have paid with the amount which has been paid by others who had obtained their goods *via* Borenore, I find I have effected

Mr.  
M. Bolton.

3 Mar., 1890.

a saving on the carriage of from 6s. 8d. to 7s. 6d. per ton. The trainage is a little more, on account of the lengthy distance of the line, but the carriage rate from Cowra, on account of the superior character of the road, is considerably lower.

3581. Supposing a railway were constructed to Forbes, either from Cowra to Forbes, from Molong and Parkes to Forbes, or from Cudal to Forbes, would you still do your business with Cowra instead of coming to Forbes? If the line came to Forbes we should still continue that way, although the line *via* Molong is estimated to be 3 miles nearer Condobolin than Cowra. I have never had a load of goods Molong or Parkes way; and the carriage between Parkes and Condobolin, although little more than half the distance, is the same as the rate we pay on the full distance to Cowra.

3582. Do I understand you to say that if a railway were constructed to Forbes, there would not be much probability of traffic between Condobolin and Forbes? If it came to Forbes, we should, of course, get our goods through Forbes. The line to Parkes would be of no use to us.

3583. Do you think that if a railway were brought to Forbes there would be any revenue from your district? If the route which I advocate is constructed, it would benefit not only the north side of the river, but also the south side. Previous to my leaving Forbes, I was with J. & W. Thomas—they do a large business down the river on the north and south side. At the present time the south traffic is lost to this district, it goes away to the southern line. I was in Sydney the other day with a gentleman from Euabalong, and he bought all his goods and forwarded them by the Cowra line, although he was paying 160 miles of carriage as against the 112 to Carathool. He said he got his goods at a cheaper and quicker rate *via* Cowra than *via* Carathool, although he got differential rates on the southern line to balance it. There are no differential rates on the western line.

3584. Does any merchandise come from Melbourne to this part of the country? The only thing is machinery. We have a lot of tank-sinking plants about Condobolin. Nearly all the people use Melbourne machinery. It came round *via* Cowra.

3585. Setting aside all the rival routes, do you think that if a railway were brought to Forbes by any one of them, the trade of Condobolin would be done with Forbes? If the railway came by Parkes you would have the traffic from the north side of the river only, but if the railway were taken to the cross line from Blayney, you would get both the north and south sides up to a point near Lake Cudgellico.

3586. What is about the population of Condobolin? About 800.

3587. Is there much land taken up and settled upon in and around Condobolin? Since the 1884 Act came into operation a number of selectors have come from Victoria and from places on the border and have settled on all the resumed areas available. The land within a distance of 12 miles of Condobolin is nearly all taken up.

3588. To what purpose have they put the land? Chiefly grazing. As nearly as we could discover there are about 1,800 acres under cultivation.

3589. What is grown upon the land to which you refer? Wheat and hay.

3590. What do the settlers do with their crops? So far the local consumption has been in excess of the production.

3591. What are the crops like;—are they good or bad? One gentleman living at Bonar—Mr. James Dawson—I think he is about 12 miles from Condobolin, on the south, crops from 100 to 200 acres. He gives us his average for ten years, taking good and bad seasons, as 14½ bushels to the acre, although two or three times he had no crops. Coming to the north-east side there is a selector on Derrawong, about 16 miles this way. He has put in wheat four years, and he had an average during those years of 14½ bushels, although one year out of the four was a failure. He cultivates about 60 acres, but this year he will have over 150 acres.

3592. In a short time you will have a surplus production in your district, which it will be difficult to get rid of unless you have railway communication? Yes. We had a flour mill opened two years ago. That gave a certain stimulus to wheat-growing. The first encouragement given to the mill was 1,800 bags of wheat.

3593. Has the land under crop increased considerably since the mill has been opened? Yes; this year we shall have more wheat down there than we require.

3594. What quantity of wheat has been produced there this year? I cannot give you the total, but the crops are exceptionally heavy.

3595. Up to the present time you have not over-produced? No.

3596. Will there be much produce coming from Condobolin to the railway in the shape of grain? I think there would be in a couple of years time, because nearly double the quantity of land will be put under cultivation.

3597. Would any quantity of wool be brought to Forbes if this line were constructed? Yes; all down to 50 miles below Condobolin would come this way.

3598. Whatever route might be adopted to Forbes, the wool traffic would come here? Yes.

3599. And that would be considerable? Yes; there are some large pastoral holdings down our way.

3600. Do you think any traffic in stock would result from the construction of this line? Yes; but another gentleman, associated with me, would be able to give you particulars as to the stock traffic.

3601. Is the character of the soil tolerably good in this country? Exceptionally good.

3602. Are you subject to droughts? Yes; but there is an enormous amount of vitality in the district. In two good seasons we seem to recover from all the effects of one bad one.

3603. Do you know the country between Condobolin and Mount Hope? No; I have only been as far as Euabalong.

3604. Is there any further information you desire to give the Committee? I desire to say that, although I have been in business twelve years, I have never had any goods sent to me by the Parkes line, nor is there any traffic from Parkes to Condobolin. In dry weather the want of water on the road puts it out of the question. In wet weather the road is of such a soft, boggy nature that the teams cannot travel upon it.

3605. Is there any Crown land in your district available for settlement? I think there is more land available in our district than in any other. It is good land, but it is very scrubby. The scrub has to be taken off before it can be taken into use.

3606. What kind of scrub is it? Pine scrub.

Mr.  
M. Bolton.  
3 Mar., 1890.

3607. Does there seem a disposition on the part of selectors to take up land in your district? Yes; particularly men from Victoria.
3608. Is settlement continually going on? Yes.
3609. It is not at a stand-still now? No; even last week three or four parties came over and went on to the borders of the district, on Melrose, which has been free from selectors all along.
3610. No matter by which route the railway may be constructed to Forbes, a large proportion of trade from Condobolin will come here? Yes; once the railway comes to Forbes.
3611. *Mr. Lee.*] I suppose the line from Cowra to Condobolin would suit you? Yes; better than any other, from the nearest point on the Cowra line upon which the Government might decide.
3612. So far as you Condobolin people are concerned, if the line came from Molong to Forbes, from Bore-nore to Forbes, or from Cowra to Forbes, Forbes would still be the depôt for the Condobolin traffic? No doubt of it.
3613. If the line were not constructed you would continue to send your dray traffic to Cowra? Yes.
3614. Although it is a longer distance down to Forbes? Yes.
3615. Of course there is a railway station there? Yes.
3616. Whereas there is none at Parkes? No; but there is a station at Molong, and that is nearer than Cowra.
3617. How far is it from Condobolin to Molong? It is estimated to be 117 miles.
3618. And from Condobolin to Cowra? 120 miles.
3619. The distances are about the same; but the Cowra Road is better? Yes, we could not get goods down from Molong.
3620. Why? In dry weather the teams could not travel that way, and in wet weather the road would not carry them.
3621. But take a happy medium? The country is of such a difficult nature, that you can go to Cowra a longer distance for a less rate of carriage. The teams believe in travelling with the river—they would travel with the river at a lower rate, than by any other route.
3622. Is that road good when the river is in flood? I have been in Forbes and Condobolin since 1861, and I have only seen the river in flood once, and that was for a week.
3623. Have you seen it come over the banks only once? I have seen it over the banks, but not to interfere with traffic.
3624. There are two roads from Condobolin to Forbes—one on one side of the river, and the other on the other? Yes: the south side is the longest.
3625. Which side is most liable to flood? Neither are interrupted by flood now—they were, a few years ago, as there were no bridges: but the Government have built a bridge from the Coobang Creek, and where the river used to break out, at a place called Bumbuggin, there is now no stoppage to the traffic—all that was required was the bridge.
3626. Why do you give the preference to a line from Forbes to Cowra? On account of the country being better, both in fine and wet weather—the teams would much sooner go that route.
3627. But I am speaking of the railway? We think it will place us in communication with both lines—south and west.
3628. A large quantity of wool is produced in your part of the country? Yes.
3629. That does not require access to both lines? No; but we estimate that this would be the shortest way, and the cheapest way, by which to get it to Sydney.
3630. Do you not know that it is 15 miles longer *via* Cowra to Sydney, than it would be *via* Cudal? Cowra is generally spoken of as the station; but we mean the nearest point upon which the Government might decide on that cross line.
3631. I suppose there is a desire in your part of the country to get an outlet, to be brought into contact with the outside markets? We are afraid that if we do not get an outlet we shall over-produce, and that will be more injurious than anything. We could not carry our hay and grain away.
3632. Your object would be to get to market as quickly and cheaply as you could? Yes.
3633. Would not the shortest route be the quickest and cheapest? Well, I cannot speak as to the actual distances.
3634. I have already given you the distances as surveyed? It is the prevalent opinion in Condobolin, that if we were connected with the Blayney and Murrumburrah line, we should be brought nearer to market, in the matter of trainage, than by any other line.
3635. But, according to your own admission, Forbes would be your depôt? It would suit us as a depôt.
3636. That is the point at which you must touch the railway—is it not? Yes.
3637. That being the case, where do you wish to send your produce—your wool must go to Sydney; you have said that you will be over-producing wheat,—what do you wish to do with that? In view of the contemplated extension of the other line we hope to be able to send it the other way.
3638. What will be the dray carriage on wheat from Condobolin to Forbes? 9d. a bushel.
3639. And would you be able to pay 9d. per bushel and ship your grain to Sydney and other markets, and then compete with other wheat there? Decidedly not; we could not do it.
3640. Your carriage would amount in all to 1s. 1½d.? Yes.
3641. Then this particular line being brought to Forbes would be of no use as a wheat line? It would require further extension to the westward to be a benefit, and no further extension is, I believe, contemplated at present.
3642. An extension from Forbes to where? Menindie.
3643. Supposing the line were constructed from Cowra to Forbes, and thence to Parkes and Dubbo, how would that suit the requirements of your district? Not at all.
3644. As a means of outlet for the wool and station produce of your district Forbes would be the best point of communication? It would bring us nearest so far as communication with other places is concerned.
3645. But would it be the cheapest way? We are singularly situated at present at Condobolin. Cowra is our nearest railway point.
3646. But if the line were constructed to Forbes? Then of course Forbes would be the nearest point.
3647. And it would give a depôt for your produce? It would.
3648. Yet you could not send your wheat from Condobolin to Forbes, and pay 9d. per bushel dray carriage?

carriage? If we did it would be handicapping the farmers very much. Nine-pence is an enormous amount to take off a bushel of wheat. You can send a ton weight from Orange to Sydney for less than half that amount per bushel.

Mr.  
M. Bolton,  
3 Mar., 1890.

3649. Do you advocate the route from Cowra as a portion of the route to Condobolin and thence west? Yes, in view of a further extension west.

3650. That is your reason? Yes.

3651. Suppose the country does not agree to that, what line into the valley of the Lachlan would best suit your purpose? No other line down the valley of the Lachlan could possibly benefit us.

3652. The line under consideration from Molong to Forbes is not the line the people of Condobolin want? No.

3653. They urge the construction of the line from Cowra to Forbes with a view to its further extension to the west? That is the idea of the majority of people in our district.

3654. You are not very much interested in the rival routes from Borenore and Molong? A line coming from Molong to Parkes is of no benefit to the Condobolin District until it reaches Forbes.

3655. Can not the same thing be said of the Cowra line? No. Every mile it comes further down would benefit us in the matter of getting our goods up or sending our wool down.

3656. Although it is the longer route? From the situation of the country the other line would be of no use till it reached Forbes.

3657. Whatever the difficulties of the Condobolin people may be they want a line to Condobolin, and nowhere else? We do not ask for a line to Condobolin at present. We ask for a line from Cowra to Forbes, as being the most beneficial line in the interests of the country generally.

Mr. Humphrey William Grey Innes, produce merchant and auctioneer, sworn and examined:—

3658. *Chairman.*] What is your occupation? I am a produce merchant and auctioneer, also a selector.

Mr. H. W. G.  
Innes.

3659. Where do you reside? At Condobolin.

3660. Have you resided there long? Seventeen years.

3661. Have you been in your present trade the whole time? I was for six years a storekeeper. For some time prior to that I was managing the Condobolin Station.

3 Mar., 1890.

3662. What kind of produce do you deal in, and where do you get the outlet? I deal chiefly in corn, chaff, and oats.

3663. Is it grown in the district? The last few years it has been, but a good deal was bought in the Parkes district during the drought.

3664. Are you able to grow sufficient for your requirements at Condobolin? Yes.

3665. Where do you get a sale for this produce? Principally from stations round about and from carriers.

3666. Carriers going to and from Condobolin? Yes.

3667. What advantage will you derive from the construction of this railway line? We are here to advocate a line from Cowra. I am prepared to give reasons why I advocate that line in preference to any other. The principal reason is that by the construction of a railway from Cowra to Forbes the two best markets in Australia would be open to the settlers on the Lower Lachlan for stock; they will have the choice of the Sydney or Melbourne market. Also, in time of drought, the owners of stock will be likely to truck at Forbes in order to reach the cold country beyond Gundagai. Going round by Molong and Orange they would incur a good deal of risk by leaving their stock in the truck so long. They would rather take their stock across to cut the Southern line about Coolaman than take them round by Molong.

3668. But if it were for starving stock, would it not be better for you to have a cross-line to the Western line, and thence to the Northern line at Werris Creek, giving you communication with the New England district? In this part of the country the stock go to the Tumut, and in that direction.

3669. Is much stock sent away during the drought? We have not had an opportunity; the owners have had to allow them to remain here to perish. They would take advantage of the opportunity if the line were constructed. I obtained statistics from the Inspector of Stock before I came away. I find that the estimated number of sheep in our district is 1,393,399. The estimated product of wool is 3,726 tons 16 cwt. The number of cattle, 6,760; horses, 2,953; pigs, 460. No doubt the members of the Committee are aware that the Government have constructed a line of stock-tanks between Bourke and Condobolin, across the back country. Hitherto those tanks have not paid the wages of the caretakers.

3670. Where did you get that evidence from? Several of the caretakers made their declarations before me as a Justice. They have made that statement monthly. From that I gathered the information that the tanks did not pay their wages. Sometimes the receipts would be as little as 8s. 4d. a month.

3671. Which tanks are those? I can mention Mowabla, Boona, and Tinda. The caretakers all made declarations before me as a Justice, and I know that the tanks have not paid one-quarter of the men's wages.

3672. Have you any other statements to make? I heard Mr. Lee ask a question as to the class of settlers in the district. I think I can give you some information on that point. I have been intimately associated with them all as a land agent. As agent I have filled up many of their applications. I have acted for them as agent before the Board. I can unhesitatingly state that nine out of every ten of them are *bona-fide* men, and that they are a class of men who intend to go in largely for agriculture.

3673. What is the average size of their holdings? Principally a full section. I have seen as many as ten sections taken up there in one day.

3674. In what direction from Condobolin are the principal portion of these selectors? There are a great many to the south. There is one large body of them, about fifteen or sixteen, on one run.

3675. To the south? Yes.

3676. What run is that? Bygalore. There are a large number on Derrawong, 14 miles from Condobolin, about north-east.

3677. That would be towards Parkes? Yes, but only 14 miles from Condobolin—about half-way between Trundle and Condobolin. Trundle is only 40 miles from Condobolin, about north-east. I wish to rebut some of the evidence offered to the Committee at Parkes as to distances. It was sworn, for instance, that the distance between Parkes and Condobolin was only 50 miles, whereas the distance is actually 66 miles.

3678. What distance is it from Condobolin to Forbes by the road? 60 miles.

- Mr. H. W. G. Innes.  
3 Mar., 1893.
3679. You make a difference of 6 miles between the two places? Yes. In the last drought I purchased over 50 tons of produce in the Parkes District, and the greater portion of it had to come round by Forbes.
3680. Why did you not purchase it at Forbes? Because I got it cheaper in the Parkes District. I purchased it early, before there was a rush; it was all secured round about Forbes. What I bought was principally chaff. I came round by Forbes for the reason that the back road is a dry track in a drought. In dry weather you have to travel a long distance for water, and in a wet season the road is utterly impassable for teams. I have known a spring-van to be five weeks between Condobolin and Parkes with a light load.
3681. Would you be surprised to hear that Mount Hope had been supplied with flour direct from Parkes for a long time? I should not be surprised.
3682. But would not that road pass over the same class of country as the road from Parkes to Condobolin? Not necessarily when you come round by Forbes.
3683. But they happen to go direct? That might be done in a good season with good horse-teams, but still there are long stages.
3684. You are referring to bullock-teams? Yes. Another reason why I advocate the line to Cowra is that it is cheaper in construction. There would be between Molong and Parkes 69 miles and 7 chains of new construction, at a cost of £7,609 per mile.
3685. Where did you get that estimate? From the Government statistics.
3686. Have you any statistics as to the Woodstock route? The distance of new construction is 64 miles and 40 chains, and the cost is £5,500 per mile, or a total of £354,750; the grade is 1 in 60, and the height above Forbes is 597 feet. Another reason I have for advocating this line is that it opens up two good markets for stock. The owners of stock have the choice when they get to Cowra. I wish to contradict a statement made at Parkes as to mails having been sent round from Condobolin to Parkes *via* Forbes—that is utterly untrue.
3687. I do not remember that evidence? It is so reported in the Press.
3688. What is the class of country between Condobolin and Parkes—I mean for settlement—not for railway? A good deal of the land is alienated; it is red loam.
3689. Is it the same from Condobolin to Forbes? It is principally river flats—more black soil; it is more sticky.
3690. Which would be your market in the event of either of these lines being constructed—that is, the line we are investigating, or the line *via* Cowra? Do you mean for stock?
3691. Which would be the outlet for stock or anything else you wanted to send away? Sydney most likely.
3692. But what would be the nearest point on the railway? Forbes.
3693. With this exception, that you have an advantage of two markets so far as the stock traffic is concerned, that is Melbourne and Sydney, it does not matter where the railway goes after you get your goods on board at Forbes? Oh, yes. The haulage would be greater *via* Molong than *via* Cowra.
3694. But it would be less? We maintain that Cowra is a shorter distance.
3695. Is that the only other reason—that it would be shorter? Yes.
3696. What is the reason that you and other witnesses from Condobolin have come here specially to give evidence against the construction of the line *via* Parkes? Because at a public meeting of the residents of the district, which was largely attended, a resolution was unanimously carried in favour of the Cowra route. It was considered that that was the best in the interests of the country.
3697. In the interests of your part of the country? No, of the country generally.
3698. Did the speakers at that meeting take into consideration the settlers to the north of Parkes? They took into consideration the nature of the country the line was likely to pass through, and from their personal experience they believed that the line *via* Cowra would run through better country than that *via* Molong, and that it would serve more people.
3699. Do you think that if either of these lines were constructed to Forbes it would be a matter of great importance to your district? I do.
3700. No matter which way it went? Of course it would benefit the district, but not so materially as it would if it came direct down the valley of the Lachlan.
3701. That is to leave Forbes and go to Menindie? Yes, *via* Mount Hope.
3702. If you want Sydney for your market what difference does it make to you whether the line goes *via* Molong or *via* Cowra? There is the extra haulage.
3703. That is greater *via* Cowra than *via* Molong and Parkes? But *via* Cowra we have the advantage of the Melbourne market.
3704. But supposing Sydney to be your market, what difference does it make to you whether the line goes *via* Cowra or *via* Molong? We do not suppose that Sydney will be our market. We want an opportunity to take advantage of either market—particularly for stock.
3705. You have come before this Committee determined to fight against one line and in favour of another? I have come here to support the line which, in my opinion, and in that of the majority of the people of the Condobolin district, is the best line in the interests of the country. I have watched the whole discussion from beginning to end, and I have arrived at the conclusion that this is the best line, and that it is likely ultimately to pay.
3706. How would a line from Young through Grenfell suit you—would not that be better? No; I do not think so.
3707. It must be from your place to Cowra? To the nearest point on that line.
3708. *Mr. Lee.*] I understand you to say that one of your chief reasons for advocating the Cowra route is that it would be the shortest route to Sydney;—if I prove to you that it is not the shortest route, how will you view the question then? I should still be in favour of the route, because, as I pointed out before, it opens up two markets.
3709. The opinion of the Engineer-in-Chief is to this effect:—
- “188. Can you tell me the distance between Bathurst and Forbes by the Molong route? The distance from Sydney to Forbes by the Molong route is 285 miles.  
189. What is the distance from Sydney to Orange and Cudal? 268 miles.  
190. And from Sydney through Cowra to Forbes? 283 miles.  
191. Then the shortest route will be that through Orange and Cudal? Yes. My principal reason for advocating the line is that it opens up the two best markets for stock.”

3710. The question you have raised as to distance you have to abandon, inasmuch as it is not borne out by actual facts? Of course, if it is not borne out by facts.
3711. You advocate the Cowra line, I take it, to come to Forbes and not to Condobolin? Ultimately it may come to Condobolin. We are not anxious for it to come there for some time.
3712. Supposing the railway were constructed to Forbes, would you be able to grow wheat in your district, to cart it to Forbes, and to forward it to the markets of the Colony at a profit? We have not yet arrived at that stage at which we can more than supply the local demand. By the time we have done that, we anticipate having a railway to send our produce west.
3713. In the direction of Menindie? Yes. The production is increasing every year in the district. One man who has had 10 acres within 10 miles of Condobolin under crop will have 100 this year, and there are several others progressing in the same ratio.
3714. The inference is that Condobolin is a wheat-growing district? Yes; I have proved that myself.
3715. Every year? In the driest year I have had a crop from which I could get something. Now and again we may get very little, but generally you would have a fair crop.
3716. What was the crop in 1888? Another witness has all the statistics about that.
3717. What freight is your district likely to supply to a railway if it were constructed to Forbes? The return I have quoted was for the year 1889. Besides the quantity of wool I have named, there would be skin, hides, and tallow.
3718. Wool would be carried in only three months of the year? Then there are large quantities of back loading. Rock salt is used very largely down there.
3719. Independently of wool and stock, there would not be very much produce carried on the railway? No.
3720. You are aware that the object of this investigation is to try to determine, if possible, which is the best way to open the important district of the Lower Lachlan, having in view the fact that there are other districts with claims quite as strong, if not stronger, than yours. Bearing that in mind, which route would, in your judgment, serve the greater number of people living in these various districts? I have taken that into consideration, and I say unhesitatingly that I believe the direct line of the valley of the Lachlan will be the best.
3721. *Mr. Dowel.*] Can you give us any information as to the population now in existence on the particular line you advocate? Those particulars will be given you by another witness.
3722. Have you a personal knowledge of the country within a radius of 20 miles of Condobolin? Yes.
3723. You know the character of the country upon which settlement has taken place? Yes.
3724. You have personally inspected the country, and you know its capabilities both as regards its carrying capacity and the growth of grain? Yes.
3725. Could you give the Committee any information as to the average crops grown in your district? Another witness has all that information prepared.
3726. Do you know the number of acres selected at Condobolin since 1884? That will be given you by another witness.
3727. Can you tell us about the mail communication between Parkes and Condobolin? The postmaster at Condobolin will be able to give you that information from official sources.
3728. Do you know anything of your own knowledge concerning it? I know he told me that I got the most letters that way, and that was about two a week.
3729. Is the mail communication between Parkes and Condobolin by horseback, or by coach? As a matter of fact there is no mail between Parkes and Condobolin. Hitherto it has been carried on horseback, but last month the Government decided that as there were no letters carried they would send the mail out *via* Trundle. The line is now from Condobolin to Trundle.
3730. What is the mail communication between Forbes and Condobolin? Cobb & Co.'s mail, six times a week each way.
3731. Have you any industries established in Condobolin? That information will be placed before you by another witness.

Mr. H. W. G.  
Innes.  
3 Mar., 1890.

Mr. John Bouffler, hotelkeeper, sworn and examined:—

3732. *Mr. Lee.*] Where do you reside? At Condobolin.
3733. What is your occupation? I am an hotelkeeper, storekeeper, and selector. I have resided in Condobolin over ten years.
3734. Are you prepared to lay before the Committee any statistics as to your district? As to the amount of selection, the money received at the Lands Office, and the carriage done by Wright, Heaton, & Co.
3735. From whom did you obtain these statistics? They were copied from the butts of the Land Agent's receipt-book by Mr. Innes and myself.
3736. Did he hand you the books? Yes; he said that anything in those books would be authentic. We did not run up the totals, but he gave us the amount for the two years himself. He added it up himself.
3737. Will you read the information you have? The land alienated from the 1st January, 1888, to the 31st December, 1889, amounted to 235,755 acres; the total moneys received at the Lands Office for the same period were £29,000; the area of land under cultivation within 15 miles radius of Condobolin is 1,850 acres; school attendance roll at the public and denominational schools, 190; there are 8 hotels (1 of them having forty rooms), 9 stores, 2 banks, 1 steam flour-mill, 1 steam saw-mill, 1 steam wool-scourer, 4 smith's shops, 2 saddlers, 2 bakers, 1 cordial factory, 3 churches, a School of Arts, a hospital, a brick post and telegraph office, a brick court-house and lock-up, 2 racing clubs, and a well improved show ground of 27 acres; there are about 800 inhabitants, and the town is gazetted for incorporation; there is a daily mail from Sydney, and 13 mails are received and despatched weekly; the average yield of wheat for this season was 25 bushels—one farm (I refer to Mr. Dawson's) has averaged for twelve years 14½ bushels. The flour mill was only opened in 1888, and the first encouragement given to it was 1,800 bags of wheat. The average yield of hay per acre this season is 35 cwt. At Wollongough, about 50 miles south of Condobolin, the selectors are completely isolated, their nearest railway station being Coolaman. No other route but Cowra would be of any benefit to them. In this district, called the Humbug Creek, there are about

Mr.  
J. Bouffler.  
3 Mar., 1890.

Mr.  
J. Bouffler.  
3 Mar., 1890.

about 80,000 acres alienated. That is included in the estimate of alienated land I have already given. I hand in a letter which I have received from Mr. R. Macrell, of Wollongough. He says:—

Dear sir,

The following is all the information I can give you, as the time is so short. The land selected within about 20 miles round Wollongough is about 80,890 acres, and the population is about 250. The hay crop will average 2½ tons per acre, and the wheat crop from 25 to 30 bushels per acre. The quantity of wool is about 500 tons.

3738. You do not know of your own knowledge if that is accurate? No. I will now give you some particulars in connection with the business of Wright, Heaton, & Co. The estimated return of the inward traffic from Cowra is 1,200 tons, and from Borenore 450 tons, or a total of 1,650 tons. The wool produced which would go by the Cowra route is 3,926 tons—that is in the event of the railway being brought on to Forbes. At present they have to go across to Coolaman. Unless the Cowra route is adopted a quantity of this traffic would be diverted. All on the south side would be diverted, for the reason that there is no means of crossing the Lachlan between Forbes and Condobolin.

3739. This wool would go by rail if the line were constructed to Forbes? Yes.

3740. A large proportion about Condobolin, and some at a considerable distance beyond Condobolin, would have to pass through Condobolin? Yes.

3741. Forbes under any circumstances would be the depôt you would make for? Providing the extension were from Cowra to Forbes. Fully 50 per cent. of the quantity hangs upon that extension.

3742. Where does that wool go to now? To Whitton, Coolaman, Young, and Cowra—that is on the southern side of the river. I should fancy it amounted to 50 per cent.

3743. Does any of it go to Hay? Not nearer than Mount Hope; and the Mount Hope traffic will come to Forbes if you get a railway.

3744. Suppose the Cowra line is not constructed, and that a line is made to Forbes, *via* Parkes and Molong, or *via* Borenore, would this traffic come to Forbes under those conditions? Not more than 50 per cent. of it.

3745. Why? Because people cannot come from the south side of the river. If you take a point due south from Forbes, it would go to Cowra. When you come to that point it would be cheaper to deliver at Cowra. Of course the Cudal route would be better than the Molong route.

3746. But by whatever route a railway were made to Forbes, would not the traffic come to Forbes just the same? No; a great deal of it would remain in its old channel on the south side of the river.

3747. Why? That is so far as my information goes. In the event of the Government constructing a railway to some point between Blayney and Harden, at Woodstock, for instance, we could get a railway not materially longer than the other line—some 2½ miles longer perhaps, if by Woodstock.

3748. If the traffic you speak of would be diverted to the Cowra line, why should it not be diverted to the Cudal line? On account of the advantages which the Cowra line offers, so far as the southern market is concerned.

3749. What advantage is that? Well, they would have to go round by Orange and back to Blayney, in order to get on to the Southern line, if you adopted the Cudal route.

3750. You know that the route you propose is a longer route than the one *via* Cudal? I was not aware of that.

3751. As a matter of fact, it is longer? We do not advocate the junction at Cowra particularly. We should like a divergence nearer than Cowra if possible. We are given to understand from statistics that we could get a line *via* Woodstock, only 2½ miles longer than the Borenore route, with the additional advantage of being brought into contact with the southern districts. I settled in Orange thirty-three years ago, and farmed there for twenty years; I can therefore speak from a personal knowledge of the different routes advocated. There is one matter in connection with the route I advocate, and it is this—that nearly all the settlers in the neighbourhood of Condobolin have interests southward, and it would be of great advantage to them to come into contact with the Southern line. When they go away for relaxation from business, they go that way, and their business also leads them to the southern districts.

3752. So far as produce is concerned, I suppose wool is one of the chief products of the valley of the Lachlan? It is the staple product.

3753. And will remain so for years to come? Yes.

3754. To which market does that wool go? I suppose it reaches Sydney.

3755. Consequently the object of a railway would be to get it to Sydney as quickly and as cheaply as possible? Yes.

3756. If any other line than the line you advocate would take it more cheaply and more quickly, would it not be a great advantage to the settlers? No doubt it would be of some advantage to the settlers; but whether it would counterbalance the extra advantage of being brought into contact with the southern markets I cannot say.

3757. There can be no possible advantage in getting your wool on the Southern line. You do not want to get it there for the benefit of its health, or to compete with the stock traffic; your object is to get the wool to market as quickly and as cheaply as possible, and Sydney is your market? Yes.

3758. Then, as to grain, we have evidence from you that yours is a wheat-producing country? Yes.

3759. What do you do with your grain now? The production is not equal to the demand just now; we have only just started.

3760. Still, yours is a wheat-producing district? I have farmed in the Orange district twenty years, and as far as the production of wheat is concerned, I would rather go into it upon a large scale in Condobolin than in the Orange district.

3761. But at present the supply is not equal to the demand? No.

3762. You anticipate producing more than sufficient for local requirements? Yes.

3763. To which market do you eventually look? I made an estimate a few years ago, and I think we could work up to about 10,000 tons of flour going west, and a short distance north and south.\*

3764. The Forbes line would be no advantage to you, so far as the disposal of surplus produce is concerned? No; only in times of drought. Last year we had a good average of production, while other places were poorly off. There is apparently less mileage to Sydney *via* Cowra than *via* Molong.

3765.

\* NOTE (on revision):—The 10,000 tons of flour mentioned above is an approximate return, provided the line was extended west, from Condobolin.

3765. But Cudal is the shortest route? It is far preferable to the Molong route. The idea of those I represent is, that the advantage of extra market will make up for the extra distance. From a national point of view there would also be less cost of construction, and the line will pass through the centre of the country. Condobolin is equidistant from all the railway points.

Mr.  
J. Bouffler.  
3 Mar., 1890.

3766. Which points? On the Southern Line, on the Western Line, and also from Cowra. There are districts to be considered independently of those to which I have referred—for instance, there is Cudgellico, about 107 miles from Whitton.

3767. Suppose the Cowra line is not constructed, and that the line to Forbes *via* Cudal is made, would your district use that route? It would be compelled to use it, I suppose, so far as that goes.

3768. If the country puts it down, will your district use it? So far as the Molong route is concerned, if that is put down the line will be an utter waste of money, and it will not pay. The Cudal route is better, but the Cowra route is better than either.

3769. You think the line should not go from Borenore or Molong? If we cannot get the Cowra line, we shall be glad to get the Borenore line. The Molong line would be of no use to us. There is an annual loss upon the line already to Molong.

3770. What we wish to know is, whether, if the line were made from Molong, your people would use it? That line would have a disastrous effect on Condobolin, on account of the road. We could not avail ourselves of the road to go straight to Parkes—that is, in its present condition, and it would cost a great sum of money to macadamise it.

3671. But could you not get to Forbes? Yes; but then we should have extra haulage going round by Parkes to get on to the main line.

3772. Do you think the farmers of Condobolin would grow wheat and pay the lard carriage to Forbes? No further.

3773. What is the cost per bushel? With back carriage and with good roads we could get it through at 1s. 3d. per bag—in round figures, about 4d. per bushel.

3774. And, if your grain could be conveyed by rail from Forbes to Sydney at 4½d. per bushel, would you send your surplus grain there? Yes. If we could find a market there would be no limit to the production. If the price in Sydney were 3s. 3d. per bushel there would be a market. I have heard settlers say that they could produce wheat and pay expenses at 2s. 6d. per bushel on the spot.

3775. Were you appointed at a public meeting to represent the Condobolin people before this Committee? Yes.

3776. And you put the line *via* Cowra forward as the best line in the interests of the country? Yes; we look upon the production of grain as of secondary importance. The selectors who hold 2,560 acres combine grazing with grain-growing. The Cowra line would be a great advantage to selectors having small lots of sheep, while it would not pay them to drive long distances to market. They want to get them to Sydney market, and they would have a chance of diverting to another market if the junction were made at Cowra.

3777. But if you adhere to Forbes as your starting-point it makes no difference? *Via* Cowra they have three markets—Sydney, Melbourne, and intermediate districts. If the Parkes road were metalled they could, of course, take advantage of the Parkes market. From my own knowledge, however good the condition of the road, it would make very little difference, because the teams would stick to the river on account of the water. I have known teams go from Condobolin to Parkes, and from Parkes back to Condobolin, *via* Forbes. There is a difference of 20 miles in the distance. They go empty, but they cannot come back full, unless in a wet season, when there is plenty of water, and then the road is likely to be very bad.

Norman Gatenby, Esq., pastoralist, sworn and examined:—

3778. *Mr. Dowel.*] Where do you reside? On the Lachlan; 20 miles below Forbes, on the southern bank.

3779. How long have you resided in the district? About three years in this district, and about fifteen years further over.

3780. What is the size of your holding? 55,000 acres.

3781. Is any portion of the area devoted to agricultural pursuits? There are some 200 acres under agriculture this year, with irrigation.

3782. Will you describe your irrigation works to the Committee? We have a 15-inch pump, a plant costing about £2,000—it throws between 2,000,000 and 3,000,000 gallons of water per diem. It will irrigate about 500 acres.

3783. What have you found to be the effect of irrigation? The effects are wonderful in this district, so far as fruit-growing and lucerne are concerned. Mangolds, potatoes, onions—almost anything in fact—will grow wonderfully. We have proved it.

3784. You have very heavy crops? Yes. I have grown a large quantity of oats.

3785. What other crops have you grown? I have grown wheat, oats, potatoes, onions, maize, lucerne, sorghum, and fruits and vegetables of all sorts.

3786. Will you give us some idea of your average crops? It is hard to give it exactly; the crops are extremely heavy. We get about 2 tons of wheaten hay to the acre.

3787. Do you grow lucerne, for hay? Yes. We cut it five times during the summer, getting 1 ton, or three-quarters of a ton per acre during that time.

3788. What is the average yield of wheat you have obtained? I could hardly say that; we have threshed only a little, but I should say it would be somewhere about 40 bushels to the acre.

3789. Have you good fruit? The best fruit I have seen anywhere.

3790. What descriptions of fruit? Oranges, lemons, peaches, figs, apples, pears, raspberries and strawberries. All these fruits grow very well with irrigation. We find that raspberries grow very well indeed, with water.

3791. Do you consume on your station all this produce grown by irrigation? No; we have some stored. At the present time we have 300 tons of hay stored. There is no way of getting it anywhere else. If we could get it away we would grow a great deal more, we would get it to Sydney, and make a regular transit of it. Under existing circumstances we simply grow it and store it against drought.

3792. What would be the cost of the carriage of produce from your station to Forbes? £1 per ton, if we send any quantity.

N. Gatenby,  
Esq.  
3 Mar., 1890.

- N. Gatenby, Esq.  
3 Mar., 1890.
3793. That would be delivered to the railway station, if there were one here? Yes.
3794. You say that there is a probability of the area you now have under cultivation being considerably increased if there were a railway at Forbes? I have not the smallest doubt of it. There are many men willing to go in for irrigation, but they are debarred from doing so through having no outlet for their produce. There are seven or eight plants on the river, but that number would be largely increased if there were an outlet for the produce.
3795. What is the carrying capacity of your run? That is rather a hard question. If I tell you the whole truth, our local Land Board will probably put up my rent. I might say, as indicating that it will carry a great deal, that we sheared 51,300 sheep this year from 55,000 acres. It has been a good year.
3796. Is there any portion of your runs scrubbed and ring barked? It is fully improved—ringbarked, scrubbed, fenced, and watered.
3797. Are there any other stock on the run, excepting sheep? Cattle and horses.
3798. What number? Only a few now. We have sold several hundred lately.
3799. Would the wool and produce come from your station to Forbes, if there were a railway? Yes. I should mention that, so far as stock-carrying is concerned, irrigated land will carry ten sheep to the acre, on natural grasses, for eight months of the year.
3800. Do you know anything of the settlement around your particular district? There is a great deal of settlement on the southern bank. On each side of the river there is a good deal of settlement. The holdings are not very large as a rule. They are not so large as they are further on, on account of the ground being richer, and the population being longer established.
3801. Is the settlement, in your opinion, of a permanent character? Yes, permanent *bonâ fide* men, as a rule—some are not, but as a rule they certainly are.
3802. Do you know anything of the rival routes? I have heard a good deal of them.
3803. Have you been over the country which they traverse? Yes; but I only know the Molong to Parkes route well—that is a rough, rocky country.
3804. Do you know the character of the country on the Cudal route? It is rough heavy country, but it is rich. There is richer country on that route, I think, than along the Molong route.
3805. You have a good knowledge of the whole locality? I know it well.
3806. In your opinion, what centres of population would be served by the construction of the line to Forbes through Cudal and on to Parkes? I believe the Cudal line would be the better line as a whole; it would be what one might call a national line. Undoubtedly the railway would have to go to Parkes in the future, but I think the first railway should be made this way.
3807. Do you know the country between Forbes and Condobolin? Well.
3808. Do you know the country further out west beyond Condobolin? There is rich red loam beyond Condobolin.
3809. Is it your opinion that wool and other produce grown in the district would come to Forbes if the railway is taken here? Certainly.
3810. And in your judgment that would be a source of considerable revenue to the railway? I think so.
3811. Is there any other information you can give the Committee? As to the value of land, I might mention that I placed 1,000 acres of land under offer at £6 an acre some time ago to a Mr. Stewartson, of California, who wished to start the fruit-growing and fruit-drying in the district. I mention that to show the value of land and the prospects of irrigation along the river. Mr. Stewartson intended to irrigate the land; it is favourably situated for that purpose—on the bank of the river.
3812. Did you sell the land at that price? No; he did not take it, but he offered £6 10s. later on for land further up the river; that price, however, was refused.
3813. The land which you yourself irrigate is on the bank of the river? Yes; it is rich black alluvial soil.
3814. To a considerable depth? Yes.

William Gibson Dowling, Esq., Stock Inspector, sworn and examined:—

- W. G. Dowling, Esq.  
3 Mar., 1890.
3815. *Chairman.*] What is your position? I am Stock Inspector.
3816. Stationed where? At Forbes. I have been here four years.
3817. Have you prepared any statistics for us? I have a few statistics here I can give you, if you like. For instance, the traffic in stock on all the roads in my district. The district extends to within 6 miles of Cowra, on the south side of the Lachlan, in an easterly direction to the Mandagery Creek, near Eugowra, on the north side of the Lachlan, in an easterly direction; westerly, it goes down to within 10 miles of Condobolin on the north side of the river, and on the south side within about 25 miles of Condobolin; the northern boundary is at The Troughs, and the southern boundary is the Tyagong Creek, which runs into the Bland. I submit as portion of my evidence an alphabetical list of stock-owners with their addresses, and number of stock within a radius of 10 miles on either side of the Lachlan, taken from their sworn returns for last year. I also hand in the stock traffic on the north and south sides of the river from 1887 to 1889 inclusive; it represents the travelling stock that go up and down the river—the traffic on the travelling stock reserve. I will also give you the number of fat sheep leaving the district. In 1887, 62,183 fat sheep left the district, chiefly to Homebush; in 1888, 42,961; in 1889, 51,000. The crossings at Forbes give an average of 750,000 sheep, and 40,000 head of cattle annually.
3818. The figures you have given as to the fat sheep show an increase in 1889 upon 1888, but a considerable decrease upon 1887? Yes; they were mostly sold as stores, and taken to other fattening districts.
3819. What is the total number of sheep in your district? 1,600,400—that would be going 3 miles above Parkes—it includes Parkes, Forbes, and Grenfell.
3820. What is the length and breadth of your district? About 90 miles long and 80 miles wide.
3821. In that area you have the number of sheep you have already given? Yes.
3822. Can you tell the Committee whether the total quantity of stock has increased or decreased during the last few years? According to the returns, it has nearly doubled in three years. The sheep numbered about 800,000 in 1886, and now there are about 1,600,000.
3823. How do you account for 62,183 fat sheep leaving this district in 1887, and only 51,000 this last year? Because this last year, I think, a greater number of store sheep left the district. The total number of sheep that left the district in 1889 was 376,731, and the number coming in from other districts was 230,705.
- 3824.

3824. You sent away 146,000 more than you brought back again? Yes. In 1887, 63,648 left the district in excess of those that came into it. In that year there were 62,183 fat sheep, and 207,460 stores; 2,097 fat cattle left the district. In 1888, the number of fat sheep leaving was 42,961, and of stores 333,977; the number that came into the district was 205,986, making an excess of 170,952. In 1889, 376,731 sheep left the district; of those, 51,000 were fat; 230,705 came into the district from other markets. The excess was 140,026.
3825. There has been a steady increase in the number, but not in the fat? Not in the fat, because in good seasons people generally sell the stores. Some years a greater number of fat sheep are sent away, in other years more stores. It depends on the market for either description of sheep.
3826. Will you let the Committee have a return as to the travelling stock on the different routes? Yes.
3827. Would a railway constructed to Forbes be of material advantage to the stockowners? It think it would, decidedly, as far as fat sheep are concerned.
3828. Do you think in times of drought many would be sent away by train to country where there is more feed? I think so.
3829. Coming through from other districts they would truck through for the mountains? Yes.
3830. Are there many sheep coming here from the north-western country? Very few; they would die before they reached here. They come chiefly from districts outside Condobolin. Sheep do not go south; they all go north; the cattle come south.
3831. *Mr. Lee.*] In the event of this proposed line being constructed into the district, do you think the small and large owners of stock would be likely to use it? Yes.
3832. Both as a means of transporting fat stock to market, and of transporting poor stock in time of drought? The line would be used for fat stock, but not, I think, for poor drought-stricken sheep, because they must travel by a direct and straight road; they will not stand being in a railway truck very long.
3833. At what point are the fat stock trucked now? Chiefly at Cowra. They used to be trucked at Orange before, of course. There are little lots trucked at Molong, but they are very small.
3834. Would the construction of a line to Forbes divert this traffic from Cowra? About midway between Forbes and Grenfell it would go to Cowra, and the balance would come to Forbes. They would truck here for Melbourne and Wodonga.
3835. Was there much stock lost in the district during the last drought? I was not there.
3836. Would the wool from the 1,600,400 sheep in the district be sent to Forbes, if a railway were made there? Some of it would go to Young, but the bulk of it would go through Forbes.

Mr. William Thomas, storekeeper, sworn and examined:—

3837. *Chairman.*] What is your occupation? I am a storekeeper, at Forbes, a member of the firm of J. and W. Thomas.
3838. How long have you been here? Twenty-eight years.
3839. Have you resided all that time in the district? Yes, with this exception, that I have been three times to England and back.
3840. Your business is that of a merchant and general storekeeper? Yes.
3841. By which route do you obtain your supplies from Sydney? Principally from Borenore.
3842. But, prior to the line being constructed from Orange to Borenore, by which route did you obtain them? From Orange. When we first went into business we had to send as far as Penrith by team, and we have been on that line ever since.
3843. You have always touched the Western line at its nearest point? Yes.
3844. Is there any particular information you desire to give us? I have made a memorandum, showing the quantity of goods from Borenore and the quantity from Cowra last year. We got 376 tons 3 cwt. and 2 qr. from Borenore, and 101 tons 7 cwt. from Cowra. We obtained, in sundries, from Cudal, Cowra, Eugowra, &c., that is, flour, potatoes, bran, pollard, &c., 89 tons 13 cwt., making a total of 567 tons 3 cwt. 2 qr.
3845. All the goods mentioned there, with the exception of the produce from Eugowra, Cudal, and Cowra, were general store goods? Yes, the bulk of them.
3846. Did you pay the railway freight on what you got from Cudal and Eugowra? No.
3847. What freight do you pay the Railway Commissioners annually? The amount of trainage paid by J. and W. Thomas for the year ending December 31st, 1889, was £1,661 11s. 2d. We paid to carriers £1,039 19s. 7d., giving a total of £2,701 10s. 9d. The trainage is made up as follows:—Borenore, £1,478 8s. 11d.; Cowra, £178 0s. 11d.; and sundries, £5 1s. 4d.
3848. Did the Railway Commissioners apply to you for any information on the occasion of their recent visit? No.
3849. Do you know how they obtained their information in this district? I do not think they made any inquiries as to the cost of bringing goods here by rail.
3850. Did you furnish the Commissioners with any particulars? Well, I waited upon them, and we had a talk.
3851. Do you send any produce from the district? Not a great deal. We buy wool, hides, and tallow sometimes, but not a great deal. There are other people in the town who buy those things.
3852. Have you travelled round about the district much during your residence here? My travels have been principally between here and Sydney.
3853. Have you been along the railway route to Cowra? Not much; I have been along part of the road from here to Canowindra.
3854. Do you know the Molong route? No; I have only been twice that way.
3855. Do you know the Cowra route? I have been from here to Cowra, but not from Eugowra.
3856. Are there any supplies for the town coming by way of Cowra at the present time? Some storekeepers get their goods entirely that way, but we have not been getting much. We find that we get them better from Borenore.
3857. Do the bulk of the store goods from Sydney come by way of Borenore? Yes. There is not a great deal of difference in the cost of carriage between Borenore and Forbes, and Cowra and Forbes, although

W. G.  
Dowling, Esq.  
3 Mar., 1890.

Mr. W. Thomas.  
3 Mar., 1890.

Mr.  
W. Thomas.  
3 Mar., 1890.

- although the distance from Borenore is greater. There are more drays on the Borenore line, and they carry at a cheaper rate.
3858. Your business gives you a fair insight into the position of selectors in the district? Yes.
3859. What opinion have you formed as to their position? I think they are in a very good position.
3860. I suppose they have had the same difficulties to contend with for the first five years as selectors in other districts have? Yes; they are under very heavy expense, of course, in fencing and other work of that kind.
3861. Do you find the selectors are permanent men? Yes; some I have known a long time; they are likely to remain.
3862. Do you find that many clear out after residence has been complied with? Not many of late years. Some selectors came here ten or twelve years ago, and seemed to take up land in order to sell to the squatter, but they are pretty well cleared out now.
3863. The selection is now more genuine? Yes.
3864. How do you find that those settlers who are cultivating their land get on? They get on pretty well. Of course, they complain about the low price of grain.
3865. Do you think they are cultivating their land at a profit? Yes. They seem to get good returns. Of course, they would grow more if they had a market. At present they say, "It is of no use to grow wheat; there is no means of sending it to market."
3866. Do many of them combine grazing with agriculture? Yes, if they have fair-sized selections.
3867. I suppose some go in for grazing solely? Yes, what we call the large selectors; but I think most of them do a little farming.
3868. The object of our inquiry is to ascertain whether it would be prudent to construct a railway *via* Molong and Parkes to Forbes—whether, if constructed, that line will be likely within a reasonable time to pay working expenses and interest on the cost of construction;—we shall be glad to have your opinion as to whether it is a desirable route? I think the route from Borenore will pay the best, because there is more population along it and better land.
3869. You think there is more population? Yes; there seem to be more settlers.
3870. Still, you have not ascertained personally whether these persons are residing there or not? No; I only go by hearsay. I have seen some of the farms along the road.
3871. Admitting that it is necessary to bring a railway into this magnificent country in the west, and having in view the various important centres which exist within easy distance of each other, which do you think would be the best route to adopt? I should say the route from Borenore to Forbes.
3872. Over and above any other? Yes, that is my opinion.
3873. Do you think that route preferable to the Cowra route? As far as paying qualities are concerned, I should say so. I do not think it makes much difference to Forbes which way the line is taken, because the distance is about the same.
3874. It appears that no matter which way the line is constructed it is bound to come to Forbes—what I want to know is, which do you think would be the best route, having regard to the general interests of the country? The Borenore route, I think.
3875. Would that fairly serve the centres between Molong and Parkes, Parkes and Cudal, and Borenore and Canowindra? Of course, Molong and Parkes would not be pleased with it.
3876. But would it serve them reasonably,—would it answer their requirements? That I could hardly tell. In the interests of the country, however, I think the Borenore route ought to be adopted. Of course, you cannot suit all parties.
3877. Do you think a better route than either of those proposed could be found? I do not know of any.
3878. How would the railway here serve the Condobolin people? It ought to serve them very well. As far as distance is concerned, either route does not make very much difference.

Mr. Charles Prow, storekeeper, sworn and examined:—

- Mr. C. Prow.  
3 Mar., 1890.
3879. *Mr. Dowel.*] You reside at Forbes? Yes.
3880. What is your occupation? I am a storekeeper and general importer. I have resided here twenty-eight years.
3881. Have you always followed the occupation of a storekeeper? For the last twenty-eight years.
3882. Previous to that what were you doing? Mining.
3883. You were here when the first rush set in? Yes, at the very first, when the first claim was bottomed.
3884. The discovery of gold caused Forbes to spring into existence? Yes.
3885. And you have watched its rise and progress? Yes.
3886. Do you know the whole of the country about this district? Pretty well; I have travelled over it occasionally.
3887. Do you know the class of settlement in existence here? Yes. It is principally pastoral and agricultural settlement.
3888. Are there many small holdings? Yes, and a few large ones.
3889. I suppose the selectors cultivate a portion of their land, and run stock upon the other portion? Yes, principally.
3890. Are there any dairy farms in this district? Yes.
3891. Many? A good few, most of them dairy a little; but there are two rather extensive dairy farms.
3892. Are there any butter factories in the district? No.
3893. Are there any wool-scouring establishments? There are three on the river here, I think. There are two in the municipality.
3894. Are there any manufactories in the town? Nothing of any note. There are buggy factories and breweries.
3895. Do you manufacture soap? Yes.
3896. All these industries have sprung up and appear to be of a permanent character? Yes.
3897. Is the country round about Forbes liable to be flooded? It has been flooded three times to my recollection—in 1870, in 1872, and 1878.
3898. Has it done any considerable damage? In 1870 it did a little damage, but nothing very great; it would do more now, because there are more improvements.
- 3899.

Mr. C. Prow.

8 Mar., 1890.

3899. Still, generally, a flood is looked upon as a good thing? I believe the flood to which I referred did as much good as harm.
3900. Do you know these rival railway routes? I have heard a good deal about them; I have been at different meetings, and I have been over the Borenore route.
3901. Have you been over the Molong and Parkes country? No.
3902. Do you know the route from Grenfell to Parkes? Yes.
3903. What sort of country is it? Flat, level country.
3904. What is the distance from Grenfell to Parkes? About 65 miles.
3905. Do you think it is desirable to construct that line? There is not a great deal of traffic on that line just now; but, possibly, if the railway was constructed it may cause traffic.
3906. Does it go through good country? Very good country.
3907. Your estimate of the distance of 65 miles, I take it, is from Grenfell to Forbes, and from Forbes to Parkes? Yes.
3908. What do you allow from Grenfell to Forbes? 45 miles; and 20 from here to Parkes.
3909. Has any consideration been given to that route by the Forbes people? Yes, at times.
3910. Has it met with general approval? Yes, it has.
3911. Have you been over the route yourself? Frequently.
3912. Is there much settlement upon it? Not a great deal—the land is taken up in large holdings.
3913. Is it not likely to support so large a population as the other route? I think not.
3914. Knowing all these routes, do you think it is desirable to construct a line from Molong to Parkes and Forbes, *via* Flagstone Creek—do you think there is sufficient population to justify the Government in constructing that line? No doubt there is sufficient population, but, at the same time, I believe that with the present tariff we could land our goods from either Borenore or Cowra by horse team cheaper than we could do by the railway.
3915. What do you pay by horse team from Borenore? I have some goods on the road at £2 a ton. The distance from Borenore to Forbes, *via* Parkes, is 85 miles, and the present tariff would be—No. 1 class, £1 9s. 4d. per ton; No. 2 class, £1 16s. 2d. per ton; No. 3 class, £2 9s. 10d. per ton. There is a higher class still, No. 7—that would come to £3 4s. 6d.
3916. What distance have you calculated from Borenore to Molong? 14 miles. In the wool season we get goods carried at from 25s. to £2 10s. a ton from Borenore to Cowra.
3917. If the existing railway rates are maintained the storekeepers at Forbes would be no better off for the railway than they are at the present time? They would have quicker transit.
3918. But, as regards the rates charged, you would have no advantage? If the railway came *via* Molong we should not, but if it came across from Borenore, there would be a little advantage in the shorter distance; there would be 18 or 20 miles less mileage.
3919. Suppose your merchandise came *via* Cowra, what would be the charge? About the same. The trainage is 5s. 11d. per ton more, and the carriage is a little less—that balances the Borenore charges. I have copied these figures from my trainage vouchers. From January 1st to December 31st, 1889, we received *via* Cowra 154 tons 16 cwt. The horse carriage amounted to £307 4s. 10d. *Via* Borenore we received 110 tons 4 cwt. 1 qr. 15 lbs., and the horse carriage amounted to £273 19s. 10d. I find that the amount of trainage we paid for the twelve months ending 1889 was £890 4s. 5d.
3920. Although, so far as the rates are concerned, the railway *via* Molong would not be a great advantage to you, would it not be of great use so far as the shipping of produce is concerned? Most undoubtedly—that is the benefit we expect to derive.
3921. You have come into contact with a large number of people in the district, and have discussed the topic of the railway with them? It has been the general topic for the last ten or fifteen years.
3922. The concensus of opinion is that a railway should be brought to Forbes by some route or other? Yes.
3923. Which route do the public appear to favour? I have heard a great many persons express a preference for the Cowra line, because it connects us with the southern districts? Since the cross line has been opened I have been getting most of the colonial produce, such as corn and oats, from the Tumut district. We can land it cheaper than from the Sydney wharves.
3924. But you have a large area of good agricultural land in your own district? Yes.
3925. How is it that you do not supply your own requirements? There are not a great many who grow corn; wheat and hay are the principal crops.
3926. Do you get any of your goods from Victoria? Yes; a good deal lately; principally machinery; it comes *via* Albury and Cowra.
3927. And if a line were constructed to Cowra, it would enable you to deal with greater advantage with Victoria? It would, undoubtedly.
3928. Do you think that if a railway were constructed from any of these points it would pay interest on the capital and working expenses? I feel quite certain it would. The Borenore line will pay, but I question whether the other line would pay, for the reasons I have given, because we should get our goods by the cheapest route.
3929. Would the difference of a few miles in the distance of the two lines create such a prohibitory rate that you would be unable to send or obtain your goods *via* Parkes? If we can get teams to fetch our goods at a less rate than that at which the railway will bring them to us it will be to our advantage to keep the teams going.
3930. Would you not prefer to pay an increased rate for the carriage of goods by train, than to pay the rate you are now paying by team? Yes.
3931. Then you would make use of the railway in preference to the teams? Yes; but there are many lines we get up for which we are not in a hurry, and those we should get by team.
3932. If a railway were constructed, the Commissioners, having to work the lines on commercial principles, would fix the rates at such a point that they would succeed in running the bullock and horse teams off the road? It would certainly be policy to do so.
3933. Do you not think that they probably would do so? It is most likely.
3934. Have you seen the Commissioners' estimate of the traffic in this district? I have not.
3935. Do you think that the whole of the merchandise and goods traffic, in and out, would be represented by a larger or smaller sum than £5,600 per annum? I think that is an under estimate.

- Mr. C. Prow. 3936. Do you think £800 is a fair estimate for the trucking of live stock;—would it not amount to more than that? In some years, and especially in dry seasons, when the stock could not travel.
- 3 Mar., 1890. 3937. Is not Forbes a large centre for travelling stock, fat and stores? Yes.
3938. Would not a large traffic in stock be brought into existence by the railway? Yes.
3939. And would not that traffic be represented by a larger amount than £800 a year? By a much larger amount, I should think.
3940. Do you know that the Commissioners' estimate is correct, that there will be a loss of £15,000 per annum if this line is constructed? I saw that.
3941. Do you think that will be the case? I do not think so.
3942. You have no hesitation in saying that under any circumstances a line should be constructed? I have not.
3943. And if it did not pay interest on capital and working expenses in the first few years, it would do so shortly afterwards? Yes.
3944. You think this town and district has as good a claim to a railway as any other district with which you are acquainted? Yes.
3945. Do you think it is likely that the gold-mining industry here will at any time induce a large population? It is very hard to say. We are in a gold-bearing district, and at any moment we may have an accession of thousands to our population. There is a place about 6 miles from here which looks very promising, and I should not be at all surprised to see a population of 1,000 there within three weeks.
3946. Your knowledge of the commercial position of pastoralists and agriculturalists in the district makes you think that the Government will be fully justified in constructing this railway? Yes.
3947. *Chairman.*] Do you know whether the diggings you speak of as being 6 miles from here are on a portion of land which was about to be thrown open for selection? I believe they are. Mr. Slee and Mr. Wilkinson inspected this country some twelve months ago, and were anxious to have it tried. There is a party trying it now—they are at a good depth and are getting some nice gold—it is about  $1\frac{1}{2}$  miles from the road, to the east, near Strickland's dam.
3948. Do you think it would be advisable under the circumstances to throw that land open for selection? I think it would be advisable to have the ground thoroughly tested first—three shafts are sinking now—one has bottomed, and I believe they have got very good gold.

TUESDAY, 4 MARCH, 1890.

[*The Sectional Committee met at the School of Arts, Forbes, at 10 a.m.*]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Molong to Parkes and Forbes.

Mr. Joseph Bernard Reymond, timber merchant, sworn and examined:—

- Mr. J. B. Reymond. 3949. *Chairman.*] What is your occupation? I could aptly describe myself as a jack of all trades. I am a timber merchant. I have a saw-mill and a flour-mill. I am a farmer, a fruit-grower, and, on a small scale, a grazier. I have been in the district since 1862.
- 4 Mar., 1890. 3950. During that time have you had a farm? Since 1866.
3951. And you are in the habit of growing crops? Every year since 1866. We began in that year on 320 acres. I am junior partner of the firm of Nicolas and Reymond, millers.
3952. What is the present area of your holding? 1,337 acres; but out of that area we rent 137 acres—1,200 acres are our own.
3953. How many acres have you under cultivation? In 1889 we had under crop 581 acres, 100 acres were for hay. We had 416 acres sown for wheat, 25 acres under lucerne, 11 acres of fruit trees, 15 acres of maize, and 14 acres of vines. Among the fruit trees, we had pumpkins and potatoes; but I cannot give you the area they occupied.
3954. Have you increased your area very much from one year to another? We have gradually increased cultivation every year.
3955. What kind of crops do you generally get—what is your return of wheat this year? Our average is 20 bushels right through. We have had it as high as 50; but we have had it so low that it has not been worth cutting for wheat. As forage, it fetches a good price. When we see that the crop is not going to give a paying result in grain, we cut it down for hay.
3956. Do you say that 20 bushels is the average of your own crops? Yes.
3957. What does the hay average? We have cut as high as 4 tons to the acre, and down as low as  $\frac{1}{2}$  a ton. I put the average at  $1\frac{1}{2}$  tons.
3958. Does the corn do as well as the wheat and hay? I have only had one crop of corn grown without irrigation. I would not advise any one in these parts to grow maize without irrigation, although higher up the river they get very good crops—that is between here and Cowra, at a place called Merriganowra. The settlers there are noted for the large yields of corn they get; the land, however, is flooded by the smallest fresh in the river, and that accounts for it.
3959. Is your farm situated on the banks of the river? We have 800 acres on the banks of the river, and 500 acres on the hills, 3 miles from Forbes.
3960. Which place do you cultivate? We cultivate in both places.
3961. Is your cultivation by irrigation? On the river.
3962. How many acres are there under irrigation? This year we irrigated only 40 acres—the lucerne and the maize.
3963. But this is an exceptionally good year? Yes.
3964. In an ordinary year would you irrigate the whole of the land? We could not with the plant we have; but we would if we could.
3965. What is the largest number of acres you have irrigated? The area we have irrigated for crop was not so large as it would have been if we had known how the season would have been. We generally begin to irrigate the crop of wheat when we see that the season looks very bad, and then with our small plant we

Mr. J. B.  
Reymond.  
4 Mar., 1890.

we cannot get over the whole of it. In 1886, for instance, the season turned very bad; in September we began irrigating the wheat. Out of 200 acres, we irrigated only 25 acres. We thought it was getting too late, and that it might bring on the rust, as it generally does, if you irrigate too late in the year. The 25 acres we irrigated went 25 bushels to the acre, and the 175 acres we did not irrigate we did not cut at all; it was a very bad year. In 1888, the season was also very bad, we did the same thing again. We began late, and the wheat we did not irrigate went 11 bushels to the acre. The irrigated land went at one place 40 bushels, and in another, over 20. In the same year in another paddock without irrigation, we get 25 bushels to the acre, but it was a low place. There is always a reason for these exceptionally good yields.

3966. In a wet season it would not do at all? In a wet season it would have to be eaten down very bare, or it would lodge. I may say that we intend to have stronger plant so that we can irrigate more. Our plant now gives 40,000 gallons an hour.

3967. What horse-power? 8-horse-power, with a 7-inch centrifugal pump.

3968. Have you far to lift the water? 32 feet.

3969. Do you irrigate on the grazing land? We have done so.

3970. What has been the result? A fortnight after it is irrigated horses and cattle can live on it. In summer time the heat is in the ground, and as soon as the water comes the grass begins to grow. In a fortnight cattle and horses can live on it.

3971. Have you any sheep? Yes.

3972. Have you ever put sheep on irrigated ground? We have not; we have put cattle and horses on it. As a rule we do not put sheep on irrigated land until cattle or horses have fed it down.

3973. Mr. Gatenby says that ten sheep to the acre can be kept by irrigation—is that correct? In a good season we can keep ten sheep to the acre without irrigation; that is in exceptionally good paddocks; we do not do that as a general rule.

3974. It would not be for the whole year? I was told yesterday by a gentleman—I cannot give you his name—that in one of his paddocks he had an average of twelve sheep to the acre. As far as my own experience is concerned, in a paddock not irrigated, from July to January last year, I had 1,600 sheep on 200 acres—that was for seven months. Of course when I took them out, the paddock was very bare.

3975. Do you irrigate the fruit garden? We did not this season.

3976. On account of the season being exceptionally good? Yes; there was rainfall enough.

3977. What fruits do you grow? Apples, pears, quinces, peaches, apricots, plums, figs, oranges, lemons, almonds, and I think we have a solitary walnut tree.

3978. Do the oranges and lemons grow well? Yes; but they want well attending to and a soil that will agree with them. There is a place on the river, 3 miles down, where there is an orange orchard on a sandhill—the oranges there are doing remarkably well; they are the trees that want irrigation; they will not do without it. They want plenty of care and attention. The other things are hardy; give them water and they will thrive.

3979. Do you irrigate your vineyard? Only a small corner. As a rule we are afraid of oidium. We let the vines take their chance.

3980. Do grapes thrive in this district? They do, very well.

3981. Exceptionally well? I made last week 90 gallons of wine off one-tenth of an acre.

3982. There is no regular wine-making establishment here? No; I think we are the pioneers in that industry. Mr. Rowley is making wine for the last few years, and so is Mr. Shied.

3983. For their own consumption? They are beginning, of course. Mr. Gaynard is planting 8 acres, and he is getting a plant ready for next year. He is making wine now, I think, but in a very small way. He is getting ready to go into the wine-making business on a large scale.

3984. Have you any knowledge of wine-making? I have.

3985. Do you not think this district particularly well adapted to the growth of the grape? Yes; and for the manufacture of wine also. I would not advise anyone to go in for wine-making on black soil—that is, if you want a good quality of wine. You get plenty of it, but the quality would not be so good.

3986. You would go on the hills? On the hills or else on the sandhills. Any sandhill on the river will grow good grapes, and give a good quality of wine. The French experience is that phylloxera will not attack the vines in sandy ground. We consider that the soil, to give a good quality of wine, must have a large quantity of oxide of iron and carbonate of lime. On our hills here we have limestone quarries and ironstone in any quantity. The soil has not been analysed, but I am satisfied from my experience of it that it will grow a good quality of wine. Mr. Bodel has a vineyard of 17 acres within 3 miles of Forbes.

3987. What is the aggregate number of acres under vines near Forbes? About 50, I should think—that is, in the municipal district of Forbes.

3988. Quite sufficient to prove that the vine can be successfully grown here? Yes.

3989. What is the class of wheat you grow—is it considered good wheat? Yes. This is a warm country, and the best qualities of wheat are grown in the hottest countries. If wheat will grow at all, it will do better in a warm than in a cold climate.

3990. What class of timber do you saw at your mill? We generally saw pine.

3991. What quantity has gone through your mill for the last twelve months? I have the quantities for the last five years. In 1884 we bought—I am now talking of wheat—45,599 bushels of wheat; in 1885, a bad year, we bought 18,918; in 1886, 27,956; in 1887, 50,150; in 1888, 27,254. I have not taken the year 1889, because we had little local wheat. This year we have received up to date 43,251 bushels, that is up to the end of February. We have purchased 4,866 bushels which have not yet come in, making a total of 48,117 bushels purchased this year. 133 bags came in yesterday, which are not included in this return.

3992. Why did you go out of the district to buy wheat last year? There was not enough in the district to keep us going, owing to the drought. Some of the farmers had nothing at all. On all our farms, with irrigation, we had some 2,300 bushels, against 8,000 bushels this year.

3993. You had to get foreign wheat into the district? Yes.

3994. What was the average price you had to pay for the foreign wheat you imported? It went about 6s. 8d., delivered at Forbes.

3995. What is the price of wheat at present? Three shillings. As far as timber is concerned, we sawed last year 419,880 feet.

3996. What class of timber? Mostly colonial pine.

3997.

Mr. J. B.  
Reymond.  
4 Mar., 1890.

3997. Would there be a market for it outside of this district if you had means of carriage? We had an order yesterday from Cargo. We have sent timber to Orange before the railway came there.

3998. Is it a good class of timber for building purposes? It is very lasting, and the white ants will never touch it. It will last nearly as long as brick; once nailed and left, there it will stay.

3999. Is there an unlimited supply of this timber in the district? We have been cutting it for twenty-eight years, and it is always coming. As a rule we have to tell the log carriers that we have enough. We have to stop them sometimes, although occasionally we make a mistake, because the wet weather will set in, and then we run short.

4000. Do you think that if a railway were constructed here, and if you had cheaper carriage, you would have a market outside this district for that wood, and that it would become of great commercial use? I think, if it were known in Sydney that it is such a good timber for flooring, there would be a great demand for it. I had an experience of that timber compared with American timber for flooring. The boards lay alongside one another. The American wore out in no time, but our local pine has lasted since 1872. It was at the door of our mill, where the trucks are running in and out every day. The American timber there wore out in no time, and had to be taken up.

4001. This timber effectually resists the white ant? No one of experience in the colony can say that the white ant ever attacked the local pine.

4002. Have you any timber here beside the pine? Lachlan gum.

4003. Is it of any use? It is good timber for felloes—that is, for wheelwrights' work. It is also very strong and useful for building purposes, beams, &c.

4004. Is it attacked by white ant? Not at all.

4005. Is it a good timber for sleepers? No doubt.

4006. How does it stand in the ground? Very well. It is used as posts for fencing, and it lasts well.

4007. Is there a good supply of that kind of timber? There is plenty in short lengths; the longer lengths have been used for bridge building—for piles and beams. When you want to get a long length it can generally be had. When we were building our mill lately, we wanted some long beams to go right across. I was afraid that we should not get them on the river. We sent some waggons to get some iron-bark on the Molong and Parkes line, but they came back empty; they could not find any sound logs. We had to look upon the river for them, and we had to go above the Southern Cross. If you want to know the power and capabilities of our mill I can give them to you. We have two mills—a stone mill and a roller mill—quite separate one from the other.

4008. Do you think that if the line under consideration were constructed it would be of material benefit to this district? If the line were constructed from Borenore, it would be a benefit to the town and district generally. I doubt very much whether a line from Molong to Parkes and Forbes would be a benefit to us; in fact, many of us are under the impression that it would ruin us.

4009. Why? We are on the main line of traffic from east to west, and all the goods that come from the Western line for the lower part of the Lachlan come through Forbes, *via* Borenore or Cowra—the bulk of them *via* Borenore. If we had a line from Molong to Parkes and Forbes, and our goods come that way, we should eventually lose the traffic down the river; because although people say that the road from Parkes to Condobolin is bad, still, when the difference in distance is 15 or 18 miles, the Government would be urged to make a road sufficiently good to carry the traffic. Then we should be cut out, and instead of being on the main line of traffic we should be only a branch line. We should have to pay trainage from Parkes to Forbes. If we wanted to send anything down the river, as we do now, we should have to pay trainage again from Forbes to Parkes—that would be double trainage which the Forbes storekeepers would have as a handicap with the Parkes storekeepers.

4010. Why would you have to pay the trainage back from here to Parkes, if you were sending goods down the river? I take it for granted that if the line came from Molong to Parkes it would go from Parkes to Condobolin at some future time, although I cannot say when. It is not likely that after going 22 miles east to Molong, and then 51 miles westward to Parkes, making a deviation of 20 miles to the south to get to Forbes, it is hardly likely, I say, that the Government, if they wanted to go to Condobolin, would construct a line which would force all the people down the river to come to Forbes on their way to Parkes, when they could go to Parkes direct. We think that unless some good reasons are shown in the general interests of the country for diverting the traffic from us, we should be left as we have always been, upon the main line of traffic to the west.

4011. Do you know whether the majority of people in Forbes believe that they would lose the traffic if the line referred to the Committee were carried out? A meeting was held in this room, at which all the leading residents of Forbes were present. Everyone was called upon to give his opinion, and it was unanimously agreed that, if they had the choice, they would rather do without the railway altogether than have one from Molong; because a line from Molong would take them off the main line of traffic, and make them in the future virtually a branch line, cutting them off from the trade of the Lachlan Valley. I do not think any attempt need be made to prove that the main line of traffic from Sydney to the Lower Lachlan is through Forbes. The Condobolin people told you that they got most of their goods from Cowra. We get most of our goods from Borenore, and the balance from Cowra. The mails from lower down the river all come through Forbes once a day. There is no mail communication now between Condobolin and Parkes; at least, there is practically none. I believe there is communication once a week, on horseback. Our getting this traffic through our town is entirely owing to our geographical position. We are the centre of a large district, and that fact has been acknowledged by all the Governments we have had until now, as they have stationed here the heads of all the administrative departments in the district. For instance, we have had the Police Magistrate, the Warden, the Road Superintendent, the Stock Inspector, the Land Court, the Sub-Inspector of Police, District Surveyor, and the School Inspector—all these officers have resided here.

4012. Do you think this town is acknowledged to be the main centre of the district? Yes; I may mention that the Warden goes from here to Temora, to Parkes, to Condobolin, to Cargo, and to Cowra.

4013. Which line do you think would serve the entire district best? In my opinion, there should be two lines—one from Borenore to Forbes, to be taken at some future time down the Lachlan, and then a line from Young to Grenfell, Forbes, Parkes, and Dubbo. I may state that these two lines would just follow the tracks made by the traffic. We have always had the overland traffic through here from north to south, and also the traffic from east to west.

4014. One of these lines would connect you with the capital of the colony, and the other would suit the overland traffic, Queensland to Victoria? Yes; I believe that is how nature intended our railways should be placed.

4015.

Mr. J. B.  
Reymond.

4 Mar., 1890.

4015. If a line were constructed from Cowra to Eugowra and thence on to Forbes, how would that affect you? We would take that line if we could not get the Borenore line, because it would still leave us on the main line of traffic. We would rather have the Borenore line, though.

4016. But if you could not get the Borenore line, you would rather have the Cowra line than the Molong line? Yes; because we wish to retain the advantages which we at present enjoy.

4017. If the line from Cowra were constructed, how would that serve the people of Parkes? There would have to be a line from here to Parkes. I do not know, however, that the Government would construct both the lines from Cowra to Forbes and the line from Young to Forbes.

4018. From what railway station do you obtain your goods, and what price do you pay? From Borenore. Our firm, within the last twelve months, have had 95 tons 4 cwt. The bulk of this, however, came from Cowra. We pay an average of 1s. 6d. a cwt., but we get most of it during the wool season. We take advantage of that period.

4019. During the wool season the loading from Sydney is taken at a very low price? Yes; it is lower then than at any other time of the year.

4020. And you all take advantage of it? Yes; as regards anything that will keep.

4021. I suppose that, at times, you get goods carried at a price which would be quite as low as even railway freight? I believe, at times, the price would be lower than the railway freight. If we had a railway from Molong to Parkes and Forbes, we could get our goods here, I think, at a cheaper rate from Cowra, than from Molong.

4022. That would be during the wool season? Yes.

4023. You have noticed the progressive nature of this place;—there has been no apparent stoppage in the progress of the place lately? No; we dwindled down at one time to a population of about 500, and when we began to till the soil we took a steady onward direction. We have been creeping lately, but we are still going ahead. I may state that before the railway was opened to Nyngan and Carathool, we were progressing very rapidly. As far as our business is concerned, we were working night and day. In a week, we sent 105 tons of flour to Hillston, Nymagee, and Cobar. There was always a demand for all the forage we could grow; but when these two lines of railway came on both sides of us, there was a sudden check in our progress, and a large area of land went out of cultivation.

4024. Will you not feel the effects of this railway extension even more, when this line is constructed to Cobar? That will make no difference; we have already lost the Cobar traffic.

4025. But would not a certain amount of trade which now gravitates southward gravitate to Cobar? I do not think so, because our trade now only goes about 40 miles below Condobolin. They would hardly come from Cobar to 40 miles below Condobolin.

4026. Do you think that if this line were constructed at Forbes, and were taken right through to the Darling, either at Menindie or Wilcannia, it would be a national line, and would be of material benefit to the colony? I have not sufficient knowledge of that part of the country. I know the country only as far as Mount Hope. I do not know whether any one has placed before you the industrial position of the town of Forbes, and the occupation of the people who live in it—that is, within the municipal district. I may state that there are 20 public-houses; 5 butcher shops; 5 bakers—one of them a steam baker; 2 breweries; 2 wool-scouring establishments, both using steam power; a soap and candle factory, also using steam power; 2 lemonade and cordial makers, one of them using steam power; 2 drapery establishments; 3 coach and buggy builders, who are also general blacksmiths; 2 general blacksmiths; 5 general store-keepers in a large way, wholesale and retail; 1 flour-mill; 1 saw-mill; 2 brick-kilns; 4 saddlers; 4 banks; 2 tinsmiths and plumbers; 2 watchmakers and jewellers; 3 solicitors; 3 doctors; 2 chemists. I do not desire to speak in a spirit of petty jealousy in regard to Parkes. I grant that Parkes has as much right to a railway as any other place. The only objection I have to the proposed line is that it takes us off the main line of traffic.

4027. *Mr. Lee.*] What do you mean by the main line of traffic? The line the traffic has always taken up to now. It is the line taken by Her Majesty's mail. The mails from Sydney to Condobolin once a day, come through here. At the same time there is the general traffic up and down the river. The electoral statistics given to the Committee at Parkes were, in my judgment, misleading, as the electoral division of Parkes extends to within 15 miles of Forbes, whereas the Forbes electorate is bounded by the Lachlan River on the south, a short distance on the other side of the town. Mr. Thomas, the School Inspector of the district, has handed me the particulars about the schools here. It is a return of the whole of the schools in the district within 20 miles to the north of the Molong and Parkes line, and within 20 miles to the south of the Borenore and Forbes line. With regard to those lying between the two lines, those schools lying nearer the Parkes line are credited to that line, and those lying nearer the Forbes line are credited to it.

4028. Are these schools measured in a direct line, or from the road? Mr. Cheeseman prepared a map, and will show you how he measured it. I hand in the list of schools.

4029. Does this list purport to be a list of the schools within the Inspector's district? No; only of the schools in his district, situated within 20 miles to the north of one line, and within 20 miles to the south of the other. The object is to show where the largest population is. The denominational schools are here. They are taken from a return handed in by Mr. Inglis two years ago, when he was Minister of Public Instruction. I may say that the enrolment at the school at Forbes is equal, within twelve, to the enrolment of all the schools north of the line from Molong to Parkes.

4030. Respecting the wheat grown in your district, where do you find a market for the flour? In the town itself, and down the river as far as Mount Hope.

4031. Is there sufficient grown for local requirements? Sometimes rather more.

4032. Have you been in the habit of sending any towards Borenore? No, none at all.

4033. I suppose the Orange flour would cut you out there? We send as far as Eugowra.

4034. Your chief trade has been to the west? Yes.

4035. Is that the market you look to in the future? To the west as well as to the east. We would have sent flour to Sydney in years when we have had plenty of wheat, if we could have sent it cheaply.

4036. The tendency of your evidence is to show that this is a suitable place for growing wheat in large quantities, the inference is, that you would soon grow more than you could possibly use, and I want to know where your market is to be? We shall not grow more than we can use, because if the farmers find that they cannot grow wheat profitably they will not grow it at all.

4037.

- Mr. J. B. Reymond.  
4 Mar., 1890.
4037. We are considering the railway;—what freight is there likely to be? If there were a railway we should send flour and wheat to Orange and Sydney.
4038. What price would you want, so as to enable the farmers to grow at a profit? If they could get 3s. 6d. a bushel in Sydney, and if 6d. would clear the trainage, they could grow it at a profit.
4039. But the price of wheat fluctuates very much in the Sydney markets? Yes.
4040. Do you know that the Railway Commissioners have instituted special rates for the conveyance of grain? Yes.
4041. Suppose you could get your wheat from Forbes to Sydney at 4½d. a bushel? That would leave 1½d. for the agents and carters. If 6d. would cover all those expenses it would pay.
4042. What does it cost to produce wheat here? I have to pay for everything. My experience is that it costs 2s. a bushel to put it into the bag.
4343. There are times when wheat is considerably less than 3s. 6d. a bushel? If the price were lower, the farmers could not send it from here to Sydney, and live.
4044. Then it would only be when the price was 3s. 6d. that wheat would be sent from here;—do you think that upon that basis any large quantity of wheat would be sent? Wheat is seldom under 3s. 6d. in Sydney. I watch the markets and I do not remember to have seen it under 3s. 6d.
4045. What other produce would be sent from here? A large quantity of freight would be sent to Sydney—there would be fruit, and perhaps later on, wine. Wool is, of course, the mainstay of the district; there would also be a large quantity of fat stock.
4046. But the wool is conveyed within 2 or 3 months of the year? You may say within 4 months; the wool that is scoured is kept a little longer here.
4047. What freight would be offered to the railway for the remaining 8 months of the year? Hides, tallow, grain, fruit, timber, and fat stock, and there would always be the passenger traffic.
4048. How many mills are there here? Only one;—there are two plants in the same building. In the return I gave you I omitted to mention a quartz-crushing battery which is working at the Britannia Reef, within half a mile of the town.
4049. Could you give us any idea of the actual number of bushels of wheat raised every year? I could not give you a better idea than the quantity we have bought.
4050. Do not the storekeepers buy it? They do not buy large quantities. There is a large quantity in such a year as this used for horses' feed—I do not know what the total production of wheat would be.
4051. Do you wish the Committee to understand that you buy all the wheat? No, but we buy the bulk of it.
4052. Four-fifths of it I suppose? I daresay we do.
4053. Do you know the railway route from here to Borenore? I have travelled over it, and also over the route from Molong to Parkes, and from here to Young. I have been from farm to farm, wheat-buying.
4054. Consequently, you know that there is considerable settlement on each track? Yes, I have a very good idea of the settlement on each route.
4055. You admit that there is a fair amount of settlement on the three routes? There is.
4056. That being the case, and seeing that it is in contemplation to make one railway into the district, which route should, in your opinion, be adopted with a view to serve the greatest number of people? The Borenore line, decidedly. That goes right through settlement, there would be settlers to the north and south of it. The Molong-Parkes line has no settlement to speak of, to the north of the line.

Mr. Thomas Leslie, selector, sworn and examined:—

- Mr. T. Leslie.  
4 Mar., 1890.
4057. *Mr. Lee.*] You are a selector? Yes, on a large scale.
4058. Holding how many acres? My return for the present year is 7,494 acres.
4059. Where are you located? About 25 miles south-west of Forbes, in the Grenfell electorate.
4060. How long have you been there? Twelve years.
4061. Prior to your residing there, were you living in any other portion of the district? I came from the Murrumbidgee, near Gundagai, before I went there to reside.
4062. How do you occupy yourself, principally? I go in for grazing, principally.
4063. Sheep? Principally. I have only a few cattle.
4064. With what result? I have a return here which may be of some use to the Committee. I can give you particulars for the last four years. In 1886, I had an area of 10,217 acres, on which I grazed 6,384 sheep, 33 cattle, and 5 horses; in 1887, I had an area of 9,647 acres, upon which I grazed 7,766 sheep, 53 cattle, and 6 horses; in 1888, I had area of 9,464 acres, upon which I grazed 7,690 sheep, 64 cattle, and 6 horses; in 1889, I had an area of 7,494 acres, upon which I grazed 7,467 sheep, 47 cattle, and 7 horses. So far as the return for 1888 is concerned, I ought to mention, that I had sold off 2,000 sheep prior to making the return. It had to be made before the end of December. This return shows that during the four years the land carried a sheep to a trifle over one and an eighth of an acre. It is over an eighth and under a quarter. I may state that so far as the returns for 1886 and 1887 are concerned, I was then grazing on some land open to conditional purchase. You will see that the area has been reduced, the land having been taken up by conditional purchasers. The land which I now hold, being very highly improved, is capable of carrying a very much larger number of stock than is shown by the returns for 1886 and 1887. The land is capable at the present time, in any sort of a good season, of carrying fully one sheep to the acre. I can give you the wool returns off the sheep for 1888 and 1889. My wool return in 1888, was 22 tons 13 cwt. 1 qr. and 19 lb.; the sheepskins were 6 cwt. and 6 lb. In 1889, the wool was 16 tons 12 cwt. 3 qr. 9 lb., and the sheepskins 10 cwt. 3 qr. 8 lb.
4065. Is your land on the river? No, off the river.
4066. What water is there? There is no water, except what we conserve in tanks.
4067. You have made some tanks? Yes.
4068. Do you irrigate any portion of the land? No.
4069. The returns you give are the result of the natural grasses? Yes.
4070. Do you cultivate any portion of your land? A small portion for hay only; it varies from 4 to 20 acres.
4071. By what route do you send your wool to market? Since the cross-line has been constructed it is sent to Cowra.

4072. Is that your present route? It is nearer and cheaper, as a rule, to send it that way. I sent it there one year, when I could make satisfactory arrangements, but this year I could not. The wool went by Wright, Heaton, & Co., who contracted for carriage to Borenore, Mr. T. Leslie.  
4 Mar., 1890.
4073. Will your supplies come back by the same route? I deal with the local storekeepers.
4074. Do you know the proposed route from Molong to Parkes, and thence to Forbes? I cannot say I know it. I have been over the country only once.
4075. How would that route suit you? If that line were constructed I think we should have to pay a higher rate to get our goods to market than we should have to pay if a line were made *via* Borenore or Cowra.
4076. Why? Because the distance from Sydney is greater.
4077. How much? I cannot say the number of miles.
4078. Are there many selectors in your locality? Yes, a good number.
4079. I suppose they graze somewhat on the same lines as you yourself? They are principally selectors on a pretty large scale. There are a few cultivating—they have been doing so, more particularly within the last twelve or eighteen months. Since the division of the runs a great many men have come over from Victoria, and these seem to be principally farmers.
4080. Have you had a dry season since you have been on your land? Yes, I had two or three dry years.
4081. Have you suffered much in consequence? I have suffered, but not to such an extent as to materially check my progress.
4082. Have you had any wet seasons? Yes, in 1878 and 1879.
4083. Have you seen the country flooded? Yes, I have seen a lot of water on the other side of the river in wet seasons.
4084. Have you suffered any losses from the floods? Never.
4085. You have had extremes of seasons, wet and dry, and after a number of years you still find your occupation a profitable one? Very profitable I may say.
4086. Which of the routes of railway into this district do you think would serve the greater number of people? That I cannot say. I believe in the construction of our railways on national principles.
4087. You have a preference for the Borenore line? I have not, if you seek my opinion about railway construction, I think the line should come where it would settle the largest number of people on the land. The land being that which is most productive and best watered.
4088. Which line do you think should be adopted from that point of view? The Cowra line, I believe.

Mr. James Twaddell, grazier, sworn and examined:—

4089. *Mr. Dowel.*] Where do you reside? In the town of Forbes.
4090. How long have you resided in the town and district? Fifty years, or more.
4091. In what part of the district? In the Forbes part—that is near to Forbes.
4092. What occupation do you follow? I am a grazier and squatter.
4093. I presume you have a large knowledge of the district? I know it pretty well.
4094. Do you know the country between Molong and Parkes? I know it from Parkes to Dulladerry Creek.
4095. Is the whole of that country good pastoral land? It is very rough. Some of it is good land, along the Billabong Creek, but the other is rough.
4096. What do you refer to as being very rough? Between the first range when you go out, leaving Parkes—it is very rough over that first range for some distance.
4097. Have you any particular information you desire to give the Committee? Well I could give you some information which I gave some years ago to the people here respecting that route.
4098. To which route do you refer to? The route from Molong and Parkes. I know the country between that and the Dulladerry Creek. I will read you a report which I made some time ago, by request of the Local Council. I was asked if I knew of one to point out to Mr. Surveyor Fitzgerald, a shorter and more practicable route for the Western railway, *via* the Mandagery Mountains, than the one recently surveyed.

Mr.  
J. Twaddell.  
4 Mar., 1890.

Gentlemen,

Droubalgie, October 9, 1877.

In compliance with your request, that I would put myself into communication with Mr. Surveyor Fitzgerald, for the purpose of calling his attention to any more desirable route (with which I might be acquainted) than those yet projected for the intended line of railway; I beg to state that I have with that view passed some days with that gentleman, and have laid before him and actually traversed, in his company, a route, I believe, hitherto unknown (at all events until now unnoticed), which appears to offer some substantial advantages over the others.

This passes through the Mandagery Mountains, at the Goamine Pass, thence through the Waterhole Creek Station, and a gap in the Bumbery Range, down Flagstone Creek to a point near Flanagan's selection. The line thence being nearly straight to Strickland's Lagoon (Newells dam), on the main road from Forbes to Parkes.

The route in question is considerably to the south of the other lines proposed, and avoiding, as it does, the circuitous courses of the others, saves in actual distance sixteen miles at the least, and, consequently the cost of construction to that extent. I may, in conclusion, state that Mr. Surveyor Fitzgerald expressed himself very favourably to the advantages offered by this line over the others, and I believe he will not hesitate to recommend it for adoption.

4099. Are there any engineering difficulties on the route you suggest? There are.
4100. Are they of sufficient magnitude to prevent the line being considered as you proposed? It will be a more expensive line than the other.
4101. Have you the merit of shortening the line in any way? I think it would have that effect. It is a portion of the line from Parkes to Molong. I believe it goes near to the Dulladerry Creek, up the Flagstone Creek.
- 4101½. Setting aside the question of rival routes, from your lengthy experience as a pastoralist in this district, do you think that if the railway were constructed to Forbes from any one of the points mentioned, there would be sufficient traffic upon it, to give anything like a fair return on the expenditure, and to pay working expenses? I do not think that would be the case if the Parkes and Molong line were adopted—its construction would be very expensive—it would be a much more expensive line than the Borenore line. I think the line would give sufficient revenue to prevent absolute loss.

Mr. Charles Read, farmer, sworn and examined:—

4102. *Chairman.*] What are you? I am a farmer.
4103. Where do you reside? About 8 miles from Forbes, on the southern side of the river, in the Grenfell electorate.

Mr. C. Read.  
4 Mar., 1890.

4104.

- Mr. C. Read. 4104. What is the area of your holding? I hold between 400 and 500 acres? The family hold about 1,200.
4105. What are you doing with the land? I am farming it, principally.
- 4 Mar., 1890. 4106. How many acres have you under crop? I have had 200 acres under crop.
4107. But how many had you last season? I had not above 70 last season.
4108. Have you any sheep? No; I keep dairying cattle and a few stores.
4109. What crops do you grow? Mostly wheat and hay.
4110. What is your average per acre of wheat crops? I have been 14 years on the farm, growing wheat, and my lowest yield has been 18 bushels—the highest is the yield I have had this year, 36 bushels.
4111. Have you threshed your wheat this year? I have. I own a steam thresher.
4112. How many acres have you under wheat this year? 70 acres. I cut a little for hay, but not much.
4113. You have never had a failure in 14 years? Well, 1878 was practically a failure—that was the only failure I had.
4114. In every other year beside 1878, then, you have had 18 bushels? That is the lowest I have threshed. In some seasons there has been more demand for hay than for wheat. I have cut it for hay; it has paid me better.
4115. Have you not cut it for hay in some seasons when you have seen that it was going to be a failure for wheat? Never.
4116. Is it not usual for the farmers here, when they see they are going to get a bad wheat crop, to cut it for hay? It is, sometimes.
4117. Have you never done so? Not that I remember.
4118. What is the average quantity of hay you have cut off your land? I have cut it as high as 4 tons and as low as 10 cwt.—that would be wheaten hay; it pays best.
4119. Are your neighbours, independently of your own family, farmers? Yes; there is my son-in-law adjoining me.
4120. Has he been as lucky as to get as large crops as yours? Yes; I have threshed for him—he has had 30 bushels.
4121. Have you been farming anywhere else? I have been farming in the district twenty-four years.
4122. Can you give us an idea of the difference between this and other districts—I mean as to the crops? I can give you a fair idea, because I have travelled with the thresher.
4123. How far do you travel from Forbes with your thresher? I have been to Parkes in three seasons, and in one of those years I threshed at Eugowra, and I also went 21 miles towards Grenfell.
4124. Have you ever gone towards Condobolin? This year, but only 8 miles.
4125. Could you give us an estimate of the average quantity you thresh yearly in this place? I can only give what I have heard them say; we can never ascertain the number of acres.
4126. What is the number of bushels you thresh during the season? There has been a lot of stripping done in the district. I have not threshed such a great lot. In Parkes we threshed, as far as I can recollect, 7,000 bushels.
4127. In the same year you threshed at Eugowra? Yes; there were two steam threshers there at the time, and we only got about a third of the threshing. I could not say how much we threshed, but it is a splendid wheat-growing district. I know that one party told me that he averaged 40 bushels. I think I threshed 4,000 bushels. I think we earned £50, at 1s. per bag.
4128. Did you thresh any more that season? Yes. I remember now that we threshed at Eugowra in the year I have named, that is 1884, 4,476 bushels.
4129. What did you thresh in Forbes? I cannot give you the Forbes total for that year.
4130. From your knowledge of the soil, what is your opinion of Forbes as an agricultural district? It is all good wheat-growing land.
4131. At what price can you afford to grow it? I can grow wheat well, and make it pay at 3s., if we have the market. I am speaking of myself—it is not every farmer who has machinery of all kinds to do the work.
4132. Those who have not machinery would want a higher price then? Or they would have to put up with less profit.
4133. Suppose this line were constructed to Forbes, would you put more under crop than you do now? I am about grubbing 50 acres at a new place. I took up one of these special areas.
4134. You have more land grubbed now than you have under crop? Yes.
4135. You have plenty of land ready to put under crop? Yes. I regard the new land as superior for wheat to the land I have already grubbed.
4136. Are there any other threshing machines in the district besides yours? Mine is the only one in the Forbes district.
4137. Is yours a large machine? It is a 5-foot drum.
4138. Have you as much work as you can do in the season? I do not depend entirely on it. I go out in the district, and if there is work to do I go further. I have had the misfortune to have one thresher burnt this year, and I have bought another. I mention it to show you that I think sufficient of the Forbes district to consider it worth my while to buy another.
4139. Is there any increase this year in the number of acres under crop in this district? Yes; and there will be a bigger increase next year.
4140. Do you believe the railway will give an impetus to this industry? I think so; that is what we have in view.
4141. Do you think the railway we have now under consideration, from Molong to Parkes, will do this district good? No; I am not an advocate of that line.\*
4142. Which line do you think would be the best? I think the Borenore line. There is more population. I know the whole of the route well—it is better land all the way. Not that I want to run down the Parkes district, I have relations farming there, and I have been always treated well there.
4143. Do you consider that the land about here, is superior to the land about Parkes for agriculture? I do not say that, I say it is equal to it, if not superior to it. I will explain what I think; we have a lot of open.

\* NOTE (on revision):—I wish to draw attention to question 4141, wherein I am asked, "Do I think a railway from Molong to Parkes and Forbes would do this district good?" The answer is, "No." It should have been, "I am not an advocate of that line, and I still think the Borenore line would serve the most people." It would be false to say that a railway would do no good to Forbes, no matter which way it came.

open country here—that is, open myall plains. I ploughed 90 acres of land there, and I suppose the whole of the labour I put in it, was one week's work in gathering the myall lying on it. I could not have cleared the land of heavy timber in the time. We have thousands of acres of that kind of land now held in reserves not far from where I grew my last crop. I think if it were thrown open we should have plenty of applications for it.

4144. What reserve is that? It is a travelling stock reserve on the Grenfell-road—most of it is high from the flood, it is quite equal to the land I have been farming. That is how I got a lot of land under cultivation. I partly cleared. I was told that the myall land would not grow wheat, and I tried it. I have been engaged in farming all my life, and I do not listen to people who tell you, that this and that is no good, I like to try for myself, and I have given you the result of my labours.

Mr. Bagration White, agent for Wright, Heaton, & Co., sworn and examined:—

4145. *Mr Lee.*] Where do you reside? At Forbes.

4146. What is your occupation? I am a forwarding agent. I am agent for Wright, Heaton, & Co.

4147. Your business is intimately connected with railway receipts and the despatch of goods? Not so much here as on the line. Nevertheless, I send the goods from here to the line. I despatch them from the depôt.

4148. You are the agent for people outside of the town more than for people inside the town? For both.

4149. Have you prepared any statistics to lay before the Committee with regard to traffic? I can give you some particulars concerning our business. I may say that as Wright, Heaton, & Co.'s agent in the town of Forbes, I have received in the year 1889, 1,180 tons. 380 tons have gone from Borenore to Condobolin, and 26 tons to Mount Hope. There has been a great falling off in the Mount Hope traffic this last year, because, owing to the low price of copper, the mines have not been working. Therefore there has been no population there. Borambla is on the south side of the river, and it received 24 tons from Borenore. Burrawang got 90 tons.

4150. Can you give us any particulars as to the wool? I suppose fully 10,000 bales of wool have gone through Forbes in the four months—that is up to the end of January.

4151. Could you give me an approximate estimate of the carriage paid on those 10,000 bales? I could not.

4152. I mean the land carriage to Borenore? A lot of the wool came from far down the river, and a great portion from about here, so that it is a very complicated affair.

4153. Having in view the rates charged on the other lines, what would be the probable rate on a bale of wool from Forbes to Borenore? The price of carriage from here to Borenore would be 2s. 6d. or 3s. per cwt.

4154. Have you any data which enables you to give an accurate answer? No; but I should think the total amount paid on the wool would be something like £1,600. If we had a railway constructed to this place, wool which goes to Cowra would come here.

4155. What other goods are sent to Borenore? Hides, tallow, and sheepskins.

4156. Any grain? Not much grain, I think.

4157. Your firm deal in maize and chaff a good deal, do they not? Not such a great deal here; not as much as in other places.

4158. Do you obtain it from the other districts and bring it into Forbes? I have had a good deal, but not a great quantity from Borenore. I do not do much in the forage line.

4159. Is the freight passing through your hands increasing or decreasing? Increasing in the last year, most decidedly. As I remarked before, when the Mount Hope mines were going, we had a large business. I have seen as many as thirteen teams in the town in one day, loaded with copper, from Cobar and Mount Hope.

4160. I suppose you contract to convey goods from Borenore right out west? Yes; we deliver them by team to the various persons to whom they are consigned.

4161. What is the nature of the traffic, between Forbes and the west? The main part of my business between here and the back country is wool. Of course I despatch any other goods which may arrive, or which the storekeepers may have to send away.

4162. How many tons does that amount to in a year? There are stations, such as Condobolin, where we might send, throughout the year, fully 60 tons of loading.

Mr. John Cunningham Cunningham, wool-scourer, sworn and examined:—

4163. *Chairman.*] What is your occupation? I am a wool-scourer, from Forbes.

4164. How long have you been here? I have been in business for eighteen months only.

4165. Where is your place of business? On the river to the south of Forbes.

4166. What does your machinery consist of—what power have you got? We have steam power—4-horse power nominal.

4167. And you pump water from the river? We are better situated than that. We have a permanent supply of drift or spring water, which is to be found about Forbes, leaving us independent of the river. We pump the water from a well. I can use the river, if required.

4168. How many hands do you employ? About twenty in a busy season.

4169. Do you use a machine for drying your wool, or do you dry it on the grass? At present on the grass; but we contemplate placing a large plant upon the ground. We would do so at once if we were assured of quick transit.

4170. What quantity of wool do you put through in a month? I can give you the quantity we have put through since we started. We have received over 200 tons of wool from a distance from Forbes varying from 5 to 60 miles. We have despatched to Sydney about 120 tons of that quantity, which would represent between £500 and £600 for carriage, at current rates. We could increase that amount very much if we had quick transit.

4171. You find a difficulty in getting wool to the station? Yes. Two-thirds of the quantity I have named went *via* Cowra. A quantity of the wool would go to Melbourne, as well as to Sydney.

4172. If there were a railway line in Forbes would you send the wool to Cowra by team? No.

4173. Suppose the line under consideration from Molong to Parkes and Forbes were constructed, would you send your wool by that line? I should send it *via* Cowra, by team, if that line were made.

Mr.  
B. White.  
4 Mar., 1890.

Mr. J. C.  
Cunningham.  
4 Mar., 1890.

Mr. C. Read.  
4 Mar., 1890.

- Mr. J. C. Cunningham. 4174. In preference to putting it on the railway line? Yes.\*  
 4175. Why? Because I believe it would be less expensive.  
 4176. You have made up your mind that the line must go *via* Cowra, or you will not have it at all? Not at all.  
 4177. Do you know that the difference in the haulage on the two lines would be only  $2\frac{1}{2}$  miles? Well, the present rate makes very little difference; that is to say, it does not matter very much whether you send the wool *via* Borenore, or by Cowra.  
 4178. But if the line were constructed to Forbes, would you continue to send your wool by dray to Cowra? Certainly not. I want the quickest way of getting to market.  
 4179. If the line under investigation were constructed, which way would you send your wool? By the line, of course. I presume you mean the Borenore line.  
 4180. Do you think that the construction of that railway, then, would lead to an increase in your business? Yes. The reason I say so is that there has been an increase of wool in the district during the last twelve months. Since I have been here I have not been able to cope with it. I have had wool remaining in Forbes for six to eight weeks, through our not being able to get it down to Sydney. A gentlemen for whom I was scouring asked to be allowed to send a portion of wool down in the grease, rather than to delay by the scouring. That is, of course, a great loss to myself and the district.  
 4181. That would be obviated if this line were constructed? Most decidedly.  
 4182. You would have no difficulty in carting from your place to the railway station at Forbes? No; and it would give me confidence in expending a large sum in order to meet the requirements of the district.  
 4183. You do not hesitate to say that you could get plenty of wool to scour if you could get it away within a certain time? Yes, we could scour a great deal more—in fact, the whole clip of the district—if we had quick transit.  
 4184. *Mr. Lee.*] So far as your business is concerned, your great anxiety is to get your wool despatched quickly? Yes.  
 4185. Have you a preference for any particular route? Studying the character of the country, and looking at the probable cost, I think the Cowra line should be adopted. In the first place, the altitude over which the goods would travel going to Borenore would be very much greater than that on the Cowra route. This would make the wear and tear on the railway stock greater.  
 4186. So long as you get an outlet by railway, have you a preference for any route, or would you take any route which would give you quick access to market? Any line which would give my clients a chance of getting their goods to market. I leave it to the Government to determine the quickest and shortest route.

Mr. William Kinglick Garnsey, stock and station agent, sworn and examined:—

- Mr. W. K. Garnsey. 4187. *Mr. Dowel.*] What is your occupation? I am a stock and station agent at Forbes. I have resided here for five or six years.  
 4188. Do you know the district? I know it well.  
 4189. Have you resided in the district prior to the last five or six years? No.  
 4190. Then your knowledge is confined to that time? Yes.  
 4191. Are there any large transactions in stock in this district? Yes.  
 4192. What information have you to give the Committee? I can give you the number of stock we have sold since we have been here.  
 4193. Will you be good enough to read the particulars? We had two months in 1884 in which we sold 2 horses, 50 cattle, 2,830 sheep, and we leased 25,000 acres of country; in 1885, we sold 22 horses, 4,616 head of cattle, 270,984 sheep, 1 station, and we leased 137,700 acres of land; in 1886, we sold 9 horses, 6,894 cattle, 226,609 sheep, 3 stations, and we leased 102,000 acres of land; in 1887, we sold 36 horses, 11,273 cattle, 294,684 sheep, 8 stations, and we leased 6,950 acres of country; in 1888, we sold 10 horses, 5,681 cattle, 299,024 sheep, 11 stations, and we leased 80,500 acres of country; in 1889, we sold 30 horses, 1,979 cattle, 423,766 sheep, 3 stations, and we leased 10,700 acres of country; so far in 1890, we have sold 10 horses, 1 head of cattle, 103,636 sheep, and 1 station.  
 4194. Generally speaking, may I infer that the business in this district in which you are engaged is increasing? Yes; it is.  
 4195. Would any portion of the business to which you have just referred afford revenue to a railway constructed to Forbes? Yes.  
 4196. What portion? I could not say.  
 4197. Do you think, from your knowledge of the district, that a considerable portion of the traffic brought to the railway would consist of fat stock, sheep, and cattle? I do.  
 4198. Would any revenue be derived from starving stock? Yes; we railed two years ago, from Cowra, between 16,000 and 25,000 sheep across to Wagga. They would have gone to Forbes, if the line had been here.  
 4199. If the railway were constructed to Forbes, do you think the traffic of stock through here would be still further increased? In fat stock it might, but not in stores.  
 4200. It is fat stock, you anticipate, which would bring revenue to the railway? Yes.  
 4201. From your knowledge of the country, do you think a larger proportion of that kind of traffic would come to Forbes than comes there now? I am certain it would.  
 4202. Can you say, approximately, what increase there would be? I have not gone into a calculation at all. I know the stations intimately between here and Hillston; and I know that much of the wool that now finds its way to Nyngan would find its way here, if there were a railway.  
 4203. You have referred to the sale of a large number of acres of land;—what do you infer from that—that persons are selling out at a profit? Yes; I can instance one station which we sold twice. I mean Upper Droubalgie. The area is 9,500 acres, of which about 3,000 acres are secured in freehold and conditional purchase. We sold this station in September, 1886, for £7,500, and we re-sold it in July, 1888, —one year and ten months afterwards—for £9,000, showing an increase in value for that time alone, of £1,500.  
 4204. During that time had the station materially improved? No; it was in the same state as on the day we first sold it.

4205.

\* NOTE (on revision):—There was a slight misunderstanding when I answered question 4174. I send a large proportion of scoured wool to Melbourne, and thought sending the wool per dray, *via* Cowra, would be less expensive and more direct than sending it *via* Parkes.

Mr. W. K.  
Garnsey.  
4 Mar., 1890.

4205. Have you had many transactions in land? Yes.
4206. What have they resulted in? Land has been sold at a profit. We had not this transaction ourselves, but I know of it. A farm of 420 acres on the Lachlan River, 6 miles from Forbes, was sold a year ago at £5 per acre; a week afterwards it was sold for £5 5s.; and in a year afterwards I took a buyer at £6 6s., and the present owner refuses to sell—he had a water frontage. There is a place belonging to William Chandler, a farmer at Wangan Vale, near Eugowra, about half-way between Forbes and Eugowra; there is an area of 1,440 acres. It was sold about two years ago for £1 18s. per acre; the present owner refused £2 10s. per acre for the same land twelve months later.; I took a buyer up there about four months ago and he wanted £3 10s.
4207. Then the Committee may infer that land is increasing steadily in value? Yes. There is a farm on the river belonging to Mr. Reymond; I took a buyer and offered £6 10s; he refused it. I may tell you also that I had a gentlemen looking about for a fortnight trying to buy a place at which he wished to start growing fruit—oranges principally, I believe. He could not buy suitable land, even at £6 an acre.
4208. Your occupation causes you to travel through the district? Continually.
4209. Is the country fairly settled upon? Yes, wherever it is available. The distance from Cowra to Forbes is just 58 miles, and taking 2 to 3 miles on each side of the river, every acre is thickly populated, and occupied by small *bona-fide* holders. Nearly all of this area consists of rich deep black soil. I estimate the average value at £4 per acre all through. Outside of the area I have named, the land is worth from £2 to £2 10s. per acre for a considerable distance. I may mention also that the valley of the Lachlan runs parallel with the surveyed line from Wood's Flat, *via* Eugowra, to Forbes. This rich land continues on both sides of the river to Condobolin, a distance of 60 miles, where a break occurs on the north side. On the south side the good land continues, with few exceptions, as far as Merri-Merrigal, 75 miles below Condobolin.
4210. Does the appearance of the selectors you know give you the impression they are permanently settled? It does.
4211. What is their chief occupation? They are occupied principally in stock-growing, because there is no outlet for anything else. So far as other things are concerned, they can grow only what is required for the district.
4212. Can you say whether there have been any sales of those selections to pastoral tenants? Not many since I have been here. Generally speaking, the settlers are *bona-fide*;—they have every appearance of possessing comfortable homes.
4213. Do you think the construction of a railway to Forbes would conduce materially to their prosperity? I think it would.
4214. And to that of the district generally? Yes.
4215. Would it give a great impetus to agriculture? It would increase it very much, compared with what it is now.
4216. Have you noticed that of late years there has been a larger area of land under crop? No; because there is no outlet. They can only consume a certain amount here. The supply is up to the demand now.
4217. Is property increasing in value in the town of Forbes? It is. Properties we have sold we can re-sell at a profit.
4218. People appear to have confidence in the town and district? Yes.
4219. Is it the anticipation of a railway which engenders this confidence? I would not say that. The natural resources of the town are steadily increasing it.
4220. Do you know anything of the rival routes? All the lines, I think.
4221. Do you think the district would be served to any considerable extent by the construction of the line from Molong to Parkes and Forbes, *via* Flagstone Creek? Any railway to the town would do it good, no matter which way it came.
4222. But would that line serve a considerable number of inhabitants—large centres of population? I think so.
4223. You know Parkes well? Yes.
4224. The principal centre of population is round about there? Yes.
4225. Can you say how the country is settled to the north of Parkes? It is very thickly settled just now.
4226. What is the character of the country? It is very open box country, with good red soil.
4227. If the statement were made this morning that there was no settlement to the north of the proposed line from Molong, would it be correct? I do not think so.
4228. You are able to form an opinion? I think so. I have been all my life at the stock and station business.
4229. If a railway were made to Forbes, what do you think would be the principal source of revenue? Well, in the first place the passenger traffic will increase considerably.
4230. What about the merchandise traffic—that will increase? That would increase. There would also be a great quantity of wool, and a good deal of fat stock.
4231. The Railway Commissioners have estimated that the whole of the return of fat stock would be covered by £800 a year;—do you think that that is an under-estimate? There is one thing to be considered in answering that question. When persons having stock can travel up a river like this, with such good country, they will be likely to do so, and a number of them might rail their stock at Cowra—they would travel their stock up to Cowra, and save the rail round. If the season were good the stock would do equally well; if the season were bad the stock would be brought to Forbes, in order that they might be railed as quickly as possible, and got away by the quickest route.
4232. Do you think that the estimate of £800 would be sufficient? I think Parkes would contribute more than that amount, to say nothing of Forbes.
4233. You are sure that the country to the north of Parkes is fairly settled? Yes.
4234. And that the settlers would contribute to the railway revenue at Parkes? Yes.
4235. Do you know the country between Grenfell and Parkes? Yes; it is all good country.
4236. Is it fairly settled upon? Well, it could be better settled upon.
4237. Is the land in the hands of large holders? From Forbes to Grenfell, after you get 10 miles out, you will find the next 10 miles all in large areas. Each side of that 10 miles is well settled upon.
4238. There is one considerable portion then in large estates, which is not likely to be settled upon? It is in large areas.
4239. It is now occupied for pastoral purposes? Yes; between Parkes and Forbes the land is not settled upon at all, because it is comprised in a gold reserve.

- Mr. W. K. Garnsey.  
Mar., 1890.
4240. It is merely occupied by the pastoral tenants? Yes.  
4241. Do you think the cross line is one which could be constructed? I do.  
4242. In preference to the one which is being referred to the Committee? I do; because I think it is a line in the interests of the country at large.  
4243. What distance is there to go from Grenfell to connect with the nearest railway? Something over 30 miles.  
4244. Do you think the Committee could fairly recommend the construction of the line from Molong to Parkes and Forbes, *via* Flagstone Creek? I do not think so.  
4245. For what reason? There is too much bad country there.  
4246. What part is bad? Take 12 miles out of Parkes, or 14 miles out of Molong, and it is good country, but the balance is bad country.  
4247. You consider that there is a belt of 24 miles of inferior country between Molong and Parkes? Yes.  
4248. Suitable for what purpose? For breeding wild dogs and kangaroos.  
4249. Is it a fact that this land which you describe as being so bad is settled upon? I know some people out there who have been there all their lives.  
4250. Still you do not think the railway ought to be constructed there? I do not think so, honestly.  
4251. Do you think the people of Cudal would be served by the Molong line, if the railway were brought within 4 miles of it? Of course any person close to a railway gets an advantage from it.  
4252. But do you consider that the Cudal farmers would be fairly served if they were 4 miles from a railway? The railway would serve them, but not as well as if it were taken through Cudal.  
4253. At all events, they would be better served than they now are? Yes.  
4254. Would not traffic from the farmers go to the railway-station if it were only 4 miles distant? Certainly, if the farmers could not get cheaper carriage by road.  
4255. But would not the Cudal people use the railway under any circumstances? I think so. I know I would myself if I were at Cudal.  
4256. By bringing the railway nearer Cudal, would it be taken out of the bad country to which you have referred, or out of any portion of it? It is good country about Cudal; the country is good considerably more than 4 miles from Cudal.  
4257. Therefore there would not be as much bad country as you anticipated? I never travelled across from Cudal, but I have been through from Murga in towards Dubbo. It is pretty nearly all bad country from the time you leave the Borenore line straight through to Oberley.  
4258. But the construction of the line to Forbes by either route would be a material benefit to the town of Forbes and to the district? Yes.  
4259. You are clearly of opinion that a line should be made to Forbes? We ought to have had a line here years ago.  
4260. You think the Committee would be perfectly justified in recommending it? I think so.  
4261. Do you know the country between Forbes and Condobolin? I do.  
4262. Do you know it beyond Condobolin? As far down the river as Euabalong, about 40 miles.  
4263. Would the trade of that district be brought here to a large extent if a railway were made here? It would.  
4264. Is Condobolin a thriving town? A very prosperous little town.  
4265. And the people there would do their trade with the depôt at Forbes? They would, I believe.

Mr. Joseph Bernard Reymond, sworn and further examined:—

- Mr. J. B. Reymond.  
4 Mar., 1890.
4266. *Chairman.*] I believe you wish to supplement your evidence? In giving the industries, businesses, and occupations of the townspeople, I omitted to mention that there were two newspapers and six stock and station agents. I also intended to read you a list of those having irrigation plants, and I should like to give you the names now. They are: Martin Brothers, Martin, Nicolas and Reymond, Farrand, Tozer, Corscaden, Gatenby, and Edols.

Mr. John Canning Corscaden, wool-scourer and fellmonger, sworn and examined:—

- Mr. J. C. Corscaden.  
4 Mar., 1890.
4267. *Chairman.*] What is your occupation? A wool-scourer and fellmonger.  
4268. Where are you situated? About a mile and three-quarters from the town, on the river.  
4269. How many men do you employ? I have had about 30 hands this season.  
4270. What machinery do you employ? A twelve-horse power boiler. I have two Tangye pumps; they are 6-inch pumps.  
4271. Do you get water from the river? Direct from the river.  
4272. About what amount of wool do you pass through your hands in twelve months? About 215 tons—that is the weight when it is scoured, not in the grease.  
4273. Are you passing more through your hands now than you used to do, or are you doing about the same business? A little more, I think.  
4274. How long have you been in business? About two years.  
4275. And you think there is an increase? Yes.  
4276. Do you have as much wool as you can scour? Yes.  
4277. You have no difficulty in getting wool? No; but there is a difficulty in getting it away.  
4278. How do you get it away? We send some by Cowra, and some by Borenore, whichever we can get through quickest.  
4279. If you had a railway here, would it be of much importance to you? Very much indeed; a railway to Forbes would materially benefit us.  
4280. I suppose it would not matter to you very much which way the line went? It would, considerably.  
4281. Why? We do not want a line *via* Molong; that route is too roundabout. We want a direct line, to benefit the people down the river.  
4282. You mean down the Lachlan? Yes.  
4283. How would it affect them? If the line came *via* Molong they would not send their wool that way.  
4284. But there is only 2½ miles difference? But they would be sending their wool right round the country, and it would be easier and cheaper to send it to Cowra by team.

4285. You think that if the line under consideration were made the wool would be sent by team to Cowra? I believe it would.
4286. Is that what you would do? The matter is not in my hands always; but I think I would do so myself.
4287. Although you know that there is only 2 miles difference in the distance? Well, it appears to be sending the wool all round the country.
4288. But you cannot get over the fact that the difference in distance is only 2 miles;—in spite of that small difference, you would rather send your wool by team to Cowra? I would rather send it by Cowra. I should get it sent away more quickly and cheaply that way.
4289. The teams go more quickly than the railway? The teams go right through to Cowra.
4290. *Mr. Dowel.*] Have you any knowledge of this district? I have only travelled by the coach.
4291. Where would those persons be on the river who would object to sending their wool from Forbes, by railway, round by Molong? I know that a great number of our constituents would object, although I could not name them.
4292. Do you know of any? I could not name them now.
4293. Could you name one? No; I should not like to mention anyone, because they might object. I fancy they would not like to send their wool this way.
4294. You only fancy so? Yes.
4295. Coming back to your own statement, do you not think that if a railway were constructed to Forbes, coming from any point on the existing railway system, it would be of advantage to you in assisting you to send your wool by railway rather than by dray;—do you not see that you would be able to despatch your wool in sufficient time to take advantage of a favourable market in Sydney, whereas, if you were depending on dray-carriage, your wool might be too late for the good market? That is quite correct.
4296. Well then, under those circumstances, would not the railway be a considerable advantage to the people in Forbes? Yes; if it came direct, but not by the roundabout route.
4297. Would 2 miles difference in the two routes make any difference to you in the transportation of your wool to Sydney, once you got it upon the railway? I think there is a difference of more than 2 miles, but I am not certain.
4298. But would you, on account of that difference, prefer to send your wool by dray to Cowra? I think it would be cheaper in the long run, and I also think that the railway from Borenore would suit the larger number of people.
4299. If a railway were brought to Forbes by any route, would you use it? I might do so, sometimes.

Mr. J. O.  
Corscaden.  
4 Mar., 1890.

Frank Alleyn Edols, Esq., squatter, sworn and examined:—

4300. *Mr. Lee.*] I understand that you are engaged in squatting pursuits? Yes.
4301. Are you one of the firm? No; but I am working under my father, who is the firm trading as T. Edols & Co.
4302. Where is the property situated? About 35 miles west of here.
4303. You have sheep, chiefly, on your run? Yes.
4304. About how many bales of wool do you send to market a year? The number varies; we had over 4,000 this last year.
4305. Greasy? It included about 400 or 500 bales of scoured. I can give you the exact number. There were 4,148 bales altogether.
4306. Which market did you send it to? We sent our wool to England, through Sydney.
4307. How did you get it from the station to Sydney? We sent it through Wright, Heaton, by dray, to Forbes. The teams take it from the wool-shed to Borenore, through Forbes, and it is taken thence by train to Sydney.
4308. Could you tell us the amount of trainage you would pay on those 4,148 bales? I could not say what the train freight is. We agreed to give Wright, Heaton, & Co. £6 a ton to take the wool at the station and deliver it at Sydney. For scoured wool we paid them £7 3s. 3d. There would be only about 500 bales of scoured wool.
4309. What would you allow for the dray carriage from the station to Borenore, per ton? I could not say.
4310. The object of this line of examination is to ascertain the actual freight likely to be obtained by the proposed railway? I am afraid I cannot give you that information.
4311. Do you get your station supplies back by the same route? Yes.
4312. About how many tons a year? Last year we had over 90 tons of back-loading; besides that, we had two or three loads from Cowra—about 5 tons on each load; there would be a total altogether of about 105 tons.
4313. Did you send any wool *via* Cowra? No.
4314. Is the Borenore route shorter for you than the Cowra route? No; I think it is a little bit longer, judging from the coach.
4315. Have you been over both tracks? Yes.
4316. Which is the better road? The Cowra road.
4317. And for what reason do you send your wool to Borenore? Wright, Heaton, & Co. take it from us, and that is the way they go. They enter into a contract to deliver the wool in Sydney at so much per ton. It does not matter to us which way it goes.
4318. Supposing a railway were made from Molong to Parkes and Forbes, would it offer to you a suitable outlet for your wool? Yes; I think it would.
4319. Could you suggest any route which would better serve your purpose than the route *via* Molong and Parkes? My own idea is that the Cowra route would serve us better. I fancy that it would be shorter.
4320. I do not know what is the position of your station in regard to Cowra; but I may inform you that the Cowra line is actually longer than the Borenore line, whereas the Molong line is the longest of the three? Yes; I thought it was.
4321. Do you know the surrounding country? Yes; I know most of it.
4322. Have you been to Borenore? Yes.
4323. Have you been to Molong? No; only as far as Parkes.
4324. Occupying the position you do in this part of the country—having such a large property here—you would, as a citizen, be interested in the extension of the railway system to this part of the colony? Yes.

F. A. Edols,  
Esq.  
4 Mar., 1890.

- F. A. Edols, Esq.  
4 Mar., 1890.
4325. And in common with the rest of the community, you are desirous of seeing the railway taken along a route, which would best serve the interests of the majority of the people? Yes.
4326. Have you thought the matter out sufficiently, to be able to offer an opinion, as to which is the best route to serve the greater number of people? I like the cross-line from Dubbo to Parkes, Forbes, Grenfell, and Young.
4327. But if that line were constructed, you would send your wool *via* Cowra;—you would not send it *via* Dubbo? I think by way of Dubbo.
4328. Would not that be a longer route than the other? I do not think so.
4329. So far as your interest is concerned, you would not advocate the construction of the cross-line to get to the west? No.
4330. It would be with a view of getting direct to Sydney? Yes.
4331. Would the construction of a line to this district, offer any special benefit to you? Oh, yes; because we should get our wool away quicker and more cheaply.
4332. Are there times when your wool is delayed in consequence of bad roads? No; I do not think we have ever had our wool delayed by bad roads.
4333. Taking the present medium of traffic by dray, you are enabled to make use of it in all weathers? Yes.
4334. The only additional advantage of the railway would be, that it would give you quicker and cheaper transit? Yes.
4335. Do you think it would lead to increasing the flocks on your station? No; I do not think it would.
4336. Would it induce you to cultivate at all? Yes; I should think so. It would induce us to go in for irrigation.
4337. You have some dry seasons here occasionally? Yes.
4338. Have you to purchase much forage at those times? Yes; we have to purchase a good deal for the horses.
4339. Where do you obtain it from, chiefly? We get some which is grown on the river by the farmers on our own station, and some from Parkes.
4340. Have you had occasion to remove any of your stock in dry seasons? Yes; we have.
4341. Do you travel them in the ordinary way? Yes.
4342. Would a railway into the Lachlan country enable you to shift them quickly, and advantageously, in dry seasons? It would.
4343. And would you be able to bear the cost of transit? Yes.
4344. To what part of the country would you send your starving stock;—are there any particular districts, which, in dry weather, hold their own better than other districts? We have always sent our stock up into the mountains, into the cold country, in the direction of Cooma, but not as far as that. It is often the case, if we have a dry time of it, they might not have a dry time out Parkes way, and we might then send our stock there.
4345. You would remove the stock to where there was grass? Yes.
4346. If a line were constructed across country, from Dubbo to the New England country, would that be too great a distance for you to send your stock? Yes; I think it would.
4347. Have you ever had occasion to use the railway to remove any stock? No.
4348. So that you do not know what the cost of it would be? No.
4349. You know that special rates are made under those conditions? Yes.
4350. Have you gone in for any amount of irrigation yet? For some.
4351. Have you the plant on the station? Yes; we have two plants.
4352. To what purpose do you usually put them;—is it for the cultivation of a garden, or for crops? No; to keep the stud sheep.
4353. That is to provide the natural grasses? Yes.
4354. Do you lay down English grass at all? No; we have grown a little lucerne, but very little.
4355. I suppose rye, and grass of that kind, will not do well? We find that the natural grasses do the best.
4356. In the case of extremely dry weather, can you, by irrigating, get the grass to grow? Yes.
4357. No matter how dry the atmosphere may be? Yes.
4358. So long as you supply an abundance of water the vegetation will spring? Yes.
4359. *Chairman.*] Will you obtain for us the amount paid on trainage from Borenore to Sydney on your wool? Yes; if I cannot get it from our agent here, I will write to the station and get it from my brother.
4360. *Mr. Dowel.*] What distance is your station from Condobolin? 28 miles.
4361. And what distance from Forbes? 35 miles.
4362. What distance from Parkes? 40 miles.
4363. What is the area of your pastoral holding? There are 90,000 acres of purchased land, over 200,000 acres of leasehold area, and 40,400 acres of resumed area.
4364. What stock have you? Last year we sheared 246,000, including lambs.
4365. Have you any cattle? About 200 head of cattle.
4366. Is the principal portion of your holding, land of first-class quality? Yes.
4367. Its grazing capabilities are good? Yes.
4368. Is it suitable for agriculture? Yes. There may be parts of it which are, but I do not think most of it is.
4369. At all events, some part would be? Yes; if we had sufficient rain.
4370. Have you grown, on your own station, any vegetables, fruits, or vines? Yes. We have a garden at the homestead.
4371. How do the fruit trees thrive? Very well. We water them regularly.
4372. Would that be a fair indication that some fruits and cereals would grow on other parts of the run? Yes; with irrigation.
4373. Knowing the country as well as you do in that direction, do you not think, that if a line were constructed to Forbes, there would be a considerable amount of traffic in fat stock;—would you not send fat stock yourselves? We could not do so; we sell our sheep off the shears, as stores.
4374. Is there a considerable amount of traffic in stock in this district? Yes.
4375. Do you know of your own knowledge whether there is a large number of fats coming through Forbes? I do not. I know we get a great many sheep through the run, but they are not fats.

4376. Do you think there would be any traffic at all in fat sheep for the railway? Yes.  
 4377. And you think a considerable quantity of wool would be brought to Forbes? Yes.  
 4378. More than comes here at the present time? I could not say that.  
 4379. But would it not be an inducement to squatters, to send their wool here, if they could get it away more quickly, and at a lower rate? Yes.  
 4380. Therefore there is every probability of the railway being utilized for the carriage of wool? Yes.  
 4381. Do you think the construction of a railway to Forbes would be a great convenience to passengers? Yes.  
 4382. Any railway to Forbes? Yes.  
 4383. You could transact your business more quickly and easily in Sydney than you do now? Yes.  
 4384. You do not think persons would drive to Cowra;—you think they would come to Forbes? Yes.  
 4385. Do you think it is at all likely, then, that people would send their wool by dray to Cowra, if there were a railway station at Forbes? No.  
 4386. Supposing you were scouring wool in Forbes, would you instruct your agent to send it by dray to Cowra, instead of shipping it on to the train at Forbes? I would have it sent direct by train, of course.

F. A. Edols.  
Esq.  
4 Mar., 1890.

Mr. Alexander Biggs, contractor, sworn and examined:—

4387. *Chairman.*] Where do you reside? At Forbes.  
 4388. *Mr. Dowell.*] What is your occupation? I am a contractor.  
 4389. How long have you resided here? Twenty-eight years.  
 4390. You have a considerable knowledge of the district? I have.  
 4391. As a contractor, will you give us some information about the timber of the district? The best timber in the district is on the Lachlan River;—it is hardwood timber. You can get pine off the river, on both sides. I have been bridge-building; I put a bridge over the Mandagery Creek, between Cudal and the Parkes-road. I also put one up between Parkes and Molong. I went all through the hills for timber. I got most of the timber for the Cudal bridge, on the other side of Cudal, at what they call the Big Flat; it is all big timber. The soft stuff came from Oakey Creek, Barragin way.  
 4392. What distances are these places from Cudal? Oakey Creek is 10 miles, and Big Flat is 3. I was looking for 42 feet girders among the ironbark, on the Molong and Parkes-road. I went all through the hills there. I had to go to the caves at Barry's Stables; I was a fortnight looking, and could not find a sound stick.  
 4393. Where is Barry's Stables? On the road between Cudal and Orange.  
 4394. What distance from Cudal? About 14 miles;—it is supposed to be half way.  
 4395. Is it a timber reserve? No, it is Crown land. I got the sticks there easily enough; but I could not get them among the ironbark.  
 4396. What timber was it you obtained? White gum, or mountain ash, as they call it here.  
 4397. The Government allowed you to use white gum instead of stringy-bark? We could not get stringy-bark good enough.  
 4398-9. You are sure that white gum does not stand as long as ironbark? I am.  
 4400. Will you please give the Committee some information as to the timber in the immediate vicinity of Forbes;—that is, within a radius of 20 miles? There is a good deal of yellow box; it is one of the best timbers going for bridge work.  
 4401. And it can only be obtained in short lengths? I have got them 52 feet long. There is a good deal of gum timber; but a lot of it has been ringbarked. Thousands of acres have been spoilt.  
 4402. Is the yellow box of which you speak pipey or shelly? Some of it; but most of it is good sound wood. With the exception of the gum, it is the soundest wood about this part. There is a good deal of pine yet.  
 4403. What distance from the proposed railway? There is pine upon the Orange-road from here to Eugowra; the line runs through it. It runs in on to the river also. There is a big timber reserve upon the river.  
 4404. What distance from Forbes? Twelve miles to the lower boundary.  
 4405. Is it an extensive pine scrub? It runs 7 or 8 miles out.  
 4406. The same character of timber that has been put into this building? Exactly the same.  
 4407. Plenty of timber like these girders could be got out of it? Yes.  
 4408. If this line were constructed, and steam saving plants were put into the scrub, timber could be supplied through the railway to Forbes, and could be sent away on the railway to various markets? I believe so.  
 4409. So as to give a revenue to the railway? I think so.  
 4410. What price do you pay for timber? You can get it delivered at Forbes at 11s. per hundred feet.  
 4411. Is there a large quantity of the timber to which you refer? A large quantity. You may say that Forbes is in the centre of it.  
 4412. Having resided in the district as long as you have, have you noticed that of late years, there has been a particular increase in its prosperity? Yes; I have noticed that.  
 4413. A large number of buildings have been erected? Yes.  
 4414. The building trade is now brisker than ever? Yes.  
 4415. What about building outside of the town? I am pretty well acquainted with the country round about here. Most of it is settled upon. The majority of the settlers are *bona fide*.  
 4416. They are still erecting dwelling-houses of a permanent character? Yes.  
 4417. And you do not think they are likely to leave there? No.  
 4417½. Has this been going on for a large number of years? The place has been steadily improving all the time. A few years ago we built the Lagoon bridge; there was then a lot of vacant land. Since then it has been cut up into special areas, and you cannot get timber now at all where you could get it then.  
 4418. The land upon which you used to get timber is now settled upon? Yes.  
 4419. And if you wanted any timber you would have to purchase it from the selectors here? Yes.  
 4420. Is there anything else beside timber you think that is likely to bring traffic to the railway? Most decidedly. There is the wool; a great deal of it goes this way.  
 4421. Have you any special knowledge of the stations about here? Yes.

Mr. A. Biggs.  
4 Mar., 1890.

- Mr. A. Biggs. 4422. And you think that a large quantity of the wool grown in the district will be brought to this line?  
Decidedly.
- 4 Mar., 1890. 4422½. Do you know Condobolin? Yes, and beyond.
4423. Do you think that any large portion of the produce of that district will come to Forbes? Yes.
4424. Giving traffic to the railway? Most decidedly it will.
4425. Do you know the country between Grenfell and Forbes? It is good country all the way—that is, keeping on the west side of the ranges.
4426. Are there engineering difficulties in the way of the construction of that railway that you know of? None whatever.
4427. Do you know the country traversed by the railway the Committee are now considering? I have been timber-getting from one end of it to the other.
4428. With the exception of the reserves, it is pretty well all settled upon, is it not? All the good available land is taken up, but there is a considerable portion of it which is good for nothing.
4429. What is the portion to which you refer? It is good from Parkes, 12 or 14 miles out on the road to Molong, along the surveyed route, and then from there to within about 17 miles of Molong, on the left hand side of the surveyed line, it is useless.
4430. Is it settled upon? Not in to the left. You could not settle upon it; it is all hills there. Along the road it is all settled, except at places where the land is of no use.
4431. Is that Crown land? Yes; but it is all mountain and scrub.
4432. Do you not know that it is locked up and that it could not be settled upon? I was not aware of that.
4433. Were you aware that it formed a portion of a leasehold area? I was not.
4434. What land are you referring to, particularly? All the hills from Bumberry straight along from Meranburn, in to the left. Along the road the land is good, but I am speaking about the land in to the left.
4435. Have you been there recently? It is two years since I was there.
4436. Would you be surprised to find that a considerable portion of that land is settled upon? Close to the road itself I believe it is; but if you go to the back of those sections you will find rough, hilly country till you get to Bilga. In odd places it is good, but a great portion of it is useless.
4437. What is the character of the land to the north of Parkes? That is all good.
4438. And between Parkes and Condobolin? That is very good too. From Parkes to Tomingly and that direction the land is all settled upon. Between Parkes and Oberley there are a good many selections, but there is a lot of inferior land.
4439. Where do you think the settlers to the north of Parkes would transact their business if this railway were made? With Parkes, of course.
4440. And the good country is fairly settled upon? Yes.
4441. You have been over the country yourself? Yes; I built a bridge there a short time ago.
4442. Does the settlement appear to be of a permanent character? Yes.
4443. There are a good class of men improving their holdings and combining agriculture with pastoral pursuits? Yes; some have come in only lately. The majority have come there within the last three or four years.
4444. Under any circumstances, without discussing the merits of the rival routes, is it advisable that a line should be made to Forbes? I think it is.
4445. And you think that it would be a line which would eventually pay, if it did not pay at the start? I do.

Mr. Charles St. Baker, stock and station agent, sworn and examined:—

- Mr. C. St. Baker. 4446. *Chairman.*] What are you? I am a stock and station agent and auctioneer.
- 4 Mar., 1890. 4447. How long have you resided here? Since 1862. I have been a little while away.
4448. What is the nature of the evidence you wish to give us? It is with regard to the floods and the general capabilities of the district.
4449. Is this place ever flooded, or is it subject to floods? A part of Forbes has been flooded. We had a big flood in 1867; that was when the big bridge in Bathurst was washed away. It was a very slight degree less than the flood of 1870. I was agent for Messrs. Cobb & Co. at the time. I had no difficulty then in conveying the mails on horseback from here in the middle of the night to the Southern Cross, to meet the coach. The reason the coach could not come through was that there are hills here which get rotten in wet weather. They would not bear the coach, so we took the mails through on horseback.
4450. What about the country outside Forbes—is it liable to flood? Some of it; but no flood-waters get up to the line from Borenore to Forbes, as now measured. It is measured outside of the highest of the flood lines—that is, either the line of 1867 or the line of 1870. There is nothing beyond the creeks, which are met with everywhere, and which have to be bridged.
4451. Have you not known all the traffic on this road suspended on account of floods? No.
4452. Not the traffic from Forbes to Condobolin? No.
4453. You have never known the traffic stopped by flood water? No; but it has been impeded.
4454. If a resident at Condobolin swore to this Committee that he had known the traffic to be stopped for a week on account of the flood he must have been swearing a lie? It has been impeded at times.
4455. What do you mean by impeded? Well, it has been stopped to a certain extent, as at the time of the wash-away at Cootamundra, when the railway accident happened.
4456. One of you two witnesses cannot be correct? Possibly not.
4457. Have you seen much progress in the business portion of the town of Forbes within the last two or three years? Considerable progress.
4458. Do you think that a railway constructed here would be a paying line, and that it would be at the same time of material consequence to the district? That depends which way it comes.
4459. Supposing it comes from Molong to Parkes and Forbes—how would that affect the district? It might possibly pay.
4460. Do you think it would be of benefit to Forbes? I think we could get a line of greater benefit to Forbes and to the colony generally.
4461. You do not think it would be of much benefit to Forbes then? Not of much benefit,

4462. Which of the suggested lines do you think would be of most benefit to Forbes? I think the Borenore line, *via* Cudal. It would go through the best country, and would serve the interests of the district as well as the general interests of the colony better.
4463. Would it also serve that large number of settlers to the north of Parkes? Yes; if the line were continued from here to Parkes.
4464. How would a line from Cowra to Forbes suit the district? It might suit it pretty well—perhaps as well as the Borenore line; but I believe in the Borenore line myself.
4465. But the worst of the three is the one *via* Molong and Parkes? Most decidedly; very much the worst.
4466. For what reason? In taking the line from Molong to Parkes, you are taking it along the edge of the good country. On the north side of the line the bulk of the land consists of barren ridges. Molong, the township, is in one of the northern corners. The bulk of the good country extends right away to the Lachlan River, and includes Cargo, Canowindra, and Cudal. It goes right away to Merraganowrie; that is on the Lachlan River. The flats there are noted for the wonderful crops of corn they have grown. I believe I am right in saying that they copped in one season even the crops grown on the Hunter River. All this so-called Molong country is to the southward, and a great deal of it to the south of the line from Borenore to Forbes.
4467. Would that country be served by the Cowra line? Yes.
4468. How far is Cargo from Orange? Twenty-five miles, I think; but I am not sure of the distance. Canowindra would be about 40 miles from Orange.
4469. What I want to get at is the distance of the country you are speaking of from the existing line? Orange and Cowra would be the nearest points.
4470. How far is it from Cowra to Canowindra? Only 22 miles, I believe.
4471. Is there any other information you would like to give the Committee? I should like to say that, so far as the Eugowra people are concerned, a portion of them are in the Molong district, and they would not be served at all by the Molong line. There is a considerable area of good land there. If you look at the map which is before you, showing the settlement, you will see that a great deal of the land to the north of the Molong line is blank. You will see that to the south of that line it is all settled country. To the north of the Molong line there are a lot of barren ridges, and so far as the people to the north of Parkes are concerned, if they want a railway it would be better to take it from Borenore, *via* Eugowra, and Cudal to Forbes, and thence to Parkes, giving them a terminus there. That seems to be the terminal point at which they are aiming.
4472. *Mr. Lee.*] There is a deviation, starting from a point between 217 and 218 miles on the staked line;— would not that bring the Cudal people within the influence of the Molong line? It might bring the township within its influence; but you must remember that Cudal is a long way distant from the bulk of the country which we wish to serve by the line we advocate. You are leaving out all the country to the south right down to the river, which is part of the Molong district, and which has been included in the Molong returns. They have appropriated those returns for Molong, in supporting their claim to a railway; but they omit to mention that Molong is in one of the northern corners, whereas the line we advocate, from Cudal to Borenore, is in the centre of the Molong district, with good land on each side of it.
4473. As a matter of fact, however, the deviation would serve Cudal? It might serve the township, if it came within 4 miles of it; but it could not be said to serve the Cudal people, because they extend 12 miles this side of Cudal.
4474. Having this deviation in view, do you not think it would serve the Cudal people equally well with people to the north of the staked line? There are very few to the north. You will see from the map that there is little or no settlement; the population extends on the south right down to the river. Looking at the map before you, I think it must be quite evident that the line from Borenore to Forbes would serve the largest population; the settlement as shown by the map proves that conclusively.
4475. But would not the proposed deviation be more likely to serve not only the people of Cudal, but the people to the north of the staked line? The line from Borenore to Forbes, *via* Cudal, would, I think, serve the greater number of people. The settlement to the north of the Molong line would not, according to the map you show me, suffer at all, because the bulk of that settlement is nearly all due north of Molong. The settlers there could come to Molong without any trouble, but a large number of persons to the south, if you adopt the Molong line, could not get to a railway without going a great distance out of their way.
4476. Are there not some residents north of the staked line over 15 miles from Molong? There might be.
4477. Are there not residents 15 miles south of the proposed line from Borenore? Undoubtedly.
4478. Then, if it were possible to make a deviation in the centre, between these two lines, would it not be likely to serve the interests of the greater number of people? Decidedly not. The Borenore-Cudal line is the most central line, and will undoubtedly serve the greatest number of people, as well as being of the greatest benefit to the colony at large.
4479. *Mr. Dowel.*] How long have you resided at Forbes? Since 1862. I have resided here for twenty-two years absolutely.
4480. Do you think it is necessary to bring a railway to Forbes at all? I think it has as good a claim to a railway as any town not having railway communication.
4481. Do you not think that if a railway were brought here by any of the routes to which reference has been made, it would be an advantage? I do not think it would; I do not think the Molong line would be of any advantage to Forbes.
4482. Is not Forbes the terminal point? Yes, *pro tem.*
4483. You know that the proposal is to construct a line from Molong to Parkes and Forbes, *via* Flagstone Creek? Yes.
4484. As a resident of Forbes, knowing the district so intimately as you appear to do, you still say that a railway by that route would be of no advantage at all to Forbes? I must give an answer with a qualification.
4485. I will take your answer—yes or no? May I be allowed to give a qualification?
4486. I have not the slightest objection, but we do not want a speech? I am not making a speech; but I think that a much better line in the interests of the colony generally, as well as of this district, would be that from Borenore, *via* Cudal, to Forbes.

- Mr. C. St. Baker.  
4 Mar., 1890.
4487. Do you consider that if the line is made as proposed, it will be of any advantage to the town and district of Forbes? I do not think it will be of much advantage. I think it will be a waste of money.
4488. As far as you can see, you think it is not desirable to construct this line; and you think that Forbes had better be without a railway, than have one by that route? That is just what I do think.
4489. Have you any knowledge of the stock-traffic that comes into Forbes? I have a general knowledge of it, but I have not looked it up.
4490. Are you aware a large quantity of wool and other produce come to Forbes? Decidedly.
4491. If a railway were brought to Forbes by any route, do you think that produce would be sent by it, or that it would be sent by bullock or horse team to Borenore or Cowra? I think a great proportion would.
4492. A large number of persons would not use the railway? I do not think they would.
4493. Would it not give them increased facilities in the shape of greater speed and cheaper rates? But they do not give us cheaper rates; we find that the railway has given us dearer rates. When the railway was at Bathurst and Rydal, we used to get loading up cheaper than we do now, as a matter of fact.
4494. What would be the cost of sending a bushel of wheat to the railway? I cannot say; I am not in that line of business. I have not looked the matter up.
4495. You do not know the rates of carriage per ton in the district? I could not give you the absolute rates just now.
4496. Have you never had any goods conveyed from the railway station to Forbes? No; but I know what others have paid.
4497. What have they paid? They have paid as much, from the nearest railway station, as £8 a ton;—that was from Bathurst some years ago.
4498. Have you never received any goods yourself? I am not in the habit of receiving goods.
4499. Supposing it has been sworn, that the carriage of wheat from Forbes to the nearest railway station, would cost 6d. per bushel, would it be of any advantage to settlers in this district who grow grain, to get their produce taken right through to Sydney by the railway at 4½d. per bushel? That is a self-evident fact.
4500. And yet you say that the railway would be of no advantage to the district? I do not think it could be of much advantage *via* Molong.
4501. Are not the agriculturists an important class, worth consideration? They are, to a certain extent; but if they could get their grain carried by a more direct line at a cheaper rate, it would be to their interests to use that means of carriage.
4502. You think, after all, that some considerable advantage would be gained by agriculturists upon a railway coming to Forbes from any point the Government might determine? There might be some advantage from whatever point the railway came. What I say is that the line you suggest would not be of the greatest advantage to the district.
4503. You would sooner be without a railway than that it should come *via* Parkes, is that what I understand you to say? You understand me to say that.
4504. *Mr. Lee.*] Have you given any attention to the suggested line from Cowra to Forbes? Yes.
4505. How would a line of that character open up the district? Very well.
4506. You know that there have been many lines surveyed into the valley of the Lachlan, from different points? Yes.
4507. And that this question of the proposed railway extension has been hanging over for many years? It has.
4508. The country has been tolerably well explored by surveys? It ought to have been.
4509. Could you suggest any line which would better serve the district than either of the three which have been mentioned this afternoon? My opinion is, that the Borenore route is the best line to open up the district. I can give you my reasons for it, if you like. I believe that a cross line from Young, *via* Forbes, to some point on the North-western line, is inevitable in the future;—that was the line I advocated myself in 1880, when I was a candidate for election to the Legislative Assembly, and when I was defeated.

Mr. John Woodliffe Girdham, gunsmith, sworn and examined:—

- Mr. J. W. Girdham.  
4 Mar., 1890.
4510. *Mr. Lee.*] What is your occupation? I am a gunsmith.
4511. Where do you reside? At Forbes.
4512. How long have you been here? Since the latter end of 1861.
4513. On what point do you desire to give evidence? I collected the census in 1871 and in 1881, and I know the whole of the district. I have travelled through it all. I was given to understand that I would be required to give evidence as regards the flooded state of the country.
4514. We should be glad if you would give us any information, first of all, with reference to the Condobolin side? The road which would be taken by a railway from Borenore to Forbes, runs pretty free from any flooded country. In flood-time I have had occasion to go that way. I was to the southward of the proposed line from Borenore to Forbes, on to Condobolin. The two lines run parallel beyond Lackey's woolshed and junction within 20 miles of Condobolin. The line from Parkes on to Condobolin runs right through Warregal, Nelungaloon, and through the heart of the Honorable John Lackey's property;—that line is free from flood. So also is the line from Cudal to Toogong, Murga, Eugowra, and on to Forbes and Condobolin. In 1870 I had occasion to take the mails out, on account of the rotten state of the country. The mail could not come along—it was not on account of the floods, but the country was so rotten that the coach could not travel upon it. In taking the mails out, I went to the southward of the proposed railway line. I drove out Mr. Geysler, the last gentleman who surveyed the line from camp to camp, till he got as far as Murga. I had occasion to go right along the line, and I could see, from the way it was surveyed, that it was in one place about 3 miles away from any flooded country. The country through which the line passes is unsurpassable, either for agricultural or grazing purposes.
4515. Now as to the line to Cowra? I have also been along that route, it is a grand piece of country between Forbes and Eugowra, and on to Woodstock. I think Woodstock will be the nearest and best point at which to tap the cross line;—there is country there which cannot be surpassed. One of the Commissioners,

Commissioners, Mr. Fehon, has expressed the opinion that it was a grand national line, and that he never saw better country. It has been said that these gentlemen,—I am referring to the Railway Commissioners—go through the country with their eyes shut. That is a falsehood. I drove Mr. Fehon from Forbes to Wellington, and there was not an inch of that country that that gentleman did not take particular notice of. He observed both the quality of the soil and its carrying capacity. The gentleman who swore, at Molong, that the Commissioners saw nothing of the country, is a sanguinary perverter of the truth. I know the whole of this district, and I do not think that for agricultural or grazing purposes it can be beaten anywhere in the colony.

Mr. J. W.  
Girdham.  
4 Mar., 1890.

4516. You have seen the Lachlan in flood? I have.

4517. Have you seen the dray road between this and Condobolin flooded? Never. If it were, God help Forbes.

4518. Have you ever known the traffic to be stopped at any time? No, except on the river road.

4519. On which side of the river? On the north side. I was engaged for some time repairing the telegraph line, and the flood waters never stopped me;—I had 60 miles of the line to look after between Forbes and Condobolin, and I have often worked in flood time. There are some places, or rather, were some places, between here and Condobolin, at Bumbergin, where at one time we could not pass, but they have built a bridge, and now you can pass in time of flood. Between here and the Southern Cross the Government have made the road 3 feet 6 inches high, and water which used to come here in 1870 and 1874, instead of coming round Forbes, now goes to the south side of the river.

4520. *Mr. Dowel.*] You know the country well between here and Woodstock? I do.

4521. What is its character between Woodstock and Eugowra? Very good.

4522. You know the country between Eugowra and Parkes? Yes.

4523. Also between Eugowra and Forbes? Yes.

4524. What is the character of the whole of that country? From Eugowra to Parkes, on the south-western side of the Euro Mountain it is very good. I do not think the country between Eugowra and Forbes could be surpassed—it would grow anything.

4525. Do you know the distance from Woodstock to Eugowra? No; but I noticed that the country was particularly good.

William Brooke, Esq., journalist, sworn and examined:—

4526. *Mr. Dowel.*] You reside at Forbes? I do.

4527. How long have you resided here? Twenty-eight years.

4528. You have seen Forbes grow to its present dimensions? From the start up to the present time.

4529. What is your occupation? I am a journalist.

4530. Have you followed that occupation for a long time? For nearly twenty years.

4531. Previous to that what were you doing? I was living on the river, farming.

4532. What is the nature of the information you desire to give to the Committee? I do not wish to give any particular information. I see from the paper to which my name is attached, that general information is required. I cannot have lived here so long without knowing a great deal of the general character of the country. I know it all thoroughly for many miles round. I have been interested in the railway question for many years. I have taken an active part in the agitation.

4533. You have heard most of the evidence which has been given to the Committee? Most of it.

4534. Do you endorse the statements which have been made, as to this being a good agricultural and pastoral district? I do. I have travelled over a good deal of this country, and over a good portion of Victoria. I do not know a district in any of these colonies which is so well adapted as this one to pastoral and agricultural purposes.

4535. You think it desirable that a railway should be constructed to Forbes? Decidedly.

4536. Without discussing the relative merits of the rival routes, I would ask you whether from your large knowledge of the district, you think that a line to Forbes from any one of the points named should be constructed? I think it is desirable that a railway should be constructed from one of the points named. I look upon the railway as simply a better kind of road, and anything which tends to make communication between the provinces and the metropolis readier and more speedy, cannot be otherwise than an advantage to a district.

4537. Do you believe that the construction of this railway would develop the resources of the district, and add to the prosperity of the people? I do.

4538. I ask you the same question with regard to the proposed line from Molong to Parkes and Forbes, *via* Flagstone Creek;—do you think that would be of any advantage to Forbes? In this way;—that we should have speedier communication than we have at present, but by a more circuitous route.

4539. You are aware that this route would involve 11 miles less of railway construction than any other of the suggested routes? I was not aware of that.

4540. Do you know the line from Molong to Parkes? I have not travelled the whole line, but I have travelled it from Parkes to Manildra.

4541. You know the country from Parkes to Forbes? Thoroughly.

4542. You know that a large portion of that country is a gold-field reserve, and that no settlement exists? I am aware of that.

4543. And that, therefore, the traffic which would be brought from Forbes, would be from the outlying districts? Yes; some portion of the traffic, but not much, from the south side of the river.

4544. Do you think that the construction of this line will materially benefit the outside population of the district? As I said just now, I think a line coming from any point to Forbes, could hardly help being a benefit to Forbes; still I do not think the line you mention is the most beneficial line for the district.

4545. Do you think that if this line is constructed any considerable revenue would be brought to the railway in the shape of traffic in produce and stock? Of course some revenue would be brought to it, but I could not say how much.

4546. The revenue would come from almost any point to this railway? As I said just now, I do not think much revenue would be derived from the south side of the river.

4547. Would the Condobolin people use Forbes as a depôt? I do not think they would.

4548. When the witnesses from Condobolin stated that they would make Forbes a depôt, although they favoured the Cowra line, do you think they represented the views of the Condobolin people? I know, as a matter of fact, that the Condobolin people favour the Cowra line.

4549.

W. Brooke,  
Esq.  
4 Mar., 1890.

- W. Brooke, Esq.  
4 Mar., 1890.
4549. Witnesses from Condobolin have told us that if the railway were brought to Forbes they would make Forbes their depôt? Possibly they would; I really do not know.
4550. But do you think it is likely? I do not know.
4551. Do you think that they would prefer to go to Cowra? I am not in a position to say.
4552. What source of revenue could be depended upon for a railway to Forbes? Well, there would be the passenger traffic and a good deal of ordinary merchandise. There are large quantities of goods coming into Forbes from various railway-stations. From Borenore and from Cowra, nearly every day, heavily-laden teams come in. That traffic, I presume, would come to the railway. There are also quantities of goods coming from Cowra, Cudal, and Cargo, in the way of wheat and other produce. Then the corn grown at Eugowra would be a source of revenue to the railway. I noticed that Mr. Prow in his evidence yesterday, gave some statistics as to goods which came to him from the railway-station at Cowra. There is also a considerable quantity of goods coming to him by team, which have never travelled upon the railway at all. Then there is the return produce from the district—wool, grain, hides, tallow, and, I believe, also a large quantity of fruit. I have seen tons upon tons of magnificent apples lying in Mr. Tozer's garden rotting. He could not sell them; he had no means of carrying them away.
4553. If a line were brought from any point to Forbes, you think a large quantity of fruit would be sent upon it? Fruit, especially. For many descriptions it would hardly matter how circuitous the route was. For other descriptions of course the quicker the despatch the better.
4554. Do you think the passenger traffic from Borenore to Forbes would be continued by coach, or that persons would use the railway *via* Molong? I should imagine that persons would use the railway by whatever route it came. I know that from my own experience. I would rather ride in a railway carriage than travel in a coach, although it might be a few miles further round.
4555. Although the railway might come *via* Molong and Parkes, you would prefer to travel that way by rail to travelling in a coach? Yes. Whatever view I might hold as to the desirableness of having a line constructed by any other route, it would not influence me in travelling any way. I should study, in the first instance, my own personal convenience.
4556. When witnesses tell us that if the Molong line were made they would continue to send their produce by bullock-team to Cowra, do you think they mean what they say—do you think they would actually do that if a railway were constructed? A great deal depends on the kind of produce.
4557. Wool, for instance? I have no doubt that would go by railway, but in the reception of goods from Sydney, the heavier class of goods—ironware, salt, and goods of that character—I believe the majority of those would come from Cowra still.
4558. You know that the Commissioners now work our railways on commercial principles? Yes.
4559. Do you not think they would have an eye to the matter to which you refer? But they do not like to run the railway at a loss.
4560. You know what differential rates are? Yes.
4561. Do you think it is likely that they would allow goods in this district to be carried by bullock-teams? We have seen that battle fought out at Goulburn and elsewhere.
4562. Let me ask you one more question about the Cowra line. Is there any considerable amount of traffic between Forbes and Victoria? There is a good deal of goods traffic with Victoria, and a good deal of passenger traffic as well. Many of the settlers living on the river and in the neighbourhood of Forbes and Parkes have come from Victoria—they have a great deal of correspondence with that place.
4563. Is there a considerable amount of merchandise or stock traffic? A quantity of stock traffic.
4564. Any merchandise traffic? A good deal of machinery comes from Victoria, by way of Cowra and Young.
4565. Is there any furniture and other merchandise coming that way? The largest proportion of merchandise by far comes from Sydney.
4566. You have come a great deal into contact with persons residing in various parts of the district who may be considered to represent public opinion? Yes.
4567. What is the consensus of public opinion with regard to this railway question? It seems to be divided.
4568. But there is no division of opinion as regards the necessity for constructing the railway to Forbes? No.
4569. The only difference of opinion is as to the route? That is all.
4570. I suppose certain persons prefer certain routes? Yes.
4571. Have you any knowledge of the country on the Molong line? I was never in Molong in my life. I know all the other routes. I have travelled repeatedly between Forbes and Borenore. One of the advantages of that route is that there is a permanent watercourse along it. From the time you leave Heifer Station Creek, 5 miles from Orange, there is a watercourse on your right-hand side nearly all the way to Eugowra, and I take it that the presence of water is an important element in the settlement of population.
4572. Is the country liable to be flooded in any way? I have never seen it flooded, and I have been over it winter and summer.
4573. Does the line pass through any large estates? There is Mr. Smith's. I do not know the extent of it. I have been told that the line passes through 30 miles of private property, but I am sure it is nothing like that. I should take it to be from 4 to 6 miles. That is from my personal observation as I have gone through.
4574. Then the statement made by Dr. Ross to the Minister in 1884, to the effect that the line from Borenore, *via* Cudal would pass through 30 miles of private land, is not correct? I should say that it was decidedly incorrect—at variance with the facts.
4575. Are you aware that the line would pass for a mile through an almost bottomless swamp? That statement is also incorrect.
4576. Is the statement also incorrect that much of the country is liable to floods? Totally incorrect, I think.
4577. Is the statement correct that population is scanty, and that the only settlement is at Cudal? There is population the whole of the way.
4578. Through the private land to which you refer? The private land does not extend beyond a few miles. As I said, I think there are from 4 to 6 miles. That would be Mr. Smith's property. I believe Keenan's people have purchased land, but I do not know to what extent.
- 4579.

4579. You, yourself, are in favour of a railway being constructed to Forbes? I am, certainly.  
 4580. And you think that Parliament would be justified in authorizing the construction of the line, and that a fair revenue would be derived from the traffic? I do. It is a question of route; that is all. I should like to add that in an all-important matter of this sort, as affecting the country as well as this particular district, we have to consider not only the population now existing throughout these areas, but we must bear in mind that the railway will be a work of a permanent character, intended to benefit not only the present population but the population in years to come. It is hard to say what will be the population of these districts twenty-five years hence. Population, as a rule, follows the watercourses, which, as we know, are few and far between in Australia. In years to come, as I believe, the population will be very much larger on the rivers and the watercourses than elsewhere, and on the principle that the railways are intended to confer the greatest good on the greatest number, I think they should follow, as nearly as possible, the watercourses. Something has been said as to the competition between railway carriage and team carriage. I believe there is a man in the town now who has carried goods from Sydney to Forbes at £5 a ton all the way. I know the country between Forbes and Cowra. As soon as Mr. Suttor made the proposal, in Parliament, that a line to Forbes should be constructed from Woodstock, I at once went over to Cowra, and drove on to Woodstock. I travelled over the country from that point to Canowindra. It is all splendid agricultural land—that is, the lower spurs of the Canoblas Range, just before they fall into the flat lands on the river. Of course, a line coming from Woodstock would have the benefit of the Lachlan River, the Belabula River, and the Eugowra Creek. From Canowindra to Eugowra, there are 18 or 20 miles of splendid land. We cannot shut our eyes to the fact that it is in contemplation to construct a line from Young *via* Grenfell to Forbes, Parkes, and Dubbo, because the statement has been made in Parliament; and, in view of that intention, I think the better line for first purposes, to connect Forbes with the existing system, would be from Borenore.

W. Brooke,  
Esq.  
4 Mar., 1890.

Mr. Thomas Tozer, gardener, sworn and examined:—

4581. *Chairman.*] What are you? I am a gardener.  
 4582. Where do you reside? At Forbes.  
 4583. What is the area of your garden? 18½ acres.  
 4584. Is it wholly under fruit-trees? There are 12 acres under fruit-trees.  
 4585. Do you grow anything else besides fruit? Vegetables, and a little hay for my own use.  
 4586. Do you irrigate your ground? Yes.  
 4587. What means of irrigation have you? A portable engine and a centrifugal pump.  
 4588. Do you find that fruit grows well in this district? Yes. I have been growing it for the last twenty-five years.  
 4589. Have you grown it in any other district? In Sydney.  
 4590. Is there a great difference between the adaptability of this soil and the Sydney soil, for the growth of fruit? A great difference.  
 4591. Which is the better of the two? These alluvial flats are better than any soil about Sydney that I know of.  
 4592. But you could not grow fruit without irrigation? Yes. I have done all the way along, until this last five years, without it, and I have grown as big fruit as I grow now.  
 4593. What fruits do you grow? Apples, pears, peaches, plums, apricots, nectarines—some of my oranges went to Sydney last season, and some of the Parramatta judges stated that they had not seen anything like them.  
 4594. Are the peaches you exhibit a fair sample of your peaches? Yes.  
 4595. Did you ever see finer peaches anywhere else? No.  
 4596. Have you any idea as to what the larger of them weigh? They go about three-quarters of a pound each; they would be considerably more than half a pound.  
 4597. And what would the larger apples weigh? 1¼ lb.  
 4598. What do you do with your fruit? I sell all I can about Forbes, Parkes, and Condobolin; the rest I take to Nymagee and Cobar.  
 4599. Do you think that if there were a means of getting it quicker to Sydney you would have a big market for all you could grow? Yes.  
 4600. Do you think there would be room here for an industry of this kind, if there were better means of transit to Sydney? Yes, plenty of room.  
 4601. I mean for other persons to start at it also? Yes, as long as we had the means of taking it away. I have taken fruit to Orange—not lately.  
 4602. Have you grown grapes? I have.  
 4603. Have you made wines? No; I sell them all for the table.  
 4604. How many acres have you under vine? About 2½.  
 4605. Have you trenched your ground for fruit-growing? It does not require it.  
 4606. Not even for grapes? No. I used two ploughs about 14 or 15 inches deep. If you trenched this ground for fruit-trees you would get no fruit at all—the trees would all go to wood.  
 4607. Do you know if the trees live long in the district? I have peach-trees about seventeen years old. They do not generally live so long in Sydney.  
 4608. Are the peaches you exhibit from young trees? They are from trees about seven years old, but I had peaches as big as that this year off old trees.  
 4609. Do you think you would be able to send some to Sydney if there were a railway? I could often catch the Sydney market, and get a good price. It would be far better than travelling 250 miles with a van.  
 4610. Could you give us any idea of the weight of the season's fruit from your orchard and vineyard? No, I could not.  
 4611. About how many tons would there be? I could not form an idea. In some seasons I have had tons lying on the ground.  
 4612. Do you grow a large quantity of vegetables? Not a great quantity, until lately. We could send tons of vegetables to the Sydney market. We have country here for the growth of vegetables which could not be beaten in Sydney.

Mr.  
T. Tozer.  
4 Mar., 1890.

Robert

Robert Matteson Vaughn, Esq., sworn, and examined:—

R. M.  
Vaughn,  
Esq.  
4 Mar., 1890.

4613. *Mr. Lee.*] You reside at Grenfell? Yes; I have resided there for twenty-three years.
4614. And you formerly represented the district in the Legislative Assembly? Yes.
4615. Will you please give such evidence as you desire to place before the Committee in your own way? I have not much to say, and I will be as brief as possible. The chief evidence I wish to give is as to the cross-line from Young, through Grenfell, Forbes, Parkes, and on to Dubbo and Werris Creek. The country about Grenfell is particularly adapted to wheat-growing. It is also good grazing country, being open box forest. The line has been surveyed, and the route is described by the surveyors as being one of the easiest and cheapest in construction of any upon which they have been engaged. I am, personally, an expert in the construction of railways and other public works, being a civil engineer and contractor. I can say of my own knowledge, that a line should be constructed from Young to Forbes and Parkes, for £3,500 per mile. The town of Grenfell itself is an important town, having 4 banks, 9 stores, 8 hotels, 4 blacksmiths, 3 wheelwrights, 3 saw-mills in the town itself, and 2 outside, 2 flour-mills, 1 brewery, 1 cordial factory, a superior Public School, a Roman Catholic school, and one quartz-crushing machine. The distance from the junction with the cross-line to Forbes would be 74 miles. I will give you some statistics as to the tonnage of goods which has been paid upon by the town—that is, the amount which has been paid for goods during the past twelve months. The haulage is estimated at from 10,000 to 12,000 tons, both from Young and Cowra—that is, annually. The traffic is divided—some of the goods come by way of Young and more by way of Cowra. One firm alone have paid £2,000 freight during the past twelve months. With regard to the rival routes, I can speak from my own personal knowledge. I have been over the lines from Borenore and Cowra, and from Young to this point. I do not know the route from Molong to Parkes; but I know the route from Borenore to Forbes very well. I consider that that would be the best line with which to connect the present railway system with Forbes. That is unless the cross-line were made, and that would accommodate everybody, I think.
4616. What would be the particular advantage which would be derived from the construction of a cross-country line taking those towns which are not already served? In the first place, it would be a great stock route in case of drought. The people could remove their stock by the shortest and best route up to the mountains about Kiandra, or to New England the other way. It would be a much better and cheaper route than the other one. There would also be a good route for the supply of Melbourne, and fat stock—that must, at no distant date, be a great source of traffic in this country. Melbourne, at the present time, cannot supply herself with meat, and at no distant date we must supply her, the Victorian country being already occupied. I think the traffic in stock will be immense. I think that point is worthy the greatest consideration. A line which would go through a mild climate and through level country is, of course, best suited to that particular kind of traffic. The animals would not be knocked about to the extent that they would if they had to go over the rough country about Blayney.
4617. Would the route you name open up a large wheat-growing country? The statistics show that Grenfell has this year the highest average per acre of any part of the Australian colonies, being nearly 20 bushels. To be exact, it is  $19\frac{1}{10}\frac{1}{2}$ .
4618. Are those figures taken from official sources? From Coghlan.
4619. To which market does this large quantity of wheat find its way? It would find its way to the Sydney market, with railway communication. I had an order from Sydney recently to buy 100,000 bags at Grenfell, if I could purchase it at a certain price.
4620. You know the present Railway Commissioners have made special rates for the carriage of grain? Yes.
4621. Would the special rates admit of the district you name sending its wheat to Sydney? Not with any hope of profit. I could purchase it at 2s. 6d. a bushel; but when I came to figure out the charges I found I could not execute the order.
4622. I suppose the wheat was in the district? I believe it could have been bought in that, and the Young district.
4623. The railway rates, even at the reduced rate, would not allow a profit? No.
4624. Presuming that the present rates are cut down to the lowest possible point compatible with a slight return to the Department, what prospect is there in the future of your getting your wheat to market? If a railway were constructed at £3,500 per mile I think we might allow for the rates being even still further reduced. We should not go over the mountains; we should go over the Southern line.
4625. Young would be the point of connection in this projected line? Yes.
4626. What distance would Young be from Sydney? 250 miles.
4627. That would be equal to  $4\frac{1}{2}$ d. per bushel? Yes.
4628. And could wheat be carried at a profit for that figure? Not at present.
4629. Have you thought of any rate which the farmers could pay, which would enable them to send wheat to the Sydney market at a profit? No; I have not.
4630. What is the net value per bushel they could receive on the spot to pay them? I think there would be a profit at 2s. 6d. per bushel, if we had railway communication, and the charges were reduced. Three shillings would pay.
4631. Is there any other information you desire to give to the Committee? I should like to say a few words as to the proposed line to Cowra. I am only speaking now as an engineer. I understand that from Cowra to Blayney there is a rise of more than 2,000 feet. At all events, there are grades on that line of 1 in 40, that is the highest grade allowed in railway construction in the colony. There are 5 miles at one part of the line with a grade of 1 in 40.
4632. Continuously? Very nearly so. There is a grade of 1 in 40 on several points of the line, consequently that would be the ruling grade, and no more than could be hauled upon those steep grades could be carried on any part of the line. That is an insuperable objection to sending all the traffic from Forbes through Cowra, to say nothing of the fact that if you build upon the Lachlan River, the line will only serve one side. The traffic must all come from one side, unless bridges were built at short intervals and at great expense along the 50 miles of river. There is some flooded country between Forbes and Cowra, and that would be another objection to the line. These places are near Eugowra Creek, and also the Belahula River.

George Henry Greene, Esq., M.P., sworn and examined:—

4633. *Mr. Dowel.*] You are the representative of the Grenfell electorate in the Legislative Assembly? G. H. Greene,  
Esq., M.P.

Yes.

4634. Have you resided in that district for any length of time? About twelve years.

4635. You know the district pretty well? I know the greater part of it pretty well.

4636. Can you say what is the population of Grenfell? The population about eighteen months ago was 7,456, but I have been disappointed in more recent returns I expected to get. The return I give is for the Grenfell electorate. I do not know the exact population of the town.

4637. Does not the boundary of the Grenfell electorate come close to the Lachlan, near Forbes? Yes; to the south side of the Lachlan.

4638. Within what distance of the township of Forbes? I suppose it would be  $1\frac{1}{2}$  miles from here to the river.

4639. What is the nature of the evidence you desire to give to the Committee? I propose to show that a line connecting Forbes, *via* Grenfell, with the Southern line, will open up an enormous amount of traffic between the southern portion of New South Wales and Victoria, and that it would afford facilities for the farmers of the Grenfell district to send their wheat and other produce not only to Sydney and to Melbourne, but—and this, in my opinion, is of still greater value—north and west. I consider, and I think I have strong grounds for saying it, that in point of production there is no district in the whole of New South Wales which stands higher than Grenfell in proportion to its population. I have here some statistics which Mr. Coghlan kindly compiled for me, showing the progressive nature of the increase in all kinds of production in the Grenfell, electorate since 1884. I have also a table prepared by Mr. Coghlan, showing the rainfall, and I am prepared to give the average in the production of wheat per acre for a number of years. I claim that by this evidence I shall establish the fact, that, whatever advantages we may be at present blessed with, are not merely chance advantages or advantages gained by spasmodic efforts, but that there has been a steady, gradual increase in population and wealth of every description. I am also prepared to say that there is land awaiting the plough at this moment, not in hundreds of acres but by hundreds of thousands of acres—that land is quite as good as any land now under cultivation.

4640. Are there any Crown Lands? Yes; but there are large quantities of this land held by men who farm and hold their own land, and who are looking forward to developing the soil, and to attaining an independence by working it. As a matter of fact, no one can travel through the district without being struck by the number of independent men who have made a living by agriculture—men who are now wealthy. It would be invidious to name them, but I could name them by the score. These are men who have cultivated the soil themselves to a large extent, they will bear me out in saying that if a means of conveyance of wheat were offered, there would be simply no limit to the amount of cultivation which could be successfully carried out. I am not a large farmer myself, but I have spoken to these men, and I take a great interest in this work. I am informed that if they can only net half a crown a bushel on the ground for their wheat, they would be prepared to farm not 100 or 200 acres, but that they would substitute 1,000 acres where they have now 100 acres. My own experience and knowledge lead me to believe that these statements are absolutely and perfectly true. To show the progressive nature of the advance that has been made, I may state, that in 1884 there were only 4,678 acres under wheat; in the year just ended, there were, according to Coghlan, 7,913 acres under wheat.

4641. Before you proceed with your statistics, I will ask you whether you are aware that the railway line which has been referred to the Committee, is from Molong to Parkes and Forbes, *via* Flagstone Creek? Yes.

4642. In opposition to that line, you are suggesting another route? Not in opposition to that line, necessarily.

4643. In connection with it? Yes.

4644. What route do you propose? I do not feel that I am capable of giving evidence as to the lines north of the Lachlan, but it occurred to me that, knowing with what object or intention the line could be carried on beyond Forbes, and knowing also the position of affairs to the south of Forbes, I might give information which would enable the Committee to make up their minds more easily as to the future course of the railway.

4645. Do you desire Grenfell to be connected by railway with Forbes? Yes.

4646. With what point of the existing system? I think the line should go from Young to Grenfell and Forbes. From Forbes I have advocated the line on to Dubbo, but under existing conditions I do not feel justified in offering an opinion on the line north of the Lachlan.

4647. Your line would stop at Forbes? Yes.

4648. You think that that line would induce the farmers of your district to increase the cultivation of their areas? I am satisfied of it.

4649. That is if they had a market to Forbes and Young? I have no hesitation in saying that the increase in production would be beyond calculation.

4650. You have given us the area under wheat this year;—what is the yield? In 1884, the average was 15·1 bushels; in 1885, 13·4; in 1885-6, 7·9; in 1886-7, 20·5; in 1887-8, 11·3; in 1889, 4·18; in 1889-90, 19·96. It is equivalent, practically, to 20 bushels. I am assured by those who collected the statistics from the farmers that the amount is habitually under-rated. It seems that many persons have an idea that they will be taxed on their produce; it is an unreasoning idea, but they often dislike to disclose the full extent of their crops. Last year we had under crop altogether 8,440 acres. This year I have not the number, but if it rises in proportion to the area under wheat it will be considerably larger. With regard to the 8,440 acres, I may state that from my own knowledge, many farmers only return the amount of crop they actually reap. In many cases in 1888-9, they abandoned their crops practically, and turned their stock into them, and treated them as if the land had not been cultivated at all. As regards the rainfall, I should fancy that the average would be over 22 inches—that is for Grenfell. The returns from Marsden, Lake Cowal, Goolagong, and the Pinnacle, are almost equally satisfactory. As regards the stock which are carried in this district, in 1884 we had only 906,209 sheep—the number has progressively increased until in 1888—I have not the returns for this last year, but they are much larger than those for 1888, the number was 1,593,936;—that is the number of sheep upon which the assessment was paid. Then as regards the public schools, I have only seven out of thirteen schools in my list. In these the enrolment amounts to 601. I have also the post office returns of the different towns. There is one other point to which I would draw your attention—the gross amount of wheat this year was 157,984 bushels.

As

G. H. Greene,  
Esq., M.P.  
4 Mar., 1890.

- G. H. Greene, Esq., M.P.  
4 Mar., 1890.
- As regards settlement, there were selected last year 69,461 acres. There are held altogether in the district under conditional purchase 320,000 acres; and under conditional lease, with a preferent right of purchase, 200,000 acres. The land revenue for last year was £22,000, and the returns taken for years past show a steady and continuous increase, averaging for the past two years, 1888 and 1889, 25 per cent. I will hand in the details for publication as an appendix to my evidence. I may mention that these returns have been compiled by Government officials. Another advantage which we claim, rightly or wrongly, for the line we suggest is, that although the distance from Forbes to Sydney, *via* Grenfell and Young, would be greater than that by any of the other lines proposed—probably this is a matter for experts to determine—the cost to the country per ton for conveyance to Sydney might not be greater, as the grade would be much less. The point I am about now to mention, I touch upon with some diffidence, not being an expert. I am given to believe that the opinion of those who have studied the matter—the opinion of men who have gone carefully over the line from Young to Grenfell and Forbes, is that it can be made one of the cheapest and most productive lines in New South Wales. As a matter of fact, the greater part of the timber used for sleepers and for the construction of bridges on the Young and Blayney line, was taken from the neighbourhood of Grenfell. We have an enormous quantity of splendid ballast and magnificent ironbark, stringybark, and white box. With regard to the grades on the Young and Blayney line, I travelled by that line for weeks, twice almost every day, on my way down to Sydney. On several occasions I have stood on the platform at Monteagle waiting for the train to get up the 1 in 40 grade. There are several of those grades on the line. On one occasion, coming from Young to Monteagle, without any weight except empty trucks, the engine-driver was able to get off the engine and walk alongside it. On another occasion I waited 25 minutes at Monteagle, hearing the engine puffing and blowing, and trying to get up the grade on the other side. The driver was only able to do so by going back some distance—getting up a full head of steam, getting the incline behind, and charging the hill.
4651. Then you are decidedly opposed to any railway to be constructed having a grade of 1 in 40? Most distinctly.
4652. Do you know whether the line, as surveyed from Cowra to Forbes, has grades of 1 in 40? I do not know.
4653. However, you would consider that an objection to the line? Most undoubtedly.
4654. You are not proposing any rival route whatever to the route *via* Molong? No.
4655. Are you acquainted with that route? I cannot say that I know it, except from the appearance of the plans.
4656. You would not like to offer an opinion upon it? No.
4657. The Grenfell and Young line would not interfere with the line before the Committee? No.
4658. Do you know whether the Grenfell line would pass through any large estates? I believe it would. I do not know for how many miles, but another gentleman will be able to give you that information. I think I could state that one estate through which it would pass will probably be cut up for sale, and as far as any land of my own in the neighbourhood is concerned, I am offering it, at this moment, to prevent the evil which undoubtedly is brought about by the holding of large estates in close proximity to a railway.
4659. Would the route you suggest pass through any land of your own? No, none.
4660. From your knowledge of the country between Young and Grenfell, do you think that a railway constructed through it, would be likely to pay interest on the capital, expenditure, and working expenses? I think so. I have no hesitation in saying that it would pay infinitely better than many lines which are now being worked.

Ernest Henry Kinleside Crawford, Esq., manager for the New Zealand Loan and Mercantile Agency Co., sworn and examined:—

- E. H. K. Crawford, Esq.  
4 Mar., 1890.
4661. *Mr. Lee.*] Where do you reside? At the Pinnacle.
4662. What is your occupation? I am manager for the New Zealand Loan and Mercantile Agency Co., on the Pinnacle station.
4663. What evidence do you desire to give to the Committee? Believing, as I do, that the line upon which the Committee are now taking evidence, would go to Forbes, I desire to say that, in my opinion, that line would be incomplete if it were not taken further. I think if the line were extended in the way I would suggest, it would be of great advantage to the colony at large.
4664. Will you give your reasons? My chief reason is that if this line comes from the north-western line to Parkes and Forbes, and then on to Grenfell and Young, it would open up a route from the north-western line to the Great Southern line. The line would, in my opinion, be easily constructed, and would allow stock-owners out to the west and north-west—at Bourke for instance—to send their stock in times of drought to Tumut and Gundagai; and also to send their fat stock direct, either to Melbourne or to Sydney, which would also be a great advantage. I can give you statistics as to the number of sheep and cattle passing through Grenfell since 1887. In 1887, there were 267,275 sheep, and 4,532 head of cattle; in 1888, there were 198,789 sheep, and 8,058 head of cattle; in 1889, there were 206,218 sheep, and twenty-three head of cattle. There would be far more sheep travelling that way if the owners were able to send them by train to the mountains; they are in many instances unable to travel from Bourke in drought time, owing to the bad state of the roads. The line I advocate would pass through country which is well adapted to the production, not only of fat stock, but of wheat, and all sorts of crops;—in fact nearly any crop the farmers choose to put in. The farmers are now debarred from growing to the extent to which they would grow, because they have not railway communication. It becomes too expensive for them to cart their produce to the nearest railway station. If the railway passed through the towns named, I am sure that many of the holdings through which it passed would be subdivided into small farms, and that instead of our seeing the country one vast sheep-walk, it would, in a few years, be thickly populated; there would be flourishing little farms all along the route. A considerable portion of the route is reserved for railway purposes—consequently there would not be so much private land to be purchased.

Mr. William Willis Priddle, farmer and grazier, sworn and examined:—

- Mr. W. W. Priddle.  
4 Mar., 1890.
4665. *Chairman.*] What is your occupation? I am a farmer and grazier.
4666. Where? 28 miles from Forbes and 13 miles from Grenfell, at Little Bald Hills.
4667. Will you, as concisely as possible, give the Committee the information you wish to lay before them? What I chiefly desired to say was that it is not of much use to grow a crop, because we cannot get it away.

away. I suppose I was about the first on the Grenfell side of the plains to grow anything worth while. From my place towards Grenfell, and round the town, say within 12 miles of it, there are twenty men who, if they had railway communication, would be prepared to grow crops of from 500 to 1000 acres.

4668. You mean a railway through Grenfell and Forbes? Yes; it would benefit me if it came to Forbes and stopped here; but a line going to the Southern railway would benefit me and others still more. I have 240 acres under crop this year; I had a very good crop; I took 1,000 bags of wheat off it, and 50 bags of maize.

4669. About 20 bushels to the acre? Yes. A storm wasted another ten I suppose, and I cut about 30 acres for hay.

4670. You say that if you had a railway to Forbes, it would be a benefit to you? Undoubtedly. I could get about 3s. 2d. for my wheat in Forbes if we had a railway. I get 3s. now, but I cannot possibly draw it, on account of the state of the roads. Two teams have been ten days on the road. They started with eighty bags and brought back forty of them. I said "It is of no use to tackle the plain any more;—it would take ten horses to draw an empty waggon."

4671. Is the plain liable to be flooded at any time? Water runs on it, but not to any depth;—there is a way of escaping the plain, if a railway were about to be constructed. I ought to tell you that there are timber and railway reserves all the way through to Grenfell from here. For my part I would give my land gratis to the Government if they would construct a railway—it would go through my property three miles, not the way it is surveyed, but by a better route. I should be most happy to point out the better route.

Mr. William Walter Bell, farmer and grazier, sworn and examined:—

4672. *Mr. Dowel.*] Where do you reside? In the district of Grenfell, 7 miles from Grenfell.

4673. What is your occupation? I am a farmer and grazier. I shall have been at the same place nineteen years next December.

4674. Have you a general knowledge of the country about here? Yes.

4675. Is it fairly settled upon? All of it;—that is round Grenfell, for 10 or 12 miles.

4676. Is the character of the country good? Yes.

4677. Good crops are produced? Yes. I had 20 acres of oats this year—it was in the oldest paddock I had—it is eighteen years old. I have had 15 crops in eighteen years off it, and this year I had 930 bushels by the bag—it would be nearly 50 bushels to the acre. It has been only rested twice in seventeen years.

4678. Yet you appear to be growing as good oats as you ever grew in the same paddock? Yes. My next oldest paddock is sixteen years—it has been rested only one year in that time. It has been cropped fifteen out of the sixteen years. This year we had to cut a great portion of the crop for hay; it was so heavy. The rest was cut for wheat—it is not threshed yet, but I daresay it will go 2½ bushels to the acre.

4679. What other crops do you grow besides these? I had about 200 acres in this year. I had some corn in, I suppose it will go 20 bushels to the acre, owing to two months of dry weather.

4680. Do you grow fruit and vegetables in your part of the country? Some, but not to any extent.

4681. Do you combine sheep-farming with agricultural pursuits? Yes.

4682. What advantage would result to you if a railway were constructed to Forbes? We should be able to send our grain away to market direct. At present, my place being about 30 miles from Cowra, it costs me to get my grain to the train 25 or 30 per cent. more than it costs to get it from Cowra to Sydney.

4683. That prevents you from availing yourself of the metropolitan market? Yes; I was in Sydney a month ago; I went to the office and obtained the information about trainage, and I found that if it were not for the cartage, we could send our wheat down to Sydney. The cartage takes off the profit. We should get about 2s. a bushel, and we cannot do it under half-a-crown. We can do with half-a-crown on the ground.

4684. You cannot find a market in Sydney at remunerative rates? No.

4685. And you believe that a railway constructed to Forbes would materially alter your position, and be a great benefit to you? Yes.

4686. You think that all the farmers would send wheat by the railway? Yes; there are four of us within 2 miles of one another, and we have 600 tons of hay, and 16,000 bushels of wheat, and no market for it.

Mr. Thomas Andrew Crowe, auctioneer, sworn and examined:—

4687. *Mr. Lee.*] What is your occupation? I am an auctioneer.

4688. Living where? At Forbes.

4689. You desire, I believe, to tender some evidence as to the suggested railway from Woodstock to Forbes and Parkes? I merely wished to impress upon the Committee the necessity for taking it into consideration on account of its peculiar advantages. It would not only benefit more places, but it would give means of access which none of the other proposed lines will give. The line I refer to would go from Woodstock to Eugowra; it would branch off at Eugowra, to Forbes and to Parkes, giving both places a railway. If the line were extended north from Parkes it would give the same facilities for trucking stock from the Northern line to the Southern line, as would be given by the suggested cross-line. It would also place the people in the Parkes district within much easier access of all the southern markets than would the railway *via* Molong. There would also be a saving in the cost of construction. The line would be cheaper either than the Borenore or the Molong line. It would also be available for saving heavy traffic over the Blue Mountains. I may state that I am secretary to the Pastoral and Agricultural Association here, and I have a few statistics. I have taken two periods of ten years, 1879 and 1889. You will see the difference between the show of ten years ago and the show of last year. The show in 1879 was the sixth show of the Association. The number of exhibitors was fifty-nine; but in 1889 there were 179 exhibitors. The number of entries in 1879 was 154, while in 1889 there were 526. The prizes offered in 1879 amounted to £140, and in 1889 to £430. In agricultural produce and dairy produce, flour, fruits, and vegetables, there were seven entries in 1879, as against forty-nine entries in 1889. With regard to traffic on the railway, the manager of the Britannia Gold-mining Co. assures me that from September, 1887, to March, 1890, they paid carriage on goods to the extent of £576 17s. 10d. This is on machinery.

4690. Have you known any stacks of hay to remain in this district for many years? Yes.

4691. Why have they remained in that state? Because the grass has been plentiful, and there has not been local consumption. It would not pay to take it away from the district by teams. There were no satisfactory means of getting it away. Of course it is bulky carriage, and unless you have a local sale it has to remain where it is.

WEDNESDAY, 5 MARCH, 1890.

[The Sectional Committee met at the Assembly Hall, Eugowra, at 11.45 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Donald Chesher, grazier and hotelkeeper, sworn and examined:—

Mr.  
D. Chesher.  
5 Mar., 1890.

4692. *Chairman.*] What is your occupation? I am a grazier and hotelkeeper.
4693. Residing where? At Eugowra.
4694. How long have you lived in this district? A little over fourteen years.
4695. In the same business? No; I have been grazing.
4696. What is the area of your holding as a grazier? 1,300 acres.
4697. What have you done with that land? I have part of it—that is, between 800 and 900 acres—rented to a man who runs sheep on it. I run cattle on the rest.
4698. How many cattle have you? About forty.
4699. How many horses? Not over fifteen or sixteen at present.
4700. How many sheep does your tenant run? 2,000.
4701. Then he must have some outside reserve? No; he has rented his land from me, and he runs that number of sheep on it.
4702. Does he run the whole of that number of sheep inside the land he has rented from you? He rented the land from me on the 1st January, and he has had that number of sheep upon it since.
4703. It will not carry that number long, will it? If we had such weather as we have had lately, it would carry that number continually.
4704. What is the average carrying capacity of the area? Two sheep to the acre.
4705. Is it on the river or creek? No; there are a number of springs. The land is black flat.
4706. Is it an exceptional piece of land? I do not know that it is; it is improved. I have prairie grass and any amount of trefoil growing on it.
4707. Is there much land like it here? Yes; I consider that any land here which has been rung would carry two sheep to the acre—that is, on the average. Of course, I count the river land in, as well as the frontages to the creek.
4708. Have you any industries here beside the pastoral industry? Farming.
4709. Have you any witnesses who are farmers? Yes; they all go in for farming pretty well. I have a few statistics applying within a radius of 8 miles of this place. They show the number of landholders; the total area of the holdings; the areas under crop—wheat, oats, corn, and hay; and stock—that is, sheep, cattle, horses, and pigs.
4710. Will you read the totals? The total number of landowners is seventy-nine. I had seventy-four, originally, in the returns, but there are five men whose signatures I did not obtain when I was taking the holdings. I thought the returns would be of no use without their signatures.
4711. What is the total area of the holdings? 122,187½ acres.
4712. What area is under crop? 2,760½ acres.
4713. What wheat have you grown in the district this season? I cannot say about the district, but within 8 miles of this town we have grown 42,443 bushels; we have also grown 360 bushels of oats, and 10,800 bushels of corn.
4714. Has that corn been husked? No; it is the estimated yield.
4715. Have the wheat and oats been threshed? Yes. I will tell you the way in which I took the average of wheat: A man would give me so many acres. Most of them stripped, only a very few threshed. The estimate given here is according to the estimate of those who grow the wheat.
4716. How long will it be before the corn is ready for pulling? Not until next month.
4717. May there not be a failure in the corn? Not now, because I think the flower is on.
4718. I suppose the corn total is guess-work? They are calculated from other years, and from the outlook. The corn is now ripening. There are any amount of cobs, and I think the calculation is well within the mark.
4719. How much hay have you had? 672½ tons.
4720. Now, as to the number of sheep? Some of the sheep are grazing further than 8 miles out of the town, but the owners are all living within the district. The number of sheep is 100,252; the cattle number 4,891; the horses, 876; and the pigs, 502.
4721. I suppose what applies to the sheep will also apply to the horses and cattle—that is, some of them may be grazing outside of the 8-mile radius? The largest owner of cattle and sheep has a wool-shed, which you can see, half a mile away from here. The other big holder, Mr. Jenkins, comes to the other side of the creek. His holding is in the Molong district.
4722. Are any of these sheep within the Molong district—in fact, do any of the returns apply to the Molong district? Yes.
4723. A portion are in the Molong district, I suppose, and a portion in the Forbes district? Yes; the creek divides the Molong district from the Forbes district.
4724. Can you tell me whether the average area under crop in your district has been increasing or decreasing within the last few years? It is increasing, decidedly. Eleven of the holders I have given you took up their selections in November last.
4725. What is the size of their holdings? One selector took up 133 acres, with a conditional lease to it, and the others were up to 400 acres.
4726. They are all small holders then? Yes. There is a reserve running from here to Canowindra, half a mile on the northern side of the road. It was thrown open to selection, and there was a rush there. The consequence was that persons could not get as much as they wanted, but had to take as much as was left for them. I was one among the number, and I think there were about fifteen there for the land.

4727.

4727. Was all the land that was open taken up? A small piece was not taken up, I think; there was no water on it.
4728. Was it a special area? No; there was a travelling-stock route half a mile on each side of the road to Canowindra, and one side was thrown open.
4729. Is much of the land here under reserve or lease? It is; in the unsettled districts it is all leased. There is very little land available until these leases are thrown open. An area on the Molong side of the creek will be thrown open in July or August—I mean a leasehold area.
4730. Do you know that particular leasehold? Yes.
4731. Is it fit for small settlement? Yes.
4732. Would it be selected, do you think? Yes; there would be balloting for it.
4733. Do you think that the population of this district would increase if available land were here? It would increase largely if the land were thrown open, but we are hemmed in so by leases and reserves.
4734. Is the land about here fit for agriculture? Yes.
4735. Could a man with a small holding—say, up to 320 acres—get a living? They do, and a pretty good living too; they keep a few cattle and horses.
4736. Where is your market for anything that may be grown here? Most of the wheat has to be taken to Forbes, on account of the difficulty of carriage. It is only three weeks or a month ago since the Progress Committee wrote to our member, asking him if he could induce the Government to reduce the carriage on wheat. That was just before the new rate sheet came out. A new sheet was sent up, showing that the rates had been somewhat altered.
4737. You know the line of railway the Committee are investigating;—would the construction of that line be of any benefit to your people? No; the Parkes line would injure us.
4738. Why? It would take traffic away, I fancy.
4739. From this road? No doubt some would come this way, but it would take away a good deal of traffic down the river.
4740. You know the other suggested lines—from Borenore and Cowra;—which of the two would be of the greatest benefit to your portion of the district? The Borenore and Cowra lines junction, on the other side of the creek; either of the lines would suit us.
4741. It would not matter to you which of the two were adopted? Not much.
4742. But the Parkes line would be of no use to you at all? Not the slightest.
4743. You know the reduced rates on farm produce? No, I do not.
4744. What would be a remunerative price for wheat grown in this district;—what could the farmers live at? I do not think they could do much under 3s., as they are now.
4745. I am speaking of the price of wheat on the ground? I cannot say; I am not farming.
4746. What is the cost of carriage between here and Borenore? 2s. 9d. a cwt. I paid this morning.
4747. That is very high, is it not? I do not know. It is seldom we have it lower.
4748. They get it from Cowra to Forbes for 2s.? Well, I can show all the way-bills. The rate I have given is from Borenore here.
4749. What is the rate the other way? I do not know what they pay on wheat from here. We have a saw-mill here, and there is another mill about 6 miles from here on the river. The proprietor wished me to say that he could dispose of about 60,000 feet a month if he could get it away. It would be pine and gum.
4750. How many men has he in his employ? I have seen four or five there.
4751. *Mr. Lee.*] Has this portion of the district supplied Forbes with statistics for railway purposes? I have not supplied any.
4752. Out of this 100,252 sheep, are any contained in the Forbes district? You will understand that I am merely taking a radius of this town. We are half in the Molong and half in the Forbes district.
4753. Might not the sheep possibly be included in the returns handed in from Forbes? Well; not all, because some are in the Molong district.
4754. Are none of the sheep you have given in the Forbes district? About one-half I suppose.
4755. Well, would not that half be included in the Forbes returns? Yes.
4756. And the same of the cattle? No; the bulk of the cattle are on this side. I do not think they were included in the Forbes return. I have been secretary to the Eugowra League, and if the Forbes people wished to know anything they would write to me.
4757. What do you do with these 10,000 bushels of corn;—where do you find market for it? Some is sent to Orange, some down the river, some is sold locally, and some is sent to Forbes.
4758. Where is your chief market? The corn is sent various ways. I believe most of it is sent down the river.
4759. Consequently, if a railway were built it would not be likely to go to Orange? It would, if we could get the freights low enough to admit of our competing with other grain growers.
4760. You had 42,000 bushels of wheat this year;—what did you do with that? Some goes to Forbes and some to Cudal, and a good deal of it has been sent to Sydney.
4761. That for Sydney is carted to Borenore? Yes.
4762. What is the dray freight? I do not know.
4763. Is any large portion sold to the mill at Forbes? A good deal.
4764. And if the mill gave a return of the number of bushels of wheat they bought, this number would be included in that return? I presume so.
4765. Is there any other information you desire to give us? Well; there are two schools here in Eugowra.
4766. Will the schoolmaster be giving evidence? No. I may say that at the Public School the attendance is 64, at the Convent School there are 43. In a radius of 8 miles there are two Public Schools, and three half-time schools, and two more are now being erected.
4767. Is there a bank in this town? No; there is a post and telegraph office, with a Government Savings Bank, and a money order office attached.
4768. What is about the population of the town? The whole population would be from 190 to 200.
4769. Does that embrace the seventy-nine holders of land you have spoken of? No; only one of them.
4770. You are speaking of the township population alone? Yes. There are thirty-five houses in the surveyed township. I could also furnish you with the business places and so forth. I may say that our wheat return was a little over 20½ bushels to the acre. A good deal of the wheat was destroyed, through the rain coming,

Mr.  
D. Chesher.  
5 Mar., 1890.

- Mr. D. Chesher.  
5 Mar., 1890.
4771. Had you any rust here? No. As to the business houses, I should like to say that there are three hotels, two stores, two blacksmiths' and wheelwrights' shops, one saw-mill, a butcher's shop, a baker's shop, a shoemaker's, and a saddler's.
4772. *Mr. Dowel.*] Have you a fair knowledge of the country surrounding this district? Yes.
4773. Do you know the country between Eugowra and Parkes? Yes.
4774. Do you think that if a railway were constructed to Parkes, *via* Molong, it would injure Eugowra? Yes.
4775. Do you know the country between Woodstock and Eugowra? Yes; it is good country.
4776. What is the distance? About 36 miles.
4777. What is the distance between Eugowra and Parkes? About 30 miles.
4778. What is the distance from Eugowra to Forbes? Round the road, 24 miles; but the line is much shorter. I came along the line this morning. I left Forbes at twenty minutes past 6, and was here at twenty minutes to 9.
4779. Are there any engineering difficulties in the way of the construction of a railway between Eugowra and Forbes? There is some rough country where the road goes; it has to take a little detour to the left, to avoid the rough country. I have never noticed very much as I have been along.
4780. Is the country fairly good between Eugowra and Parkes? No; there is rough country in the middle—this end is good and the other end is good.
4781. And one portion of the country is bad? Yes; it is ironbark country.
4782. Is the ironbark good timber? I do not think so.
4783. Do you think you are correct in your estimated distance between Eugowra and Parkes? The general idea is that it is about 30 miles.
4784. Have you been over the country yourself? Yes.
4785. Do you think that the railway from Woodstock to Eugowra, and branching at Eugowra to Forbes and Parkes, would serve a large number of the population? Yes; I think it would.
4786. Is it a line, the construction of which you yourself would recommend? It would serve a large number of people.
4787. What is the character of the holdings in this district—are they large or small? It is a squatting country, you must remember. The holdings are very large in some places, but still there are some selectors on the runs.
4788. Are the selections on the runs large or small? Some of them very large. I have a return of one holding of about 4,000 acres.
4789. That is a family selection, I suppose? Yes.
4790. Is not that class of settler a very desirable one to encourage? Decidedly.
4791. I suppose they combine grazing with agricultural pursuits? Yes; that seems to pay the best.
4792. On the holdings of which you have a knowledge, do you think that the holders are likely to remain;—are the holdings fairly improved? Yes.
4793. You do not think they will revert to the squatter? No; I am pretty well sure of that. They are *bona-fide* selectors. I do not think there is a dummy in the district at the present time.
4794. They have all cleared out? They cleared out years ago. When I came here, fourteen years ago, on this side of the creek there were only four selectors. There were only two houses here, and two of the selectors were dummies.
4795. What is the population within a radius of 8 miles, including the population of the township itself, approximately? I do not think I should be going beyond the mark if I reckoned each house to contain six persons. That would give a population in the radius you have named of 684. I think I am below the mark. Some of the selectors have large families—up to half a dozen and over.

---

Mr. Archibald M'Millan, farmer and grazier, sworn and examined:—

- Mr. A. M'Millan.  
5 Mar., 1890.
4796. *Mr. Lee.*] What is your occupation? I am a farmer and grazier.
4797. How many acres do you hold? Nearly 5,000 altogether.
4798. Yourself and your sons? Yes; we are a big family.
4799. Is any portion of that area conditionally leased? Only about 380 acres.
4800. How long have you held that land? Some as long as I have been in the district—about twelve years.
4801. Are you the original selector, or did you purchase? I am the original selector.
4802. What do you produce off that land? This year we have have farmed about 80 acres.
4803. What sort of crops do you grow? All wheat.
4804. What return do you get? The return I obtained was off 75 acres—5 acres were cut for hay; the return I had was 432 bags of wheat.
4805. That would be about 1,728 bushels? Yes; and there was a great waste.
4806. That would be equal to 23 bushels to the acre? Yes. There was considerable waste. There was a heavy crop lying on the ground. There were fully 6 bushels an acre lost.
4807. Have you threshed your wheat yet? Yes; I have reaped, threshed, and bagged at the rate of 23 bushels to the acre, and I have lost 6 bushels to the acre.
4808. Has this been a good season? Yes.
4809. What sort of a crop had you in 1888—the dry year? Not good; it was a failure.
4810. Then you do not get a crop every year? We have had a crop every year during during the twelve years I have been here, with the exception of the year 1888.
4811. What have the crops been since 1888? They have averaged about 18 bushels.
4812. You are an experienced farmer;—what do you consider a fair average of wheat per acre for this land, taking an ordinary season? For the district, I should consider 20 bushels would be a fair average.
4813. Is not the land cultivated in this district confined to the creek banks and the flats? It is confined for the most part to the creek and river banks.
4814. Is it better land? It is generally considered so, but it is not. There is as good land off the creek as there is on it.
4815. But, as a matter of fact, the creek bank land is considered the best? It is considered the strongest for some things.

4816. Do you look on wheat-growing as a certainty in this district? Not as we are situated; we have no outlet for it.
4817. What I mean is, are the seasons sufficiently good to enable you to calculate upon a crop every year? Yes.
4818. With the exception of the year 1888, you have not lost a crop? No.
4819. What about the maize crop? I do not grow much maize.
4820. And the hay? The hay crop is very good. I have grown oats for hay, as well as wheat. The last crop of oats I had for hay gave 3 tons to the acre. There were fully 100 tons off 32 acres.
4821. Are you bringing more land under cultivation annually? No; I think I have sufficient. There is no outlet for the crop. We have only the local market at Forbes.
4822. Do you sell your wheat chiefly to the mill at Forbes? Always.
4823. Have you ever sent any wheat to Cudal or to Sydney? No.
4824. Do most of the farmers here sell to the Forbes mill? Yes; I think so, with the exception of a few who send Cudal way.
4825. Have most of them sold this year to Forbes? No; I think there is considerably more in the district than the mill at Forbes can take.
4826. Have you delivered your wheat this year? They are delivering it now.
4827. Are the farmers holding it? No; on account of the bad roads, they must get clear of it before the winter comes on.
4828. Do you think a third of the crop is in your district at the present moment? Fully a third of it.
4829. You want to see a railway constructed into your part of the country? Yes.
4830. How would that benefit you and your class? It would benefit us to this extent—that where we have 1 acre under tillage at the present time we should have 50 acres, if we had an outlet for the crop.
4831. That would mean that you are looking to the outside markets? Yes.
4832. You do not want a railway to take your grain into Forbes? No.
4833. What does it cost you per bushel to produce your wheat—that is, ploughing, sowing, reaping, and threshing? I consider that £1 an acre is ample to pay all the expense of ploughing, sowing, harvesting, and bagging; that would include the cost of the seed, also.
4834. That would be a fraction off 1s. 1d. per bushel? Yes.
4835. Would 2s. 6d. per bushel on the spot pay you? Yes.
4836. If you got 2s. 6d. per bushel on the spot, would you increase the acreage under wheat? I would.
4837. Do you know what the cost of carriage to Sydney by rail would be for this distance? No; not for farm produce.
4838. It would be equal to 4½d. per bushel—with other expenses, put the cost at 6d.—that would mean that 3s. a bushel in Sydney would pay you? Yes.
4839. If a market could be obtained in Sydney at 3s., you would undoubtedly send your wheat to that market? Yes.
4840. Would you look to the outside market as a market for your corn? I never grew much of it.
4841. Your land is capable of growing anything? Yes.
4842. And your return of maize is very large? Yes.
4843. Is not the western country a proper market for your maize? Down the river is the best market.
4844. You do not grow many potatoes;—is the climate not suitable? Not as a rule.
4845. Wheat, really, is the staple produce of this part of the country? Yes; wheat or oats.
4846. *Mr. Cox.*] Where is your own land situated? Down at the junction of this creek and the river—about 6 miles off.
4847. Is any of the pine country, such as that we have just come through, under cultivation? A considerable quantity of it is, but the pine country does not go to the river.
4848. What kind of crop do you get in that land? Very good crops.
4849. I suppose they are not equal in quantity to the crops grown on the creek flats? In some respects they are better.
4850. Is it a better grain? A plumper grain. Our wheat gets too rank on the creek and river frontage, and is liable to lie down.
4851. That pinches the grain sometimes? Yes.
4852. In the country we passed through to-day, between here and Forbes, do you think the greater part of the land is suitable for agriculture? Decidedly; there is very little of it, besides the swamps, that would not be suitable.
4853. Of the red sandy soil which we passed through, and the yellowish soil, which would you consider the better? Sometimes the red soil is better for one thing, and sometimes the light soil is the best. The light soil is, as a rule, the best for wheat.
4854. The country between this and Forbes is a reserve at the present moment? Yes.
4855. If it were cancelled, would a large portion of it be taken up? Every acre.
4856. You think it would be profitably settled? Yes.

Mr. Edward Herbert, farmer and grazier, sworn and examined:—

4857. *Mr. Cox.*] What are you? I am a farmer and grazier.
4858. What area have you? In all, about 1,600 acres.
4859. How much of that do you cultivate? In some years a little more than in others. This last year I had 80 acres under cultivation—under wheat, and I had some hay.
4860. What is the result of your harvest? Between 300 and 400 bags of wheat. The wheat I cut for hay ran about 3 tons to the acre.
4861. That is beyond the usual yield? Yes; the wheat was very heavy this last year. A lot of the crop was down.
4862. How long have you been here? Sixteen or seventeen years. I have been cultivating from the time I could get the land into a fit state for it.
4863. How often have your crops failed in those years? I have never had a thorough failure.
4864. Not in 1888? No; I had 9 bushels to the acre that year.

Mr.  
E. Herbert.  
5 Mar., 1890.

- Mr. E. Herbert.  
5 Mar., 1890.
4865. Is your land on a creek or river flat? At the junction of the creek and river. On the creek, within 2 miles of the town, I think I had some 45 acres that ran 9 bushels to the acre in the year you name. I got between 6s. and 7s. a bushel for it.
4866. Then it paid you nearly as well as a good crop? Yes; there was not so much to handle and cart away.
4867. Where is your market? At Forbes.
4868. The market there, I presume, is limited? It was not limited last year.
4869. Would you add much to your farming area, if you could get a good reliable market for your produce? If we could rely upon a certain market we could put in a great deal more than we have in now.
4870. The present land carriage you have to contend with, prevents you from doing so? Yes. If we were to grow more wheat the Forbes mill would not take it, and it would not pay to cart it to Borenore, and then send it by train to Sydney.
4871. I believe you send some of your wheat to Cudal? I have not, but I know others who have sent it that way. Mr. Marsh, a neighbour of mine, sold his to Wright, Heaton, and they sent it that way one year.
4872. What is the cost of sending wheat from here to Borenore? I could not say, but the storekeepers have sent some.
4873. What stock have you? Cattle and horses.
4874. And dairying cattle? We sell a bit of butter in the spring of the year, and in the cooler weather.
4875. Would a railway from Molong to Parkes, and Forbes, be of any benefit to you? Not at all.
4876. What is the cost of sending your wheat to Forbes? I draw it with my own team.
4877. But what would the cost be? About 4d. a bushel, sometimes 6d., if the roads are bad.
4878. That, added to the trackage charged, would be a barrier to the successful growth of wheat? You could not make anything out of it, I think.
4879. Do you know the country between here and Borenore? Yes; I have been up and down many times.
4880. Would a railway from Borenore, *via* Cudal, benefit you very materially? Yes; it would do a lot of good to me and to others;—in fact, to every farmer in this neighbourhood.
4881. Do you think a much greater area would be put under cultivation in the event of a railway coming in that direction? Yes; we should be much more independent in the matter of sale; we could sell in many ways, if we had a railway to take our produce to the metropolis.
4882. Have you ever cultivated any of this kind of pine country? I have not cultivated any myself.
4883. I suppose it gives a good crop, equally with the other country? In wet seasons it gives a good crop, perhaps a better average than mine; mine, perhaps, would be too strong, and in a good season like this the wheat would go down.
4884. About half the country between this and Forbes is pine country? Yes.
4885. And the other half consists of river flats? Yes.
4886. Which would be the most suitable for cultivation? I fancy the flats would wear the longest; perhaps the pine country would give the best crops for a few years.
4887. The river flats would be costly to bring under cultivation? Yes; but they would be the least expensive in the end, because they would be comparatively everlasting.
4888. You mean that the floods would renew the soil? Yes.
4889. In the event of a flood covering the crop, would it destroy it? It depends upon the time of the year.
4890. But at harvest time the floods would ruin the crop? Yes.
4891. Suppose the wheat were growing? If it were young, a flood would not hurt it much.
4892. A good deal of the land on these flats is liable to inundation? Yes.
4893. But that, you think, would not be a barrier to cultivation? No.
4894. Is your country flooded? Yes; on the river, mine is.
4895. But not on the creek? It may overflow a little; it overflows at times. I have a farm within 2 miles of the town; the creek there overflowed on one occasion, in November, but it did not overflow sufficiently to do injury. I fancy it did the maize good, and it made a grand yield of my oats.
4896. How far is it from this point to Dulladerry Creek? I cannot say.
4897. What sort of road is there between Toogong and Manildra? A hilly road—up and down.
4898. Has it been made? No; not to my knowledge. I have not been there for the last few years.
4899. Do you think a large extent of country would be taken up if these reserves were thrown open? Every bit that could be obtained would be taken up.
4900. Irrespective of the railway? Yes; people would take it, if they could get it, at any time.
4901. But if the railway were to come here, it would be rushed? It certainly would; it would be taken up in small lots, settled upon, and farmed.

---

Mr. Archibald M'Millan, sworn and further examined:—

- Mr. A. M'Millan.  
5 Mar., 1890.
4902. *Chairman.*] I believe you wish to express your opinion relative to the suggested line *via* Eugowra to Cowra? Yes; I consider that the line from here to Cowra would benefit more people than the line from here to Borenore; and in this way, that it would be further away from the Molong line, and would benefit the Cudal people, as well as the people living along the valley of the Lachlan.
4903. You mean the Canowindra people? Yes.
4904. You think, then, that the line *via* Cowra would be the best of the three? Yes; for the reasons I have just given.

---

Mr. Thomas Clyburn, publican, sworn and examined:—

- Mr. T. Clyburn.  
5 Mar., 1890.
4905. *Mr. Dowel.*] Where do you reside? At Canowindra.
4906. How long have you resided there? Twenty years.
4907. What is your occupation? When I first went there I was a quartz miller and I had a crushing machine.
4908. What occupation do you follow now? I am a publican.
4909. What is the nature of the evidence you desire to give to this Committee? I want to give some general evidence. I desire to produce some statistics relating to Canowindra. They were collected a few months

months ago, a man being employed especially to collect them. I exhibit a list of the names of residents desirous of a railway from Cowra, *via* Canowindra and Eugowra, to Forbes and Condobolin. The list shows the number and area of holdings, the cultivation and yield per acre, the stock, mining particulars, machinery, and schools within the distance of 12 miles each way along the line of route from Canowindra and 6 miles on either side. The list is alphabetically arranged; the name of every holder of land is included, the area of his holding, the area under cultivation, and the yield per acre. The yield was estimated a little before the crops were taken off, but some of the crops have since been taken off and they have shown that the farmers were not far out in their calculation. The total number of holdings given was 234, the total area in acres is 242,727; the area under cultivation is 15,444 acres, number of sheep 214,667, of cattle 6,700, of horses 2,766, and of pigs 865. Then as to the schools at Canowindra, there is a total attendance of 100. The attendance at Nyrang Creek is 30, at Walli 40, at Watergumberg 33, Soldier's Flat 28, Chaucer 25, Tenandra 15, The Grove 18, and Mogong 16. The total attendance at the schools averages 305 daily. Then as to machinery, there is the Gospel Oak Mining Co., at Stockyard Gully, with 10 stamps and 25-horse power; Smith's, at Canowindra, with 5 stamps and 10-horse power; Smith's flour-mill at Belmore, with two sets of stones, 10-horse power. Then I may mention that £735 was taken by the Mining Registrar last year. These returns are all taken up to the end of last year. Canowindra is a great mining centre. I hand in a synopsis of the returns, showing the increase of stock, the area under cultivation, &c. You will see the difference between 1887 and 1889. There is an increase of 129 holdings, of 85,365 acres, of 4,097 acres under cultivation, of 109,919 sheep, 3,870 cattle, 750 horses, with a decrease in pigs of 750. There are no returns available for further comparison.

Mr.  
T. Clyburn.  
5 Mar., 1890.

4910. Your returns include all the country right up to the point at which the Eugowra returns were completed? Yes; that was understood.

4911. Can you say what the population of Canowindra is? I could not say exactly; there is Belmore, about 2 miles away.

4912. Have you a personal knowledge of the country to which your statistics refer? Yes.

4913. What is the class of country? It is first-class agricultural and mineral land all through.

4914. Is it chiefly occupied? Nearly every bit of it.

4915. And settled upon? Yes, with the exception of 20 miles between here and Canowindra; that is not occupied, as it is a travelling-stock route.

4916. It is Crown land? Yes.

4917. The whole of the country, with the exception of the reserves, is occupied? Yes; they are very good settlers, taking them all through. I do not know of any who are not willing to remain on the land.

4918. They have every appearance of being a permanent class of residents? Yes.

4919. What are the principal crops grown? Wheat, hay, and corn.

4920. You are aware that the line of railway which has been referred to the Committee goes from Molong to Parkes and Forbes, *via* Flagstone Creek? Yes.

4921. Will that line, in your opinion, be of any benefit to this district? None whatever.

4922. You are quite clear on that point? Quite clear.

4923. What are your reasons for thinking so? It would be further away from our place; we should have to go further, and the carriage would be heavier than in the case of Cowra.

4924. Do you know the country traversed by the proposed line from Molong to Parkes? No.

4925. But you feel pretty sure that the line would be of no benefit to you? Neither that, nor the Bore-nore line.

4926. Are there any engineering difficulties on the line of railway you suggest? There is only one bridge.

4927. Is the country level? Yes. There is only one place where they reckon there will be a grade of 1 in 40; all the other grades are 1 in 70 and 1 in 80. The engine would have to go through the 1 in 40 grade, as far as I know.

4928. You have been over the staked route? No, not the whole of it.

4929. What about this 1 in 40 grade? I can give you no further information about that.

4930. I suppose you come into contact with a good many of the residents in your township? Yes.

4931. Have any meetings been held there in support of the railway? Yes; the opinion of the people is that we ought to have one. Another thing I have noticed—that is, that in the different papers which I have seen bearing upon the matter, Canowindra is generally classed as forming a portion of Cudal; we wish that to be denied; we should not be served by the Cudal route.

4932. What distance would Canowindra be from the nearest point of the railway? Twenty-five miles.

4933. That is too far to be of any service to you? Yes; and then there is the extra expense of the haulage.

4934. Is there any timber within a reasonable distance of the line you suggest, which would be suitable for fencing, sleepers, and bridge purpose? I know of one place where you could get it for bridges, and you could get any quantity of timber for fencing.

4935. There is no diversity of opinion among your people, as to the route which should be adopted? No.

4936. Under all the circumstances, you think that the proposed line from Molong to Parkes and Forbes would not serve the residents of your district? I think it would not. I would point out that the difference in the elevation of Bore-nore and Cowra is somewhere about 1,200 feet. The consequence is, that there would be all that stiff grade to go up.

4937. What is the height of Blayney? About 3,000 feet.

4938. What is the difference between Blayney and Bore-nore? That I cannot say; but in travelling to Bore-nore you have some stiff grades to mount, and the line would cost more for working expenses. There would also be a greater distance for us to cart our produce. The level from Cowra to this point is 1,200 feet lower, to start with, than it is at Bore-nore. You would have all that extra grade in working.

4939. What rise have you to make to go into Blayney;—is it not as far above the sea as Bore-nore? Blayney is on the other side; you are coming down, and you would have to go up again.

4940. What difference does it make whether you go up to Blayney, or to Bore-nore? There is this difference—that in going to Cowra you are running on to a line already constructed, with a junction at a lower grade; in the other case, you would have the extra line to construct to get to Cudal.

- Mr. T. Clyburn.  
5 Mar., 1890.
4941. Do you know that Forbes is 14 miles nearer Sydney, going by way of Borenore, than going by way of Cowra? Yes; suppose I want to go to Young, what a nice thing it would be for me to have to go all the way round by Orange.
4942. Suppose you want to go to Victoria? Well, the same thing holds good there.
4943. What traffic do you anticipate would go to Young or to the south? There is a large traffic in stock—they are trucked at Cowra; some come from Queensland, and some from down south.
4944. You appear not to want a railway so much for the people of Canowindra, as for the people of Queensland? I do not go quite so far as that.
4945. What benefit would accrue to Canowindra in sending your produce south? It would make 4d. a bushel on all our wheat—that is only one consideration.
4946. How do you make out the difference of 4d. a bushel? By putting it on the train and sending it to Sydney.
4947. Sending it which way do you say? From any of the farms to the railway station.
4948. If you had a railway, it would make a difference of 4d. a bushel, you say? Yes.
4949. Suppose you had either of the other railways? In that case it would cost us about 8d. a bushel.
4950. How so? Because it would be so much further carriage.

Mr. Thomas Finn, storekeeper, sworn and examined:—

- Mr. T. Finn.  
5 Mar., 1890.
4951. *Chairman.*] What is your occupation? I am a storekeeper residing at Canowindra. I have been there eighteen years. I have not been storekeeping all the time, but I have been in business.
4952. What is the population of Canowindra? The population of Canowindra itself is about 200. If you take a radius of 8 or 9 miles there are 700 or 800. We live on the people who come into the town, from the back.
4953. What is the principal industry in your district? Wheat-growing and agriculture, generally.
4954. Is there much land under crop in the Canowindra district? A great deal. I could give you the latest returns taken by the police in January. They were handed to me last night in a rough form by a constable.
4955. Are they for the police district of Canowindra? They take them within a radius of 10 miles. The police district of Canowindra is comprised in the Cowra district. Our district joins on to Toogong and Goolagong. Part of the Goolagong district is in the Cowra district.
4956. This would include Barrigan? Very nearly.
4957. What is the state of Canowindra at present; is the population increasing? It has increased very much the last year or two. I am sure it has doubled within the last two years, and there is every appearance of a still further increase.
4958. Is there any particular industry in Canowindra—manufacturing, or anything of that sort? There is no manufacturing, but we have a flour-mill.
4959. How far are you from Cowra? Twenty miles exactly.
4960. Is that the nearest point on any railway? Cowra and Woodstock would be, as nearly as possible, the same.
4961. You know the country between Canowindra and Woodstock? Yes; it is good country, but it would be a rougher route for the construction of a railway than the surveyed route to Cowra.
4962. Is not Woodstock nearer to Canowindra than to Cowra? I think about the same, as nearly as possible.
4963. Do you know anything about the line of route of the proposed railway *via* Molong and Parkes and Forbes? I do not know anything about the Molong route. I know the line from Borenore.
4964. Supposing a line were constructed to Forbes by either of these two routes, would it be of any advantage to you? Not in the least.
4965. Then no other line would suit the Canowindra people but a line from Cowra, on Wood's Flat? That is all.
4966. Have you had any meetings at Canowindra about this railway? Yes. The general opinion is that we ought to have a railway from Cowra, for the benefit of the country at large.
4967. Do you know that there is a large population to the north of Parkes which would be in no way served by a line from Cowra? Yes, I know there would be a large population there.
4968. Do you not think that, in the construction of a railway line, all these things should be considered, and that a line should be constructed which would serve the greatest number of persons? Yes; but we have as great a number on the line, I suggest, as they have. At the present time there is a rush to Parkes, consequently you see a number of persons there who might not be there to-morrow. We may have a rush to our district at any time; it is just as auriferous as the Parkes district.
4969. Is the country between Cowra and Canowindra, and between Canowindra and this place, well populated? Yes; recently a lot of land has been thrown open for selection between Canowindra and Eugowra, on the left-hand side, on the travelling stock route.
4970. Which side does the travelling stock reserve run from Canowindra to this place? It runs right through; there is half a mile of reserve on each side of the road.
4971. And this land which has been thrown open is on the north side—that is on the right-hand side coming here? Yes.
4972. Was the whole of the land taken up? There was not an acre available which was not taken up.
4973. What area was thrown open? I have no idea.
4974. What would be the size of the selections? From about 160 to 320 acres. It was cut up into small pieces. I may say that on the Cowra line, all the land between Cowra and Canowindra has been taken up chiefly by selectors. I have a report here from Mr. Thornbury, who surveyed a railway here some years ago. Mr. Clyburn made a mistake in stating the distances between Cowra and Forbes, and Borenore and Forbes; the distance of railway construction would be far less than he stated—that is *via* Cowra—and the cost of construction per mile would be £5,988.
4975. Where did you get those figures? From Mr. Thornbury's report. He surveyed the line from Canowindra to Cowra for the Government. I have not the slightest doubt about the distance from Cowra to Forbes. It is 63 miles. I travelled the line with Mr. Commissioner Fehon, and I heard him say that he was confident, from what he saw of the line between Canowindra and Cowra, that it could be constructed for £5,000 a mile. I will give you some of the places which would be benefited by the railway. In the first place there is Cargo, because it would be as short a distance from Cargo as the Cudal line; all the places this side of Cargo would come to Canowindra, as a matter of course. Then there is Goolagong, which would be ignored, if there were not a railway to Cowra.

4976. How far is that from Canowindra? It is 15 miles from Canowindra; the people there go now to Cowra, the distance being 25 miles. Goolagong would be served by the route from Cowra to Canowindra, at Nyrang Creek, about 5 miles this side of Canowindra. The district is on the Lachlan River, and there is wool traffic between Goolagong and Grenfell, about 45 miles; and Barrigan would also be benefited by the Cowra line, in fact all the settlers along the Lachlan River, from Cowra down to Forbes. You asked Mr. Clyborn about the wheat going on to the Southern line. A lot of the wheat grown in our district has been bought to go to Cootamundra and Goulburn. Most of our wheat this year has gone to Sydney. I could also give you the returns of the Canowindra Post-office for 1885 and for 1889. Mr. T. Finn.  
5 Mar., 1890.

4977. Why did you select 1885? I do not know why that year was selected; the post-master handed the particulars to me. With regard to the schools, I can corroborate what Mr. Clyborn has said, being a member of the School Board for the district of Cowra.

4978. *Mr. Cox.*] I notice that in these returns there is a man named Duffy who has 1,620 acres on which he is feeding 5,000 sheep, or three sheep to the acre? I am sure he often does that; he is always dealing in sheep, buying and selling. Many men with small holdings run four or five sheep to the acre, for the time being.

4979. A man may put on twenty sheep to the acre and may keep them on the land for a week, but would it not be deceiving to put them on a list like this, which is supposed to be a fair return for the year? At the time the return was collected Duffy probably had the number of sheep given, and that is why they are included in it.

4980. Here is another man, named Jenkins, with 21,600 sheep to 3,600 acres? The area given would be only his conditional purchase and freehold. He must have a far larger area of land than that.

4981. Then I say again, that the return is deceiving;—it is supposed to represent the number of sheep kept for the year; the whole return is rendered valueless it seems to me? Of course, Mr. Jenkins could not keep the number of sheep you give on such an area for the whole year.

4982. Then I see that a man named Hurley has 1,006 acres of land, on which he keeps 5,000 sheep, or five sheep to the acre—is that possible? He deals in sheep, and he may have had that number at the time. I know that both Duffy and Hurley overstock, and find it out to their sorrow in time of drought.

4983. But you understand that if the man does not keep, continuously, the number of sheep given in the return the return is deceiving? I could not say whether they keep them continuously, or not.

4984. I have known persons, to prevent sheep from being destroyed by grass seed, to put them all into two or three paddocks, feeding them on a certain area, but it would be deceiving to say that that number of sheep were kept on a few thousand acres of land? Of course it would not be possible to keep the numbers you have given, continuously, on such small areas. At the same time the area of Jenkins' holding is wrongly stated, I believe.

4985. *Mr. Dowel.*] Do you know Mr. Hamilton Osborne? Yes.

4986. Do you know his holding? Yes.

4987. Does it contain 29,000 acres? It might, I think.

4988. Do you know that he is returned as carrying 40,000 sheep? I did not know that.

4989. What is the character of his land? It is splendid land.

4990. Do you know what rent he pays for it? He has very little leased land; it is nearly all freehold.

4991. You have said just now that the rush of gold might suddenly cause a large population at Canowindra? Yes.

4992. Can you give the Committee any information regarding the mineral resources of the district? At the present time there is a reef, which has been working for the last three or four years, giving magnificent returns and paying a large dividend. I refer to the Blue Jacket Reef. Their average per week would be 50 or 60 oz. of gold. It goes about 2 oz. to the ton, and their blanketings have gone as high as 12 oz. They put through 42 tons the other day at the Clyde Works, and that went 7¼ oz. There are other reefs working, which go from ½ oz. to 1½ oz.

4993. What number of miners are employed in this auriferous belt of country? At the present time there are not more than forty or fifty, and they would be scattered about the district. I may mention that a lot of leasehold areas will be shortly available for selection. People will take up the land as soon as it is open.

4994. Is the land on these areas of good quality? Very good, in most cases.

4995. Is it well watered? No; but it is easy to make water.

4996. In your opinion the whole of this land will be occupied as soon as it is available? Yes.

4997. By *bona fide* men? Yes.

4998. The day of the dummy has gone by? Yes, and we are glad it is so.

Mr. Robert Rice, farmer, sworn and examined:—

4999. *Mr. Lee.*] Where do you reside? At Canowindra. I have been there close upon four years, but I have been in Cowra twenty-seven years. I am a farmer. Mr. R. Rice.  
5 Mar., 1890.

5000. What is the extent of your holding altogether? 642 acres of purchased land, and I lease 180 acres.

5001. Are you an original selector? No, not at that place.

5002. You desire to give some evidence as to the proposed line from Cowra to Canowindra? Yes.

5003. What do you wish to say? I have been over every yard of the Cowra route, and I know that it has been proved to be the nearest route to Forbes, *via* Eugowra, by from 1½ to 2½ miles.

5004. You mean the shortest of the surveys from the Murrumburrah line? Yes; that can be proved. The distance can be lessened between this place and Canowindra fully 3 miles, giving quite as good a route as the other lines. I reckon that there would be five miles less to construct. There has been only a trial survey of the route between Cowra and this township, but if there were a permanent survey, I am sure that the route could be still further shortened, and that it could be made a cheaper line. This route has been proved to be the cheapest, officially, by £200,000.

5005. Officially? Yes, from several sources. I will give you at least one good source. Mr. W. H. Suttor made a statement to that effect in a letter to a newspaper.

5006. Those figures are taken, apparently, from Parliamentary papers? Yes; the next point I have to press on the Committee is the height between Cowra and Forbes—it is only 200 feet—just the drop of the river between the two towns—consequently there would be easy grades. Borenore being 2,000 feet, there would be increased haulage, as Mr. W. H. Suttor shows in his letter—“We have already taken our lines

over

Mr. R. Rice. over these high altitudes too frequently, and I do not think another mistake of the kind should be made in constructing a line to Forbes." The quality of the land on the route I suggest, surpasses the quality of the land on either of the rival routes—this I can prove from statistics, and from my experience of the district, I can state confidently, that we can carry, on many thousands of acres, from two to ten sheep to the acre. I can carry 1,000 sheep on 100 acres of land.

5 Mar., 1890.

5007. For how long? For nine months in the year.

5008. Every year? Yes. On the land to which I refer, the thistles grow from 12 to 14 feet high. There are 100,000 acres of similar land on the Belabula River.

5009. Is it all thistle country? Yes; I have grown 90 bushels of corn to the acre, and others, who have held the same land, have grown 100 bushels to the acre. I maintain that the land is unsurpassable for wheat-growing. As a practical farmer, I say that there is no land in the colony equal to the land on the route from Cowra to this township. I have been a wheat-grower for twenty-seven years. Cudal, I may mention, is already provided with a railway, being only 15 miles distant from Borenore. The distance from Cowra to Forbes would be 64 miles. The line would serve the Lachlan Valley, and when you see the Upper Lachlan, I guarantee you will say there is no better district in the colony; it is only a few miles off the river at any place—the railway I mean; therefore, it embraces the valley of the Lachlan for the whole distance.

5010. Have you seen the Tweed and Richmond Rivers? No. I may also state that by constructing a line *via* Cowra, the public could be suited either with a Sydney or a southern market. They would not have this choice if the line were taken *via* Molong, or Borenore. Neither of those routes could be constructed without persons being obliged to go a very long way round to get to the Southern line, so as to take advantage of the Southern markets. The Lachlan River is already bridged. I think this is a great point in favour of the Cowra route—that we have a very extensive bridge over the Lachlan there. I suppose it has cost nearly £200,000.

5011. You mean the railway bridge? Yes. As to the places which would be benefited, there is Goolagong. We know the exact distance of that place, because the Government erected a telephone there a few months ago. The distance from the point tapped by this line would be 10 miles. The population on this route is far greater than that on the Borenore, or Molong route. It must be, when you consider that Cargo, Eugowra, Goolagong, Canowindra, and all these other places would be served.

5012. Could you give me the population of these various places? Only an estimate.

5013. Which is the most important settlement this side of Cowra? Canowindra. There is only one bridge to construct by this route—that is over the Belabula, and it is not an expensive one. Bricks, sand, ballast, and stone can be obtained on the route—also sleepers.

5014. What sort of timber is it? All kinds of hardwood, ironbark, box, and red gum. I read the evidence of Mr. Kenna, of Orange, who stated that the route from Cowra to Forbes was thinly populated. Now I deny that, and to prove my words I should like you to allow me to merely quote from the report of Mr. Surveyor Thornbury, who was sent up by the Government to survey the line about three years ago. He said:—"The country comprises good agricultural and pastoral land, and is nearly all taken up by free selection. There are a great number of farmers proximate to the line, which has been taken as close as possible to the cultivated land." Cowra, being midway between the Southern and Western lines, would be most advantageous to settlers on the Lachlan, and to the people of Forbes and Parkes also. I have always considered the Blayney and Murrumburrah line would carry a great deal of the traffic of this colony for many years to come. Cowra, being midway on the line, people would be more advantageously served. We know that a large number of the recent selectors round Parkes, at least two-thirds of them, are Victorians. A great deal of their traffic will go towards Melbourne, and you can quite understand the advantage which would be gained by settlers if, on their arrival at Cowra, they were able to command the Melbourne or the Sydney market. Suppose there were a block on the Western route—that might occur at any time—then, settlers having their produce at Cowra, could send it by the Southern route to Sydney. That, it seems to me, is a very strong argument in favour of the line I suggest. No company or syndicate would hesitate which route to adopt, if a dividend were the object. If the travelling-stock reserves were thrown open and a fair upset price were put upon the land, the amount returned would fully pay for the land the Government might have to purchase, if they adopted the Cowra route. It is a dead level, and there is land, of the very richest description on this travelling-stock reserve. It would be selected the first day it was thrown open. There would be a saving in the cost of construction, arising out of the lesser distance of £200,000—that is a great consideration. The land being almost level, the line could naturally be constructed almost straight, consequently the cost of maintenance would be very much less. The advantages of population, easier gradients, and cheap construction, all seem to point to the Cowra line as the best route which could be adopted. I believe the line would give national satisfaction. The valley of the Lachlan, at least, would have the most direct and legitimate channel for its traffic, and I consider that a great good would be achieved.

5015. One of your chief reasons for advocating the Cowra line is that it would give settlers a choice of the Melbourne as well as of the Sydney market? Yes.

5016. The stock traffic in this district, no doubt, would be large, but you must be aware that there must be traffic other than stock to maintain a railway;—you have already shown that your portion of the district is a fertile one, and that it produces immense crops of wheat and maize, particularly—what market do you depend upon for the sale of your maize? The Belabula River, so far as inland places go, is unsurpassed for maize growing. They grow very little maize in Victoria, and import a great quantity. I have already sent maize to Sydney, but I do not see why the Victorian market might not be a market for maize. If I can obtain a higher price there, surely it will be the better market.

5017. Could you pay the freight on that long distance, together with the Victorian duty, and then sell your maize in Victoria at a profit? Yes, I think so; because if I send my corn to Sydney, as I have done, it is quite possible that that very corn may be again shipped and sent to Melbourne.

5018. Then, where would your market be for the large quantities of wheat you grow? There are some hundreds of tons that have gone through Canowindra from Walli, Woods' Flat, and other places, for the Forbes market.

5019. How much wheat do you think has been delivered at Forbes this year? I cannot say. I know some of my neighbours are selling there.

5020. Could you say how many loads have been sent? It is early in the season yet.

5021. Is much Canowindra wheat sold in Forbes every year? Yes; most years it is sold in Forbes; it is, as a rule, the best market.

5022. Has there been as much wheat as usual sold there this year? No; because they had more good crops round Forbes.
5023. What other markets do you look forward to? I sell wheat at Bathurst and Cowra; those have been my chief markets.
5024. Markets other than Sydney have been your markets up to the present time? Yes.
5025. In the event of a railway being constructed, you look forward to increasing your output considerably? Yes.
5026. And the quantity you would have, in consequence of the increased cultivation, would be very large? Yes.
5027. Naturally, you would look for a market outside in preference to purely local markets? Yes.
5028. And where would you go to? The bulk of our produce must, in a few years hence, go to Sydney.
5029. What price, on the spot, will pay you at Canowindra for the growth of wheat? My opinion is that wheat cannot be grown for less than 3s. a bushel on the spot; when the price is below that I would not put a plough into the ground.
5030. Then if the trainage and Sydney charges were added, you would have to get 3s. 6d. per bushel in the Sydney market? Yes; to make the crop pay.
5031. What does it cost you to cultivate your land,—that is to plough, sow, reap, thresh, and bag the wheat? It is very difficult to answer that question directly. Suppose I put in a crop every second year, and fallow one year, that would be a very different thing from putting in a crop yearly. I have been in the habit of doing a great deal of fallowing in my wheat-growing, and I think that 15 bushels to the acre, at 3s. a bushel, would just pay a man fairly. It is as little as he could live upon.
5032. What I want to get at is how much it would cost to grow the wheat per bushel, and get it ready for market? I suppose it would cost 15s. to plough and harrow, and the seed would be 3s. 9d. I roll my wheat, and that costs 1s. per acre; the harvesting would be 12s., that is including bags; then there are fencing, and a number of other things to pay for. I could not really tell you what it would cost, I cannot give you any nearer idea than these figures, and I do not think any man could. I should have been up a tree a long time ago, if I had not had 3s. a bushel for wheat. I have grown wheat for twenty-seven years, but my price has averaged 5s. per bushel.

Mr. R. Rice.  
5 Mar., 1890.

Mr. William Cook, constable, sworn and examined:—

5033. *Mr. Cox.*] What is your position? I am a constable, stationed at Conowindra. I have been here something over six years.
5034. Is it your duty to collect statistics for the district? Yes.
5035. Will you look at the statistics produced? Yes; I could not say what these are; they are not taken by me, or from my returns.
5036. You cannot vouch for them? No.
5037. Have you any returns compiled by yourself? I have only the wheat returns. I can give you the quantity of wheat grown in my portion.
5038. I find in the statistics which have been handed in to us, very notable instances of an enormous number of sheep being run on small areas of ground. Mr. Duffy holds 1,620 acres, and he is put down as having 5,000 sheep, or three sheep to the acre? I believe he has that number.
5039. But could he keep that number on his land all the year round? No.
5040. Therefore to give that number in a return supposed to apply to the whole of the year 1889, would be misleading? Yes; but Duffy probably had that number of sheep when the return was taken—you take the number when you are collecting, even if they happen to be in a stockyard.
5041. Do you know a man named Hurley, who is represented to have 1,006 acres of land? Yes, but he has more than that—he has a lot of leasehold land—3,000 or 4,000 acres.
5042. He is said to keep 5,000 sheep? He has fully that—he shone 4,000. He could run that number; he may be a little over-stocked, but not much. He generally runs from 3,000 to 4,000.
5043. Do you know Mr. Jenkins, with 6,300 acres of land, keeping 21,500 sheep? He shone about 21,000 last year, and when I got the return in January, he had just bought 5,000 more.
5044. What sort of country is it? It is not extra good; he could not keep that number all the year round.
5045. What are the wheat returns you desire to give? The total yield in the portion I took was 79,664 bushels.
5046. On what area was that collected? With the exception of three or four, or perhaps half a dozen, it would be collected from persons within 10 miles of Canowindra.
5047. When did you yet these returns? In January.
5048. Was the harvest over then? It was mostly bagged then. They gave me the number of bags, and I reckoned 4 bushels to the bag.
5049. Did you see the crops growing? Yes; they would have gone more than they did, but several thunderstorms passed over the district and destroyed a great deal of wheat. I should say that fully one-fourth of the crops was lost.
5050. What did you find the average yield of acre to be? Something over 18½ bushels.
5051. Did you collect the statistics in 1888? Yes.
5052. What was the average yield that year? There was a very poor yield that year, a great deal of wheat was destroyed. I do not think it averaged more than 5 bushels. A lot of the crops were not cut at all.
5053. To what acreage does your wheat return apply? 4,285 acres.
5054. Do you know anything of the Cudal and Barrigan country? Only the outlines of it.
5055. Have you come across any farming population there? Yes.
5056. Do you know the Manildra country? No.
5057. Comparing that country with the country about Cargo, Cudal, Cowra, and Canowindra, which would you say was the best? I do not know the Manildra country well; but I can give some idea of the land down this way. Taking the whole distance between Cowra and Nyrang Creek, 6 or 8 miles this side of Canowindra, it is most thickly populated. The number of holdings I collected was 150 within a radius of 10 miles. These returns go to Molong—they are taken in the Molong returns for the year.

Mr. W. Cook.  
5 Mar., 1890.

Mr.

Mr. James Davison, storekeeper, sworn and examined:—

- Mr. J. Davison.  
5 Mar., 1890.
5058. *Mr. Dowel.*] Where do you reside? At Eugowra.  
5059. What is your occupation? I am a storekeeper at present.  
5060. How long have you resided here? I have been in the district fifteen years.  
5060½. Previous to that where were you? I was in Parkes for five or six years.  
5061. Have you a considerable knowledge of this district? Pretty good.  
5062. And of the people who reside here? Yes.  
5063. Is the district fairly settled? Yes.  
5064. What is the nature of the evidence you desire to give? I have no particular evidence to give.  
5065. During your residence of fifteen years here, have the crops, to your knowledge, been fair? They are generally pretty fair crops. In odd years they have missed. I have not missed altogether, but I have had inferior crops.  
5066. What are the principal pursuits carried on by the residents here? Agriculture and grazing.  
5067. Is there any dairying? A little, but it is not carried on to any great extent—there is no outlet for the butter.  
5068. From your position as a storekeeper, do you think that the settlers in this district are improving their position, or that they are going back? They are certainly improving it.  
5069. And is the district generally improving? Yes.  
5070. Do you regard the settlement as being of a permanent character? Yes.  
5070½. You think the residents are *bona fide*? I am sure they are.  
5071. Can you give any information as to the merchandise brought to this town? Only as regards my own. I get about 2 tons a month on the average, from Borenore.  
5072. What rates do you pay for carriage? The rates vary, according to the season. I have paid as low as 2s. per cwt., and as high as 5s.  
5073. What is the rate of carriage from this place to Borenore? Generally, about two-thirds of the rates I have mentioned.  
5074. Is there any special price for the carriage of wheat to Borenore? I have seen it carried for 8d. a bushel, and I have known them to ask 1s.  
5075. Do you produce wheat here? No.  
5076. Do you buy produce of any description? Butter and eggs.  
5077. Is there much of that produce brought to you for sale? Sometimes a good deal—more than I want.  
5078. And you have no market? Except at Forbes, for that kind of thing.  
5079. You know the proposed line from Molong to Parkes, *via* Flagstone Creek? Yes.  
5080. You have resided in Parkes—what do you think of that proposal? I cannot say much for the route because it goes through a lot of barren, useless country. There are miles and miles of it, from Manildra to Flagstone Creek.  
5081. Do you know all of the country on that route? A great deal of it. I have not exactly followed the lines, but have touched on them here and there. The greater part of the line you mention is a barren waste.  
5082. Where is this country situated? Between Meranburn, to within a few miles of Parkes—it is all one class of country. All that country at the back of the mountain is useless—it is roly polly, there is no grass on it.  
5083. How long did you reside in the Parkes district? I was five years on the Coobang Station.  
5084. Had you many opportunities of seeing the country round about Parkes? I have had more opportunity since I have been here than I had there.  
5085. How far does this country extend from Parkes, on the road to Molong? About 7 miles.  
5086. Have you been over the country to the north of Parkes—towards Peak Hill? Yes.  
5087. Is it good or bad country? It is good country.  
5088. Was it settled upon when you knew it? No.  
5089. Do you know the country between Parkes and Forbes? Yes, on the road.  
5090. Is it good, bad, or indifferent country? Very good, most of the way.  
5091. Then all the country from Forbes to Parkes, and the country for about 7 miles from Parkes towards Molong, is good? Yes, it is of a fair character on the north side of the road.  
5092. Does the good land extend northerly for a considerable distance? Yes.  
5093. Knowing the country as well as you do, do you think it is desirable that a railway should be constructed to serve the settlers in these districts? I think there are more people living on this route, and that a railway here would serve a greater number.  
5094. Is the character of the land sufficiently good, and is the population sufficiently large, to warrant the Government in constructing a railway? I could not say that it was not. I do not know the present population. If you are referring to the Parkes district, very few people were settled there when I was there some years ago.  
5095. Would the proposed line, if constructed to Parkes and Forbes, be of any service to you? If it went from Borenore, but if it went the other way it would be of no service whatever.  
5096. If the farmers could get an outlet to the Sydney market from Forbes or Parkes, would that not be a considerable advantage to those who cultivate the soil between Eugowra and Forbes? I cannot say that it would be of great service, because they would have a bad road to travel to get across to the railway.  
5097. What is the distance? It would be about 30 miles on to the Parkes line.  
5098. And on to the Forbes line? By the measured road it would be 24 miles.  
5099. Often, if you have surplus produce, you cannot dispose of it, even at Forbes? Often we cannot.  
5100. If there were a railway to Forbes, would it not be of considerable advantage in taking your produce to a market where you could be always sure of selling it? Yes; but we could take it for nearly the same cost to Borenore.  
5101. What is the distance from here to Borenore? Forty odd miles.  
5102. Would you prefer to cart your produce 40 miles, in preference to the 24? Yes; but if we went to Forbes there would be the extra trainage to pay.  
5102½. You cannot see that any benefit would be conferred upon this place if a railway were constructed from Forbes to Molong? I cannot see that there would be any.

5103. Is it not generally admitted that farmers will take their produce to a railway if they can get within 10, 15, or 20 miles of it? Yes.
5104. Would not the farmers within that radius of Forbes use the railway for their surplus produce? Some of them might, but if they had their own teams they might as well take the produce to Borenore, as pay the extra trainage.
5105. Have you noticed that this place has progressed in size and numbers since you have been residing here? The town itself does not progress fast, but the population is increasing; more land is being taken up every year round about. Whenever land is open, it is taken up very quickly.
- 5105½. Can you say, of your own knowledge, whether fruit can be grown to advantage in this locality? Yes, there are very good crops of grapes, peaches, apples, pears, and everything of that kind.
5106. As a storekeeper here, you have come into contact with a number of persons, and have discussed the various rival routes? Yes.
5107. What is the consensus of opinion as regards the route which should be adopted? People favour either the Canowindra or the Borenore line.
5108. Are they pretty equally divided in opinion as to the merits of these two lines? I think so.

Mr. J.  
Davison.

5 Mar., 1890.

Mr. Michael John Dwyer, contractor, sworn and examined:—

5109. *Chairman.*] What is your occupation? I am a contractor.
5110. Residing where? At Eugowra.
5111. What is the nature of the evidence you wish to give? I am a native of the district. I was born within about 20 miles of this place; I know the locality thoroughly. I consider that if this part of the country were approached by a railway line it would tend greatly to improve settlement upon the land; we should have a much larger population.
5112. Have you noticed that this place has progressed lately? Yes. We find that land available for selection is eagerly sought for. The land to the north of the Canowindra-road, forming part of the travelling stock reserve, was settled in one day.
5113. Have you ever known this place to be more prosperous than it is at the present time? No; never. I knew this place when there was only one hotel here.
5114. Do you see more land put under cultivation here every year? Yes; I believe there is.
5115. Have you ever known this place, or any land round about here, to be flooded? The creek seldom overflows its banks here.
5116. But you have known it to do so? I have seen it overflow once.
5117. Did it stop the traffic? No.
5118. How deep would it be on the road where the traffic would be? The place where it overflows is below the place where the traffic crosses the creek.
5119. It would only affect the farms? Yes.
5120. Did it do much damage to the farms? No. It is generally considered that when the creek overflows its banks it benefits the land it flows over.
5121. Do you know the surveyed line to Cowra? Yes.
5122. Would that be in the flooded country? No, above it.
5123. Do you know the surveyed line to Borenore? Part of it.
5124. Would any part of it be subject to flood? It joins the line from Cowra to this place before it crosses the creek, about 10 chains from the bridge.
5125. What class of contracts do you take? At the present time I have a contract under the Roads Department, and another from Mr. Jenkins, for fencing.
5126. Which line would be of the most benefit to this place? The Cowra line. As regards the slow increase of population, it is principally because the land is locked up in reserves that the population does not increase more. We have travelling stock reserves, forest reserves, and railway reserves,—all that land would be eagerly taken up. There was one piece of land, a special area, 16 miles from here, and sixteen applicants balloted for the one piece. It is of very little use for the farmers to extend the area under cultivation, because there is no outlet for their wheat. The men who combine grazing with farming send their fat stock to Melbourne—one lot went recently to Cowra, and another to Junee.
5127. *Mr. Cox.*] Do you know the country about Cargo, Barrigan, and Cudal? I have travelled through it.
5128. Do you know it fairly well? I know the roads.
5129. Do you know the farms? A few, but not all.
5130. You know the Manildra country? No.
5131. Therefore you could not give an opinion as to which railway would suit the bulk of the people living in these localities? No.

Mr. M. J.  
Dwyer.

5 Mar., 1890.

Mr. Nicholas Edward Osberg, sawyer and farmer, sworn and examined:—

5132. *Mr. Lee.*] You are a resident of Eugowra? Yes; I have been here for about eleven years.
5133. What do you do? I am sawing at present.
5134. Have you always been sawing here? No; I have been farming and doing blacksmith's and wheelwright's work, and all that sort of thing.
5135. Are you doing any farming now? Yes.
5136. Do you till your land? Yes.
5137. You have heard some of the evidence by some of the other witnesses? Yes.
5138. What particular class of evidence do you wish to give? As to the timber trade, which could be developed, I think there would be a great deal of it, if there were any outlet.
5139. What kind of timber do you deal in? There is plenty of good red gum; it cannot be surpassed in the colonies for sleepers or for wheelwright's purposes. There is any amount of it all along the valley of the Lachlan—the Lachlan pine is also very good. I am sawing some of it at the present time.
5140. Do you own the saw-mill at Eugowra? Yes.
5141. Where does your large timber come from? Within a radius of 6 miles.
5142. Do you saw up much red gum? According to the demand—it is chiefly required for bridges and culverts.

Mr.  
N. E. Osberg.

5 Mar., 1890.

5143.

- Mr. N. E. Osberg. 5143. Is there much of it in the district? Yes.
- 5 Mar., 1890. 5144. Have you had anything to do with sleepers? No; but I have seen plenty.
5145. Is the timber large and sound enough for sleepers? Yes.
5146. Is it sound, as a rule? You find gum-veins in some of it.
5147. Is there much pine about here? A good deal.
5148. Is there pine here in sufficient quantities to keep your mill going? For a considerable time.
5149. Do you saw lining boards? Yes.
5150. What is the nature of the timber? It is very good for building purposes; it is more lasting than the Oregon pine, especially for flooring.
5151. If there were railway communication, do you think there would be much demand for this wood? Yes.
5152. And could you supply a considerable demand? Yes.
5153. Could you supply 4,000,000 or 5,000,000 feet? If I had time.
5154. Is there timber in the district to do it? Yes.
5155. Supposing a line were constructed, could you saw timber, and send it to other districts, and compete there with the local timber? Yes; I am closer to the pine here. I should send pine towards Canowindra, or towards Cudal, if this line were constructed.
5156. But there is pine in other parts of the colony? Not much up this way.
5157. Not in the valley of the Murray? Yes; and on the Western line. But if there were a railway between here and Borenore, we could send timber to Borenore, and compete with people on the Dubbo line.
5158. Would the Borenore line suit you better than the Canowindra line? No; I think the Canowindra line would do equally well.
5159. Have the people here a preference for either line? If anything, they prefer the Canowindra line.
5160. Both of the surveys junction at Eugowra? Yes.
5161. So that the Eugowra people are in the happy position of getting a line, whichever way it comes? Yes; as long as it does not come through Parkes.
5162. The line from Molong to Parkes will not suit you? No.
5163. But if you had cheap communication with Parkes, would not the miners up there demand your timber? No; there is pine at Parkes, and a saw-mill too. Of course, you might have a branch line to Parkes.
5164. I suppose there is a saw-mill at Cowra? Yes; but they have to draw the timber a long way.
5165. If it were easy to send sawn boards by train, I suppose it would be as easy to send log timber? There would be one advantage—if you required any Maryborough logs or kauri pine, you could get it up in the log and cut it up here.
5166. Is your mill running full time? Yes; when I have time to run it.
5167. I suppose you have orders enough to keep you going? Yes, at the present, and for some time to come.
5168. If you had a railway, you could not cut any more stuff? I could, because up to the present I have been idle—that is, I have been doing other business occasionally—the carriage is heavy, and unless I get local orders I do not care very much about the work. Local orders pay very much better than distant orders.
5169. You have to get in your logs by dray? Yes.
5170. Most of your constituents drag their timber from the mill? It all depends—sometimes they do.
5171. Can you mention special advantages which would accrue from the construction of a line to this part of the district? Well, there is any amount of water for irrigation along the valley of the Lachlan, and if the farmers and graziers had easy access to a railway they would cultivate more, and go in for fruit-growing and so forth. At present there is no market for anything, therefore it is of no use for them to spend money on irrigation plants.
5172. Do you grow any wheat? I have done so until last year.
5173. For sale? Yes.
5174. Where do you sell it? At Forbes, as a rule.
5175. Have you any difficulty in finding a market? No; I do not grow very much.
5176. The other farmers swear that they cannot sell what they grow? Some of them have to take their wheat away from here, I believe.
5177. *Mr. Dowel.*] What price do you obtain for your timber at the mill? 11s. and 12s., cash and credit.

Mr. Daniel John Robertson, gardener, sworn and examined:—

- Mr. D. J. Robertson. 5178. *Mr. Cox.*] What is your occupation? I am a gardener.
- 5 Mar., 1890. 5179. What area have you under cultivation? I have altogether 20 acres; some of it I cultivate for wheat.
5180. What have you under orchard and vines? About 8 acres.
5181. What are your chief fruits? Peaches, apples, pears, apricots, plums, and grapes. I have 2 acres of grape vines.
5182. How old is your orchard? It commenced with about twenty trees, and I have added every year. I commenced about twelve years back.
5183. Are you still increasing it? Yes.
5184. Therefore you find it profitable? I hope it will be; it has not paid me very much yet.
5185. Then why do you keep adding to it? I am in hopes that it will be profitable some day. I am starting to dry fruit, and I hope to make it pay in that way.
5186. What process of drying do you adopt? I have an American dryer. I have tried samples of all sorts of fruit this year, but I have not done them very well, because I am new at it.
5187. Have you a local demand for your fruit? I go to Cowra, Molong, Orange, and Cudal.
5188. You can grow fruit which cannot be grown in the colder climates? Yes; our grapes are ripe before theirs.
5189. Do you think a railway will be of any advantage to you? Decidedly.
5190. Where would you send your fruit? To Orange, *via* Borenore, to begin with—Cowra, on the other line, would suit me as well—it is a colder district. I am a month ahead of them in peaches, apricots, and grapes.

5191. How does your climate compare with that of Parkes? This is a better climate for fruit than the Parkes climate. Sometimes they have better grapes—not always. I believe, as a rule, we can outdo them in fruit of any kind—peaches, and other stone fruit, they cannot grow as we can.

Mr. D. J.  
Robertson.

5192. Cannot they grow peaches at Forbes as well as you can? I do not think you have seen peaches better than those which I am now exhibiting. I had some ripe on the 1st December, I am sending fruit to Forbes now.

5 Mar. 1890.

5193. Do you irrigate? Yes.

5194. Have you abundance of water? No, I have not enough.

5195. So that, in a dry season, you would be unable to irrigate? Last year I had as good a crop as any—at least it paid me best, because I had a better price. I got 6s., 8s., and 10s. a case, taking the fruit to Cowra and Canowindra.

5196. Then I gather that, unless you have a railway on which to get rid of your produce, you will have to dry it? Yes. I may mention that my grapes would not have been affected by the rain this year as they have been, if I had had any means of getting them away. I am trying raisins.

5197. If there were a railway you think the fruit-growing industry would be a profitable one, and that a large number of persons would embark in it? Hundreds of acres would be planted with trees.

Mr. William Niven, bee-keeper, sworn and examined :—

5198. *Mr. Lee.*] You reside in Eugowra? Yes, I have been here about thirteen years.

Mr. W. Niven.

5199. What have you been doing all that time? Part of the time I was hawking. I used to travel from Orange through the back country; in later years I have undertaken well-sinking contracts. Latterly, I have turned my attention to an apiary.

5 Mar. 1890.

5200. As a commercial experiment or as a hobby? With a view to make a profit.

5201. How does it pay you? At first I did not succeed very well, I worked on the old system, with boxes, but latterly, I have adopted the more modern system, and now I am succeeding very well.

5202. What bee do you cultivate? The black bee.

5203. Is that the English bee? Yes, but latterly I have got Italian queens. I am going to Italianise all my bees.

5204. How many hives have you? Seventy-three.

5205. What quantity do they yield in the course of the year? In an ordinary season, with frames, I estimate that they yield one cwt. per hive. It depends a great deal on the bee-keeper, and the number of bees in a hive. One man might work with 10,000 in a hive, and another man with 30,000.

5206. Have you had much experience in the management of bees? I have had to do with bees all my life, but it is only for the last four years that I have commenced studying books on the subject.

5207. Do you cultivate food for them? I grow honeysuckle in the winter, but I depend mostly on the pasturage and the bush.

5208. In what form do you send your honey to market? I have been sending extracted honey.

5209. Do you find a demand for it? I can always sell it, now that it is known.

5210. Where is your market for it? Lately, I have sold a good deal of it in Forbes; but I have sent it to Bathurst, Sydney, and Cowra.

5211. By dray? No, I have taken it myself.

5212. Do you find it a profitable speculation? Yes, I am making my living at it now, and I intend to continue it.

5213. Are you a married man? I have a family, but my wife is dead.

5214. You can support your family by the industry? Yes.

5215. What advantage would a railway be to an industry of this kind? It would be a great advantage to me. Often, when honey is worth 6d. and 8d. a lb. in Sydney, I could send it there.

5216. However successful your industry may be, the produce you are likely to send to the railway would amount to a very small freight? I am making only a commencement. I have seventy-three hives now, but I might bring the number up to 500.

5217. Your evidence proves what can be done in the way of raising bees, and you have shown that, with a better outlet, the industry would be still more profitable? Yes.

5218. Is there room here for other bee farms? Plenty.

5219. Do the bees suffer much in the dry weather? It affects them a good deal. A bee-keeper has to see that he does not take too much honey; but he can feed them, and carry them through the drought, if necessary.

5220. But that is the difficulty? Yes.

5221. Can you give us any other evidence concerning the railway? I have heard witnesses speak about the flooded state of the country on the frontages to the Lachlan. I have travelled some years from Orange, down the Lachlan, to Forbes and Parkes, and out as far as Cobar and Hillston. I have seen the country in flood time.

5222. What is your opinion? I consider that even if a flood rose and spread over the banks, it would not interfere with the railway, because the permanent way is raised. I have travelled from Lake Cudgellico to Forbes, in flood time—the water spread out for miles, but it was very shallow—perhaps only 10 inches deep. You could easily travel along the road, if you knew where it was. The current is so weak that it would not wash anything away. I have found more difficulty, in a wet season, in travelling in the back parts, on the red soil, than I have in the flooded country in time of flood.

5223. For what distance does the flooded country extend? I have known 8 or 9 miles of flooded country along the banks.

5224. How far from the river? Sometimes a  $\frac{1}{2}$  and sometimes a  $\frac{1}{4}$  mile. Traffic could go between here and Forbes in flood time, by keeping a little round.

5225. Do you know the flooded country, between the Southern Cross and Forbes? Yes; there is a low place where the water breaks over, and runs round by Forbes. By keeping where the railway goes you avoid it.

5226. *Mr. Dowel.*] The floods are sometimes an advantage to the district? Yes; I have never heard of them washing away fences or stock.

5227. What price do you obtain for a bottle of honey of the description you are now exhibiting? I sell it at 9s. a dozen, wholesale. I have had offers from Sydney. Not long ago, they said they would take a ton, if I had it to send.

Mr.

Mr. Lawrence Kirby, storekeeper, sworn and examined :—

- Mr. L. Kirby. 5228. *Chairman.*] What is your occupation? I am a general storekeeper.  
 5229. Where do you reside? At Eugowra.  
 5 Mar., 1890. 5230. How long have you been here? Fourteen years.  
 5231. Have you been keeping a store all that time? Yes.  
 5232. Do you find that the place is prosperous, and that your business improves? Yes, very much.  
 5233. Is it better now than it was some time ago? It is twenty times better than it was when I came here.  
 5234. Has it improved during the last four or five years? It is steadily improving.  
 5235. Can you do better since you have discontinued the traffic to Parkes through this road. There is more doing in the way of settlement.  
 5236. Does not the principal support of the stores arise from the traffic on the road through here? No. Our principal support is from settlement. Of course, we get a certain amount of support from the traffic.  
 5237. Do you sell corn and chaff? Yes.  
 5238. Where do you get it from? I get it from the local farmers, within a radius of 6 or 8 miles.  
 5239. It is all grown here? Yes.  
 5240. What is the average price of chaff per cwt.? Last year I bought at from £5 10s. to £7 10s.  
 5241. That was an exceptionally dry year? Yes.  
 5242. What did you give for it this year? I got it delivered here at from £3 to £3 5s.  
 5243. I suppose if you had a railway it would not pay to buy chaff here and send it to Sydney? You can buy it cheaper at the farms here.  
 5244. Can it be bought cheaper than at the rate at which you have been buying it? Yes; I buy it delivered.  
 5245. Do you buy much corn? Yes, a good deal.  
 5246. How much chaff do you buy in the year? Last season I bought 140 tons.  
 5247. Was it all sold here? I sent about 14 tons to the other side of Condobolin. I had also orders from Mount Hope. I did not supply any though.  
 5248. Would the construction of a railway line do you much good? A great deal.  
 5249. If a line were constructed, would there be much merchandize traffic from here? Yes; there is a lot of produce grown in the district which would be sent either to the back country, or down to Bathurst, or Sydney. There is a large quantity of produce in the district this year and no market for it.  
 5250. Are the holdings here of a large size, as a rule? Yes; a good size, as a rule. They run from 150 to 1,000 acres, and over—some of them are very large.  
 5251. Which do you reckon are most useful to the district—the large holders or the small holders? The small holders, I believe.  
 5252. I suppose they get more out of the ground than men with large holdings? Yes, they work the land more; they raise more produce.  
 5253. Do you think the railway we are considering would be of any benefit to this place? No; we should derive no benefit at all from it.  
 5254. Which railway to this district, do you think, will serve the interests of the greatest number of people? Either the railway from Borenore, or that from Cowra. It does not matter, so far as Eugowra is concerned, which way it comes.  
 5255. But I mean in the interests of the general public? I believe the Borenore line, simply because it has the greater population. I may mention that I have sent away a lot of local produce, such as eggs and butter. I have sent butter to Sydney, and also bacon.  
 5256. Where is the butter made? Nearly all of the settlers make butter.  
 5257. All the year round? Except for a month or two in the hot weather.  
 5258. What quantities have you sent to Sydney, monthly? I do not send it regularly; I find it does not pay—the expense is too great. I send 1 cwt. at a time; eggs I send pretty often.  
 5259. How much butter do you think is made in this district in a month? I suppose about 1 ton.  
 5260. What is the return of eggs a month? I should think about 400 dozen.  
 5261. Is there any other produce you send from here? Hides, sheepskins, beeswax, kangaroo skins, opossum skins—in fact all sorts of skins.  
 5262. What do you think would be the total amount of tonnage you would send away, including everything? It is very hard to say. Perhaps about 15 tons in the twelve months.  
 5263. Have you sent any wheat to Sydney? Two years ago I sent 177 bags; I sent to Orange, in 1887, 317 bags.  
 5264. Did you send any in January, 1889. No, it was scarce that year. I sent 200 bags to Forbes and Cudal, and got it ground for local consumption.  
 5265. *Mr. Dowel.*] Where did you reside, previous to coming to Eugowra? At Bathurst.  
 5266. What occupation did you follow there? I served my time at storekeeping.  
 5267. Have you any knowledge of this district, outside of the town? A fair knowledge.  
 5268. Do you know anything of the mineral resources of this district; is there any gold in the immediate neighbourhood of Eugowra? The prospectors obtained some, 2 or 3 miles from here, I think on the Canowindra-road.  
 5269. No gold has been brought to your store for sale? No.  
 5270. Are there any stock transactions taking place in this district? A large number of travelling stock pass through. I have seen as many as 10,000 sheep at a time. It is quite a common thing to see that number passing through here.  
 5271. Where did they come from? The back country.  
 5272. Where are they making for, as a rule? For Orange, Bathurst, and Blayney, and other routes.  
 5273. If a railway were made to Eugowra, would any of that stock be conveyed upon it? I believe the greater part of the stock would be conveyed by rail.  
 5274. Would a large number of stock be brought here to be trucked? A large number, I feel sure.  
 5275. Have you any large travelling stock reserves in this district? Yes; too large, in fact.  
 5276. To what do you attribute the improvement in business generally, at Eugowra? To settlement on the land.  
 5277. You think the settlers are in a fairly good position? Yes.  
 5278. Are they in the habit of disposing of their holdings to the squatter? I have not known one to do so for years—they are all *bonâ fide* men.

Mr.

Mr. Donald Chesher, sworn, and further examined:—

5279. *Chairman.*] I believe you wish to give some additional evidence? Yes. With regard to the price of land. I am an auctioneer and commission agent. I have several farms for sale now in this district. There was a forced sale down here. A man mortgaged the place and died, and it was sold off. The place was about half a mile over the creek, it was sold at £3 10s. 6d. an acre. It was a selection, and was improved up to the requirements of the law—that is, the improvements amount to 10s. an acre. A bush fire had come just before, and had cleared off the fence.

5280. Was much of the land cleared? Not a great deal.

5281. How many acres were there? 168½ acres.

5282. Is that a fair sample of the land about here? Yes. Then Mr. Herbert, who gave evidence to-day, bought a freehold from Mr. Fanning, and gave £3 10s. an acre. I know that he was offered by Mr. Garney, auctioneer, of Forbes, £5. The land is on the river.

5283. Who was the purchaser of the first selection? Mr. Jenkins.

5284. You have heard the information which has been given us as to the large quantity of travelling stock coming through this district. Can you give us any information, as an auctioneer, concerning that stock? There are frequent stock transactions in the district. About a fortnight ago Mr. Dalton, of Orange, came down here, and bought either 8,000 or 10,000 head of sheep. Another gentleman bought 2,000 very recently. All M'Phillamy's sheep travel through here and truck at Borenore.

5285. Would the stock to which you refer represent a great many thousands? They come in mobs of from 8,000 to 10,000—that is, stores. I despatched, myself, the week before last, to Borenore, 2,160.

5286. If there were a railway station at Eugowra, would there be any considerable number of fats trucked here? Yes.

5287. And at any time when the terminus was taken beyond this place;—do you think that fat stock would still be trucked here for market? Yes; the local stock. The owners of the run on which we now are have over 3,000 head of cattle, and they sent some to Melbourne last week. They trucked them at Cowra.

5288. But are there any fat sheep travelling through the district which are likely to go to market from here? A good many go up the river.

5289. Would any wool be brought here for despatch? Only the local wool.

5290. But I suppose the sheep to which you have been referring would not be trucked here at all, after the railway had passed Eugowra? Only the locally grown sheep—those within 15 or 20 miles. On the average, those 10 miles this side of Forbes would come here. Those over the river would also come here.

THURSDAY, 6 MARCH, 1890.

[The Sectional Committee met at Glazier's Hotel, Murga, at 10.30 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Molong to Parkes and Forbes.

Mr. James Glazier, senior, publican, sworn and examined:—

5291. *Chairman.*] What is your occupation? I am keeping this licensed house at the present time.

5292. How long have you resided here? Ten years, last September.

5293. I suppose this is a pastoral town? Yes.

5294. What is its population? I can give you statistics, showing the population within 8 miles of Murga.

5295. That would be an 8 mile radius in every direction? Yes.

5296. But Mr. Chesher gave us statistics collected within 8 miles of Eugowra—if you give us statistics collected within 8 miles of Murga the two would overlap? Yes.

5297. Who collected these statistics? My son. They represent Gilwarry Rocks, Waterhole Creek, Redbank, and Reedy Creek, within 8 miles of Murga. At these places there are 48 adults, 150 children; the area of holdings is 5,000 acres; the number of acres cleared is 1,150—the number under hay 100, under wheat 900, under maize 150. There are 1,000 sheep, 150 horses, 200 head of cattle, and 20 pigs. The grand total, inclusive of the places I have mentioned, would be 175 adults, 235 children; the area of holdings, 85,114 acres; the acres cleared, 3,976; under hay, 165 acres; under wheat, 1,733 acres; under maize, 340 acres. The number of sheep would be 19,417, horses 582, cattle 775, and pigs 174.

5298. Have you seen any progress in this district during the last two or three years? Yes; a great many more people have been selecting.

5299. Is there any land available here for selection now? Not that I know of.

5300. Is there not a lot of Crown land here which would be selected, if it were not too barren and mountainous for that purpose? Yes.

5301. Are there any leasehold areas which will fall in this year, and which will be then open for selection? I know of none, unless at Goimbla and Eugowra; there may be some land there.

5302. Where has the population settled which has come here within the last few years? Some of them down on this side of the creek, and some on the opposite side—some are upon Reedy Creek.

5303. How far is Murga from the proposed line of railway? It is about 17 miles from here across to the Flagstone Creek.

5304. Would the construction of that line be of much benefit to Murga? None at all.

5305. You know that another line has been suggested from Borenore to Forbes—would that line be of material benefit to this place? It would be of great benefit.

5306. Would the suggested line from Cowra be of any benefit to you? None at all.

5307. How far would Murga be from that line? Well, I suppose it is 14 miles from here to Eugowra.

5308. Would you be no nearer to any part of that line? No; it would be 20 miles from here to go up to Long's Corner and across to Canowindra.

Mr.  
D. Chesher.  
5 Mar., 1890.

Mr.  
J. Glazier, sen.  
6 Mar., 1890.

- Mr. J. Glazier, sen.  
6 Mar., 1890.
5309. Is there much land under cultivation in a northerly direction from here, towards the proposed line from Molong to Parkes and Forbes? A great deal, especially on Reedy Creek. There is as fine land for wheat-growing there as you would find in any part of the world.
5310. Is Mandagery Creek the main creek running west from here? Yes.
5311. Going direct south towards Canowindra, are there many farms? There are a great many going from Long's Corner into Canowindra.
5312. Are there any farms between here and Mogong? Yes; but there is a great reserve that way, adjoining the farms.
5313. You mean at Toogong? Between Toogong and Mogong.
5314. But I am talking of the country to the south of this place? It is mountainous right over to Nyrang Creek.
5315. Do you think that if the proposed railway were constructed to Forbes, this district would contribute much traffic towards the payment of expenses? I believe there would be sufficient loading up and down the line to pay expenses. I believe a good deal of additional agriculture would be carried on.
5316. What is your idea of the tonnage that would leave this place? A good deal of wheat and oats, and corn would be grown all down the Mandagery Creek, and on Reedy Creek.
5317. Could you give us an idea of the average return of wheat per acre in this district? From what I can see, the average for the last ten years would be about 20 bushels to the acre.
5318. Have you had any failures in crop? In times of drought our farmers have had very fair crops.
5319. But 20 bushels to the acre is a long way above an average fair crop? Yes; but there have been crops here which have gone as high as 40 bushels. I think I saw on Reedy Creek, this year, wheat which would average 40 bushels.
5320. Is Mr. Stevenson the largest farmer in the district? Yes, I think so.
5321. Mr. Lee.] Do you know the country from Molong to Parkes? No, I have never been along that road.
5322. You do not know the railway track, then? Part of it, from the head of Reedy Creek.
5323. Is that anywhere near Manildra? No; right away. The place I speak of is between Parkes and Forbes.
5324. Do you know the Dungeon Range? Yes; I have been there several times.
5325. What distance is it from Murga to Manildra? About 23 miles—that is the way you would have to go by road; in a straight line it is about 20 miles.
5326. Chairman.] Is there any mining going on in this district? At Boney's Rocks.
5327. Where is that? 6 miles from here.
5328. In which direction? Out east, between Toogong and Canowindra.
5329. What are they mining for? Gold.
5330. Is there any population there—are they doing any good? A good few people are there now.
5331. Are they getting gold? They are getting good stone, at least, so a man told me last night.
5332. Do they crush there? No; Canowindra.
5333. How far is it from where they are mining to Canowindra? About 15 miles.
5334. It is all reefing, I suppose? Yes.
5335. Is there any other mining here besides that? They were mining at Surface Hill, 3 miles from here—that would be alluvial.
5336. Were they sluicing it? Yes. My son got gold, but it was not payable, it was only prospecting.
5337. Have you any silver or any other mineral in the district? Yes; we have some up in the mountains.
5338. How far from here? About 3 miles.
5339. What have they done there in the shape of prospecting? They have put down a shaft 50 feet. I obtained these assays from Mr. Dixon, of Sydney—1 oz. 13 dwt. 16 grs. gold, and 6 oz. 7 dwt. 9 grs. silver to the ton. Another assay, by Mr. Harwood, gave, lead, 19·575 per cent., silver, 33 oz. 19 dwt. 11 gr. per ton, with a trace of gold.
5340. This is from a large lode formation? Yes.

Mr. Henry Green, farmer and grazier, sworn and examined:—

- Mr. H. Green.  
6 Mar., 1890.
5341. Mr. Lee.] What is your occupation? I am a farmer and grazier.
5342. What is the size of your holding? 290 acres.
5343. Are you an original selector? Yes.
5344. Is the whole of your holding conditionally purchased? It is all purchased.
5345. How long have you been here? Twelve years.
5346. What do you grow on your land? Wheat, hay, corn, and potatoes.
5347. Did you grow any hay this last year? None this last year.
5348. Did you grow any wheat? About 56 acres, I think.
5349. How many bushels to the acre? I have not threshed yet.
5350. Have you cultivated wheat every year? Mostly wheat—there is no consumption for hay.
5351. What has been the average crop? I suppose I have had from 15 to 20 bushels to the acre.
5352. What is the average return of wheat in this district, per acre? I suppose, about 15 bushels to the acre—that is a fair average, taking one season with another.
5353. Where do you find a market for your wheat? Sometimes at Forbes, sometimes at Orange—wherever we can obtain the best price.
5354. Do you ever ship any to Sydney? I have done so.
5355. From what part of the railway have you shipped it? From Orange.
5356. Was the transaction a satisfactory one? No, it was not.
5357. After paying expenses, it left you no profit? Exactly; the cartage was too heavy from here.
5358. What price ought you to get for your wheat on the spot, in order to make it pay? I think that 3s. on the spot ought to pay, taking one year with another.
5359. On an average, 3s. on the spot would pay? Yes.
5360. You know that railways have been surveyed from Molong to Forbes, and from Borenore to Forbes? Yes.
5361. Which of these surveyed lines would suit this district best? The Borenore line, by far the best.

5362. Of course you hold strong opinions upon that question, because you happen to live there? I am well acquainted with both lines. I have been a carrier for thirty years. Mr. H. Green.  
6 Mar., 1890.
5363. You have travelled on both routes? Yes.
5364. Why do you think the Borenore route would be the best? The land on that route is by far the best for cultivation. If more of the land were thrown open to selection there would be a great deal of cultivation; but a lot of the land is reserved. For this last five years there have been no selections.
5365. What reserve is there? There is a mile on each side of the route, for some distance.
5366. If you went a mile on each side you would go up into the hills? Not at all places. In some places, perhaps, but not at others.
5367. Does not the surveyed line from Borenore run through a large area of purchased land? Not a great deal.
5368. How long is it since you were over the Parkes and Molong route? About twelve months.
5369. Do you know Manildra and Garra? Yes.
5370. Do you know that there are many thousands of acres settled upon in that direction? I know there is a good deal of settlement about Garra.
5371. Would this part of the district compare favourably with that, for settlement? I think so.
5372. Are there not ten settlers there for every one here? When you get into our farming districts, about Cudal and Canowindra, you will find any number of farmers.
5373. But in the places I have mentioned there would be about ten settlers for every one in this immediate locality? Yes.
5374. What other reasons are there in favour of the line coming this way? Well, the line going to Molong would be of no use to us at all.
5375. But, taking a larger view of the question, and supposing a line to be made to serve the bulk of the people in these districts, which route do you think should be adopted? Well, the Garra people are close to a line at present, at Molong—they are only about 7 miles from Molong.
5376. What about Manildra? There is not much farming carried on there.
5377. What about the country between that and Bumberry? There is very little farming there—it is for the most part barren land.
5378. But it is all taken up? That may be; it is, nevertheless, very poor land.
5379. The land you have here is chiefly alluvial land, situated on the banks of the various creeks? Yes.
5380. And when you leave the flats you get at once into barren ranges? Just hereabouts.
5381. What particular advantages do you expect, personally, from the construction of the line? I hope to get my grain to a good market.
5382. And I suppose there will be an increase in the value of your land? Yes.
5383. Have you been in the habit of carrying your wheat in drays from here to Orange? Yes.
5384. Have you had any difficulty in selling it any time? About three years ago, I had a great difficulty in selling it, and in getting it to market. I have sent wheat from here to Sydney, and have sold it for 2s. 5d. per bushel.
5385. One of your chief reasons for advocating this line is, that it would be of great advantage to you, personally? Yes.
5386. *Mr. Cox.*] Which has the greater population—the district to the north, or the district to the south of the proposed line? The district to the north, I think.
5387. Right away between this and Manildra? Yes.
5388. What is the amount of population south? There is none at all this way.
5389. But towards Toogong? I could not tell you. There is a large population on the Nyrang Creek. After passing Long's Corner you get into open country.
5390. Which is the better soil for cultivation—that towards Toogong and Nyrang Creek, or that towards Manildra? The soil towards Toogong cannot be beaten, there is nothing but mountains from here to Manildra.
5391. Are you aware whether the proposed railway will run through any large portion of the Toogong estate? I does run through a portion of it, but I cannot say whether it is large or small.

Mr. Edwin Glazier, miner, sworn and examined:—

5392. *Mr. Dowd.*] Where do you reside? At Murga; I have been here, off and on, for about ten years.
5393. Where were you previously? At Canowindra.
5394. What is your occupation? I follow mining, principally.
5395. For how long have you been doing so? Some six or seven years now, off and on.
5396. Can you give the Committee any information about the minerals in this district? I am working now on the Nangar Mountains, about 3½ miles from Murga. Before that, I was working at Surface Hill, a short distance from here.
5397. In what sort of mine are you now working? We sunk a shaft there 50 feet first, and we had only one assay from that depth—that my father has given you. The lode is 200 feet wide between the two walls. I know where the foot-wall is, and where the top-wall is, and I have sunk in both.
5398. Have you any quartz here? Yes.
5399. All the specimens you exhibit are contained within this lode? Yes.
5400. These are exhibits of the various strata through which you passed in sinking the shaft 50 feet? Yes; we obtained the same description of stone in the shaft—some of it has been assayed by Mr. Dixon, and some by Mr. Harwood.
5401. From your knowledge of mining, do you think there is likely to be any large discovery of gold or other mineral in this district? I do.
5402. Have you heard that opinion expressed by other diggers? I have.
5403. What number of diggers are there in the district? There have been a great many here at different times. There are only four now engaged where I am working. There are a number working at Boney's Rocks, about 5 miles from here.

Mr. E.  
Glazier.  
6 Mar., 1890.

Mr. Charles Fuller, farmer and grazier, sworn and examined:—

5404. *Mr. Cox.*] What is your occupation? I am a farmer and grazier.
5405. What area of land have you? 1,005 acres of selection, and I have a conditional lease. 5406. Mr. C. Fuller.  
6 Mar., 1890.

- Mr. C. Fuller. 5406. What is the total area of your holding? 3,773 acres.  
 5407. What quantity of stock have you? About 2,000 sheep.  
 6 Mar., 1890. 5408. Some statistics have been handed to us purporting to give the names of the various holders of land within a circuit of 8 miles of Murga. Your name is down, and the area of land is correct; but you are not placed here as a sheep-holder at all? I have a joint interest in the land—perhaps that is the reason.  
 5409. What horses and cattle have you? About twenty head of horses, and fifty head of cattle.  
 5410. What area of land do you cultivate? About 60 acres. I grow wheat, maize, hay, pumpkins, and, sometimes, potatoes. I have no potatoes in this year.  
 5411. What crops had you in this year? I had 22 acres of wheat.  
 5412. And what return did you get? About 400 bushels; 40 acres of hay gave me 20 tons; and I am now growing about 25 acres of corn.  
 5413. What do you expect from that? I may get from 12 to 15 bushels.  
 5414. How does it come to be so low? It has been neglected—it got very bad with weeds.  
 5415. How far is your farm from Murga? Two miles.  
 5416. Upon the Mandagery Creek? No; straight in a northerly direction from here.  
 5417. Why do you cultivate so small an area out of so large a holding of land? Because there is no outlet for the produce.  
 5418. Where is your market for wheat? Cudal and Borenore—sometimes Forbes. I occasionally sell a little at Eugowra.  
 5419. This year you are getting a very low price, on account of the heavy crop throughout the district? Yes.  
 5420. What does it cost you to put in and take off a crop of wheat? I never calculated it.  
 5421. What has been your average crop for the past ten years? From 12 to 15 bushels.  
 5422. Did you get anything in 1888, in the great drought? Not much. I got 18 bags of wheat off 22 acres, but the cattle got into some of it and destroyed it.  
 5423. Have you any other occupation than that of keeping sheep and cultivating this small area of land? No.  
 5424. Have you a threshing machine? No, I have a stripper.  
 5425. Do you use that for your neighbours' crops as well as for your own? No; not very extensively. I do, sometimes, two or three farms in the year, besides my own.  
 5426. Is that the general method of getting the harvest in? Yes, generally, but some approve of cutting and threshing with machinery.  
 5427. Is it not a fact there has been a large quantity of wheat lost this year through the strippers? Of course, if the wheat is lying down it cannot be gathered by the stripper.  
 5428. Then it was not the fault of the stripper that there was so big a loss this year? No.  
 5429. Do you know the line of railway which has been surveyed *via* Borenore and Cudal? Yes.  
 5430. Do you think that line would better serve the greater number of farmers in this part of the country than the line *via* Molong and Parkes? I do.  
 5431. Why? Because there is a larger population on this line than on the other.  
 5432. Leaving out of the question the people who live between the two lines, would the greater number to be served be to the south of this line, or to the north of the other line? To the south of this line, decidedly.  
 5433. Is it a fact that there are several large estates on this line on which there is no settlement? There are two fairly large estates, but they are not extraordinarily large. Bowman's estate at Toogong is only 15,000 acres. I do not know what the area of Mr. Lance Smith's estate is.  
 5434. Do you think that if a railway were constructed, these proprietors would cut up their land for cultivation? They might do so.  
 5435. Is the land particularly suited to cultivation? Yes; it is first-class soil, the greater portion of it.  
 5436. Would the proposed railway from Borenore run through a large portion of these two estates? Not a large portion; it runs through some reserves, though.  
 5437. It has also been suggested that a line should be constructed from Cowra—would that line suit you? I do not think so.  
 5438. The line you advocate is the Borenore line? Yes, exclusively.  
 5439. Is there much reserved land about here which could be rendered available for conditional purchases? There is a good deal—there is a travelling stock reserve from Long's Corner pretty well to Forbes.  
 5440. Do you know the leasehold areas on Goimbla and Eugowra? Yes.  
 5441. Is there much land there now locked up, which will be thrown open for selection in July next? Yes; I think so. I may mention that the principal part of the travelling stock reserve is first class cultivation land.  
 5442. You think the travelling stock reserve would be thrown open if a railway were constructed? Yes.  
 5443. Is there any timber in the neighbourhood suitable for railway sleepers? Yes.  
 5444. Where is it to be found? There is box timber all along the line, and red gum on the creek; then there is ironbark up the Nangar Valley, and also upon the other side.  
 5445. I suppose there is a good deal of traffic on this road? Not so much as there was before the line was constructed to Nyngan, but there is a fair amount now. No doubt, if a line were constructed to Forbes, more goods would go this way than go now. This line, if it were continued to Condobolin, would take traffic which now goes to the Western line. I also think that if we had railway communication you would see a good deal more farming carried on than is done now.  
 5446. You think there will be plenty of land available? Yes; and not only that, but people who have land would cultivate more largely than they do now. We cannot compete with other places having railway communication, on account of the heavy rates of carriage by team.  
 5447. *Mr. Lee.*] You know the route of the proposed railway from Molong? From Manildra.  
 5448. Do you know much of that part of the country? I know it all, pretty well.  
 5449. Do you know the country to the north of that line? I know it by Cumnock and Oberley.  
 5450. Do you know Kadina? No.  
 5451. How long is it since you were there? I have not been out that way for ten years.  
 5452. Then how can you swear that the population south of this line is greater than the population to the north of the other line? Well I can only swear from what I know of it.\*  
 5453. But how do you come to know about it? Simply from going through the country. 5454.

NOTE (on revision) :—From the knowledge I have of the country, knowing it is principally mountainous, population could not settle on it.

5454. But you have not been there for ten years? I have learned a good deal from other persons who have travelled through it. Mr. C. Fuller.
5455. Then you are swearing from what you have heard from other people? Yes. 6 Mar., 1890.
5456. You cannot speak of the population from your own knowledge? No; not for the last few years.
- 5456½. You are going mostly on what you have heard from other people? Yes, mostly.
5457. The land at Canowindra would be outside the influence of this line? I do not think so.
5458. How far is Conowindra from here? About 18 miles.
5459. Canowindra is as close to Cowra as it would be to this line? That may be.
5460. Consequently it cannot be reckoned as part of the country influenced by this line, as it is within the same distance of an existing line? I understand that there are only two lines in question.

Mr. Isaac Wren, farmer, sworn and examined:—

5461. *Chairman.*] What is your occupation? I am a farmer. Mr. I. Wren.
5462. Where do you reside? At Cranbury. 6 Mar., 1890.
5463. How far is that from here? About 10 miles easterly from here, to the right of Toogong.
5464. Is it a township? No; there is a farming population.
5465. Are there many farms there? A great many.
5466. What is the area of your holding? 474 acres.
5467. How much have you cleared and fit for cultivation? I had 127 acres under crop this year.
5468. Have you all the land you have cleared under crop? Yes.
5469. What have you been growing? Wheat, hay, and corn. I have 500 bags of wheat, or 2,000 bushels off 87 acres.
5470. That is over 23 bushels to the acre? Yes.
5471. What hay did you get? I had about 45 tons from about 33 acres.
5472. What corn have you? I have about 8 acres of corn.
5473. Where is your market? At present we are compelled to sell at Cudal, on account of the haulage. Cudal is the nearest town of any importance to us.
5474. What would it cost you a bushel to convey your wheat to Borenore? 6d. a bushel. Several teamsters this year would not take it there under 6d. We have paid 6d. a bushel to Orange.
5475. If the line we are investigating were constructed, would it be of any advantage to you? No.
5476. Which line would be of most advantage to you? A line from Borenore, through Cudal, would be of most advantage to us.
5477. Would either the line from Molong, or the line from Cowra, be of advantage to you? A line from Cowra to Forbes would be of more advantage to us than the Molong line. The Cowra line would go through Canowindra, and we are 14 miles from that place.
5478. Do you know Mr. Wren, a solicitor of Manildra? He is my brother magistrate.
5479. How far is your selection from your brother's? From 13 to 14 miles; my brother's farm is at Gregra.
5480. Would the Borenore line serve your brother as well as yourself? It would; it would not be more than 5 miles distant.
5481. At what distance on either side of a railway line do you estimate that farmers will be served? I should say about 10 miles.
5482. You think that a railway would serve farmers, fairly and honestly, 10 miles on each side of it? Yes. If we could not get it closer we would be satisfied with that.
5483. Has there been an increase in the area of land put under cultivation in the district in the last two or three years? The increase during the last two or three years has been very slight, if there has been any at all. I cannot say, definitely, that there has been any increase in cultivation.
5484. How do you account for that? Well, in the first instance, bad seasons have interfered with agriculture very much.
5485. Has the price of wheat had anything to do with it? The price of wheat has been very low. Then there is the cost of carriage to market.
5486. If a railway were constructed, what would it cost per bushel to send your wheat to Sydney, touching at the nearest railway point to your district? I could not say. I should imagine that we might get our wheat down for 6d., 7d., or perhaps 8d. per bushel.
5487. Would that pay you then? Much better than at the present time. Now, it costs us about 1s. 1d.
5488. You are aware that the Railway Commissioners have made special rates for the conveyance of farm produce. From the point at which you would probably touch a railway, the charge would be about 4d. a bushel, delivered in Sydney. That being the case;—do you think the farmers would be induced to put a larger area under crop? I think so.
5489. What does your wheat cost per bushel to grow;—what could you afford to sell it for on the ground, allowing yourself a reasonable profit? I have never made that calculation.
5490. What is the average yield of your district? It is hard to say what it has been during the last three or four years. Previously, for three years following, it averaged about 23 bushels to the acre. Since that time we have had uncertain seasons, and droughts have set in. At Barrigan, in very indifferent seasons, it has averaged 11½ bushels per acre.
5491. Is there any other information you would like to give the Committee? I should like to say a few words as to the nature of the country between Cargo and Canowindra. The whole of that land is well adapted for cultivation; it is occupied now principally by small settlers and farmers. Starting from Long's Corner, and going south, it is almost level country—that is, going towards Canowindra. From Canowindra to Cargo, and from Cargo to Bowan Park, on the east of Cudal, the whole of the country is fit for cultivation.
5492. Is much of that country held in large areas by squatters? Very little of it. Mr. Bowman, at Toogong, is the largest holder I know of. There is a paddock belonging to Davy's Plains Station, but it is not a very large area. There is a reserve of 9,000 acres at Long's Corner. A portion of it has lately been revoked, and it has been thrown open to settlement. I have made a calculation as to the number of farms in the district. There are nine farms almost adjoining me, of from 290 to 500 acres; nine have grown upwards of 3,160 bags of wheat this season. I know of one place where a threshing machine has threshed, this season, 1,800 bags of wheat off three farms.

Mr.

Mr. Thomas Barton, farmer, sworn, and examined:—

- Mr. T. Barton.  
6 Mar., 1890.
5493. *Mr. Lee.*] What is your occupation? I am a farmer.  
5494. Holding how many acres? Four hundred and ten.  
5495. How much do you cultivate? I have not cultivated much lately, because there has been no market.  
5496. What do you chiefly cultivate? Wheat and hay.  
5497. How far do you reside from Murga? Two miles.  
5498. What are you doing with your land, chiefly? Grazing.  
5499. Why are you in attendance to give evidence to-day? Because I think the Borenore line is the best line.  
5500. You have been requested to attend? Yes.  
5501. Who asked you? Mr. Glazier, a good while ago.  
5502. When did you know that the Committee would be here? I saw it stated in the Orange newspaper.  
5503. Could you give us any information as to why the railway should not be made between Molong and Parkes, or as to why it should be made anywhere else? I do not know the road from Molong to Parkes, but I do know the road to Borenore.  
5504. The Borenore line would suit you best? Yes.  
5505. You cannot say that the line from Molong to Parkes and Forbes would not benefit a large number of people? It will not get the traffic from the right hand side of this road, as long as there is a road to Borenore.  
5506. How far is Borenore? Thirty-eight miles.  
5507. Suppose a deviation brought the Molong line within 10 miles of this place—would the people use it then? I do not think they would pay that 10 miles of cartage, if they had a good road to Borenore.  
5508. Would you cart your produce 40 miles, to Borenore, if you had a railway station 10 miles distant? That depends upon the produce.  
5509. Would you send your wheat to the railway station 10 miles distant? No; I would sooner cart it 40 miles, and save the railway carriage.  
5510. If you would cart your wheat 40 miles, I suppose you can cart it now, so that really you do not want a railway? I do not grow wheat, because there is no market.  
5511. Have you any other information to give us as to the capabilities of the country, and so forth? I think this place will grow anything in reason, and for sleepers and fencing there is plenty of good timber.  
5512. That can be said of the country through from Parkes to Manildra, Toogong and Cudal, and thence to Canowindra? It is all good country, with the exception of the mountains just here.  
5513. There is a large population settled over that area? Yes, and they are chiefly farmers, living by cultivation.  
5514. But a railway cannot be taken to every man's door. Which would be the best line to serve the greatest number of persons in this district? If I had no interest in the matter at all, I should still say that the Borenore line is the best line.  
5515. Yet you know nothing about the other line? All this district, and all the residents down below Forbes, will support this line.  
5516. Are you including Canowindra and Cargo? Yes.  
5517. If this line were constructed, do you not know that the Canowindra people would be further away from it than they are from the Murrumburrah line at present? I was not aware of it.  
5518. *Mr. Cox.*] Do you live across the creek? Yes.  
5519. A bridge has lately been constructed over the creek? For the traffic from here to Parkes, backwards and forwards—it is a main road, and stock travel upon it a great deal.  
5520. At whose instance was the bridge built? The people about here petitioned for it.  
5521. It serves all those people lying to the north between here and Manildra? Yes, the people at Reedy Creek.

Mr. Robert Kinnerson, grazier, sworn and examined:—

- Mr. R. Kinnerson.  
6 Mar., 1890.
5522. *Mr. Cox.*] Where do you reside? At Nangar; 7 miles from here towards Eugowra; about half-way between this place and Eugowra.  
5523. What is the area of your holding? Five hundred and fifty-seven acres. I go in for a little cultivation and a little grazing.  
5524. Do you find cultivation profitable? Not exactly here—it is rather too far from market.  
5525. If you had a means of getting your produce to market, would you cultivate more largely than you do now? A lot more.  
5526. Would your neighbours do the same? Yes.  
5527. I suppose they only cultivate now because they have nothing else to give them employment for a part of the year? Exactly.  
5528. Do you know the route from Molong to Parkes and Forbes? Not much. I have travelled it a few times, years ago, when I was carrying. I know it is pretty rough country.  
5529. Are you on the Mandagery Creek? Yes; right on the creek.  
5530. What was the result of your harvesting this year? I got about 400 bags of wheat off about 80 acres. I had some stripped, and some I have in stacks not yet threshed. I could not say what is in the stacks exactly, but I stripped 275 bags. I think there must be something over 100 bags in the stacks.  
5531. What do you do with your wheat? I have sold part of it. I take it to Forbes.  
5532. At what cost? Sixpence per bushel.  
5533. What price do you get there? Three shillings.  
5534. Would 2s. 6d. a bushel pay you? Yes; if we had the facilities to get the produce to market.  
5535. Have you ever had a team on the road? Yes; I was carrying myself, at one time.  
5536. That would be knocked on the head in the event of there being a railway? Yes.  
5537. You believe that a railway from Borenore, *via* Cudal, to Forbes, would suit the larger number of persons in this part of the country? Yes.

Mr. Hugh Pryor, farmer, sworn and examined:—

- Mr. H. Pryor.  
6 Mar., 1890.
5538. *Mr. Dowel.*] Where do you reside? At Reedy Creek, 6 miles from Murga; I am a farmer.  
5539. How long have you resided in this district? Somewhere about thirteen years. Previous to that I was living on the other side of Orange, 3 miles on the other side of Millthorpe. 5540.

5540. What area have you? I hold 320 acres. I till it, and grow a bit of wheat.
5541. Where do you dispose of your grain? Principally at Cudal.
5542. What distance are you from that place? Twenty-one miles.
5543. Do you know anything about the staked line from Molong to Parkes and Forbes? I have never been along the railway route, but I have travelled the road with a team, pretty often. I have gone from Dulladerry, through Meranburn, into Molong.
5544. What would be the nearest point on the Molong railway to your property—I mean the proposed line? I do not think it would be more than 7 miles away.
5545. Then would that railway serve you and the Reedy Creek people at all? I suppose it would have to serve us, if we did not get a line through here.
5546. But if a railway were constructed in that direction, do you think the farmers at Reedy Creek would bring their produce to it? That is the line we should have to take, if we could not get through *via* Cudal.
5547. You know that the Molong line is now surveyed to a point at about 4 miles from Cudal? I was not aware of that.
5548. Knowing that, do you think that the line would be of any service to the farmers at Reedy Creek? As far as I can see, the deviation would not affect the people at Reedy Creek.
5549. Would the construction of any one of these lines be of advantage to the farmers in this district? Yes, it would enable them to get their produce to market at a low rate of carriage. At present we have no encouragement to increase the area under cultivation. But for my family, I would allow the land to stand still.
5550. If you could land your wheat at Sydney, by the Molong line, at 4d. a bushel, would you be encouraged to put in a larger area of wheat? Yes; but there is the cartage to be considered.
5551. But would you not be able to avail yourself of the Sydney market? Yes.
5552. In your opinion, then, it would be an advantage to have a line constructed? Either that line or the Borenore line—the Borenore line is my favourite line. It is all falling ground from Reedy Creek to Murga, with the exception of a little red hill; but it is impossible to go the other way in wet weather.

Mr. Henry Thomas, farmer and grazier, sworn and examined:—

5553. *Chairman.*] What is your occupation? I am a farmer and grazier.
5554. Where do you reside? At Barrigan, but it is usually called Cranbury—my holding adjoins Mr. Wren's.
5555. What evidence can you give this Committee as to the construction of the proposed line from Molong to Parkes and Forbes—would it be of any advantage to you? No; I do not think so.
5556. Do you think that either the Cowra or the Borenore line would be of greater advantage? The Borenore line, I think, because it runs within  $3\frac{1}{2}$  miles of my place. I would not advocate the line for that reason alone, but in my judgment, it passes through the centre of the population.
5557. Do you know the country north of the line from Molong to Parkes? I do not.
5558. Then how do you know that the line from Borenore to Forbes would be the central line? Well, I take it that the Molong line runs to the extreme north, and the Cowra line to the extreme south, whereas the Borenore line would be in the centre.
5559. But how far is it from this proposed line to the main Western line, at Dubbo—is it not three times as far as it is from here to Cowra? I do not know about that, but it is central, so far as the agricultural area is concerned. It is not generally supposed that the Bogan country grows much produce.
5560. Would you be surprised to hear that in the Kadina country 17,000 acres have been taken up in one place, and that the holders are all farmers? There is nothing very surprising about that. I would not say for a moment that it was not the case.
5561. But your statement that the Borenore line is the central line is not exactly borne out by facts? It may be a good thing to make a railway with a view to induce population to settle upon the soil, but if you can put a line where you have population to begin with, I think you are doing still better. The people are already settled upon this line.
5562. But you say you do not know anything about the population to the north of the Molong line? I can only speak from my reading and casual observation. I cannot speak definitely.
5563. Have you read or heard anything about the Parkes country I am now speaking of—I mean the country directly north of Parkes? I know it only from hearsay. I have heard that a few persons have settled down at Kadina, who have come from Victoria or South Australia. I have heard that they are getting on remarkably well, and that they have taken up a considerable area of land.
5564. Do you not think, having regard to the population to the north of the Molong line, that that is more likely to be the central line than the Borenore line? I do not imagine so for a moment, but on the other hand, I cannot say definitely that that would not be the case. I fancy we require a railway here, even if they get one there.
5565. Would a line from Borenore to Forbes be a paying line? I think it would pay right away from the time of its construction.
5566. You think it would pay working expenses and the interest on capital? It would.
5567. Supposing a line were constructed from Borenore to Forbes, to what distance south of that line would the people be served? I suppose it would serve people for 15 miles on either side of it.
5568. That would take in the people nearly down to Canowindra? Yes. I should be satisfied if I got a railway within 15 miles.
5569. How far are you from this proposed line? It would be about  $3\frac{1}{2}$  miles from the outside of my land, but 4 miles from where I reside.
5570. How far are you from Cudal? Eight miles.
5571. Then if a line of railway from Molong to Parkes went within 4 miles of Cudal you would be well served, because you would be within 12 miles of it? If that is the case;—but I am rather doubtful about the distance.
5572. If the Molong and Parkes line came within 12 miles of your place you would be served? I think so, if I could not get a better line. People are generally averse to making more miles of railway than are absolutely necessary—the carriage has to be paid on the additional distance for all time to come, even if the Molong line came within 4 miles of Cudal, there would be 20 miles extra to travel in order to take advantage of it, so far as some people are concerned.

Mr. H. Pryor.  
6 Mar., 1890.

Mr.  
H. Thomas.  
6 Mar., 1890.

- Mr. H. Thomas. 5573. *Mr. Dowel.*] But you would get your grain to Sydney at 4d. a bushel? That would be an advantage.
- 6 Mar., 1890. 5574. Is there any other statement you desire to make? I can quite corroborate Mr. Wren's statement as to the quantity of wheat grown in the district—this year, I am sure I had 30 bushels to the acre.

THURSDAY, 6 MARCH, 1890.

[The Sectional Committee met at the Court House, Cudal, at 5 p.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN.)

The Hon. GEORGE HENRY COX.

WILLIAM SPRENGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Molong to Parkes and Forbes.

Mr. Edward Taylor, senior, grazier, sworn and examined:—

- Mr. E. Taylor, sen. 5575. *Chairman.*] What are you? I am a grazier.
- 6 Mar., 1890. 5576. Where do you reside? At Pretty Plains.
5577. Do you know anything about this district? A good deal.
5578. You have property here? I have about 1,300 acres of land; some freehold land, some selected land, and some town property.
5579. Where is the 1,300 acres situated? Within 1½ miles of the town, between here and Orange.
5580. What do you do? One of my sons is living and farming on it. I keep stock on it.
5581. What stock? Cattle and horses.
5582. How many head of cattle? In winter time over 200 head. In the summer time I have not so many. I shift them down below.
5583. Do you use any cattle for dairying purposes? I do, at home—not here.
5584. Are you breeding horses? Yes.
5585. How many have you at this place? Not many. At the present time only half a dozen.
5586. Your son farms a portion of the land? Yes.
5587. How many acres? About 130.
5588. Had he that area under crop this year? Yes.
5589. Has he been in the habit of farming there for some time? Yes.
5590. What sort of crops does he get? They are good this year, but last year he got none at all.
5591. What would be about the average? From 17 to 20 bushels. This year he had over 30 bushels.
5592. How many acres had he under wheat this year? I think about 80 or 90; the rest was hay.
5593. Does he grow anything else? I think he had about 20 acres of corn.
5594. Is it looking well? No; the rain did not come in time.
5595. Where is his market for wheat? He sold it this year at Millthorpe.
5596. How does he get it there? In waggons, from here to Borenore, and there he puts it on to the train.
5597. What does it cost per bushel to cart it from his farm to Borenore? He draws with his own teams.
5698. But what could he get it drawn for? For about 1s. a bag, or 3d. a bushel.
5599. If a railway line were constructed to this district, would a larger acreage be put under cultivation? I think so.
5600. Would the line we are investigating, from Molong to Parkes and Forbes, be of any benefit to you? No; not a bit.
5601. Would the line from Cowra to Forbes be of any benefit to you? No.
5602. The only line that would do any good to this place, in your judgment, is the line from Borenore to Forbes, *via* Cudal? Yes.
5603. Putting aside all personal feeling, do you think that would be the proper line for the Government to construct in the interests of the greatest number of people? For this district it would be the best line. The people on the other side of Manildra would be within 8 miles of it; they would be still nearer if there were a platform at Little Boree, at Parkes-lane, and they would have a good metalled road right up to it; that would be 8 or 9 miles from here.
5604. Do you know where the proposed line is surveyed, then? Yes; but I do not know whether they would put a platform there.
5605. Do you think that if the people of Manildra are 8 or 9 miles from a railway they ought to consider themselves served by it? I should think so, because every one cannot have a line.
5606. By the same rule, you would be served if you were 8 or 9 miles from a railway? We should, if we could not get any closer.
5607. Would the Molong line, under these circumstances, benefit you? It would not benefit us, because if we had our wheat on the waggons we might as well take it to Borenore as to Manildra.
5608. How far is it from here to Manildra? About 8 miles, straight. Some parts of Manildra are nearer than others. Some of the farmers live within 6 miles of this place.
5609. What class of country is it between here and Manildra;—is it agricultural country all the way through? There are some stony ridges and some good land.
5610. Is it near Manildra? Near Meranburn. The bad land is when you get to Coates' Creek.
5611. How much barren country is there between here and Manildra? I could not say how much, but there is a good deal.
5612. Is it a mile across? No; I do not think it is.
5613. With the exception of that small portion of bad land, is all the land from here to Manildra good agricultural land? Yes; there is the Mandagery Creek, it is very good between here and that point, excepting a few places where you will find rocks and stones.
5614. Now, supposing the Molong line, instead of going through Manildra, was to go through about half-way between here and Manildra, would it benefit the people of Cudal? Not on the south side. The principal farms are about Big Flat, and between here and Cargo. 5615.

5615. Supposing a line were constructed from Borenore through Cudal and Forbes, to what distance on the south side would the farmers be benefited by it? About 8 miles. I think it ought to serve the farmers even more than 8 miles on each side.

5616. Do you not think that if every farmer got a railway line within 12 or 14 miles of his farm he ought to be satisfied? If they could all get that they ought to be.

5617. If you had a line within 4 miles of Cudal to the north, the people 8 miles below you again towards Cargo would not be more than 12 miles from the railway, and they ought, therefore to be satisfied? I think it would pay them better to cart to Borenore.

5618. How far are you from Borenore? About 15 miles, I think, but I could not be sure.

5619. Do you know whether the population is increasing,—whether more people have come here within the last few years? There are more coming here every year.

5620. What are they doing? Farming.

5621. Are they selectors? Yes.

5622. Is there any land open to selection? Not now; it is all taken up.

5623. What increase has there been in the population within the last three or four years? I cannot say. I know a number of strange persons have come here, but I could not say how many.

5624. Do you know whether the land between here and the Mandagery Creek, to the north of this place, is as good as the land between here and Cargo to the south of it? I do not think it is. There is good and bad land on both sides. There is as good land on the Molong line as there is on this line. There is good land at Manildra, and good land at Bumberry just this side of Packham's.

5625. Do you know the country up towards Kadina? Yes; and towards Garra and Oberly. I have dealt with horses and cattle there.

5626. Do you know the country between Oberly and Manildra? Yes.

5627. What sort of country is that? There is very good land on Brymedura, but it is not open to selection.

5628. What do you think of the Kadina land? Some is good and some is bad.

5629. Is there not a large population there? There was not when I was there.

5630. How long is it since you were there? Five years ago.

5631. Do you think that if a line were constructed from Borenore to Forbes *via* Cudal it would serve people at Kadina? I think they would be close enough to the line at Molong.

5632. How many miles from the line at Molong do you think they are? About 30 miles.

5633. Of course you do not think that this line would serve them then? No; not at that distance.

5634. Then there is another place to the west—I mean Trundle—where 19,000 acres have been taken up. The people there would be still worse off? Of course this line would not benefit them a bit.

5635. But would not a line to Parkes benefit them? Better than the Cudal line, certainly.

5636. Knowing that there is a large increase in the population to the north of the Molong line, and putting on one side all personal feelings in the matter, which of the whole of the lines suggested do you think would be the proper one to construct in the interests of the community? I think the Borenore line, because there are so many good farms out here to the south, round Barrigan, Cargo, and towards the Canoblas. I think they grow better crops in that direction.

5637. Would not the people at the Canoblas be served by the line from Orange to Borenore? Yes; on one side, but not on the other, where you go down to Paling Yard Creek, Cave Creek, and Big Flat.

5638. Would not Barrigan be served by a line from Cowra quite as well as by a line from Borenore? The people at Barrigan could get to this line at Long's corner or Toogong; 7 miles would be the furthest, and going to Canowindra there would be 12 miles, a difference of 4 or 5 miles.

5639. You are only 15 miles from Borenore, and having a good road to that place do you not think that you are already fairly served by a railway, and much better served than many other parts of the colony? There are thousands of tons of straw going to waste this year for want of railway communication, and within 6 miles of Cudal 32,000 bushels of wheat have been grown. A threshing machine this year has threshed 8,000 bags; then a great deal has been stripped, and there is a lot more remaining to be threshed. So far 32,000 bushels have been stripped and threshed. Gavin, Baker and E. Taylor, junior, have grown, 8,000 bushels between the three.

5640. What is the population of this place? Over 300.

5641. Within what radius? Within  $2\frac{1}{2}$  miles of this place.

5642. Is there anything you would like to add to the evidence you have already given? I should like to give my reasons for thinking that the Borenore line is the best. I have been travelling round the district for about twenty years. I have been nearly all over the Molong district, and I admit that there is good as well as bad land in it. The reason I think this is the best line is, that there are so many persons settled upon it. The land on both lines was at one time open for selection, and if the land on the other line had been as good as it is there I think there would have been more people settled upon it, and that there would have been more business places. From Borenore to Eugowra there are twelve public-houses, and five billiard-tables, paying to the Government £410 a year. On the Parkes line there are only three public-houses paying to the Government £90 a year—a difference of £310. On this line there are eight stores from Borenore to Eugowra, two telegraph offices, one flour-mill, one bank, a savings' bank and money-order office, two Schools of Art, a Good Templar's hall, seven schools within half a mile of the road, a Catholic chapel, an English church, four blacksmiths' shops, two saddlers' shops, two bakers, two shoemakers, two harness-makers, and three police stations. On the Molong line you will find none of these places—there are only three public-houses, and two little stores; there are no banks and telegraph offices; there was a constable stationed at Manildra for a few months, but he had nothing to do there, and the Government shifted him. Then there is a running creek of water within sight of the railway for 46 miles from Borenore to Eugowra, with the exception of the first 5 miles.

5643. Does not the Borenore line pass through some large estates which are not at all likely to be subdivided? This line for 25 miles, from Borenore to Toogong, runs through twenty-four land-holdings—take Keenan's first—the line goes through his land for about  $3\frac{1}{2}$  miles; the next is Mr. Smith's—it goes through his land for  $3\frac{1}{4}$  miles.

5644. What length of the line goes through the Toogong Estate? I could not say positively, but I should think about 4 miles.

5645. That is about 11 miles of large estates through which the line passes out of the 25 miles between Toogong and Borenore? Yes; but you must not include Toogong—it is 25 miles up to Toogong.

- Mr. E. Taylor, sen. 5646. To go through the estate you would be about 29 miles from Borenore? Yes; then you go through a gold-field reserve, which goes down to Long's Corner; then from there there is a travelling stock reserve.
- 6 Mar., 1890. 5647. Is there any particularly good timber about there for building purposes, or for railway construction? I do not think there is about here, close to the line.
5648. You said just now that the land on this line had been more readily selected than the land upon the Molong line, and you inferred from that that the land here was a better quality—where did the western outlet from Orange go before the Molong railway was constructed—did it go towards Parkes, or was it along this road? The western outlet was along the Forbes-road, of course.
5649. Would not that fact of itself be sufficient to account for the population along the road? I do not think selectors who wanted to take up land would care much about the western outlet.
5650. But you have referred to the general population—do you not think that such an immense traffic as you have had along this road, would be likely to cause settlement? I think it might to a certain extent, because, of course, business-people go where the traffic is.
5651. Then the increased population will not necessarily show that the land was better, although it might show that there was more traffic along the road than along the Parkes-road? Molong is an older town than Orange, and also Wellington; and if the land there had been good it would, I suppose, have been taken up eagerly.
5652. Is not a good deal of the land round about Molong locked up in large estates? I do not know about that. But Molong was a town twenty-five years ago.

Mr. Charles Schramme, Hon. Secretary of the Cudal Railway League, sworn and examined:—

- Mr. C. Schramme. 5653. *Mr. Lee.*] You reside at Cudal? Yes; I have been living at Cudal about two years; but I have been living within 3 miles of the town about sixteen years. My occupation has been farming; but I am not doing anything in particular now.
- 6 Mar., 1890. 5654. Have you taken much interest in this question of railway communication? I have since I have been living in Cudal.
5655. Is there a railway league in Cudal? Yes; I am the honorary secretary of the league.
5656. Has the league had any public meetings? Yes.
5657. Have they prepared any statistics, in tabulated form, to be submitted to the Committee? Yes; I have some statistics—they are of various descriptions. It has been stated in Molong that the majority of the population on the Borenore and Forbes railway route is on the north side. I have prepared a list, showing all the names of the holders on the north side, and all on the south side of the line, within 7 miles of the proposed route. They are taken from Cheeseman's Creek to Toogong. I now hand in the names on the south side and on the north side, as an exhibit for the information of the Committee.
5658. How have these statistics been collected? By two persons who should have been present to-day.
5659. Did you collect any? No; they were collected by my authority.
5660. Are you prepared to swear that they are correct? I am prepared to swear that they are a correct copy of what I have received.
5661. The total number in the list, purporting to be the holders on the south side, is 143? Yes.
5662. And the number on the north side is sixty? Yes.
5663. Are any residents in the Murga district included in these lists? No.
5664. Are we to understand that they refer only to the country between Cheeseman's Creek and Toogong? Yes; I can also give you a list of the number of persons holding land between Borenore and Cheeseman's Creek—you will see that the number of holders is twenty-two.
5665. Do you also hand in a list showing the names of holders through whose land the Borenore line will pass, if constructed from Cheeseman's Creek to Toogong? Yes.
5666. I see that No. 2, the Hon. John Smith, at Boree, has no acreage given? I could not ascertain it.
5667. The acreage is wanting in several other cases I see? Yes, I could not ascertain it. In some of these instances the line passes through only a small portion.
5668. Who collected the statistics? Percival Gavin and William Cragie.
5669. Are they paid collectors? Yes, they are paid by the day.
5670. Are these returns certified by the holders of the land? They have not seen the documents, I think—they simply gave the acreage to the collectors.
5671. Have you checked the list to see that it is correct? I have not looked at the map.
5672. You have taken it for granted that the return is correct? I have no reason to doubt it.
5673. Still, you cannot swear that it is absolutely correct? No. I also hand in a summary of the population and produce returns, taken from Borenore to Murga, within 7 miles of the proposed Borenore, Cudal, and Forbes railway route; it shows that there are 376 holders of land, a population of 2,334, and that the acres of holdings are 245,693.
5674. Are the leaseholds included? Yes; the acres cleared number 24,631; the acres under hay are 2,968; under wheat, 12,450; under oats, 404; under barley, 51; under maize, 2,238. There are 91,791 sheep, 3,212 horse, 5,659 cattle, and 885 pigs. Allowing an average of 2 tons of hay, 25 bushels of wheat, 40 bushels of oats, 15 bushels of barley, and 20 bushels of maize per acre, which is a very moderate average for this season's crops in this district, the yield will be 5,936 ton of hay, 311,250 bushels of wheat, 16,160 bushels of oats, 765 bushels of barley, and 44,760 bushels of maize. To this may be added from Cargo, Mogong, Nerang, Canowindra, and other places south of the line, 40,000 bushels of wheat; and from Gregra, Manildra, and Mandagery, 10,000 bushels of wheat giving a total of 361,250 bushels of wheat grown within a reasonable distance of the proposed route, with other produce in proportion.
5675. Do you really know whether 361,250 bushels of wheat have been grown this season? I believe so.
5676. But can you give me any evidence of it? The farmers will give you evidence as to the returns of their wheat.
5677. But you furnish us with this return as evidence; if it is not authentic it is of no value; it is useless, unless you can swear to the correctness of it. We do not want an estimate if we can get exact returns. You say that the figures you give represent a fair average of the crops of this year? I believe they are a fair average for this year. I am sure there must be as much wheat as the quantity stated.
5678. But how do you know that this wheat was grown? The acreage is given by the farmers themselves. You have the number of acres under crop.

5679. Only for certain portions; I see no returns from Mogong, Cargo, and Nerang? It is only an estimate. My estimate of the wheat grown at Canowindra is 40,000 bushels, and there is an official record showing that more than 40,000 bushels were grown at Canowindra this year. The return is, I believe, sent to the Molong office. I am satisfied if any wheat is grown at all they must have grown this quantity. I can find three men in the district who have grown 10,000 bushels of wheat.

Mr.  
C. Schramme.  
6 Mar., 1890.

5680. But what we want is some evidence of the fact? I believe the estimate I have given to be correct; I would not make a false statement.

5681. Not willingly, I am sure. But in preparing statistics it is very difficult to obtain the matter upon which to proceed, consequently persons fall back upon information gathered from various sources, and from that they form an estimate; this we have already found to be the case in the course of our investigation. It is of no use to load the evidence with a lot of figures which are absolutely useless? These statistics were collected by two persons who will swear to-morrow that they are truthfully given. If the farmers state that they grew so much wheat, we must take their word for it. We cannot thresh or measure their wheat. The quantity of wheat may appear to you to be large, but in the Molong statistics they put down the wheat produce of Toogong, Cudal, and Canowindra, at about 248,000 bushels, and they say that the Molong portion alone produced about 290,000 bushels. Now, the reason why it appears so from the police statistics is that the police in Molong have collected a portion of their statistics about 7 miles south of the Borenore-Forbes line. The district is apportioned out to the police in a peculiar manner in that respect, and instead of this return applying to the Molong portion of the district alone, it applies to the whole of the remaining portion of the electorate. I am referring now to the statistics given by the Molong people as belonging to the Molong district alone. The Molong police have been 7 miles to the south of Cheeseman's Creek also. If the amount of wheat grown in that portion of the electorate is deducted this line, as far as the head of Oakey Creek, and they have taken nearly the whole of the statistics of from the Molong portion, and added to the Cudal portion, as it should be, it would make a material difference in the statistics produced at Molong. The police statistics are not really applicable to railway purposes. Molong is on one side of an electorate which is about 48 miles across.

5682. You think then that the Molong people, in giving their returns, have included some portions which should have been included in Cudal? Yes.

5683. Have you not included some portion of the Molong district? No.

5683½. Do you not think that Manildra belongs to the Molong district? Yes.

5684. But you have included it in your returns? A portion of it.

5685. Have you included Canowindra in your returns? That is to the south of the line.

5686. Do you not think the Canowindra people might feel aggrieved at your taking possession of their statistics? I think not.

5687. You think it is fair for you to make use of their returns for other districts, but that it is not fair for Molong to make use of your returns? They do not apply to railway matters.

5688. You include the Canowindra returns in your list? Yes.

5689. Have you any reason to suppose that the Canowindra people would send their traffic to Borenore if the line were constructed? I am certain they would.

5690. To what point? To Cudal or Toogong.

5691. Are you aware that the Canowindra people are almost as close to the Murrumburrah line at about Cowra as they would be to this line? That may possibly be the case.

5692. Are they not using the Cowra line at present? I do not know; but they may be using it because they have not a better line to use.

5693. Seeing that the Canowindra people are closer to Cowra than to Borenore, or any point upon the proposed Borenore line, do you think they would be likely to send any traffic to that line? I think so; because Orange is the inland town for this district. Most of the produce goes to Orange, not Blayney.

5694. Are there not other towns buying wheat? There might be a long way to go, and if the farmers could get a nearer market they would avail themselves of it.

5695. But would any farmers be likely to cart their produce the longest distance to a railway station? It depends upon where they can get the best market.

5696. Then on your own showing you have included in your returns the Canowindra district, when it is clearly proved that it cannot be brought within as easy influence of the Borenore line as on the Cowra line? There would be a difference of about 2 miles in the distance, and when the wheat is on the wagon they would not consider a distance of 2 or 3 miles.

5697. If you had the choice would you cart the longer or the shorter distance? If I had the choice I should take my wheat to Orange, because I should get quite as good a price there, and it would be nearer.

5698. But would you cart it to Toogong, or Eugowra, to send it to Orange? I might send it to Toogong, if residing in the Canowindra district.

5699. Why? I should send it to the nearest market. I do not think there is a bushel of wheat that goes to Molong from this district. It goes chiefly to Orange and Sydney; but as I have pointed out Orange is the chief market for this district. The statistics are not particularized so far as Canowindra and Manildra are concerned. I added them to show that they would feed this line if it were constructed.

5700. The Canowindra people have sworn distinctly that they would not send anything by this line? The three persons who gave that evidence do not represent Canowindra.

5701. But would not they represent it quite as well as you do Cudal? No; they are merely expressing their own individual intentions, whereas, as Secretary of the Cudal Railway League, I represent and express the sentiments of the people.

5702. Your additions to your local statistics have made them of no value? The local statistics are given separately, I merely added the others to show the probable traffic on the line. I have to add some statistics as to the public schools. I find that the number of public schools between Borenore and Murga within 8 miles of the suggested line is 27.

5703. I see your return includes other matters? Yes.

5704. First as to the public schools and the enrolment of the children—from what sources did you get this information? From the school books.

5705. Is that last year's education report? Yes, the report for 1888.

5706. How did you arrive at the number of letters posted at the various offices? From the official Report of the Post Office.

- Mr. C. Schramme.  
Mar., 1890.
5707. The same with regard to the telegrams and money orders? Yes.
5708. How did you arrive at the estimated population of 3,200? From statistics.
5709. What statistics are available for that purpose? The returns prepared by the collectors. I will now hand in statistical returns illustrative of the population in the district through which the Borenore line will pass. The returns are taken within 8 miles of the proposed line, and have been compiled by the Committee of the Cudal Railway League from official Government reports, and other reliable sources for the year 1888.
5710. Is there any other information you can give the Committee? I can give you some information as to the traffic at Borenore. I wrote to Mr. Smith, Messrs. Wright, Heaton's Manager, at Borenore yesterday, and I have received from him some particulars as to the traffic. He sends me the following letter:—

Borenore, March 5th, 1890.

Dear Sir,

Your letter of the 4th instant reached me this morning. It is with feelings of sincere regret that I cannot comply with your request. I have done my best to get the book-keeper from Orange office, but he is too busy to relieve me. I should be only too glad to render you the assistance required, but as I cannot come in person, I will send you the evidence which I would give, hoping that it will be of some material use.

Borenore Station, January 1st, 1889, to December 31st, 1889.

Inwards.—Borenore, 570 tons; Cudal, 500 tons; Toogong, 17 tons; Murga, 25 tons; Eugowra, 130 tons; Forbes, 1,180 tons; Burrawang, 90 tons; Borambil, 34 tons; Condobolin, 380 tons; Mount Hope, 26 tons. Total, 2,952 tons.

Wool received at Borenore Station, September 1st, 1889, to December 31st, 1889, 8,989 bales.

Outwards.—1889, 4,294 tons; coaching, 1889, £855 12s. 10d.; 1,674 passengers, £530.

Wheat received at Borenore Station, January 1st, 1890, to March 6th, 1890—

January, 1,400 bags; February, 6,300 bags; March (six days), 1,700 bags. I have allowed 290 bags for to-morrow, this will be about the quantity to come in.

You can explain when giving the evidence that the traffic at this station, so far as goods and wool are concerned, would be as much again if all the traffic came this way, but on account of Cowra station opening, fully half the traffic goes that way.

We pay to the railway an average of £9,000 per annum for trainage, and other accounts which pass through our hands, but on which we do not pay the trainage, would amount to £4,000, making a total of £13,000.

Wishing you every success.

Yours, &c.,

JNO. SMITH.

Any further information you require wire me to-morrow, and I will furnish.

To C. Schramme, Esq., Hon. Secretary, Cudal Railway League, Cudal.

I have papers showing the population of Cudal, and it can be proved that the correct population is given. I will hand you in the names of the persons, and that will verify the totals of the other lists I have given.

5711. What further evidence have you to give? I have been a long time in the district, and I have travelled on both routes. I know the Parkes route very well. I travelled on it eight or ten years ago. When I came here to select I rode all over the district. I visited Mandagery Creek and Meranburn. I concluded that the land here was the best, and I settled down here. I have not been sorry that I did so. There is no better land in New South Wales than ours, excepting, perhaps, some of the river flats. I do not think the land is surpassed anywhere for its wheat producing capabilities—it is by no means an extraordinary thing to grow 40 bushels of wheat to the acre—men have grown that this year.

5712. How long is it since you were through the Molong district? I have not been from Molong to Parkes, but I have been from Boree.

5713. Have you been north of Parkes to Kadina and Trundle? No.

5714. Have you been north of the line between Molong and Manildra? Not very far.

5715. Have you been 15 or 20 miles up? No.

5716. Consequently you are quite ignorant as to what population there might be there? Yes.

5717. Your knowledge is based on information you have gained in the district? Yes. I may say, that instead of people having to travel *via* Parkes to go to Forbes, they often have to go to Forbes in order to get to Parkes, the Parkes country being so bad that it is very difficult to travel over.

5718. *Mr. Cox.*] Is there any traffic to Canowindra on this road now? I think so. There is a lot of traffic coming in from the eastern part of Canowindra. I often see people from Canowindra here.

5719. Do you know that goods pass through Cudal *en route* to Canowindra? I have no personal knowledge of the matter.

FRIDAY, 7 MARCH, 1890.

[The Sectional Committee met at the Court House, Cudal, at 9 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX | WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Edward Taylor, senior, sworn and further examined:—

Mr. E. Taylor, senior.  
7 Mar., 1890.

5720. *Chairman.*] I believe you wish to make a further statement to the Committee? I said yesterday that the distance from here to Borenore was 15 miles, whereas it is 18 miles.

Mr. Alfred Percival Gavin, farmer, sworn and examined:—

Mr. A. P. Gavin.  
7 Mar., 1890.

5721. *Mr. Lee.*] Where do you reside? At Cudal.

5722. What is your occupation? I am a farmer.

5723. Were you employed by the Cudal Railway League to collect statistics? Yes.

5724. Have you any data by you to check the numbers given? Yes.

5725. What did you do with the statistics gathered by you? I merely copied them as you see them here, and handed them to the Railway League—there is the rough copy as I took them.

5726. You simply carried out your instructions? That is all.

5727.

5727. How did you arrive at the number of bushels per acre on the several farms? Chiefly by average. I took the acreage and the yield of several farms in the neighbourhood and I averaged them. Mr. A. P. Gavin.
5728. When did you collect these statistics? In the latter part of October of last year. 7 Mar., 1890.
5729. Had the wheat crop been threshed for the past year? Yes; but we were collecting for the year coming, and were taking the acreage under crop then.
5730. This is the acreage estimated for 1890, and the crop was then growing? Yes.
5731. Supposing something had destroyed all the crop, where would your statistics have been? We had the acreage, and as none of the crops were destroyed we can easily arrive at an average.
5732. The growing crops were estimated to give this result—were they matured? Yes.
5733. At that time they were only partially grown? Yes.
5734. Then as to the number of stock how did you arrive at that? By taking down all the stock every person had.
5735. How far did you go on the north side of Cudal? About 6 miles at the furthest—not that I think, perhaps about 5 miles.
5736. Do you know the Orange and Parkes Road? Yes; I went just to the border of that.
5737. Did you go to Cargo? Yes, as far as Cargo.
5738. Did you go to Mogong? No.
5739. To Nerang? No.
5740. To Canowindra? No.
5741. To Gregra? Yes; I went as far as Gregra.
5742. Manildra? No.
5743. Mandagery? I hardly know where the parish begins.
5744. If you did not visit these places how did you ascertain the quantity of wheat they grew? I scarcely know where some of them begin and end—some of them may come nearly into Cudal.
5745. If you do not know, how can you possibly give the returns—you say you did not go to Canowindra? Mr. Craigie collected there, and also on the Mandagery.

Mr. William Craigie, mail contractor, sworn and examined:—

5746. *Mr. Lee.*] What are you? I am a mail contractor.
- 5747-8. Residing at Cudal? Yes.
5749. Were you appointed Collector by the Cudal Railway League? Yes; I acted in conjunction with Mr. Gavin. Mr. W. Craigie.  
7 Mar., 1890.
5750. What portion did you take? The lower portion of the Mandagery Creek. I followed it down a little below Toogong, and out upon the Canowindra Road for a few miles towards Mogong.
5751. Do you support the statements of your colleague as to the way in which the statistics were collected? Not exactly. When I collected the statistics the hay harvest was in. I asked the acreage the farmers had and the crops they had in. The estimate was to be struck afterwards, from the returns after threshing. That, I believe, has been done. No estimate was taken of the yield of that crop.
5752. Then how did you get at the figures? I asked how many acres they had under each kind of crop. I asked the acreage of their holding and the number of acres cleared. I also asked what they intended to make hay of, and what they intended to cut for wheat.
5753. But as to the yields? There was no return given to me. I asked them, and they said they could not estimate it, and that the best way to obtain it would be after the crop was gathered.
5754. They gave you the acreage of their holding, and they told you what they intended to cut for hay and what they would leave for wheat? Yes.
5755. They gave you no figures as to the results? No.
5756. And you are unable to swear to these figures? In many cases I knew the acreage and the number of stock; the yield of grain I could not swear to. I have worked myself, on two or three of the farms, and having taken the census, I know their returns. I assisted one person named Taylor to gather his crop, and it averaged nearly seven bags to the acre.
5757. In any case you cannot vouch for these figures, because they were not given to you? No.

Mr. William Shield, storekeeper, sworn and examined:—

5758. *Mr. Cox.*] What is your occupation? I am a storekeeper in the town of Cudal.
5759. Have you been long a resident in this district? About forty-two years. Mr. W. Shield.  
7 Mar., 1890.
5760. You are well acquainted with its surroundings? I am.
5761. Do you know the country well, through which a railway from Borenore to Eugowra would pass? Yes.
5762. You know it all thoroughly on both sides? Yes.
5763. Are you equally acquainted with the other land—from Molong to Parkes and Forbes? I am; but I have not been over that line so recently as I have been over this. I knew the country where the line goes, when it was simply a bridle track to the westward; I have known it over forty years.
5764. The Cudal line has been settled much longer than the country on the other line—farms have been here much longer? Yes, I think so.
5765. Is that on account of this being the great highway to the west? This has been the great highway to Forbes, and down the Lachlan; Parkes was on a by-road going to Gunningbland.
5766. You have some practical knowledge of farming? I have.
5767. In your opinion which line of these two passes through the better country? Decidedly this line, *via* Cudal.
5768. Why do you say so? Because there is more good agricultural land on this line than on the other. There is some good land on the other line, 7 or 8 miles from Molong, at Garra and Manildra. There are also some patches beyond; but not to any large extent until you get within 5 or 6 miles of Parkes.
5769. On this line is the land all good, or is it only patchy? There are patches on this line, of course, as you yourselves must have noticed yesterday as you passed through Goimbla and Murga, and the Rocks this side of Eugowra.
5770. With those exceptions the whole of the country on this line is good? With those exceptions the country, and especially that to the south of the surveyed line, *via* Cudal, cannot be beaten in New South Wales for the growth of wheat. 5771.

Mr.  
W. Shield.  
7 Mar., 1890.

5771. There is yet another line projected. I refer to that from Cowra to Canowindra, and on to Forbes—do you think it would be a suitable line in the interests of the community generally, so far as this district is concerned? I do not think it would benefit Cudal at all.

5772. But I suppose Cargo and Barrigan would benefit from it? Some of the settlers there might use the line, but I do not think the majority would—they do their business with Orange, and would come this way.

5773. But there is a bad hill to get up to Orange, from the level ground at Canowindra? Of course there is an easier road on the level ground, but it is not a macadamised road, and persons living in this district, within 5 miles of Canowindra, do their business with Cudal and Orange.

5774. Is there much traffic from Canowindra this way? Not exactly from the town, but from 5 or 6 miles this way there is. There are several persons living within 7 or 8 miles of the town who do business with me.

5775. Some of these persons do business with Orange notwithstanding that they have to climb a big mountain in order to do so? I do not think there is any big mountain, I do not call it a mountain. Of course there is a hill, and rather a steep one, I would rather go up that hill, the road being metalled, than I would go along a flat road if it were boggy.

5776. What kind of road is it between Canowindra and this place? Pretty level.

5777. But none of it is made? Portions here and there—50 or 100 yards now and again. I think you passed over one or two portions yesterday. Now I come to think of it I am not quite clear as to whether any of it is metalled or not.

5778. We have full particulars from another witness as to the statistics of the district. Have you anything further to say to the Committee in furtherance of the line we are investigating or in opposition to it? I believe a line *via* Cudal would be of more advantage to the district, and also to the colony. I am certain that there is a larger population on this line than on the other, which in my mind goes to prove that the country here must be better. So far as the line passing thorough Meranburn is concerned I do not see that we could possibly avail ourselves of it, nor do I see how the persons residing to the south of this line could do so. The nearest point of the originally surveyed line which could be made use of by people here would be about 11 miles distant at Manildra.

5779. You are aware that a surveyor is now engaged on the survey of a deviation through Bocoble Gap? I know where that line goes very well.

5779½. How far is that away? The nearest point to Cudal would be at least 8 miles.

5780. Not 4 miles? Certainly not.

5781. How far is it from Cudal to Manildra? About 11 miles. If you go by road you cannot do it in less.

5782. So that the deviation *via* Bocoble Gap would not come south more than 3 miles? The nearest point would be at the back of Mr. Allen's, about Mr. Wren's ground.

5783. How far is Mr. Wren's farm from here? The first portion would be at least 8 or 9 miles.

5784. That is the nearest point touched by the deviation? Yes.

5785. So that a line of railway to Molong *via* Parkes and Forbes would be of little advantage to the people unless they lived considerably to the north of this line? Quite so,—it would be of no advantage to the population south of the Cudal line. Drawing their wheat and produce to the nearest railway station on the Parkes line, they would have to go not less than 8 miles. They would have in all 28 miles to reach Borenore. They would have to pay haulage for that distance.

5786. What you mean to say is, I suppose, that once they get their produce on the dray it does not make much difference whether they drive 10 or 20 miles? I did not say that.

5787. Do you mean to say then that they would save 28 miles of trainage by driving their drays 20 miles? No. It is 18 miles from here to Borenore I believe, and many of the farmers or rather the bulk of them live some distance to the south of the Cudal line. Many of them do not come to Cudal at all, but in going to Borenore they have a good sound road. If they went over the 11 miles between this and Manildra they would not have nearly as good a road, and they would have to pay for the haulage of their wheat about 14 miles from Manildra to Molong. The difference when they reached here would be that they would have to go 18 miles by road instead of 11—there would be a difference of 7 miles.

5788. In the event of a railway being made from Molong to Parkes and Forbes, the Government would naturally have good feeders in the shape of good roads—some of the difficulties you mention would therefore be overcome? Of course I cannot say that that would not be done, but the principal sources of traffic to the line would be to the south of Cudal.

5789. More wheat is grown to the south of the proposed line to Borenore than to the north of it? That depends upon the distance you go; I could not say that more is grown here if you include Garra. The district of Molong extends to Oberley, Buckinbah, Two-mile Creek, and round that way, but the Parkes line would be of no advantage to these people—they would go to Wellington and Molong. The only thing is that the Parkes line would be of service to the population living actually between Molong and Parkes. Of course the population immediately round Parkes would be included.

5790. *Chairman.*] Have you any further statement to make—do you think there is any other line which would be of advantage? I have thought whether it might not be well to construct a line from Borenore to Eugowra, and from thence to Parkes, and from Eugowra to Forbes, making a junction at Eugowra. That could be constructed, according to the estimates given, for the same money as the line from Molong to Parkes—it is all level country between Eugowra and Parkes.

5790½. *Mr. Cox.*] You are aware that a great difficulty in connection with the Borenore line consists in getting down the hill to Borenore from Keenan's Swamp—it is a very heavy grade? Not heavier than those on the Cobar line already passed. My knowledge of the estimated cost and grades of the lines is, I may mention, derived from Parliamentary papers.

5791. *Chairman.*] Then I may inform you that your figures are not correct? Then I suppose the papers I have read were wrong. My statement in regard to this line is made from what I have read in the Parliamentary papers. I would not make a misstatement wilfully.

5792. The cost of this line is estimated to be £6,444 per mile, and of the other line, £5,700 per mile? That is different from what I have heard before, but I do not see how any person outside of the Department could have any knowledge of the cost of construction beside that which he gathers from the public press.

5793. Is there any other statement you desire to make? Well, the line from Borenore to Forbes would be the shorter distance to Sydney.

5794.

5794. But not the shortest piece of construction? The shortest when completed by 17 miles. It seems to me that that shorter distance would make up for the additional cost of construction.

5795. The argument used by the Forbes people was to this effect—that if they used a railway *via* Parkes and Molong, they would have to carry their produce 17 miles further than they would coming this way for all time to come? Exactly; and many other persons would be affected by the longer distance.

Mr.  
W. Shield.  
7 Mar., 1890.

Mr. John Taylor, farmer, sworn and examined:—

5796. *Mr. Dowel.*] Where do you reside? A mile from Toogong.

5797. How long have you been in the district? Twenty years.

5798. What is your occupation? I am a farmer.

5799. What is the size of your holdings? About 720 acres.

5800. How many acres have you under cultivation? About 110.

5801. What do you chiefly grow? Wheat, chiefly.

5802. Do you find the growth of wheat a profitable industry? Yes, if I can obtain anything like a price for it.

5803. What are the average crops you grow? There is a very great difference. My lowest average in an ordinary year would be about 20 bushels to the acre—for one or two years I had no crops at all, or nearly none. I have had, for instance, 7 or 8 bushels to the acre, and in a good year I have had as much as 33½ and 35 bushels.

5804. With your average crops, if you had a market for your produce, wheat-growing would be a profitable industry in the district? I think so.

5805. Do you know the character of the country and the nature of settlement in this district? Yes, I have travelled the line between Orange and Forbes hundreds of times.

5806. You are well acquainted with the character of settlement in the district? Yes.

5807. Is the settlement in large or in small holdings? In small holdings principally.

5808. Do the men with these holdings appear likely to reside upon them permanently and to continue their industry? Yes.

5809. They are not likely to sell to a pastoral tenant? I should not think so.

5810. Can you say what this soil is capable of growing? Wheat, potatoes, and corn, although corn does not seem to do as well in this district as other crops.

5811. Do orchards and vineyards do well? Pretty well in places. Some people seem to do well with them.

5812. What is your average crop of potatoes? I have not measured the ground or weighed the potatoes, but I have had what I estimated to be 6 tons to the acre.

5813. What does it cost you at the present time to convey your wheat to a railway station? I have carted my own wheat, but I heard my neighbours say that they had to pay 1s. 6d. a bag to get it carried to Borenore—they made an agreement, and in some cases the carriers even then refused to carry.

5814. Do you know the route of the staked-out line between Borenore and Cudal? Yes.

5815. You are acquainted with Dr. Ross, M.P., I suppose? Yes.

5816. Is the statement he made to the Minister on 17/9/84 correct—that this line would pass through 30 miles of private land? I do not think the statement is correct.

5817. Is he correct in stating that it would pass for a mile through a bottomless swamp? I suppose he alludes to Keenan's Swamp, and the line can cross that swamp in a great deal less than a quarter of a mile—it is not only not bottomless, but as a carrier on this road for many years, I have known cattle to walk across it on firm ground.

5818. Is it true that Mr. Sharkey got bogged there, and that they had to haul him out with a team of bullocks? I do not know. I have seen people bogged on dry land before to-day.

5819. Is the statement correct that much of the country through which this line would pass is liable to floods? No; it is not.

5820. Then you directly contradict statements Dr. Ross made to the Minister? I do not care whom I contradict—I am speaking the truth.

5821. Is it true that population on this line is scanty, and that Cudal is the only centre? If you consider it a scanty population to have a man and his family living on every 300 acres, and in some cases less, then it is scanty.

5822. Is the statement true? It is not true. There are many families living in this district on from 40 acres up to a section.

5823. Is it true that this line would serve fewer people than either of the other routes? It is not true.

5824. You give your emphatic denial to the statements made by Dr. Ross to the Minister? That, I do.

5825. Do you know anything about the line referred to this Committee for investigation? I have travelled the road from Orange and Boree to Parkes by team many years ago, but I have not travelled it since the railway was marked out. I understand that it partly follows the direction of the road—that is, by Meranburn, Manildra, Dulladerry Creek, and Bumberry.

5826. Do you know the country between Eugowra and Parkes? Yes.

5827. Having resided in the district for so long, and knowing the district so well, together with the class of people settled in it, and the nature of their occupation, do you think that a railway should be constructed along the permanently-staked-out route from Borenore, *via* Cudal, to Forbes? I certainly am of that opinion.

5828. Do you know of any other line which will serve our district? I do not know of any other line so likely to be a paying line. There is any amount of good land on it, and that cannot be said of other places, as far as I know them. The land is well settled at the present time; it is all taken up—a man cannot get a farm of good land unless he goes on to a reserve.

5829. Have you as good a knowledge of the route from Molong to Parkes as you have of this route? No, I have not; but I have a pretty good general knowledge of the country to the north.

5830. You think the line *via* Cudal should be constructed in the interests of settlement? Yes.

5831. Is there anything else you would like to say to the Committee? I consider that the other route, from what I know of the country, would not bear comparison with this one. There is a good deal of sterile country that could not be made to grow anything; no man of sense would take any trouble with it.

Mr.  
J. Taylor.  
7 Mar., 1890.

Mr.  
J. Taylor.  
7 Mar., 1890.

it. I have been told that it has been said that there is splendid timber on the other route. As far as I can recollect, I saw no timber on that route which would compare with the timber to be found within 5 miles of this route.

5832. What is the character of the timber on this route? Ironbark and red-box, and the box is supposed to be superior to the ironbark.

Mr. Walter Rennie Murray, farmer, sworn and examined:—

Mr. W. R.  
Murray.  
7 Mar., 1890.

5833. *Chairman.*] What are you? I am a farmer.  
 5834. Where do you reside? On Mandagery Creek.  
 5835. To the north of Cudal? To the north-west of Cudal.  
 5836. How far is your farm from the township of Cudal? About 7 miles.  
 5837. How far is it from Meranburn or Manildra? About 7 miles.  
 5838. Then you are half way between the two places? Yes.  
 5839. What is the area of your holding? 300 acres.  
 5840. How much of it have you under crop this year? I have about 106 acres under crop.  
 5841. Of what did it consist principally? Of wheat, hay, potatoes, and pumpkins.  
 5842. Do you know what your average of wheat was? I had between 1,600 and 1,700 bushels off 100 acres.  
 5843. Have you long cultivated your land for wheat? About sixteen years.  
 5844. What has been the average crop? The crop I have given you is not over the average.  
 5845. But there have been years when you had scarcely anything? Last year we had a very poor crop.  
 5846. Your average then has been fully 16 or 17 bushels? I think that is a fair average.  
 5847. Have you, as a rule, a good crop of hay? I have had about 3 tons to the acre, of wheaten hay, this year.  
 5848. Is it a good district for potatoes? Fairly good.  
 5849. What is the lowest price for wheat on the ground which would enable you to live and keep your family? We have to live on it, and draw it to Borenore for 2s. 10d.  
 5850. What is it worth to draw it to Borenore from your farm? 6d. a bushel.  
 5851. Then you could grow wheat remuneratively for something like 2s. 6d. a bushel? Yes.  
 5852. If you were guaranteed 2s. 6d. a bushel for as much wheat as you could grow would you put more than 100 acres under wheat? I think so.  
 5853. Would the line which has been referred to the Committee be of any great advantage to you if constructed? I am midway between the two places. Taking everything into consideration, I do not think it would be of as much advantage to me as the line coming this way. The roads this way are better.  
 5854. Still, the other line would surely be of some advantage to you? It is a matter of almost indifference to me which line is made—it is only a question of roads.  
 5855. Still, if your wish were complied with, the Borenore-Cudal line would be constructed? I think so.  
 5856. Are there many farmers in your neighbourhood? All the available land is taken up.  
 5857. That is from Cudal right through to Meranburn? Yes; excepting the reserves. You could not select a farm now between the two places.  
 5858. Is it all good farming country? It is all good.  
 5859. Do you know what it would cost you per bushel to send your wheat to Sydney from Meranburn at the present rates? I do not.  
 5860. Suppose it would cost you 4½d. a bushel, could you grow wheat remuneratively? Yes; considering that wheat is 3s. 6d. a bushel in Sydney now, and that we can only get 2s. 10d. here.  
 5861. So far as you are concerned, you think that either the line from Borenore to Forbes, or the line from Molong to Parkes, would be of great benefit to the farmers in your neighbourhood? Yes.  
 5862. Supposing either of the lines were constructed, do you think the farmers in your vicinity would put a larger number of acres under wheat crop? I should think so.  
 5863. Is there any further statement which you would like to make to the Committee? There is a good timber reserve on the line from Borenore to Forbes.  
 5864. Where is it situated? About 4 miles north of Toogong from the railway route.  
 5865. Do you know the ironbark land on the route from Molong to Parkes? I have seen it, but I have never worked in it, or taken any particular notice of it. The timber on the reserve at Toogong is the best ironbark I ever saw in this part of the country. There is also the Nangar reserve. The timber on that is principally red-gum, or red-box. As far as the country on the two routes is concerned, I am certain that the country on the Borenore route is by far the better. There is certainly a great extent of good land this way both north and south of the line. Right down the valley of the Mandagery there is as good land as you will find anywhere in this part of the colony—that is, running down towards Forbes to the junction with the Lachlan, below Eugowra—that piece of country contains good land from one end to the other.  
 5866. Do you know the country for some distance to the north of Parkes? I have been over it.  
 5867. Have you been up to Kadina? I do not know it by that name. I know Callumbutta and Gumble—that is rough country. There is a lot of mountainous country there running out towards Parkes. It is very rough right through from Gumble to Parkes. There is nothing but ironbark ridges.

Mr. Samuel Landauer, sworn and further examined:—

Mr. S.  
Landauer.  
7 Mar., 1890.

5868. *Chairman.*] I believe you have a further statement which you desire to make to the Committee? Yes; it is with regard to Keenan's Swamp. The Borenore line would not pass through it for more than 2 chains, and the whole distance of purchased land through which the line would pass would not be more than 24 miles, counting large and small holdings. The distance for which the line runs through Mr. Smith's land is about 3½ miles. Now I am here, I should like to mention that last year being a dry season, and wheat being scarce here, I sent 290 tons of flour down the Lachlan, 26 tons between here and Canowindra, and down the Lachlan again—about 30 tons of bran, pollard, and wheat. This does not include small lots.

5869. This year, I suppose, you will send away still more? We have sent nearly as much away already.

Mr.

Mr. Cornelius Dempsey, hotelkeeper, sworn, and examined:—

5870. *Mr. Lee.*] What is your occupation? I am an hotelkeeper and produce-dealer at Cudal. I have been here about four and a half years.
5871. Upon what particular point do you wish to give evidence? I wish to give some particulars as to traffic on the road. I know the road from here to Forbes well.
5872. Will you give us your evidence as to the traffic? There are ninety teams constantly on the road.
5873. Travelling between what places? Borenore, Forbes, and Condobolin.
5874. Has the number increased of late years? No, it has decreased since the Cowra railway was opened.
5875. Has the opening of the Molong line made any difference to the traffic? None whatever.
5876. This used to be the main line of traffic before the Blayney line was opened? I have seen thirty and forty teamsters camped in front of my place at night before that line was opened.
5877. You think that the Murrumburrah and Blayney line then, has affected traffic upon this road? It has had a wonderful effect on the traffic.
5878. How many coaches are there on the road? There is one each way every day—a four-horse coach.
5879. I suppose that since the farmers have come in and land has been more freely taken up traffic has increased? The farming traffic has increased wonderfully.
5880. What other evidence do you desire to give? I have travelled on both routes. I was a carrier at one time, and my opinion is that this is the better route of the two. I am quite certain that if we had a railway along here farmers would profit by it. I may mention that I have a chaff-cutting machine. I used to send chaff to Sydney and I had to cease sending it on account of the team carriage to Borenore. We pay 14s. a ton. The reason that a great deal of traffic has gone from here to the Cowra line is that there are no macadamised roads in that district, and all the bullock teams have principally left this on that account.

Mr.  
C. Dempsey.  
7 Mar., 1890.

Mr. George Gavin, farmer, sworn and examined:—

5881. *Mr. Cox.*] What are you? I am a farmer.
5882. How long have you been a resident of Cudal? About fifteen years.
5883. Where is your farm situated? It is about 3 miles from Cudal.
5884. How much do you cultivate? About 300 acres.
5885. What is your chief crop? Hay, oats, maize, and wheat. I have not a large area under potatoes.
5886. How long have you been cultivating in this district? About fifteen years.
5887. Of course you must find it profitable or you would not continue to cultivate? You must cultivate sometimes even when it is not profitable. It would be more profitable if we had cheaper carriage.
5888. With machinery you can cultivate much more cheaply than you could years ago? Much more cheaply.
5889. Three shillings a bushel now would pay you better than 4s. or 5s. a bushel under the old system of reaping by hand? Yes.
5890. What does it cost you to send your wheat to Borenore? From where I am farming it would cost about 1s. a bag as the roads are very good. The distance is only about 14 miles and there is a very good road. I generally draw my own produce.
5891. Would a railway benefit you very much? Decidedly.
5892. In what way? Well, there is farm produce. I have a lot of stuff going to waste; it would not pay me to cart it. For instance, there is straw, hay, and chaff; the carriage takes all the profit off it. I have 100 tons of straw, which I could not attempt to send to Sydney at the present cost of carriage.
5893. But you anticipate being able to send your wheat all the way to Sydney at a little more than the rate you now pay to Borenore? Just a trifle more.
5894. Consequently, if you had a railway, you would largely increase your acreage under crop? I should be most happy to do so.
5895. What can you clear per acre, taking one year with another;—can you clear £1 an acre by farming? That is a matter which wants consideration. I hardly know what I clear. I suppose I must clear that or I should not continue.
5896. Have you £100 to put in the bank at the end of the year off 100 acres? I think so.
5897. If you can clear £1 an acre by cultivation it really pays you better than sheep or cattle? Yes. I have taken up 96 tons of wheat within the last three weeks to the railway station off my own farm, and I have a good deal more to take up.
5898. You believe that the farmers all round you would add to their cultivation if they had a railway? I am sure they would.
5899. A railway would increase the material prosperity of the district, and would add to the wealth of the country? It would certainly increase our prosperity.
5900. Would a railway *via* Parkes and Forbes benefit the country—I am not speaking of your particular district—as well as a line *via* Cudal? I do not think so, for this reason, that it merely skirts the good country. The country between Cargo and Meranburn is excellent country, and the line you refer to merely skirts it. I think the more thickly populated districts have a better claim to a railway.

Mr.  
G. Gavin,  
7 Mar., 1890.

Mr. William Henry Couch, farmer and grazier, sworn and examined:—

5901. *Mr. Dowel.*] Where do you reside? About 7 miles south of this place, by the nearest road, on the main road from Orange to Borenore, Canowindra, and Cargo.
5902. What is your occupation? I am a farmer, and grazier.
5903. What is the extent of your holding? I hold, in connection with my family, 3,054 acres.
5904. What do you chiefly do with the land? I graze chiefly, but I have been farming pretty extensively for the last thirty years.
5905. What number of acres had you under crop this last year? I have been in the habit of cultivating for twenty years from 200 to 250 acres. Last year, on account of the trouble in getting away produce and so forth, I decreased the area to about one-third. Last year I had something like 70 acres under crop.
5906. Under what crop? Wheat and hay principally. I had grape vines and things of that kind on small areas.

Mr.  
W. H. Couch.  
7 Mar., 1890.

- Mr. W. H. Couch.  
7 Mar., 1890.
5907. What is the carrying capacity of your land? I have not had less than two sheep to the acre for the last ten years. I have nearly three sheep to the acre now, and I kept nearly two sheep to the acre last year in a great drought.
5908. What distance is your holding from a railway station? About 20 miles from Borenore.
5909. What does it cost you to take your produce to that market? I have sent thousands of bushels to Orange, and I never sent a bushel there under 6d. I may say that I cultivate lucerne to a great extent. I have about 100 acres of lucerne.
5910. Would that be on the banks of a creek? Yes.
5911. How does it thrive? First-class, if it is well cultivated and the land is suitable.
5912. Have you had hay crops from the lucerne? Not generally; it is generally eaten by sheep.
5913. Do you irrigate any portion of the land? No; but it could be irrigated easily.
5914. What would be your average crop of lucerne, for hay? About 2 tons to the acre.
5915. Have you a good knowledge of the district? I have been thirty years resident here and in the vicinity of the Parkes line.
5916. You have a knowledge of the Parkes line? For about 20 or 30 miles out of Molong—no further.
5917. Do you know the traffic on either of the lines of road? I know the traffic pretty well on this line but not so well on the Parkes line.
5918. What is the traffic on the Cudal line? I only know it in a general way. I have been to Orange twice in a coach these last few years. On one occasion, there being nothing special about it, there were twelve passengers, and I had to stand about half way to Orange.
5919. What is the traffic between here and Canowindra? There is a fair amount of traffic between the two places. Some of the goods manufactured here are used in Canowindra, I believe. I may tell you that the teams you passed yesterday, and which camped near the court-house last night, have gone to Borenore with wheat, from farms within 7 miles of Canowindra. There is a large mill at Cargo; that is 8 or 9 miles in a straight line from here. I have a considerable interest in that mill. I am one of the local managers. The mill derives a great deal of its supply from the immediate neighbourhood of Canowindra, up to the very boundary of the proposed line. Nearly all of that flour comes on to the road to Borenore. On some occasions we have sold flour to go down the western line to Nyngan and Bourke. The teams have been stuck on the road often in wet weather. They have been stuck in the mud, and the flour being behind time in arriving at its destination, supplies have been brought from elsewhere, and we have had the flour left on our hands on several occasions. On one occasion it was nearly a dead loss. The farmers on this side of Canowindra send a small portion to Cudal, but the larger portion they send to Borenore, or to the Cargo mill. Teams go weekly with merchandise for the storekeepers of Canowindra from the Borenore station.
5920. Is there a flour-mill at Canowindra? Yes; but it does not work regularly.
5921. Are you acquainted with the various rival routes as staked out? I have a knowledge of the most of them.
5922. Do you know anything of the route staked out from Molong to Parkes? I have not been over it since it has been staked out. I know the country for about 25 or 30 miles. I have resided in it for several years, that is until the Land Act of 1861 was passed. I then sought of settling. I did not like the country out there. I did not know this part. I was about to settle there when I was recommended by a gentleman named Burgess, of Molong, to come out here. In recommending me to come here he used these words:—"There is as much difference between the land down there and up here at Molong as there is between chalk and cheese." I told him that I did not know the country about here, and he offered to show it to me. I said that if he would do so I would pay him if I took up any land.
5923. Do you find the land upon which you are now settled superior to the land with which you were acquainted on the Parkes line? Yes. I took up the land Mr. Burgess told me, and I paid him £10 two days afterwards.\*
5924. Having a knowledge of these various routes, which one do you think should be adopted in the interests of the general public? I think that in the interests of the general public the Borenore and Cudal route should be adopted. I would not adopt the Cowra line on account of the scarcity of the population. The bullock teams travel that way because there are no metal roads, and there is plenty of turn-out for the bullocks, otherwise they would travel on the Borenore route.
5925. *Chairman.*] Would not the line from Cowra serve the Canowindra people better than this line? Yes, the people just near Canowindra; but the chief part of the farms are not close to Canowindra. They are on this side. I believe it has been sworn at Molong that I hold 5,000 acres, and that there is very little settlement in the neighbourhood of Bowen's Park. The fact of the matter is that I hold, in conjunction with my family, only 3,054 acres. Davy's Plains station own about the same. I have not an inch of property within 4 miles of Bowen's Park by the nearest road; but I was counting the farms coming along the road yesterday, and within a radius of 2 miles of the Bowen's Park post-office I counted forty-two.

Mr. Thomas Seale, farmer, sworn and examined:—

- Mr. T. Seale.  
7 Mar., 1890.
5926. *Chairman.*] What are you? I am a farmer at Bowen's Park, 3 miles from here. I have been here seventeen years.
5927. What is the area of your holding? 480 acres.
5928. What do you do with it? I till it, and use it for agriculture, principally.
5929. Is it all cleared? No; about 120 acres.
5930. What quantity had you under crop last season? About 90 acres.
5931. Is that the largest crop you have had on it? No.
5932. What sort of crop have you had? Very good. It averages about 19 bushels. I have some statistics to hand in.
5933. Will they not be included in the statistics handed in by Mr. Schramme? Yes.
5934. Then you merely wish to confirm his statistics? Yes. There are two holdings I am not quite sure of, and I think the yield is under-estimated.
5935. Are the returns given here in some instances the actual returns of wheat? Yes. 5936.

\* NOTE (on revision).—This Mr. Burgess is, I am informed, the same gentleman who, in his evidence at Molong, is said to have stated that the land in the vicinity of the Cudal route was in every way very inferior to that *via* Molong and Parkes.

5936. Would the line from Molong to Parkes be of any benefit to you? Not in the least; the Borenore line would be much closer.
5937. How far is your land from Borenore? About 15 miles—I think it is about that distance,—it is 14 miles anyway.
5938. If this line were constructed, you would be within about 14 miles of it? Yes.
5939. Would the Cowra line be of any use to you? No; we should be nearer to Borenore.
5940. Do you think that if that line were constructed more land would be placed under cultivation than you have at present? I firmly believe that would be the case. More hay—more bulky stuff would be grown.
5941. That, of course, would be a great advantage to farmers, because if they saw that the crop was not going to be of any use for wheat they would turn it into hay? Yes.
5942. Consequently the risk in putting in a large crop would be diminished? Yes. My chief reason for advocating the Borenore line is that the country through which it passes is superior to the country on the other line.
5943. What could you profitably grow wheat for on the ground, suppose delivery were taken at your farm? We could grow it for 3s. if it were taken away from the farm. That would be a much greater profit than we derive at the present time.

Mr.  
T. Seale.  
7 Mar., 1890

Mr. John Baker, farmer, sworn and examined :—

5944. *Mr. Lee.*] How long have you resided in the district? Twelve years; I am a farmer.
5945. Where is your farm? At Bowen Park.
5946. Have you anything to add to the evidence of the last witness? I must say I would not like to grow wheat at 2s. 6d. a bushel.
5947. What would it pay to grow it at? I believe I can grow it to pay me at 3s. 6d. a bushel, and I can grow it as cheaply as any one.
5948. Supposing the buyer took delivery on the farm, what would you sell it at? I could not live at it by selling under 3s. I believe I could live at 3s. a bushel if I put in a lot.
5949. Is it a tolerably certain crop in your part? It is not a certainty, but we generally get as good a crop as any one round.
5950. How do you reckon up your crop;—you do not expect a full crop every year, I suppose? We do not get it.
5951. Do you get one crop in three years? Yes; a pretty fair crop once in three years. Last year was an exceptionally bad year, and this year is a very good one, but we lost a lot. I believe I lost fully 50 bags. I could not get it; it laid down.
5952. Is it the extreme dry weather or the extreme wet weather which does you much harm? Wheat is a crop which does not want very much rain.
5953. That being the case, how does it come about that the crop is frequently a partial failure here? Too little rain.
- 5953½. Do you suffer from rust or smut? No. On very rich land we may have a little rust, but that is all.
5954. Is your grain damaged in any way in consequence of weeds? No.
5955. Is it good milling wheat? Yes.
5956. The actual loss is in cultivation, and depends entirely on the season? Yes; I have travelled a good bit about New South Wales, and I never saw better land in my life.
5957. What market have you availed yourself of? Orange.
5958. How do you get your wheat there? By team. I sold some at Bathurst. I always deliver at Borenore, no matter where I sell.
5959. What is the distance from Bowen Park to Borenore? As we have to come round, it is 20 miles from my place. We could go nearer, but that is rotten country.
5960. Supposing a decent road were made by the most direct route possible? Then the distance would be about 14 or 15 miles.
5961. Do you ever make use of the Cowra line? No.
5962. Do you know anything of the country through which the proposed railway runs from Borenore to Forbes? Not past Toogong. I have been to Molong, but not on the proposed line from there to Parkes.
5963. Which of the two routes do you favour? This one, decidedly.
5964. For what reason? Because it would suit me, and because I think it would pay, if constructed. No doubt the population on this line is three to every one on the other line.
5965. How do you know that? From statistics; then there are the public schools to go by.
5966. Your chief reason for advocating this line is, that it would be of benefit to you? Yes; and the public also.
5967. Is there any available land for settlement in the neighbourhood of Bowen Park? I cannot say there is.
5968. Consequently, the approach of the railway will not increase the settlement? No; but it will increase the area under crop. I shall put more under crop myself.
5969. Would Borenore be the closest point at which you could touch the proposed line? No; Cudal would be about 4 miles off.
5970. You regard yourself as a resident of the Cudal District? Yes.
5971. If this line were constructed, you would be within a stone's throw of it; consequently, it would be a great and direct benefit to you? Yes.
5972. *Mr. Cox.*] What do you get for your wheat? 3s., delivered at Borenore; I send it there by my own teams.
5973. What would it cost you? If I had to pay, it would cost 4d. a bushel.
5974. That would leave 2s. 8d.? Yes.
5975. How is it that other farmers can live at 2s. 6d. a bushel? I do not know. I have my own family to take it off. I can take it off as cheaply as anyone.

Mr.  
J. Baker.  
7 Mar., 1890.

Mr.

Mr. Isaac Bates, farmer and grazier, sworn and examined:—

- Mr. Isaac Bates. 5976. *Mr. Dowel.*] Where do you live? At Sisters' Rock.  
 5977. What distance is that from Cudal? About 12 miles as the crow flies direct between here and Borenore crossways. I am within 4 miles of Borenore in one direction, and I live near a place called the Caves.  
 5978. What is your occupation? I am a farmer and grazier.  
 5979. What is the extent of your holding? 2,400 acres.  
 5980. What is the nature of the evidence you desire to give the Committee? For many years I was a carrier on the road, and as a carrier I had to travel both ways—sometimes to Forbes and sometimes to Parkes. I believe from my own personal observation that the road from Borenore, or from any part down this way—from Amaroo for instance—would go through more fertile country than through smaller holdings. It would be a shorter road if the roads were equal in everything else.  
 5981. To what place would it be shorter? Forbes.  
 5982. Would it be shorter to Parkes? Equally to Parkes, I think.  
 5983. Would you be surprised to learn that there is 11 miles less to construct on the route from Molong to Parkes, thence to Forbes, than on any other route? That may be true as far as construction goes. I was thinking of the total distance when the line was constructed. I hear people complain very much of having to pay the longer freight.  
 5984. You have a knowledge of both routes. How long is it since you were on the Parkes route? About four years.  
 5985. What was the length of your experience in that part of the country? I was travelling there a number of years.  
 5986. For how many years were you travelling on that road? About twelve, between Orange and Forbes and Molong and Parkes.  
 5987. Have you been from Parkes to Forbes? Yes.  
 5988. I suppose you did not explore the country at all? Only when I had to look for my horses. I never went out purposely to explore it.  
 5989. Did you notice that it was fairly settled upon? I noticed that it was occupied and fairly settled upon.  
 5990. What class of settlement did you notice? Selectors, chiefly, and occasionally stations.  
 5991. Had the selectors small holdings? Yes.  
 5992. Were they engaged in agricultural and pastoral pursuits? Yes.  
 5993. Do you think that the residents in that direction are entitled to railway communication? Yes; I do.  
 5994. Do you think this particular line will serve them, and that they will be benefited by it? Of course.  
 5995. You also know the Borenore route—you have travelled over it a great deal? Yes.  
 5996. Is the country over which it passes fairly settled? Yes; in some cases thickly settled.  
 5997. I suppose you think that those settlers should have a railway? Yes. Four years ago Forbes was a more flourishing town than Parkes, and the soil on the Eugowra-Parkes Road is of a richer description than the soil about Parkes. I am speaking of the soil through which the proposed line passes.  
 5998. Knowing both routes as well as you do, which do you think should be adopted in the interests of the country? It is a very grave question. I think I am giving a truthful answer to the question when I say the Cudal-Forbes line.  
 5999. Notwithstanding, you think taking into consideration the settlement of the country on the route from Molong to Parkes that the people there are entitled to a railway also? Yes.  
 6000. Have you any other information bearing on the subject you can give the Committee? Yes. I think a junction at Amaroo should be taken into consideration. There are 3½ miles of railway already constructed to that point.  
 6001. You think that is the point at which the Forbes line should leave the other line? Yes; I think that should be the starting place.  
 6002. What is the distance between Borenore and Amaroo? About 7 miles. It will shorten the line 3½ miles. A great deal of the gradient is taken off by starting from Amaroo and extending to Borenore.  
 6003. You would avoid some of the steeper grades by going round the hills? Yes.  
 6004. Do you know anything of the country between Eugowra and Parkes? No. I know the country between Murga and Parkes. I waited on the Minister with a deputation to advocate a line from German's Hill to Cudal. The line is already surveyed. The Cudal people thought the line did not come sufficiently close to them, and they threw cold water on it. I believe it would be the best route so far as population is concerned.

Mr. Patrick Ryan, farmer, sworn and examined:—

- Mr. P. Ryan. 6005. *Chairman.*] What are you? I am a farmer.  
 6006. Where do you reside? At Mousehole Creek.  
 6007. Where is that? About 1½ miles from the Boree sheep station.  
 6008. How far are you from the Borenore Station? About 11 or 12 miles.  
 6009. Do you know the route of the proposed line *via* Borenore or Cudal? I do.  
 6010. How far would that be from you? I am about 12 or 15 chains from it, measuring from the boundary of my paddock.  
 6011. Where do you take your produce now? Borenore.  
 6012. Do you grow much wheat? Some years about 1,500; others, 1,000; and others 700 bushels.  
 6013. How much have you grown this year? I had close upon 700 bushels off 30 acres. I have grown 1,200 bushels off 28 acres.  
 6014. Have you ever had a year when you have had nothing? Only last year, when no one got anything. I have taken 130 tons of hay this year off 40 acres.  
 6015. What is the lowest price at which you could grow wheat to keep yourself and family? It is hard to say, but I should think from 4s. to 4s. 6d. per bushel.  
 6016. But taking an ordinary crop could you not grow it for 2s. 6d. on the ground? I could not grow it for less than 4s. or 5s. at the lowest.

6017. How do you keep your bank account going if it costs you about 4s. to grow your wheat, and you sell it at 3s.? There would be very little money in the bank at that price. Mr. P. Ryan.
6018. One man said he put away £100 into the bank from 100 acres after paying all expenses? Some persons may be so situated that they can do that. It depends upon the family. I have been thirty-five years in the colony. I landed here in 1854. I have travelled in many places to get a home, but I do not think I could get a better one than the one I am in at present. I think the country will be a great loser, if the Government do not make the suggested railway from Borenore to Forbes, *via* Cudal. 7 Mar., 1890.

Mr. Luke Hughes, publican and farmer, sworn and examined:—

6019. *Mr. Lee.*] Where do you reside? At Cheeseman's Creek, 9 miles from Cudal, on the main road to Orange. Mr. L. Hughes.
6020. What are you? A publican and farmer.
6021. What is the nature of the evidence you desire to give? I have travelled on both routes, and I think I am in a position to judge as to which would be the better route of the two. I know only a portion of the Molong and Parkes line. 7 Mar., 1890.
6022. What is the use of your saying that you know which is the better route of the two to serve the larger number of people if you have not been along both routes? Well I know all the people about here, and the people going by my place.
6023. What traffic is there past your place? There is a great traffic past there to and from the Borenore railway station, but I never kept any account of it.
6024. How long have you kept your hotel? About fourteen years.
6025. Do you remember a time when there was less or more traffic than there is now? I remember a time when there was more traffic—that was before the Dubbo railway was opened.
6026. Has the construction of the Murrumburrah railway line taken any traffic off? Yes.
6027. If a line were constructed from Cowra to Forbes, it would take still more traffic and would interfere with your business? Yes.
6028. If the traffic was kept along this line your business would benefit? Yes.
6029. What particular advantages would accrue to your district if the Borenore line were constructed? I think it would be the better paying line—there are more people living along the route.
6030. But what data have you to go upon—how do you know? I know most of the people.
6031. Do you know most of the people living on the other line? Yes; I have not travelled the road from Molong to Meranburn, but I have travelled from Meranburn to Parkes several times. I have been about among the farms along both roads.
6032. I suppose the general opinion in this part of the country is that the Borenore line should be constructed? Yes.
6033. Local opinion is almost unanimous in that respect? Yes.
6034. Upon the good old principle of each one for himself? I do not think so.
6035. I suppose you know the wheat growing districts of the west, comprise a very large area within the immediate influence of the several suggested lines from Molong, Cowra, and Borenore—there being such an immense area to be served by one line of railway, which route do you think would serve the greater number of inhabitants? The route from Borenore *via* Cudal—there is good country on both sides of the line.
6036. From a national point of view would that line be the best? Decidedly.

Joseph Claxton, Esq., Postmaster at Cudal, sworn and examined:—

6037. *Mr. Cox.*] What position do you occupy? I am Postmaster at Cudal. J. Claxton Esq.
6038. You desire to give us some information in reference to the postal returns? Yes. The number of letters posted in 1889 amounted to 28,356, showing an excess of 1,009 on last year; the number of newspapers posted was 6,152. In the Money Order branch the amount issued was £1,707 Gs. 2d., the number of orders being 640, the amount paid upon orders was £625 10s. 1d., the number of orders being 170. The Savings Bank deposits amounted to £540 14s., the number of depositors being 147. The withdrawals amounted to £362 1s., and the number of withdrawals was 35. The telegraph returns were £96 13s. 1d., and the number of telegrams 1,630. The stamps yielded £340. I may state that when I came here two years ago we had only three bags of mail matter. Since then the correspondence has grown to such an extent that we have had to have a special bag from Sydney, making four bags. There are about 120 daily papers issued here, I think. The average rainfall has been for the last five years, 25.42 inches. The Government at the present time pay £497 to Cobb & Co. for the conveyance of mails right through to Forbes. The present year shows an increase in business, and there is every prospect of a good year before us. 7 Mar., 1890.
6039. Have you observed whether the coaching traffic is on the increase? I think so. Since the first of the year there have been fairly-loaded coaches both ways;—in fact, I think the loading delays them a little.
6040. Do you think this increase is due to the increase in settlement? Yes. I see a great number of strange faces in this district. People from Camden and down that way are coming up here.
6041. Is not a lot of your business caused by the through traffic? I do not think it. There may be an odd telegram now and again from coach passengers, but the increase I have is pretty local.
6042. *Mr. Dowel.*] Do you know the country between Eugowra and Parkes? I have been across several times.
6043. What sort of country is it? It is pretty fair.
6044. Is it level? I should call it very passable country; it is not very hilly, but there is a slight fall to the river.
6045. Do you know of any engineering difficulties in the construction of a railway? I do not think so; there is only a bridge as you come in to Parkes. I have been across several times in an open buggy; the distance is about 32 miles.
6046. If a witness at Eugowra said that the route would be impracticable for a railway his evidence would not be true? Not from what I have observed.

Mr.

Mr. Stephen Tierney, hotel-keeper, sworn and examined:—

- Mr. S. Tierney. }  
7 Mar., 1890.
6047. *Chairman.*] What are you? I am an hotel-keeper.  
6048. Where do you reside? At Keenan's Bridge, 7 miles this side of Borenore.  
6049. What is the nature of the evidence you wish to give the Committee? I will answer any question, if I can.  
6050. Have you been living at Keenan's Bridge long? About four and a-half years, and three and a-half years at Heiffer's Station, on the Forbes-road.  
6051. Do you know where the suggested line is pegged out from Borenore to Forbes? Part of the way; I know the starting-point.  
6052. Do you know where the line is marked out from your place to Borenore? Yes.  
6053. You know it has to mount a steep grade? Yes.  
6054. Do you know of your own knowledge whether by making a detour, and going any other way, that hill could be avoided? I do not know.  
6055. You know where Amaroo is? Yes.  
6056. Would a line from that point avoid the mountains? In coming from Amaroo you would have to pass the swamp at some place. By coming from Borenore you could practically avoid the swamp.  
6057. Has the traffic on the road increased or decreased lately? I can give some facts as regards the traffic up to a certain time. A good deal of the bullock-dray traffic goes down to Cowra because there is no metal on the roads there. The carrying traffic on October 5th, 1889, represented fifteen passengers; on the 16th, there were twenty-two; on the 17th, fifteen; on the 18th, eleven; on the 19th, four; on the 20th, three; on the 21st, eight; on the 22nd, eleven; and so on—the total would be 223 from the 15th October to the 2nd November inclusive. These passengers passed my residence; I put them down myself as they passed. The centre of the road is only 16 yards from my verandah. During the same time the coach ran six days a week, and from October 15th to November 2nd, the coaching traffic was 218. From the 18th February up to last night in the present year, there were 116 passengers by the coach. In the first week in March 121 teams passed, and fifty-four passengers were carried. I have never seen better traffic on a similar road, than I have seen on the Forbes Road, since I have been in the colony. I left New England in 1864, and lived as an innkeeper on the Molong-road, for some years.

Mr. Andrew George Peterson, farmer and grazier, sworn and examined:—

- Mr. A. G. Peterson. }  
7 Mar., 1890.
6058. *Mr. Lee.*] Where do you reside? At Gheewong.  
6059. How long have you been there? I have been there sixteen years; I am a farmer and grazier.  
6060. The Committee are desirous of ascertaining what it costs to produce wheat—that is the ploughing, harrowing, sewing, reaping, threshing, and bagging—could you tell us? I could tell you what it costs to produce wheat, but I could not speak as to the cost of the preparation of the land. I will give you the cost after the land is prepared. I have men to do work for me and pay for everything. Nearly everything is done by contract for me, and I keep a record. My ploughing costs 5s. per acre; the men find their own horses, their own horses food, their own food, and I find the ploughs and plough-shares. Harrowing at 1s. per stroke; twice over would be 2s. per acre; the sewing would be 3d. per acre; the seed would be 4s. an acre, and the wear and tear of ploughing would be about 6d. per acre—that makes 11s. 9d. for putting the wheat in. I now come to the harvesting—the stripping is all done by contract on a similar arrangement to that which I have mentioned. The man finds his own horses and horse food, and I find him in his own food. I pay 4s. 6d. an acre. The cleaning costs 2s. 4d. an acre, including bagging; the wages of the cook to work for the harvesters is £1 a week, or (say) 6d. an acre; the rations for six men at 1s. per head per diem, would be 10d. per acre; the wear and tear of machinery, oil, twine, and needles, I reckon at 1s. 1d. per acre, making the total cost per acre 21s.; that is what it costs me, and I am perfectly certain that the figures are correct.  
6061. You appear to have kept an accurate account of your disbursements, and you say that you have to pay for all the labour? Yes; my own labour goes for nothing in supervision. I may state that so far as carriage is concerned I pay 3d. per bushel for carriage to Molong.  
6062. Then wheat can be produced even if you have to pay for labour at 21s. per acre? Yes.  
6063. Suppose a farmer had several sons capable of assisting in farm work, could wheat not be cultivated and produced at even less than 21s. an acre? I doubt it; you see a man has to keep a family all the year round, whereas I keep my men only while the work is going on.  
6064. What is your average return? I have had from 8 to 25 bushels. My farm is 8 miles from here.  
6065. What did you have this last year? Sixteen bushels. I lost a great deal; it grew too rank and fell.  
6066. What is a fair average crop? Sixteen bushels to the acre. I am perfectly satisfied that that is as much as a man would get taking one year with another; if he gets 3s. 6d. he ought to be satisfied.  
6067. If you get 2s. 6d. a bushel for wheat on the farm, it would leave you a profit of 19s. 6d. an acre with an average of 16 bushels. Would that pay? Yes, if you were to cultivate at all. I seldom send wheat to Molong. It costs 6d. a bushel from Molong to Sydney. Wheat growing will pay right enough if it is managed properly.  
6068. *Mr. Cox.*] That is chiefly due to the use of machinery? Yes.  
6069. You use modern machinery to economise labour? Yes.  
6070. Have you used any steam ploughs? No.  
6071. Are there any cleared areas of land large enough to enable the farmers to work the steam ploughs to advantage? There would be if people would take the trouble to clean the ground thoroughly.  
6072. I suppose that will come in time? Yes, I have no doubt it will.

Mr. Ambrose Minslow, constable, sworn and examined:—

- Mr. A. Minslow. }  
7 Mar., 1890.
6073. *Mr. Cox.*] You are a constable stationed at Cudal? Yes, I have been here twelve months last October.  
6074. It is your duty every year to collect statistics? Yes, I collect the Cudal portion.  
6075. Where do you get your orders from? The collectors are appointed by this Court for this portion of the district, but the returns, when collected, are forwarded to Molong as the head station in the district.  
6076. What arrangements are made in the collection of statistics to prevent their overlapping one another—have you any charts drawn out? We follow the natural boundary.  
6077. How far towards Borenore do you go in the collection of your statistics? About 4½ miles. I do not collect Boree.

6078. So that a considerable portion of this district lying to the south of the railway line will be included in the Molong district? Yes, it is taken by the Molong police. We know where we are supposed to go and we go no further.

Mr.  
A. Minslow.  
7 Mar., 1890.

6079. So that the statistics which are said to belong to Molong would be deceptive for railway purposes, inasmuch as they include a large part of the country which properly belongs to the Cudal district? Yes. I called at places where I was told the Molong police had called on the previous day. I did not see them taking the returns, but I know that they did take them.

Mr. Peter Edward Murray, sworn and examined:—

6080. *Mr. Dowel.*] You are a resident in this district? Yes.

6081. Where do you reside? At Spring Creek, about 9 miles from Cudal.

6082. In what direction? Towards the Cargo road.

6083. Have you resided long in this district? About thirteen years.

6084. You have a good knowledge of the country? Yes.

6085. What is the nature of the evidence you desire to give to the Committee? I understood that I was desired to refer to the fact that in the collection of statistics the Molong Police took mine. They came to my place, and my neighbours also have been included in their statistics, although we consider we are in the Cudal district.

Mr.  
P. E. Murray.  
7 Mar., 1890.

Mr. William Henry Traves, farmer and grazier, sworn and examined:—

6086. *Chairman.*] What are you? I am a farmer and grazier.

6087. Where do you reside? Within 5 miles of Canowindra—on the road to Canowindra.

6088. What is the area of your holding? 560 odd acres.

6089. How much do you cultivate? I have 140 acres of timber cleared, but I cultivate only 70 acres.

6090. What evidence do you wish to give the Committee? I wish to confirm the evidence which has been given as regards the traffic coming from Canowindra this way. The principal traffic from the locality in which I live, comes this way, and always has done, so far as my knowledge goes. I myself have sent produce to Borenore, and thence to Sydney. I have sent several crops of wheat that way, and the principal farms lying to the north-east and north-west do the same.

6091. How far is it from your place to Borenore? About 35 miles.

6092. Do you know the suggested line from Borenore to Forbes? Yes.

6093. How far would you be from that line? The nearest point would be 8 or 9 miles at the furthest; that is at Long's Corner. I am giving you now only a rough calculation.

6094. Are you direct north of Canowindra? Very nearly; rather east, if anything.

6095. How far is it from your farm to Cowra? About 27 miles.

6096. Why is it that you cart your produce 35 miles to Borenore when you can cart it to Cowra in 27 miles? The market suits me better; that is why I send it this way.

6097. What market is there at Borenore? Orange and Millthorpe. I have hay at the present time which is of no use to me because the cartage will cost more than it is worth. In dry times we send away a little, principally in the western districts.

6098. Are there no farms between Canowindra and Cowra? It is scarcely populated country; but there are farms.

6099. Nothing like the number to the northward of Canowindra? No.

6100. You think the construction of this line will be of material benefit to you? Yes.

6101. Would not a line from Cowra, through Canowindra, to Eugowra suit you better? It would be 5 miles away from me.

6102. But would it not suit you better than the Borenore line? If it were constructed, I dare say it might.

6103. Putting on one side all personal feeling in the matter, which line would serve the greater number of people—the line from Cowra or the line from Borenore? As far as my knowledge and opinion goes, the line surveyed through here would benefit not only the larger number of persons in the district, but the country at large—I believe it is the nearest route to Sydney, and that it would be the least expensive as far as cartage is concerned. The people at Nyrang Creek would be benefited by the line at Borenore.

6104. But would they not be benefited by the line from Cowra? Equally well, I suppose.

6105. *Mr. Dowel.*] Do you know the mineral resources of this district? No; but I know there are some mineral claims at Cargo.

Mr.  
W. H. Traves.  
7 Mar., 1890.

FRIDAY, 7 MARCH, 1890.

[The Sectional Committee met at the Club House Hotel, Orange, at 8 p.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Alfred Underwood Alley, manager at Orange, for Wright, Heaton, & Co., sworn, and examined:—

6106. *Chairman.*] The Committee have been informed that you desire to make a statement with reference to the traffic between this district and Parkes and Forbes. They will be glad to hear anything you have to say, but they have already taken a great deal of evidence, and must request you to be as brief as possible. I believe you are manager for Wright, Heaton, & Co., forwarding agents at Orange? I am.

6107. Will you please make any statement you may desire to make? I have been constantly travelling between Molong and Parkes from 1870 to 1874. I know the district thoroughly along the proposed route from Molong to Parkes at a distance of 10 miles at each side of the road. I have also been 70 miles below

Mr.  
A. U. Alley.  
7 Mar., 1890.

Mr.  
A. U. Alley.  
7 Mar., 1890.

below Parkes, *via* Bogan Gate, and Troff's Station. The land, I consider, from Molong, for a distance of about 13 miles, to Meranburn, on the main route to Parkes, is of good quality, but from there to within about 5 miles of Parkes, I consider it is of very inferior quality. This bad land consists of stony and ironbark ridges, and the timber is, in my opinion, of inferior quality for railway sleepers. I resided in Parkes for over two years, and although the land around about there is of fair average quality, it is not nearly as fertile as the land about Cudal. I know the land from Parkes to the Troughs Station, and do not consider it is good agricultural land, the country being badly watered, and more suitable for grazing purposes than farming. I have travelled from Orange, *via* Borenore, Cudal, and thence to Eugowra and Forbes, scores of times, and I am intimately acquainted with the country for miles on each side of the proposed route. I think the land from Borenore to Toogong is admirably suited for farming, especially for wheat-growing. Cudal is a very rising township, situated in the centre, without doubt of the best agricultural land in the Colony. The district is thickly studded for miles with *bona fide* settlers. By the line going *via* Cudal it would tap a very large area of the finest wheat-growing land in New South Wales, especially about Cargo, Davis' Plains, and Canowindra. The land from Toogong to Eugowra is patchy, and is not so well adapted to agricultural as to grazing purposes. From Forbes to Condobolin, on both the south and north side of the River Lachlan, if the land, which is of very fine quality, were irrigated, it would yield very heavy crops of wheat, maize, lucerne, and fruits of all kinds. As far as Euabolong, on the same route, 40 miles below Condobolin, the whole of the land is taken up by squatters and selectors, but it is more suitable for grazing purposes. A large extent of country around Condobolin is good agricultural land. Taking into consideration the very superior quality of the land on the Borenore-Forbes route and the much larger population, I unhesitatingly state from my intimate knowledge of both routes, that the Borenore-Cudal-Forbes line would pay better than a line of railway from Molong to Parkes. I have travelled from Forbes to Grenfell through Cowra. The land from Grenfell to within about 10 miles of Cowra is of very inferior quality, being very mountainous and rocky. It is the poorest country I ever travelled over in these colonies. Regarding the traffic between Borenore, *via* Cudal, thence to Forbes and Condobolin, and from Molong to Parkes from 1877, when Orange was a railway terminus, as manager for Wright, Heaton, & Co., I forwarded the whole of the goods to the above mentioned places, and received the whole of the wool and copper from the various stations on the proposed rival routes, and I have no hesitation in saying, after examining the firm's books, that it took fully four times as many teams to deliver the goods which came by rail from Sydney to Orange to their destination on the proposed Cudal-Forbes route, as it did to deliver the goods *via* Molong and Parkes, clearly showing that the Cudal-Forbes railway route will pay better than the Molong to Parkes line. The returns given by Mr. W. H. Moulder at the inquiry held by you at Orange, *re* the two routes including the tonnage of goods and quantity of wool, copper, hides, &c., I wish now to corroborate. The returns were supplied by me; I got them from the books of the firm.

MONDAY, 10 MARCH, 1890.

[The Sectional Committee met at the Court-house, Cowra, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Dennis M'Cartie, Senior-sergeant of Police, sworn and examined:—

Mr.  
D. M'Cartie.  
10 Mar., 1890.

6108. *Chairman.*] What is your position? I am a senior-sergeant of police.

6109. Have you been here long? About 14 years.

6110. You have some statistics to place before the Committee? Yes; I will read them. The acreage under wheat is 13,749 acres.

6111. To what area do these statistics apply—I suppose you have made Cowra the centre? Yes; we have gone to a radius of 15 miles.

6112. Then your district does not reach to Canowindra? It goes to the Belabula River.

6113. We have already statistics from Canowindra—do you think your statistics and those gathered at Canowindra, will clash? Very likely; a good many are included in mine on this side of the river.

6114. This is the difficulty we have had to contend with all through at almost every place where statistics have been handed in to us, we have found them overlapping; consequently they have been of little or no value, because we have had a repetition of the same statistics over and over again. If some system had been adopted in the collection of statistics whereby they would not have overlapped they would have been very valuable evidence;—your statistics are collected, I presume, on behalf of the Government? Yes.

6115. If you could have managed to get similar officers to meet you outside your district your evidence would be very valuable, but as matters stand it is of little value? We have nothing to do with the private statistics which are taken.

6116. *Mr. Cox.*] Does your district extend right away to the Molong electorate? Yes.

6117. When you gather your statistics you go as far as Molong? To the boundary.

6118. Consequently, the Police collecting statistics at Molong would not overlap you? No.

6119. The statistics gathered by the Police would be in that respect reliable? Yes.

6120. Will you read the totals of the statistics you have gathered? I have already given you the acreage under wheat. The yield in bushels was 269,988; the acreage under oats yielded 1,800 tons of hay. There were also 400 acres under oats which gave 12,000 bushels. Five hundred acres of corn yielded 5,000 bushels. There are 3,297 horses, 7,042 cattle, 254,526 sheep, and 1,711 pigs.

6121. Are the whole of these statistics within a radius of 15 miles of the place; or are the homesteads only within that distance, and do the statistics apply beyond? The average would be 15 miles. In the direction of Canowindra we go 18 miles, but in other directions 12 or 13, so that I take the average to be about 15 miles.

6122.

6122. These statistics are gathered within the police district of Cowra? Not properly speaking. It is the police district less a small portion of our district which is included in the Molong land and electoral district, and which therefore goes into the Molong statistics.
6123. The Molong police would collect that? Yes.
6124. Are the total returns of cattle, sheep, and horses the total returns from all the land in your portion? Yes.
6125. On leasehold areas, conditional leases, selections, and so on? Yes; the whole. There is no cultivation on the leasehold areas, of course.
6126. Do you collect the electoral rolls of this district? Yes, with assistance.
6127. Did you collect them for this year? Yes.
6128. Is there an increase or decrease upon last year? An increase; but it is a very small one.
6129. In the statistics we received from the Canowindra Railway League we found Mr. Hamilton Osborne set down for 29,000 acres;—how far from Canowindra does his land extend, coming this way? About 6 miles this way.
6130. Consequently you would include some of this land in your returns? Yes; I go to the Belabula River and that would include him.
6131. Then the 29,000 acres will be included in both statistics? Yes.
6132. Sloane is quite close to Cowra? The land is quite close, but the homestead is about 12 miles distant.
6133. If that were included in the Canowindra statistics it would be unfair, as it really belongs to Cowra? Yes.
6134. The only two which should not come in appear to be Sloane and Osborne? Yes; but they hold a very large area between them. The electoral roll last year numbered 1299, and this year it numbers 1391.
6135. What class of people are comprised in the increase? Farmers principally.
6136. Has any land been thrown open to selection here lately? No; not much.
6137. Is there much land available for selection here, do you know? At the present time there is not much available land in the district; it is monopolised by leases.
6138. Then how do these men get their farms;—are they renting them? No; they are freehold.
6139. Then the land must have been available for some time, but has been only lately taken up? The holders have sold out to Victorian farmers who have come in. A lot of persons have come from Victoria, and have settled in this district.
6140. Do you see much progress in the place during the last two or three years? Yes; since the railway came here, principally.
6141. Would not that be accounted for principally through more business being done with the rest in the shape of traffic owing to the presence of the railway station? It is principally owing to our connection with the main trunk lines.

Mr.  
D. M'Cartie.  
10 Mar., 1890.

Beilby Kemp, Esq., Clerk of Petty Sessions and Land Agent, sworn and examined:—

6142. *Mr. Lee.*] What is your position? I am Clerk of Petty Sessions and Land Agent at Cowra.
6143. How long have you been here? I was appointed in September, 1887.
6144. Have you been in any portion of this district before you came here? No; I have not.
6145. Could you give the Committee any information as to the alienation which has taken place in your land district since the commencement of the Land Act of 1884? 33,834 acres have been alienated under the Act of 1884. The previous alienation was 189,176 acres. These figures are approximately correct.
6146. Do these returns comprise the conditional leasehold, or do they apply to land alienated by auction? That is simply conditional purchase from 1884 to 1889 inclusive. There seems to have been very little land sold by auction. The area I have given is the area applied for by conditional purchasers up to date.
6147. Have you any idea of the extent of the conditional leaseholds? I could not tell you to-day, but I could furnish the information to-morrow.
6148. Do you know the acreage of the pastoral leaseholds in the district? No; I do not.
6149. Do you notice in the transactions of your office that many transfers are made? A good many, but most to the banks.
6150. Chiefly by way of mortgage? Yes; there are not many in any other way.
6151. What would that lead you to infer? I should infer that persons wanted the money, and transferred by way of mortgage to get temporary assistance.
6152. Would it lead you to suppose that land has been held by them on behalf of capitalists? No, I do not think so.
6153. I suppose you could form a pretty correct idea as to whether there had been much dummieing going on in the district? I should not think very much. I know of none at present.
6154. If a number of transfers were made to large pastoral tenants what would you think then? I might have my doubts then, but I have had none of those in my time.
6155. So far as you can judge the settlement by way of conditional purchase in this neighbourhood has been *bona fide*? Yes, as far as I can judge. Of course my experience is very limited.
6156. You have not been brought very much into contact with the settlers by reason of your short residence? Exactly.
6157. If there had been much dummieing under the new Act, however, it would have come to your knowledge? Yes.
6158. Do you happen to know whether the improvements on the conditional purchases are made in accordance with law? Yes; so far the declarations are coming in to that effect.
6159. I presume the Land Board sits there occasionally? Yes, once in every two months.
6160. And the declarations are made before you? Yes, as a rule.
6161. Your opinion is that the country here has been settled upon in a fair and legitimate manner? Yes; I think so.
6162. Do you happen to know whether there are a large proportion of Crown Lands still within your district? Yes, I believe there are.
6163. How are they held at the present time? Under leasehold area and in reserves.
6164. You do not know the acreage? No.

B. Kemp,  
Esq.  
10 Mar., 1890.

- B. Kemp, Esq.  
10 Mar., 1890.
6165. Do you know the acreage of the reserves? No.  
6166. Do you know anything about the reserves? There are some large reserves.  
6167. Could you name them? No, I could not.  
6168. What is the largest reserve? Some thousands of acres, but I could not give you the exact area.  
6169. On which runs are these reserves? I could not say now, but I could let you know later on.  
6170. Personally you know nothing of the country between here and Canowindra? No.  
6171. When do the pastoral leases fall in in this district? I am informed that a great part fall in at the end of June; this is in the Eastern Division.  
6172. Are there any inquiries for land on the part of small settlers? Yes, both personally and by letter.  
6173. By many persons outside the colony as well as in the district? As a rule they do not give me their names, so I could not say.  
6174. Is it generally supposed that when these leaseholds fall in they will be selected? It is.  
6175. Consequently there will be a large addition to the population? Yes.  
6176. Is there a railway reserve in your district? I could not tell you now.  
6177. Can you tell me the returns in cash from land from the year 1884 up to the year 1889? I can let you know that presently.  
6178. You know nothing about the returns furnished by the Police Department? No.  
6179. Or of the population of the town? No.

Mr. Richard Sim, jun., Inspector of Conditional Purchases in the Cowra District, sworn and examined:—

- Mr. R. Sim, junr.  
10 Mar., 1890.
6180. *Mr. Cox.*] What is your position? I am Inspector of Conditional Purchases in the Cowra District.  
6181. How long have you been residing here? Five years.  
6182. Has much selection taken place within the last five years? Yes; nearly the whole of the district has been taken up, with the exception of the reserves and leaseholds.  
6183. There is no land now suitable for selection, except that on the reserves and leaseholds? No.  
6184. Will any large area of leasehold land fall in this year? That I am unable to state; a good quantity will fall in, I know, but I could not say how much.  
6185. Could you not tell us approximately? I could not.  
6186. On what runs chiefly are there any large areas of Crown lands? On Warrangong and Neila. On those two runs alone there is a very large area.  
6187. I suppose a rush will be made for this land directly it is thrown open for selection? Yes, they are making most of the reserves into special areas.  
6188. What price do the Government put on these special areas? From 30s. to £2 10s. an acre.  
6189. And the land is readily taken up at that price? Not at £2 10s. There is one special area out here which has been standing at £2 10s. for two or three years.  
6190. Do you know of any private land being sold in the neighbourhood of Cowra lately, and at what price it was sold? Farms have realized from 30s. to £2 per acre.  
6191. Selected land? Yes; improved farms.  
6192. Consequently the price of £2 10s. which the Government have put upon unimproved special areas appears to be rather in excess of their value? Yes, a little; that is the reason they have not been taken up. There is another drawback. The land requires water; it is necessary that water should be conserved on these areas, and that requires rather too big an outlay for the selectors.  
6193. On this red soil it is difficult to conserve water? No; they can conserve it by excavation; but they are not all prepared to go in for it. There is so much else to do when people take up land.  
6194. In the future, however, there can be very little selection except that which takes place on the leasehold areas and reserves? Yes.  
6195. Do you know much of the farming in the neighbourhood? I know nearly the whole of it.  
6196. Do you think the farming would increase largely if the facilities for getting the produce to market were greater? Yes.  
6197. Has cultivation increased materially since the railway was opened to Cowra? Yes; and very much since I have been here within the last five years.  
6198. Where in this district are the chief farms situated—on the bank of a river? Between here and Canowindra, and between here and Carcoar, on the eastern side of the Lachlan River, chiefly. There are a good many farms also between here and Young, towards Bang-Bang.  
6199. Do you know the Government surveyed route for a railway between this place and Forbes? No.  
6200. Is there any other information you wish to give to the Committee? I cannot remember that there is; I might add, perhaps, that most of the country between here and Canowindra is fit for agriculture. A very small portion of it is hilly and unfit for agriculture; the whole of it could be put under cultivation.  
6201. Where is the boundary of your district north? The Belabula.  
6202. And towards Forbes? Goolagong, Kangarooie, and Broula Range.  
6203. Has much dummying been carried on in this district? There has been a certain amount.  
6204. Of course that is put a stop to by the present Act? I do not know that it is; in fact I am sure that it is not. Most of the selections, however, have been *bona fide*. In a dry season men take up the land with sufficient money to secure it, but not sufficient to carry them over a bad season, and they have to sell out; that is why there have been so many transfers. Until two years ago we had dry seasons here. The drawback has been that men have settled on the land without sufficient capital.  
6205. Is the land which has been selected devoted to pasture or to agriculture? To both.  
6206. What is the average area of the selections which have been taken up within the last three or four years? Many additional selections have been taken up. I should say the holdings would average from 400 to 500 acres.  
6207. Sufficient land has been taken up to permit of the combination of pastoral with agricultural pursuits? Yes. The selectors take up a small area in the first place, and then add to it.  
6208. Until the leasehold areas fall in, there will be little opportunity for any one to select? Very little; in fact a lot of persons are waiting to select, and are inquiring for land every day.  
6209. Have applications been made to throw open some of the reserves for selection? That I cannot say.

John

John Vigar Bartlett, Esq., Superintendent of Roads in the Cowra district, sworn and examined:—

6210. *Mr. Dowel.*] What is your position here? I am Superintendent of Roads in this district.

6211. How long have you resided here? Since 8th December, 1884.

6212. You have a considerable knowledge of the district? Yes.

6213. Extending how far? From Carcoar to Lake Cowal, and from Bigga to Eugowra. Those are the boundaries of my district.

6214. Can you give the Committee any information with regard to the rival routes of railway? I cannot comparatively, because I have not travelled the route from Molong, or that from Borenore to Forbes.

6215. Do you know what is known as Thornbury's route? Not without seeing the map.

6216. Do you know the Canowindra route? Yes; I am conversant with that, and with the whole of the country intervening between this place and Eugowra.

6217. You have observed the character of the country, and the class of settlement existing on that particular route? I have. The route *via* Binni Creek to Canowindra is about the most densely populated in this district. That is outside of the towns.

6218. Are the holdings large or small? They are not large. They vary from a little over 100 to 300 or 400 acres. Some have more. There is a little stony country intervening, but the principal portion of the land is well adapted to agricultural purposes.

6219. Does the settlement strike you as being of a permanent character? Yes. There have been a few changes, but those who have purchased from the original selectors were for the most part strangers. A great many Victorians come here. They purchase the land, and seldom part with it once they get hold of it.

6220. To what use is it put? Agriculture and grazing combined.

6221–2. Have you noticed during your residence any increase in the population in this district? The town itself has more than doubled. There are great signs of improvement, there are more houses. All the recent buildings are well built, and of a permanent character.

6223. Is the town of Canowindra surrounded by large estates? The township surveyed by the Department is about three quarters of a mile on the south side of the Belabula, but there has been a private subdivision.

6224. Is it not a fact, however, that Canowindra is surrounded by large estates? Only on two sides are there large estates, Hamilton Osborne's Bangaroo property running down the Belabula towards the Lachlan is the largest estate, and he has one or two paddocks about 3 miles out from the township. That is the principle large holding there is in the vicinity. Mr. Smith of Mogong has some property there, but he is about 7 miles away. There is a property of about 2,000 or 3,000 acres belonging to Mr. Foot, and there is Mr. Rice's place, but with those exceptions the place is thickly studded with farms for miles round.

6225. Where is the private township of Canowindra? The Government township is on this side of Belabula on the south side. When you ascend from the river you meet the private township. Belmore is away towards Cargo.

6226. On whose estate was the private township? On no estate in particular. The suburban land was sold some time ago, and people subdivided and cut up their farms, because the Government were late in giving them a township. They made a township in fact.

6227. That is on the north side of the river? Yes.

6228. Are there any engineering difficulties on the line as sketched out on the map before you? I have not been over the respective allotments with this plan or a similar one in my hand, but from my knowledge of the country I am in a position to state that there are no engineering difficulties whatever in the way of constructing a line of railway. Either of these two routes might be constructed. I would not confine myself to their exact position to within a quarter of a mile.

6229. Knowing the country as you do, and the class of settlement which exists, do you think it is advisable to construct a railway by either of these two routes shown on the map? I say it is the only place where a railway should be constructed. I have no private interest to serve. I do not hold an acre of the land. I am a bird of passage. I am here to-day, but I may be away next week. The country on the other side of Canowindra, towards Eugowra, should be opened up, and there is no way of opening it up except by a line of railway from here to Forbes.

6230. You think it is a good class of country, and that the nature of the settlement would justify the Government in constructing a railway by one of the suggested routes? Undoubtedly.

6231. Would the construction of either of these lines relieve the Government of the construction of any road, or lessen the road expenditure of the Department? Undoubtedly it would, for instance there is a large traffic now on the road between here and Forbes, and it is said that that road is a disgrace to our Department—that is a matter of opinion—but the heavy traffic, on an unmade road, coming up the valley of the Lachlan, is so great, that after a slight rainfall, owing to the sticky nature of the soil, it is impossible to get through with a load. Often when travelling on that road, during the wool season, I have passed between Goolagong and Cowra twenty-seven wool teams.

6232. As a professional man, competent to form an opinion, you recommend that the railway should be constructed on the ground of economy as well as upon other grounds? Yes. It would not only be a saving to our Department but on a commercial basis the railway should be constructed, because it would be the means of making traffic, and avoiding loss on other lines. The wool traffic is not only from Forbes to this place, but from 150 miles below Forbes, away beyond Condobolin, right out west—that all comes this way. When passing along the road I have frequently noticed new names on bales of wool. I like to see where it comes from. I mention this to show that I am acquainted with the places sending their wool this way.

6233. You have not been past Condobolin, and on to Wilcannia and Menindie? No; I have not.

6234. Do you know Young? Yes.

6235. Are you aware that a line of railway is suggested from Young to Forbes? I heard that there was a suggestion to make a junction about 5 or 6 miles out from Young, and to extend a railway from there through Grenfell to Forbes—that proposal was made, I believe, three or four years ago.

6236. Do you know the country traversed by that proposed line? I am not very conversant with the country between Young and Grenfell. I have only travelled along it by the coach.

6237. But you know the country to a certain extent? Yes.

J. V. Bartlett,  
Esq.

10 Mar., 1890.

J. V. Bartlett, Esq., 6238. Have you observed the country sufficiently to warrant you in making a choice between that line and the line from Cowra through Canowindra? I would certainly recommend the construction of this line in preference to the other for more than one reason. I would recommend this line as a national work because it strikes the loop-line at its centre, and a great deal of the produce sent from these districts does not find a market in Sydney exclusively; a good deal of it is sold in Victoria. Hundreds of trucks run down with stock to Victoria. I have seen seven or eight specials a day starting with cattle for Victoria. If a line is made from Young it means an extra haulage of about 40 odd miles to Sydney; although, of course, the line would be available for the southern traffic. If you strike the cross-line at Cowra both markets are on a level footing. Looking at the map, and calculating the distance, the line I suggest would be a part of a design of a national system of railways.

10 Mar., 1890.

6239. Is not Young nearer the southern markets? That is true, but it would be further to get supplies from Sydney. I think there is a difference of over 33 miles—that is between Forbes and Sydney *via* Young and Forbes and Sydney *via* Cowra.

6240. Is there any further information you would like to give to the Committee? You might like to know the traffic over the Cowra Bridge. This is a copy of a return I have made. The principal portion of this traffic is, of course, on the Forbes line—that is the heavy traffic; the other is purely local.

6241. Would the construction of a railway from Cowra to Canowindra involve your Department in much expense in the construction of feeders to the railway? No; the roads already existing would act as feeders. There would be no additional expense because we should be relieved of all the expense of the through traffic; that would more than compensate for the making of short cuts to stations along the line. There is a lot of unsold land at Eugowra, and the rainfall on the other side of the Belabula is much greater than it is here. It is a splendid district for agricultural produce.

6242. *Mr. Lee.*] What is the annual Road Vote for this district? A little over £10,000, irrespective of bridges.

6243. You mentioned just now that much of the traffic coming here was from the Forbes district and from the valley of the Lachlan, beyond Forbes; you must remember that we are now considering a proposal to construct a line of railway from Molong to Parkes and Forbes. Suppose the country determines to construct that line would not a great portion of the Condobolin traffic go to Forbes and thence to Molong? Not on the left bank of the river. All the country intervening between there and Grenfell would never go that way.

6244. Would it not be closer for many who send to Cowra now to send to Forbes? Yes; a certain portion of that country would be cut off; they might take a few miles over the left bank, and the rest of the traffic would come here, as it does now.

6245. So that the traffic to Cowra from the western country at present is no criterion of what it might be if a line of railway touched Forbes from some other point? Of course railways always supersede roads and divert the traffic.

6246. Suppose the country were to consider it advisable to construct a railway to Forbes from this cross-line, which do you think, in the interests of the country, would be the best starting point? The cheapest and best line, I think, would be from Cowra, because it can be so easily constructed. If the railway started lower down, at the Sheet of Bark for instance, two stations would be necessary owing to the position of the place. The Government would be scarcely likely to make two stations there; and if they did not do so, all the southern traffic must run on to Woodstock. There would thus be an overlapping for some considerable distance.

6247. But the bend made in the loop-line to get down to Woodstock would naturally be nearer in connection with Eugowra? It would make a slight difference, but what would be gained in one instance would be lost in the other.

6248. What is the distance from Cowra railway station to Woodstock? Twelve miles.

6249. The difference in haulage would be 12 miles so far as the southern market is concerned? Yes; there would be a difference of 2 miles in favour of the Sydney traffic, but there would be considerably more for the Victorian trip. It would be about 10 miles against 2.

John James Richards, Esq., Post and Telegraph Master at Cowra, sworn and examined:—

J. J. Richards, Esq., 6250. *Mr. Lee.*] What is your position? I am Post and Telegraph Master at Cowra. I have been in charge of the office eight years.

6251. Could you furnish the Committee with any statistical information as to the work in the several branches of your department? The amount of money received at the post office for money orders and Savings Bank deposits for the three years, 1887, 1888, and 1889, was £22,650 10s. 9d.; the amount paid out in the same department in the same years was £11,263 16s. 2d.; the amount received for telegrams for the same period was £1,353 9s. 9d. There were posted in 1889, 200,000 letters, 19,000 packets, and 40,000 papers. The stamps sold for 1889 amounted to £1,188 10s.; the excise duty on beer stamps for 1889 was £109 15s. 9d. I can give you some particulars as to the rainfall. In 1886 it rained 88 days, and the total rainfall was 30·81 inches; in 1887 it rained 110 days, and the total rainfall was 42·42 inches; in 1888 it rained 63 days, and the total rainfall was 16·79 inches; in 1889 it rained 79 days, and the total rainfall was 27·23 inches, or an average of 29¼ inches per year.

10 Mar., 1890.

6252. Has the general business in your office for the year 1889 shown an increase or a decrease? There has been an increase during the last eight years. It has been gradual, but the business done at the present time is just five times as great as it was when I took charge of the office.

6253. Has there been any alteration in the despatch of mails from Cowra since the opening of the railway? No; there have been no alterations. The mails continue as they did before. Of course the railway brought extra mail matter through this place which previously did not come this way.

6254. Since the railway touched Cowra, has there been a larger amount of mail matter sent here for distribution to various places? Yes; it comes here now because the route is quicker.

6255. That would account in some measure for the increase in your department? Not for the increase of letters. The record of letters taken is for letters actually posted in the town. The letters which passed through are not included in the return.

6256. Has it been your duty to keep a record of the flood levels? No.

Mr.

Mr. John Grant, grazier, sworn and examined :—

6257. *Chairman.*] What are you? I am a grazier.
6258. Where is your holding? About 5 miles on the other side of Canowindra.
6259. What is the name of it? Belabula.
6260. And the area? About 20,000 acres.
6261. What do you do with it—is there any under cultivation? About 200 acres under hay, wheat, and corn.
6262. Is that the largest area you have had under cultivation at one time? I have never had more.
6263. Do you grow any lucerne? Yes; in addition to that 200 acres, I have about 300 acres of lucerne.
6264. What is your average yield of wheat? From 25 to 30 bushels.
6265. How many years have you had wheat in? I do not sow every year. I do not sell any wheat. I grow it for my own consumption.
6266. You have had it in in good seasons, I suppose? Yes.
6267. You had not a crop in in 1888, I suppose? Yes; I got about 10 bushels, I think.
6268. Taking that into consideration, what would your average be? From 25 to 30 bushels.
6269. What has been your maximum return then? 40 bushels through the whole crop.
6270. What yield of hay have you had? About 2 tons—that is oaten hay.
6271. Does the lucerne thrive? Yes; it is on the bank of the creek.
6272. How many sheep have you? 20,000.
6273. What do you estimate that your run is capable of carrying? I do not think it is capable of carrying more on the average than 1 sheep to the acre. I have 500 cattle, and 300 horses.
6274. Do you know the route of the proposed line from Cowra to Forbes through Canowindra? Yes.
6275. Would it go through your property? No.
6276. Of course it would serve you very well—better, in fact, than any other line? Yes; I suppose it would.
6277. But would the construction of the line lead you to utilize your property to any greater advantage—would you give better returns; that is, would you carry more sheep to the acre, or put more land under crop? I should have my produce nearer market. The ground could not produce more than it is producing unless more were put under agriculture. Any of the land is fit for agriculture, and it is quite possible that if I had railway communication I might increase the area under cultivation.
6278. Have you any idea at what price you could profitably grow wheat on the ground, supposing delivery were taken at your station? For about 4s.
6279. If you could not grow it under 4s., you would be confined to the local market, because, on account of the carriage, you would never get your price. You think that if you did not get 4s. it would not pay you to grow it? It might pay to grow it at about 3s., but not less.
6280. Are all the men round you large holders? No; there are a great many selectors there.
6281. Have they taken up any of your run? Yes.
6282. How are they doing? Very well as farmers; some of them have stock.
6283. What is about the size of their holdings? They nearly all hold 640 acres.
6284. There are none of them, I suppose, with more than 100 acres under cultivation? Some have more. Some of them take their wheat to Cowra, and some of them take it to Cudal.
6285. Do you know the country to the north of Canowindra, between this and Cudal? Yes; it is all good agricultural land.
6286. How far to the north of Canowindra would people be served by the construction of this line from Cowra to Forbes? For about 10 or 12 miles.
6287. Would that reach to Cudal? Very nearly.
6288. Would the line from Molong to Parkes and Forbes serve you in any way? Not at all.
6289. You would be nearer to this railway—that is, the existing railway—than to that line? Yes; a great deal nearer.
6290. Supposing a line were constructed from Borenore, *via* Cudal and Eugowra, to Forbes, would not that serve you? Yes; but not better than this line.
6291. But you would be only 2 or 3 miles away from the line? There would be 2 or 3 miles difference in the distance to the station, if there were a station to Canowindra, and I suppose there would be.
6292. Do you think the construction of either of these lines would induce the selectors in your locality to grow more produce for the market? I have no doubt it would.
6293. Which pays you best, growing sheep or growing wheat? Growing sheep.
6294. Then it is not likely that you will grow wheat for the benefit of the country, when you can benefit yourself more by growing sheep? I do not think so.
6295. And will not that apply to other persons? I suppose they will grow what pays them best. It might pay some men who do the whole of their own cultivation to grow wheat; it would not pay me to grow it, although it might pay a person with a large family to do so.
6296. Have you any idea of the number of small holdings round Canowindra in towards Mogong? There are a good many that way.
6297. Is there not some unalienated land about Mogong? A good bit. It is good agricultural land.
6298. Why is it left unalienated? It is under lease.
6299. Is there not a lot of it that is not under lease? I do not think so. There are some mountains on the other side of Mogong.
6300. *Mr. Cox.*] You say that sheep-growing pays you better than cultivation? Yes.
6301. And yet you grow from 25 to 30 bushels per acre? Yes.
6302. At what price can you sell it on the average? I could not get 3s. a bushel for it now. I have never sold wheat.
6303. Suppose you get 3s. a bushel, and an average of 25 bushels, that would be £3 15s. an acre;—how much would it cost you to cultivate? Over £1 an acre.
6304. That leaves £2 15s. an acre profit? Yes.
6305. How many sheep do you keep to the acre? On the river bank, eight or nine, or even ten.
6306. That is on lucerne ground? No; it is on thistle.
6307. You mean the broad-leaved thistle? Yes.
6308. Keeping eight sheep to the acre, I suppose you would clear about 4s. a sheep? 5s.

Mr.  
J. Grant.  
10 Mar., 1890.

- Mr. J. Grant.  
10 Mar., 1890.
6309. That would be £2, but with cultivation you would clear £2 15s.? The cultivation is very risky, although a man with a family could carry it on pretty well, I suppose.
6310. Clearly, cultivating your land leaves you a greater profit than you get from growing wool? It might pay a man with a family to cultivate, but it would not pay a man who had to employ labour.

Arthur Henry Costin, Esq., Post and Telegraph Master at Canowindra, sworn and examined:—

- A. H. Costin, Esq.  
10 Mar., 1890.
6311. *Mr. Cox.*] What is your position? I am Post and Telegraph Master at Canowindra.
6312. How long have you resided there? For the last six years.
6313. Have you any statistics to show the working of your department? Yes; I have the Postmaster-General's Report for 1885, and also his report for 1888. The report for 1889 is not yet published. I therefore drew up a report from my own books. The number of letters posted at Canowindra during the year 1885 was 13,368; the number of telegraph messages sent was 1,158; the number of money orders issued was 474, representing £1,379 13s. 11d.; the money orders paid numbered 51, representing £179 9s. 6d.; the revenue from the sale of postage stamps was £170 15s.; the revenue received for telegrams transmitted was £67 7s. 6d., the total revenue being £238 2s. 6d.; the savings bank deposits amounted to £152 5s. 6d. In 1889 the number of letters posted was 33,224; the number of telegraph messages transmitted was 2,376; the money orders issued numbered 503, representing £1,274 3s. 4d.; the money orders paid numbered 107, representing £410 7s. 3d.; the postal revenue was £280, and the telegraph revenue was £107 13s., making a total of £387 13s.; the savings bank deposits amounted to £103 16s. 9d. The increase, taking one year with another, is £149 11s. 6d. That is the increase in the actual revenue between the two years. During the year 1889 a branch of the Commercial Bank opened, and that interfered with our revenue.
6314. Has the increase been gradual from 1885 to 1889? Yes; and it is still increasing.
6315. Do you keep the rain gauge? I do.
6316. What has been the average during the last eight years? I have kept the record for the last five years, and it would give an average of about 26 inches to the year.
6317. Is there much passenger traffic through Canowindra? Not very much at present, there appears to be an increase though, every year, in the number of passengers.
6318. What size mail vehicle runs from Canowindra to Forbes? There is no direct coach from Canowindra to Forbes; the letters go by coach to Orange, Woodstock, and Cowra railway stations, a rather roundabout way.
6319. So that the only direct route is between Cowra and Forbes, not calling at Canowindra? Yes; because there is no coach running on the road from Canowindra to Forbes.
6320. You have no direct communication with Forbes? No, except by road. Of course there is a main road, Canowindra to Forbes, but it is not a mail line.
6321. Is there any other information you desire to give to the Committee? I merely wish to state that the population appears to be increasing in the neighbourhood of Canowindra.
6322. Both in the town and in the country? Yes; more particularly in the town.
6323. I suppose there is not very much land open for selection outside the town now? There are several reserves on the proposed line from Cowra to Forbes. Between Canowindra and Eugowra, on each side, there is a travelling stock reserve half a mile in width; that, of course, cannot be selected, but it would be snapped up immediately if it were available.
6324. I presume there will be a fair amount of good land on the leasehold areas to be thrown open? Yes.
6325. And that will add materially to the population when the time arrives? Yes. I may mention that there is a water reserve adjoining the town. Efforts have been made to get it cut up into allotments. Inasmuch as there is a great demand for land in the town and no land is available, application has been made to the Government to have the reserve cut up.
6326. Do you reside in the Government town or in the private town? With the exception of a few houses, the Government town is not settled upon at all. I am in the private town—all the Government buildings are in the private town.
6327. What sort of town is Belmore? It is about 1½ miles from Canowindra, in the direction of Orange; it is a village—there is a flour mill, however, and a few gold-mines are in operation.
6328. Have you a flour mill in Canowindra? No; the mill at Belmore serves the whole Canowindra district.

Mr. William Robinson, commission agent, sworn and examined:—

- Mr. W. Robinson.  
10 Mar., 1890.
6329. *Mr. Dowel.*] Where do you reside? At Canowindra.
6330. How long have you resided there? Thirty-eight years.
6331. You have an extensive knowledge of the district? I should have, I think, considering the time I have been in it.
6332. You know all the country through which the proposed railway would be constructed? Yes; I know the three lines from Molong, from Borenore, and from Cowra. I know nearly every tree on the three lines.
6333. What is your occupation? I am a commission agent. Formerly I used to own a place just opposite to the Government township. I sold it to Mr. Foote some fourteen years ago.
6334. Do you know the railway route known as Thornbury's route? Yes.
6335. Do you know the route known as Cummings'? No.
6336. Does the route to which you refer pass through Canowindra, or does it leave it 3 miles away? I mean the Townsend route.
6337. What is the class of country that Cummings' route passes through? I have travelled all the colonies, and if we are referring to the same route, I do not think there can be better land in any part of New South Wales or Queensland. The quality of the soil is exceedingly good.
6338. Is the settlement in large or small holdings? There are some large holdings and a great many small ones—from 60 acres up to 640 acres.
6339. Do the small holdings appear to be of a permanent character? Yes.
6340. You do not think they are likely to revert to the pastoral tenant? I do not think so.
6341. Do you think they represent *bona fide* settlement? Yes.

6342.

6342. How do these settlers chiefly employ the land? They are nearly all both grain-growers and sheep-farmers.
6343. And they all appear to be in a thriving condition? Yes; so far as one can see. My business gives me a pretty good acquaintance with the district all round, what with buying and selling to the different people.
6344. In the event of one of these lines being constructed by the Government, do you think it is likely that any considerable amount of traffic would be brought to the railway? A great deal will come from the Lower Lachlan and that part of the country.
6345. What are the principal centres of population within 10 miles of the route which would be served by the railway? The district of Canowindra, very nearly as far as Cudal, would be served by it. Up as far as Barrigan the district is thickly populated. There is a net-work of farms from Canowindra to Barrigan. Then it would also serve the people down the Belabula River as far as Goolagong.
6346. Are there many transactions in stock taking place in Canowindra? Yes.
6347. Do you think they would afford any traffic to the railway? Yes. People have now to send either to Orange or to this place to truck their stock. They have to send here if they are going to the southern markets, and to Orange for the Sydney market.
6348. A great deal of the stock to which you now refer would be trucked at Canowindra? Yes.
6349. And it would not have to come to Cowra over the bridge as it does at the present time? No.
6350. As a stock agent, has it come to your knowledge that any losses of stock have occurred on this bridge? Yes. Not a very long while ago some sheep were killed on the bridge.
6351. You say you have a knowledge of the proposed route from Molong to Parkes and Forbes? Yes.
6352. Do you know anything of the country to the north of that line? Yes; and I have been west as far as Cobar and Wilcannia, and down the Lachlan as far as Hay.
6353. Is the country to the north of the line of a good or bad description? I should not say it is good. It is a very sandy and granity country; nothing like the country between here and Eugowra.
6354. Do you know if it is settled upon? I have not been there for a number of years.
6355. How many? Twelve years.
6356. Would you be surprised to hear that all that country is settled upon at the present time? I have heard so.
6357. Do you know anything of the country at Young? Not a great deal.
6358. You do not know the proposed railway route from Young? I have often been across from Young to Forbes through Grenfell, but I do not know where the route is surveyed.
6359. But you know the class of country the railway would pass through? Yes.
6360. Knowing all these routes, which, in your opinion, would be the best for the Government to construct for the convenience of the largest number of persons, and having regard to the character of the country? Speaking without prejudice, I think the line starting from Cowra would be by far the best.
6361. You feel certain that a considerable amount of revenue would be returned by that line if it were constructed? I do.
6362. Can you give the Committee any information as regards the village of Canowindra;—does it appear to be increasing? Very much within the last three years.
6363. Has the land increased in value? Yes, a great deal.
6364. Is all the available land in the district occupied at the present time? It is all occupied, with the exception of a temporary common and the travelling stock route from Canowindra to Eugowra. All the Crown land available is occupied.
6365. Supposing a fairly improved farm were to come into the market, what would it realize per acre? I have a reserve of £2 10s. per acre asked on improved farms. I have several large holdings of from 300 up to 1,000 acres at that price. I have others down as low as 30s., but they are merely fenced and grazing paddocks. The other paddocks are cleared and cultivated.
6366. Generally speaking, you think that the town and district are improving and increasing in number? Yes.
6367. And that the settlement is of a *bona fide* character? Yes.
6368. Is there any other information that you wish to give to the Committee? No.

Mr. George West Hardie Dry, commission agent, sworn and examined:—

6369. *Mr. Lee.*] Where do you reside? At Belmore, near Canowindra.
6370. What is your occupation? I am a commission agent.
6371. What is the nature of the evidence you wish to give to the Committee—have you any returns prepared? I collected the statistics for Canowindra a short time ago.
6372. You collected and compiled them? Yes.
6373. Before you started collecting them, had you any arrangement with the Railway League at Cudal or at Forbes, with regard to the districts you would severally collect? There was a tacit understanding that each would collect within a certain distance of their own place.
6374. Are you aware that the statistics supplied from Canowindra include a large number of statistics supplied from Cowra? That may be, but the statistics we gathered are solely within the radius to which we were confined, that is 12 miles on each side of Canowindra, on the Eugowra and Cowra lines.
6375. Are you aware that the Cudal statistics include a large number of yours? No; I am not.
6376. We find in going through the various districts that no arrangement has been made between the collectors, and that in nearly every instance, one district has encroached on the other, rendering your detailed statistics utterly valueless? The statistics furnished by the Canowindra League were the first compiled, and were strictly within the distance I have named. Copies were sent to Cowra and Forbes. It was intimated also through the press, that certain arrangements had been made, so that the other districts must be fully cognizant of where we had been—any encroachment must have been made by the other collectors.
6377. The other districts claim certain areas which appear to be at variance with yours—can you give us a revised list showing us the exact number of persons within your boundaries? The number on the list you already have, are within our distance. I hardly see how we can make any revision.
6378. But you all claim certain persons, so that somebody must be wrong? There may be an apparent discrepancy, arising from the size of the holdings, in some instances. Some of them go a considerable distance back from the water boundary, but the holders named in the statistics I furnished are correct.

6379.

Mr.  
W. Robinson.  
10 Mar., 1890.

Mr.  
G. W. H. Dry.  
10 Mar., 1890.

- Mr. G. W. H. Dry.  
10 Mar., 1890.
6379. Have you taken an active part in forwarding this railway movement? I naturally feel interested in the question.
6380. Which particular route do your people advocate? From Cowra to Forbes, through Canowindra and Eugowra.
6381. For what reason? It is a cheap and easy route—then there is the population, and the superior character of the country, to be considered.
6382. The line is much closer to Canowindra than the others? Undoubtedly, but it will be a good route for other places besides? Goolagong and Cargo will also benefit by it.
6383. But the chief reason why you advocate the line is, that it will be a greater benefit to Canowindra than any of the other lines? It will benefit not only Canowindra, but the country all along the route.
6384. How far is Canowindra from Cowra? Twenty miles.
6385. How far is Cargo from Canowindra? About 12 miles.
6386. Do you know the district of Parkes? I am not well acquainted with it. I do not know the settlement to the north of that place at all.
6387. Do you know the population at Garra and Manildra? No.
6388. How far is Parkes from Cowra? Close upon 70 miles.
6389. You are aware that it is the intention of the Government to construct a railway into these districts by a route which will suit the greatest number of persons. You know also that such a railway cannot be taken to every man's door, hence the necessity arises for arriving at some point, which will benefit the greatest number. Taking that wide view of the question, are you of opinion that a line from Cowra to Canowindra and Forbes would benefit the greatest number of people in these districts? It will, on account of the Southern line. I think it is in a more central position, and people having stock which they desire to send to the south will have more convenient, and better travelling.
6390. Considering that you are already within 20 miles of a railway station and that the people to the north of Parkes are 60 or 70 miles from a railway, do you think it would be a national policy to give you another line within a few miles of Canowindra and to leave the other settlers unserved? Of course this line would be of great benefit to us; but we are not the only people to be considered—there are so many in the district entitled to consideration.
6391. As a matter of fact, you think that this line will benefit Canowindra—perhaps during the course of construction and perhaps after the line is constructed? It will benefit the whole of the district.
6392. But more particularly Canowindra? Yes.
6393. Since you are already within 20 miles of a railway would not the Government be justified in bringing other persons within 20 miles of that means of communication? Yes, if their resources warrant it.
6394. But you say that you are not conversant with their resources? No.
6395. You appear to know the immediate surroundings of Canowindra, but you do not know the enormous area and the very large population which the Government are anxious to serve by a railway. From a national point of view, which would be the best line to lay down the valley of the Lachlan? I think the Cowra line would be the best line to tap it, on account of the facilities for getting to the Southern market.
6396. Suppose the line were constructed *via* Canowindra, what traffic would your district supply? Stock, grain, and passengers. There is any amount of population there. At Canowindra itself there is a population of about 400. Within a mile of the town there is a population of 246. At Belmore, about 1½ miles distant, there are about 154. Then there is the mining population.
6397. These people are storekeepers and others, and their families living in the town? Yes. Of course the mines at Belmore employ a great number of men. There are about 40 men employed on the mines there. The returns from there lately, gave about 2,600 oz. of gold.
6398. What are the names of the mines? The Blue Jacket, and Hayes Reef. There are banks there, of course.
6399. You referred just now to stock traffic; this is, of course, a large stock district; but are you aware that the Railway Commissioners consider the stock traffic a dead loss to them? I did not know that. I supposed everything would pay, unless under loose management.
6400. They reckon that the stock traffic is of no value; they reckon that it costs them 5s. per train mile both ways, so that very little is to be derived from that traffic. What other traffic would your district supply? Well, the country is specially suited to the growth of grain.
6401. Where is the grain likely to go to? Undoubtedly, it will go to the best market.
6402. Where is that likely to be? If the demand is on the Victorian line it will go that way; if it is in Sydney it will go there.
6403. Is not the western country more likely to be a market for you? Sydney, I think, would take the bulk of the grain from here.
6404. What freight would you be able to pay from Canowindra to Sydney? I do not know about that.
6405. I mean to make wheat-growing a profitable industry? I do not know—I have not dealt much in it myself.
6406. Wheat, you are aware, is carried at a low rate? Yes, I know; but I cannot say what it is. I have no hesitation in saying that if the travelling stock reserve beyond Canowindra was thrown open for sale it would help to pay a great deal of the expenditure, and would at the same time give great returns to the railway. To give you an instance—about a month ago, something like 1,800 acres of this reserve were thrown open, towards Eugowra—that land was immediately rushed, and the people had to ballot for it.
6407. Is there any pastoral holding in your locality? Mr. Osborne, Grant, and Smith.
6408. Is there any leasehold in connection with it? Yes, there is.
6409. That lease will fall in this year? Yes.
6410. Is there any large area of land on that run which would be available for settlement when the lease falls in? Yes; but I do not know what the exact area is.
6411. Has any farm land changed hands lately in your district? Yes.
6412. At what price—take a conditional purchase, for instance, at five years; what would it be worth per acre? Some will ask £3 10s. and £2 10s.
6413. But at what price did the land change hands? That depends upon the improvements; some are only temporarily improved; some would change hands at £3, some at £2 10s., and some at 30s.
6414. Belmore and Canowindra are very close together? Yes; that is owing to the mines. Belmore is a mining township, and there is a flour-mill there. I may mention that there is a branch of the Commercial Bank at Canowindra.

6415. How many hotels are there? Two; and there is another in course of erection. There is no hotel at Belmore; there was one there at one time, but it was burnt down and has not been rebuilt.

6416. *Mr. Cox.*] Have you taken the trouble to find out what the probable receipts of a railway would be, presuming that one were constructed from Cowra to Forbes? No; I have not gone into that matter.

6417. The line will probably cost about £330,000; the annual interest would be £12,000; and the permanent way and other expenses would amount to about £10,000 per annum. Would there be sufficient traffic on this line to pay £22,000 a year? I believe there would. The country through which the line passes is very good, and there is plenty of material near the railway which could be utilized in construction.

6418. You think there would be sufficient traffic—wool and grain one way, and goods the other—to pay this large amount of money? Yes.

Mr.  
G.W.H. Dry.  
10 Mar., 1890.

Mr. John Bates, Railway Stationmaster at Cowra, sworn and examined:—

6419. *Chairman.*] What is your position? I am Stationmaster at Cowra.

6420. How long have you been on the railway here? About a fortnight.

6421. Have you any returns of railway revenue? Yes. I can give you the returns for 1888 and 1889; that is the earnings of the Cowra railway station for those years. In 1888 there were 4,491 passengers, the amount of coaching was £4,070 19s. 11d., the outward tonnage was 4,579 tons 13 cwt., the total inward tonnage was 4,773 tons 19 cwt. 6 qr., the total amount paid, and to pay, on goods in and out, was £14,566 6s. 8d., the number of bales of wool was 13,481, and the number of bags of wheat 2,773. The coaching and goods earnings amounted to £18,587 6s. 8d. The wool receipts, averaging the bales at 4 cwt., would be 2,696 tons 4 cwt., at £2 18s. 8d., giving a total of £7,708 17s. 1d. The receipts less stock would be £26,396 3s. 9d. In 1889 there were 4,416 passengers, the amount of coaching revenue was £4,121 13s. 2d., the outward tonnage amounted to 5,133 tons 5 cwt. and 2 qr., the inward tonnage amounted to 6,403 tons 4 cwt. 2 qr.; the total amount paid, and to pay, on goods in and out, was £17,033 14s. 11d., the number of bales of wool carried was 18,589, and the number of bags of wheat 3,223; the total of the coaching and goods earnings was £21,265 0s. 1d.; the wool receipts were, on 3,717 tons 12 cwt., £10,904 19s. 4d., making the receipts less stock, £32,169 19s. 9d. The total of the goods and coaching receipts for the month ending 31st January 1890, was £5,152 12s. 9d.

Mr. J. Bates.  
10 Mar., 1890.

6422. In regard to the passenger returns would that be money taken at your office for passages to Sydney? It would mean passengers, parcels, and horse and dog carriage.

6423. It has nothing to do with passengers coming to Sydney? Nothing whatever.

6424. Is the sum of £17,033 the amount actually taken for goods at your station? That is the total both ways.

6425. Could you give us a comparison between the inward and outward loading; would it be equal or would there be a great difference either way? Not so many goods go away, as come in, excepting in the wool season.

6426. Do you think, taking the year through, that the returns would be about equal? We should receive more than would be due on the trainage of the goods sent away, because wool and grain would be carried at a cheaper rate.

6427. So that if we take one half that would be a fair return from this office? I think fully two-thirds would be revenue returned for goods coming in, because of the difference in trainage. Grain is carried at a very cheap rate in comparison with goods, and so is wool.

6428. Have you noticed any marked increase in the passenger returns on this line? There does not appear to be much increase between 1888 and 1889; there is a good increase in wheat, that is on account of the drought of the previous year. There is also an increase in the wool, that is attributable to the same cause.

6429. Have you much stock trucked here? Not since I have been here.

6430. The stock returns are not shown in this paper? No.

6431. Where are your trucking yards? About 300 yards on the other side of the station.

6432. You have been across the river? To the other end of the bridge.

6433. Is there not a better position for trucking stock at the other end of the bridge than down here? Any place away from the town would be better than where the yards now are.

6434. Do you think a better position could be found on the other side of the bridge? It would be better for the townspeople, as the cattle would not have to come through the town. It would be better for the stock also.

6435. The principal part of the stock comes from that direction? Yes; it is always inconvenient to have stock coming through the town.

6436. Where were you stationed before you came here? At Nevertire.

6437. Did much stock come through your station, from Bourke for Melbourne? There was a large traffic in live stock last year, running night and day. Seventeen engines have been in the yard on one day.

6438. Do you know Young? I have been through it.

6439. Supposing a line were constructed from Young through Grenfell and Forbes, to Parkes, and from thence to Dubbo, would that intercept the stock traffic that comes round by Blayney? Most decidedly it would. A great deal of the traffic through here comes from Dubbo, and from the west of Dubbo.

6440. Then the Young line would be a great stock line? Yes, for the Melbourne market. Pretty well all the stock loaded at Nevertire last year, was for Melbourne.

6441. Have any representations been made by the sheep owners in the Lachlan Valley as to the inconvenience of sending sheep across a narrow bridge to the trucking yards? Not that I know of. I have seen no record of it.

6442. Have you heard of any losses through the use of this narrow bridge for stock? No. I have been through the books at the station, and I have not come across any complaints.

6443. You hand in, as an appendix, a statement showing the earnings of the Cowra railway station for the years 1888 and 1889, and other particulars? Yes.

Mr. Robert Rice, sworn and further examined:—

Mr. R. Rice. [6441. *Chairman.*] I believe you wish to make some additions to the evidence you gave at Eugowra? I desire to say that there are thousands of acres of land on the Belabula River suitable for irrigation. I have tried it on a small scale, and I intend to go in for it largely, and I know others who have the same intention. We shall be able to grow any amount of produce, to afford traffic for the railway. Mr. Grant has many thousands of acres of black land, suitable for irrigation. I grow 90 bushels of corn to the acre in favourable seasons, without any irrigation whatever. No doubt in a few years there will be a number of irrigation plants on the Belabula River, there being water and good soil. I think there has been some misunderstanding as to the estimated cost of the proposed railway.

Mr. Dennis Cornelius Joseph Donnelly, storekeeper and miller, sworn and examined:—

Mr. D. C. J. Donnelly. [6445. *Mr. Cox.*] What is your occupation? I am a storekeeper and miller.  
 6446. How long have you been resident at Cowra? Twelve years. I have been in the district longer than that, but in the town of Cowra twelve years.  
 6447. Are you well acquainted with the district? Yes; I have been, during that period, and before it.  
 6448. Does your knowledge of the country extend right away north and north-west towards Cudal? My knowledge of the Cudal district would warrant me in giving you the evidence you require in connection with it. It is many years since I passed over the track; it was all open country then.  
 6449. What have you to say with reference to the Cowra district? When I first came to Cowra there were three stores, and a very small number of houses. At the present time, as you can see for yourselves, there are a great number of stores, and the population during the interval has increased wonderfully. To give you some idea of the increase in population, I can refer you to the fact of our not having a medical man nearer than Carcoar for some time. At the present time there are two medical men, three undertakers, and we even support a sexton. In the period I have named we have also built a substantial hospital, and I am proud to say that it is entirely out of debt, and has a good substantial balance to its credit, although it is nearly continuously full. There was only one bank when I came to Cowra—the Joint Stock—we have three here now. The court business, when I came here, was conducted in a small room, in what is called the lock-up. The building in which you are now sitting has since been built. A gaol has also been built. This is also a town where the Quarter Sessions and District Court are held. As to the post and telegraph office, when I came here it was a little caboose next to the first public-house, as you go down the street. You have seen the new office which has been built, even that office is too small for the public convenience here. In regard to churches, when I came here a little brick place on the right-hand side of the road did service for the various congregations. There was one small Roman Catholic Church. Since that time we have had a new Church of England, there is a Wesleyan Church in course of erection, there is a large Catholic Church, and also a convent. We have a Roman Catholic school, the attendance at which is nearly 100. I do not know what the attendance at the Public School is. My own children, I educate in my own house. I have often counted the children leaving the convent school, and I have noticed that there have been from 75 to 100.  
 6450. What is the population? There are about 1,400 or 1,500 persons on the roll in the police district of Cowra;—that, of course, would indicate a much larger population.  
 6451. That would not include Canowindra? No. I might add that the character of the land in this neighbourhood is exceedingly good; so much so, that a very wet season would not be as profitable to the growers here as a comparatively dry one. In a moderate season the head of the wheat is full and the stalk is short. After an extraordinary fall of rain the crop is not always so good. In the twelve years I have been here, we have had one bad season caused by drought, and another by excessive rain. These are the only two seasons in which we have not had a fair and prosperous yield of wheat in the district. We should have had a splendid yield in the year 1887, but the rain destroyed it.  
 6452. *Chairman.*] What quality of wheat is grown? It is excellent. No better wheat is grown in any part of the colony, with the exception of the Bathurst Plains wheat. I think the wheat is as good as any I have ever seen. It is very much superior to the New Zealand wheat.  
 6453. What quantity of wheat do you purchase in a year? I have had nearly as much as 20,000 bushels of wheat on hand at one time.  
 6454. What is the present price of wheat at Cowra? 3s. 2d. for good wheat. You must take this into consideration—that if we have a line of railway to Forbes, and it were extended beyond that to Wilcannia and to Broken Hill, then the valley of the Lachlan would be an immense territory for the supply of the people of Broken Hill, instead of their going to Adelaide for their supply. Instead of sending our produce against the stream, as at present, we would be going with the stream. Now we are entirely ruled by the Sydney market. If wheat is worth 3s. 7d. in Sydney it is only worth as much less here as would cover the freight from here to Sydney. If we were sending wheat the other way, its natural course, it would be worth plus the freight between here and Sydney. Thus instead of being 3s. 2d. here it would be 3s. 7d., 3s. 8d., or even more.  
 6455. So that the extension of the railway westward, would be far more advantageous than the present railway eastward, to the metropolis? Decidedly. We have sufficient good soil and resources to feed millions of people. The river land is admirably adapted to the growth of corn, vegetables, and fruit. The undulations on the river are splendid for wheat-growing, there are good clay soils.  
 6456. Have you ever made a calculation of the cost of growing wheat? No, but I think persons growing wheat in this or in any other district, should be placed in possession of easy command of a good market to recompense them for the great toil expended in its production. I have known settlers from early dawn to all hours of the night, struggling to clear the land. Sometimes wheat has been brought in here and I have bought it at 2s. 3d. I am sure that it could not have been grown for that money. Since the railway has been opened here there has, of course, been an improvement. I would also advocate this line, not so much for the benefit of the people of this town and district as for the benefit of the people of Forbes and to the west. As a large consignor of wheat, my experience is that the southern market is better than the east. We sent a lot to Sydney this year, but in the other years Wagga, Goulburn, and markets in that direction take a good deal—that is the surplus. If Forbes had a surplus, as she will have in time, she would be equi-distant from the two systems of railway, and would be able to send her produce to either market—to the most suitable at the time.

6457.

6457. From what you say, cultivation must have materially increased since the railway came here? Very much. When the people began to take up land, they were under the impression that a railway would be built; it assisted in inducing persons to take up land, and since its completion it has assisted them to grow more wheat. Mr. D. C. J. Donnelly.

10 Mar., 1890.

6458. Are they still clearing their land? Yes, and such large proprietors as Mr. Sloane and Mr. Alford must be able to count their wheat by the thousand bags this season.

6459. The reduced rate for the carriage of wheat I suppose has also been of material assistance? It does not always bring about that result, but it has been better on the present occasion. It often happens that the consumer gets the benefit of the reduction. On this occasion the farmer is getting the entire benefit of the reduction—that is so far as this season has gone. Another matter I wish to refer to is the stock traffic. A short time ago this railway was continually kept going with specials taking stock to the Victorian market. A great deal of it came from the far west, and I need hardly point out that the carriage of this stock round from Forbes to Parkes, Parkes to Molong, Molong to Orange, Orange to Blayney, and Blayney to this place, would involve a great deal of unnecessary knocking about. The direct line across to Cowra would avoid all that, and there would be a great saving of freight. The cost of construction would be very low, and there are no engineering difficulties to be surmounted, with the exception of one bridge over the Belabula, and I do not know that that would be at all difficult in construction. I might also mention that the difference in altitude, between this place and Forbes, is only 100 feet, so that the grades would be very simple. Our elevation is only 900 feet above the waters of Port Jackson. I exhibit a sample of wheat, of which I bought 1,773 bushels. It was grown just beyond the cemetery, about 5 miles from Cowra, on the Canowindra-road.

6460. *Mr. Cox.*] Now as to the returns of traffic going through here, I presume a good deal of traffic over the railway to Cowra still goes through Eugowra to Borenore? A good deal of the traffic does go from beyond Forbes, and Forbes itself to Borenore. I know this year a premium has been offered by Wright, Heaton, & Co. to carriers taking loading that way. That is, a greater amount was paid for carriage given to teams going to Borenore than to teams going to Cowra, in proportion to the distance.

6461. What reason would there be for that;—is there less haulage afterwards from Borenore, than there would be from Cowra to Sydney? I could not say. This is a matter which has come to my own knowledge. I should think that the distance from Borenore to Sydney would not be much shorter than from here. There is another thing which has militated against the traffic coming this way. Very heavy wool teams have been led to believe that the bridge would not carry their weights across, and they have been afraid to come this way.

6462. In other districts it is said that you have no metalled roads to hurt the bullocks feet, and that is the reason they come this way, although it is further? Some excuse is given for everything which is done. A great deal of the loading this way is brought by horse teams, therefore the excuse about the hurting of the bullocks feet does not apply.

6463. Is there more open land for turning out teams on this road than on the other road? Yes; there are some good openings for turning out teams, also for bullocks. There is driftway all the way along for the accommodation of stock, and that can be used by teamsters. I was about to refer to the resources of the district independently of agriculture and pasture. I might say that we have iron ores in abundance here. We have some of the richest iron ore to be found in any part of the world in very large quantities distributed over a considerable surface. We have also some silver bearing lodes. We have both silver and gold. For miles from here you can trace copper any where. I have no doubt, but that in the course of a short time some first-class copper mines will be found in this neighbourhood. Milburn Creek is the nearest. There is one mine which has been partially worked about 8 miles from this town, and it is now being inspected with a view to its being reopened. I have had considerable experience in mining myself. I commenced mining the year before gold was discovered in New South Wales, and from that experience I can safely say that richer or finer iron ore is not likely to be found in any part of Australia than you can find here. I will now refer to some statistics as to the earnings of the railway. In 1887 the earnings of the railway were £16,026 16s. 10d. The total during the last two years including that sum is £31,452 7s. 1d. The difference between the two sums would give you the earnings for the last two years.

6464. What are the items? The passengers outward for the years 1888 and 1889 were 8,907, the goods inward amounted to 11,177 tons 3 cwt. 2 qrs., the goods outward to 9,712 tons 18 cwt. 2 qrs., the wool to 32,070 bales, or about 6,413 tons 14 cwt. The wheat in 1889 amounted to 3,223 bags. The live stock traffic for 1888 and 1889, inwards and outwards, was as follows:—Horses, 292; cattle, 2954; sheep, 85,166; pigs, 3,671.

6465. *Chairman.*] There is a great difference between your return of wheat and the return given by the station-master;—are your returns copied from the books? I believe they are copied from the books. For 1890, the passengers, up to the end of January, numbered 618; the goods outwards were 1,859 tons 0 cwt. 2 qrs., and the goods inwards 509 tons 10 cwt. and 3 qrs. The wool amounted to 1,974 bales, or 394 tons 16 cwt. There were 13,210 bags of wheat, and the earnings for the month were £5,152 12s. 9d.

6466. *Mr. Cox.*] The members of this Committee have seen nearly the whole of these routes with the exception of that between here and Eugowra;—what kind of country is it between these two places? I have never passed over it. I have been from Canowindra to Cargo, but not to Eugowra.

6467. *Chairman.*] I think you stated that a line constructed from here to the west would be of a great deal more consequence to this district than the railway constructed eastward? I think a line constructed from here to bring this district in touch with the large consuming district of Broken Hill, will be a great advantage, not only to this district, but to every district along the valley of the Lachlan.

6468. Did you not state that a line westward would be of more importance to this district than a line eastward? I do not recollect it; but if you mean the line to Sydney, it would be because in sending produce to Sydney, you are sending against the stream, whereas in sending it the other way, you are with the stream.

6469. Would you have made that same statement if you had not a line from Sydney to this place;—would you prefer a line to the west, to a line from this place to Sydney? I should prefer a line most suitable to the circumstances surrounding it. If you put that question to me before the railway had been here, my answer would be guided by the surroundings, I might say "No," or I might say "Yes." At the time of the railway being made here, there was no Broken Hill.

6470. But supposing Broken Hill had been in existence, you would advocate communication with Sydney

- Mr. D. C. J. Sydney before communication with any town in the extreme west? It is necessary to be brought into contact with Sydney, of course. It would be necessary to have a line to Sydney as well as the other one.
6471. But is not the line to Sydney of more importance than the line westward? I thought so at the time. If we had no line to bring us in touch with Sydney and other places, a railway to Wilcannia would not be so good for the public at large as would a line to Sydney. Locally speaking a railway from here to Broken Hill would be of more advantage, because when goods come into Sydney at low figures, New Zealand wheat and chaff, for instance, they could not be brought over the Blue Mountains, to compete with us here; that, however, would be a very selfish view to take of the matter.
6472. Do you grow enough in this district for your own consumption? Last year we did not; we had to import.
6473. As a rule you grow more than you require? Decidedly.
6474. Where is your usual market? The best markets I have had for wheat have been on the southern railway system. I have sent a lot of wheat to Goulburn and to other places along that line. This year there has been a demand from various quarters along the southern line, as well as at Bathurst. All the mills at Bathurst have been buying, and several speculators in Sydney have also been buying.
6475. Have you sent much of your wheat from here to Forbes? Yes, very largely.
6476. Regularly? Not regularly. I have not sent much for the last three or four years, but up to that time it was quite a regular thing for the Forbes millers to come down here, buying wheat. I have purchased a great quantity for them. I might add that prior to the opening of the western railway to Nyngan and those places, Forbes was in a better position than it has since been in. The whole of the country as far as Cobar and Mount Hope, was supplied through Forbes. Hence they were glad to get produce from any quarter for distribution. The opening of the line to Nyngan took away some of their back trade, so that they do not do as much in the distributing line, as they did before.
6477. Putting aside all personal feeling and interest in the matter, which do you think would be the most suitable line to construct for the benefit of the greatest number of people? I have not the slightest personal feeling in the matter. I am certain that the line itself for several years would not benefit me in any way—on the contrary, it would militate against my business. A good deal of my present business would go through in the train, but I do say this—that the district round about would benefit immensely from a railway. Anything which opens up a market for a producing district, must be of help and benefit to it.
6478. *Mr. Dowel.*] Do you hold any official position in this town? The only position I hold, is that of an alderman and magistrate of the territory.
6479. Can you give the Committee any information as to the value of the ratable property in this town? I could not do that.
6480. Could you give us the amount of the rates collected? Not at this moment.
6481. To what do you attribute the progress and prosperity of the town? To the free selection round here, during the last ten or twelve years.
6482. If this line were constructed from Cowra to Forbes, do you think some of the settlers to whom you refer, would contribute any considerable amount of revenue to it? I am positive of it. Before this line was opened to Blayney, the coach often started without a passenger. I have often travelled the whole distance without a companion.
6483. Is the passenger traffic between Cowra and Forbes considerable? No. I was speaking of the traffic between Cowra and Blayney. As soon as a railway is formed, and facilities are given to passengers to come, they will come fast enough.
6484. The passenger traffic to Forbes at present is not very large? No; but the passenger traffic between here and Forbes, is equal to the traffic between here and Blayney, when I first came to this town.
6485. Are the coaches well filled with passengers? There is a daily coach from here, and I do not know whether it is often full or not—they generally have passengers in them.
6486. This is a very considerable wheat-growing district? Yes; and the area under wheat is increasing every year—the ground is very suitable for the growth of wheat.
6487. How many threshing-machines are there in the district? At present only two.
6488. I suppose a large number of strippers are used? Nearly every farmer has a stripper.
6489. You spoke just now of the mineral resources of the district—how many men are employed in this district working in connection with minerals? Not many. I could not say how many. Some are working upon the river in a small way, some are working out at the Battery, Burrowa River. A few men are working at Broula. There would be a greater number, but at present they are waiting for the Prospecting Board to come out and see if any assistance should be given. The bulk of the men engaged in mining, will be found at Canowindra.
6490. You say there are large deposits of iron here? Yes. As it stands at present, it is impossible to work it. In the first place, there is an indisposition on the part of the people to undertake such an occupation; in the second place, the difficulty in getting up the furnaces is great; and thirdly, the cheap rate at which iron can be brought here from other parts of the world, prevents persons from going into such a speculation. To my mind, however, the day is not far distant, when the mines will not only be profitably worked, but when they will employ a large number of hands.
6491. Do you know the surveyed routes known as Cumming's and Thornbury's? Yes; I know them as far as Canowindra.
6492. What is the nearest point to either of those routes at which these deposits of iron ore would be found? So far as they have been discovered, about 9 or 10 miles, but they may prove a great deal closer than that, if they are further developed.
6493. I suppose there has been considerable discussion here about these rival routes? Yes.
6494. Has any expression of public opinion been given on the subject? At public meetings.
6495. What has it been? A committee was appointed at a public meeting to collect funds to pay Mr. Thornbury and other expenses in connection with the survey. I think Mr. Thornbury was paid by the inhabitants, but I am not sure.
6496. What route was favoured at the meeting to which you refer? Mr. Thornbury's at that meeting, but subsequently another meeting was held, at which Cummings' route was advocated, and it was shown that the grades could be reduced, without lengthening the line very materially.
6497. Do you know any of the route from Young, through Forbes, to Grenfell? I know the country from the Weddin Mountains to Forbes.

6498. Having a general knowledge of these three routes, which, in your opinion, would be the most advantageous for the Government to construct? The line to be constructed for the benefit of the whole population is, I think, from here to Forbes—it goes through a fertile valley; it is easy of construction; there is plenty of material at hand, and it opens a large tract of country already well populated. I think these are reasons enough.

Mr. D. C. J.  
Donnelly.  
10 Mar., 1890

6499. A large amount of traffic would be brought to the railway by persons settled along that route? Yes; I think so.

Mr. Ivie James Sloane, grazier, sworn and examined:—

6500. *Mr. Cox.*] What are you? I am a grazier.

6501. You reside in the vicinity of Cowra? Within 12 miles of it.

6502. Have you a large area of freehold? About 27,000 acres.

6503. Have you any leasehold? No. I have two reserves but no leaseholds.

6504. Consequently, no portion of your run can be taken up in the present year? No.

6505. What are the reserves on your run? One is a water reserve, and the other is a camping reserve, but it is not on the main road.

6506. What is the name of your run? The Homestead is North Logan.

6507. Do you cultivate? Yes. I cultivated 300 acres last year.

6508. What crop had you? All wheat last year.

6509. Have you much laid down in lucerne? None at all.

6510. Do you not find lucerne a profitable crop, on the banks of the river? No doubt it is, but I have not tried it. I intend to try it this year.

6511. Have you heard of persons keeping as much as eight sheep to the acre, on the land here? No; but I have kept ten for six months. I have kept five all the year round, on river flats.

6512. On the natural grasses? On thistle flats.

6513. We had evidence this morning to the effect that as many as eight sheep to the acre were being kept on thistles on the flats here? I daresay they could be. I had ten to the acre for six months, and they came off fat, they were not removed on account of the scarcity of food, in fact, after they were removed, five sheep to the acre were left on the land.

6514. How long have you been cultivating the soil? Since the railway came, chiefly—not much before.

6515. Have you found it profitable? Yes.

6516. What is about your average yield of wheat? I reckon about 15 bushels.

6517. This year I presume you had a heavy crop? Yes; up to 40 bushels.

6518. What was the average this year? The late crops were cut up with the rust. That reduced the average a good deal. I suppose it would be about 26 bushels.

6519. In 1888 what average had you? 12½ bushels.

6520. There are some half dozen or more freeholds of about the same area as yours, in this district—are there not, Campbell's, Osborne's, and Grant's, for instance? About four or five, I think.

6521. I suppose there is no dummieing in this neighbourhood? I can only speak for myself.

6522. Were these freeholds chiefly obtained by improvement purchases at auction? That is how I had to buy mine principally. Of course I bought out a great many selectors. The selectors whom I bought out were, however, *bona fide*.

6523. What is the value of selected land in this district? I think they are getting about £2 10s. There is a certain amount still to be paid up. There is generally 10s. to 12s. to pay, but it is first class agricultural land.

6524. Taking the whole of this country together, how many sheep will it keep to the acre? Speaking for myself I am running a breeding ewe and a half to the acre. I run two dry sheep—that is on the flat land.

6525. Is that a fair average of the capabilities of this country? I think so—that is on the flat land of course—not going into the hilly country. All the improved land is capable of carrying that amount of stock.

6526. Do you know the country to the north, towards Cudal and Borenore? I have been through there.

6527. Do you know the line staked out from Borenore, through Cudal, to Eugowra? No.

6528. Do you know the line from Molong to Parkes and Forbes? I have been along a part of that line but not through the whole way. The biggest part of the traffic comes here, in preference to Borenore. I know that from the teamsters themselves.

6529. They have macadamized roads and you have bush roads? The carriers bring the goods here, and pay the extra trainage rather than go to Borenore.

6530. Does that apply to horse as well as to bullock teams? I have heard the owners of both sorts of teams say so.

6531. Then there is no truth in the evidence given elsewhere that the bullock teams all come here on account of the softer road, and on account of there being more accommodation for the bullocks while the horse teams went the other way along the macadamized road? I could not say that a large proportion of horse teams come along this road.

6532. You know the country between this point and Eugowra? Yes.

6533. Is it a favourable country for railway construction? I do not think there is any obstacle, excepting the crossing of the Belabula. The ground is slightly undulating, but it is not difficult country to get through.

6534. From your knowledge of the traffic through here, do you think a railway constructed between this point and Forbes for about £320,000, would pay a fair interest and working expenses? I should think it would. Of course the construction of a railway would no doubt increase the traffic. For my own part I should put a great deal more land under crop and that would mean additional revenue to the railway.

6535. If a railway were made through to Forbes I suppose all the traffic would come this way instead of part of it going to Borenore? Yes.

6536. And you think there would be a reasonable prospect of the railway paying? Yes.

6537. Do you truck many sheep to Sydney? I have not trucked very many these last few years.

6538. Do you think the trucking yards are conveniently situated? I think the trucking yards ought to be on the other side of the river—that is my opinion. They have to cross the line so much. The biggest part have to cross the river, and cross the line.

6539.

Mr. I. J.  
Sloane.  
10 Mar., 1890.

- Mr. I. J. Sloane.  
10 Mar., 1890.
6539. Have any representations been made to the Government with a view to a change in the position of the trucking yards? I think representations have been made to have the yards brought to this side of the line. There is Government land on the other side, and they could make trucking yards there, and at the same time have some accommodation for stock. At present the beasts can get nothing to eat, but on the other side they could get a feed. I think there is only one small reserve where they can feed now, and unless the Government keep stray stock off, there is nothing on it.
6540. Would you have to cross any flooded country going from here to Eugowra, besides the point you have spoken of on the Belabula River? There is another small creek.
6541. But are there any flooded flats? I do not think so; I do not know of any.
6542. From Eugowra to Forbes, by keeping to the railway route, you can avoid the floods? I could not say that. I know there is low land, but where the line goes, I do not know.
6543. Do you know Young and Grenfell? Yes.
6544. Are you aware that a railway is projected by the present Government to go from Young, through Grenfell, Forbes, Parkes, and Dubbo? I have heard of it.
6545. Do you think that would be a more national line than the line from Cowra? My own opinion is that this line should be carried through, and I do not say so from self-interest.
6546. If the line were carried through from here to Forbes, it would go on to Parkes and Dubbo? It could, I daresay; but I thought it was to go on to Wilcannia.
6547. Looking at the matter from a national point of view, do you think the line from Young, through Grenfell, to Forbes, would be more advantageous in the general interests of the country, than the line *via* Cowra? I would not venture an opinion on that point. I thought the line from Cowra to Forbes, was to be continued to Wilcannia.

Mr. Henry Ford, contractor, sworn and examined:—

- Mr. H. Ford.  
10 Mar., 1890.
6548. *Mr. Dowel.*] Where do you reside? At Cowra; I am a contractor.
6549. Do you know the proposed route from Cowra to Canowindra? Yes.
6550. You know the class of country through which the line passes? Yes.
6551. Have you been over the route? Two or three times.
6552. Have you observed any engineering difficulties? Nothing, beyond ordinary culverts.
6553. Do you know of any timber along the line, within a reasonable distance, suitable for sleepers, for fencing, and for bridge work? Yes; at various places along the line, good timber can be obtained.
6554. Suitable for railway purposes, generally? Yes.
6555. What is the character of the timber? Stringybark, ironbark, and gum—it is very good timber.
6556. In your opinion there would be no difficulty in procuring timber? I do not think so.
6557. What about ballast? There is plenty of it all along the line—that is within 4 or 5 miles of it. At various places it may be from 6 to 8 miles, but it is not further.
6558. Having travelled over the route, you have observed the class of settlement along it? Yes, there are a great many settlers along the line.
6559. Of what class are they? Farmers.
6560. Do they combine pastoral with agricultural pursuits? Yes, most of them.
6561. What is the nature of the evidence you desire to give to the Committee? Nothing more than this: That I think this is a very desirable route to be adopted, in view of the progress of the district.
6562. Do you know the rival routes which have been staked out? I know the one from Molong to Parkes. I was over that some two years ago.
6563. Did you know the country previous to that? Yes; I was over it many years, travelling with cattle.
6564. You have not had a recent opportunity of observing the settlement on that line? No.
6565. So that you could not compare the two lines on their merits? No.
6566. Have you any knowledge of the routes known as Thornbury's route and Cumming's route? I know Thornbury's route.
6567. Have you any knowledge of Cummings' route? I have been over it the whole way, but I should adopt Thornbury's route.
6568. That, in your opinion, is the best line to construct? Yes, because the material is handier, and the gradients are not so big. I think the line would be shorter, but I am not positive on that point.
6569. Would it pass through country as well settled as the country on the other route? The country is much the same in both cases.
6570. You know the country on the route from Young, through Grenfell, to Forbes? No; but I have been informed about that route. I have seen 4 feet of water in some parts of it.
6571. As a contractor, you have watched the rise and progress of this town? I have.
6572. Is it of late years that it has gone ahead? When I came here in 1866, there were thirty-three houses and four hotels, and now we have eight hotels, and 600 good houses.
6573. Do you attribute this prosperity and the rise of the town, to the construction of the railway, or to the *bonâ fide* settlement of the soil? I think the construction of a railway has brought settlement here.
6574. Settlement was not here before the railway came? Yes, but it was not so large as it is now.
6575. From your knowledge of the country, do you anticipate that there will be a large amount of traffic on this line? It will open up the country from the south to the west, in a direct line.
6576. Do you know the country from Eugowra to Forbes? Yes.
6577. I suppose you have heard many discussions about these various routes? Yes.
6578. Which appears to be the most favoured route? The route to Forbes, *via* Canowindra, I think. I think if it were constructed, it would prove the most payable.

Mr. Donald McInnes, auctioneer and commission agent, sworn and examined:—

- Mr. D. McInnes.  
10 Mar., 1890.
6579. *Mr. Lee.*] What are you? I am an auctioneer and commission agent.
6580. Residing in Cowra? Yes. I have been here since 1881.
6581. You were employed by the Railway League at Cowra, I believe, to collect statistics? Yes; I hand in a copy of them.
6582. Will you describe the boundaries of the district within which you collected these statistics? In some instances they extend from here to Canowindra. In some cases they go up to 8 miles, and in other cases not more than 6 miles.
- 6583.

6583. The return you now hand in shows the names of residents on the proposed railway from Cowra to Forbes, the number and area of holdings, the cultivation, the yield per acre, the sheep, cattle, horses and pigs, 8 miles from Cowra and 6 miles from either side of the line, and also within a radius of 8 miles of Cowra? Yes.

Mr.  
D. M'Innes.  
10 Mar., 1890.

6584. Did you go from farm to farm? No; I have been a grain buyer during this wheat season, and in most cases I took advantage of the farmers coming in. I got the statistics from the men themselves in this town.

6585. When did you collect these statistics? In the month of January; I think about the latter end of the month.

6586. Had the farmers all threshed their wheat at that time? The greater part of the wheat in the district is stripped; it was nearly all stripped, and the wheat was coming in during the month of January.

6587. There are some who reap and bind? Very few.

6588. Would they have threshed at the time you took these returns? Not all.

6589. That being the case how could you arrive at the yield? I saw them personally. In the radius within which I collected these statistics, I know of only a few who did thresh.

6590. But if they had not threshed how could they give you the average yield? Most of them stripped some, and they gave the average of what they had stripped.

6591. Had you any arrangement with the collectors of Canowindra, as to the boundaries within which you would collect these data? The Canowindra statistics were collected before the Cowra League collected theirs; therefore I had the Canowindra statistics before me.

6592. In that case you can tell me whether any names on your list are included in the Canowindra statistics? I am certain they are not.

6593. You have no doubt about it? None whatever.

6594. Did you receive the returns of stock and the carrying capabilities of the land, from the owners? From the owners; I will read you the totals; they are: 157 holders holding 130,403 acres, of which 8,786 acres are cultivated. There are 138,423 sheep, 4,382 cattle, 1,930 horses, and 1,594 pigs.

6595. You swear that this return is correct? Yes, as far as my knowledge is concerned.

6596. You are a grain buyer? Yes; I have been during this season.

6597. That would necessitate your visiting various parts of the district? Yes.

6598. How long have you been buying grain? Since about the 24th December last; that was the date of the first lot I bought. This is my first experiment as a grain buyer. I have been a commission agent and auctioneer in the district for about four years.

6599. What is the impression left in your mind as to the condition of the settlers among whom you have to go? Generally speaking they are fairly well off. This season has been a very prosperous one, and has given them a fair rise.

6600. Do you think they are making a living? I am sure they are. This year they have done fairly well.

6601. You do not think many of them will sell, after compliance with the residence condition? I do not think so, so long as there is an increase in values. I do not know of more than two or three who are intending to sell.

6602. Is not the price of land an inducement to settlers to sell? I have fewer farms in my hands for sale at the present time, than I have had for the last four years. There are more buyers than sellers. I sell a good deal of land.

6603. Have any farms passed through your hands? Yes.

6604. At what price? I sold a farm of 2,006 acres for £7,150; that was along this proposed route.

6605. Was that a conditional purchase? Partly conditional purchase, and partly freehold.

6606. Have you been living in the district for any time? For the last nine years.

6607. Where were you before? I took up a selection in the district, when I came from Victoria.

6608. You were a Victorian? Yes; I have been farming part of my time in Victoria, and I was for some time an auctioneer.

6609. Where were you farming in Victoria? In the Ballarat district, near Clunes, and in the Avoca Valley.

6610. Did you come over on this side to take up a selection? Yes.

6611. You do not appear to have held it very long? It was sold to another Victorian farmer, who has not yet taken possession of it.

6612. Why did you sell? Because it was 12 miles out of town, and I found that it was too far from my business.

6613. Did you sell before the railway came here? No; afterwards.

6614. Did you sell because you found wheat-growing an unprofitable industry? No; I did not.

6615. Did you cultivate wheat? Yes.

6616. Where did you find your market? In the first year we had to send to Blayney—that was before the railway came—and it cost about 1s. 6d. a bushel carriage.

6617. What is the quality of the land, and the average yield per acre compared with the land and yield you had in Victoria? The land in this district is better than any place I have lived in in Victoria for wheat-growing; it will grow a better quality of wheat.

6618. Is the yield better than it is there? In most places. Some places in Victoria are very dry. The Avoca Valley for instance.

6619. What is the average there? Sometimes it is as low as a bag to the acre, and sometimes it is up to four. I never saw it over four, and I have seen it when it was not worth stripping.

6620. How does the price go there? It would be something like the price here at the present time.

6621. According to your return the average here is between 19 and 20 bushels? Taking it roughly this year it would be 26 or 27.

6622. Are these particulars correct? I got the statistics from the men themselves. My family are living about 12 miles out of town, and they cultivate about 40 acres. My own cultivation, this year gave about 35 bushels.

6623. You have no reason to doubt the accuracy of these returns? Not the slightest.

6624. In fact if they gave you continuously very high returns, and you thought they were not correct, you would not put them in? No; I would not swear to them, but I am sure that these returns are approximately correct.

Mr. D. M'Innes. 6625. Then the farmer in this colony would be in a perfect paradise as compared with the Victorian farmer? I do not say that. They do not cultivate such large areas although the yield per acre looks large, they cultivate so little that the profit is comparatively small. The Victorians go in for small profits and large returns.

10 Mar., 1890.

6626. Have you seen a total failure in the crop here? I think I have seen one, and that I believe was in 1888. It would not pay that year, certainly. Off a farm I sold, there was a return that year, of one bag to the acre.

6627. Was there any rust this year? In some of the late crops. We do not have it as a rule except in the case of late sowing.

6628. Taking one year with another the wheat crop is a comparative certainty? As long as it is put in in time.

6629. That being the case there is likely to be a large freight of grain and flour for the railway at this place? Yes.

Mr. Henry Dennis, manager and proprietor of the "Fitzroy Hotel," sworn and examined:—

Mr. H. Dennis. 6630. *Chairman.*] What is your occupation? I am manager and proprietor of the "Fitzroy Hotel," Lachlan-street, Cowra.

10 Mar., 1890.

6631. How long have you been here? Since 1875.

6632. Have you observed much improvement in the place since you came here? It has grown nearly three times its size in that time.

6633. Has there been much growth since the railway opened here? Yes.

6634. It has given a great impetus to the place? Yes.

6635. Do you find business as brisk as it was a few years ago? I find that my returns for some months, have been nearer what they were when the railway was in course of construction.

6636. Was it during the construction of the railway that you found your trade most brisk? Yes. Of course it is certain to be brisk then, but the standard business is twice what it was before, or very nearly twice. My weekly takings are nearly twice as much as they were before the railway commenced.

6637. To what do you attribute that? To the construction of the railway.

6638. Causing traffic to go this way instead of by other routes? Yes.

6639. You find more teams now than there used to be? Yes. One difference it has made in my trade I will endeavour to explain: Commercial travellers who used to travel with several horses come by rail now. I have comparatively no business in the stable; but, with the exception of that particular branch, my business has increased considerably.

6640. Do you know the country outside? Yes; from here to Cudal I know it thoroughly well.

6641. Also to Canowindra? Yes.

6642. It is good country? Splendid country.

6643. Is it in large holdings? It is, for the most part, in very decent farm holdings. There are only two stations, and they are Mr. Osborne's and Mr. Sloane's.

6644. How many acres? I could not say.

6645. Do you know if there are any large holdings on the other side of the river? On the western side of the Lachlan there are some considerable holdings, but they are not very large, they are principally farmers. Mr. Watt and Mr. Phillip have holdings of some size, but there is nothing very large. Then there is Mr. Fagan, at Mulgan. That is on the eastern side of the Lachlan, next to Mr. Sloane's.

6646. Then there are three large holders? Mr. Osborne, Mr. Sloane, and Mr. Fagan.

6647. Do you know the country to the north of Cudal? I knew it a good many years ago.

6648. Have you been to Parkes within the last few years? Not within the last ten years.

6649. Have you any further evidence to give to the Committee? I desire to draw attention to the very central position of Cowra, situated as it is, on the loop-line between the Great Southern and Great Western Railways. I think if Thornbury's line were adopted from here to Forbes, it would be a general benefit; it would certainly do more good than either of the other lines, as far as my knowledge goes. Cowra seems to be a natural junction for the traffic. Traffic can be sent from here to the south or to the west. It is in a better position than any other place which has been mentioned to the Committee as a starting point.

6650. How do you make that out? From the geographical position.

6651. Would not Young be more central? No; I think Cowra is in a better situation, having regard to the main lines of railway. The line would pass through splendid agricultural country; there would be no heavy cuttings, and it would be cheaply constructed.

Beilby Kemp, Esq., sworn and further examined:—

B. Kemp, Esq. 6652. *Mr. Lee.*] You are now in a position to give the Committee some information as to the reserves? I find that the reserves in the parish of Kenilworth are 3,500 acres; in Tintern about 2,000 acres. There is a travelling stock reserve in Wattamondara of about 3,000 acres. Most of the other reserves are small.

10 Mar., 1890.

There are a lot of small reserves, but there is a gold-field reserve at Broula of about 29,000 acres.

6653. How does that lie from the town of Cowra? It would be south-west.

6654. Do you know the quality of the land there? No.

6655. Have any applications been made to have that reserve revoked? They would not come to me; there are about 40,600 acres of conditional leases; that includes the converted pre-emptive leases.

6656. The right of purchase is attached to these leases? Yes.

6657. Then as to the revenue of your office? In 1889 the revenue was £11,834.

6658. Has there been a Government sale of town allotments during your time? No.

6659. Do you wish to supplement your evidence in any way? I think I said this morning that there was a great deal of land open, but, after looking at the maps, I see there is not so much as I thought—it is fairly well taken up.

6660. Is there much land available at the present moment? No; very little at the present moment—there is a good demand for it.

6661. That likely to become available, is in the pastoral leases? Yes.

6662. I suppose some of the reserves may be dispensed with, in the public interest? Yes; I think so.

6663-4. I suppose there are some very good water reserves without any water on them? It is quite possible.

TUESDAY,

TUESDAY, 11 MARCH, 1890.

[The Sectional Committee met at the Court-house, Cowra, at 10 a.m.]

Present:—

JAMES EBENEZER TONKIN, ESQ. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Molong to Parkes and Forbes.

Mr. Stephen Wright, forwarding agent, sworn, and examined:—

6665. *Mr. Lee.*] What are you? I am a forwarding agent, residing at Cowra.
6666. How long have you followed that occupation? About two years.
6667. At any other place besides Cowra? No.
6668. Have Wright, Heaton, & Co. an agent here? They have.
6669. To what portion of the district do you forward goods? Forbes, Condobolin, Euabalong, and other places.
6670. What is the largest centre to which you forward goods? Forbes.
6671. How many tons do you send a month? During the last twelve months I have sent about 400 tons of loading to Forbes, and along the proposed line of railway. Other agents have also sent large quantities.
6672. Had the railway opened when you started business? The station had just opened when I started.
6673. Do you know what progress has been made since the opening of the line? Some of the principal storekeepers in Forbes got their goods through Cowra immediately the line opened, and they have since continued to do so. The traffic has greatly increased from here to Forbes, and also to Euabalong.
6674. What is the nature of the Condobolin traffic? Generally merchandise.
6675. You have no monopoly of the trade in this district, I suppose;—other agents would forward as well as yourself? Yes.
6676. Do you send any goods to Parkes? A few small lots to Parkes; a good deal of produce has gone from here to Parkes.
6677. Have you been over that part of the country yourself? I have been from here to Forbes.
6678. Are they chiefly horse or bullock drays on the road? They are about equal in number. Last year the horse teams had preference; this year, being a good season, the bullock teams had preference; taking the seasons all through, they are about equal.
6679. Is the traffic about equal all the year through, or is it greater at one time than another in consequence of the back loading during the wool season? It is pretty general throughout the year.
6680. Does much Forbes or Condobolin wool come this way? A good deal of it.
6681. Do you know whether the drays are stopped on the road through bad weather? They have not been at any time during the last two years.
6682. Is any portion of the road subject to flood? In extreme wet weather; but there is nothing to delay the traffic for any length of time.
6683. Taking the country to the south of Condobolin—that is between Condobolin and the main southern line—is there much of the traffic from that part filters into that town? We have some of the traffic from the district between Condobolin and Euabalong. The whole of the traffic from Euabalong has come here during the past two seasons. There has been a good deal of traffic between Cowra and Mount Hope especially during the last season.
6684. That was in consequence of the severe season? That had something to do with it. I forwarded several lots of goods myself to Euabalong.
6685. Has any portion of the Grenfell traffic come through here? Yes; nearly all the Grenfell traffic.
6686. What is the distance of Grenfell from here? Thirty-five miles.
6687. Is it nearer than Young? The distance by road is about the same, but the railway distance is greatly in excess.
6688. Does the railway traffic from Cowra come by way of Blayney, or Murrumburrah? Blayney.
6689. Is there any trade from the south of Cowra? From Murrumburrah and from Albury. Agricultural machinery and flour have come into this district from Albury.
6690. How do you account for that? Last year the district was short of grain.
6691. Was there not sufficient grown in the district to supply the demand? No.
6692. Is there much stock trucked from here? A considerable quantity for both markets. Last year a considerable quantity was trucked for Melbourne.
6693. Do you happen to know how many teams are plying to and from this station and various portions of the district? I have not made an estimate, but I have seen as many as ten or twelve teams a week. On the average, there would be about eight or nine teams a week down the river, from this place to Forbes, Condobolin, and Canowindra.
6694. Does the whole of the Canowindra traffic come here? Yes.
6695. Is there any Eugowra traffic? A little not a great deal—that goes *via* Borenore. Last year we had a considerable amount of wool from Eugowra.
6696. Is there any traffic from Cargo? Yes.
6697. Do they get their goods from here? No; from Orange. A good deal of wool comes here from between Parkes and Forbes. A lot of wool came in from Bogan Gate last season.
6698. Is the grass better on this route? Yes, along the river, and the route is also shorter.
6699. There is more likely to be feed for teamsters—that is one reason for their coming here? The land carriage by team down the river is cheaper than it is the other side.
6700. You are aware that the object of this inquiry is to ascertain the expediency of constructing a line from Molong to Parkes and Forbes;—do you think the Cowra line will suit the bulk of the population in this large area? Well, persons trucking stock or goods from Forbes or Parkes, *via* Molong, would have to return at right angles to take their produce to Melbourne.
6701. You do not know much about the settlement to the north of the Parkes line? No; but from what I have been told by persons residing in those districts, they would prefer to come here.

Mr.  
S. Wright.  
11 Mar., 1890.

John Plumb, Esq., M.P., sworn and examined:—

- J. Plumb, Esq., M.P.  
11 Mar., 1890.
6702. *Chairman.*] You are one of the representatives of the electorate of Carcoar? Yes.
6703. Are you conversant with this district? Yes.
6704. Have you known it long? For some eighteen years.
6705. Where do you reside? At present, in Sydney. I have resided in the Carcoar district for about thirteen years, and for about three years in the Orange district.
6706. While you were living at Blayney, had you any means of knowing the amount of business done at Cowra? I had a fair opportunity of judging of the amount of business, and I know that it was very considerable.
6707. Was it progressive? Yes.
6708. It consisted, I suppose, principally of ordinary merchandize and return loading in wool? Yes; wool and wheat; those were the staple articles.
6709. Do you know whether there was any increase in the wheat? It increased every year during the time I was there.
6710. Did you not have a mill at one time? Yes; at Blayney.
6711. While you were the proprietor of that mill did you buy any Cowra wheat? A little. This country had not then been opened up for agriculture, but I purchased wheat in considerable quantities in this district, after I had given up the business of milling. I bought it as a speculation, I know that each year—under favourable circumstances—that is, when the season would admit of it, the yield constantly increased, and a larger area was put under cultivation.
6712. I suppose the construction of the cross line from Blayney to Murrumburrah, has materially increased the business capabilities of this place? Yes, it stimulated business, also agriculture and other business.
6713. Are the agriculturalists fairly served by this cross line? Those who reside between Cowra and Blayney are fairly served but those at right angles down the Lachlan Valley, are not.
6714. At what distance from a railway line would agriculturalists be served—of course we cannot take a line everywhere? I know that when the line was at Blayney I repeatedly heard the farmers say that it would not be worth their while to put the land they had selected under wheat to any extent while the railway was 40 miles distant. They said that the cost of tilling the land, taking off the crop, threshing it, and the cartage, representing in many cases 6d. a bushel, prevented it from paying. In many cases they did not cultivate as they would do if they had a railway within 20 miles of them.
6715. Do you think that farmers within 20 miles of a railway would be fairly served by it? Well, fairly.
6716. Have you any knowledge of the country between Canowindra and Cudal? Yes, I have been through that country.
6717. What class of country is it? Some of it is good grazing and agricultural land.
6718. Is it equal to or superior to the land about here? No, I think not. The land in the Lachlan Valley and on the Belabula River is some of the best land in the western district. In the immediate vicinity of Cudal the land is very good, in fact, quite equal to the land here; but that is a very small area compared with the area to which I refer.
6719. Do you know the proposed route of railway through Cudal to Eugowra? I have been over it, but not over the surveyed line. I presume it follows the road pretty closely.
6720. Do you know what class of country there is beyond Cudal;—that is to the north of it? Yes. There is a good deal of poor country after you pass the Mandagery Creek; you get then into the iron bark and rough country. There are the Bumberry ranges between there and Parkes.
6721. Have you been to Parkes lately? Not for many years.
6722. Then you do not know of the increase of settlement which has taken place about Parkes? No.
6723. If you were aware that land had been taken up to a considerable extent by settlers not only to the north of the line to Molong, but to the north and north-west of Parkes—that is, 17,000 acres at Kadina and 19,000 acres at Trundle—would you then consider that a line from Cowra to Forbes would be in the interests of the country, and the better line of the two to construct? Yes. I think the line should be constructed to serve both the people in the Lachlan Valley and the people at Parkes, because you could turn off at Eugowra—it is 20 miles from Eugowra to Parkes. The line could be continued through Parkes to Dubbo, to connect with the Western line. The people there would then have the choice of a market in the western country and the market in Melbourne and Sydney—the difference in distance would not be a serious matter. It is 60 miles from here to Parkes, and it is 45 miles from here to Blayney; it would be 105 miles from Parkes to Blayney, whereas it is 91 to Blayney by Molong. They would have the choice of the Melbourne as well as of the Sydney market.
6724. How would that line serve the farmers between Molong and Parkes? Not at all, they would have either to cart to Parkes or Molong.
6725. Would the line you suggest serve the farmers about Cudal and to the north of this place? Yes. As nearly as I can remember it is 16 or 17 miles to Toogong, to a point near Nyrang Creek—that is as near as you would get to the valley in which Cudal is situated.
6726. Do you know Wood's Flat? Yes.
6727. Do you know the proposed branch from there? Yes.
6728. What is your opinion of that line? As far as I have heard it would be the shortest way to connect with Forbes, but there are certain obstacles—there is no permanent water supply at Wood's Flat. I know that the route is a good one, and that it is fairly level.
6729. Do you know that there is a proposal to construct a line from Young through Grenfell to Parkes, Forbes, and Dubbo, right through to Werris Creek? Yes.
6730. If that line were constructed would there be any necessity to construct a line from Cowra to Forbes also? Yes; if a line were constructed down the valley of the Lachlan it would not interfere with the line you speak of—it would be a feeder to it. This line would be extended down the river to Condobolin and Hillston.
6731. Do you think that without making an extension beyond Forbes this line would pay? I do; because the country is capable of wonderful development from both an agricultural and pastoral point of view.
6732. Do you know what the annual cost of the line would be—that is, the working expenses and interest on the capital? I am not an engineer, but I have heard the opinion of those who are in a position to give a fair estimate. I have heard that this line could be constructed for from £3,000 to £3,500 per mile—there being no bridges of any size to construct.
6733. We are informed that the annual charge would be £22,000—would there be sufficient revenue on the

the line between here and Forbes to pay that sum annually? I should not like to state that there would; but I should think the revenue would come pretty close to that sum, if it did not quite reach it—it would at all events pay a considerable portion of it.

6733½. Do you know the country between Grenfell and Forbes? Yes; I have been over it recently.

6734. Is it level? Yes.

6735. Would it be the same class of country upon which to construct a railway, as the country between Cowra and Forbes? No. The route from Cowra to Forbes would be easier because there are 12 miles less between Grenfell and Forbes, that is the Grawlin Plains, which are subject to floods.

6736. Do you know the country from Young to Grenfell? Yes.

6737. Is that more difficult country? Yes; it is more undulating. I am speaking from a contractor's point of view. When I say that it would cost about £3,500 a mile to construct a railway from here, I am leaving out the rails; I am speaking as a contractor would contract.

6738. In your opinion, which would be the proper line to construct in the interests of the country? This line, I think, comparing the different districts and the quality of the land along the routes. There is a larger extent of valuable land to be opened up along this line, and from that point of view, I think the country would be better served by this line than by any other. I am referring now to the Molong and Parkes line, although I cannot speak as to the population along that route.

6739. *Mr. Cox.*] Looking at the matter as a legislator and quite regardless of any local interest, which line do you think would conduce most to the benefit of the whole community? I think a railway should be taken to Forbes from the cross line to Murrumburrah, I would vote against any other line.

6740. *Mr. Dowel.*] Do you know the country between Cowra and Canowindra? Yes.

6741. Have you a knowledge of the surveyed routes known as Thornbury's route and Cummings' route? Yes, I was over that country recently.

6742. Do these lines pass through country of a good character, and country which is well settled? Yes; the principal part of the distance particularly between here and Binni Creek.

6743. Have you a sufficient local knowledge to say whether it would be more advantageous to adopt Cummings' route or Thornbury's route? The route which goes to the north of Canowindra would be the line to serve the largest number of persons—I do not know which of the two routes that would be; it would be used by the people of Cargo and Toogong—the Cudal people would go to Borenore.

6744. Have you any knowledge of the country between Eugowra and Parkes? Yes, I have been at Parkes through the bush, but that is some sixteen or seventeen years ago. I have been over that particular country only once.

6745. You are not in a position to say whether there are any engineering difficulties there in the way of the construction of a railway? No, I do not think there could be—it is not very difficult country.

Mr. John Muir, District Court bailiff, sworn and examined:—

6746. *Mr. Cox.*] What are you? I am a District Court bailiff.

6747. Do you know the district pretty well? Yes.

6748. Have your services as bailiff been much in requisition lately? Not a great deal.

6749. You are also a farmer? Yes.

6750. Where do you reside? At Cowra, but I have some land out at Binni Creek, 4 miles from Cowra.

6751. Is the whole of that creek taken up by small holders? Yes.

6752. Is it rich soil? Very good soil.

6753. What do you grow on your farm? Wool.

6754. You do not cultivate? Very little. I have 14 or 15 acres under crop.

6755. Do you find wool growing more profitable than cultivation? Yes.

6756. Are there a number of cultivators on Binni Creek? There are three or four who run sheep and cultivate—the rest all cultivate.

6757. What kind of crops do they get as a rule there? Very good crops.

6758. What would be the average yield taking one year with another? About 16 to 18 bushels—this year the average is a long way above that.

6759. Do you know the surveyed routes between Cowra and Canowindra? Yes, the routes join at Butler's; they both go to Canowindra—one leaves Canowindra above it, and the other below it. Cummings' route is surveyed to Butler's, and there it joins Thornbury's—that is to get an easier route.

6760. Of the two routes measured by Cummings and Thornbury, one runs right along the Binni Creek? Yes.

6761. Is there permanent water? There is no permanent water in the creek itself, but you can always find water underneath the surface. It is a sandy creek.

6762. Which of these two routes do you think should be adopted? Cummings' route, I think. There is no rise in Cummings' route at all, in Thornbury's there is a great rise.

6763. In the event of a line being constructed from Cowra to Canowindra, would more land be put under cultivation? Certainly. There would be a greater outlet down the river, than there is now.

6764. Do you know the country between Borenore and Cudal? No.

6765. Or between Canowindra and Eugowra? Yes; I was stock-keeping in Eugowra for some years.

6766. Is that all good country? Yes; it is all taken up.

6767. In what position generally are the farmers;—are they well to do? Yes, pretty fairly.

6768. They are not in the hands of the banks and storekeepers? A good many are in the hands of the banks, but they are pretty comfortable. Land is at a good price within the last five years, it has doubled itself.

6769. What is the value of farm land within a radius of 7 or 8 miles of this place. From £2 10s. to £3 per acre irrespective of the amount due to the Government. I was offered £3 for my land at Binni Creek, and I would not take it.

Joseph Charles Ryall, Esq., journalist, sworn and examined:—

6770. *Mr. Dowel.*] Where do you reside? At Cowra. I am a journalist, and proprietor of the local paper.

6771. How long have you resided in this district? Twelve years.

6772. During that time have you had much opportunity to see the district? Yes.

6773. And you have come into contact with a large number of the residents? Yes.

6774. What is the nature of the evidence you desire to give to the Committee? One thing I wish to submit, is a statement showing the earnings of the Cowra railway station, compiled from figures furnished to

J. Plumb,  
Esq., M.P.  
11 Mar., 1890.

Mr. J. Muir.  
11 Mar., 1890.

J. C. Ryall,  
Esq.  
11 Mar., 1890.

- J. C. Ryall,<sup>1</sup>  
Esq.  
11 Mar., 1890.
- to me by different railway station-masters, from the opening of the line up to the present date. The station-master who gave evidence yesterday, has been here only a fortnight, but I have this information from his predecessors—two other station-masters.
6775. You are in a position to say that these statistics are a true copy from the railway books? I am. You will see that the returns are given monthly. They are for 1887, 1888, and 1889, and for one month of 1890. The totals are the same as those given you by Mr. Donnelly yesterday. In 1887, when the train was running only three days a week, and when the line was constructed only to the opposite side of the river, the earnings were £16,026 16s. 10d.; in 1888, shortly after the daily train ran, the total earnings including wool and live stock, were £26,396 3s. 9d. The station-master I believe, in his statistics, did not include live stock and wool. In 1889, the goods, coaching, and wool revenue, amounted to £32,169 19s. 5d.; the live stock earnings have to be added to that. They amount to £4,572 17s. 8d. For one month of January the coaching and wool and goods traffic came to £5,152 12s. 9d., and the live stock earnings to £206 5s. 2d., making a total, for three years and one month, of £86,811 4s. 5d.
6776. That includes the inward and outward traffic from and to Sydney? Yes, the traffic to the south as well.
6777. To what do you attribute the marked increase in the receipts of the railway station during the last half year? To the increase of settlement principally.
6778. Of what character has that been? Farming, generally. There has been an increase in the general population as well.
6779. In the immediate vicinity of Cowra? Yes.
6780. During the twelve years you have resided here have you seen any marked signs of progress in the district? When I reached here twelve years ago, the population was 600; now it is about 1,800.
6781. Do you attribute any large share of the progress of this district to the construction of the railway to Cowra? Yes.
6782. And you think that the construction of the railway to Canowindra, from this point, would be a further advantage? I do; I think the farmers would be induced to put a larger area under crop.
6783. We have heard a good deal as to the suitability of the soil for the growth of wheat; is it also suitable for the growth of fruits, vines, and vegetables? Yes, I can speak from experience. I have had eight or nine years' experience as a farmer—it is particularly well adapted to orchards and vine growing.
6784. Do you know anything at all about the route from Cowra to Canowindra? I have been as far as Nyrang Creek, on the Canowindra route, and as far as Oma, on the Young to Forbes route.
6785. During the past few years has there been any public agitation in reference to any one of these routes? Yes.
6786. What has been the result? Public opinion is almost unanimously in favour of the construction of a line to Forbes from Cowra, through Canowindra and Eugowra.
6787. There seems to be no doubt in the minds of people here, as to that being the right route? There is no difference of opinion so far as that is concerned. Some may be under the impression that it may not be for the benefit of the town, inasmuch as it might take traffic away from it.
6788. That is a local, but not a national consideration? Exactly.
6789. You think that this line should be constructed to serve particularly, the interests of those who have settled upon the soil? Yes; and I think it should be constructed on national grounds as well.
6790. By the construction of the railway the interests of Cowra would also be advanced? Yes.
6791. Is there any further information you desire to give the Committee? There is another matter in reference to the proposed railway from Young, through Grenfell, to Forbes. I had a witness here, who knows the route well, and particularly the country in the neighbourhood of Oma. The country from that point into Parkes is level and subject to floods, especially about Bundaburra and Grawlin Plains.
6792. You do not know that of your own knowledge? I have not been past Oma; the country there is very level, and if the Lachlan waters came over the bank, the whole flat would be submerged.
6793. What is your opinion of the route from Young to Forbes through Grenfell? It would not benefit the Forbes people, as they would have to pay 48 miles extra haulage to get to Sydney.
6794. Would it serve a large population and pass through many holdings? I could not say; I have not been there for eight or nine years.
6795. Generally speaking, the residents of Cowra are in favour of the construction of a line from here to Forbes? Yes.
6796. There are no difficulties in the way of the construction of that line, nor is there any doubt as to its paying capabilities? I have no doubt whatever about it.
6797. You think it would compare favourably with any other line that has been constructed? Yes.
6798. Have you any further statement to make? In the event of a line being constructed from Dubbo, and connected with Werris Creek, a great deal of traffic would be diverted from this line, because this is at the present time a through line to the south. The line from Dubbo to Forbes would not be of any advantage, because the distance would be about equal—that is the distance between Dubbo and Young and Dubbo *via* Cowra to Young—one line would be brought in conflict with the other.
6799. *Mr. Lee.*] You are connected with the Cowra Railway League? Yes.
6800. You furnished the Railway Commissioners with statistics in February last? Yes.
6801. Are the statistics handed in yesterday a copy of the statistics handed to the Commissioners? I think so.
6802. You have given some detailed evidence as to the railway earnings. Are those the same as were furnished to the Railway Commissioners in February? Yes.

Michael Thomas Phillips, Esq., solicitor, sworn and examined:—

- M. T. Phillips,<sup>1</sup>  
Esq.  
11 Mar., 1890.
6803. *Chairman.*] What is your occupation? I am a solicitor.
6804. Where do you reside? At Cowra.
6805. Have you been in the district long? Ten years.
6806. Have you seen much progress in it? Yes; there has been great progress, both in the town and in the district, since I came here.
6807. What is the financial position of the majority of the people here—is it sound? It is good, as far as I know.
6808. Are there many persons mortgaging their property? Not a great number. The farmers here seem to be in very good circumstances. 6809.

6809. Have you any knowledge of the country along the route of the proposed line from Molong to Parkes and Forbes? I know the country from Molong to within about 20 miles of Parkes. I was practising at Molong for some years. M. T. Phillips,  
Esq.  
11 Mar., 1890.
6810. From your knowledge of both districts, which do you consider the more progressive? I have no hesitation in saying that this is the better district.
6811. To what do you attribute the difference in the two places; is the land better, or is it held here in small areas? I think the land is quite as good as in the Molong district, if not better, and it is held in small areas. The land about Molong and Borenore is held by two or three large squatters.
6812. Your experience of these country towns has been that in cases where they are surrounded by large holders, the progress of the town is retarded? Yes; there is no doubt about that.
6813. Do you know the route of the suggested line from Cowra to Eugowra and Forbes? I know the route from here to Eugowra.
6814. You do not know the country beyond Eugowra? Not much about it, I have travelled from Eugowra to Forbes.
6815. From your knowledge of both of these routes which do you think would benefit the greater number of persons—which do you think would be better as a national project? I believe the line between here and Eugowra would be the best.
6816. Why? I think the land is better, and the farms are nearly as numerous on this route. Some part of the route between Molong and Parkes is barren—other portions I admit are very good.
6817. Do you know the country to the north-east and north-west of Parkes? No; but I know the country between Forbes and Parkes, that is a very fair country.
6818. You are speaking from your own knowledge of these portions of the district? Yes.
6819. You think this district would warrant the construction of a line from Cowra independently of any other line in any other portion of the country? Certainly, independently of the Borenore route, and the Parkes route.
6820. Do you believe the country would be warranted in constructing both the line from Molong to Parkes and Forbes, and from Cowra to Forbes, do you think there is any justification for any such course as that? I do not think it.
6821. Knowing that the Government are not likely to construct the two lines, you think this would be the best line in the interest of the Colony at large? I believe it would; I believe the land here is as good as the land on either of the other lines, and that the line itself could be constructed more cheaply.
6822. Do you think this would be the most central line of the three—do you think it would serve the bulk of the population, for instance as well as the line from Borenore to Forbes? I think this would be the best line, because the people of Forbes, and the people beyond, would have a better outlet for their produce in the event of their wanting to send their goods to the southern markets. If they wanted to send to Melbourne there would be much less haulage through Cowra than through Borenore.
6823. But so far as direct communication with the metropolis is concerned the Borenore line would be the most direct route? Yes.
6824. Would it not serve the greater number of people on either side of it, to the north and south? I could not say that positively.
6825. The population to the north of that line would not be served by a line from Cowra to Forbes; would they? They are not very far from Molong only about 15 or 20 miles.
6826. How would the population between the line from Cowra and the proposed line from Molong, be served if your line were adopted? It would not serve them very much.
6827. Taking that into consideration and looking at the matter impartially, do you not think the central line would serve the greatest number of persons? It may serve a greater number. I believe the population on the Borenore line is greater than that on either the Molong or the Cowra line.
6828. Do you think that if the line you advocate were constructed it would benefit the town of Cowra? I believe it would, although the townspeople have different opinions about it—some say it would not. I believe that a railway brings people into the town, and that it must benefit it in the end.
6829. But it would do away with a considerable number of the teams coming in and out of the town? Whichever line comes to Forbes you will have the same result, so far as the Forbes traffic is concerned.
6830. And of course the Lachlan traffic? Yes.

William Ashman Stokes, Esq., manager of the A. J. S. Bank, Cowra, sworn and examined:—

6831. *Mr. Lee.*] What is your occupation? I am manager of the A. J. S. Bank here. W. A. Stokes,  
Esq.  
11 Mar., 1890.
6832. How long have you been in charge of it? Five years.
6833. Had you been in charge of any bank in the Lachlan district before coming here? Yes; I was in this district some years before.
6834. Are you in a position to judge of the progress of the district? Yes; I think so.
6835. Has the district made much progress during the term of your residence here? Yes; I should say that the population had very nearly doubled. The district itself has shown marked signs of progress. The area under cultivation has increased wonderfully, and the general prosperity of the district is making itself very evident every day.
6836. How many other banks are there here? Two.
6837. Have you resided in a free selection district before? Yes.
6838. Then you have a pretty good idea as to how that class of men start and make their homes? Yes. I was here a year or two after free selection first commenced here, and the prosperity of the selectors has increased very much since that time. They are in a far better position and their holdings are improved. Many of them had very little capital. The greater number of these men are now in a very good position and the value of their land has materially increased.
6839. Do you consider them a permanent class of settlers? Yes, as a rule.
6840. Have you had occasion to think that any number of them have been acting on behalf of capitalists merely to acquire land? No, I do not think I know of one. They are all *bona fide* settlers—men who have come here to make homes for themselves and their families.
6841. Has the progress of this district dated from the opening of the railway? I should say that since we have had a railway here prosperity in the district has been very much enhanced. I refer to the district generally.

- W. A. Stokes. Esq. 6842. How do you account for that? We are brought nearer to a market and the farmers have readier means of getting their produce away. They are not dependent upon a few persons, for the sale of their produce. If persons are not satisfied with the local market, they can seek and generally find a market elsewhere. The railway is also a good means of transit for fat stock.
6843. In other words, the railway is an outlet for all your produce at market rates? Yes.
6844. Previous to its construction, had persons here much difficulty in disposing of their grain and stock? Yes. In the old days when I was in the district before, they had to store their grain and produce until they could find a market. In that way heavy losses were sometimes incurred.
6845. Do you think that persons have cultivated their land more largely since the construction of the railway? Yes, every year we find larger areas being placed under crop.
6846. You are strongly of opinion that railway construction has inspired the people with great confidence? I am sure of it; that applies not only to people in the immediate district, but to people in other districts. Many of these are anxious to come here and have not the means of communication.
6847. Do you think railway communication has enhanced or decreased the value of conditionally-purchased land? I should say it had increased it from 25 per cent. upwards. Conditionally purchased land—that is improved land—here, was worth four or five years ago £1 or 25s. per acre, it is now worth from £2 to £2 10s. per acre, and is sold at those prices.
6848. Do you think the railway has increased the value of town property? Yes; considerably. It has brought about a larger population, and more town accommodation is required in the shape of shops and buildings. The other two banks have been here only some six years.
6849. Have you noticed in the progress of your business whether many inquiries are made by outside people for land? Yes, frequently; and the demand cannot be satisfied. A great many inquiries come from Victoria.
6850. Are there many Victorian men here? Yes; and more are coming, trying to get land.
6851. Do you consider that the farming population are in a satisfactory commercial condition? Eminently so, for *bona fide* farmers.
6852. You consider the district a sound and progressive one? Yes.
6853. *Mr. Cox.*] Is there much indebtedness among the farmers in this district? There is more indebtedness than there would have been, had the seasons been good. We have only lately come through some very bad seasons. If we have fairly good seasons at the present time, the district will be very prosperous.
6854. The indebtedness of the farmers is caused by the seasons, not by improvidence? They have had to improve their land, and have run into debt, principally from that cause.
6855. The year 1888 was a very disastrous year? Yes; there were no crops to speak of in that year.

Mr. Dugald Campbell, saw-mill proprietor, sworn and examined:—

- Mr. D. Campbell. 6856. *Mr. Cox.*] Where do you reside? At Bandon, on the Cowra line, between Eugowra and Forbes.
6857. What are you? I am a saw-mill proprietor.
6858. What is the nature of the timber in the country round about you? I am sawing Lachlan pine and gum now.
6859. In the event of a railway from Cowra to Forbes passing through that country, would you be able to supply railway sleepers? Yes, of gum.
6860. What gum is it? Red-gum—very superior gum. I cut bridge timber for the Blayney line out of the same timber. There is any quantity of gum in that locality; I could cut away for twenty years.
6861. Is there any ironbark? Between Eugowra and Canowindra. I went in to look at it; there is a fair proportion of good ironbark timber all through there. It is some 3 or 4 miles from the cleared road from Eugowra to Canowindra. I have sent away from the district since the commencement of the year, 87,000 feet of pine.
6862. There is no demand for heavy woods? No, the carriage is too high.

Mr. Samuel Amos Rheuben, miller, sworn and examined:—

- Mr. S. A. Rheuben. 6863. *Mr. Dowel.*] Where do you reside? At Cowra. I am a miller and have resided here for fifteen years.
6864. Are you in the habit of purchasing wheat? Yes.
6865. What quantities have passed through your mill in the last two years? This year 20,000 sacks passed through my hands—that is this season, since the beginning of the year.
6866. What do you do with your flour? I have to send it to Sydney, or to the back country. Last year I think I sent 300 tons to Parkes and Forbes.
6867. The larger proportion as a rule you send to Sydney? Yes; but last year they were deficient at Parkes and Forbes.
6868. Sometimes your market is in Sydney, and sometimes in the west? Yes; of course I prefer it in the west.
6869. Have you noticed during your residence in this district, any particular increase in the area of land under agriculture? A great increase.
6870. Has there been an increase in the proportion of land put under wheat? Yes, almost all of it is under wheat.
6871. What is the quality of the wheat grown? It is unsurpassable.
6872. And you can hold your own with your flour in the metropolitan market or out west? Anywhere.
6873. What particular information do you desire to give to the Committee? I think it would be for the benefit of the country, to have a line constructed from here to Forbes.
6874. Do you know the route through which the railway passes? I travel it every few months.
6875. And it goes through a large area of *bona fide* settlement? Yes.
6876. From your knowledge of the settlers, do you think that if the railway were constructed they would be induced to grow more wheat? I am sure of it. I know that one selector on the other side of Goolagong said that if the line were made from here to Forbes, he would grow three times the quantity of wheat he now grows.
6877. Have you sent much to Sydney this year? No, not this year.
6878. Did you send much to Sydney last year? No. It was all sent back west.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Molong to Parkes and Forbes.

SECTIONAL COMMITTEE.

APPENDIX.

A.

[To Evidence of John Alexander Rose, Esq.]

RETURN showing Quantity of Land taken up at Parkes since the passing of the Land Act of 1884.

Year.	Conditional Purchase.	Conditional Lease.	
1885 .....	42,868 acres 2 roods	92,280 acres.	
1886 .....	17,690 "	57,623 "	
1887 .....	53,439 "	138,362 "	
To 14th June, 1888 .....	32,898 "	92,388 "	
From 14th June, 1888 to 31st January, 1890 .....	85,515 "	235,051 "	
	232,410 acres.	615,704 acres.	Total, 858,114 acres.

		1,493	340	707,985	7,773	265,785	4,807	2,333	912

The names on sheets 1 to 18 are all located to the north, west, and north-west of Parkes.

The attached sheets have the signatures of the holders, with the exception of sheets 21 and 22 which are copied, the originals having got destroyed with wet.

Returns from Bullock Creek, Burra Burra, Gelnedry, and Mungay are not here. The population at each place is large, and the area of land alienated great.

B.

[To Evidence of George Henry Sheaffe, Esq.]

SCHEDULE showing Alienated, Reserved, and Unalienated Lands between a line (E and W) 20 miles north of Parkes, and a line (E and W) half way between Parkes and Forbes, also between the line (E and W) half way between Parkes and Forbes, and a line (E and W) 20 miles south of Forbes

Murga—within 7 miles of proposed route .....	52	410	85,114	3,976	166	1,733	2	6	340	19,417	582	775	174
Village of Toogong .....	10	61	.....	.....	...	...	...	...	...	82	52	57	8
Village of Cudal .....	70	365	.....	.....	...	...	...	...	...	120	136	101	55
Total .....	376	2,334	245,693	24,631	2,968	12,450	404	51	2,238	91,791	3,212	5,659	885

Allowing an average of 2 tons of hay, 25 bushels of wheat, 40 bushels of oats, 15 bushels of barley, and 20 bushels of maize per acre—which is a very moderate average for this season's crops in this district—the yield will be :—5,936 tons of hay, 311,250 bushels of wheat, 16,160 bushels of oats, 765 bushels of barley, and 44,760 bushels of maize. To this may be added, from Cargo, Mogong, Merang, Canowindra, and other places south of line, 40,000 bushels of wheat; from Gregra, Manildra, and Mandagery, 10,000 bushels of wheat. Giving a total of 361,250 bushels of wheat grown within a reasonable distance of the proposed route, with other produce in proportion.

Cudal, January 20th, 1890.

CHAS. SCHRAMME,

Hon. Secretary, Cudal Railway League.

## G 1.

## STATISTICAL RETURNS, ILLUSTRATIVE OF THE POPULATION IN THE DISTRICT THROUGH WHICH THE BORENORE-FORBES RAILWAY LINE WOULD PASS, TAKEN WITHIN 8 MILES OF THE LINE.

The within returns are taken within 8 miles of the proposed Line, and have been compiled by the Committee of the Cudal Railway League from official Government reports, and other reliable sources, for the year 1888.

Cudal, January 20th, 1890.

CHAS. SCHRAMME,

Hon. Secretary, Cudal Railway League.

TRAFFIC

## APPENDIX.

## TRAFFIC—1885.

## TRAFFIC FROM CUDAL-FORBES ROAD

*Vide Returns at Borenore Railway Station since Forwarding Agents have been established there.*

*General Merchandise, exclusive of Wool.*

	Received for the Road	Delivered from Road
Part of July, 1886 .....	45 tons 8 cwt.	39 tons 18 cwt.
August, 1886 .....	203 ,, 2 ,,	59 ,, 13 ,,
September, 1886 .....	519 ,, 7 ,,	90 ,, 3 ,,
Part of October, 1886 .....	393 ,, 9 ,,	500 ,, 7 ,,
	1,161 tons 6 cwt.	690 tons 1 cwt.

Total Carriage, exclusive of Wool, for about three months, 1,851 tons 7 cwt.

N.B.—Notwithstanding depression in consequence of late dry seasons, and the fact that Borenore Station is only 8 miles on a section of Railway 23 miles in length.

This represents the traffic for about three months in the year 1885. No returns for the year 1889 are at present available—C.S.

*Wool received at Borenore Station during above term from Cudal-Forbes Road.*

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM COOTAMUNDRA TO TEMORA.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of Railway from Cootamundra to Temora," have, after due inquiry, resolved that it is expedient the Railway should be constructed at a cost not exceeding £3,300 per mile; and, in accordance with the provisions of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed Railway, the first representations regarding the necessity for which were made in 1886, is described as a light line which would leave the Great Southern Railway on the Sydney side of Cootamundra station, and passing in a north-westerly direction for  $12\frac{1}{2}$  miles, as far as Yeo Yeo, go from that point due west, through Stockinbingal, to Temora, a total distance of 37 miles 58 chains 14 links. The country through which the line would pass is very undulating; but a route has been chosen which does not present any engineering difficulty, and there are no rivers of any magnitude to cross. The grade will not be more than 1 in 75.

Description of  
the proposed  
railway.

2. The estimated total cost of the line is £138,000, or £3,656 per mile. The official description of the line laid before Parliament, and referred by the Legislative Assembly to this Committee, represented the cost as £146,400, or at the rate of £4,086 per mile, for a length of 35 miles 66 chains 14 links; but since then matters in relation to the Railway have been revised, with the result that the length has been increased to 37 miles 58 chains 14 links, and the cost reduced to £138,000, or £3,656 per mile.

Estimated  
cost.

3. The Railway Commissioners are favourable to the proposed railway, on certain conditions. Their estimates of annual cost are based on an estimated cost of construction amounting to £200,000—an amount which appears to have been stated to them prior to either the railway being proposed to Parliament or the estimates in relation to it revised. This does not, however, affect their conclusions generally considered; and from these it may be gathered that they are favourable to the proposal to construct the railway, if certain advantages to the Railway Department be conceded. The district through which the railway would go is, they say, admirably adapted for settlement, and in the future will prove capable of carrying a large population; but "the settlement at present, while numbering many agriculturists of the best type, is too limited to leave room for the expectation of working expenses being realised. In the district however," they go on to say, "there is a considerable area of Crown lands, which would be much enhanced in value by railway communication, and also one or more valuable timber reserves. If a substantial sum, to be derived from the sale of these lands, were devoted towards the payment of the cost of

Report of the  
Railway Com-  
missioners.

of constructing the line, and the Railway Department afforded some privileges in the direction of obtaining a supply of ironbark and other timber suitable for railway works, the construction of the line could be recommended, but not otherwise." And they consider that, if the line should be made, the residents of the district should combine together to have the land necessary for the construction of the railway conveyed to the Department free of cost.

Method of the  
Committee's  
inquiry.

4. In the conduct of their inquiry, the Committee considered it well to first take the evidence of the officers of the Department of Public Works, so that a good general idea of the proposed railway might be had, and then to appoint a Sectional Committee to visit the districts through which the railway would go, and to ascertain from local residents, and from a personal inspection of the country, what evidence, in addition to that given by the departmental officers, there was in favour of the railway being constructed. Before the departure of the Sectional Committee, an engineer connected with the Department of the Engineer-in-Chief for Railways was examined as to an alteration of route which it had appeared to the Committee was desirable, and respecting which, at the instance of the Committee, this officer was specially instructed to obtain information.

Nature of the  
country to be  
traversed by  
the railway.

5. The country which would be served by the railway is chiefly agricultural, specially adapted for the growth of wheat, and suitable also for the cultivation of fruits. Grazing and the production of wool are carried on extensively in various directions, and gold-mining, though not now at all so brisk as it has been, is followed to a small extent. Settlement, principally agricultural, exists extensively along the route of the railway between Cootamundra and Stockinbingal, and in and around Temora; and there are leasehold areas in the district of such a character that it is believed if the railway were constructed they would in a large degree be sought after by selectors, and placed under cultivation. With regard to pastoral pursuits, the Sectional Committee ascertained that there were at least fourteen properties to which the railway would be accessible for the conveyance of wool, and they found that the line would be very serviceable to stockowners for the removal of stock in times of drought. Another circumstance of importance in relation to the nature of the country through which the railway would go, is that though the land is undulating, and the district is intersected by a range of hills, the railway route passes this range through an opening where the grade would be of a very easy kind, and for the whole length of the route no engineering difficulty presents itself.

Choice of  
route.

6. A considerable amount of care seems to have been shown in the selection of the route. At the commencement of their inquiry, and until the Sectional Committee had visited the district, it appeared to the Committee that an error had been made in fixing the starting point of the railway at Cootamundra instead of at Wallendbeen. As shown on the plan, the line taken from Cootamundra passes at a sharp angle northwards towards Yeo Yeo, and it seemed to the Committee that it would be much more economical and convenient if it were taken from Wallendbeen westwards, by a straight line, to Yeo Yeo. The Acting Engineer-in-Chief for Railways could give little more information upon the point than that the instructions had been to make the survey from Cootamundra, and that the possibility of taking the line straight across the range had not been investigated. Instructions were, however, at the instance of the Committee, given to an engineer to visit the locality, and ascertain the feasibility or otherwise of taking the line from Wallendbeen, and his examination of the country led him to conclude that the railway could not be constructed from Wallendbeen except at great additional expense, and generally at much disadvantage, as compared with the route from Cootamundra. This conclusion was afterwards confirmed by the inspection and inquiry made by the Sectional Committee; and there can be no doubt that in choosing Cootamundra as the point where the proposed railway should join the main Southern line, the officers of the Department of Public Works took the right course. Special efforts appear to have been made since the railway was referred to the Committee by the Legislative Assembly to improve the route generally, and where the grade was at first no better than 1 in 50, the engineers have been able, by making some deviations, to reduce it to 1 in 75. There are no heavy cuttings on the line, and with regard to water-courses, only small creeks that will be spanned by the ordinary openings—a 24-foot span.

7. The prospects of traffic upon the railway, as represented in the evidence taken before the General Committee, are fairly good; but the information upon this point which the Committee consider should carry the greater weight is that gathered by the Sectional Committee, and set forth in their report. The Railway Commissioners regard the settlement at present in the district to be traversed by the railway as "too limited to leave room for the expectation of working expenses being realised"; and though they admit that the district presents great inducements for increased settlement, they decline to recommend the line except on the understanding that the Railway Department be conceded certain important privileges. The traffic officer, upon whose information the Railway Commissioners' report is understood to be based, considers, on the other hand, that the line would pay working expenses, provided the Crown lands in the district, including leaseholds, were thrown open for settlement, in which case every acre of them, he is certain, would be occupied. His report, which he produced before, and read to, the Committee, goes further than this; for, after mentioning that a large traffic is carried on between Cootamundra and Temora, which with proper means of transit would be considerably increased, it states that the character of the country is favourable to a light line of railway which should pay good interest on the outlay. Then in his evidence he describes the settlers about Stockinbingal as "a splendid lot of farmers—some of the best in the Colony," and says that the soil there is better than that along the proposed railway between Culcairn and Corowa, and that the district presents great room for the development of agriculture. The Sectional Committee, in recommending the construction of the line, "are influenced," their report states, "by the evident suitability of the whole district for purposes of husbandry, and its capacity for carrying a large population; and they believe that, though there may not be a prospect of an immediate return sufficient to pay interest on the cost of construction, yet in the course of a few years the expenditure will be fully justified by the results."

Traffic prospects.

8. One of the principal matters upon which the Committee endeavoured to elicit information was that of the estimated cost of the line, their opinion being that if the railway be constructed the work should be carried out as cheaply as possible, consistent with completeness and stability. They recommend, as will be seen by the resolution at which they have arrived, that the cost of construction should not exceed £3,300 per mile, and regarding all the circumstances, they consider that without difficulty the cost can be kept down to this amount. The Acting Engineer-in-Chief for Railways, and the engineer who effected the improvements in the line as at first proposed, did not, when giving evidence, appear to see how any further reduction in cost could be effected; but an examination of their evidence will indicate some directions in which the estimate of the Department may be lessened. The Acting Engineer-in-Chief admits that the country between Cootamundra and Temora is very much the same as that between Culcairn and Corowa, the cost of the proposed line in which district the Committee recommended should not exceed £3,500 per mile, and also that the estimate for the Cootamundra to Temora railway may yet suffer considerable alterations when the matter is further worked out. In all estimates, he states, it is usual to provide a margin for contingencies, and those contingencies may prove to be unnecessary, and the money set down for them will not then be required. So far as the permanent way is concerned, there would not, he says, be any material difference between the cost of the Cootamundra to Temora line and the line from Nyngan to Cobar, the estimate for the construction of which is £2,500 per mile; but there are other differences, he states, between these lines which account for the estimated cost of the one being greater than that of the other. One item is a decision of the Railway Commissioners to charge, in the case of the Nyngan to Cobar line, 1d. per ton for the conveyance of the rails required for the permanent way, and in the case of the line from Cootamundra to Temora, 2d. a ton. The Committee, however, think that the estimate of cost can and ought to be reduced to the amount per mile recommended by them. The country through which it is proposed to take the railway presents no engineering difficulty whatever, and it is clearly a district where, if a line be constructed, it should be a reasonably cheap one. Nearly £6,000 is set down in the official estimate for fencing, and it will be observed, from the report of the Sectional Committee, that they point out a way in which the fencing may be done at a little more than half the cost hitherto incurred for such work.

Possibility of lessening the cost of the line.

Conclusions  
arrived at  
by the  
Committee.

9. The conclusions arrived at by the Committee, as the result of their inquiry and of the visit of the Sectional Committee to the Cootamundra and Temora District, may be summarised as follows :—

- (1) That the agricultural and pastoral importance of the district presents reasonable claims for a railway.
- (2) That the proposed route for the railway appears to have been well chosen.
- (3) That, with railway facilities, settlement and cultivation are likely to largely increase.
- (4) That though the traffic on the railway may not be very great at first, the probabilities are that, with the development of the district, which the railway should bring about, it will speedily increase.
- (5) That the cost of the line should be kept as low as is justifiable with sound railway construction, and that it should not exceed £3,300 per mile.

The evidence in the case, together with the report of the Sectional Committee, was considered by the Committee on Tuesday, 18 March, 1890, and the resolution shown in the following extract from the Committee's Minutes of Proceedings was passed :—

Mr. Copeland moved,—“That, in the opinion of the Committee, it is expedient the proposed railway from Cootamundra to Temora, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. O'Sullivan seconded the motion.

Mr. Garrard moved, as an amendment :—“That the following words be added to the resolution, ‘at a cost not exceeding £3,300 per mile.’”

The amendment was seconded by Mr. Dowel, and, after discussion, passed on the following division :—

Ayes, 8.

Dr. Garran,  
Mr. Humphery,  
Mr. Cox,  
Mr. Garrard,  
Mr. Tonkin,  
Mr. Dowel,  
Mr. O'Sullivan,  
Mr. Hurley.

Noes, 2.

Mr. Trickett,  
Mr. Copeland.

The resolution, as amended, was then agreed to.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 23 April, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM COOTAMUNDRA TO TEMORA.

WEDNESDAY, 15 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.  
The Hon. ANDREW GARRAN.  
The Hon. FREDERICK THOMAS HUMPHERY.  
The Hon. WILLIAM JOSEPH TRICKETT.  
The Hon. GEORGE HENRY COX.  
JACOB GARRARD, Esq.

HENRY COPELAND, Esq.  
JAMES EBENEZER TONKIN, Esq.  
WILLIAM SPRINGTHORPE DOWEL, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.  
JOHN HURLEY, Esq.  
CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway from Cootamundra to Temora.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] You are Under Secretary for Public Works? Yes.  
2. Can you give us any information in reference to this proposal—the origin of it, and so forth? I think that I need not trouble you with any detailed statement of the steps which led to this proposal, because I now hand in a *précis* of the case which very fully describes all the main steps which have been taken with regard to this proposal. (The *précis* was handed in by the witness and read by the secretary, as follows):—

J. Barling,  
Esq.  
15 Jan., 1890.

In April, 1886, a petition extensively signed by residents of Temora, Barmedman, and other places concerned, was presented to the Minister by Messrs. Mackinnon and Spring, the local members, praying for railway communication from some point on the Main Southern Line, and stating that the mineral and agricultural resources of the district would make a railway a remunerative undertaking, that Temora is only 30 miles from Cootamundra, Wallendbeen, or Junee, and that a line to Temora might be extended to Barmedman (23 miles), and thence through the rich Bland District to Hillston on the Lachlan *via* Lake Cudgellico and Euabalong, a country unsurpassed in all the elements of prosperity, and the surface being level, and the land still in the hands of the Crown, the cost of making a railway would be moderate. The Minister directed that this line should be placed on the list of railway proposals. On August 18th, 1887, the honorary secretary of the Cootamundra Railway League, forwarded to the Minister a newspaper report of a public meeting held at Cootamundra, at which resolutions in favour of a line from that town to Temora were carried unanimously; and stated that a few days previously a conference of delegates from Barmedman, Cootamundra, Junee, Temora, and Wallendbeen, had been held, and that it was unanimously agreed by them that Cootamundra was the most suitable starting point from the main line, and that it should be accepted by all of them. On September 16th, 1887, a deputation waited on Mr. Secretary Sutherland, to advocate a line from Cootamundra to Temora. The deputation described the route which they desired should be adopted, and represented the distance as 35 miles. The line, they said, would be a cheap one to construct, and they believed it would pay. It would be the best route for an extension to Wilcannia. Timber for sleepers and ballast were obtainable. The Minister promised to visit the locality, and to be guided by what he saw in deciding whether to grant a trial survey or not. A petition and a statistical statement were presented to the Minister. The former is not now on the file, but the latter gives the following particulars:—Population of town of Temora, 1,700; population of district, 2,000; sheep, 35,000; land under cereals, 8,000 acres; gold produced in 1885-6, 15,000 oz.; imports, 2,000 tons; exports, wool, 9,000 bales; sheep skins, 5,000; hides, 1,500. There was also a large production of valuable timber. The deputation further referred to the agreement which had been arrived at by the delegates from the several places concerned in favour of Cootamundra. This compact which, as before stated was unanimous, was however violated almost immediately by Junee (one of the parties to it). In November, 1887, the Council of that place wrote to the Minister urging that the line might be taken from Old Junee *via* Junee Reefs and Sebastopol to Temora, a distance of 32 miles. In June, 1888, Mr. Sutherland visited Junee, when the claims of that place as the starting point of the proposed line were also verbally pressed by the Mayor, who stated that the distance to Temora by that route was only 26 miles. The Minister promised consideration if the distance were as stated. This seems to have alarmed the promoters of the route from Cootamundra, and a deputation waited on the Minister to represent the superior advantages of that route. They reminded the Minister that the question had been fully considered by a conference of delegates, and that after an exhaustive discussion Cootamundra had been accepted without a dissentient voice. They suggested that a projected sale of Crown lands should be postponed, as some of the land would be required for the railway, and the decision to make the line would enhance the value of the portion sold. A petition of the same purport, with something like 1,000 signatures was also presented to the Minister, who, in replying to the deputation, stated that he had driven over the route from Junee, and apart from other disadvantages it had the great one of being further away from Sydney than Cootamundra. He could promise them that a survey (from Cootamundra) should be made, but he did not intend that that should commit him in any way. The sale of Crown lands should be postponed. In the July following three surveyors were sent to make the promised survey, and it appeared by the preliminary report of these officers that the country was so level that it required only the laying of the sleepers for a considerable part of the distance. In August, 1888, an effort was made by the Cootamundra Railway League to obtain a survey from Salt Clay Creek, on the (alleged) ground that it was the shortest route, and passed through good land, but the surveyors had already reported that that route presented engineering difficulties which would involve considerably increased expense, and more than counterbalance the saving in distance. The Minister decided that at all events such survey could not be undertaken then. Soon after in reply to Mr. Mackinnon and the Temora League, the Minister stated that it had been determined to make a trial survey of a line to Barmedman (in continuation of the Temora survey) and on to Hillston. On September 4th, 1888, the united Railway Leagues of the district urged upon the Minister the desirability of making a trial survey of the Salt Clay Creek route, but, doubtless for the reason already given

J. Barling,  
Esq.

15 Jan., 1890.

given, no action was taken. Some time in 1886 an application was made to Mr. Secretary Lyne for a survey of a line from Coolaman northwards, *ie.* to Hillston and Euabalong, but the Minister, after receiving a report from the Engineer-in-Chief decided that a survey was not warranted. On September 20th, 1888, the project was revived by the persons interested, through Mr. Dibbs, who forwarded to Mr. Secretary Sutherland a memorial which had been addressed to him on the subject. The matter was referred to the Engineer-in-Chief, who reported that a line to Barmedman was already being surveyed and that it would be better to continue this to Hillston. There were three routes to Hillston from Sydney, (1) *via* Carrathool, 479 miles; (2) *via* Coolaman, 441 miles; and (3) *via* Cootamundra, 429 miles the length of new line to be constructed in each case being (1) 60 miles, (2) 132 miles, (3) 176 miles, but No. 3 spaced the country better, and passed through more population. The Minister directed that the survey by Barmedman should be adhered to. On April 3rd, 1889, Mr. Secretary Bruce Smith having been asked to receive a deputation to advocate the Cootamundra-Temora, Barmedman route, and thinking a deputation unnecessary, caused the applicants to be informed by letter that a trial survey had been completed to Temora (36 miles), that an estimate of cost had not been prepared, but it would not be heavy, that the survey had been extended to Barmedman, and was then in progress to Hillston. Soon after another alternative scheme was suggested. In May of the present year Mr. C. S. Smith addressed the Minister, advocating Bethungra as the starting point from the main line on the ground that a saving of some miles of line would be effected, that there is plenty of timber and stone on the route, and there would be no expensive purchases of land to make. The letter was referred to the Railway Commissioners. On April 25th, 1889, a deputation from Cootamundra, Temora, &c., introduced by Messrs. Barnes and Mackinnon, waited on the Minister to urge the immediate construction of the line—Cootamundra to Temora and Barmedman. In addition to the arguments employed they now submitted definite statistics which they had collected and printed. These statistics may be briefly summarised as follows:—1888, population—Temora, 1,146; farmers, 198; their families, 661; labourers, 318; total, 2,323. Sheep, 173,593; cattle, 2,021; horses, 1,220; farmers' holdings, 318,780 acres; land under wheat, 9,145 acres; produce, 188,300 bushels; passengers by coach, 1,730; imports, 20,000 tons; exports, 4,000 tons. The Minister informed the deputation that there was no occasion for them to say anything further, as from what they had said and from a report he had received from the Engineer-in-Chief, he had determined to submit the whole case to the Railway Commissioners. The Commissioners were advised accordingly, and the report furnished by them will be submitted to the Committee. After the reference of the case to the Railway Commissioners further action took place as under:—On June 27th, 1889, a deputation, introduced by Messrs. Dibbs and Gormly, M.s.P., waited on the Minister in the interest of the Coolaman to Hillston proposal. They represented that the district was rapidly turning from pastoral to agricultural pursuits, the soil being admirably suited for wheat culture; that the district produced splendid timber suitable for fencing, and that stone was plentiful. They were aware that other routes to Hillston had been advocated. They did not oppose any other, but they desired before any decision was arrived at to have "a fair show." The proposed line would be a connecting link for the Tumberumba line. Mr. Dibbs said the only way to make the Junee-Hay line pay was to have light lines, such as that now proposed, as feeders to it, and that for such lines our tram motors (for which a use would one day have to be found) might be utilised, travelling at a speed of 8 or 10 miles an hour. The Minister reminded the deputation that if railways were given to every district where they could be made payable many millions would be added to our public debt. He did not think their case was a strong one, but he could promise that no line should be made until an authoritative report on their proposal had been furnished. The Railway Commissioners had been over the route from Cootamundra to Temora and spoke rather favourably of it, especially mentioning the timber. As regarded light lines, Mr. Travers Jones had spoken to him of a system adopted in Queensland of laying steel sleepers on the surface at a cost of £2,000 a mile, and he had drawn the attention of the Commissioners to it. The deputation presented two petitions from persons residing in the several localities in favour of the line, and a statistical statement giving the following particulars:—Population, 508; land, freehold, 196,085 acres; land, leasehold, 53,619 acres; land bearing pine timber, 24,070 acres; land cultivated, 6,623 acres; produce, wheat, 28,475 sacks; sheep as far as collected, 130,120; horses, 683; cattle, 883; wool, 1,660 bales. An undertaking to give the land required free of cost to the Government was also furnished, with the signatures of twenty-one persons. On July 3, 1889, the local Railway League addressed the Minister, with reference to a deputation from Junee which was about to wait upon him to oppose the Cootamundra scheme, stating (1) that a conference of delegates from all the places concerned, Junee included, had unanimously resolved that the line should be from Cootamundra to Temora; (2) that if a line were made from Old Junee to Temora it would involve another junction a few miles from Junee; and (3) that, if such a line were constructed, it would entail a further run of 35 miles on the main line, making the distance so much longer than it would be if the Cootamundra route were adopted. On July 11, 1889, the deputation from Junee referred to above, waited on the Minister, and made representations in favour of their town as the starting point from the main line. The Minister, read to the deputation the statement from the Railway League given above, and asked them if such a conference had been held with the result alleged. They admitted that the facts were as stated, but pleaded that they were not satisfied with the action of their delegates on that occasion. The Minister pointed out that two years had been allowed to elapse, and they only came to him now when they knew the matter was going to be submitted to the Public Works Committee. It was not business-like, but he would send someone over the route they proposed, to ascertain the traffic, &c.

3. The statement just read is a history of the proposal from the beginning? Yes.

4. And so far as you know and can say it is an accurate one? Yes.

5. Is there anything else that you have to say? I have now to hand in, in the first place, the official description of the line which was laid before Parliament. Probably I need not read it, but I would just draw attention to one point. The length is given there as being 35 miles 66 chains 14 links. The proposed line was subsequently revised, namely in November 1889, and the length is now 37 miles 58 chains 14 links. The cost originally given was £146,400, or at the rate of £4,086 per mile; but the revision gives the cost as £138,000, or an average of £3,656 per mile, and the line now leaves Cootamundra at 252 miles 48 chains 86 links from Sydney, and terminates at Temora at 290 miles 22 chains from Sydney, and the proposed station at Temora would be between Schleicher and Baker Streets. Then I have to hand in the Railway Commissioners' report, which is an earlier document still, dated June 20, 1889. The cost of construction is there given as £200,000, and the Commissioners say:—A trial line has in this instance only been made, and therefore a rough estimate of the cost of construction, which may be accepted as fairly accurate, has been given. I think that it might be interesting to the committee if I were to read the opinion of Mr. Whitton, who is now absent from the Colony, as contained in a minute written by him. This is referred to in the *précis*, but I think that you might like it in full. It is dated October 10th, 1888. Mr. Whitton, says:—"I have the honor to inform the Minister that a survey is now being made from Cootamundra to Barmedman *via* Temora, and I think it would be better to continue this to Hillston than to survey a line as suggested, from Coolaman to Hillston, the latter distance being 132 miles, as against 112 miles from Barmedman to Hillston. From Carrathool to Hillston the distance is only 60 miles. The through distances from Sydney by the three routes would be as follows:—(1) Sydney to Carrathool, 419 miles; Carrathool to Hillston, 60 miles; total, 479 miles. (2) Sydney to Coolaman, 309 miles; Coolaman to Hillston, 132 miles; total, 441 miles. (3) Sydney to Cootamundra, 253 miles; Cootamundra to Barmedman, 64 miles; Barmedman to Hillston, 112 miles; total, 429 miles. The length of line to construct in each case would be—No. 1, 60 miles; No. 2, 132 miles; No. 3, 176 miles; No. 3 line appears to divide the country better, and would, I think, pass through a more settled district."

6. Which is number three? The one we have under consideration—a portion of that. I think that is all that I have to state in regard to it. It may be interesting to the committee to know that the inspectors whom it was stated in Parliament the Minister would appoint for the purpose of collecting statistics have this day been appointed.

7. *Mr. Copeland.*] Who are they? One of them is Mr. Sydney Alexander, who has been connected with the chief trial surveys lately, and the other is Mr. Harry Gilliatt, of the Mines Department.

8. *Mr. Garrard.*] Is this line put before us as a line to Temora, or as part of a line on to Hillston? I can only answer for the line before you—from Cootamundra to Temora.
9. *Mr. Cox.*] Has the population increased or decreased lately at Temora? I have not gone into that matter. Mr. Coghlan will be able to give you that information.
10. *Mr. Dowel.*] Can you say whether the suggestion made by the Railway Commissioners, that a substantial sum derived from the sale of Crown lands, could be devoted towards defraying the cost of constructing this line? I am able to partly answer that question. In the evidence I gave before this Committee in connection with the proposed railway from Grafton to the Tweed, occurs this statement which I made with authority:—"While on this question I may mention that a sum of £862,833 has been paid out of the Consolidated Revenue on account of capital charges in connection with railway construction. This amount is chiefly made up of the cost of the Engineer-in-Chief's establishment to date, and a further sum of £1,047,975 has been paid out of the revenue to meet debentures as they fell due. I may also point out,—though no doubt this is common to all railway constructions in the various colonies—that the State land through which the railways pass is handed over to the Commissioners without any credit being given to the land revenue, which in fact means using what would otherwise be land revenue for construction purposes. I find that up to the present time, the quantity of Crown lands taken for railway purposes amounts to 22,300 acres 2 roods 5 perches. The quantity of private land taken is 21,212 acres 1 rood 24 perches, and the amount paid on account thereof to date is £1,238,151 4s. 7d. With regard to the whole of this important question, I am authorized to say that the Ministers for Works and Lands are in consultation with a view to bringing some tangible proposal before the Cabinet in relation thereto. The question of writing down the capital value of any new railways from the proceeds of land, increased in value by the construction of such railways, is to be considered by the Cabinet as a separate question, and it is not thought desirable by the Minister to connect the two matters in an isolated case of railway construction. In the Commissioners' report on another railway to come before this Committee, a similar proposal has been made, and the whole question will, therefore, be more fitly dealt with, apart from such considerations the desirability of railway construction."
11. What date was that? That was on November 12.
12. The Commissioners' report was dated June 20? Yes.
13. So that in the meantime, this proposal of the Commissioners' had been brought before the Ministers, and duly considered? I do not think I can say that any determination has yet been come to in the matter, but it has been considered by the Minister. As far as I am aware, no determination has been arrived at in regard to it.
14. No further action has been taken? No definite action has been taken, but I am aware that it is still under consideration, for the Minister was speaking to me about it this morning. You are aware, I dare say, that in Victoria this matter is made the subject of special legislation, and in that evidence I quoted the sections of the Victorian Act dealing with the matter so far as Victoria is concerned.

J. Barling,  
Esq.  
15 Jan., 1890.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

15. *Dr. Garran.*] What office do you hold at present? I am Acting Engineer-in-Chief for Railways.
16. You are personally cognizant of the plans for this railway? Yes.
17. Have you yourself been on the ground? No; I have not been over the ground. I instructed Mr. Alexander to examine the ground, and he has made a report.
18. It is principally on Mr. Alexander's evidence then that your opinion is formed? Yes.
19. You will observe by the plan suspended there that instead of going off as a continuation of the main southern line, where it is running west, the line runs down nearly south to Cootamundra, and then north of it for some considerable distance on this new line;—can you tell us the reason for that sharp angle? Cootamundra was considered the best place for the junction. The application for the trial survey of one of the routes emanated from the residents of Cootamundra, and, besides that, I believe that the most favourable place for crossing that range is opposite Cootamundra.
- 19½. Has there been any flying survey made across the range by a line that would be straighter? No, I think not. This is the only survey that has been made.
20. You cannot say there is any engineering difficulty in the way of a straighter line? No, I cannot. All the instructions we had were to survey a line from Cootamundra to Temora.
21. How much distance would be saved by going straight instead of taking that very sharp dip? That is distance to Sydney?
22. Yes—from there to the bend in the proposed line? About 8 miles. It was proposed to run straight across from Cootamundra, taking nearly a west north-west direction, but the range there is very rough, and the engineering difficulties are greater.
23. Then you have gone north to avoid a difficulty? Yes.
24. You cannot say that the difficulty would have been a bit greater if you had gone straight on the southern line? No, I cannot say.
25. It is rather important that the Committee should know whether there is any greater difficulty there, because on the map the detour seems most unreasonable and unnecessary; as I understand you the object of it is simply to please Cootamundra, with a junction? The instructions were to make the survey from Cootamundra.
26. You have simply acted according to your instructions? Yes. I believe that the possibility of taking the line straight across there has not been investigated.
27. What is that range; is it a difficult range, a lofty range? Not the way we go.
28. I see that the gradients are nothing worse than 1 in 50? No; and those gradients of 1 in 50 will be cut out by proposed deviations, and will not be worse than 1 in 75.
29. There are two or three places where the gradient is 1 in 50? Yes.
30. And you will get rid of them all? Yes.
31. And reduce them to 1 in 75? Yes.
32. And without any material increase in expense? The line examined by Mr. Alexander was cheaper than this.
33. The Committee are to understand that you have got an improved line to Temora with gradients of 1 in 75? Yes.

H. Deane,  
Esq.  
15 Jan., 1890.

H. Deane,  
Esq.  
15 Jan., 1890.

34. What is your estimate now of the cost of the work? The line is somewhat lengthened—it is lengthened very nearly 2 miles, but the total estimate is £138,000, which makes £3,656 per mile.
35. What weight of rail do you give for that? A 60-lb. rail.
36. And on that rail you propose to run the lighter class of your present engines? Yes.
37. So you would not require a special rolling stock? No, not at all.
38. Is there any facility for ballast being got on this line? Yes, there is some ballast to be got, in the first few miles.
39. Is there any suitable railway timber? There is ironbark in the neighbourhood. We pass through some ironbark timber.
40. And the Commissioners, I see, speak of certain facilities being given by the railway Department for carrying timber; does that imply that the timber will have to be brought from a distance? Some of it probably will. I expect the sleepers will be got near the line, but squared timber of all kinds might possibly have to come from a distance.
41. Are we to understand that they look for a small or for a great carriage of timber used in construction towards lessening the first cost of the line? The charge for the carriage of sleepers has always been very heavy.
42. They propose to reduce it in this instance so as to cut down the cost of the line? Yes.
43. They speak of that as almost a necessary precedent to recommending the line—is that to be understood? I have not gone carefully into the Commissioners' report.
44. How much would it save per mile if the cost of timber were reduced; if you are going to get the sleepers on the spot you will not want very much squared timber? The cost of the timber bridges altogether is estimated at only £9,900.
45. How much of that would be for wood material? These are all timber bridges.
46. How much of that would be for the cost of material including timber? About half.
47. That is calculated on the basis of the present rate of carriage? Yes.
48. So the only saving would be the reduced cost of carriage on the material? Yes; say, on £5,000 worth of timber.
49. How much would the cost of carrying that £5,000 worth of timber be? It is very difficult to say, because I do not know where it would all come from.
50. So far as the engineering part of the question is concerned, on which alone you speak, is there any engineering difficulty of any kind on the line? None whatever.
51. No heavy cuttings? No.
52. No difficult streams to cross? No; only small creeks that are spanned by the ordinary openings—24-foot span.
53. The work would be an easy work? Yes.
54. *Mr. Copeland.*] What is the reason why the line was not surveyed from Wallendbeen so as to cut off those two sides of the triangle? I cannot give you any information on that point. I only know that the Engineer-in-Chief had instructions to have a line surveyed from Cootamundra. I am not aware whether his opinion was ever asked.
55. It will be seen that this simply forms two sides of a triangle, whereas one line straight across here (pointing to the map) would save how many miles? I think you would find it would save 8 or 9 miles—not more than that. Without having the matter investigated I could not say how much would be saved.
56. You do not know whether a flying survey has been made across the range here? I do not believe it has; I do not remember anyone having examined it. There never was any survey to my knowledge of the country between Cootamundra and Temora till this year.
57. You say that you have got an improved line now; are the Committee to understand that you have any improvements over and above what is submitted to us here in this statement? If you have the amended statement, that shows all the improvements. Mr. Barling, I suppose, handed it in.
58. This statement includes then all the expected improvements? Yes; it shows a saving of about £8,400. The route is the same as before, only there are some small deviations along the route; the terminus is different in Temora.
59. Can you say what distance this line would be away from the Junee to Hay line in its general course? The two lines are not parallel, and I can scarcely say.
60. Do you think they would be sufficiently wide apart to be likely to have traffic enough to pay, especially when in all probability the only traffic would be wool and live-stock? And some cultivation, I believe there is.
61. Can you say where the cultivation is? Yes, there is wheat cultivation in the neighbourhood.
62. In the neighbourhood of Cootamundra, but not in the neighbourhood of Temora, I think? Only at the Cootamundra end so far as I know. This is a wheat district here—near Stockinbingal.
63. Would you expect to get any wool traffic or live-stock traffic by this proposed line that you do not at present get by the Junee to Hay line. Yes. To tell you the truth, the matters of traffic have been so completely taken out of our hands, that the question has perhaps been rather neglected by the engineering branch.
64. You can simply give the Committee information only on the engineering aspect of the question? I would rather give information only on the engineering question.
65. You have already stated that this would be a line very easy to construct? Yes.
66. You cannot say, speaking in general terms, how far it would be from the Junee to Hay line? Well, Temora is about 30 miles—taking a straight line down on to the Junee and Narrandera line it is about 30 miles.
67. Supposing the Government were to construct a line from Forbes to Menindie, having already in existence the line from Junee to Hay, do you think that then there would be room enough for a payable line on this proposed route—Cootamundra to Hillston? Not considering it as a pastoral country. If it were taken up for cultivation no doubt there would be.
68. But so far as pastoral traffic is concerned you would expect that they would make either to the Forbes-Menindie line, or to the Junee-Hay line, and that you would not be likely to increase the traffic in any way by building this now proposed line; in other words, any pastoral traffic that this proposed line would get would simply be taken away from one of the other two lines? Some portion of it would, but there would be a certain amount of extra carrying, though perhaps not very much.

69. Of pastoral traffic? Yes. I mean this—any produce grown here, wool or otherwise, would naturally come into Temora instead of going down here, or up this way (*pointing to the map*) or any other direction. Anything grown here (*pointing to the map*) and taken to Temora, would give extra carriage. The produce of the district just beyond Temora would be carried along that line, and it would be additional carriage. Any place where the distance to the railway was saved would give extra carriage.

H. Deane,  
Esq.  
15 Jan., 1890.

70. Can you say the distance between Narrandera and Condobolin? It would be about 110 miles in a straight line.

70½. So that supposing that the Condobolin-Menindie line were constructed, the furthest that any place could be away from the railway would be 55 miles? Yes.

71. Supposing that the Government were to decide, or had decided, on the line from Condobolin to Menindie, would you then recommend that this line be constructed? It would only serve a very small district.

72. Would you recommend that it be constructed to Hillston if the other two lines were in existence? Yes, I should, if the country were taken up for agricultural purposes, but not for pastoral purposes.

73. Is the land all fit for agriculture—right up to Hillston? Not all of it.

74. Have you any personal knowledge of the country? No; I have not been there. I can tell only from reports.

75. *Mr. O'Sullivan.*] In reply to the Chairman just now, you stated that the gradients would be about 1 in 75, and that there were no engineering difficulties in the way of this line? Yes.

76. Therefore we can take it for granted that the line could be cheaply constructed? Yes.

77. The estimate per mile is £3,656? Yes.

78. Is not that rather high for a very easy country? No; I do not consider that high. It is not a level country.

79. You say that there are no engineering difficulties, and even the crossing of the range is not a matter of very great difficulty? I do not know, I am sure, where any further economy could be exercised.

80. Have you taken into account the cheap system of fencing? The total for fencing is only £5,850—that is not a large amount.

81. Do you think it possible to construct this line at a cheaper rate? I would not advise it—not to make a proper job of it.

82. You are aware that the Committee has recommended the construction of the Culcairn to Corowa line on the understanding that the cost should not exceed £3,000 per mile? Yes.

83. Is that country as difficult as the country between Temora and Cootamundra? I should say that it is pretty much the same. The Culcairn to Corowa line would, if anything, be rather easier.

84. In his evidence before the Committee, Mr. Alexander said that that line could be constructed for less than the estimate, but he would not advise it to be done. I presume that in the same way you are of opinion that this line might be constructed more cheaply, but you would not recommend it? My opinion is this—that the design of the works is most suited for the country, and for the particular class of line. This is only an estimate after all; this is an estimate from a trial survey. It may suffer considerable alterations—some of the items may be reduced when we come to work it out. Certainly no more work would be put into it than was absolutely necessary; but unless you alter the type of construction, practically, you do not reduce the cost of the line. This cost of £3,656 per mile includes an amount for contingencies which it is only fair to take into account. Those contingencies may prove to be nil, and then that money will not be required. It is usual in all estimates to provide a margin.

85. In your evidence you also said the starting-point was fixed at Cootamundra for Ministerial reasons—or you implied that? Instructions came from the Minister to make the survey from Cootamundra.

86. What year was that in? Last year.

87. But in carrying out those instructions you actually added 8 miles of haulage to the line? Yes.

88. That might have been avoided? I cannot say. If the line could be carried across from that other point—Wallendbeen.

89. There appears to be no great difficulty about that; you have to cross the range going to Cootamundra and only once going to Wallendbeen? Yes; but the character of the range will vary very much in its different parts. Cootamundra seems to be the natural point of departure for Temora on the map. The reason why the line is taken in this direction from Cootamundra is that there is a low point in this range—only about 200 feet above Cootamundra—and I think you will find on examination of this range further north that it rises again, much the same as it does in the south.

90. *Mr. Tonkin.*] You know of course that the proposed line from Nyngan to Cobar is to be constructed without fencing? It is proposed, I believe, to construct it without fencing.

91. Is not this similar country, and would not this line do without fencing the same as the other? Any country that is used merely for pastoral purposes could be treated in the same way; there is no reason why, if fences are unnecessary in one part, they should not be abolished in the other.

92. That would reduce the cost, would it not? Yes.

93. Can you tell us why this line will cost £3,600 per mile, whilst the proposed line to Wilcannia will cost only £2,500 per mile; that is over £1,000 per mile difference—33 per cent. on the cost of construction? In the first place the earthworks are slightly in excess here; then the permanent way is higher per mile. In the case of the Nyngan to Cobar line the Commissioners have arranged for the freight on the rails to be 1d. per mile; here the freight has been reckoned at 2d. per mile.

94. But will there be any material difference in the cost of the permanent way? No.

95. The rails will be 60lb. rails in both cases? Yes.

96. And I suppose there will be the same amount of sleepers and ballast in each case? Yes.

97. Then would that penny per ton per mile upon the carriage of the rails make the difference of 33 per cent. on the cost of construction? No; but there are other reasons. If we were to compare the two estimates it would soon be seen where the difference lies.

98. Can you tell this Committee where the difference lies—there is such a great difference? I cannot give you an estimate that will exactly compare with this, because nothing more than what is a rough approximation has really been made of the Nyngan to Cobar line. This has been taken out in detail. By-and-by, when all the plans are finished, I shall be able to make an estimate to correspond with this and compare with it. It would be difficult just now to make a comparison of the different items; it would be mere guess-work.

99. Do you mean that the cost as given to us of the Nyngan to Cobar line, £2,500 per mile, is too low an estimate

H. Deane,  
Esq.  
15 Jan., 1890.

estimate—that it cannot be constructed for that;—do you mean that? No, I do not mean to say that. I only mean to say that the estimate is more or less an approximate one. It has not been so carefully made out as this estimate has. I have not the slightest doubt that it can be done, but there are differences in the character of the country and the design of the works which would account for a good deal, I have no doubt.

100. Can you give this Committee any explanation of the difference—this great difference—between the two lines, for the lines will be similar lines;—are there much heavier earth-works or cuttings? Yes; I mentioned that just now. I think I may say that in the way of excavations there is an excess here over the Nyngan to Cobar line of £10,000; that is to say that supposing this country were of the same character as the Nyngan to Cobar line the excavations, the earth-works, would cost only about £8,900; here the excavations are estimated at £18,875. That is one cause of difference. Another cause is the fencing. £5,000 no doubt could be knocked out of fencing if it were not necessary to fence except close to settlements. That would make £15,000. Then there is the permanent way and ballasting permanent way; 1d. per mile extra has been charged. You understand the late Commissioner charged us 4d per ton per mile, but the present Commissioners have agreed to carry the permanent way material at 2d. per ton per mile, but in the case of the Nyngan to Cobar line they have offered to carry it at half that rate. I understand that that reduction applies only to the Nyngan to Cobar line.

101. For the purpose of reducing the expenditure in the construction of this line, would you recommend that the fencing should not be carried out; you know the country the line is going through? I know the southern line, but I have not been across between Cootamundra and Temora.

102. Would you recommend that that should be a railway line without fencing—a cheap line? There would be this difficulty: a great deal of the land is fenced, and where we go through fenced land owned by different owners they would probably insist on the line being fenced. Where we go through Crown land—for the last 15 miles I think it is—we could do as we liked, I suppose.

103. *Mr. Dowel.*] Have you read the Railway Commissioners' report on this line? Yes.

104. You notice that they refer to a supply of ironbark in the district? Yes.

105. Have you any information about this particular timber to which they refer? The surveyors have reported that there are ironbark forests there.

106. Can you give the Committee some information about those forests—the nature of them, their extent, and whether they are on the proposed route, or within a radius of how many miles? I believe that the proposed railway would pass through an ironbark belt, and there is, no doubt, plenty of ironbark within a small distance of the line.

107. Then there will be no difficulty in procuring sleepers? No difficulty, I should say.

108. As an engineer, have you any objection to specifying for the use of half-round sleepers of ironbark in this particular line. I am asking you this question with the view of seeing whether the cost of construction could be lessened in any way. As an engineer, would you recommend in your specification that half-round sleepers should be used—that this innovation should be made on this particular line, where there is a large quantity of ironbark on the route easily accessible? I would not recommend it. I would endeavour to make the specification for sleepers as easy as possible. Good sound sleepers should be used, but I would not be so particular about their being absolutely rectangular and showing no sap at the edges.

109. What difference would that make in the cost of the sleepers—the way you propose now to specify for them, as different from the ordinary sleepers as at present used? I do not think that it would make very much difference. It would certainly admit of smaller trees being used, but where larger trees were obtainable, of course a considerable proportion of the sleepers provided would still be rectangular—still come up to the old specification, you might say. It would only enable the splitters to get in sleepers of somewhat inferior quality—sleepers from the outside of the tree.

110. You have no idea what the reduction of cost would be then? I think one might put it down at about 6d. per sleeper.

111. The country, if I understand you aright, is of an undulating character? Yes.

112. Involving more earth-works than there would be on the Culcairn to Corowa line? Yes.

113. That accounts for the difference in the cost—the increased cost in your estimate? That accounts for the increased cost of the earth-works.

114. The difference of cost is chiefly made up by the earth-works in the two estimates? Yes. If I remember aright, the estimate for the Culcairn to Corowa line was £4,100 per mile—this is really cheaper than the line from Culcairn to Corowa—but the Committee's recommendation was £3,500.

115. You could not recommend in the construction of this line the use of half-round sleepers? No.

116. You are aware, I presume, that they are used in the construction of lines in America? I would not like to go by American practice altogether. I know that lines in America are very often made in a very flimsy manner. Population springs up at the end of the line and along the line, and it pays them to renew the works in a substantial manner. This is being done more or less throughout the country.

117. Would it be advantageous for a policy of that description to be carried out in New South Wales? I do not think so, because the Government can always borrow money at a cheap rate; whereas in America a company has to construct the line. Looking upon it as a speculation, if a private company in America were able to get the money and lay the lines in a substantial manner, it would most decidedly be better to do so than to lay them in a flimsy manner, and afterwards to have to renew the works.

118. What does the Department pay for sleepers now? *Mr. Eddy* told me not very long ago they had a contract at Dubbo for ironbark sleepers at, I think, 2s. 11d. each, delivered at the station.

119. The whole of the bridges are of timber? Yes.

120. *Mr. Lee.*] Can you tell the Committee how the difference in cost is arrived at as between the estimate made in June, 1889, and this made in November of the same year; the first estimate was for 35 $\frac{3}{4}$  miles at a total cost of £200,000, and the revised line shows a longer length at a very much reduced cost—£138,000; how is that arrived at? It is chiefly due to a revision of the necessities of the line, and an alteration in the economy of construction. The excavations amount, I see, to about the same thing per mile, and other expenses are very similar. There is a saving of about £2,000 in bridges; the permanent way and ballasting has been cut down £4,000; and diversions of roads which we put down to cost over £2,000 have been cut out altogether.

121. Did this revision of the line take place after it had been referred by Parliament to the Public Works Committee? Yes.

122. It was referred by the Legislative Assembly on September 27th, 1889? Yes. It was after that—  
about the time when I instructed Mr. Alexander to examine the country. H. Deane,  
Esq.
123. In other words, since the line has been referred by Parliament, your department has taken every  
precaution to straighten the line, and reduce the cost as much as possible? Yes. 15 Jan., 1890.
124. Does that really express your meaning; that is to say, the line which the Committee now have before  
them is the result of your subsequent labours? Yes. I should say that my views have not altered in the  
slightest about the character of the work required for this line, but I have been through the estimate and  
revised the prices, and cut them down to correspond with some other lines.
125. Do you think that you have cut them down below the contractors' prices? No; I think not.
126. You think that the line could be constructed for that money? Yes. For instance, in the first estimate  
we had for ballasting 5s. 6d. per yard; that stands now at 4s. 6d., and I am sure it can be done for that,  
as ballast is obtainable on some parts of the line; then, sleepers were originally put at 4s. 6d., but we  
can, I think, get them at 3s. 6d.
127. Your department has revised this line since it has been submitted to Parliament, and you are now  
speaking of the revised figures before the Committee? Yes.
128. Consequently those figures have passed through your hands? Yes.
129. Are you of opinion that it would be safe to go even lower—to reduce the cost of this line, having in  
view the public safety? No; I would not recommend that.
130. You think that that is the lowest price at which this line could be constructed? Yes; that is to say,  
as I pointed out before, an amount has been allowed for contingencies, which we might not have to draw  
upon.
131. That is allowed in all cases? Yes; it is a usual thing in making estimates. I believe that this line  
could be constructed at this rate if the contract be let within the next few months, but if it had to stand  
over for a couple of years, and business became brisker in the colony, wages might rise, and we would have  
to pay more.
132. *Dr. Garran.*] You said that the Commissioners proposed to carry the rails for the Cobar line at 1d.,  
and for this at 2d.? Yes.
133. What is the schedule rate at the present time, without any favour, for rails? I think it is 4d.
134. That has been the rate hitherto charged? Yes.
135. Is it in the power of the Commissioners to charge one extension 1d. another 2d., another 3d., and  
another 4d.? Really that is a matter which I have not considered.
136. But in their calculation they propose to give Cobar an advantage over this line? Yes.
137. And this line an advantage over the schedule rate? Yes.
138. So in comparing one branch with another, we shall always have to bear in mind that little bit of  
favouritism? The rate for the carriage of rails is of course a rate which can only apply to the construction  
department; nobody else has rails to carry except to a very infinitesimal extent.
139. I mean that when we compare the cost of one line with the cost of another we must look to see if the  
Commissioners give any special favour in the cost of carrying the rails? Yes.

THURSDAY, 16 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway from Cootamundra to Temora.

Stanley Alexander, Esq., District Engineer, sworn, and examined:—

140. *Dr. Garran.*] What is your status? District Engineer. S. Alexander,  
Esq.
141. Did you survey the proposed line? It was surveyed whilst I was in charge of the department. 16 Jan., 1890.
142. Have you been over the ground yourself? Yes.
143. Have you been over the ground near Wallendbeen where the line might make a short cut from the  
262-mile peg instead of going all the way to Cootamundra and making that sharp angle? No. I think  
that the line would have to pass over the range or to go the way that it goes now.
144. Would it not be practicable to have a much straighter route from Sydney to Temora? I think it is  
possible, looking at the map, but Mr. Firth will be able to give you more information on that point.
145. Have you had anything to do with the preparation of the estimates of the cost of the line? Yes;  
I prepared them.
146. And, as far as you know, they are trustworthy? Yes.
147. What is the weight of the rails which you provided for? 60lb.
148. What is the difference in cost per mile between 60lb. and 40lb. rails? Roughly, about £200.
149. Would the 60lb. rail carry the lightest of our present locomotives? It will carry them all.
150. And the 40lb. rail would necessitate a separate class of engines? Yes.
151. And that is such a disadvantage that you think it better to spend £200 a mile extra and use the  
60lb. rails? Yes.
152. You have no hesitation in recommending the 60-lb rail? None whatever.
153. We are told that the gradients will be reduced from 1 in 50 to 1 in 75? Yes; you can depend on  
that.
154. And that will necessitate an increase in the length of the line by two miles? Yes.
155. You recommend that? Yes.
156. Will it not involve any dangerous curves? No.

- S. Alexander, Esq.  
16 Jan., 1890.
157. It will be in every way a better line than the original one? Yes.
158. You believe that the gradient can be reduced to 1 in 75? Yes; you can make sure of that—possibly it may turn out better.
159. There may be improvements? Yes.
160. Taken as a whole it is a line of cheap construction? Yes.
161. It presents no engineering difficulties? None.
162. You think it could be made, at present contractors' prices, within your estimate? Yes.
163. Have you gone into the question of traffic? No.
164. You have confined your attention to the engineering part? Entirely.
165. Is the country as far as Temora a wheat-growing country? It is.
166. Would it be as far as Barmedman? I was told so at Temora.
167. How far is Temora from the line that goes to Narrandera; what is the breadth of the belt of country between the two lines? About 35 miles.
168. Then between the two lines there would be no point distant more than 17 or 18 miles from a railway? No.
169. And the two lines gradually widen out from the junction? Yes.
170. They form two sides of a triangle virtually? Yes.
171. *Mr. Tonkin.*] When was the fresh survey made that reduced the grades from 1 in 50 to 1 in 75? There has been no fresh survey made.
172. Then how has the alteration been brought about? From an estimate which I formed after having inspected the line.
173. Did you have to go over the ground to make that alteration? Yes.
174. And without surveying the line you could see that the gradient could be reduced? Yes.
175. When was the survey according to which the grade is 1 in 50 made? It was commenced on August 1st, 1888, and ended on the 17th September, 1888.
176. And when did you inspect it and alter the grade? I was there in October last year.
177. Do you think that any reduction could be made in the price per mile, £3,656? I do not think so.
178. You know the proposed line from Nyngan to Cobar and Wilcannia? Yes.
179. You know that the estimated cost of that line is £2,500 per mile? Yes.
180. Can you explain why the proposed line from Cootamundra to Temora should cost 33½ per cent. more than the line to Wilcannia? I have never seen that country.
181. Have you seen any country presenting less engineering difficulties than the route of the proposed line from Cootamundra? I have seen railways in flat country with perfectly porous soil which did not require any bridges.
182. Was that in this country? No; in India.
183. Have you seen any railway route in this country affording greater facilities for the construction of a railway than the route of the proposed line? No.
184. Do you think it is necessary to fence in this line? The line must be fenced, because it goes through alienated land.
185. Do you know what the difference in the cost would be if there were no fencing? The cost of the fencing amounts to £5,850.
186. For how many miles of line? Thirty-seven and three-quarter miles.
187. What sort of a fence is it to be? Wire.
188. Without any top-rail? Yes.
189. How many wires will there be? Seven.
190. Do you know the depth of the deepest cutting on the line? They are very small, from 5 to 7 feet.
191. You are quite confident that the estimate £3,656 a mile could not be materially reduced? Yes. Almost exactly half of the estimate is for ballast and permanent way.
192. Is there any difference between the permanent way of the proposed line from Cootamundra to Temora and that from Nyngan to Cobar? I am not sure, but I think that the sleepers estimated for the Nyngan to Cobar line were not ironbark; and I do not suppose that such good ballast was provided for, simply because it was not to be got on the Cobar line.
193. Would that make any material difference;—if you could get good ballast readily would it not be as cheap as bad ballast? No; if you have to use bad ballast you will use almost anything.
194. Are you quite sure that you are not making a mistake in your estimate? I am not making a mistake.
195. Did you estimate the cost of the Cobar line? No.
196. You do not know anything about that line? No.
197. When you made the alteration in the grade was that before or after you investigated the grades on the Crookwell line? It was after.
198. *Mr. Dowel.*] Do you propose to carry this line any further than Temora? It is surveyed to Hillston.
199. What distance is that from Temora? 121 miles.
200. You said that you had been over both the surveyed routes? Yes.
201. In reference to the one which you recommend to be adopted, could you tell the Committee the character of the country through which it traverses and the description of the timber? It is not a new line altogether, only deviations from the surveyed line. Near Cootamundra it is all agricultural land.
202. Are there any forests of timber? The land is for the most part under cultivation or fit for cultivation, except on the ironbark ridges, near Gundibingar.
203. Are there any good forests or reserves of timber within a radius of 10 miles of the railway? There are ironbark ridges all reserved.
204. Is it good ironbark? It is stunted.
205. Would you have any difficulty in that country in obtaining timber for bridges and sleepers? The sleepers could all be got there.
206. And the timber for the bridges also? I think for the piles, it could be, but not squared timber. It will be too short.
207. You propose to have ironbark sleepers? Yes.
208. Would you, as an engineer, recommend that half round sleepers should be used for the purpose of cheapening the construction? No.

209. For what reason? When engineers speak of half-round sleepers they mean pine sleepers. They are split down the middle, giving a perfectly clean surface, and all the sleepers being exactly alike. They make as good a road as squared timber; but if we attempt to use half-round sleepers made of gum timber we get sleepers of all shapes and sizes. It is impossible to make as good a road with them.
210. All over the world half-round sleepers have been used to cheapen construction;—do you think it possible that half-round ironbark sleepers could be used? Of course they could be used.
211. In your opinion the construction of railways with safety and solidity would not be affected if half-round sleepers were used? It would not be affected.
212. What is the cost of the sleepers which you use? 3s. 6d. each.
213. And you would use about 2,200 to the mile? About 2,000 to the mile.
214. If half round sleepers were used do you think that there would be a considerable reduction in the cost of construction? Yes.
215. What ballast would you recommend? I think it will all be quartz on this line.
216. Local ballast? Yes.
217. So you could not cheapen the line except by reducing the cost of the sleepers by using half round timber? I do not wish to be understood as recommending it. You can make a cheap railway, but when you come to maintain it you will find that it will run away with your revenue if you have not used first-class timber.
218. *Mr. Cox.*] You spoke of a range between Cootamundra and Temora;—what range is it? I really do not know. It has a great many local names. It divides the Lachlan from the Murrumbidgee.
219. Is that a broken range or grassy hills? It is a broken range.
220. Is there a difficulty in finding a gap through that range? The gap that the railway is to go through is a very easy gap. It is an extraordinarily easy gap.
221. In the event of its being taken across that range from a point on the railway nearer to Sydney do you know whether there would be any difficulty in crossing the range? I do not know the country.
222. Do you know whether that range has ever been inspected by surveyors? I do not think it has been.
223. So that the present line was projected merely to connect Temora with Cootamundra? Yes.
224. Irrespective of the securing of any nearer route to the metropolis? Yes.
225. *Chairman.*] Do you know who was the surveyor who laid out that line? There were three. Messrs. Bode, Chalmers, and Kennedy.
226. Would they be available for examination by a Sectional Committee on the route? I think two of them are out at Wentworth, and the other at Mudgee.
227. *Mr. Garrard.*] Did you say that Mr. Firth knew something about it? Yes, about the range.
228. *Mr. Cox.*] What directions were given to the surveyor who laid out the line to connect it with the Southern line at Cootamundra? To start from Cootamundra.
229. *Chairman.*] If the railway is to open up the agricultural lands in that district, there is no reason why it should go to Cootamundra to do that, is there? I do not think there is.
230. I suppose you could look the matter up and see what exploration was done with the view of connecting the line to Temora with any other part of the railway, and let the Committee know at some other time? Yes.
231. Do you think any instructions were given to connect this line with the main line higher up? I do not think so.
232. This estimate for fencing, I suppose, includes all the crossings and gates? It does not include the gates; the gates are included in the level crossings.
233. Then do you not think that £77 a mile for fencing is an outrageous price? The object of the fence is to keep stock off the line, is it not? I have estimated that there are 26,000 roods of fencing at 4s. 6d. a rood. That is 80 miles of fencing, 40 miles for each side of the railway.
234. Do you not think that fencing of the same character as that which is used in the district will do for a railway? Could it be put up for less than 4s. 6d. a rood?
235. I should think so. The squatters do not pay that for fencing? Fencing does not make the railway work better or bring any more revenue—it is purely a matter of insurance.
236. Yes, but in the aggregate, all these things “tot” up. You have an item of £9,000 for stations, that looks pretty stiff for an unsettled district, does it not? I have the details here.
237. Are the buildings to be of brick? No, of timber.
238. Timber platforms? Yes. The first is at Stockinbingal. There are to be three stations—one at Temora and two intermediate ones. These intermediate stations consist of a fourth-class passenger building estimated at £200, a third-class goods-shed £180, two cottages at £350 and £275, and a platform at £203; at Temora is proposed a third-class passenger building £300, platform £250, two cottages, a second-class £350, and a third-class £275. A second-class cottage costs about £350; a third-class cottage about £275. There are to be trucking yards at each station which cost altogether £500.
239. Are the plans of station buildings submitted to the Railway Commissioners for their approval before the department adopt them? I do not think that they have been hitherto.
240. Do you think they ought to be? Yes, but since the Commissioners were appointed hardly anything has been built.
241. But before the buildings were put up would not the Commissioners be consulted? I should think they ought to be. In fact I think the Act provides that they shall have the fixings of the stations.
242. What you have given us amounts to £7,000. What do you provide for at the Temora station? A timber platform, £250; a third-class passenger building, £300; a second-class goods-shed, £525; a second-class cottage, £350; and a third-class cottage, £275; and trucking yard, £200.
243. What is the total for Temora? £1,681 and £200 makes £1,881. There are trucking yards at each station.
244. *Mr. Garrard.*] How much for them? I have not the details here. I suppose about £500 for the whole line.
245. *Mr. Trickett.*] Have you ever devoted your attention to the question of the adoption of the cattle stops such as are used in America? There are ten crossings with cattle stops, three with gates, and there are 40 private crossings.
246. *Mr. Dowel.*] Are there any railway contracts in existence at the present time? None.

S. Alexander,  
Esq.  
16 Jan., 1890.

- S. Alexander, Esq., 247. When was the last tender called for for railway construction? It was for the North Shore line, fully two years ago.  
 248. When tenders were received for that line were not the rates considered very low? Yes, I think they were. I am only speaking from hearsay.  
 16 Jan., 1890.

G. J. Roberts, Esq., District Traffic Superintendent, sworn, and examined:—

- G. J. Roberts, Esq., 249. *Mr. Garrard.*] What is your position in the railway service? District Traffic Superintendent.  
 250. Have you had anything to do with the proposed line from Cootamundra to Temora? I have reported upon it from a traffic point of view.  
 16 Jan., 1890. 251. Have you been over the line of country between Cootamundra and Temora? Yes, as far as Barmedman.  
 252. Have you submitted an estimate of the traffic to the Commissioners? Yes.  
 253. Have you seen the report which the Commissioners have laid before the Committee? I have not.  
 254. Do you know the totals of your report? No; I furnished the statistics, and they were made up in the office, I believe.  
 255. Is the statement of the Commissioners' based on your report? I believe it is.  
 256. Is the country between Cootamundra and Temora agricultural or pastoral? Both.  
 257. Is there much agriculture going on around Temora? To a very large extent.  
 258. Whereabouts is it going on to a very large extent? From Stockinbingal, and at Temora itself.  
 259. On the route of the proposed line? Yes.  
 260. Did you go by the ordinary road, or by the route of the line? By both routes.  
 261. Is there more settlement on the road than on the route of the line? It is about equal.  
 262. Where do you find a large extent of agriculture? At Stockinbingal.  
 263. Is there much at Barmedman? Very little there.  
 264. Is Temora a mining township? It is more of an agricultural district. There is very little mining there now.  
 265. Do you think that the line if constructed would pay? I believe it would.  
 266. Immediately on its construction? No.  
 267. What do you mean by paying—covering the working expenses? Yes.  
 268. Paying the working expenses without considering the interest on the capital? Yes.  
 269. You think that the line would pay working expenses? Yes; providing that the Government cut up the leasehold land there. I mentioned that in my report.  
 270. With the Crown lands left as they are would it pay? I have very much doubt about it.  
 271. Then it is a problematical affair. If the Government do not cut the land there is no chance of its paying? It might possibly. There is a great deal of Government land there.  
 272. What is the tonnage of the traffic from Cootamundra to Temora? I left Cootamundra last night. There are no less than twenty teams travelling from Stockinbingal to Cootamundra with wheat.  
 272½. How much of that should we get? We should get it all. They complain of the great expense of cartage.  
 273. Is it not all down hill to Cootamundra? No; there is a large hill round which we should have to run the line.  
 274. That wheat traffic is only for a few weeks in the year? Yes.  
 275. What other traffic is there? Wool, sheepskins, tallow, &c.  
 276. How much wool that at present goes into Cootamundra would the line intercept? The wool would be intercepted at Stockinbingal and Temora. The quantity I cannot estimate.  
 277. What is the yield? I have my report here and I will read it:

District Superintendent's Office, Junee Junction, May 29, 1889.  
 Cootamundra to Temora Railway.

Sir,

I have the honor to report that I left Cootamundra on Friday morning, the 24th instant, and drove along the proposed railway route to Temora and Barmedman, and returned to Cootamundra on the Monday afternoon following.

Although your instructions were to report on the line to Temora, I took it upon myself to go as far as Barmedman in order to collect all information respecting the probable traffic from that locality and also satisfy myself what amount of business we might expect in the event of the line being extended there, or only as far as Temora.

The distance from Cootamundra to Temora and Temora to Barmedman are 35 and 32 miles respectively, and for the whole distance with few exceptions, such as the iron-bark ridges, the country is well adapted for agricultural and pastoral pursuits.

In the absence of a tracing of the surveyed line there are, as far as I could judge, no serious engineering difficulties to contend with, the gradients being light, with plenty of timber and ballast at short distances along the line of route.

Sidings and station accommodation would be required at the following places, in the event of the line being adopted, viz.:—

Stockinbingal, about 14½ miles from Cootamundra.  
 Temora, about 35 miles from Cootamundra.  
 Halfway House (Kavanagh's), about 10 miles from Temora.  
 Barmedman, about 22 miles from Temora.

In course of time I have no doubt sidings will be required between Stockinbingal and Temora, and perhaps between Cootamundra and Stockinbingal.

From returns furnished me by Mr. Woodhouse, secretary of the Stockinbingal Railway League, I find that within a radius of 10 miles (north side of the line) there are forty-one selectors, &c., owning 127,388 acres, 3,260 acres under cultivation, 107,200 sheep, 1,014 bales wool, 1,149 large stock, 326 pigs, 4,000 acres in reserves, 500 population.

Within a radius of 6 miles (south side of the line) there are nineteen selectors, &c., owning 38,350 acres, 4,060 acres under cultivation, 28,600 sheep, 286 bales wool, 1,079 large stock, 277 pigs, 1,470 acres in reserves, 160 population.

It is estimated that the incoming traffic is about 600 tons, and the outwards traffic about 3,200 tons, wheat and wool.

In addition to the selectors, &c., referred to it is asserted that a siding at Stockinbingal would benefit a great number residing outside the distances quoted.

From Stockinbingal to Temora, distant about 21 miles, there is very little settlement along the route; however, the line passes through Gundibengal and Combaning leaseholds, which will be available for future settlement. I was informed that already something like 15,000 acres had been surveyed, and cut up into small holdings from 50 to 280 odd acres each, which will be readily bought up when submitted to auction. This will tend to considerably increase the population and traffic between these two places.

Herewith will be found printed statistics showing the resources of the Temora districts, and in submitting same I was requested to mention the fact that the population has considerably increased since it was completed and printed.

The

The town of Temora consists as follows:—Places of business other than hotels, 38; hotels, 17; manufactories and other industries, 9; general carriers, 22; court-house, police offices, post and telegraph offices, mining registrar, public school, hospital, four churches, two halls, three theatres. The estimate tonnage is 2,676 tons (inwards and outwards). The average rate per ton for general goods between Cootamundra and Temora is £2 per ton. There are six mail coaches connected with the town, carrying mails to and from Cootamundra, &c. A neatly turned out newspaper published by Mr. James Meehan, "The Independent," a well equipped fire brigade, besides public recreation ground, show ground, &c. The stock slaughtered are 684 cattle, 2,850 sheep, 140 pigs; hides and tallow sent away, about 38 tons. The average attendance at schools is—public, 140; Roman Catholic 96. There is also a private school.

The carriage of wheat between Temora and Cootamundra ranges from 4d. to 9d. per bushel.

The fare by coach between Temora and Cootamundra is 10s. It has been officially announced that the various squatting holdings around Temora will not be renewed at the expiration of present leases, but will be available for selection. A marked increase in the population has taken place since the breaking up of the drought. A valuable tin country has been opened up at Mandamah, within a half day's journey from the town. A very extensive traffic to Temora is done from Wollongough, Broken Dam, Murrool Creek, Big and Little Mimosa.

Between Temora and Barmedman the distance is 22 miles. The population is very small, but there is plenty of Government land available for settlement in the event of the Government cancelling the leases and submitting them to auction.

The following particulars were furnished to me by Mr. Gibson, the secretary of the Railway League at Barmedman:—

Population of the town, 250; district, about 500. The town consists of—4 hotels, 3 stores, post and telegraph offices, savings bank, 1 public and 1 private schools—daily attendance 70 and 10 respectively, 1 steam-mill, 1 blacksmith, 1 butcher 1 baker, 2 churches, police station, court-house, lock-up, pound, 1 undertaker, 1 crushing battery of twenty-five stampers, 2 pumping and winding machines. There is no alluvial digging, but quartz reefing is being carried on. During the last three years 13,000 oz. of gold have been forwarded, of the average value of £3 17s. 6d. an oz., equal to the sum of £50,375. A good deal of English and colonial capital is to be invested. The steam saw-mill is turning out 12,000 to 15,000 feet of timber per month. The tonnage for the hotels, stores, and butcher average about 127 tons per annum. The rate of carriage is from £4 to £4 10s. per ton, 1s. 4d. per bushel for wheat; 450,000 acres of Crown lands are available for selection, but owing to its distance from the nearest railway station it is not utilized. The statistical returns of Barmedman, Marsden, and Morangarell taken from the acting clerks of petty sessions show that there are twenty-three leaseholders and fifty-five farmers occupying an area of over 1,400,000 acres of land carrying 500,000 sheep, 1,600 cattle, 700 horses. The amount of revenue the Government received from stock owners as assessment is over £600.

The whole of the farmers round Barmedman having settled subsequent to the passing of the Amended Land Act of 1884, the area under cultivation is necessarily limited, the men being fully occupied erecting such improvements as were made compulsory by the Act, such as fencing (from 8 to 10 miles per C.P. and C.L. of 2,560 acres), dam-making, ring-barking, &c., &c. There are however some 500 acres under wheat and oats, &c, principally for domestic purposes. The wool returns are 1,000 tons or 5,000 bales per annum. The surrounding country is for the most part in a state of nature, but with railway extension promised would undergo such a change at the hands of small settlers as would not only increase the carrying capabilities to more than double the present numbers, but would have the effect of inducing the farmers to increase the cultivated area to ten times the extent. The distance to railway carriage at present making it impossible for farmers to grow crops profitably.

In addition to the above statistics I also beg to attach returns from Junee, old Junee, Coolamon, and Cootamundra as furnished by our own officers as showing the amount of traffic from Temora district.

In conclusion there is no doubt that a large traffic is carried on between Cootamundra and Temora, and with proper means of transit would be considerably increased.

The character of the country is favourable to the construction of a light line of railway which should pay good interest on the outlay. I cannot however see my way to suggest a continuation of the line beyond Temora at present, as the population and probable traffic do not, in my opinion, warrant it. No doubt it will be necessary at some future date to continue the line to Barmedman and eventually on to the Lachlan.

The requirements of the selectors, &c., between Temora and Barmedman will be greatly assisted by the construction of the line to the former place.

Since my return home I have received the enclosed letter from Mr. P. Heffernan, J.P., of Clear Hills, near Temora, in which it will be seen that he advocates the line to Temora being started from Bethungra instead of Cootamundra.

Beyond believing the Bethungra route to be the shorter, I cannot venture to give any reliable information or express any opinions on the subject advanced by Mr. Heffernan in its favor.

The Chief Traffic Manager, Redfern.

P.S.—Since writing my report yesterday, I am in receipt of tracing of surveyed line, and am returning to you by up mail to-night.

I have, &c.,

G. J. ROBERTS.

Junee, 13th June, 1889.

*Proposed Railway—Cootamundra to Temora, and vice versa.—Probable working expenses.*

MR. HACKETT, Locomotive Inspector, Harden, informs me that one engine will do the service with one driver at 14s, one fireman at 10s., a cleaner at 7s., and stores 9s., or a total cost of £2 per day. The traffic expenses will be as under—One guard at 10s. per day, one porter in charge at Stockinbingal, 45s. per week; one station master, Temora, at £150 per annum; one porter at 7s. per day, and a junior porter at 30s. per week at Temora, and gatekeepers, say, 25s. per week. This gives a yearly cost of £1,442 5s., and to this must be added the cost of wear and tear, and permanent way expenses. My calculations are based on the assumption that it will be a seven-day service on this branch, and that the trains are to run in connection with the present up and down mails. Mr. Hackett's estimate does not include coal, nor does mine include traffic stores.

Chief Traffic Manager.

G. J. ROBERTS.

278. Where do the people of the Temora and Barmedman districts find a market now? At Cootamundra and Sydney.

279. Is not a large portion of their produce sent to Junee? No.

280. Not any at all? Only to a small extent.

281. But there is a traffic to Junee? Yes. That is owing to the differential rates. The people in that district are in the habit of getting stores sent to Wagga Wagga by railway, and carried to Temora by teams, but their proper outlet is Cootamundra.

282. Their goods are forwarded to Cootamundra to be sent either north or south? The traffic comes this way.

283. Therefore if the line struck the main line nearer Sydney, it would be to the interest of the Temora people? Yes.

284. Do you know anything of the country to the north of Cootamundra? I know all the country there.

285. What is the nature of the country between Yeo Yeo and Wallendbeen;—is it more difficult than the country between Cootamundra and Yeo Yeo? Yes. It may be a little more broken and undulating.

286. Would it not be more to the interests of the Temora people if the branch line started from Wallendbeen instead of Cootamundra? Yes. It is the shorter distance to Sydney.

287. Do you know whether much produce from Cootamundra goes south? Not a great deal.

288. Their natural markets are at Sydney, and the towns along the line? Sydney and Goulburn.

289. Your assumption that the line would pay working expenses is based on the supposition that large areas of Crown lands will be thrown open and occupied? Yes.

290. With the present population is there anything to warrant the construction of the line? I do not think it would be a paying speculation; but I am certain that if the land were cut up, every acre of it would be occupied.

- G. J. Roberts, Esq., 291. Does not that apply to many parts of the Colony? The character of the country is not suitable to settlement in some parts.
- 16 Jan., 1890. 292. Is not the land immediately around Temora of rather a poor description? No.
293. Have you gone over the ground about there? I have travelled all over it.
294. And you think that the country, say, for 7 miles out of Temora, towards Cootamundra, is good country? Yes; there are one or two stringy-bark ranges in it; but as a whole it is a splendid bit of country. It will be expensive clearing it.
295. Mr. Copeland.] What is the nature of the soil? It is red soil.
296. And a pretty good depth? Yes.
297. Is there any pine scrub? Yes, I noticed it particularly beyond Temora, to the westward. There is some splendid ironbark between Stockinbingal and Temora.
298. Suitable for sleepers? Yes, and for fencing.
299. You said that if the leasehold areas were cut up and thrown open to the public, a great deal of it would be taken up? I believe that all of it would be taken up.
300. Do you know how long the leases have to run? I understood that they had to run till the end of last year.
301. Can you say whether the whole of the land on the resumed area is taken up? I could not.
302. Do you know whether there are any reserves which could be thrown open? Yes. I refer to them in my report.
303. Those reserves are good land and would be selected? Yes.
304. Mr. Hurley.] You referred to some tin-bearing country? Yes.
305. Did you visit it? Yes; I have travelled through a portion of it.
306. Can you form any idea as to the probable returns? No; I do not think anything came of it after all.
307. Mr. O'Sullivan.] You have had some experience in gathering traffic estimates, have you not? Yes.
308. You reported on the proposed line from Culcairn to Corowa, did you not? I did.
309. Is the settlement on this line anything like that on the proposed line from Culcairn to Corowa? As far as Stockinbingal there is even more settlement, that is for a distance of 15 miles, out of Cootamundra. Beyond that there are only a few settlers on the land to Temora.
310. Do you consider the settlement there of a *bona fide* character? Yes. They are a splendid lot of farmers about Stockinbingal, some of the best in the colony.
311. Do they send their wool to Sydney or Melbourne? Principally to Sydney.
312. Is the soil there as good as that on the proposed line to Corowa? I believe it is better.
313. You consider that there is great room there for the development of agriculture? I do.
314. Do you say that Temora is a worked-out gold-field? Pretty well. There was very little doing when I was there.
315. Is there any unprospected auriferous country there? I believe there is.
316. And there is likely to be another rush or two? I believe there will be.
317. Mr. Cox.] Do you know the country between Wallendbeen and Yeo Yeo? I have never travelled across it, but I believe it is excellent country. Some of the best farmers are at Jindalee.
318. Can you account for the line going from Cootamundra, and being so many miles longer than it would be if it started from Wallendbeen? I cannot. It might be a little more expense to cross the range there. It is 12 miles from Wallendbeen to Cootamundra.
319. What is the distance from Cootamundra to Yeo Yeo? Between 8 and 10 miles.
320. Mr. Humphery.] Is the land between Wallendbeen and Yeo Yeo as suitable for agriculture as that between Cootamundra and Yeo Yeo? I think so. Mr. Gibbs, of Berthong, owns a large tract of country between Yeo Yeo and Wallendbeen.

Thomas R. Firth, Esq., Assistant Engineer, in Charge of Trial Surveys, sworn, and examined:—

- T. R. Firth, Esq., 321. Mr. Copeland.] What is your position in the service? Assistant Engineer, in Charge of Trial Surveys.
- 16 Jan., 1890. 322. Have you been over the route of the proposed line from Cootamundra to Temora? No, I have not been over it since the survey was made. It is about fifteen years since I was over that part of the country. I have been as far as Stockinbingal.
323. It is proposed that this railway shall branch off at Cootamundra, making a detour to the northward. Do you know anything about the range where the surveyed line traverses it? Yes, I know the country in the direction of Wallendbeen.
324. What sort of a country is it between Yeo Yeo and Wallendbeen? The range would be rather difficult to get down, but after having got down there would be no difficulty at all.
325. Would it be any more difficult to cross the range in a straight line from Wallendbeen than to cross it at an angle? Yes, considerably more.
326. In what does the difficulty consist? It is much higher, and there are so many spurs running out.
327. Is there any gap through which the railway can be taken between Wallendbeen and Yeo Yeo? I examined with the view of taking the Wagga Wagga line through there, but I could only get down with 1 in 40, and it would be much more expensive than crossing the range at the bend in the proposed line.
328. Do you consider it a good proposal to start the line at Cootamundra and make that angle? If I had to make a line from Sydney to Temora I should go that way.
329. Would you not endeavour to take the line by Wallendbeen? I should.
330. Have you examined the range so as to be sure that the spot where the line makes this angle is the only place at which the range can be crossed? It can be crossed in a line from Yeo Yeo to Wallendbeen, but not at the same cost. It might, perhaps, be necessary to go a little further back than Wallendbeen.
331. Do you not think it likely that there would be a gap? The range is very steep and rugged on the north-western side.
332. What would be the additional height to rise in getting across the range where you suggested? You would rise no higher than you do on the Southern line.
333. Then were is the difficulty of crossing? The difficulty is in getting down on the other side. It falls rapidly and there are a great many spurs.

334. Would there be no chance of carrying the line along the range? It would have to be carried along the range and you would have to cross the spurs. That is what causes the expense. The line would have to skirt along the range and to be gradually dropping. You would have to follow the range for some distance and to be crossing the spurs all the time.

T. R. Firth,  
Esq.

16 Jan., 1890.

335. You are aware that if the line was taken in a direct line from Wallendbeen 12 miles would have been saved? Very probably; but I do not suppose you would shorten the distance of construction.

336. But there would be 12 miles shorter haulage? Yes.

337. The question is, are the difficulties of such an insurmountable character that the line must start from Cootamundra, thus making 12 or 13 miles extra haulage from Temora to Sydney? I do not think so. I could get a grade of 1 in 40.

338. I suppose, by a further examination of the country, you could get a better grade? We might get a grade of 1 in 60. I would not say that even a better than that might not be got. It is fifteen years since I examined that country. A grade of 1 in 40 would have satisfied us then.

339. Are there no steep grades on the present route? No. They are 1 in '75.

340. Do you know whether the country west of Wallendbeen is good for agricultural purposes? It is very good country to the top of the range; then it is good grazing country until you get down, after which there is more agricultural country.

341. Do you know anything of the country beyond Yeo Yeo in the direction of Temora? No.

342. Do you know anything of the geological formation about Yeo Yeo? It is shale and schist.

343. Would there be any difficulty in getting ballast? No.

344. Do you remember what timber there is? There is a little ironbark on that range.

345. Suitable for sleepers? Yes. There is no big timber.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined :

346. *Chairman.*] You have been sworn in this inquiry? Yes.

347. As far as the Committee can gather there does not appear to have been any exploration made by your Department, as to the possibility of connecting the proposed line with the main line further north than Cootamundra? No.

H. Deane,  
Esq.

16 Jan., 1890.

348. Can you give any reason why that was not done? Since giving evidence yesterday I have looked into the question of a junction at Wallendbeen, and I find that when the matter was considered that idea was rejected, and Cootamundra was selected as it was already the junction of the Gundagai line. It was considered undesirable to increase the number of junctions. It was also considered that stock coming right across from between these two districts, Temora and Gundagai, in that direction would be better accommodated at Cootamundra than by having to go to Wallendbeen.

349. Then the matter was considered by the Department? Yes.

350. Would that connection add materially to the expense of maintenance? Yes, Wallendbeen is a small station at present. There would have to be an increase in the staff, and an alteration in the station yards.

351. Would there not be a saving of 10 or 12 miles to the people of Temora in going to Sydney? There would be some saving. I estimate it at 8 or 9 miles; it might be 10 or 12.

352. *Mr. Copeland.*] Have you any reason for thinking that the stock would require to be moved on that line from Temora down towards Gundagai? I really have not considered the matter myself. It would be convenient to take stock along by Gundagai, and if the line were extended to Tumut it would be taken on to the high land.

353. Suppose that people at Hillston, Barmedman, and other places wished to send stock to Cootamundra, could they not do so by sending them to Wallendbeen, and keeping them in the same trucks which could travel back and get on the Gundagai line? Yes; but there would be the extra travelling.

354. And if they wanted to send the stock to Sydney there would be less travelling? Yes; that would be a great advantage. There would probably be more traffic in the direction of Sydney than across the country to Gundagai.

355. Then the real difficulty seems to be in the department not wanting to create another junction at Wallendbeen? Yes; and another is that the line would be more costly if made from there.

356. But have you had that ascertained by actual examination? I have spoken with Mr. Firth on the subject.

357. We have had his evidence to-day. He has not been over that country for fifteen years, but he thinks that the line could be constructed from Wallendbeen? Yes; but he told me that it would be at a considerably higher cost. The best way would be to send someone down there to ride over the country and form an opinion. He could proceed from Wallendbeen to Yeo Yeo, and then return to Cootamundra.

358. When could you get that done? I could send someone at once, and let you have a report by the end of next week.

359. *Dr. Garran.*] As far as the agricultural traffic is concerned the market would be more in Sydney than down south? Yes.

360. Therefore a straighter line would suit the farmers the best? I should consider that it would.

361. And as to stock it would all depend on whether it was going south or going to Sydney? Yes; or going across the country.

362. You are positive that as far as traffic is concerned a straighter line would be better? Yes.

363. But not so sure about the stock? No.

THURSDAY,

THURSDAY, 23 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.
CHARLES ALFRED LEE, Esq.	

The Committee further considered the proposed Railway from Cootamundra to Temora.

William Hutchinson, Esq., District Engineer, sworn, and examined:—

- W. Hutchinson, Esq.  
23 Jan., 1890.
363. *Mr. Copeland.*] What position do you hold? I am a district engineer in the Railway Department.
364. For which district? No particular district—I am merely what they call a “district engineer.”
365. You were sent up, I believe, by the department to examine the country between Wallendbeen and Yeo Yeo? Yes.
366. What time did you spend in that examination? Four days.
367. Did you make a very critical, close examination of it? Yes.
368. Or did you merely ride over the track? I walked a good deal about the place and rode as well.
369. Did you know the district before you went? No I did not know the district at all before I went.
370. Did you have anyone with you to point out any gaps or lower altitudes, or anything of that kind? Yes. The first day I went out I had a man who was said by the people there to know the district better than anybody else in the place. He pointed out where he thought it was possible to take a railway.
371. What is his name? Stacey.
372. What is he in the district? He is a selector. I do not know what exactly he is besides that. He keeps horses and that sort of thing.
373. Did he accompany you on the whole journey? He took me over the range, down to where the country was level, and I did not require him. And besides this man I had two or three others who came on Monday and Tuesday with me. One gentleman, a Mr. Gibb, who knows the country very well, took me.
374. By this map it would appear that the direction you have taken was across the range, right in the face—at right angles? Yes.
375. Would it not have been possible for you to have got a better grade if you had taken the range on the eastern side sideways. Your course has evidently been nearly west in crossing the range; you have ascended the range on the face and then crossed down again immediately. What I want to know is whether you examined the country with the view of carrying the railway farther south on the cap of the range, getting up one side gradually and coming down the other side gradually, in the direction of this red mark? You could not go south of the point shown on this map where the line is taken, as the range is higher. Where it is marked blue there is a gap where the old traffic used to go years ago.
376. Would it not be possible to find a spur on the eastern side of the range leading up? Not in my opinion.
377. Did you examine the country with that object? Yes. I examined the country all through here. This map does not show the range correctly at all. It is all rangey country—you get into a lot of ranges here. It is not merely one range—the range extends 2 or 3 miles.
378. I suppose where the map shows the land has been selected these selections are off the range? No; on the range.
379. You were ascending how far from where this line intersects the range? For about 2½ miles, I should think.
380. What, the whole time? Yes; a gradual ascent.
381. You think that by curving the line further to the south, and letting it run to a greater distance on the range, you could not make a more gradual descent? No; you get into very rough country. By going south of the blue line on the plan you get into much rougher country—rangey country.
382. What object had you in taking the line so far to the north in this curve? To get down a gully here, as indicated on the map.
383. And from your examination you think it would not be practicable to take the line farther south in the direction I have marked? I think not.
384. Why have you extended this blue line before junctioning with the previous survey? It gives a little better country the way the blue line is shown. You might go down where that curve is shown but it would not be quite so easy. You must cross the Congo Creek at the point shown on the blue line.
385. What in respect to agriculture is the nature of the country on the course of this line that you examined? Some of it is good agricultural land; some of it is land fit only for grazing purposes.
386. Is it as good as the land on the red line? No, not as level; not as good for agriculture, and there is not as much agriculture on it.
387. There seem to be a large number of selections? This land after you get out 3 miles from Wallendbeen Wallendbeen in nearly all in the hands of a squatter.
388. The people generally in the district about Wallendbeen and Yeo Yeo—were they favourable to this line you went to examine? The people about Yeo Yeo did not care which way the line went, as either way it comes through Yeo Yeo. Of course it was a little less haulage for them, but they did not seem to care much about that.
389. I suppose you did not go out as far as Temora? Oh, no. I went as far as Stockinbingal, shown on that plan.
390. Did the people at Wallendbeen express any opinion in favour of the shorter route? Yes; those that I spoke to at Wallendbeen were all anxious it should go from Wallendbeen.
391. I think you say there would be a grade of 1 in 40 for about 2 miles from the point marked B on the plan to the timber reserve 1,274; would it not be possible to improve on that grade of 1 in 40? I do not think so.
392. The rest of the line seems to be a fairly suitable grade, is it not? Yes, the grade on the rest of the line is fairly good. I think you could get 1 in 75.
- 393.

W.  
Hutchinson,  
Esq.  
23 Jan., 1890.

393. All except for these 2 miles? Except for those 2 miles.
394. And that would be 1 in 40? Yes, I do not think anything less.
395. You think that with a more careful examination you could not improve on the grade? I do not think so.
396. Did you form any estimate of the cost of taking the railway by that route? No.
397. Did you notice any rocks suitable for ballast, or what timber there was on the ground? There would be good gravel ballast on the ironbark reserve shown on the plan, and timber suitable.
398. Timber suitable for sleepers? Yes.
399. Would the timber be any better on that route than on the Cootamundra route? About the same.
400. Then as an engineer, although the distance is very much farther to go round by Cootamundra—for the people to send their produce (say) from Temora round by Cootamundra to get to Goulburn—still as a professional man do you think it would be advisable for them to pay all that additional haulage? I think that the cost of this line from Wallendbeen would be very much greater than the one from Cootamundra.
401. Can you give any idea as to how much greater? No, I would not give an opinion as to how much greater without seeing a detailed section of the line.
402. What you mean I suppose, is that it would be greater per mile? Yes. The chief difference would be in excavation; there is very little on the other line, but the cuttings would be considerable on this line.
403. Can you say how much it would shorten the distance between Temora and Wallendbeen? About  $9\frac{1}{2}$  miles. The line from Wallendbeen to the junction of the Cootamundra to Temora line would be about  $14\frac{1}{2}$  miles.
404. And do you think that you spent sufficient time in examining the range with the view as I pointed out of carrying the line along the range for some distance, and so getting a more gradual descent? Yes. I do not think that by any further examination you would get a better line. You are practically fixed to one or two points; you could not cross anywhere else.
405. I suppose you do not think there is any other route that could be extended successfully, say, starting from some point other than Wallendbeen, so as to shorten the whole distance? No. The only place where I think it would be possible to start from is Nubbo siding, but that would lengthen the line considerably, and then it would be very rough.
406. Is that on the Goulburn side of Wallendbeen? About 4 miles on the Goulburn side of Wallendbeen.
407. What you mean by that is it would make the line to be constructed much longer? Yes.
408. But even then the whole journey from Temora would be much shorter than the one proposed by Cootamundra? Yes. I am very doubtful as to whether you could get a line that way. I only mention this because the people there thought it might be done. I did not examine the country in any shape or form there.
409. They thought it might be done? Yes, in the same way they thought the line could easily be taken from Wallendbeen to Temora.
410. Can you give the Committee the actual distance between Wallendbeen and Temora by the line you examined and also the distance by Cootamundra to Temora? If I could see the plan again I think I could, approximately. (*Witness looked at the plan.*) The line by Cootamundra to Temora would, I believe, be 289 miles from Sydney; the other line, by Wallendbeen, would be about  $279\frac{1}{2}$  miles. There would be a saving of about  $9\frac{1}{2}$  miles.
411. Your opinion is that the country on the Wallendbeen line is not so good as that on the Cootamundra line for agriculture? Yes. It is much more rangey, rougher country—altogether not so suitable for agriculture.
412. Still, judging from the map, it appears that there are a very large number of selections to which the Wallendbeen line would be beneficial; are all those selections used for grazing purposes? The greater number of them. I understand from Mr. Gibb the squatter there that these selections all belong to him now—the greater number of them.
413. Was Mr. Gibb favourable to the Wallendbeen line? Yes, very.
414. Did Mr. Gibb accompany you on the journey? Yes, on the second day—on the Tuesday he took me over to two gaps he thought were suitable to take the line through.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Cootamundra to Temora.

APPENDIX.

A.

RAILWAY COMMISSIONERS' REPORT.

Office of the Railway Commissioners of New South Wales, Sydney, 20 June, 1889.

Proposed Branch Line of Railway—Cootamundra to Temora—35½ miles.

IN accordance with section 13 of the "Public Works Act, 1888," we beg to report as under :—

*Cost of construction—*

The Engineer-in-Chief estimates the cost of construction of a single line of railway (exclusive of land and compensation) at ..... £200,000

*Annual cost—*

Interest on cost of construction, at 3½ per cent. .... £7,000

The estimated cost of working the line would be as under :—

Traffic expenses ..... £1,147  
 Permanent-way expenses ..... 4,500  
 Locomotive expenses ..... 1,850

7,497

£14,497

A trial line has in this instance only been made, and, therefore, a rough estimate of the cost of construction, which may be accepted as fairly accurate, has been given. The interest on this cost, and the expense of working, will amount to £14,497 per annum, and to this must be added the interest on the cost of land to be resumed and the purchase of rolling stock. To meet this annual expense a considerable amount of traffic would be required, and although the district which would be served by the proposed line is admirably adapted for agricultural settlement, and will, in the future, prove capable of settling a large population, the settlement at present, while numbering many agriculturalists of the best type, is too limited to leave room for the expectation of working expenses being realized. In the district, however, there is a considerable area of Crown lands, which would be much enhanced in value by railway communication, and also one or more valuable timber reserves. If a substantial sum, to be derived from the sale of these lands, were devoted towards the payment of the cost of constructing the line, and the Railway Department afforded some privileges in the direction of obtaining a supply of ironbark and other timber suitable for railway works, the construction of the line could be recommended, but not otherwise.

We consider that the residents in the district should combine together to have the land necessary for the construction of the line conveyed to the Department free of cost, if the line is made.

The seal of the Railway Commissioners of New South Wales  
 was hereto affixed this twentieth day of June, in the  
 presence of,—

HUGH M'LACHLAN.

{ E. M. G. EDDY,  
 Chief Commissioner.  
 W. M. FEHON,  
 Commissioner.  
 CHARLES OLIVER,  
 Commissioner.

B.

OFFICIAL DESCRIPTION OF THE PROPOSED RAILWAY.

Cootamundra to Temora—Length, 35 miles 66 chains 14 links.

The estimated cost of constructing this as a light line of Railway is £146,400, or £4,086 per mile, exclusive of cost of land and compensation.

THIS branch line leaves the Great Southern Railway on the Sydney side of the Cootamundra station at 252 miles 43 chains 86 links from Sydney, and is terminated near Temora at 288 miles 30 chains from Sydney, being a length of 35 miles 66 chains 14 links.

The character of the country passed through is very undulating. A surface line has been designed in order to reduce the cost of construction.

No rivers of any magnitude are crossed.  
 August, 1889.

Revised on November 8, 1889.

Length, 37 miles 58 chains 14 links; cost, £138,000; average per mile, £3,656. Leaves Cootamundra at 252 miles 43 chains 86 links from Sydney. Terminates in Temora at 290 miles 22 chains. Proposed station at Temora would be between Schleicher and Baker streets.

## E.

REPORT BY MR. DISTRICT-ENGINEER HUTCHINSON ON THE COUNTRY BETWEEN WALLENDREEN AND YEO YEO.

Railway Construction Department, Sydney, January 22nd, 1890.

Memo. to the Acting Engineer-in-Chief.

IN compliance with your verbal instructions of the 16th inst., I beg to inform you that I have examined the country between Wallendbeen and Yeo Yeo with the view of obtaining a practical route for a line of railway, and I have marked on the attached county map the only way in which, in my opinion, a line could be taken.

From Wallendbeen to the commencement of the Dividing Range at A an easy line could be obtained, with gradients not exceeding 1 in 75. For the next 2½ miles the line would have to be taken over broken and ridgy country to the summit of the Dividing Range at B; on this portion of the line it might be possible to adopt 1 in 75 as a maximum grade, but to do so would entail curving the line about a good deal, and a considerable amount of excavation and embankment. From the summit of the divide at B the country falls quickly to Timber Reserve No. 1274, and the line could only descend this range by means of a gradient of 1 in 40 for about 2 miles. From Timber Reserve No. 1274 to within half-a-mile of Congo Creek the line would be easy and the gradients flat; from this point the line would ascend to a gap in the range on the south side of Congo Creek and descend again to level country, after which the line would be an easy one to the point of intersection with the line from Cootamundra to Temora.

W. HUTCHINSON,  
District Engineer.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## SECTIONAL COMMITTEE.

### RAILWAY FROM COOTAMUNDRA TO TEMORA.

## REPORT.

THE Sectional Committee appointed to "inspect, inquire, and report with reference to the proposed Railway from Cootamundra to Temora," have the honor to submit the following Report:—

The Committee left Sydney on the evening of Friday, the 31st January last, and arrived next morning at Cootamundra, where a sitting was held in the Court-house, and seventeen witnesses examined. The evidence of two more witnesses was taken in the evening at the "Albion Hotel." On the following Monday the Committee proceeded to Stockinbingal, and held a sitting at Woodhouse's hotel, where eight witnesses were examined. On the same afternoon the Committee proceeded along the route of the proposed railway to Temora, which was reached about 6 o'clock in the evening, when arrangements were made for procuring evidence. Next morning the Committee met in the Court-house at Temora, and examined twenty witnesses, including three from Barmedman. The presence in Temora of these witnesses from Barmedman rendered it unnecessary for the Committee to proceed to that place as intended, and on Wednesday they started for Wallendbeen, *via* Stockinbingal. They were met at Stockinbingal by a number of residents of the Wallendbeen District, who drove them over the suggested route from Stockinbingal to Wallendbeen, through the Fresh Water Spring Gap. They arrived at Wallendbeen in the evening, and examined three witnesses—additional to four others from Wallendbeen already examined at Cootamundra—after which they left by train for Sydney, where they arrived on Thursday morning.

The Committee find that the proposed railway will run from Cootamundra 12½ miles in a north-westerly direction as far as Yeo Yeo, and thence due west to Temora, *via* Stockinbingal.

An alternative route has been suggested running from Wallendbeen on the Main Southern Line, and joining the proposed line at Yeo Yeo, a distance of 14½ miles. The length of the proposed line from Cootamundra to Temora is 37½ miles, and of that from Wallendbeen 39½ miles. The haulage from Temora to Sydney, *via* Wallendbeen, would be 9½ miles less than that *via* Cootamundra, but the suggested route, besides being 2 miles longer, would be more difficult and costly to construct.

The country along both routes may be regarded as equally suitable for wheat production, and the soil and climate of the entire district to be served by the railway are eminently adapted for the growth of wheat, the former being of a rich chocolate description. There is a very large area of country in the leasehold areas and reserves which could, and, if railway facilities existed, probably would, be speedily selected and brought under cultivation,

The Committee found that extensive agricultural settlement had taken place along the proposed railway route to Stockinbingal, in the vicinity of Wallendbeen, and in the neighbourhood, as well as within a considerable radius of Temora. On the land to be served by the line to Stockinbingal the evidence shows that there are sixty-seven settlers holding an aggregate area of 75,174 acres, notwithstanding that a very large area of country is reserved for timber, water, and gold-mining purposes, much of which might be made available for agricultural settlement by being thrown open in special areas. The yield of wheat per acre in a good season is abnormal. The average this year is stated to be about 20 bushels to the acre, but instances were cited in which a very much larger yield was obtained. The land lying towards the Lachlan River was also reported to be admirably suited for agriculture; but owing

to

to the heavy rates charged for the conveyance of wheat to the railway, only a limited wheat cultivation is at present carried on in that part of the district. The high rates of carriage, and the difficulty in obtaining teams at harvest time, are serious drawbacks to the profitable occupation of the land. Nevertheless, there appear to be many inquiries for land in the district by members of the agricultural class.

The soil in the vicinity of Temora is well suited for vineyards and for horticulture. Some very fine specimens of grapes, apples, figs, plums, &c., were produced before the Committee as evidence of this; but up to the present time the pursuit of fruit-growing has not been followed to any great extent. However, those who have tried the experiment are confident that if cheap and easy access to a market were provided, the fruit industry would become a very profitable one at Temora.

There appear to be at least fourteen station properties to which the proposed line would be accessible for the conveyance of wool. As the railway, if constructed, would join the Gundagai line at Cootamundra, it would be likely to prove most serviceable to stock-owners for the purpose of removing their sheep to summer country in times of drought. The evidence clearly indicates that during the last drought a very large number of sheep were moved from the back country along the route of the proposed railway; and as there are three travelling stock routes in the vicinity of Cootamundra the proposed line would very likely also be used for the transportation of stock to the local and metropolitan markets. In dry seasons a considerable return might be expected from the conveyance of fodder from the southern districts to the back country.

The township of Temora came into existence on the discovery of gold there about the year 1880, and for a considerable period it was a flourishing centre of business, with a large population. Gold-mining has, however, declined to a minimum; very few men are now engaged at alluvial working, and only a small number find profitable occupation at reefing. The town, which at one time appeared very much depressed, shows signs of revival, and now possesses a population of over 1,000 people. There are sixteen licensed hotels there, and the general trade of the place appears now to be on a sound financial basis, the town being principally supported by the agriculturists of the surrounding districts.

The passenger traffic between Temora and Cootamundra is not at the present time very considerable.

There is a belt of excellent ironbark timber in the range between Stockinbingal and Temora, and abundance of suitable ballast is to be found along the entire route.

No difficulties are presented by the country through which it is proposed that the railway should be carried, and the engineers have taken care to ensure an easy grade by crossing the dividing range through a gap in which there is a scarcely perceptible rise. As far therefore as its physical features are concerned the country does not offer the slightest obstacle to the construction of a cheap line of railway.

A deviation has been suggested by the Engineer for the purpose of avoiding ground worked by the miners, and obtaining a better entrance to Temora and a more suitable station site.

As the result of their inquiry the Committee desire to recommend that the line submitted to them should be constructed to Temora, *via* Stockinbingal, from Cootamundra.

They have arrived at this conclusion from the evidence adduced before them, all the witnesses, with the exception of those from Wallendbeen, being of opinion that the interests of the district would be better served by communication with its local trade centre, Cootamundra. This town is the point of junction with the Gundagai line, and is therefore better adapted for travelling stock purposes than Wallendbeen. The Cootamundra line will also be more suitable for the conveyance of agricultural and other implements that are imported from Victoria and South Australia. It will have the advantage, besides, of being nearer to the Southern districts, from which fodder is obtained in times of drought. Added to this, it may be said that the majority of the farmers likely to be served by a line from Wallendbeen are within 7 miles from that place or from Stockinbingal, and therefore will be fairly well provided for in the matter of railway communication, if the line goes from Cootamundra. The line from Cootamundra will be shorter, and the cost of construction very much less, than that from Wallendbeen. All these advantages,

advantages, in the opinion of the Committee, outweigh the fact that the Cootamundra route will entail a haulage of  $9\frac{1}{2}$  miles from Sydney or Goulburn more than would be the case if the railway were taken from Wallendbeen, and they have therefore no hesitation in recommending the line, as proposed, in preference to that suggested *via* Wallendbeen. In these views your Committee is supported by the evidence of all the witnesses, save those from Wallendbeen.

In making this recommendation, the Committee are influenced by the evident suitability of the whole district for purposes of husbandry, and its capacity for carrying a large population; and they believe that, though there may not be a prospect of an immediate return sufficient to pay interest on the cost of construction, yet in the course of a few years the expenditure will be fully justified by the results.

In conclusion the Committee would point out that as the country between Cootamundra and Temora offers no engineering difficulties, and as timber and ballast are to be found in abundance along the route this railway should be constructed at a minimum cost.

As the average cost of railway fencing has not been less than £100 per mile, and as it appears from the evidence taken during this inquiry that men in the district are willing to erect similar fencing at a cost of £55 per mile, the Committee are of opinion that it would be conducive to the public interest if a separate contract were let for fencing, as the cost of construction would be materially lessened by bringing the work within the range of local competition.

11th February, 1890.

HENRY COPELAND,  
Chairman.

---

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM COOTAMUNDRA TO TEMORA.

[TAKEN BEFORE SECTIONAL COMMITTEE.]

SATURDAY, 1 FEBRUARY, 1890.

[The Sectional Committee met at Cootamundra at 10 a.m.]

Present:—

HENRY COPELAND, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. | EDWARD WILLIAM O'SULLIVAN, Esq.

The Sectional Committee proceeded to consider the proposed railway from Cootamundra to Temora.

James Alexander Kenneth Mackay, Esq., grazier, sworn, and examined:—

1. *Chairman* ] What is your occupation? I am a grazier. My father is a grazier, and I live on his property.
2. Where do you reside? At Wallendbeen.
3. Do you carry on any agriculture? We had this year about 320 acres under wheat.
4. Do you send the wheat to the Wallendbeen railway station? We send it to the Wallendbeen station when shipping it away.
5. What distance are you from the Wallendbeen station? About 2 miles.
6. Have you had your harvest? Yes.
7. How many bushels has it yielded to the acre? I could not be quite certain, but I should say about 20.
8. Then with reference to the railway to Temora, you are not personally interested in the matter, seeing that you are already near enough to the Wallendbeen railway station? No. For the purpose of sending away wheat we should not use the Temora railway at all. We have our railway at Wallendbeen.
9. And the same remark applies in reference to stock? Yes. Our stock would go to Sydney, as it does at present, even if we did get the line from Temora to Wallendbeen.
10. Do you know the country personally between Wallendbeen and Yeo Yeo? I cannot say I know it well—I have been over it. I went over the proposed line. Yesterday I went through the gap spoken of by Mr. Hutchinson in his report. I drove through it.
11. I suppose there is no difficulty in driving a vehicle across the gap? Well, it is a rough road. It is country that has been ringbarked, and a great deal of the timber has fallen. Myself and a friend started yesterday, and we drove right through the whole of what is called difficult country. I cannot say that it was easy driving, but at the same time it was quite possible to drive through it.
12. I suppose, personally, you are in favour of the railway being taken from Wallendbeen instead of from Cootamundra? Yes. I would prefer that route, although we have interests in Cootamundra as well as in Wallendbeen. We will be benefited whichever way the railway goes.
13. Taking a public view of the question, in your opinion should the railway start from Cootamundra, or from Wallendbeen? I think from Wallendbeen.
14. What is your opinion for thinking so? Because at least  $9\frac{1}{2}$  miles of haulage would be saved—possibly more. I am going by Mr. Hutchinson's report. The Wallendbeen route would bring the railway a certain number of miles nearer Sydney. I presume the line is intended to tap Hillston and the back country. I know the sympathies of that country to be as a rule thoroughly Victorian, and I think the nearer you can bring your terminus to Sydney the better, at any rate for Sydney.
15. You are aware that there is some idea that if the line were connected at Cootamundra it would be convenient for the people who have stock in the western country—Hillston and round there—to send their stock in droughty seasons to the hilly country about Tumut, by sending them on the Gundagai line;—do you think the line would be used for that purpose, and that the people would send their stock from Barmedman, Hillston, or Temora? I am doubtful. I should think it would be an exceedingly expensive experiment.
16. Has it been the practice to send stock to the mountain ranges from the country about Temora and west towards Hillston? Yes, there is no doubt that a great deal of mountain country is made use of.
17. What part of the country? Up about Tumut. I have never been there, but from all I have heard, I know it is made use of extensively for sheep.
18. If the railway were constructed to Cootamundra, do you think the people would be likely to send their stock by rail to Cootamundra and on to Gundagai? I doubt it myself.

25 (a)—A

J. A. K.  
Mackay, Esq.  
1 Feb., 1890.

- J. A. K. Mackay, Esq.  
1 Feb., 1890.
19. Do you think it would be cheaper for them to travel the stock to the mountains? I do. In big lots, such as theirs would be, I do not see how it would pay.
20. If the country was dry, and there was little feed on the road, would they not be likely to avail themselves of the railway? They might possibly do so for the removal of valuable sheep, which they would rather go to a big expense than lose, but as regards ordinary sheep it is a long way, and the cost would swallow up all the good.
21. I suppose there are plenty of travelling stock routes in the neighbourhood? There is a travelling stock route from Wallendbeen out as far as Lake Cudgellico. It is a very good one. The only thing is that it has been given into the hands of the squatters to a great extent and there is never any grass upon it. But if that were remedied there would always be grass as far as I can see. I have travelled sheep on it myself, and I have found that it is a very good stock route, but nearly all held by the various land holders, who have deliberately eaten it down.
22. Are there any stock routes from Cootamundra or from Wallendbeen in the direction of Tumut? In most cases the land here has all been sold, and there are simply the roads. I could not say anything with regard to a stock route from here to Tumut; there may be one I do not know.
23. How many stock do you run? On Wallendbeen from 10,000 to 11,000 sheep, 300 head of cattle, and about seventy horses—that would be the average.
24. I suppose your father is the proprietor of the run? Yes.
25. *Mr. O'Sullivan.*] Which do you think would constitute the larger volume of traffic—the local trade from Temora to Cootamundra, with the starving stock thrown in, or the traffic that would arrive from Temora to Sydney, *via* Wallendbeen—I mean comparing the local trade, which would naturally go to Cootamundra with the trade that would go to Goulburn and Sydney, *via* Wallendbeen? I should be inclined to think that the trade would work towards Goulburn and Sydney—Sydney principally; it nearly always does. As a rule when people have an opportunity they go to Sydney for their goods, because they can obtain them cheaper there if they purchase in anything like a large quantity. I do not say they would get better quality.
26. Is not Temora regarded from an agricultural point of view as an offshoot from Cootamundra? I could hardly say. I have hardly thought of Temora as an agricultural centre, and as I have never been there, I could not give an opinion on the subject. I have never heard Temora spoken of as a very large agricultural centre, but I believe it is becoming one.
27. Do the Temora people look upon Cootamundra at the present time as their trade centre? That I could not tell you, because I know nothing about them.
28. *Mr. Humphery.*] What is the distance from Wallendbeen to the commencement of the Dividing Range? About  $4\frac{1}{2}$  miles.
29. I mean the commencement of the range, not the top—along the proposed route? The proposed route runs to a certain point, and then suddenly dips and goes right into the gap. This point, I should think, would be about 4 miles from the railway station.
30. For the next  $2\frac{1}{2}$  miles, what kind of country is there? That is the only difficult country—that is through the gap.
31. What is the character of the country from the summit of the Dividing Range, marked A on Mr. Hutchinson's map, to timber reserve 1,274? It is the only rough country on the line; it is a long valley.
32. Rough country unsuitable for settlement? Well, just immediately where the line is.
33. Is that your answer? My answer would certainly not be that it is unfit for settlement any distance away. I am merely speaking of the spot where the line goes through. The country becomes good a very short distance out on each side, but where the line actually goes, and where there is a hill running up on either side, the land there would not be suitable for settlement.
34. What length of line would run through bad country—that is to say, what is the distance from the commencement of the Dividing Range to timber reserve 1,274? I should think about 2 or  $2\frac{1}{2}$  miles—that would be the gap.
35. *Chairman.*] What you mean is that it is only in the valley itself that the country is broken and bad, and that when you get out of the valley the country is better? It is still hilly, but it is excellent soil. It is good country; in fact, I do not suppose there is any bad soil at all. It is rough. It would be unfit, for instance, to build upon the side of the hills.
36. Is it red soil? Yes; it is red soil right through.
37. So that the land on both sides of the gap is good, but the land in the gap itself is broken? It is very broken. I may say that it is hilly country in any case through there, but it is good country.
38. *Mr. Humphery.*] Is it suitable for agriculture? Parts of it are, but there are other parts that I think would be more suitable for grazing. It is excellent grazing land. The soil is suitable for agriculture, but in places it is rather hilly.
39. Could it be ploughed? Certainly, most of it could. A man will plough almost anything if the soil is good. It is merely a matter of more horse power or more bullock power.
40. What is the distance from timber reserve 1,274 to Yeo Yeo? I could not tell you exactly.
41. Are you familiar with the route? I am not. I went over it yesterday. I know that a great deal of it is very good country, and that the moment you come out of the gap of which I have spoken the land becomes very favourable for agriculture. You will see flat country there admirably adapted for agriculture.
42. What knowledge have you of the surveyed route from Cootamundra to Yeo Yeo? None whatever.
43. You have not been over it? No.
44. Are you able to express an opinion as to whether the proposed route from Cootamundra to Yeo Yeo would serve a larger number of people than the suggested route from Wallendbeen to Yeo Yeo? I am unable to answer that question, because I do not know the extent of population along the line.
45. And your opinion that the line would be better from Wallendbeen to Yeo Yeo is based on the fact that it would save 9 miles of haulage? That it would save 9 miles of haulage, and have a tendency to bring traffic towards Sydney instead of its going to the rival capital.

James Matheson Mackenzie, Esq., station manager, sworn and examined:—

- 46 *Chairman.*] Where do you reside? At Wallendbeen.
47. What is your occupation? I am manager of the Wallendbeen station.
48. The station about which Mr. Mackay has just been giving us information? Yes.
49. *Mr. O'Sullivan.*] In which direction does the Wallendbeen Run lie from the town of Wallendbeen? To the east and south;—in fact the railway line goes through the run.
50. Would the proposed line from Temora to Wallendbeen, *via* Yeo Yeo, touch the Wallendbeen Run? No; it would not go through an acre of it.
51. What point on the existing railway line do your teams make for? Wallendbeen.
52. Do you get your stores from Wallendbeen or from Cootamundra? From Wallendbeen.
53. Do you know of any other stations whose wool is sent to Wallendbeen? Yes, a great number.
54. Will you name them? Mr. Gibb, of Berthong; and Messrs. Lackey, Wallace, and Mills send their wool to Wallendbeen, as do also a great number of smaller station-owners.
55. In which direction do these stations lie? Mr. Gibb's station, and Messrs. Lackey, Wallace, and Mills' station lie north from Wallendbeen.
56. Are they all north from Wallendbeen railway station? The two I have mentioned are. There are, of course, a lot on the south.
57. Then those you have mentioned are not on the proposed railway line from Temora to Wallendbeen, *via* Yeo Yeo? Yes, they are partly on that line.
58. Do all these stations draw their supplies from Wallendbeen? I believe so.
59. What stores are there at Wallendbeen by which they can be supplied? The supplies come from Sydney by train to Wallendbeen.
60. They get their stores from Wallendbeen because that is the nearest station to them? Yes.
61. Wallendbeen would be regarded, then, as their market and trade centre? Yes, that is as far as the trucking of stock is concerned, and the sending of their supplies, and wheat, and so forth.
62. Do you know the country between Wallendbeen and Yeo Yeo? I do.
63. What is your opinion of it? I think it is very good.
64. Good for what? For agricultural purposes—with the exception of about  $1\frac{1}{2}$  miles or 2 miles.
65. Are there many settlers there? Yes, a few.
66. If it is good country why has it not been more settled? Because it is partly in the hands of Mr. Gibb and Mr. Sinclair.
67. Leasehold area? Yes, part of it.
68. Is this land likely to be sold when the leases expire in July next? I think so.
69. Do you know of any people who are preparing to settle out that way? I do.
70. Do you regard that as difficult country for a railway to go through? No. I do not think it is.
71. Have you travelled over the route referred to by the previous witness? Yes, I could drive a four-in-hand over it without any trouble.
72. Have you ever driven across there? I have.
73. And did you have any difficulty in getting through? Not the slightest.
74. Did the route you took go anywhere near the proposed railway line? The proposed line was the route I took.
75. What stations lie upon the line of route from Wallendbeen to Yeo Yeo? The station of Messrs. Lackey, Wallace, and Mills, Mr. Gibb's station, called Berthong, and Geraldra, Mr. George Davidson's station.
76. Does not the station of Messrs. Lackey, Wallace, and Mills, lie north of Wallendbeen? Yes.
77. And north of the line of railway? Yes.
78. Does not Berthong also lie off the line of railway? Yes.
79. I mean the proposed line of railway from Temora by Yeo Yeo? That line would go through part of both stations.
80. Through part of Nubba? Yes, and part of Berthong too.
81. Where is the Nubba homestead? About 3 miles from the Wallendbeen railway station, to the north.
82. Would not the manager of Nubba send his wool teams to the existing southern line of railway in preference to the proposed line? I suppose he would.
83. Then the proposed line would be of no use to Nubba? I could not say that. If they got settlement there of course it would be good for them.
84. How far are the shearing sheds and the homestead of Nubba from the main southern line? About 3 miles.
85. And they stand to the north of Wallendbeen, do they not? Yes.
86. Therefore they are off the line of route taken by the Yeo Yeo line to Temora? Yes.
87. Will the same remark apply to Berthong? Yes, I believe it will.
88. Where have they been in the habit of sending their wool? To the Wallendbeen railway station.
89. Could they strike the proposed line of railway if there was a platform or station available? They might; they would save 3 or 4 miles if they did.
90. Would they be likely to unload for the sake of 3 or 4 miles? That I could not say.
91. What other stations are along the proposed Yeo Yeo line? Geraldra.
92. Any others? There are several further on.
93. Do you know their names? There is one just on the boundary—Reardon's.
94. What is the name of his run? The Oaks.
95. How many selectors do you think there are between Wallendbeen and Yeo Yeo? That I am not prepared to say—a good many.
96. Are there twenty? Yes; more.
97. Do you think there are fifty? Yes. There will be seventy between that line and the other line.
98. How much agricultural land is likely to be thrown open when the leases fall in in July next? There are about 4 or  $4\frac{1}{2}$  miles of Crown lands there reserved. It is for the Government to please themselves about that.
99. Do you think there will be 20,000 acres of leasehold fit for agricultural purposes thrown open in July? That I could not say.

J. M.  
Mackenzie,  
Esq.

1 Feb., 1890.

J. M.  
Mackenzie,  
Esq.  
1 Feb., 1890.

100. How would you prefer the railway to go, speaking as a man having regard to the national interest and altogether apart from any local prejudice? I think it should go to Wallendbeen. By doing so 10 or 11 miles of haulage would be saved in the first place.
101. Where do you send your stock in dry seasons to escape the drought? Wherever we can get grass land.
102. Where can you get grass? I do not know. I have had no occasion to send sheep away for grass. We send them sometimes out to our back stations at Condobolin.
103. Do you send them further out west? No.
104. In time of drought? We sent them out there to save the grass on the station here.
105. In time of drought where do the pastoralists generally send their starving stock? To Tumberumba, in the mountains.
106. Which way would they take their stock? Through Cootamundra and through Wallendbeen. I have seen 10,000 sheep on the reserve.
107. Why do they go through Cootamundra? Because I suppose it is the nearest track for them.
108. Is it because the railway goes from there to Gundagai? I do not think so.
109. Do they use the railway at all from Cootamundra to Gundagai? I do not think so—I am not sure.
110. Why do they go through Wallendbeen with their stock? Because it is a direct route from Forbes and *via* Young and Hillston to the mountain runs.
111. By which route do the larger number go? That I could not say; but I have known 10,000 sheep on their way to the mountains to be camped on the reserve at Wallendbeen on one night.
112. Do you think if a line of railway were run out to the west towards Hillston, that the pastoralists in that direction would use the line to send their starving stock to the mountain runs to escape the drought? I do not think so. It would hardly pay them.
113. You think they would prefer to travel their stock? I believe so.
114. Is there any danger of their losing their stock on the way, owing to the want of grass? I think they would chance that sooner than pay the railway rates.
115. How long would it take to travel a flock of sheep from the neighbourhood of Hillston to the mountains? About two months.
116. How long would it take to convey them by railway? I could not say.
117. Do you think it would forty-eight hours? Yes, more.
118. Suppose it took sixty hours, do you think the stock proprietors would run the risk of a two months' journey in a time of drought when, by using the railway, they could send their stock to the mountain run in a sixty hours? I could not say what others would do, I can only speak for myself.
119. But as a man having an eye to business and to the security of your stock, which would you do? Sooner than pay the high railway rates I would travel the stock.
120. You would rather travel your stock for two months in time of drought, when there is no grass on the stock route, and run the risk of losing three-fourths of the stock? Yes. If you sent them by railway you would lose three parts of them before you got them out of the trucks.
121. Do you think that is the general opinion amongst pastoralists? I think so.
122. That they would rather travel their stock a two months' journey than pay the starving stock rates for a railway journey of sixty hours? I can only speak for myself—I know I would.
123. *Chairman.*] Would not the Nubba people use the Wallendbeen railway station? Yes.
124. So that if the line were constructed from Wallendbeen to Yeo Yeo they would not use it? I do not suppose they would.
125. They would still go to Wallendbeen station? Yes.
126. Is the Wallendbeen railway station nearer to Berthong than is the Nubba railway station? Yes.
127. Then do not the Berthong people use the railway station? No, they do not.
128. If the line were constructed from Wallendbeen to Yeo Yeo, would not the Berthong people still continue to use the Wallendbeen railway station? That I could not say. Berthong would be about  $3\frac{1}{2}$  miles from the proposed line, and it is now  $8\frac{1}{2}$  miles from the Wallendbeen railway station.
129. And how far from Nubba? About 3 miles from Nubba homestead.
130. Then the Berthong people and the Nubba people would both continue to use the railway station on the existing main Southern line? Nubba, I suppose, would, but I do not know about Berthong; they would save about 5 miles by sending to a platform on the proposed route.
131. Would they not have to pay a considerably increased railway freight if they used the line between Wallendbeen and Yeo Yeo;—would they not have to pay so many miles more haulage than if they used the Wallendbeen station? Yes; they would have to pay for 5 or 6 miles more haulage.
132. Then in all probability the Berthong people would use the Wallendbeen railway station? Very likely.
133. And the Nubba people would also continue to use the station on the main Southern line? Yes.
134. You are well acquainted with the nature of the country;—do you think any better route could be chosen to get through the gap than the one selected by the surveyor? I do not think so.
135. You do not think there is any better method of getting down off the range? I do not think there is, and I have known the country for the last thirty years.
136. How many selectors are there at Wallendbeen? About fifty or sixty.
137. These are *bona fide* selections in which the owners of the station have no interest? Yes.
138. Are these selectors cultivating their land? They are.
139. Growing wheat? Yes.
140. Any other crops? Yes, maize and potatoes, and they also graze a few sheep.
141. Do they get pretty good crops of wheat? They do.
142. What is about the average? I believe some of them have got as high as 40 bushels to the acre.
143. What do they generally get in maize? That I could not say.
144. What is the yield of potatoes? About one ton to the acre, I should think.
145. *Mr Humphrey.*] Is there any maize grown there? Yes. There is some growing there now.
146. Are the selectors on Wallendbeen fairly served by the existing railway? Yes.
147. Then the suggested line between Wallendbeen and Yeo Yeo would not be for their benefit? Not for the benefit of those on Wallendbeen, but there are a number of selectors on the west side of the southern line who would benefit largely by the proposed railway to Wallendbeen.
148. How many? About seventy.

149. On which side of the main line of railway is the Wallendbeen Run? On the south-east side.
150. All of it? Yes.
151. With regard to the selectors whom you say would be benefited by railway from Yeo Yeo to Wallendbeen, what distance are they from the existing railway? Some of them are quite close.
152. What distance? Some of them are right along the route of the proposed line.
153. How far are they from the existing railway? Five or six miles.
154. Is that the greatest distance? There are some 7 or 8 miles away.
155. Then none of the selectors referred to by you are more than 7 or 8 miles from the existing railway? About 7 miles.
156. You have referred to the Government reserve—what distance is that from the existing railway? I think about 7 miles, the proposed route going through it.
157. You said there were also some unalienated Crown lands? There is part of the timber reserve, and there is another reserve which goes on to Congo.
158. You are referring to timber reserve 1,274? Yes, and about a mile further on there is another reserve.
159. How far is that from Wallendbeen railway station? The timber reserve is about 7 miles from the existing line.
160. Is that timber reserve suitable for agricultural settlement? It is.
161. The whole of it? Yes, I believe so from what I have seen of it.
162. What is the extent of the reserve? I cannot say.

J. M.  
Mackenzie,  
Esq.

1 Feb., 1890.

Mr. James Boxsell, farmer and grazier, sworn, and examined:—

- 163 *Chairman.*] Where do you reside? At Cullingah, adjoining Wallendbeen.
164. What are you? A farmer and grazier.
165. How much land do you hold? About 2,600 acres.
166. Is it all purchased land? It consists of selections.
167. *Mr. O'Sullivan.*] Cullingah is the name of a station on the main southern line is it not? Yes, but that is on the other side of Harden in quite a different direction.
168. Where does your farm stand from Wallendbeen? It is about 8 miles to the east of Wallendbeen.
169. Anywhere near Berthong? About 16 miles from Berthong.
170. What station are you near? Mr. Mackay's old Wallendbeen station.
171. Then you are not on the route of the proposed railway? No.
172. And you are not likely to be affected by it? No.
173. Can you speak as to the character of the country between Wallendbeen and Yeo Yeo? Yes. For about six or seven years I have been buying wheat as an agent, and I have been round most of that district. It consists of about the best agricultural land I have seen in the district. Most of it is composed of chocolate-red soil, and I have bought some of the largest crops there that have been grown in the district.
174. How many selectors would you find out there cultivating wheat? I could not exactly tell you.
175. Could you not state the number approximately? There may be forty or fifty, and perhaps more.
176. Would fifty be a fair statement? I daresay it would.
177. Are those fifty selectors on the line of route between Wallendbeen and Yeo Yeo? Yes. Most of them are on this side.
178. Are they within 5 miles of the route on either side? Yes, about that.
179. And would they be likely to be served by the railway if it were carried that way? They would. If there was a platform at Berthong or somewhere in that locality it would save them a great deal of haulage.
180. Are these selectors permanent? Yes, some of them have been there for sixteen or seventeen years.
181. They are permanent selectors and do not occupy the land in the interest of the station? Yes.
182. Is there much more agricultural land to be taken up? I am informed that a great many reserves are to be thrown open; in fact they are already measured in a 160-acre blocks, and I know several people who are looking out for them although they are small blocks.
183. Can a man make a living out of 160 acres? If it is good land he can.
184. But are not the leasehold areas on the runs out there to be thrown open in July? I believe so.
185. And is the land on the leasehold area good? Yes. There are a few ironbark ranges, but they produce timber, which could be used as sleepers for the railway.
186. Do you think there is likely to be a rush of settlement on the leasehold area? Yes; I have seven sons of my own I want to send them out as soon as I can get a place.
187. So that in July next there is likely to be a rush of settlement along the proposed route from Wallendbeen to Yeo Yeo? Yes.
188. Is not the country very hilly there in parts? Only the little bit at the gap.
189. For what distance do you think the hilly country extends? I should say for about 2 or 2½ miles.
190. The distance between Wallendbeen and Yeo Yeo is about 12 miles? About that.
191. So that 10 miles of the country may be considered as suitable for agriculture? Yes.
192. Where do these farmers go for their stores? Most of the big farmers send to Sydney for their stores, as I do.
193. To what railway station? To Wallendbeen.
194. And where do the smaller farmers get their stores from? Some go to Cootamundra, and some to Wallendbeen.
195. Which line of railway do you think would serve them best—the one from Temora to Wallendbeen, or the one from Temora to Cootamundra? I believe the line to Wallendbeen would best suit the farmers I have mentioned.
196. Have you noticed which way the travelling stock proceed to the mountain runs? I have seen some going both ways. I have not seen so many on the Cootamundra side, because my business is more in the direction of Wallendbeen. But I have seen a lot of sheep on both sides.
197. Are they in the habit of walking the whole distance? They generally drive them, because there has been no other way of getting them to the mountains, except since the Gundagai line has been opened. Whether they go there or not I cannot say.

Mr.  
J. Boxsell,

1 Feb., 1890

Mr.  
J. Boxsell.  
1 Feb., 1890.

198. Suppose this line were taken on from Cootamundra to Hillston, do you think it would be of any advantage to the owners of starving stock in enabling them to get their sheep to the mountain runs? I daresay it would, if they left them too late.
199. Would they be likely to use the railway or would they drive the sheep the entire distance? They would have to use the railway if the stock got too poor to travel. But as a rule they generally start in time to take them by the road.
200. Referring to these agricultural settlers, you think they are well established in the district, and likely to remain? Yes.
201. What is about their average crop? The constable told me that the average is about 20 bushels to the acre this year. The yield in some instances has been as high as 30 bushels.
202. What is the average size of their holdings? I could not exactly say. Most of them have got a little over their 640 acres. Some have double that area, and some of the holdings reach 2,000 or 3,000 acres in size. There are some big and some small. The smallest quantity of wheat I got was 500 bags, and in other cases I got 2,000 bags.
203. These selections are all in the eastern division? I do not know exactly the division.
204. How do they hold more than 640 acres if they are in the eastern division? They took up two selections years ago. A selector would take up one in his own name and one in the name of his son.
205. By combining their children's selections with their own they hold a larger area? That is so.
206. Is it your opinion that this agricultural settlement will increase? Yes. Mr. Gibb himself says that he will throw open his run for agriculture. In another year these runs will be all open for settlement. I come from Illawarra, and I know that Mr. Berry, who was a great squatter there many years ago, cut up his land into farms, and it has been let for the last twenty or thirty years. All the land on his property is fetching from 10s. to £4 an acre.
207. And your opinion is that the squatters will see the advantage of that directly, and will cut up their land and let it, and that a clerk will do their business instead of a boundary rider? Yes. There is splendid agricultural land, the greater part of which lies on the north side of the railway route from Temora to Wallendbeen.
208. What crops besides wheat do the selectors grow? Wheat is the principal crop. They grow corn sometimes; but maize-growing, as a general rule, is not a success.
209. Do they grow oats? Yes; large quantities of oats.
210. Are there any vineyards in the district? There are a few, but they are on a very small scale. Grapes do exceedingly well, and I have often wondered why vine-growing has not been more general in this district.
211. Is there any other special crop besides wheat? No. It is the main thing all through the district. There is no doubt that if the price of wheat keeps low the farmers will turn their attention to something else.
212. *Chairman.*] Which is your market? Most of my wheat goes to Goulburn?
213. I suppose that is the market for the people of this district generally? Yes.
214. Is there a flour-mill at Wallendbeen? There was one, but it is now closed.
215. Do you know whether there are any flour-mills at Cootamundra? There was one, but it is closed.
216. And they are not grinding in the district at all? No.
217. All the people send their wheat to either Goulburn or Sydney? Yes.
218. Do you grow any fruit in the district? There is a little fruit, but it is not gone in for extensively.
219. They do not send any to market, I suppose? Only to the local market.
220. *Mr. Humphery.*] You said that the land was similar and of equal value to that of Mr. Berry, at Illawarra? No. I merely wished to show that in time the land might become the same—that it could be cut up into farms, and in that way the owners could make more money out of it with less labour. They cannot make nearly as much from sheep and cattle as they can by cultivation.
221. You said that Mr. Berry received from 10s. to £4 an acre a year for his land? Yes.
222. For what part of his estate does he get a rental of £4 an acre? For some on the river bank.
223. Can you mention one farmer who pays £4? I could not give you any names, because it is so long since I was there. In some instances, the land was let on halves, and it was so productive that Mr. Berry received a very high return.
224. Can you mention one farmer who paid as much as £2 an acre? I believe Mr. Lewis M'Intyre paid more than £2 for some of the good land.
225. Is not the average rent paid for the country round there from 15s. to 30s.? Yes, that is generally about the average, but the land along the river banks is very valuable.
226. Is there any comparison between the land on Berry's estate and the land which would be served by a railway from Wallendbeen to Yeo Yeo? I admit that Mr. Berry's land is a good deal better. I only referred to Mr. Berry's estate as an illustration of how I thought it was likely this land would be dealt with. I said that these stations would be cut up in the same way that the Berry estate was cut up, and that they would be more profitable under agriculture than as grazing land.
227. Which, in your opinion, is the better land for agricultural settlement—the land between Cootamundra and Yeo Yeo or the land between Wallendbeen and Yeo Yeo? The land between Wallendbeen and Yeo Yeo.
228. Notwithstanding its mountainous character for about 4 or 5 miles? Yes, I think the quality of the land will make up for that.
229. You think there will be a greater number of settlers between Wallendbeen and Yeo Yeo than between Cootamundra and Yeo Yeo? Yes, as soon as the reserves are thrown open.
230. What other products besides wheat are sent by railway? I do not know of any. I have seen a little corn sometimes in a good season, but as a general thing there is not much besides wheat and oats.
231. When will the wheat harvest be despatched by rail—in what month of the year? The farmers have been sending it away for about six weeks, and they will continue to send it for a month or six weeks longer.
232. Over what period would the traffic extend? I suppose for about two months or a little over.
233. And what traffic would there be for the railway during the remaining ten months of the year? There would only be the wool, as well as a few fowls and pigs, and perhaps fat sheep.
234. When would the wool be sent in? About September, October, or November.
235. The carriage of supplies from Sydney, I suppose, would extend over the entire year? Yes.

Mr.

NOTE (on revision): There are three reserves near the Wallendbeen railway station with a never failing spring of water.

Mr. James Drummond, storekeeper, sworn, and examined :—

236. *Chairman.*] Where do you reside? At Wallendbeen.  
 237. What is your occupation? A storekeeper.  
 238. Have you any personal knowledge of the country between Wallendbeen and Yeo Yeo? I have for a distance of about 4 miles. I have not been out much further in that direction.  
 239. You are acquainted with the country lying between the Wallendbeen railway station and the mountain range? Yes.  
 240. Do you send many goods from your store out west and in that direction? No, I do not do business in a large way, and I have not sent out large quantities of goods to the west.  
 241. Do you receive any consignments from the west? No. Our trade, being a small one, is entirely with Sydney.  
 242. I suppose you are of opinion that it would be better to bring the line from Yeo Yeo to Wallendbeen? The principal argument in favour of that route is the saving which would be effected in haulage to the extent of a few shillings a ton.  
 243. From your experience as a business man can you say whether the people near Wallendbeen and along the proposed railway from Wallendbeen to Yeo Yeo are in the habit of sending their goods southwards towards Wagga Wagga, or do they send the whole of them northward towards Goulburn and Sydney? As far as I know, towards Goulburn and Sydney.  
 244. Do you consign any goods yourself as agent for any of these people? Small lots sometimes but not much. I have not done much agency business.  
 245. And so far as you are aware the people of the district do their business with Goulburn and Sydney and not with Wagga Wagga and Albury? Exactly.  
 246. They are not in the habit of sending their goods to Melbourne, or of obtaining their stores from Melbourne? No, not as a rule. There might be an isolated case, but the rule is to trade with Sydney.  
 247. Do you understand farming? I am not well up in it, but I have been farming for a time.  
 248. What in your opinion is the character of the soil along the 4 miles of the proposed railway route from Wallendbeen with which you are acquainted? It is very good. I did not go down into the gap referred to by other witnesses, but as far as I went the land appeared to be very good, but there is not much of it. For the first 3 miles from Wallendbeen the land is principally embraced in the Nubba and Berthong properties. There is not much of it in cultivation, with the exception of that held by three small farmers.  
 249. You are, I believe, the secretary of the Wallendbeen Vigilance Committee? Yes.  
 250. Have you any data or statistics to lay before the Committee? I cannot say that I have anything prepared. I only knew the other day that the Committee were coming; and I had not an opportunity of obtaining as much information as I should otherwise have collected.

Mr. J.  
Drummond.  
1 Feb., 1890.

William Augustus Byrne, Esq., Mayor of Cootamundra, sworn, and examined :—

251. *Chairman.*] I believe you are Mayor of Cootamundra? Yes.  
 252. How long have you held that position? During the last year.  
 253. Have you been an alderman long? Yes.  
 254. For how many years? About four years.  
 255. Are you in business in Cootamundra? Yes, in the stock and station agency business.  
 256. I presume you have a pretty accurate knowledge of the country round about? I have. I have known the country for a very long time.  
 257. For how many years have you resided in the district? I have resided permanently in the district for about thirteen years, but I have been acquainted with it for about twenty-five years.  
 258. Speaking as Mayor, can you tell the Committee the value of the property within the Municipality of Cootamundra? I have omitted to obtain that information, but have sent the clerk for it. The town was incorporated on the 20th May, 1884. The rates received up to the 31st January, 1890, amounted to £3,901 11s. 8d. The amount expended up to the 31st January, 1890, was £10,351 1s. 11d. The population of the borough is 1,600. The figures will show a large increase in the capital value since the borough was incorporated.  
 259. Can you tell the Committee the amount of money collected in rates for last year? A little over £800, I should think.  
 260. Has the Municipality any debt? Yes, about £1,000 or £1,100.  
 261. Have the business people of Cootamundra, the storekeepers and others, any direct trade with Temora and Stockinbingal? Yes; there is direct communication by "road," and I think the business taking place between Cootamundra and the localities mentioned will amount to about £12,000 or £13,000 a year.  
 262. What can you tell the Committee with reference to stock in the district which the proposed railway from Cootamundra to Temora would serve? I consider that in time of drought the railway would bring from the country lying on this side of Temora from 70,000 to 80,000 sheep, which would be carried by rail direct to Gundagai, and I should think would be brought back by rail. The railway would serve a similar purpose in regard to the country beyond Temora. A very large quantity of stock would be brought from there to Gundagai. In fact stock from right across to the Lachlan would, in dry seasons, go to Temora, and be trucked through to Gundagai. If they had to go by rail *via* Wallendbeen, unnecessary inconvenience and expense would be entailed on the owners.  
 263. Are people in the habit of sending their stock to the Tumut district and to the mountain runs? Yes, they frequently had to do so within the last seven or eight years.  
 264. Did they send any last year? The mountains were all taken up last year, when the drought, although short, was very severe.  
 265. Was the country taken up by people living between here and Temora, or between here and Hillston? Between here and Hillston, and also by people between here and Temora. A grazier living between here and Temora owns a very large run on the mountains.  
 266. In sending their stock to the mountains did those people make use of the railway from Cootamundra to Gundagai? In some cases they did, but as a rule they did not.

W. A. Byrne,  
Esq.  
1 Feb., 1890.

- W. A. Byrne, Esq.  
1 Feb., 1890.
267. What reason have you for believing that if this railway were constructed to Temora they would make use of it for that purpose? They generally keep the sheep on their runs until it is impossible to keep them there any longer, and by that time the travelling stock routes are completely bare of grass, and I should think it would be to their advantage to get the sheep to the hills as soon as possible.
268. But does not that argument also apply to the railway between Cootamundra and Gundagai at the present time? Certainly; but the distance is much shorter than would be the case if the line were constructed to Temora. Having to travel the stock to Cootamundra, it would be scarcely worth their while, if the sheep were at all strong, to truck them to Gundagai, which would be only a distance of 35 miles.
269. Is the district provided with travelling-stock routes in the direction of the mountains? Pretty fairly; but, as in other portions of the Colony, in dry seasons there is never a blade of grass left on these reserves.
270. Is there any water? No; not much water in this part of the country.
271. How do the stock get water when they take them to the mountains? They get along the best way they can. They get a drink now and again, and of course the losses by death are very great.
272. Those who live are allowed to live, and those who cannot, die? They die all along the road.
273. Is this district very much subject to drought? Very much.
274. How is it then that it generally manages to grow pretty good wheat crops? It seems to me that wheat crops require very little rain, if they happen to get that little at the right time.
275. What sort of season had you last year? An exceptionally good one.
276. When was the last drought? Last year. The last spring was a wet one, and that was a good season, but the year previous to that was a very dry one.
277. Was there much loss in stock? Yes. Although it was only a short drought it was very severe, and the losses in stock were considerable.
278. That was in 1888 and the beginning of 1889? Yes.
279. During that period of drought were there many sheep sent away to the mountains? Yes; and especially from that part of the country.
280. Does the stock in the district mostly consist of sheep, or of sheep and cattle? Sheep principally. The people only keep a few cattle—sufficient to supply their own requirements.
281. I suppose it is considered a good sheep district? Yes, excellent. It is sound sheep country.
282. Can you say how many sheep, cattle, and horses are sent per annum from the western district—say between Temora and Cootamundra? I should say that last year there must have been between 60,000 and 70,000 sheep sent from the country lying between here and Temora.
283. Where were those sheep sent to? To Tumut and the mountains.
284. I am speaking now rather of fat sheep—were there any sent to Sydney or to Goulburn? Not many.
285. Were there any sent south to Wagga Wagga, Albury, or Victoria? No. We had no fat sheep last year to send.
286. When they do have fat sheep is it their practice to send them to Sydney or to Victoria? Mostly to Sydney. Occasionally they send a few lots to the Albury market, but as a rule the sheep go on to Sydney.
287. That being the case do you not think it would be an advantage to the people if the line were constructed to Wallendbeen, and a saving in haulage effected of 9½ miles? As regards fat sheep it would certainly, but the number of fat sheep carried would only be in the proportion of about one to twenty as compared with store sheep, if the line were extended to Temora.
288. The traffic in store sheep is greater than the traffic in fat sheep? Certainly. The whole of the poor sheep on these stations have to go to the mountains in a dry year, and the largest of the stations between here and Temora has not more than a couple of thousand of fat sheep to send there, so that it would be about 20,000 of store sheep as against 2,000 fat sheep.
289. Have you any reliable information with reference to wool? Not as to the number of bales.
290. Do you know what is the opinion of the people living say between Stockinbingal and Cootamundra? They are decidedly in favour of the Cootamundra line, which is a comparatively level one.
291. I suppose there are business relations between Cootamundra and Temora? Yes. The land office for the Temora district is located at Cootamundra. Temora is a portion of this land district, and the people do their business here.
292. So that the selectors at Temora have to come to Cootamundra to transact their land business? Yes.
293. Therefore if the line were constructed to Wallendbeen they would have to travel from Wallendbeen to Cootamundra to do their land business? Yes, they would have to come back here.
294. Is there not a local land office at Temora? No. And it is a very good agricultural district. The land around Temora is very good, and settlement has taken place there to a large extent.
295. *Mr. O'Sullivan.*] Has there been a large increase of population in Cootamundra during the last few years? Yes.
296. Could you supply the figures from the electoral roll during the last three years? Yes.
297. Have you any auriferous country around this district? We have the Muttama reefs.
298. They are not along the proposed line of railway? No. They are on the Gundagai line.
299. Is there any auriferous country between here and Temora? Gold has been discovered in different places between here and Temora, but not in payable quantities.

Frederick Pinkstone, Esq., journalist, sworn, and examined:—

- F. Pinkstone, Esq.  
1 Feb., 1890.
300. *Chairman.*] Where do you reside? At Cootamundra.
301. What is your occupation? I am a journalist.
302. With what paper are you connected? The *Cootamundra Herald*.
303. Have you prepared any statistics with reference to the agricultural productions of the district? Yes; I have collected statistics.
304. Do those statistics apply to the country west of Cootamundra? Yes; between here and Stockinbingal, a distance of about 20 miles. The figures refer to the year 1888, but those for the subsequent season will show an increase of from 25 to 30 per cent. There are sixty-seven settlers living between Cootamundra and Stockinbingal, who occupy a total area of 75,174 acres. I may say that the figures apply to a distance of 20 miles from Cootamundra, or about 5 miles beyond Stockinbingal.

305. But the sixty-seven settlers to whom you have referred live along the proposed railway? Yes. All these people would be interested in the platform at Stockinbingal. F. Pinkstone,  
Esq.
306. What distance have you taken from the route of the railway on either side? They are all within 6 miles at the outside. There is not one of them more than 6 miles from Stockinbingal platform. The total area they held in 1888 was 75,174 acres. They are all selectors, and in that year they had only 3,000 acres under crop, but it was a very dry year. The number of horses was 2,185, and of sheep, 138,570. The number of cattle I have not totted up. The average population is about ten persons to each holding, and they are all on the northern side of the road to Temora. Mr. Miller was to collect the statistics for the southern portion, and these were all published in my paper of the 3rd September. 1 Feb., 1890.
307. Have you any information with reference to the production of wheat either in this year or last year? The statistics for this year will show an average production of about 20 bushels to the acre throughout the whole district by the people to whom I have referred. The district of the police sergeant only extends for about 4 or 5 miles out of Cootamundra. The statistics for the country beyond that would be collected by other persons than the local police.
308. Can you tell us how many acres were cultivated this year? I can give you a rough estimate. I should think that amongst the people I have mentioned there would be about 5,000 acres under crop.
309. You do not know anything about the average yield, I suppose? From the returns sent to me as a journalist, the average yield is not below 20 bushels. The total aggregate yield for the whole district surrounding Cootamundra will be about 100,000 bags of wheat, or between 400,000 and 500,000 bushels.
310. Can you say what the average yield of wheat has been for a number of years? I think our lowest yield has been about 11 bushels, in a season in which there was a drought throughout; but when the rainfall is fairly distributed through the year, the average yield is about from 17 to 20 bushels.
311. Then, I suppose, we may take it that the general average production is about from 11 to 20 bushels? Yes. Those are the actual figures according to the returns.
312. I suppose there is nothing else cultivated in the district to any extent besides wheat? Yes; hay is grown very largely.
313. Where is the wheat sent to? It is sent chiefly to Cootamundra and sometimes to the southern district. One year we did a very large trade with the south-western line in hay. The sheep-owners there had to come up here and buy the stuff and take it down to feed the sheep.
314. In a season of drought? Yes. The principal crops grown consist of wheat, oats, and hay. There is also produced sheepskins, tallow, hides, and a few other things.
315. I suppose you have no statistics with reference to those other articles? No.
316. As a pressman and a man supposed to be acquainted with public opinion, what are you prepared to say is the general opinion of the people whom this railway would benefit with reference to its going to Wallendbeen or to Cootamundra? You will find that the people from Wallendbeen to Clifton—that is two-thirds of the way from Wallendbeen to Stockinbingal—are indifferent as to whether the railway goes to Wallendbeen or to Cootamundra. Beyond that point, at Stockinbingal, and on to Temora and Barmedman, and Hillston, the whole of the people are in favour of Cootamundra. As an argument in favour of Cootamundra I may mention that the traffic by road has always naturally gone to that place.
317. That is since the main line was constructed to Cootamundra? No, at all times. Before the railway was constructed to Cootamundra the road trade of those districts centred here. In 1877, for instance, the Vigilance Committee at Cootamundra received a petition from all these people in the back country asking for the bridging of the Bland Creek at the Stockinbingal township, in order to facilitate communication with Cootamundra.
318. But was there a Vigilance Committee in existence before the railway was built? Yes.
319. I suppose the railway was under construction then? Yes. It was then as far as Binalong. The line now under consideration was first proposed in 1877 by Mr. Sutherland, and I have an extract from his speech. It was proposed to enable the people in the pastoral country to send their stock into the mountain country, and to enable the people of Tumut, Gundagai, and Cootamundra to send into the western country produce which could not be obtained there.
320. Can you say whether the population out west is increasing to any appreciable extent? Between here and Barmedman it is increasing very fast. The Temora diggings broke out about 1881. Up to that time there were only about two or three scattered selections in the district. I can say from my own knowledge that since then there have been applications for nearly twenty public schools through that district. This fact will illustrate the increase in the population.
321. *Mr. Humphery.*] The Committee understand you to say that the whole of the farmers referred to by you reside within a radius of 6 miles of Stockinbingal? Within 20 miles from here; and none further from Stockinbingal than 6 miles.
322. If you look at the route on the map it will appear that the line between Yeo Yeo and Stockinbingal would serve the farmers you speak of. Yeo Yeo and Stockinbingal are the same.
323. Therefore it would be a matter of indifference to them whether they send their produce to Wallendbeen or to Cootamundra? In speaking of the people who were indifferent as to that, I referred to those between Wallendbeen and Clifton.
324. I want you now to concentrate your attention upon Stockinbingal. If the farmers to whom you refer are within a radius of 6 miles of Stockinbingal, would it not be a matter of indifference to them whether the line were constructed from Wallendbeen to Yeo Yeo or from Cootamundra to Yeo Yeo? No. You will find that the whole of the people at Stockinbingal will declare for Cootamundra.
325. I do not wish to know what they will do, but I want your reason for believing that they will be better served by a line from Cootamundra to Yeo Yeo than by a line from Wallendbeen to Yeo Yeo? The reason is this: Cootamundra is within their own land district, while Wallendbeen is within the Young land district. They do a very large trade with Cootamundra—a trade worth thousands of pounds per annum—and they do no trade at all with Wallendbeen.
326. Assuming the survey to be correct, would not a line to Wallendbeen reduce the haulage by 9½ miles? Yes.
327. And except as regards the trade relations which exist between Cootamundra and Stockinbingal the line to Wallendbeen would be most convenient? It would be a shorter line.
328. Do you think that the importance of the relations which have grown up between Cootamundra and Stockinbingal would justify the construction of that line although the haulage would be 9 miles greater from

- F. Pinkstone, from Sydney? Yes. But fully one-third of the traffic of this line will not go to Sydney. About two-thirds of the traffic would go to Sydney and Goulburn, and I believe that one-third would be entirely lost by constructing the line from Wallendbeen.
- Esq.  
1 Feb., 1890.
329. Why? Because of the inconvenience.
330. What is the nature of the traffic you speak of? Tumut, for instance, does a large trade with these districts at the back in cheese and maize. Maize cannot be grown in the districts out here except in exceptionally good seasons.
331. And as for the live stock? There is a large traffic in live stock to the pastoral districts from Tumut every year.
332. And would it be more convenient for the people living beyond Stockinbingal and at Stockinbingal to send their live stock in time of drought by way of Cootamundra in preference to Wallendbeen? Certainly. They would have to go through a junction at Wallendbeen and they would go straight across through Cootamundra.
333. Do you think that all these advantages would neutralize the benefit the people would derive from the saving of haulage? I certainly think so.
334. I am not asking you as a resident of Cootamundra, but I am asking your opinion as a public man? I am speaking in the interest of the railway as a matter of general policy. Personally I am quite indifferent as to whether it goes to Wallendbeen or Cootamundra.
335. And you think that the advantages would be so much greater by having a line constructed between Cootamundra and Yeo Yeo that the saving in haulage which would be effected by taking it to Wallendbeen would be neutralized? Yes. There are strong reasons in favour of Cootamundra. You will find that it is almost central between two junctions. There is the junction at Harden for the traffic from the western line, and the junction at Junee for the traffic of the Narrandera line, and Cootamundra fairly divides that traffic. There is a very large traffic from the south, coaching traffic as well as train traffic, and those people instead of travelling 86 miles—say from Junee to Temora, *via* Wallendbeen—would prefer to go 32 miles across from Junee to Temora. I believe also if the line is constructed to Wallendbeen it will be necessary to maintain the road traffic between Cootamundra and Temora. The Cootamundra route would concentrate the whole of the traffic of this proposed line, whereas Wallendbeen would lose one third of it.
336. *Mr. O'Sullivan.*] I noticed a large number of bags of wheat stored at the railway station at Cootamundra—where did that wheat come from? Principally from the Stockinbingal country and south of Stockinbingal.
337. Why has not that wheat gone to Wallendbeen? The traffic from the farmers never goes to Wallendbeen.
338. Then at the present time Cootamundra is the natural trade centre for the wheat farmers of the district? Yes. To my knowledge there have been on the road between Cootamundra and Stockinbingal over twenty hired teams engaged in drawing wheat besides all the private teams.
339. What is the cost of carriage per bag of wheat from the Temora district to Cootamundra? They get on an average about 1s. per bag—from 1s. to 1s. 6d. I have heard of their paying as high as 2s., but I think that was an exception.
340. Would 2s. a bag be a prohibitive price? I think so. I do not think that the farmers could afford to pay 2s. a bag for carriage when they only get 3s. or 3s. 2d. a bushel for the wheat.
341. Do the wheat buyers come to Cootamundra? Yes. Mr. Heaton, for instance, and another buyer have been scouring the district for wheat.
342. And where is the wheat of the farmers on the Temora side supposed to be delivered? It is delivered in Cootamundra. We have been asked to obtain a market reserve in the township, principally for the convenience of these people. The desire is to have a market so that farmers will be able to send in samples of their wheat, and buyers may come and bid publicly for the produce.
343. Do you think that Cootamundra is merely a temporary trade centre or a lasting trade centre? I can prove that it is a permanent trade centre. It has been the permanent trade centre for the whole of that district, to my knowledge, for thirteen years, when the population of this town was only about 150. The population now is 1,600 or 1,700 within the borough alone.
344. At the time of the goldfields was this the point of departure for Temora? Yes. This was the point from which the road was started, and also the telegraph line. The Young people tried to divert the traffic to the road *via* Young to Murrumburrah, but they could not succeed, and Cootamundra was established as the centre. But for the fact that the differential rates drive a great deal of the trade of Temora and the back country to old Junee the traffic by Cootamundra would be at least double.
345. Are the settlers round Cootamundra connected by family ties with those of Temora? I do not know that they are very largely connected by family ties—there may be some family connections.
346. Are many of the sons of the settlers round Cootamundra settled in the Temora district? Yes, a good many of the sons of settlers in the Cullinga district have gone to that neighbourhood, principally to the south of Temora.
347. Do many of the farmers out towards Temora run stock? Yes. Their industry consists of sheep and wheat growing combined. The sheep manure the land and increase its fertility.
348. Has Mr. Primrose a farm out that way? No; his farm is on the other side.
349. What has been your observation of the travelling of starving stock;—do the stock-owners come this way or *via* Wallendbeen to the mountain runs? There is only one man who goes *via* Wallendbeen, and that is Mr. Gibb, of Berthong. He has a station in the mountain country, at Tumut, and he is in the habit of sending his stock through Wallendbeen to the mountain country. But the whole of the stock from the Bland and away towards the Lachlan come through Cootamundra.
350. Does Mr. Gibb send his stock by train to Gundagai? No, he generally travels. The distance by train is very short, and you would have to go through a junction.
351. How do the pastoralists on the Bland send their stock? By road chiefly. But their sufferings have been very great. I know of my own knowledge that the Messrs. Jamieson, in 1888, lost nearly the whole of their stock because they were unable to remove them. If the line were extended into the country they would certainly send their sheep by rail, because in dry summer seasons it is impossible for them to travel by road.
352. Why do they not use the line between Cootamundra and Gundagai? If you make inquiries you will find that some time ago the Department were unable to supply the trucks to meet this very traffic. A drover brought

- brought last year a flock of sheep from the western country and they were almost lost on the road. I F. Pinkstone, Esq.  
knew him to pay £60 for the lease of a 40-acre paddock at Cootamundra for ten days, to save the lives of his sheep, whereas had he been able to send them by train he would have saved the whole of them. 1 Feb., 1890.
353. If the line were ultimately extended to Barmedman and on to Hillston, do you think it would be availed of by pastoralists as a starving-stock line? I am certain of it, especially at the half rates, or starving-stock rates allowed by the Commissioners. I am positive they would not travel by the road unless the rainfall was evenly distributed through the year, and it is a characteristic of this district that it is not evenly distributed.
354. And which would be the more advantageous route for these pastoralists who desire to send their starving stock to the mountain runs—*via* Wallendbeen or Cootamundra? They would never send to Wallendbeen unless they were compelled. I am quite prepared to swear that these people would never send their stock to Wallendbeen unless they were compelled to do so.
355. Would they not have to go round two sides of a triangle in order to reach Cootamundra *via* Wallendbeen? Yes. Then there is a great quantity of stock brought in—cattle, for instance—that are trucked to the Albury market. They come in from the Queensland side. There is a very large traffic in cattle, and if they could be conveyed by the Temora railway this traffic would be greatly increased.
356. Is not there a travelling-stock route from Queensland *via* Forbes and Morangarell? Yes, and they come in very largely at Morangarell.
357. If this line were extended to Barmedman and Hillston, it might divert the travelling stock route from Queensland to Cootamundra? Yes, a great many of the stock would come in there, and they could be trucked direct to the Albury market, instead of having to travel by road.
358. And this would considerably shorten the distance and the time? Yes.
359. You have given some evidence with regard to agricultural statistics. You were at one time a delegate at the Farmers' Conference, representing the farmers of this district? Yes, in 1883.
360. And therefore, you have had an opportunity of posting yourself up on the subject? Yes.
361. And we can accept your statements as authoritative? Yes.
362. *Mr. Humphery.*] If the line were constructed from Cootamundra to Temora, do you think it would be used to any extent for the removal of stock unless the line were also extended from Gundagai to Tumut? I think it would be availed of as a stock line even as far as Gundagai, because this pastoral country at the back extends for about 150 miles, and if the line were carried there I think the stock would be shifted, because of the difficulty of getting water.
363. Even if the line from Gundagai to Tumut were not constructed? Yes. They have only 25 miles from the Murrumbidgee to Tumut, and there is a good deal of summer country about the Murrumbidgee that they could occupy, so that they would not require to travel much beyond the Murrumbidgee. The Murrumbidgee is, to all intents and purposes, the terminus of the starving-stock traffic.
364. *Chairman.*] You are connected with the *Cootamundra Herald*, are you not? Yes.
365. And you keep a rain gauge there? Yes, I have kept it since the beginning of 1885.
366. During 1889 there was, according to that gauge, a rainfall of 21 inches 71 points? Yes, that is the town record. The rainfall was larger outside the township.
367. And during 1885, according to the same gauge, the rainfall was 26·65 inches? Yes. The highest registered has been 40 inches.
368. During 1886 the rainfall was 28·29 inches? Yes.
369. And during 1887 it was 40·79 inches? Yes.
370. And during 1888 it was 12·07 inches? Yes. That is the year for which I gave the agricultural statistics. I have been requested to state that the Lower Murrumbidgee people truck very largely here to the mountain country.
371. From what particular direction? From the runs along the south-western line. Those are the districts we have supplied with fodder sometimes, and they send their stock by rail to Gundagai in the direction of Tumut.

William Augustus Byrne, Esq., Mayor of Cootamundra, sworn, and further examined:—

372. *Chairman.*] What was the capital value of the ratable property within the borough of Cootamundra W. A. Byrne, Esq.  
in 1884? £169,862. 1 Feb., 1890.
373. And what was the capital value in 1889? In that year it had risen to £203,769 showing an increase in the capital value of the ratable property of £33,907.

Mr. Archibald Booth, schoolmaster, sworn, and examined:—

374. *Chairman.*] What position do you occupy in Cootamundra? I am head master of the public school. Mr. A. Booth, Esq.  
375. Have you any information in reference to the progress the school is making? Only the official records. I have only been here three weeks. 1 Feb., 1890.
376. How many children have you in the school? 190.
377. What is the average attendance? 150.
378. Can you give us any comparative figures with regard to the average attendance? In 1888 the average was 112, and during the past month it has been 150. In 1888 the number of boys was 66, and the number of girls 46.
379. Is there only one public school in Cootamundra? That is all.
380. Can you say what other schools there are? There is a convent school, and I believe there is one and probably more than one private school.
381. *Mr. O'Sullivan.*] How many schools are there between Cootamundra and Temora? I could not say.

Mr.

Mr. Thomas Parker, senior sergeant of police, sworn, and examined :—

Mr  
T. Parker.  
1 Feb., 1890.

382. *Chairman.*] What are you? I am senior sergeant of police at Cootamundra.
383. How long have you been in the district? I have been nearly fifteen years in the Cootamundra district, and I was four and a half years at Murrumburrah.
384. You are employed by the Government to collect statistics for the district? Yes.
385. Can you give us any two years as evidence of an increase or decrease in the population of the district? Since I have been in Cootamundra the population has been increasing every year. Since I took charge it has increased by 200 or 300.
386. Have you any statistics—say for 1885? I have not any with me.
387. At any rate you are under the impression that the population is increasing? Most certainly.
388. Increasing pretty rapidly? The increase this year has not been so great as in the previous year.
389. What was the population last year? About 2,000 in my portion of the district independently of the population in the borough.
390. What is included in your portion of the district? To take the population I have to go as far as 20 miles from here, but as regards the collection of statistics the Dividing Range is only 6 miles from Cootamundra.
391. 20 miles in which direction? In the direction of Stockinbingal and Gundabingal. About 1,500 or 2,000 would be the population in the Cootamundra district, and taking Gundabingal and Stockinbingal and the other places between here and there.
392. That would be within a range of how many miles of the proposed railway from Cootamundra to Temora—what distance on each side of the line? I go for about 8 or 10 miles on each side of the line.
393. About what proportion of the people would be served by the proposed railway to Temora? All the Stockinbingal and Gundabingal people would be served by the railway. They all live within easy distance of it.
394. And the population you think is increasing pretty rapidly? Yes; and the settlers are going further back towards Barmedman.
395. The population you gave just now was for last year;—has the population for this year been taken? I have the papers at the office.
396. Can you say what the increase has been since last year? The increase has been about 100. I refer to the population outside the borough.
397. Can you say how many additional names have been placed on the electoral roll since last year, or going back two or three years? I will have to count them up before giving an answer.
398. You are of opinion, however, that the population is decidedly on the increase? Yes, decidedly.
399. I suppose you are generally riding around the district? Yes; I know the district very well.
400. Can you say whether it is progressing with regard to agriculture—are the people cultivating more land than they did a few years ago? They cultivated more this year than they did in any previous year. They went in very heavily this year for cultivation. Some of the settlers this year have harvested as many as 10,000 bushels of wheat.
401. *Mr. Humphery.*] Have you been beyond Stockinbingal towards Temora? Yes, several times.
402. Do you know the country well? Yes; pretty well. I have travelled backwards and forwards between Temora and Cootamundra.
403. Do you know the route of the proposed railway? I have not been along the route particularly, but I know the country.
404. Can you say if the land on both sides of the proposed route from Cootamundra to Stockinbingal is first-class arable land? Yes; it is all first-class arable land. I can say that with certainty.
405. What is the character of the land from Stockinbingal on to Temora? It is all good land, except where it goes across the ironbarks. It is good country on both sides of the ironbark range.
406. How many miles of the proposed railway route would not be first-class arable country? I think only about 6 miles.
407. Then with the exception of 6 miles, the whole of the land on both sides of the proposed route would be suitable for agricultural purposes and for settlement? Yes. It would be settled upon if it were accessible to the settlers.
408. For what distance on either side of the line? Right along the line. It extends for over 20 miles.
409. Then it is all good? Except the portion that goes round by Wallendbeen—I would not answer for that.
410. Do you know the country between Wallendbeen and Yeo Yeo? Yes; I have travelled over it, and know it well.
411. You believe you are qualified to express an opinion as to the merits of the proposed routes as far as the land is concerned? As far as my private opinion is concerned, I certainly think that the route from Cootamundra, *via* Stockinbingal to Temora, is the more preferable one, and for this reason: There are very few settlers on the road from Wallendbeen to Yeo Yeo. On the right of the route from Wallendbeen is the Nubba Station, Mr. Gibb's run, Mr. Davidson's, and a portion of another run. On the left side of the route from Wallendbeen to Yeo Yeo Creek, there are about five settlers.
412. Are we to understand that there is more land, and of a character better adapted for settlement between Cootamundra and Yeo Yeo, than between Wallendbeen and Yeo Yeo? Most certainly, when the reserves are thrown open; they are good for any purpose. There is a large reserve on the Yeo Yeo Creek at Stockinbingal, and if it were thrown open, farmers would go and settle upon it.
413. But I am speaking of the two routes—one between Yeo Yeo and Wallendbeen, and the other between Yeo Yeo and Cootamundra? The route from Yeo Yeo to Cootamundra is a long way before the Wallendbeen route.
414. *Chairman.*] Are there not a number of farmers settled on the northern side of the line between Wallendbeen and Yeo Yeo? I am not aware of any settlers along there, except Mr. Gibb's property. There was a settler named Mulcahy living there, but he has removed to Stockinbingal.
415. Then all these selections we see on the map are on the runs? Yes; except close to the township of Wallendbeen, where a man named Isard has a selection.
416. *Mr. O'Sullivan.*] Do you know why the selector you refer to removed from the neighbourhood of Wallendbeen to Stockinbingal? He used to live at Congo about 7 miles from Wallendbeen.
417. Can you state the reason why he removed from there to Stockinbingal? Probably he wished to obtain more land. Where he is now living there is more land to cultivate. 418.

418. Is the soil better at Stockinbingal? Where Mackay lived, the soil was very good. It was called the Black Springs—it was black soil. I daresay he left for the purpose of getting more land.
419. In riding to Temora have you noticed any increase of settlement along the line of road? Not for some years, but some of the selectors have increased the number of their farms, and bought others out.
420. Then some of the selectors in the neighbourhood have been selling out? Some of them have been selling out and getting larger runs.
421. To whom have they been selling out? Mr. Currey sold out a large block to Mr. Emery.
422. They have not been selling out to the pastoralists, but to each other? Yes; selling out to each other.
423. Does the proportion of cultivation go on the same? Yes; in fact there is more cultivation this year.
424. Have you noticed which road is taken by the wheat and wool teams coming in? The Cootamundra road between here and Temora.
425. They all make for Cootamundra? Yes, even from the Marsden direction.
426. Do any of the teams on the Congo side make for Cootamundra? Yes; a man named Mackay brought his team to Cootamundra from the Congo Falls.

Mr.  
T. Parker.  
1 Feb., 1890.

Mr. John James Miller, stock and station agent, sworn, and examined:—

427. *Chairman.*] Where do you reside? At Cootamundra.
428. Are you in business? Yes, as a stock and station agent.
429. Have you prepared any information for the Committee? Yes, I have a return with regard to stations and station produce.
430. And you will hand in that return as evidence? Yes. I know it to be correct, because the figures are from the official record. The area of land is taken from the number of acres of Crown land which each station holds. The total is about 1,500,000 acres of Crown land held by stations.
431. Can you say what proportion of these are in the leasehold area? The greater part of them.
432. I suppose there is scarcely any resumed area left unselected? I could have given the quantity. The greater part would expire in July and the balance is held for another five years.
433. Some of these lands referred to are in the Central Division? Yes, the majority are in the Central Division. The following is the list:—

Mr.  
J. J. Miller.  
1 Feb., 1890.

Stations.	No. of Sheep.	Bales of Wool.	Distance from Temora Railway.	Present distance to Railway.	Area Crown Lands.	Rent of Run.
Barmedman.....	40,000	400	22	55	40,251	£ 291

Totals .....	775,000	7,870	.....	.....	1,499,215	9,353

434. What portions of the district have you included in this list? I have included within 100 miles of Temora.
435. These are stations that will make use of the Temora line, and you have taken a radius of 70 miles from Temora? Not exactly a radius, because I do not include those stations that would send their wool to Coolamon, on the south-western line.
436. Have you included in the list any of the stations lying between Temora and Cootamundra? Yes.
437. And also to the westward of Temora for 70 miles? Yes—all the wool that would come through Temora by the railway to Cootamundra.
438. Have you given the quantity of the wool? Yes.
439. Do you do business as agent with the whole of the stations referred to? Yes; with the exception of one or two. We have business with pretty nearly all of them. We know pretty well what sheep they shear, and this is an estimate. We average 100 sheep to the bale, which is rather a low estimate.
440. You have not given the figures from the actual clip? No.
441. Then this return must only be taken as an estimate? Yes, it is an approximate return, but in every instance I have kept under the mark as much as possible.
442. Do you think it would suit the interests of these people to have the line constructed to Cootamundra or to Wallendbeen? If the line went to Wallendbeen the wool would go direct through to Sydney; but on the other hand, as they do all their business with Cootamundra it would put them to considerable inconvenience to go to Wallendbeen, and if the line went to Cootamundra it would enable them to send their

Mr.  
J. J. Miller.  
1 Feb., 1890.

their stock through to the mountains. I could give you a pretty good idea of how much stock went through last year to the mountains, and how many of the pastoralists own mountain runs, and how many of them are likely to make use of the railway.

443. What quantity of stock went through last year? I estimate that during the drought last year about 250,000 sheep went through here to the mountains. The figures for ten stations are as follows:—Reardon, 20,000; Samuel Wilson, Son, & Co., 15,000; Davidson, 8,000; Hiawatha, 11,000; Morangarell, 8,000; Combaning, 40,000; Temora, 15,000; Narraburra, 5,000; Carumbi, 10,000; Berthong, 20,000; that gives a total of nearly 150,000. Those were the larger lots, and there were a number of small lots of about 2,000, and some went through of which I have no knowledge.

444. The whole of these travelled by road—none of them went by railway? The rams were pretty nearly all trucked.

445. Then there was, as an actual fact, a number of rams trucked to Gundagai? Mostly all the rams are trucked, because it knocks them about travelling on the road. They were trucked from Cootamundra to Gundagai. One man was sending in 5,000 sheep from a station about 60 miles from Temora. He got them as far as Cootamundra, but could get them no further, and we as agents sold them there. They could hardly stand up. They sold as low as 4½d.—on terms at twelve months' bills. If there had been a railway from Temora they could have been trucked through, and their lives would have been saved, because they were knocked up by the rough travelling. They were pretty well done when they got to Temora, and when they got here they were worse. If they are weak when they get to the mountain country, the sheep will die there.

446. Are many sheep sent from here to Sydney or Goulburn? Yes; a good many fat sheep are sent to Homebush.

447. Are any sent to Victoria? Not lately. We have sent a good many to Victoria one time and another. The markets fluctuate; sometimes the sheep are sent to Melbourne, and sometimes to Sydney.

448. You send them wherever the market is best? Yes. With regard to the land on the Berthong Station, I find that there are 11,000 acres of Crown lands spotted over that run.

449. Available for selection? A great portion of the land forms part of reserves which would have to be revoked. There is one reserve through which the proposed railway route from Wallendbeen to Yeo Yeo runs. It is a timber reserve consisting of ironbark. The balance of the 11,000 acres is made up of land within several other reserves on the run. With regard to Nubba, I do not find any record of reserves. I think it is all purchased land.

450. Mr. Humphery.] Do you think that in dry seasons any appreciable quantity of fodder would be sent from Sydney or elsewhere to Temora as a distributing centre? In dry seasons the fodder comes from different parts. We have to buy fodder ourselves in very dry seasons, and in some seasons we have sent it away.

451. Would Temora be a good distributing centre for fodder in dry seasons? Yes; I think it would. In very dry seasons they must get their hay from somewhere. But Temora, as it is going on now, with agriculture increasing, would grow enough in good seasons.

452. I am referring to times of drought? The farmers would store their straw and hay, so that it would be available for them in dry seasons.

453. Mr. O'Sullivan.] Is there not a good trade in fodder done between Cootamundra and the Corowa district in times of drought? We have done a great deal of trade with Hay.

454-5. It would be a shorter distance to convey the fodder by way of Cootamundra to Temora than by way of Wallendbeen? Yes. Most of the stations that have suffered from the drought lie between Hay and Condobolin, and the line from Cootamundra to Temora goes straight to tap that district.

456. Which do you think would be of more importance to the pastoralists owing the thirty stations you have mentioned—a saving of 9 miles of haulage for their wool by way of Wallendbeen, or a cheaper and speedier means of transit for their starving stock to the mountains *via* Cootamundra? There are two arguments in favour of the Cootamundra route. The pastoralists will be able to do their business with Cootamundra direct instead of having to go *via* Wallendbeen, and the line will afford them the means of speedy transit for their sheep to the mountain country.

457. Which would be of more importance to the pastoralists—the saving of 9 miles of haulage of the wool to Sydney or the cheap and speedy transit to the mountain runs? The safety of the stock is of more importance than the saving of a few shillings on a bale of wool; because in a week they might lose thousands and thousands of sheep. On one station alone about 20,000 died in about three weeks, the sheep being unfit to travel. That station is about 25 miles from Temora. If the sheep could have been trucked their lives might have been saved.

458. If this line goes on to Hillston, how far would it be from the Mount Hope Copper-mine? I cannot say.

Charles Herman Burton Primrose, Esq., Police Magistrate, sworn, and examined:—

C. H. B.  
Primrose,  
Esq.

1 Feb., 1890.

459. Chairman.] Do you reside at Cootamundra? I do.

460. What position do you occupy in the Public Service? I am police magistrate here.

461. And land agent? No; I was a land agent up the 1st October last.

462. Can you give the Committee any information with reference to land matters? I can.

463. Have you prepared any statement? Yes. The number of selections held in the district is 3,615.

464. What country does the district embrace? It embraces the whole of the Temora district. It extends about 10 or 11 miles to the north and north-west. It extends, I should think, for a distance of somewhere about 45 miles.

465. Can you tell the Committee what land has been selected within a radius of 20 miles on either side of the proposed railway from Cootamundra to Temora;—we want to know what selections will be affected by the proposed railway? Nearly the whole of that land is selected with the exception of the reserves. All the available land is selected.

466. All the available land on the route of the proposed railway? Yes; except the reserves and the leasehold area.

467. Is there any land open for selection other than the reserves and the leasehold area? I could not say without looking at the office maps, but I do not believe there is.

468. But speaking in general terms, the whole of the land that is available is selected? Yes. If it were not selected it would be readily taken up.

C. H. B.  
Primrose,  
Esq.  
1 Feb., 1890.

469. And the figures you have prepared refer to the land district as a whole? Yes.
470. That would embrace land that is away from the railway line? Yes.
471. Can you give the Committee any information with reference strictly to the land that would be affected by the proposed railway—could you say how much land has been selected within a radius of 10 or 11 miles of the proposed railway route? I could not. Nearly all the land that has been taken up of late years has been in that direction, because there has been no other land available.
472. Perhaps we might take the figures you have prepared, and you could say that much of the land would not be affected by the proposed railway. The figures will show what amount of settlement has been taking place in the land district? The only land that has been available for selection for many years past has been in the direction of Temora.
473. There is no Land Office at Temora? No.
474. So that all the selections in the neighbourhood of Temora would be made at Cootamundra? Yes, and within the last ten years.
475. Could you supply the Committee with the number of the selections and the area taken up in the vicinity of the railway line? I could get that information, but it would take some time. No doubt it could be forwarded on to Sydney. The Land Office was opened at Cootamundra in 1877. In 1881 there were 307 selections, most of which would be in that direction. In 1882 there were 206 selections; in 1883 there were 162; in 1884 there were 180; in 1885 there were 119; in 1886 there were 84; in 1887 there were 74; in 1888 there were 32; and in 1889 there were 66. The greater number of these selections would be in the direction of Temora.
476. How much revenue is the Government receiving from the land selected in this district? In 1888 the revenue was £11,852; and in 1889 it was £12,073 5s. 5d.
477. That is by yearly instalments? Yes, and other collections, but principally instalments.
478. And deposits on selections? Yes. The land revenue for the year 1888, including instalments, was £14,624, and for 1889 £16,814.
479. Can you say what balance is due to the Government on conditional purchases in this district? I could not do so without a little calculation. The March collections for 1888 were £11,852, and for 1889 £12,073.
480. Those figures do not include the pastoral lease rents? No, except the conditional leases. The pastoral leases are station properties. They are not included.
481. Have you the figures with regard to the pastoral leases? No. Those payments are made direct to the Treasury, and do not go through the local office.
482. From your knowledge of the district, do you anticipate that when the leasehold areas are thrown open to the public the land will be selected rapidly? I think so. In fact, I feel sure of it. There is a demand for every available acre of land in the district.
483. So that the population will reasonably be expected to increase considerably during the next few years? Certainly.
484. And the produce from the land will also proportionately increase? Yes.
485. Do you hold the office of Registrar of Births? Yes.
486. Can you tell the Committee the number of births registered within the last few years? With regard to the district through which this railway would run, I have nothing to do with that, because I am merely an Assistant-Registrar of the Gundagai district, which only extends about 5 or 6 miles, and does not touch the county of Bland at all. I have the returns for 1888 and 1889, but they do not touch the county of Bland through which this railway goes.
487. Can you say how many teams ply between Cootamundra and Temora—wheat, wool, or general teams? I could not give any idea as to the number, but during the last few years I have frequently had to go to Temora, and I have noticed a great number of teams going backwards and forwards carrying wool, wheat, and stores of all kinds.

Mr. William Miller, stock and station agent, sworn, and examined:—

488. *Chairman.*] Where do you reside? At Cootamundra.
489. What is your occupation? A stock and station agent.
490. I suppose the evidence you will give will be similar to that given by your brother, Mr. J. J. Miller? Yes; I could give information concerning wool, stock, and other matters, and also in reference to the country extending beyond Temora.
491. Perhaps you would tell the Committee what information you could give? I have drawn a rough sketch of the river Lachlan from the Murrumbidgee up to its source at Forbes, showing the country intervening between the south-western line and the western line. The proposed line to Hillston would run nearly equi-distant between the two. The country lying between the Hay line and the Bourke line is nearly all Crown land, and there is a very small proportion of freehold land. South of the Hay line, and through Riverina, it is all purchased property. The country about Hillston is all Crown land, with the exception of a very small proportion of purchased land. The resumed area on all those runs is nearly all taken up by selectors. There is a very large new population, which has come there during the last three or four years, since the passing of the Act of 1884. That is all good agricultural country, or nearly all of it, and there are about 5,000,000 acres of Crown land between the Hay line and the river Lachlan, which this proposed railway would traverse if it went right through to Hillston or any other point on the Lachlan—say Cudgellico, or any other point which may be made the terminus. There is a very large population of selectors there. I have been all through that country lately. All the resumed area, all that part open for selection—all the best of it—is already taken, and the occupants are all new families, principally Victorians, and I estimate that in five years time there will be a very large area under agriculture.
492. And do you anticipate that when the leasehold areas are thrown open they will be readily taken up? The population will increase at the rate it has done during the last five years.
493. And you think there will be people enough to select the land comprised within the present areas? Yes.
494. Suppose there is a railway taken from Orange to Forbes along to Menindie; that will circumscribe the distance very much between the Hay line and the Forbes-Menindie line;—do you think there will then be sufficient space between the Hay line and the Forbes-Menindie line to allow of another railway running to Hillston? Most decidedly. There is an enormous tract of country there.
495. What do you anticipate that these western selectors will do with their land? They will only run sheep until they get railway communication.

Mr.  
W. Miller.  
1 Feb., 1890.

Mr.  
W. Miller.  
1 Feb., 1890.

496. Do you think it would pay to send wheat from Hillston to Sydney? Yes. The very large area they could put under cultivation would facilitate it. If they were only to grow small areas it might not pay, but the tremendous extent of country capable of being put under wheat, oats, and other crops, would enable them to make it pay.

497. Do you think that the climate of Hillston and the neighbourhood would grow oats? The climate between Cootamundra and Hillston is much the same as it is at Cootamundra.

498. Do oats grow at Cootamundra? Yes. Heavy wheat crops have been grown in the district.

499. Are there any oats? I have seen the heaviest crop of oats, or at any rate equal to anything I ever saw in my life, about 70 miles the other side of Temora—half way between Temora and Hillston.

500. Is the country there higher than it is here? I should think it is about the same. There is only a difference of 8 feet between Cootamundra and Temora, and it is nearly all level country from Temora to the Lachlan.

501. And you think the rainfall is as great at Hillston as it is at Cootamundra? Not quite. Half-way between Temora and Hillston the rainfall for the past year was 21 inches, the same as it was at Cootamundra.

502. In the meantime these new selectors to whom you refer are running sheep on the selections? Yes. Of course they have not improved their land yet to enable it to carry stock to the extent that it will do.

503. These selections will all be in the Central Division? Yes.

504. And are they taking up large areas—2,560 acres? Yes.

505. Then I suppose you are of opinion that if the line were extended from Temora to Hillston it would give accommodation to a large number of selectors? Yes, equally as great a number, if not greater, than between Cootamundra and Temora.

506. And you think that all the available land in that direction is taken up already? Not all the land. There are still some blocks. There is a great deal of land to be alienated yet, but for a distance of 100 or 80 miles from Temora all the good country that is worth taking—that is the country on the resumed area—is gone, and in order to get land now they must go further back towards Hillston.

507. Do you agree with your brother that all the people beyond Yeo Yeo, and out towards Stockinbingal and Temora, would prefer a line to Cootamundra to a line to Wallendbeen? Yes, a line to Wallendbeen would inconvenience them considerably.

508. As a stock and station agent, are you in the habit of visiting the stations in the neighbourhood? Yes. I have visited nearly all the stations between Cootamundra and the Lachlan.

509. How long have you been in business? Four years.

510. Can you say whether the wool clip is increasing or decreasing? It is decreasing on the stations.

511. What is that owing to—selections? Yes; to the resumed area being taken up by selection.

512. But if the selectors are running sheep on the selections, ought not the quantity of wool to increase? It will in time, but at the present they are not fully stocked. Instead of putting capital into sheep they are applying it to improving their lands. A great many of the new selectors are not stocked, although their land is capable of being stocked.

513. Is the land between Cootamundra and Yeo Yeo good land? Yes; it is all good agricultural and grazing land.

514. And all fully occupied? Yes. There are a few reserves which are being cut up into special areas and thrown open, but nothing to speak of; nothing in comparison with what there is beyond Temora.

515. Do you understand farming? Yes.

516. Is the land between Cootamundra and Yeo Yeo suitable for cultivation? Yes. There are patches which are not, but the soil is all good where it is not stony.

517. Where it is not stony the soil is good for cultivation, and where it is stony I suppose it is good for grazing? Yes.

518. And beyond Yeo Yeo, about Stockinbingal? For 6 miles beyond Yeo Yeo it is all good agricultural land, and then there is a belt of iron bark and scrub which runs right through from the Murrumbidgee to the Lachlan River. This belt of country is about 6 or 8 miles wide. It is all barren country, good for nothing except for grazing.

519. Is it a mining country? Yes, it is all auriferous.

520. Has there been any gold found between Cootamundra and Temora? Yes; there are two diggings.

521. What are they called? There is Woodstown and what is called the Possom Power Reef. They are in this barren belt.

522. What has been done at Woodstown? Both those places are worked out pretty well. There are only a few miners there now.

523. Where they quartz or alluvial? Both. Possom Power was quartz; Woodstown was alluvial and quartz.

524. Where are they located;—are they near the railway line? The railway line runs within a few hundred yards of Possom Power, and within  $2\frac{1}{2}$  miles of Woodstown.

525. There are very few men employed at both those places? Very few at present.

526. There are no gold-fields at work between Cootamundra and Temora besides those two? Not that I know of.

527. Were they any good when they were at work? Yes; good payable gold was found there while it lasted. In fact, throughout the whole of that country gold has been found in patches.

528. *Mr. Humphery.*] Do you think it would be necessary to fence the railway line the whole way between Stockinbingal and Temora? Yes.

529. Even through that part of the country which you speak of as being rough? It is always safe to fence, so as to prevent stock getting on the line.

530. You say that 6 or 8 miles of the country is unfit for any purpose? Unfit for agriculture or grazing.

531. Would it therefore be necessary to incur the expense of fencing the line on both sides? I think it would be necessary.

532. *Chairman.*] I suppose there are stock running there? It is on a run. Even on this country they run stock, but it is merely an auxiliary to better country.

533. *Mr. Humphery.*] You think then that the fencing could not be dispensed with and the cost of construction lessened in that way? It would be much safer to fence the line.

534. Would there be any difficulty in procuring the necessary timber? No, this belt of country is valuable for timber. There have been thousands of railway sleepers got there already, and it is not half worked out yet.

535. I suppose there is an abundance of ballast? Yes.

536.

Mr.  
W. Miller.  
1 Feb., 1890.

536. Do you know the country between Yeo Yeo and Wallendbeen? Yes.
537. Can you say whether there is much settlement there? The other side of the proposed route is all purchased property. Berthong has 40,000 acres of purchased property, and the line runs through part of that.
538. How many farms or conditional purchases do you think there are on the northern side? I do not know of any.
539. They are all on the southern side? Yes—there are about ten, I should think.
540. Would the farmers within 3 miles of the junction of Yeo Yeo be equally served by either of the proposed lines? I should certainly think that the farmers within 4 miles of the Wallendbeen side of the junction would never go to Wallendbeen;—they would sooner drive to Cootamundra.
541. Assuming that the Wallendbeen line were constructed would it be more convenient than a line from Cootamundra to Yeo Yeo? No, it would not.
542. *Chairman.*] Why not? In the first instance their produce is purchased by the Cootamundra people, and their wheat would come to Cootamundra. Their business is all done with Cootamundra.
543. But Cootamundra does not retain the wheat, but sends it on to Sydney or Goulburn? When the flour-mill was at work at Cootamundra a very large quantity of the wheat was bought here. It happens now, through some financial difficulty, that the mill is closed, but if it were open again all the wheat would be bought and ground into flour at Cootamundra.
544. *Mr. Humphery.*] Would not the farmers within 3 miles of the Wallendbeen side of Yeo Yeo save a considerable haulage in sending their wheat to Goulburn or Sydney if it went by the Wallendbeen line? Yes, if they wanted to send to Sydney.
545. But irrespective of the haulage, it would be equally convenient for them to send their produce to Cootamundra? Yes.
546. *Mr. O'Sullivan.*] Where does the wool from the Hillston district go at the present time? It goes to Carrathool by team, and is taken down the river to Echuca, from whence it goes to Melbourne.
547. If this line were taken on from Temora to Hillston do you think it would tap the wool trade of the Lachlan River? Yes. The wool there has to be carted 100 miles to the river, and railway communication would be preferable, because waggon cartage is a very heavy item.
548. Is the Lachlan River navigable up to Hillston? No, they have to take the wool up the Murrumbidgee.
549. How far is the Lachlan navigable? I do not know.
550. None of the wool comes down the Lachlan at present, but it has to be carted from Hillston to Carrathool? Yes.
551. But do they not strike the Murrumbidgee near Hay? Carrathool is near Hay.
552. And they ship the wool by the Murrumbidgee on to Echuca? Yes.
553. They ship it at Carrathool to be sent down by water to Echuca? Yes.
554. How far have they to travel from Hillston to Carrathool? 100 odd miles.
555. At least 100 miles? Yes; I should think so.
556. And if the line were taken on to Hillston or anywhere near it there is a probability that it would tap the wool trade of the Lachlan River Valley, and bring it to Sydney instead of allowing it to go to Melbourne? Yes.
557. At present none of the wool is sent on the railway at all? It has to be carted 150 miles.
558. Do you know how many teams ply between here and Temora? I could not say. I think about five regularly. In the wool season there are a tremendous number.
559. *Chairman.*] Squatters have their own teams? A lot of them have.
560. *Mr. O'Sullivan.*] Are there not regular teamsters who make it a practice to come here during the wool season, carrying the produce to the nearest railway station? Yes.
561. Do any of these professional teamsters trade between Cootamundra and Temora and Hillston? Not between Cootamundra and Hillston, but between Cootamundra and Temora. The Hillston goods go from Hay.
562. Then at the present time the trade of Hillston is principally done with Melbourne? Yes.
563. Do they get their stores up from Victoria? Not all of them, but a very large proportion.
564. I suppose the teams that take the wool down from Hillston to Carrathool get station supplies as return freight? Yes.
565. And if a railway were constructed is it likely that that trade would also be done by the Sydney side? Yes.
566. Is there much settlement beyond Barmedman? Not immediately beyond Barmedman. There is a tract of bad country there—an iron bank and malee belt. When you get beyond that, and about 30 miles from Temora, the good country commences again, and goes on to the river. That is a new settlement.
567. Is the Lachlan Valley getting settled by farmers and selectors? Yes.
568. Is it good agricultural soil? Yes.
569. Does the river overflow its banks there to any extent? Not to any extent. The river is not a valley; it merely runs through the level country and does not overflow its banks. There is no alluvial soil on the river.
570. Are there no floods on the Lachlan? The water runs into billabongs.
571. Does it not at times flood the whole country? No.
572. Have you never read telegraphic descriptions of floods on the Lachlan River? Yes, but the water goes off by degrees into billabongs.
573. It is good arable soil, is it not, on either side of the Lachlan River? Yes, particularly on this side.
574. Soil that is likely to grow fodder to a large extent? Yes, to a very large extent. There is an enormous tract that could be put under wheat and oats.
575. I suppose that if it were properly settled, and if a railway were carried to Hillston on the bank of the Lachlan there would very likely be a large trade done in fodder as well as in wool? I consider it one of the most important centres in the Colony. There would also be a very large traffic between the Lachlan River and the southern line. It is a new country and it has never been touched. The beauty of it, is that it is all Crown land, and the Government would derive a large revenue from the sale of country capable of carrying some hundreds of thousand of people, and of developing into a very large agricultural district.
576. *Mr. Humphery.*] What is the mileage between Barmedman and Hillston? I should think about 150 miles.
577. And between Barmedman and Temora? 22 miles.
578. That would be 172 miles from Temora? I am not quite certain.

Mr. Edward Prior Barnes, late storekeeper, sworn, and examined :—

- Mr. E. P. Barnes.  
1 Feb., 1890.
579. *Chairman.*] You are a resident of Cootamundra? Yes, I was formerly a storekeeper here.
580. What information can you give the Committee with reference to the goods and passenger traffic between Cootamundra and Temora? I am collecting some information as to the quantity of goods sent out by the carriers during the past twelve months. That total is 450 tons.
581. Is that merely an estimate or have you reliable information? I have reliable information as to that.
582. What do those goods chiefly consist of? Goods and wire, and iron and principally lighter goods. The wire and iron cannot be sent from Cootamundra on account of the differential railway rates. A large quantity does of course go from here, but not so much as would be the case if the differential railway rates were not in existence.
583. Have these goods been carried by public teamsters? Principally by public teams.
584. Can you say to what distance the goods have been sent beyond Temora? To Temora and Barmedman, but principally to the town of Temora.
585. Can you say how many tons come this way from there? I did hear that there were 2,000 tons of wool but I could not say for certain.
586. I suppose the people of Temora and Barmedman are in the habit of getting their stores at Cootamundra? Yes, the selectors are in the habit of dealing principally with Cootamundra.
587. But there are large stores in Temora? Yes.
588. I suppose they get their goods direct from Sydney? They get them from Sydney, round by Old Junee. The goods are sent from Sydney to Wagga Wagga, and are returned from there to Old Junee, and are sent on by teams to Temora.
589. That is on account of the differential railway rates? Yes.
590. Have you any knowledge with regard to the passenger traffic? No.
591. Do you know how many public teams run between Cootamundra and Temora? About four or five regularly.
592. Are they horse teams? Eight-horse teams.
593. Are there any bullock teams? Very few.
594. I suppose in the wool season the squatters mostly send the wool in by their own teams? No. Generally speaking, teamsters who reside in the locality contract with the squatters to bring in their wool. The squatters as a rule do not now keep teams of their own; they find it better to engage professional teamsters.
595. Do coaches ply between Cootamundra and Temora regularly? A coach plies regularly every day.
596. One coach a day? Yes; backwards and forwards.
597. Can you tell us who would be able to give us information with reference to coaching traffic? I think Mr. Findlay, the contractor, would be the best man.
598. Does he represent Cobb & Co.? No. He and his partner were with Cobb & Co.
599. I suppose they carry the mails? Yes.
600. And there is one coach a day? Yes.
601. Seven times a week? Yes.
602. I understand that you have been out of business now for about a year? Yes.
603. So that you cannot say anything about an increase in the business being done? No.
604. *Mr. O'Sullivan.*] How far out from Cootamundra in the direction of Temora do the shopkeepers of this town do business? I think they do business nearly as far as Barmedman, but principally on this side of Temora. The principal business is done about 25 miles out from Cootamundra.
605. All the people out that way must regard Cootamundra as their business centre? Yes, they do.
606. Do you know if any produce is sent to Junee or to Old Junee? Not from this side of Temora.
607. From the farmers on the Temora side? Yes. I think some wheat goes from the Mimosa side. Some goes to Coolamon and some goes to Junee.
608. Why does it go to those places? Because that is the nearest railway communication.
609. Would this proposed railway be likely to tap that trade? It would most undoubtedly do so.
610. They would then be much nearer to the Temora line than to Junee? Yes.

Mr. William Hall Matthews, general storekeeper, sworn, and examined :—

- Mr. W. H. Matthews.  
1 Feb., 1890.
611. *Chairman.*] Where do you reside? In Cootamundra.
612. Are you in business? Yes, as a general storekeeper.
613. Have you been long a resident of Cootamundra? For sixteen years.
614. For how many years have you been in business? During the whole of that period.
615. Do you find the trade with people lying west of Cootamundra increasing or decreasing? Very materially increasing.
616. I suppose you account for that by the increase of population in that direction? Yes. Until some nine years ago there was very little population there. Since then it has increased very considerably, is still increasing, and will continue to increase.
617. Can you say how many tons of goods you send out to the westward in the direction of the proposed railway during the year? I cannot say exactly, but I should roughly estimate the quantity at 100 tons.
618. How many storekeepers are there in Cootamundra besides yourselves? There are two doing nearly as much business as ourselves, and a good many smaller ones. There must be three large firms, and about five or six smaller ones.
619. Three firms doing as much business as yourself? Not as much business—we do the largest business.
620. I suppose we can reckon that there would be 300 or 350 tons of goods sent from Cootamundra in a year? I should scarcely think so, because the other two stores do not go in for the farmers' trade as largely as we do.
621. Do you think the farmers are tolerably prosperous? Yes, particularly prosperous.
622. Have you any difficulty in getting your payments? None, with those who are careful and industrious. There are the usual exceptions, but those who are careful and industrious have all done well.
623. You find them generally having payable crops? Excepting last year, when the season was exceptional. This year they are about 20 per cent. above the average.
- 624.

624. You think they will be able to save money this year? Well, they had a bad year last year to pull up. This year, on the whole, will more than recover the liabilities of the district for the last two years. Mr. W. H. Matthews.
625. I suppose you reckon that in general terms the farmers of the district are reasonably prosperous? Yes. 1 Feb., 1890.
626. Able to pay their way and do a little more? Yes.
627. Have you any knowledge with reference to the reserves in the district? Yes, I can give you some particulars concerning them. In the first place, there is a large reserve at the railway station for railway purposes. Lying west from the town about a few miles there is a large reserve which had been recently subdivided, but which has been withdrawn from sale waiting for the railway.
628. Is that reserve No. 1,798? It is a timber reserve, and is still intact.
629. What is the number of that reserve? It is part of the suburban boundary within the population area, and is about 3 miles out.
630. How many acres does it comprise? About 1,000 acres.
631. What other reserves are there? The next reserve is at Stockingbinal—it is a travelling stock reserve, No. 1,157.
632. Does that remain intact? Yes. Water reserve No. 187 has been alienated. Then there is water reserve No. 1,017, and reserve No. 15, and reserve No. 55.—These three have not been surveyed, and have still been retained as reserves.
633. Are they required as water reserves in the interests of the public? No, they are not required.
634. Are they not on the travelling-stock route? You have a travelling-stock route to the south-east.
635. But is there any water on travelling-stock reserve 1,157? I do not think there is.
636. Then they would not require the water that is on these reserves? There is a reserve lower down. There is a reserve on the Dinga Dingi? That is adjoining the proposed village of Stockingbinal.
637. And do you advise that those reserves should be cancelled and thrown open for settlement? That reserve I would, or a portion of it.
638. Those are known as the Yeo Yeo water reserves, I suppose? Yes.
639. Could you say how many acres they contain? The reserve is approximately  $1\frac{1}{2}$  miles square. There is, in addition, a reserve at the village of Stockingbinal about 600 acres. There are only two half-acres sold.
640. Are there any other reserves? There is a water reserve No. 1,017 near Stockingbinal.
641. Can you say whether that is good land? Yes, it is splendid land.
642. And the other reserves to which you have referred—are they all good lands? Really good land.
643. Land that could be taken up for settlement? Yes, if it were thrown open.
644. With reference to water reserve No. 1,017—is that required for water purposes? I do not think so.
645. Suppose a town were formed at Stockingbinal, would there be a water supply for it? There is a deep creek which runs for about four or five months in the year. It is the head of the Bland Creek.
646. Are there any other reserves? There is the leasehold area which will be thrown open in July.
647. Will the travelling-stock reserves all be required? They may be, but there is a lot of country that has not been selected.
648. Although the lands were measured, they have been locked up from selection by being included in the leasehold area? Yes.
649. And you think the whole of these will be taken up as soon as they are thrown open? Yes, every one of them will be taken up on the first land office day.
650. Are there any others? Out at Gundabingal there is a large amount of land which has not been selected. This is principally a travelling-stock route.
651. But these travelling-stock routes must be preserved to enable people to get stock to and fro? Still adjoining these there is a large area of Government land. There are some large forest reserves in connection with these which could be thrown open. The timber is of no use at all. In some cases it is, but in other cases it has only been an excuse to have the land reserved. Then at Combaning there is an immense timber reserve.
652. Is that good land also? It is nearly all good land. There is a ridge of ironbark on which some valuable timber for sleepers could be obtained. The estimate given for sleepers I consider too high because they cost 3s. 6d. delivered here according to Government contract. But as these would be largely on the ground, and at no very great distance the estimate for sleepers could be very much reduced.
653. Do you not think it would be desirable to keep the forests where the ironbark grows, reserved? Most decidedly.
654. You would not have them destroyed? No, I would reserve the ironbark, but I would throw open the good agricultural land because when you get away from the ironbark you come into the box country, where the timber is not of much use.
655. Are there any others? Lying north of Gundabingal is Dinga-Dinga, where is situated the Narraburra reserve comprising from 20,000 to 30,000 acres, the bulk of which is the finest land in the district. At present it is embraced within the leasehold area, but immediately it is thrown open there will be a tremendous number of applicants for it. In fact the other day a private coach was taken to convey eight persons from Victoria to go out and inspect, so as to be ready to select.
656. Are there any more? That is in the parish of Narraburra. There is a further portion of timber reserve 437. Again, there are reserves shown in the parish of Trigalong. All this land which is numbered has not been thrown open for selection. It has been measured recently, and is to be thrown open immediately.
657. I suppose you have not gone into any calculation as to how many thousand acres will be available in the district? Approximately, I am given to understand, about 35,000 acres, fit for settlement; that is, within a radius of say 15 miles of Temora.
658. And the whole of this is on the route to Temora? Yes, and adjacent to Temora.
659. It would all be benefited by the railway? Yes. In the parish of Temora again there are many large reserves which are at the present locked up. A large proportion of these are to be thrown open. In Thanowring there are very large areas of reserves.
660. But these are within the Temora gold-fields reserves? Still they can be thrown open and taken up under the 15th section. In the parish of Culingeria there is a considerable quantity of land in reserves. The larger portion of the parish is reserved. If this land were thrown open it would be almost immediately selected.

- Mr. W. H. Matthews.  
1 Feb., 1890.
661. And you think there would be no difficulty in finding the people as soon as the land is made available? Not the slightest difficulty. Finding land for the people is the difficulty at the present time.
662. It is hardly any use asking you whether you are in favour of the line being made from Cootamundra—you are, I suppose, very much in favour of it? Yes, I am. Personally I am of course interested in the line being brought to Cootamundra, but I am influenced in my opinion by a broader view in the interests of the whole district. As the centre of trade Cootamundra has superior claims. The land office is here, the mails go to and from here, the principal business of the back country is centred in Cootamundra, and although there would be a saving in haulage to Sydney if the line were taken to Wallendbeen, this advantage would be more than counter-balanced by the inconvenience which would be experienced by the people of the surrounding districts having access to Temora being obliged to come to Cootamundra *via* Wallendbeen.
663. But as far as the mails are concerned you know of course that if the line were constructed to Wallendbeen they would go by train? At the same time those on the present mail route would be inconvenienced. I would point out that it is the intention to establish large flour mills at Cootamundra, so that instead of sending the wheat away we would grind it ourselves. Therefore it is not to be expected that the wheat will always be sent to Sydney. A farmer growing 200 acres of wheat would produce approximately 100 tons. The saving he would effect by sending it *via* Wallendbeen instead of *via* Cootamundra, the haulage being 9 miles less, would be about £5. He does not grow wheat all the year. But against this saving there is this view of the case—he does his business in Cootamundra, and if he got 10 tons of goods in a year, he would receive them, *via* Wallendbeen, and they would have to travel a distance of 14 miles more than would be the case, if they went, *via* Cootamundra. This in itself would mean a cost of £3. Then, take it for granted that he comes into town once a fortnight, the railway would lose his fare, as he would ride into Cootamundra, in preference to incurring the extra cost of going by Wallendbeen.
664. *Mr. Humphery.*] Are you aware of the cost of construction of this proposed line? I am informed by the surveyors that the cost would be very slight, because there are no earth-works on the line.
665. The cost of the line is estimated at £138,000. Interest upon that sum would be nearly £5,000 a year, and the working expenses of the railway would be £7,500 a year. These two sums would make a total of £12,500. Is there any prospect of the earnings of the line paying the working expenses within a reasonable time of its opening, and eventually the interest on the cost of construction? I am certain it would be one of the best paying lines in the Colony from five to seven years after it was opened. I base my remarks on this fact, that the country is taken up by *bona fide* selectors—men who have gone upon the land with the sole object of making a home for themselves as the selectors have done around Cootamundra, and the very fact of having a railway will assist them to do this. If they do not get a railway, it may be only a question of time for the land to revert into the pastoral holdings. To a very large extent, the run-owners will buy out the selectors and the population on the soil will be limited. The greater the population, the greater will be the chance of a railway paying, and it is on that fact that I base my opinion that the Temora line if constructed will pay handsomely as years go on, because you do not end at Temora. When you get to Temora, you find many miles of good country beyond. At the present time I am sending goods a distance of 60 miles beyond Temora to *bona fide* selectors. Many of them have gone out, and are going out, on the prospect of the Temora line being constructed, and of their being thus placed in closer connection with civilization than they are at present.
666. So that you believe that this will be within a very short period, a reproductive work? I feel certain it will be as reproductive as any other railway of its character in the Colony.
667. *Mr. O'Sullivan.*] You are the Secretary of the Railway League—have you had anything to do with preparing the statistics and data that have been furnished to the Committee? No.
668. Can you guarantee that they are correct? I fully believe they are; I accept them as correct myself, knowing the parties who collected them.
669. You are prepared to swear that to the best of your belief they are correct? Most decidedly. There is one remark I wish to make. You cannot take the goods traffic from the Cootamundra railway station as any criterion of the quantity of goods that go to Temora, because in consequence of the differential railway rates, I do not think that more than a quarter of the goods that are taken to Temora go *via* Cootamundra. The differential railway rates have acted very prejudicially to the interests of Cootamundra. Goods can be taken to Wagga Wagga, and taken by teams to Temora cheaper than they can be conveyed *via* Cootamundra.

Herbert Stafford, Esq., Manager of the Commercial Bank, Cootamundra, sworn, and examined:—

- H. Stafford Esq.  
1 Feb., 1890.
670. *Chairman.*] Are you a resident of Cootamundra? Yes.
671. What is your occupation? I am Manager of the Commercial Bank.
672. *Mr. Humphery.*] How long have been in Cootamundra? About five years and a half.
673. Can you say if the number of your depositors has appreciably increased during that period? The number has wonderfully increased.
674. Quadrupled? Yes, fully; I may mention that during the last six months, two banks have opened here, making five in all in the town. This fact affords some proof of the stability of the district.
675. Have your operations extended to Temora? They have extended even further than Temora.
676. Are branches of any of the Sydney banks established at Temora? Yes, two; the Bank of New South Wales and the Joint Stock Bank.
677. Have you any customers between here and Temora? Yes; several.
678. What are they—conditional purchasers? Farmers growing wheat, and combining wheat with sheep.
679. Can you speak as to the general prosperity of the district? Yes; knowing most men in the district, I can say that those who have tried to get on have succeeded. If a man is industrious and attends to his business, he is certain to get on.
680. You regard the district as financially sound? Very sound indeed.
681. You have made no bad debts during the time you have been here? No. Of course I might lose a few small unsecured debts, such as a loan of £5, but no secured accounts.
682. Can you say if there are mortgages over many of the holdings? I should say that nearly every holding was mortgaged. There are exceptions. It is a young district, being only about thirteen years old. Farmers from all parts of the Colony came here. They saw the country, and knowing that it would  
not

not remain long unsold, they secured as much as they possibly could of it. They had to mortgage their holdings in order to take up other lands, and now they are in such a position that they could all clear out and go away with a fair independence.

H. Stafford,  
Esq.  
1 Feb., 1890.

683. And pay off all incumbrances on their holdings? Yes; they could easily do it.

684. Have you formed any opinion as to whether the proposed railway from Cootamundra to Temora would, within a reasonable period after its opening, pay working expenses, and, in the course of time, interest on the cost of construction? At first I do not think it would pay, but if it were carried on past Temora to Barmedman, and eventually further west, it would be a very paying line.

685. Do you think it will pay if it stops at Temora? Well, I would not like to say that. I think the further it goes out the better it will pay. It will open up more traffic and increase the value of the Government land, which will fetch a higher price.

686. And you think that the proceeds of the Crown lands would help to pay for the cost of construction? I am certain of it.

Mr. Albert Henry Davies, postmaster, sworn, and examined:—

687. *Chairman.*] You are a resident of Cootamundra, and occupy the position of Postmaster? Yes.

688. How long have you been in that position? Two years.

689. Can you give the Committee any information as to whether the postal business in the direction of Temora is increasing? The local business has vastly increased since I came here.

690. I suppose you do not make up the mails for Temora; they are made up in Sydney? We make up a local mail for Temora; that has not increased very much.

691. Has it not rather decreased since the gold rush? I was not here at the time of the gold-fields.

692. Then what is the case as regards the postal business between Cootamundra, Stockinbingal, and Temora, and around in that neighbourhood? I should think it has slightly increased.

693. Not to any material extent? No.

694. Could you form any decisive opinion, from the amount of correspondence, as to whether or not the population between Cootamundra and Temora is increasing very much? I should not think so.

695. You make up a return every quarter? Yes.

696. What increase does that return show? It does not show the correspondence between here and Temora, but only the total number of letters actually posted in the office.

697. That would apply rather to the Cootamundra business? Yes, simply to Cootamundra.

698. Is there any appreciable increase in the business of your office? That has increased since I have been here to the extent of about thirty or forty letters in the quarter.

699. Have you also to do with the telegraph office? Yes.

700. Is there any increase in the telegraph business? There has been a slight increase during the last twelve months. The telegraph receipts in 1889 increased about £12 beyond the revenue for 1888.

701. That applies to the whole of the district? Yes.

702. You could not separate any portion of the district, and say what increase applies between Cootamundra and Temora? No; there is nothing to show that.

703. *Mr. O'Sullivan.*] How many mails a day do you send out from the Cootamundra office—general mails? Twelve or thirteen.

704. How many of your mails go to Temora and to the west and east of Temora? We make up direct for Temora and the intermediate stations—three, I think.

705. There would be no mails going away to the east and west? No; we have nothing beyond Temora. We make up direct for Temora, and they branch off and make up from that office.

Mr. William Hall Matthews, general storekeeper, sworn, and further examined:—

706. *Mr. Humphery.*] Are you aware that the Railway Commissioners recommend that the land necessary for the construction of the line should be conveyed to the Department by the owners free of cost? I saw such a suggestion in the report of the Commissioners.

707. Do you know whether the owners of the land that would be traversed by the line from Cootamundra to Temora would be willing to convey their land free of cost? I think some of them would. I am instructed, on behalf of one gentleman, to say that it will be done as far as he is concerned. His land is on the other side of Stockinbingal. It could hardly be expected that for some distance outside of the town owners would give their land free of cost, because they would gain no benefit whatever. The owner to whom I refer is Mr. Joseph Stokes. The line will probably run for about a mile through some property of my own, and I shall be quite willing to give that land. There is only a question of getting a water supply, which might be a matter of compensation, but as far as the land itself is concerned I am willing to convey it to the Government.

Mr. W. H.  
Matthews.  
1 Feb., 1890.

Mr. Joseph Stokes, land-owner, sworn, and examined:—

708. *Chairman.*] Where do you reside? At Stockinbingal.

709. You are the owner of some land in that neighbourhood? Yes; about 623 acres.

710. And the proposed railway would traverse that land for about a mile? For about 35 chains.

711. As far as the surveyed line traverses that land are you willing to convey the land to the railway authorities free of cost if the line is constructed through your property? Yes.

712. I suppose you are not in a position to say whether any of your neighbours would be willing to do the same? I could not say.

713. What is the land worth in your neighbourhood? About £3 an acre.

714. That is if the instalments were paid up? No; as it stands now.

715. With how much paid? About 7s.

716. And you estimate that it is now worth about £3? Yes.

717. Does that include improvements, such as fencing? That would be the price if you were selling out a selection with improved and unimproved land together. Of course there would be improvements on it—fencing and dams.

718. And you would estimate the general value of the land in the district at about £3 an acre? Yes; that would be the value of the selections. I do not mean unimproved land.

719. Farms? Yes.

Mr. J. Stokes.  
1 Feb., 1890.

- Mr. J. Stokes. 720. Are you carrying on farming? Yes.
- 1 Feb., 1890. 721. What is the general average yield of your crops? From about eighteen to twenty bushels of wheat to the acre. That was the yield this year. I cultivated 130 acres.
722. Do you grow anything else besides wheat? Yes; corn, potatoes, and vegetables of all sorts.
723. Is the wheat free from rust? The early wheat was.
724. The later wheat is suffering from rust? Yes. All the late wheat out there had the rust.
725. What is about the general yield of potatoes—how many tons per acre? It depends on the season.
726. How many tons do you generally get? This year was a good one, and I suppose the yield would be between 4 and 5 tons to the acre.
727. Do you find wheat or potatoes more profitable? Wheat is the surest crop.
728. Wheat is the main stay? Yes.
729. Is there any fruit grown in the district? There will be after a few years. It is only a new place about where I am.
730. I suppose there is very little dairying carried on? With some of them there is.
731. Any big farms? All the farms have a few pigs.
732. But none of them have gone into the business extensively? No; they have not gone into dairying alone.
733. Only keeping pigs to eat up their potatoes? Yes. Every farmer has a few pigs of his own.
734. Do they find growing wheat or running sheep the more profitable? Most of them grow wheat and run sheep too.
735. They combine agriculture with grazing? Yes.
736. And from your experience do you think the farmers generally are in a really prosperous state? Well, I do not know. I can only speak for myself.
737. You have nothing to complain of? No.
738. So long as you get good crops and good prices I suppose you will be able to do reasonably well? Yes; if we could get our crops to market cheaper.
739. Mr. O'Sullivan.] How long does it take a selector to get upon his feet in a district like this? That depends upon what sort of a man he is.
740. An ordinary industrious man? It would also depend upon what sort of a start he had.
741. Suppose he starts, as many do, with little or nothing? It would take him a good while now.
742. Four years? Yes, twice that.
743. Chairman.] Can you give the Committee a fair idea as to the average profits per acre derivable from wheat culture; that is to say, the net profits after taking into account the cost of ploughing and sowing, as well as the cost of seed-wheat and of reaping and stripping and getting your wheat to market;—about how much per acre do you reckon to make, clear net profit? I could not tell you. I never reckoned it up that way. I know there is not much in it if you have to pay for a lot of labour, and pay 1s. 6d. per bag for the carriage of the wheat to the railway station.
744. You think the construction of this railway would be a material benefit to the farmers? Yes.
745. Mr. O'Sullivan.] Do you know of any persons who are likely to take up selections in this district? Yes; I know any number of people who would do so if there was land available.
746. You are aware that there will be land thrown open in July in the shape of leasehold areas? Yes; but a lot of that land is poorish land—grazing land—say half; and half will be second-class land.
747. Did not the squatters take the best half of their runs into the leasehold areas in 1884? That I could not say.
748. It would be very natural for them to do so? Yes; but perhaps they could not do so, because it may have been all taken up before.
749. You know they all fixed their own dividing-line? Yes.
750. And they would very naturally select the better portion for the leasehold? Yes.
751. These lands are now falling in, and therefore the chances are that they are better land than that on the resumed areas. That being so, do you think that these lands are likely to be taken up rapidly? Yes, if they are thrown open.
752. Would an ordinary industrious selector in about four years get on his feet with land like this? Yes, with fair seasons.
753. We may therefore look for a thriving agricultural settlement on these areas within four years? Yes. There is a lot of reserves embracing the best land about there locked up.
754. But do you think that we can look for the successful settlement, or the industrious settlement, of the leasehold areas within four years time from this? Yes.
755. And those who get on the reserves of which you speak will have an advantage, and be more likely to be prosperous than the others? Yes.
756. Mr. Humphery.] In estimating the value of land at £3 an acre, would you include the cultivated land? I include the whole selection right through. If you had a selection with unimproved and improved land you would let it go together.

Mr. Thomas M'Beath, builder and contractor, sworn and examined:—

- Mr. T. M'Beath. 757. Chairman. Where do you reside? At Cootamundra.
- 1 Feb., 1890. 758. What is your business? I am a builder and contractor, and have lately added a saw-mill to my business.
759. Where is the saw-mill? In the town.
760. Where do you obtain the timber? During the last six or nine months I have obtained it principally from between Cootamundra and Temora—about half-way; but on account of the scarcity of teams during the wheat and wool seasons we have had to bring a good portion of the timber from near Narrandera. As soon as the teams are available we shall commence to bring the timber again from the same place.
761. What kind of timber have you been sawing? Both pine and hardwood.
762. What kind of hardwood? Ironbark and white box principally, and stringybark occasionally.
763. What size do you cut the logs? A size that will give marketable timber.
764. About what diameter and what length? The diameter will be from 12 to 18 inches, or an average, I suppose, of about 16 inches; and as regards length, the timber we have been getting in lately will, I suppose, average 20 feet.
765. This will apply to both pine and hardwood? Yes.

765½. And is there a good supply of pine? From inquiries I have made, I am given to understand that there is a good supply of timber. Several of the reserves referred to by Mr. Matthews contain marketable timber.

Mr. T. M'Beath.

1 Feb., 1890.

766. The whole of the best timber is reserved? Yes, and a good deal of it is on leasehold land held by the stations. Of course it is available for timber-getting under a license.

767. Still it is included within the timber reserves? Just so.

768. Which you consider is a desirable thing? The leasehold land would not be reserved, but most of the timber we have been getting has been on Crown land.

769. But the leasehold area would also include timber reserves? Yes. We have not yet touched what is strictly known as the timber reserves. They are rather far out. The leasehold and other Crown lands are more convenient.

770. Did you say ironbark or redgum? Ironbark.

771. I suppose there is a reasonable amount of timber that would do for railway sleepers.—Is there a reasonable supply of ironbark with a diameter of from 12 to 14 inches and about 30 feet in length? That is rather long. The timber out there does not run so long as the timber you find growing on the coast. It is very good, and about the best quality of timber that could be had for sleepers, because it is very dense, hard, and sound. Sleepers have been procured from there continuously since the commencement, and even before the commencement of railway construction in the district. I can recollect that before the line ran to Cootamundra many thousands of sleepers were procured from that direction and used on the railway.

772. You think there would be plenty of timber there now for sleepers? There are several contracts there now being executed, and there does not seem to be any scarcity of timber.

773. And timber for bridges—(say) 30 feet in length? Yes. I am certain that a fair quantity of timber could be procured of that size. It would have to be picked as most of the timber is shorter.

774. Timber that would square 12 inches and 12 by 14? Yes. We have been paying at the rate of over £300 a year for carting timber by teams from these forests.

775. I suppose you would expect to get it in cheaper if the railway were built? We should get it in cheaper, but only if the line came direct to Cootamundra; because if we had to take it to Wallendbeen and bring it back this way again we should be in the same position that we are now, and we might just as well cart by teams.

776. You think you would not be able to shift your mill to Wallendbeen? Well, the local consumption here is considerable, amounting to between 250,000 feet and 300,000 feet a year, and there is a big market for timber from Gundagai to Tumut and in that direction. But on account of the heavy freight from Narrandera, where most of the timber comes from, they use local timber, although they prefer the pine.

777. Are you in the habit of sending timber to the neighbourhood of Tumut by train? We have sent some, but a good deal of timber goes in that direction from the Narrandera line. I know, however, that the timber off that line for a distance of 15 or 20 miles from the back of the railway is pretty well cut out, and in the course of two or three years the marketable pine will have disappeared altogether. The best forests that are now within reach of this centre are towards Barmedman.

778. What timber grows there? What they call the Lachlan pine. It is very valuable timber. I am credibly informed that there are splendid forests out in that direction.

779. Good-sized trees? Yes.

780. If the railway were constructed I suppose you would anticipate a large business in timber? Yes. A large proportion of the up-traffic from Narrandera to Junee consists of timber. There is a very large consumption of timber in the district round Cootamundra. Therefore, I feel sure that if facilities were afforded for bringing the timber from the Barmedman country a very large trade would be done, because the length of carriage would be shorter, and the timber is of a better quality; besides which the timber forests on the south-western line are being quickly worked out.

781. Your mill is at present occupied cutting timber at Narrandera? No; we are drawing timber from about half-way to Temora by teams.

782. What do you pay? We are paying in freight from that direction about £300 a year.

783. How many teams are employed? We can keep four employed, but sometimes we can only get two.

784. Can you get a ready sale for the timber you cut? Yes. We have no difficulty. We have no stock at all. Everything is sold as fast as it is cut.

785. Do you send it to Goulburn? No.

786. And your business all consists of local trade? Yes, and within a radius of 50 miles.

787. *Mr. O'Sullivan.*] Do I understand you to say that this hardwood timber exists along the railway route? Yes, for a distance of 5 or 6 miles. The reserves referred to by a previous witness contain timber.

788. This timber could therefore be utilized for railway purposes? Yes.

789. Have you noticed travelling that way if there is a supply of ballast which might also be utilized? I have not taken particular notice, but the ranges are so stony that I do not think there can be any doubt about it.

Mr. Thomas Parker, senior-sergeant of police, sworn, and further examined:—

790. *Chairman.*] Can you give the Committee any further information with regard to the yield of wheat in the Cootamundra district? The number of acres of wheat grown last year was 19,713, and the aggregate yield amounted to 394,891 bushels. In 1885 the number of acres of wheat grown was 12,121, yielding 149,904 bushels.

Mr. T. Parker.

1 Feb., 1890.

Mr. Haines Thomas Giddy, railway station-master, sworn, and examined:—

791. *Chairman.*] You are railway station-master at Cootamundra? Yes.

792. How long have you occupied that position? A little over eight and a half years.

793. Can you give the Committee any information with reference to the traffic between Cootamundra and Temora? I have no record of the passengers, but I can give you an outline of the parcel traffic. For the last two years the parcel traffic has averaged about £6 10s. a month; that is the traffic going by coach to Temora.

Mr. H. T. Giddy.

1 Feb., 1890.

794. Booked through from Sydney? Yes—passing through our office for Temora and going by coach.

795.

- Mr. H. T. Giddy. 1 Feb., 1890.
795. Do you think there has been any increase during the last six or twelve months? At the beginning of 1888 the traffic was from about £3 10s. upwards, and at the end of last year it went up as high as £10.
796. Then that shows clear evidence of an increase? It shows an increase for the latter end of last year.
797. You have no means of telling what has been sent away from the Temora district? No.
798. And the same with the wool? With regard to the wool, I could give the tonnage that has gone through the station. I daresay the Committee would be able to deduct the local wool from that, and the result would give a fair outline of what the wool traffic from the Temora district would be. For 1889 the wool traffic was a little over 800 tons. That was the total passing through Cootamundra. Last year there were 4,375 bales of wool.
799. Do you know whether the stations round Temora, and out in the direction of Hillston, send their wool this way or to Victoria? I have no idea.
800. Wright, Heaton, & Co., have an agent here? Yes, they have an agent of their own, but Mr. Robert Perry has done the greatest part of the wool trade during the last season. I might say that as a rough estimate, the goods traffic from Cootamundra to the Temora district would be equal to about 37 or 38 tons per month. I refer to the goods passing through the railway office. But as far as I can understand that only represents a small proportion of what really belongs to the Temora district. I understand that three or four teams draw from Junee, and that there are teams drawing also from Wagga Wagga to Temora. I believe also that teams draw to Temora from Old Junee and from Coolaman. I am told that there are at least seven or eight teams engaged drawing goods from Wagga Wagga, Old Junee, and Coolaman, to the Temora district.
801. If the proposed railway were constructed, the whole of that traffic would go through Cootamundra? Yes. A line to Temora would take the whole of that traffic, and would land the goods at the township direct.
802. The earnings of the railway would only be between Temora and Cootamundra? The earnings, of course, as far as the railway is concerned, would be on the traffic between Cootamundra and Temora. The goods go from Wagga Wagga and Old Junee to Temora instead of from Cootamundra, owing to the differential rates.
803. There would be no increase in the earnings of the railway from Cootamundra to Sydney? Under the differential rate system it is cheaper to send goods from Sydney to Wagga Wagga than it is from Sydney to Cootamundra. If the goods could be taken to Temora by railway direct it would be an advantage to the district, although of course as far as the receipts of the Railway Department are concerned, there would be very little difference.
804. Mr. Humphery.] Will you give the Committee some idea of the operation of the differential rate system as it affects Cootamundra? I think the following figures will give you some idea of how the system works: 6 tons of goods from Sydney to Wagga Wagga would cost £25, and the cost of conveyance back to Junee would be £4. The cost of road carriage from Junee to Temora would be £9, making a total of £39, which the carriage of the 6 tons would cost from Sydney to Temora. Six tons of the same class of goods from Sydney to Cootamundra would cost £38 0s. 6d. Add to this the £9 for road carriage to Temora, and you have a total of £47 as against £39, the freight to Temora *via* Wagga Wagga and Junee. There is also to be considered the haulage from Cootamundra to Wagga Wagga. The freight of 6 tons of goods from Sydney to Junee at the mileage rate is £41 11s. 6d., which, with the charge of £9 for road carriage to Temora, makes a total freight of over £50. I estimate that the freight by railway from Sydney to Temora direct would be about the same as the freight on the goods landed at Junee.
805. Mr. O'Sullivan.] Have you ever been manager of a terminal station? No.
806. Do you know from what distance a terminus would draw traffic to a railway station? I have no idea. It would depend upon the circumstances of the locality, particularly as regards population.
807. From how far out in the direction of Temora does the Cootamundra railway station draw wool? From somewhere about Barmedman—about from 60 to 80 or 90 miles.
808. Then if the line were pushed on to Temora, and that were the terminus, it would probably draw traffic from a distance of from 60 to 80 miles? It would all depend of course upon the amount of settlement.
809. If there was a station at Temora it would very likely draw the wool traffic from the Lachlan River and the neighbourhood of Hillston? There is no doubt it would draw from a greater distance in proportion as the line was extended. I could not say in what direction the stations lie from which the wool is sent. Possibly they might send their wool *via* Young or away out to the western line.
810. At present they may do that, but if the railway were pushed out to Temora, would they not be very likely to utilize the station there instead of going to Young or Coolaman? There is no doubt that if it were nearer to them and more advantageous, they would use it.
811. Then if the line went to Temora it would be likely to tap a portion of the wool trade that now goes to Victoria? I cannot say what districts may be sending wool to Victoria.
812. At all events we should draw some of the wool from the southern portion of the Hillston district? There is no doubt a railway would draw wool which during last year went to the south-west line towards Narrandera and that way.
813. In your evidence just now you gave the number of parcels, and the tonnage of goods that went through your station to Temora; I presume that would not represent anything like the trade that is going on between Cootamundra and Temora? No; I do not suppose it would. That is simply what passes through Cootamundra.

Mr. Richard Corbett, coach proprietor, sworn, and examined:—

- Mr. R. Corbett. 1 Feb., 1890.
814. Chairman.] You are a resident of Temora? Yes.
815. Are you the proprietor of the line of coaches running between Cootamundra and Temora? I am one of the proprietors.
816. Is yours the only line of coaches that runs? Other coaches go occasionally.
817. You run every day I suppose? Yes, Sunday included.
818. Have you the mail contract for the year? Yes.
819. How often do the other coaches run? I could not say exactly; probably about once a month. Whenever any sports are held, or on any other holiday occasion three or four coaches run; but our coaches are the only ones running regularly.

820. How many horses do you drive? Four.

821. How many passengers do you take? On an average about five a day both ways—about two in and three out.

822. So that the total passenger traffic would amount to (say) two to Temora, and three back? Yes.

823. You are not including in your coach traffic the passengers that you pick up and drop on the road, but only those going right through? Exactly.

824. As a matter of fact I suppose you do take up other passengers on the road? Yes, every day almost.

825. Can you say what parcel traffic you have? We have a very large parcel traffic—as much as we can take. In fact we cannot take it all as a rule. This includes goods obtained from the goods' shed.

826. And you carry the mails both ways? Yes.

827. What is the amount of your contract for carrying the mail? We get £155 a year.

828. *Mr. Humphery.*] How many passengers do you think are carried by private vehicles between Temora and Cootamundra? I think there are more than travel by coach. I think on an average at least three or four a day travel by private traps in addition to those who are carried on special occasions by other coaches.

829. So that you think the total traffic would be about 10 daily? I think it would be more than that all the year round.

830. Have you any objections to say what your receipts per month are for passenger and parcel traffic? Somewhere near about £140 a month.

831. Is that inclusive of what you get for carrying the mail? No, exclusive. I could not tell you the amount exactly, but it is somewhere near the sum I have mentioned. A considerable amount would have to be deducted for trainage.

832. Can you say approximately what you have to deduct for trainage? From £40 to £50 a month.

833. Then you think your earnings are £90 a month, exclusive of £12 a month for the mail? Yes, about that.

834. You think the whole of that traffic would go by rail if the line were constructed to Temora? Yes.

835. *Mr. O'Sullivan.*] Do the farmers of the district and the people of Temora drive in to Cootamundra in their own buggies? The majority of them do.

836. Therefore, the passenger traffic you have is what may be called the casual traffic? Yes.

837. Do you run coaches out in any direction from Temora? No.

838. Are there any lines of coaches running out into the other districts? There is a line of coaches running from Temora to Junee, another from Temora to Barmedman, and one from Temora to Young.

839. Is there a line of coaches to Wagga Wagga? No; a line runs from Wagga Wagga back, about 16 miles from Temora.

840. Are there any lines running off into districts, *via* Young, Wagga Wagga, Junee, and Barmedman—I mean to the little country districts? There is a line that goes from Wagga Wagga past the back of Temora, about 12 miles from the township, and which runs right down to Wollongough.

841. Do passengers come to Temora from a long distance away—from the west or from the north? Those passengers all go from Wollongough to Wagga Wagga. They would come *via* Temora, but there is no line of coaches.

842. If station managers, or persons employed out that way, or visitors going to stations this side of Hillston and away towards north, east, and west, desire to reach the southern line, which point on the line would they make for? Many of them go from Temora by coach. Mr. Dalton, and all in his direction, come into Temora and take the coach.

843. They come into Temora, leave their traps there, and take the coach into Cootamundra? Yes.

844. I suppose the railway would be likely to get all that traffic? Yes.

845. *Chairman.*] Is there not a line of coaches running from the railway-station at Junee to Temora? Yes, it runs twice a week.

846. Have you any idea of the amount of traffic they have? They average two passengers a trip, as nearly as I can tell you.

847. Do you think if the railway were constructed to Temora it would obtain that traffic? Yes, I am sure it would.

848. Do these passengers come up from the south—is that the reason why they leave the railway at Junee, because they come from Victoria or Albury? The majority of them are commercial travellers.

849. Why do they prefer going that way instead of going through Cootamundra? They generally go across that way and come back this way.

850. In any case they would require to do the same journey. Even if the railway were to go to Temora they would want to do the journey between Junee and Temora? There are no business places on the road and only one hotel.

851. I think you said there was not a coach between Temora and Wagga Wagga? There is not. There is a coach that leaves Wagga Wagga, and passes within 12 miles of Temora, and goes on in the direction of Hillston, but it only runs once a week.

852. Does it carry many passengers? Yes, I believe it does.

853. If a railway were taken to Temora I suppose those people would be likely to travel by it? Yes, I think they would all go by the railway to Temora if there was a line of coaches running from that place. It would be nearer for them to come *via* Cootamundra than *via* Wagga Wagga.

854. Is there any coach running through to Hillston from anywhere? Not that I am aware of.

Mr. William Hall Matthews, sworn, and further examined:—

855. *Chairman.*] I believe you wish to supplement the evidence you gave this afternoon with reference to railway rates? Yes.

856. What is the rate for third class goods from Sydney to Wagga Wagga by truck load? £4 6s. 8d. per ton.

857. That is if you send a full truck load? Yes.

858. And if you do not send a full truck load? A charge of 7s. 6d. per ton is made by the agents for taking the goods and making the truck load up to 6 tons themselves.

- Mr. W. H. Matthews:  
1 Feb., 1890.
859. That would bring the freight up to £4 14s. 2d. per ton to Wagga Wagga? Yes.
860. Then what would be the freight by the road from Wagga Wagga to Temora? An average of £2 per ton.
861. What is the distance? About 62 miles.
862. And do they carry goods all that distance for £2 a ton? Yes.
863. That would make a total freight from Sydney to Temora, *via* Wagga Wagga, of £6 14s. 2d. per ton? Yes.
864. Do you know what the freight would be from Sydney to Temora, if the line were constructed to the latter place? According to the present scale and the rate sheets it would be about £6 15s. per ton.
865. So that the Temora people would be able to obtain their goods right through by train for £6 15s. per ton, as against £6 14s. 2d., which they have to pay at the present time, sending the goods by Wagga Wagga and then by road? Yes.
866. And the railway department would be receiving the difference in freight between £4 6s. 8d. per ton and £6 15s. per ton? Yes.
867. That would be £2 8s. 4d. the railway authorities would receive additional freight if a line were constructed to Temora? Yes; and they would save the haulage of the goods between Cootamundra to Wagga Wagga.
868. *Mr. O'Sullivan.*] I believe you wish to give, as an illustration, the actual returns received by a selector from 100 acres of land, growing wheat? Yes. The facts are as follows:—A man cultivated 100 acres of land. He paid for ploughing and sowing 10s. per acre, and for stripping 10s. per acre; the seed cost £25, and he paid £36 15s. for the cartage of 490 bags of wheat to the Cootamundra railway station. These different payments make a total of £161 15s. From the sale of the 490 bags of wheat he obtained £305, showing a profit of £143 5s. above the cost of labour.
869. Would that man do his own ploughing and stripping? Yes.
870. Can that be taken to the best of your belief as anything like a fair average? Yes. It can be taken as a fair average in this way, that although the yield of wheat from the 100 acres was above the general average, the price received for the wheat was considerably below the general average. It was the lowest price that we had for some years.
871. What is about the average price of wheat in a fair season? The average price for some years past has been about 3s. 10d., extending over the last four years.
872. *Chairman.*] What did you say was the cost of the seed wheat referred to? £25.
873. How much per bushel? I have calculated it at 4s. per bushel.
874. Is that the usual price of seed-wheat? No, but last year the price was high.
875. I suppose it is sometimes higher than 4s., and sometimes lower than 4s.? Yes.
876. If the price of the seed-wheat was lower in another year, that, of course, would alter your calculations? Yes.
877. What was the yield of wheat in that particular instance? Nineteen bushels.
878. Does everybody get 19 bushels to the acre in this district? The average for some years has been 16½.
879. Then if you only got an average yield of 16½ bushels, that also would vary your calculation? Unless the price was higher.
880. But as a matter of fact the people do not get 19 bushels to the acre. I suppose that, occasionally, some get more than 19 bushels? There are some parts of the district that will average considerably over that.
881. And there are other parts that will average less? Yes.
882. I suppose the yield varies according to the season? Yes.
883. And according to the quality of the land? Yes.
884. Your calculation is based on a selling price of how much per bushel? Three shillings.
885. I suppose sometimes the wheat fetches more than 3s.? Yes, it fetches up to 5s.
886. Then if it fetched up to 5s. or 4s. the calculation would work out differently? Yes.
887. Could a man plough and strip 100 acres of land at the same price as he could plough and strip 500 acres? There is very little difference, proportionately, in the cost of 100 and 500 acres? A fair estimate of the quantity of land that one man could farm himself, with the assistance of a couple of men just at the harvest time, would be about 120 acres.
888. You think that would be about a medium thing? Yes.
889. If a man was only cultivating 20 acres, could he cultivate it at the same price as a man cultivating 120 acres? No; because he would have to have the same plant for stripping, and everything else, and the wear and tear would be the same.
890. Therefore, your calculation would only apply to a man who had 100 or 120 acres, and would not apply to a man who had only 20 or 30 acres? Exactly. The latter would be about a third-class man.
891. *Mr. O'Sullivan.*] If this man got a fourth less in yield but received a fourth more in price, it would come to as much as the amount you gave in your illustration? Yes, just the same.
892. *Chairman.*] Do you think a man cultivating 500 acres would not be able to do so at proportionately a cheaper rate than a man cultivating 120 acres? No, because he would have to increase his plant. He would have to get two strippers and two ploughs, and keep a double set of horses. 120 acres is about a fair quantity of land for one man to farm, having one stripper, one plough, and an ordinary set of four or five horses.

MONDAY, 3 FEBRUARY, 1890.

[The Sectional Committee met at the "Stockinbingal Hotel," Stockinbingal, at 11:30 a.m.]

Present:—

HENRY COPELAND, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. † EDWARD WILLIAM O'SULLIVAN, Esq.

The Sectional Committee further considered the proposed Railway from Cootamundra to Temora.

Mr. John Vaughan, farmer, sworn, and examined:—

893. *Chairman.*] You are a farmer residing at Stockinbingal? Yes.
894. How many acres of land do you possess? 2,300.
895. How many acres had you under cultivation this year? 340.
896. I suppose it is all under wheat? There was some barley, some corn, and some hay.
897. How many acres were under lease? I should say about 320. There were about 15 acres under hay and the rest was under barley and corn.
898. What did the harvest yield you in wheat? The average yield of wheat was something over 14 bushels all round.
899. Do you find that the general average? I could not say exactly, but I think it would be pretty near the general average. Mine was a bit late and the late crops were affected by rust.
900. Have you been many years farming in this district? I have been here altogether for sixteen years.
901. And what do you consider to be a fair average yield of wheat from this neighbourhood per acre? I should consider that if it were carefully got in, and sown a little earlier than we usually do, the yield would be from 15 to 20 bushels—it might go up to 25.
902. How many bushels of wheat did you have this year? I had about 1,400 bags.
903. And how many tons of hay? It went over 2 tons to the acre.
904. Was it wheat or oaten hay? It was a mixture.
905. What do you pay for carriage from here? I pay a shilling a bag to Cootamundra from my place.
906. How many miles is your place from the railway station? 12 miles.
907. So that it costs at the rate of 1d. per mile per bag? Yes.
908. How much do you pay for the hay? I could not say exactly.
909. Have you any intention of increasing your area under cultivation? Yes, I have.
910. Is most of your land fit for cultivation? It is pretty well all fit for cultivation. I think it is all equal to what I have under cultivation.
911. Do you find growing wheat profitable? It has not been exactly profitable for the last two or three years. We have made it pay fairly well this year, but during the last two years we came out none too well.
912. Still I suppose on the whole you manage to live and keep on increasing your area under cultivation? Yes, and the land is improving.
913. So that you find it sufficiently profitable to warrant you in increasing your area? Yes, we all find that.
914. And I suppose if the railway were constructed you would be very glad to avail yourself of it by sending your produce to market? I may say it is our determination.
915. To what market do you send your produce? Some years ago I sent some to Sydney, but it goes principally to Goulburn.
916. Do you send any south, to Wagga Wagga, Albury, or Victoria? No; we do not send any that way.
917. Goulburn and Sydney are your two principal markets? Yes.
918. In your opinion would it be better to take the railway to Temora from Cootamundra, or from Wallendbeen? I am strongly of opinion that it would be better to take it from Cootamundra.
919. Why? Well, Cootamundra is an important place. It is not only a very good market for grain, but it is also a great stock market, and it seems to be pretty well and widely known. We all seem to do pretty well out of our stock at Cootamundra; we never make any failures there. That is one great object.
920. I suppose you know that if the railway were taken to Wallendbeen there would be  $9\frac{1}{2}$  miles less haulage to pay? I am aware of that.
921. Do you think it would be preferable for you to go to Cootamundra and pay that extra haulage of  $9\frac{1}{2}$  miles? Yes.
922. You would rather go to Cootamundra, and pay the  $9\frac{1}{2}$  miles extra haulage, than go to Wallendbeen? Certainly.
923. For the sake of getting communication, I suppose, with a large town? Yes, and on account of the stock. In dry seasons it would be convenient to send stock through Cootamundra to the mountain country.
924. Have you any stock? Yes. I have about 3,000 sheep, about 100 head of cattle, and about 40 head of horses.
925. And you carry the whole of these on 2,000 acres? Not exactly. I do not carry them all the year round. I generally run perhaps from 1,000 to 1,500 sheep.
926. Are the people in the habit, in times of drought, of sending their stock from here to Tumut and the mountain country? They have done so when necessary; but lately they have been more careful, and have not stocked so much, and they have been better provided with water. They find it is unsafe to overstock.
927. In the event of the people sending their stock to the mountains, do you think they would be likely to use the railway for the purpose? I think it would be a great consideration.
928. Have they ever made use of the railway from Cootamundra to Gundagai? I could not say with certainty; but I have seen them driving stock over from our own district.
929. The distance they could travel by rail would be so short as to be scarcely worth while sending them by train? They would be knocked about a good deal; but I think the railway would be an accommodation to the people in the back country.
- 930-1. Are there good travelling stock routes available between here and Tumut? I could not say much with regard to the country between Gundagai and Tumut.

Mr.  
J. Vaughan.  
3 Feb., 1890.

- Mr. J. Vaughan. 932. Between here and Gundagai? I believe they are fairly good.
- 3 Feb., 1890. 933. There is a travelling stock reserve all the way from here to Gundagai? Yes.
934. Is there water on the route? Yes.
935. And you are in favour of the railway being taken to Cootamundra, as against Wallendbeen? By all means.
936. *Mr. O'Sullivan.*] Is there much agricultural settlement to the east and north of Stockinbingal? There is not much agricultural settlement due north.
937. Are there any stretches of well-settled country in the neighbourhood like that through which the Committee passed this morning? No.
938. Do you consider the settlement out here of a permanent character? By all means. It is increasing every year. There was very little settlement here a few years ago.
939. Do you know of any persons who intend to settle out here if the leasehold areas are thrown open for selection? Yes; any number of them.
940. Have you had many people up looking out for land? Yes, there have been a good many looking for land.
941. You think it is likely that there will be a rush of agricultural settlement here? There is no doubt about it.
942. And I suppose if they are fairly industrious men they can do well on the land here as wheat-growers? Yes. They can see how other people are situated, and will have the advantage of our experience.
943. Are any selectors selling out to graziers or to each other? They are not too anxious to sell at present. I believe they would sell if they got a good price, but I do not think there are any who are very anxious to sell.
944. What is about the value of the agricultural land out here? From £3 to £4. £3 17s. was paid for some land.
945. Do you know of your own knowledge of any purchases at £4? I know of a purchase at £3 17s. 6d.
946. Are the men who bought at £3 17s. 6d. doing well? Yes; they are doing very well.
947. The £3 17s. 6d. was given for the land with the unpaid balances attaching to it? Just so.
948. And the men who bought at that price are doing well? Yes; they are cultivating nearly the whole of it.
949. What is about the area that is generally cultivated up here? The cultivations are getting larger in extent every year. At one time 20 or 30 acres was considered a large cultivation, but now farmers cultivate from 200 to 300 and up to 500 acres.
950. And I suppose that experience has taught them that this is a successful calling? Yes; we think we can do very well, and we make some very fair cheques out of wheat-growing; but we have come to the conclusion that we would like to run some stock as well to make it a certainty.
951. But the selectors, as a rule, out this way do not run very many stock? They do. They have all more or less sheep and cattle and horses.
952. What sort of cattle? Dairy cattle.
953. They do not raise fat cattle for slaughtering purposes? Oh, yes they do.
954. And where is their market for the cattle? Sometimes they send to Sydney, and sometimes send to Cootamundra.
955. Do they send any cattle to Wodonga? No; they might send some store cattle in an exceptional case, but not very often.
956. Have you noticed which part of the line the wool teams from this part of the country make for? They make here. I saw a great lot of wool going through here and on to Cootamundra.
957. Cootamundra appears to be the natural market for this part of the country? By all means.
958. Are any of the people out this way related to the Cootamundra people by family ties? Not that I am aware of.
959. They just go in to Cootamundra as their natural market? Yes.
960. *Mr. Humphery.*] Does the railway pass through your land or any portion of it? No.
961. Do you know the route of the proposed railway? Yes; I know the route from Stockinbingal to Cootamundra, but I have never been over it.
962. Could you suggest any alteration or deviation that you think would be an improvement? I could not.
963. You think the line laid out would best serve the people of this district? I think it is well laid out. I do not think any of our local people could improve upon it.
964. Are there many settlers between Stockinbingal and Cootamundra? There are a good few.
965. How many are there between this township and Cootamundra, within 4 or 5 miles of the surveyed route, who would be served by the railway? I suppose there are about forty or fifty holdings.
966. Are they freehold holdings or tenant farms? There are very few tenant farmers out here. It is selected land.
967. Are you a selector? Yes.
968. Have you any objection to state whether your means were large or small when you came to the district? They were very small.
969. All you possess now you have accumulated since you have been here? Yes; I was almost a working man when I came here.
970. And are these other settlers in a similar prosperous condition? Yes; they are all doing fairly well.
971. All wheat-growers? Yes; with one or two exceptions, they all grow wheat.

Mr. Thomas Walter Manning, farmer, sworn, and examined:—

- Mr. T. W. Manning. 972. *Chairman.*] Where do you reside? At Stockinbingal—within 2 miles of this spot.
- 3 Feb., 1890. 973. Have you resided here for long? For three years. I have got leased land here. I do not hold any land of my own.
974. What part of the country do you come from? I was in the Gundagai district for about ten years.
975. How many acres of land have you leased? 1,700.
976. How many acres do you cultivate? 580.
977. I suppose your crops this year consisted mostly of wheat? Yes. I had some corn and hay as well.

Mr. T. W.  
Manning.  
3 Feb., 1890.

978. How many acres of wheat? 580, out of which I got about 14 acres of hay.
979. How many acres of corn? 25.
980. How many bushels of wheat did your crop yield? 12,650 bushels.
981. That would give an average of how many bushels to the acre? A little over 22.
982. How much hay did you get to the acre?  $2\frac{1}{2}$  tons.
983. What do you pay to have your wheat taken to Cootamundra? 3d. a bushel, or 1s. a bag.
984. Can you say what are the profits per acre, generally, from the cultivation of wheat in this district? About £2.
985. Do you net £2 an acre clear profit? Yes, in a good season.
986. Is that £2 per acre clear of all expenses, including ploughing, stripping, seed-wheat, &c.? Yes.
987. You make a clear profit of £2 an acre in a good season? Yes; when once you get the land cleared.
988. What is the proportion of good and bad seasons? As a general rule we have one bad season out of three.
989. What would be the yield in a bad season? I had a yield of 8 bushels in a bad season. That was the worst we ever had.
990. You heard the evidence given by Mr. Vaughan; I suppose you generally endorse that evidence? Yes; I think it is quite correct.
991. Have you any intention of increasing your area under cultivation? Yes; I have a decided intention of doing so.
992. You find it profitable to do so? Yes. The reason we do not go in for growing so much hay is, because the cartage is too high.
993. What do you pay? We have not made it a rule to team it, simply because it does not pay.
994. If a railway were constructed to this place, I suppose you would send hay by train? Certainly, and a good few other articles that I would go in for that would pay.
995. Have you tried any other crops? I tried corn this year, and had a very good crop.
996. I suppose you cannot say how many bushels it will go? It will go about 20 bushels to the acre.
997. Do you find oats thrive? Yes; oats thrive very well. That is a thing we would go in for if we had a market.
998. Oaten hay? Yes, and chaff and so forth.
999. Do you find the oats ripen? Oh, yes; they grow splendidly.
1000. Have you tried fruit? No, but I believe it would do well here.
1001. Do you think the people generally are in a reasonably prosperous state? Yes, very fair.
1002. They are wheat growing mostly? Yes.
1003. And if the railway were open they would make use of it to send their produce to Cootamundra? Most decidedly they would.
1004. *Mr. Humphery.*] Is your holding 2 miles to the east or 2 miles to the west of the line? It would be to the south.
1005. You said that the net profit of wheat growing is £2 an acre? Yes.
1006. Have you deducted the labour? Yes, everything. That is the profit from the land when it is fit for cultivation.
1007. *Chairman.*] I think you said the railway does not go through your land? No, it does not.
1008. Do you think the people through whose land the line would run would be willing to give the Government, free of cost, the land that would be required for the railway? I could not say.
1009. You know that in many districts the people do that? I know it would pay them to do it at a distance in order to get their produce away. Those living close to a large town, and having an easy means of getting their produce in would not, perhaps, care to give the land.
1010. In any case your land is leasehold, and you could not do it? That is so.
1011. *Mr. O'Sullivan.*] You say you did not select up this way? I could not get the chance. The land has been shut up. I am only waiting for the opportunity.
1012. Then you would be likely to select when the leaseholds are thrown open? There is no doubt about that.
1013. Are there many men of your stamp likely to select? Yes, there are three or four where I am now.
1014. Neighbours? There are a couple of men working for me, and one is living there.
1015. Are there any leases about the district like yours? Not that I am aware of.
1016. And are you able to pay your rent and clear £2 an acre—that is £1,000 a year on your cultivated land. Have you any objection to say what rent you pay? Three shillings an acre.
1017. And notwithstanding that you pay 3s. an acre rent, besides all the expenses of cultivation, you can clear £2 an acre? Yes.
1018. What size are the wheat paddocks up here? I think the smallest are 50 acres in extent. I have paddocks up to 235 acres.
1019. And have your neighbours any larger? About the same as myself. I think Mr. Vaughan has one 300 acres in extent.
1020. *Mr. Humphery.*] You know the route of the railway? Yes.
1021. Have you any suggestion to make as to any alteration or deviation? No.
1022. And you are clearly of opinion that it is better for the railway to go to Cootamundra than to Wallendbeen? Most certainly.
1023. And any advantage you might derive by shorter haulage *via* Wallendbeen, you think would be neutralized by the inconvenience of having to go to Wallendbeen instead of to Cootamundra? Quite so.
1024. *Mr. O'Sullivan.*] Do the farmers sell in Cootamundra to buyers there? They buy and sell in Cootamundra.
1025. Do they sell their produce in Cootamundra to buyers who go to Cootamundra? They sell it there. Some send it to Sydney and other places.
1026. At their own risk? Some of them, but very few. As a rule, most of them sell to buyers in Cootamundra.
1027. And to those who sell to buyers in Cootamundra the 9 miles haulage does not matter? No.

Mr.

Mr. David White, farmer and grazier, sworn, and examined:—

- Mr. D. White. 1028. *Chairman.*] Where do you reside? At Stockinbingal.  
 1029. Of how many acres of land are you possessed? About 1,900 acres.  
 3 Feb., 1890. 1030. Is the whole of that selected land? Yes; selected and purchased property.  
 1031. You do not lease any? No.  
 1032. How many acres have you under cultivation? About 300.  
 1033. And what do you grow? Wheat.  
 1034. All wheat? All wheat this season.  
 1035. How many bushels per acre have you had from your crop? Some did very well, but the late crop was not very large.  
 1036. What did the late crop give you? About two bags, or 8 bushels to the acre.  
 1037. And what did the early crop give you? 32 bushels.  
 1038. You have heard the evidence given by Mr. Vaughan and Mr. Manning; I suppose you generally endorse all they said? Yes; they are both neighbours of mine.  
 1039. Have you any evidence to tender of a different character to that given by them? No.  
 1040. You quite endorse the proposal to take the railway to Cootamundra? Yes.  
 1041. You have no suggestion of any kind to make? No.  
 1042. Do you intend to increase your area under cultivation? Yes.  
 1043. *Mr. Humphery.*] Where is your holding situated? It joins this travelling stock reserve.  
 1044. Does the line pass through it? No. It does not interfere with it.  
 1045. *Mr. O'Sullivan.*] Did you buy your land from other selectors? I bought 106 acres from a selector named John Noonan. The great portion of it I bought from the Stockinbingal Estate when it was sold.  
 1046. At auction? It was put up to auction, but it was bought privately afterwards.  
 1047. Do you know of anyone likely to come up here to select? I have seen plenty of people looking round through the district lately, but I do not know them personally.  
 1048. Do you think that the land in the leasehold area is as good as the land already under cultivation? Yes. There is any amount of land between here and Dinga Dinga. If it were thrown open it would not remain long unselected. With regard to the necessity of a railway, I may say that I have had 60 tons of hay here for two years without being able to get it away, and then I had to pay £1 a ton for its carriage to Cootamundra.  
 1049. If the railway had been constructed you would have sent it by train? Yes.  
 1050. Can you say what is the charge for the carriage of hay now? I question whether it could now be taken in for less than from 15s. to £1 a ton.  
 1051. It will be less than that, I suppose, after the harvest has been carted? I do not think so.  
 1052. Then that is the rate of carriage at all times? Yes.  
 1053. *Chairman.*] Comparing the running of sheep on the land with the growing of wheat, which do you find the most profitable? Wheat. I could not live without wheat.  
 1054. As a general thing, what is the net result from sheep—how much from the wool and the natural increase? I had 25 bales of wool off 1,900 sheep.  
 1055. What do the fleeces generally weigh? They averaged this year about 6 lb.  
 1056. What do you get for the wool in the grease? I sold it in the grease this year at 9½d.  
 1057. That would be 4s. 7½d. per fleece? Yes.  
 1058. What per centage of lambs did you have? They were all young ewes—over 300.  
 1059. Out of how many ewes? About 500.  
 1060. Then, I suppose, the lambing would be about 70 per cent.? Something like that.  
 1061. Upon how many acres of grass did your sheep run? About 1,400 or 1,500 acres.  
 1062. How many sheep? There are now about 2,100.  
 1063. Then 1 acre would more than feed a sheep? That has been the case this year; this is a good season.  
 1064. I suppose about 3 acres would feed four sheep? Yes.  
 1065. What was the acreage required, taking the average of seasons;—would the land feed a sheep to the acre? Yes, well.  
 1066. I suppose it is better adapted for sheep than for cattle? Well, the Yeo Yeo district is very good country for cattle.  
 1067. Speaking for the whole year, how many acres would it take to feed a beast? I do not know exactly. I have about 100 head of cattle and horses running on 300 acres and they are all in good condition, there being plenty of grass, still.  
 1068. Running on 2,000 acres in addition to the sheep? Yes.  
 1069. In addition to how many sheep? 2,100.  
 1070. And what is the total area of the land? There are about 1,900 acres of my own.  
 1071. Do you lease any? No; only I have the privilege of running over the biggest part of a paddock of 500 acres which still belongs to the station.  
 1072. But we might reckon at any rate that this country would feed, on the average, at least one sheep to the acre? Yes, well.  
 1073. So that taking the wool and the natural increase even for sheep it would pay you about 7s. or 8s. per acre profit? Yes.  
 1074. *Mr. Humphery.*] Is yours a very superior farm or an average farm? My land is very good. There is not one acre that is not as good as that which I have cultivated.  
 1075. Is it regarded as the best farm in the district? Well, I don't know; there might be some as good as it.  
 1076. You do not know of any better? No.  
 1077. *Chairman.*] Have they tried in the district to cultivate English grasses? Yes, I have seen English grasses growing about 2 miles from here.  
 1078. What kind of grass? Prairie grass.  
 1079. Did it succeed? There was a beautiful crop.  
 1080. Do you think it is profitable? Yes.  
 1081. More profitable than the natural grass? Yes.  
 1082. Did sheep thrive on it? They had it more for cattle.

1083. And they found it good? Very good.

1084. How is it then that other people have not followed that example? That is more than I can tell you. I expect it was tried as an experiment. Mr. Davidson, of the Geraldra station, has tried all sorts of grasses.

Mr.  
D. White.  
3 Feb., 1890.

1085. And is the prairie grass still giving good results? I have not been there for the last couple of years; it is three years ago since I saw it. I should like to say with regard to travelling stock, that about half a million of sheep went up the summer country the year before last.

1086. By which route? Through Cootamundra. There have been from 28,000 to 30,000 sheep on the road between here and Mr. Davidson's, of Geraldra, with nothing visible but a cloud of dust—there not being the slightest sign of grass.

1087. *Mr. O'Sullivan.*] And would the stock owners be likely to use the railway in preference to travelling their stock? Yes. On the occasion to which I refer they could not travel; there was no grass—nothing but a cloud of dust.

1088. *Chairman.*] Did the sheep pass through Mr. Davidson's run? Yes.

1089. And you think it would be more profitable for the stock owners to send them by rail? Certainly.

1090. You think that although there would only be a short distance of railway still they would be sent that distance by train, and be driven afterwards? Yes.

1091. Where did the sheep to which you refer come from? A very long way down this way.

1092. From the Bland? Yes.

1093. Do any sheep come this way from Hillston? I believe so.

1094. Suppose stock owners were sending sheep from Willandry or Hillston, do you think that when they got the sheep to Temora they would make a break and take the sheep whatever distance the railway ran—say from Temora to Gundagai—and then travel them the remainder of the journey? Yes, I certainly think they would.

1095. *Mr. O'Sullivan.*] There appears to be a travelling-stock route on the Bland? Yes.

1096. Is that the route usually followed by sheep going to the mountains? Yes.

1097. Therefore they would have to go through Cootamundra? Yes. In fact I have known them to go miles and miles round to get on this route.

Mr. John Vaughan, sworn, and further examined:—

1098. *Chairman.*] Do you grow any fruit? Yes.

1099. What kind of fruit? Apricots, plums, peaches, apples, and cherries.

1100. Do you find the climate and the soil suitable for growing those fruit? Yes. They will grow very well if they are attended to, and if the ground is dug and the weeds kept out so that the ground will hold the moisture through the summer months.

Mr. J.  
Vaughan.  
3 Feb., 1890.

1101. Do you get satisfactory crops? Wonderful crops.

1102. Why do you not cultivate more fruit-trees? I have ordered a lot. I ordered £7 worth of American fruit-trees from an agent who was round here taking orders. I think he has taken a great many orders from this neighbourhood.

1103. I suppose you know that fruit-growing is more profitable than wheat-growing? From what I have seen here I believe that no farmer should be without fruit.

1104. The fruit you cultivated I suppose you used on the farm? We have not sold any.

1105. I suppose you would be able to sell a good quantity in Cootamundra? I believe so.

1106. Have you tried grapes? Yes, but not in large quantities. There is a vineyard close to Stockinbingal.

1107. Were the grapes you tried a success? They were fairly successful. I grew them more for shade round the house.

1108. I suppose no one has tried wine-making in the district? No.

1109. Has any one got sufficient grapes to enable them to make wine? One selector close to Stockinbingal has 500 cuttings.

1110. Can you say what kind of crop they yielded? A very fair crop. The fruit was of excellent quality.

1111. Do the grapes grow to a large size? Yes, they are very good indeed.

1112. *Mr. O'Sullivan.*] Did you say that an American agent came here to take orders for fruit-trees? Yes.

1113. What kind of trees? All varieties.

1114. All the English fruits? Yes. When we expressed some doubt about giving orders, the agent said he would refer us to Tumut, in which district, he said, his fruit-trees had been very successful.

1115. *Chairman.*] And he is going to send you fruit-trees from America? Yes, they will be here in July next.

1116. *Mr. O'Sullivan.*] And the farmers around here intend to go in for horticulture? Yes. I think the agent to whom I have referred got some very heavy orders from the Temora district.

Mr. William Koenig, farmer, sworn, and examined:—

1117. *Chairman.*] Where do you reside? About half a mile up the road.

1118. How much land have you? 225 acres.

1119. Is it your own land? Yes.

1120. Did you select it from the Government? Yes.

1121. At £1 an acre? Yes.

1122. How many acres of it have you under cultivation? About 80.

1123. What do you grow? Principally wheat.

1124. In addition to the wheat you also have a vineyard? I have cultivated a small patch to see whether or not the ground would produce any fruit.

1125. Do you grow anything besides grapes? Nothing but grapes as yet.

1126. How do you find the grapes answer? They answer very well.

1127. Do they yield a good large crop? It all depends upon the kind of grape.

1128.

Mr.  
W. Koenig.  
3 Feb., 1890.

- Mr. W. Koenig.  
3 Feb., 1890.
1128. What kinds do you grow? Principally table-fruit. I have the Black Prince, the Red Muscat, and the Sweet Water.
1129. The different kinds you have grown are table-grapes? Yes.
1130. Were you accustomed to wine-growing in the old country? No; only since I came out to the colonies.
1131. Have you made wine at Albury? No, round about Mudgee.
1132. Then you are competent to say whether this district would be likely to produce a wine-grape? This district produces as good fruit as any part of New South Wales.
1133. You think you could make wine in this district successfully? Yes.
1134. But, up to the present, you have not grown any wine-grapes? No, not yet.
1135. Do you reckon that your vines have been a success—have they been profitable? They are very profitable, provided they are looked after.
1136. What you have grown you have found to be successful and you have been able to sell them at a profitable price? There is no trouble selling them anywhere at a profitable price.
1137. Do you intend to enlarge your vineyard? Yes, as soon as I am able to do so.
1138. You are so satisfied with the cultivation of grapes that you intend to grow more when you can? Yes, because I believe fruit pays 100 per cent. better than wheat.
1139. You do not grow any other kind of fruit? No.
1140. Have you any intention of cultivating grapes for the purpose of making wine? I have.
1141. Can you say what kind of grape you intend to cultivate? I should cultivate the Hermitage for one.
1142. You think it would be successful here? Yes, it grows well. I have one or two stocks.
1143. Do you know the Albury district? No, I have not been in Albury.
1144. You only know Mudgee? Yes, I was there for a few years.
1145. And from your previous knowledge you think that [this would be a successful district for wine-making? Yes. I think it is as suitable for wine-growing as either Albury, or Mudgee, or any other part of New South Wales.
1146. You say you had no experience in the the old country in wine-making? No. My experience has been more confined to the tillage of the soil in regard to cropping.

Mr. Edmund Hamilton Woodhouse, publican, sworn, and examined:—

- Mr. E. H. Woodhouse.  
3 Feb., 1890.
1147. *Chairman.*] You are the proprietor of this hotel? Yes.
1148. How many years have you been here? Getting on for three years.
1149. Where did you come from? Cootamundra.
1150. Do you know the district well? Yes.
1151. Can you tell the Committee how many teams there are travelling on the road generally? This year I have kept a sort of record of the wool that has passed here. A great deal more would pass if the railway were constructed, because it would be much closer for the people in the Bland country who now send their wool to Young. Over 2,000 bales of wool have passed here this year from different places.
1152. This is the main road between Cootamundra and Temora? Yes. This is on the Bland road, but it is on the direct road for teams to Temora.
1153. It is the road that teams generally take to Temora? Yes; more especially bullock teams.
1154. Do you think other teams have gone between Cootamundra and Temora besides those that have passed your place? Yes, I am sure of it.
1155. Do you think there are many? Yes, a great many.
1156. What proportion do you think? More have gone that way than this way.
1157. More from Temora to Cootamundra? Yes.
1158. I suppose the Hillston wool does not come this way? No; wool comes in from some of the Humberg country and the Meroo country.
1159. Does any wool come from the Barmedman district? Yes.
1160. Does that come this way? Some of it came this way this year, and some of it went the other way—the other Temora way.
1161. You say that if the railway were constructed to Stockinbingal, wool that now goes to the railway at Young would come this way? Yes, I am sure of that, because it would bring them so many miles nearer.
1162. I suppose there are public teamsters generally travelling on the road? Yes.
1163. How many teams are there? About twelve just round about here, besides teams that were drawing last year and that belong further back.
1164. Are they horse teams? No, principally bullock teams.
1165. How many bullocks to the team? Some twelve, some fourteen, and some sixteen.
1166. There are not many horse teams then? No; I have only seen about seven horse teams here this year.
1167. Can you say what the freight is from Temora to Cootamundra by bullock team? I think about 35s. a ton.
1168. That is for wool and other things? Yes.
1169. Do the stations in the neighbourhood keep their own teams or do they employ teams? Nearly all of them employ teams.
1170. Are the teams generally employed all the year round, or only in the wool season? All the year round, when they can keep their cattle.
1171. I suppose after the wool season there is the wheat season? Yes; and the goods that the stations and the farmers require are, as a general rule, brought out by the teamsters.
1172. Is any timber sent away from this neighbourhood? A great many logs have been sent away this year.
1173. Of what kind? Principally pine, and there has been some ironbark and gum.
1174. Is there much of that timber left? There is a good stretch of country beyond, on which there is plenty of ironbark and pine. There is not much gum.
1175. I suppose there are no public schools here? No; not here. There are public schools round about within about 5 miles from here.
1176. Is the population, in your opinion, increasing very much in the district? Yes; it is increasing.

1177. Do you find any visible difference during the few years that you have been here? A great deal of difference in my business.
1178. *Mr. O'Sullivan.*] Stockinbingal stands near the roads leading to Wallendbeen and Cootamundra, does it not? Yes.
1179. Do you notice that any of the wheat or wool teams make for Wallendbeen? No; I never saw any of them going that way. They all make their market in Cootamundra.
1180. Do you know if any of the wool or produce goes by any of the by-roads to the railway (say) to Bethungra, or Junee, or any other point on the railway? Not from around this part.
1181. Further back, near Temora? There may be. I believe Mr. Hefferman's wool goes to Junee.
1182. I notice that Stockinbingal is near the Gundabingal gold-field;—is any mining carried on here? There is a little. There are two reefs working at the present time.
1183. How far from here? One is about 10 miles and the other about 12 miles.
1184. There are no alluvial diggings? No.
1185. Are these reefs paying? Yes; they are paying very well. One man is putting up a plant on his own ground.
1186. Do you keep the post-office? Yes.
1187. Can you state if there is any increase in the number of letters? Yes; there is a great increase.
1188. Have you noticed whether many persons have been up this way looking for land to select;—if there were any such persons you would be likely to see them? Yes; I have seen a good few. I know of some who are now waiting for the reserves to be thrown open in order that they may get a piece of them.
1189. Where are these reserves? There are several in this district. There is a large reserve between here and Geraldra.
1190. I suppose there will be plenty of land thrown open, apart from the reserves, when the leaseholds fall in? Yes. The people want either the leaseholds or the reserves thrown open.
1191. And you think, from what you have observed in regard to strangers coming to look for land, that there is likely to be a rush for settlement when the leases fall in? I am sure of it.
1192. *Mr. Humphery.*] Do you know the district between Stockinbingal and Temora? Yes.
1193. Is there any settlement there? There is a fair amount of settlement.
1194. About how many settlers are there between here and Temora? There must be fifty.
1195. Fifty farms? Yes.
1196. Can you say whether they are within an easy distance of the proposed line of railway? The selector who lives the furthest away out of the fifty I have mentioned is about 8 miles from the line. Most of them are within that distance of Stockinbingal.
1197. The settlement you speak of is within a radius of 8 miles of Stockinbingal? The greater part of it.
1198. Do you know whether the land between Temora and Stockinbingal is good land? Yes; it is very good.
1199. Is all the land fit for settlement? Yes; with the exception of one stretch of ironbark.
1200. With the exception of that stretch of ironbark is the whole of that land fit for cultivation? Yes.
1201. What is the width of the strip you speak of? I suppose it is a little over 2 miles.
1202. Is there any good timber on it besides ironbark? There is some box, some gum, and some pine.
1203. Could railway sleepers be obtained there? Yes. A good few are got there now.
1204. Could you get any ironbark 30 feet clear? Yes; I daresay we could.
1205. And 12 inches diameter? I think so. The trees are big enough.
1206. There is good timber suitable for railway purposes—for bridges and sleepers? Yes; and for fencing.
1207. *Chairman.*] Are there any rabbits in the district? I have not seen any. I have heard of two or three being caught.
1208. There are plenty of hares? Yes. I may state that, if the line went from here to Wallendbeen, I do not think that I should use it—at any rate, not for a good while to come.
1209. *Mr. Humphery.*] You confirm the evidence of the previous witnesses as to the route between Stockinbingal and Cootamundra being preferable to the route between Stockinbingal and Wallendbeen? Yes; because I know that for what produce I buy I have a market in Cootamundra, and I should take it there, as I do now, if the railway were constructed to Wallendbeen.
1210. *Chairman.*] Suppose a township were to spring up at Wallendbeen, similar to Cootamundra, would you not then prefer to go to Wallendbeen? I do not know. I think it would take a good while before the township grew, and I should have to make a fresh market for all the produce I bought.
1211. *Mr. Humphery.*] Is there much travelling stock passing here? Yes. There were a great many sheep last year.
1212. Where did they come from? From the Bland district, the Humbug district, out Hillston way, and all out in the back country.
1213. Where were they going? To the mountain country.
1214. Do you think it at all probable that the railway would be used for the removal of stock in dry seasons? I daresay that if the sheep were not strong enough, people moving stock would use the railway to a great extent.
1215. But I suppose they would be scarcely likely to use it, unless the railway were extended a considerable distance beyond Temora, towards Barmedman and Hillston? There were several last year who would have used it if it had even been here.
1216. For the short distance of 40 miles between Temora and Cootamundra, and then on to Gundagai? Yes.
1217. What distance do the stock travel before reaching here? I have known some of them to travel 300 miles before reaching here, on their way to the mountains. I know a lot of them would have taken the railway if it had been here last year. I know some of them took the railway from Cootamundra.

Mr. E. H.  
Woodhouse.  
3 Feb., 1890.

Mr. Alfred J. J. Elliott, grazier, sworn, and examined :—

- Mr. A. J. J. Elliott.  
3 Feb., 1890.
1218. *Chairman.*] Where do you reside? At Rogan.  
1219. Where is that? About half-way between Temora and Young, on the Bland Creek.  
1220. What occupation do you follow? Grazing, chiefly.  
1221. I suppose you have a pastoral lease from the Government? No, it is conditional purchased land.  
1222. And conditional lease, I suppose? Yes.  
1223. How many acres have you? 1,000.  
1224. What do you run? Sheep.  
1225. How many sheep do you run on the 1,000 acres? My father and brother and myself are running together. We have nearly 4,000 acres together.  
1226. You are working the 4,000 acres in one block? Yes.  
1227. How many sheep do you run on the 4,000 acres? About 4,000 on an average. We have had over 5,000, but that was too many.  
1228. What is the average year by year? Between 3,000 and 4,000.  
1229. On an average the land would carry about a sheep an acre? Not quite. When it is well improved I have no doubt it will, but it is not sufficiently improved to carry that number yet.  
1230. By improvements I suppose you mean ringbarking and scrubbing? Yes, ringbarking, and plenty of water.  
1231. About what do the fleeces cut out there generally? My sheep average about 6, 6½, and 7 lb.  
1232. Ewes with lamb do not cut so much? No, about 5 lb. is the average.  
1233. Have you sold any wool this year? Yes.  
1234. What did you get in the grease? 10½d.  
1235. What is the distance from your place to Cootamundra? About 37 or 38 miles.  
1236. Would the proposed railway benefit you in any way? Yes. If the railway were here I should go in more for cultivation.  
1237. About where would you strike the railway? At Stockinbingal.  
1238. What distance would you be from Stockinbingal? About 25 miles.  
1239. Then if the railway were open to Stockinbingal you would cultivate land, and bring it to the Stockinbingal railway station? Yes. At present I have to pay 2s. a bag for carting wheat to Cootamundra.  
1240. Do you cultivate any land now? Not much. It does not pay.  
1241. You pay about 6d. a bushel to take it to Cootamundra? Yes.  
1242. And do you think that if the railway were brought to Stockinbingal wheat-growing would pay you better than sheep? It would be better to combine both, unless you went in for wheat extensively. I have no doubt it would pay then.  
1243. Is your land fit for wheat-growing? Yes. I have grown as much as 30 bushels to the acre.  
1244. Is it red soil? Yes.  
1245. Is the land in your neighbourhood mostly red soil? Light red soil. There is some clay land there too.  
1246. Do you find the clay land good for wheat? Yes. It is rather hard to work, that is the only thing.  
1247. Is there any other cultivated land in your neighbourhood? Yes; on the Narraburra Creek, about 5 or 6 miles from my place, there is a good deal of cultivation going on.  
1248. Do they grow wheat? Yes, chiefly.  
1249. Where do they send their wheat to? Cootamundra.  
1250. Are there many selectors in your neighbourhood? There are not many close to us. Further down there are more.  
1251. Is there any land open for selection in your vicinity? Not at present—it is all locked up under leasehold.  
1252. Do you think it will be selected when the leaseholds are thrown open in July? There will not be a bit of it left. I believe it will all be taken.  
1253. *Mr. Humphery.*] Do you know the whole of the district between Temora and Stockinbingal? Yes.  
1254. Can you say whether the land is suitable for wheat culture? Yes, the whole of it is, with the exception of the ironbark land.  
1255. Where do you send your wool now? To Cootamundra. I do all my business with Cootamundra.  
1256. Within what radius from Temora do you think there is land suitable for wheat cultivation? I could not say, but I believe that right out through the Meroo and all out that side it is good agricultural land.  
1257. Do you know it yourself? I know part of it.  
1258. Is the land round Temora suitable for wheat culture? Yes, it is very suitable.  
1259. *Mr. O'Sullivan.*] Is your land a fair specimen of the agricultural and pastoral country round that way? Yes.

Michael Joseph Noonan, Esq., auctioneer, &c., sworn and examined :—

- Mr. M. J. Noonan.  
3 Feb., 1890.
1260. *Chairman.*] Where do you reside? About a mile from here.  
1261. What occupation do you follow? I am an auctioneer and a stock and station agent.  
1262. Is the number of sheep and cattle in the district increasing? Yes; the number has increased very much during the last few years.  
1263. How many years have you been in the district? I was born here; I have been here over twenty years.  
1264. And you know the stations very well? I know every acre of land in the district.  
1265. Do you think that all the land that is available has been selected or purchased? Yes; I do not know of any Crown lands now available.  
1266. And is it your opinion that when the leasehold areas are thrown open the whole of that land will be selected? I hear many persons inquiring for land, and I think it will all be selected.  
1267. Do you think there are a sufficient number of people in the district without land who will be willing and ready to take up the land when it is thrown open? There will not be enough to take it all up, but I know of several people from a distance who have been inquiring for land. 1268.

1268. Can you say from what districts they will come? Some from Murrumburrah and Wallendbeen.
1269. As a stock and station agent and auctioneer, do you do any business with Wallendbeen? No; I have done no business with Wallendbeen.
1270. Do you know the road from here to Wallendbeen? Yes, well.
1271. Do you think there is a large amount of settlement between here and Wallendbeen? There is on the southern side of the proposed line, towards Cootamundra.
1272. Do you know the route that has been suggested for a railway between Stockinbingal and Wallendbeen? Yes; I travelled with the engineer when he went over the line.
1273. Is there much cultivation on that route—on the Wallendbeen side? No, there is not a great deal. It goes through two or three big stations—Nubba, Berthong, and Clifton.
1274. Does it go through Berthong? Yes; it touches Berthong.
1275. About how many selectors do you think there are on the railway route between Stockinbingal and Wallendbeen? I do not think there are more than thirty-five or forty at the very outside.
1276. How many of these are on the southern side, and how many on the northern side of the line? I know of very few on the northern side, except just at Wallendbeen;—in fact I do not know any except the stations.
1277. You say there are thirty-five or forty selections between Stockinbingal and Wallendbeen? A good many of them are about the Congo.
1278. And are the selections taken up in the interests of the station? Not that I am aware of.
1279. They are in the hands of *bona fide* selectors? Yes.
1280. Do these selectors cultivate much land? Yes, they cultivate a good deal.
1281. Where do they take their wheat—to Wallendbeen? A good many go to Wallendbeen, and others to Cootamundra.
1282. Would not the railway, if taken to Wallendbeen, be a great advantage to those settlers? There is no doubt it would be an advantage to them. About 3 miles from Wallendbeen on this side there are a good few selectors, and then there are not many more until you come to Congo and Morrison's Hill.
1283. What is about the average of the cultivated areas on that line? I could not exactly say.
1284. Are there any large cultivated blocks? No, there are no large blocks. They run in extent from 50 acres to 100 acres.
1285. Are there many cultivated to that extent? Yes.
1286. And they have to cart their wheat to the Wallendbeen station? Yes.
1287. About how far does the cultivation extend from Wallendbeen in this direction? For about 2½ miles, and then the line goes through the station.
1288. That is as far as the range? Yes.
1289. Is there any cultivated land on this side of the range and on the Wallendbeen railway route? Yes, there are a good many selections on Morrison's Hill.
1290. And are there many this side of Morrison's Hill? Yes, on towards Congo there are a good many selectors.
1291. And are there many this side of Congo? Yes, I think there are ten or twelve about Congo.
1292. Do they cultivate largely? Yes, pretty largely. Some of them cultivate up to nearly 300 acres.
1293. About what distance would they be from the proposed Wallendbeen railway line? They would be within 2 miles of it or closer.
1294. How many miles do you think they would be from the Wallendbeen railway station? From 14 to 16 miles.
1295. How many miles do you reckon it is from Stockinbingal to Wallendbeen by the surveyed railway route? About 21 or 22 miles.
1296. *Mr. Humphery.*] How many of the thirty-five or forty selections you mentioned are between Congo Creek and Yeo Yeo? I think about twenty.
1297. Would those twenty settlers be fairly well served by the line from Cootamundra to Yeo Yeo? Yes; and the most distant of them would not be more than 5 miles away from the line.
1298. How many other settlers are there between Congo Creek and Wallendbeen? About twelve or fifteen.
1299. How would they be served? They would certainly be best served by the line to Wallendbeen.
1300. They would have to send their produce to Wallendbeen? Yes.
1301. They would not be served by the line from Cootamundra to Yeo Yeo? No.
1302. I suppose you cannot say approximately how much land they have under cultivation? I think some of them about Morrison's Hill have up to 200 acres.
1303. How far are they from the proposed line between Cootamundra and Yeo Yeo? About 10 miles.
1304. And how far from Wallendbeen? About 8 miles.
1305. So that it would be more convenient for them to send their produce to Wallendbeen than to use the line from Cootamundra to Yeo Yeo? Yes.
1306. *Mr. O'Sullivan.*] Do you hold any stock sales at Stockinbingal? Yes.
1307. Do you get any stock from the Congo and Tumbleton sides? No. They come principally from Temora and about this neighbourhood.
1308. I suppose you are pretty well acquainted with the land out towards the Bland? Yes, I know it all.
1309. In your opinion is it well suited for agriculture? Yes, with the exception of some small patches or ridges of ironbark.
1310. Then the country out on the Bland will be served by a railway going from Stockinbingal to Temora? Yes. The railway would serve all the Bland country.

Mr. Joseph Johnson, farmer, sworn, and examined:—

1311. *Chairman.*] Where do you reside? About 6 miles from here, on the Gundabingal Station.
1312. What occupation do you follow? A bit of carrying and a bit of farming.
1313. How many acres of land have you? 380.
1314. Is it a selection? Yes.
1315. What do you do with the land? I cultivate 35 acres.
1316. What do you grow? Wheat.

Mr.  
M. J. Noonan,  
3 Feb., 1890.

Mr. J.  
Johnson,  
3 Feb., 1890.

1317.

- Mr. J. Johnson.  
3 Feb., 1890.
1317. How many bushels to the acre did you get this year? About 3½ bags.  
1318. About 14 bushels? Yes. It might be more.  
1319. You do carrying on the road? Yes.  
1320. What teams have you? A bullock team.  
1321. How many bullocks do you generally use in a team? From ten to sixteen.  
1322. How many tons are you able to carry on this road? It depends on the time of the year.  
1323. Speaking in general terms, how many tons can you manage to take this time of the year? 6 or 7 tons.  
1324. I suppose you have very little carting to do in the winter time? Not much.  
1325. What do you generally carry? Generally wool; anything that is going.  
1326. What do you charge for carrying wool to Cootamundra? £1 a ton from the Gundabingal station, and £1 4s. from Gundabingal North.  
1327. Do you carry any from Temora? No.  
1328. I suppose there is a large amount of stores carried backwards and forwards to Temora? Yes, but they generally go the other road.  
1329. Do you carry anything from Stockinbingal? No.  
1330. Do you carry anything to Stockinbingal? Not often.  
1331. Is there no wheat or wool to be carried? There is plenty of wheat.  
1332. What do you charge for carrying wheat? They give 1s. 6d. and 1s. a bag—1s. 6d. for 20 miles, and 1s. from here, which is about 12 or 14 miles.  
1333. Can you say how many teams there are on the road? Sometimes there are more than at others.  
1334. How many do you think there are carrying at the present time, during the wheat season? There might be fifteen or twenty that I know of. I am not on the road now, and I cannot say exactly. There may be more. I believe there are twenty.  
1335. I suppose the majority of the teamsters are also selectors, and have land of their own? Yes; a good many of them.  
1336. At other times of the year I suppose they are clearing their land and cultivating it? Some are, and some come from other parts to cart wheat.  
1337. In which direction from here is your selection? It is about north-west from here, on the Gundabingal Station.  
1338. I suppose you are also of opinion that the railway would be better taken to Cootamundra than to Wallendbeen? Yes.  
1339. You think it would be more beneficial to the district generally? Yes, a great deal more.  
1340. Do you bring any wool from the westward? Yes, sometimes. I do not go back for wool now, but only cart for the sheds about here.  
1341. What sheds do you take wool from? From Gundabingal, 6 miles, from here, and from Gundabingal north.  
1342. And they send their wool to Cootamundra station? Yes.  
1343. Is there any difficulty in winter time in getting stores taken to Temora on these roads? Sometimes there is a little difficulty.  
1344. What does cartage go up to in the winter time from Cootamundra to Temora? From 25s. up to £2.  
1345. Do you find farming pay you better than carting? No.  
1346. You think the carting pays you better? Yes, because I have very little land under cultivation.  
1347. Do you find bullocks more profitable than horses? I have not had much to do with horses. I think bullocks are more profitable.  
1348. *Mr. Humphery.*] After the wool and wheat have been sent away from the district during the summer, is there much other traffic? I do not think there is a lot then—not during the winter.  
1349. Is there no traffic carting stores up to the different stations? There is a good deal of traffic sometimes in timber and sleepers.  
1350. Where does the timber come from? From the belt of ironbark about 6 miles from here, on the way to Temora.  
1351. What quantity of timber do you think would be sent? It is only taken to Cootamundra for repairs to the railway.  
1352. Is there any saw-mill up there? Not now. There were two during the construction of the Gundagai line, but they were closed after that contract was finished.  
1353. Is there abundance of timber suitable for railway purposes still available? Yes.  
1354. Do you know the size of timber required for sleepers and the construction of bridges? Yes.  
1355. Is there any timber of that sort? There is plenty of bridge timber.  
1356. *Mr. O'Sullivan.*] How far out in the back country do the teams go that bring wool to Cootamundra? As far as Bygaloree.  
1357. What distance is that from Cootamundra? Over 100 miles.  
1358. And do you think that if the railway went on to Temora they would draw wool from a distance of 100 miles from Temora in the same way? I am pretty well sure of it. Wool that now goes to Junee would come this way, and wool that now goes to Young would come this way—if there was a railway to Temora.  
1359. Do you know if there is any wool that goes down towards Hay that might come this way? Yes, there is a good deal of wool within a pretty easy distance of Temora.  
1360. Which goes towards Hay to be shipped on to Victoria? Yes.  
1361. Do you think that would be drawn this way if the railway were taken to Temora? That would depend on the railway freight, but I think a good deal of it would.

Mr. David White, sworn, and further examined:—

- Mr. D. White.  
3 Feb., 1890.
1362. *Mr. Humphery.*] Have you had any experience as a railway contractor? Yes.  
1363. In this colony? In Queensland, Victoria, and New South Wales.  
1364. Can you say what is the cost of wire fencing—seven wires, posts, 6 ft. 6 in. long, 6 in. x 3 in., and 8 ft. 3 in. apart, No. 6 wire; what would that cost per mile? £55 a mile they gave at Wallendbeen.  
1365.

\* NOTE (on revision):—The fence I referred to had a top rail. However, the money suggested would put up a first-class fence. This fence was two wires, equal to the top rail.

1365. That is what the railway contractors paid for getting the fencing done? Yes.  
 1366. Was that first-class railway fencing? Yes.  
 1367. Who were the contractors? Amos Brothers.  
 1368. Who erected the fencing? A man called Williams; he had a mate with him.  
 1369. Where does he live? He lives out Gundagai way, now.  
 1370. Was that for the whole length of the line? No, only a part of it. I think a mile on each side of the line.  
 1371. Could you say what would be the value of railway fencing of a similar description between Temora and Cootamundra? I reckon that if the wire were delivered on the ground the posts could be cut and put up, and everything else done for £25 per mile.  
 1372. Do you think the fencing of this line could be done for less than £55 per mile, which was the cost of the fencing at Wallendbeen? The fencing could be done for less, because the stuff is alongside, and there is no cartage.  
 1373. Have you any doubt that the fencing could be done for £55 per mile? None at all.  
 1374. Would you be prepared to take a contract to do the whole of the fencing between Temora and Cootamundra for £25 a mile—you finding all the material with the exception of the wire? Yes.  
 1375. *Mr. O'Sullivan.*] Would your posts have the holes bored for the wires? Yes, the posts would be bored and the wires put in.  
 1376. *Chairman.*] A similar fence to that at Wallendbeen and on the Government railways? Yes.

*Mr. D. White.*  
 3 Feb., 1890.

Mr. Thomas Walter Manning, sworn, and further examined:—

1377. *Mr. Humphery.*] You have heard the evidence of Mr. White? Yes.  
 1378. Do you know if the fencing referred to was done for £55 per mile? I could not say anything about that.  
 1379. Could you say at what price fencing similar to that described to Mr. White could be erected between Temora and Cootamundra? I am certain it could be done for the sum Mr. White mentioned.  
 1380. Have you had any experience in fencing? Yes, a good deal.  
 1381. Have you had any fencing done yourself? Yes.  
 1382. What has your fencing cost you? £17 10s. per mile.  
 1383. Is that the highest? Yes.  
 1384. What is the number of your wire? No. 10.  
 1385. Are you quite sure that £25 per mile would cover the cost of all materials except the wire and also pay for the labour? Yes, I am certain of it.  
 1386. Would you be prepared to take a contract for the erection of railway fencing similar to that described to Mr. White? Yes, I should be quite prepared to take a contract for the fencing at £25 per mile, and the wire found.

*Mr. T. W. Manning.*  
 3 Feb., 1890.

TUESDAY, 4 FEBRUARY, 1890.

[*The Sectional Committee met in the Court-house, Temora, at 10:30 a.m.*]

Present:—

HENRY COPELAND, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. | EDWARD WILLIAM O'SULLIVAN, Esq.

The Sectional Committee further considered the proposed Railway from Cootamundra to Temora.

Francis Hickey, Esq., auctioneer, &c., sworn, and examined:—

1387. *Chairman.*] Where do you reside? At Temora.  
 1388. How long have you resided here? Over ten years.  
 1389. What is your occupation? I am an auctioneer and commission agent.  
 1390. Have you any experience as a farmer? No.  
 1391. Have you had any experience as a miner? Yes; I have been mining for many years.  
 1392. Does your business lie in the direction of selling stations or selections? I sell selections, merchandise, landed property, and houses.  
 1393. Can you tell the Committee what is the value generally of the selected land in the neighbourhood? I sold some selected land at £2 5s. an acre. I offered some property for sale some few months ago, the upset price of which was £5 an acre.  
 1394. Was that a selection? Yes.  
 1395. Were there many improvements on the land? Yes.  
 1396. Did you get a buyer for it? No.  
 1397. What was the highest bid? I think the highest offer for the land at that time was £4 14s.  
 1398. How many acres were there? 640.  
 1399. Is there much demand for land in the neighbourhood? There is for original selections.  
 1400. Do you think that if any land were thrown open it would be readily selected? Yes; there are in fact some Victorian farmers here now looking for land.  
 1401. How many? I think there is one gentleman in Court now.  
 1402. I suppose you mean there are one or two cases of that kind? I have known as many as twenty in a week inquiring for land.  
 1403. Do you know of very much good land held in reserves or within the leasehold areas on the squatters' runs? Not within the leasehold areas—it is all in the resumed area.  
 1404. The resumed area, I presume, is all selected? No. There are about 23,000 acres of the resumed area held in reserves at the present time.  
 1405. What kind of reserves? There is one called the Narraburra Reserve, which extends from near the boundary of the leasehold area up to Combaning.  
 1406. Whose leasehold area? The Temora station.  
 1407. How many acres does it contain? There are about 13,000 acres in that reserve alone.

*F. Hickey, Esq.*  
 4 Feb., 1890.

- F. Hickey,  
Esq.  
4 Feb., 1890.
1408. What proportion of that 13,000 acres do you think is suitable for agriculture? The whole of it.
1409. It is a reserve for water? Yes.
1410. Is there any water on it? Yes.
1411. Of what nature, a creek? There is a creek and there is a very large dam on the creek.
1412. I suppose the dam belongs to the station? No; I think it belongs to the Crown.
1413. Who constructed it? I do not know.
1414. I suppose it would be desirable to retain that dam, so that the water may be available for the use of the public? Yes. The dam is set apart for the public. I think a mile on either side of it is reserved.
1415. Then there is a reserve within a reserve? Yes.
1416. And all the land outside the inner reserve, I suppose, could be dispensed with in the interests of the public? Yes; in fact it is all cut up into special areas.
1417. Do you think that land will be selected? Yes, if it is thrown open, every inch of it will be selected.
1418. Have you any information with respect to the number of selections within a radius (say) of 10 miles of Temora, or any other reasonable radius—have you any statistics? Yes. We collected statistics eighteen months ago, which embrace a radius of 18 miles from Temora, and we left those statistics with the Minister for Works. There were 196 selections in that list; about thirty did not send their statistics in.
1419. How far did you go from Temora? We took a radius of 18 miles round Temora.
1420. You have not taken any statistics since then? No. The railway league sent a man round to collect information, and each farmer gave the quantity of land he held.
1421. Have you any reliable information with reference to the number of acres that were cultivated this season, and the yield? No; we had not time to prepare that information.
1422. Do you think the land in the district is increasing or decreasing in value? Increasing.
1423. Do you mean agricultural land? Both town land and agricultural land.
1424. What is there to make the land increase in value at the present time? All the Crown lands in the neighbourhood are occupied, with the exception of the reserves.
1425. Is there no land available for selection? No; unless the people go a long way back.
1426. Is the value of the town land increasing or decreasing? Increasing.
1427. Is the land worth as much now as it was when gold-mining was brisk? A long way more—four times the amount.
1428. And I suppose, in your opinion, it obtained its value on account of agriculture? Yes.
1429. Does the town present the appearance of being permanent? Yes; it is a permanent town, and it is increasing.
1430. With regard to the proposed railway, do you think it is the opinion of the majority of the people that it would be better to take it to Cootamundra or to Wallendbeen? I do not think the sense of the people has been taken on that subject.
1431. You have not endeavoured to obtain the sense of the people? No.
1432. I suppose you know that the route *via* Wallendbeen would be 9 miles shorter? I have heard so.
1433. Well, if you wanted to go from here to Sydney or Goulburn you would have to travel 9½ miles more by Cootamundra than by Wallendbeen. That additional journey would take you, I suppose, half an hour. The question is whether you think it would be in the best interests of the people to construct the railway to Cootamundra, and have to travel 9½ miles additional, rather than have the railway constructed to Wallendbeen, and have a journey 9½ miles shorter? While recognizing the argument you bring forward, I unhesitatingly go for Cootamundra, for this reason: we, at Temora, are so situated that we are on the natural highway from Queensland, and from all the back country down as far as the Lachlan, and from thence on to the river Darling. There are immense quantities of cattle coming through here, and immense quantities of sheep travelling to summer country, and Cootamundra is in a direct route for that traffic. In my opinion it would be better to construct a line to Cootamundra, for present convenience, and allow the line to Wallendbeen to remain to be constructed in the near future, when the surrounding country will be more densely populated, and when the expense of a second line from Yeo Yeo to Wallendbeen would not matter such a great deal, and then there would be two lines which would suit all parties. The construction of the line would, in a great measure intercept the traffic from the back country to Victoria. That is the way I look at it.
1434. Can you say where the principal business is transacted—in the direction of Goulburn and Sydney, or in the direction of Wagga Wagga and Albury? I think the principal business is transacted with Goulburn and Sydney.
1435. Are there any business connections with Albury, Wagga Wagga, or Victoria? There are; but not so many as in the other direction.
1436. Where are the fat stock sent to? The fat stock is nearly all sent to Victoria. During the last half-year about 8,000 head of cattle passed through here, and about 130,000 sheep. The sheep chiefly come from the mountains, or what they call the summer country.
1437. They came out here to go west? Yes, to go down to the back country. In time of drought a great many of these sheep would be trucked to the summer country.
1438. I was asking you more particularly what market you sent your fat stock to—Sydney or Melbourne? Some go to Sydney, but the greater portion, both fat and store, go to Victoria.
1439. That applies to both sheep and cattle? Yes.
1440. Where is the wool sent to? Some of the wool goes to Victoria, but the greater portion goes to Sydney.
1441. Can you particularize any of the stations and say where they send their wool to? I cannot.
1442. You have no business transactions in that direction? No.
1443. Where is the wheat sent to generally? The wheat, as a rule, goes down the country—Goulburn and Sydney; some of it goes to Wagga Wagga.
1444. And to Albury, I suppose? I do not know that there are any buyers from Albury here.
1445. Can you say whether the majority of it goes to Goulburn and Sydney? Yes, the greater part goes to Goulburn and Sydney.
1446. You have no information with reference to the average yield of wheat for this year? Only from hearsay.
1447. *Mr. Humphery.*] I think you said there were 196 selections, and the number not sent about thirty? Yes.
- 1448.

1448. In what direction are the majority of them—Stockinbingal or towards Barmedman? There are none out Stockinbingal way within the radius mentioned, on account of the reserves. F. Hickey, Esq.
1449. The selections you referred to are west and north? They are all round Narraburra, which is north-east; on the Trungley station, which is north; and at Mimosa, which is nearly due west from here. 4 Feb., 1890.
1450. And very few of the selections you refer to are east of Temora? Very few, only those on Narraburra.
1451. How far is the most distant of the 230 selections from Temora? About 18 miles.
1452. Do you know the country between Temora and Barmedman? I have been over it.
1453. Can you speak as to the character of the soil? I think it is somewhat similar to that at Temora; if anything, a little better.
1454. When you spoke of 230 selections, did you mean that there were 230 families settled on various selections, or that there were 230 selections taken in different interests? All taken by families themselves. I think out of the number there were some forty-three single men, and the remainder were married people.
1455. Is there any timber between Barmedman and Temora suitable for railway construction? I think there is one belt of iron-bark.
1456. How far is it from Temora? A little more than half-way, perhaps 13 miles.
1457. Do know anything of the industries that are carried on at Temora? Yes.
1458. Is there more than one saw-mill in the town? No, there is only one.
1459. How many vineyards are there? There are three in the immediate neighbourhood.
1460. Can you say whether there are other cereals grown besides wheat? Yes; oats and barley.
1461. In any quantity? No, not largely.
1462. Any maize? There may be a little maize, but I am not aware.
1463. Is the soil suitable for the cultivation of the olive? Yes; in fact I think the soil is eminently suited for the cultivation of all fruits.
1464. What is the average rainfall? From 14 to 18 inches.
1465. Would there be any traffic for a railway between Temora and Cootamundra after the wool and wheat had been sent to market? Oh, yes. There would be all the goods from the town—storekeepers' goods. There would be a good deal of merchandise, as well as the passenger traffic.
1466. I am speaking of products? No; I do not think there would be anything else at present.
1467. What passenger traffic is there at the present time between here and Cootamundra? An average of perhaps six a day backwards and forwards.
1468. How many stores are there here? I could not say.
1469. Do you know how many public houses there are? I think there are seventeen.
1470. All doing business? Apparently so; they all take out licenses.
1471. What is supporting the town at the present time? I think it is supported by the agricultural interests. Mining at the present time is very poor.
1472. Do you know whether there has been much wheat grown beyond Temora? A great quantity. The people are holding their wheat because the price is very low, and they have to pay from Temora 2s. a bag, and 3s. between Cootamundra and Junee. At these rates it would not pay them, and they are holding for better prices.
1473. How will their wheat be sent? By way of Cootamundra and Junee; the principal part by Cootamundra.
1474. *Mr. O'Sullivan.*] Is the population of the town of Temora increasing or decreasing. I think it is pretty well at a standstill.
1475. Does it fluctuate at all? Very little; the people seem to be settled.
1476. How do you account for the discrepancies in the figures supplied to the Minister for Works, which show that in September, 1887, the population was 1,700; in April, 1889, it was 1,146, and in June, 1889, only 508? The last figures must only represent the population within the town boundary.
1477. Would 1,700 include the population surrounding the town? Yes; within a reasonable distance, not the farmers altogether.
1478. This town was depressed for a considerable period, was it not? Yes.
1479. And is it suffering a recovery now? Yes; it is increasing every year.
1480. There is evidence then that the agricultural interest has now taken the place of the mining interest, and is likely to make Temora a prosperous town? Yes.
1481. With regard to the mining interest, can you say whether that is likely to recover itself? Yes.
1482. You have a reef here called the Mother Shipton Reef, have you not? Yes.
1483. Have they resumed operations there? Yes.
1484. Can you give the Committee any idea of the imports and exports of the town during the year? No.
1485. Do you think this is a correct statement—that the passengers in the coach in one year numbered 1,700; that the imports were 20,000 tons, and the exports 4,000 tons? Yes. Those figures are from the statistics, taken eighteen months ago.
1486. Were those statistics taken in a reliable manner? They were.
1487. Were any steps taken to verify them? The storekeepers supplied their railway returns, and gave the information.
1488. You think, then, that every reasonable precaution was taken to place a true statement of the case before the Minister for Works? Yes.
1489. Are those figures likely to be increased? I think so. In fact I am almost sure of it.
1490. You spoke just now of some selected land that was sold at £2 5s. an acre;—was that sold subject to the unpaid balances? Yes.
1491. And the offer of £4 1s. for another block, was that with the same provision? Yes.
1492. Have you noticed whether pastoralists are in the habit of driving their starving stock this way to the summer country? Yes, they always go by Temora.
1493. And whence do they proceed then? They proceed to Cootamundra.
1494. Is this along the stock route? Yes, the stock route runs just outside the town.
1495. To what do you attribute the fact that the land between here and Stockinbingal is not settled? To the fact that it has been reserved. We could not get it thrown open. We have tried time after time without success.

- F. Hickey, Esq.  
4 Feb., 1890.
1496. Is the Narraburra water reserve on that land? Yes. That has been cancelled. The water was analysed, and found to be unfit for human use; consequently, the Government gave the reserve up.
1497. Who holds it now? It is Government land. I saw a little time ago that the lessees of the run had a lease of it, or were paying rent for some portions of the land.
1498. Then why is this land not taken up? It is still reserved.
1499. Is there not also a large gold-field reserve out there? Yes.
1500. What is the name of it? Temora gold-field reserve.
1501. Is there not a Gundabingal reserve? That is a separate reserve.
1502. So that you have three reserves between Temora and Stockinbingal? Yes.
1503. Not one of which should be reserved? I consider they should all be thrown open for selection.
1504. Is the iron-bark country reserved? Yes, that is in the Narraburra reserve.
1505. Have you any good orchards or vineyards around the town? Yes, very fair.
1506. Do you know if any of the horticulturists cultivate the olive and the vine to any extent? Mr. Deitz imported 240 olive-trees from Adelaide last year, and planted them, and I understand they are growing well.
1507. Are the owners of the land between Temora and Cootamundra likely to give to the Government, free of cost, the land required for the railway? I could not say.
1508. Have they not made that offer to the Minister for Works? Not that I am aware of.
1509. It is in print in one of the documents supplied to the Minister. Do you think the land owners would be likely to hold to that offer if it were made? I daresay the selectors would give the land.
1510. But not holders of town lots? I should hardly think the holders of town lots would be likely to give up the land after improving it.
1511. Have you heard of any selectors in this neighbourhood selling out? Yes.
1512. To whom do they sell? I have several selections in hand now for sale.
1513. Why are they selling out? One man is selling because his sons have left him, and he is rather old to look after such a big holding, and he would like to get into some other pursuit.
1514. Any other reasons assigned? Another has sold because he has a better property elsewhere, and another man sold out a short time ago for the very same reason—because he had an hotel property with a large selection attached, on which he could do better.
1515. Then in each case a reasonable excuse has been offered for the sale of these lands? Yes.
1516. Are the lands being bought by pastoralists, or by other selectors? By neighbouring selectors.
1517. *Mr. Humphery.*] Is the site of the proposed station, as marked on the map, a suitable one? The land is rather low at that particular spot. I think it would be better if it were taken higher up the hill.
1518. How far from the proposed site? 100 or 200 yards.
1519. What inconvenience do you apprehend from the present site being a little lower than the one you suggest? The land there is rather boggy in wet weather, it being a natural water-course.
1520. That is the only objection? Yes.

Mr. Henry Morris, miner, sworn, and examined:—

- Mr. H. Morris.  
4 Feb., 1890.
1521. *Chairman.*] Where do you reside? At Temora.
1522. How long have you been here? Since August, 1880.
1523. What is your occupation? A miner—what they call a puddler.
1524. Have you been working in alluvial mines since 1880? No. I have been puddling dirt for the public.
1525. You have not done any mining on your own account? Not on Temora.
1526. I suppose you have been mining in other parts? Yes. At Gulgong, New Zealand, and other places.
1527. What is your opinion with reference to the prospects of this place with regard to alluvial mining. Do you think the alluvial mining is worked out? I believe there is a possible chance of new gold being struck, provided people would prospect. There are, very likely, places within a few miles of the town.
1528. Is there much prospecting being done? Very little outside the old lead.
1529. Has the district been prospected? It has not.
1530. About how far from the town do you reckon it has been thoroughly prospected? Not above 4 miles.
1531. You think, then, that within 4 miles of the town it may safely be concluded that there is nothing likely to be discovered? There are one or two places within the 4 miles that have not been tested.
1532. Have not those places been sufficiently prospected to decide whether or not there is payable gold there? There are one or two places that have not.
1533. What is the depth of sinking there? About 70 or 80 feet.
1534. All soft sinking? Yes; fair sinking.
1535. I suppose the general run of the depth is about from 60 to 80 feet? In some instances the depth is 170 feet.
1536. Does it form into a lead where the ground is deep? It is more like a lode in places—it does not continue into the lead.
1537. What was the nature of the wash-dirt—was there much gravel? Some places it was very gravelly, but in others there was very little gravel.
1538. Was the gravel much water-worn? Yes, a lot of it. But down this part of the lead there was very little gravel.
1539. Do you think there is any probability of a deep permanent lead being discovered in the neighbourhood? In the present lead there are several large holes that have never been bottomed, and there is splendid wash all the way down, but the gold appears to get poorer as they get deeper. The ground, therefore, cost too much to work, and the men left it.
1540. Did it make any water, and become wet? No; it was very dry. There are several water-shafts getting water at a depth of about 210 feet. There is very little variation in the depth of the water.
1541. Can you say how much gold has been got from the field up to the present time? No.
1542. Are you fully employed with your puddling-machines? Not at present; work is a little dull at present.
1543. How many machines have you? Three.

1544.

1544. Horse-power, I suppose? Yes.
1545. I suppose, as a matter of fact, there is very little payable dirt now to work? Very little. The average for last year was very poor.
1546. We may consider that, for all practical purposes, the field is worked out as far as is known? Yes, at present. It is only just fossicking in the old lead. It is worked out if there is nothing new.
1547. So that there is nothing in the shape of alluvial mining to look forward to to give traffic to the railway or prosperity to the town? Not at present.
1548. Are you the only puddler here? No; there are two others—Fee and Brown.
1549. How many machines have they? Brown has two, and Fee has four.
1550. Are they employed? I think they are employed pretty much about the same as myself. We get about three days a week at present—about half our time. The quantity of dirt I puddled during the last twelve months was 3,250 loads.
1551. What was the yield? About  $2\frac{1}{2}$  dwt. to the load.
1552. Is the gold pretty good? Very good gold.
1553. What do you charge for puddling? 3s. per load.
1554. What does it cost to cart it to the machine? I cart it and puddle it for 3s.
1555. So that the miners have about 7s. a load for getting it? Yes.
1556. What depth of dirt is there? There are various depths, from 30 feet to 3 and 4. In some places they do not know the depth of it. There is any amount of dirt giving from 1 to 2 dwt. to the load.
1557. What do you mean by "any amount"? Thousands of loads. But it is so deep that it will not pay to raise it.
1558. I suppose the ground requires timbering? Yes; you want a lot of very heavy timber, and it is so deep that it takes them very long to raise it.
1559. In what form is it;—is it a flat horizontal layer of clay and gravel? Gravel. It is also gravelly about the Golden Gate, towards the top of the town.
1560. Does it take the form of headings? It is down on the bottom, underneath the original workings.
1561. Were the original workings on a false bottom? Partly, and in other parts there is a very high reef on each side, and these are full of holes containing wash-dirt, and none of them have been bottomed.
1562. What do you reckon is the lowest yield that would pay to get this dirt out? With the present state of working, and without good appliances, 3 dwt. is the lowest yield that would pay in the case of rich gravel; that is, working as they do now with a whip to raise the dirt.
1563. Then the work that is being done at the present time is really not payable? No.
1564. About what wages do the miners make after paying you for puddling? Sometimes they make very little. They might make £2. I believe that if the wash-dirt would yield 3 dwt. they would make £2 10s.
1565. It will not yield more than  $1\frac{1}{2}$  dwt.? No, it will not; and they only make about £1 or £1 5s. a week.
1566. Where do you get your water from? The dam. We have to depend upon race water.
1567. Are there any gold-fields being worked between Temora and Stockinbingal? Yes; at the Scrub Yards and Woodstown, about 17 miles from here.
1568. Is payable mining being carried on there now? No. There is nothing doing there as regards mining.
1569. It is abandoned? Yes. There might be two parties working out there, but that is about all.
1570. Is there anything being done in mining between Temora and Barmedman? Nothing. In fact I think it has been very little prospected.
1571. Do you know how many men are employed here in alluvial mining at the present time? I should say not more than 200.
1572. *Mr. O'Sullivan.*] Have you any knowledge of the Temora and Gundabingal Gold-fields reserves? No.
1573. Did you ever hear of any gold-fields being discovered on them? No.
1574. Do you think those lands ought to be locked up in reserves? No. I think they ought to be thrown open.

Rev. John Brown Gribble, Church of England Clergyman, sworn, and examined:—

1575. *Chairman.*] Do you reside in Temora? Yes.
1576. What is your occupation? I am a clergyman of the Church of England.
1577. Do you travel much in the district? A great deal.
1578. Do you think from your experience that the district is progressing? I do.
1579. That the population is increasing? Yes.
1580. I suppose you are in the habit of visiting the selections and the stations? Yes.
1581. Can you tell whether the selectors in the district are reasonably prosperous? That is my opinion.
1582. You think that they are not only making a living but also putting a little by for a rainy day? Their prospects are very good. They had a very dry season, but during the last season they were more successful, and their prospects are very good.
1583. Speaking in general terms, do you think they are mostly free from debt, or are they heavily in debt? I do not think they are heavily in debt. The extent of their indebtedness, of course, I cannot tell.
1584. I am only asking you to say in general terms? My opinion is that they are a very industrious and very prosperous body of men.
1585. You think that as a class they are permanently settled in the neighbourhood? I do.
1586. That they have no intention of selling their holdings and going further afield? I do not think they have any idea of doing so. I have formed the opinion that they are *bona fide* settlers on the soil.
1587. Can you say whether they are increasing the area of their holdings? They are endeavouring to do so, but they are prevented in a great measure by the fact of the land being locked up. They would increase their holdings if they had facilities for doing so.
1588. How many churches are there in the town? Four.
1589. Of what denominations? Roman Catholic, Anglican, Presbyterian, and Wesleyan.
1590. Are there any churches in the neighbourhood outside the town? Yes, at Barmedman, Bagdad, and Marandula. I visit different stations and settlers' houses, and altogether work thirteen places in the parish.

Rev.  
J. B. Gribble.  
4 Feb., 1890.

Rev.  
J. B. Gribble.  
4 Feb., 1890.

1591. What is your opinion with reference to the proposed railway—do you think it would be desirable to take it from Cootamundra or from Wallendbeen? Knowing the whole district very well, my feeling is that the connection should be at Cootamundra. One reason assigned by Mr. Hickey I thoroughly endorse. I can say that this is the direct stock route from all the back country. Indeed, during the past twelve months I have travelled right through to the Queensland border, and I find that stock travel from Hungerford right down through Temora. I have a son engaged in that work, and he brings cattle right down to the Darling. Some are sent on by way of Cootamundra to Victoria. Apart from marketable stock, this is also the direct route to the summer country. I travel to the hills regularly at given periods in connection with my work among the aborigines, and I know that the Tumut country is supplied from the back country during the summer. A greater portion of the starving stock passes through this district to Gundagai, and on to Tumut and Tumberumba, and places beyond.
1592. How long have you resided here? I have been here just about a year.
1593. Can you give any instance where stockowners have made use of the railway from Cootamundra to Gundagai to take their stock to the mountains, instead of travelling them by road? I cannot give an instance, but I have frequently met flocks travelling to and from the summer country.
1594. Travelling by roads? Yes; I do not doubt but that if railway communication were secured they would travel by rail.
1595. What makes you think they would travel by rail if the railway were constructed to Temora, when they have not used the railway from Cootamundra to Gundagai? In the first place—and perhaps this would be the principal reason—the stock would be kept on their holdings as long as possible, and then they would be glad to send them by the most expeditious way of travelling. They would keep their stock as long as possible, hoping for rain, and then they would remove them to the mountain country.
1596. Do you think they would be likely to pay the railway rates—even the low starving stock rates—so long as they were able to travel the sheep by the road? Yes, I believe they would. They would keep the stock as long as possible on their own holdings, and in the last extremity they would send them through by rail as quickly as possible to the summer country. It is my opinion that they would use the railway. I might give another reason for the junction at Cootamundra, and I think it is a very tangible one, viz.: That there is a general junction there at the present time, while at Wallendbeen a new junction would have to be created, which of course would involve great inconvenience to the public, and also great expense.
1597. Do you think the people at Stockinbingal and Wallendbeen would be satisfied with the railway going to Cootamundra and leaving them out in the cold? Mr. Davidson, a very large squatter on the Bland, told me very plainly, and in fact wrote to the same effect to the Committee at Wallendbeen, that he would certainly prefer the junction being at Cootamundra. Selectors on this side of Yeo Yeo, just on the border of Dinga-Dingi, also told me that they would prefer Cootamundra. Beyond that over the small piece of country lying between Yeo Yeo and Wallendbeen I found that the feeling was in favour of Wallendbeen. I found, however, that the number of people who would be best served by that route, was small, in comparison with those who would be served by the other route.
1598. Are you well acquainted with the country between Yeo Yeo and Wallendbeen? No; I am not.
1599. I suppose you frequently visit Barmedman? Very frequently.
1600. Is there much cultivation going on between here and Barmedman? There is a considerable amount of settlement between Temora and Barmedman. This has not taken place since my arrival, but beyond Barmedman a good deal of settlement has taken place since I came here.
1601. Do you think all the available land is occupied? Yes.
1602. Do you think more land would be occupied if it were available? I am sure of that. I have heard of numbers of cases during the past six months in which, from Victoria and South Australia, inquiries have been made for land in this district.
1603. *Mr. Humphery.*] Can you speak as to the character of the soil within a radius of 15 miles of Temora to the north, south, and west, omitting the east towards Stockinbingal? Yes. In my opinion it is first-class agricultural soil.
1604. Suitable for the production of wheat? Yes, very suitable indeed. I have witnessed some of the best crops I have ever seen in my life in this district, and especially at Mimosa and Barmedman.
1605. And is it good fruit-growing land? Yes, first-class.
1606. What description of fruit? Grapes, peaches, plums, figs, apples, oranges—those are the principal fruits that I have noticed.
1607. Did you hear Mr. Hickey say that there were 230 selections in the district? Yes.
1608. Do you think that is a correct estimate of the number? Approximately.
1609. Within 18 miles? Yes, I think that is correct. I have not counted them myself, but they are nearly all in my parish, and I think that estimate is not at all an exaggeration.
1610. *Mr. O'Sullivan.*] How far do your ministrations take you from Temora to the north and to the west? 35 miles to the north.
1611. And how far to the west? About 18 miles.
1612. Do you think that the produce within that area would be likely to come to Temora? Yes. It is the only centre.
1613. Do you go far out in the direction of Hillston towards Lake Cudgellico? I go about 16 miles.
1614. Do you know if any of the pastoralists or farmers are in the habit of sending their produce down towards the Hay line? No, I do not. Further down in the Merool and Humbug country they send to Whitton.
1615. Have you heard of any pastoralists who send their wool to Carrathool to be shipped by steamers on the Murrumbidgee and taken down to Melbourne. I lived on the Murrumbidgee for eight years, and when I commenced my work there that was the case, but it is not so now. All the steamer trade is done away with in consequence of the railway.
1616. You think that the opening of a line to Temora would tap a portion of the trade of that back country? It would tap a great portion of the Humbug country. There is a main road from here right through to the Humbug towards Lake Cudgellico. For 20 or 30 and perhaps 40 miles it would serve that country.

Mr.

Mr. Eugene Perrot, fruitgrower, sworn, and examined :—

1617. *Chairman.*] Do you reside at Temora? Yes.
1618. What is your occupation? I am a fruit-grower.
1619. How much land do you own? Four acres.
1620. How much of that have you under cultivation? Two acres.
1621. What do you grow? I will show you samples of my fruit. [*Fruit produced.*] This basket of fruit contains grapes, peaches, apples, apricots, figs, plums, &c. In fact I can grow any kind of fruit.
1622. Do you find that the apples do well here? They could not do better. The climate and the soil could not be better adapted than it is for fruit-growing. I have tried twenty different kinds of grapes, and I find the soil suitable for all kinds of table-grapes. I have not as yet tried wine-grapes.
1623. Do you think it would be desirable to try wine-grapes? Not if the railway comes here.
1624. Have you had any experience in grape culture in the old country? No.
1625. How many years have you been gardening? It is six years since I started the orchard in Temora.
1626. Your experience has been confined to this neighbourhood? Yes.
1627. You are not able to say whether the climate and the soil is suitable for wine-making? I would not be afraid to try it, but I think it would pay better to grow fruit for the market than to make wine if we had the railway here. Speaking as one private individual, I would say that instead of having only 2 acres devoted to the cultivation of fruit for the supply of the Temora market, if there was a railway here I should grow fruit for the Sydney market. It is impossible for us at present to send fruit to the Sydney market, because the expense would be too great, and the fruit would be in a bad condition.
1628. Do you find a ready sale in Temora for the fruit you grow? Yes; but it is as much as I can do to sell all I grow.
1629. So that if you cultivated more you would not be able to get rid of it locally? I could not cultivate more profitably unless the railway came.
1630. Do you think it would pay you to send fruit from here to Sydney by rail? Yes, decidedly.
1631. And you find that you get prolific crops? As an instance, I will give you the yield of the apricots. From five trees I sold 1,000 dozen. I get about £2 10s. from every tree.
1632. I suppose you find that very much better than growing wheat? Most decidedly.
1633. Your actual income from each tree is £2 10s.? Yes, this year. I plant a little of my orchard at a time. There are only a certain number of trees in full bearing at present; the others are quite young, some of them having only been planted this year. Every year I plant about half an acre.
1634. How much ground have you in full bearing? Only about half an acre.
1635. Have you any objection to tell the Committee what income you derive from the half acre? About £70 this year.
1636. Do you find that any disease attacks the fruit? No.
1637. Is there anything special about the soil you cultivate, or is there any quantity of soil in the neighbourhood equally as good as yours? I think it is nearly all alike. I do not see any difference in it.
1638. So that if the people chose to cultivate fruit there would be no difficulty in growing a very large quantity? Not as long as there was a market to send it to. One thing that is very favourable for fruit-growing in this district is that we are about a month or more ahead of Young and Goulburn in our seasons, so that we could send fruit to those places about a month before they had any themselves. For instance we could get 6d. a lb. for grapes at Young or Goulburn, for ours would be ripe when theirs would be quite green.
1639. *Mr. O'Sullivan.*] Have you made any attempt to grow the orange? No.
1640. Have you heard of any one who has attempted it? Yes. I believe some evidence will be given with reference to that.
1641. Do you know of any successful attempt? Yes.
1642. Do you think the climate and soil are suitable for the growth of the orange? I could not say. I have seen oranges growing here successfully.
1643. Who is it that grows the orange and the olive? Mr. Deitz.
1644. Has he made a success of orange culture? I have never been to his place.
1645. Do you think that fruit-growing would be a success here if you depend on the local market, or even the Goulburn market? Without a railway the fruit industry will not prosper in Temora, but with the means of reaching a market it is bound to go ahead.
1646. Do you think you could compete in the Sydney market from this distance? Yes.
1647. You have never heard of anyone who has cultivated the grape for wine purposes? Yes, Mr. Hensler has done so.
1648. I suppose the 4 acres of land you possess have enabled you to make a comfortable living? I have only half an acre fruit-bearing now, but with the whole of the 4 acres I should make £500 or £600 a year.
1649. Net profit? Yes.
1650. *Mr. Humphery.*] Is Mr. Hensler building a wine cellar? Yes, he is building a large one.

Mr.  
E. Perrot.

4 Feb., 1890.

Mr. Alexander Deutscher, farmer, sworn, and examined :—

1651. *Chairman.*] Where do you reside? Three miles to the north of Temora.
1652. What is your occupation? I am a farmer.
1653. How much land do you hold? 530 acres.
1654. Is it conditionally purchased land? Yes.
1655. How long have you held it? For five years and three months.
1656. How many acres have you under cultivation? Seventy.
1657. What did you grow this year? All wheat.
1658. You do not cultivate any other crop? I have not done so yet.
1659. What was your yield this year? Twenty-six bushels to the acre.
1660. How many years have you been growing wheat? I was brought up on a farm. My father has been growing wheat ever since I can remember. I have been growing wheat on my own account for two years.

Mr.  
A. Deutscher.

4 Feb., 1890.

- Mr. A. Deutscher. 1661. I suppose 26 bushels to the acre is an exceptionally high yield? Yes. The average, I should think, is about 20 bushels.
- 4 Feb, 1890. 1662. And do you find that a yield like that gives you a good profit on the cultivation? It does when we can get rid of it.
1663. Have you any difficulty in getting rid of the wheat at any time? We have this year.
1664. Can you not find purchasers for it? We can, but at a very low figure.
1665. What is offering for wheat now? I have sold 250 bags at Temora for 2s. 8d. per bushel.
1666. Delivered where? In Temora.
1667. Then you have to cart it into Temora, and sell it at 2s. 8d. per bushel? Yes.
1668. Do you know where it is going to? It was bought by Mr. Gardiner, who has a mill here.
1669. Then I suppose that wheat would be ground into flour for local consumption? Yes.
1670. Can you say what is the reason you can only obtain 2s. 8d. per bushel—is more wheat grown in the neighbourhood than can be consumed? Yes, I believe so.
1671. What would you have to pay for carting that wheat to Cootamundra? 2s. 3d. a bag, or from 6d. to 7d. a bushel.
1672. How much would it cost to have it taken to Wallendbeen? I could not say.
1673. I suppose there are no teams going to Wallendbeen? No.
1674. I presume you are very much in favour of the railway being constructed to Temora? Yes.
1675. And you would be very glad to send your wheat by the railway if it were open? Yes.
1676. If the line were constructed to Temora do you think there would be a large increase in the area of land cultivated? I am sure there would. If there was a railway here I should cultivate more.
1677. Is the farm your own, or is it your father's? It is my own.
1678. Do your parents reside in the neighbourhood? Yes.
1679. Have you calculated the value of the wheat taken off per acre? I have not.
1680. It yields 26 bushels, which was sold at 2s. 8d.; that would be about £3 9s. per acre. Do you find that a profitable occupation, taking into consideration the cost of the seed wheat, the ploughing and stripping, and all the other labour? It was, perhaps, profitable this year, but it is seldom that you get such a good crop.
1681. You are making more by that occupation than you could make by mining, splitting, fencing, or any occupation of the kind? That I am not sure of.
1682. At any rate if the railway were here you would be likely to increase your area under cultivation? Yes.
1683. Is there very much land as good as yours in the neighbourhood? I think so. All the land in the neighbourhood is good.
1684. Is there much good land between Temora and Barmedman? I think it is all equally as good as mine.
1685. Are there no barren ridges of ironbark? There is one ironbark ridge.
1686. How wide is that? A mile or a mile and a half.
1687. And, with the exception of that ridge, is the whole country suitable for agriculture? Yes.
1688. Do you know the country beyond Barmedman? Yes, for some distance beyond Barmedman.
1689. How many miles? About 12 or 13 miles.
1690. What is the land like out there? It is very good land.
1691. Is it equally as good as the land between Temora and Barmedman? In my opinion it is.
1692. Do you consider your land as good as the land about Yeo Yeo? I am not acquainted with the land about Yeo Yeo.
1693. *Mr. O'Sullivan.*] How far out do you say your farm is? 3 miles.
1694. Are there many wheat-growers further out than you? There are a good many, but they do not grow a large quantity of wheat, because it is too far to draw it to market. This year, I believe, if we offered 3s. a bag we could not get it drawn, because there are no carriers here to draw it. Later on in the winter we may get it carted.
1695. You consider, then, that wheat culture is very much hampered for want of speedy transit to market? I do.
1696. Where do the farmers outside of you send their wheat? To Cootamundra.
1697. How do they get it in? Whenever they can get a chance by a carrier. Sometimes a carrier comes up loaded from Cootamundra, and they send their wheat back.
1698. Would it pay them to give 7d. a bushel for conveyance to Cootamundra? It does not pay them.
1699. They must either send it to Cootamundra, and pay that high freight, or allow the wheat to rot? Yes.
1700. How far do you think the farming population—that is, farmers who cultivate a little now, and who are likely to be farmers—how far does that population extend around this town, drawing a circle round east, north, and west? To the north for about 40 miles I believe the farmers will all grow wheat if the railway is constructed, and they can get it to market.
1701. Would it pay these men to grow wheat if they had to cart it 40 miles to Temora if there was a railway here? It would pay them better than at present. It does not pay them at all now. No doubt they would grow some wheat if there was a railway as far as Temora.
1702. How does your answer just given agree with what you said previously;—you say that if the railway came to Temora farmers 40 miles out would send their wheat in, and yet you said that it did not pay the farmers in your neighbourhood to send their wheat to Cootamundra, a distance of 35 miles? I say that the farmers 40 miles out would grow some wheat. I do not say they would cultivate to any great extent. They would do the same as we have to do at present—grow a little wheat and send it to market.
1703. But a little wheat would not pay the expenses of the farm for the year? It would not pay them, but still they would always grow a little.
1704. What else would they do;—run sheep and cattle? Yes.
1705. Many sheep? Yes; it is a good grazing country.
1706. Do they do their own shearing out there? I believe so.
1707. Which way do they send their wool in? Through Temora, to Cootamundra, and from there to Sydney.
1708. Have you been far out to the north, towards Hillston? No, not further than Barmedman.

1709. And you cannot speak then with any authority as to the country beyond—40 miles from Temora? No.
1710. *Chairman.*] Have you any sheep or cattle? Yes.
1711. How many sheep? 1,000.
1712. Do you keep those on your selection? The sheep are not all mine. They have been running in one of my paddocks for the last four months, until my father has water on a piece of land further back; but I have about 500 sheep all the year round on my land.
1713. How many acres? 400.
1714. So that the land would carry more than a sheep to the acre? Yes.
1715. Have you any land under conditional lease? No.
1716. About what do the fleeces cut generally? Our average has been about from 3lb. to 4lb.
1717. And what do you get a lb. for it in grease? 7d.
1718. Is that not rather a light fleece for this neighbourhood? They were mixed sheep; most of them breeding ewes.
1719. And you think growing wheat will pay better than sheep? I am sure it would if there was a railway here.
1720. *Mr. O'Sullivan.*] Where do the farmers living some distance from Temora get their stores from? A great many of them get them from Cootamundra.
1721. Do they deal with the storekeepers in Temora? To a certain extent they do.
1722. And if not, where do they get stores? They send to Cootamundra.
1723. Then all their business appears to lie between Cootamundra and Temora? Yes.
1724. Are many of the people out here related to the Cootamundra farmers? Not that I am aware of.
1725. They regard Cootamundra, then, as their local trade centre? Yes.

Mr.  
A. Deutscher.  
4 Feb., 1880.

Richard Webber Burstal, Esq., Manager of the Bank of New South Wales, Temora, sworn, and examined:—

1726. *Chairman.*] You reside in Temora? I do.
1727. What is your occupation? I am Manager of the Bank of New South Wales.
1728. How long have you resided in Temora? About a year and nine months.
1729. During which time you have occupied the same position? Yes.
1730. *Mr. Humphery.*] Can you say if the deposits in the bank have been increasing or decreasing during the past five years, since Temora ceased to be a payable gold-field? The deposits have been decreasing within the last five years. That, of course, is partly owing to the exodus of the miners to other fields.
1731. Can you speak as to the general prosperity or otherwise of the existing population living round Temora? The population has largely increased, and the money that has been brought to Temora has been sunk in the land and in improving it. The general prosperity of a district can hardly be gauged by the deposits in the bank. In a young district more especially you would have to gauge the prosperity of the farmers by visiting their homesteads and seeing what they have. Instead of leaving money in the bank at 4 and 5 per cent. it would pay them better to apply it to the improvement of their farms.
1732. Then you explain the decrease in the amount of the bank deposits in that way; that is to say, that the money is invested in conditional purchases? The money has been invested in land, stock, farming implements, and in improving their holdings.
1733. Can you say that your bank has advanced largely for that purpose? Yes. I have advanced pretty largely since I have been here. The advances have increased very much in the last five years.
1734. For the purchase of land and stock? Yes; the whole of it has gone into the land. As to the purchase of stock there is always a floating advance, but the majority of the advances have gone into permanent improvements on the land.
1735. Do you advance against the wheat crop? I am making temporary advances this year pending a higher price for sale.
1736. Against the wheat crop? Yes; we temporarily advance pending the price of wheat rising, but we do not make permanent advances against anything of that sort. We advance against certificated selections and against sheep and cattle.
1737. Can you say if the area under wheat is increasing? It has nearly doubled in the last twelve months as far as my constituents are concerned.
1738. Can you say from the repayments you have had for advances made whether the settlers round here who cultivate are in a prosperous condition or otherwise? It is rather early in the season to speak as to this year's wheat. I can only judge by the stocks on hand, and as far as my returns have come in the average yield to the acre has been about 22½ bushels. I am not speaking of the district generally but of men who are in my books and who send their returns into me. This yield, estimating its return at 3s. a bushel, has, in the majority of cases, reduced the individual debts to the bank about half.
1739. And are you prepared to say that the operations in which you have been engaged are of a perfectly healthy character? I do not believe there are any sounder operations in any financial institution in the Colony.
1740. Do you know anything of the proposed railway between Cootamundra and Temora—do you know the route? I have travelled over the route once.
1741. Have you travelled over the route from Yeo Yeo to Wallendbeen? No, I know nothing of that.
1742. Can you say whether it is desirable that there should be any alteration or deviation of the proposed route? Most decidedly not, as far as the convenience of the people in and round Temora is concerned.
1743. And you think that if the line were constructed as proposed it would best serve the whole of the settlers in and around Stockinbingal as well as Temora? I cannot speak as to Stockinbingal because I am not sufficiently acquainted with it, but I can speak most decidedly about Temora.
1744. Do you think that the proposed site of the railway station in Temora is a suitable one? The site is central but is situated rather in a hollow, and the ground is at times somewhat swampy about there.
1745. Do you think the site is the most convenient having regard to the possible extension of the railway to Barmedman? I think it is as suitable as any other site.
1746. You have spoken as to the financial condition of the farmers;—can you say whether the business in the town is in a healthy state? As far as I am able to judge it is.
1747. Can you say how many storekeepers there are in Temora? Ten or twelve.

R. W. Burstal,  
Esq.  
4 Feb., 1880.

1748.

- R. W. Burstal, 1748. And how many banks? Two—the A.J.S. Bank and the Bank of N.S.W.  
 Esq. 1749. *Mr. O'Sullivan.*] Have you made many bad debts since you have been here? I have made one.  
 4 Feb., 1890. 1750. In how long a period? About nineteen months.  
 1751. Have you had to foreclose on any land or stock mortgaged? No, not yet.

Mr. Thomas Gelling, hay and corn dealer, sworn, and examined:—

- Mr. 1752. *Chairman.*] I believe you are in business in Temora where you carry on a hay and corn store?  
 T. Gelling. Yes.  
 4 Feb., 1890. 1753. How long have you been in business there? About nine or ten years.  
 1754. How many other persons are there in the same business? There are one or two more.  
 1755. Judging by what you purchase do you think agriculture is increasing in the neighbourhood? Yes.  
 1756. I suppose the general crop is wheat? Wheat principally.  
 1757. Is there much hay grown? A good bit.  
 1758. Any lucerne hay? Not that I am aware of.  
 1759. What do they make into hay? Wheat and oats.  
 1760. Do you find your business increasing? It keeps something about the same—there is not much difference.  
 1761. Do you purchase for local distribution or send to Cootamundra? To send to Cootamundra and Junee—Junee principally, and also to Albury and Wagga Wagga.  
 1762. Can you state what quantity you purchase? About 40 tons in seven weeks.  
 1763. Can you say how many tons you sent away this year or last year? I could not say exactly. About 6 or 8 tons of wheat come up to Temora, and very often 3 or 4 tons go down—some weeks not so much.  
 1764. Can you tell the Committee what was the extent of your business last year? Two or three teams were kept going. I have one of my own. They are always on the road.  
 1765. You could not say how many tons? I could not say exactly without looking over the books. You can see by the railway receipts. There were about 40 tons in seven weeks.  
 1766. Was that all sent to Junee? It all came from Junee.  
 1767. Of what did the goods consist? Principally beer, corn, potatoes, oats, and chaff.  
 1768. But you do not deal in beer? No; I draw for two beer firms in Wagga Wagga.  
 1769. Then you are bringing agricultural produce from Junee to Temora? Yes. I bring a good deal of produce here when the district has not sufficient itself, and when it is cheaper to import it. There is very little corn grown about here, and only a small quantity of potatoes.  
 1770. Do you think the land is not suitable for the growth of these things? I think it is. I have seen some very good potatoes here, and some very good corn, but, as a rule, it is not a good line. It is principally wheat and oats that pay.  
 1771. You do not bring any wheat and flour from Junee? Yes; I bring flour.  
 1772. You bring flour from Junee to Temora? Yes.  
 1773. And what does it cost to bring from Junee? The freight on flour is about from 30s. to 35s., and the freight of a general load is about £2.  
 1774. How do you account for the fact that, though there is so much good land in the neighbourhood, and so many people cultivating wheat, you have to bring flour from Junee to supply the local requirements? I could not say. Flour is a good deal dearer about here.  
 1775. Have you brought flour from Junee during the last few months? No. I have brought none for five or six months.  
 1776. And what you send away from Temora do you send away to Junee? Yes.  
 1777. And to Albury? Very little to Albury—mostly Sydney.  
 1778. What do you send to Junee—wheat or flour? A good deal of wheat, and palings and rails.  
 1779. Are these things for local consumption at Junee? Yes.  
 1780. Then you do not do any business with Albury or Victoria? No.  
 1781. Do you do any business with Goulburn or Sydney? Yes. We get potatoes from Goulburn, corn, oats, and potatoes from Sydney, and cheese, bacon, and general stuff.  
 1782. You bring potatoes up from Sydney to Temora? Yes.  
 1783. Do you know whether they have ever attempted to grow potatoes here? Yes. I have seen some very good potatoes, but nothing extra.  
 1784. Can you give any idea of the number of tons of potatoes you brought up last year from Goulburn and Sydney? At the rate of about a couple of tons a week all through the year.  
 1785. What else did you bring up in the nature of agricultural produce? Corn and oats.  
 1786. Taking the whole year do you know what your traffic was on the railway between Sydney and Cootamundra? I can only go by the railway ticket. I have tickets for seven weeks which represent 40 tons.  
 1787. Is that a fair average for the year? Yes.  
 1788. You generally keep up at that rate? Yes; there are two teams going, and very often three. Some of the goods go to Barmedman and on that way.  
 1789. I suppose we may reckon that you have over 250 tons of goods brought up by the railway during the year? Yes, quite that.  
 1790. Can you say whether the other business people do anything like the same amount of business? Not in my line.  
 1791. There are other people in the same district, but you think they do not do as much business as yourself? I am sure they do not.  
 1792. Is that the traffic one way—from Goulburn and Sydney to Temora? Yes.  
 1793. All imports brought here? Yes.  
 1794. Have you any record of what you send away from Temora? I could not say without reference to my books.  
 1795. Do you think that cultivation of the soil is increasing in the neighbourhood? Yes. We are clearing a good bit of land ourselves and going in for cultivation.  
 1796. Do you think there is a large demand for land in the neighbourhood? Yes; there are a great many inquiring for land. I was asked by two or three yesterday about land.  
 1797.

1797. You think then that if the Government throw open the leasehold areas of the reserves they would be eagerly taken up? Yes; I would take one up myself.
1798. From your knowledge of the farmers in your district do you consider them a fairly prosperous people? I do.
1799. So that on the whole we may consider that in this district agriculture pays reasonably well? Yes.
1800. *Mr. O'Sullivan.*] In time of drought there is a very large trade in fodder with the back stations, is there not? Yes.
1801. Where do the stations at the back of Temora get their fodder from? It is all brought by teams from the railway. They get it in the cheapest market.
1802. Do they get any from the Corowa or Tumut districts? Yes; I get some myself from Wangaratta very often in dry seasons.
1803. You seem to think that Temora could not supply the fodder required by these stations? Yes; it could supply chaff.
1804. Then in dry seasons there might be a considerable trade in fodder along the railway? Yes.
1805. Will this fodder come as far as Junee and be brought from there by teams, as at present, in opposition to the railway? No. The produce sent from Wangaratta and Albury all comes to the railway at Junee.
1806. Then in time of drought a railway to Temora would be of material assistance to the pastoralists and small graziers in the back country by bringing them fodder cheaply? Yes.
1807. *Mr. Humphery.*] Why do you obtain your supplies from Junee instead of from Cootamundra? The team is always in the habit of going there. It has regular traffic on the road, and the beer and the Albury stuff draw us that way. We go to Cootamundra too, but mostly to Junee.
1808. Is not the railway carriage by Junee 35 miles greater than that by Cootamundra? About that.
1809. What is the distance between Temora and Junee? 35 miles.
1810. A shorter distance than from Temora to Cootamundra? No; I think the distance to Cootamundra is a little shorter.
1811. Are you quite sure about the distance? It is about 32 miles to Cootamundra.
1812. Does not Temora lie north-west of Cootamundra? Yes.
1813. Is not Cootamundra much nearer to Temora than Junee? It is about a mile or two nearer.
1814. Does it not cost you more to get your goods from Junee than it would from Cootamundra if there is a distance of 35 miles of railway in addition to the loading by team? We allow a little more for the railway. I think it makes a difference of 1d. a bushel. But we make up for that by the fact that the beer and other things from Wagga Wagga make up the loading.
1815. Then it suits you better to trade *via* Junee than *via* Cootamundra? Yes, on account of the differential rates to Wagga Wagga, in consequence of which a lot of traffic goes to Wagga Wagga and comes back to Junee, so that we make up our loading that way.
1816. Explain how it is that you get an advantage with the differential rates? Through the stuff going to Wagga Wagga. Sometimes a man might have half a ton or 5 tons. The principal stores get a lot of loading that way. They make up the loading.
1817. As a matter of fact, although Junee is 35 miles further than Cootamundra, the railway rates are less? Yes.

Mr.  
T. Gelling.  
4 Feb., 1890.

Mr. John Peter Clements, farmer, sworn, and examined:—

1818. *Chairman.*] Where do you reside? About 4 miles to the west of Barmedman.
1819. What is your occupation? A farmer.
1820. How much land do you possess? 2,560 acres.
1821. Are you in the Central division? Yes.
1822. And you selected 2,560 acres? Yes. Conditional purchase and conditional lease.
1823. How many acres have you under cultivation? About 80.
1824. How many acres had you last year? About 60.
1825. Then you are increasing the area under cultivation? Yes.
1826. What was the yield this year? I got 22 bushels to the acre, and I only just harrowed the surface.
1827. Was it a self-sown crop? No. I sowed the seed and I only just harrowed the ground.
1828. You ploughed the year before? Yes.
1829. Do you consider that a satisfactory method of farming? It was for last year.
1830. What was your reason for not ploughing? I was frightened it would come rather too wet in the winter. Some of the people at Temora were too late.
1831. And you say you had an average of 22 bushels to the acre? Yes, for 30 acres.
1832. And what did you have off the remainder? 24 acres were under Indian corn.
1833. You cannot say anything about that as yet? No.
1834. Does the crop look healthy? Yes.
1835. About how many bushels do you anticipate getting from it per acre? If rain were to come now I reckon I would get about 40 or 50. I had also 26 acres growing wheaten hay and oats.
1836. Did you sow the wheat and oats together or separately? I had about 10 acres of oats and the rest under wheat.
1837. Which do you find most profitable for hay—oats or wheat? Generally wheat, but last year the oats were best.
1838. How much hay per acre did you get? About 3 tons.
1839. Where did you dispose of it? In Barmedman.
1840. Is there a demand for all the hay that is grown there? There has been a full demand since I have been there.
1841. Do you send anything to Temora? No, not yet.
1842. You do not send anything to the railway? Only wool.
1843. How many sheep have you? I have now about 800.
1844. What is the average weight of the fleece? About 4 lb. Most of them are ewes.
1845. How many acres does it take to keep a sheep. About one. I think I could carry one sheep to the acre if I had the land all cleared. What land I have cleared has carried a sheep to the acre.
1846. Have you ringbarked? I have ringbarked some of the land, but not all.

Mr.  
J.P. Clements.  
4 Feb., 1890.

- Mr. J. P. Clements.  
4 Feb., 1890.
1847. Do you find that ringbarking improves the carrying capacity of the land? Yes. Land is no good where I am unless it is scrubbed.
1848. What scrub have you? Oak and wattle.
1849. If the railway were constructed to Temora, do you think the farmers in your neighbourhood would be induced to cultivate more land? Yes; I should cultivate all the land I could plough.
1850. You think it would be a profitable occupation? Yes; more profitable than sheep. I have been growing wheat now for the last twenty years, and it has paid me better than sheep.
1851. What do you think is the average yield of wheat per acre in your neighbourhood? I have had an average of 17 bushels in four crops.
1852. I suppose those have been the average seasons? Yes, the last four years.
1853. So that you could reckon that for the future, taking good and bad seasons together, you might depend upon getting an average yield of about 17 bushels? Yes.
1854. Is your land about the average quality, or is it better or poorer than other land? I have got good land, but there is as good land as mine.
1855. Yours is about the average? Yes.
1856. Are there many farmers out west of Barmedman? There are a good few.
1857. Is agriculture extending westward from Barmedman? Yes, I believe it is.
1858. If the railway were taken to Temora without being extended to Barmedman do you think that Barmedman farmers would avail themselves of it? I think so.
1859. What is your opinion of the land generally between here and Barmedman—is it all good or is a very large proportion of it poor land? It is good land, but it is patchy-like in parts.
1860. I suppose there are ironbark ridges? Yes.
1861. Is there any gravelly country—any quartz ranges? Yes, I believe there are.
1862. What proportion of the land between Temora and Barmedman is good land—half of it? Yes; more than that. You may say that it is all good, with the exception of the ironbark range.
1863. Then I suppose that all the land that was open for selection has been selected? Every bit of it, and if there was more land thrown open it would be taken up, and if the railway is constructed there would be a still greater demand.
1864. Do you know the country for some distance to the west of Barmedman? Only for about 8 or 9 miles.
1865. You do not know the Hillston country? No, but I have heard many who have gone there say it is all good country.
1866. *Mr. O'Sullivan.*] You say you have grown wheat for twenty years? Yes.
1867. In this district? No—in the Burrowa district. I have been here about five years.
1868. During those five years have you ever been prevented from getting a crop by a dry season? Yes; it was dry last year.
1869. What was your average last year? I had about 1½ tons of hay to the acre and 8 bushels of wheat to the acre.
1870. Are dry seasons likely to materially affect the agricultural interests out in your direction? In all parts of the Colony you are likely to get a dry season now and then.
1871. There are some portions of the Colony more affected by drought than other portions; do you think that this district is likely to be materially affected by the drought? I don't think so.
1872. You have heard a previous witness say that he was in the habit of getting fodder from Wangaratta; would it pay the farmers round this district to cultivate fodder? I think so.
1873. I presume you understand ensilage? Yes.
1874. Do you practise it? No.
1875. Have any of the farmers up here any silos? I do not know.
1876. Would it not pay the farmers to grow fodder crops and keep the fodder for dry seasons? I am stacking up a lot for that now.
1877. I suppose you know there is a great demand for fodder in times of drought? Yes.
1878. Would it not be in the interests of the farmers to practice ensilage in order to have fodder ready? People hardly know what that is yet; they have never tried it. Perhaps, like me, they do not believe it is any good—that is, not to keep any length of time. It might do to keep for 12 months or so, but I do not think it would do to keep 12 years.
1879. If kept for 12 months it might be exceedingly valuable? Well, in a year like this it would not be of much use. It would have done very well last year.
1880. You are in the Central division are you not? Yes.
1881. You said that a railway would be likely to induce fresh settlement out that way? I am sure it would.
1882. How can that be the case when the leases of the runs are to be extended for five years? The leases ought not to be extended for five years.
1883. You know that under the last Land Act the pastoralists in the Central division can obtain an extension of their leasehold area for five years. That being so where could the people obtain the land. Is there much of the resumed area fit for cultivation? Yes, further out.
1884. Is the settlement of that land likely to be promoted by the construction of this railway? I think so.
1885. How far out do you think? I am told there is land to be got right through to Hillston, and good land. Of course it is scrubby, and people get a little frightened of it.
1886. But are not most of the resumed areas pretty well selected? Just about Barmedman they are—but not farther out. They are being taken up every week, and if a railway goes out there there will be more land taken up still.
1887. Do you prefer the Cootamundra to the Wallendbeen route? I do.
1888. Do you obtain your stores from Temora and Cootamundra? I get mine at Barmedman. Wire and iron I get from Temora or from Sydney.
1889. Most of these stores I presume come by way of Cootamundra and Temora? Yes.
1890. Therefore that would be your natural route for the market? Yes.

Mr. James Gibson, farmer and selector, sworn, and examined:—

Mr.  
J. Gibson.  
4 Feb., 1890.

1891. *Chairman.*] Where do you reside? 8 miles west of Barmedman.
1892. Are you a landed proprietor? I am a selector.
1893. How many acres have you? 2,560.
1894. How long have you held the land? A little over four years.
1895. How many acres did you have under crop this year? I have only farmed to the extent of my own wants. During the first two years I was there I simply grew a little hay for my own use, and I experimented on a small scale to see if the land would produce crops of sorghum, corn, potatoes, and wheat.
1896. How much did you put in of each kind? Merely a few square yards on the side of a hill as an experiment.
1897. What was the result with regard to sorghum? The sorghum and corn grew about 8 feet high.
1898. I suppose you considered that very satisfactory? Yes.
1899. And the potatoes? The potatoes gave a very good yield. It was the American potato—the early rose.
1900. Were they a good potato? A very good potato. That was four years ago.
1901. You have not followed up that experiment? No, I have not done any farming since except that in the following year I had 6 acres of hay for my own use.
1902. What use do you make of the land;—do you run sheep? Yes.
1903. You find the sheep pay you better than agriculture? Well, I have never done any farming, and do not pretend to have any knowledge of it. I have worked amongst sheep since I was a boy.
1904. What do you estimate sheep to give you as a net return—wool and natural increase? About 3s. per sheep. Of course it depends on the season. It would average from 2s. 6d. to 3s. per sheep for the wool, and the average price of lambs 8 or 9 months old is from 5s. to 6s.
1905. About what percentage of lambs did you have? Sixty-five on an average during the last few years. Last year we had one of the worst years that we have had for some time, and it reduced the average considerably.
1906. What was the average weight of the fleece? About 5 lb.
1907. And the price of the wool? Last year it was 10½d., and it was from 7d. to 8d. for the three years previously.
1908. What proportion of sheep do you carry to the acreage? Last year I had 2,300 ewes, with a percentage of lambs. That is the greatest number I have carried, but as it was the worst season of the four I consider that the land, as it is improved now, would carry a sheep to the acre.
1909. Have you got it all ringbarked? Nearly all ringbarked.
1910. Is it your intention to cultivate, or do you think it better to keep on with sheep? I am better acquainted with sheep, and I think I will stick to sheep. I have no knowledge of farming.
1911. Where do you send your wool to? Sydney.
1912. By Temora? Yes; through Temora and Cootamundra.
1913. Do you think it would pay better to take the railway to Cootamundra or to Wallendbeen? I myself would prefer that it should start from Cootamundra. In the first place, our Land Office is at Cootamundra, and all our business in connection with the land is done there. A great many of the settlers are doing banking business there, and it is a good centre for stock sales and for carriage. There are more teams on the road continually, and therefore the rate of cartage is lower. So many carriers have settled along the route that they have got into the habit of travelling, and being near their homes they would probably carry for a lower rate.
1914. Do you not think that similar results would follow if the railway were constructed to Wallendbeen—would not banks be established there, and stores for the accommodation of the settlers? No doubt there would; but I do not think the country is so good. It is not so favourable for settlement as the country round Cootamundra.
1915. Do you know the country between Yeo Yeo and Wallendbeen? Yes. It is some years since I passed through it, but I can remember the character of the country.
1916. What do you remember about it? Some of it is good, but it is very hilly as a rule, and there is a greater proportion of what we call rough country, or ironbark country, than there is along the other route.
1917. So that you would prefer to send your wool a greater distance of 9½ miles for the sake of having the accommodation already established at Cootamundra? Yes; together with other advantages we should have, such, for instance, as being able to send our sheep away in time of drought—to Tumut and the mountain country.
1918. Have you ever sent sheep to the mountain country? No, but I have taken them for other people.
1919. By what route did you take them? Sometimes I have taken them down through Yass to the Monaro country, and sometimes across by Gundagai, and up that way.
1920. When you took them to Yass did you make use of the railway? No, we travelled them through Queanbeyan and up that way.
1921. If you took them to Gundagai would you travel them? Yes.
1922. If the railway were open to Temora do you think any of the western people would be likely to make use of the railway from Temora to Gundagai for travelling sheep? I think so; in fact I am positive, for I know that a great many of them are anxious for an extension of the railway because every mile it goes further west it brings them nearer to the country where we might expect a large stock traffic in dry seasons.
1923. Do you think it would be cheaper to pay the starving stock railway rates than to travel the sheep by road, and run the risk of losing a few? Yes, I think it would. People as a rule keep their sheep on their runs as long as they can, in the hope that rain may come, and so avoid the expense of travelling. They leave it so late before removing sheep that they would only be too glad to truck them to save their lives.
1924. I suppose you never find such a thing as a blade of grass on a travelling stock reserve at a time like that? Very seldom.
1925. Do you ever find any water? There is water occasionally.
1926. Sufficient? Not as much as the sheep would drink, but sufficient to carry on.
1927. Is it a permanent supply? In some cases it is a natural supply, and in other cases the water is made.

- Mr. J. Gibson.  
4 Feb., 1890.
1928. Then your opinion is that the graziers would make use of the railway to take their stock to the mountain country in times of drought? Certainly.
1929. *Mr. O'Sullivan.*] How far out is your selection? Eight miles from Barmedman.
1930. That would be 30 miles from Temora? Thirty miles the way we come in at present. We could reach Temora in 23 miles, but there is no road.
1931. Do you know where your neighbours who are pastoralists send their wool? Some of them, who live 20 or 30 miles down on the Bland, send it to Young, and some send it to Cootamundra. I think most of them round Barmedman send to Cootamundra.
1932. Do you know any pastoralists about here who send their wool to Carrathool or Hay? No.
1933. Do they sell their wool to the Victorian wool brokers? Some of them do. I know some who prefer the Melbourne market and send their wool to Wagga Wagga.
1934. Their teams take it in to Wagga Wagga? Yes.
1935. Do you think it likely that the opening of this line to Temora would tap any of that trade that goes to Melbourne? Yes, because it is 34 miles nearer, which would be an inducement to send it here.
1936. Have you many selectors round you? There are about 100. But we do not go more than 6 miles towards Temora when we reach the boundary of the Central Division. We go 6 miles towards Temora, about 10 miles east, and about 20 miles west, and north. Within that radius there are about 100 settlers.
1937. Would they be likely to trade with Temora? Certainly.
1938. Is there any more land out there to select? Yes.
1939. On the resumed area? Yes.
1940. And when the leasehold area is thrown open in July next do you think there will be a rush of settlement out there? Yes, there is a great inquiry for land at the present time. People are beginning to go out further, as the land round here is already occupied.
1941. Would these new selectors trade with Temora? Yes, there is no other market. I might say that the 100 farmers to whom I have referred settled on the land within the last four years, after the passing of the Land Act of 1884.

Mr. Patrick Heffernan, grazier, sworn, and examined:—

- Mr. P. Heffernan.  
4 Feb., 1890.
1942. *Chairman.*] Where do you reside? About 16 miles south from here.
1943. On a station property? Yes.
1944. What is the name of the station? Clear Hills. It is known officially as Hooligan's Creek.
1945. Do you lease land from the Crown? Yes—some.
1946. How much land is there within your leasehold area? About 14,000 acres.
1947. And in your resumed area? About the same.
1948. Are you in the Central or the Eastern division? The Central.
1949. Do you know if any land on the resumed area has been selected recently? I do not think there is any available, unless it is very inferior land. A good deal of the land in the resumed area is reserved for gold-field purposes, and the rest is inferior country, consisting of ironbark.
1950. What reserve is there on the resumed area? A gold-field reserve of 4,000 or 5,000 acres.
1951. Are there any timber reserves? No.
1952. What is the nature of the soil on the gold-field reserve? The reserved country is good agricultural land.
1953. Do you think any harm would arise if that land were thrown open to selection, as long as a right to mine upon it was given? Some of it would be suitable, but the balance consists of quartz country.
1954. Are there any miners working there at the present time? In close proximity, but not at that particular spot.
1955. Has there ever been any working on that reserve? Yes, some prospecting has been done.
1956. Alluvial or quartz? Quartz. There have been a few shafts for alluvial sinking.
1957. Did they obtain anything of a payable character? They got a little gold, but it was not payable.
1958. There is no likelihood, I suppose, of anyone commencing to mine on that land at the present time? I could hardly say; there would not be as regards parts of it.
1959. Have there been any miners settled in the district? There were fourteen or fifteen years ago, but there have been none since.
1960. What was the name of the rush? Sebastopol.
1961. Was there not a shaft sunk there to a considerable depth? Yes, about 300 feet.
1962. Do you remember what results they got? The shaft was misplaced and it did not develop the mine any further than had already been done, although it cost £3,000 or £4,000.
1963. But they did have some stone which they crushed some fifteen or sixteen years ago? Yes, at that time it yielded very well. They crushed for three or four years, and the stuff went  $1\frac{1}{2}$  oz., but it afterwards went down to 9 dwt.
1964. Is Sebastopol on your resumed area? Yes, it is on part of it.
1965. In that case it is better to maintain it as a gold-field reserve? Yes. There have been applications from the owners of the reef for a diamond-drill, to test the reef at a depth of 500 or 600 feet, and I think it will be tested.
1966. What is the character of the land under leasehold area? About half is inferior country, and the other half good agricultural land.
1967. What is the inferior country—ironbark ranges? Some of it is ironbark and scrub.
1968. Pine? Very little pine.
1969. How many sheep do you carry? About 40,000 or 50,000.
1970. What is about the average yield? From 5s. to 6s. per sheep.
1971. Does that cover everything—the natural increase and the wool? No; that is for wool alone.
1972. And that is according to the present price of wool? Last year it would be a little more; the prices were much better.
1973. I suppose, on the whole, the country is very good sheep country? Yes. I do not think it can be surpassed in the Colony, and I have a very fair knowledge of the country generally.
1974. What will the country carry a sheep to the acre? I think that two years after it has been ring-barked the better class of country will carry on an average a sheep to the acre.
1975. Putting it altogether—the better and the poorer country? Well, there is some ironbark country, which you could hardly classify—it is too inferior.
- 1976.

1976. How many sheep do you carry on your leasehold area? It is not fenced off. The conditional purchase land, the resumed area, and the freehold land are all fenced into paddocks.
1977. How many acres of conditional purchase land have you? Including freehold, conditional purchase, and conditional lease, I have about 23,000 or 24,000 acres.
1978. That will leave how many thousand acres to be thrown open when the lease expires? About 20,000 acres, I suppose.
1979. Of that 20,000 acres, what proportion do you think will be suitable land for agriculture? About one-half.
1980. You say that your land is to the south of Temora? Yes; almost due south.
1981. Where do you send your wool to? I send it to Sydney, by Junee.
1982. If the railway were constructed to Temora, would that be any advantage to you? It would depend a great deal upon where the nearest station would be between here and Cootamundra. It would not be any advantage for me to come here. Of the two places, Old Junee would be the nearer.
1983. Suppose there was a station at Stockinbingal, would that be an advantage to you? No. The country would be too rough between my place and there.
1984. Would a station at Gundabingal be of any service? For passenger traffic it would. It would be nearer, but the features of the country are a little rough.
1985. Then, I suppose, that, in estimating the traffic returns from this place, we could not reckon upon your wool—it would still go to Junee? Well, no. If the road were made between Gundabingal, and if there was a station at Gundabingal, it would be a few miles shorter.
1986. But in any case it would be no advantage to the Government whether you brought your wool here or to Junee so long as you sent it on to Sydney and not to Victoria. I suppose you do not send it to Victoria? No, I have sent it to Sydney.
1987. I suppose you do not cultivate? I have cultivated this year about 100 acres of wheat.
1988. Where did you send it? To Junee.
1989. Is there any local consumption at Junee? No. I think it is brought there to be sent on to Sydney—there are buyers of wheat there.
1990. You do not know whether it goes north or south? I could not say. I think the most of the wheat is bought for Sydney. I do not think that Victorian buyers come as far as Junee.
1991. Of course you anticipate getting a rental of your pastoral lease? I do.
1992. What rent are you paying at the present time? About 2½d.
1993. Are you of opinion that it would be better for the railway to go to Cootamundra, rather than to Wallendbeen? My own private opinion is, and I have a considerable knowledge of the geography of the country, that it would be better to construct a line to Bethungra or Junee. But, as between Cootamundra and Wallendbeen, I should say Cootamundra would be preferable.
1994. Why do you think either Bethungra or Junee would be preferable? Owing to the nature of the country, and the line would be easy of construction.
1995. Would it be shorter? Some 3 or 4 miles, I think.
1996. Suppose the people wanted to trade with Sydney—do you think it would be more advantageous for them to go all down the line to Junee? There would certainly be the question of haulage between Junee and Cootamundra.
1997. Taking that view into consideration do you think it would be advantageous to the people to have to pay additional haulage? I do not suppose it would be an advantage to those in the immediate vicinity of Temora, but as regards my own locality and the surroundings I should say it would be an advantage to that part of the district.
1998. In other words I suppose the people in your locality would like to have a railway to connect them with Junee? Yes, a railway from Junee to Temora.
1999. What is the nature of the country between Junee and Temora from an agricultural point of view? It is all first-class land, as good as any in New South Wales.
2000. How many miles is it from Temora to Junee? About 35 miles, and I think every acre of it is suitable for agriculture.
2001. Would it be open to selection? No; a great deal of the land along the road is taken.
2002. You mean that it is suitable for agriculture, but not all available? Exactly. Every landed proprietor in the district would, I think, be only too glad to let his land or dispose of it. The land in my district will produce from £2 to £3 per acre under cultivation, as against 5s. or 6s. per acre for grazing sheep. If there is a demand for wheat, and we could send it away at a profitable price, I think every landed proprietor in the district would have his land cut up, the profits from wheat-growing being so very large as compared with grazing.
2003. Do you think the country is improving in its grazing capabilities? Wonderfully. I have had about nineteen years' experience in the district, and have a fair knowledge of the country for 30 or 40 miles round, and where virgin country has been improved its carrying capacity has increased 100 per cent. or more. In fact, I should say 1 acre ringbarked is worth 3 acres in its natural state.
2004. Do you keep a rain gauge on your station? No. The nearest rain gauge is at Combaning.
2005. Do you know the rainfall? It is somewhere about 20 or 21 inches.
2006. *Mr. Humphery.*] How far did you say you were from Junee? About 14 or 15 miles from Old Junee railway-station.
2007. If it pays the farmers well to cultivate wheat at Stockinbingal, which is about 18 miles from Cootamundra, do you not think it would pay equally well to cultivate the land you hold when you are only 14 miles from the railway? Yes; and the land is going into cultivation every day. There is a want of population to cultivate it.
2008. Have you made any offer to sell the land? A portion originally held by a partner of mine (Sebastopol) was sold recently, and it fetched from £2 10s. to £3. I gave £3 myself for a portion of it.
2009. *Chairman.*] Cash? Yes. With the unpaid balances this would make the price equal to £3 10s.
2010. *Mr. Humphery.*] How many people are there settled between Temora and Junee? I could hardly say. From Sebastopol out the holdings are a bit large, but from here to Sebastopol they are smaller.
2011. How many selections do you think there are between here and Junee? From here to Sebastopol the land is all held under conditional purchases by small holders. That would be about 10 miles. The remainder of the country is in rather large holdings.

Mr.  
P. Hefferman.  
4 Feb., 1890.

Mr.  
P. Hefferman  
4 Feb., 1890

2012. Would a line from here to Cootamundra serve a larger settled population than a line from here to Junee? I do not think there would be much difference. I think, from my knowledge of the country, that if the land were cut up into small areas, and rented or sold, the country would carry more.

2013. But the proprietors, apparently, at the present time have shown no disposition to throw open their land? Yes, one large estate—the Junee estate—has been offered at auction, and is being sold in portions.

2014. They would be very well served by the existing line of railway? Yes, they are quite close enough to the railway. Their property is between 5 or 6 miles from the line.

2015. Have you had any experience in mining? I have.

2016. Can you say anything concerning the Barmedman gold-field? No, I could not venture to express an opinion on that. I have been there once or twice, but my observation of the field was not sufficiently close to justify me in venturing an opinion.

2017. Were you a holder in the Morning Star Mine at Sebastopol? Yes, I have been interested in that for a great number of years. In fact, I was the discoverer of that nine years ago.

2018. Did you have good results? Very good. For two or three years there was a township there, with a population of 300 or 400 people. But the field got poor. It is a very large reef about 8 or 9 feet wide and about half a mile long, and it got poor. The yield went down to 9 dwt., which at that time, when crushing was so expensive, did not pay. Other gold-fields broke out about that time, and it was left, and has remained untouched ever since. I have worked it off and on ever since that time, but I have not succeeded in doing very much with it.

2019. Is there any working going on there now? Not just at present. I have applied for a diamond drill, to test the ground at a great depth.

2020. *Chairman.*] Do you think the stone will yield 9 dwt. to the ton now? I do.

2021. Nine feet wide? It runs from 9 feet to about 3 feet 6 inches. I suppose the whole of the reef—taking three leases of about 5 acres each, which is the principal part—would average about 9 dwt. right through.

2022. And is it on Crown land? Yes.

2023. Of course, you know that 9 dwt. would pay remarkably well in a reef of that size? Yes, but large machinery and appliances would be required. It would cost £3,000 or £4,000 to test the mine at a lower depth. I have a knowledge of the surrounding country, and know the whole district personally, having lived here for eighteen or nineteen years, and with regard to the character of the land, I can say that though the good land is intersected here and there with ironbark, yet taking the whole of the country for 20 or 30 miles around, you can reckon that 80 per cent. of the land is suitable for agriculture.

2024. *Mr. O'Sullivan.*] Where do you get your stores from? From Temora principally.

2025. You send your wool to Sydney via Junee? Yes.

2026. You are equi-distant between Junee and Temora, are you not? I am about 2 miles nearer to Junee.

2027. But if there was a railway station at Gundabingal you would be nearer to Gundabingal than to Junee? It would be about the same.

2028. How far would you have to travel from your station into Junee? 14 miles.

2029. Then you would have to go 30 odd miles into Cootamundra? Yes. The journey to Sydney would certainly be shorter for Gundabingal.

2030. You would have to travel about 14 miles into Gundabingal, and about 15 miles from there to Cootamundra, which would be in all about 30 miles? Yes.

2031. So that you would save 15 miles trainage by using the Temora line? Yes.

2032. Would it not be to your interest to send your wool by Temora if the railway were constructed, instead of sending it by Junee? Yes, if a road were made to the new line. The road at present is very rugged.

2033. Is the road not passable for teams? No; it could be made so.

2034. I suppose in course of time there will be a road and you will very likely be one who will utilize the Temora line to send your wool to Sydney? Yes, certainly, if the road is improved a bit. I think it would meet the views of a great number of people if there was a slight deviation in the proposed line, so that instead of coming from Gundabingal to Temora it could be turned off at Stockinbingal on to the Temora Road. There has been an agitation in this direction from the Salt Lake Creek people who live out there. This deviation would meet their views and also the views of the people in my district. It would be a very slight deviation.

2035. Would it not come by Combaning? Yes.

2036. You think that if the line were diverted from Stockinbingal to Combaning it would serve the Sebastopol people and the Salt Lake Creek people? Yes, and I think it would meet the views of all.

2037. And would they be likely to use that line instead of taking their produce by teams to the main southern line? Yes. I question if the deviation would make the line any longer, but it would give great satisfaction.

2038. *Mr. Humphery.*] Was there an effort made to obtain a survey from Salt Lake Creek? Yes.

2039. Did not the Minister refuse to grant a survey? I am not sure; I do not know any of the particulars. I know that there were some parties who moved in the matter.

2040. The report says that the survey was refused on the ground that the route presented engineering difficulties which would involve increased expense and more than counterbalance the saving in distance. Is that correct? I think so. What I am suggesting would meet the views of the people to whom I have referred;—it would bring the railway sufficiently close to them. They have great difficulty in bringing their produce over the ranges, and they tell me that the station at Stockinbingal would not be of the slightest benefit to them. From my personal knowledge of the district I think the suggested deviation is worthy of an inspection and report.

2041. What you suggest is, that the line should be diverted from Stockinbingal towards the south, past the Combaning Station, and into Temora? Yes.

Mr. John Buckley, sergeant of police, sworn, and examined:—

Mr.  
J. Buckley.  
4 Feb., 1890.

2042. *Chairman.*] You are a sergeant of police stationed at Temora? Yes.

2043. How long have you been here? About five and a half years.

2044. Do you collect the statistics for the Government? Yes.

2045. Do you take the population? Yes.

2046.

2046. Can you say whether or not the population is increasing in this district? Since I came here the population has increased in the district, but has decreased in the town.
2047. When did you take the statistics last? Last month. The population of the town was then 1,021.
2048. That is within the town boundary? Yes.
2049. And what was the population of the district? The population of the portion of the district for which I collected the statistics was a little over 2,000. That was for the district altogether, including the town.
2050. Then there is as large a population in the town as there is in the district out of town? Yes; but I may mention that to the west I only collected statistics for about 10 miles from Temora.
2051. You did not take the whole of the police district? Not nearly the whole of the police district, because that is identical with the electoral district which includes Young.
2052. Then we cannot look upon the figures you give us now as in any way representing the population of the whole district? Not at all. The population of the district of Temora would be greater than what I have stated. Taking (say) 20 miles from Temora it would be considerably more.
2053. Take (say) 10 miles in a circuit round Temora? The population, including the town of Temora, in this area would be about 1,600 or 1,700.
2054. You think that is an increase? Yes.
2055. Can you say what percentage of increase? I did not keep the statistics last year, but at a rough calculation I should say the increase would be 8 or 10 per cent.
2056. Do you take the statistics for the electoral roll? Yes.
2057. Can you say what the increase on the electoral roll has been? I have not prepared the figures, but I can say that there has been a decrease in the town and an increase in the country over last year.
2058. You cannot say what the actual increase is? No, but there has been an increase. For instance, this year there were 100 additional names.
2059. Was that in this district? Yes.
2060. What do you suppose the decrease in the population of the town is owing to? To the miners having left. A great many have gone to Peak Hill and other rushes, and have not returned.
2061. And do you assume that the increase in the population outside the town is owing to the extension of agriculture? Yes.
2062. From your experience of the district do you think the agricultural population are fairly prosperous? Yes; I am certain of it.
2063. Do you think there are many people who would be glad to take up land if it were available? Yes, there are many looking for land. In fact, I do not think there is any land available in the immediate neighbourhood, except what is included in reserves, and there is a considerable increase this year in the agricultural area. I should think that the yield of wheat this year would average fully 20 bushels to the acre.
2064. Do you collect the agricultural statistics? Yes.
2065. And you think that the yield would average 20 bushels to the acre throughout the whole district? The yield for the extra district of Young is about 18·52 bushels to the acre. I am of opinion that the yield of the Temora portion would be 20 bushels to the acre.
2066. What is the general average? Last year would be no criterion, because some of the farmers did not get any wheat at all; they turned stock in, and let them eat it down. I may mention, with regard to statistics, that they are sent on to the department, and I do not keep a record of them. I am, therefore, only speaking now from memory.
2067. Speaking from memory, what do you think would be the average yield of the district, one year with another? Taking the drought with the good seasons, I should think that the average yield of wheat per acre would be 15 or 16 bushels. The year before last it averaged within a fraction of 19 bushels.
2068. I suppose you have a lock-up at Temora? Yes.
2069. Any gaol? No.
2070. Are you troubled with very many prisoners as a rule? I think we had over 100 during the year.
2071. I suppose the majority were not serious cases? No. It is very seldom that there is much crime in a gold-mining township or an agricultural district. There is more crime where coal-mining or railway works are going on, and among seafaring men.
2072. *Mr. Humphery.*] Do you know how many acres are under cultivation in the district? I could not tell you. I know there is a very large increase over last year. I suppose the increase this year, as compared with last year, must be fully 25 per cent.
2073. Can you say if the land within 15 miles of Temora is suitable for the cultivation of wheat? Yes, it is.
2074. It is nearly all good land? It is all splendid land with the exception of the ironbark ridges. There is scarcely any bad land in the district. You might ride 50 miles in any direction and see nothing but good land. I have been up the Humbug and to Wollongough, and it is all splendid land even up in that direction.
2075. And capable of sustaining a large population? Yes, magnificent land.
2076. *Mr. O'Sullivan.*] You say that the population has decreased since you came here? Yes, in the town.
2077. When did you arrive here? On the 7th June, 1884.
2078. The gold diggings were in full swing at that time? They were just on the wane.
2079. What was the population of Temora when it was at its highest? The population of Temora town at its highest, that is when the gold rush first broke out in 1879-80, was about from 6,000 to 7,000. Of course this was a floating population. The population of the town at present, 1,021, is a settled one.
- 2080-1. This town has a population now of a little over 1,000? Yes, 1,021.
2082. How do these 1,000 people sustain seventeen hotels? That is a mystery. There are sixteen hotels. A great many of the hotel-owners occupy their own properties and pay no rent.
2083. But does it not strike you as an extraordinary number for a town of 1,000 inhabitants? Yes, it does. There is no doubt that there are more hotels in Temora than there is any need for.

Mr.  
J. Buckley.  
4 Feb., 1890.

Mr. John Morris Foley, postmaster, sworn, and examined:—

Mr.  
J. M. Foley.  
4 Feb., 1890.

2084. *Chairman.*] You are postmaster at Temora? Yes.
2085. How long have you held that position? A little over four years and seven months. I have been a resident of Temora ever since December, 1880. I came here as assistant postmaster, and the appointment of postmaster was given to me in 1885.
2086. Can you say whether there is an increase in the number of letters received and posted? There has been an increase during the last three years; but previous to my appointment there was a much larger population—that was before the mining population dispersed. During the last three years I believe there would be an increase of letters amongst the selectors, and settlement has taken place all round Temora.
2087. Can you say about what percentage the letters have increased during the last three years? I should think they have increased to the extent of about 500 or 600 a year. According to the returns in the Blue Book the number of letters posted in 1888 was 61,806.
2088. Can you say anything with reference to the telegrams? They have also increased during the last two years. In 1888 the number of telegrams transmitted through this office was 4,823, and the figures for this year may show a small increase on that. The revenue derived from the transmission of those messages was £304.
2089. I suppose three or four years ago the revenue was very much below that? Four years ago it was.
2090. So that from 1880 to 1886 there was a gradual decrease? Yes. Since then it has gradually increased. A great number of selectors have been added to the population, but the number of the miners has decreased.
2091. Then you would judge by the postal and telegraph business that the population is steadily increasing? Yes.
2092. Have you anything to do with the money order office? Yes.
2093. Do you find that the business of that office is increasing? Yes, fairly well. The number of money orders issued for 1888 was 1,012, representing an amount of £3,072. The deposits for 1888 were 259 in number, representing in amount £1,250. The postage stamps sold amounted to £705. The figures for 1889 will show an increase, but I could not obtain them without reference to the Blue Book of 1889.

Mr. William Stuart Quail, auctioneer and commission agent, sworn, and examined:—

Mr. W. S.  
Quail.  
4 Feb., 1890.

2094. *Chairman.*] Where do you reside? Just outside Temora.
2095. How long have you resided in this neighbourhood? About ten years. I have been in the district for about twenty-seven years.
2096. What is your occupation? I am an auctioneer and commission agent.
2097. Have you followed the profession of a mining surveyor at any time? I have; I have followed that occupation in Queensland, and in the early days of the gold-fields here.
2098. Were you under the Government? I was not.
2099. You were following the profession privately? Yes.
2100. Do you desire to give the Committee any information of a particular character in connection with this railway project? It would be a very good thing for this field if we had a railway. From what I know of the country I should say Cootamundra should be our starting point. My reason for saying so is that Cootamundra beyond any doubt is our principal market, our principal depot for produce, agricultural and otherwise.
2101. I suppose what business you do you transact at Cootamundra? No; Temora and Cootamundra.
2102. You have heard a good deal of the evidence given this afternoon? Yes.
2103. I suppose you agree with it in the main? I do. I am sorry that the mining industry was not placed more conspicuously before the Committee. It is very desirable that we should have means of systematically working this country, particularly to the north, and that we should have easy transit for machinery. We have lots of undeveloped country here and great mineral wealth. I have been through the country to the north and in the Barmedman district, and there are reefs out there showing gold-bearing quartz on the surface.
2104. *Mr. Humphery.*] Did you hear the evidence of Mr. Heffernan? Yes.
2105. Do you agree with him as to the desirability of the line being taken to Salt Lake Creek? Certainly not. It may suit Mr. Heffernan very well and that part of the country, but in making this suggestion I think Mr. Heffernan lost sight of the east side of the country which is at present locked up, though it is fine agricultural country. I suppose about 13,000 acres of land are locked up to the east of Temora.
2106. Then with that portion of the evidence given this afternoon you do not agree? No.
2107. *Mr. O'Sullivan.*] You say you have had some acquaintance with the Barmedman country? Yes.
2108. Can you give the Committee any idea of the mining carried on there now and its present prospects? I think everything is almost at a standstill, but those who are working seem satisfied with their prospects. When I say things are at a standstill, I mean they are not what they were when Hardie and Gorman bought the place out. Barmedman was then working with very large results, but since then things have gone down. There are a few mines paying very well. I think the Hard-to-Find is working, and also some reefs in the immediate neighbourhood of the Barmedman Company's Mine.
2109. What is about the population of Barmedman? I cannot say.
2110. Can you explain how it is that gold has only been found in one lead in Temora? I cannot tell you about that; I know it is very disseminated. I think there is gold here still. I believe there is a basin of gold here somewhere.
2111. The gold found here has been in gaps, has it not? Yes; there has been no continuous lead in Temora.
2112. Still you believe if the country were properly prospected there would be? I have not the slightest doubt about it; but not in the immediate neighbourhood of Temora.
2113. *Mr. Humphery.*] Do you know the route of the proposed extension from Cootamundra to Temora? Fairly well.
2114. You know where the line will enter the town? Yes; near Talbot's hotel.
2115. Do you know the proposed site of the railway station? I do.

2116. Do you think it the best site that could be obtained and the most convenient to the people? It is certainly the most convenient to the people, but with my knowledge as a surveyor, I can hardly hold with the position of it. I would be far more pleased to see it near the police paddock.
2117. How far would that be from the site at present proposed? About 4 or 5 chains.
2118. Would it be necessary on the site you propose to resume any private land? No; the police paddock would be large enough.

Mr.  
W. S. Quail  
4 Feb., 1890

Mr. James Neilson, mining manager, sworn, and examined:—

2119. *Chairman.*] Where do you reside? At Temora.
2120. What occupation do you follow? I am a mining manager.
2121. What company do you manage? The Mother Shipton.
2122. Where is that situated? In Upper Temora.
2123. What is the nature of the mining—quartz or alluvial? Quartz.
2124. At what depth are you? 105 feet, and we are still sinking.
2125. That is the greatest depth you have attained? Up to the present.
2126. And have you done much stopping at the higher levels? No, I have not; the original party stoped the higher levels.
2127. Can you state to what extent north and south? About 150 feet north and south, and I suppose we stoped to about 30 feet.
2128. What is the width of the reef? It would average about 10 inches.
2129. Are there anything like defined walls—does it look permanent? Yes, the walls are defined, only it is in decomposed diorite.
2130. Both walls? Yes.
2131. What has the stone that has been got averaged? I could not give you the average, because I have not got the returns. There has been a great quantity of gold taken out, but I do not know whether any accurate estimate of the average has been made.
2132. Where was it crushed? At Lower Temora.
2133. The company never had a battery of their own? No.
2134. How long have you been manager? I have only been up here five weeks—acting for this company. I was up here seven months previously.
2135. Is the face in the shaft? I passed through it in the shaft.
2136. Are you sinking a vertical shaft? Yes.
2137. Has it much underlay? About 3 in 10.
2138. Do you find the gold occur in shoots? No, it lays in patches, not shoots. I have had no patch since I have been here because I have been doing dead work, but according to the nature of the ground where they have taken the patches from I think it has got an underlay of about 30 degrees to the south-east from the point where she starts on the surface out of the east and west lines.
2139. Still nothing like a defined run? The run is defined only you get the gold in the same stone, and you get it in patches and not regularly.
2140. Where it is, there it is, I suppose? Yes.
2141. What was the quality of the stone where you passed through it? Still decomposed diorite, and the stone is very heavily charged with galena and copper.
2142. Do you think it will improve? I have a great opinion of the Shipton Mine.
2143. You think it got better than it was at the higher level? No, it was similar to the other levels.
2144. How much per ton do you estimate the quartz to be worth? I could not strike an average per ton, because if you do not get the large deposits of gold you get nothing.
2145. Did the stone you sunk through in the shaft give good prospects? As far as the prospects are concerned I do not believe it would go more than 2 dwt.—not the stone I went through. But that is nothing, because you might go only 4 or 5 feet and get 400 or 500 ounces.
2146. Is that the only make of stone you have in the mine? No, we have a large make of stone away to the westward.
2147. Has that been prospected? Not to any extent.
2148. How deep has it been sunk? The deepest, I suppose, is only 12 feet.
2149. Of what description is the quartz? A sort of free quartz—just surface quartz—no mineral because they have not gone the depth. There has been no trial crushing and nothing more than prospecting with the dish.
2150. I saw some ironstone outcrops about the town;—do you know if any of these have been prospected? No, not in the hill where I am. That ironstone crop goes right through. I can trace it for a good many miles.
2151. Do you know if it has been tested in any way? Not that I am aware of.
2152. How many are there employed in the Mother Shipton Mine? Eight.
2153. Working three shifts? Two shifts.
2154. How many hours? Eight hours.
2155. What wages do you pay the men? £2 10s. a week; eight-hours shifts.
2156. Is this the only quartz-mine that is worked in Temora? No; there is the other mine that I was manager of before—Burke's reef.
2157. Where is that? Close to the Shipton.
2158. Is that working at present? No.
2159. Is there any other mine at work besides the Mother Shipton? No; not at present.
2160. So that you do not consider the quartz-mining much of a success? Well, I have a great opinion of quartz-mining in the Temora district. As far as the reefs are concerned I believe it will be a very rich district in time. It only wants a little capital brought in to develop it. There is no doubt, in my opinion, that Temora will yield some very rich quartz, and it has already yielded, as far as the Mother Shipton is concerned, some very rich patches of gold. The run is still there, but the parties who were working it after they took out the last rich deposit, lost the trace of the country, and I consider that I have picked it up. I hope before long to be in the same run of country again that the original party worked.
2161. Did you say that the walls were well defined? Yes.

Mr.  
J. Neilson.  
4 Feb., 1890

- Mr. J. Neilson.  
4 Feb., 1890.
2162. With reference to alluvial mining, I suppose we may consider that they are completely worked out? Yes. In regard to alluvial, what has been found is completely worked out. There are several parties always doing a little, and there are some claims which, if they could be worked on a more extensive scale, would, I think pay very well, but with the appliances we have the stuff is rather too poor to enable it to be raised and carted with profit. It is my opinion that there ought to be a great deal more of alluvial gold here. There does not seem to have been much prospecting.
2163. Is there any prospecting going on in the district now? No.
2164. Neither quartz nor alluvial? No.
2165. Is there any other mineral mining—copper, silver, or tin? No. There is a tin-mine out here, but I do not know anything about it.
2166. Where is it? Out Broken Dam way, to the left of Barmedman.
2167. How far from Barmedman? I could not say.
2168. Then there is no other company actually at work except your company? No.
2169. And yours is not what might be termed a pronounced success at the present time? At the present time—no.
2170. You are not paying dividends? No.
2171. Can you say whether there are many miners on the field now? Not that I know of. The only few that I know of are working up in the claim with me, and there are a few working about in the old ground.
2172. How many miners became selectors since the gold-fields were worked out? That I could not say.
2173. Mr. O'Sullivan.] I suppose you are likely to keep on working the Mother Shipton mine? Yes.
2174. Did not your directors some time ago hold a meeting in Sydney with regard to it? Yes.
2175. And send up Mr. Garrard, one of their number, to report? That was before I came.
2176. I presume the report was favourable, or they would not have sent for you to work the mine? Their report was favourable.
2177. You think this is likely to be an industry in Temora for some time? Decidedly.
2178. Was there not a very rich piece of quartz sent home to the Exhibition some time ago from this mine? Yes.
2179. Is there much more of that stuff? There was a lot of that got. Altogether, as nearly as I can recollect, there were about five of those patches got. When the last rich deposit was taken I am given to understand it yielded £2,600. This is only hearsay, but I know it was a very rich patch.
2180. Are those the finds they have been breaking into occasionally? Yes.

Mr. Robert Cassin, storekeeper, sworn, and examined:—

- Mr. R. Cassin.  
4 Feb., 1890.
2181. Chairman.] Where do you reside? In Barmedman.
2182. What is your occupation? I am a storekeeper.
2183. Have you been there many years? About seven years.
2184. Is any mining being carried on at Barmedman at the present time? Yes, to a limited extent—not anything approaching what there was four or five years ago.
2185. Is there any alluvial mining being done? No. It has all been quartz-mining.
2186. Can you tell the Committee the names of the different reefs that are being worked at the present time? The Fiery Cross is the principal one.
2187. Are there any others? Yes, there is an amount of work being done on a lease of Messrs. Hardy & Co., of Wagga Wagga. They call it No. 1, or Hard-to-Find.
2188. Take the Fiery Cross; can you give the Committee something like an estimate of what that mine has done? Three or four miners in an adjoining claim found it, pegged out the ground, shepherded the claim for a month or two, sold some interest in it, and by accident dropped on to the gold.
2189. How long since? Five and a half years.
2190. What was it called then? The Fiery Cross.
2191. Has it been in continuous working ever since? There has not been a day's suspension of work that I am aware of.
2192. Was there not some large company at work at Barmedman about two years ago? Yes.
2193. What was the name of that? The Barmedman United Gold-mining Company.
2194. What has become of it? It was wound up.
2195. It is not at work now? No; nor has the ground been fully worked. That company came into existence at the same time as several other companies. They expended a large amount of money on the surface. Evidence has been given in the Court that plant was erected to the amount of £16,000. They expended a large amount of money on the service and got a good deal of free gold out of the shallow workings, until they encountered the water at what we term the 80-foot level; their funds then became exhausted, and they finally wound up. They only broke into the reef and did not prospect by cross-drives.
2196. Since then the ground has been lying idle? No, it has not been idle. The plant was afterwards sold, and the battery is now used crushing for the whole district.
2197. But nothing more has been done to the mine? Various parties have attempted to make a living by fossicking, but there has not been any legitimate mining.
2198. Just working at the shallow level? Yes. Unless they get a main shaft down to drain the water—and that will cost a lot of money—no one can get down.
2199. Then at the present time the only two companies in existence are the Hard-to-Find and the Fiery Cross? There are other parties working. Jackson's No. 1, adjoining the Hard-to-Find, had four men fully employed and two occasional men. The next claim to that, in which Jackson also has an interest in conjunction with myself, had ten men on last month.
2200. Are they getting payable gold at the Fiery Cross? We never had a crushing that did not pay over £3 a week. We are crushing 300 tons at present, and I expect it will pay wages and leave a profit.
2201. When did you crush before? Three or four months since.
2202. And it has taken three or four months to get the 300 tons? Yes. They could have got more by putting on wages men.
2203. How many men are employed altogether? We have had eight and ten working here, but that was occasionally, when we tried to work it on a larger scale. The working shareholders do not care to employ labour in the mine, and there are seldom more than four or five men working.
2204. What width is the reef generally? It is a dyke of stone, more than a reef. 2205.

2205. What depth is the dyke? We have had 16 feet of stone. When we had the engine going and were paying 15s. a ton for crushing, we only used to take about 3, 4, or 6 feet of it, which went generally from 1 up to 3 and 4 oz. Mr. R. Cassin.  
4 Feb., 1890.
2206. How many tons did you crush last time? About 300 or 400.
2207. How many oz. of gold did you get? I could not say from memory, but I know it was payable. I think it went more than 7 dwt. Originally, when we used to pay 15s. per ton for crushing, we used to take only the choice stone, leaving the wall stone standing on each side. Afterwards, when the water came and the company ceased working in the lower level, we had to take the stone that was left previously.
2208. What is the depth of the reef in the Hard-to-Find, and the quality of the stone? The last crushing went  $3\frac{1}{2}$  oz.
2209. When was that? More than twelve months ago.
2210. What have they been doing in the meantime? Sinking a water-shaft.
2211. What depth is it now? About 179 feet.
2212. Is the water-shaft away from the reef? Yes.
2213. When do they expect to cut the reef again? They intend to drive to the reef as soon as the contract is finished for sinking the 194 feet.
2214. Have they ever seen the reef at anything like a depth of 194 feet? No. Nobody has ever been down that depth before.
2215. I suppose they have sunk blind shafts? We followed the reef down about 113 feet into the water.
2216. And at 113 feet what is the stone worth?  $3\frac{3}{4}$  oz.
2217. That was the last crushing? Yes.
2218. What width is the reef? From 8 inches down to 4 inches.
2219. Then you anticipate that the Hard-to-Find will be a payable mine? I think so. I am expending my own and other people's money upon it.
2220. You anticipate that the Fiery Cross and the Hard-to-Find will both be profitable? Yes.
2221. Jackson and party;—what are they doing? They are dependent on the drainage of the shaft I have referred to. When that shaft cuts the stone it will drain their stone.
2222. They are getting no gold at present? They brought in 40 oz. of gold yesterday from 8 tons of stone.
2223. I suppose they obtained that above the water-level? No. When the engine was going, and before the fresh water gave out, they followed the reef into the water, and took the drainage off by means of a horse-whip.
2224. How many men are there employed on the ground? They had four at one time and six during the last few days.
2225. And how many are employed by Jackson and Cassin's party? I had eight or ten, but I had to knock them off. The water beat us. A few days after the engines stopped we were flooded out.
2226. Are the whole of these four companies on the one line of reef? Yes.
2227. And is this a different line of reef to that which the Barmedman United was working some time ago? There is no proof as to that. They are a mile and a half apart.
2228. They may or may not be the same reef? We do not know.
2229. Is there anyone at work now on the line of reef that the Barmedman United was on? The Barmedman United were on the same line of reef as the Fiery Cross.
2230. You think it is the same line? Undoubtedly.
2231. Can you say anything in connection with the discovery of tin near Barmedman? I do not know anything about it.
2232. Is it not reported that tin has been found in the neighbourhood? I heard there was tin, but I did not think the matter of sufficient importance to take any notice of it.
2233. *Mr. O'Sullivan.*] What is the population of Barmedman? About 150 all told.
2234. About how many people are living round Barmedman within a radius of 10 miles? I could not say, but the land is all taken up for farms.
2235. There is good agricultural land there? Yes.
2236. Do not the people in the Barmedman district do their trade with Temora? Yes.
2237. If the line were extended to Temora you would be within 22 miles of the railway terminus? Yes. We do all our business through Temora, which is the natural centre for our district.

James Baker, Esq., Police Magistrate and Gold-fields' Warden, sworn, and examined:—

2238. *Chairman.*] You are Police Magistrate and Gold-fields Warden at Temora? Yes.
2239. How long have you held those positions? A little over seven years.
2240. From your position as warden do you think the prospects of the gold-field are in any way encouraging at the present time? They are not very encouraging just now, and they have been diminishing every year for a number of years. But I think the probabilities of the future are that the field will hold its own, and perhaps a little more than its own. The district has never had fair play. In saying that, I mean that I do not think the ground has ever been worked in a systematic manner and in such a way as to give the best results from the labour and money expended.
2241. You have had very many years experience of gold-fields have you not? Ever since 1852 or 1853.
2242. You have been continuously on gold-fields? Yes.
2243. Do you think this district has been sufficiently prospected? No, I do not.
2244. You think there is a reasonable chance of new discoveries? Yes, both of quartz and alluvial gold.
2245. Was the alluvial mining very profitable as a rule? It was profitable to some and not to others. It is a very patchy country. One man would get a lot of gold, and his neighbour would hardly be able to pay for his provisions.
2246. I suppose you do not issue miners' rights now? No; but I can give you some figures with regard to the yield of gold. The following are from the official return:—The yield of gold in 1881 was 21,652 oz.; in 1882, 33,348 oz.; in 1883, 17,347 oz.; in 1884, 14,381 oz.; in 1885, 7,865 oz.; in 1886, 7,161 oz.; in 1887, 3,406 oz.; in 1888, 2,353 oz.; in 1889, 1,169 oz. There is some discrepancy with regard to the year 1889, because the two Mining Registrars give the yield of gold for that year at 1,679 oz. The value of the gold is estimated at £3 17s. 6d., making a total for the year of £5,862. 2247.

J. Baker,  
Esq.  
4 Feb., 1890.

J. Baker,  
Esq.  
4 Feb., 1890.

2247. With reference to the proposal to take the railway from Cootamundra, which, in your opinion, is the better route? Unquestionably Cootamundra is better than Wallendbeen for a variety of reasons, some of which have already been given. Cootamundra is the natural route for stock and produce. There is already a junction there, and a great deal of business is done at Cootamundra. A good deal of business is done also at Junee, as well as with Gundagai and Tumut. For example, maize and produce of that kind come largely from Tumut, and if you take the railway to Wallendbeen you take it out of its natural course. Although there may be a saving of haulage in the journey to Sydney a great deal of the business of the district is done between Cootamundra and Albury.

2248-9. Still, there is, I suppose nothing like the proportion of business transacted to the south that there is to the north? I should think that very much the larger proportion of business is with Sydney, though I know there is a considerable amount of business done the other way.

2250. Do you think the proposed site of the railway station at Temora is suitable? The land is rather low, but the situation is central.

2251. You think on the whole it will be the most suitable position for the business people and the people generally in the town? I think so. I think the position is an excellent one, if care is taken that the ground is raised sufficiently high. But the police paddock, a little to the north of the proposed site, would, perhaps, be preferable.

2252. Do you know the country between Temora and Barmedman? Yes, very well.

2253. Assuming that the railway is brought to Temora, would the country beyond Temora, in the direction of Barmedman, be such as to warrant the taking of the railway to Barmedman? Unquestionably. If the land were mine and I had the money to make a railway, I would make it as quickly as I could, because I feel quite sure that the increase in the value of the land would pay for the construction of the railway. There is an ironbark range commencing about 10 miles from Temora on which the land is not very good for agricultural purposes, but which contains timber very valuable for railway construction.

2254. Is there much of that timber? A considerable quantity.

2255. Do you know the country westward of Barmedman towards Hillston? No. I have only been 6 or 7 miles beyond Barmedman. So far as I have gone the country is of the same character—very excellent land.

2256. Do you think the mining interest is in a healthy state at Barmedman? Not as healthy as it ought to be. I think Barmedman ought to be a much more prosperous mining district than it is. Mr. Cassin is about as good an authority as you could consult on this question, and I am quite sure that whatever information you get from him will be the truth, whether it is for or against the district. But there have been several causes which have prevented Barmedman from being as prosperous as it ought to have been. In the first place, the Barmedman United Company was completely muddled from beginning to end. It was badly managed. They fossicked about the surface and exhausted their funds, instead of sinking down below the water to get the gold, and they wasted the money. The manager told me if he wanted a box of candles they would have to send to Sydney for them, and they would send him a ton at a higher price than he could buy them from the local storekeepers. I am speaking now of what came under my notice officially, the statements having been made on oath in court. The result was that the plant was sold for £1,050—one engine alone being worth all the money. The plant cost nearly £20,000, and they sold everything for £1,050, and then went into the court to liquidate their debts.

2257. I suppose the shares were mostly held in Sydney? Mostly held in Sydney, and muddled in Sydney.

2258. Do you know anything with reference to a tin discovery that has been spoken of? No. There was a tin discovery reported to me, and some mineral leases were taken out, as nearly as I can guess, 35 miles from here, and about 25 miles from Barmedman.

2259. In about what direction would it lie from here by the compass? About north-west.

2260. How long is it since the discovery was first supposed to have been made? About twelve or fifteen months. They made a very good dam which the owner of the run is very proud of; he says it will come in very handy for him. They have given it up, and it is to be sold. I never saw the place. There is unquestionably tin there, but whether it will pay or not I cannot say.

2261. Can you say whether there is any silver, copper, or any other kind of mineral in the district? There is no evidence of the kind with regard to the ironstone which runs through the town. I sent a sample down to have it assayed, but somehow or other they sent me an assay of the wrong stuff.

2262. What was the result? There was silver, tin, and nickel, but Mr. David who came up said it was a mistake, and they had sent the wrong assay.

2263. *Mr. Humphery.*] The cost of constructing a railway to Temora will be about £138,000. The interest on that sum will be £5,000 a year, and the working expenses of the line will amount to £7,500 a year, making in all an annual expenditure of £12,500. Do you think the prospects of this district would justify the construction of the railway at such a cost? If you simply rely upon the traffic for the first year or so, I should say no, but if the Crown lands for 3 or 4 miles on either side of the railway were conserved, so that the State would have the real value of the land when the railway was opened, I believe that the amount that would be derived from the increased value of the land would more than construct a railway.

2264. Do you think there is a prospect of the working expenses being covered by the earnings of the railway within a year or so? Yes; within a year or two, I should think.

2265. Do you think that within five years the interest on the cost of construction as well as the working expenses would be paid by the earnings of the railway? I think so.

2266. And you think the country would be justified in incurring the cost? Not only do I think the country would be justified but I think it would be a very praiseworthy thing to do.

Mr. Owen Roberts, miner, sworn and examined:--

Mr  
O. Roberts.  
4 Feb., 1890;

2267. *Chairman.*] Where do you reside? At the lower township.

2268. What are you? A miner.

2269. Did you some time ago make a discovery of tin? Yes.

2270. In what locality? North-west from here.

2271. How many miles? About 27 miles.

2272. On whose station was it? Mandamar West—Mr. Davidson's station.

2273. What was the nature of the deposit—was it alluvial tin? Stream tin.

2274.

2274. You did not find any lode? We sunk a 4,000-yards tank, and we discovered six narrow veins carrying tin. One was from 4 to 5 inches thick, another, about 2 or 3 inches, and another about 1 inch.
2275. How far apart? About 15 feet apart altogether.
2276. These different veins were all comprised within 15 feet? Yes; running parallel east and west.
2277. Did you sink on those? The company did. They sunk away from the tank and sunk about 100 feet on the same vein that we struck when first going down for the tank.
2278. Did they carry the tin down with them? They drove into the vein. There was a sort of dyke of sandstone and limestone. There was a little tin discovered but nothing any good.
2279. Did they cross-cut and try to get the other veins that were running parallel to the one you got? They never tried them.
2280. So that out of the six veins they only proved one? Yes.
2281. That was at a depth of 100 feet? Yes.
2282. Did they drive along the cross-cut? No.
2283. You said it was stream tin? The alluvial was stream tin.
2284. What did you find in the alluvial? We found some very fair tin; as much as  $\frac{1}{2}$  lb. and 1 lb. to the dish, and sometimes 3 and 4 oz., and so on.
2285. And less than that, I suppose? Yes.
2286. What do you think would be the average to the dish? The average on the whole would be about 4 oz.
2287. What thickness was the dirt? From 1 foot to 6 feet.
2288. Was it in granite country? Yes.
2289. Was it a defined wash? It was water-worn stone.
2290. Large stone? Yes.
2291. Granite boulders? It was more of a sandstone diorite and quartz.
2292. How much dirt did you take out altogether? The company sunk shafts, and took out about 150 or 200 loads.
2293. And what was the result? They never washed it.
2294. Is it lying there still? Yes.
2295. Has no one ever had the curiosity or the energy to wash this dirt; is there any sluicing near? We tried thirteen loads. I made a box myself.
2296. Is the stuff of a clayey nature? No; it could be sluiced. They tried it with the box I lent them, and we consider we lost 4 or 5 lb. to the load in trying it.
2297. What did you save to the load? We took the best of course, and we got  $4\frac{1}{2}$  cwt. of tin from seven loads, and we had to cart it  $1\frac{1}{2}$  or 2 miles to try it.
2298. Did the tin ore assay well? Mr. Woods sent about 12 or 15 lb. away, and the return that came back was 68 per cent., and of course some washed less.
2299. The whole thing has been abandoned now, I suppose? It is not abandoned. I do not know what the company is going to do with it.
2300. Is it a Sydney company? Yes.
2301. Did they minerally conditionally purchase the land, or was it a mineral lease? It was a mineral lease.
2302. They have not purchased it; so that if they do not go to work the land will ultimately be thrown open for somebody else to work? Yes.
2303. From your experience do you think there is a fair probability of the ground turning out payable? I think myself that the manager who was sent up knew very little about tin, judging from the way he went to work.
2304. Is there a great extent of granite country in that neighbourhood? Yes; it continues a long way.
2305. Has the ground been prospected in other parts? No; only just what we did, and the manager to whom I have referred drove and sunk at the place where we found the tin.
2306. How did you make the tin discovery;—were you sinking for gold? No. We found indications on the surface, and there was a chain of conical hills, and I sunk in a gap between two of them, and that is where we found the tin.

James Davoren, Esq., Mining Registrar and Warden's Clerk, sworn, and examined:—

2307. *Chairman.*] I believe you occupy the position of Mining Registrar and Warden's Clerk? Yes.
2308. Can you tell the Committee how many miners' rights have been issued in the district (say) for last year? 242 miners' rights.
2309. Any mineral licenses? Eleven.
2310. How many miners' rights have been issued this year up to the present? Eighty-four or eighty-five.
2311. Any mineral licenses this year? None. There were eleven last year and twenty-seven the year before.
2312. I suppose you find from the numbers of miners' rights issued that the number of miners is diminishing? Yes.
2313. Are there many residence arcas taken up under miners' rights? There are a good many under business licenses. I issued sixteen business licenses last year more than I did the year before.
2314. How many did you issue last year? Sixty-nine.
2315. What was the total revenue you received last year as Mining Registrar? I could not say without reference to the book.
2316. Is there any land in the district held under mineral lease? Yes, 180 acres.
2317. For what mineral? Tin, as described by the last witness. There was one application for 80 acres, one for 60, and one for 40, making in all 180.
2318. Those are the only mineral leases held in the district? Yes.
2319. Are you Registrar of Births? I am.
2320. How many births were registered last year? About 120.
2321. Do you know the number of deaths? I do not. The deaths were very much less than the births—probably about half.

Mr.  
O. Roberts.  
4 Feb., 1890.

J. Davoren,  
Esq.  
4 Feb., 1890.

- J. Davoren, Esq.  
4 Feb., 1890.
2322. Can you say whether the births were greater last year than the year before? They were very much greater last year.
2323. Do you gather from that that the population is increasing? Yes, it is becoming more settled.
2324. *Mr. O'Sullivan.*] Were any of those who took out miners' rights new men? I could not say. I think that generally speaking they were taken out by old miners who were here. I have no doubt a great many more miners' rights would have been taken out had not the land been occupied so much by leases which had not been cancelled. Another objection miners have to taking up land on which registration has been obtained is that, according to a decision of Judge Forbes, if gold is obtained the proprietor who originally registered can come in and claim the ground.
2325. Have any miners applied for the right to mine on private property under the new Act? None have applied to me. In one case they applied to mine under a reserve, and their application was granted.

Mr. William James Cartwright, farmer and grazier, sworn, and examined:—

- Mr. W. J. Cartwright.  
4 Feb., 1890.
2326. *Chairman.*] Where do you reside? At Mimosa, about 13 miles south from here.
2327. How much land do you hold? 2,371 acres, consisting of 1,706 acres conditional purchase and the remainder under conditional lease.
2328. How many acres have you under cultivation? 460.
2329. And I suppose you run sheep on the remainder? Yes.
2330. Is the whole of the land which you have under cultivation growing wheat? Yes. I have got some hay also.
2331. How many tons of hay did you get per acre? About 2½.
2332. Wheaten hay? Yes.
2333. How many bushels of wheat to the acre did you get? About 25.
2334. For how many years have you been cultivating this land? About seven years.
2335. And does it still continue to give you 25 bushels to the acre? It will average about 18 or 20.
2336. You find the yield fall off by continuously growing the same crop? Yes.
2337. Where do you send your wheat to? Old Junee.
2338. I suppose if this railway were constructed you would still send it to Old Junee? No, I would send it to Temora. I have to cart it 22 or 23 miles at present.
2339. What do you pay per bag for carting it? I cart with my own team, but if I had to pay, the freight to Junee would run from 1s. 6d. to 1s. 9d. per bag.
2340. And when you got to Junee you would have to pay extra railway freight to take it back to Cootamundra? Yes.
2341. Does your wheat go to Goulburn chiefly? Yes.
2342. You do not send any of it to Albury? No.
2343. Do you consign the wheat yourself or send it to agents in Cootamundra? I generally sell it through an agent in Cootamundra.
2344. How many acres have you under crop? 460.
2345. How many years have you been living on the land? Seven.
2346. And during that seven years you have cleared 460 acres? Yes.
2347. Are you continuing to extend your cultivation? Yes. I did not clear any this last year. I consider I have sufficient unless I have more convenient means of getting it to market.
2348. Is it your intention to bring more land under the plough if a railway is constructed? Yes.
2349. Have you any more land as good as that which you are at present cultivating? Yes, it is all fit for agriculture.
2350. Is the land in the district round about generally good land for agriculture? Yes, excellent.
2351. Are there many other farmers in the same neighbourhood? Yes, a good many.
2352. All cultivating? Yes.
2353. And do they all send their wheat to Junee? Yes.
2354. And it would be an advantage to them as well as to you to have the railway constructed, as it would bring them nearer to the market? Yes.
2355. Do you think the railway ought to come from Cootamundra rather than from Wallendbeen? Yes, I believe Cootamundra is the best route.
2356. What about taking the railway to Junee from Temora? It would suit me nicely, but for the welfare of the country I believe Cootamundra is the proper starting point.
2357. *Mr. Humphery.*] How many sheep have you? 2,200.
2358. And cattle? About nine head.
2359. Have you any objections to say what your means were when you came to the district seven years ago? Very fair.
2360. You had money when you came here? Yes.
2361. Are you better off now than when you came? Yes.
2362. What you have you have made here? Yes; some of it.
2363. Are your neighbours as prosperous as yourself? Yes.
2364. *Mr. O'Sullivan.*] Is your selection near Clear Hills station? About 12 miles from it.
2365. What distance are you from Temora? About 13 miles.
2366. And how far from Junee? About 22 miles.
2367. You obtain your stores from Temora now? From Cootamundra.
2368. Do they come by way of Temora? I get them chiefly now from Junee.
2369. I suppose your neighbours would, like yourself, patronise the railway if it were opened to Temora? Yes.

Mr. Christian Hansler, landed proprietor, sworn, and examined:—

- Mr. C. Hansler.  
4 Feb., 1890.
2370. *Chairman.*] Where do you reside? Just outside Temora.
2371. Are you a landed proprietor? Yes.
2372. How many acres do you possess? About 15½.
2373. How many acres do you cultivate? I have got 4 acres under grapes, and about one more under fruit-trees.
2374. Have you made wine in the old country? Yes, and here also.
2375. What is your native country? Germany, 2376.

2376. On the Rhine? Close to the Rhine.

2377. Do you think the soil and climate of this locality is well adapted for wine-making? Particularly well adapted. I believe we can grow as good wine about Temora as can be grown in any other part of New South Wales. I proved it last year. I made some wine though the vineyard was started only about four years ago.

Mr.  
C. Hansler.  
4 Feb., 1890.

2378. How many gallons of wine did you make last year? The first year I lost a lot on account of the very dry season which kept me back, and the vines are not in full bearing yet. It will be another two or three years before they are in full bearing.

2379. I suppose when they are in full bearing the wine will be of a better quality? The wine is of good quality now. When the vineyard is in full bearing I expect to make about 500 gallons to the acre or a total of 2,000 gallons for 4 acres.

2380. Do you think that would be about the average production of the land in the district? Yes.

2381. Is that red wine or white wine? Both.

2382. What are the names of the wines? Muscat, port, claret, white Reising, and other kinds.

2383. Do you grow many table-grapes? Yes.

2384. And what other fruits do you grow? Apples, pears, peaches, plums, oranges, and all sorts of fruit.

2385. And all those fruits grow well? Yes, especially apples and plums.

2386. And you find you can grow oranges and apples in the same garden? Yes. I got a prize for oranges at the last Temora show.

2387. Is it not rather unusual for apples and oranges to grow together? I am not aware. I am not so well acquainted with the orchard as with the vineyard.

2388. So far, your orchard is thriving? Yes, doing well.

2389. And what do you reckon you would make out of an acre of fruit, leaving the grapes out of consideration? I reckon that, in pretty full bearing, they would bring in about £1 a tree.

2390. How many trees to the acre? About 70.

2391. That would be about £70 per acre? Yes. The trees would not yield that yet—not until they mature.

2392. Do you not think there is a very large area of land in this district from which wine could be made of good quality? Yes. I sold all my vine-cuttings to other people for planting.

2393. So that it is evident that wine culture is making progress? Yes.

2394. And you think, from your past experience, that it will be a success? I think so.

2395. And that it will be more profitable than wheat-growing? Yes.

2396. *Mr. Humphery.*] You are building a wine-cellar, are you not? Yes.

2397. Have you a wine-press? Yes.

2398. Is the wine-press I saw at your vineyard this morning the only one you have been using? Yes, that is quite sufficient. I could press with that for the whole of Temora.

2399. What quantity of wine did you make last year? About 100 gallons, in addition to the grapes I sold.

2400. Did you sell the wine? Yes, I sold it all.

2401. *Mr. O'Sullivan.*] Have you been in the wine districts of Victoria, near Rutherglen? Yes.

2402. Do you think that the soil here is equally as good for vine culture as the soil there? It is just as good.

2403. What do you estimate your profits per acre at? I estimate that, when in full bearing, the land will bring me in about £400 a year.

2404. Do you think you will clear £25 an acre? I should say so.

2405. You know that in Victoria the small farmers do that? Yes.

2406. And therefore, the small vignerons could do the same here? Yes.

2407. But I suppose it would very much conduce to the promotion of the industry if a large wine cellar were established with wine-presses? Yes.

2408. You think, from the way the people are taking it up, that it is likely to be a successful industry here? Yes.

### WEDNESDAY, 5 FEBRUARY, 1890.

[*The Sectional Committee met at the Wallendbeen Court-house, Wallendbeen, at 7 p.m.*]

Present:—

HENRY COPELAND, Esq. (CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY. | EDWARD WILLIAM O'SULLIVAN, Esq.

The Sectional Committee further considered the proposed Railway from Cootamundra to Temora.

James Gibb, Esq., pastoralist, sworn, and examined:—

2409. *Chairman.*] You are the proprietor of the Berthong Station? Yes.

2410. Are there many acres of conditionally purchased land on the station? There are a good many.

2411. Can you say how many? There are 53,000 acres, purchased and conditionally purchased.

2412. That which has not been conditionally purchased, I suppose, has been purchased by auction? Yes, and improvement purchase.

2413. How many acres have you under lease from the Crown? I have 11,858, but I do not think there is that quantity.

2414. You are paying for 11,858 acres under pastoral lease, but you do not think there is that quantity? Exactly.

2415. Is there any land on the station in the resumed area available for conditional purchase? Not at present.

2416. Is it open to be selected? Not yet; it is in reserves, but it is cut up.

2417. It has been surveyed for selection? Yes.

2418. In special areas? I do not know the size.

2419. About what proportion of land is fit for agriculture of the land that will be available on the resumed area? About one-fourth.

J. Gibb, Esq.  
5 Feb., 1890.

- J. Gibb, Esq. 2420. And the remainder, I suppose, is good grazing land? No, it consists of ironbark ranges and granite ridges.
- 5 Feb., 1890. 2421. How many acres have you in the leasehold area? I think there are 6,252 acres of Crown land.
2422. Then there is an equal division? Nearly so.
2423. Can you say how many acres there are in reserves in the leasehold area? About 2,204 acres.
2424. Approximately, how many acres do you think are in the reserves? 2,204 acres. There are 960 acres in the one you came up to-day.
2425. Is that a water reserve? Yes.
2426. Has the reservation not been revoked? Not in the papers, but they sent a surveyor to cut it up.
2427. They have measured it preparatory to throwing it open? Yes.
2428. What proportion of that 960 acres is agricultural land? About one-half.
2429. What other reserves are there on the resumed area? There is another water reserve at the home-stead known as the Berthong Springs, and the ironbark forest reserves we passed through to-day.
2430. How many acres? About 700 acres in Berthong Springs.
2431. Are those springs permanent? Yes.
2432. And I suppose it would be desirable to retain some portion of that reserve? I have not the least doubt of it.
2433. Retain it as a water reserve for all time? For all time.
2434. There is no necessity to retain any of the 960 acres? No.
2435. Is that permanent water? No.
2436. What other reserves have you on the leasehold area? Travelling stock reserves.
2437. Is the travelling stock reserve continuous, or merely a remnant of a travelling stock reserve? It is not continuous, and not a remnant.
2438. In what direction does it go? No particular direction.
2439. Do you ever make use of it in sending your stock through? No. My paddocks go right out on to the road.
2440. Do you ever send your stock to the mountains? Yes, but not in that direction. This stock reserve goes north from my run, and when I send my stock to the mountains I send to the south.
2441. Then as far as you are concerned this travelling stock reserve is not required? Not required.
2442. Are you in the habit of sending your stock away to the mountain country in times of drought? Yes.
2443. Where do you send them to? I have got two runs on the mountains near Kiandra above Tumut.
2444. What are the names of the runs? Yarrangobilly North and Pinbeyan West.
2445. How long do you keep the stock there? Sometimes a year—all the winter if I am hard pushed at Berthong.
2446. In sending your stock there do you ever make use of the railway to Gundagai? No, I have not done so.
2447. Do you think that if this railway were constructed to Temora the graziers to the west of that place would be likely to make use of the railway to send their stock to the mountains? That would depend upon three things. First, it would depend upon the price of the journey.
2448. You know, I suppose, that there is a specially low rate for travelling stock? I would expect so. In the second place, the trucks as they are at present are not fit to send even fat stock away in. There ought to be at least four compartments in each truck. And thirdly, the Government ought to take into their hands the town commonages, fence them in, subdivide them into paddocks, and make a charge for travelling stock, so that they could rest and have feed.
2449. What is your opinion as to where the proposed railway from Temora should join the main Southern Line? I think it should join at Wallendbeen.
2450. Will you state concisely the reasons why you think it should connect at Wallendbeen in preference to Cootamundra? It will save the consuming public about 3s. a ton for every ton they consume, and there will be an additional haulage of close upon 10 miles backwards and forwards.
2451. Any other reason? It will open up a large tract of country.
2452. Do you think it would open up a larger tract of country than by connecting with Cootamundra? I cannot speak as to that. I have never surveyed that line.
2453. You know there are a great many selectors on the proposed line between Cootamundra and Temora, and westward of Temora? There is no doubt of that.
2454. And that the land office and other Government offices are at Cootamundra? I am aware of all that also.
2455. Do you not think it would be greatly to the convenience of all these people to be taken straight to the land agent's office, even although they had to pay a little extra in the way of haulage? No. I think there ought to be a land office in Temora.
2456. Then the people would be able to choose the shorter route? Yes. I can save from £1 to £2 per ton on my goods by purchasing them in Sydney and landing them in Wallendbeen.
2457. From £1 to £2 per ton? Yes; instead of buying from the merchants.
2458. But surely it does not cost from £1 to £2 a ton to take the goods on to Cootamundra from Wallendbeen? I am not talking about taking them on to Cootamundra. I say, that if I buy direct in Sydney, and take the goods home to my own place, instead of going to Young or Cootamundra I will save from £1 to £2 per ton.
2459. But if the railway went to Cootamundra you would still have the Sydney market open to you, just the same as you have at present? Certainly; but I am talking of the Temora people. Instead of having to go to Cootamundra to buy, they could buy direct in the head city of the Colony.
2460. But could they not buy direct all the same if the railway were taken to Cootamundra? Yes; and have to pay 3s. a ton extra for haulage.
2461. Do you think that, if a railway were brought to Wallendbeen, stores and Government offices would spring up, giving the same amount of accommodation to the people that is now obtainable at Cootamundra? I do not think for a moment that Government offices would spring up—not for a considerable time, at any rate. There will be other branch railways made in the course of time.
2462. Do you not think it would be a great advantage to the people about Temora and to the westward if the railway were to connect at Cootamundra, and join on direct with the Gundagai line, so that they might be able to send their stock on direct to the mountain country? No doubt it would.
2463. Can you point out any recommendation in favour of the Wallendbeen line, besides the fact that 9½ miles

9½ miles of haulage is saved by adopting the more direct route? You go through a splendid ironbark country, where there is timber suitable for sleepers and posts and rails, and you go north through Government land all the way to Yeo Yeo. J. Gibb, Esq.  
5 Feb., 1890.

2464. But is that land open for selection? The reserves are not.

2465. Is there any land open for selection at the present time on that route? I am not aware that there is, but there will be.

2466. Do you think that the railway, by the suggested route to Wallendbeen, would traverse as much settlement as if it went by way of Cootamundra? A great deal more. There is the very finest land on Berthong, on Davidson's station, and also on Milong. The Milong farmers are within 8 miles of the flat before you enter the rough country. Instead of having to go 15 miles to Young, they would be within 8 miles of a platform. There are a very large number of selectors on Milong, and part of Davidson's.

2467. Do these lie north of the suggested route? Yes.

2468. Can you say how many selections have been taken up within a radius of (say) 10 miles on the northern side of the line from Wallendbeen to Stockinbingal? That I could not say. There are a very large number on Milong and Geraldra.

2469. What distance is that from the railway? About 8 miles, or 9 at the outside. Nine miles would bring you right in amongst them. No doubt some of them would be 10 miles distant.

2470. Are there more selections on the northern side of the line between Wallendbeen and Stockinbingal than there are on the southern side of the line? I will not say that. I think that south of the proposed Wallendbeen line the land is nearly all occupied by selectors.

2471. I suppose to a great proportion of those on the southern side of the line it would make very little difference whether they made use of the line to Wallendbeen or that to Cootamundra? It would make a difference of 1½d. a bushel to a great many of them. They would have to pay 6d. a bag freight either to Wallendbeen or Cootamundra.

2472. But they would have to pay something per bag to have it taken to any station;—there would not be a station alongside every selector's barn, they would have to pay something in any case? Undoubtedly so.

2473. How many selectors are there (say) within 7 miles of Wallendbeen, between Wallendbeen and Yeo Yeo? There are a large number, but I could not say accurately.

2474. Have you any idea how many selectors there are on the land between here and Yeo Yeo? There might be sixty.

2475. *Chairman.*] Sixty selections or sixty persons? Sixty selections. On some of them there are eight or ten people.

2476. *Mr. Humphery.*] Sixty selections occupied? Yes, sixty homesteads.

2477. How many of those would be within 7 miles of Wallendbeen? A good few of them.

2478. Can you say about how many? I would not undertake to say how many.

2479. What I wish to know is this: How many are there within 7 miles of Wallendbeen, and how many are there within 7 miles of Yeo Yeo? I would not attempt to answer the question with accuracy.

2480. Can you say how many selectors there are between 5 and 10 miles of Wallendbeen? The land is all occupied by selectors, but how many there are I cannot say.

2481. I want to know how many would be served by the existing line, and how many would be served at Yeo Yeo, where the proposed line goes to Cootamundra, and the suggested line to Wallendbeen? There might be twenty-five who would put their goods on that line.

2482. At Yeo Yeo? Yes.

2483. *Mr. O'Sullivan.*] To what railway station do you send your wool? To Wallendbeen.

2484. How far are you distant from Wallendbeen? The shed is 9 miles away.

2485. And I presume you obtain all your stores by way of Wallendbeen? Yes.

2486. How many graziers are there between Wallendbeen and Stockinbingal? Only Mr. Davidson, myself, and the owners of Nubba Station.

2487. Nubba station is near the southern line, is it not? The southern line goes through a portion of it.

2488. Is there a platform on Nubba station? I believe so.

2489. Where is Mr. Davidson's station? Geraldra.

2490. How far is that from the southern line? 20 or 25 miles.

2491. Does Mr. Davidson send his wool into Wallendbeen? To Cootamundra I think.

2492. Then he would very likely be served by a station at Stockinbingal if one were established there? I should think so.

2493. How far would his woolshed be from Stockinbingal? About 2½ miles.

2494. The land we passed through to-day, coming from Stockinbingal to Wallendbeen, was in some places of a very superior quality, was it not? Yes, very good.

2495. How much of that land do you think would be open for settlement if the line were taken from Wallendbeen to Temora? It is impossible for me to say.

2496. Can you not give the Committee an approximate idea as to how much would be likely to be opened? I cannot say.

2497. Can you not form an idea as to how much land would be available for settlement? No, I cannot; I never bothered with any place but my own.

2498. Would not the reserve through which we passed be available for settlement? Undoubtedly; but I do not know the size of it.

2499. Are there many leasehold areas out there? I cannot say.

2500. Does the Geraldra leasehold area come in out there? I do not know that Mr. Davidson has any.

2501. How much resumed area have you yet in hand? The Government say about 5,606 acres.

2502. How much of this would be on the line of railway if it were constructed from Wallendbeen to Temora? The railway would go through the 960 acre water reserve and the ironbark forest reserves.

2503. Then the whole of these 5,606 acres would be available for settlement? Yes, if thrown open for selection.

2504. Not all the resumed area? No, the water reserves would not go. I do not think the Government would ever part with the main spring.

2504½. It would be necessary to retain the reserves on that resumed area? It would be necessary to retain that one.

2505. Can we say that there would be about 10,000 acres available for settlement between Wallendbeen and Stockinbingal? No.

Mr. Peter Sinclair, station manager, sworn, and examined:—

Mr. P.  
Sinclair.  
5 Feb., 1890.

2506. *Chairman.*] You are manager of the Nubba Station? Yes.  
 2507. I presume that the question of the proposed railway from Wallendbeen to Yeo Yeo does not affect the Nubba Station very much? Not in the least.  
 2508. Because you are near enough to the main southern line? Yes, it runs through the station for about 4 miles.  
 2509. You have heard the evidence given by Mr. Gibb? Yes.  
 2510. Do you generally endorse that evidence? Yes, to a certain extent.  
 2511. Is there anything you would like to state to the Committee with reference to the proposed railway which you think ought to be brought out in evidence? The only thing is that if the railway went from Wallendbeen to Yeo Yeo it would open up a lot of country, whereas the land on the Cootamundra route is already opened up. The railway from Wallendbeen would get all the outside traffic from Milong, and the leasehold area on Berthong, I suppose, will be available some of these days.  
 2512. But a great proportion of the land to which you refer is already within a reasonable distance of the main southern line, is it not? Yes. But there are only 48,000 acres within the triangle altogether, and the people are mostly large holders. I should not think there were more than eighty altogether.  
 2513. Is there any part of Mr. Gibb's leasehold area 10 miles away from the Wallendbeen Railway Station? I think not.  
 2514. Then the whole of them would be within 10 miles? Yes.  
 2515. Some of them much nearer than 10 miles? Yes.  
 2516. Is there any statement you would wish to make to the Committee? No, there is nothing in addition to what has already been said by Mr. Gibb.  
 2517. You endorse generally what has been said by Mr. Gibb? Yes.\*

Mr. James Drummond, sworn, and further examined:—

Mr. J.  
Drummond.  
5 Feb., 1890.

2518. *Chairman.*] Do you produce some statistics with reference to the quantity of wheat sent from the Wallendbeen Railway Station during the whole of last year and the first month of the present year; also the passenger traffic and the whole of the traffic inwards and outwards? Yes. The information is embraced in the following tabulated statements:—

COACHING, 1889.

\* NOTE (on revision): I omitted to state that the north-western line traffic from Blayney, &c., should also be considered, and, further, I feel certain if a trial survey were made, that the Yeo Yeo would be a much easier line for rolling-stock than the present line from Wallendbeen to Cootamundra, and would save the extra 9½ miles' haulage on both routes, which would be a big item in a few years.

2519. What ground have you for believing that these figures are absolutely reliable? I obtained them from the station-master, and have every reason for believing that they are correct.  
 2520. *Mr. O'Sullivan.*] Do those figures refer to the land south of the main southern line as well as north? They refer to the whole of the Wallendbeen railway traffic. I also furnish the Committee with the following particulars of holdings on and near the proposed route of the Temora railway, starting from Wallendbeen as far as Yeo Yeo. I have not been able to fill up the particulars under some of the headings.

Mr. J. Drummond.  
 5 Feb., 1890.

Name of Owner	Distance from proposed route	Distance from Wallendbeen Station	Area of Holding	Area under crop	Number of bushels.
—Price . . . . .	On the route	Adjoining station	acres.	acres.	
John Izzard . . . . .	do	1 mile	520	..	.....

— Davidson . . . . .	Geraldra Estate here running through it.				

Mr. Patrick Kilfoyle, Police Constable, sworn, and examined :—

2521. *Chairman.*] You are the resident constable at Wallendbeen? Yes.  
 2522. How many years have you been here? Three.  
 2523. I suppose you know the district very well? Yes.  
 2524. You went over with Mr. Surveyor Hutchison to examine the proposed railway route from Wallend-  
 been to Yeo Yeo? Yes.  
 2525. Do you think Mr. Hutchison took a reasonable amount of trouble in ascertaining the best route obtainable? Yes, I think he did.  
 2526. You think that the route selected is the best that could be obtained? Yes.  
 2527. The shortest and the best from an engineering point of view? Yes.  
 2528. We do not know of any better way of getting over the range? No.  
 2529. Neither a shorter way nor a better way from a gradient point of view? No.  
 2530. Have you collected any statistics with reference to Wallendbeen during the last year or the present year? Yes, I collected the stock and crop returns.  
 2531. Within what radius of Wallendbeen? About 10 miles.  
 2532. East, west, north, and south? No; 10 miles south, about 6 miles east, and 6 miles west, and about 9 miles north.  
 2533. Within those distances of Wallendbeen, what returns can you give the Committee? Last year there were 6,481 acres under wheat.  
 2534. How many holdings? Forty-five under wheat; other crops, nine holdings; total, fifty-four holdings.  
 2535. Have they any other crops besides wheat? Yes About 3,241 acres would be under other crops.  
 2536. Of what did the other crops consist? Corn and hay—oaten hay and wheaten hay.  
 2537. Any root crops—carrots or turnips? Yes, and cabbages and potatoes.  
 2538. Any large area of potatoes? No, not very large.  
 2539. Then I suppose the whole of the cultivation is practically comprised in wheat crops and hay crops, consisting of wheaten and oaten hay? Yes, and corn.  
 2540. Do you think the people to whom you have referred suffer any practical inconvenience from the want of a railway at the present time? The railway would not be convenient to the farmers out at Cullingar.  
 2541. What distance is that from Wallendbeen? To the Dividing Range it is about 9 miles.  
 2542. Then if a railway were constructed from Wallendbeen to Yeo Yeo, it would be an advantage to those selectors? No; it would only be an advantage to six of the Cullingar farmers who have selections at Stockinbingal.  
 2543. How many of them are there at Cullingar? About forty.  
 2544. But I thought you were only giving the statistics with reference to some forty-five? Well, I suppose there would be about forty at Cullingar, Biggan, Collingwood, and Two-mile Creek.  
 2545. Do they lie south of the proposed railway from Wallendbeen to Yeo Yeo? Yes, all of them.  
 2546. Would not those people be within a reasonable distance from the railway from Yeo Yeo to Cootamundra? They are within reasonable distance from Wallendbeen Railway Station and Nubba siding at the present time.  
 2547. About how many miles distant? The most distant is about 9 miles away.  
 2548. Then how far would they be away from the railway if it were constructed from Yeo Yeo to Cootamundra? About the same.

Mr. P. Kilfoyle.  
 5 Feb., 1890.

Mr.  
P Kilfoyle.  
5 Feb., 1890

2549. Suppose the railway were constructed from Wallendbeen to Yeo Yeo, what distance would there be from that? It would make no difference; they are lying away back. The nearest point would be the main line.
2550. Then they would not be benefited in any way by the construction of a railway from Wallendbeen to Temora? No.
2551. *Mr. O' Sullivan.*] You gave the number of selectors within your district as fifty-four? Yes.
2552. Your district goes to the south, to the north, and to the east of Wallendbeen, as well as to the west? Yes.
2553. How many of these fifty-four selectors would lie upon the line of railway from Wallendbeen to Stockinbingal, if it were constructed? About thirteen; but they are not all in my district. They are within about a couple of miles of the proposed railway from Wallendbeen to Yeo Yeo.
2554. Then the majority of the fifty-four selectors to whom you refer do not reside on the line of route at all? No.
2555. But outside of your district there are a few other selectors who would be served by the line of railway? Yes.
2556. How many outside of your district? I should think from fifty to sixty.
2557. How far would they be away from the proposed line of railway? Some of them would be 7 miles away.
2558. In what locality are these selectors to be found? To the right of the route we passed this afternoon.
2559. That would be to the north of the proposed line of railway from Wallendbeen to Temora? No, to the west.
2560. Will you give the names of the localities? Morrison's Hill, Congo, and Stockinbingal.
2561. Those are the principal localities where these selectors reside? Yes.
2562. And how far away from Wallendbeen are the fifty or sixty selectors who reside outside your district? The nearest of them is about 4 miles away from the Wallendbeen station.
2563. Would the majority of the sixty outside of your district be within 10 miles of the Wallendbeen station? Yes.

Mr. William Hall Matthews, sworn, and further examined:—

Mr. W. H.  
Matthews.  
5 Feb., 1890.

2564. *Chairman.*] Do you wish to supplement your evidence by a statement showing the amount of agricultural machinery that has been purchased from South Australia and Victoria, and which has come via Albury by the railway to Cootamundra during the years 1887, 1888, and 1889? Yes. The amount of machinery that my firm has imported to Cootamundra represents 93 strippers, 45 winnowers, 28 ploughs, 6 wool-presses, 2 horse-powers, 5 chaff-cutters, and 1 travelling chaff-cutter, making a total of 128 tons.
2565. Where did you dispose of these? A large proportion of them were sent to Temora.
2566. About what proportion? About a third.
2567. And where have the other two-thirds been disposed of? In the surrounding districts between Temora, and in the Cootamundra district generally.
2568. Then if Temora were connected with the Southern Railway at Wallendbeen, it would be necessary for these goods to be forwarded on the main line as far as Wallendbeen, instead of only to Cootamundra, as at present? Yes.
2569. And you think it would be better, from that point of view, that the railway should run between Temora and Cootamundra? I do.
2570. Do you not get a number of machines from Sydney also? Not as large a proportion as that. The number is small in proportion.
2571. Still you do get some? Yes.
2572. On the other hand, they would have to pay an extra haulage by being sent to Cootamundra instead of to Wallendbeen? Yes.
2573. The figures you have given show the machinery imported from South Australia and Victoria by your firm alone, and I believe there are three other firms in Cootamundra in the same line of business? Yes.

1890.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

COOTAMUNDRA TO TEMORA RAILWAY BILL.  
(MESSAGE No. 17.)

---

*Ordered by the Legislative Assembly to be printed, 2 July, 1890.*

---

*By Deputation from the Governor,*  
ALFRED STEPHEN,  
*Lieutenant-Governor.*

*Message No. 17.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the construction of a line of railway from Cootamundra to Temora.

*Government House,*  
*Sydney, 25th June, 1890.*

SECOND REPORT

TOGETHER WITH

MINUTES OF EVIDENCE, APPENDICES, AND PLANS,  
TO WHICH IS ATTACHED THE FIRST REPORT, WITH MINUTES OF EVIDENCE,  
APPENDICES, AND PLANS,

RELATING TO THE

PROPOSED RAILWAY

TO CONNECT THE

NORTH SHORE RAILWAY WITH PORT JACKSON  
AT MILSON'S POINT.

---

Presented to Parliament in accordance with the provisions of the Public Works Act,  
51 Vic. No. 37, section 8.

---

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

## MEMBERS OF THE COMMITTEE.

## LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Vice-Chairman.  
 The Honorable ANDREW GARRAN.  
 The Honorable FREDERICK THOMAS HUMPHERY.  
 The Honorable WILLIAM JOSEPH TRICKETT.  
 The Honorable GEORGE HENRY COX.

## LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Chairman.  
 JACOB GARRARD, Esquire.  
 HENRY COPELAND, Esquire.  
 JAMES EBENEZER TONKIN, Esquire.  
 WILLIAM SPRINGTHORPE DOWEL, Esquire.  
 EDWARD WILLIAM O'SULLIVAN, Esquire.  
 \*JOHN HURLEY, Esquire.  
 CHARLES ALFRED LEE, Esquire.  
 \*WILLIAM M'COURT, Esquire.

[\*Mr. John Hurley's seat as a Member of the Committee became vacant, by reason of his resignation from the Legislative Assembly, on July 3, and Mr. William M'Court was appointed to fill the vacancy on July 16, 1890.

## GENERAL INDEX.

Second Report of the Committee.  
 Minutes of Evidence taken by the Committee.  
 Appendix to Evidence taken by the Committee.  
 Plans.  
 First Report of the Committee, with Minutes of Evidence, Appendices, and Plans.

## LIST OF WITNESSES.

	PAGE.
Joseph Barling, Esq., Under Secretary for Public Works .....	1-3
Henry Deane, Esq., Acting Engineer-in-Chief for Railways .....	3-18, 81-79, 100
Cecil West Darley, Esq., Engineer-in-Chief for Harbours and Rivers .....	19-25
Captain John Jackson, Manager of Public Wharves .....	26-28
John Henry Geddes, Esq., Woolbroker .....	28-32, 80-81
William Frederick Buchanan, Pastoralist.. ..	33-36
Arthur Samuel Hamand, Esq.....	36-44, 90-97
John Duff, Esq., Inspector of Forests .....	45-47
Hugh M'Lachlan, Esq., Secretary to the Railway Commissioners .....	47-51
Tannatt William Edgeworth David, Esq., Geological Surveyor, Department of Mines.....	52-53
William Bethel Sharp, Esq., Chairman of the Chamber of Commerce, Newcastle.....	54-58
Henry E. Stokes, Esq., Member of the Chamber of Commerce, Newcastle.....	58-59
Arthur Harrison Collings, Esq., Manager of the Gore Hill Brickworks, St. Leonards .....	59-61
Walter Liberty Vernon, Esq., Surveyor and Architect, North Shore .....	61-63
Mr. Richard Porter, Fruitgrower, Gordon .....	64

## PLANS.

- Plan I.—Plan showing the various routes for the proposed Railway as they have been before the Committee in their Second Inquiry.
- Plan II.—Sketch plan showing Mr. Darley's proposed arrangement for a ferry service between Circular Quay and Milson's Point, in connection with the Railway.
- Plan III.—    "    "    "    "    "    "
- Plan IV.—Plan showing proposed present station accommodation at Milson's Point, according to the Government scheme.
- Plan V.—Plan showing how accommodation can be provided at Milson's Point for a large passenger traffic, according to the Government scheme.
- Plan VI.—Mr. A. S. Hamand's proposal.
- Plan VII.—    "    "    "    "    "    " section.
- Plan VIII.—Plan showing the suggested Passenger Station at Lavender Bay, with lines for goods traffic to Milson's Point, or Neutral Bay and Cremorne.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

**RAILWAY TO CONNECT THE NORTH SHORE RAILWAY WITH PORT JACKSON, AT MILSON'S POINT.**

**SECOND REPORT.**

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was remitted for further consideration and report "the expediency of constructing a line of railway to connect the North Shore Railway with the deep waters of Port Jackson at Milson's Point," have, after further inquiry, resolved that it is expedient the railway should be constructed as suggested in an amended plan showing a maximum grade of 1 in 50; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway, the construction of which the Committee, in their Report of 11 December, 1889, declared they did not consider to be expedient, was remitted to the Committee by the Legislative Assembly, for further consideration and report, on the motion of Mr. Bruce Smith:—

Reason for the further inquiry into the proposed railway.

"That it is expedient that the Report of the Parliamentary Standing Committee on Public Works upon a proposed line of railway to connect the North Shore Railway with the deep waters of Port Jackson at Milson's Point be remitted to the said Committee for its further consideration and report, for the following reason:—That, since the said report was made, fresh evidence concerning the commercial value of the said line of railway has been obtained, which was not before the said Committee when that report was completed."

2. A description of the railway, with copies of the departmental plans, will be found with the last Report of the Committee, attached to this Report. Shortly stated, the proposed line, as it was before the Committee in their first inquiry, represents an extension of 2 miles and 21 chains of the North Shore Railway from the present terminal point of that railway at Gore Hill, or Crow's Nest, to Milson's Point, the estimated cost of construction, including land and compensation, being £262,000. But in the present inquiry, Mr. Deane, the Acting Engineer-in-Chief for Railways, has suggested a route which will make the extension longer by 30 chains than that originally proposed, and increase the cost of construction by £16,000, but with a reduction in the total estimated cost to £231,156, and will reduce the grade to 1 in 50, that in the original proposal being 1 in 40.

Description of the proposed railway.

3. A further suggestion has been made with a view to reducing the cost of the proposed railway by not taking the line as far as Milson's Point. This suggestion is that the passenger station at the harbour terminus of the line should be placed near the head of Lavender Bay, on the east side, the goods traffic (if any) to be dealt with either by means of goods sidings at the rear of the passenger station, or carried on to Neutral Bay or Cremorne.

Suggested modification of the proposal.

4. Two other suggestions of importance, involving an alteration in the original proposal as referred to the Committee by the Legislative Assembly, have been made during the course of the Committee's inquiry by two of the witnesses. The first is from Mr. Arthur Samuel Hamand, and it proposes that, instead of extending the railway to Milson's Point by the route recommended in either the original

Other suggestions before the Committee.

original proposal of the Government or the amended proposal put forward by the Acting Engineer-in-Chief for Railways, the line should be taken round by Middle Harbour, passing close to the site of the suspension bridge in course of erection by the North Sydney Tramway and Investment Company, and to the locality of Willoughby Falls, and then running to Milson's Point, past the heads of Neutral Bay and Careening Cove, and along the east side of Lavender Bay. The other suggestion will be found in the evidence of Mr. Walter Liberty Vernon. This has not been before the Committee with the details necessary for its full consideration, and it has not therefore engaged their attention to the extent noticeable in connection with the suggestions from Mr. Deane and Mr. Hamand.

Method of the  
Committee's  
inquiry.

5. The Committee have examined in their second inquiry a large number of witnesses, principally on the subject of a goods traffic, that being the question upon which the proposal to connect the North Shore Railway with Milson's Point was remitted to the Committee by the Legislative Assembly, and also, in view of the suggestions for improvement upon the original proposal, with respect to the question of route. In addition to this, some evidence has been taken as to ferry accommodation, and on the question generally. As in the first inquiry evidence was invited and sought from all sides, and several visits of inspection were made by the Committee to North Shore in order that they might acquaint themselves as far as possible, by personal observation, with the apparent advantages or disadvantages that might be expected from adopting one or other of the routes proposed. Furthermore, being of opinion that Mr. Hamand's suggestion was worth careful consideration, and in order that it might be thoroughly tested, they invited the Railway Commissioners to express an opinion upon it, and Mr. Foxlee, M. Inst. C.E., Deputy Engineer for Existing Lines, made a careful inspection of it and of the Government proposal, and gave evidence before the Committee respecting them.

General  
nature of the  
evidence.

6. The general nature of the evidence given before the Committee in the present inquiry, while differing from that of the evidence in the first inquiry, by reason of new matter being introduced, is not on some essential points dissimilar from that of the evidence previously given. Mr. Joseph Barling, Under Secretary for Public Works, who appeared as a witness to explain the circumstances under which the proposed railway was referred back to the Committee for further consideration and report, stated that towards the close of the last investigation it came to the knowledge of the Department that in all probability a considerable goods traffic would arise on the railway, and it was thought it could be shown that there was a promise of considerable traffic in wool, meat, timber, and other merchandise, which, it was anticipated, could be dealt with in Lavender Bay, or by a branch line along the frontage of the harbour, between Milson's Point and Admiralty House. It might also, he said, be reasonably anticipated that depôts would arise for sending station supplies to all the northern districts, a plan that would tend to relieve the present congested street traffic to Darling Harbour. A coal traffic, should such spring up from the districts lying between Newcastle and Sydney, could be provided for by a branch line to Cremorne; and to meet requirements connected with the construction in the future of a bridge across the harbour, another branch line could be taken from a point north of Lavender Bay to reach M'Mahon's or Blue's Point. The question of the construction of this bridge, however, the Department considered was entirely distinct from that of extending the North Shore Railway to the waters of the harbour. Mr. Deane, Acting Engineer-in-Chief for Railways, explained how a goods traffic could be accommodated along the eastern side of Lavender Bay, from the head of the bay downwards for a certain distance, the length of frontage available for this traffic being 1,560 feet. The passenger traffic, in his opinion, should be brought down to Milson's Point, where there would be about 800 feet of frontage that could be used for it. By this plan the passenger line would be carried at the back of the goods line, and brought down between the goods sidings and the high ground to the wharf at the end of the goods sidings, where the platforms and station would be. Supposing Lavender Bay were found not to provide sufficient accommodation for a very large goods traffic and for coal traffic, the line could be extended round the western side of Lavender Bay, or towards Kirribilli Point, Neutral Bay, or Cremorne. Access to the proposed goods station at Lavender Bay could be obtained by a road with a gradient of 1 in 18, commencing

commencing at Willoughby-street, near the Congregational Church. Another plan which might be adopted, if thought desirable, was to have the passenger station near the head of Lavender Bay, on the eastern side, and carry the goods traffic behind the passenger traffic to Milson's Point, or the line for goods traffic could be pushed on from Lavender Bay to Neutral Bay or Cremorne. The most important matter was to provide for the passenger traffic, and by placing the passenger station at Lavender Bay the question of providing for a goods traffic might be determined apart from the question of passenger traffic. As to the extension of the railway from its present terminus he advocated his amended proposal, which would make the line somewhat longer than that referred by the Legislative Assembly to the Committee, and increase its cost, but would reduce its grade to the ruling gradient between Hornsby or Pearce's Corner and the present terminal station at Crow's Nest. Evidence was given by Mr. C. W. Darley, Engineer-in-Chief for Harbours and Rivers, with regard to the manner in which a steam-ferry service for passengers could be carried on in connection with the railway, and, to some extent, on other matters connected with the proposed line. Captain John Jackson, Manager of Public Wharves, was examined as to the space afforded by Lavender Bay for the accommodation of shipping, the advantages or otherwise of carrying on a shipping trade at wharves erected near Kirribilli Point, and as to wharfage accommodation and facilities for the shipment of goods in the harbour generally. Mr. John Henry Geddes, wool-broker, and Mr. William Frederick Buchanan, pastoralist, appeared before the Committee to explain what was being done by J. H. Geddes & Co., the Pastoralists' Association (Limited), in the erection of warehouses near Kirribilli Point for the carrying on of a business in the receipt and shipment of wool, frozen meat, and general pastoral and agricultural produce, and to advocate the extension of the railway to Kirribilli Point. Mr. John Duff, Chief Inspector of Forests, gave evidence respecting the timber in districts from which timber supplies might be sent along the North Shore Railway, and Mr. T. W. E. David, Geological Surveyor, Department of Mines, with reference to coal deposits between Gosford and Newcastle. Mr. Hugh M'Lachlan, Secretary to the Railway Commissioners, and Mr. David Kirkcaldie, Chief Traffic Manager, Railway Department, were examined on the subject of a goods traffic, and on the general proposal for the extension of the railway, care being taken in the examination of Mr. M'Lachlan, who appeared for the Railway Commissioners, to ascertain whether, since the first inquiry of the Committee, there had been any change in the opinions of the Commissioners on any important point in relation to the railway. Two witnesses—Mr. William Bethel Sharp, chairman, and Mr. Henry E. Stokes, member, of the Chamber of Commerce, Newcastle—came before the Committee in the interests of Newcastle, as against any diversion of trade from Newcastle to North Shore. Mr. Arthur Samuel Hamand and Mr. Walter Liberty Vernon submitted alternative routes for the proposed railway; and upon the question generally, or upon the schemes submitted by Mr. Hamand and Mr. Vernon, more particularly that by Mr. Hamand, there were examined by the Committee,—Mr. A. H. Collings, Manager of the Gore Hill Brickworks, St. Leonards; Captain Benjamin Jenkins, member of the Marine Board; Mr. George Pile, auctioneer; Mr. Charles Cyrus Bullock, surveyor; Mr. Dugald Thomson; Mr. Thomas Allright Dibbs, General Manager, Commercial Banking Company, Sydney; Mr. Charles Augustus Goodchap, M.P.; Mr. William Theodore Foxlee, M. Inst. C.E., Deputy Engineer for Existing Lines, Railway Department; and Mr. Charles Billyard. Mr. C. A. Goodchap gave evidence against the construction of the railway, on the grounds that it would be an unreasonable and extravagant policy to extend the line from its present terminus to Milson's Point, or to any other point at the present time; and that the extension of the tramway from its terminus to the railway station at St. Leonards, the present terminus of the North Shore Railway, would meet all the just requirements of the case. The connection of the existing tramway with the railway would be, in his opinion, sufficient for the probable traffic for "a great number of years"; and in expressing that opinion he did not lose sight of the favourable offer of the executors of the Berry Estate with regard to land required from that estate for the extension of the railway. He did not think the passenger traffic would be large, and as to the question of a goods traffic he considered it very improbable there would be a general traffic in either wool, coal, or other produce, while, in the case of goods for local consumption, they could be distributed much better from the present terminus than from Milson's Point, the present terminus being more central.

Question of  
a goods traffic.

7. The question of a goods traffic on the proposed railway, being that upon which the proposal to construct the railway was remitted to the Committee, became the most important in the Committee's inquiry. Mr. Barling, Under Secretary for Public Works, gave no detailed evidence on the subject. Questioned as to the evidence he gave at the first inquiry he said that when he was examined on that occasion the subject of a goods traffic had not been sufficiently considered, and such traffic was not looked upon as at all likely. Details as to the probability of a goods traffic he left to other witnesses. Mr. Deane, when before the Committee in their first inquiry, expressed very decided opinions against a goods traffic on the railway, but in this inquiry was prepared to give evidence only on the engineering question of how provision could be made for dealing with goods. The principal witness in this inquiry, with respect to a goods traffic, was Mr. J. H. Geddes. Shortly after the adoption by the Committee of their First Report a letter was received from the Under Secretary for Public Works asking the Committee to delay reporting to Parliament in order that the Department of Public Works might be enabled to submit further evidence with reference to a goods traffic on the line; that further evidence being a statement from Mr. J. H. Geddes, that the company with which he was connected intended to erect wool stores near Kirribilli Point, and carry on a wool and general produce business, which should bring a considerable traffic to the proposed railway. The Committee did not feel justified in reopening the first inquiry to hear this evidence, and the desire that it should be heard formed the basis upon which the Minister for Works had the proposal to construct the railway remitted by the Legislative Assembly to the Committee for further consideration and report. Mr. Geddes was examined in the present inquiry immediately after the departmental witnesses, and he described the intentions of his company in detail. He stated that the Pastoralists' Association, which had been formed with a view to a combination among wool-growers for reducing the charges associated with the sales of wool, produce, &c., and for the storage and shipment of frozen meat, and which already numbered 118 pastoralists, representing 31,000 bales of wool, intended to erect a warehouse near Kirribilli Point for the carrying on of a large business. It was anticipated that their arrangements would result in the receipt of a constantly increasing quantity of wool and other produce, and as special provision would be made for the storage and shipment of frozen meat, and the northern pastures were amongst the best in the Colony for fattening purposes, it was considered that there would be a large frozen meat export. While this was expected at Kirribilli Point, it was considered, Mr. Geddes went on to say, that the natural effect of the construction of the proposed railway would be the gradual creation of an enormous goods depôt for the supply of all the northern districts, the diversion of sufficient of the wool traffic at present carried on at Darling Harbour to relieve the great congestion there, and an improvement in the city street traffic now greatly overcrowded by the conveyance of wool and produce to the city warehouses. To enable the Pastoralists' Association to carry on their business according to these intentions it would be necessary to extend the proposed railway to Kirribilli Point, but if extended only to Milson's Point the Association would use it. The warehouse to be erected by the Association would cost, Mr. Geddes stated, £60,000, but for the present only a section of it was to be built, the cost of this to be £20,000. Mr. W. F. Buchanan, a shareholder and director in the Association, was also examined, but his evidence, while generally supporting that of Mr. Geddes, did not give any new information of importance. Following these witnesses upon the subject of a goods traffic there were Mr. H. M'Lachlan, Secretary to the Railway Commissioners, and Mr. D. Kirkcaldie, Chief Traffic Manager, Railway Department; and both these gentlemen gave evidence showing that the Railway Department does not anticipate any appreciable goods traffic on the proposed line. In his evidence in the first inquiry Mr. M'Lachlan stated that the railway to Milson's Point would not answer for general goods traffic,—that was for Sydney goods traffic, and he had no reason in the present inquiry to alter that opinion. Nor had the Railway Commissioners changed their views materially from those expressed in the first inquiry. They had noticed, he said, that one or two wool companies, and one in particular—perhaps attracted by the prospect of getting cheaper land at North Shore—were building stores there, and, no doubt, they would in their own interest get their wool consigned to the local station; but the Commissioners did not think that the general bulk of the traffic would be affected, and they did not count upon there  
being

being any great goods traffic on the line. If wool were carried to Milson's Point the carriage rate would be the same as that to Darling Harbour, but for produce there would be a difference of 6d. or 7d. a ton in favour of Milson's Point. The Commissioners desired, however, he went on to point out, to concentrate the traffic at Darling Harbour, as it was cheaper to work it that way, only one staff being required. As for coal traffic, it would not be possible to reduce to any appreciable extent the present rates for the carriage of coal, and the railway to Milson's Point need not be expected to earn anything by a coal traffic unless coal-mines were opened up about Gosford. There would probably be a traffic in agricultural produce from the north for the local market at North Shore, but it would not be very remunerative to the Department, and what was conveyed by the Milson's Point railway would be taken from the railway to Darling Harbour. The proposed line, if constructed, would have to depend for its earnings almost entirely upon the passenger traffic and the local goods traffic. Mr. McLachlan also expressed the opinion that, with regard to the practice of the Railway Department of delivering wool from the railway trucks at Darling Harbour to the warehouses free of charge, if the same practice were adopted with the Pastoralists' Association, at Kirribilli Point, it would be cheaper to lighter their wool from Darling Harbour than to cart it from Milson's Point or Lavender Bay. Mr. Kirkcaldie was generally of the same opinion as Mr. McLachlan with regard to a goods traffic. He did not think the extension of the railway to Milson's Point would in any way affect the working of the goods traffic from the far north, as when arrangements which were being carried out at Darling Harbour were completed there would be room there for all the waterside goods traffic, and in that case the Railway Department would rather not have another wharf on the north side of Port Jackson. According to present arrangements wool would not be delivered from the railway to the warehouse of the Pastoralists' Association at Kirribilli Point free of charge, and if it should be decided to give the North Shore warehouse this advantage, and the quantity of wool consigned to the warehouse were large, it might be cheaper to deliver it from Darling Harbour by punt than from Milson's Point by dray. It would not pay to extend the railway from Milson's Point merely to deliver produce to the store, unless there were a very large quantity. He did not anticipate any coal or timber traffic on the proposed railway, except for local purposes. People sending goods from the north would save 7 miles in distance by consigning them to Milson's Point instead of to Darling Harbour, but he did not think that advantage would be a sufficient inducement to those forwarding the goods to consign them to North Shore as it was not likely they would be carried at a cheaper rate. As for the shipment of produce received by the railway, up to the present, though wool and, to some extent, wheat, hay, chaff, maize, and timber had come to Sydney from places beyond Newcastle, only wool had been shipped; none of the other produce had been for export. The statement by the Under Secretary for Public Works as to the probability of a considerable goods traffic on the proposed railway in wool, meat, timber, and other merchandise he could not endorse. He also stated that the great source of revenue on the line would be the passenger traffic, that such traffic was not there at present, and that the passenger traffic alone on the line would not be sufficient to pay the ordinary expenses for a very long time to come, but that the line would pretty well develop as far as suburban traffic was concerned. Some other witnesses gave evidence with respect to a goods traffic, but, with the exception of a detailed statement from the manager of the Gore Hill Brickworks as to the probable revenue to the railway from the carriage of bricks, it did not differ materially from what was placed before the Committee in the first inquiry.

8. The amended proposal of the Acting Engineer-in-Chief, already mentioned, will be found represented by a dotted line on Plan I published with this Report. The route has not been surveyed, but cross levels have been taken for the purpose of testing it, and the line has been found practicable. By adopting it the level of the wharf at the head of Lavender Bay cannot be reached, as it could with a grade of 1 in 40, but the better grade is regarded as more generally advantageous, especially as it will keep the grade the same throughout the distance from Milson's Point to Hornsby. The cost of the amended proposal, for works alone, would be £143,000, as against £127,000, the estimated cost of construction, exclusive of land and compensation, in the original proposal. The total length of the amended line, as shown upon the plan, would be about 2 miles 51 chains, as compared with

The proposed line with a grade of 1 in 50.

2 miles 21 chains; but with regard to this Mr. Deane mentions that the extra length is not absolutely necessary to allow of the improvement in grade, for while looking into the matter he thought it desirable to make better provision for wayside stations at Bay-road, and possibly at Edwards-road. On the original line there is not very much allowed for better grades just where the train would have to stop, but in grading the amended line longer stretches of easy grades were provided in order that the trains might be able to start and stop properly.

The proposal  
to stop at  
Lavender  
Bay.

9. In his first examination in the present inquiry the Acting Engineer-in-Chief for Railways was questioned whether the terminus on the proposed extension could be made at the head of Lavender Bay, and the line carried on from there to Neutral Bay and Cremorne; and he did not see how it could be done. But on a subsequent occasion he explained that further consideration had shown him that the passenger station might be placed near the head of the bay, leaving Milson's Point for goods, or sending the goods on to Cremorne, where  $1\frac{1}{2}$  mile of good water frontage was available. This plan would admit of the goods terminus being for the present left out of consideration, as it could be determined after the necessary provision had been made for passenger accommodation, and by adopting it a saving in cost would be effected to the extent of about £52,000—£10,000 in works, and £42,760 in the cost of land which, by extending the line to Milson's Point, would have to be resumed. Access to the passenger station at Lavender Bay could be obtained, Mr. Deane explained, by the construction of a branch tram-line about 1,000 feet in length, from Alfred-street, at a cost of about £5,000; or there could be a direct steam-ferry service between the site of the station at the head of the bay and the Circular Quay. The saving in cost of land by not making the passenger terminus at Milson's Point would be effected only if goods were sent on to Cremorne; if they were sent on to Milson's Point land in the vicinity of the Point would have to be resumed. According to an estimate made by the Land Valuer about £25,000 worth of land would have to be resumed if the line were taken on from Lavender Bay to Cremorne, but if after resumption it were found the Government did not require some portion of this land, it could, Mr. Deane considered, be sold for a sum which would cover the cost of the improvements that would be made in the levelling of ground and the erection of platforms and wharves. The additional length of line by going to Cremorne from Lavender Bay would be  $1\frac{3}{4}$  mile, and the extra cost, exclusive of land resumption, £90,000. A comparison as to the cost between the Milson's Point and Lavender Bay-Cremorne proposals, Mr. Deane stated as follows:—"The cost of the works included in the estimate for a line to Milson's Point from the junction at the head of Lavender Bay would be £31,000, and the cost of resuming land along the eastern shore of Lavender Bay, as far as the Point, would be £67,760, making a total of £98,760. Then the cost of taking a line to Lavender Bay, with a passenger terminus there, and allowing the goods traffic to go on to the western side of Cremorne, would be: For the passenger station, £21,000; for the line to Cremorne, £90,000; for land in Lavender Bay, £25,000; and for land between Lavender Bay and Cremorne, according to the Land Valuer's estimate, £22,830; making a total of £158,830." Of the two proposals he favoured taking the passenger traffic to Milson's Point. To his mind it appeared desirable to resume the frontage at Milson's Point, although it appeared to be somewhat costly—it would be useful at some future time; while if the resumption of land stopped short at Lavender Bay, and an extension towards Kirribilli Point were afterwards required, it could not be carried out except at a large expenditure.

Mr. Hamand's  
scheme.

10. The scheme suggested to the Committee by Mr. A. S. Hamand was recommended by him on the general grounds that it would provide better accommodation for the district; it would save 2 miles of the route to Cremorne; its maximum grade would be 1 in 70, and might, if wished, be made generally 1 in 80; it would permit of Middle Harbour being opened up by steamer in connection with the railway; and it might be made to form the first 2 miles of a railway to Manly. In an interesting statement supplied to the Committee, and which will be found published as an appendix, the line he recommends is described as follows:—Commencing at the Milson's Point end, near the steamer pier, which the platforms would adjoin, the railway by this route would pass for three furlongs from the Point over land now covered with water and necessary to reclaim in Lavender Bay, the frontage to that bay from  
Milson's

Milson's Point to where the line would leave the bay to pass into a tunnel under Alfred-street, to be resumed, and the surplus land so resumed to be available for re-sale. A length of 600 feet adjoining Milson's Point would be retained for railway wharf purposes and local traffic. From the tunnel under Alfred-street the line would come out into the valley at the head of Careening Cove, passing under M'Dougal-street and High-street. Between these two streets would be an embankment, on which would be placed a passenger station for the accommodation of the district between Walker-street and Neutral Bay. Thence the line would proceed by tunnel under the eastern end of Whaling-road, and then, emerging, would follow a rising contour round the western side of the head of Neutral Bay, crossing two or three minor roads, and then passing under William-street, and occupying the site of the lower half of Alfred-street until it turned at right angles to the east, which part of Alfred-street would be diverted. Bent-street would be slightly diverted, and passed by bridge over the line. From Bent-street the line would continue along the valley until it entered a tunnel through the ridge. Between Bent-street and the tunnel would be a goods and passenger station, which would serve, on the west side of the line, the district lying between Berry-street, Miller-street, and Falcon-street, and on the eastern side of the line between Military-road, Shell Cove, and Neutral Bay. On the north side of the ridge the line would emerge in the valley between Grasmere-road and Cammeray-road, with a station near Willoughby Falls, on the land now occupied by Chinese market-gardens. The station here would be for goods and passengers, accommodating the district between Falcon-street, Miller-street, and the south arm of Long Bay. It would also be available for pleasure traffic on Middle Harbour. Leaving this station the line would proceed by bridge under Cammeray-road; thence skirting the slopes overlooking the northern arm of Long Bay, and passing under the northern extremity of Miller-street by a bridge. Here there would be a station for goods and passengers. From Miller-street the line would proceed with easy work to the North Sydney-road, which the railway would pass under by a bridge, and here another station is proposed to accommodate the district around. Then from the North Sydney-road the line would proceed to join the completed railway, the total length of line to be constructed being a little over 4 miles. The sharpest curve in the scheme is 12 chains radius, and the steepest grade 1 in 70. The disadvantages from adopting this proposal would be that the extension would be something more than 1 mile longer than the Government proposal, and the cost would be greater, the estimate of cost, including land, being £350,000. Some compensation would, however, be gained by increased speed of trains up the easier grade. The reasons in support of the proposal, and the information obtained by the Committee in a personal inspection of the route, led them to think the scheme was worth careful consideration; but after the plans submitted by Mr. Hamand and the route of his proposed line had been critically examined by the Acting Engineer-in-Chief for Railways and the Deputy Engineer for Existing Lines, and those officers had given evidence on the subject, the Committee could not but come to the conclusion that beneficial as Mr. Hamand's scheme undoubtedly would be in some respects, it was not, bearing in mind all the circumstances necessary to be considered, desirable, in the public interest, that it should be adopted.

11. Mr. W. L. Vernon's proposed line is somewhat similar to that of Mr. A. S. Hamand. He objects to such a westerly route as that shown by the Government proposal being taken, because he does not think it will be sufficiently central to meet the requirements of the people of North Shore. He considers that the railway should be so constructed as to serve the large population to the north-east of the proposed Government line, and he suggested that the extension should branch off from the existing line at about 10 miles from Hornsby, pass below the Cottage Hospital at North Shore in order to keep down the levels, and round by the site of the suspension bridge over Middle Harbour, and thence to Miller-street, where it would run under the Military-road, at the eastern corner of the reserve, by a short tunnel, and come out into the Neutral Bay valley. This would bring the line to the head of Neutral Bay, where the Government, in conjunction with the East St. Leonards Council, Mr. Vernon pointed out, propose to reclaim  $7\frac{1}{2}$  or 8 acres of land, so that there would be no expense in purchasing a frontage, and the property when the filling-in has been completed ought to be extremely valuable for wharfage purposes. Then a short tunnel would bring the line to the head of Careening Cove, where there are  $2\frac{1}{2}$  acres of

of land which the excavations from the tunnelling might be used to reclaim, and from that point it would be a short cut by a tunnel either to Milson's Point or to Kirribilli Point. The grade with which this line could be constructed was, as near as he could tell, 1 in 60. Details as to cost of construction and other important matters, Mr. Vernon, however, could not give, as he had not made the necessary calculations, and beyond the examination of himself the Committee did not proceed with his proposal.

Steam ferry service.

12. The question of a ferry service in connection with the railway appeared to the Committee to be important, and the Acting Engineer-in-Chief for Railways and the Engineer-in-Chief for Harbours and Rivers were instructed by the Minister for Works to consider the matter and lay the result of their deliberations before the Committee. The information thus obtained will be found in the evidence given by Mr. H. Deane and Mr. C. W. Darley, and in two sketch plans published to illustrate this evidence. The idea of these two officers is that a special ferry service should be provided for the accommodation of passengers and their luggage. When the contemplated re-arrangement of the jetties at the Circular Quay has been carried out, berthing could be found for a proper steamer, and waiting-sheds and ticket-offices could be erected. The steamer would be one specially adapted for its work, lying in a kind of dock at the Circular Quay, and having its deck arrangements of a kind most likely to facilitate operations. The passengers would obtain their railway tickets at the ticket-office, or on the steamer, and their luggage would be taken in charge by railway porters, and run upon trollies on to the steamer. At the North Shore side of the Harbour there would be a floating stage, the two end portions of which would be fixed, and in the middle of which there would be two ramps which would articulate on the fixed portion at the top, and form a platform to enable passengers to embark upon or leave the steamers at all conditions of the tide. Porters in attendance at North Shore would see to the proper disposal of the luggage in the trains. The eastern side of Milson's Point, Mr. Darley explained, would be the most suitable from which to run the ferry-boats, as they would not then have to turn, and the landing point on the Sydney side would be at the head of the Circular Quay. The steamers would cost from £12,000 to £13,000 each, and it would be necessary to have three. The Commissioners for Railways, it should be mentioned, are of opinion that for the present the existing North Shore ferry service would be sufficient to meet requirements.

Resolution arrived at by the Committee.

13. After due consideration of the evidence in this second inquiry the Committee are of opinion that the proposed railway should be constructed from its present terminus to Milson's Point by the route with the 1 in 50 grade, as shown in the amended plan submitted by the Acting Engineer-in-Chief for Railways. The division upon the resolution which was adopted shows seven members in favour of the resolution and four against it. The two other members of the Committee, whose names do not appear in the division list, are Mr. Joseph Palmer Abbott, Chairman of the Committee, who was absent in accordance with a letter intimating his intention to retire from the Committee's deliberations until a decision had been arrived at with regard to Mr. Hamand's scheme, which if adopted would increase the value of his property, and Mr. George Henry Cox, who, in consequence of ill-health, had temporarily left the Colony. The resolution passed will be seen in the following extracts from the Committee's Minutes of Proceedings:—

On Thursday, 7 August, Mr. Dowel moved:—

"That in the opinion of the Committee it is expedient the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson at Milson's Point, as referred to the Committee by the Legislative Assembly, be carried out."

Mr. Garrard seconded the motion.

Mr. O'Sullivan moved, as an amendment on the motion:—

"That all the words after the word 'Jackson' be omitted, with a view to the insertion of the following,—as suggested in a modified form, with a 1 in 50 grade, and a passenger station, near the head of Lavender Bay, being portion of a proposed line referred to the Committee by the Legislative Assembly, be carried out."

On Tuesday, 12th August, with the concurrence of the Committee, Mr. Dowel's motion was amended as follows:—

"That in the opinion of the Committee, it is expedient the proposed railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point, in accordance with the amended Government plan, showing a maximum grade of 1 in 50, be carried out."

Mr.

Mr. O'Sullivan's amendment was negatived on the following division:—

Ayes 3.  
Mr. Copeland.  
Mr. O'Sullivan.  
Mr. Lee.

Noes 7.  
Dr. Garran.  
Mr. Humphery.  
Mr. Trickett.  
Mr. Garrard.  
Mr. Tonkin.  
Mr. Dowel.  
Mr. M'Court.

The motion was passed on the following division:—

Ayes, 7.  
Dr. Garran.  
Mr. Humphery.  
Mr. Garrard.  
Mr. Tonkin.  
Mr. Dowel.  
Mr. O'Sullivan.  
Mr. M'Court.

Noes, 4.  
Mr. Lackey.  
Mr. Trickett.  
Mr. Copeland.  
Mr. Lee.

14. In arriving at the decision shown in their resolution the Committee did not lose sight of the fact that some of the principal grounds upon which they declared in their First Report that it was not expedient the proposed railway should be constructed were unaffected by the evidence given in the present inquiry, or that on the question of a goods traffic, the subject which formed the basis for remitting the proposal to construct the railway to the Committee for further consideration and report, the evidence is not of a character to lead the Committee to the conclusion that there will be any large goods traffic on the railway; but they saw some other reasons, based upon fresh evidence given, which led them to consider that it might be more in the public interest to bring the railway to the waters of the harbour than to leave the terminus where it is at present. It is apparent, from the evidence of the Acting Engineer-in-Chief for Railways, that since the Committee's first inquiry careful attention has been given to the desirableness of improving the grade of the proposed line, with the result so far that a 1 in 50 grade has been found to be practicable, a very important improvement upon the original proposal of a grade of 1 in 40. Then details of the earnings on the North Shore Railway between Hornsby and its present terminus, since the opening of the line, as given in the evidence of the Secretary to the Railway Commissioners, show that the railway under present circumstances is being worked at a serious loss. This evidence is to be found in the following questions and answers taken from the record of the examination of Mr. Hugh M'Lachlan, Secretary to the Railway Commissioners:—

1457. Can you tell us anything about the earnings of the North Shore line? So far they have been very poor.

1458. When was the line opened? I simply took out the earnings for several months. During the first four months of the present year the line earned £464.

1459. What was your expenditure for wages during the same period? £1,489.

1460. And for interest? £2,676.

1461. I suppose the Commissioners regard it as an impossibility to make the line fairly remunerative if it is left where it is? Yes.

1462. What were the earnings for the first month of the year? £122.

1463. And for the fourth? £144.

1464. Do the Commissioners regard it as hopeless to make the line pay interest while it is left where it is? Yes; they cannot see any prospect of its being a paying line under present circumstances.

1465. If the line were brought down to Milson's Point it would take some time for the population on it to increase so as to develop the traffic? Yes. But the Commissioners look upon the district as a splendid one for residential purposes, and they expect that a big population will settle there.

Mr. David Kirkcaldie, Chief Traffic Manager, Railway Department, who was not examined in the first inquiry, is of opinion that bringing the line to the deep waters of the harbour is the only way of making it yield any return. "It is very certain to me," he says, "that the line will never do any good while it terminates where it does. The traffic is not likely to increase under present circumstances, though it would increase if the line were brought down to the water's edge." This evidence, from an officer of extensive railway experience, must necessarily carry with it a certain weight. There has also been, in this second inquiry, an important feature bearing upon the question of the proposed railway, in the form of a letter from Mr. John Hay, one of the executors in the estate of the late Mr. David Berry. This letter, written to the Under Secretary for Public Works, and forwarded to the Committee for their information

information, states that, with the concurrence of his co-executor, he has agreed, in the general public interest, to give, free of cost to the Government, such land as may be required for the railway, on the understanding that the Pearce's Corner to Milson's Point route is decided upon, and that the area of land so required—in addition to that already occupied, which is about 10 acres—will be about 20 acres, and that the railway be constructed within two years. The offer thus made means a possible reduction in the cost of the railway. During the Committee's first inquiry a letter was received from Mr. Hay, informing the Committee that he was prepared to advise his co-executor to sell to the Government such land as might be required for the construction of the railway at £500 per acre, "conditionally upon certain provision being made for stations and overhead bridges, as may be mutually arranged, and on the distinct understanding that such line of railway will be constructed within the next two years." The offer to give the necessary land free of cost to the Government is an important reason, not previously apparent, in favour of the construction of the railway. Furthermore, the cost of the railway, as it is before the Committee in the present inquiry, is considerably less than it was represented to be in the first inquiry. At that time it was stated as £262,000, the amount being made up of £127,000 for the construction of the railway and £135,000 as the cost of land and compensation. The amended proposal of which the Committee approve shows a reduction of £31,000, the total estimated cost being £231,156, or £143,000 for construction and £88,156 for land and compensation, the increase in cost of construction being due to the deviations on the line with a grade of 1 in 50, and the reduction in the cost of land being brought about by the offer of Mr. Hay, and some other considerations.

15. Attached to this Report will be found the evidence taken in this inquiry, together with appendices and plans, and also, in order that every means to a full understanding of the reasons for and against the proposed railway may be easily available, the First Report of the Committee on the subject, with the evidence, appendices, and plans as they were laid before the Legislative Assembly.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY TO CONNECT NORTH SHORE RAILWAY WITH PORT JACKSON, AT MILSON'S POINT.

WEDNESDAY, 28 MAY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)	
The Hon. JOHN LACKEY.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	JOHN HURLEY, Esq.
HENRY COPELAND, Esq.	CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] Have you prepared a statement for the Committee about this proposal? Yes; it is as follows:— J. Barling,  
Esq.

*North Shore Railway.*

"As this proposed railway has already been before the Committee I need not furnish particulars, but will briefly state the nature of the fresh evidence which it is proposed to adduce, and which the Minister for Works ventures to think would have tended to modify the Committee's report, had it been before them on the former occasion. It will be remembered that the evidence upon which the Department at first depended to support the construction of the line, contemplated passenger traffic as the primary object. It is right, however, that I should here draw attention to the fact that the Minister for Works, in introducing the proposal to the House, pointed out that should a cargo traffic spring up from points between Newcastle and Sydney, there would be a large wharfage frontage on the eastern side of Lavender Bay available for the purpose. This particular branch of the inquiry, however, as the Committee will know, was not followed up. Towards the close of the investigation it came under the cognizance of the Department that in all probability a considerable goods traffic would arise, and a request was made that the inquiry might be reopened. It was, however, too late for this, the Committee having already come to a decision. It is evidence on this point that the Department now desires to bring forward. The Department think it can be shown that there is a promise of considerable goods traffic in wool, meat, timber, and other merchandise, which it is anticipated can be dealt with in Lavender Bay or by a branch line along the frontage of the Harbour, between Milson's Point and the Admiralty House. It may also reasonably be anticipated that depôts will arise for the supply of all the northern districts (in the way of station supplies, &c.), and an advantageous feature of this is that it would tend to relieve the present congested street traffic to Darling Harbour. With regard to the question of coal traffic, should such spring up from the districts lying between Newcastle and Sydney; this, as the Acting Engineer-in-Chief will explain to you, can be provided for by a branch line, so as to utilise the commodious water frontages which the Government now possess at Cremorne; and, regarding the possible connection of Sydney and the North Shore by means of a bridge across the Harbour, Mr. Deane will also explain that a further branch can ultimately be constructed from a point north of Lavender Bay to reach M'Mahon's or Blue's Point.

The Minister for Works hopes that with this additional evidence which will be submitted, together with that already received in regard to passenger traffic, the Committee will see their way clear to recommend the construction of the line. With reference to the suggestion that has been made that, before settling the question of this line, that of the construction of the North Shore Bridge should be determined, I may, perhaps, be allowed to say that the Department are of opinion that the two subjects are entirely distinct; that, whether the bridge be constructed or not, the line should be continued to the waters of the Harbour, and that the one proposal does not in any way hinge on the other.

I have purposely refrained from going into details as these will be more properly brought out in the direct evidence which it is proposed to adduce. I have now to ask, on behalf of the Department, that the Acting Engineer-in-Chief may be first called to explain the methods proposed to deal with the goods traffic."

2. You have nothing to add to that? No. I thought it desirable to leave all the evidence to those who can give direct testimony on the points raised.

3. *Mr. Trickett.*] Do you know anything about the ownership of the land between Milson's Point and Admiralty House? I know that part of that land has been purchased by a private company.

4. Very recently? I think so.

5. Is it not a fact that the Colonial Government wanted to extend the Admiral's premises, and that they were prevented from doing so by a syndicate which had purchased the land adjoining it? I do not think so. There was some talk about extending the Admiral's grounds, but I do not think the idea was put aside on that ground.

6. Has the whole of that land been purchased? I do not think so. I suppose you refer to the Pastoralists' Company. I think they have something like 1,000 feet.

7. Is their land nearer to Milson's Point than to the Admiralty House? I think it is nearer to Admiralty House than to Milson's Point.

- J. Barling,  
Esq.  
28 May, 1890.
8. It is a recent purchase? I think it was purchased very recently.
  9. With the object of constructing wharves there? With the object of putting up large wool warehouses and so on.
  10. *Mr. O'Sullivan.*] Can you say whether the Government own the land on the point between Careening Cove and Neutral Bay? I cannot answer positively about that.
  11. Do they own any land about there? I do not think they do at the present time.
  12. They own the Cremorne land? Yes—there is the usual 100 feet reservation there. I daresay you are aware that there are proposals now before the Government with regard to the filling up of Neutral Bay and Careening Cove, and that surveys are being made with a view to that. I do not think that the Government own any land there at the present time, though I could not say positively.
  13. Do the Government intend to fill up Careening Cove? I do not know that the Government intend to do so. The Municipalities are more concerned in the matter. The Government will probably erect the retaining wall under certain conditions.
  14. I suppose the Government own the usual reservations around these bays? I am not sure, but I do not think so.
  15. You see by the map that one of these routes runs right down to the site of the proposed bridge—that does not agree with your statement that the two works are distinct? I did not say that the two works were distinct. I said that whether the bridge were constructed, or not, we considered the extension to Milson's Point must be carried out—that the one does not hinge upon the other. If North Shore were connected with Sydney by bridge, the line leading to the bridge would have to start about midway between the present terminus and Milson's Point. Mr. Deane will explain that fully.
  16. *Mr. Lee.*] Will you have any evidence to offer respecting the site of the proposed bridge? We have full information on the point, and it will be given by Mr. Deane.
  17. *Chairman.*] Have the Department taken into consideration the question of what is to become of the steam ferry service if Milson's Point is resumed? Mr. Deane will give all evidence on that point.
  18. Have the Department taken into consideration what is to become of the steam ferry service between Sydney and the North Shore if the whole of Milson's Point is resumed for the railway? I do not know that that has been definitely arranged, but there is no doubt that proper arrangements will be made.
  19. Has the matter been under the consideration of the Department? I am not able to answer that question at the present moment, but I will supply the fullest information about it later on.
  20. *Mr. Trickett.*] When you were examined before, you said, in answer to question 4, "If it were necessary to make wharves, Milson's Point would not be chosen, as there is no room there, and the narrowness of the harbour would cause obstruction to the navigation." Are you still of that opinion? When I gave evidence before, the question of the goods traffic was not sufficiently considered, and such traffic was not looked upon as at all likely. I think that it was chiefly in relation to the coal traffic that I spoke.
  21. You say later on, "In any case goods, and coal, and passenger traffic must be separated, so that the value of Milson's Point for coal traffic need not be considered"? Mr. Deane will be able to show you certain modifications which will allow the goods traffic to be dealt with as it springs up.
  22. You said that, "The narrowness of the harbour would cause obstruction to the navigation"? Our opinion is somewhat modified on that point.
  23. Why? Because the question of dealing with the possible goods traffic has been more carefully looked into, and some objections have been removed.
  24. The harbour is no wider now—are you of the same opinion as before? I do not know that we should attempt to concentrate all the goods traffic at Lavender Bay. If any coal traffic springs up we shall be able to deal with it at Cremorne.
  25. You are still of opinion that the harbour is too narrow there for goods traffic? If you refer to a heavy coal traffic, I think that we should have to make some other arrangements.
  26. But when large wharves were erected you could not confine their use to any particular kind of traffic? We should be able to deal very well with all wool traffic.
  27. Would ships like the "Oroya" and the "Orizaba," and those of the P. & O. Company, be able to swing there? By dredging we should be able to get any depth we liked.
  28. I am not talking about the depth. Would the swinging in of such ships at this narrow part of the harbour be an advantage or disadvantage to the general shipping? At the time I gave evidence before, we had not considered the probability of such traffic coming here, but our views have now been considerably modified. When you have Mr. Deane before you he will be able to give more direct evidence upon the point.
  29. Has your opinion changed—do you think that the circumstances are altered now? Of course, the natural features are not altered, but I think that we can make such arrangements as would separate the coal traffic from the other traffic, so that the objection of the narrowness of the harbour would not obtain. The objection which we had was to the crowding together of the large number of vessels which would be required to carry on a heavy coal traffic. There would not be the same objection in connection with the wool traffic, and it only occupies part of the year.
  30. Are you not aware that the wool traffic is carried on in larger ships? I am not referring to the size, but to the number of the vessels.
  31. The size would be a material feature when swinging in? It is not the swinging in, but the constant movement of vessels that I think would be an objection.
  32. A small vessel could go in and out with very little inconvenience, but when one of the large ships leaves a berth in the Circular Quay it takes an hour, or an hour and a half, to get her out, and she is lying across the harbour for that time? To that extent there may be some little inconvenience.
  33. That would exist now as much as before? Undoubtedly.
  34. *Mr. Dowel.*] Can you inform the Committee whether the Government have taken into consideration the advantages of the proposed railway for defence purposes? I do not think that that reason for its construction has been brought forward.
  35. *Mr. Copeland.*] What is the proposed cost of the present undertaking? The estimates are not altered. We propose to carry out the scheme which has already been before the Committee, and Mr. Deane will point out how, with other extensions, we can deal with the goods traffic.
  36. Are these extensions supposed to be before the Committee? I think not.
  37. The Committee have to consider the same proposal as before? Yes, and we shall give additional reasons why the work should be carried out.

38. Does the proposal before the Committee now embrace the line round Lavender Bay, for instance? No, it does not. We should have had to make another reference to the Committee if further extensions were proposed. We intend, during this inquiry, to show how we can deal with the goods traffic.
39. You will afterwards make extensions? Yes. I do not think it will be necessary for them to come before the Committee, because they will be simply sidings—that is as far as Lavender Bay is concerned.
40. So that the Committee have now the same proposal before them, but the Department is prepared to give additional evidence? Yes.

J. Barling,  
Esq.  
28 May, 1890.

WEDNESDAY, 11 JUNE, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

41. *Mr. Lackey.*] You have given evidence before in reference to the proposed extension of the railway from the Crow's Nest to the shores of Port Jackson? Yes.
42. You are aware that the Government, through Parliament, have intimated their desire that the Committee should re-open their investigation, because they have further evidence to offer, which they think will probably induce the Committee to alter the determination already come to? Yes.
43. You know the nature of the proposal which the Government now desire to submit? I could give evidence to show how the goods traffic could be provided for. I am not prepared to give any evidence as to what that goods traffic will be, because it is out of my department.
44. You are aware that the Committee took evidence before on this matter, and came to the conclusion that it was not desirable to make the extension? Yes.
45. You recollect the circumstances under which the Committee was asked to re-open its investigation;—we take it that you now come as the representative of the Works Department to give further reasons why the line should be extended? I come prepared to give you the engineering part of the question—to show how the traffic could be further provided for. I know that during the previous inquiry the evidence rather went to show that the proposed extension was not adapted to the requirements of goods traffic at all, and that it was expected that there would be no, or very little, goods traffic along it. I have prepared a plan to show in what way the extension could be made so as to provide facilities for bringing the goods traffic down to the harbour.
46. Are you of opinion that the extension would be utilised for the purpose of goods traffic to any large extent? I am not prepared with any statistics or estimates of traffic.
47. The project upon which you now propose to give us evidence is to provide for a large amount of goods traffic? Yes.
48. To where? To Lavender Bay, Neutral Bay, or Cremorne Point.
49. Do you purposely exclude Milson's Point? I exclude the extreme end of Milson's Point, because I consider that the passenger traffic should be brought down there.
50. Not the goods traffic? Not the goods traffic. The eastern side of Lavender Bay, from the head of the bay downwards for a certain distance, would be used for the goods traffic. The length of frontage available for goods traffic is 1,560 feet. That leaves quite sufficient length from the end of Milson's Point for the accommodation of the passenger traffic.
51. *Chairman.*] How much would there be for the passenger traffic? About 800 feet.
52. *Mr. Lackey.*] Between the end of the 1,560 feet and Milson's Point? Yes.
53. Giving 2,360 feet of shore line? Yes, that is about it.
54. To what point do you now propose to extend the line? Other than Milson's Point?
55. Towards Milson's Point? Towards Milson's Point in the same way as it was proposed before, with the exception that the passenger line would be carried at the back of the goods line, and brought down to the wharf, at the end of the goods sidings, where the platforms and station would be. It would be kept inland, between the goods sidings and the high ground.
56. That would necessitate considerable cuttings? Yes.
57. Do you propose to make any reclamations or to do any filling up with the excess earth? Yes; it would all be utilized.
58. In giving you deeper frontage? Yes.
59. Are you of opinion that that scheme would give you sufficient accommodation for the passenger traffic? I think so, for a considerable time to come. I am not prepared to show you any definite plan of what would be done in the future, but I have a plan here giving a suggestion as to how a terminus might be arranged, chiefly with the object of showing the amount of space available, because I think it is imagined that there is so little room for a station here that it is scarcely worth while thinking of it.
60. That is at Milson's Point? Yes.
61. We want the exact project that the Railway Department is desirous of submitting to the Committee. I suppose the project is that the railway be extended to Milson's Point? Yes.
62. Partly for goods traffic, and partly for passenger traffic? Yes.
63. That is all for the present? Yes.
64. You think that there would be sufficient accommodation for both goods and passengers—for the goods traffic on the east side of Lavender Bay, and for the passenger traffic more towards Milson's Point? For the present. I said on a previous occasion that I did not consider that Lavender Bay provided sufficient

H. Deane,  
Esq.  
11 June, 1890.

H. Deane,  
Esq.  
11 June, 1890.

sufficient accommodation for a very large amount of goods traffic and for coal traffic; but I have shown on the plan which I have produced that, supposing that not to be the case, the line can be extended into other bays.

65. The project admits of expansion to provide for increased coal traffic or goods traffic? Yes.

66. Is that an extension towards the western side of Lavender Bay? Whether it would be desirable to bring the line round the western side of Lavender Bay, or towards Kirribilli Point, Neutral Bay, or Cremorne Point, is a question for the future.

67. The proposal now is to bring it to Milson's Point? Yes.

68. How do you propose to get to the goods station? By water or by road. I have marked on a plan here the position which a road approach would take, giving a gradient of 1 in 18, which, for the North Shore, is very good indeed. The gradient of part of the present road there is 1 in 13.

69. *Chairman.*] That is to come down to the goods shed? Yes.

70. *Mr. Lackey.*] Would that be by means of a cutting? Yes; wherever you have a road you must make a cutting. I show on the plan that it is possible to do that. The road will probably commence from where Willoughby-street runs in near the Congregational Church. The ground there is about 20 feet higher than it is further on, so there is really no difficulty about getting a better gradient, or as good a gradient, from that point as from a point further back because you take advantage of the depression.

71. And it is included in the original estimate? No; the original estimate was for the passenger line alone. The construction of wharfs, and filling in, and so on, would be included in it.

72. Have you formed any estimate of the approximate cost of the proposal now before us, to divide the two classes of traffic, and to provide access to the stations, together with making the necessary reclamation? No.

73. Do you know whether any such estimate has been made? No; but I could soon prepare an estimate.

74. Supposing the proposal, as submitted, were agreed to, do you think there is enough land at Milson's Point to accommodate the passenger traffic? Yes.

75. Do you think that there is room there for a large passenger traffic? Yes, for a very considerable passenger traffic. The plan which I have shown to you only offers a suggestion; the work would not be undertaken at the present time. It was proposed by the Railway Commissioners that we should just bring a couple of lines down as a commencement, and afterwards extend the accommodation.

76. Is the part marked red where the passenger traffic will be accommodated? The double platform is where the passenger traffic will be provided for at first, and when that traffic increases another dock can be made.

77. *Mr. Trickett.*] What area of Government land have you there? I do not recollect.

78. Could you let us know? Yes.\*

79. *Mr. Lackey.*] From your knowledge of the present traffic from that part, and of its probable increase, do you think there would be anything like sufficient room to meet its requirements? In the future?

80. Yes? No; but the accommodation can be increased still further, if necessary.

81. Probably to the extent of taking the whole of the land right across the Point? Yes, and providing additional platforms.

82. I suppose that there is a great deal of rocky land about here—the cuttings would be through rock? Yes; but that would be all the better, because the rock would answer for filling-in purposes, whereas earth would be useless.

83. Do you know what the depth of the cuttings would be to obtain the level required for the passenger platform? They would vary from nothing to 40 feet.

84. You still adhere to the old proposed line from the Crow's Nest round by Berry's Bay? Yes.

85. Crossing the spot which you pointed out to us the other day? Well, that is the line which is being submitted to the Committee; but I mentioned to the Committee the other day, when they were at North Shore, that by winding a little more we could get a 1 in 50 grade, and I have drawn a dotted line on the map before you to mark the position of that line.

86. Would that add to or diminish the expense? It would add to the length of the line; it would make it about 30 chains longer.

87. Would it add to the expense as well? Yes; it would add to the expense by about £10,000. Of course that would be very much better, because the ruling gradient on the line between Hornsby and the present terminal station is 1 in 50.

88. *Mr. Trickett.*] What is the character of the goods which you expect to bring down here if you have a goods terminus? I might refer you to your former evidence, questions 124 and 125:—"What I want to get at is this: that the original design is changed in this respect, that when you were first called upon you had to provide a water terminus for goods only, but now you are called upon to provide a water terminus for passengers only? Yes. Therefore, instead of marking out the line to Ball's Head, which, in your judgment, would be the best place for the terminus of the goods traffic, you now intend to bring it from Milson's Point as the best place for the terminus of the passenger traffic? Yes." Do you still adhere to that opinion;—you there state that Ball's Head is the best place for the goods traffic, and Milson's Point for the passenger traffic? Yes; Ball's Head was considered the best place for the terminus of the goods traffic at the time.

89. What was the goods traffic contemplated—coal, I believe? Yes, entirely, I think.

90. Then we have question 126. "That is the explanation of the change of the water terminus from Ball's Head to Milson's Point? One reason why the Ball's Head branch-line was abolished was that it was considered that that would not be the best place to bring the coal traffic; there would be very little coal traffic from the north; and if coaling facilities were to be given in the harbour at all they should be given on the other side, so as to permit the Illawarra and southern coal to be brought in." You see that those are not my opinions. I merely state the departmental opinions. Those were the conclusions that were come to at the time.

91. But what reason do you see for changing them now—have you any reason for saying now that there will be a large coal traffic, whereas on the 9th of October, 1889, you said that there would be very little; if so, why have you changed your opinion? The opinion I hold now, with regard to the means of bringing coal traffic down to the harbour, is not that Ball's Head would be the best point, but that it would be better to carry the present line through from the head of Lavender Bay to one of the other bays; that it would

\* NOTE (on revision):—I find it is 1½ acre.

H. Deane,  
Esq.  
11 June, 1890.

would be more suitable to do that than to go back on the present line a long way in order to get down to Ball's Head. You cannot get down to Ball's Head from the present station at St. Leonards. The distance is too short. You would want nearly 2 miles for a 1 in 40 grade, while the extreme end of Ball's Head is not anything like that distance from the present terminus, and you would want the level at the bottom for the wharfage. To bring the railway down to Ball's Head would necessitate a separate line.

92. When the line to Ball's Head was being considered, where was it to go from? From Chatswood, the station before the terminus, about  $2\frac{1}{2}$  miles back.

93. In answer to question 133 you say, "I do not believe in bringing the coal down to the harbour";—Are you still of that opinion? I think I stated before that the evidence I have to offer is on the engineering question of the possibility of providing facilities for the traffic.

94. But you have expressed the opinions which I have read, and I wish to know if you have changed them since, because if they have been changed we ought to have the benefit of the change. We have your deliberate opinion expressed that it is not desirable to bring the coal down to the harbour? I have not made any careful inquiries about that point, because I did not consider that I was called upon to do so, but I understand it is likely that some coal may be brought down here, in spite of the opinion which was expressed at the time. The opinion at the time that the Milson's Point line was submitted to Parliament certainly was, that coal traffic would not be brought down to the harbour here.

95. Do you say that that opinion is changed—whose opinion was it—yours? I think it scarcely fair to press that question.

96. *Chairman.*] You gave direct evidence on the subject on a previous occasion. If you had then declined to do so, and had said that you were not qualified to give an opinion as to the nature of the traffic, I do not suppose the Committee would have insisted upon your giving an opinion. But you have expressed the opinion on oath that there would be a coal traffic. Now Mr. Trickett is asking you if you have changed that opinion.

97. *Mr. Trickett.*] Your answer to question 135 is as follows. "I suppose further reflection has satisfied everybody that no coal would be brought over the range between the Hawkesbury and Sydney at a rate which would compete with the water carriage? It is not likely." I know at that time we made some calculations and found that it would be too costly; but I have been informed since that it is most likely that the rail carriage could compete with the water carriage very well, from the southern part of the Newcastle coal-field.

98. Would you mind telling us by whom you were informed, or whether it is your own calculation? Although I answered these questions at that time, I did not on this occasion expect to be examined again on the same subject, and therefore I have not considered it. I should be very glad to consider it if I had instructions to do so, but I understood that my evidence was merely to have reference to the technical part of the work.

99. A great many questions were asked you of the same tenor? Yes, I see that.

100. This is your evidence in questions 142, 143, and 145. "There was an idea that the wharves on the North Shore would be coal shipping wharves? Yes. That idea you think is now generally abandoned? Yes. I understand that the Ball's Head terminus is recognized by the engineers as a good coal terminus, but not as a good passenger terminus, and that Milson's Point is looked upon as a good passenger terminus, but not as a good coal terminus? Yes." I want to know whether that is still your opinion? Yes. I do not consider that Milson's Point is a very good coal terminus now, because I consider that if coal is brought down in any quantity we ought to go through to one of the other bays. I certainly see that my evidence about the possibility or probability of bringing the coal traffic down at all will have to be modified, but I do not think that my answer to question 145 can be considered incorrect even now, because the Ball's Head terminus is still recognized as a good coal terminus, though I believe a better one has been found by utilising the proposed extension.

101. Branching off where? At the head of Lavender Bay.

102. And going underneath the point to Neutral Bay and Robertson's Point? Yes. If at the time I gave evidence before, this scheme had been worked out, I have not the slightest doubt that I should have answered that, however good the terminus at Ball's Head might be, it was not quite so good as one or two of the points which I have mentioned.

103. You also adhere to your former opinion that "we really have to consider this line now as a passenger line wanting a suitable water terminus?" I have still the same opinion with regard to the passenger traffic.

104. Could you not make the passenger terminus at the head of Lavender Bay, and then carry on the line below the surface, as you suggest, to Neutral Bay and Robertson's Point? I do not see how room is to be obtained there, and in my opinion it would not be so convenient for the ferry. When the re-arrangement of the wharves in the Circular Quay as contemplated by the Government is carried out, the distance across from there to Milson's Point would be a little more than half what it would be to the head of Lavender Bay.

105. But then the steamers go now from Milson's Point to the head of Lavender Bay? Yes.

106. And you have already stated that the present tram-line suits all the people who live along it? Yes.

107. And that the proposed extension would be chiefly for the benefit of a new traffic? Yes.

108. Therefore could not that traffic embark at the head of Lavender Bay, instead of being taken on to Milson's Point? That would not be so quick.

109. It would not make 3 minutes difference in the steamer journey to Sydney? Perhaps not more than 3 or 4 minutes difference; but that now-a-days is a consideration. But, apart from this, I do not see how room for a passenger terminus is to be found at the head of Lavender Bay.

110. Could you not fill in there as you proposed to do in the deep water on the western side of Milson's Point? Yes; but the distance is so short. At Milson's Point we have a length of about 800 feet, but that length in Lavender Bay would go right across the bay. It would be a costly thing. Then the proposed line only terminates round the corner on the eastern side; and supposing the dotted line were carried out it would also terminate at about that place, so that the grades would only begin to be suitable after you passed the head of the bay.

111. How far is the point where the grade ceases beyond the point at which you strike off to go through the hill to Neutral Bay? About 10 chains.

112. Could not that grade be worked in, in the tunnel through to Neutral Bay? Yes; we should have to drop down there, but it is not a suitable grade for a station to be placed upon.

113.

- H. Deane, Esq.  
11 June, 1890.
113. You say that it would be a very expensive thing to make a passenger station at the head of Lavender Bay;—would it be more expensive than bringing the line on to Milson's Point, and resuming and filling-in for the purpose? Yes, I believe so, because the only part that would be really utilised for the passenger traffic would be at the end; you would have all the rest thrown in for the accommodation of the goods traffic.
114. I understand that you have no figures or data which you could supply the Committee to account for your change of opinion from the evidence you gave last time as to the increased goods traffic likely to come to Milson's Point? No.
115. I suppose the estimate you gave before of the cost of connecting the present terminus of the railway with the terminus of the tram-line is still the same—about £30,000? Yes.
116. You are still of opinion that that is the probable cost of connecting the railway with the tramway? Yes; that is about it. I notice that in the report of the Committee a point has been made of the inconvenience to passengers of the double change to the ferry-boat at Circular Quay from cab, tram, or omnibus, and from the ferry-boat at Milson's Point into the train. I see no reason why passengers should not be booked through from the Circular Quay. When the contemplated rearrangement of the jetties at the Circular Quay is made, berthing can be given for a proper ferry-steamer, and waiting-sheds and ticket-offices can be erected. The passengers to the North Shore line could take their tickets there, and would have no further bother, except that they would have to walk from the ferry-boat to the train.
117. *Mr. Cox.*] They would have to shift their luggage? That could be done by the porters. I should not use the present style of ferry-boats at all. I was discussing the matter with Mr. Darley the other day, and we came to the conclusion that a boat of this kind (*exhibiting sketch*) would be the thing to adopt. The boat would go up into the berth, and the passengers would enter it from the end, while there would be trollies to take the luggage. The passengers would have nothing to do with the luggage, because it would be taken charge of by the railway officials.
118. *Chairman.*] What is the distance from the ferry-boat to the train? As shown here it is about 40 feet I think.
119. *Mr. Cox.*] It is a pity that they do not undertake the duty of shifting the luggage at the Redfern Station? I think that an arrangement such as I suggest would be a great improvement, and would do away with a great deal of the inconvenience likely to be experienced otherwise.
120. *Chairman.*] Then you would have to establish a ferry service of your own? The present ferry system would not answer. I imagine that if the railway were made, the traffic would in a short time be sufficient to maintain a separate ferry service. The boats would simply run backwards and forwards from the Circular Quay to Milson's Point, as they do now at certain hours of the day.
121. Then the existing company would have to adapt their boats to suit the requirements of the railway, or the railway would have to maintain a service of its own? Yes.
122. The present boats are not suitable? No; they are not suitable. The plan which I have produced is not a design, but is simply a suggestion.
123. Then what is the object in putting it before the Committee? I think I explained that it was proposed, under the present estimate, to bring down only a couple of lines and to utilise the present service. The passengers would simply walk down from the train and embark on board the ferry-boats. The plan now submitted was made to show how an increase of the traffic could be provided for, if special boats and special wharves were built. That kind of wharf to which I refer is such as I believe is made use of in all rivers and estuaries where there is a considerable tide. Instead of having to walk a narrow plank you have a floating platform which comes down to the level of the deck of the steamer. There is the fixed stage, and a floating stage attached to it by hinges. Sometimes the platform is level, whilst at other times it is slightly inclined downwards.
124. *Mr. Trickett.*] Are you still of opinion that the railway, if constructed, would not compete with the present tramway? Yes.
125. Because the people who use the tram would not use the railway? Yes. I do not see how they could. I am still of the same opinion with regard to that point.
126. I suppose you are aware that some company or individuals have bought land and are erecting wharfs alongside Admiralty House? Yes; I am aware of that.
127. In the scheme now submitted to us by you do you propose to connect these wharfs with the railway? The plan shows how, if there were a series of wharfs along the shore towards Kirribilli Point, a line could branch off from the proposed line, pass under Alfred-street, and skirt the shore at the back of the wharfs.
128. Is that a new idea since you were here last, or had you it in contemplation then? None of these extensions were considered at that time, because they were not then considered necessary.
129. The idea of constructing wharfs along Kirribilli Point to Admiralty House is a new one since you were here last? Yes. The Department, I believe, were so satisfied with Milson's Point as a passenger terminus that they thought it would be sufficient to insure the favourable recommendation of the extension, and the goods traffic was left out.
130. These proposals are all theoretical? They are all practicable.
131. They are all practicable but problematical as to which shall be carried out? So far they are alternative.
132. Have you considered the cost of an extension of the railway from Milson's Point along the shore to Kirribilli Point? No; but I have made an estimate of the cost of some of these extensions. The line from the head of Lavender Bay to Cremorne Point, including the excavation at Cremorne Point, but not including any wharfage construction, would, I reckon, cost about £70,000.
133. *Mr. Humphery.*] What is its length? A little over  $1\frac{1}{2}$  mile.
134. *Mr. Trickett.*] Have you estimated the cost of a line from Milson's Point round Kirribilli Point? I have the cost of the whole loop.
135. We will say as far as Admiralty House? The cost of a branch line from Milson's Point to Kirribilli Point would probably be about £18,000. The estimate is only approximate. It is to be understood that in all these cases the line has not been surveyed, although we have some levels to go upon.
136. Would the amount you name include everything—the reclamation of land? For this line there would be no reclamation. On the Cremorne line there would be reclamation.
137. In addition to the £70,000? No.
138. *Mr. Cox.*] And the other portion of the line from Lavender Bay to Kirribilli Point? That would be about £22,000.

H. Deane,  
Esq.

11 June, 1890.

139. *Mr. Trickett.*] But there would have to be reclamation there, because the line goes all along the private properties? There would be resumption.
140. On both of these lines the cost of resuming land would have to be added? Except at the Admiralty House, I suppose.
141. *Mr. Tonkin.*] That would be in addition to the £70,000? Yes. The branch to M'Mahon's Point I have put down at about £20,000.
142. *Dr. Garran.*] What do you estimate to be the total cost of the line which you are putting before us from the head of Lavender Bay to Milson's Point? I have not got that separated here, but I can let you have it.
143. I want to see the relative cost of the plan you are now submitting to us and the plan suggested by Mr. Trickett of having a passenger station at the head of Lavender Bay, and then tunnelling on to Cremorne. I understood you to say that you could tunnel on to Cremorne from that point at a cost of £70,000, exclusive of resumption. When you get to Cremorne, how much Government frontage would you have? We have the whole length.
144. Both sides of the peninsula? Both sides.
145. Making how much altogether? Roughly,  $1\frac{1}{2}$  mile.
146. Of available deep-water frontage? That is on both sides. There is about  $\frac{3}{4}$  of a mile on the western side and  $\frac{3}{4}$  of a mile on the other side.
147. That is all available shipping frontage? Yes. The 100 feet reserve extends right up to the head of Shell Cove and Great Sirius Cove on the other side to the point.
148. If you once got to the head of Lavender Bay you could, by a railway expenditure of £70,000, utilize  $1\frac{1}{2}$  mile of first-class shipping frontage? Yes. You get down, of course, on one side readily enough, but you would have to back on to the other.
149. To go direct you would have to make another tunnel? Yes.
150. Without a tunnel you could shunt back? Yes.
151. Still you could utilize  $1\frac{1}{2}$  mile of frontage? Yes.
152. You would have it made accessible? Yes.
153. The Government would not have to buy an inch of that land? Yes.
154. They would only have to pay money to get to it? Yes. If they utilized the whole of the 100 feet reserve, the owners of the land at the back would, I suppose, have access given to them from behind.
155. By that same line you could, if necessary, utilize the east coast of Neutral Bay, and provide still more accommodation? Yes.
156. That would give something like half a mile of frontage? Nearly half a mile.
157. Is the water there fairly deep, too? I believe so.
158. The  $1\frac{1}{2}$  mile frontage would be nearly 8,000 feet? Yes, it would.
159. You are now proposing to allow 1,500 feet for the goods traffic? Yes.
160. By a railway expenditure of £70,000 you could get, without resumption, nearly 8,000 feet? Yes.
161. Of quite as good water frontage? Yes.
162. In addition to that, you could, by resumption, get to the eastern side of Neutral Bay? Yes.
163. That is providing 2,600 feet more, if required? Yes.
164. So that the quantity of frontage available on this route is enormously in excess of the quantity available in Lavender Bay? Yes.
165. It is in excess of what you could get in Lavender Bay, even if you made a railway round the west side also? Yes.
166. Mr. Trickett asked you whether at the head of Lavender Bay you were at the water level, and you said "No";—how much above the wharf level would you be there? Twenty feet, roughly.
167. The passengers would have to ascend and descend steps to get from the railway platform to the ferry? Yes.
168. Would that be a serious inconvenience? I do not know about its being serious, but it would be very inconvenient.
169. It would be undesirable? It would be undesirable. The level of the station would be higher than that. It would be about 27 feet.
170. Supposing it were 30 feet;—that is not more than a station cutting in a city would be? No; I think not.
171. *Mr. Humphery.*] It would be higher than this room? Yes; this room would only be about 20 feet high.
172. *Dr. Garran.*] If you are 20 feet above the wharf at that point, how far have you to go along the goods station before you get to the level? By the time you get to the end of the goods station you are on the level. We do not waste any of the 1,500 feet.
173. You do not come on to your goods line to shunt back at all? Oh, no. The 1,560 feet of wharfage is only taken from here to the curve. (*Explaining on the map.*)
174. Would it be possible for you to get down to the wharf level at the head of Lavender Bay? We could with a grade of 1 in 40.
175. You have marked on the plan a 10-chain curve line a little more to the west than the line submitted to us? Yes.
176. Has that line been surveyed properly? No; but I have had cross-levels taken for the purpose of testing it.
177. I presume the object is to get a better grade? Yes.
178. Can you get 1 in 50 upon that line? Yes.
179. It will increase the length by how much? By about 30 chains.
180. And will avoid all tunnels? Oh, no.
181. There are no tunnels marked on the plan? No; because the route is shown by a dotted line—there would still be a tunnel under Blue's Point-road.
182. Looking at the diminished length of tunnel on the line, would it be a dearer line than the other? It would be dearer by 30 chains.
183. But would not much of the work be lighter? Without having a section taken over it I could not say.
184. You have had no proper estimates made? No.
185. By that route you would get a 1 in 50 grade? Yes.

- H. Deane, Esq.  
11 June, 1890.
186. And with a short length of 1 in 40 you could come on to the wharf at the head of Lavender Bay? Yes.
187. If it is ever expedient to come down to the level there, you have the option of taking this route? Yes, with the 1 in 40 grade.
188. Do you not think that it would be very desirable to get to the level of the wharf at the head of the bay? Yes; but I think that I should prefer the better grade.
189. You mean you would have to determine upon a grade of 1 in 40 to do it? Yes.
190. But you have that grade now? Yes; but it has always been very objectionable, and when I took this work in hand after the line had been laid down, the first thing I did was to get some cross-levels, in order to see if a less grade was possible.
191. Between St. Leonards and Hornsby you have no 1 in 40 grade? No.
192. So that this will be the only 1 in 40 grade on the line? Yes. It will spoil the line as to grades.
193. Could you not manage with the more westerly line to come down to the head of Lavender Bay with a grade of 1 in 50. It is not possible. I am sure that there is not length enough.
194. You must decide to have a grade of 1 in 40 or make the line at the head of the bay 20 feet above wharf level? Yes.
195. We cannot avoid that? We cannot avoid it.
196. How high is the wharf level above the high water level? About 6 feet. The line at Walker-street as at present laid out would be about 20 feet above the wharf level, but supposing we put a station there it would have to be continued from the level at the end of the tunnel.
197. What length would you have to clear for a station from the exit of the tunnel to the cutting on the opposite side? Supposing you go straight across?
198. Yes? 18 chains.
199. 18 chains would be available and open for a station? Yes.
200. What is the length of the covered part of the station at Redfern? I do not know, but it was proposed to make the platforms at the terminus at Hyde Park 700 feet long.
201. Then you would have more room there than it was proposed to have in Hyde Park? Yes; there would be plenty of room.
202. The only objection would be the height above the wharf level? I do not know about the only objection; it would require a great deal of earthwork.
203. Unless you made a viaduct? That would probably be still more costly.
204. Still, you must get rid of the stuff from the tunnel? That would not anything like fill up the hole.
205. I should like to get an approximate idea of the relative expense of making a goods station where you propose to make it, and the Cremorne scheme. If you can give us approximate figures I shall be very glad. That is including all the cuttings and the filling in which will have to be made? It will be very difficult to do that with the information now available.
206. Do you know what the estimated cost of the resumption on the east side of Lavender Bay was? I have the details in the office; I do not remember at the moment.
207. *Chairman.*] The total cost you will see was put down by Mr. Thompson at £133,909? Yes, but he gave it all in detail.
208. *Dr. Garran.*] You see what I wish to get—the relative cost of adopting Mr. Trickett's idea, and of the scheme you are now submitting to us. We can then weigh the cost against the available frontages, and the relative advantages for shipping purposes? Yes. It would be necessary before giving this for me to get some levels taken over the line, so that I could give a closer estimate than is possible at present. I suppose an approximate estimate would be enough?
209. You have submitted a scheme to us in which you say that the east side of Lavender Bay will provide accommodation for the present passenger and goods traffic, but if that increased it would be necessary to make an extension of the line to Admiralty House or Cremorne. I want to get the relative cost of the plan you propose, and of not touching the east side of Lavender Bay, but of dealing only with the head of the bay for passenger purposes and going straight to Cremorne? Then I should have to provide a passenger terminus at the head of Lavender Bay instead of at Milson's Point.
210. *Chairman.*] And you have 1,180 feet to do it on at Lavender Bay as against 800 at Milson's Point? 1,180 feet is the length of the hole which we will have to fill up.
211. *Dr. Garran.*] You feel quite sure about not being able to get to the head of the bay at the wharf level? Unless with a 1 in 40 grade.
212. That is by the westerly line; you could not do so with a grade of 1 in 50? I will tell you what made me try to get that particular line. I found that the difference in length that was required to give a 1 in 50 grade was about 25 chains—that I wanted 25 chains more. Our starting point is fixed, and a break in the grade going up the hill is most desirable, in order to provide for future wayside stations, so I allowed 30 chains.
213. Could you not go further back? I have started right from the bridge; in fact, I am not sure that the 10 chains at the end of the existing work would not have to be slightly altered. We lead directly from the end of the present line.
214. Could you go behind that to advantage? No, we could not alter the station level. We start running down rapidly immediately after passing under the bridge, carrying the Lane Cove-road.
215. The choice is to have a grade of 1 in 40 or to come out at Lavender Bay, 27 feet above the level of the wharf? Yes?
216. Which is the best of these alternatives to adopt? My opinion is that Milson's Point is the proper terminus. I think it is a very serious objection to have a grade of 1 in 40. I always intended to see if we could not get rid of that, because it spoils the line—it makes the ruling grade for the whole section 1 in 40.
217. Between Hornsby and the Hawkesbury there are grades of 1 in 40? Yes.
218. Then any coal train coming from the north would have to pass over these grades? Yes.
219. You could deal with a descent of 1 in 40 if you could deal with that ascent? If you take the local traffic alone into consideration it would be desirable to keep the ruling grade the same throughout the section of 12 miles.
220. In that case would it not be better for you to adopt the 10-chain curve line, and to keep to the 1 in 50 grade instead of adopting the line put before us? Yes.

221. Although you have not surveyed that line and worked out the details of it you think it would be a preferable line? I think it would.
222. We really have before us the project which you think the best—you admit that it is desirable to have a grade of 1 in 50? I admit that it is possible to improve the proposed line. I hope with most of the lines submitted to Parliament and to the Committee as trial lines, that in the process of permanently staking considerable improvements will be made. The tendency always is towards improvement.
223. What particular surveyors have done this work? I really could not say. There have been several engaged upon it.
224. Is there any gentleman who knows the details of the ground better than you do yourself? No; I do not think that there is.
225. As far as you know, the line marked on the plan is a practicable one? Yes.
226. And not extravagant or expensive? No, I do not think that it would be more expensive than the other, except as regards the cost of the extra distance.
227. Are you doing anything to have it more minutely examined? No, I am doing nothing. The matter is still in abeyance.
228. You are awaiting the result of this inquiry? Yes. If the opinion of the Committee depended upon the knowledge of the practicability of the line I will have a section taken over it.
229. *Chairman.*] How long would it take you to get that done? We could get over that in a few days, just to take sufficient levels to test the line. Of course you understand that if we get 1 in 50 grades we have very much sharper curves.
230. *Dr. Garran.*] But they are only 10-chain curves, which are not so sharp as those on the Western line? Yes.
231. *Chairman.*] Which is it best to do—to reduce the grades, or to reduce the curves? There is a system of compensation. A grade of 1 in 50, with a 10-chain curve, is better than a grade of 1 in 40, with a 15-chain curve.
232. *Mr. Cox.*] Because when you near the station you slow down? Yes.
233. *Dr. Garran.*] It would not be desirable to bring a heavy load of coal down a 1 in 40 grade to terminate suddenly at the wharf? You would have to put the brakes on.
234. The wear and tear would be considerable? I do not think that it matters on the steel rails that we have.
235. Supposing we had a passenger station at the head of Lavender Bay, would there, in that 1,100 feet, be sufficient room for dealing with the light suburban goods traffic as well? I doubt whether you could get down to it; the ground at the head of Lavender Bay is so steep.
236. *Mr. Humphery.*] But you can make an approach from the steamer up to the station? The passenger approach would be by steps.
237. Then a suburban goods traffic there would be impossible? I dare say an approach could be made up on to Alfred-street.

H. Deane,  
Esq.  
11 June, 1890.

THURSDAY, 12 JUNE, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

238. *Mr. Lackey.*] Your project, so far, has been to construct a line from the Crow's Nest to the eastern side of Lavender Bay, at a certain distance from Milson's Point? Yes; stopping near Milson's Point—almost at the extremity of the point.
239. Using a portion of the line for goods traffic, and another portion for passenger traffic? Yes.
240. Since the matter was before the Committee on a previous occasion it has been stated that additional reasons are to be submitted by the Works Department why the proposed extension should be reconsidered—have you some other project to submit in reference to the proposed extension? Since I was here yesterday, I have been speaking to Mr. Eddy about the extension to Milson's Point, and it has been suggested that the passenger station might be placed higher up the bay.
241. Lavender Bay? Yes. If it were considered that the expense of carrying the line down to the point is too great, and the amount of room too limited. I was asked, yesterday, to make an estimate of the cost of constructing a station at the head of Lavender Bay near the baths, and I think I said then that it would be very expensive, because it is a regular hole that we should go into. Besides that, we should not be able to get low enough down to the water to make it convenient for passengers to land from the steamer. Putting in a grade to suit the circumstances there, we should have the level of the line about 40 feet above the bay, which, of course, would necessitate a flight of steps to give access to the station. When talking the matter over with Mr. Eddy this morning, he suggested that we might reverse the proposal with regard to Milson's Point, and put the passenger accommodation near the head of the bay, leaving the other end for goods. That proposal would admit of the goods terminus being left out altogether for the present, and we could put up the passenger station at the end of the piece coloured red.
242. You would only require to come to that point at present to provide for passenger traffic? Yes, and the goods traffic could be carried behind and beyond. On the plan before the Committee the passenger traffic is shown as being carried behind the goods traffic. If the goods traffic were carried behind the passenger traffic to the point, and the passenger station built in the position suggested, it would be less costly.

H. Deane,  
Esq.  
12 June, 1890.

H. Deane,  
Esq.  
12 June, 1890.

243. Have you made an estimate of what would be saved by that alteration? Yes. Supposing the line were only carried so far as would be necessary to accommodate the passenger traffic, there would be a saving of about £10,000 of work and between £42,000 and £43,000, according to the Land Valuer's estimate. The Land Valuer's estimate would be reduced by £12,730.
244. That would be a total reduction of about £52,000? Yes.
245. In the general estimate of the cost of the proposed extension? Yes. I have a plan here (produced) to show you how the scheme could be carried out.
246. Does the part coloured pink represent the passenger station? Yes, and that might be constructed first. Then the goods sidings could be taken on at the back, or could be left out altogether, and the line for goods traffic be pushed on into Neutral Bay or Cremorne. The making of the line only as far as this point would save about £42,000 in land, and £10,000 in works.
247. How about the access to this passenger station; do you say that it would have to be supplied with steps? No, there would not be a flight of steps; but a branch tram line could be brought down to the station from Alfred-street—I mean if this were made the terminus of the North Shore Ferry traffic. Passengers going into St. Leonards, and not requiring to take the railway, would go up by the tram line, while those desiring to use the train would simply go into the station.
248. What length of tram line would that require? About 1,000 feet.
249. *Mr. O'Sullivan.*] What would be the cost of that 1,000 feet of tram line? About £5,000.
250. Allowing that as a set off, you would actually save about £47,000 by altering the site of the passenger station in the manner proposed? Yes, if the goods line is left out.
251. Do the Commissioners now favour the proposal to take the freight trains to Cremorne or Neutral Bay? I have not spoken to the Commissioners as a body, but I believe that Mr. Eddy has always rather looked forward to that as affording additional facilities for the traffic.
252. Do you know the distance from the present terminus of the line to Cremorne? Three and a half miles.
253. If the North Shore bridge were constructed, and the railway taken across it from the present terminus, you would have to adopt a different route from that which you would adopt to bring it into Lavender Bay and Cremorne? No, I should follow the same route.
254. You go through a tunnel to reach Lavender Bay. A line crossing the bridge could not be brought on to Lavender Bay or to Cremorne? There would be a junction on the proposed line.
255. There would be a deviation going through a tunnel into Lavender Bay? Yes; because that would be at a lower level. You will have to descend from there to get down to the bay. The cheapest way of doing it will be to descend before coming to Lavender Bay, passing through a tunnel, and then to go under Milson's Point near the level of the water, thus getting to the bays beyond.
256. Is the passenger station marked on the plan intended to be a permanent structure? Yes.
257. Will not the passengers come across the bridge when it is erected? I cannot say what may take place when the bridge is erected, but I think that even if the bridge is erected, there will always be plenty of traffic by this route.
258. But what passenger traffic could this station serve. If the passengers going to Sydney are taken across the bridge, the station will only serve a very small local traffic. Passengers coming to Sydney will undoubtedly prefer to come across the bridge to going down to the station on the shores of Lavender Bay? In the first instance, that need not be any objection to the construction of the line. The station would only be built in a small way, to be added to as the traffic increased. If the bridge is to be built within a year or two, there would be very little loss even if the station were not required. There would not be all the work that I have shown on the plan thrown away, because the plan allows for a very considerable development of the traffic.
259. But if the passengers were brought across the harbour by the bridge, and freight is to go to Cremorne, do you think there will be enough traffic left to justify the erection of a permanent station at the head of Lavender Bay? I do.
260. Would not the traffic be purely local, and could it not be easily taken on to the head of the bridge. Is it worth while to construct an expensive station at this place, when the probability is, that in a few years it will be rendered useless, except for local traffic, by the erection of a bridge over the harbour? I should not erect an expensive station there at first, I should make one to suit the requirements of the traffic, which at first would be small. Before very long it would be seen whether the bridge was to be constructed. If the bridge is to be constructed in the near future, I imagine that its construction will have to be decided upon almost immediately, while if it is to be left for coming generations, we had better have something like what I propose to answer present requirements.
261. I can see the importance of this station if the bridge is not to be constructed, but there is every indication that it is to be constructed. That being so, would it not be better to have a temporary station at the North Shore end of the bridge, than to have a station at a place where it must be abandoned in future? No; I do not think so, because the branch from the goods line would be a very small one, and would not be costly in the first instance. What we should put in at present would be very small.
262. The line in crossing to Cremorne must go through a tunnel at the head of Lavender Bay;—how much further than the western end of this tunnel will it be taken to accommodate the proposed station? About 20 chains.
263. And will it not have to pass through some very valuable property? Not very much I think. It is mostly unimproved. The most valuable property is that between this place and the point.
264. You say that the value of the property which would have to be resumed between the proposed station and Milson's Point would be £42,000? That is the Land Valuer's estimate.
265. Would not the 20 chains of property from the deviation from the Cremorne line to the end of the station be worth pretty well the same sum? According to the land valuer, taking a very liberal estimate, it would only be worth £25,000, and it must be remembered that if any portion of this land were resumed, and the Government in a few years time did not require it, it would fetch a very much larger sum than they would give for it now, and it would cover the cost of the improvements that would be made in the way of levelling ground and erecting platforms and wharves. It would be a very good investment.
266. Do you think the land could always be sold for more than was given for it? For very much more, covering the interest on the money and the cost of improvements.
267. Supposing the bridge is constructed, will not trains going to Newcastle and the north start from the city of Sydney itself? I suppose they will.

H. Deane,  
Esq.  
12 June, 1890.

268. I presume that the Newcastle trains will go by that route, and that it will be the chief passenger line to the north. If the northern train starts from Sydney, what would be the use of this little side track for mere local traffic? I do not know how the line may be worked, or what development in the traffic will take place.
269. You still think that this station will be useful for the mere local traffic running between that point and Hornsby at intervals during the day? Yes. The Commissioners might also find it desirable to start a train for the north to meet the mail train at Hornsby, but, of course, that is a matter for their consideration.
270. You mean a separate northern train? No; but they might run through carriages, which could be hooked on to the mail train at Hornsby. Branch lines are sometimes worked in that way, special carriages going through the whole journey.
271. *Mr. Dowel.*] In your official capacity, I presume, you have given very considerable attention to the alternative, or, I might say, rival routes, from the present terminus to Ball's Head, Blue's Point, Cremorne, and Lavender Bay, as well as to the proposal submitted to the Committee? Yes.
272. And are you still of opinion that the proposal now submitted by the department is the best that could be adopted? Yes; I am, decidedly.
273. You think that, in the interest of the country, it is the best line that could be constructed? Yes.
274. Starting from the present terminus, the line crosses the ridge dividing the Middle Harbour and Parramatta River watersheds at the lowest point;—at the Lane Cove-road? Yes.
275. Therefore, it is the natural route to the harbour? Yes.
276. So that the line follows the natural fall of the country, does it not? We contour down from that point.
277. You contour down to the deep waters of Lavender Bay? Yes; Lavender Bay being the nearest point at which we can touch the water.
278. The route being the easiest from an engineering point of view as well as the shortest—is not that so? Yes.
279. Now, you are aware that when this proposal was before the Committee on a recent occasion there was not very much said as to the goods traffic to be provided for, but that, after the close of the investigation, the Minister submitted reasons why he thought there would in all probability be a great development of goods traffic on the line? Yes.
280. Would the scheme suggested by Dr. Garran provide sufficient accommodation for this goods traffic? Do you mean the extension to Cremorne?
281. No. I am speaking now of the proposal to erect a station a short distance from the mouth of the tunnel at the head of Lavender Bay;—would not that very materially lessen the space allowed to the goods traffic? You would lose the frontage on the eastern side of Lavender Bay.
282. Instead of the department making more provision for the goods traffic it would be making less than is now proposed? Yes; that is, of course, not taking into consideration the extensions to the other bays.
283. The proposal before the Committee gives very much more goods accommodation than the scheme suggested by Dr. Garran? I think Dr. Garran's suggestion was to make the passenger station at the head of the bay, on the line of route to Cremorne. That would cut out the whole of the frontage on the eastern side of Lavender Bay.
284. What would be the additional length of construction if the Cremorne scheme were carried out? As compared with the Milson's Point scheme?
285. As compared with the Milson's Point scheme? About  $1\frac{1}{2}$  miles.
286. And what would be the additional cost? That I estimate at £70,000. The difference in the distance between Milson's Point and Cremorne Point from the present terminus is  $1\frac{1}{4}$  miles, but the additional length of line to be constructed from the junction at the head of Lavender Bay to Cremorne would be nearly  $1\frac{1}{2}$  miles.
287. Is not Cremorne Point the narrowest point in the harbour, and Milson's Point the widest point? Cremorne Point tapers very much towards the end.
288. Do you know what the width of it is? The Government reserve is 100 feet. There is not above 200 feet in width for some considerable distance. At the end it is 200 feet wide.
289. You would have very little room then for a terminus there? I suppose some resumption of land would be necessary. Of course we should reclaim a portion of the harbour.
290. Talking about resumption, is not a large quantity of that land already sold? I do not know—of course it is in the hands of private owners. I do not know whether there has been any sale recently.
291. You would require some considerable distance for shunting purposes? There is plenty of length there.
292. How would you be able to turn in that 200 feet;—would you have plenty of room? Do you mean for shunting back on the eastern side.
293. Is not the land too narrow to connect the water frontages by a curve? Yes.
294. What height above the water level would the terminus of a railway be here? You could make it anything you liked.
295. What height would the terminus be above the water at Milson's Point? The levels we have assumed are between 5 and 6 feet.
296. That would be 5 or 6 feet above the water for a distance of nearly 300 feet? I make it 2,360 feet—1,560 feet for the goods traffic, and 800 feet for the passenger traffic.
297. Could you get that 2,360 feet equally as well at Cremorne? There is a longer stretch at Cremorne.
298. *Mr. Trickett.*] A mile and a half? Yes; that is taking the two sides.
299. *Mr. Dowel.*] Would there be any great difficulty in increasing the wharfage accommodation by going round towards Blue's Point at Lavender Bay, supposing that were necessary? That could easily be done, if required.
300. Would not the shipping at Cremorne Point be more exposed to bad weather than it would be at Lavender Bay? I believe that on the eastern side of Cremorne Point it would be more exposed.
301. There is no population at present there that is likely to be served by the railway, if constructed? There is no population at Cremorne.
302. Is not nine-tenths of the population on the south side of the line. Therefore if you took the railway down to Cremorne it would not serve the population as it is situated at the present time? It would not do to make a passenger terminus at Cremorne.

- H. Deane, Esq.  
12 June, 1890.
303. That was a proposal put forward by the Government? There was a proposal at one time; but I think that it would be a great mistake.
304. You are clearly of opinion, under all the circumstances, that Lavender Bay is unquestionably the best position for a terminus? For the passenger terminus.
305. For the passenger traffic,—and the goods traffic could be accommodated in the manner suggested, as well as by going round to Blue's Point? Yes; an extension is possible in that direction.
306. *Chairman.*] Will you say at what cost? Well, I think I mentioned yesterday that it was estimated that the work, exclusive of the cost of resumption, would cost £20,000.
307. *Mr. Dowel.*] Mr. Copeland asked you some questions in reference to bringing the railway down to Ball's Head;—is it practicable to bring the railway down to Ball's Head and to make a terminus there? Yes; a line was staked out to Ball's Head from Chatswood as a branch line to the present railway.
308. That would be about 2 miles back, I suppose? I think rather more—2½ miles.
309. Was that done to get a longer run and a practicable grade? A ruling gradient of 1 in 40.
310. You went back that 2 miles on purpose to get a practicable gradient? Yes.
311. Did not Mr. Whitton estimate the cost of the scheme at £300,000? I believe so. I must say that I think that estimate, taking present prices into consideration, is rather excessive.
312. Taking the various bays on the North Shore between Ball's Head and Bradley's Head, is it not a fact that every one of them except Lavender Bay is very narrow at its head, that not one of them is as wide as Lavender Bay? Yes, if you except Neutral Harbour.
313. Do you know the width of Lavender Bay at its head? I can scale it on the plan—9 chains.
314. Nearly 700 feet. Now the heads of all the other bays have mud flats with fresh water creeks running into them, have they not? Yes, I believe they have.
315. There is no mud flat at the head of Lavender Bay? It is sand there, I think.
316. Is not the water very deep where there is a width of 700 feet? You get 20 feet depth almost close in shore at the head of Lavender Bay.
317. In descending or ascending a steep grade it is necessary to have a good length of level track for the terminus? Yes.
318. Is it not an axiom in railway management that all lines of communication should connect with the railway for the purpose of supplying it with traffic? Yes.
319. Do you not think that that is a good reason why the line should be taken to Milson's Point so as to connect it with the tramway, the horse ferry, and the passenger ferry? That is the opinion of the department.
320. That is the opinion of the department and your own opinion, now, I presume? Yes.
321. Do you think you could get 3 chains in width on the straight run at Milson's Point by excavation? By excavation and filling in.
322. Would not that be ample for all the requirements of the traffic for many years to come? I think it would.
323. Even anticipating that there would be a large traffic? Yes; you could conduct a great deal of traffic on that width.
324. If the Commissioners chose to send the northern traffic over that portion of the line, would it represent one third of the passenger traffic? I suppose it would.
325. And you would have ample room for that traffic? I believe so—that is my opinion.
326. Three chains in width and half a mile in length would give you about 12 acres? Yes.
327. *Chairman.*] Would not that go over the road where the tramway is? No. I have no doubt that we could get 3 chains in width by reclamation, without abolishing the tramway.
328. You could fill up Lavender Bay by reclamation? Well, it would be rather a large work.
329. *Mr. Dowel.*] Can you supply to the Committee the relative extent of accommodation at Darling Harbour now and as proposed at Milson's Point? I am not prepared with it at the present moment, but I can get it, from the Commissioners. I have no plan showing the Darling Harbour Yard.
330. It was laid out under your department? No. Without going very carefully into it, the average width in the present proposal would be about 120 feet. In some places, by cutting back and reclaiming, we should have 2½ chains.
331. On an average you would have about 2 chains, and I ask you if it was not practicable to obtain 3 chains? At the upper end of the bay we could get a width of 3 chains without difficulty, but we should not be able to get that width near the point without reclaiming the whole of it.
332. Do you think it desirable to locate the station near a steep grade, as suggested by Dr. Garran yesterday? No. I pointed out the objections to that idea, namely, that the station would be too high above the wharf-level.
333. But it is also objectionable to locate it near to a grade of 1 in 40? The grade would have to be levelled off. We should have to run a level between the tunnels, and put the station upon it.
334. Would it not be objectionable under any circumstances to have the station near to the mouth of the tunnel? I do not think that would be any objection.
335. A question was asked you a short time back about the connection of the bridge with the proposed railway, it does not follow that the bridge has anything to do with this proposal? Well, I think not.
336. No part of the railway would have to be removed or altered for the purpose of allowing a bridge to be constructed? No.
337. You are aware that it has been proposed to take the railway to the head of Neutral Bay. That that has been suggested to the Committee? I am not aware that it has been suggested to the Committee.
338. Do you remember what length of tunnel there was on the Cremorne line once proposed by the Government? I shall have a section of the line here in a few minutes. There were three tunnels on the Cremorne line, the total length of which was between 1,100 and 1,200 yards.
339. Can you give the Committee any information about the bridge? Of what nature?
340. As to the width of the harbour, say, between Dawes' and M. Mahon's Points? It is 1,800 feet.
341. Can you inform the Committee of the estimated cost of the Cremorne route—what was known as a high-level scheme? I can easily supply it.
342. The Minister stated it to be £285,000—would that be correct? If the Minister stated it, he, no doubt, got his information from me.
343. How much longer would that route be than the Milson's Point line? About 1½ miles, I think.

344. Having given the Committee all this information, you are still of opinion that the proposal before them is the best which could be offered? Yes.

345. *Mr. Tonkin.*] In placing the passenger station in the altered position, on the east side of Lavender Bay, do you propose to resume as much land as you originally intended to resume for the goods station? No.

346. What would be the difference? I should say, before it was worked out, that there would be only half the land taken, and that the least expensive half.

347. That would naturally be half the cost of the resumption on the part of the Government? Yes; it would be less than half. The saving in the resumption would be, according to the land valuer's estimate, £42,760.

348. *Chairman.*] What was his total valuation? £67,760.

349. That was for the Lavender Bay side? Yes.

350. *Mr. Tonkin.*] Is there not some Government land nearer Milson's Point than the proposed site for the erection of a passenger station? I am not aware of the Government having any land there.

351. You think there would hardly be sufficient room on the east side of Lavender Bay for any great development of the goods traffic? Yes, and certainly not for coal.

352. I understood you just now to say the new proposal was to have the passenger station on the east side of the Bay, and to carry the goods traffic to Milson's Point? As a substitution, yes; leaving it optional to provide for the goods traffic. I have always looked upon it, and I believe that it has been recognized by the department, that this line, without the passenger traffic, would scarcely have come under consideration, and that it is a most important thing to provide for the passenger traffic. Therefore, I suggest, as a substitution for the original proposal, that the passenger traffic should be put higher up than Lavender Bay, so that it can be constructed first. It then remains optional to determine that the goods traffic, which is expected to be considerable, shall be provided for by the extension to Milson's Point or by an extension to Neutral Bay and Cremorne.\*

353. Do you think that if the passenger station were constructed as you propose there would be any necessity for carrying the line on to Milson's Point? For goods?

354. Yes? I do not think it would matter where it is carried, so long as it is carried somewhere.

355. Do you think there would be as much accommodation if it were carried to Milson's Point as if it were carried over the head of Careening Cove and Neutral Harbour to Cremorne? There is a longer frontage at Cremorne.

356. Which do you think would be preferable for the goods traffic alone? It is so difficult to make a comparison between the lines—it depends so much on the quantity of goods traffic for which you have to provide.

357. Could you accommodate a coal traffic at Milson's Point? I do not think that the accommodation of a large coal traffic at Milson's Point would be desirable.

358. Do you think that if the line were carried to Cremorne there would be sufficient accommodation? Yes. There is plenty of room there.

359. Supposing a large goods traffic—a traffic in coal, merchandise, cattle, and meat—is developed, which line should be carried out, the one to Cremorne or that to Milson's Point? That is assuming that the passenger station is placed according to the last suggestion?

360. Yes? I should like to make a more careful estimate before making a comparison—I should like to find out how much each would cost.

361. I am not entering into the cost at all, I merely ask you which would afford the greatest amount of accommodation for all kinds of goods traffic, coal included? There is no doubt which would give the most accommodation—of course, the longest line would.

362. Would not that line also give more accommodation to passengers? I dare say passengers would use it. I dare say some portion of it would come to be a passenger line as well as a goods line.

363. The construction of that line could not in any way diminish the amount of traffic by railway? No.

364. If in the construction of the passenger station where you now suggest we shall save £42,000, and the line to Cremorne will cost £70,000, are we to deduct the one amount from the other, leaving the difference only £28,000? The £70,000 does not include resumptions.

365. *Mr. Lee.*] I understood that it was £52,000 that would be saved—£10,000 in works and £42,000 in land? Yes. Against that is the cost of a branch tramway, if required.

366. *Mr. Humphery.*] There would not only be the expense of the tramway, but there would also be the extension from the tunnel at Milson's Point—the cost of the 20 chains? I have taken that.

367. *Mr. Tonkin.*] Could you give us the estimate of the total cost of the line as proposed by you, with the passenger station on the east side of Lavender Bay—the station and resumption included? Yes; the estimate for works can be taken as before.

368. *Mr. Lee.*] £212,000? I think it was shown that £23,000 had to be taken off the valuation of the land, because by the Lands for Public Purposes Acquisition Act, we shall not have to resume the land over the tunnel.

369. *Mr. Tonkin.*] Would the deviation shown by the dotted line increase the cost much? By the extra length;—it is 30 chains longer.

370. Would the cost be proportionately the same? Yes; I expect it would be. Are you including the land?

371. Yes? No, it would not be, then.

H. Deane,  
Esq.  
12 June, 1890.

WEDNESDAY,

\*NOTE (on revision):—I should like to add that, in spite of this suggestion, I am still strongly of opinion that the proper terminus for the passenger traffic is at the Point.

WEDNESDAY, 25 JUNE, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.  
 The Hon. ANDREW GARRAN.  
 The Hon. FREDERICK THOMAS HUMPHERY.  
 The Hon. WILLIAM JOSEPH TRICKETT.  
 JACOB GARRARD, Esq.

HENRY COPELAND, Esq.  
 JAMES EBENEZER TONKIN, Esq.  
 WILLIAM SPRINGTHORPE DOWEL, Esq.  
 EDWARD WILLIAM O'SULLIVAN, Esq.  
 JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

H. Deane,  
 Esq.  
 25 June, 1890.

372. *Mr. Tonkin.*] Have you prepared an estimate of the cost of the proposed line from the Crow's Nest to the passenger station at the head of Lavender Bay? What I understood was required was a comparative estimate showing the cost of the line with a passenger station at Lavender Bay, taking the goods traffic to Cremorne, and the cost of a line carried down to Milson's Point only.

373. I wanted the estimates separately, because I wanted to show the actual cost of construction of the proposed station in Lavender Bay, the cost of carrying the goods traffic from Lavender Bay to Cremorne, and the cost of a line to Milson's Point, as originally proposed? I have taken only from the junction at the head of Lavender Bay. In the estimate submitted originally as little as possible was included. That estimate did not cover a sufficient expenditure to accommodate a large amount of passenger traffic, and allowed very little for the goods traffic, except as regards the material used for constructing embankments and for filling in along the shores of the bay. The following is the estimate which I have prepared:—The cost of the works included in the estimate for a line to Milson's Point from the junction at the head of Lavender Bay would be £31,000; and the cost of resuming land along the eastern shore of Lavender Bay, as far as the point, would be £67,760, making a total of £98,760. Then the cost of taking a line to Lavender Bay, with a passenger terminus there, and allowing the goods traffic to go on to the western side of Cremorne, would be—for the passenger station, £21,000; for the line to Cremorne, £90,000; for land in Lavender Bay, £25,000; and for land between Lavender Bay and Cremorne, according to the Land Valuer's estimate, £22,830; making a total of £158,830. When I was before the Committee on a previous occasion I estimated that the cost of a line to Cremorne would be £70,000, but since then I have found that it will be necessary to carry the line so as to cross Neutral Bay higher up, constructing a short tunnel, and making an extra length of line, which accounts for the extra sum of £20,000.

374. By the construction of a passenger station in Lavender Bay we shall not require one at Milson's Point? If a passenger station were built at the head of Lavender Bay it would be a substitution for a similar station at Milson's Point, though it would not exactly answer the same purpose—it would be put instead of it, though it would not be so good. I consider it desirable to carry the line down to Milson's Point.

375. Under any circumstances? That is my opinion—that the line should be carried down to Milson's Point. The suggestion of placing a station at the head of Lavender Bay came, I think, from Dr. Garran.

376. But in the event of our having a passenger station either on the east side or at the head of Lavender Bay, would you still recommend carrying the line on to Milson's Point? To my mind it would be a great pity not to resume that frontage, although it appears to be somewhat costly. It would be useful at some future time, and I understand that it is possible that an extension towards Kirribilli Point may be required; but if the resumption stopped short in Lavender Bay, as has been suggested, it could not be carried out afterwards, except at a large expenditure. I saw by the newspapers that I was supposed to have originated this scheme, but I do not take any credit for it, and in fact I did not suggest it. In my evidence I state that Mr. Eddy suggested it. I think in itself it would be the best substitute if the proposal to carry a line to Milson's Point were absolutely rejected; but I understand that it is necessary to provide in Lavender Bay, not only for passenger traffic, but also for certain classes of goods traffic; and if that is so, I consider it absolutely necessary to bring the passenger traffic to Milson's Point, reserving the higher part of the bay, which is much more suitable for wharfage purposes, for the goods traffic. Besides, Milson's Point, being the nearest place to Sydney, is a better terminus for the passenger traffic than a spot halfway up Lavender Bay. On the 11th June I endeavoured to show that the difficulty of finding space for the passenger station was not so great as was supposed, because even now we have sufficient room to deal with all the passenger traffic which is likely to occur for some time to come, and it would be possible by altering the position of the present tramway and passenger ferry to make a station which would accommodate a very large traffic indeed. The traffic coming to Milson's Point would not require anything like the space which the traffic coming to Redfern requires, because there would be much fewer number of trains coming there, whereas at Redfern there are trains from the Northern, Western, Southern, and Illawarra districts, and the different classes of traffic are mixed. There is the slow suburban traffic and the quicker express trains. At Milson's Point there would be at most two classes of traffic—the suburban traffic from the North Shore and the Lane Cove-road, and the through trains from the Northern Line.

377. Then I understand that you prefer Milson's Point as a terminus for a passenger station to any site on Lavender Bay? Yes; I have always held to that.

378. The cost of land on the eastern side of Lavender Bay would be £67,760;—would it be necessary to resume all that land if you had a passenger station at the head of Lavender Bay and then went on to Cremorne? Part of that, to the amount of £25,000, would be required for the passenger train itself.

379. That is at Milson's Point? In Lavender Bay. The difference is the cost of resuming the land from the suggested passenger station down to the point.

380. Would you recommend that the goods traffic should be dealt with in Lavender Bay instead of being carried to Cremorne, or to any of the bays further on? I think I said before that in my opinion Lavender Bay is not suitable for coal traffic, but that there would be room for all other goods traffic for some time to come.

381.

H. Deane, Esq.  
25 June, 1890.

- 381. What do you think would be the principal kind of traffic which you will have here—will it be coal, live stock, and meat? When I was asked that before I stated that I had not considered the question—that I had only been instructed to consider the engineering aspect, and to that I have given a good deal of consideration.
- 382. Supposing coal and heavy merchandise is to be the nature of the goods traffic, would you, as an engineer, recommend Lavender Bay for its terminus, or would you desire to see it carried on to Cremorne? If there were a large goods traffic I should propose to provide additional wharfage for it in some other bay—Cremorne, perhaps; but for such traffic as wool and produce there is a great deal of room in Lavender Bay; 1,560 feet is a pretty good frontage. I believe that you could get three ships in there, each of about the size of the large mail steamers. You could do a good deal of trade with such a frontage.
- 383. *Mr. Humphery.*] Have you estimated the cost of the amended line from St. Leonards to Milson's Point? With the 1 in 50 grade?
- 384. Yes; and with the deviations? It would be £16,000 more.
- 385. What would be the total? The original estimate was £127,000 for works, so that the amended line would cost £143,000.
- 386. In what way would the cost of that line be increased by resumptions? I have not got an estimate of that. It would be increased to some extent, but not very largely, because the line goes for some distance through the unimproved land belonging to the Berry Estate.
- 387. Can you give us an accurate estimate of the increase in cost which the land resumptions will cause? Yes, it is £5,700, as estimated by the Land Valuer.
- 388. What is the exact length of the line originally proposed from St. Leonards to Milson's Point? Two miles 21 chains.
- 389. What will be the length of the amended line? As it is shown upon the plan, about 2 miles 60 chains—that is about half a mile more. I should mention that the extra length is not absolutely necessary to allow of the improvement in grade, but that while looking into the matter I thought it desirable to make better provision for wayside stations at Bay-road, and possibly at Edwards'-road. On the original line there has not been very much allowed for better grades just where the train would have to stop, but on grading this new line I have provided longer stretches of easy grades, so that the trains may be able to start and stop properly.
- 390. You have provided better station accommodation than was originally allowed? Yes.
- 391. There will be two stations between Milson's Point and St. Leonards? Yes, probably. It will of course be necessary to have a station at Bay-road. There is no population about Edwards'-road at present, but I have not the slightest doubt that when that place comes to be built upon a station will be wanted there.
- 392. What distance would the Bay-road station be from Milson's Point? On the deviation?
- 393. Yes? Bay-road is eleven and three-quarter miles on the new line.
- 394. Will you give me the distance from Milson's Point? One mile 50 chains.
- 395. And would the next station be midway between St. Leonards and Bay-road? Yes, though rather nearer Bay-road.
- 396. In your estimate, do you include the cost of station buildings at those places? At Bay-road, but not at Edwards'-road, because there is no population at the latter place.
- 397. Do I understand that to carry out the original plan, including the whole of the resumptions, would cost about £143,000? Not including resumption.
- 398. What would it cost to bring the line to the head of Lavender Bay, providing for a passenger station by 800 feet of resumption, instead of by 2,300 feet? There would not be more than 800 feet of resumption. You would have to resume about half of it. In any case you would require room for the diverging lines as you approach the station for shunting purposes.
- 399. By how much would the £143,000 be reduced if you had a station at the head of Lavender Bay, providing for the passenger accommodation and for the light suburban goods traffic? The amount I should cut out is, as I have already said, £10,000.
- 400. You have not taken into consideration the resumptions which I think you said the £143,000 would include? No. £143,000 is for works alone.
- 401. Then the cost of constructing a line at the head of Lavender Bay and of building a passenger station there would be £133,000? Not to the head of the bay—half way down the bay.
- 402. I am speaking about where it is proposed to have a passenger station—how many feet frontage are there to the water? About 1,100.
- 403. Would the whole of that have to be resumed? Yes. A calculation has been made with regard to it.
- 404. Is that included in the £67,000? Yes.
- 405. What have you allowed for the 1,100 feet? £25,000.
- 406. You save on that then about £42,000 in resumption? Yes.
- 407. By stopping midway between the head of Lavender Bay and Milson's Point there would be a saving of £42,000? There would be £10,000 saving in construction.
- 408. And £42,000 in resumption? Yes.
- 409. Would it not be necessary to extend the tram to the railway station if this scheme were carried out? I think it would be desirable to extend the tram down to the station.
- 410. I think you said it would be necessary? No; I did not say that it would be necessary, but I think that it would be desirable to do so.
- 411. What would be the length of the tram line from the station to Willoughby-street? I think I said 1,200 feet.
- 412. And what would it cost? I put the cost down at £5,000.
- 413. Would any resumption be necessary? For the tram lines?
- 414. Yes? Yes.
- 415. Can you tell us about what the cost of resumption would be? No; I have no information. An approach would certainly be required.
- 416. Can you get a roadway of easy gradient from the head of Lavender Bay, or at least from where it is proposed that the passenger station shall be, to Willoughby-street? No; the gradient would be suitable for a tramway only. The road marked on the map would have a gradient of 1 in 14, but there are grades

as

H. Deane,  
Esq.  
25 June, 1890.

as steep as that in Alfred-street, near Milson's Point. I see that I was asked on a previous occasion, "What length of tram line would that require?" and that I said, "About 1,000 feet." I estimated the cost at about £5,000.

417. Have you considered the possibility of getting a line with a better grade from St. Leonards to Milson's Point by a more easterly route than that marked on the map? No; I have not seriously considered it.

418. You know nothing of the suggestion made to the Committee by Mr. Hamand of a line of railway to come on the eastern side of the existing tram line, skirting along Long Cove, and passing by Willoughby Falls to the east of the reserves? I should not be surprised at anything Mr. Hamand suggested.

419. You have not considered that? No, I have not.

420. What will be the height of the proposed passenger station above high water at Lavender Bay, according to the amended plan? About 6 feet.

421. Would it be possible to save the resumption of the water frontage by the amended plan, if you were to stop at the head of Lavender Bay, instead of coming down midway between the head of Lavender Bay and Milson's Point? No; I do not think that you can make a station there.

422. Then the estimate you have given is the lowest cost at which proper passenger accommodation could be provided at Lavender Bay? Yes; though you require some room for shunting beyond the actual length of the station.

423. *Mr. Hurley.*] Have you given any consideration to the idea of making Milson's Point an intermediate instead of a terminal station? No. In what way?

424. In view of the possibility of the railway being brought to Circular Quay, and being carried across the harbour upon pontoons such as are shown in the photograph before you? Something in the way of a steam ferry?

425. Yes? Yes, I have.

426. From reading, or from knowledge obtained in other ways, are you able to inform us whether the transportation service shown in the photograph is carried on satisfactorily? I do not know the place which is shown in the photograph.

427. The photograph shows the transportation of trains from Venetia to the San Francisco side of California, where the water is tidal? On the Sacramento River I believe that the service is carried on satisfactorily. The distance across the water is about  $1\frac{1}{4}$  miles.

428. It is a service that meets the demands of a very great traffic? Yes.

429. Do you not think that if the railway were brought down to the Circular Quay and taken over to North Shore by a similar service it would be satisfactory? I am not sure that it would be of much use to have a steam ferry to carry trains across here. I do not think that it would. I considered the matter not very long ago in conjunction with the Engineer-in-Chief for Harbours and Rivers, and our conclusion was that it would not be worth while to adopt such a system here, because the loss of time in transshipping would more than compensate for the shortening of the distance.

430. Your chief objection to this system was the loss of time that would be occasioned in taking a large punt across the harbour? In transshipping the trains—in putting a train on board at one side and running it off on the other, I know that the work can be done very rapidly with efficient arrangements, but as the distance saved would only be a few miles it would be no gain in time—the running of a train over a few extra miles would not take longer than the journey across the harbour.

431. I suppose you admit the necessity of bringing the railway to the Circular Quay, or nearer to the harbour than it is at the present time? Yes.

432. You know that several projects have been put before the Government for doing it? Yes.

433. If the transportation of trains on punts can be carried on in other parts of the world where there is an immense traffic, why can it not be carried on here? If it was necessary to carry the traffic in that way it could be satisfactorily done here.

434. Admitting that such a system would be satisfactory in its working, it would not be necessary to have a large area of land at Milson's Point or at any other point on North Shore for a station? In that case, no.

435. At Milson's Point there would only be an intermediate station between the metropolitan station and some place further north? Yes.

436. Therefore sidings and all the paraphernalia attending terminal stations would not be necessary? No.

437. So that a large expenditure of money in reclaiming and resuming land would be saved to the State? Yes.

438. Do you not think that the saving which would be made in that way would justify the Government in constructing pontoons such as I have suggested? I still do not think it desirable to adopt the method which you have suggested. I should like to call attention to a plan (*produced*) which I have brought, and which I had with me on the 11th of this month. My object in bringing it was to show what could be done in the erection of a station here. I do not intend to speak as an authority upon traffic management, but it is quite clear that very little space would be required to deal with the kind of traffic which we should have at Milson's Point. I take it that there would be suburban trains running, we will say, to Hornsby, or part of the way, and, perhaps, in the course of a few years, leaving every quarter of an hour, and there would be no branch lines. These trains would go regularly backwards and forwards, so that one dock with a couple of platforms would serve all requirements, and a third line in between the platforms would provide standing room for a few extra carriages. At the end of the platform points will be laid down so that the engines could change ends. Two platforms such as I suggest would serve all the traffic that there is likely to be for an indefinite period; and if a further dock was required it could be placed at one side of the platform, and would accommodate through traffic and anything else for which it was needed. So you see that a very narrow space is really all that is necessary for a passenger station.

439. What width of land would the construction of such a station necessitate? The width of the station as shown here is 140 feet. Then there is the tramway. On the plan I have shown the end of the tramway is diverted.

440. Did I understand you to say before that you proposed to make special provision for the landing of passengers and their luggage from the ferry boats? On the plan, a steamer is shown which is specially adapted for this work. There is a passage down the middle of it from the southern end, and a side passage outwards on the right-hand side. It was proposed that such a steamer should run into a dock at Circular

Circular Quay, and that the passengers should be enabled to take tickets there for the railway. There would be porters in attendance to look after the luggage and to run it on to the steamer, and at the North Shore end, when the steamer came alongside the wharf, they would run it off again. At North Shore there would be a floating stage, the two end portions of which are fixed, and in the middle there are two ramps, which would articulate on the fixed portion at the top, and form a platform to enable passengers to embark upon or leave the steamers at all conditions of the tide.

H. Deane,  
Esq.  
25 June, 1890.

441. Was this sort of steamer designed by the department? Yes; its design was the result of the conference which I mentioned that I had had with the Engineer-in-Chief for Harbours and Rivers.

442. Do you not think that the time consumed in getting off these ferry steamers and into the train would be much more than it would take to transport the train itself upon the pontoons? I do not think it would make much difference.

443. And would not the convenience in one case be much greater than the convenience in the other? The convenience to those going right through would by the pontoon system be very well suited, but then the expense would have to be taken into consideration, because to enable the system to be carried out you would have to provide specially-constructed docks and steamers.

444. But contrast the expense of such a service with the expense of an overhead bridge, which it has been proposed to make. Do you not think that if the pontoon system were adopted there would be no necessity for an overhead bridge? I do not believe in an overhead bridge myself. This place is scarcely comparable with the Sacramento River, because the conditions are different. The connection between Sydney and the north is already established by the Strathfield-Hornsby Railway, while at Sacramento there is no such connection.

445. Am I right in anticipating that the department has had under consideration the advisability of constructing a railway to Manly Beach? I believe that the matter has been before the department, and that it has been referred to me for report.

446. It has not been under your consideration in connection with this proposal? Not up to the present. I understand that it will come under my consideration.

447. If such a railway were constructed, the connection with the North Shore by way of Strathfield, which at present exists, would be of no use to it? No.

448. But the construction of a pontoon to carry the train across from the Circular Quay would be of great use in assisting the trade of Manly? Yes, it might serve that traffic, though it is questionable whether it would serve the northern traffic.

449. Can you tell us what instructions you have received about the Manly Beach line;—is it to be continued eventually to Broken Bay? I have not yet received any instructions, but I believe that they are on the way to me. Mr. Barling told me that a paper was coming to me about them.

450. In the event of Parliament deciding that a pontoon connection with North Shore would serve all requirements in the carrying on of the trade from the north, would the amount saved in land amount to some hundreds of thousands of pounds? Not so much as that.

451. But a considerable sum would be saved? I scarcely think so, because the cost of making proper docks for these vessels, and of constructing the vessels themselves, would have to be placed against the saving in station works and sidings.

452. I did not clearly understand you with regard to the scheme for providing for the coal traffic and general merchandise. Do you consider that a separate traffic, and will you have another set of stations or sidings besides those at Milson's Point? There would be a double line from St. Leonards to the head of Lavender Bay, and there it would diverge, the goods traffic coming to the water sooner than the passenger traffic.

453. Now, of all the points on North Shore, excluding Milson's Point, which do you consider as the most suitable for coal traffic, as well as for the traffic in wool and general merchandise? I doubt very much whether it is desirable to combine the two classes of traffic.

454. You would hold the two separate? I think they ought to be separated. To mix up coal and wool would be undesirable—coal is a dirty traffic.

455. Suppose we say a large coal traffic? I would not have the coal traffic in Lavender Bay.

456. Do you favour Robertson's Point, remembering that the Government is possessed of a large amount of frontage there, in preference to any other point as the terminus for the traffic? Yes; I favour Cremorne as the terminus for this traffic. The Government having frontage there is greatly in its favour.

457. The depth of water and everything is suitable? Yes.

458. *Mr. Copeland.*] Do you still adhere to the opinion that it would be better to have the passenger station at Milson's Point than midway between the head of the bay and that point? Yes.

459. You still recommend that it should be at Milson's Point? Yes, for two reasons: the ferry journey to Sydney would be shorter, and by placing the passenger station at Milson's Point you would leave room for the goods traffic higher up the bay.

460. Do you propose that the Government should run the special ferry of which you have been speaking? I do not make any proposal about it. It might be desirable for the Government to run it, or they might make some arrangement with the existing company—it is a matter of detail.

461. According to the plan you propose to make different wharfage accommodation for the ferry-boats from that which they have at the present time? By-and-bye, but not immediately.

462. Do you not propose to carry out the works shown on the plan? Not immediately. That is not included in the estimate. As I have endeavoured to show, this scheme provides for a very large amount of traffic, and it is not proposed to carry it out in the first instance. It is only proposed to have a double platform with three lines of rails in between.

463. Supposing a railway were projected from Milson's Point round to Shell Cove, Careening Cove, and Cremorne, if there were a large traffic a population would spring up along the route and would create a passenger traffic, while the line might ultimately be taken across the Spit to Manly, and perhaps to Pittwater;—supposing such a line were constructed, the station at Milson's Point would be the terminal station for two lines—one going to Hornsby, and the other to Pittwater? Yes.

464. Would there be room at Milson's Point for such a station? Yes.

465. You feel quite sure that the Railway Department would not be cramped up and unable to work the traffic satisfactorily, as they were at Redfern? Yes.

H. Deane,  
Esq.  
25 June, 1890.

466. You must bear in mind that the suburban trains might have to start away every few minutes, as they do from Flinders-street Station in Melbourne? If you have trains running at regular intervals, and all of the same class, you can always work the traffic with one platform. A train would come in, fill up, and run out again. It is the having to deal with a large number of trains of different kinds, and from different parts of the colony, that causes the difficulty at Redfern.
467. Would that not be the case at North Shore? I would have a separate dock for each line.
468. Would you have room for that? Yes; I could make room. There could be a still further extension of the station in width, so as to provide a dock for the Hornsby local traffic, another for the Manly traffic, and a third for the through traffic.
469. What about the tram? The tram comes down alongside of the station. There would have to be a re-arrangement of the traffic, that is all.
470. Still there would be room? Yes; I am sure that with a re-arrangement of the traffic there plenty of room could be found.
471. Would the levels allow you to get away from Milson's Point to Cremorne and Manly? Yes; it is nearly all one level.
472. You would be able to come down to Milson's Point, and then get away on the same level? Yes.
473. In that case you would use the northern portion of the eastern side of Lavender Bay for goods? Yes.
474. You think that would give sufficient accommodation for light goods traffic for years to come? For light and heavy traffic. I do not know what the goods traffic would be, because I have not gone into the question, but still 1,560 feet is a pretty good length for a goods' wharf.
475. Suppose the traffic were timber? Well, you could have three vessels lying alongside at the same time.
476. Do you know how many acres of land the Commissioners had at Redfern before the recent resumptions? No, I do not.
477. How many acres would you have at Milson's Point if your scheme were carried out—how many for the passenger traffic, and how many for the goods traffic. You would want a certain amount of space for shunting. What is the length of the passenger accommodation? About 500 feet. After the 800 feet line marked on the plan, the lines of railway diverge, and the shunting of trains going into the station will take place at some distance beyond that.
478. You would have 500 feet in length by what width? If you want to compare it with the area of any particular station, I should think it would be necessary to take more than that—about 1,000 feet, or 14 chains, I think. The average area taken up by passenger stations and road approaches is about  $4\frac{1}{2}$  acres. The platform here is 400 feet long.
479. That would accommodate how many carriages? Ten forty-foot carriages.
480. There would be no insuperable difficulty in the way of your moving the tram line further over to get additional accommodation if required? No, none whatever.
481. *Dr. Garran.*] Will you give us, in a schedule, a clear statement of the various estimates of cost which you have supplied to us—first, the estimated cost of the line originally proposed; then, of the 1-in-50 grade line; then, of the branch line from the head of Lavender Bay to Milson's Point; and, lastly, of the line to Cremorne, distinguishing the cost of works from the cost of land resumption? Yes; I will append it to my evidence.
482. *Mr. Dowel.*] In your estimate of the cost of a railway to Cremorne, did you include anything except the bare line? Only the double line.
483. Only the bare line itself—just touching Cremorne? There would be a certain amount of reclamation.
484. Do you provide for that in your estimate? Yes, to some extent, but not for the total reclamation that would be required.
485. Do you provide for the particular class of goods traffic which you propose to bring there? There was no wharf provided for.
486. You were asked whether a road could be obtained from the head of Lavender Bay—could not a better grade be obtained at Milson's Point than at Lavender Bay, to provide access to the station? Do you mean the passenger station?
487. Yes? It would be about the same thing. The grade at the point is, I think, 1 in 14, and the gradient of the road down which the tramway would be brought would be about the same.
488. Have you ascertained the exact grade? Yes; it has been calculated.
489. I understood you to say last time that it was 1 in 18? I was speaking then of an approach for goods traffic.
490. You told the Committee the other day that by the reclamation of the shores of the east side of Lavender Bay you could get 2,300 feet on a straight run. That at 3 chains wide would give you an area of how much? About  $10\frac{3}{4}$  acres.
491. Do you not think that that would be sufficient for many years to come for goods and passenger traffic? I think so. I think I stated that.
492. Are you aware that Mr. Eddy, in his examination before a Royal Commission, recently stated that he considered 10 acres sufficient for a city terminus? That was the area which it was proposed to take out of Hyde Park.

THURSDAY, 26 JUNE, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Cecil West Darley, Esq., Engineer-in-Chief for Harbours and Rivers, sworn, and examined:—

493. Dr. Garran.] Is it your view that the transit of passengers across the harbour should be in the hands of the Government, or would you leave it to a private company? I think that if the transit of passengers across the harbour is to be in connection with the railway, it had better be put into the hands of the Railway Department. C. W. Darley,  
Esq.  
26 June, 1890.

494. You think that it would be necessary for the Government to have charge of the passenger transit from the railway on one side to that on the other? I think so.

495. You are making your preparations with a view to that? That is how I thought it over, but I have made no preparations. When I was in America some years ago I looked into this matter, and I found that in all cases where a town was separated by water from the railway, the Railway Company provided transit boats for the passengers. Several of the railways leaving New York, such as the Pennsylvania, and the Baltimore and Ohio lines, start from the other side of the river, and each company provides its own transit boats to take the passengers across. The company take charge of your luggage at the quay, label it on board the boat, and allow you to buy your railway ticket on the way across.

496. Does the ferry at San Francisco belong to the Railway Company? It does—you mean the Oakland ferry?

497. You do not know of a case in America where a railway company leaves itself at the mercy of a private ferry company in respect to the matter of passenger transit? I do not remember coming across a case.

498. What railway ferries in America did you inspect? I inspected the ferry between San Francisco and Oakland, and another ferry—I forget what they term it—belonging to the Union Pacific Company, and some miles out of San Francisco, where the whole train is taken across the Sacramento River on a very large boat. There the passengers do not have to move out of their carriages. At New York I crossed on two or three different ferries to the Baltimore and Ohio line to Philadelphia, and to the Pennsylvania Company's line. I think the last-named Company have two ferries. I went to a ship-building yard near Washington—I cannot remember the name of the town—and there saw some of these boats building, and had a long conversation with the builders. They gave me a set of plans of the boats.

499. Some of these American ferries are close to the grand terminus of the railway, as at New York? Yes.

500. In such cases do they take the whole train across, or merely unship the passengers? They tranship the passengers.

501. In the case of Detroit, where the ferry occurs in the middle of the journey, they transport the whole train? Yes, as is similarly done on the Sacramento River.

502. If the northern train came down to the North Shore here we should have an example of the former class of ferries? North Shore would be the terminal station.

503. Would you consider it necessary, in a case like that, to transport the whole train? No.

504. Then you do not propose to have a train-ferry across the harbour? I should like to explain that I think there would be no necessity for taking the train across the harbour unless the railway was brought down to the water's edge on this side. I am not aware of what it is proposed to do on this side. At present there is no connection with the water on this side, so that there will be no necessity for taking the train across.

505. But altogether apart from that, the people coming down by rail to the North Shore, whether from short or long distances, would be coming to Sydney; their business would be in Sydney. You would not then consider it necessary here, where the ferry is at the terminus of the journey—and the distinction which I wish to make is between a ferry occurring at the end of a journey, and one occurring *en route*—to make any provision for carrying the whole train over? Certainly not.

506. In your plan you do not think of bringing the train across? No.

507. You are planning a ferry like that at Brooklyn, which is purely a passenger and vehicular ferry? I should provide only for passengers and their luggage. I did not think of making provision for vehicles. The plan which I found was usually adopted in America, and which I would recommend as the best, is to have a number of large luggage trollies, such as they have at the Redfern Railway Station. As the luggage is taken off the cab at the wharf it is put on to one of these trollies, and when a trolley is full it is run on board the steamer and carried across. On the arrival of the steamer at the other side the trollies are run on shore again alongside of the goods vans, and the luggage put into the train, so that it is only twice handled.

508. But supposing the railway were brought down to Fort Macquarie, which is one of the schemes of the Railway Commissioners, continuing the line from Hyde Park, so as to have the least distance across the water, would it not be almost necessary to have a punt with rails on it, so that trucks filled with luggage or special commodities could be taken across by it;—do you contemplate making the ferry-boat large enough to bring over trucks or brake vans whenever it may be desirable not to shift their contents? I do not see the necessity for it. You could run trucks round by Strathfield.

509. Supposing some bricks had to be sent from the brick-kilns on North Shore to some place along the suburban lines, would it not be convenient to have the trucks brought across in the ferry so as to prevent any extra handling? If the bricks were going to the city it would be better to put them on a dray and bring them across on the transit boat. Bricks are expensive things to handle, and it is very often cheaper to cart them direct to their destination than to send them by train. 510.

- C. W. Darley, Esq.  
26 June, 1889.
510. Are you clear that it is a wise thing to have the ferry exclusively for passengers and their luggage, or are you going to make a ferry capable of carrying trucks? I should not recommend that a ferry capable of carrying trucks be used here.
511. Then the steamboats which you would require would not have to be much larger than those in use at present? No; not very much larger.
512. You would separate the vehicular traffic from the passenger traffic absolutely? Yes.
513. You would leave that to private enterprise? Yes; unless the Government thought fit to look after it.
514. As a Government officer you do not think that you are called upon to do more than provide for the railway traffic proper—you are not going to cut out the private company? The Government took the matter up. They would practically cut out the private ferry to Milson's Point, because the competition would be too keen if two sets of boats were running. It would be better for the Government to monopolise the passenger traffic.
515. You would leave the goods traffic to private enterprise? Yes; I would leave the transit of goods to private enterprise.
516. If this ferry is to be for passengers only, is it very important whether we start from Fort Macquarie and go to Milson's Point, or from the head of Circular Quay and go right into Lavender Bay;—would it make much difference which route were adopted? There is a limit, unless you went to the expense of a large number of boats. You would want to keep up a quarter of an hour service, so that the steamboat ought to be able to make the journey and load and unload during that time. If it could do so, you would require three boats, two of which would be running while the third was being repaired.
517. If it were your own private speculation, you would find out the difference between the cost of bringing the railway to the point and of the extra steamers which you would require if you did not bring it so far? Yes.
518. Would it not be very much cheaper to have an extra steamer than to make expensive lines to the points which I have mentioned, simply to shorten the water journey? You would have to keep that as short as possible. You can always run more quickly by train than you can by steamer, so that it would be better to bring the train as near to the point as possible. I recommend that the train be brought to the point. I do not think that it should be left at the head of the bay.
519. Would you advise us to incur the extra expense of taking the railway from Lavender Bay to Milson's Point on the north side, and from Princes Stairs to Fort Macquarie on the south side, in order to save the expense of two or more extra boats? I should start the ferry-boats from the head of Circular Quay and run them to Milson's Point, where I should bring the passengers by train.
520. You take the head of the bay on one side, and the point on the other? Yes.
521. Do you know what it would cost to take the railway from the head of Lavender Bay to Milson's Point? You must have a calling-place at Milson's Point to suit the convenience of passengers. A very large portion of the passenger traffic must at all times land at Milson's Point. There is a very large settlement in that neighbourhood.
522. A passenger station at the head of Lavender Bay will not suit the convenience of a large number of North Shore people? It will not suit a large number of them. I do not propose that the ferry-boat should call from wharf to wharf, but that it should carry out a special service between two wharves.
523. If the railway terminus were at the head of Lavender Bay, you think that the ferry-boat would have to call at Milson's Point to suit the convenience of the public? Undoubtedly.
524. Could you not leave that to private enterprise? Then there would be two boats running to practically the same place.
525. No; the private boat would run to Milson's Point, while the other boat would run straight to the railway station at Lavender Bay; the two would not compete? I think it is cutting it too fine to run two boats to almost the same place. I would strongly recommend that the railway be brought to the point, and that that be made the stopping-place for the boats.
526. It is half a mile between the point and Lavender Bay, and the railway service which we are contemplating is not for the benefit of the people living on the promontory near Milson's Point—they would benefit very little by it—but for the benefit of the people who live along the line of route? Apart from that I am not aware whether you could get sufficient wharf accommodation at the head of the bay to carry on any amount of traffic. It would pay to bring the railway down to the point, so as to make use of the water frontage along the bay for wharfage purposes.
527. You think it would pay the Government to extend the line to the point, because the property which would have to be reclaimed would become so valuable? I think it would be desirable to continue it to the point in order to get sufficient wharfage for supplies and goods.
528. Then your argument on behalf of the extension of the railway is that the Government might make a good land speculation by means of it? Yes, and to provide wharfage accommodation. You would get good wharfage accommodation all along that side of Lavender Bay.
529. You think it would be a good investment for the Government to reclaim the land along the shores of Lavender Bay as far as Milson's Point? Yes.
530. And you recommend the extension of the railway to the point on that ground? Yes.
531. And not because it would be necessary to bring the passenger traffic to Milson's Point? The extension would also be necessary for the better working of the passenger traffic.
532. Do you think it would be required if the railway were made? Yes, and the railway will make traffic for itself according as you allow facilities for it.
533. Do you think the whole of the extension would be wanted? I think so; but I do not know what the sections of the railway are. I do not know whether the line could be brought down to the water at the head of Lavender Bay, or whether it would be high up there.
534. We have been told by Mr. Deane that he can bring it down to within 7 feet of the wharf level at the head of the bay, and that at the new site it would be quite to the wharf level? Several things have to be taken into consideration in looking at the matter. The head of the bay is more or less shallow, so that you would have to reclaim the land for some distance out, and it would not be such a convenient place for running the steamers to as Milson's Point is, because at the latter place the steamer would lie parallel with the shore.
535. I admit the convenience of the Milson's Point project, but is it worth the expense which will have to be gone to to carry it out? I think so. I think that every convenience of that kind will pay for itself in time, and will enable the railway to make a trade for itself.

536. To come back to the question of the ferry service. I suppose that the reason why ferries have been adopted on the American railways is because bridges at those places would be practically impossible? Yes. C. W. Darley,  
Esq.
537. Do you know of any case where a ferry has been superseded by a bridge? Of course to some extent the ferries have been superseded by bridges. You might say that the Brooklyn Bridge superseded the ferries. But as a matter of fact they are still running there. There is a very large traffic across the Brooklyn Bridge, but it has not been able to run off a single ferry-boat. 26 June, 1890.
538. Do you think that in looking at this connection between North Shore and Sydney we ought to go into the question of the expense of ferry-boats, and the cost of the extension of the railway to the points on each side which have been mentioned, on the assumption that a bridge is for the present impracticable, or are we justified in going to that expense in view of the probability of a bridge being constructed within a few years? My opinion is that the ferries would hardly lose a passenger if a bridge were made.
539. You think that it is worth while to establish this ferry system now, even if a bridge is to be made? Yes; I think that there will be as many passengers crossing by the ferry after the bridge is made as there are now, though the bridge may draw the traffic away for a short time.
540. You think that we may dismiss the idea of a bridge for a time as not interfering with the system about which we are talking? Yes.
541. We can go on with the ferry system whether there is a bridge or not? The bridge must start from high ground, and would land its passengers, say at Obelisk Hill, so that it would not serve a large number of the population. Passengers coming over by the ferry would be taken from the low ground, and would be landed near their offices, so that a bridge would not interfere much with the local traffic.
542. Suppose the bridge were built, do you think travellers making for Sydney by the North Shore line would prefer coming down to Milson's Point, and transshipping into the ferry, to keeping in their carriages and going across the bridge in the railway? The through passengers by railway would not prefer to come down to Milson's Point.
543. All passengers brought by the railway would go over the bridge? I have no doubt that if they were going to Sydney they would go over the bridge, if it were made.
544. Supposing the bridge were made, and the train ran across it into Sydney, would there be any railway traffic down to Milson's Point? There would for goods coming to the water.
545. Only for goods intended to be sent away in ships? Yes.
546. The line would not be superseded? Not altogether.
547. But its value would be somewhat diminished? No doubt its value would be somewhat diminished, but I think it is still worth while to make it down to the water's edge. Every time that you bring a railway to the water traffic follows it. It makes a connection at once.
548. Notwithstanding the expense of the line, you think it is wise to make it, although there is a possibility of a bridge being constructed some years hence? I do. I think that the line will pay for itself in time.
549. Do you mean to pay interest on its cost, or pay itself off? Pay the interest. That it will make a traffic, and pay for itself.
550. It would create a paying traffic, and would continue to have a paying traffic, after the bridge was built? I think so. I think there should be a good deal of traffic to and from the water there.
551. Now with regard to Lavender Bay—that is everywhere as fine a bay for shipping purposes as the Circular Quay? Yes; there is very good water there, except at the head, where it is shallow.
552. And plenty of room to move ships about? Yes.
553. The largest ships that come to the port could easily be dealt with there? Yes.
554. It is in every respect as good a mercantile cove as Sydney Cove? I think it is, very nearly. Just at this minute I do not know whether it is quite so wide.
555. Would it be as easy for ships to go in and out of it? Yes, quite as easy.
556. But is it as good a place for sending goods away inland. Is the shore line towards the interior as accessible as it is on the south side. Is Lavender Bay as good and convenient a harbour for access for commercial purposes from behind as the bays on the south side? No, because the railway does not come to the North Shore.
557. But if it did? I think that where the railway is situated now all the southern and western traffic must come to the Sydney side.
558. Do you think that the northern traffic would come to the North Shore? I think that a great deal of the northern traffic would gravitate to the North Shore.
559. Do you think that if the railway were brought down to the water's edge there that would become a commercial terminus? I do. I think there ought to be a good deal of trade coming there from the north.
560. If you were the chairman or the director of the Northern railway—if you were managing it as a private speculation, would you have any hesitation in extending the line to the deep waters? None whatever—it would give the command of a water frontage, which undoubtedly would be a great benefit.
561. I gather that the result of your evidence is that you look forward to having a ferry service exclusively for passengers, running from the head of Sydney Cove to Milson's Point, and that you think that the Northern railway should be brought right to the point, to do justice to the traffic? Yes.
562. *Chairman.*] Is it proposed to close Newcastle as a port? No, I think not.
563. Then, how do you come to the conclusion that goods will come from the north to Milson's Point. What class of goods will do that? We find that an immense quantity of goods now come from the north.
564. But what class of goods will come to Milson's Point from the north? The railway will make a trade for itself to a very large extent.
565. You say that you believe that goods will come to Milson's Point from the north. You have told us that you believe that this line will be a paying line if it is brought down to Milson's Point, because goods will come there from the north. What goods do you anticipate will come from the north, passing Newcastle? I understand now that we are to have a shipping place for wool, and that wool stores can be erected at North Shore shortly. That will bring wool down.
566. You think that the fact of those stores being erected at North Shore will bring wool there from the north? If the stores are erected there wool must be brought to them by the line.
567. Must? Whatever wool business they do will be in wool brought by that line.
568. Is that the principal class of goods which you anticipate will come to Milson's Point from the north, and

C. W. Darley, Esq. and which will help to make the line pay? I have not much to do with the goods traffic, but I see goods traffic passing down the Northern line every time I travel over it, which is very often, so that I know there is a good deal of traffic passing down that line.

26 June, 1890.

569. You have told the Committee that, in your opinion, if the line is brought down to Milson's Point, it will pay, and one of the reasons which you assign for that opinion is that goods will come from the north to Milson's Point. I ask you what goods will do so? It is a matter into which I have not gone very much.

570. You see that you have sworn that goods will come from the north to Milson's Point, and that that will be one of the elements of the profit made by the line. But now you cannot tell us what those goods will be. Take wool for example. Do you imagine that the carriage of wool from the north will be increased by the extension of the line into Milson's Point? I am speaking of the traffic generally. I find that wherever railways are made to the water's edge a traffic is created. I found the same thing in the old country, and I have had experience in South Wales, at Newport, Cardiff, Swansea, &c.

571. That is where you have a producing district at the back of the water. Have you a producing district between Milson's Point and Newcastle? We find the railway traffic passing Newcastle now. The railway has made its own traffic through Newcastle.

572. What class of goods is passing Newcastle? Produce of all kinds is coming through now, and did so even before the Hawkesbury Bridge was constructed.

573. Do you know that since the railway has been open to Newcastle less wool has come to Sydney than came previously—that there are more direct shipments of wool from Newcastle now than there were four or five years ago? No; on the contrary, I understand there has been a falling off.\*

574. *Mr. Hurley.*] I understand you to say that you have visited Detroit and Sacramento? Sacramento, not Detroit.

575. During your visits you paid special attention to the pontoons used there for conveying trains across from one point to another? Yes.

576. Did you learn whether the system worked satisfactorily? I only visited one place where it is carried out.

577. Did you notice whether the system in use between Venetia and California was giving general satisfaction? It struck me that it was. It seemed to work very well indeed.

578. I suppose that in going from one point to another the question of time is of great importance? Yes.

579. Have you taken into consideration the time which it will take to tranship the passengers and their luggage with the system which you propose? I do not look upon the station at Milson's Point as an intermediate station. I look upon it as a terminal station.

580. If Milson's Point is made a terminal station there will be a very short distance between it and Redfern? I think the bulk of the passengers by the line will be coming into Sydney, and when they arrive at Circular Quay will take a cab to their destinations. They will not be passing through.

581. But the city is extending to the south-west, and a great number of those travelling from the north would live in those suburbs? I do not think that it would pay to transport the trains across the harbour simply for the convenience of a few passengers from the suburbs. It would be better to let them tranship into a ferry-boat.

582. Notwithstanding the service which you have seen between Sacramento and San Francisco you are emphatically opposed to anything in the shape of a pontoon bridge to connect Sydney with the North Shore? I think there is no necessity for a vessel such as they have to cross the Sacramento River. That ferry is a great many miles out of San Francisco. It is not near a terminal station. Near San Francisco itself the passenger traffic is stopped at Oakland. They do not take the train into San Francisco. That is a parallel case to this.

583. I suppose you admit that the saving of time is essential to all travellers? Yes.

584. But have you compared the time which would be occupied in getting into a steamer on this side, and then transshipping into a train on the other side with the time which would be occupied in transporting a train across? I think the time consumed in breaking up a train and putting it on board a transport would be greater than that consumed by the transshipment of passengers into a ferry-boat.

585. The time expended in transshipment with the pontoon system would be greater than that expended with your system? It would. At Sacramento they have to break the train up into three parts.

586. That is a photograph of the Sacramento service before you? Yes.

587. I suppose you have some idea of what the cost of a pontoon such as is shown there would be, and of the cost of building a large station at North Shore, as it is proposed to do by the department? I do not think that it would be necessary to have a large station at North Shore, and, even if you brought the train over to Sydney, you would want a station there.

588. Can you tell us what is the object of the boring operations now being carried on between the Circular Quay and North Shore? No, I could not.

589. Have they anything to do with your department? No. The boring punt belongs to our department, but we have lent it to the Railway Department. I have not seen the result of the work, nor do I know exactly what it is for.

590. During your inspection of the American transport system, did you ever hear anything antagonistic to it? No, I did not. It seemed to answer all purposes very well.

591. But you do not think that the system is suited to the short distance between Circular Quay and Milson's Point? No; because Milson's Point will be a terminal station.

592. *Mr. O'Sullivan.*] Do you think that if Milson's Point were made a shipping place for large vessels it would interfere with the fairway between Dawes' Point and Milson's Point. If the railway is extended as proposed, it will come almost to the point, and I presume that the shipping will be just inside the point? That will not interfere with the fairway.

593. Are you well acquainted with the shore round Cremorne and those other bays? Not very well.

594. From your knowledge of them do you think that they would make good shipping places for wool, coal, and produce? A very fine line of wharves could be constructed there.

595. Is not the water deep? There is very good water there.

596. If, when the bridge is constructed, a line of railway is run into the city and round Darling Harbour, do you think it likely that wool and heavy produce will be brought to Cremorne for shipment? I think that

\*NOTE (on revision):—Upon inquiry, when revising evidence, I ascertain the shipments of wool from Newcastle for 1889 show a falling off, in comparison with 1888, of over 33 per cent.

- that wherever you make your wharf you will find the traffic growing year by year—of course, if you do not overdo it. You will find that the traffic will come to the wharves. C. W. Darley, Esq.
597. At the present time there is not enough wharfage accommodation for the shipping coming to Port Jackson? There is very nearly enough—it is increasing every day. 26 June, 1890.
598. There are plenty of private wharves, but there are not enough Government wharves? Some of the private wharves are not doing so well now, because large steamers are being substituted for small sailing vessels.
599. Do you think that we should do well if we spent money at Cremorne? If we made it a coal-shipping depôt—that would probably be wanted in Sydney before long.
600. You are not certain that there will be much wool sent from Newcastle? None will be sent from Newcastle.
601. Nor coal? No.
602. Do you think that coal will be sent from Teralba to Lake Macquarie? There are mines opened up there where they have proved the coal. It will depend upon the distance from Sydney. If the coal is nearer to Sydney than it is to Newcastle it will, with equal facilities for transit, gravitate to Sydney.
603. If we get wool or heavy produce brought down on the Southern or Western lines, and if wharves are carried out at, and a railway extended to, Cremorne, it will have to be taken across the harbour by the bridge to the shipping place? It is a question whether Cremorne is the best place, or whether the wharves should not be constructed higher up the harbour. I think that some of them might be constructed at Glebe Island, or in that neighbourhood.
604. Do you think that it is preliminary to construct wharves at Cremorne or Lavender Bay? I think Lavender Bay is a very good place. The water frontage would not be so extensive as at Cremorne; but I think that it would be sufficient for some time to come.
605. *Mr. Copeland.*] You were speaking about the ferries from New York to Brooklyn—do not those ferries belong to the railway companies, to private companies? To the railway companies.
606. Do you not think that the principle is different when private companies own the railways from what it is when the Government own them;—do you think that it is the duty of the Government to enter into competition with private companies in the same way as a private company would enter into competition with another private company? I think that in carrying passengers in this way it would be desirable for the ferry to be in the hands of the Railway Department.
607. Of the Government? Of the Government. My idea is that passengers should be able to drive to the wharf and get out of their cabs, leaving their luggage to be looked after by the porters. You will not find that the private ferry companies will put on porters. At the present time, if you have a portmanteau you must carry it on board yourself. I would have a ticket-office on board the steamer, so that passengers could buy their railway tickets there.
608. Supposing there were two passengers by the train, one getting out at Milson's Point, and the other going on to Sydney, you would provide at your own expense a steam-ferry for the convenience of one man, but would you provide cabs for the other man? No.
609. Where is the difference in principle? The Government have to take charge of the luggage, and they would label it on board the steamer.
610. I was speaking of passengers only? Through passengers would always have luggage. You must have somebody to take charge of your luggage.
611. Would not the other man want some one to take charge of his luggage, and ought you not to provide a parcel delivery van for him? No, no more than you would provide a parcel delivery van at this end.
612. Would you consider the station at Milson's Point a terminal station, or would you consider the Circular Quay the terminus of the line? The Circular Quay would practically be the terminal station, except that you would not come across in the train. I know that the system which I am advocating is the one found to work best in America. There you book right through.
613. That is with a private company? All the railways are managed by private companies there.
614. A railway company naturally desires to obtain the last farthing of profit from the passengers. Do you think it is the duty of the Government to follow out the same principle, and cut against existing private enterprise, such as the existing steam-ferry? To carry that to an extreme you would not make a railway at all.
615. I think you will see that there is a difference in principle between making a railway to open up settlement on Crown lands, and establishing a ferry service to North Shore? I think it would be very inconvenient to have the railway and ferry service in different hands. The Commissioners should be able to control the running of the steamers so as to make it fit in with the running of the trains.
616. When a passenger left the train at Milson's Point, would not the Government cease to have any control over him, just as at Redfern? The Government provide trams at Redfern.
617. That is not because of the railway, but because the traffic is there. If you make the railway to North Shore the case will be exactly similar? I do not exactly see it in that light myself.
618. Have you any reason to doubt that the North Shore Ferry Company will not be able to meet all requirements, judging from what they are doing at present? No doubt they could, but to carry out my idea of issuing tickets and booking the luggage on board of the steamers, I think the management of the ferry would have to be in the hands of the Railway Commissioners.
619. But is there any real necessity for issuing tickets on board the steamers. Would not the passengers be able to provide their own means of getting to their destination from the railway? I look upon it as a matter of public convenience: You would drive down to the steamer from your hotel, and when you arrived at the wharf your luggage would be taken from you and carried on board. At the present time you would have to carry it yourself.
620. Have you not to do that at Redfern? No. The porters there take your luggage from the cab to the train. You might wait at the North Shore ferry for a month before any one would do that.
621. If a train were brought to Milson's Point, would it not equally be possible for porters to take the luggage on to a private ferry steamer? Quite possible, but you would have to carry it off the steamer.
622. Have you not to move your own luggage when you take a cab to a hotel. I suppose that out of those who arrive at Redfern from a long journey nineteen out of twenty take cabs? Yes; but the porters put their luggage into the cabs.
623. Could not they do that with a steam-ferry? No doubt they could if there were any porters.
624. Then there would be no reason for the Government to interfere? When you arrived on this side you would have to carry your luggage some distance before you could get into a cab again. 625.

- C. W. Darley, Esq.  
26 June, 1890.
625. When a ferry steamer arrives at Circular Quay would you provide a Government porter to carry your luggage home for you? No, but you would want to get your luggage from the steamer into a cab, and you would have to carry it 40 or 50 yards. A private company would not put anybody on to do that for you. At least they do not do it now.
626. Would not the cabman do it? He could not leave his cab to go on board a steamer—he would not be allowed to do that.
627. I think there are generally porters at most of the wharves. When a steamer arrives from Brisbane, Tasmania, or Melbourne, are there not a number of porters who for 6d. or 1s. are prepared to carry your luggage? Yes, but I do not think that passengers are fond of paying 6d. or 1s. a parcel.
628. But why should the Government compete with these men and provide porters at the public expense? It is done everywhere else; it is always part and parcel of railway travelling. I have travelled all over the continent, and through America, and I have found that porters are always provided.
629. You would have a number of porters on the steamboat to be ready to carry the luggage at this end to a cab? The porters would either travel with the luggage, or a few men would be kept on this side—that is the way the thing is worked in New York. The luggage would be put into a trolley on the other side; and the trolley run on board the steamer, and on this side run off on to the cab-stand, where the luggage would be issued.
630. Is any extra charge made for all that trouble? No; I never had to pay excess for luggage at any railway station.
631. Then the man who travels without luggage does not get as much for his fare as the man who travels with luggage? Well, that holds good at Redfern now, or anywhere else.
632. Have you any idea that the steam ferry company at the North Shore is not giving satisfaction at present;—is that your reason for trying to introduce a Government ferry? At the present time, I fancy that the service is giving satisfaction, but then there is no railway communication with it. I think it would be difficult to separate the management of the two services.
633. Would it not have been equally proper, when the railway terminus was at Newcastle, for the Government to have provided steamers from Sydney to Newcastle—that would only have been a little longer? No; passengers then were not booked through to Sydney, but only to Newcastle.
634. Would they not here book to Milson's Point? I think you would find that passengers would not be satisfied to take their luggage from Armidale to Milson's Point. The department would have to issue tickets for Sydney.
635. They would not charge to Sydney for those who wanted to stay at the North Shore—they would also have to issue tickets for the North Shore? It would only make a difference of one penny or so.
636. I gather from your evidence that you are in favour of the Government taking the ferry out of private hands, and expending public money in competing with the existing company? I think that it would be desirable to have a railway and a ferry all under one management.
637. Do you not think that the North Shore Ferry Company would be able to claim a considerable amount of compensation from the Government if the Government interfered with their trade? I do not think so. The Hunter River Companies have not been paid anything by the Government because of the interference with their trade from Newcastle to Sydney. There is nothing to stop me or any other member of the public from starting a ferry company to-morrow, if I get the necessary wharves.
638. Do you think that it is a proper thing for the Government to spend money in driving away private enterprise of that kind? I think it is. I think that it is necessary to have the two services controlled by one power. You get a sort of divided control if you co-operate with a private ferry company. The system of working the ferry in conjunction with the railway was so successful in New York, that I am satisfied that it would not be so satisfactory if the two services were controlled by different managements.
639. When the passengers by the railway arrive at the Circular Quay you would leave them there desolate—you would not provide them with cabs and parcel delivery vans? You would have brought them to Sydney, which would be their terminus.
640. With reference to the questions asked by Mr. Hurley about the coal traffic, do you not know the country between Lake Macquarie and Sydney pretty well? Yes.
641. Supposing a coal mine were opened at Wyong, which is 53 miles from Sydney, or at any place south of Lake Macquarie, do you not think that it would be better to send the coal to North Shore by railway than to Newcastle, and then to ship it from Newcastle to Sydney? If the coal was coming to Sydney it would undoubtedly be better to send it direct by train, but if it was for Melbourne, and half way between Sydney and Newcastle, I daresay that it would be just as cheap to send it to one place as it would be to send it to another.
642. I presume that the coal is one of the sources of traffic that you expect to have on the Northern line? Yes.
643. Supposing there were a good forest of timber between here and Newcastle, would you not expect the timber trade to develop? No doubt some of the timber would come this way.
644. Where do you think it would be better to deal with that traffic—at Neutral Bay, at Lavender Bay, or at Cremorne? I have not gone into it fully.
645. You have a good deal of knowledge about the timber trade which is carried on at Newcastle. Does it not require a considerable wharfage space there? I think there would be sufficient space in Lavender Bay.
646. Both for the timber trade and for the coal trade? Of course as the trade increased you could extend the railway. It seems a long way to carry the line to Careening Cove.
647. Do you not think that in the course of time it will be desirable to extend the railway, say to Middle Head, Manly Beach, and Newport, where the Government hold large areas of land? It would have to be looked into. I think it would be better to take a branch line from the heights—that is my first impression—going down to George's Head from the high level, not running down to Careening Cove, and climbing a hill again.
648. Supposing we commenced to export wheat, would it be sent to Sydney or to Newcastle? I daresay that each place would get its share. I daresay Newcastle would get some, but Sydney will command a large portion of the trade always, because of the vested interests here.
649. Is there any good land between here and Lake Macquarie which will be likely to send produce here instead of to Newcastle? There is some very good land just beyond Gosford, but it has not been much developed yet. There is not much coming from it.

C. W. Darley,  
Esq.  
26 June, 1890.

650. Are they not going in for orchards very extensively in that district? I believe so.
651. Supposing they were exporting fruit to Sydney, is it not likely that that would develop a large trade on the North Shore line? I did not know that I was going to be asked any questions about the goods traffic. It is not a thing to which I have given much attention. I am speaking of my experience generally in the construction of railways. I know that in Wales, where we opened up virgin districts at Newport, Swansea, and Cardiff, each line made its own traffic.
652. *Chairman.*] That is where there is a producing district at the back? I hope that all our coast district will be productive as the population increases, I know enough of it to be aware that a good deal of the country is capable of producing. At the Newcastle end the country is poor, but at Wyong it is very good indeed.
653. *Mr. Dowel.*] Have you given fair consideration to the proposal now before the Committee. I presume that you have made yourself acquainted with the physical features of the country through which the railway will pass? I have not had the plans before me, and I have not looked into the matter. I am speaking generally of the passenger traffic as it is at present.
654. Do you know Lavender Bay personally? Yes.
655. You have gone into it? Yes.
656. You know the east side of it pretty well? Yes.
657. Do you think that it is a suitable place to bring the railway to? I think that good wharfage could be made along there. The water is very deep—30 or 40 feet all along.
658. Knowing the bay as you do, where do you consider the best site for a passenger station and for a goods station? The passenger station would be at the Milson's Point end of the wharf, and the goods traffic would be dealt with along the bay from that point to the head.
659. You would not approve of a proposal to have the passenger station at the head of the bay and the goods station at Milson's Point? I think it will be better to take the passengers on as far as possible by railway, and so shorten the ferry journey.
660. Can you give the Committee any information as to the area of Lavender Bay and the depth of the water there? I could not tell you the area of the bay off hand, but there is 30 or 40 feet of water all over it.
661. The bay is a large one? Yes.
662. And, in your opinion, suitable for shipping purposes? Yes; very suitable indeed.
663. What is the depth of the water on the west side of the bay round about M'Mahon's Point? It is very much about the same—30, 32, and 37 feet.
664. Running up to 40 feet? As you get towards the north-western portion of the bay the water becomes shallow.
665. What depth do you make it there? 10 or 11 feet.
666. What is the depth along the eastern shore from Milson's Point to the head of the bay? At Milson's Point it runs up to 40 feet, and continues as deep as 22 feet nearly to the head of the bay. Of course at the very head of the bay it is shallow, but within 100 feet of where the baths are there is a depth of 22 feet.
667. Which would you consider to be the most suitable point for starting the transit service from? From the eastern side, close to Milson's Point, so that the ferry-boats would not have to turn. At the present time the wharf faces the south, so that the ferry-boats have to turn round. My idea would be to keep the boats nearly in the same direction all the time.
668. Where would you propose to have your landing point at the Circular Quay? At the head of the Circular Quay.
669. What would be the cost of a steam transit service which you speak of as necessary? Do you mean the cost of working it?
670. No; the cost of the plant in the first instance—the working expenses would be another matter? The steamers would cost from £12,000 to £13,000 a piece.
671. What do you anticipate would be whole cost of the service? I have not gone very much into it.
672. You say that you would require three steamers? Yes. The steamers would cost nearly £40,000.
673. You told the Committee that you anticipated that there would be considerable goods traffic in Lavender Bay? Yes.
674. But you were only able to enumerate one class of goods when the Chairman asked you some questions? I am speaking of the general goods traffic. If you asked me I could not enumerate the goods traffic coming to Redfern, but I know in a general way that it is very large.
675. Do you not know as a matter of fact that large quantities of live stock, wool, wheat, hay, chaff, straw, timber, and coal pass Newcastle and come to Sydney? I do. I mentioned just now that I knew that a large quantity of goods came down that line, but I really could not enumerate the different classes of traffic.
676. Are you of opinion that that traffic could be provided for in Lavender Bay for the present—that there would be ample accommodation for it? A great deal of it I think is not suitable for Lavender Bay; it would be better to run cattle down to the yards at once.
677. Wood, hay, chaff, straw, timber—could you provide for these in Lavender Bay? Yes; we could easily make arrangements for them there.
678. Having considered the whole proposal now before the Committee, are you clearly of opinion that for present requirements it is the best from an engineering point of view? I think Lavender Bay would be the best place to bring that traffic. I produce a sketch plan to show the system on which the ferry traffic might be worked, as explained in my evidence.

WEDNESDAY, 2 JULY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. GEORGE HENRY COX.	EDWARD WILLIAM O'SULLIVAN, Esq.
	JOHN HURLEY, Esq.

The Committee further considered the proposed Railway to connect the North Shore Railway with the deep waters of Port Jackson, at Milson's Point.

Captain John Jackson, Manager of Public Wharfs, made a declaration, and was examined:—

Captain  
J. Jackson.  
2 July, 1890.

679. *Mr. Trickett.*] What are you? The Manager of Public Wharfs.
680. You are aware that the Committee are considering a proposal to connect the present terminus of the railway, at what is called the Crow's Nest, with Milson's Point? I have seen that stated in the papers.
681. You have not gone into the matter in detail? Not at all. I do not know anything at all about it.
682. Do you know anything about the wharfage which it is proposed to make? I have never seen anything about it.
683. You come to the Committee entirely uninformed? I know nothing at all about anything. I do not know where they want the wharf, or anything else about the matter.
684. What have you to do with the wharves? I have to do with the berthing and unberthing of ships.
685. Have you anything to do with the berthing of the large P. & O. and Orient steamers? I have to be down on the wharves to berth them.
686. What time does it take to get one of these ships alongside the wharf? It depends upon the wind—about three-quarters of an hour.
687. Would that be under favourable circumstances? Yes.
688. Do these vessels interfere at all with the traffic in the Cove? Not much.
689. Notwithstanding their great size? Sometimes they interfere slightly with the ferry steamers. The ferry steamers have sometimes to deviate a little from their usual course in order to get clear of them.
690. Is not the ferry traffic the principal traffic in the Cove? Yes.
691. You know the foreshore from Milson's Point round to the head of Lavender Bay? Yes.
692. What is your opinion with regard to the usefulness of that for wharfage purposes;—have you examined it sufficiently minutely to be able to form one? I know that the harbour is very narrow there, and I do not think that the place would be suitable for wharfage purposes.
693. I am speaking now of the shores in Lavender Bay? Yes, I understand you.
694. Between Milson's Point and the head of Lavender Bay? Yes. Some years ago the San Francisco mail steamers used to lie there, and there were continual complaints about their being in the way. The ship which I commanded—the "Gladstone"—was lying there once, and there were letters in the paper and complaints brought before the Marine Board about its blocking the place up.
695. From practical experience then, through one vessel lying there, it was found that Lavender Bay was inconvenient for shipping purposes on account of its smallness? Yes.
696. Suppose a large wool or coal shipping trade were done in that bay, do you think it would be desirable? I do not think that a coal shipping trade would be desirable. The bay might be more suitable for a wool trade.
697. Why? A vessel loading wool would lie at the wharf for a week or three weeks, whereas a vessel loading coal would only lie there for a few hours, so that with a coal trade the vessels would constantly be going in and coming out.
698. That would interfere with other traffic? I think so.
699. Do you know where they are proposing to build wharves now near to the Admiralty House? I have seen the place.
700. What do you think of that position for wharfage purposes? I think it might do for wool, but I do not think it would do for coal, for the reason before mentioned.
701. Is not that place at about the narrowest part of the harbour? Yes. The narrowest part is between Dawes' Point and Milson's Point, where the width is between 1,200 and 1,400 feet.
702. I suppose all the traffic in and out of the harbour passes Kirribilli Point? Yes, the whole of it.
703. Would it be advantageous or otherwise to the traffic along the harbour to have wharves doing a large amount of business between Admiralty House and Kirribilli Point? It would not.
704. On account of the narrowness of the water space? Yes.
705. I suppose large ships would lie alongside those wharves if there were a wool traffic? Yes; I do not think that large vessels lying there would interfere very much with the traffic of the harbour. A vessel with a 50 feet beam would not interfere very much with that traffic.
706. Would not the berthing and unberthing be an inconvenience? It would, in connection with a coal traffic; but I do not think that the inconvenience would be very great if a vessel only berthed and unberthed once in fourteen days.
707. You have not considered the amount of wharfage accommodation that could be obtained in Lavender Bay or between Milson's Point and Kirribilli Point? I have not; but I do not think that the place is suitable for a coal traffic.
708. You know a good deal about the incoming and outgoing of the vessels of the port;—what is the present state of wharfage accommodation; is there much crying out because of the want of accommodation? No. Within the last six months shipping business has been very slack, and at the present time there is ample wharfage accommodation.
709. For all the requirements of the port? Yes; and there has been so for the last six months. Of course the wool season is now approaching, and during the next six months there will be a rush.
710. But even during the wool season are ships kept out of their berths for an inconvenient length of time? No; there is ample wharfage accommodation.

711.

711. Will you tell us the chief wharves which are availed of for the wool traffic? The wharves at the Circular Quay. I think I may safely say that more than half the wool clip of New South Wales is shipped from the Circular Quay.

Captain  
J. Jackson.  
2 July, 1890.

712. Do you think that it is absolutely necessary that there should be increased wharfage accommodation for wool shipping? I do not. At the present time we have the whole of Woolloomooloo Bay, where we could get wharfage accommodation.

713. Supposing the shipment of wool increased by 25 per cent., would that inconvenience you much? No.

714. If it increased by 50 per cent? No.

715. There is wharfage accommodation enough to cope with the traffic if it increases by 50 per cent.? Yes. From Woolloomooloo Bay and Circular Quay, you could ship all the wool grown in the colony.

716. Are not the wharves beyond Dawes' Point private wharves? Yes.

717. Are they availed of much? Yes; two of them are—Lamb's and Parbury's.

718. Are they not very frequently empty? They are not very often empty.

719. They are very largely used? Yes.

720. Have you ever given any attention to what I may call the rival schemes for dealing with the coal traffic that have from time to time been suggested—that is, at Blue's Point, Ball's Head, and Cremorne Point? I have not.

721. You have not been called upon to do so? No.

722. Will you venture to offer an opinion as to whether it is necessary or desirable, at the present time, to extend the railway from the top of North Shore to the deep waters of Port Jackson, for the purpose of shipping wool? If I dared venture an opinion, I should say that it was not necessary.

723. Do you know anything of the wool shipping that goes on at Newcastle? Yes.

724. Is that carried on to a large extent? It was some years ago, before the railway was constructed from Newcastle to Sydney. I think that now a large portion of the wool comes by rail to Sydney. There were two firms of wool stevedores at Newcastle.

725. You think more wool comes to Sydney now than came before the railway was constructed? Yes.

726. Is not a good deal of wool shipped from Newcastle now? A considerable amount. I think that last year 60,000 bales were shipped from there.

727. Are there wool shipping and dumping firms at Newcastle now? Yes.

728. Could you give me the names of one or two of them? I think that Gibbs, Bright, and Dalgetty are the only two.

729. Do you know whether their business has fallen off much since the railway was constructed? I could not say.

730. You look upon Woolloomooloo Bay as a very desirable and very easily availed-of place for an extension of our wharfage system? Yes.

731. Is there good water there? Yes; there is plenty of water, 30 feet at low tide.

732. Is it not a fact that the wool traffic is chiefly located on the southern side of the harbour? Yes.

733. Have you heard any expressions of opinion or indications of the traffic being shifted over to North Shore if a railway were brought down there from Newcastle? No; and I do not think that it is very likely that it would be shifted. I am sure that it would not.

734. Will you give us your reasons for thinking so? All the vested interest is on this side of the water, and if the trade were taken to the other side it would ruin the interests here. If you look at the immense stores that have been built on this side of the water, you will see that it is not very likely that a change will be made.

735. I daresay that you have been very observant of our coal traffic;—if the railway under consideration were constructed, do you think that a large coal traffic would be done at North Shore? Where from?

736. Would they bring coal from Newcastle and ship it at the North Shore? No, they certainly would not, because the freight from Newcastle by train would undoubtedly be more than the freight by water. The water freight is only 3s. a ton, and I do not think the railway could take coal 100 miles for that.

737. Does your experience go to show that ships would be availed of rather than a railway? Yes; people would sooner bring it by water than by railway.

738. I suppose the great traffic in coal from Newcastle here is to feed the large ocean-going steamers? Yes.

739. If a railway were constructed to the deep waters of North Shore, would it be of any advantage to those large steamers in enabling them to get their coal supplies more easily? No; they would have to pay more for the coal.

740. Would they go alongside the wharves at North Shore for the purpose of coaling;—would they first go alongside the Circular Quay to discharge passengers and cargo, and then move over to North Shore in order to take in coal? I do not think so.

741. If they did not do that, and the coal came by railway to North Shore, it would have to be put into lighters and brought across to the steamers? Yes.

742. Would that be an advantage or disadvantage? A very great disadvantage.

743. Why? The steamboat companies would have to pay lighterage as well as railway freight, while the coal would be much more broken up because of the extra handling.

744. Of course the present railway from Newcastle comes round to Darling Harbour? Yes.

745. What, in your opinion, are the facilities or otherwise of dealing with the coal traffic and general traffic at Darling Harbour? There are none at the present time.

746. How do you mean? At the present time there are no facilities at Darling Harbour for shipping coal.

747. Could it be made available for shipping coal? Yes. There are two staiths there that have been erected fifteen or twenty years. They have never been used, and were intended for shipping coal.

748. Can you tell us why they have not been used? I do not think they were suitable.

749. Is there plenty of water there for large ships? Not for very large ships. Darling Harbour silts up very fast. Ships can load there up to 21 feet, but if they want to load deeper than that they go to the Pyrmont wharfs. They load a considerable amount of shale at Darling Harbour.

750. Can you tell us the average draught of the ships that go from Newcastle or here with coal? I suppose a vessel of 2,000 tons would draw about 22 feet.

751. Such a vessel could not go up to the present wharves at Darling Harbour? No.

752. Is that because of the rocky nature of the bottom? No; there is a mud bottom.

753.

- Captain J. Jackson.  
2 July, 1890.
753. Would there be a difficulty in dredging out the mud? A dredge is nearly always at work there, but a great many sewers and drains run into the harbour at that place.
754. Do many ships of the size which you mentioned take coal from this port? Not from here.
755. Would the bridge interfere with their going up to Darling Harbour? No; they could get through the bridge.
756. You know the large piece of ground which the Government lately purchased at Darling Harbour—Darling Island;—were you ever consulted with regard to that purchase? No.
757. Have you been consulted since as to the utilising of the land for wharfage purposes? No.
758. Have you formed any opinion as to its utility? I expect that it will be most suitable for shipping coal—undoubtedly it will.
759. Could an ordinary coal-ship get alongside that land without any difficulty? Yes; and so they can with the new wharves at Pymont. I believe that rails are going to be laid there, and that hydraulic cranes are to be erected for the purpose of shipping coal.
760. *Mr. O'Sullivan.*] Could the mail steamers go there? They could go alongside the Pymont wharf.
761. *Mr. Trickett.*] But, as a matter of fact, they would not do so, for the reason you explained a little while ago, that they would not want two moves? Yes.
762. It is a serious undertaking to move one of these large boats? Yes; and there is very considerable risk, especially in narrow water such as that at Darling Harbour and North Shore.
763. Even if coal were brought to these places it would have to be put into lighters or hulks and taken alongside the steamers? Yes.
764. Have you paid any attention to the necessity for providing wharfage accommodation at North Shore for local purposes? No; I have not.
765. You know Lavender Bay well? Yes.
766. If coal wharves were constructed there, do you think that the coal dust would blow over to Sydney and become a nuisance in any way? I do not think so.
767. You have given some evidence before about the size of Lavender Bay for shipping purposes;—supposing wharves were erected along the eastern shore of Lavender Bay, would the ships have to lie alongside them, or would they lie out in the stream? They would lie at the wharves, but those wharves would have to come out a considerable distance from the present shore line.
768. Ships could lie alongside the wharves? Yes.
769. Supposing vessels were alongside the wharves, would there also be room for other vessels to lie in the bay? No.
770. Therefore such vessels would have to lie out in the fairway if they wanted to avail themselves of the wharfage at Lavender Bay? Yes.
771. When the mail steamers used to lie in Lavender Bay did they not drift ashore once or twice? Yes; one of them did.
772. She must have been pretty close in? No. There was a buoy moored there for them to make fast to.
773. If Lavender Bay were utilised for wharfage purposes, would it not become very much the same as Circular Quay is now in extent and appearance? Towards the water it might.
774. It would be the same with regard to the shipping; no ships can lie in Sydney Cove now? No; and it would be just the same in Lavender Bay.
775. No ships could lie in Lavender Bay then? No.
776. Is there much ferry traffic in Lavender Bay? There is a considerable ferry traffic. The ferry steamers call at two or three places there.
777. From your knowledge of the foreshores of Lavender Bay, do you think that the land would have to be reclaimed for any distance out in order to enable wharves to be constructed? I think it would. I am not very sure of that, but I think there is shallow water for a considerable distance out.
778. There is very little level land at the water's edge? I think that there is none.
779. Then the necessary space for wharfage purposes would have to be artificially obtained? Yes.
780. You know Blue's Point and Milson's Point? Yes.
781. Can you tell us the distance between them? I can not; I should think about 1,600 or 1,800 feet.
782. Can you tell us the distance between Macquarie Point and Daves' Point? No; I should say that it was about 1,000 feet.
783. Can you tell us the area of Lavender Bay, as compared with that of Sydney Cove? I think that Lavender Bay, in its present state, is larger than Sydney Cove; I think that it is wider.
784. Could you tell us the relative depth of the water in Sydney Cove and in Lavender Bay? In Sydney Cove the average depth is about 35 feet. I could not say what it is in Lavender Bay, but I believe that it is much less than that.

John Henry Geddes, Esq., wool broker, sworn, and examined:—

- J. H. Geddes, Esq.  
2 July, 1890.
785. *Chairman.*] What are you? I am a wool broker.
786. And you are a member of some company? I am a member of the Company of J. H. Geddes & Co., The Pastoralists' Association (Limited).
787. *Mr. Dowel.*] Have you any knowledge of the proposal now before the Committee to extend the North Shore Railway down to Milson's Point? Yes.
788. Will you inform the Committee whether you think there is likely to be any goods traffic on that line from the north? I thought that perhaps it might facilitate the work of the Committee if I wrote out what I had to say, and, afterwards, if you thought proper you might ask me questions in detail bearing upon the traffic.
789. *Chairman.*] You understand that that statement will be taken on oath? Yes. It is as follows:—  
J. H. Geddes & Co., The Pastoralists' Association (Limited). Reasons for the extension of the Northern Line to the waters of the Harbour at Kirribilli Point.

The Pastoralists' Association who have purchased "Theulda," on behalf of the Company, at Kirribilli Point, is the outcome of frequent discussion as to the advisability of woolgrowers combining with the object of generally lightening the charges associated with the sales of wool, produce, &c., and finance matters generally, and also for the storage and shipment of frozen meat. In furtherance of this view they purchase the business of J. H. Geddes and Co.; and, in order to give assurance to intending shareholders that their interests in the city would be under experienced and tried supervision, decided to retain the name and combine it as "J. H. Geddes & Co., The Pastoralists' Association (Limited)."

Although

Although the purposes of the Company have not been generally made known, the Association already numbers 118 J. H. Geddes, pastoralists, representing 21,000 bales of wool, or approximately about 8,000 bales from sources otherwise than the 23,000 bales offered by J. H. Geddes and Co. last season; and the Directors have already been waited upon by representatives of country meat freezing companies, who recognize the advantages of the situation for the storage and shipment of chilled meat. Esq.  
2 July, 1880.

The necessity for greater storage, however, owing to the immediate requirements of the Association, enhanced by the anticipated increase in the business of "J. H. Geddes and Co.," in common with the general advance of the wool sales in Sydney, arising from the growing Continental and English direct representation, rendered imperative the careful inspection of all the most suitable sites available, and Kirribilli Point was chosen.
