1748. Have you been long in the district? Twenty-seven or twenty-eight years.

1749. Are you on leased land? No, my land is freehold. It was bought by auction before free selection commenced.

1750. You use it for grazing purposes? Yes, and we grow crops for our own use.

1751. Have you been sending away any quantity of butter? Until about seven months ago, but now I send my milk to the factory.

1752. Are you a shareholder in the factory? Yes.

1753. Can you say whether the factory is likely to use the railway? Yes, there is every probability of it because it affords quick transit.

1754. Will the railway run through your land? No.

1755. Seeing the advantages that a railway would afford, would you be prepared if a land tax were brought in to pay your quota towards the cost? I suppose we should have to do it.

1756. Do you look upon dairy-farming as a success in this district? I do.

1757. Do you think that the construction of a railway here would lead to an increase of the population? I think so.

1758. Are there any lands open for selection outside the Berry estate? There is not a great quantity of good land, but there is some towards Jervis Bay that will be taken up.

1759. What price would you take for your land? I would not take £40 an acre for it.

1760. Is the land adjacent to yours equal to your own? Yes; my land adjoins the Berry estate.

1761. Can you say whether the railway as proposed will meet the wishes of the residents? Oh, yes. I have not been over the line, but I know the country well, and I do not think that the route of the railway could be improved upon.

1762. Do you know anything of the alternative route, called the Jamberoo route? Not much.

1763. Do you know anything of the land between Nowra and Jervis Bay? I do; it would make fine vineyards, and there is some very good grazing-land amongst it.

1764. Do you think that with railway facilities large orchards would be likely to be brought into existence in that district? Yes; the land is just adapted for that.

1765. Is it suitable for the growth of olives, grapes, and oranges? Yes; they can grow splendid grapes there.

1766. Do you know anything about the mineral resources of the district? I do not, except what I have heard.

1767. Do you think the inhabitants of the district are in a good financial position? Yes; they are well to do there as a rule.

1768.

Mr.  
J. Boxsell.

29 Jan., 1890.

- Mr. J. Boxsell.  
29 Jan., 1880.
1768. Have you heard complaints about the inconvenience of the present means of communication with Sydney? Yes. In rough weather we cannot get our produce away.
1769. Are you a shareholder in the bacon and ham factory? No; I think one man has that himself.
1770. Can you say whether there are hundreds or thousands of acres of land suitable for maize-growing? Yes, there is plenty of land on the Berry Estate.
1771. And you think that it would give employment to a large population if a railway were made? Yes, there are thousands of acres of land covered with bush.
1772. Do you look upon the construction of the proposed line as a national investment? I do. The line has reached Kiama, where it just commences to get into the best part of the district.
1773. You think that the proposed line from Kiama to Nowra will be more productive than the line from Sydney to Kiama? Yes.
1774. *Mr. O'Sullivan.*] Is much produce lost through being sent by sea? Not a great deal. If butter is delayed it gets bad.
1775. Are the steamers often weather bound? Very often.
1776. Does that deteriorate the live stock and butter? Yes, very much.
1777. Do you think the farmers would be likely to use the railway for the conveyance of their produce if it were carried out? I do.
1778. How would maize and perishable productions be taken to market? It would depend upon the cost of carriage. If the rates by the steam-boats are lower than the rates by the railway the steam-boats may get the traffic, but that consideration will not influence every one. Farmers will not haul their produce 6 or 7 miles when they can put it on a railway close at hand.
1779. How about the farmers on the eastern side of the district, near Broughton Creek and the river? There are only a few farmers there.
1780. Do you think that the farmers on the river are likely to cart their stuff to the station when they have steamers calling at a wharf near their property? It depends on freight.
1781. Will not the fact that they can save cartage cause them to use the steamer? They could take three or four loads a day, as the distance to the railway is not very great.
1782. How many acres have you? 160 acres.
1783. How many cattle have you? I have 150 head altogether on this farm.
1784. Do you think the land would carry a cow to the acre? Yes.
1785. What is your estimate of a return of a cow per annum? I never went into that. I could not tell you what a cow is worth.
1786. What is a cow worth per year? £9 or £10.

Mr. Richard Morris, police constable, sworn, and examined :—

- Mr. R. Morris.  
29 Jan., 1890.
1787. *Chairman.*] What is your position? First-class constable in the police force stationed at Broughton Creek.
1788. How long have you been here? Six years.
1789. Have you collected the statistics of stock? I have collected my portion of them.
1790. What does your district comprise? The district is subdivided between us. My portion of the district extends from the boundary here to Broughton Village and to Bomederry including Coolangatta, Broughton Vale, Brogle's Creek, and Kangaroo Mount.
1791. Will you give us the figures for your portion of the district? I can only give you the approximate figures. I should think there are about 12,000 head of horses and cattle, and 7,000 pigs—that would be a low estimate and would not include the stock on Mr. Hayes' property which would number a couple of hundred.
1792. Can you say what quantity of butter is sent away from this portion of the electorate? I could not say. The greater portion of the milk is sent to the factories.
1793. Do you know how many pigs are slaughtered at the bacon factory? I think that the number which they stated to me at the factory was 4,845 pigs slaughtered during the year 1889—I speak from memory as I sent the returns in long ago.
1794. Can you speak as to the progress made by the district during the time that you have been here? It has progressed wonderfully. It is progressing in every way. We have an increase every year in the schedules in which we insert the number of acres of occupied land.
1795. Can you say that the community as a body are prosperous? Yes, the majority of them.
1796. Are there many insolvencies in the district? No, very few.
1797. Can you say about how many have occurred during the period that you have been in the district? I should say not more than a dozen and those not for any great amount.
1798. Do you know how many hotels have been built within the last four or five years in your portion of the district? There is only one hotel—"The Great Southern"—that has been built since I came here, and additions have been made to Mr. Lambert's hotel.
1799. Do you know what the cost of building that hotel has been? The landlord told me that it cost £5,000.
1800. Is it built on freehold land? No, on a twenty-one years leasehold.
1801. Do you think that if the railway is constructed as proposed there will be a very large traffic upon it? I should say there would be a great deal more than there is at present—a great many people would avail themselves of the chance to go to Sydney who at present do not go once in twelve months.
1802. Why do they not go now? People object to travel by the steamers, many not being able to stand the sea, and it is not very convenient travelling by coaches which are often over-crowded, especially at holiday times.

Mr. Jonathan Goldsmith Lambert, publican, sworn, and examined :—

- Mr. J. G. Lambert.  
29 Jan., 1890.
1803. *Mr. O'Sullivan.*] What are you? Hotelkeeper in this town.
1804. Have you been long in Berry? Five years.
1805. Has much progress been made by the district since you arrived here? New buildings have been erected and the whole district has progressed.
1806. Has the population increased much? I could not say.
1807. You have added to your hotel, have you not? Yes.
- 1808.

1808. Do you care to state how much you expended? The new additions to my hotel cost me £3,000.
1809. Is your land freehold or leasehold? Leasehold; twenty-one year's tenure.
1810. Do you consider that you will be well rewarded for your expenditure, notwithstanding the cost of the additions? I suppose I shall.
1811. Are the other properties in the town built on leasehold lands? Yes; everything is leasehold.
1812. What is your frontage? I think it is 72 feet.
1813. What rent do you pay? £200 a year after paying my own expenses for building it.
1814. Do you pay all taxes? Everything.
1815. Is £200 a year a fair average rental for an hotel in the principal street? No; it is too much.
1816. Do you think there would be much competition if you offered your good-will for sale? I could not say; I do not think there would be very much competition.
1817. Are all the hotelkeepers in Berry doing well? I could not say.
1818. Do you consider Berry a good business town? I think it is.
1819. Berry is the centre, is it not, for the surrounding farmers, and markets are held here once a week? Yes.
1820. Therefore it is likely to be a good railway centre? I could not say; I think it would be a good centre. We have steam-boats within a mile of the town. I suppose that the boats would compete with the railway, and it is cheaper to get goods by water than by train.
1821. Do you think you are likely as a business man, to use the boats instead of the railway? Considering the way the coaches are running between Kiama and Nowra, there must be a deal of passenger traffic. I would rather patronize the boats than the train.
1822. If the boats carry goods at a lower rate you will patronize them? Of course they will run at lower rates. We get goods here cheaper by the boats connected with the Berry Estate than they can get them at Kiama.
1823. I suppose that a little delay does not matter in your business? No.
1824. Do you think from the attractions of this district that it is likely to be a resort for visitors? Most decidedly.
1825. Have you many now? Not at present; but when the railway is made there will no doubt be a great many more. Every one who comes here, and who has seen Mount Victoria and the Blue Mountains, considers that the Blue Mountains cannot be compared with this place.
1826. Then this portion of the Illawarra district is likely to be a favourite resort of tourists? I think so.
1827. And that will add to the revenue of the railway? Yes.
1828. *Chairman.*] Did you lease the land upon which you have built your hotel direct from Mr. Berry? Yes.
1829. Before that, did you buy the good-will of the old property? Yes; I gave £2,500 for the good-will of the old house.
1830. You have spent altogether about £5,500? The amount is nearly £6,000.
1831. And you are under a ground rent of £200 a year? Yes.
1832. Am I to understand that you are paying your way? I have done, so far.

Mr.  
J.G. Lambert.  
29 Jan., 1890.

Mr. George Frederick Davis, storekeeper, sworn, and examined:—

1833. *Mr. Hurley.*] What are you? Storekeeper.
1834. Have you been long in the district? I have been upwards of four years in Berry.
1835. Has your trade increased much during the last twelve months? It has.
1836. Is your trade satisfactory? Yes.
1837. Have you many bad debts on your books? There are a few, not many.
1838. How do you get your goods? By the "Meeinderry" and the "Coomonderry."
1839. What is the freight? 10s. a ton.
1840. Do you think the railway would be an advantage to yourself and others in the same line of business? I do.
1841. Would you take advantage of the railway, as against the boats? I should.
1842. Do you recognise the fact that the railways could not carry freight at 10s. a ton? I think it would pay me to get my goods by rail.
1843. You would rather have your goods carried by rail than submit to the inconvenience and risk of steamer carriage? Yes.
1844. Do you insure your goods? In some cases.
1845. From your general knowledge of the people, can you say whether they are in a healthy financial position? I should say that they are.
1846. The district is progressing? Yes.
1847. Is the railway likely to bring about an increase of population? I am sure that it will.
1848. Have you any knowledge of the country beyond here? No.
1849. Do you know anything of the agricultural or mineral resources of the district? No.
1850. Do you buy any grain? Yes.
1851. What trade in grain do you do in a year? Between £500 and £600 worth. I sell it in the district.
1852. Do you sell much fruit? Only canned fruits.
1853. Where do they come from? We sell both American and colonial.
1854. Do you sell Californian fruits? Yes.
1855. Do you think that sufficient fruit could be grown in the district? Yes.
1856. And that it is not done you attribute to the apathy of the people? Yes; to their indifference. They are engaged in a more profitable business.
1857. Do you think it would be good policy on the part of the Government to make a railway through this district on to Nowra? I do. I am sure it will be a good paying line.
1858. Do you think it will pay working expenses and something towards the interest on the cost of construction? I am sure of it.
1859. Do you think it will pay one half of 3½ per cent. on the cost of construction? I think so.

Mr.  
G. F. Davis.  
29 Jan., 1890.

- Mr. G. F. Davis. 1860. Therefore you look on the advent of a railway to the district as likely to be most beneficial to the country as an investment, and of great utility to the revenue? I do.
- 29 Jan., 1890. 1861. Are the accounts of the farmers paid weekly, monthly, or yearly? They are paid monthly.
1862. Do they regularly meet their engagements? Yes; the majority of them.
1863. You consider this a sound business district? Yes, one of the soundest in the colony.

Mr. John Cook, junior, farmer, sworn, and examined:—

- Mr. J. Cook. 1864. *Chairman.*] What are you? Farmer, of Woodhill.
- 29 Jan., 1890. 1865. How far is that from the township of Berry? Seven miles.
1866. How many acres do you farm? About 480 acres.
1867. How long have you been resident at Woodhill? About twenty years.
1868. Is your farm freehold or leasehold? I have 380 acres of freehold and 100 acres of leasehold.
1869. What number of stock have you? About 100. A portion of the land is not improved yet.
1870. Have you any land under cultivation besides that for grazing? Very little—only a few acres.
1871. Is your farm a dairy-farm? Yes.
1872. Do you send your milk to the factory? No; I use a separator.
1873. What quantity of butter do you produce monthly? About 800 or 1,000 lb.—about half a ton.
1874. Do you send that to Sydney? Yes.
1875. What price do you get for it on the average? About 10d. net all the year through.
1876. Have you any other sources of income? We have pigs and calves, grass and potatoes, but we do not grow much grain.
1877. What do you regard as the average earnings of your milking herd? I consider that a cow should bring in an average of about £10 a year.
1878. Can you say whether this district will be much benefited by a railway? I have always been of opinion that it would be. The district is kept back for want of a railway.
1879. Do you think that the railway will be a profitable investment? I think so.
1880. Do you think that there will be a large traffic from here in goods and passengers immediately upon the opening of a railway? Yes.
1881. Have you heard what the cost of the line will be? I have.
1882. Do you think that the revenue from the line will be sufficient to defray the working expenses and cover the interest on the cost of construction? Yes, within a reasonable time.
1883. Have you seen the route of the railway? Yes.
1884. Have you any suggestion to make as to any alteration or deviation of the line? I think it cannot give any reasonable return unless it goes to Nowra Bridge. I think it will lose all the trade of Nowra if it is not carried to the bridge—the trade will go down the river and by sea.
1885. Do you think that the line should be extended to Jervis Bay? I do.
1886. What is your reason for so thinking? Because there are minerals in that direction, and I think that a considerable trade would spring up between the South Coast district and Melbourne.
1887. Are there many settlers in that direction? Yes, the land is very rich, and there are homesteads scattered all over it.
1888. Are they freeholds or leaseholds? Freeholds. Between thirty and forty are settled in or at Broger's Creek.
1889. Are the settlers prosperous? They are very prosperous, and almost without an exception they have made comfortable homes for themselves.
1890. *Mr. Hurley.*] I heard you say that if the line stopped short at Bomederry instead of going to the bridge it would be a failure? I do not know whether it would be altogether a failure, but it would lose a great deal of the trade at Nowra.
1891. Would it get the trade from Broughton Creek? Yes, that would go by the line, but the Nowra trade would go by sea.
1892. Do you mean to say that a great deal of the trade will be lost to the railway if that branch line is not carried up to the Bomederry Bridge? I think so. The people would not like to come far to this side of the bridge with their goods.
1893. Do you think they would patronise the steamers in preference to crossing the bridge? If they had only to cross the bridge that would not be much, but they would have to go some distance at the other side of the river.
1894. Would the people of Nowra not prefer the railway to the steamer? If it was near the bridge they would.
1895. It is 50 chains from the bridge to the Bomederry township. This line is to go on to the Nowra township and Jervis Bay, and under those circumstances do you think that the Government ought to construct the branch line? I think they ought, because we cannot depend upon getting the railway carried over the river for a number of years. I think for all the cost of it the construction of the branch would be amply justified.
1896. Have you any knowledge of the country beyond Nowra? Only as regards its timber.
1897. How far do you live from here? Seven miles.
1898. Are you influenced in regard to what you say by any talk that you have had with persons of Nowra? No. I am not influenced in any personal way—only by my desire to see the railway reach Nowra.
1899. Are you influenced by any conversation that you have had with people from Nowra? No.
1900. Have you had a conversation with any one in reference to that branch line? Not with any one in particular.
1901. Have you not had a conversation with a person who took a very prominent part in the controversy with regard to the construction of that branch line to Nowra? No.
1902. Have you not had a conversation with a person who has been advocating that branch line in the newspapers? Not one word.
1903. Your opinion then is formed upon your own judgment? Yes.

Mr.

Mr. Daniel Fraser, storekeeper, sworn, and examined :—

1904. *Mr. O'Sullivan.*] What is your calling? A storekeeper.  
 1905. How long have you been in Berry? Two years.  
 1906. Have you noticed any marked progress since you arrived here? Yes, a great deal.  
 1907. Has the population of the town increased? I think it has, as regards the working classes.  
 1908. What is your opinion of the financial position of the district? I think it is a first-class district.  
 1909. Do you think it is such a district as the people are likely to remain in, although attractions may arise elsewhere? Yes; I believe the people will remain here, although the land all belongs to one person.  
 1910. Have you any bad debts? Not that I know of.  
 1911. Are the storekeepers in the district in the habit of giving mortgages of their property? Not that I am aware of.  
 1912. How do you get your stores down here? By Mr. Berry's steamers.  
 1913. I suppose you are likely to continue to get them that way, unless the railway rates are lower than the steamer rates? If the railway is more convenient I would pay a little more to have my goods carried by them.  
 1914. Do you think that is the general opinion of the storekeepers in the district? Yes.

Mr. D. Fraser.  
 29 Jan., 1890.

Alexander John Colley, Esq., bank manager, sworn, and further examined :—

1915. *Mr. Hurley.*] You desire to make some addition to your evidence? Yes. I wish to give some statistics with regard to the local Agricultural Association to show the resources of the district. We have one of the best agricultural associations in the colony, and the figures which I am about to lay before the Committee are rather remarkable, as showing the quantity of our products. At present there are over 320 members of the Association, and at last show £381 7s. 6d. was paid away in prizes. At the show of 1889 there were 2,668 entries, of which 378 were horses; cattle, 388; poultry and other animals, 178; dairy produce, 147; vegetables, 239; fruits, 120; flowers, 437; saddlery, 8; implements, 5; needlework, 151; household manufactures, 292; works of art, 325; total, 2,668. The society has a fixed deposit of £500 in the bank. I do not think that any other local show in the Colony has ever had so large a number of entries.  
 1916. Can you give us any idea of the amount receivable from your members? The annual income is about £200.  
 1917. Are your grounds free from debt? They do not belong to us; they belong to Mr. Hay.  
 1918. Was the show-yard provided by the Association or by Mr. Berry? Mr. Berry bore the entire cost of it.  
 1919. I suppose he still retains the right to it? Yes.  
 1920. *Chairman.*] Were the buildings also erected by Mr. Berry? Yes. The area of the ground is 10 acres.  
 1921. What was the cost of the buildings? Between £3,000 and £4,000; I believe.

A. J. Colley.  
 Esq.  
 29 Jan., 1890.

Mr. Andrew Gardiner, public school teacher, sworn, and examined :—

1922. *Chairman.*] What are you? Teacher of the public school.  
 1923. How long have you been here? Two years last Christmas.  
 1924. Has there been any increase in the number of pupils in your school? Yes; a considerable increase.  
 1925. How many were there on the rolls when you took charge of the school, and what is the present number? I cannot give the exact number on the rolls of the school when I took charge, but I can give the attendance, which was about 120. The present attendance is from 160 to 180.  
 1926. Are there any other public schools within a radius of 5 miles? Yes; there are six.  
 1927. Can you say whether the attendance at those schools has increased during the time that you have been here? Yes; it has increased in two of them, especially at Jasper's Brush and Harley Hill.  
 1928. Can you tell what the increase is? I could not say exactly.  
 1929. Do you think it has been proportionate to the increase in your own school? Yes.  
 1930. Have you any private schools in the district? Yes; there is one in this town.  
 1931. What is the attendance? I really could not say. I know that they have a fair attendance.  
 1932. What do you consider a fair attendance? I should say between a dozen and twenty.

Mr. A.  
 Gardiner.  
 29 Jan., 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Kiama to Nowra.

[SECTIONAL COMMITTEE]

APPENDIX.

A.

RETURN OF REVENUE COLLECTED AT THE LANDS OFFICE, NOWRA.

Crown Lands Office, Nowra, 31 January, 1890.  
Sir, In compliance with a request made by the Chairman of the Parliamentary Standing Committee on Public Works, I have the honor to enclose herewith a return of revenue collected at the Lands Office, Nowra, from 1 January, 1880, to 31 December, 1889 I have, &c,

The Secretary, Parliamentary Standing Committee on Public Works, Sydney  
F. GALBRAITH,  
Crown Lands Agent.

LAND REVENUE			MINING REVENUE		
	£	s d		£	s d
1880	1,917	2 8	1880	57	10 0

Total	£32,895	11 9	Total	£2,679	16 0

B.

[To Evidence of Mr H Keon]

Kiama, 30 January, 1890

Sir, I have the honor to supplement my evidence re railway Kiama to Nowra, if it is admissible I am under the impression that the evidence given by me was not very clear as to alterations of freights When handing in the revised list of freights I should have stated that several items have never been altered, but have been the regular charge for the past twenty years as they appear on the list 10s (ten shillings) per ton, viz, ironmongery, hardware, and all that class of goods, drapery, and measurement goods, which includes furniture, &c

I may also mention that the railway did more injury to the sailing vessels trading to this port than to the steam boats, as they carried all the lumber, such as bricks, timber, coal, and blue metal, which comes and goes per train We used only to carry small quantities, to oblige our customers, as bricks and timber did not pay for handling and detention of our steamers Those items form the chief cargo for the train Bricks are made along the line, and can be landed at the Kiama terminus almost as cheap as they could be delivered at the Sydney wharf for shipment to Kiama, coal also from Wollongong, live stock from Homebush We never carried any fat cattle—they used to be driven overland The whole of this trade is secured by the train now, and has been from the start But I think it will be very slack shortly, as the chief buildings are now nearly completed, and there are plenty of vacant houses and stores in Kiama now

The great loss to the I S N Company was the passenger trade and the reduction in the freight of butter from 2s per keg to 1s, and the loss of the factory butter from Jamberoo and Gerringong, all of which now goes per train, although our rates are cheaper The annual yield of butter in a good season does not reach 33,000 kegs of 60 lb each from all sources—Shellharbour, Jamberoo, Kiama, and Gerringong, and this estimate will not allow for any milk to be shipped, for the more milk going away, the less butter Mr Somerville's estimate is pretty correct—a little over the mark, and no allowance made for the milk I may also mention that cartage from Kiama wharf is 1s per load, and from Kiama railway present terminus 2s per load, so we only have the advantage of 1s per load in that way

The Hon F T Humphery,  
Chairman, Sectional Committee, Kiama to Nowra Railway Extension

I have, &c,  
HUBERT KEON.

B 1.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM GRAFTON TO THE TWEED.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Grafton to the Tweed," have, after due inquiry, resolved that it is expedient the railway should be constructed from Lismore to the Tweed; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway would commence at Grafton on the north bank of the Clarence River, and passing through the counties of Clarence, Richmond, and Rous, touching population-centres at Casino, Lismore, Bexhill, Clunes, and Cavvanba (Byron Bay), would extend to Murwillumbah on the Tweed River, the length of the line being 140 miles 76 chains, and the estimated total cost £1,728,100, exclusive of the cost of land and compensation. Description of the proposed railway.

2. In making their inquiry as to the expediency or otherwise of constructing this railway the Committee have, for several reasons, been more than ordinarily impressed with the importance attaching to the proposal. The line is not put forward as a branch railway, or a feeder to any railway in existence. It is contemplated by its authors that it shall form part of what eventually shall be a great trunk-line, extending from the Queensland border north of the Tweed to the Hunter River, costing, as near as an approximate estimate will show, £6,080,000; and several other contingencies come into view. At present the proposal does not go beyond the idea of the railway being a feeder to the Clarence and the Richmond, and to Byron Bay, but at the same time this portion of railway is regarded by the Government as a part of the contemplated trunk-line, and to a certain extent this circumstance becomes an element in the inquiry. Furthermore, the proposal is, in certain respects, affected by those for the improvement of the Clarence River, the Richmond River, and Byron Bay, and by the general question of making those places important centres for the carrying on of a large shipping trade. Important nature of the proposal.

3. The information before the Committee at the commencement of their inquiry was not as complete as it should have been. At the time when the proposed railway was referred by the Legislative Assembly to the Committee the route for the line had not been properly surveyed or examined, no sectional plan had been prepared, and the estimate of the cost of the railway was, in a large measure, approximate. Before the taking of evidence was brought to a conclusion a surveyor went over the route, and a better knowledge of it was obtained, but up to the present no plan showing the sections of the railway has been before the Committee, and no plan of the kind can, therefore, be published with this Report. The absence of complete plans has somewhat interfered with a satisfactory understanding of all the important details of the proposed railway, but this circumstance did not appear to the Committee to be of sufficient moment to prevent them from proceeding with the inquiry, and they have been able from the information which they have obtained from witnesses, and from a personal inspection by a Sectional Committee of the country through which the proposed railway would pass, to arrive at a conclusion which they consider is sound and justifiable. Information before the Committee.

Method of the  
Committee's  
inquiry.

4. The Committee commenced their inquiry by examining the Under Secretary for Public Works, the Acting Engineer-in-Chief for Railways, and some other witnesses whose evidence it was thought desirable to have, in order that the Committee might have a good general idea of the proposed line and the reasons put forward in support of it; and when that testimony was obtained a Sectional Committee, consisting of four members of the Committee, was appointed to visit the districts concerned in the construction of the proposed railway, take the evidence of witnesses in those localities, and, as far as possible, personally inspect the country through which the railway would pass. After the return of the Sectional Committee further evidence was taken in Sydney; and in this manner the inquiry has been made as full and complete as possible.

Principal  
matters  
upon which  
evidence  
has been  
obtained.

5. The principal matters upon which, in relation to the proposal before them, it has appeared to the Committee desirable to obtain evidence, have been:—

- (1.) The details of the proposal.
- (2.) The necessity, or otherwise, for railway construction in the districts concerned.
- (3.) Whether the route for the railway has been wisely chosen.
- (4.) The questions of cost and probable traffic returns.
- (5.) How far, or in what respect, if any, the improvement of the Clarence and Richmond Rivers affects the proposal.
- (6.) To what extent, if any, the improvement of Byron Bay is associated with the proposed railway.

Details of the  
proposal.

6. The details of the proposed railway will be found chiefly in the evidence of the Under Secretary for Public Works, the Acting Engineer-in-Chief for Railways, and the railway surveyors engaged in connection with the line. The estimate of cost has been made up in two parts—one from Grafton to Byron Bay, 108 miles 26 chains, to cost £1,271,300, and the other from Byron Bay to the Tweed, 32 miles 50 chains, £456,800. Taking the whole line into consideration the estimate of cost represents £12,256 a mile, irrespective of land and compensation. For the section from Grafton to Byron Bay the cost per mile is £11,736, and for the length between Byron Bay and Murwillumbah on the Tweed, £14,000. As will be seen further on, the Committee consider it expedient that the line should be constructed from Lismore to Murwillumbah, not from Grafton to Murwillumbah, and this reduction in the length of the railway means, at the same time, of course, a corresponding modification in the total cost. The length of line in the proposal before the Committee is 140 miles and 76 chains; the length represented in the decision of the Committee is about 60½ miles, the probable cost of which would be about £800,000. The altitude and ruggedness of much of the country between Lismore and Murwillumbah are so great that anything like a straight line is impossible, and the only means of laying down a railway through the district appears to be to adopt an irregular route by which the line will run from Murwillumbah towards the coast at Byron Bay, and then bend at a sharp angle away from the coast again to Lismore at the head of the Richmond River. The ruling gradient on the line, the Acting Engineer-in-Chief for Railways considers, may be regarded as 1 in 50, though in a descent to Byron Bay there is a portion of the route, 1¼ mile in length, where the grade may be as steep as 1 in 40. Efforts are being made to reduce this heavy grade, and also to improve the line in other respects where improvement is found to be practicable, but at present the grade is as stated. Several rivers and creeks will have to be crossed, a circumstance which forms a large feature in the cost of the line; but the cost of these bridges—given roughly as £175,500—may, ultimately, be found to be much less than the amount at present set down for them. For example, a bridge across the south arm of the Richmond River at Casino, the estimated cost of which as put before the Committee is £51,730, can be built, it has since been ascertained by recent borings, for £15,000, a reduction to the extent of nearly £37,000. This is an instance of the incomplete information alluded to in a previous portion of this Report as available to the Committee at the commencement of their inquiry, as well as an indication of a possible reduction in the estimated cost of the bridges generally. The principal watercourses are the Richmond River, Leicester's Creek, Wilson's Creek, and the Brunswick River;

River; but the crossing of the Richmond River and Leycester's Creek is not involved in the Committee's recommendation for the construction of a portion of the proposed railway. Regarding the proposal generally, the Acting Engineer-in-Chief considers the line to be the easiest and cheapest that could be made from the Richmond to the Tweed, and that it will serve more country than any other line that could be laid down there.

7. In considering the question of the necessity or otherwise for railway construction in the districts concerned, there can be no doubt from the evidence adduced by the Full Committee and by the Sectional Committee that railway facilities for the country between the Richmond and the Tweed Rivers are not only a necessity but the right of the settlers who have taken up land there. The land for the most part is as rich and productive as any land in the colony; its powers of production are in some respects almost unlimited; but cultivation, and the increase of population by the progress of settlement, are retarded by the want of suitable means for the conveyance of produce to market. This difficulty is referred to and explained very fully in the Committee's Report upon the proposed breakwater at Byron Bay, and what is said in that report need not be repeated in this. All that it is necessary to say here, in addition to what has already been said on this point, is that the construction of a railway through the districts, lying between the Richmond and the Tweed, is a work likely to be not only useful to the population of those districts, but of great advantage to the colony.

Necessity or otherwise for railway construction in the districts concerned.

8. It has already been stated that the Acting Engineer-in-Chief for Railways considers the proposed railway to be the easiest, cheapest, and most generally advantageous that could be laid down from the Richmond to the Tweed. That statement summarises effectually the advantages expected from the route, but an examination of the evidence given by the Acting Engineer-in-Chief, and by the surveyors employed by him in connection with the line, will show the reasons why he is of this opinion. A direct line from Lismore to Murwillumbah would have "to cross a range, in which some of the points are 2,700 feet high, and others 2,000 and 1,400, gradually falling towards the coast to about 1,100," and the route for the line has been chosen, as shown on the plan, "in order to get round the hills and up the gullies," or, in other words, so that the line may be constructed in the easiest manner possible. Except in one instance, the route has not been laid down specially to serve any particular place between the terminal points, and generally regarded it is considered to be the most direct and best route that could be adopted. "Approximately," the Acting Engineer-in-Chief states, "it is the only route you could take," and, it is of importance to observe that he states that in any line from Grafton or Lismore to Murwillumbah it is necessary to go round by Byron Bay. Whether the question of improving Byron Bay is or is not considered, the railway must, owing to the nature of the country, go within easy distance of the bay. The instance where the route has been laid down specially to serve a particular place is a locality called Tyagra-grass, between Byron Bay and the Brunswick River, a point through which four lines of road pass, and one which is expected to be an important centre of population. The route has been made to touch that point designedly, because of the advantages likely to accrue to the railway by so doing; through the other portions of the country to be traversed by the line the route has been chosen where it has appeared most practicable for the railway to be taken.

Whether the route for the railway has been wisely chosen.

9. The estimated cost of the railway, already stated, is described in one part of the evidence of the Acting Engineer-in-Chief for Railways as to a great extent only approximate, but this refers apparently chiefly to the cost of the bridges. He says, however, that when the estimate was made "there was not sufficient information to allow of anything but a mere approximation. When all the information is to hand the matter will be carefully gone into, and the greatest economy will be exercised." Taking the estimates all through he believes them to be ample; so that while there is a possibility of their being reduced, it would appear to be improbable that they will be exceeded. The estimated cost of the bridges may be reduced materially. It is probable that the traffic returns will be satisfactory within a reasonable period after the construction of the railway. The Railway Commissioners have carefully inspected the route and also a good deal of the surrounding country,

The questions of cost and probable traffic returns.

and, as will be seen by their report, are favourable to the construction of the railway. They found the land to be for the most part of an exceedingly rich character and capable of producing "almost any tropical or temperate zone product;" that practically every acre available for settlement has been taken up, but that in consequence of the difficulty of getting produce to market, only a portion of the land has been placed under cultivation; and that large supplies of very fine timber exist along the route. They are convinced, as well from their own observation as from assurances made to them, that if the railway were authorized a large number of the present holdings would be subdivided and "at least six families would locate themselves where at present there is only one;" and they "feel that the country urgently requires a railway, and are of opinion the demand should be complied with, although," they go on to say, "it will be some considerable time before the large capital required for its construction will receive a fair return." This difficulty, they suggest, should be met by setting aside as railway capital from the time it may be determined to make the railway one-half the money realised from the sale of Crown land along the route and within 10 miles of it on either side, the Railway Commissioners, at the same time, to have a voice in the arrangements for the subdivision and mode of selling the land. There are along the route, and within the distance from it mentioned, Crown lands to the extent of 622,000 acres, the present value of which is £761,000, and the probable value, when the railway shall have been made, twice this amount. The report of the Sectional Committee is also strongly expressive of the richness and value of the land through which the railway, if constructed, would go, and of the probability that cultivation would be carried on extensively immediately railway facilities for getting produce to market were available. Roads, as feeders to the line, would have to be provided. It was at first thought that the construction of the railway would effect a saving in road construction and maintenance in the district, but the result, naturally, will be an increase rather than a decrease in road expenditure. The main roads must be kept very much in the same order as now, and in addition to this tributary or branch roads will have to be made. This expense, however, should be more than covered in the traffic the roads should bring to the railway.

To what extent the improvement of the Clarence and the Richmond affects the proposal.

10. One of the primary objects in view in the construction of this proposed railway is the attraction of goods and passenger traffic to the Clarence and the Richmond Rivers—principally to the Clarence. Proposals to improve the entrance of each of these rivers involve the expenditure of a large amount of money, and it has been thought desirable to attract to the rivers as much of the trade of the surrounding districts as can be done. But for reasons which will be found in the evidence, and which are summarised in the Sectional Committee's Report, the Committee do not consider that the proposed railway would be the means of drawing traffic to the Clarence, and therefore they do not recommend that portion of the proposed line which would run between Grafton and Lismore. Except on the banks of creeks and in the immediate vicinity of rivers, the land between the Richmond and the Clarence is of very poor description, not at all likely to be cultivated to any very profitable extent; and, as produce from the country to the north of the Richmond would not be likely to pass that river and be sent 80 miles further on to the Clarence, the probability is there would be no appreciable goods traffic to the Clarence. Passenger traffic also would in all likelihood be very limited, for it would be confined to travellers between Lismore and Casino and Grafton, and they would be few. Passengers from north of the Richmond to or from Sydney would, doubtless, make the Richmond or Byron Bay their terminal point on the railway, and would not travel to or from the Clarence. To the Richmond traffic by the railway is certain to go, for the river and its improved entrance will be the available outlet for the produce from a large portion of the district north of the river, and towards the country in the neighbourhood of Byron Bay.

The improvement of Byron Bay.

11. In a manner similar to that in which the proposal for the railway is affected by the improvement of the Richmond River, the question of improving Byron Bay has a certain relation to the scheme. The route of the railway has been so laid down that the portion between the Tweed and the Richmond converges at Byron Bay, and unless a large proportion of settlers are to be compelled to send their produce along the railway many miles further than seems to be necessary, it should be shipped from Byron Bay. The improvement of Byron Bay for that purpose

purpose need not draw from the Richmond traffic which should legitimately go there. To those shippers of produce or to railway passengers whose nearest port of shipment is the Richmond, Lismore will be the traffic centre; and to those nearer to Byron Bay than to Lismore, Byron Bay will be the place where they will expect to trade with the most convenience and the least expense.

12. The Committee have decided to recommend that the proposed railway be carried out from Lismore on the Richmond River to Murwillumbah on the river Tweed, and they have come to this decision because they consider that traffic is assured between those two points, and not between the Richmond and the Clarence. To some extent their reasons for not supporting the construction of the portion of the railway between Lismore and Grafton have been already stated, and they will be found more fully stated in the Report of the Sectional Committee. The evidence obtained on the subject, together with the plans, &c., was finally considered on Thursday, 20 March, 1890; and the following extract from the Minutes of Proceedings will show the position of the Committee in the matter:—

Mr. Cox moved (*pro forma*, notice of a similar motion having been given by Mr. Lee, and Mr. Lee being unavoidably absent),—"That in the opinion of the Committee it is expedient the proposed railway from Grafton to the Tweed, as referred to the Committee by the Legislative Assembly, be carried out from Casino to the Tweed."

Mr. Dowel seconded the motion (*pro forma*).

Mr. O'Sullivan moved, as an amendment,—“That all the words after the word ‘out’ be omitted.”

Mr. Dowel seconded the amendment.

The amendment was negatived on the following division:—

Ayes, 2.		Noes, 10.
Mr. Dowel.		Mr. Abbott.
Mr. O'Sullivan.		Mr. Lackey.
		Dr. Garran.
		Mr. Humphery.
		Mr. Trickett.
		Mr. Cox.
		Mr. Garrard.
		Mr. Copeland.
		Mr. Tonkin.
		Mr. Hurley.

Mr. Garrard moved, as an amendment,—“That the word ‘Casino’ be omitted.”

The amendment was seconded by Mr. Copeland, and passed.

Mr. Garrard moved, as a further amendment,—“That the word ‘Lismore’ be inserted in the place of the word ‘Casino’.”

The amendment was seconded by Mr. O'Sullivan, and passed on the following division:—

Ayes, 9.		Noes, 3.
Mr. Abbott.		Mr. Copeland.
Mr. Lackey.		Mr. Tonkin.
Dr. Garran.		Mr. Dowel.
Mr. Humphery.		
Mr. Trickett.		
Mr. Cox.		
Mr. Garrard.		
Mr. O'Sullivan.		
Mr. Hurley.		

The motion, as amended, was then agreed to.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 15th April, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM GRAFTON TO THE TWEED.

TUESDAY, 12 NOVEMBER, 1889.

Present:—

JACOB GARRARD, Esq. (TEMPORARY CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
The Hon. WILLIAM JOSEPH TRICKETT.  
The Hon. GEORGE HENRY COX.  
JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.  
JOHN HURLEY, Esq.  
CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway from Grafton to the Tweed.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Temporary Chairman.*] What is your position in the Public Service? I am Under Secretary for Public Works.
2. Are you prepared to lay before the Committee a statement showing the position of the proposal now before them;—the Grafton to the Tweed Railway? Yes.

J. Barling,  
Esq.  
12 Nov., 1889.

I do not think it will be necessary for me to give any lengthy statement in regard to the proposal before the Committee, viz., for a Railway from Grafton to the Tweed. I hand in a pretty full *précis* of the papers, which will supply any detailed information that may be required (*Vide Appendix A.*). I may mention, however, that a sum of £1,980,000 for a line via Casino, Lismore, and the Brunswick was voted by Parliament in the Session of 1884, and the plan, section, and book of reference for the first section—a distance of about 20 miles from Grafton—were laid upon the table of the Legislative Assembly and unanimously approved on the 15th September, 1886, and in the Legislative Council the proposal, by 15 votes to 7, was referred to a Select Committee, from which stage it has not since emerged. On the 27th September of this year, the proposal was remitted by Parliament to the consideration of this Honorable Committee. The line may be shortly described as follows:—

“Grafton to the Tweed River. Length, 140 miles 76 chains. The amount voted for this line was £1,980,000 for an assumed length of 165 miles, at the rate of £12,000 per mile, but the length has since been ascertained by survey to be under 141 miles, and the estimated cost is £1,728,100 for the works of construction, exclusive of the cost of land and compensation. The estimate has been made up in two parts, viz.:—From Grafton to Byron Bay, 108 miles 26 chains, £1,271,300; from Byron Bay to the Tweed, 32 miles 50 chains, £456,800; total, £1,728,100.”

The Commissioners, in their report, have treated the estimated cost of the line as £1,652,000; but their report was written before the estimate had been again revised by the railway engineers.

“The line, as proposed, commences in Mary-street, Grafton, on the north bank of the Clarence River. It passes in its course through the counties of Clarence, Richmond, and Rous. The centres of population touched are—Casino, at 62½ miles; Lismore, at 80 miles; Bexhill, at 85½ miles; and Cavanba (Byron Bay), at 108½ miles. Brunswick is passed through at 118 miles, and Murwillumbah, on the Tweed, is reached at 140¾ miles. The large rivers crossed are—the Richmond, at 62 miles 33 chains; Leycester's Creek, at 79 miles 43 chains; Wilson's Creek, at 88 miles 76 chains; and Brunswick River, at 118 miles 36 chains. August, 1888.”

With the permission of the Committee, I will now read the report of the Railway Commissioners on the subject:—

“Proposed Railway from Grafton to the Tweed River, *via* Casino, Lismore, and Byron Bay, 3rd May, 1889. In accordance with the provisions of the Public Works Act, 1888, section 13, we beg to report as under:—The Engineer-in-Chief estimates the cost of construction of a single line of Railway (exclusive of land and compensation) at £1,652,000. Capital expenditure, at 3½ per cent., £57,850. We have carefully inspected the route of the proposed Railway, and also a good deal of the surrounding country, and find the land, for a great portion of the distance, to be of the highest and most productive character we have seen in the Colony. The roads, however, are of the most defective kind. From Grafton to a point 10 miles south of Casino the country generally is excellent for grazing purposes, whilst the banks of the various creeks are well suited for cultivation, and the land is being taken up for this purpose. Very fine timber also exists along the route, both hard and soft woods, ironbark, cedar, pine, &c., largely prevailing. After passing from the pastoral country, the whole of the land thence to Casino, Lismore, the Brunswick, and the Tweed, is of an exceedingly rich character, and capable of producing almost any tropical or temperate zone product. We inspected about 140 miles of river and creek frontages in the district, and found that practically every acre of the land available for settlement had been taken up, and was under cultivation, thus clearly showing that where the means of getting the produce to market exists, the fertility of the land brought settlement.”

In a conversation which I had with Mr. Eddy this morning, he specially emphasised this point, and gave it as one of the principal reasons for constructing a railway, that wherever there are facilities for the conveyance of produce to market, there the land is taken up and cultivated.

“A considerable quantity of land has been taken up in the vicinity of the proposed route of the Railway; but, in consequence of the difficulty of getting produce to market, only a small proportion of the land has been cleared. We were assured, and we feel that in all probability such would be the case, that if the line is authorized a larger number of the existing land owners who possess 640-acre lots, and in some cases more, would at once subdivide their holdings, and that at the least six families would locate themselves where at present there is only one. The soil is so rich that a good income can be obtained even from a 40-acre holding. We feel that the country urgently requires a railway, and are of opinion the demand should be complied with, although it will be some considerable time before the large capital required for its construction will receive a fair return, and we therefore think an exceptional course should be followed in regard to its construction. Along the route of the railway, and within 10 miles of it on either side, there are Crown Lands to the extent of 622,000 acres, at present valued at £761,000, and undoubtedly if the line is made, this land, if sold judiciously, would realise to the State quite, if not more than, double this amount; and as the cost of making the railway will be very heavy, owing to the numerous waterways

J. Barling,  
Esq.  
12 Nov., 1889.

to be crossed and the broken character of the country, we would suggest for the consideration of the Government that the Railway Capital should be credited with one-half the money realized from the sale of this land from the time it is decided to make the railway, the Railway Commissioners to be allowed to have a voice in the arrangements for the subdivision and mode of sale of the land, which could otherwise be sold in accordance with the provisions of the law relating to Crown Lands. We are aware that our proposal is one having no precedent in this country, but it is doubtless within the knowledge of the Government that, to a large extent, lines have been made in America on the Land Grant System, the Railway Companies in that country having had conveyed to them alternate blocks of land to a depth of 20 miles back from the railway on either side, and the sale of these lands has enabled railways to be pushed forward into districts which could not otherwise have had such communication. This district in being isolated from the trunk line cannot contribute any additional traffic thereto, and in consequence of this, and also because of its great richness, we think in the interests of the State we are justified in making this proposal for consideration. In the sister Colony of Victoria too, the Government write down the Railway capital each year to the extent of £200,000 from moneys received from the sale of Crown lands, the total amount so credited up to June, 1888, being £2,200,000. It has been pointed out by deputations in various parts of the Colony that the American railways precede the population very considerably, and that, as a consequence, very speedy settlement follows, but we do not think this state of things is applicable generally to Australia; the fact is lost sight of, that the population of America is exceedingly great, its growth from 1870 to 1880 having been eleven and a half millions, and that there is a continuous pouring of emigrants of all nationalities into the country. On some days, there have been as many as 6,000 emigrants taken into New York alone by ships from Liverpool. If the line is authorized, very careful consideration will have to be given to fixing the position of the terminus at Grafton and Murwillumbah, as ultimately the railway will have to be extended south or west of Grafton, and in the north the line will, ere long, have to be taken forward to join the Queensland system of railways. We have not given the usual statement of estimated working expenses and traffic, as the figures cannot be laid down with any degree of certainty. We therefore ask to be relieved from giving this information, as we feel the figures would be, to a very great extent, speculative, and the subject is one requiring to be dealt with on broad principles of State. With regard to the line itself, if authorized, we would make arrangements for the station accommodation to be laid in the cheapest way, so as to keep the first cost as low as possible until the income from the line justified a more liberal expenditure. (Signed) E. M. G. Eddy, Chief Commissioner. (Signed) Charles Oliver, Commissioner. (Signed) Wm. Fehon, Commissioner."

The Commissioners have pointed out the extraordinary fertility of the land through which a portion of this line would pass, and this is no doubt due not only to the richness of the soil, but also to the abundant rainfall with which the district is favoured. Mr. Russell gives the mean average rainfall at Grafton—I am quoting now from the last meteorological report;—as 36 inches; Woodburn, 56·46 inches; Casino, 40·26 inches; and Lismore, 46·63 inches. The significance of this will be apparent, when it is stated that the mean average for the entire Colony is only 23·68 inches. As illustrating the value of some of the best land on the Clarence, I notice from a report made by the Chief Draftsman of the Mines Department to the Minister, dated February, 1887, that tenant farmers are paying rent in some cases as much as £2 10s. per acre per annum. I am informed, however, that the general average rent for farm lands is at present about 30s. per acre per annum. Comment has been made on the inferior character of the soil between Grafton and Casino. The Commissioners for Railways, however, make it clear that it can only be called poor in comparison with the phenomenally rich lands which are to be found in the Richmond and Tweed River districts. Mr. Lyne, when Secretary for Works in introducing the proposal to the House, said: "The country through which the line passes nearly as far as Casino is not rich agricultural land, but the line will open up a considerable area of Crown land, and will pass through fairly good country, here and there, in the neighbourhood of streams; and in those parts there will be considerable agricultural development." I may also perhaps be allowed to quote the words of Mr. Gullet, of the "Daily Telegraph," who is a very competent witness, and he exactly bears out the remarks of the Railway Commissioners. He says: "With respect to the land between Casino and the Clarence, some widely different accounts were given to me. According to one version, it was very poor land; according to another, it was as rich as any agriculturalist could desire. I did not distrust the good faith of any of my informants, but found it difficult to explain such a conflict of estimate. I afterwards had an opportunity of seeing some that was described to me as first-class land, and then I understood the difficulty. It all arose from the difference of the standards of quality adopted. Coming to this land, with an average estimate of the agricultural land of the Colony in your mind as a standard, you take this as good, easily cleared, easily worked, highly improvable soil, capable of profitable tillage over a great portion, and good for grazing over the rest. But coming to it with the standard supplied by the fertile volcanic soil of the scrub, it certainly looks poor in comparison. The fact is, it is good second-class land, all more or less available for settlement, and certain to be selected were access to it afforded by the construction of a railway. I have no doubt that this case could be made out for the construction of the whole length of railway that, were it formed, within five years of its opening it would run through country occupied by genuine and prosperous settlement from one end to the other." Mr. Campbell, of the Mines Department, in his reports, also touches on the same question. In his pamphlet on "Certain Agricultural Districts in New South Wales," page 33, he says:—"There can be no doubt that the Clarence River district is capable of producing a very great variety of crops, and of supporting an immense population. The extensive area of upland and hilly country, at present considered of little worth, will, in time, be found to be exceedingly valuable for many purposes—such as fruit-growing, dairying, grazing, &c. The Italian settlement called 'New Italy,' situated on this upland 'poor' country, between the Clarence and Richmond Rivers, is a good illustration of the value of such land. For the last six years the remnant of the Marquis de Ray's emigrants have been settled here—thirty Italians and two French families. By dint of the very hard work of men, women, and children, these people have made themselves comfortable homes, fenced in their farms, made considerable clearings, planted small vineyards, which are just now coming into bearing, a few fruit trees, some olives, and mulberries, and pretty little flower gardens around their homes, which, as a rule, appeared to be kept extremely clean and neat." Mr. Clifford, in his report on "New Italy," referred to by Mr. Campbell, speaks as follows:—"Ever since the settlement of the Clarence and Richmond districts, the land hereabouts, and, in fact, for the whole 20 odd miles between these two rivers, had been looked upon as too poor, and useless for other than lumbering purposes, for supplying local needs and the larger markets of Victoria and New Zealand; and it was not until after the dispersion of the Italian immigrants by the 'James Paterson' in April, 1881, which had the effect of sending one Rocca Communiti to the Richmond district, and who, in April, 1882, just twelve months after the dispersion, selected 40 acres of land in the parish of Donaldson, was any attempt made to set aside the damnatory verdict. For some years, being off the main line of traffic, the progress made by these hard-working people was almost unknown, even to the residents of the district, who certainly knew there was a settlement of Italians somewhere, but of any further knowledge people generally were destitute; but, when loads of grapes and healthy-looking succulent vegetables began to appear in the larger townships and settlements, local interest in the little colony was awakened, and visitors thereto astonished at the amount of sterling work these people had so quietly and unostentatiously done." I have also here a letter from Mr. Angus Mackay, in answer to a letter which I sent him asking about the character of the soil between Grafton and Casino. I will hand it in as an appendix. [Vide Appendix B.]

From the foregoing, I venture to think it will be seen that the construction of the line is justifiable on purely local grounds. It has, moreover, a very distinct national bearing, and I am authorized to say that the Minister for Works looks upon the construction of this line as portion of a national undertaking to construct a coast line from the Hunter River to the Tweed, of which this will form a part. When Sir Henry Parkes introduced the railway proposals in June, 1888, he made the following remarks in reference to this coast line:—"Then we come to what must be regarded as a gigantic undertaking, one which will probably occupy a number of years; I should think, at least, five years. But we attach so much importance to it, after the most careful inquiries that we have been able to make, that we think that Parliament will be fully justified in sanctioning this great work. This is a line of a permanent character to strike off from the Hunter River, and extending to the Tweed River. We purpose, if Parliament assents to the proposal, to commence the line at both ends. [Mr. McElhone: It will cost £12,000,000 or £14,000,000!] Not quite. The estimated cost is £6,080,000. We regard this as a trunk line. I have some personal knowledge of the country in places, and a very good knowledge of the whole of the country from trustworthy reports. The line will pass through country than which there is no finer in New South Wales or in the world. This country in many places is richly timbered, and is of great value for its forests. [Mr. McElhone: Only on the banks of the rivers! Mr. Crouch: That is untrue!] I have reason to believe that, from river to river, there is hardly any diminution of good land. I have travelled over some portion of it, which is certainly as rich as land can well be imagined to be; and I do not know that there is in all Australia a tract of country more capable of sustaining a dense, industrious, and prosperous population. There are several rivers which will have to be bridged, and this must be borne in mind in considering the total cost. The estimates are not based on superficial information, as I believe that the whole distance has been surveyed; I am not quite sure on the point, but I think I am correct. The distance from the Hunter River to Grafton is 307 miles, and the estimated cost

cost of construction is £4,100,000. The distance from Grafton to the Tweed—a perfect garden all the way—is 140½ miles, and the estimated cost of that section is £1,980,000, making the total cost—which I think must be spread over five or six years—£6,080,000, according to the calculations of the Engineer-in-Chief. We propose, if the House sanctions this proposal, asking in the first instance for a quarter of a million of money to commence the line.”

J. Barling,  
Esq.

12 Nov., 1889.

I have further to point out that this line will piece in with the proposal to connect the coast line with the tableland. At the present time there is a trial survey being made of a line from Guyra through the Don Derrige scrub (a very rich country), to South Grafton, which promises to be practicable. Lastly, the line may be taken in its strategical aspect, viz. :—The necessity of being able to concentrate troops rapidly at any point on our coasts which may be menaced, and the creation of the harbours which are proposed, will render this more imperative still. Regarding the effect the construction of this line would have on the common roads in the district, the Commissioner for Roads has given me the following memorandum, which, with the permission of the Committee, I will read :—

“In the event of the proposed railway being constructed from Grafton to the Tweed, *via* Casino, Lismore, and Byron Bay, what saving (approximately) would be effected in expenditure upon roads. Will Mr. Hickson kindly say.—J. B., 5/11/89. Roads affected :—

Class.	Length.	£	s.	d.
2	24 miles, Grafton to Cross Roads.....	600	0	0
1	34 miles, Cross Roads to Cosino .....	1,700	0	0
1	12 miles, Casino to Lismore .....	600	0	0
1	14 miles, Lismore to Ballina .....	700	0	0
1	20 miles, Ballina to Cape Byron .....	1,000	0	0
2	14 miles, Ballina <i>via</i> North Creek to Byron Bay	350	0	0
1	30 miles, Lismore to Brunswick .....	1,500	0	0
1	26 miles, Brunswick to Tweed River .....	1,300	0	0
Total.....		£7,750	0	0

“Indirectly, but at considerable distance westerly from proposed route, on the roads from Lismore to Queensland Border, now endowed to the amount of £5,750. When the new line of these is opened the other will probably fall into disuse. The only road on which saving could be effected by construction of a railway from Grafton *via* Casino, Lismore, and Byron Bay to the Tweed, would be on the road from Grafton to Casino, which would be almost abandoned, and its endowment, £2,300 annually, might be omitted from schedule. Nothing could be saved from the other roads shown on list; on the contrary, with the increased settlement the railway would undoubtedly cause even larger endowments in the form of special grants, which would probably be required, and a number of tributary roads would also have to be made.—F.W., 6/11/89. The only road affected by this line would be that from Casino to Grafton, which at present costs £2,300 per annum. I am not at all clear, that much, if any, of this amount, would be saved; as several portions of it would be still required as approaches to railway stations, and as such would have to be kept in repair. The expenditure on the other roads would certainly not decrease, more likely increase on the grounds of being feeders to the railway.—R.H., 6/11/89.”

In regard to statistics of the district generally, these I have already handed in to the Committee, in connection with the proposal for a breakwater at Byron Bay, and I would ask that they be also taken into consideration in reference to the present proposal.

With regard to that portion of the Commissioners' report, in which it is stated that the Government of Victoria write down railway capital annually to the extent of £200,000, it may, perhaps, be interesting to the Committee if I quote from the Victorian Act, which deals with this question, and which the Minister has consulted, and which was referred to by him in the House. I refer to the Land Act of 1869, 33 Vic. No. 360, sections 42 to 44, which read as follows :—

Section 42. From and after the first day of January, one thousand eight hundred and seventy, there shall be paid within each year out of the Consolidated Revenue, from the moneys arising from the sale and alienation of Crown lands, under this Act, to the credit of a Trust Account to be called the “Railway Loan Liquidation and Construction Account” the sum of two hundred thousand pounds.

43. All such moneys as shall from time to time be standing to the credit of the said account shall be and be deemed to be appropriated, and be legally available for the following purposes, viz.:—The repurchase of any debentures heretofore or hereafter to be issued to provide for the construction of State Railways to such an amount as shall from time to time be approved of by the Governor in Council. The making of any railways, the construction of which shall hereafter be authorized by any Act of Parliament.

44. The Minister shall lay before Parliament in the Session next after the passing of this Act, and in every following year, an estimate of the quantities of land which it is proposed to sell by auction during the ensuing year; and such estimate shall specify as far as may be practicable the quantities of each description of land proposed to be sold.

While on this question I may mention that a sum of £862,833 has been paid out of the Consolidated Revenue on account of capital charges in connection with railway construction. This amount is chiefly made up of the cost of the Engineer-in-Chief's establishment to date, and a further sum of £1,047,975 has been paid out of the Revenue to meet debentures as they fell due. I may also point out,—though no doubt this is common to all railway construction in the various Colonies—that the state land through which the railways pass is handed over to the Commissioners without any credit being given to the land revenue, which in fact means using what would otherwise be land revenue for construction purposes. I find that up to the present time, the quantity of Crown land taken for railway purposes amounts to 22,300 acres 2 roods 5 perches. The quantity of private land taken is 21,212 acres 1 rood 24 perches, and the amount paid on account thereof to date is £1,238,151 4s. 7d. With regard to the whole of this important question, I am authorized to say that the Ministers for Works and Lands are in consultation with a view to bringing some tangible proposal before the Cabinet in relation thereto.

The question of writing down the capital value of any new railways from the proceeds of land, increased in value by the construction of such railways, is to be considered by the Cabinet as a separate question, and it is not thought desirable by the Minister to connect the two matters in an isolated case of railway construction. In the Commissioners' report on another railway to come before this Committee, a similar proposal has been made, and the whole question will, therefore, be more fitly dealt with, apart from such considerations the desirability of railway construction.

3. *Mr. Trickett.*] Have you a description of the country traversed, with which to complete your statement? The Engineer-in-Chief for Railways, and the surveyors who will follow me, will give you that.

4. *Temporary Chairman.*] You have no personal knowledge of the country, or of the proposal? No, I have not. I have simply given an historical account of the proposal, and, to a certain extent, the policy of the Government in regard to the matter.

5. *Mr. Dowel.*] You referred to one particular class of country as being very inferior—bad?—I said “comparatively speaking inferior.”

6. Have you any information as to a large discovery of minerals having been made on that land? I believe that mineral discoveries have been made there; but I have no information on that point at the present moment.

7. *Mr. Cox.*] Do you know the country between Casino and Grafton? I have been to Grafton; but I have never travelled between Casino and Grafton.

8. In your reference just now to the Italian settlement on the Richmond, you said that the land there was comparatively poor? Yes. I think my object in referring to that settlement was not quite understood. I did not wish it to be inferred that the railway passed by there. I was only trying to show what could be done on comparatively poor soil in the district.

9. Do you think it desirable that we should spend large sums of money in making comparatively poor country valuable, when we have a large amount of rich country that could be made available? I pointed out that

- J. Barling, Esq.  
12 Nov., 1889.
- that there were national reasons for constructing the line, and I then endeavoured to point out that what is called poor country is only comparatively poor,—that very good results can be obtained from it which would justify the construction of a railway *per se*.
10. Is it not more desirable that we should give the people, who are settled on really rich land, opportunities of getting their produce to the coast, than that we should afford those opportunities to people on comparatively poor country? Undoubtedly, if it stands by itself.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

- H. Deane, Esq.  
12 Nov., 1889.
11. *Temporary Chairman.*] You are Acting Engineer-in-Chief for Railways? Yes.
12. Do you know the proposed route of the railway from Grafton to the Tweed? Yes.
13. Have you visited the country itself? No; I have not been over the country.
14. You have no personal knowledge of the country nor of the proposed route? No.
15. What surveyors have been engaged on this work? The surveyors at present in the field are Messrs. Lloyd, Wilkins, and Caswell.
16. Is there any officer in the head office who has been engaged on this survey at any time? Yes; Mr. Alexander has examined a portion of the line between Byron Bay and the Brunswick.
17. That portion only? Yes; and Mr. Burge has been through the first portion, from Grafton to Byron Bay. Mr. Alexander is in the head office, but Mr. Burge has left to examine the line from the Brunswick to Murwillumbah, and he will be able to give information to the Sectional Committee visiting the district.
18. You have only one officer in the head office who has been employed on the line, and he only knows that portion of it from Byron Bay to the Brunswick? Yes.
19. All the other gentlemen are at present in the field? Yes.
20. It would be very inconvenient to bring them here? Yes; it is a long journey, and it would delay the work very much.
21. Have you gone personally through the reports and data upon which this proposal is based? Yes.
22. What are the ruling gradients on the line? The ruling gradient on the line I think we may say is 1 in 50; but there is a small portion in the descent to Byron Bay where I am very much afraid we shall not be able to get less than 1 in 40.
23. Then it is a 1 in 40 grade? The 1 in 40 grade is confined to that one place.
24. Is it a short pinch?  $1\frac{1}{4}$  mile.
25. If the proposed railway is to be worked as a continuous railway from the Tweed to Grafton, that pinch will govern the whole line? No. You can have a banking engine if you confine your steep gradients to one place.
26. Is this pinch necessary to enable you to get down to Byron Bay? Yes; but Mr. Burge is going to examine it himself; and if necessary one of the surveyors will be deputed to examine it very carefully, because we are very anxious to get rid of the steep grade if possible.
27. At all events this grade of 1 in 40 occurs in the piece with which Mr. Alexander is familiar? I believe Mr. Alexander is familiar with that portion.
28. Have there been many deviations and alterations since the first survey of the route? Yes; a good many alterations. There are a number of short lengths which have been altered, and altogether the amount of alteration is considerable.
29. Have these alterations been made for the purpose of avoiding difficulties such as rivers and ascents? Yes.
30. The railway will have to cross several rivers, or the arms of rivers? Several important rivers and small creeks will have to be crossed.
31. Will there have to be a bridge over the north or south arm of the Richmond? Yes.
32. At Lismore and at Casino? We shall cross the river at Casino; but we do not cross it a second time; we cross the Leicester Creek at Lismore.
33. At each place there will have to be a bridge? Yes.
34. Is there any serious river or creek crossing near your starting point at Grafton? There is only a small creek in the town of Grafton.
35. What is the object in taking the railway so close to the banks of the Clarence as is proposed? Do you mean near Grafton?
36. Yes? That is the only high ground there that is not flooded.
37. The line is above the flood level? Yes.
38. Is it not the case that the banks of the Clarence near Grafton and at other places are frequently washed away? This has been reported to be perfectly safe. It was picked out by the surveyors, and Mr. Burge has examined it.
39. Will it be necessary to protect the river banks along which the railway proposes to run to get into Grafton? I think not.
40. What is the next creek of considerable importance requiring to be bridged—nothing until we come to Casino, I suppose? The only important bridges are those over the Richmond and over Leicester Creek at Lismore. There is the Myall Creek and another creek which will have to be crossed, but those bridges will not be of much importance.
41. What is the estimated cost of the bridge across the south arm at Casino? £51,730.\*
42. Is it to be an iron or a wooden structure? An iron structure.
43. Is not the district noted for its timber. Could not a wooden bridge be used with advantage. What is the difference between the cost of iron and wood there? Wood must be cheaper for the superstructure; but it would not answer for the piers? The piers would be too high.
44. What is the estimated cost of the Leicester Creek bridge? £42,637.
45. Is it also to be of iron? Yes.
46. What is the next bridge of any magnitude? The next bridge is that over the Brunswick.
47. What is the estimated cost of it? £9,246.
48. Is that also to be an iron bridge? No; it is estimated as a timber bridge, with truss spans.

49.

\* NOTE (on revision) :—Borings have now been taken, and the results show that this bridge can be built for about £15,000.

49. Are there any other rivers or creeks to be crossed before the Tweed is reached? Nothing of importance—nothing calling for special construction.
50. You do not cross the Tweed at all? No.
51. Could you tell us the ruling gradient between Grafton and Casino;—what is your steepest gradient there? 1 in 50.
52. And between there and Byron Bay? The same, with the exception of one small portion where it is 1 in 40.
53. I understood that the 1 in 40 gradient was between Byron Bay and the Brunswick? No, on this side of Byron Bay.
54. Between Lismore and Byron Bay? Yes.
55. Then the remainder of the line, from Byron Bay northward is 1 in 50? There will be nothing worse than 1 in 50.
56. Will this be an expensive line to construct? Yes, it will be, taking it all round. The bridges of course will make a considerable difference in the cost. Two bridges alone come to £94,000.\*
57. On the plan behind you there are two lines shown from Byron Bay northward. Which is the one we are considering,—the inner one? The line along the coast goes to Chindorah; the other line goes to Murwillumbah.
58. Was the coast line surveyed? Yes, it has been surveyed, and it has also been staked out.
59. And it has been discarded in favour of the line running more inland? Yes. Both lines have been staked out, but the inner line is the line for which the estimate has been prepared.
60. What is the reason for taking the inner line instead of the coast line? It serves the better country.
61. Are there any more engineering difficulties on one line than on the other? The coast line would be on flatter country, and would be cheaper.
62. Whereabouts is it proposed to join with the Queensland line, at the border. That line at present stops at Southport? Yes. I cannot tell you exactly; but Mr. Burge is going through Brisbane, and he has instructions to see Mr. Stanley and ascertain what surveys have been made to the border, so that we may be able to connect with them. I understood from some of the residents that it was impossible to connect from Murwillumbah, and we thought at one time that it would be necessary to adopt the coast route for this purpose.
63. It is quite possible that after the line has been constructed, the Queensland authorities may not find it possible to come opposite to you on the other side? We should then have to continue our line for some distance in order to meet their line. An officer will examine the country to see approximately where a line can be taken.
64. What are the instructions given to the surveyors in the field at the present time,—to try and reduce the grades, or are they staking out the line permanently? They are staking out the line permanently. If they have any deviations which they think desirable, they submit them.
65. How long have the officers been in the district? I do not remember exactly when they went there.
66. Their knowledge of the character of the country would not be worth much, I suppose. They could only give us an idea of the character of the country through which they have passed, from an engineer's point of view? Yes.
67. *Mr. Trickett.*] When was the first survey for the line made? A good many years ago. Did not the Under Secretary give you that information?
68. How much a mile will it cost? The present estimate is £12,256 a mile.
69. Is that right through? Yes.
70. That is irrespective of compensation for land? Yes.
71. Will you give us the information for the two sections? The estimate for the section from Grafton to Byron Bay is £1,271,300. The length of that portion is 108 miles 26 chains, and the cost per mile £11,736. The estimate for the portion from Byron Bay to Murwillumbah is £456,800. The length of that portion is 32 miles 50 chains, and the cost per mile £14,000.
72. *Mr. Lee.*] What is the distance from Murwillumbah to the Brunswick? Approximately, 22 miles.
73. From the Brunswick to Byron Bay?  $10\frac{1}{2}$  miles.
74. From Byron Bay to Lismore? 28 miles.
75. From Lismore to Casino?  $17\frac{1}{2}$  miles, Casino is  $62\frac{1}{2}$  miles from Grafton.
76. *Mr. Trickett.*] This line may be regarded as a comparatively expensive one? Yes; it is, compared with other country lines that have been considered by the Committee.
77. What instructions were given to the surveyors as to the ruling grade in this case;—any particular instructions? They have had no general instructions. Latterly the object has been in all cases to improve the older line, which had gradients of 1 in 40. The object has been to cut out earthworks and, if possible, to put in flatter grades.
78. Do you think it would be possible to reduce the grades still further without much extra expense? I am afraid not; but everything possible is being done. The worst part is that going down to Byron Bay.
79. As far as you are acquainted with the route is the bulk of it easy for railway construction. Do the difficulties occur at frequent intervals? There is a good deal of flat country between Grafton and Casino.
- 79½. After passing Casino the country gets ridgy? Yes; you can judge the character of the country pretty well by the course of the line as shown on the plan. The more crooked the line, the more difficult the country.
80. Do I understand that the surveyors are out now trying to improve the line? Yes; they are staking out the line permanently, and as they do the permanent staking they look out for improvements.
81. How long do you think it would take to make the line if you started, as is suggested, at both ends simultaneously? I hardly know.
82. *Mr. O'Sullivan.*] The route of the line between Byron Bay and Murwillumbah appears to be very sinuous;—is it the straightest possible line that could be obtained? Yes; it is by no means flat country through which the line passes, and you cannot choose your direction. You have to follow the lay of the land.
83. The country between Byron Bay and Murwillumbah is of a very rough character? Yes; a great deal of it is very rough.

H. Deane,  
Esq.

12 Nov., 1889.

\* NOTE (on revision):—This has now been modified.

- H. Deane,  
Esq.  
12 Nov., 1889.
84. And in order to avoid the roughest portions you have to make the deviations which give the line such a sinuous appearance? In going through hilly country you must curve about a good deal.
85. I notice that there is a second line depicted on the plan as going from Lismore to Byron Bay. Which of the two lines are we now considering? The eastern line has been abandoned.
86. Adopting the western line you come right down to the point near Byron Bay? Yes.
87. Then I notice that you go back almost parallel for a long distance. The line depicted on the map has since been improved upon by a deviation after leaving the township at Byron Bay, which serves better country, and avoids the hilly portion at the back of Byron Bay? Yes; between Byron Bay and the Brunswick there was a coast line, and an inland line surveyed. Neither of these lines has been adopted; but a middle line has been taken which combines the advantages of the two others.
88. *Temporary Chairman.*] That is the line that is depicted on the tracings before the Committee? Yes.
89. *Mr. Tonkin.*] Which is the line beyond the Brunswick? The inland line.
90. *Mr. O'Sullivan.*] The line between Cavanba and the Brunswick will not have to submit to competition with water carriage, owing to the fact that there is no harbour between those two places? No.
91. Therefore it is a perfectly safe proposal to run the line so close to the coast? Yes.
92. In reply to a question asked by the Chairman, you said that at one place near Byron Bay, you were compelled to use a grade of 1 in 40? Yes.
93. Is there any possibility of avoiding that? The country is going to be examined. I have given instructions for the line to be carefully examined again. At present I am afraid that it cannot be done; but the utmost endeavours will be used to improve the grade.
94. From the information at your disposal do you consider the country of such a character that it would be impossible to make roads there at a reasonable cost? I should think there would be no difficulty about making roads. They would be expensive. The more hilly the country, of course the more expensive you must expect the road to be.
- 94½. I am given to understand that the country is so difficult in many places that it is almost impossible to construct roads at a reasonable cost? The hills are very steep, and the country is very thickly timbered.
95. On this point, I suppose, you would not care to express a definite opinion? No.
96. *Mr. Tonkin.*] Can you tell us the distance from the coast to Casino in a direct line? 27 miles.
97. Then the line runs on an average about 27 miles from the coast between Grafton and Casino,? About half way between Grafton and Casino, it is only about 20 miles from the coast.
98. Would it not be possible to continue that line direct to the terminus as you have it now, without going into Byron Bay at all? No; the country is far too rough.
99. You have to leave Casino and run north-east, or east north-east, to get to Byron Bay? Yes. If you ran in a direct line to Murwillumbah you would have to cross a range, in which some of the points are 2,700 feet high, and others 2,000 and 1,400, gradually falling towards the coast to about 1,100.
100. If you continued the line 27 miles inland you would go behind those hills altogether? Yes. Mount Warning is only 20 miles from the coast, and it is 3,000 feet high.
101. Has the line been twisted about in the manner shown on the plan, for the express purpose of getting to every little township? No; in order to get round the hills and up the gullies.
102. For no other purpose than to construct it in the easiest possible manner? Yes.
103. It is not taken out of its course to serve any township? That is correct.
104. Then the line is surveyed in the most direct route you could have it? Yes. If you wished to connect Grafton, Casino, Lismore, Brunswick, and Murwillumbah, you could not have a more direct route. Approximately it is the only route you could take.
105. Suppose you wanted a line direct from Grafton to Murwillumbah, would it be necessary to go round in the same manner? Yes; you would have to go round by Byron Bay.
106. How many different surveys of the line have been made? I could not tell you. Practically there has only been one survey; but there have been repeated improvements of portions of the length.
107. What was the grade of the first survey;—was it 1 in 40? Yes. Until lately it has been 1 in 40. Before the present surveyors went out to do the permanent staking the grade adopted was 1 in 40.
108. With the exception of one place at Byron Bay, you have a grade of 1 in 50? Yes.
109. Do you think that it would not be possible to reduce that to 1 in 66 without materially altering the cost? I doubt very much that that could be done; but I know that we have the best line in any case. If it can be done, it will be done. There are sometimes certain points that you have to go over. There may be a saddle, and you may be bound to take a certain direction. Then it is only a matter of laying down the grades on the section. If you put in 1 in 40 you have less earthworks; if 1 in 50, a little more; if 1 in 66 more still. If the extra earthwork involved is not too great, there is no reason why a grade of 1 in 66 should not be adopted.
110. Cannot a grade be sometimes altered by a curve, without increasing the earthworks? Yes, in some cases; but the best line has been adopted in all cases here, so as to give the greatest possible flatness.
111. Are the surveyors instructed to get a grade of 1 in 50, or a lesser grade if possible? A lesser grade if possible.
112. Do you know how long it will take these men to go over the survey before they will be prepared with the plans? I believe that they will have finished the field work in about two months.
113. Of course you cannot tell the Committee for certain what the grade will be until you get the sections. It may be less than 1 in 50? When the section comes to be considered in the office, it is a matter for calculation whether it is desirable to increase the earthworks so as to improve the gradients. If the grades were only heavy at one spot, we should be inclined to go to a considerable expense to improve them, in order that they should not be worse there than on other portions of the line.
114. The estimated cost of the line is £12,256. This will be a very expensive line to construct? Yes. Some parts of it are very heavy indeed. The earthworks are very heavy.
115. Do you know whether the portion from Grafton to Casino and thereon to Byron Bay will cost very much less per mile than the portion between Byron Bay and Murwillumbah? From Grafton to Casino is the lightest portion. A great deal of it goes through very flat country, and the line is scarcely above the surface of the ground.
116. *Mr. Lee.*] Although the line is submitted as a whole it is practically in two distinct parts, is it not—the Grafton portion and the Richmond portion? Yes.

117. Where would the Richmond and Tweed portion of it terminate? The good country is from Casino on. It is fair country from Grafton to Casino; but very different from what you get between them and Byron Bay.

H. Deane,  
Esq.  
12 Nov., 1889.

118. The object of the surveyors now in the field is to reduce the grades and to straighten the line as much as possible? I should say to improve the line. That implies a good deal.

119. That would mean reducing the grades and making the line as straight as possible? It might, or it might mean making it more crooked in order to save earthworks.

120. Between Casino and Grafton there are two big creeks—the Myall and the Myrtle Creek? Yes.

121. Those will require expensive bridges? Nothing out of the way;—some timber openings.

122. With reference to the grade of 1 in 40 at Byron Bay, would the existence of such a grade prevent the hauling of the ordinary trade over the line? I doubt very much whether it would. A down-hill grade in the direction of the principal traffic is not a great disadvantage. Supposing, for instance, you have an undulating line, and a grade of 1 in 40 downhill in the direction of the heavy traffic, there is no great hardship, because an engine that would take produce up a grade of 1 in 60 with a full load might be quite equal to taking a lesser load in another direction over a grade of 1 in 40.

123. You are acquainted with the line between Singleton and Glennie's Creek? Yes.

124. Has it ever been brought under your notice that there is any portion of that line that has blocked the traffic, because of the heavy grade? Yes.

125. What is the heaviest grade between Singleton and Glennie's Creek? I think 1 in 33.

126. In three different places? Yes.

127. There is no grade of 1 in 33 on the Grafton-Richmond line? No.

128. You feel quite capable of coping with a grade of 1 in 40 with an ordinary engine and ordinary rolling stock? Yes.

129. Supposing it were desirable to leave the Byron Bay question out of the calculation altogether, could the line from Murwillumbah to Casino be made much shorter than it is now proposed to make it? No.

130. The difference would be insignificant. Whether the improvements to Byron Bay are considered or not, the railway must go to within easy distance of it? Yes. I believe that the line that is now being taken is the easiest and cheapest line that you could make from Casino to Murwillumbah.

131. And will it serve most country? Yes.

132. As to the general policy. Is it within your province when proposing lines of this character to take into consideration their ultimate connection with existing lines? Yes, I think so, decidedly.

133. Supposing it were decided to construct this line as proposed, how could it be connected with the main northern line, and where? It could be connected between Tenterfield and Casino.

134. What would be the distance? Eighty-seven miles.

135. Has any survey been made between Casino and Tenterfield? Yes.

136. Have you the trial plans in the office? No; they were burnt.

137. Consequently you are not prepared to speak as to the character of the country? No. There are no plans and sections, and the reports are very meagre. I tried to get what information I could.

138. At all events if it became a question of connecting this line with the main northern system, it could be connected at Tenterfield? Yes.

139. Supposing it were thought desirable to connect it by way of Grafton, South Grafton, and Glen Innes, would that be a practicable route? There is a line staked out from Glen Innes to Grafton; but it is a very bad line. I believe the only practicable line has been taken, because other lines were tried and abandoned. The line that has been staked out contains eight chain curves and 1 in 33 gradients.

140. Has it been abandoned? No.

141. Is it looked upon as a practicable line? It is looked upon with very great disfavour.

142. Is there any other surveyed route from the main northern line to this one? A line was recently explored from Guyra to South Grafton.

143. A line has been surveyed from Guyra to Grafton? It has only been explored. Some surveyors have been sent out to make the survey.

144. It has not yet been discovered whether a practicable route could be obtained? There is every probability of it.

145. What is about the distance from Murwillumbah to the Queensland border? From 7 to 8 miles.

145½. Where would this line join the Queensland line? We cannot tell that. An officer has been deputed to see the engineering authorities in Brisbane, with a view to finding out whether they have made any surveys to the border.

146. You know, of course, to about what point the Queensland railways have now been made? Yes; to Southport.

147. From the Queensland border to Brisbane is 75 miles? Yes.

148. If at any time it should be thought desirable to have a uniform gauge between the Colonies, by a construction of 75 miles of railway the Queensland trains could run through from Brisbane, and through Tenterfield, Werris Creek, Nyngan, Cobar, and Broken Hill, to the border of South Australia, and if South Australia reduced her gauge there would be as direct a route between Brisbane and Adelaide as it would be possible to make? Yes.

149. Did you ever take the trouble to ascertain the distance that would be saved by going by that route instead of by the existing route? No, I have not; but I believe that it would be a great deal.

150. Do you think 500 miles could be saved? Instead of going through Sydney and Melbourne?

151. Yes? I could calculate the distance.

152. Perhaps you will send in a return, showing the actual distance from Brisbane to Adelaide by this route? Yes.

153. I believe that the Engineer for trial surveys has been over this district? He has been over the line from Byron Bay to the Brunswick.

154. You have simply dealt with this question from an engineering point of view? Yes.

155. You have not considered it as a matter of railway policy? No. I have not been directly in charge of the surveys until recently.

WEDNESDAY, 13 NOVEMBER, 1889.

EVENING SITTING.

Present:—

JACOB GARRARD, Esq. (TEMPORARY CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.  
The Hon. GEORGE HENRY COX.  
JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.  
CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

H. Deane,  
Esq.  
13 Nov., 1889.

156. *Mr. Lee.*] I should like to ask if you can tell us the distance from Brisbane to the Tweed and so forth? I have a return showing the distances between places on the route between Brisbane and Adelaide. I will read it. I will give the details of the distances between Brisbane and Adelaide, taking this particular route. The distance from Brisbane to Murwillumbah *via* Southport 60 miles, Murwillumbah to Casino 81 miles, Casino to Tenterfield 87 miles, making 228 miles. Tenterfield to Werris Creek 225 miles, Werris Creek to Dubbo 154 miles, Dubbo to Nyngan 99 miles, Nyngan to Silverton 373 miles, Silverton to Adelaide 319 miles—total 1,398 miles. By going along the Queensland line *via* Warwick and Tenterfield, the distance is 16 miles longer, making a total of 1,414 miles.
157. The route under discussion is 16 miles shorter than the existing line? Yes, including the length from Casino to Tenterfield.
158. That is of course 16 miles saved in Queensland, or the difference between the line from Brisbane *via* the Tweed to Adelaide, and from Brisbane *via* Wallangarra to Adelaide? Yes. The distance from Brisbane to Adelaide *via* Sydney and Melbourne, the present route—is 1,808 miles. It shows a reduction in the distance of 410 miles.
159. *Mr. Humphery.*] I did not catch the last reply. The distance from Brisbane to Adelaide *via* Sydney? 1,808 miles, and the distance by the Tweed and Richmond line crossing by Werris Creek, Dubbo, Nyngan, Wilcannia, and Silverton would be 1,398 miles.
160. Without touching at Sydney? Yes, without touching at Sydney.
161. From Brisbane by the Tweed you branch off at Werris Creek? Yes.
162. *Via* Murwillumbah, Casino, and Tenterfield is 1,398 miles? Yes.
163. You don't touch at Sydney? No. *Via* Warwick is a distance of 1,808 miles.
164. *Via* Warwick coming to Sydney first? That is 1,808 miles.
165. Then suppose you come by way of the Tweed? That would be 16 miles shorter—1,792 miles.
166. *Mr. Dowel.*] What are the chief engineering difficulties on this coast route that cause this large estimate of cost? The bridges and the rough nature of the country.
167. Can you tell the Committee the cost of the whole of the bridges? Roughly £175,500.
168. Including all the minor bridges? Yes.
169. A number of the bridges that you propose to construct will be of iron? Two of them.
170. Is it not a fact that in this particular district excellent timber abounds? Yes.
171. What do you estimate the cost of an iron bridge per lineal foot? It comes to about £50 a foot.
172. What would be the cost of a timber structure per lineal foot? I think that timber piers would scarcely be admissible. The piers would be very high.
173. What would be the length of the cylinders? I have not that information.
174. Could you give an approximate estimate from memory? I am afraid not.
175. I want to ascertain whether there are any insuperable difficulties in the way of obtaining timber? I think the length of the cylinders would be from 30 to 40 feet. The bed of the Richmond River is 70 feet below the banks.
176. Your cylinders would not be above 50 feet above low-water mark would they? I cannot tell exactly. I am giving an approximate estimate at present. The estimate has been made as a rough approximation, because at present we are waiting for the results of the boring.
177. If the £50 a foot for an iron bridge is only an approximate estimate, surely you can give something like an idea of the cost of a timber structure? They vary from £15 to £25 per foot, according to the piers. When we have had timber piers the height of which was not great the cost has been as low as £15, but with higher piers built of brick and stone the cost has been as much as £25.
178. Is it not a fact that our timber bridges have not exceeded £15 per lineal foot when there have been no great difficulties, such as you have pointed out in regard to their construction? Yes.
179. Suppose the length of the piles required for the bridges should not exceed 70 feet, is it not a fact that the timber for them can easily be procured in the district? I should think it would be possible to get piles 60 or 70 feet in length.
180. Suppose you could not get those lengths, have you not another mode of construction by fish joints that would answer the same purpose? Yes; we could cut off the piles at a certain height, and frame them into the pier.
181. Bridges constructed at £15 a foot would answer all practical purposes for many years, would they not? If those bridges were built of timber I do not think you could get the piers at £15 a foot. The timber bridges built at the rate of £15 a foot have been bridges which have not stood more than 20 feet off the bed of the river.
182. At any rate £20 a foot would cover the whole cost? I am not sure about that without going carefully into it.
183. With reference to the designing of our iron bridges, have you an officer in the Department who does that specially? Yes.
184. What is his name? The draughtsman who is entrusted mostly with the ironwork is Mr. Howarth.
185. You are aware that a gentleman has lately been imported from England for the purpose of designing these bridges in the Public Works Department? No; I am not.
186. Do you know Mr. McDonald? Yes.

187. You are aware that his whole attention is now specially occupied in designing and carrying out the construction of iron bridges? Yes; I know that he has designed a number of road bridges of iron.
188. And that he was brought from England specially for that purpose? I do not understand under what circumstances he came here. He has been here a great number of years, I think.
189. Are you aware that he has a special knowledge of the construction of iron bridges? I know he has paid special attention to the construction of iron bridges.
190. And that he has been engaged on that for some time? Yes; that is part of his duties in the Roads Department.
191. Will any part of the proposed line compete with water carriage, and, if so, where? I think not. It could not be said to compete with water carriage.
192. At no particular point? No.
193. It would not be in the position that some of our railways are in—of having to compete with the rivers? No.
194. I suppose that the line has been designed with the idea of its being a feeder to the rivers? Yes.
195. When the whole project is completed how will it affect Sydney or the northern rivers? I should think that any railway that is carried out would be indirectly to the advantage of Sydney, as well as of the whole country. It would increase the product of the district, and indirectly increase the trade of Sydney.
196. In designing the line, you have had that in view I presume—the bringing of traffic to Sydney—or have you considered the desirability of bringing the traffic to the various rivers on which it is proposed to spend large sums of money? That has been the object of the line more than anything else—to bring the produce of the particular districts to the ports available to the rivers themselves.
197. That is the object of the railway generally? Yes. You see it is a detached system of railway. It is not connected with the existing railway system. Consequently, all that it can do would be to promote local traffic, or bring produce to where it can be carried to Sydney—to bring it to the ports.
198. In designing the line from Grafton to the Tweed was it taken into consideration that in all probability the portion from Grafton to Maitland would also be constructed? That was not a necessary part of this scheme, which, I believe, was considered as a system by itself,—being a railway intended for getting produce to the rivers; in one case,—chiefly to Grafton.
199. Was not the proposal to make a line from Grafton to Maitland taken into consideration when the proposed line was designed from Grafton to the Tweed, or was it determined, on its own merits, to make Grafton a terminus? The House considered this, and the vote was taken upon it separately.
200. I am speaking of the railway policy in your department? I think it may be said to be a separate matter.
201. In reality they are two separate proposals? Yes.
202. I suppose that a very large amount of local as well as departmental information was obtained when you were laying out this line? Yes; I believe so.
203. As to the character of the country, for instance, and of the population? Yes.
204. Is this line not surveyed? Yes.
205. And the whole of the particulars are to hand about the matter? Yes. The character of the country was fully reported upon.
206. Are the reports available? I have not got them here. We have not produced them because the latest statistics have been collected by the Commissioners.
207. The reports have been handed over to the Commissioners? No; the Commissioners collected the information themselves. They have much more recent information about the district than we have. I believe that their object in visiting the district was to obtain information.
208. Have you any other information to give the Committee? No.
209. And the Committee are in possession of all the information necessary to guide them in this matter from your departmental point of view? Yes. With regard to the estimates, it should be considered that to a great extent they are only approximate. They must be again revised, and I believe that if anything the estimate will be reduced. I believe it will be possible to reduce the estimated cost of the bridges materially. As I said before, when this estimate was made there was not sufficient information to allow of anything but a mere approximation. When all the information is to hand the matter will be carefully gone into, and the greatest economy will be exercised. We shall know then what the bridges are likely to cost. At present, rather a large margin has to be put on the estimate to allow for unforeseen contingencies.
210. Nevertheless, you are of opinion that the estimates you have allowed are ample? Taking it all through, I believe that the estimates are ample.
211. *Mr. O'Sullivan.*] Was a line ever surveyed from the Tweed to the Richmond River? This is the Tweed to the Richmond River line.
212. Was a line ever surveyed by your Department from the Tweed River to the Richmond River near the heads? Not that I know of.
213. Was a proposal ever made by the residents that such a line should be carried out? I cannot tell you—not to my knowledge.
214. Did the departmental scheme for surveying this northern coast district embrace a line from Grafton to Glen Innes? Yes; that is to say, among the same proposals. Among the proposals which were made when this line was voted upon, a line from Grafton to Glen Innes was also passed. That was included in 1884.
215. *Mr. Tonkin.*] Did your Department receive any report from the Commissioners at all with regard to this railway? I have not seen it. The Minister probably had a report.
216. As a rule, you do not receive reports from the Commissioners before you estimate the cost of new lines? No.

Colonel F. R. de Wolski, Director of Military Works, sworn, and examined:—

217. *Temporary Chairman.*] What position do you occupy in the Government service? I am Colonel in the New South Wales Forces.
218. Are you in charge of some portion of the defence work? I am Director of Military Works.
219. You have had some considerable experience in military matters? Yes.
220. What is the nature of the evidence you purpose giving the Committee on the subject under consideration? On the strategical advantages of a coast railway—the necessity for coast railways in Australia.

Colonel  
de Wolski.

13 Nov., 1889.

Unless the Government of the country are prepared to fortify all the important harbours of refuge, sooner or later it will be an absolute necessity to make such a railway. There will be two alternatives,—either defence or a coast railway, by which troops can be rapidly thrown upon any threatened point.

221. If an enemy attacked our Colony, is it not likely that the attack would be upon the metropolis, where they could get the most loot? No; it is not likely that they would knock their heads against the metropolis—they would probably start from another point.

222. What would be the good of their landing in an inaccessible part of the country like the Tweed? Well, they might seize colliers. The first thing that they would want would be coal. They cannot coal in the open sea. They might go into Byron Bay, and make that place their base of operations. They must have a place of that sort.

223. That would be an argument against the making of Byron Bay into a harbour, or fortifying it when it was constructed? No; it would be an argument in favour of the making of railways to bring up an adequate force to prevent an enemy from landing. General Edwards points out in his report that Australia may be threatened, not at centres of commerce, but at some out-of-the-way place.

224. Is not that a reversal of what it is ordinarily thought would happen—has it not been thought that an enemy will attack some principal city or port along the coast, instead of going to inaccessible places? Not necessarily.

225. Is it not a reversal of what it has been understood would be the tactics of an enemy? I think it is a new light upon the subject. General Schaw and others, in their report, have always ignored the danger that would arise from an enemy getting a footing in any part of Australia, and forcing you to undertake the task of driving them out.

226. Then you think that an enemy would not attack the metropolis because of its being comparatively well guarded, but that they would attack an outlying place? The probability is that the enemy would have to create a fresh base, and that he would not at first attack Sydney. He would require to have a footing on the Australian coast, before he could take Sydney.

227. Do you think it likely that an enemy would land in the country between the Tweed and the Clarence, where there is very little to attract him, and where he would be such a distance from the metropolis? It is comparatively near the metropolis—it is only a few hours' sail from Newcastle.

228. Yes, but you are speaking of travelling by land? No; I do not mean landing; I only mean landing in the sense of making a fresh base of operations—perhaps taking his convoys in. Probably the enemy would take five or six ships into Byron Bay, and make them secure there.

229. Would not that be dangerous unless Byron Bay is made fairly secure as a harbour for him? If you make it secure you must defend it, or provide a railway by which we could throw in troops to drive an enemy off.

230. And there is that danger—we shall have to defend the harbour or construct a railway to it for the conveyance of troops? Yes, and the same with regard to all the rivers. If you open the Clarence River you will make it more dangerous.

231. Then you regard this proposed Grafton to Tweed Railway as a portion of a through coast line? Yes, and the lines should afterwards be connected.

232. Would it not do for your purpose if connected with our northern railway at Tenterfield, without carrying it down the coast? That would only meet one point. If you connect from the watershed line to the coast at different points, you multiply the number of lines. If you want to move troops to Grafton or to the Macleay you would have to go a long way round. It would take a month at present.

233. Unless the coast is protected by forts all the way along you must have a coast railway? I think so. As long as you have harbours of refuge, or places where they could make a basis, they would not come to Sydney, they would get to some secure place, where they could form a base.

234. Of course you have no knowledge of the coast from the Tweed down to Sydney? Only to Newcastle.

235. And it is from that point of view that you think the proposal would be beneficial as being a portion of this coast line? It will be almost a necessity to have a coast railway in Australia.

236. You are looking at it purely from a military point of view? Purely from the view of a field army being rapidly moved to meet any possible invasion. The object of an enemy might not be to take any particular place—it might be to get a footing, and secure terms of peace. They might say: "Peace is declared. We have a footing in Australia. Give us a share." That is one of the arguments about the channel tunnel. The opponents of that scheme say it would be a danger, because, in the event of peace being declared, an enemy might make it a term of peace that the channel tunnel should be handed over. Any footing obtained in the country by an enemy would be a very great danger.

237. Do you think it at all likely that so large a force would be thrown upon the shore of Australia that it could not be dislodged by the local forces? I do not think that the Germans or the French would do it by half measures. They would send a large force, and trained men—not volunteers.

238. And take some portion of territory rather than levy blackmail? I think it more probable.

239. They would come to stay? I think they would come to stay. There are not many parts of the world left now, and the Germans especially like ready-made colonies. I think Australia is quite enough to tempt any power, and they are unscrupulous enough to take advantage of any opportunity.

240. That is characteristic of all military powers, is it not? It is, unfortunately.

241. *Mr. Humphery.* Would not the fact of most of our harbours having not more than from 12 to 15 feet of water on the bars be a protection against a foreign force? At present I think there would not be much danger from the harbours that are very shallow, but proposals will ultimately be made to open those rivers.

242. Assuming that the Richmond River has 12 or 15 feet of water on the bar, and that the Clarence has about 15 feet, do you think that there would be any danger? There would be no danger of a big ship running in there, but there would be danger at Byron Bay.

243. In the event of its being converted into a harbour of refuge? Yes, it would be a very great danger.

244. Otherwise, you say there is no particular risk of invasion if the harbours are left as they are at the present time? Very little. There would be very few points of danger between Byron Bay and Port Stephens.

245. Which would be likely to tempt a foreign force to land? I should think any of those open harbours—Port Stephens, or the others.

Colonel  
de Wolski.

13 Nov., 1889.

246. I suppose Newcastle would be dangerous? It is fairly well defended, and it is on the railway.
247. As a matter of fact, unless we improve the various harbours along the coast, there are at present no points which would require this coast railway for the purposes of defence? A coast railway is only necessary when there is any possibility of ships coming in. An attack on Newcastle would probably be preceded by the occupation of Port Stephens. Ships cannot lie outside a port with the liability of a storm coming up next day and sweeping them off with their transports. It would be necessary to form a base.
248. A large ship would draw more than 15 feet of water? Cruisers might not take more than 18 or 20 feet of water.
249. The only port that might require defence is Port Stephens? Or rapid railway communication. If we could throw a couple of thousand men into that place in twenty-four hours it would be rather awkward for an enemy coming in there. They would not be easily able to coal in the face of even field guns. It would be a great thing to have the means of throwing troops rapidly on a spot where there was a possibility of ships coming in.
250. In the event of this railway proposal being carried out we shall be safe in concluding that unless the Richmond, the Clarence, and Byron Bay, are improved, so as to admit vessels of greater draft than 18 feet, there will be no danger? I think there are one or two points along the coast where, during particular winds, there is very safe anchorage.
251. If we improve the harbours sufficiently to admit vessels of very large tonnage, then it will be necessary, for the protection of those harbours, to construct a railway to convey troops for the defence of those points? I think that ultimately a railway will be an absolute necessity.
252. *Mr. O'Sullivan.*] You appear to think that some day there will be danger of a very large force of Germans, or a contingent from some other military power, landing here;—do you think it possible that any nation in Europe could spare so large a number of men as would be necessary to make an impression on New South Wales? I think that in the event of our losing the command of the sea there would be an enormous danger to Australia. General Edwards quite coincides with that.
253. You think it possible to find transports to send a sufficiently large force out here? I think it quite possible.
254. On what points are we in danger? I think all along the coast of Australia, right down to King George's Sound, at a number of points.
255. We are dealing with the New South Wales coast line, along which you say this railway will afford a useful service by the transport of troops;—what other port than Byron Bay do you think likely to be seized upon? I am looking to the future. Undoubtedly, if the country is to be opened up, you will have to open out the harbours along the coast. The Richmond, the Clarence, and other rivers will ultimately be made navigable.
256. I suppose that an enemy could not seize those points without a considerable fleet? If you have nobody there it will be an easy operation.
257. Are they likely to come without a convoy? Men-o'-war must come.
258. Then how are our land forces to drive them away? They would not drive them away, but they would prevent them from coaling. They cannot coal in the open. They must go to some sheltered place.
259. You consider that the north coast railway would afford valuable assistance to the military authorities in the transport of troops to points of attack? Ultimately they will have to have some communication by land to the different points. A coast railway is a necessity for Australia from a strategical point of view.
260. I suppose we may look upon this as a portion of a federal line from Adelaide to Brisbane? Yes; by which troops can be thrown upon a given point. It will be necessary to have a line nearer the coast than the present watershed line.
261. *Mr. Cox.*] Suppose that a fleet landed troops at Byron Bay, and there was no railway—what harm could they do without roads or railways? They could coal there. They might hold that place, and then they might see their way to attack Newcastle, or they might simply hold Byron Bay during the whole war. You would not be able to drive them out if you gave them four or five days preparation.
262. In the event of their landing would they take possession of the railway? No; I think you must rely for the defence of Australia on the forces. They would prevent the possibility of any advance by railway.
263. At present there are no roads, so that troops could not travel from Byron Bay to the interior; but if there was a railway could they not take possession of it and get into the country? Yes; but it would be rather difficult to move up any force. Even if they captured a couple of trains they could not do much. They would have to capture a large quantity of rolling-stock, and to get the control of the whole line before they could move.
264. Then what harm could they do? The danger is, their occupation of the place with a view of waiting until the declaration of peace, when they would claim that they had a footing in the country.
265. What would our troops and men-of-war be doing in the meantime? There is a possibility of our losing the command of the sea. The fleet might have to go off to defend Hongkong or Singapore. We should then be open to attack by the first enemy.
266. You say they would have an opportunity of going into Byron Bay to coal;—how could our troops prevent them from coaling if we had a railway? They could not coal in the face of even field guns. They might seize passing mail steamers, deprive them of their coal, and scuttle them.
267. *Mr. Tonkin.*] Do you know the position of this railway on the coast? Only as far as it is marked on the map.
268. Did you make a study of it before you came to-night? I had the line explained to me.
269. What distance from the coast should a line be that you would call a coast railway? At any point where it tapped a river.
270. How far inland should it be, not touching the coast? It might be a considerable distance back from the coast line, provided it tapped a river where you could run your men down by boats. On the Clarence the railway touches at Grafton, and I suppose they could run down from Grafton to the sea by water transport.
271. Do you think that the Government would be justified in spending £2,000,000 under existing circumstances on the construction of this railway for military purposes? Not altogether for military purposes; but

Colonel  
de Wolski.  
13 Nov., 1889.

but when a railway is designed, in many countries they take into account the possible movement of troops in the future. If it also will meet other conditions, it is a great point to have the line to serve possible future contingencies. If war broke out next March, and we found that we could not move up troops to those points under six weeks or two months, we should think the money had been very badly spent, because the railway did not answer that purpose.

272. Do you know that we have already a railway constructed to within 140 miles of the places this railway will serve;—if you are within 140 miles of the coast line, will that be near enough? That would be fifteen days, even over good roads, to move men and material. You give the enemy twelve or fifteen days start of you. He might have served his purpose and be off. I think General Edwards has clearly pointed out that an enemy will not necessarily go to any centre of commerce. He may attack any portion of the Colony, obtain a footing, and make it necessary for you to drive him out. The country is not safe unless we are prepared to oppose him by a superior force within a reasonable time.

273. *Mr. Lee.*] Your evidence is given from a purely military point of view, I presume? Yes.

274. And your remarks with reference to a coastal railway apply to the military defence of the coast? Yes.

275. Not taking into consideration the commercial relations sought to be established between New England and the northern portion of the coast? No; I had not taken that into account.

276. I presume your remarks with reference to Byron Bay will apply with equal force to Port Stephens, the Hawkesbury, Jervis Bay, Twofold Bay and Wollongong? Yes; to all similar points.

277. On the general principle that a coastal railway is requisite to defend all these places, which are points of weakness at the present time? Certainly.

278. There will be just as much danger of an enemy landing at Port Stephens as at Byron Bay? Probably more.

279. I am basing my questions on the presumption that if our naval defence were found to be insufficient, and an enemy once gained the coast, they would be just as likely to land at Port Stephens, Jervis Bay, or Twofold Bay as at Byron Bay? Yes; they would have to select some point to work from on the sea coast before they could attempt a larger enterprise.

280. You do not wish the Committee to understand that works of progress should be kept back because it is likely that an enemy may visit the country in the future? No; I think it should be before the minds of the Committee that some day or other they will have to construct a line of this description.

281. Are you acquainted with the distance between Byron Bay and Brisbane? I know that it is not very far distant. I do not know the distance.

282. The route of the proposed railway will go as far as a place called Murwillumbah, and thence to Brisbane; it is a distance of 60 miles, and a large portion of the railway is already made on the Brisbane side of the range; Suppose that line were connected, would it not be a very easy matter to concentrate troops at Byron Bay from Brisbane? Certainly; but if you want to move them south again after the enemy moved on, you would have to take them back again.

283. Suppose, looking at the matter from a federal point of view, Byron Bay were threatened by an enemy, troops could be sent from Brisbane very much more quickly than from Sydney? Certainly.

284. And Byron Bay, if made a good anchorage for tolerably large shipping, would not present any greater attractions to an enemy than any of the existing ports at the present time? No.

285. It will be no greater source of danger to the country than any of the existing ports? Certainly not.

286. Your object in attending is to point out what action the country may have to take as regards the protection of its ports both near the metropolis and at a distance? Yes; unless you are prepared to defend in a military way each of these points, have an increased standing army, and ultimately spend a great deal more money than probably you could build the railway for.

287. Suppose that at a place like Byron Bay, harbour works were constructed, and a railway brought down to those works, if an enemy could land there and use the railway to go inland, I suppose it would be within the power of troops or civilians to rip up the line in various places and stop their progress? They could not move unless they captured a large quantity of rolling stock, and obtained control of the line.\*

288. If a small number landed there they could destroy the coast railway at various points? They certainly could.

289. And thereby stop the concentration of troops at various points? They would have to guard the line of railway, as they will in war time, between Sydney and Newcastle.

290. Suppose a squadron sufficiently large were to come down the coast and overpower our naval defence, a portion of the squadron might occupy Port Stephen's as a base of operations, and another portion might run into Broken Bay and blow down the railway bridge? That would be very possible.

291. The attacking party might possibly devote attention to more than one place at the same time? They probably will attack Australia in several places simultaneously.

292. Suppose the Hawkesbury River bridge were blown away, it would prevent any troops from being sent to the northern portion of the coast? It would certainly. It is proposed, however, to defend the Hawkesbury.

293. *Mr. Dowel.*] Have you and General Edwards considered this question from a federal point of view to a large extent? Yes.

294. In the light of the possibility of massing troops from all the Colonies? A fairly considerable force.

295. Have you taken into account the various railway gauges in the different Colonies? No; but I am acquainted with the remarks made by General Edwards, in which he draws attention to the break of gauge in the Colonies.

296. What is your opinion? I think the break of gauge is a very serious question. Changing stores and troops from one gauge to the other would be simply a hopeless business.

297. The sooner that state of things is altered the better? I saw the same thing happen before my eyes in India, in connection with the Punjaub railway. I was not four years in the country before I saw the railway—it was the meter gauge—ripped up from end to end for a distance of about 150 miles, and the broad gauge put down.

298. In order to move troops with advantage, you strongly recommend that there should be a uniform gauge throughout the Colonies? Certainly; it seems to be a very great point to make a uniform gauge, so as to run carriages right through.

299. Have you studied the advantages of the various gauges? No.

300. Do you favour the 4 feet 8½ inch gauge? I have really no knowledge which would guide me as to what would be the best gauge.

Charles

\*NOTE (on revision) :—See question 263.

Charles James Saunders, Esq., Chief Draughtsman, Department of Lands, sworn, and examined:—

301. *Temporary Chairman.*] I believe you are chief draughtsman in the Lands Department? I have been chief draughtsman for about two and a half years.

302. Did you furnish the Under Secretary for Public Works with a return of the reserves and land unalienated in the Grafton, Richmond, and Tweed districts? Yes. I have a copy of the return with me.

303. Will you read the return? It is a return of areas in the counties of Clarence, Richmond, and Rous? In the county of Rous 630,900 acres have been alienated which are tinted red on the map. I include land actually sold, land held under conditional purchase, and land under conditional lease—land which may be converted into fee simple at any time. We have reserves containing 306,800 acres, and we have 444,700 acres unreserved and unsold.

304. Do you know the character of the unalienated land—does it compare favourably with the alienated or reserved land? I have a general report from the district surveyor at Grafton.

305. What are the particulars in regard to the other counties? In the county of Richmond there are 216,700 acres alienated, 127,200 acres reserved, and 352,420 acres unreserved and unsold. And in the county of Clarence there are 266,200 acres alienated, 141,400 acres reserved, and 431,840 acres unreserved and unsold.

306. Can you say whether much land has been taken up lately in any of these districts? I have not made any inquiries in that respect. I think there is a fair amount of selection going on now.

307. How many land districts are there in the three counties? Casino, Lismore, Grafton, and Murwillumbah.

308. Have you ever been in that portion of the Colony? No.

309. You have no personal knowledge then? No.

310. Have you heard from any of the officers in the Department as to how the unalienated land compares with the alienated land. Have the eyes of the district been “picked out”? I think that most of the good land in the accessible localities has already been taken up.

311. What are all these reserves you have mentioned—railway reserves? This strip—a mile wide—is a railway reserve; but I think that the bulk of the reserves are for timber.

312. With the exception of that mile the reserves are for timber? Some of them are notified in anticipation of subdivisions being made, some for water supply and different public purposes, but timber reserves predominate.

313. Does that complete the return? I have a memo. of the district surveyor with regard to the character of the unsold land. He estimates that 10 per cent. of the unsold land is fit for agriculture, 55 per cent. fit for occupation by selectors for pastoral and dairying purposes, 25 per cent. fit for pastoral purposes, but not good enough for profitable occupation by selectors, and 10 per cent. practically inferior and useless land. This estimate includes all the reserves which may be cancelled.

314. *Mr. Dowel.*] Can you state in round numbers the total area of land unalienated and under reserve in the whole of the districts? In round numbers it is about 1,804,360 acres.

315. Can you state what portion of that amount is in the leasehold and what portion is in the resumed areas? No. More of the leases expire in July of next year. A part of this district was never held under pastoral lease. It formed part of what was known as the old settled district. Half of the country was therefore not included under pastoral lease or occupation license.

316. Is it not a fact that a very large proportion of the 1,800,000 odd acres of Crown lands is locked up at the present time in leasehold areas and in reserves? A very large proportion is in reserves. The reserves aggregate at least half a million acres.

317. I was wanting to ascertain whether the land would not have been taken up if it could have been obtained for purposes of settlement? No doubt it would if the leasehold areas had not existed.

318. In all probability if they had not existed, a large proportion of that area would have been alienated? I would not say a large proportion; a considerable area no doubt would have been taken up.

319. Have you any information about the character of the timber? No.

320. Or about the mineral resources? No.

321. *Mr. O'Sullivan.*] Can you state if many conditional purchases have been forfeited or abandoned in the Richmond River district? I could not say without investigation.

322. It has not come under the notice of your Department that many settlers have left the district owing to the want of immediate transit to centres of population? No. I scarcely think it would come under the notice of our Department.

323. It has been stated that men have been compelled to abandon their holdings round Byron Bay and other places because they were unable to get their produce to market, and therefore could not work their holdings profitably. I desire to know from you if that has come under the notice of the Department as a prominent fact? I do not think it would. The Department could tell how many conditional purchases were forfeited in any district last year or the year before.

324. You have not come prepared with that information? No.

325. *Temporary Chairman.*] Have you any other information to supply to the Committee? I hand in a map of the Government township at Byron Bay showing the alienated portions, the unalienated portions, and the reserves. I also hand in a schedule showing the prices realised for the town lots; two maps showing the unalienated, alienated, and reserved land in the parishes of Brunswick and Byron, and a schedule giving particulars as to the various reserves—the purpose for which they were made, and the areas.

326. What was realised by the sale of allotments in the Government township of Cavanba? The total area sold in the township was 30 acres 3 roods  $4\frac{1}{2}$  perches, and the total sum realised was £2,072 5s.; the average price per acre being £67 7s. 9d.

327. *Mr. Lee.*] When was the last sale of allotments? On the 14th October, 1887. The first sale was held on the 28th July, 1886.

328. That was some considerable time before the Byron Bay project was formulated? I hardly think so. I think that larger prices were realised at the last sale on account of the possibility of the place being improved. At the first sale the average price realised per acre was £47; at the second sale, £43; and at the third sale, £164.

C. J. Saunders,  
Esq.

13 Nov., 1889.

Charles

Charles Smith Wilkinson, Esq., Government Geologist, sworn, and examined.

C. S.  
Wilkinson,  
Esq.  
18 Nov., 1889.

329. *Temporary Chairman.*] You are Government Geologist for New South Wales? Yes.
330. *Mr. Dowel.*] You know the proposal before the Committee? I understand that it is the construction of a line of Railway from Grafton to the Tweed.
331. Have you a geological map showing that particular part of the country? Yes.
332. Will you hand in that map as an appendix to your evidence? Yes.
333. Does it show the whole of the country represented by the map on the easel? Yes.
334. Taking the map in your hand, will you please tell the Committee your opinion about the mineral resources and the development of that country? The district traversed by this line of railway consists, to a great extent, of coal formation, but with basalt volcanic rocks in places. The basalt formation occupies an area of about 1,000 square miles, or 640,000 acres. Nearly the whole of that volcanic formation is in the county of Rous, between Casino and Byron Bay and the Queensland border. The rich agricultural soil of that district is chiefly produced by this volcanic soil. I reckon that fully 1,000 square miles consist of good agricultural land, comprising what is generally known as brush land, which is so very rich. North of Lismore, running from near Ballina in a north-westerly direction, and from Ballina northward to the Tweed, we have a slate formation containing gold-bearing reefs. None of these reefs have been worked yet, though a few have been prospected, yielding encouraging prospects; but very little attention has been given to them yet. Near Ballina, and some distance north and south along the coast, the debris from the basalt formation has furnished gold-bearing sand on the coast, though it has only given profitable employment to a few miners for a great many years. I have no doubt that patches of this basalt formation, especially to the northward of Ballina, between the Richmond Heads and Cape Byron, and in fact nearly the whole of the watershed of the Brunswick River, between the Brunswick and the Richmond, will be found payably gold-bearing; so that I anticipate the settlement of a fair mining population in that locality. Hitherto it has been very little prospected, as far as I have been able to learn. I have been through a large portion of this district—I have been from Drake to Casino, Lismore, and the Head of the Brunswick, and thence down to the mouth of the Richmond, and overland to the Clarence and Grafton. In fact I have been through the principal portion of this locality.
335. *Mr. Cox.*] What is the nature of the country between the Clarence and the Richmond? The hilly ground between the Clarence and the Richmond, as far as I have seen it, is poor agricultural ground; but in nearly all the valleys we have rich alluvial deposits. The climate is favourable to the growth of vegetation in these flats, or somewhat moist places, and it has created a rich vegetable soil. The hills, however, consist almost entirely of coal formation, which, as a rule, does not produce good soil where the rocks crop out. In the valleys the alluvial is moderately rich, though it is not to be compared with the volcanic soil in the Lismore district.
336. *Mr. Dowel.*] You have not referred to any silver-bearing country—is there any in the county of Rous? In the slate formation, where they are likely to find silver-bearing lodes, none have been found. The formation is like that in which we do usually find them—like the formation at Drake.
337. You have traversed a pretty good portion of this country? Yes.
338. And you had exceptionally good opportunities of obtaining information as to its mineral wealth? Yes.
339. Do you think that if the proposed line of railway were constructed the mineral resources would give any revenue to the line? Not to any large extent, because the chief production would be gold and silver, which, being small and heavy, would be carried by water rather than by land.
340. Although the railway may be constructed, you think the miners would send their gold and silver by water instead of by rail, and receive their produce in the same way? It would go to Lismore, and then I think it would be shipped.
341. Do you think the line, as proposed, would favour the development of the district's mineral resources? I suppose the miners would be able to get their produce a little more cheaply.
342. In all probability, if there is a large settlement—which mining enterprise always brings about—there must be a considerable passenger traffic on the line? Yes. I do not think the mining population would be very large. It will be a moderate mining population, but the agricultural capabilities of the country are so great that I think they far outweigh the mining, and many families will be settled there.
343. You do not anticipate any Broken Hills being discovered there? No.
344. *Mr. Tonkin.*] Can you state at what point on the map the coal measures join the volcanic formation? About 6 miles west of Ballina we have slate formation, which extends northerly along the coast more or less to the Tweed, and from the same point it runs south as far as Wardell, on the Richmond River, and also from a point 4 miles to the west of Ballina it extends 30 miles. I have seen it for 30 miles north of Lismore in narrow strips. It runs in narrow strips through the country. The other portions consist of volcanic rocks, and coal formation.
345. The coal formation does not run down to the ocean? Not in the Richmond district. The first place on the coast where it occurs is near Wardell, in the southern bend of the Richmond River.
346. *Temporary Chairman.*] That is not more than 15 miles from the coast? Yes; but the formation extends from the coast to there.
347. *Mr. Tonkin.*] Have you come across any granite formation in going through this country? Not in the portion I have referred to. It comes in west of the Clarence, at the foot of the ranges. The red portion of the map indicates the granite area.
348. Do you think the coal formation is sufficiently strong to warrant the belief that there will be large coal-mines opened in the district, by which the railway would receive a large amount of traffic? I think the Clarence district will shortly entirely supply its own coal. I saw one seam between 30 and 40 feet thick, but with numerous bands, causing the coal to be in such a state that it would not compete with Newcastle coal. I have since advised parties to try and open up a seam cropping out in the sides of the hill, higher up, and they say they have 4 feet of clean coal. If so, they could send that to Grafton, and completely shut out the Newcastle coal. Therefore I am quite sure that the district will supply its own coal, and the railway will be consequently benefited by it.
349. Where is the coal? It is about 20 miles west of Grafton. It crops out at the surface there, but the formation dips under Grafton. I calculate that the same seams will be found under Grafton at a depth of between 600 and 700 feet.
350. Do you know whether the granite formation here is the granite which, as a rule, contains tin? Yes; but hitherto they have not found it in payable quantities. I have seen tin from granite south-west of

of Grafton, and right to the north-west in the Tabulam district. I have had nice specimens from there. Miners have prospected the district, but they have not found payable deposits yet.

351. Is there any large extent of auriferous sand on the beach you mentioned? I think for about 10 miles north of Ballina and south in places along the coast to the Clarence, they find it in patches—all along the coast where the basalt happens to come subject to the action of the waves.

352. If the railway were constructed, would it afford greater facilities to people to get to the alluvial deposits? I think not.

353. You think that the construction of the railway would not tend to open up any alluvial or auriferous country? I think not. It would facilitate intercourse between the various mining districts, but if there is a chance of getting gold anywhere there, the roads are sufficiently opened for miners to go now.

354. *Mr. Cox.*] Do you think it would be wise to spend a very considerable sum in making a railway from Grafton to the Tweed through the comparatively poor country you have described? I think it depends to a very large extent on the opening up of the mouth of the Richmond and Byron Bay. When I was in the Richmond district, I asked the farmers if the port were opened, and they had a choice between the port and the railway, by which means they would send their produce, and they said in nearly every case that they would send it by water.

355. Do you think it would be inadvisable to make the coast compete with the railway between these two points? If you open these points you encourage coast traffic, and if you make a railway as proposed you discourage traffic, so that in the event of a railway being constructed it would be folly to open up the ports? I think the opening up of the ports would offer to farmers a regular exit for their produce, and with that advantage I am quite sure the district would rapidly become settled. In fact, I look upon Rous as likely to be one of the most populous districts in the whole of the Colony, for its agricultural capabilities. There will be a fair mining population too. When districts are settled in that way they require local markets for their produce, which would be found at Grafton and the Richmond.

356. Are not the products of the two rivers pretty well the same;—why should they grow anything at one place to send to the other? They are.

357. What will create a traffic then if they are? I think that a railway would afford the farmers in the intermediate country a means of getting to such centres of population as Grafton and Lismore. At the present time they cannot occupy country far away from water carriage.

358. Can you mention an instance of the wonderful fertility of this soil? One of the best instances I saw in the district was at a farm about 15 miles north of Lismore. A person had taken up 640 acres of brush land, but had cleared only 200 acres, which he worked with the assistance of his sons, not employing labour. He assured me that he netted £1,600 last year off those 200 acres. There was a most luxuriant growth of grass in small paddocks. He gave me the particulars of how he made up his profit—pigs, fowls, butter, calves, and various kinds of dairy produce. The soil is so rich that it requires constant attention, and a thorough farming system to keep it down, and if you neglect it it will grow rank weeds. The farms round his place were overgrown with weeds, but he worked his farm on a thorough European system of farming, and made it very profitable. In fact, one family can hardly work more than 200 acres.

359. Do you remember the man's name? I think his name was Johnston.

360. What means of communication had he between his farm and Lismore? A fair road partly metalled.

361. Did he complain of want of means of communication with the markets? Yes. He said he often lost his produce on the steamers. For instance he would send calves to Sydney, and the steamer might be wind-bound for a fortnight, and they would die. Other dairy produce was affected in the same way by the delay of steamers.

362. That was on account of the Richmond bar? Yes. The navigation of the river had been closed for about three weeks when I was there.

363. But with an open river this probably would not occur? No. I think they would have a regular service.

364. *Mr. Humphery.*] How many miles from the proposed railway is the coal seam of which you spoke? Twenty miles.

365. It would not be assisted by the construction of the line? No. It is almost entirely coal formation from Grafton to Lismore. The railway will run over coal formation at Grafton, where it is between 600 and 700 feet deep.

366. *Mr. Lee.*] Is it at Coledale? Yes, near that place and at Copmanhurst also.

367. *Mr. Dowel.*] Have you any special information about the land in the locality of Byron Bay; have you visited it? I have been almost close to Byron Bay, and the head of the Brunswick. I have not been to the Bay itself, but I know the character of the country.

368. Do you think it is likely that men-of-war would run in there for coal; would they get coal anywhere near there? No.

369. What is the nearest point to Byron Bay, where coal has been discovered? About 30 miles from Byron Bay; but not in payable quantities so far.

370. You do not think it is likely that men-of-war will run in there for coaling purposes? I think not.

Stanley Alexander, Esq., District Engineer, and late Engineer-in-Charge of Trial Surveys, sworn, and examined:—

371. *Temporary Chairman.*] You are Engineer-in-Chief in charge of Trial Surveys? Not now. I am District Engineer now.

372. You have visited some portion of the route of the line under consideration? Yes; from Byron Bay to the Brunswick, a distance of 10 miles, and 10 miles north of the Brunswick.

373. What is the total length you have seen? 20 miles.

374. You do not know anything of any other portion of the country personally? No.

375. Are there any engineering difficulties in the line you traversed? There is the crossing of the Brunswick River.

376. By a very expensive bridge? No; by a timber bridge estimated to cost £9,000 odd.

377. Is that above ordinary navigation? No; the navigation extends some miles up the Brunswick.

378. If the bridge is placed there it will be a bar to navigation? I allow a headway of 20 feet.

379. Do coasting vessels go above the site of the bridge now? No.

C. S.  
Wilkinson,  
Esq.

13 Nov., 1889.

S. Alexander,  
Esq.

13 Nov., 1889.

- S. Alexander, Esq.  
13 Nov., 1889.
380. All the trade above that point is done by river punts or droghers? I do not think there is one there now, but they told me that droghers now working on the Tweed might be expected there, and provision should be made for them. I have made provision for them.
381. What is the grade on the portion of line which you visited? The grade has hardly been fixed yet, but it certainly will not be worse than 1 in 50.
382. Is it about the worst of the country, from an engineering point of view, you have to deal with between Grafton and the Tweed? No; the worst portion is between Lismore and Byron Bay.
383. What was the object of your visiting the locality? Surveyors were at work there, and there was a difficulty as to the proper route and the crossing of the Brunswick River, which I went to decide upon. It was a difficult part of the line altogether. The crossing of the river made a great engineering difficulty.
384. How did you reach Byron Bay? I went via Harwood Island to Woodburn, down to Ballina, and then across to Byron Bay.
385. You did not touch any point of the proposed route except what you have mentioned? No; but I have been at Lismore. On my way home I drove to Lismore and took steamer down the Richmond.
386. Anywhere near the route of the proposed line? Yes; it passes through Lismore.
387. Coming from Byron Bay and going home did you follow any portion of the route? No; I went by ordinary road.
388. You have a number of surveyors in the field there now? Three.
389. The line is permanently staked? It is being permanently staked.
390. I suppose the surveyors have instructions to make easier grades if possible? Yes.
391. They are allowed some latitude in the matter of deviations? Yes.
392. *Mr. Lee.*] Looking at the map on the easel, is the route of the railway as marked there tolerably accurate? I think the upper route is pretty nearly accurate.
393. As a matter of fact the line has been considerably improved since the tracing was made? Yes; it is permanently staked as far as 10 miles north of the Brunswick.
394. What was your object in getting down so close to Byron Bay? To get into the town, I presume.
395. Were there any engineering difficulties outside Byron? There are some bad swamps there.
396. I suppose the country all through has been tolerably well traversed and explored? I think it has.
397. That has been decided upon as the most practicable route? Yes.
398. Were you influenced by any other reason than that of obtaining the most direct and best line to the various centres? I cannot speak of anything this side of Byron Bay. I may mention that part of the line between Byron Bay to the Brunswick will be pointed out to the Sectional Committee.
399. Why? It seems as if the line had been purposely deviated inland to pass through the centre, and so it has. Tyagrass is a central point through which four lines of road have passed for a long time.
400. It is a centre of population? It will be a centre of population. It is a very important point.
401. The line was taken there designedly? Yes.
402. Have you any suggestions to offer? There was a line surveyed here [*pointing to the map*], and when the Sectional Committee goes up there, very possibly there will be pressure brought to bear on them by local people urging that line on their notice.
403. That is the outer line shown on the plan—the line which the Department have abandoned in favour of the route through Tyagrass? Yes.
404. Why was not that line adopted? Because of the expense. It is a very expensive line indeed. It is on broken ground the whole way. It has only one advantage. It does not pass over swamps; it avoids the swamps altogether.
405. After mature consideration, the Department adopted the other line as being the cheaper, shorter, and better? Yes.
406. Has the necessity of connecting this line with the rest of the railway system come under your knowledge professionally? No.
407. Have you had to inquire into the possibility or practicability of connecting that line with the table-land of New England? No.
408. Do you know anything of the surface beyond Casino towards the table-land? No.
409. As a scheme for that portion of the Colony only you know this railway, and not as a contemplated portion of the railway system generally? Yes.
410. *Mr. O'Sullivan.*] Why does the line you surveyed take such an extraordinary curve to the eastward after leaving the Brunswick? On account of the swamps.
411. It is all swampy country to the westward of it? All this is swampy.
412. The line curves towards the westward? It is all hilly ground.
413. The ground to the westward is all hilly country? Yes.
414. Is it settled? Yes, except the reserves.
415. Are you not going away from the population in coming out here? No, it is all swampy.
416. If it be all swampy to the eastward, and the settlement lies to the westward why is it that the line comes out towards the swamps, and neglects the settled country? We could not get in here.
417. Can you state how many times the proposed line will cross the Richmond River. It crosses one arm of the river at Casino, and another arm at Lismore.
418. Does it cross any other arm? No.
419. It goes straight down to Byron Bay? At Lismore the Richmond River is composed of Leicester Creek and Wilson's Creek, and after that it is called the Richmond River.
420. I suppose the reason why the line will be so costly, is because it runs through difficult country, and will have to cross several rivers or creeks? Yes.
421. *Mr. Dowel.*] Can you give any information about the timber in that district? There is an immense quantity of timber there, but I believe it is not good for bridge purposes. It is quite a different class of timber from what we get here.
422. Could it not be made useful for railway purposes? It is too perishable.
423. You ascertained that when you were there? I was told there, and I have heard since that it is too perishable.
424. You anticipate that your timber will have to be brought some distance? Yes; from the Manning and the other rivers, where we now get our iron-bark timber.

THURSDAY, 14 NOVEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY,  
The Hon. FREDERICK THOMAS HUMPHERY,  
The Hon. WILLIAM JOSEPH TRICKETT,  
The Hon. GEORGE HENRY COX,  
JACOB GARRARD, Esq.,

JAMES EBENEZER TONKIN, Esq.,  
WILLIAM SPRINGTHORPE DOWEL, Esq.,  
EDWARD WILLIAM O'SULLIVAN, Esq.,  
JOHN HURLEY, Esq.,  
CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

George Neville Griffiths, Esq., sworn, and examined:—

425. *Chairman.*] What is your business? I don't know that I have any particular business, except in looking after my properties.  
426. You have written a letter to the Committee in reference to this proposal;—will you kindly read it and give it in as your evidence? The Committee has not had the opportunity of reading it.

G. N. Griffiths, Esq.  
14 Nov., 1889.

Witness read the following letter:—

*Grafton to Tweed Railway.*

SIR,—

569, George-street, Sydney, Nov. 13th, 1889.

As one well acquainted with the Richmond River district, and largely interested in its progress and development, I must in the public interest protest against the expenditure of public money in the construction of a Railway between the points—*Grafton and Casino*—on the proposed Railway,

None would be more advantaged by the proposed railway than the proprietors of Woorooloolgen Estate, which is under my management—for the proposed Railway, would run through part of the estate, and greatly enhance its value; but, notwithstanding this fact, I consider it would be criminal on my part to keep silence when your Honorable Committee has under consideration this large public work, for I know, from long personal acquaintanceship with the Richmond River district, that it would be a gross waste of public money to build a railway between Grafton and Casino.

Because:—

1. Starting from Grafton, the route of the proposed Railway, for the first 60 (of the 70 Grafton to Casino) miles, is through poor unproductive soil, unsuited for anything but grazing and timber-getting.
2. Even after fifty years of settlement the traffic between Grafton and Casino has never been able to support a public coach, and there is absolutely no goods traffic between these places.
3. Lawrence—and not Grafton—is the actual shipping place for goods and passengers from the Clarence end of the proposed Railway line.
4. There is but a sparse population engaged in grazing and timber-getting, and no agricultural settlement along the proposed Railway line—Grafton and Casino.
5. The Clarence and Richmond River districts being large producers of similar commodities,—viz., sugar, maize, timber, pastoral and dairy products, &c.,—there is no likelihood of any interchange of products or growth of business between Grafton and Casino.
6. As railway carriage can never compete in cheapness with water carriage, and as Grafton has the Clarence, and Casino the Richmond River, so there is no possibility of any remunerative goods traffic between Grafton and Casino. For it would be as ridiculous to suppose that a Casino producer would send his goods to ship at Grafton, as to suppose that a Grafton producer might send his to ship at Casino, when each has a navigable water-way at his own door.
7. The rivers Clarence and Richmond are both good waterways, and the natural outlets for their respective districts, and the traffic is carried on in distinct line of steamers and sailers. So there is no present necessity to expend a very large sum of public money in connecting these parallel water-ways.
8. The construction of the railway between the points—Grafton and Casino—would divert attention from the pressing and essential requirements of the Clarence and Richmond River districts.

These requirements are.—

Improvement of the entrances from the sea to the rivers Clarence and Richmond, so as to make them navigable at all times, and by a larger and more powerful class of vessels and steamers.

Dredging and clearing the channels of the rivers and their affluents, so as to enlarge the areas to which they act as feeders and distributors.

Immediate construction in the Richmond River district of railways, to tap the rich agricultural and dairy-lands (mostly fertile black soil—scrub land now lying idle) lying to the north of the Richmond River, on its tributaries, and on the rivers Brunswick and Tweed—such railways to bring the produce to the various points on the navigable waters of the Richmond at Lismore, Woodburn, and Ballina, &c.

For above reasons I unhesitatingly assert that the time is not yet come to warrant the expenditure of £700,000 to £800,000 in construction of a Railway between Grafton and Casino. I am confident the construction of a line between Grafton and Casino would entail an enormous annual loss in interest on the outlay, and in cost of working and maintenance, and even if such line were constructed it would be of but small public advantage, as the traffic between Grafton and Casino would be infinitesimal.

I may here point out that if ever a railway has to be constructed to connect the navigable waters of the Clarence and Richmond River districts, such railway should be:—

1. Between Lawrence and Casino.
2. Between Harwood Island and Woodburn.

I hope the Members of your Honourable Committee, or at least a Sub-Committee, will visit the Clarence and Richmond River districts and personally enquire into above statements, going over the proposed Railway line, and visiting the districts generally.

Such inspection will satisfy your members of the extreme urgency for commencing the Improvement works at the mouths of the Clarence and Richmond Rivers, and will demonstrate the necessity for the immediate construction of railways to draw the produce from the rich scrub lands of the Richmond, Brunswick, and Tweed to the port on the navigable waters of the Richmond River, or possibly to Byron Bay.

Your, &c.,  
G. N. GRIFFITHS.

To the Honorable Chairman, Public Works Committee.

427. Your statements in that letter are correct? Yes; to the best of my knowledge and belief.
428. Have you known these districts for any length of time? I lived up there part of the year 1861, and the whole of 1862, and part of 1863; and subsequently I have, for the last few years, managed the Woorooloolgen Estate, and am constantly up there. I have been up there four times this year.
429. Have you ever, when in those districts, considered the most advisable way of getting a railway to the New England heights? I have not. I have never been over the different lines.
430. Do you know the lands along this proposed line of Railway—from the Tweed down to Byron Bay? I do not know the country well. When I lived up there, it was almost an uninhabited scrub. We used to have to go down to Ballina, and make our way along the coast to the Tweed.
431. You say the railway should not be taken beyond Casino. Why do you stop there? I have carefully guarded myself from pointing where the railway should go upon the Clarence and in the Richmond River

G. N.  
Griffiths, Esq.  
14 Nov., 1889.

River district. I have simply protested against the construction of the line between Grafton and Casino, 432. And you say there is no country there worth opening up? I have said the first 60 miles or so out of Grafton, excepting, of course, the river flats near Grafton, are poor country. You commence to get on the black soil for the last 9 or 10 miles before you reach Casino. That is beautiful country.

433. *Mr. Garrard.*] You think it desirable that the entrance to the Clarence and Richmond should be improved? Certainly.

434. Are you aware the Clarence has a fair entrance now, and the vessels trading there never miss a trip during the year? I have been across the Clarence bar twenty or thirty times,—never without fear and trembling.

435. Have you ever been delayed on the Clarence River for want of water and bad bar? For several hours at a time, but not for days.

436. If it is not desirable to bring the railway further south than the Richmond River, would it not be as desirable to stop at the Brunswick, coming south from Tweed. Is not the Brunswick a navigable river to some extent? There is no entrance.

437. Then the Richmond River, in your opinion, is the first good navigable water south from the Tweed? Certainly. My hope is to see the district advance, and to see the money expended in several lines of railway from the Richmond or from Byron Bay into the great scrub and dairy lands, back on the heads of the Tweed, the Brunswick, and the Richmond.

438. Do you know the proposed route of the Railway we are considering. Do you know the country between Casino and Grafton well? Yes.

439. That is the part you think would not be profitable, and which the Committee would not be justified in recommending to be made? At present.

440. But you are in favour of the railway from the Tweed as far as the Richmond? Most decidedly. Railways are bound to draw the produce from a part of the country which is almost inaccessible.

441. We understand you are in favour of a railway from the Tweed to the Richmond? Instead of building this railway, I would build three or four railways into the heart of this great scrub country.

442. Do we understand that you think it would be better to run two or three distinct lines of railway into the scrub country rather than have a trunk line, if I may so term it, from the Tweed down to the Richmond? Allow me to answer you in another way. As a practical man, I got a lot of machinery of a special kind a little time ago, which was manufactured for me in Melbourne. I paid 7s. 6d. a ton to get it from Melbourne to Sydney—600 miles water carriage. For the same machinery, to carry it 503 miles to Bourke, I had to pay between £7 and £8 a ton. Railway carriage can never compete with water carriage.

443. Do I understand you are in favour of the trunk line, or two or three lines branching out from the coast into the scrub country? I would think it would pay the inhabitants and the country much better if there were three or four small lines running away from the navigable rivers, to bring the produce of the back lands to the navigable river, than it would to construct one main trunk line.

444. Have you no knowledge of the country through which this line goes; you visited it during the time you had to traverse the coast to get to Brisbane? I go constantly about this district; I was at Lismore only quite recently, and I went down to Coraki.

445. Do you know anything of the country between Lismore and the Tweed? No; I have been there, and have seen its rich land generally, but I have no special knowledge of the locality.

446. *Mr. O'Sullivan.*] You seem to be of opinion that the land between Casino and Grafton is of an inferior character? Yes.

447. Is it not a fact that between Woodburn and the Clarence there is a thriving Italian settlement, called New Italy? Certainly, but that is not the same bit of country.

448. But you say the country is of the same character? No.

449. How far then is this Italian settlement from the proposed line of Railway? The Italian settlement is 4 or 5 miles from Woodburn. I have never been there since the Italians settled there.

450. Then the Italian settlement is near Woodburn, on the Richmond River,—therefore in better country than that which would be served by the Railway to Casino? This is a better country than that. On the 8-miles post from Casino, going towards Grafton, you leave the river flats and you rise into what we call very poor clay—spotted gum ridges—and that extends, with slight difference, in the shape of little flats and creeks, almost all the way down beyond the Traveller's Rest.

451. Is there any settlement there? There is the Wooroowoolgen run, where I live, right down to Codrington. We have now concentrated upon the northern portion of it. I have my big dairy at Montgogery.

452. Is that property freehold? Yes.

453. I suppose you are aware the Government has reserved a mile upon each side of the proposed Railway between Grafton and Casino? Yes.

454. What kind of country is that? As far as our boundary goes south it is frightfully poor. It is beautifully rich land 8 miles out from Casino.

455. As to the character of the country on the Grafton side, how far does the good land extend out from the line? I have never gone out from this railway line, but it does not extend beyond the river flats.

456. Is it your opinion that this land reserved by the Government would not be taken up even if a line ran through it? The answer to that is difficult to give. The Government offer very easy terms for settlement, and settlers may see means of earning a living by having houses on the line, and accommodation paddocks for people who come in from the outside and want to leave their horses or to bring goods. They may establish places of business for agricultural purposes. I should say the unfortunate man who attempted to grow cereals upon the clay land would make a mistake.

457. Then, in your opinion, these reserved lands might be taken up, though not for agricultural purposes? Yes.

458. I presume you are aware that almost every line of railway constructed in this country has to pass through a large area of poor country in order to reach good country? Of course—that is the great misfortune of New South Wales railways. They have to pass over large areas of barren lands.

459. Owing to the fact that there are alternate belts of good and bad country in New South Wales, the railways which serve the inland districts have to pass through bad to reach good country? Certainly.

G. N. Griffiths, Esq.  
14 Nov., 1889.

460. Is not this a case in point, where they would pass over a belt of poor country to reach the rich land near Casino and the Richmond River? I do not say they would not; but I say it would be a waste of public money to spend £700,000 in putting a railway between Grafton and Casino. The produce grown about Casino will go down the Richmond River, and the produce grown about Grafton, down the Clarence River. There is no business between the two places.

461. But may not a business be induced? No doubt, in the course of many years, when we are dead and buried.

462. Do you think that the State is likely to recoup the expense incurred in building a line across the poor country by the spoils from the richer country? I think not, in this case. Of course a railway running through the Wooroowoolgen estate, in which I am interested, would enormously enhance the value of it.

463. Of course I take your interest to be a disinterested one. You are aware that this is a portion of the north coast railway, proposed to be run from somewhere near Maitland up to the Tweed River? I have heard that.

464. And that line is looked upon as requisite for military as well as trading purposes? I hear so.

465. Are you not aware that one argument in favour of it is that it is to be a military line? Yes, I have heard that argument; but I never thought it would justify us in spending £5,000,000 on that line.

466. Do you think the State would be justified in constructing this line as a national work,—in constructing a line of railway along the coast to a certain point—say to near the Clarence—and then leaving a gap between there and the Richmond River? When I was a Member of the House I opposed it, because I thought it would be an unjustifiable expenditure of public money.

467. You suggest it would be better to spend the money on three or four lines which would pierce the scrub lands to the north of the Richmond;—are you aware that it is almost impossible to take a line any other way than the one proposed from the Richmond to the Tweed? I am not aware of that.

468. Did you see the diagram with the line sketched out upon it? Yes.

469. You see the line from Lismore to the Tweed runs almost like a triangle? Yes.

470. Does it not strike you that that would be an extraordinary route to take if they could go in a straighter direction? Of course, barring the scrub, you could get across the other country. I have been over the range many years ago. We used to go up the spurs of the range to Mount Warning. According to the ordinary system of railways, it may be almost impossible to construct it at present; but there are systems of railways by means of which these inclines can be overcome. For instance, we have the Swiss railways which go up very steep inclines. It is a very broken country, covered with scrub; but it is wonderfully rich volcanic red and black soil—nearly the whole of it.

471. We admit all that; but I want to get your reason for suggesting these three or four lines of railways into a country which the engineers apparently think is inaccessible. You will notice they build this railway to reach Murwillumbah from Lismore;—would they have constructed it in that shape if they could have got to Murwillumbah in a direct route? I am not an engineer.

472. Does not that suggest the idea that the country must be very difficult? It is most difficult. It is a very difficult thing to get the produce out of that portion of the country.

473. Then you think it likely that Parliament would endorse three or four other lines running into this inaccessible country? If you go into the whole system of railway construction you will find it a difficult matter to discuss without all the data before you. If I had known the Committee would ask such questions I would have devoted several days to going over the country with the people there, and seeing what they think about it, and what routes they can suggest. There are creeks running in that country, some of which run into the Brunswick, and some into the Richmond; and where there are creeks there is generally a means of access. There are also bridle tracks and roads up to the various selections all over the country. I am not prepared to say whether building railways through that country would be cheap or not; but I should think it would be advisable.

474. From your knowledge of the country, do you think Byron Bay is a proper place at which this line should junction? That I cannot say. It is, as it were, out of my particular district. My business keeps me south of Casino, and it is only on various occasions, when I have wanted to see the Richmond heads and matters of that kind, that I have been down the Richmond. Murwillumbah was not in existence when I was out there.

475. You are aware we are now considering a proposal to improve the Clarence and the Richmond? Certainly.

476. Is it your opinion that the money proposed to be devoted to clearing the Clarence River would be wisely expended? I would not like to give an opinion on Sir John Cooke's scheme; but it certainly seems, after what the engineers have done at Newcastle, that it may be possible to make a good entrance to the Richmond and Clarence.

477. You spoke in your evidence about the desirability of running a line from Harwood Island to Woodburn? I said in the future. It is the nearest route between the two rivers.

478. And you recommended Lawrence as a better place for the line to come to Casino than Grafton? I said that if the waterways of the Clarence and the Richmond eventually had to be connected, the nearest point would be Lawrence to Casino, and Harwood Island to Woodburn. They are geographically so.

479. But would the line from Casino to Lawrence not run through this poor country you speak of? Certainly it would. I am not advocating that line.

480. But you advocate it in preference to running a line between Grafton and Casino? Yes; if you want to connect the waterways, because you would have it shorter.

481. But still you say that would run through poor country? Yes. I may illustrate the matter in this way: Supposing we take the rich flats on the Clarence and Richmond for dairying and grazing purposes, and clear and ringbark them, we can run one head of cattle to 2 or 2½ acres; and taking the gross and large areas we can calculate upon running a piece of ringbarked country of 4 or 5 acres to the beast, or one beast to 4 or 5 acres. Our experience of the Wooroowoolgen estate, which has been owned by my father and his partners since it was first taken up in 1842, has been that we have carefully analysed the quantity of stock carried on the run, and we find, including the good country, that it has taken nearly 40 acres per beast all through. That is an illustration of what the value of land is. Of course, I don't say but what there are good little patches in amongst the poor country.

482. If you admit this is a poor country right through from Casino to the Clarence, what is your reason for

G. N. Griffiths, Esq. for preferring Lawrence to Grafton as the place at which the line should strike? I only said, if it were necessary to connect the waterways it would be more economical to do it from the places within the shortest distances from each other.

14 Nov., 1889.

483. Then it is merely an economical reason? Yes.

484. *Mr. Cox.*] Do you know anything of Trial Bay? No.

485. You know nothing about its harbour? I was sheltered there once from a southerly gale two or three years ago, coming down from the Clarence River.

486. You are aware that it is proposed to make Byron Bay a harbour for the traffic of the Tweed and Brunswick country, as well as a harbour of refuge for coasting steamers? I have heard it.

487. Would you advocate the expenditure of money in making this a harbour when a large sum of money is about to be expended on the entrance to the Richmond River;—do you think the two would be required? As the settlement of the population increases more harbours and facilities are required; that is the only answer I can give at present. I perhaps speak as a Richmond River man, and would like to see the Richmond River entrance improved first. If that were done, perhaps the construction of breakwaters at Byron Bay might be deferred for a time; but I have no experience about it, and do not wish to give an opinion about it.

488. You mentioned just now that land carriage can never compete with water carriage? For heavy goods, such as produce.

489. Consequently it would be very unjust to the residents of the Tweed and the Brunswick Rivers to bring their produce all the way down to the Richmond if they could get a nearer port? I admit it, as long as it could be done at a reasonable price.

490. Consequently, if Byron Bay can be made a port for the convenience of the Brunswick and Tweed River settlements, it is desirable, providing it does not cost an enormous outlay? Certainly.

491. The question was asked by Mr. O'Sullivan as to what was the reason, if you wanted to connect Murwillumbah and Casino, the railway must be taken in that circuitous route? This is the first time I have seen the surveys for these railways. I have never seen them before.

492. But the object of the Government is to give an opportunity to all the settlers in that country to bring their produce to market? Yes.

493. So that you would advocate in the future various lines of railway from this big scrub country between the Richmond and the Tweed Rivers, converging to a point either at Byron Bay or Ballina, or at the entrance of the Richmond River? Certainly.

494. Do you think that the railway projected between Casino and Byron Bay would be justified, inasmuch as we are about expending a large sum of money in the improvement of the Richmond River bar;—do you think that railway could be ever made to pay where you have got water carriage? I cannot conceive that the people would pay a much greater freight for their goods by rail than by water.

495. Therefore, you think that the expenditure for the railway between Casino and Byron Bay would not be wanted? Another question in regard to this matter is the one of celerity. The whole of the business of the Richmond River, in its various branches, is brought down the Richmond River mostly to Ballina, and there is a good deal of traffic going up and down there. There is a different traffic, as between various places such as Lismore and Ballina, to what there is between Lismore and Grafton. There is a large number of steam launches and a great traffic on the roadway.

496. And you think the length of time taken in running the traffic by water would compensate people who did not pay the extra price to send their perishable produce by train? No; I did not say that.

497. I gathered that from what you said? No; I say there is expedition as regards passengers. The passengers might use the railway.

498. We heard yesterday from a witness that he had sent calves down from the heads of the Clarence, and they were bar-bound at Ballina on board a steamer;—this would not have occurred if he had sent them down by train? I have known instances where they have been bar-bound. When I, as an agent, had to receive cattle, I have found them to be perfect wrecks after being a few days in the ship's holds at the Clarence and Richmond Rivers bars.

499. But that would not occur in the event of judicious expenditure on the Richmond River bar? It would not occur; but these have only been isolated instances, and not regular things. Now and again, for two or three months at a time, the Richmond bar was very bad; but there came a flood, and the entrance was swept a bit, and we have not had any trouble lately.

500. Knowing what the drift of my questions is, would you recommend the expenditure of a large sum of money in taking the railway from Casino to Byron Bay, when you have already got water carriage on the Richmond—taking into consideration the fact that a large sum is about to be spent at the mouth of the Richmond to make it a good harbour? I think it would be far more to the advantage of the country and the inhabitants of the district that the waterways, which are naturally placed there by Providence, should be improved and rendered feasible in all times and seasons. Of course, in the dim future, when there is a vast settlement there, it will be judicious to make the railway; but at present it is much more desirable to make the waterways efficient in every way.

501. *Mr. Tonkin.*] If the proposed trunk line were constructed, do you think it would serve the inhabitants of the country it goes through—I do not mean the inhabitants who are directly on the route—but those who are some distance away from it—say, those some 50 or 60 miles inland? That all depends on the rates of carriage. When a man gets down to Lismore with his produce he would rather put it on board the steamer, and let it go right away without further trouble, than send it to a place where he has to transship it when the steamer comes round. Consequently, if that line were constructed, the inhabitants about there would not use it, except for carrying goods to the nearest port. There might be occasions, when the Richmond River was blocked, and if there were good jetties, loading arrangements, and wharves at Byron Bay, they might send their goods down there.

502. Is there a large population in that part of the country which the line would run through? I speak with all deference; but statistics were published some time by Mr. Page in the *Richmond River Express*, and, as far as I recollect, he made out that the population of the Richmond and Clarence districts was increasing at the rate of about 10 per cent. per annum, and I think he made out a very large population in the Richmond and Clarence; but whether that was official or not I do not know.

503. Do you know whether there are any good agricultural lands, not already alienated, available between Grafton and Casino? The river flats and rich lands at the Clarence end of the line and the Richmond end

end of the line, are all alienated, except what are kept as population areas and reserves. It is all alienated with the exception of the reserves.

G. N.  
Griffiths, Esq.  
14 Nov., 1889.

504. You see by the map that the Government has reserved a mile on each side of the railway line;—was there any necessity to reserve that, the land being so poor as it is? I do not think it was reserved in the way you mean. We have always understood that that reservation was made, so that no person might acquire the right to the land the railway was to go through, and charge the Government a heavy amount for resumption.

505. On account of it being so poor there would be no fear of it being taken up for any other reason excepting for purposes of compensation from the Government? You misunderstand me. I do not say that the land has not been taken up, because I am told that there has been 18,000 acres of the resumed half of Woorwoolgen station selected this year. Where the Government offers land at 2s. an acre deposit on the conditional purchase, and only a bagatelle rental on the conditional lease, a number of people have taken up lands, but they are taking it up in areas of 1,280, and I cannot conceive that the settlement of a few families would justify the Government in making a railway for their advantage, at is an enormous expense.

506. Could these areas grow large quantities of wheat? There is no wheat grown on the Richmond and Clarence. It is maize and pumpkins. Within 30 miles of the coast where they are free from frosts, they grow sugar-cane.

507. Would that land be suitable for the purpose of growing these products? There are portions of them where you could grow maize—the small flats—but the land as a whole is poor.

508. Taking the work as a whole—I do not refer to that portion you object to—but taking the work as a whole, as placed before this Committee, do you think that the country or this Committee would be justified in recommending the construction of that line, which I suppose would cost £6,000,000? £6,000,000, I think is the whole from Maitland north. I have not been over it or considered the matter. I would not like to give a rash opinion on such a subject as that.

509. Then you only object to this one link of the chain because it is going over poor country? I do not object to it personally, because it would be an immense advantage to me, but I say it would be an immense waste of public money to erect that railway.

510. But would it not be a greater waste of public money if we constructed a piece of line from Grafton to Maitland, and then left a portion of the chain open, and then started from Casino again, and went to the Tweed? Some people would consider it so, but I think it would be a very unwise thing to expend six millions of money until we could see some necessity for it.

511. Do you think that if these different rivers and Byron Bay itself were made available, and vessels of sufficient tonnage at all times of the year could communicate with the inhabitants—that that would not be a sufficient means of taking their produce to market for some years to come? It would be a sufficient means for those who are within reach of the navigable waters; but the hope of the inhabitants—I speak from the many conversations with the people I have had up there—the hope of the inhabitants of the back lands is that your Committee will recommend the Government to construct the railways 15 and 20 miles back from the ports on the Richmond River. In the hope of that they are busy clearing the land, planting and arranging settlements, dairies, and factories. They are a go-ahead people.

512. But that of course would be quite independent of the proposal before us now. This trunk line would not have the effect which you are referring to now? No; because it does not go far enough back.

513. Then you believe, instead of the construction of this line at present, that if there are a few light lines running from the navigable portions inland in different directions, that would be a greater benefit to the inhabitants of the district than this line? Certainly; if the entrances to the Richmond and Clarence were kept clear so that the traffic could be continuous.

Joshua Bray, Esq., Police Magistrate at Tweed River, sworn, and examined:—

514. *Mr. Humphery.*] What is your position in the public service? Police Magistrate at the Tweed River. J. Bray, Esq.

515. Are you the Land Agent also? Yes.

14 Nov., 1889.

516. How long have you resided in the district? Ever since 1863.

517. Were you in the district previously to that? No.

518. Have you seen the proposed route of Railway from Grafton to the Tweed? I have seen that part of it from Brunswick to the Tweed, but not the other part.

[*By request of the Chairman witness examined the map of the proposed route, and it was explained to him by Mr. Lee.*]

519. You have noticed, have you not, that the line would be taken from Murwillumbah to Byron Bay, thence to Lismore, and then on to Casino? Yes.

520. From your knowledge of the district, can you say whether a line as proposed there would serve the settlers between the Richmond and the Tweed? Yes, it would. I think it would be as good a route as any that could be chosen.

521. You think that the proposed route is a good one in the interest of the settlers of the district? Yes.

522. Has the settlement there increased very rapidly during the time you have been resident there? At first it did not, but during the last seven or eight years it has increased very rapidly.

523. You know the character of the soil? Yes.

524. What is your opinion of the whole of that country between the Richmond and the Tweed? A great deal of it is rich scrub land. It is the richest land I have seen in any part of the country.

525. How do the settlers at the present time send their produce to market? There is a steamer running regularly between the Tweed and Sydney, and for the people near the Brunswick, a steamer calls at Byron Bay. She lately started a trade between Byron Bay and Sydney—since the jetty has been finished,—but before that the people could not send anything away, or very little. They are able to send something now away from near Byron Bay.

526. Is it your opinion that, in the event of that line being constructed, the settlers between Byron Bay and the Tweed River will send their produce by way of the Richmond River—use the railway and send their produce that way? Yes.

527.

- J. Bray, Esq. 527. Instead of sending by steamer from the Tweed and from the Brunswick? Yes. The way it is now they would, because it is very uncertain for them to send anything away by the steamer—the trips are so uncertain.
- 14 Nov., 1889.
528. Do you know anything of the country between Lismore and Casino? Very little.
529. Or anything of the country between Casino and Grafton? Very little of that either. I have been along the road years ago, but it is ten or twelve years since I was along that way.
530. Mr. O'Sullivan.] Do you know the country between the Clarence and the Richmond Rivers? Yes. I have been through it two or three times.
531. From what point on the Richmond did you start to go to the Clarence? I went from Lawrence to Casino, and I have been from Casino to Grafton.
532. What is the character of the country between Lawrence and Casino? Well, it was rather poor land—swampy land, and in some places ti-tree scrub.
533. You think it is a wise proposal to construct a line of railway between Grafton and Casino through country like that? I do not think so.
534. You think it is allowable as part of a national line to serve the whole of the north coast? It might be advisable on that account, but not otherwise.
535. Do you know the country between Lismore and Murwillumbah? Yes.
536. What is the country like? That is quite different altogether.
537. I mean what is the contour of the country;—is it mountainous, hilly, or level? It has mountains and flats, hills and flats, valleys,—a great deal of flat agricultural land.
538. Is it a difficult country through which to construct a line of railway? Yes, much more difficult than between the Clarence and Casino.
539. Have you seen by that diagram that to reach Murwillumbah from Lismore, the engineers have been compelled to travel in a triangular direction; you notice that they have been compelled to take the line in a triangle? There are very high mountains all the way.
540. Is it possible to construct a line of railway across that country? I say it would be difficult and expensive, but I do not say impossible. It is very difficult to get a road for a horse there.
541. You think that the Department was justified in taking the line from Lismore to Byron Bay, or to Murwillumbah? I think so.
542. Would it be cheaper to construct the line along that route rather than along a direct route? Yes.
543. Which line would serve the greater population? The one proposed.
544. Do you think a line of railway running from Murwillumbah on the Tweed to the Richmond River heads would be a useful line for the population in the Richmond River district? Yes.
545. Supposing the proposed line between Grafton and Casino were not constructed, which do you think would be most to the advantage of the district;—to have a line running as proposed on that map, from Casino down to the coast, and from the coast to Murwillumbah, or to run a line from Murwillumbah to the Richmond River Heads—to give them access to a navigable river;—which would be the best line for the district? I think that would be the best, as it is there.
546. As it stands? Yes.
547. You can see that that does not serve the mouth of the Richmond River at all? Yes.
548. It does not come within miles of the mouth of the river—a line down to Byron Bay? Yes.
549. You think then that the Department are justified in not connecting the two rivers, and in running the line in that triangular fashion, to serve the district? I think so.

THURSDAY, 6 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

Dr. James Robert Miller Robertson, Mining Engineer, sworn, and examined:—

Dr. J. R. M. Robertson.] 550. Chairman.] What are you? Mining engineer.

551. The Committee have been informed that you desire to give some evidence with regard to the coal-measures on the Clarence River? Yes, I have been requested to do so.

6 Feb., 1890. 552. Do you know Mr. Wilkinson was examined before this Committee on that matter? I was informed a few minutes ago that he was.

553. You have not seen his evidence? No, I have seen no evidence.

554. Will you tell the Committee whatever you can with regard to these coal-measures—where they exist, and the character of them? They exist under a range of mountains called the Coal Range, contiguous to a surveyed township called Coaldale, where I think there are one or two houses erected.

555. Is that up the river from Grafton? Yes, almost midway between Richmond and the Clarence river.

556. How far from Grafton? About 14 or 15 miles from the Clarence River, but by the road 28 miles from Grafton.

557. Is the river navigable up to that point? The river is perfectly navigable beyond the nearest point to Coaldale—Moleville, I think, is the name.

558. How far is that point from the coal? About 14 miles.

559. There would be 14 miles of land carriage then? To take it to the Clarence River there would be 14 miles or probably 15 miles of railway to make.

560. Have you seen coal anywhere else except there? No; I have not examined any other part of the district. Dr. J. R. M.  
Robertson.
561. Have these mines been opened to any extent? Partially opened—the outcrops of three seams of bituminous coal and an inferior cannel coal. 6 Feb., 1890.
562. What are the depths of the sinking on it? They apparently crop out on the base of the spurs of the range.
563. Have they driven in any depth on them? They have driven in a few yards in two of the seams. The upper seam of all is a comparatively thick seam, probably 11 feet thick, of which there are 5 feet 6 inches or 5 feet 7 inches of coal without a band. That, I should say, would be the workable portion of that seam.
564. Have you had any tests made of that coal? I had no tests—simply physical appearances.
565. Only from appearances? Yes, only from appearances. I have asked the owner to have assays, and I think he told me that the Government had assayed one of the seams.
566. Is the coal apparently a good one? Yes, it is good bituminous coal. The upper seam would be a steam coal. It has more the physical properties and appearances of the upper seam in Illawarra.
567. Have you seen it tested at all for steam purposes? No, I have not seen it tested. I have seen it burning.
568. In steamers? No, in an open fire.
569. You could not form any opinion from that as to its quality for steam purposes? Of course people who handle a large quantity of coal can come approximately near its value and quality.
570. For steam purposes? Yes.
571. Then there is not much use in having coal analysed? Well, of course, you cannot tell the exact amount of ash, but a person that is skilled can come very near it approximately. I believe that the Government Assayer assayed a seam lower than the seam I referred to. The seam I have spoken of is the one last discovered—a seam only recently discovered.
572. Have you been up there recently? About the middle of December.
573. Was that the only time you were there? That is the only time I have been at Coaldale.
574. Did you visit the district at all to ascertain whether it was likely that the seams of coal would be of an extensive character? A few miles along the base of the range is the distance the coal-measures I examined extended.
575. How far from Grafton are the first indications of the coal-measures? They all occur within a short distance of Coaldale and close together. The Clarence flows over coal-measures for very many miles, but whether they contain workable seams of coal has yet to be proved. The coal-measures extend a good number of miles west also from the Coal Range. I examined that some years ago, as far as Yugilbar Station.
576. Is the quality of that coal such that it would compete with the Newcastle coal for export? Not for export. It would certainly cut out the Newcastle coal in the district, and in the surrounding districts, provided there was a railway.
577. Then its uses would be simply for local purposes? For local purposes. It would certainly take the whole of the local demand. There is a large area of coal measures there.
578. Do you think that the coal is sufficiently good to be used for railway locomotive purposes? Perfectly good. My impression is that the upper seam is better steam coal than Newcastle, in the same way that the Illawarra upper seam is better steam coal than Newcastle. It is not such a good coal for gas purposes.
579. That is the conclusion you have come to as an expert? Yes.
580. But not from any analysis? I have seen the Government analysis of a seam lower than the upper seam, and which, practically, is about equal to Newcastle Borehole seam;—not very much difference, only a decimal per cent. in the matter of ash.
581. Why would it not answer for export purposes? Because it is a rather more friable coal than Newcastle. It does not occur in such thick beds. The bands that intersect the coal occur at more frequent intervals than at Newcastle. A good export coal must bear the rolling and handling on board the ship.
582. Do you know anything else of other minerals in that district? It is entirely a coal district between the two rivers, as far back near the range as Yugilbar, and there the auriferous rocks take the place of the coal-measures.
583. You only came here to give evidence as to the coal-measures? Yes.
584. *Mr. Hurley.*] Are you interested in any of them? I am interested in no mine. I have never had a share or interest in any mine.

John See, Esq., M.P., sworn, and examined:—

585. *Dr. Garran.*] Are you connected in any way with this district? Yes. J. See, Esq.,  
M.P.
586. In what way? I am interested in trading to the district and in the district. 6 Feb., 1890.
587. Have you resided in it? I have resided on the Clarence.
588. Do you know much about the Richmond? Not so much as about the Clarence. I have been to the Richmond.
589. Are you acquainted with the locality of the Big Scrub? I know something about the Big Scrub. I have been in part of it.
590. Can you roughly, on this map, sketch the outside boundary of that Big Scrub? I cannot.
591. Does it come right down to the coast? I think it does. I have not been very far north in the Big Scrub. It is about 24 miles from Lismore.
592. Have you been on the road from Lismore to Byron Bay? I have not.
593. Have you been from Byron Bay to Murwillumbah? I have not.
594. Have you been from Ballina up the Creek? I know a little about the country from Ballina to Lismore.
595. You know this is one of the richest districts, so far as the quality of the soil is concerned, in New South Wales? Yes.
596. And that the problem in making railways in that district is to give the cultivators access to a market? Yes.
597. The great object in making a railway would not be to connect one port with another, but the producers with the water? That would be one of the objects. 598.

J. See, Esq.,  
M.P.  
6 Feb., 1890.

598. Do you know enough of the physical geography of that district to say whether the line as laid out here is the best expenditure of money possible to give the largest number of producers access to a port? My idea is that the line would serve a larger number of persons, and to all intents and purposes be a better line, if it went more inland.
599. Are you at all acquainted with the engineering reasons that have caused the line to take its present route? I am not, except from what I have heard—that there are more engineering difficulties in going through the Big Scrub than round it; that it would be more expensive to go through the Big Scrub, as there are some mountains they would have to pass.
600. You have not been through the heart of the scrub? Not right through it. I have been 20 miles from Lismore, and am informed that nearly all the Big Scrub is of the same character, and after you leave the scrub and get on to the banks of the river, it is altogether different. I do not think that the alluvial on the Richmond River is a wash down from the Big Scrub, but from the mountains.
601. From the granite country? Yes; from the table-land.
602. Is it granite? Some of it is granite—mostly, I think.
603. You think that the alluvial on the banks of the Richmond is of the same quality as that on the banks of the Clarence? It is exactly the same. It is all made up of deposits by floods—the accumulation of centuries.
604. Is that river bank land as rich as the basaltic land further inland? I think it is much richer.
605. Of the two soils, the river bank soil is better than the Big Scrub soil? For agricultural purposes it is much better.
606. Is it better for dairying purposes? I cannot say from experience; but I know that sugar-cane and maize and products of that kind are much more profitable than that grown in the Big Scrub; but I am told that the grass in the Big Scrub—and I have seen it—is wonderful for grazing purposes.
607. Then for dairying purposes the basaltic soil might be the better of the two? I think it would be as good, if not better.
608. How far back do you find the settlers bring their produce to the river, to ship in your steamers, or any other steamers? Thirty or 40 miles.
609. Does it pay settlers to carry their produce 20 or 30 miles? It does not pay them as well as it would if they had better facilities; but they have taken up the land, which is wonderfully good, and are cultivating it in the hope that they will have better facilities for getting their produce to market. There are scores of farmers who have taken up land in some of these rich districts, not many miles from the Clarence, who have simply complied with the conditions under the Act, under which they have taken it up, but have not been able to utilize the land for want of an outlet. They expected that roads and wharves should be made, but that has not been the case. I refer to Coff's Harbour and Urara, to which the produce would come if they had a means of getting it away.
610. You mean that the greatest temptation to free selection is excellent land? That is the great temptation.
611. And the settler takes that up in the hope of having greater facilities for transit hereafter? Yes; that is the way in which the land has been taken up.
612. Leaving out exceptional cases, how far back from the river is the bulk of the tillage carried on? The principal portion of the sugar-cane and maize is grown on the banks of the Richmond or Clarence.
613. When you say "on the banks," do you mean within a mile? Yes; I should say within a mile. There are numerous creeks running into the various rivers. On the Clarence there are creeks and arms and branches of the river, and the land is just as valuable there as is the land on the main river; for instance, on the south arm back to Coldstream, and on the north arm, and various other places I might mention. They are all of the same character. The land on the creek banks is as rich as on the river banks, and of the same class. The land on the river banks is of a different character from that of the Big Scrub. There is some of the same kind, but the wood indigenous to the river banks is more marked in its character than that grown in the Big Scrub.
614. Sugar-cane is an article that will not bear long carriage—it deteriorates somewhat after it is cut? It would not bear very long carriage. Two or three days is the length of time it will remain good after being cut.
615. But there are other crops grown in that district that will bear long carriage far better than sugar-cane? I do not know what they grow besides sugar and maize. The principal crops on the rivers are maize and sugar-cane—chiefly maize.
616. I am asking you this question, as you say you do not think this line opens up the district as well as it should do, but looking at the area of the district, how near do you think we should bring the farmer within reach of transit facilities, either by water or by rail? There is very little farming, except on the banks of the river. There is a good deal of land fit for dairying, but there is not a great deal of land used for dairying yet. There are some steam-mills being put up for the purpose of crushing, which will give those who choose to grow maize means of getting their produce crushed and manufactured.
617. We want to open up this district so as to bring the produce to market. You think that a better line might be made than this one now proposed;—can you state any routes you know of that would bring more cultivators within reach of the coast than the line before the Committee would? If practicable it would be far better to take the line through the Big Scrub than around it. I look upon the Richmond River as the principal outlet for the southern part of the Big Scrub, and possibly the Tweed might be one outlet for the Big Scrub.
618. You do not view with favour this project of a line near the coast? I am only giving you my opinion that, if practicable, the line would be more serviceable if taken through the Big Scrub than run round it; but if that is not practicable, this would be an acceptable line.
619. A line running north towards Murwillumbah would be better than this line? I think so.
620. But you do not know whether, on engineering grounds, that would be practicable? I do not.
621. That would run through about the centre of the Big Scrub? Yes. The object is to open up the country, and give people facilities for bringing their produce to market. A railway going through the Big Scrub would serve the purposes of the settlers better than a line along the sea coast, because it would give the people settling in the Big Scrub facilities to get their stuff to a shipping port.
622. Do you know anything of the character of the country about Ballina on the way from Lismore to Byron Bay? No.

623. You have not been up Tintinbar? I have a general knowledge of the country. I know it is all scrub land, pretty much of the same kind.
624. As soon as you get out from Ballina, leave the coast and go inland, you get on to good land? Yes; a few miles from the coast you get on to good land. In some cases it runs almost to the coast. At Tintinbar, I believe, it does.
625. From Ballina up to Tintinbar Creek, would it be all good land? Yes; on the banks of the creeks it is good land.
626. A line by that route would approach this line marked on the map from Lismore to Byron Bay? Yes.
627. Suppose a railway started from Ballina and went up Tintinbar towards this line from Lismore to Byron Bay, and then on to Byron Bay, and then to Brunswick, would you not, from the very first, be bringing producers within reach of a shipping place? Of course, you would if you brought the railway to Ballina or to Lismore. Lismore is at the head of navigation on the north arm, and from there the greater portion of the produce of intermediate places is sent by steamers.
628. Some of the witnesses objected to Lismore on account of the delay incurred on the way which they thought would spoil the butter they wished to send to the Sydney market? That depends on the state of the bar. If the ship could get out I do not think the produce would be injured in any way, because it would only take four hours to run down the river.
629. Granting that Lismore is a point of shipment for that part of the country within a moderate distance of it, Ballina would be a better point of shipment, would it not, for those on a part of the line from Lismore to Byron Bay? Yes, if that line were constructed; but in the majority of cases the produce is not shipped at the entrance of the river—Ballina or Yamba—but from places all along up to the head of navigation. There are some towns and settlements, and there are wharves provided as depôts for the use of settlers.
630. That is because the river is your main road now? And so it would continue to be for the products of the local places.
631. If we start from Ballina we get into good country almost immediately, and if we get this line here proposed and follow it north towards Byron Bay, we shall be going through good rich scrub land the whole way? I think it is a debatable point whether the line should go to Byron Bay at all.
632. You observe on the map that the line is forced round here because the ranges approach the coast so closely? Yes.
633. If you look at the map you will see that the line is laid out up the water course, and the whole of the distance within a few miles of the coast? Yes.
634. We must assume that physical difficulties compelled the engineers to come closer to the coast than they otherwise would have done? I think it is perhaps a matter of economy in indicating the course the railway should take. The surveyors as a rule pick out the best possible grades, the least expensive routes for constructing a railway. I do not think that routes for railways are always picked out because they are the most suitable, or go through the best country, or serve the people the best. The first object, I think, that the surveyors have in view is to give an easy grade which would entail the least possible expense for construction.
635. You said you did not think there was any necessity to go to Byron Bay at all; do you look upon Lismore as the natural port for the Big Scrub? For the bulk of the Big Scrub. At present 9-10ths and more than that of the produce of the Richmond River including the Big Scrub is sent from the Richmond, although there is a jetty and means of getting produce to market from Byron Bay. The great bulk of the stuff sent from Byron Bay is timber, which would go whether there was a jetty or not.
636. As the problem presents itself to you the task of constructing a railway in the Big Scrub is the task of connecting it with Lismore? I repeat that I think the greater number of persons would be benefited through opening the Big Scrub—through taking the railway through it if practicable rather than along the route proposed; but, of course, there may be engineering difficulties that I do not know of. I do not pretend to know anything about that. I speak only from the general knowledge I have as to opening up the country. The Richmond River entrance is, I suppose, to be made a port, and that, I say, is the natural outlet for the greater portion of the country adjacent to it.
637. Still all this country from Lismore to Byron Bay is rich land? Yes.
638. And the line from one point to another will, from beginning to end, run through rich land? There seems to be a general opinion that it is more adapted to grazing purposes than cultivation. It grows an enormous crop of grass, but so far—whether it arises from the difficulty in getting the stuff to market or not—it has not been a success. Clearing the land is very expensive. I suppose it would cost at least £5 or £6 an acre to clear it.
639. Still it is rich enough to be worth that? Yes.
640. If it pays to clear the land at Kiama and Shoalhaven will it not pay to clear the land there? Three-fourths of the Big Scrub has been taken up by speculators.
641. When you say "speculators" I suppose you mean speculative selectors? No, I mean that a great number of Sydney folks have taken up the land.
642. As selectors? They found the money.
643. You mean they are in partnership; they have found the money necessary to enable the land to be utilized? Yes.
644. It is practically a partnership? Yes; on the banks of the river the means have been obtained from the outcome of the land itself, but in the Big Scrub, I think the greater portion of the money has been spent from outside sources rather than from the increment of the land itself.
645. Do you think it would be a remunerative national project to carry the railway through this Big Scrub? I am sure of it.
646. You think that the land is rich enough to give a traffic? I think the North Coast District, from Newcastle right away to the Queensland Border, is as rich as any other country in the world, and the Richmond District is as rich as any portion of it.
647. Then you think this district does deserve railways? Unquestionably.
648. Your only doubt is as to whether this line has been laid out to the greatest advantage? Yes; but I think that that should not be a bar to its construction.
649. You do not oppose the line as laid out? No.
650. You only think that it might be laid out better? It is only a suggestion of mine, to open up the centre of the Big Scrub.

J. See, Esq.,  
M.P.  
6 Feb., 1890.

- J. See, Esq.,  
M.P.  
6 Feb., 1890.
651. Contrasting Lismore and Ballina as ports, you think Lismore is equally good? Yes. Up to the present time there has been more water at Lismore than on the bar. A vessel has had no difficulty in getting up the river after crossing the bar. Lismore has really been the port of shipment from the Clarence.
652. But if the improvements designed by Sir John Coode are carried out, Ballina will be a better port than Lismore? Yes; of course it will probably be deeper water, although I think he says there will be 14 feet, and there are 14 feet at Lismore; but the produce that should go to Lismore from that locality would not be diverted from Lismore to Ballina. To my mind the head of navigation is Lismore on the north arm, and possibly Casino on the south, and the greater portion of produce will be shipped from those centres.
653. At the same time Ballina is the natural port for all of the district within 10 or 15 miles behind it? Ballina would be, because it is at the heads. It is maintained, I think, almost exclusively by the shipping that comes in and out of the Richmond, and not sustained by the inhabitants who are settled in and about the neighbourhood.
654. Still you say there is rich land in the rear all the way back to the proposed line? Unquestionably there is a great quantity. Tintinbar land and the land up this creek is very good.
655. So a line from Ballina would go through rich land all the way? Yes.
656. Is it a difficult route? No; I do not think there are any difficulties whatever.
657. Can you tell us anything about the land between Casino and Grafton? It is good grazing country, and there is some alluvial country. On the banks of the creeks there is good agricultural land.
658. Looking at the necessary limitations in our public expenditure from year to year, do you think a line from Casino to Grafton is a justifiable line at the present time? I think the original intention was that this line should be a national and not a local line. I am sure the intention of the projectors of this line was to make a costal line from the border of Queensland on the coast to Newcastle, and a line of railway over only a portion of this route would appear to me to be a line leading almost from nowhere to nowhere; because, unless you give the people a market in Brisbane, which I understand is not proposed to be done at present, what is the use of the railway, unless it be made a national line.
659. You said just now that the object was to bring producers within reach of a local market? That is part of it. That is one of the local intentions, but where is the market. If you bring it from the centre of the Big Scrub to the Richmond, you have not brought it to the market, and you must tranship it to a steamer which would take it to a market.
660. Where is the market at present? The principal market for the products of all the north coast districts is Sydney.
661. Do you think that that market has in itself sufficient expansiveness to take the additional produce that will be sent down to the coast when this railway has opened up this district? Yes; Brisbane could very often take a great deal from the table-land.
662. Could not your steamer which takes produce from Lismore to Sydney, also take it to Brisbane? There is not sufficient volume of trade at present.
663. If there is not trade enough at present in Brisbane to take the surplus products from Lismore, where would be the work for the railway? These districts are increasing enormously.
664. The more the producers grow, the more they want a market? Quite so.
665. You say you want a national line for the sake of sending the produce to the market? As I understand this project, it is that there is to be a line of railway from the Queensland border to connect with the northern railway near Maitland and intersecting the whole of the northern rivers.
666. It is not put before the Committee as part of a national line of railway at all, but as a railway to develop the resources of this district? Not alone that district; it is a line from Grafton to the Tweed, to open up communication.
667. Yes; but is there any particular traffic between Grafton and the Tweed? There is a good deal of traffic between the Richmond and the Clarence. The mails at present, I believe, go that way.
668. There is not much traffic in mails, is there? There are a great number of passengers.
669. The tendency of the evidence brought here by the Sectional Committee is that there is very little traffic between the rivers—that they produce so much the same thing that they do not trade with one another? They do not send maize from the Clarence to the Richmond or from the Richmond to the Clarence, but there is a good deal of communication by people going backwards and forwards.
670. You advocate the line from Casino to Grafton not so much on the ground of its local traffic as of its being part of a national line? Yes, I certainly do. My impression is that if this is to be the terminus we do not want a railway to Byron Bay, Richmond, and the Tweed.
671. You do not look upon this projected line as part of a national line? I do not say so, but it cannot be a national line if only a local line. If it is part of a national line, it speaks for itself.
672. If it is laid out in the first instance so as to give the greatest possible development to the adjoining districts, and is connected ultimately with the line to Sydney and Brisbane, it will be both local and national? Exactly so, but all the districts north and south must, I take it, be connected with the table-land by railway from the coast and joined on to the northern line, and it cannot be this way; it will be simply a local line from the Tweed to the Richmond or Casino. A tramway might answer the same purpose. If followed up by railway to the table-land, a great deal of produce would be taken to the table-land.
673. You understand we have not any proposal to go to the table-land? No; but I think they are almost inseparable. There has been communication from the Clarence to the table-land for years. A road has been constructed at a cost of £200,000 to and from Lawrence to Tenterfield at a cost of £120,000 odd pounds. A railway would give them facilities to get the market. There would be an interchange of trade resulting from the opportunities afforded by railway construction.
674. Do I understand you to say that we have spent £320,000 in connecting this coast with the table-land behind it? Yes.
675. Have we had trade corresponding with that expenditure? Yes; nearly all the trade went that way until the differential rates were imposed the other day by the Railway Commissioners. Even now, in spite of the differential rates, some of the goods go that way.
676. Could anything ever neutralize the value of the line through the Big Scrub? That is simply a local line; you would not give them facilities to go to the table-land, nor give people there facilities to go to the Big Scrub.
677. This line, if once made, will never become useless as long as the settlers are there? No, I do not think it would; but it would not serve the purposes for which it is intended.
- 678.

678. Which do you think is the biggest want for the settlers—a line to the table-land or to the sea? Both.

679. Which most? They have a road to the sea—a fairly good road through the Big Scrub.

680. How far back are the people of Lismore really using their ground now? I suppose 20 or 30 miles.

681. They are bringing produce from 30 miles back in the scrub to Lismore? Little, except butter, I think.

682. Looking at the products of the district, do you think that the people on the table-land could offer the same market for butter and cheese that the south does? No.

683. Do they make butter and cheese on the table-land to a large extent? To some extent they do. I think sugar, and maize, and tropical products will be more in keeping with the products of the Big Scrub than butter and cheese.

684. Do I understand you to mean that the proper destiny of the Big Scrub is to grow sugar for the table-land district? I think that is part of its destiny.

685. The great object should be to make a railway to the table-land and not connect with this port? I think they might be connected with the port and the table-land too. I think the northern district will grow sugar and other products, and that there will be an interchange of products between them and the table-land.

686. You spoke rather disparagingly of the quantity of butter made in this Big Scrub, but I see from Mr. Coghlan's book that more than 1,000,000 lb. came from the district last year, and that the number of cattle is very much larger? That means 10 tons of butter. More than that comes in one steamer from Wollongong.

687. Do not you think it is equally as good a dairying district as any part of the south coast? I think the feed is as good, but I do not think that they can make butter and cheese as well. I think the climate is against them—that is the only reason.

688. The ground is not so rich? Yes, richer. I think that if they get proper refrigerators and cool chambers to bring it to market they will be as successful as those on the south coast.

689. To sum up your evidence your only objection to this proposed line is that it does not go sufficiently through the heart of the scrub and is not connected with the table-land? That is not my objection to this line, but I think the destiny of this district is to be connected with the table-land. I am giving my reasons why I think it should be a national rather than a local line.

690. Still you want this line to be made? I have said so; but if only that part of the line is made it will be local and not national.

691. If only a local line—would you condemn it on that ground? It would not serve the purpose I think it is intended for—to give these people an outlet to other places besides the sea coast.

692. Would it not be worth making for that purpose? Possibly it would. But if the Richmond River entrance improvements, the Byron Bay works, and the Tweed railway are made this would not be much use as a local line.

693. *Chairman.*] Do you know anything of the Italian settlement; have you been there? Yes, I have been there, and can corroborate what Mr. Campbell says. Having been sent by the Government to report on lands suitable for a model farm he says:

THE Italian settlement called "New Italy," situated on this upland "poor" country between the Clarence and the Richmond Rivers, is a good illustration of the value of such land. For the last six years the remnant of the Marquis de Ray's emigrants has been settled here—thirty Italian and two French families. By dint of the very hard work of men, women, and children, these people have made themselves comfortable homes, fenced in their farms, made considerable clearings, planted small vineyards, which are just now coming into bearing, a few fruit trees, some olives and mulberries, and pretty little flower gardens around their homes, which, as a rule, appeared to be kept extremely clean and neat.

The land was heavily timbered with hardwood, ironbark, and gum when first occupied, and it was considered to be so inferior that the Italians were thought to be insane to attempt its cultivation; but I believe that they are very well satisfied with their prospects, and could not live again on the poor fare they were accustomed to at home in Italy after enjoying the abundance of good food they can now command.

That is a report from Mr. Campbell, who was sent by the Mines Department to get information in reference to this particular question. It is corroborated by the little book written by Mr. Clifford. I merely give that as evidence of how this land could be utilized, and in corroboration of my assertion that the land between Casino and Grafton is not poor wretched land as some persons would have us believe. I now hand in some statistics, prepared at my request by Mr. Coghlan. He says that in 1861 the population of Grafton was 1,441; in 1871, 2,526; in 1881, 7,744; and in 1889, it was estimated at 9,710. In 1861 the population of the Clarence was 1,865; in 1871, 6,364; in 1881, 6,752; and in 1889, 7,827. In 1861 the population of the Richmond was 1,835; in 1871, 4,870; in 1881, 9,266; and in 1889, 19,207, making a gross increase from 1861 to 1881 on the two rivers of 31,000. As regards the Clarence River trade last year, there were 301 departures of steamers from the Clarence, and 59 sailing vessels, conveying 8,109 passengers. The principal exports to Sydney were:—214,071 sacks maize, 1,038 bags oysters, 2,979 bags bones and horns, 22,976 bags and 32 tons sugar (exclusive of that shipped from the Colonial Sugar Company's Works), 6,400 cases meat, 6,480 cases eggs, 1,898 bales wool, 317 bundles skins, 106 horses, 1,239 cattle, 163 calves, 6,485 pigs, 1,864 coops poultry, 11,599 hides, 525 hogsheads tallow, 435 hogsheads molasses, 775 hogsheads rum, 496 casks beer, 9,680 bags potatoes, 1,979 cases fish, 1,241 sacks pumpkins, 3,092 bags mineral ores, 75,700 spokes, 908 logs cedar, 81,010 pieces sawn cedar, 292,457 feet hardwood, 101 bales hay, besides a large quantity of spirits from the distillery. I do not know if your attention has been directed to the proposed establishment of a direct line from London to Grafton, and perhaps I may be permitted to read the following newspaper paragraph:—

THE storekeepers of Grafton, Glen Innes, and Inverell are opening up a direct trade with London by sailing vessels from Grafton. Mr. C. B. Ridley, of Messrs. Robards & Co., has visited the districts and procured sufficient support to start the line. The new departure has, doubtless, been brought about by the success attending Messrs. J. and A. Brown's direct lines to Newcastle.

694. *Mr. O'Sullivan.*] Do you know the value of the lands in the Kiama and Shoalhaven districts—what they bring per acre? I think that good alluvial land at Shoalhaven would bring as much as on the Clarence—the values ranging from £20 to £50 per acre.

695. What population is there between Grafton and Casino? There is not a great deal; it is mostly a station country. There are a few houses, but not many.

696. Is the country likely to support a population if a line is constructed that way? I think there is a good deal of land that would be used for farming. It is well timbered. 697.

J. See, Esq.,  
M.P.

6 Feb., 1890.

- J. See, Esq.,  
M.P.  
6 Feb., 1890.
697. If the national line were carried out as outlined on the map is it likely to have keen competition with steamers on the coast? No, I think it will produce a great deal of settlement, and not come into competition with steamers at all.
698. Will not the steamboat traffic come into competition with it? If it does, it will have to go down, but I do not apprehend that they will interfere with the railway, or that the railway will interfere with the steamers.
699. Do you think that it is likely to have the same effect on that district as the railway has had on the Kiama district? Yes.
700. Give a large impetus to trade? Yes. I think millions of people could be sustained by the north coast district.
701. Will this line be a shorter route to Brisbane than the northern line? From the river, certainly.
702. But I mean from Sydney to Brisbane? The proposed north coast railway would be nearer to Brisbane than the northern railway.
703. *Mr. Lee.*] In considering this surveyed line down the coast to join the main line about Newcastle, you look upon that as a national line? I do.
704. Do you think that if that line were constructed maize, and similar products of the Clarence and Richmond would not be sent by that line? Possibly not, but a good deal of produce would. Under our newly revised railway system we are taking goods cheaper than they are being taken from bar harbours.
705. What is about the average cost by steamer for the carriage of a bag of maize? About 1s. 6d. per bag.
706. Would the railway carry it for that? Yes, they are carrying it cheaper now. I will be glad to show you the rates charged, not only by our own company, but by other companies, and also show you the new schedule of rates authorized by the Railway Commissioners for the carriage of produce down from the interior. The statistics I have handed in contain full particulars of the land under cultivation, the area of land alienated, the area of land available for agricultural and pastoral purposes, and the number of cattle and other stock—in fact, all the information that I have been able to gather from Mr. Coghlan.
707. *Mr. Tonkin.*] I think that in answer to Dr. Garran you said that the greater part of the land in the Big Scrub had been taken up by Sydney speculators? That they were interested in it—yes.
708. I want to ask you whether you believe they took that land up in anticipation of its value being increased by the construction of this railway? Unquestionably they have done so. I know there has been a great deal of speculation going on in the Big Scrub.
709. *Chairman.*] With regard to the Big Scrub, it would be impossible for a poor man to use that land at all? Quite impossible.
710. He must have capital at his back? Yes, he must. The same applies to a great deal of the land on the northern rivers, and in other parts too.
711. You have told us that it costs £5 or £6 an acre to get that land prepared for use? Yes. I think, if the labour had to be paid for, it would cost £4 or £5. Of course, the farmers utilize the labour of their families. I was told, when I was on the river a few days ago, that the Clarence River bears a favorable comparison with any other district in the country with regard to the school-children. The arrears of fees are very small. There are forty-six public schools—ten provisional schools, and six half-time schools in operation. The pupils in the public schools number 3,367, in the provisional schools 178, and in the half-time schools 105—total 3,650, of which there are ninety free pupils in the public schools, four in the provisional schools, and four in the half-time schools. The arrears of school fees are as follows:—public schools £16 15s. 3d., provisional 4s. 3d., half-time £1 3s. 3d., making a total amount of arrears in sixty-two schools of £18 2s. 9d. The expenditure on new schools and repairs amounted to about £2,500.
712. I suppose the farmers on the Clarence are not in debt at all? The district is not in debt. The farmers, like very many others, are in debt. However, I am sure they could all pay their debts—there would be a large surplus in the aggregate if all the liabilities were discharged.
713. *Mr. Copeland.*] Do you think it is desirable to bring the railway from Lismore to Byron Bay—that is, from one shipping port to another shipping port? I have already said that I am not favourable to that section. I do not think it is necessary.
714. I have not heard you say what scheme you are favourable to? I am first of all favourable to the north coast railway, but also to the construction of a line of railway from Grafton to the Queensland border, and I would certainly go to Casino and Lismore, but I think that a better route, serving a larger number of persons, could be taken through the Big Scrub on to Murwillumbah or the Tweed River, instead of going to Byron Bay and along the coast as it is proposed to do.
715. *Chairman.*] Have you been up in that country at all? Not beyond Ballina.
716. Have you been to Byron Bay? No, never.
717. Then you had better go and see if the railway could be taken along that range of mountains? I do not say that it could, but only that if it could it would be better.
718. *Mr. Dowell.*] Do you think it desirable that the starting point of the railway should be opposite to Murwillumbah? I could not say, but I should say that that would be a good centre—it is the head of navigation.
719. Do you think it absolutely necessary and desirable that the railway should be constructed from Grafton to Casino? Yes, I do.
720. What point of the northern line do you think the most desirable to connect at Grafton? I am not able to give an opinion. I have taken a great interest in connection with the two schemes, but only one has been recommended, and I supported that—a line from Glen Innes to Grafton.
721. *Chairman.*] I suppose you are indifferent as to where the connection is, so long as it is made fairly for the New England people? So long as it serves the greatest number of persons. But I think it inevitable that there will be a connecting system between the coast and the table-land, instead of having to go to Newcastle or Sydney as now, when any one wants to send any produce to the table-land.

Charles O. Burge, Esq., District Engineer, Railway Department, sworn, and further examined:—

722. *Dr. Garran.*] What position do you hold in the Civil Service? I am a district engineer. I am also a member of the Institution of Civil Engineers. C. O. Burge,  
Esq.  
6 Feb., 1890.
723. What portion of the line now before the Committee have you personally examined? I have closely examined the line from Grafton to Byron Bay, and in a more fragmentary way from the Brunswick to Murwillumbah, and also the connection between the Tweed and the Queensland railways.
724. Taking that part between Lismore and Byron Bay—you are intimately acquainted with that? As far as the line goes—yes.
725. Leaving Lismore, you follow mainly the line of a water-course? Yes, Wilson's Creek.
726. And then how far off the coast? We go straight up to Byron Bay.
727. Where is the Dividing Range? Close to Byron Bay.
728. How far off? About 5 miles.
729. You are ascending all the way from Lismore to within 5 miles of the coast? More or less.
730. And then you make a rapid descent to the coast? Yes.
731. What is the maximum elevation that you reach? I do not remember the exact elevation, but it is marked on the plans before the Committee.
732. Is the descent very steep? It was originally 1 in 40, but I have made some alterations so as to involve only 1 in 50. I reduced all the maximum grades from Grafton to Byron Bay to 1 in 50.
733. When you once get into the bed of that water-course, are you pinned in there? Pretty well.
734. You cannot get out and cross the range without making that maximum elevation? No; unless there was a very considerable deviation altogether.
735. You know no better route between Lismore and Byron Bay than following up that river? No.
736. Does that involve very much curvature in the line? Yes.
737. Many crossings of the river? Not so very many. We follow the valley, but do not cross it very often.
738. You keep winding round the edge of the spurs all the way? Yes.
739. So the distance between the two points has increased how much over the straight line? I cannot tell you that.
740. Is it 25 per cent.? I daresay it would be.
741. Do you know the physical geography of the Big Scrub generally? I have been through it on the railway, but not away from the line, except so far as to examine possible deviations in the neighbourhood.
742. Are you able to give us any information as to Mr. See's remark that a line pretty well north from Lismore to Murwillumbah would be an improvement on the present line? That I cannot say. I think from appearance that it would be very rough.
743. Have you been north from Lismore at all? No.
744. While engaged between Lismore and Byron Bay did you have any occasion to go from any point of that line towards Ballina? No.
745. You know nothing of the country between those two points? No.
746. You do not know what elevation you reach half way between Lismore and your summit? I cannot say right off, but it is all shown on the section. It is rising all the way from Lismore to the Dividing Range.
747. You are compelled to go round that point at the coast;—you could not avoid hitting the coast at Byron Bay? If we went more inland we would get rougher country.
748. *Chairman.*] If you went more inland to avoid Byron Bay you would have to go nearer the coast to go across the Brunswick would you not? I do not know.
749. You do not know that country? I did not examine from Byron Bay to about 2 miles north of the Brunswick. That was examined by Mr. Alexander.
750. *Dr. Garran.*] Do you know the country from the Brunswick to Murwillumbah? From there I had a slight examination.
751. Does that go round spurs or over a ridge? It goes over a ridge.
752. It crosses one main ridge? Yes, between the Brunswick and Murwillumbah.
753. Does it ascend any valley? Yes.
754. And goes down the valley on the other side? Yes.
755. In each case you keep to the water-course? Yes.
756. That is the best route you can take? Yes.
757. Do you remember the maximum elevation there? No, I was not concerned with the elevation. It is more the gradients one keeps in one's mind.
758. Can you tell us whether there is easy lateral access to each side of your railway? I think it is very difficult in most of the country between Lismore and the Tweed—very bad and hilly roads.
759. You see this line is to open up all the country to facilities of transit;—I want to know whether by taking a line up a valley like this you have made it easy for producers 8 or 10 miles away to get to your line, or will it be difficult? I do not think there will be any difference from any other route. There will be difficulty in any case, because of the badness of the roads.
760. I mean as far as the line is concerned? No.
761. You think lateral access would be difficult in any case? Yes.
762. You are of opinion that lateral roads are essential to make this railway a success? Yes.
763. Without them it will be of little value? Comparatively so.
764. Good local roads are an absolutely necessary adjunct to this scheme? That is what struck me on this portion.
765. Did you go far from the line? No.
766. But you heard of the country? Yes.
767. And what you had seen led you to form that impression? Yes.
768. But the railway must be backed up by good local roads or it will be of little use? Certainly.
769. You saw no reason to alter the main line of the route? I have altered it in many instances.
770. But only in details? Yes.
771. On the plan behind you you see two lines between Lismore and Byron Bay—one being apparently an alternative survey;—do you know anything of that survey? No. I examined the one to the right—the more northerly one.
772. You know nothing of the other route? No. 773.

- C. O. Burge, Esq., 773. Did you go off the line from Murwillumbah to the Tweed at all on the other side? I examined thoroughly all the country between Murwillumbah and Macpherson Range with reference to a connection with Queensland.
- 6 Feb., 1890. 774. So far as you saw there was no desirable deviation on either side from the Brunswick to Murwillumbah? No. I examined also the coast line—that would be considered the alternative.
775. You do not consider that a better line between Brunswick and Murwillumbah could be laid out practically now? No, except in detail.
776. Between Byron Bay and Murwillumbah is the railway forced on to the coast at the Brunswick? I did not examine that portion. Mr. Alexander went over that.
777. Because the line crosses the Brunswick near the mouth apparently? Yes.
778. You could not go round the Heads at the Brunswick? I think not, but I have not examined that.
779. Taking the line between Lismore and Casino, is that a line that has any elevations to conquer? Not very much; there will be a tunnel.
780. Is that up and down, crossing creeks and ridges? No, it is an easy country except the Dividing Range, between the two arms of the river, and there there will be a tunnel.
781. Do you go up a valley to get to that range? No, not specially one valley. It is only a very small stream, and we cross the range at the lowest point.
782. Is there a good road between Lismore and Casino? Yes.
783. Is the land settled? I think pretty fairly.
784. Did you see people taking their produce to the market? Yes.
785. Was the road a fair one for the country? It was very good between those two points.
786. Would the railway run very much on the line of the road? Not far off.
787. It will duplicate the existing means of communication? Yes; they are both pretty direct between those places.
788. Did you examine the line from Grafton to Casino? Yes.
789. Is that an easy line? Very easy.
790. No great or expensive works on that line? No, not at all. There are some large creeks to cross, but taking it as a whole, it would be counted as an easy line.
791. You examined the line from Murwillumbah to the mouth of the Tweed? Yes.
792. Is that a difficult piece? No.
793. If we wished to connect with Queensland it would be an easy line? I would call it an easy line—not specially easy, but not difficult.
794. It runs near the river all the way? Yes, as far as what they call the junction of the north arm, and then it follows the course of the back waters, and goes up to the Tweed Heads.
795. Have you any great range to cross? No.
796. Only minor difficulties? Yes.
797. So the connection with Queensland would not be very difficult? No.
798. To make that, should we go up there or across the range? It would be practically impossible to cross the range. The Queensland Government are proposing to carry their line to the Tweed Heads.
799. That is close to the boundary? Yes.
800. Is there a mile between the outlet at the mouth of the Tweed and the boundary? No, it is almost co-incident. The boundary passes through Point Danger, which is practically one head of the Tweed River, and the mouth is close to that, and the Queensland Government line runs close up under Point Danger.
801. You do not know if any trial surveys have been made north of Lismore by any surveyors? I do not.
802. *Mr. O'Sullivan.*] Was the route *via* Murwillumbah chosen in preference to that by Cudgen on account of there being only one crossing of the river instead of two? It does not involve that. In any case there would be only one crossing of the Tweed River.
803. Is it practicable for the Queensland Government to meet you directly north of Murwillumbah? I think it is impossible, on account of the engineering difficulties.

WEDNESDAY, 12 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	HENRY COPELAND, Esq.
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHEBY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

John M'Farlane, Esq., M.P., sworn, and examined:—

- J. M'Farlane, Esq., M.P., 804. *Mr. Lee.*] You are a Member of the Legislative Assembly for the electoral district of the Clarence? Yes.
- 12 Feb., 1890. 805. Do you reside in the Clarence district? No; in Sydney.
806. Have you at any time resided in the Clarence district? Yes; about twenty-four years.
807. Up to about what date? Till 1884.
808. You expressed a desire to give evidence on the question of the construction of a line of railway from Grafton to the Tweed? I was desired to give evidence by the Member for Grafton.
809. The Committee will be very glad to have any information you can place before them now with respect to that proposed line? I do not think I can say very much fresh on the subject. As far as I can learn a great deal of evidence has been given.
810. Do you happen to know the route proposed? I know it fairly well. I cannot say that I know the surveyed line—the exact line where the railway is proposed to go, but I know the locality very well.

J. M'Farlane,  
Esq., M.P.

12 Feb., 1890.

811. Have you been in the Tweed River district? No; but I have been on the Richmond River.
812. Have you been in the Brunswick district? No.
813. In the neighbourhood of Byron Bay? No.
814. Have you been in the neighbourhood of Lismore? Yes; I have been in Lismore.
815. And Casino? Not Casino. I have been very close to it, but not in the town.
816. Do you know the country between Casino and Lismore? Not very well.
817. Do you know the country between Casino and Grafton? Yes.
818. Along the proposed line of railway? As I stated before, not exactly along the surveyed line, but I know the locality generally.
819. You have a general knowledge? Yes.
820. What is the character of the country between Casino and Grafton? Fairly good. It is good grazing country, and portions of it could be placed under cultivation. There are a number of portions that could be placed under orchards, or anything of that description. I do not say it is the very richest quality of land, taking it all through, because it is not, but it is good grazing land, so far as my judgment will serve.
821. In what portion of the Clarence did you reside? In Grafton and Ulmarra.
822. How long were you residing there? Twelve months in Grafton and twenty-three years in Ulmarra.
823. Did you ever reside at Lawrence? Never.
824. During your term of residence there was it the custom at any time for the Richmond River people to send produce across to the Clarence for shipment to Sydney? I never heard of it.
825. Were the Clarence people in the habit of sending produce across to the Richmond? Certainly not.
826. Was there any interchange of products between the two rivers? In agricultural products certainly not worth mentioning. There might be a very small exchange, but not worth mentioning.
827. Do you think that if a line of railway were constructed from Casino to Grafton there would be an interchange of products between the Richmond and the Clarence Rivers? I think so.
828. Having in view that they produce the same kind of products and both have ports, do you think they would be likely to use the railway in order to send from one river to the other? Only at certain seasons; no doubt if there were a railway constructed there would be an interchange at various seasons of the year. When a product was out of season in one district it might not be out of season in another.
829. That would be occasionally and according to circumstances? Exactly.
830. Not regularly? Not in agricultural produce, unless in potatoes. I do not think the Richmond produces potatoes in sufficient quantities for their own requirements, but the Clarence does, and there would be, I daresay, a fair trade in potatoes.
831. Could the proposed railway be made to touch any other portion of the Clarence except Grafton? Yes; it could be made to touch almost any other portion.
832. But having in view deep water and the probable traffic? Yes.
833. At what point? I believe Lawrence is the nearest point. I may say that this is my opinion that if it were simply a railway to be constructed between the Clarence and the Richmond Rivers, certainly Grafton would be the wrong place to have it and so also would Casino. A much nearer route could be got to connect the two rivers in less than half the distance, and at less than half the cost by connecting them lower down where the distance between them is only 24 miles.
834. Where from? From Woodburn to Iluka is only 23 miles.
835. Iluka is at the entrance to the Clarence River? Yes; on the north side.
836. That would be of very little benefit to the Upper Clarence? I do not see that that would be much benefit at all to the Upper Clarence.
837. Is that the point you favour as a terminal point for any proposed railway between the two rivers? I cannot say that it is, because in my opinion a railway simply made to connect the two rivers I do not think would pay, but I look upon the railway from the Grafton to the Tweed River as simply a section of the north coast line, and I think that that was the intention when the scheme was first proposed.
838. Where would you propose to have the terminal point on the Clarence? If not at Grafton at least close to it. I think above the navigation of the ocean boats would be the proper place to cross the river, and I think that that is the only practicable place to cross. I do not think that the river could be crossed lower down.
839. You think that if there were a terminal point it should be at or above Grafton and not lower down the river? Yes; I am speaking of crossing the river.
840. Supposing it were made a portion of the north coast railway, what traffic could be brought across from the Tweed, through the Richmond to the Clarence, and thence by the north coast railway? The passenger traffic would be very considerable. There is a large passenger traffic at present between the Clarence and the Richmond. I think there are five lines of coaches running daily between different parts of the Clarence and the Richmond, and they seem to be doing a fair trade—to be paying. They have been continued for a large number of years, and that is one evidence that they are not losing money.
841. They carry mails, do they not? Yes; mails and passengers and parcels.
842. Do you think that the residents in the Tweed River district would be likely to use that line if it were constructed? For passenger traffic they certainly would.
843. From the Tweed by the coast to Sydney? I think they would use it this way: Take the train to Grafton, and the steamer there.
844. Do you think they would go past the steamers on the Richmond to go to the Clarence and take the steamer? I think so. Under ordinary circumstances they would, because of the state of the Richmond bar. It has been uncertain up to the present time, although it is very good now. I do not suppose that at the present time they would go past Lismore, only that they have a better class of steamers running to the Clarence for carrying passengers.
845. Having in view the improvements already sanctioned for the Richmond River heads, and the extreme probability of providing a safe entrance there, do you think that if a safe entrance were made there the passengers would pass the Richmond River? Certainly not. If the other requirements kept pace with the improvements made to the Richmond—that is, if the bar or harbour was made equally as good as the Clarence bar or harbour.
846. Nor would the Casino people, I presume, go across to the Clarence for that purpose if the Richmond River entrance were made good? I think that it would not make very much difference to the Casino people.

- J. M. Farlane, Esq., M.P.  
12 Feb., 1890.
- people. They cannot go by ocean steamers from Casino. They must go to Lismore or down the river to pick up the ocean boats, so that if the accommodation were not exactly as good in the Richmond River boats, it is probable that they would go to Grafton. At the present time some of the residents in the Tweed go to Brisbane. In some instances I know they have gone to Brisbane in order to go to Sydney, and in some cases they go the Clarence in order to go to Sydney.
847. You think that that line would be very likely used as a passenger line more than for produce? For a passenger line it would be used more than for the purpose of interchange of produce. No doubt if the line were constructed it is bound to open up a large area of country along the line which would, of course, increase the traffic upon the line.
848. What is the freight per bag on maize from the Clarence to Sydney? 1s. 3d.
849. If the improvements to the Clarence River Heads and the Richmond River Heads are carried out, is that rate of freight likely to be reduced? I think so.
850. To about what? I should think to about 10d. a bag. I myself have known a time when the freight was 6d.; but that only lasted for a short time, and was caused by excessive competition.
851. That being the case, do you think that the railway could possibly carry the produce at 10d. per bag to Sydney and compete with the steamers? Certainly not. I do not think the railway would compete—at least they would have to make a special concession for that particular line. There would have to be a differential rate.
852. Then about the inward freight—goods shipped from Sydney and other places to the Clarence and Richmond River districts—would they, in your opinion, be shipped by steamer to those rivers, or sent up by this proposed coastal railway? Heavy goods would, I believe, be shipped by steamer, but perhaps drapery and the like would be shipped by rail.
853. Would not the freight be an important factor in the carriage of the goods? In drapery it would not amount to a very great deal.
854. What is the ordinary freight on drapery, which I presume is by measurement? 15s. to 20s. by steamer per ton measurement.
855. Do you think that the railway could possibly compete with the steamers under those conditions? I admit that the freight by train would be dearer than by a steamer, but in the case of drapery I think it would go by rail.
856. That being the case, if it went by steamer it would go to the respective ports of the Richmond, the Tweed, and the Clarence? Yes.
857. Therefore there would be no necessity to send the goods across from the Clarence to the Richmond by rail? Not if they went to the Richmond River certainly.
858. So far as you can say that line would answer the purposes of a passenger line? Yes.
859. And occasionally perhaps for an interchange of produce? I think it would be more than occasionally. I do not think that there would be a heavy interchange, but I think it would be pretty constant.
860. Have you anything further to say? With regard to the continuation of the railway to the south after crossing the river at Grafton, I think that the railway must be constructed farther south than Grafton, to give accommodation to the numerous settlers now settling down on the country at the head of the Urara River, some 50 miles from Grafton, where there is a large area of the richest land. I think it is a certainty that the railway must be constructed at an early date from this rich country to Grafton, as they really have no port—Grafton being the nearest one.
861. *Mr. Garrard.*] Not necessarily to go to Sydney, but to go to Grafton as the nearest port? Grafton would certainly be the nearest port.
862. *Mr. Lee.*] For transshipment by steamer? Yes. In fact it is my opinion that the construction of the north coast line would save the country the expense of making harbours for small rivers. It would be better if instead of attempting to make those harbours, railways were constructed to the different rich localities in the neighbourhood where there is already a fairly good harbour or a prospect of making one; it would answer the requirements of the settlers far better than would tinkering with harbours that never would be safe.
863. *Dr. Garran.*] Do you think it would be a sound national policy to make the Clarence the port for the Richmond? Not if there were a reasonable probability of making the Richmond a safe port by the expenditure provided.
864. If there is that probability, you think that the Richmond should have its own port and the Clarence its own? I do, most certainly.
865. *Chairman.*] For the first 60 miles from Grafton on this line, we have been told that the country is very poor unproductive soil—is that so? It is not unproductive.
866. Is there any settlement on it apart from pastoral occupation? Not large. There are small patches of cultivation. I have not seen it for some years.
867. On the creeks? Yes.
868. It is principally used for grazing and timber-getting, is it not? Yes.
869. There is no communication between Grafton and Casino by coaches? Not at the present time, I think.
870. There never has been, has there? Yes, there has.
871. From Grafton to Casino? Yes. I am not exactly certain whether the coach is discontinued now.
872. We have been told that, after fifty years of settlement, the traffic between Grafton and Casino has never been able to support a public coach, and that there is absolutely no goods traffic between those two places? At one time, to my knowledge, there was a coach.
873. Lawrence is the point of departure and arrival between the Richmond and the Clarence Rivers? One of the points—the other is lower down—from Chatsworth to Woodburn. The principal passenger traffic comes from the north arm of the Clarence River to Woodburn. I think there are three or four lines of coaches.
874. In the Clarence and Richmond districts there is a similarity of produce—that is, sugar, maize, timber, and pastoral and dairy produce, are what each of them produces? Yes.
875. So there would be no interchange of commodities between these two places? Except at certain periods, when one of the products is out of season on one river, and not out of season on the other—for instance in the case of maize. Recently I have sent maize to the Richmond while there was plenty on the Clarence.
876. Then you think that the extension of the line to Grafton would be justified only by carrying it farther farther

- farther south? Of course I cannot say whether it would be justifiable to carry it, unless there was a prospect of continuing it farther south, but I think that that is the intention—to carry it farther south.
877. You know that, at the present time, the Richmond River is just as navigable as the Clarence, and higher up, is it not? I do not think it is navigable higher up, although ocean boats do go higher up on the Richmond than on the Clarence. They could go up higher than Grafton, but they do not do it.
878. The entrance at the bar is as good in the Richmond as in the Clarence at the present time, is it not? I think it is nearly as good.
879. Then if there is to be no interchange of commodities between those two points, what would be the justification for the construction of a line of railway from Lismore to the Clarence? There would be a large passenger traffic between the two places.
880. Why? They have got equally good boats on the Richmond and the Clarence, have they not? I suppose there would be a good deal of local traffic between the Clarence and the Richmond, as there is at the present time—I mean residents on one of the rivers going to the other.
881. Knowing it as you do, and describing it as grazing land, do you think that there would be sufficient passenger traffic from that land to justify the construction of a railway? No. I do not.
882. Even prospectively—certainly it would not now? No, it would not now.
883. A justification of a line to Grafton would be an extension to take in the rich lands you describe? That is a strong argument, I see, in favour of it.
884. But the great argument used by people in that district is connection with New England, is it not? That is what they are all looking and hoping for—to get some connection with the table-lands in New England from Grafton? They are agitating for that, but do not use that argument in connection with this proposed line. That is a separate matter.
885. *Mr. O'Sullivan.*] Supposing the line is constructed from Casino down to the coast, and then on to Murwillumbah, do you think that the trade of that large district is likely to gravitate towards Brisbane? I think so.
886. I mean if the line between those two points is constructed and the north coast line is not carried out as proposed? I think so. I think that the principal part of the Richmond River trade will, as regards maize, go to Brisbane. Through the whole of this year I have shipped maize in large quantities from Sydney to Brisbane and Northern Queensland—maize, and potatoes, and other agricultural produce, and if there is a railway constructed to the Queensland border, I have not the slightest doubt that the bulk of this produce will not be sent to the Sydney market at all, but go to Brisbane.
887. If that be so, is there a likelihood of Brisbane supplying that district with stores? Very probably.
888. Do you think that it is essential to securing this trade that the line should be constructed between Casino and the Hunter River—that is, the original North Coast line? What I stated before about that was, that the railway rates would have to be greatly reduced before they could compete with the water-carriage.
889. You think that if the north coast line were carried out in its entirety, it would not be able to compete with the steamers? Not from the northern rivers—that is, provided that harbours are made as good as we were led to believe they would be, by carrying out Sir John Coode's recommendations.
890. Is not the line to Kiama successfully competing with steamers on the south coast? I believe so.
891. Is not the same result likely to accrue if a line be constructed to the Hunter River from Casino? Well, the distance is greater. I should guess that it would be nearly 400 miles of railway from Sydney to Grafton by the north coast line, and that is a little longer than by sea, and the sea-carriage must necessarily be at a less rate.
892. But, though the distance is greater, the line would go through very productive districts? Yes.
893. And these districts at the present time have no safe harbours? No. Some of them, you might say, have no harbours at all. I know selectors who have been six or seven years on some of the best land in the country, but have had no market. Some of them have not had 6d. from the produce grown at different times during that period.
894. If the line were carried as far as Grafton from the Hunter River they would produce profitably? Yes. I think the country it would open up would pay for its construction.
895. Do you think it would be desirable on the part of the State to build a non-productive line from Grafton to Casino in order to prevent trade going to Brisbane? If there were any danger of the trade going to Brisbane, I think it would be good policy.
896. *Mr. Garrard.*] Do you know anything of the country between our border and Brisbane? No.
897. You have already said that you know nothing of the country between Lismore and the Tweed? I do not know anything of the country farther north than Lismore.
898. You do not know any difficulties then that would intervene to prevent our trade going to Brisbane? No; I am not acquainted with the country.
899. *Mr. Copeland.*] From Lismore to Ballina, at the mouth of the river, the river is navigable all the way? Yes, all the way from Lismore to Ballina.
900. Can you give the Committee any reason why there should be a railway constructed from Lismore—where there is navigable water—to take the traffic away from that navigable water to Byron Bay? No, I do not see any reason to justify it, unless for the opening up of the country between Lismore and Byron Bay, about which I know nothing, but which I believe to be good country.
901. Supposing we were to build a railway from Murwillumbah, say to Ballina, would not that open up the country? I think it would.
902. Would it not give people between these two places access to navigation? Yes. But if it were a railway merely between the rivers, I consider that either Casino or Grafton would be the wrong place to have it, and the same argument applies to Lismore.
903. Supposing a railway were constructed from Murwillumbah to Ballina, you would not want to construct a railway from Lismore to any other navigable place, would you? Not in order to get the produce from the Tweed River to navigable water.
904. Is not the river navigable at Casino, or within 2 or 3 miles of it? It is navigable for small vessels, but not for ocean-going boats. Some passenger steamers run up from Coraki to within, I think, 2 miles of Casina. They are not very small boats; they are river steamers.
905. Have you any knowledge of the Richmond River at all? I have a fair knowledge of the district.

J. M. Farlane,  
Esq., M.P.

12 Feb., 1890.

- J. M'Farlane,  
Esq., M.P.  
12 Feb., 1890.
906. Do you know for what periods the Richmond River has been closed for navigation through steamers not being able to go either in or out? I think eight weeks is the longest period I have known that to occur.
907. Is it not a common occurrence for the river to be closed for three or four weeks? A few years ago it was a very common occurrence, but within the last few years we have had occasional floods, which have had the effect of clearing the sand bar away, and it has not been so frequent. Of course the steamers are detained sometimes for a few days at a time—a week, or something like that.
908. Supposing any of the farmers had their crops ready, say at Casino or at Lismore, and there was a railway from there to the Clarence River, do you think they would be likely to make use of that railway, supposing the Richmond were closed at the bar, to get their produce away? Oh, yes.
909. For anything like bananas and perishable cargo of that kind, would they not be likely to make use of the railway in order to have a certain get-away rather than send it to the Richmond if there was the slightest chance of its being blocked at the bar? Yes, certainly.
910. Which has the safest entrance, the Richmond or the Clarence? There is no comparison between them, as far as my judgment goes—the Clarence is by far the safest. It is very rare indeed that there is a boat bar-bound, beyond a few hours.
911. *Chairman.*] There is no necessity, then, for any great expenditure there? For the present line of steamers, which are not large enough for the trade.
912. *Mr. Copeland.*] You represent the Clarence district, do you not? Yes.
913. You do not represent the country between Lismore and Byron Bay—that is not in your electorate? No.
914. Still, as a man representing a neighbouring electorate, you have no hesitation in saying that a railway from Lismore to Byron Bay is not required, seeing that Lismore is already situated on navigable waters? Not for the produce that is grown near Lismore. It certainly, in my opinion, would never go to Byron Bay.
915. Would it not be a feasible proposal to have a railway from Murwillumbah past Byron Bay down to Ballina—would not that give the whole of the people north of the Richmond access to a navigable harbour? Not the whole of the people north of the Richmond. Of course there are some living near the Big Scrub, which goes some distance back from the sea. It would, however, give the residents on the Tweed River access to a part of the Richmond.
916. Do you think it would be a feasible proposal to build a railway from Murwillumbah to Lismore in a direct line through the Big Scrub—would it be possible to take a railway that way? I do not know the nature of the country, but from what I do know of it I think it would. I do not know the nature of the country from personal observation, I mean, but from knowledge I have gained from others, and from doing business with the people there, I think it would.
917. You have fair grounds for believing that the country is of such a character that a railway could be constructed between Murwillumbah and Lismore? Yes.
918. Do you think that the railway surveyed from Murwillumbah past Byron Bay, and so on, could be extended to Ballina? As far as I know the country, but I do not know much about the country except from hearsay, I do not think there will be any great difficulty.
919. Because if it could be done that would be connecting the whole of the Tweed River people with the navigable waters of the Richmond River at Ballina? Yes; it would answer the purpose of the Tweed River residents.
920. You do not know anything of the country in a direct line from Murwillumbah through here to Lismore;—you do not know whether the railway could be taken there? No, I have no personal knowledge at all.
921. If this railway is stopped at Casino would there be a feasible plan of getting connected with the table lands of New England from Casino? I do not know the country at all.
922. You do not know that the only possible route would be from Casino to Tenterfield, I suppose? I am not aware of that.
923. *Mr. Humphery.*] Would a railway from Murwillumbah to Byron Bay serve the district at all unless a breakwater were constructed at Byron Bay? At the present time it would not.
924. Would it not be necessary, in order to give settlers facilities for the conveyance of their produce, to construct a railway from the Tweed River to Lismore? At the present time of course it is wanted.
925. That is the nearest point of the Tweed River? I cannot say it is the nearest point.
926. According to the surveyed route? Well, according to that, it is very crooked.
927. In the absence of a breakwater at Byron Bay, would it not be in the interests of the whole district that the railway should be constructed as far as Lismore, instead of stopping at Byron Bay? Yes, that is what I always thought with regard to connecting the Tweed with the Richmond—to have a direct line from Lismore to (say) Murwillumbah. It would be much shorter than going *via* Byron Bay.
928. *Chairman.*] How far north of the Richmond have you ever been? I have not been north of the valley of the Richmond.
929. Then you have not been into the big scrub at all? No.
930. Then you know nothing of the country between the Richmond and the Tweed River? No.
931. You know nothing of the difficulties of connection between Southport and the Tweed River? Nothing whatever from personal knowledge.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Grafton to The Tweed.

APPENDIX.

A.

PRECIS OF PROCEEDINGS RELATING TO THE PROPOSED RAILWAY FROM GRAFTON TO THE TWEED.

22/10/84.—A sum of £1,980,000 for a line of railway from Grafton to the Tweed, *via* Casino, Lismore, and the Brunswick, was voted by Parliament in the Session of 1884. A trial survey of the proposed route, which had been some time in hand, was completed about the same time, but the permanent survey does not appear to have been commenced until early in 1886.

Aug., 1886.—The plan, section, and book of reference of the first section of the line were laid on the Table of the Legislative Assembly (15/9/86) and were unanimously approved.

In the Legislative Council the proposal, by seventeen votes to seven, was referred to a Select Committee.

With a view to being prepared with evidence for the Select Committee Inspector Robinson was deputed to visit the district and collect information (Jan., 1887). The following particulars are extracted from the Inspector's report:—

Population of Grafton .....	5,100
Ditto located between Grafton and Casino, exclusive of the two towns .....	6,850

*Electorate of Clarence and Grafton.*

Area cultivated .....	35,531 acres.	Produce—continued:—	
Produce:—		Molasses .....	2,805 hogsheads.
Maize.....	787,532 bushels.	Live Stock:—	
Barley and oats .....	3,020 „	Horses .....	12,016
Hay .....	140 tons.	Cattle .....	46,317
Sugar .....	3,610 „	Sheep .....	3,318

Between Grafton and Casino (65 miles) the country was found to consist of box-tree ridges, fit, for the most part, for grazing only.

The exports from the Clarence River in 1886 were as under:—

Maize .....	431,680 bushels.	Figs .....	2,844
Sugar .....	3,610 tons.	Potatoes .....	17,327 sacks.
Molasses.....	2,695 hogsheads.	Pine timber .....	1,596,975 feet.
Preserved meats .....	20,048 cases.	Cedar .....	3,465 „
Cattle .....	5,870	Hardwood .....	47,865 „

After passing Casino there were 6,200 acres of first-class land, fit for cereals, &c., but owing to the absence of the means of transport very little of it was taken up and settlement was limited. Casino is 2½ miles from the wharf, but the river not being navigable to the town the goods have to be hauled thither at a cost of 2s. 6d. Goods for Casino have to be transhipped at Coraki and brought to the wharf in droghers. It was stated that if there was a railway from Grafton that mode of conveyance would be adopted. The population of Casino was 1,500, and of the country thence to Lismore 1,060. Land under cultivation between the two places only 1,020 acres. Lismore had water communication, navigable by small sea-going steamers. Population of town, 1,962; of district, between that town and Brunswick village, 519. Land under cultivation, 1,080 acres.

Exports from Richmond River as under:—

Maize .....	295,200 bushels.	Timber of all kinds .....	12,086,331 feet.
Sugar .....	3,800 tons.	Cattle .....	892
Molasses .....	3,128 hogsheads.		

Total area under cultivation in Richmond Electorate..... 38,026 acres.

Produce:—		Live Stock:—	
Cereals—chiefly maize ...	287,620 bushels.	Horses .....	11,010
Sugar .....	3,850 tons.	Cattle .....	138,438
Molasses .....	2,806 hogsheads.	Sheep .....	1,500

The country between Lismore and the Brunswick River was good scrub land thickly covered with valuable timber.

*Brunswick River to Tweed River.*

Population—Brunswick River .....	100
Ditto District .....	480

The land between the two places was good scrub land heavily covered with valuable timber, but the timber trade was almost at a standstill for want of the means of conveyance to the water, there being no roads, and the timber being cleared away to within 9 miles of the water.

Nearly the whole of the area under cultivation was confined to the banks of the rivers and creeks, and the only means of transit to a port of shipment was by the road. It was not to be expected that a railway would secure any of this river traffic, and there could never be much interchange of commodities between the Clarence and Richmond districts, because the products of the two districts were of a similar character. The proposed line would doubtless tend to open up this country and induce settlement, but for a long period the traffic would be very small. Judging by the coaches which run from Grafton to Casino and Lismore, the passenger traffic would be very light. It was not probable that there would be a traffic in live stock, inasmuch as a very small number were shipped by seagoing steamers, people preferring to take the animals by road to Newcastle and Sydney. One mixed train a day each way would fully meet all the requirements of the traffic for a long time to come—giving, the Inspector says, a daily mileage of 330 miles.

In a minute commenting upon the above report, the policy of leaving out that portion of the line which passes through country already served by water carriage was mooted. It was not likely that the Casino people would pay the charges by railway from Grafton (65 miles) while they had water carriage available at their own doors. The question, the writer says, might be considered of leaving out the portion of the proposed line between Grafton and Lismore and constructing the line only from Lismore to the Tweed. It would pass through what is known as the "Big Scrub," some of the most fertile land in the Colony, while between Casino and Lismore the land was only fit for pastoral purposes. The minute admits that, judged by existing population and cultivation, the line from Lismore to the Tweed would not pay working expenses, but a large traffic in agricultural produce would be developed and a very extensive trade in timber, and the ultimate prospects of the limited line suggested were equal to those of any line in the Colony.

4/3/89.—A letter of this date, addressed by Mr. Surveyor Sharkey to Inspector Robinson, draws a very unfavourable picture of the line, and must not be passed over here. Mr. Sharkey states that the traffic on the Main Road, Grafton, to 23-m. 51-ch. is very small—little wheel traffic, and no heavy or goods traffic of any kind. From 23-m. 51-ch. to Casino the traffic is, he says, "much greater," but adds, "one train per week might pass, but not more," and I can only explain the apparent inconsistency by the not very satisfactory suggestion that Mr. Sharkey intended to say "not much greater." From 31-m. 20-ch. to Casino there is no heavy or goods traffic of any kind, and the coach from Lawrence to Lismore, *via* Casino, is more frequently empty than not, and without the postal subsidy the traffic would not pay for two coaches a week. From Casino to Lismore the passenger traffic by horses and by buggy only is much greater, but, owing to the facilities afforded by the river, no goods of any kind are carried. Mr. Sharkey had no knowledge of the country beyond this point. He states

further that from 6-m. to Casino there is very little settlement, and no cultivation except at Deep Creek, and there limited. From 6-m. to 55-m. there are, he says, only seven resident settlers within 3 miles of the surveyed line, and one only of them depends on the land for a livelihood. Over the whole of this distance there is no land which is fit for anything but grazing purposes. On the rich lands of the Clarence River maize, sugar, and pumpkins are grown. Casino, Lismore, and the Brunswick and Tweed produce the same articles. Throughout, the production was in excess of local consumption, and the surplus was sent by water to Sydney, Newcastle, and Brisbane. Mr. Sharkey therefore fails to see how any approach to payable traffic can be hoped for, as there can be no interchange of commodities between the districts to create a local traffic, and, for the conveyance of produce to Sydney and Newcastle, the railway could never compete with the steamers and other vessels. All this, Mr. Sharkey says, was freely acknowledged by the residents, who only wanted a railway to the interior to give a new market to themselves and access to a port to the population inland.

21/3/89.—The Clarence River Railway and Harbour Improvement League forwarded to the Railway Commissioners a printed statement of reasons why lines of railway should be constructed from Grafton to the Tweed, from Inverell to Glen Innes, and from Glen Innes to Grafton, with replies to objections. The statistics given in this document will be found elsewhere. The arguments, so far as they refer to the proposed line from Grafton to the Tweed, are—

- (1.) That a heavy debt has been incurred for railway construction, and that the people of the districts referred to have not participated in the benefits of that expenditure, while they share the responsibility of the debt and contribute their quota of the interest thereon; and
- (2.) That the population, and productions and capacity for the increased settlement and development entitled them to the construction of the line already sanctioned by Parliament; and
- (3.) Because it is essential to keep our trade within our own border, and if this line be not constructed the trade of the northern part of New South Wales will go to Queensland.

Mr. T. Showeller forwarded to the Railway Commissioners a memo. professing to set forth the conclusions of the Prospecting Board on a recent visit to the Clarence District. The capabilities of the district are stated on this document in glowing terms, gold, silver, antimony, copper, and zinc being found in payable quantities, and though last not least, coal of fair quality.

The Lismore Railway Committee also forwarded a statement to the Commissioners in advocacy of the portion this line extending from the Richmond to the Tweed. From the document the following particulars are extracted.

*District of Casino-Lismore and the Tweed.*

Area of land .....	3,000,000 acres
Area of freehold land .....	250,000 „
Area of conditional purchase land.....	600,000 „
Area still available .....	2,150,000 „
Increase of population in 10 years.....	20,000
Produce in 1887 :—	
Sugar .....	8,947 tons
Maize .....	234,000 bushel
Probably doubled for 1888.	
Butter .....	259,422 lb.
Cheese.....	88,431 lb.
Both of which industries are in their infancy,	
Live stock :—	
Horses.....	15,268
Cattle.....	137,098
Sheep.....	1,251
Pigs.....	11,734
The departure of vessels from Richmond (no returns from Tweed) are :—	
Steamers.....	203
Sailing vessels.....	137

For the purpose of illustrating the progress of the District the Committee direct attention to the fact that Lismore which in 1879 was an insignificant village, is now a Municipality with 3,000 inhabitants, possessing a system of water supply and sewerage and gas works, and that town land, which was considered dear at £2 a foot in 1879, is now worth £30. Casino and Ballina, with 2,000 and 1,000 souls respectively, are also Municipalities, while there are twelve important townships and numerous villages all directly or indirectly concerned in the matter of Railway communication. The surveyed line from Lismore to the Tweed would pass for 60 miles through land, the richness of which could not be overestimated, and almost every inch of this (not reserved) had been taken up. The products of the district are stated by the Committee to be sugar, maize, barley, oats, rye, potatoes, lucerne, linseed, jute, tea, coffee, cotton, rice, tapioca, arrowroot, ginger, yams, pumpkins, squashes, melons, grammas, and tobacco, vegetables of all kinds, and (marvellous to relate) the fruits of temperate, sub-tropical and tropical climates. The extensive forests of the district contain cedar, pine, cudgaree, long jack, rosewood, sycamore, beech, teak, white myrtle blue fig, silky oak, sassafras, ironbark, gum, peppermint, turpentine, blackbutt, tallow-wood, blood-wood, box, mahogany, &c., &c., and millions of feet of these valuable woods were in the process of clearing, destroyed because the difficulty and cost of carriage were so great. The timber trade of the district was important, and with railway facilities would be enormously increased. Among the minerals of the locality was coal, of which numerous outcrops were known to exist. All they asked was the means of turning the resources to practical account. Under fairly liberal treatment their district would provide homes for half a million of people. Nature had lavished her best gifts upon them in soil, climate, timber, and rainfall, and if the Government did its duty by them and the country, then would reap the full benefit of their "splendid inheritance."

23/2/89.—Mr. Whitton submitted plan, section, and book of reference, with estimates as under :—

Grafton to Byron Bay.  
Byron Bay to Murwillumbah.  
(Alternative) Byron Bay to Chinderah.

4/3/89.—The Cabinet approved of the submission of the proposals for the consideration and report of the Railway Commissioners.

April 27 and 30.—The Clarence Railway and Harbour Improvement Committee forwarded to the Commissioners several statements of statistics, viz. :—Exports from the Clarence, population returns, municipal returns, postal returns, school returns, maize returns, sugar, area of land, average holding, conditional purchases, &c., but of the several items of information, some have little, if any bearing, on the matter at issue, and others are stated in a not very intelligible shape. The population of the electorates of Grafton and the Clarence is said to have increased from 14,496 in 1881, to 18,725 in 1889; and of the borough of Grafton from 3,891 in 1881, to 5,000 in 1889.

The Railway Commissioners submitted their report, and that document is now before the Committee.

C. A. B., 19/10/89.

A 1.

PROPOSED DEVIATION, VIA MULLUMBIMBY, OF RAILWAY GRAFTON TO THE TWEED.

20/1/85.—Shortly after a trial survey of a line from Grafton to the Tweed, *via* Brunswick, had been completed, Mr. Neil Campbell addressed the Minister in opposition to the surveyed line across the Brunswick, which he represented to be too low down, unnecessarily expensive, and not convenient for the population, and recommending a trial survey of a deviation from Tragara, *via* Mullumbimby, to the head navigation middle arm for 3 or 4 miles, then over to the north, and to strike the original line there. A railway station would be wanted on or about Reserve 108A.

Mr. Whitton promised that on the return of the surveyor to Sydney the plan should be examined with a view to determine whether this trial survey should be made.

14/3/85.—Mr. John McGregor addressed the Minister, urging the same point, and stating that by far the larger area of rich agricultural land lay considerably inland, and for several miles along both banks of the river, where also the great body

body of the settlers were located. The general opinion was that there should be a station at the Mullumbimby Township Reserve to accommodate the surrounding residents, and that the line, therefore, should be taken through Mullumbimby. The surveyed line crossed the river about a mile from the ocean, and had only sand and ti-tree swamps on one side and barren ridge on the other. The railway surveyor was of opinion that the line should be taken through Mullumbimby, but the way seemed barred by a range of hills. A practicable route, however, had since been found by a resident, who was prepared to point it out to any authorized person. The river being much narrower at the proposed deviation than near the coast the cost of bridging would be greatly reduced.

The Minister (Mr. Wright) called for a report on the subject.

July, 1886.—The Brunswick River Association presented a petition to the Minister stating the same facts, and urging a survey of the Mullumbimby deviation.

Mr. Secretary Lyne, then Minister, also called for a report.

25/8/86.—Mr. Neil Campbell again addressed the Minister, pointing out that the line as surveyed at the Brunswick River did not, and would not at any future time, meet the wants of the residents, and urging that a trial survey might be made from near Byron Bay, running inland, and crossing the river at Town Reserve 108A (Mullumbimby) at the head of the navigable waters of the Brunswick River, and thence to join Mr. Surveyor Gibbs' line.

This letter also was forwarded for report.

Sept., 1886.—Mr. Ewing, M.P., presented a petition to the Minister from residents on the Brunswick River, setting forth the disadvantages of the surveyed route, and praying earnestly for the adoption of the Mullumbimby deviation.

This petition was sent to Mr. Palmer for report, but the papers do not disclose any action.

1/6/87.—Another petition from residents was presented to the Minister by Mr. Ewing, praying that a survey might be made of a deviation *via* Mullumbimby (the same already referred to). The petitioners stated that the surveyed line in this part was too near the coast to be of service, and passed through very poor land; that the line they proposed would tap a large area of rich and productive land; that it would greatly diminish the cost of bridging; and that three of their number were prepared to point out the route to any officer of the Government.

Action now was taken. Mr. Surveyor Wilkins was deputed to examine the country, and he reported that, accompanied by three of the residents, he went over the suggested route; that for the first six miles (to Mullumbimby) it presented no unusual difficulty, but from that point the country was so rough and broken that usual gradients could not be obtained without exceptionally heavy earthworks. Two spurs of the mountain would have to be tunnelled, and very heavy cuttings would be necessary. This adverse report was fatal, and Mr. Ewing was informed accordingly.

2/1/88.—After the lapse of some months, Mr. Neil Campbell again took up the case. He wrote to the Minister, stating that, after long and diligent search, they had discovered a practicable route on which the range could be pierced by a very short tunnel, and requesting that a trial survey might be made. He pointed out that the line, as surveyed, would be of no use to the people, inasmuch as if they had to cart their produce to near Brunswick Heads (where the station would be), they might just as well ship at Brunswick Heads, or cart to Byron Bay—in either case avoiding the railway. Again, the bridge required for the surveyed line would block the navigation. A railway as surveyed would, in fact, be a curse, and not a benefit to this district.

The papers do not disclose any action upon this letter.

1890.—The project has now once more been brought on the tapis by a memorial to the Engineer-in-Chief, and a letter to the local officer. They repeat the intimation made by Mr. Neil Campbell in his last communication, that a really practicable route has been discovered; and they proceed to represent the advantages of the deviation, but, as these have already been stated in this paper, they need not be given here.

31/1/90.—The question was again referred to Mr. Surveyor Wilkins, who reported that the proposed route as far as Mullumbimby was the same as that which he reported upon in 1887. Thence it traversed a somewhat rugged country, on the east of Mount Chincogan, the principal spurs of which would be the only obstacle to easy construction. One of these spurs would require a tunnel of 150 yards long, but the others could be graded at 1 in 50 by open cuttings. The deviation would increase the distance by about a mile. Petitioners had stated their case very clearly. Along the proposed deviation were rich volcanic land and alluvial flats, far beyond anything to be found on the original line. The earthworks on the deviation were heavier, but this would be compensated for by the saving in bridges. He must recommend a trial survey.

Mr. Firth is of opinion that a trial survey ought to be made.

Mr. Deane minutes that the line is already permanently staked passing through Brunswick; and that, to survey this deviation, whatever its merits may be, will cause delay. It is, moreover, a serious departure, Mr. Deane points out, from the line submitted to the Public Works Committee. At an earlier stage he would have had no hesitation in sanctioning a survey; but, under existing conditions, he would prefer to have Ministerial authority if that step is to be taken.

C. A. B.

7/3/90.

Submitted.—J.B., 11/3/90. Let the survey be made by all means, and at once, and inform Committee.—B.S., 11/3/90. Letter sent to Committee.—J.B., 11/3/90. Mr. Deane, B.C.—J.B., 11/3/90. Very urgent. Mr. Firth to instruct Mr. Wilkins to make the survey.—H.D., 12/3/90. Mr. Firth. Instructions sent in letter 90/97 to Mr. Wilkins to commence a trial survey of the proposed route at once.—T.R.F. *per* G.J.B., 13/3/90. Engineer-in-Chief, 14/3/90.

## A 2.

### LETTER FROM THE UNDER SECRETARY FOR PUBLIC WORKS ON THE PROPOSED DEVIATION VIA MULLUMBIMBY.

Sir,

Department of Public Works, Sydney, 11 March, 1890.

Referring to the question of the proposed railway from Grafton to the Tweed, which is now under the notice of your Committee, I am directed by the Secretary for Public Works to inform you that an application has been received for the survey of a short deviation from the original line *via* Mullumbimby.

The proposed new route has been examined by the resident officer, and he reports that the earthworks will be heavier and more costly than on the original line, and one mile longer; but these considerations, he is satisfied, will be fully compensated for by the diminished outlay for bridges. The advantages of the proposed deviation are that it will serve a considerable population of farmers, and that it runs through a tract consisting of fine volcanic soil and alluvial flat. The original line at this part, on the other hand, is said to have only a barren ridge on one side, and sand and swamp on the other.

The object of the Committee and of the Department being to secure the best line, the Minister has considered it his duty to state these facts for the consideration of the Committee, and has given instructions for a survey to be made at once, so that no time may be lost in the progress of the Committee's investigation.

I have, &c.,

J. BARRLING,

Under Secretary.

The Chairman, Parliamentary Standing Committee on Public Works.

## B.

### MINUTE PAPER.

Subject :—Grafton to the Tweed Railway.

Department of Public Works, Railway Construction Branch, Sydney, 14 November, 1889.

IN my evidence last evening I am afraid I scarcely made myself clear as to the structure and objects of the Grafton to the Tweed line.

This railway is of importance as forming part of the proposed North Coast Railway which, starting from Maitland or Morpeth, and continuing northward, more or less parallel with the coast terminates near to the northern boundary of the Colony.

The completion of this railway is looked upon as a necessity of the future—the only serious interruption along the whole line being the Clarence River at Grafton, the bridging of which would be very costly undertaking, but some other means of getting the traffic across this barrier could probably be devised.

Apart from its value as a section of the said North Coast Railway, the line under consideration has merits of its own, and serves a special purpose in the district through which it runs. Its immediate object is to bring the produce of the district to the local ports, from whence it can be shipped to Sydney. The produce of the southern portion of this district would thus be conveyed to Grafton; that of the central and northern parts to Lismore; and, in the event of the construction of the break-water at Byron Bay, to the harbour thus formed.

The South Grafton to Glen Innes railway, to which reference was made yesterday, would not be of any use in connection with the line under consideration; but it might become of importance when the North Coast line, as a whole, is taken into account, *i.e.*, if it proved to be the only practicable route between the table-land and the coast.

A vote for this line was passed in 1834 at the same time as that for the Grafton to the Tweed railway, and the centre line has been permanently staked, but it would be a most undesirable railway to construct: firstly, on account of the great cost, which may largely exceed the vote (no reliable estimate having at that time been made, as pointed out by the Engineer-in-Chief); and secondly, on account of the difficulty of working, there being numerous 8-chain curves and long lengths of 1 in 33 grades along the line.

Should it be considered necessary to connect the North Coast railway with the New England railway for military or other reasons, the best routes to adopt would probably be south of the Clarence, South Grafton to Guyra; and north of the Clarence, Casino to Tenterfield. The former route is now being surveyed.

Between Casino and Tenterfield several trial surveys were run some years ago, but the plans of these lines were lost in the Garden Palace fire. The results of the surveys were not very satisfactory, but further exploration of the country might prove more successful.

H. DEANE,  
Acting Engineer-in-Chief.

To the Chairman and Members of the Parliamentary Standing Committee on Public Works.

C.

LETTER OF INSTRUCTIONS TO SURVEYORS.  
Grafton to Tweed River.

Memo.

Department of Public Works, Railway Construction Branch,  
Engineer-in-Chief's Office, Sydney, 6 December, 1889.

I FORWARD herewith, for the information of the Parliamentary Standing Committee, a copy of a letter of instructions, dated 28th February, 1888, signed by Mr. Whitton, and addressed to Messrs. Geisow, Lloyd, and Thornbury, surveyors,  
H. DEANE.

The Secretary, Parliamentary Standing Committee on Public Works.

[Enclosure.]

Railway, Grafton to Tweed River.

Memo.

Department of Public Works, Railway Construction Branch,  
Engineer-in-Chief's Office, Sydney, 28 February, 1888.

WITH the view of carrying out the determination of the Government that future railways are to be constructed as economically as possible, I wish Messrs. Geisow, Lloyd, and Thornbury to meet and arrange to examine the country at the places named below (dividing into sections as convenient), in order to obtain, if possible, a cheaper line. Rough tracings of plan and section, at undermentioned places, will be sent.

Can lower ground be obtained at about—

	m. ch.	m. ch.	m. ch.	m. ch.
	4	35	21	0 to 22 50
	8	0 to 8 25	23	0 to 24 50
	8	50 to 10 40	24	50 to 27 40
	11	0 to 12 60	39	40 to 40 50
	18	0 to creek at 20 miles 50 chains.		

And can line be raised at 27 miles 65 chains.

Can any improvement be made at 31 miles 50 chains, and from 43 miles to 47 miles 40 chains, and tunnel avoided; and at 63 miles to 66 miles 40 chains, 67 miles 40 chains to 68 miles 40 chains, 70 miles 20 chains to 70 miles 40 chains, new section.

The level of rails in all cases to be above highest known flood level.

Please also report generally if improvements can be effected in any other portion of the line.

JOHN WHITTON,

Messrs. Geisow, Lord, and Thornbury.

[To Evidence of C. J. Saunders, Esq.]

D.

SCHEDULE of lots sold in the village of Cavvanba (at Byron Bay):—Total number of allotments, 66; area, 30 acres 3 roods 4½ perches; price realised, £2,072 5s.; average price per acre, £67 7s. 9d.

Sale at Lismore, 28 July, 1886.

[To Evidence of John See, Esq., M.P.]

STATEMENT COMPARING CARRIAGE BY RAIL WITH FREIGHT CHARGED BY STEAMERS FROM NORTHERN RIVERS.

Dear Sir,  
 Sydney, 10 February, 1890.  
 As promised, I send you herewith a comparison of freights charged from the northern rivers to Sydney on maize, and the railway rates on grain in trucks of 6 tons. The stations selected are about the same distance from Sydney as the different rivers. In every case you will notice the cost by rail is less per ton than by water.

J. Garrard, Esq., M.P., Public Works Committee.

Yours, &c.,  
 JOHN SEE, per A.V.

## REPORT.

1. The Sectional Committee appointed on the 14th November, 1889, to inspect and take evidence in reference to the proposed railway from Grafton to the Tweed, left Sydney on Monday, 18 November, and proceeded to Brisbane, where they commenced their duties by waiting upon the Railway Commissioners of Queensland, and obtaining from them as much information as was available of their intentions with regard to the extension of their railway system to the New South Wales border, with a view to securing trade for Brisbane from the north coast districts of New South Wales. The Committee left Brisbane the day after reaching there, and proceeded to the Tweed River Heads, where steps were at once taken for the examination of witnesses, the first meeting of the Committee being held at the Tweed Heads in the evening of the day of their arrival, Thursday, 21 November. At that meeting they examined five witnesses, including the local pilot (Mr. William Macgregor) and the Sub-Collector of Customs (Mr. Edward Osler). On the 22nd eighteen witnesses were examined at Murwillumbah, among whom were Mr. C. O. Burge (District Railway Engineer), Mr. O. G. Morton (Road Superintendent), Mr. E. A. Barrington (Acting Clerk of Petty Sessions and Land Agent), and a bank manager, storekeepers, farmers, journalists, and others resident in that district.

2. On Saturday, November 23, while *en route* to Byron Bay, Mr. G. Wilkins, railway surveyor, was examined at Burringbar; and the evidence of three witnesses, including Mr. James Anderson, a licensed surveyor, was taken at the Brunswick. At Byron Bay eight witnesses, all farmers or selectors resident in the vicinity, were examined. The Sectional Committee, on Monday, 25 November, proceeded to Lismore, passing through Eureka and Clunes, and taking evidence from local residents at each place. Lismore was reached in the evening, and one witness, Mr. Alexander Meston, sugar planter and manufacturer, was examined. On the following day eighteen witnesses were examined, among whom were Mr. C. H. Gale, Land Agent; Mr. W. G. Walker, District Surveyor; Mr. G. W. West, Inspector of Conditional Purchases; Mr. E. M'C. Allman, Road Superintendent; the Very Rev. J. J. Doyle, D.D., Roman Catholic Bishop of Grafton; Mr. T. C. Lodge, bank manager; and storekeepers, farmers, and selectors in the surrounding district. On Wednesday, the 27th November, your Committee proceeded down the Richmond River to Ballina, and returned to Lismore *via* Alstonville. On the 28th your Committee proceeded to Casino where eleven witnesses were examined, among whom were Mr. Richard Barling, licensed surveyor; and storekeepers, farmers, journalists, and other business men of the locality. At Myrtle Creek, on November 28, evidence was taken from three witnesses, and on the following day two witnesses were examined at Lawrence. The Sectional Committee arrived at Grafton on Saturday, November 30, at which place they examined twelve witnesses, among whom were Mr. P. R. Donaldson, District Surveyor; Mr. G. H. Gibson, Land Agent; Mr. John Cumming, railway engineer; Mr. Samuel See, Mayor of Grafton; Mr. H. V. Haynes, licensed surveyor; and local farmers, selectors, and tradespeople.

3. At the Tweed River Heads Mr. William Macgregor, pilot, was examined, and was of opinion that the entrance to the river might be improved, but at certain phases of the weather vessels would still be unable to cross the bar. The produce of the district, as a rule, found its way to Sydney. Mr. E. Osler, Sub-Collector of Customs, gave particulars of the quantity of produce sent away from the Tweed River. The exports in 1887 amounted to the value of £74,153; in 1889 the exports for ten months amounted to £50,632. Vessels were frequently bar-bound there—sometimes for four or five weeks. Mr. William Charles, a selector at Terranora, who had formerly lived in Illawarra, described the land on the Tweed as much superior to that of Illawarra, and the district would support a far larger population. He could not grow corn profitably, because it could not be got away to market with the present condition of the bar. He stated that it was a fact that people had actually been starved out of the district through the want of means of communication, although the land was so rich that 40 acres would support a family. If a railway were made, settlement would follow along the line of route, and the river and creeks would act as feeders to the railway. What the farmers wanted was a sure and certain means of access to market. Mr. Henry Eden, a selector near Murwillumbah, thought improvements to the river would be preferable to a railway, because the bulk of the settlement was located near to navigable water. Mr. John Marks, grazier, about 15 miles above Murwillumbah, was also of opinion that the district would be better served by a satisfactory improvement of the river than by a railway; at the same time he admitted that certain parts of the district would be benefited by the railway. He thought the route, as surveyed, would tap as large an area of good land as it was possible to obtain. The evidence of Mr. C. O. Burge, District Engineer, was of a technical nature. He thought the ruling gradient of the proposed coast line, Cudgen, would be 1 in 60, but that was only an estimate. The grade on the inland or Murwillumbah line, he anticipated, would be more severe, and would be more expensive. Mr. O. G. Morton, Road Superintendent, stated that he knew both the routes proposed. The land was better on the inland than on the coast line. The people in that district had little or no means of getting their produce to market at a profit, and there was no encouragement for them to develop the land. Mr. E. A. Barrington, Acting Clerk of Petty Sessions and Land Agent, stated that up to the 14th November, 1889, there were ninety-eight conditional purchases taken up in the district, as against eighty-three in 1888, and forty-six in 1887. Mr. F. A. Halliday, Manager of the A.J.S. Bank, Murwillumbah, said the land on the Tweed River was as good as that on the Clarence, and it had struck him as wonderful that there was so little cultivation on the river. Upon making inquiries he found it was due to the fact that the people had no facilities for getting their produce away. Mr. A. Easthauffe, storekeeper at Murwillumbah, also stated that the reason why maize was not grown in the district was the difficulty of getting it to market. Maize would be the staple product of the district, after which came sugar, and after that they would go in for dairying. The soil would grow anything they put into it. He was of opinion that the proposed railway would be the best and most certain means of opening up the district, especially if Byron Bay were made a suitable and safe harbour. The evidence of Mr. J. Buchanan, farmer, in South Murwillumbah, was to the same effect. He considered the land on the Tweed to be capable of growing anything. He believed that the proposed railway would give the people the necessary relief, and if they were able to ship their produce at Byron Bay it would be the making of the district. Mr. E. H. Johnston, licensed surveyor, stated that he has a selection of 560 acres about 4 miles from Murwillumbah, but only grew sufficient maize and fruit for his own requirements. He believed he could get his surplus produce to market if the railway were constructed. Mr. W. R. Baker, proprietor of the *Tweed and Brunswick Advocate*, said that when he came to the district he was “dumbfounded” at the want of facilities for getting produce away. On account of the expense, he had discarded the idea of keeping the river open as the highway for the district, but a railway either to Byron Bay or to the Richmond would best serve the district. Within his knowledge farmers had given up cultivating the land simply because they had no market for their produce. The statement of Mr. Gavin Pettigrew, a farmer between Tumbulgum and Cudgen, was to the effect that he was in a worse position for getting bananas to market than they were in Fiji. Mr. Charles Anthony Brady, a settler on the Tweed for about sixteen years, had known people there for seven months at a time to be without communi-

cation

cation with the outside world. He had cultivated silk, coffee, and tobacco, and the district was eminently suited for the growth of grapes and oranges. Mr. William Kelly, hotelkeeper at Murwillumbah, stated that he was growing maize for three or four years, until he was completely ruined from want of a market. He thought the district was decidedly entitled to the railway. Mr. Richard Dodd, butcher, Cudgen, advocated the coast line on account of its being cheaper. Mr. Henry Clarke, selector, thought the market for the district was Brisbane, and that it would be foolish to make the railway. Mr. J. M' Connor, overseer of a sugar-plantation, and Mr. W. R. Isaacs, manager of the Colonial Sugar Refining Company, gave evidence with respect to the production of sugar on the Tweed. Mr. Isaacs was in favour of the line *viâ* Murwillumbah. Mr. W. Wardrop and Mr. J. Black, both expressed themselves in favour of opening up the river, so that it would be a feeder to the railway. Technical evidence respecting the surveys was given by Mr. C. H. Caswell and Mr. G. Wilkins, railway surveyors.

4. At the Brunswick River, Mr. J. M'Gregor, farmer, expressed his opinion that the future development of the district would warrant the proposed expenditure on the railway. Mr. J. Anderson, licensed surveyor, spoke of the good quality of the land through which the line passes. He thought the most available route had been adopted. He believed that if the country were properly developed, even an entrance to the Brunswick River would not be sufficient to take away half the produce of that district. Mr. F. V. Wareham, farmer, near Byron Bay, spoke of the difficulty of developing the land through the want of a market. He had been there six years and had made nothing off the land yet. Ten acres under fruits would yield a handsome income, if facilities were granted for cheap and quick communication with a market. The route proposed for the railway would go through the heart of the country. Mr. T. Temperley, a selector and Inspector of Northern Fisheries, residing near Ballina, alluded to the superior quality of the land near Byron Bay. The Government could get £15 an acre for a large portion of the land, if it had railway communication. Mr. E. S. Atkins, sugar planter and manufacturer, Byron Bay, declared that the land there would produce sugarcane equal or superior to the cane grown on the Clarence. Within a short radius of Byron Bay there was more land suitable for cane than there was on the Clarence River. Mr. Robert Campbell, dairy-farmer, Byron Creek, said he found it of no use growing maize because he had no access to market. If the railway were constructed, he would grow maize, potatoes, and other crops. The land in that district was as good as that at Narrowgut, on the Hunter, which had been sold at £100 per acre. Mr. E. Williams, storekeeper and selector at Coorabell Creek, had put down his land in grass, because, although he could grow anything he pleased, he was obliged to be content with butter and grass-seed, which he could carry away easily. Mr. O. B. Wareham, farmer, about 3 miles from Byron Bay, produced grass, bananas, pine-apples, and maize; he also shipped timber off the land. He considered the district entitled to the proposed expenditure of public money for the railway and the breakwater, as the block of land dependent on Byron Bay was the largest and richest in Australia. Mr. E. Boyle, a dairy-farmer, of Byron Bay, corroborated the evidence previously given. At Eureka, Mr. A. Johnston and Mr. M. King, both engaged in dairying pursuits, gave evidence in favour of the construction of the railway. Very similar evidence was given at Clunes by Mr. G. T. Hindmarsh, Mr. J. Gibson, and Mr. T. Moses.

5. At Lismore, Mr. A. Meston, sugar-manufacturer, considered that a railway to the Tweed was absolutely necessary. If it were constructed, the land that now kept cows would keep a large number of human beings. He could not suggest a better route for the line than the one that had been proposed. Mr. C. H. Gale, Land Agent, gave particulars as to the sale of Crown Lands at Byron Bay. Mr. G. W. West, Inspector of Conditional Purchases, thought the railway line as laid out was the best that could be got. He looked upon the breakwater at Byron Bay and the railway as one matter. Mr. E. M. Allman, Road Inspector for the Lismore District, believed that the country was sufficiently rich to warrant the construction of a railway, because the population would enormously increase. The Very Rev. J. J. Doyle, D.D., Roman Catholic Bishop of Grafton, stated that he thought the line was being taken along the most practicable route to get to the population at the principal centres. He considered the railway, on the whole, would pay very well.

well. Mr. T. C. Lodge, Manager of the A.J.S. Bank, Lismore, believed the Government would be justified in the expenditure for the railway and the breakwater at Byron Bay, in view of the increased value of the unsold land. Water communication had not developed the district, hence a railway was necessary. Mr. L. Armbruster, sugar-planter, Mr. T. Osborne, farmer, and Mr. S. G. Woodrow, selector, all supported the construction of the railway. Mr. James Barrie, store-keeper, Lismore, gave a history of the agitation for a railway from the year 1881. He approved of the route now proposed, and thought the unoccupied land was sufficient to justify the outlay. Mr. F. O'Flynn, Mayor of Lismore, Mr. W. Barnes, selector, and Mr. F. Tonkin spoke in favour of the construction of the line. Mr. W. Walmesley, dairy-farmer, said he would be producing a great many more things if he could get them away at a reasonable rate. Mr. J. Stocks, farmer and dairyman, found it did not pay to cultivate for the market, unless they had better communication. He had advocated the construction of a railway for the last twenty years. Mr. H. B. Chisholm, farmer, thought the railway would fairly serve the present and future settlement. Mr. O. Lloyd, railway surveyor, gave technical evidence.

6. Mr. Richard Barling gave evidence at Casino with reference to the quality and the value of the land. He did not think the line from Casino to Grafton would pay, except as part of a national coast line. Mr. F. B. Gulley, storekeeper, of Casino, spoke of having suffered loss through the detention of goods in and out, through the bad state of the Richmond River Bar. If they had the railway, the produce of Casino and 30 miles to the south would go to Lismore. He believed that within a reasonable time the line would pay. Mr. F. G. Crouch, storekeeper, of Casino, said the capabilities of the district were immense, and it had progressed by leaps and bounds since he had known it. A railway between Casino and Lismore would pay in a very few years. He thought the Government would be justified in expending the amount required for the railway and the breakwater at Byron Bay. Mr. J. C. Irving, pastoralist, said the increased value that would be given to the land if the railway and breakwater were carried out would assist in paying for the works. Mr. R. Pyers, timber merchant, stated that a large amount of timber would be sent by the railway if it were constructed. Mr. D. Campbell, pastoralist, and Mr. T. Carlill, senr., supported the construction of the railway. Mr. Robert Page journalist, gave particulars respecting the production of the district. Mr. A. C. Simpson, timber merchant, also stated that timber would be largely sent by the railway. Mr. W. J. Fanning, pastoralist and manager of a cheese factory, thought the line would be a very desirable one. Mr. T. G. Hewitt, proprietor of the *Northern Star*, confirmed the evidence that had been given with regard to the carriage of timber by the railway. He believed every acre of land between Grafton and Casino would be taken up if the railway were made.

7. At Myrtle Creek, Mr. W. Morrison, farmer, said he had selected in the hope that the railway would be constructed. Mr. T. A. Small, selector, said he would send his produce by the railway. Mr. J. Wells, farmer, considered that the construction of the railway would lead to a great increase of the land under cultivation in the district.

8. Two witnesses at Lawrence, Mr. W. Olive, innkeeper, and Mr. E. Shields, both expressed their opinion that the line should be taken to Lawrence instead of Grafton.

9. At Grafton, Mr. P. R. Donaldson, District Surveyor, stated that the whole of the country between Grafton and Casino was well adapted for grazing and dairy-farming, and a great deal of it, in proximity to the watercourses, for agriculture; but settlement on that part of the district was retarded for the want of better means of communication than the ordinary roads. His impression was that the sale of the land on this section would certainly recoup the expenditure on the line, and the land on the other section would go a long way towards doing so. Mr. G. H. Gibson, Land Agent, gave information respecting the number of conditional purchases in each year since 1881. Mr. John Cummins, railway engineer, gave technical evidence, chiefly with respect to the grades on the proposed line. Mr. W. Goodger, a retired farmer, believed the railway between Grafton and Casino would pay in ten or fifteen years, but if they waited that time for the railway it would retard settlement. Mr. C. Duggan, butcher and grazier, said the country between Grafton and Casino was for grazing purposes from fair to good, and some very good,

good, and portions of it were fit for agriculture. The country would produce maize, oats, or oaten hay, timber and fruit, for the railway to carry. Mr. Samuel See, Mayor of Grafton, believed the line would pay from the moment it was constructed from Grafton to Casino. Grafton would get the benefit of the trade from Myrtle Creek—42 miles; the rest of the traffic would probably go to Casino. He believed a sufficient quantity of produce would be grown between Grafton and Casino to warrant the expenditure of the large sum of money that it would take to construct a railway, together with the increased passenger traffic; and the timber trade would develop to a great extent. More timber had been burnt on the Clarence than had been sold, simply because they had no means of getting it away. Mr. H. Fisher, licensed surveyor, also declared that all the land between Grafton and Casino was suitable for settlement, and he believed every inch of it would be bought at once if the railway were constructed. Mr. J. B. Carlton, gave evidence as to the great benefit that would be derived from the construction of a line from the Tweed to Grafton, to form part of the Coast Railway at some future date. Mr. T. Bawden, formerly Mayor of Grafton and its late representative in the Legislative Assembly, produced statistics showing the amount of wheat, maize, oats, sugar-cane, and potatoes grown in the district, and the acreage under crop. He was strongly in favour of a connection with the tableland of New England. Mr. H. V. Haynes, licensed surveyor, thought the residents of that part of the Colony had a right to a railway. Mr. J. H. Munro, stock and station agent, confirmed the evidence of previous witnesses. He was of opinion that there would be a population between Grafton and Casino, within 5 or 10 miles of the railway line, of 5,000 people, and as it is calculated that each person averages £3 profit to the revenue, there would be £15,000 annually, a great proportion of which could be applied to the reduction of the annual cost of the railway. Mr. Samuel See, on being recalled, stated that there was a coal seam within 22 miles of Grafton 46 feet from the surface. There was an 8-foot, a 4-foot, a 4 ft. 6 in., and a 3 ft. 6 in. seam.

10. The evidence obtained at the various centres of population visited by the Sectional Committee will be found to deal very fully with the question under consideration. To some extent it is associated with evidence on the proposed break-water at Byron Bay and the improvements to the entrance of the Clarence River, but this the Committee found it impossible to avoid, the three subjects being very closely connected with one another. As far as could be done, the evidence on each of the three proposals inquired into by the Committee was kept separate; and where a witness was questioned or made a statement upon more than one of the proposed works it will be observed that the reference to the matter not at the time immediately before the Committee is in direct connection with the subject upon which the witness was called for examination, and therefore not superfluous or out of place.

11. The Committee have had no sections of the proposed railway before them, and have through this circumstance been placed somewhat at a disadvantage; but the omission does not appear to have been due to any fault on the part of the Department of Public Works. The plans of the railway are not ready because every effort is being made to secure the best route and the easiest grades, and the country through which the proposed line would go is of a very difficult nature. Owing to the density of the scrub through which the surveyors have to cut their way, the work of finding an easy and good route is a matter of very great labour.

12. After a due consideration of the evidence given before them, and of the information obtained by personally visiting the districts in which the proposed works will, if approved by Parliament, be constructed, and by inspecting Byron Bay, the entrance of the Clarence River, and, as far as possible, the route of the proposed railway from Grafton to the Tweed, the Sectional Committee desire to report that they are favourable to the construction of the proposed railway from the Tweed River to Casino, on the Richmond River. The Committee are of opinion that the line should be constructed from the point proposed opposite to Murwillumbah, and continued, as recommended by the Department, to Byron Bay, and thence to Casino. The railway so constructed would, the Committee consider, be a feeder to the port at Byron Bay and to the Richmond River. The Tweed River is so shallow, the entrance so bad, and the probable cost of works that would permanently remedy this

state of things so enormous, that the Committee doubt whether it would be desirable to attempt, at any great expense, to improve either the one or the other. Even if the river were made navigable, and the entrance safe, it could only serve farmers within a distance of 14 or 15 miles on each side of the stream; and the same may be stated with regard to the Richmond. In this case the intervening country would be absolutely without the means to enable farmers to get their produce to port. Although a great deal of the land through which the proposed railway would pass is at the present time held in large areas, the Committee feel sure that the owners of this land would, in their own interests, at no distant date, lease or alienate it, so that farmers might be induced to settle in the district by reason of the facilities afforded them to reach a market. The greater part of the land between the Tweed and the Richmond Rivers is of an exceptionally rich character, but travelling south from the Richmond the land gradually becomes inferior, until a point is reached a few miles south of Casino where the land is of the very poorest character except in small areas on the banks of the creek, and it continues so until within a short distance of the Clarence River. Although the Sectional Committee received evidence from people between Casino and the Clarence as to the capabilities of the land in that locality, they could not obtain any evidence showing that up to the present time this land had been utilized for any purpose other than grazing, except in small flats along the banks of creeks. The greater part of the land between Casino and Grafton, until the alluvial land of the Clarence is reached, is of very poor quality, and the Sectional Committee are thoroughly satisfied that a railway between the Richmond and the Clarence, at Grafton, would not carry the produce from one district to the other. Nor would there be any great passenger traffic, as the Committee feel sure that, when the proposed improvements at the entrance to the Richmond River are carried out, the facilities for reaching the Richmond by steamer will be quite as good as those now available in connection with the Clarence, and passengers will therefore travel direct to the Richmond instead of to the Clarence, as is the practice at present, owing to the uncertainty of the bar at the entrance to the Richmond River. Believing that no produce will pass between Grafton, on the Clarence, and Casino, on the Richmond, the Sectional Committee can see no reason for constructing the portion of the proposed railway which would connect those two places, unless it were constructed as a part of what is known as the North Coast Railway. If it were determined to construct a line of railway, as has been suggested, from the Hunter River District along the coast northwards, then the proposed line between Casino and Grafton could form part of the greater scheme of the North Coast Line. Or, on the other hand, if it were feasible to connect Grafton with the tableland of New England, at Glen Innes, or elsewhere in that neighbourhood, there might be some justification for the construction of the line to Grafton, as being a centre or point of very great importance; but the Sectional Committee do not deem it part of their duty to offer any suggestion as to the construction of a line to Glen Innes from Grafton, or as to the North Coast Line. At the conclusion of their labours the Sectional Committee returned to Sydney by way of Glen Innes, making such arrangements as enabled them to travel over the country between Grafton and Glen Innes during the daytime, and to see for themselves the nature of the country in and about those localities.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 28th January, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RAILWAY FROM GRAFTON TO THE TWEED.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

THURSDAY, 21 NOVEMBER, 1889.

The Sectional Committee met at the "Commercial Hotel," Tweed Heads, at 8.30 p.m.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

JACOB GARRARD, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee proceeded to consider the proposed Railway from Grafton to The Tweed.

Mr. William Macgregor, J.P., Pilot, sworn, and examined:—

1. *Chairman.*] You are the pilot stationed at the Tweed River Heads? Yes.
2. How long have you been here? Over nineteen years.
3. *Mr. Garrard.*] Have you been a pilot all that time? Yes.
4. You are familiar with the trade of the port during that nineteen years? Yes.
5. Has it increased much of late years? Yes.
6. How many vessels entered inward and outward in a month when you first entered upon your duties as pilot? Possibly six.
7. And how many now? That I could not tell you.
8. Roughly? I could not answer the question.
9. *Chairman.*] Have you no record? I have; but I was not prepared for this examination.
10. *Mr. Garrard.*] Would there be twenty, inward and outward? About twenty. I do not say that that is correct.
11. Are the vessels trading to the port now of larger tonnage than those which used to come here nineteen years ago? They are.
12. Very much larger? Half as large again.
13. What is the principal produce outwards? Sugar.
14. Any timber? There is timber. Timber and sugar are exported in equal quantities.
15. I suppose that timber was the only export nineteen years ago? That was all.
16. Has that trade fallen off? It has been better lately.
17. Is the quantity of timber in the neighbourhood of the river decreasing? There seems to be more now—wherever they are getting it from—than there was then.
18. Was any timber cut close to the Heads nineteen years ago? No.
19. It was brought from some distance? Yes.
20. It is brought from a still further distance now? It must be.
21. There is no planting out going on in the district at all? No.
22. What kinds of timber are exported? Cedar, pine, and beech.
23. How would you arrange the outward shipments—half sugar and half timber; those are the only two products? Yes.
24. Is any maize produced? Very little.
25. You think that there is as much sugar as timber exported? I think so.
26. What is the nature of the inward cargoes? Coal and general goods.
27. Coal for the sugar-mills? Yes.
28. And general cargo? For the population on the river.
29. Has the population increased? I could not say much.
30. You are seldom up the river? Yes, very seldom.
31. Your duties compel you to remain at the entrance? Yes.
32. Do you know whether much land has been taken up and utilized during the last nineteen years? Most of it has been taken up within the last nineteen years.
33. Have you any knowledge of the land that has been taken up or that is available? None whatever.
34. Do you think that if the entrance to the river were improved, and the impediments to navigation within the river removed, it would provide a sufficient outlet for the produce of the district without railway communication? I could not say about that. The improvement of the navigation would be sufficient for the river, but leave the river, and I cannot say anything about it.
35. But water transit is the cheapest mode of conveyance? It is.
36. Therefore, if the entrance and the river itself were fairly navigable, would there not be a fair outlet for the produce of the district? For the land on the river it would. I do not know anything about the land away from the river.

Mr. W.  
Macgregor,  
J.P.  
21 Nov., 1889.

- Mr. W. Macgregor, J.P.  
21 Nov., 1889.
37. Do you think it desirable that a railway should be constructed from Murwillumbah to Lismore, Casino, and Grafton? I would not like to pass an opinion. I do not reckon that I am in a position to pass an opinion.
38. From your local knowledge, do you think that it would be possible, at a reasonable cost, to improve the entrance and navigation of the river? I believe that it would not take a great deal to improve it.
39. Do you know if anything has been done in the way of improvement? Nothing whatever.
40. Do you know if it is contemplated to do anything? I have heard a rumour for the last eighteen years that something was to be done.
41. Is it not a fact that engineers from the Harbours and Rivers Department have been or are here now? They have been here two or three times; but I cannot see that anything has actually been done.
42. Do you know that it is proposed to spend £8,000 or £10,000 on the entrance? I have heard that they are trying to get it; but I am not aware that it has been granted.
43. Are you not aware that there is an officer of the Department now taking borings? Yes.
44. That looks like business? I have seen a good deal before from which nothing has resulted.
45. Do you know anything of the work which they propose to do—have you seen the plans, or had you any conversation with the engineers? I have had conversation with them, and have an idea of what is likely to be done.
46. Do you think that the plan is a common-sense one? I do.
47. You believe, from your knowledge of the entrance, that the project is a feasible and a common-sense one? I do.
48. Nothing less expensive would be of any avail? I do not think it would.
49. It would not be well to go in for a more expensive plan? I cannot think that anything better could be done than what they suggest.
50. If the work is done, what depth of water do you think you will get on the bar? I should think that if it were done—having seen it run through the sand where they now propose to make the dyke—we should have 12 feet.
51. Are there any great difficulties higher up the river than what the Harbours and Rivers Department propose to deal with now? There are only the flats, and they could be dredged with a proper dredge.
52. Those are only sand flats? Yes.
53. If they were removed, would a vessel drawing 12 feet be able to get up to Murwillumbah? There would be a few other obstructions.
54. What are they? Two or three little shoals that would require dredging.
55. No rocky bars? Not that I am aware of.
56. If you had a depth of 12 feet up to Murwillumbah, do you not think that the river would give a fair outlet for the produce of the district? I do not know. I only know about the banks of the river.
57. Do you think that any trade naturally draining to the banks of the river would go that way? Yes.
58. *Mr. Lee.*] Supposing the contemplated works at the heads were carried out, would there be sufficient depth of water for the class of craft now trading here to enter in all weathers? Clear of a gale of wind—yes.
59. But in all weathers? There are times when none of the harbour bars could be taken.
60. You say that if the works were carried out there would be 12 feet of water under the ship's bottom—would that not be sufficient for ships trading here to enter in all weathers? No.
61. Supposing they were loaded and ready for sea, would they be able to go out in heavy weather? No.
62. So that practically they would be as much dependent on the winds then as they are now? No. We could go out in ordinary bad weather; but there is weather when a vessel cannot go in or out in better harbours than this.
63. Have many vessels been lost at the entrance during your period of office? Four or five.
64. Steamers or sailing vessels? There was one steamer; the rest were sailing vessels.
65. Admitting that the entrance were made tolerably safe for the ordinary craft trading here, how many vessels would you be able to accommodate in your anchorage inside the Heads? If it were improved in the way suggested there would be no anchorage required; the ships would be able to go all the way up the river.
66. I am speaking of the river just inside? At the most nine at present.
67. What is the tonnage of the steamers trading here? 120 tons.
68. And of the sailing vessels? 104 tons register, carrying nearly double that.
69. What is the average depth of water? At the present time there is 10 feet. I have known it less than 6 feet at high water.
70. Is 10 feet sufficient for the vessels you have mentioned? Yes.
71. What is the least depth required to bring them over with safety? 7 feet.
72. With that depth you can enter inwards and outwards with safety? Yes.
73. At the present time how is the produce of the river brought down to the ocean boats? By steam droghers and punts, and transhipped into the larger boats.
74. You have no knowledge of the country lying back from the river? None whatever.
75. And a very limited knowledge of the river itself? I have not a great deal of knowledge of it beyond the flats.
76. Would a depth of water of 12 feet at the heads be sufficient to admit steamers and sailing vessels of a larger draft than are now trading here? Yes.
77. Up to how many tons? 300 to 400.
78. Is there any foreign trade from this port—that is, to the other Colonies? A little for Brisbane at times, but not at present.
79. Is there any to Melbourne? No.
80. The produce of the district then as a rule finds its way to Sydney? Yes.
81. Are the present means of conveyance by water the only means the people have of getting produce to market? Yes.
82. Is there any overland traffic between the upper river and Queensland? Not that I am aware of.
83. You do not know anything about that? No.
84. So far as your knowledge goes you are of opinion that a depth of water of 12 feet up to Murwillumbah would carry vessels of sufficient tonnage to convey the produce of the river? I believe so. 85.

85. Is there a tug service here now? There is.  
 86. Is it a Government Service? It is subsidised by Government.  
 87. And by the ship-owners? Yes; they pay so much.  
 88. Are the port dues levied here? Yes.  
 89. The same as at any other port? The same as at any other port.  
 90. Have you any additional evidence to give. Do you know whether a cheaper service could be established by water than by rail? None whatever. I would not like to speak about it.

Mr. W.  
 Macgregor,  
 J.P.  
 21 Nov., 1889.

Edward Osler, Esq., Sub-Collector of Customs, sworn, and examined:—

91. *Chairman.*] What is your position in the Government Service? Sub-Collector of Customs for the Tweed River District. E. Osler, Esq.  
21 Nov., 1889.
92. How long have you occupied that position? Since 1st June, 1886. I was acting here a fortnight before that.
93. Has there been an increase in the trade of the district—in the number of vessels in and out, since then? There has been a little increase since 1886, but not so much as in former years.
94. Can you furnish the Committee with the number of vessels for each year since you came here? I have here the total tonnage. In 1880, 5,062 tons. During that year a few vessels went out in ballast; but those were the trips of the "Terranora," a large steamer belonging to the Sugar Company, going to Brisbane and bringing machinery back. In 1881, 5,434 tons. Very little ballast went out that time. Nearly all the vessels were loaded. In 1882, 6,042 tons; no vessels in ballast. In 1883, 6,500 tons. There was a little of that tonnage in ballast, but not much. It was principally taken by the same steamer. In 1884, 7,873 tons. There were then two trips of the "Terranora" in ballast, to the Clarence River only. In 1885, 10,841 tons. During that time I find one small steamer, 49 tons, in ballast, and two or three trips of the "Terranora," which was 199 tons, back to the Clarence in ballast. In 1886, 12,668 tons. The trips made during that year in ballast were principally to the Clarence and to the Richmond, this steamer going back. In 1887, 12,354 tons; 1888, 7,751 tons; 1889, 6,953 tons for ten months only. The decrease in the tonnage for 1888 and 1889 is partly accounted for by the fact that the steamer "Karuah," which is now running here, is about half the registered tonnage of the "Tweed."
95. What we want to know is, what goods are taken in and out—not the tonnage of the ships? I have a return of the goods taken out. We take no account of the goods that come in coastwise. In 1880, outwards, 382 tons of sugar, which I put down at £20 a ton; 89 tons of molasses, at £10 a ton; 891,000 feet of timber, calculated at 10s. per 100 ft., which, I believe, is a fair average price; 880 bushels of maize, calculated at 2s. 6d.; 264 hides, at 10s. each; 9 casks of tallow, which I reckon equal to 3 tons, at £15 a ton, at a low estimate; and 13 cases of sundries, £1—a total of £13,285.
96. Give us the totals of the others. I suppose each year there was a similar cargo? I do not know except from my official records. You would want each year separate. I have here, 1880, 1887, and 1889, to show the increase. In 1887, which was a very good year on the river for sugar, 2,716 tons were sent away; 389 tons of molasses; 2,924,000 feet of timber; 1,152 hides; 25 casks of tallow; 612 packages of sundries,—which, on the same basis as before, I reckon were worth £74,153. In 1889, which is the next year I have, the total exports for ten months I reckon at £50,632.
97. Is there no export of maize from this district? During this year more maize has been exported than in previous years—8,434 bushels, taking 4 bushels to the bag. The quantity of timber has not been so great this year; neither has the quantity of sugar.
98. Do you know any of the back districts here at all? I have never been back from the banks of the river. I have been on the Tallabudgery Road, and I have been up the north arm as far as Dungey Creek.
99. Do you think that if the entrance to the harbour were improved that would help to develop the resources of the district more largely? Yes, if there were better facilities for getting the stuff away, and the vessels could be depended upon in getting out, I think it would be an inducement for people to settle on the soil and cultivate it.
100. That improvement would accommodate the people on the river within a reasonable distance of this place? I should think so.
101. You do not know enough about the district to say anything about the trade? I have never been further up than Murwillumbah; my duties do not take me that way; they take me more to the north. The head of Dungey Creek, where I went on official business, is near the Queensland border, say about 3 miles.
102. I suppose they do not use any stills here? I am not aware of any.
103. *Mr. Garrard.*] Is there any cargo going to Brisbane from here? Yes. My return includes the cargo to Brisbane in the total exports from the river.
104. Can you tell us whether there is an increase in the quantity going to Brisbane, or a decrease? A decided decrease. There is no timber going to Brisbane now; but they had a vessel running there constantly.
105. What is the reason of that? When the Queensland Government increased the duty on timber the people who had purchased timber here said that it did not pay them to take it away, and in all probability there was also a depreciation in the value of timber in Brisbane.
106. Then for the ten months of 1889 we understand that the outward tonnage has been 6,353 tons, and in 1880 it was 5,000 tons, showing a small increase? Yes. In 1880 the "Terranora" made seventeen trips outward, and she is only 1 ton less than 200 tons; therefore, in round numbers, she is more than double the size of the other vessels.
107. Was it in 1880 that the Sugar Company first used their mills on the Tweed? I am not positive.
108. I understood you to say that the "Terranora" was bringing machinery from Brisbane? Yes, and sometimes coal. At one time they had a great traffic between here and Brisbane, and kept the "Terranora" constantly running.
109. If the tonnage in 1880 was 5,062 tons, and in 1889, 6,353 tons, there has not been a very large increase? No; but, as I said before, the "Karuah" is only the half the size of the "Tweed."
110. Then if the "Great Eastern" had been enabled to come in here with cargo you would have put down her registered tonnage if she only brought 10 tons of cargo. The small vessel does all the trade that the bigger one did before? She does the trade to a certain extent. 111.

- E. Osler, Esq. 111. You must see that the tonnage of a vessel is not a guarantee of a cargo carried, because the "Tweed" only went out with half cargoes? She was scarcely ever 'full, except perhaps of timber. The only way we have of getting statistics is by taking the registered tonnage. The registered tonnage of one vessel is 66 tons, and she goes out with 90 if full. It is a very hard case if a vessel does not go out with her registered tonnage on board. When the bar was bad most of them went out with their registered tonnage.
- 21 Nov., 1889. 112. Do you know whether vessels have been bar-bound here for any length of time. The first three months that I was here the steamer was bar-bound for twenty-eight days in three trips.
113. And produce lying in her hold all that time? Yes. The other vessels were also bar-bound.
114. Do you know the rate of freight from here to Sydney compared with that charged from the Clarence or from the Richmond? I think the freight of the steamers is 30s. or 35s.
115. You do not know what it is from the Richmond or from the Clarence? I have no idea.
116. It is rather higher here? I think so, because of the insurance premium being high.
117. And liability to detention? Yes.
118. How often have you known vessels to be bar-bound here? I could not say exactly.
119. Roughly—twice in a year—once in a year? I suppose two or three times in a year. There are certain times in the year when they are bar-bound; during the equinoctial gales, for instance.
120. What would be the longest detention? As well as I can recollect from memory—I could tell you exactly if I had my journal here—four or five weeks.
121. Is that a sailing vessel or a steamer? Sailing vessels and steamers as well. The bar was impassable because of the bad weather and the shallowness of the water.
122. As a resident, and one who has watched the trade of this place, do you think that if greater facilities were given for the conveyance of produce, either by improvements to the entrance, or a railway, it would lead to a greater development of the district than now exists? That seems to be the opinion of people in the district with whom I have spoken.
123. You have not formed an opinion of your own? I should think that if there were better facilities for the conveyance of produce there would be more inducement to people to settle on the river and grow produce.
124. Which do you think would serve the people of the district best—water carriage or railway carriage—improved water carriage, with a depth of 12 feet on the bar, or a railway 60 or 70 miles in length, giving communication with the deep waters of the Richmond or the Clarence at Grafton? You would have to take into consideration the state of the Richmond and the Clarence. Of course, if harbour improvements were carried out in those places, and this place were allowed to remain as it is, a railway from here to carry produce to either of the other rivers would be a convenience to the people; but it would not be as cheap as water carriage. Water carriage must be the cheapest, because there are no roads to keep in repair, and the wear and tear of ships is very little compared with the wear and tear of railway engines and roads.
125. Do you think the difficulty of getting to market has been the chief bar to the more rapid progress of the district? I should imagine that it has, looking at the statistics; but I can only speak for the time that I have been here.
126. *Mr. Lee.*] During your time have any vessels with cargoes been lost going out of the river? The "Kalara," a steamer belonging to Brisbane, was lost since I came here. She foundered about a mile from the bar.
127. Can you give us any evidence as to whether the shippers insure from here? I know nothing of my own knowledge. I know nothing except what I have been told by the owners.
128. Does the question of freights come within your knowledge? No.
129. Does the question of port dues? Harbour and light and pilotage dues only.
130. Are the usual charges made here? Yes; the usual charges—4d. per ton if it becomes due.
131. There is no extra charge made? No extra charge. The harbour and light dues are only paid when they fall due. They are paid six-monthly. Where there is no Sub-Collector, even if the pilot is acting as such, the Act of Parliament does not say that the pilotage must be paid there, but they can pay it at Sydney.
132. But still it is a liability incurred in this port? It is a liability incurred in this port for harbour and light dues, provided the six months is up before the vessel leaves the port.
133. I want you to clear up the question of tonnage. The "Terranora" is the largest vessel that is trading to this port? Yes.
134. Could she leave the port with 200 tons of cargo on board? I could not say from having seen the ship leave the port, but I should think from the build of the vessel that she could leave with 200 tons.
135. With the depth of water that you have seen on the bar? Yes; I do not think that the "Terranora" would draw much over 6 feet. If she drew over 6 feet she would go. The bottom of the "Terranora" is flat.
136. I notice that in your returns no dairy produce, such as butter, bacon, or cheese, is mentioned? During the last year a ton of butter has gone away from the river, principally to Brisbane.
137. You look upon that as a perishable article? Yes.
138. If that were in a ship's hold, and she were bar-bound, it would deteriorate in value? It would become almost useless, except for cart-grease.
139. Would any other cargo such as sugar, hides, or tallow deteriorate if kept in the hold? No; not the kind of sugar sent from the river.
140. Could you give the Committee any information as to the population of the Tweed River District? I have not the slightest idea what it is.
141. That does not come within your province? I do not know it officially. There is a large nomadic population—people coming to and from the sugar mills in the crushing season.
142. The alienation of land does not come within your province? No.
143. Have you ever kept a record of the rainfall about here? No.
144. Have you any idea what it is? I have no record and no means of making one.
145. Could you tell me what is about the rainfall? From general observation I should think there is more rainfall in this district than there is in most parts of the Colony where I have been.

Mr. William Charles, selector, sworn, and examined:—

146. *Chairman.*] Where do you reside? At Terranora.
147. How far from here? About  $3\frac{1}{2}$  miles in a straight line.
148. What are you? A farmer or grazier.
149. A selector? A selector.
150. Will you give the Committee what information you have;—how long have you been here? Six years.
151. Where did you come from? I came from the Namoi.
152. What part of it? Bullerawa; but I came originally from Illawarra.
153. Do you know this district well? Yes; I think I know it very well.
154. Up and down the river? Not so much on the river as back.
155. How far back? I think I know the district as well as anyone on the river.
156. Up to the Dividing Ranges? Yes.
157. What is the character of the soil? It is a beautiful rich red and dark soil—volcanic soil.
158. Is that on the hills as well as on the flats? Yes.
159. Could the hills about the district generally be cultivated? Yes. The scrub hills would grow almost anything.
160. And the flats, I suppose, are exceedingly rich? Yes. The hills are really good too.
161. Is the land about here superior to that about Illawarra, do you think? Yes; much superior.
162. Have you studied the rainfall here at all? Yes. The rainfall is much greater here than it is at Illawarra.
163. And the vegetation much more rapid in growth because of the district being further north? Yes. The country will carry more stock than that about Illawarra will.
164. In its natural state? No; but after it has been felled and cleared. There is very little natural grass; it is all dense scrub.
165. Is it a district which you think would develop into a second Illawarra if there were markets for the produce? Yes; it would.
166. It would sustain a large population? Yes; a much larger population than the Illawarra district would maintain.
167. It is more extensive than Illawarra? Yes. There is a greater quantity of good land here than there is in Illawarra. In fact, all the land here is much better than that in Illawarra.
168. You get better returns from it? Yes.
169. What do you do—raise stock? Yes.
170. Have you tried to grow any grain? Yes; I have grown corn.
171. Was it profitable? No; because we could not get the maize away with the present condition of the bar.
172. I suppose what you want in this district is to be able, with a certainty, to get your maize away to catch particular markets. Then it would pay well. What we want is a railway.
173. Do you think that if the facilities were great and certain, a great deal more land would be cultivated here than there is now? Yes.
174. And the population would become more dense? Yes.
175. Is it a fact that people have left here after trying hard to farm their land? Yes. They have actually been starved out.
176. Do you know of any people here who have taken up land and complied with the conditions, but who have had to give it up because they were unable to obtain a market? I know of several, close to my own place, who took up land and worked it for three or four years, and then had to give it up.
177. I suppose 640 acres would sustain many families? Yes; 40 acres of land here would sustain any family.
178. If a railway were constructed from the Tweed southwards to the Richmond River, or to the first certain port, do you think settlement would follow on the line of route;—is the country good? It is very good.
179. Do you know it? I know it very well between Richmond and here. Of course, most of it along the coast is not so good, but after you get inland it is splendid.
180. Supposing the railway were complete, and the entrance made just as it is, do you think the river and creeks here would become feeders to the railway to any large extent? Yes; they would be feeders to the railway.
181. The same as the Hunter is? Yes.
182. *Mr. Garrard.*] Do you think that if the railway were constructed to Murwillumbah for the terminal point the people in the district would avail themselves of it? Yes.
183. How would they get to it? I think it would be continued to the border.
184. But if the terminal point were Murwillumbah—you are going on the supposition that it would be extended—would the people avail themselves of it? Yes.
185. How far are you from that place? 7 miles, in a direct line, from the Junction by road.
186. And how near are you to the north arm? The junction of the north and south arms?
187. How far are you from there? 7 miles by road.
188. How far are you from Murwillumbah? That would be 6 miles further on.
189. Is it at all likely that people in your district would pass by a waterway, and go 6 miles further on to put their produce into a train and carry it 60 or 70 miles? Certainly; because their goods would be perishable. They would send them either to the Heads, and then up by launch to Murwillumbah, and from there by rail, or from our district to Tumbulgum (or Junction), and by river to Murwillumbah.
190. We have it in evidence that there is 10 feet of water on the bar, and that at present there are seven vessels here drawing from 7 to 9 feet of water;—do you say that the people of your district would send their stuff down the river as far as the Heads, and up the river again to Murwillumbah, in order that they might go by train, when they would pass all those vessels? Yes; and I think they could do that more cheaply than they can take their goods by the present system. They never know now when the vessels are going to get out.
191. How often have the ships been bar-bound during the last twelve months? I could not say.
192. You do not know that they have been subject to this disadvantage? Yes. I do, from my own knowledge.

Mr.  
W. Charles.  
21 Nov., 1889.

Mr.  
W. Charles.  
21 Nov., 1889.

193. Would you send your stuff down to the Tweed Heads, pass by vessels there, take it 20 miles to Murwillumbah, tranship into the train, and then carry it 60 or 70 miles to put it into a vessel for Sydney—would it pay you to do that? Yes, because I should not run the risk of having my goods detained at the Heads for a week, or perhaps three weeks.
194. Have any goods been detained here during the last twelve months for a week? Yes, hides of my own.
195. They are not perishable articles? Yes, they are. They are left in the sun, and dogs and everything destroy them.
196. Do you advocate this railway, the terminal point of which is to be at Murwillumbah, in the hope that it will be extended to the Queensland border, near Terranora? Yes, that is one reason.
197. If you had no hopes of its being extended you would not be anxious about it? I would be just as anxious.
198. Do you know the route of the line between Murwillumbah and Lismore? Yes.
199. Does it pass through fairly good country all the way? It passes through the best lands of the district.
200. Nearly all of it is alienated? No. There are some reserves along the line containing very good country.
201. Do you not think that if the river entrance and the river itself were made better, it would be cheaper for the people to send their produce that way? Even if they made this river equal to the Richmond, I should not say that we should derive the same advantage from it as from a railway.
202. Do you think that this district would be served better by railway communication with Brisbane than with the Richmond River? I do not know. Of course, what stops our communication with Queensland is their policy of protection. Unless we got federation the railway would not help us.
203. Their duties are against you? Yes. If they were removed Brisbane would be our market.
204. If there was intercolonial freetrade you think it would serve you better to be connected with Brisbane than with the Richmond River? Yes, I do. It would serve my part of the district better.
205. *Mr. Lee.*] Are you personally interested in any land through which the proposed railway will pass? No.
206. Are any of your relations? No; none that I am aware of.
207. You are not advocating the construction of this line from any self-interested motive? No.
208. You are not advocating it for the purpose of increasing the value of land which you hold on the route? No.
209. As to the question of sending away your produce. The line we are considering is one from the Tweed to Grafton, supposing Grafton were made a port available for large ships, to which they could come in in all weathers; do you think it at all likely that the produce of the Tweed would be sent to the Clarence for shipment? No. I think our only hope is Byron Bay.
210. On account of the distance? Yes.
211. It would prohibit from sending your produce there? Yes.
212. If that project were carried out the railway would be utterly useless to you? Yes.
213. Supposing Lismore were made the port of shipment for the Tweed, would you be able to send your produce across there? Lismore is a bad harbour, as ours is. If larger boats could come up the Richmond, then I think we could send our produce there.
214. Supposing there were any other place where a safe harbour could be constructed, and where you could get certain despatch and delivery, would that answer your requirements? Yes.
215. Do I understand that what you mean by an outlet is a port by which you would always be able to get your goods to market under any circumstances? Yes, that is what we require.
216. I suppose the fact of your produce being bar-bound, no matter what it is, means keeping you out of your money for so many weeks? Yes; and it also deteriorates in value. Our maize is destroyed by weevils.
217. As the port is at the present time, and I take it that this is your only outlet? Yes.
218. You are unable to take advantage of any rise in price which may occur in any market in the Colony? We cannot do it, because after we get word it is three weeks before we can get our goods there, and by that time the market has gone down; whereas, if we had a railway, it would be different.
219. Will maize suffer if kept under hatches for a short time? Yes; it will be destroyed.
220. By weevils? By weevils and damp.
221. Would the settlers in your locality be able to pay the railway freight to Byron Bay or Lismore, and then tranship to Sydney in competition with the river steamers which take the stuff direct? Yes, I think they could. I am sure they could.
222. Do you insure your goods when you send them down by steamer? Yes.
223. Is it a high rate? The insurance is very high.
224. What I gather from your evidence is this; you want a sure and certain means of access to market? Yes; that is what we want.
225. Are you in a position to give any information as to the increase of population in the Tweed River district? Since I have been here?
226. Yes? It has increased.
227. Supposing this railway were built, and the steam companies were to reduce their freights one-half, which way would you send your produce? Still by rail.
228. Why? Because I would have direct communication, and it would pay me better.
229. Although the freight by rail would be somewhat more? I do not think it would be possible for the steamers to reduce it one-half.
230. Supposing it were reduced? I would sooner send produce by rail. I would sooner pay £1 a ton more to send some goods by rail than send them by river. It is impossible to send live stock by river. I remember that one time I had a lot of calves, which were then selling at good prices in Sydney, and I thought I would ship them from here; but when I came to make inquiries I found that the Tweed was bar-bound, and that the bar was very bad, so that I would have to send them to Brisbane, and ship from there.
231. The same would apply to pigs? Yes.
232. Do you send large stock, such as cattle, to market by steamer? If Byron Bay were made a port we should be able to slaughter and send the carcasses to market, because just over the border there is one of the best districts in Queensland for cattle—the Logan district. We get most of our cattle from there, and they were sent from there to Grafton, and then killed and sent to Sydney.
233. Is the stock traffic in the district likely to increase? Yes.

Mr.  
W. Charles.  
21 Nov., 1889.

234. I notice by the returns given that there is a very small quantity of maize raised? Yes. There is not a great quantity raised, because they cannot get it away. Even now, though you may arrange to have your maize taken by the steamer, they may say, "Well, we will take it the trip after next." When the boat comes back they will tell you, "Oh, we have two more loads of timber, and you will have to wait until we take them away."
235. In the meantime the price of the article may increase or decrease? Yes, and the weevils are eating your corn.
236. At all events you are debarred from a ready and sure market? Yes.
237. Even if you had to pay more freight you would be satisfied to do so if you had the means of getting your produce away at all times? Yes.
238. Whether the railway is constructed or not, I presume that there will always be a certain amount of river trade for the steamers? Yes.
239. You know the route of the proposed line? Yes, well.
240. Does that line serve a portion of the country which the river does not serve? Yes. It serves all the country back from the river.
241. Is that back country equal to the country along the banks of the river? Yes; part of it is.
242. Is the country lying between Murwillumbah and the Brunswick of equal quality? Yes.
243. To which river would that traffic flow—to the Tweed, the Brunswick, or the Richmond. It must go by rail.
244. Is there not some communication with the Brunswick by ship? Yes, there is; but the vessel trading there is very small.
245. It is still more uncertain than the Tweed? Still more uncertain.
246. Your remarks with reference to the Tweed apply still more strongly to the Brunswick? Yes.
247. As you are so well acquainted with the proposed route, will you tell us whether you think the proposed line could be improved upon—that is to say, by being made straighter or taken through better country? No, I do not think it could.
248. Have you been over the actual survey? No, but I have crossed it in several places.
249. Have you found that the surveyors have gone out of their way to climb over a mountain? Yes.
250. You think these mountains could be avoided? I think they have taken the best route.
251. I suppose you would not care if they went over the moon so long as they gave you a railway. The desire of the people is so great that they would not care if the railway were shorter or longer? Yes.
252. That arises from the fact that they are living in a good district, and are unable to get their produce to market? Yes. There are numbers actually starving.
253. On good land? Yes.
254. For what reason? Because they cannot get their goods to market.
255. Are there no local buyers? No. Between the Brunswick and here they would have to cart their produce so far that it would not pay them to grow it. They would have to carry it 20 miles and get half-a-crown a bushel for their maize.
256. You know the Byron Bay country? Yes.
257. You know some distance back from it where the range comes in? Yes.
258. On the plan it appears to be a very much shorter track from Lismore to Murwillumbah by the foot of that range? It is shorter.
259. Can you give the Committee any idea as to why the line was made to approach the coast at Byron Bay instead of going in a more westerly direction? There is a range to the westward of the surveyed line.
260. What is the nature of the country between the range and the coast? Very good.
261. Is there any swampy country? There is, nearer the coast. Back from the coast the land is first-class.
262. How far back from the coast? It is half a mile in places before you get on to the good country, and even less.
263. Will the line as surveyed serve the greater number of the people in your district? Certainly, because Byron Bay must be our port. If it can be made a port it will be where we shall send our goods to market.
264. But supposing Byron Bay is not made, where will your port be? I could not say. We would perhaps have to send to the Richmond. I do not know whether that would pay. I think our only hope is that Byron Bay will be made a port.
265. From Murwillumbah to Byron Bay is shown on the railway plan as 30 miles—could you afford to send your produce that distance, provided there was a certainty of getting it away? Yes.
266. *Mr. Garrard.*] All the answers you gave to me about taking your produce south were on the supposition that you would have a port at Byron Bay, and not be compelled to go to the Richmond? Yes.
267. It is a matter of serious doubt to your mind whether the railway would be any good to you if you had to go to the Richmond? Yes, unless larger ships could be got to the Richmond.
268. You are aware that improvements are being carried out at the entrance to the Richmond to make it equal to the Clarence? Yes.
269. Suppose it is made equal to the Clarence, do you think it would pay you to go there? My reason for saying that it would not pay us is that we could run to Brisbane. Queensland is running her line to the Tweed.
270. Who told you that? Mr. Stephens, the Member for The Logan.
271. Where do you think the Queensland junction would take place? At a place called The Gap; it is on the range between Murwillumbah and the Crumbden Creek.
272. Is that on the coach-road from Nerang to Murwillumbah? Yes. They would only have to tunnel a short distance through The Gap.
273. How far would that be from Murwillumbah? About 6 miles, I suppose. I do not know the actual distance.
274. Then, as I understand you, you doubt whether it would be to your interest to have a railway at all? Certainly it would be to our interest.
275. Not if you were going to Queensland? It would give every one a chance of sending his produce away.
276. A railway would do very little good to the district unless there were a port at Byron Bay? It would do a great deal more to the district if we had a port at Byron Bay.

- Mr. W. Charles.  
21 Nov., 1889.
277. Would it not be a great deal more benefit to the district to have a fair bar and a good river than to have railways or anything of that sort? No.
278. How far do people bring their produce at present from the river bank to the Tweed on each side? 10 or 15 miles. I think only a very few bring it that distance.
279. They bring it 10 or 15 miles to the river with the present bad flats and entrance? Yes.
280. Do you not, therefore, think that if a fair improvement of the navigation were made people would bring their produce 16 or 17 miles? They would; but even if the river were improved it would not have a depth of 10 feet.
281. Do you know that it is estimated that there will be a depth of 12 feet? That is on the bar. I am talking of inside the bar.
282. Why could they not make it 12 feet inside;—do you know of any rocky obstructions? I do not know of any, but I think there is gravel or rock above the Colonial Sugar Company's mill. I do not know actually much about the river itself, because I am more inland.

Mr. Henry Eden, selector, sworn, and examined:—

- Mr. H. Eden.  
21 Nov., 1889.
283. *Chairman.*] Where are you living? I am living here at the present. I have a selection 6 miles from Murwillumbah.
284. Where were you living before you got the selection? On various parts of the river. Twenty years ago I had a vessel running here.
285. Where from? From Brisbane.
286. Your business relations have always been with Brisbane? No, with Sydney.
287. Are you not a large property-holder in Brisbane? I have some little property there—not of any great extent.
288. What do you want to tell the Committee? I am thoroughly acquainted with the river and its tributaries and with the trade done here for twenty years past. I have been a large buyer of cedar and maize, and have chartered vessels to take cargo from here to Sydney. I know the produce obtained here.
289. How much do they produce? The principal things shipped from here are cedar, beech, and pine, and sugar. There are very few perishable goods sent from here. Occasionally a small quantity of butter goes down, but it has not paid hitherto.
290. How long have you been a landowner in the district? Eight or nine years.
291. What quantity of land have you got? About 600 acres.
292. Did you take it up as a conditional purchase? Yes.
293. What have you done with it since? I am still improving it.
294. In what way? By planting fruit-trees.
295. How many acres have you got under fruit? 2 or 3 acres.
296. Is that all you have done with this in ten years? I have 70 acres of scrub felled.
297. Under cultivation? Under artificial grasses.
298. I suppose 70 acres is all that you can bring into use? Probably 100 altogether. The ground is very broken, although the soil is very rich. It is a very expensive place to work.
299. Where is it—on the Tweed? Between the Tweed and Tallbudgery, near the Gap referred to by a previous witness.
300. Will the construction of this railway to Lismore or Grafton be of any benefit to you or to the selectors there? It would be of no benefit to me or to the selectors there.
301. You look to Brisbane for your market? No, to Sydney.
302. The last witness said that Brisbane would be the market if there was intercolonial free-trade? Brisbane is only a limited market; it is not as good as Sydney.
303. When did you know the river first? In 1868. I was trading for two years on it.
304. Has there been much improvement since then? Very much.
305. Before you can get returns for the land such as you describe is it expensive? Yes.
306. You want considerable capital then to take up a selection? That is my experience,—that is if you go into the mountain country.
307. Which do you think would be the most beneficial to this district, improvements to the entrance of the river, which would give 13 feet of water, or a railway, as proposed, to Grafton and the Richmond, via Byron Bay? I think the improvements to the river for the bulk of the produce of the river, because the bulk of the settlement is located near navigable water.
308. Do you think that Murwillumbah would be the proper terminal point if it were determined to construct such a railway? I think so.
309. But if the river were improved, that would be a greater benefit to the district than the construction of the line? It would give a benefit to a larger number.
310. How many miles on each side of the river do you think the river would serve? Excepting on the principal part of the river and near here there is not much settlement away from the water, except above the North Arm.
311. How far do you think the people would take it to the river to send it away? It think all those above Deepwater would be benefited by the railway.
312. How far back? For some distance back.
313. Would people for 10 miles back come to the river? Not 5 miles.
314. How would the people further back be served? All those further back would be benefited by a railway, but not those on navigable waters, who are the bulk of the settlement.
315. Have you an intimate knowledge of the country between Grafton and the Tweed? No.
316. Between the Richmond and the Tweed? Of a portion of that country. I have travelled it several times.
317. Do you think that an expenditure of £20,000 or £25,000 upon the improvement of the river or the harbour would be of more benefit to the whole of the district than the expenditure of £100,000 on the construction of the railway from the Richmond to the Tweed? I do not see that a railway would take the bulk of the cargo that goes from the district. We could not send timber away by railway.
318. Is not the timber exhausted now? No; but because of the high freights we cannot send it away.

319. Do you think that if facilities were given by a railway for getting to a better harbour, or shipping port, the timber, instead of being sent away in bulk, would be sawn? It could go more cheaply by water. As far as perishable articles are concerned, they would go better by railway. Mr. H. Eden.  
21 Nov., 1889.

320. There is not much at present? No.

321. Is it likely to increase sufficiently to pay interest on £100,000? That is an open question. There is no doubt that it would stimulate enterprise.

322. Do you think that the people of this district, supposing it is not possible to construct the railway unless extra charges are made, would be prepared to pay heavier freights than usual for the carriage of their produce? It would only pay when the cargo was of a perishable character.

Mr. John Marks, grazier, sworn, and examined:—

323. *Chairman.*] Where do you reside? At Terragon, about 15 miles above Murwillumbah.

324. Will you tell the Committee what you have to say? The difference in freight between this river and the Richmond River is something like 2s. per 100 feet on log timber, and a proportionate freight on sawn timber—that is almost entirely owing to the bad bar and the bad water communication in years gone by. I have known hundreds of bags of maize to be rotting in the barns, because there were no means of getting it to a good market, or to any market. The insurance rates are considerably higher here than on any other river in the Colony. I understand that that is owing to the bad bar. For a short time after the wreck of the "Tweed," a steamer which lately traded here, the insurance societies would not effect any new policies at any price. I owned a part share in conjunction with Mr. G. W. Nicoll of Sydney, in a saw-mill in this district. We found that the high rate of freight consequent on the bad state of the river and bar was one of the greatest drawbacks with which we had to contend. There is a tremendous amount of good land in the district which is entirely lying idle, owing to the want of good means of communication.

Mr. J. Marks.  
21 Nov., 1889.

325. It must pretty well all be taken up if it is lying idle? No; I do not think that more than about one half is taken up.

326. Where are you speaking of? The district in general—the police district.

327. How far south does that extend? I think to the Brunswick River, and it takes in some of the Brunswick. This land I believe would all be cultivated, if the river were improved, or if we had a railway. If the people of the district were given their choice, I think they would almost unanimously say that a good bar and a satisfactory improvement of the river would be of more benefit to the district—this particular district—than railway communication.

328. *Mr. Garrard.*] What do you mean by "satisfactory"? To give a depth of 12 feet at all times.

329. *Chairman.*] Up the river? Yes, and on the bar. That would enable vessels of at least 700 or 800 tons, built on a moderately light draft, to trade to the district, and would be quite sufficient for all our requirements I think. Individually I should prefer that the river and the bar were improved to having a railway. I believe it would do more good.

330. Where is your land;—on the river? Some of it—900 acres. I have land within 3 miles of Murwillumbah going up the river, in the parish of Dumbille, and also in the parish of Kunghur, 15 miles up. I have 1,600 acres there of leasehold and conditionally purchased land. I have 2,500 acres altogether.

331. What are you doing with it? Grazing principally.

332. Cattle? Cattle and horse stock. We did cultivate some considerable area of cane and corn; but we found that owing to the bad communication with Sydney and Brisbane by the Tweed, we could not possibly make it pay.

333. But that would not affect the cane? No; but owing to our having to employ high-priced labour, we found that that also did not pay. We consequently gave up both cane and corn, and are now going in for grazing entirely. In the event of more satisfactory communication being provided, we would cultivate again, but not until there is better communication.

334. *Mr. Lee.*] You say that there will not be any increased cultivation until there is better communication? Very little more.

335. So far as you are concerned, you are of opinion that the improvements to the bar and to the river would suit you best? Yes, they would suit me best, and would suit the general public best.

336. The general public on the Tweed? Yes.

337. In your locality? And the whole district.

338. Would it suit the people on the Brunswick? The bar improvements and river improvements here would be of no benefit whatever to the Brunswick.

339. Then you think that the Brunswick would require railway communication to give it an outlet. Yes. It wants some better communication than it has now.

340. Do you think that railway communication would offer an outlet from it? Yes.

341. In your opinion, it would be desirable not to include the Tweed in the railway scheme; to start the railway from the Brunswick? It would do us good, undoubtedly.

342. But in your opinion, the Tweed River district does not require railway communication? It is dependent upon the river improvements. If they are carried out, we shall not require a railway as much as under the present circumstances.

343. But you would like to have both? It would not do us very much harm. Of the two, I think the harbour improvements would do the district most good. I have lived here for eighteen years, and am thoroughly acquainted with the requirements of the district. I have been engaged in all kinds of occupations.

344. The river must serve the district? Yes, and some distance back.

345. Do you know the proposed railway route? Yes, I am thoroughly acquainted with the locality. I have been on both sides of the line.

346. Does not the line pass through a large area of land that will never be benefited by the Tweed River? Yes.

347. Consequently, it would benefit a certain portion of the district? Certainly.

348. And would open out a portion of the district at present sealed up? Yes.

349. In that way it would be an advantage? Yes.

350. And would lead to increased cultivation? A hundred-fold.

351. And thereby be getting traffic for itself? Yes.

- Mr. J. Marks. 352. So, after all, you would not like to see the Tweed River left out of a railway scheme, for the simple reason that a railway would open up the country? Yes, for some considerable distance from the river, to which the river would hardly give communication.
353. Personally, it would not be quite so much benefit? I do not think so.
354. It would benefit a large portion of the country practically closed up at the present time? Yes.
355. *Mr. Garrard.*] In your opinion for what distance on either side of the river would the land be benefited by improvements made on the river? With good roads people would bring their produce 10, 15 and 20 miles.
356. All your interest is above Murwillumbah? My personal interest is. Our family own property all over the district.
357. Is the river as navigable to your place as to Murwillumbah? Yes. I may say that I am largely interested in the timber industry, and when bringing rafts down you have an excellent opportunity for finding out the shoals. A raft will come from 3 miles above my property to the heads as well as from any part of the river. There are two or three narrow bars across the river of gravel and sand.
358. They can be removed? They can be removed by dredging. The Company had a small dredge some years ago and improved the worst of them.
359. Supposing the river were not improved, and the railway were constructed, would the timber be sent by it? No. I think the timber would always go by water.
360. Notwithstanding the flats and the bad entrance? Yes. I do not think a railway could possibly carry timber to another part and allow us to pay freight from there to Sydney or to Melbourne. We could not do it as cheaply as we can ship timber from the Tweed.
361. So that in computing the trade of the district if we take timber as one-third we can wipe that off because none of it would go by the railway? I do not think so.
362. Do you think that the railway would be used down to the Richmond for other produce, or only to a port at Byron Bay? A good port at Byron Bay would do good.
363. Suppose there were no port at Byron Bay? Then we should have to fall back on our present means of communication.
364. So if there were no port at Byron Bay the railway would not be used? I think so. I think the additional freight would be quite as much as we pay under the present circumstances.
365. Your evidence tends to show that this railway is likely to be a white elephant? Only as far as this district is concerned. There are larger areas further back from the banks which would be largely benefited by the construction of the railway.
366. Your argument would be to improve the river, making Murwillumbah the metropolis, and running the line out 30 miles to bring produce into the river? No. What I mean is that the water communication will be sufficient.
367. For the district tapped by the Tweed River, 15 miles on either side? Yes, only for the Tweed River.
368. Supposing the river were improved would people 30 miles south come to the Tweed rather than go to the Richmond? No, because the Richmond would be always better than the Tweed.
369. Would it not be cheaper to take produce 20 miles than 60 miles? It is not 60 miles. 50 miles will take you to any port on the Richmond from the Upper Tweed.
370. You know the surveyed route? I think so—pretty well.
371. You think it the best route that could be obtained? I think that it would tap as large an area of good country as it is possible to obtain.
372. Do you think that the divergence to the coast at Byron Bay was only for the purpose of reaching Byron Bay, or was it to avoid some range? I think it was for the purpose of touching Byron Bay.
373. Only for that? I think so.
374. Is there any difficulty as far as you can see in taking a more direct course to Lismore? There is a difficulty if you keep too far from the coast. Keeping too far in you will strike the high range.
375. If the people 30 miles south of the Tweed had railway communication to its navigable waters, would it not pay them better to take their produce 30 miles than 40 miles to Lismore by this route? The difference for 10 miles would be more than made up by the difference of freight if improvements were made to each river. The Richmond would always be better than ours.

FRIDAY, 22 NOVEMBER, 1889.

*The Sectional Committee met at the Court-house, Murwillumbah, at 3 p.m.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

JACOB GARRARD, Esq. | CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

C. O. Burge, Esq., District Engineer, Railway Department, sworn, and examined:—

- C. O. Burge, Esq. 376. *Mr. Garrard.*] What is your position in the Public Service? District engineer in the Railway Department.
- 22 Nov., 1889. 377. Have you been in charge of the survey of the proposed line from Grafton to the Tweed? No; but I have been sent to revise it. I have travelled over the whole portion from Grafton to Byron Bay, and have spent 2½ months upon it.
378. Have you made any alterations in the survey? Several.
379. Are there any surveyors in the field now who are commissioned to lay out the line? Yes.
380. Where? Mr. Lloyd at the Brunswick, Mr. Caswell, on the alternative coast line, and Mr. Wilkins between this and the Brunswick.
381. Do I understand you that there is still a surveyor on what is called the alternative coast line? Yes.
382. I thought that that line had been discarded altogether? I do not know.
383. On what portion of the alternative line is a surveyor engaged? I could point it out on the plan. It is a little south-west of Norrey's Head, about 1½ miles.
384. Where are the other surveyors engaged? One is engaged at Burringbar, and another, Mr. Lloyd, is close to the Brunswick.
- 385.

C. O. Burge,  
Esq.

22 Nov., 1889.

385. On what route? On the inland route.
386. On what we may take as the permanently surveyed route? From the Brunswick to the Tweed. Neither routes are permanently surveyed.
387. He is on the route from Murwillumbah to Byron Bay, and thence to the Richmond? Yes; Mr. Wilkins, Mr. Caswell, and Mr. Lloyd are on that.
388. You have only gone over that portion of the line between Grafton and Byron Bay? Yes; I have been along the coast line.
389. You have not been on the route we are now considering—from Byron Bay to Murwillumbah? No, though I have passed along the road.
390. You can give us no information about it? I am not prepared to do so, because I have not had time.
391. Are there any surveyors in the field who could give us information about it? I do not think more than I could.
392. But someone must have been over it? As far as the line goes they could give you information.
393. Who? Mr. Wilkins, on the inland line.
394. Either of the gentlemen on the inland line can give information about the road between Murwillumbah and Byron Bay? Yes.
395. You personally know nothing of the line between Byron Bay and Murwillumbah? Yes.
396. Not of the inland line? No.
397. Do you know the coast line? Yes.
398. Is the surveyor on that line continuing his work? Yes.
399. With what object? I cannot say: I am not instructing him. I have only been over it to see if it can be improved.
400. Have you conferred with the Queensland authorities as to the terminal point on their border? Yes.
401. Have they decided upon it? They only pointed out to me the position of their projected line; that was to the Tweed Heads.
402. That is the only one they have at present in mind? That is all.
403. They have no idea of reaching the border nearly due north of Murwillumbah? No.
404. Do you know anything of the country between Murwillumbah and the Gap? No. I was going to examine it, but I have not had time.
405. How did you come here? From Nerang, by coach.
406. Does the coach go over the Gap—the lowest portion of the range? I do not know. I have only been twice over there, and have not examined the country.
407. Have you had any conversation with the Queensland surveyors as to the probable point of piercing that range? No; because the Queensland surveyors are now waiting at the Tweed Heads for the purpose of examining the range.
408. You purpose going along the range for some distance? Yes.
409. What is the ruling gradient along the coast line? I think 1 in 60. It is hardly in a sufficient state of advancement to decide on these matters, because the section has not been taken. We can only estimate.
410. What is the nature of the country through which it passes? It is marshy.
411. Have you passed over the country between Coolangatta and Southport? No.
412. Have you any knowledge of the country between Byron Bay and Murwillumbah on what you call the inland line? No; except what I gathered from going along the road.
413. Can you give us any idea of the country? It appeared to me to be very rough.
414. Rougher than the coast line? Far rougher.
415. Is it better land? It appears to me that there is a good deal of land to be drained between the two lines. It is very rough on the road.
416. You anticipate a severer grade on the inland line than on the coast line? Yes.
417. And it will be much more expensive in construction? Yes. I should say that only from looking at it—very much more.
418. Have you any men on your staff here? No; I have none here. The material for my evidence is scarcely ready; it is hardly in a sufficiently advanced state.
419. *Chairman.*] You have no plans or sections? No. They are not out of the surveyors hands yet.
420. *Mr. Garrard.*] You have seen the tracings of the proposed line—the inland line? Yes.
421. You have not followed that route right down to Byron Bay? Only a short piece down near the Brunswick; this side of the Brunswick.
422. You are only familiar with the coast line from Brunswick Bay? That is all. I have been commissioned to go over it; but I have not had time. It was understood when I left Sydney that you were coming from the other end. If you had done that I should have had time to prepare all this information before you arrived here.
423. *Chairman.*] How long will it be before you get it? A fortnight.
424. *Mr. Garrard.*] You made no alterations in Mr. Caswell's survey? No.
425. What is he doing;—permanently staking? The only alteration I should make would be at the Tweed River; but it is a mere trifle.
426. Where does it join the Tweed? At Cudgen.
427. The country between Cudgen and the Brunswick is swampy? I cannot speak as to its quality, because I am not a sufficiently good judge. Mr. Caswell tells me that he has taken frequent levels there in connection with the line, and that most of it is easily drained and perfectly level.

Oswald Gordon Morton, Esq., Road Superintendent, sworn, and examined:—

428. *Mr. Lee.*] What is your position in the Government Service? Road Superintendent.
429. How long have you been in the district? Two and a half years.
430. Where were you before you came here? At Mudgee.
431. Your knowledge of the district is confined to the last two and a half years? Yes.
432. How far does your district extend? Southwards to Byron Bay, and thence along the land district boundary to a point about 15 miles due west from the Brunswick.

O. G.  
Morton, Esq.  
22 Nov., 1889.

- O. G. Morton, Esq.  
22 Nov., 1889.
433. To the Queensland border? North to the Queensland border, and thence to the Tweed Heads along that border.
434. Do you know anything of the proposed line of railway between Grafton and the Tweed—that portion of it within your district? Yes; I have seen two marked lines.
435. Will you give me some information as to the road expenditure on that portion of the country and in your district per annum? Starting from Byron Bay as far as my district goes there is an expenditure towards the Brunswick of £50 a mile for 9 miles of road—that is along the main road to Lismore. To join that road from Byron Bay there is a road strikes from the bay in a line about due west, on which there is an expenditure of £50 a mile for 5 miles.
436. Will you give me the total amount spent per annum on the roads within your district? The amount per annum spent on scheduled roads is £7,540.
437. *Chairman.*] Is your road district the same as the police district? Very nearly the same. The amount I have mentioned is confined to the district of which I have charge, including special votes for special circumstances the amount reaches £12,170. On the main road, keeping along the proposed railway line, the expenditure is above £1,500 a year.
438. How many miles? Twenty-five—a little over.
439. And special votes for the bridges? Yes. The special votes for the bridges in this district this year will be about £500 along that road.
440. *Mr. Lee.*] I want information respecting the whole of your district? Yes.
441. Will the roads you have mentioned act as feeders to the proposed railway if it is constructed? Yes; very much so for the settlement about the Brunswick and along the main road. The branch roads leading from the settlement on the various creeks will tap this land.
442. In your opinion will it be necessary to increase the number of roads in this district if some other means of communication are not provided? Decidedly so.
443. On what do you base that opinion? From the amount of settlement, and the very indifferent means for getting to market, or to the various shipping ports, through dense scrubs, which in wet weather become almost impassable. The roads must be pushed out as settlement advances, and it has been doing that very rapidly since I have been here.
444. Had you to construct roads to any particular part? Yes. Up to the head of this river, and to the head of the Brunswick, and several branch roads striking off from the main road from here to the Brunswick in a westerly direction along the creeks.
445. What is the state of your roads in wet weather? Bad.
446. Notwithstanding that there is £50 a mile spent on them? It does not keep them in order for heavy traffic.
447. What does the traffic consist of? Principally timber drawing. Lately they have been carrying maize and produce to and from the selections.
448. From what you can see in your travels about the country, are you impressed with the idea that the settlement is of a *bona fide* character? Decidedly.
449. Not of a speculative character? No.
450. The men who come in to take up the land do so for the purpose of making *bona fide* homes? Yes; carrying out good improvements and spending money.
451. Holding that opinion you feel justified in asking the Commissioner for Roads to authorize the expenditure of large sums in the district? Yes.
452. Do you know anything of the proposed terminal site at Murwillumbah? I do.
453. Can you give the Committee any information as to whether it is sufficiently central to suit the majority of people in the locality—is the site a good one? Yes, I think it is.
454. You have been over the ground? I have.
455. So far as you know, the site selected by the railway surveyors is a suitable one? Yes.
456. Do you know of any local objection to it? I have heard of none.
457. Have you spent much money on your roads between here and the Queensland border? Yes, we spend about £500 annually.
458. Is there much traffic between here and Queensland? Not of a heavy description. It is passenger traffic principally in coaches.
459. What about the produce of the district? It does not go to Queensland.
460. What is the principal outlet for the people of the district? At present it is by the river; but that is so bad that it is hardly an outlet at all.
461. The only outlet is the river? Yes.
462. Your duties take you very much through the district? Yes.
463. That gives you a good opportunity of seeing the land all through the district? Yes.
464. What is it generally;—is it all good land? The greater part of it is really good rich scrub land. There are barren ranges, but they are not very extensive.
465. To occupy and bring under cultivation the lands in this district requires, I suppose, some amount of capital? It does.
466. *Chairman.*] Do you know the lands near Mudgee or Maitland? Yes.
467. Is the land here as good as that or better? It is as good, and, for the greater part, better.
468. Are the river and creek flats as good as, or better than, the Hunter River flats? I should say that they were about as good, as far as I could judge.
469. Is there a very large extent of this good land;—is the larger portion of the land in the district good? Yes.
470. You know the line from here to Byron Bay? Yes.
471. Is there good land on that route—I mean the coast route? No, not to as great an extent as on the other line.
472. Does the line from here, past the Brunswick to Byron Bay, go through generally good country? Yes.
473. Most of it alienated? Yes.
474. Have the people on that line any means of getting their produce to market so as to give them a profit on it? I should say little or none.
475. There is no encouragement to the bulk of those settlers to go on developing the land themselves, or to let it to other people in the district? No. I should think very little of it would let on anything like reasonable terms.
476. For want of a market? Yes.

Edward Acres Barrington, Esq., Acting Clerk of Petty Sessions, sworn, and examined :—

- 476½. *Chairman.*] What are you? Acting Clerk of Petty Sessions and Land Agent.  
 477. How long have you been here? About ten months.  
 477½. Were you here before you entered upon your duties? Never.  
 478. Are you pretty well acquainted with the land district? No, I know very little about it, except what knowledge I get from the performance of my duties.  
 479. Has much conditional purchase been going on since you came here? Since I have been here more conditional purchases have been taken up than in any previous year under the Act of 1884. You could soon see by looking at the register.  
 480. You have been here all this year? I came here on the 19th March. Up to the 14th November there were ninety-eight conditional purchases taken up in the district, as against seventy-three in 1888 and forty in 1887.  
 481. Could you from memory say whether the conditional purchases taken up in 1889 were small or large? I could not say; they would vary considerably. I should say there were about an equal number of original conditional purchases and additional conditional purchases. They would average about 200 acres, I should say.  
 482. Can you say from memory whether much of this land has been transferred from the holders to other people? I have the book here.  
 483. They start in 1886 with fifty-six transfers, and they run from that up to 621 on the 22nd November this year. Although so many transfers appear to have been made, the land may have only passed to and from? Yes.  
 484. From one man to another, just for temporary accommodation, and back again—this is no true indication of the traffic in land? The register is the only thing that I have to go by.  
 485. Is it no indication that the land has been parted with by the original owners? There is no guarantee of that, unless it is transferred as an absolute sale.  
 486. That does not appear in the transfers? The stamp duty is the only indication I have of it.  
 487. You can say generally that the people in the district are not transferring their land—selling it absolutely? I should say not.

Mr. E. A.  
Barrington.  
22 Nov., 1889.

Francis Asbury Halliday, Esq., Manager A.J.S. Bank, Murwillumbah; sworn, and examined :—

488. *Chairman.*] What are you? Manager of the A.J.S. Bank.  
 489. Have you been here long? Nearly twenty months.  
 490. Have you seen much of the Tweed River land district? In and about the neighbourhood of Murwillumbah, and up the various arms and creek I have seen a bit.  
 491. What have you to tell the Committee? When I came here from the Clarence it struck me as wonderful that there was such a small amount of cultivation on the river. Upon making inquiries I found that that was due to the fact that the people had no facilities for getting their produce away. The land here is equally adapted for growing maize and other products.  
 492. Is it as good as that on the Clarence? As far as I could judge.  
 493. How long were you on the Clarence? About nine years.  
 494. You say that the lands here are as good as those on the Clarence for growing maize? I believe so.  
 495. Seeing so little produced you began to ask the reason for it? Yes.  
 496. What did you generally hear? That the producers could not get their stuff away. I know that when we opened our branch and I was sent over here not a steamer came in for six weeks. On the Clarence River the farmers can make it pay better than they can here by taking advantage of a sudden rise in the market. The agents would telegraph up that there was a rising market, and as many as 1,000 bags would go down and catch the market at 4s. a bushel. Here it might be a month or six weeks before they could get their maize away. As for sending pigs, calves, eggs, or anything of that sort, it is an impossibility. All these things are sent from the Clarence River, and swell the profits of the farmers.  
 497. Do you think that if a railway were constructed from here to the Richmond it would be used by the farmers in that district, assuming that the Richmond River always has a good entrance? I believe we would send it to the Richmond if our own river was not opened; but it is not to the Richmond that we are looking.  
 498. You are looking to a port at Byron Bay—but suppose you do not get it? Then we will go for an entrance to our own river. There is a certain amount of jealousy between the rivers.  
 499. What I want to know from you is whether, if a breakwater is not constructed at Byron Bay, this railway, if taken to the Richmond or Clarence, will be used by the farmers? Provided our bar is as it is now we should be bound to use it.  
 500. You would only use it when you were forced to do so? We should use which ever was the most rapid.  
 501. Even if your bar were a good bar, do you not think that if the railway were constructed to a certain port on the Richmond River the settlers would use it to take advantage of rising markets, as they do on the Clarence? Between here and the Richmond the railway is bound to open up the country, and the people will have to use it.  
 502. Do you know the country at all? I have simply been through it, that is all.  
 503. Is it good country? As far as I can judge, a great part of it is good.  
 504. If a breakwater were constructed at Byron Bay, do you think that the traffic of the whole district—you would not get it from the Tweed River Heads, of course—would be sent to Byron Bay? Anything you wanted to send away speedily—any perishable article, I believe, would go that way. A good deal depends on the freights.  
 505. The freights would depend, I suppose, a good deal on the cost of construction—do you know whether the district has been developing at all largely since you have been here, or is it at a standstill? It has not done so as much as it should, and so long as we are as we are I do not see how it can make rapid strides. From the Clarence River they only pay 1s. 3d. a bag for corn.  
 506. Four bushels? Yes. Here we have to pay 2s. 6d.  
 507. That is the transit to Sydney? Yes.  
 508. They have a certain outlet at 1s. 3d., while you have no certain outlet? Yes. That is not the only thing. They can take advantage of the accessories to farming—eggs, fowls, pigs, and calves, and those sorts of things. They would constitute about one-third of the income of a farmer on the Clarence River.  
 509. I suppose to get a farm under cultivation would be pretty expensive? I cannot say from personal experience; but I think it would cost £10 an acre to clear it and get it under cultivation.

F. A.  
Halliday, Esq.  
22 Nov., 1889.

Mr.

Mr. Alexander Easthauffe, storekeeper, Murwillumbah, sworn, and examined:—

- Mr. A. Easthauffe.  
22 Nov., 1889.
510. *Mr. Garrard.*] What is your occupation? Storekeeper at present.
511. In Murwillumbah? Yes.
512. How long have you resided there? About four years.
513. Have you been longer in the district than that? No.
514. Where were you residing prior to coming here? In Queensland.
515. Have you an intimate knowledge of the district? Yes; I have been over a good portion of it.
516. How far south? To the Richmond and Clarence.
517. And of course up to the Border? Yes.
518. Do you know the route of the proposed railway line between here and Byron Bay and the Richmond? Not exactly along the surveyed line; but I know the country.
519. Do you know the alternative route on the coast? No.
520. Do you know anything at all of the coast land? Only at the Tweed heads.
521. You have no knowledge of the character of the country between the Tweed Heads and Byron Bay? No.
522. You have a fair knowledge of the country between Murwillumbah and Byron Bay? Yes.
523. Is it good country? Yes.
524. Equal to that which we see here? Yes. A great deal of it is scrub-land—what we term first-class scrub-land.
525. This was scrub-land about here? Yes.
526. The character of the country there is similar? It is very similar.
527. Where do you get your stores from now? From Sydney.
528. Via the Tweed? Yes.
529. Is that the only way in which you can get them? Yes.
530. What does it cost to bring a ton here? The freight, with the exception of flour, 20s., ranges from 25s. to 55s. per ton.
531. From Sydney delivered at the wharf here? Yes. Then there is the additional expense for insurance.
532. What does that come to—it is very small on a ton of goods, I suppose? It is reckoned on the money value.
533. Do you know what it costs the Lismore people? I could not say positively; but I have been told that it is about 15s.
534. As against your 40s.? I have paid up to 55s. for carriage
535. Would you take an average of 35s.? From 35s. to 40s.
536. And the average on the Richmond would be about 15s.? I could not say positively; but I believe so.
537. If it costs you 15s. a ton to take your goods to Lismore you would be in the same position as you are in now? About the same. There is a great difficulty in getting goods from Sydney. It sometimes takes fourteen days or three weeks. If we do not happen to get the order in just as the steamer is leaving it may mean several weeks.
538. Then it would be profitable to you to pay an increased freight if you could get your goods regularly? Yes.
539. I suppose the delay in receiving goods necessitates your keeping a larger stock? Yes.
540. Consequently money is lying idle? Yes, and very often through running out we may miss a sale.
541. What is the longest time after ordering goods in Sydney that you have been before receiving them? I could not speak positively, but about five weeks.
542. What is the ordinary time? From ten days to a fortnight from ordering until the receipt comes.
543. If a railway was constructed between this and the deeper waters south of Byron Bay or the Richmond, how long do you estimate it would take you to get your goods in, supposing Lismore were your port? About four days.
544. It would pay you to get them from there because you would have to keep less stock? It would be profitable even if you had to pay more freight.
545. From how far down the river do you think the people would use the railway? With the present state of the navigation of the river, no doubt they would avail themselves of the rail-carriage and water-carriage all the way down; but if the river were improved a great many would still send their produce by it.
546. Do you not think that there are sufficient facilities for water carriage now to supply the wants of people 15 miles up? I think that, because of the uncertain state of the river navigation now, a great deal of land that could be cultivated is lying idle.
547. Which do you think would be better for the district—improved water-carriage, or a railway to the Richmond? Improved water-carriage would no doubt assist the residents on the banks, or close to the banks, but a great deal of country between here and the Richmond would be certain to use the railway.
548. Suppose you had 10 feet of water on the bar and on the river flats, how far do you suppose the people in a southerly direction would make use of the river—10, 15, or 20 miles? I think only 2, 3, or 4 miles.
549. You do not think that an improvement of the river would open up the country more than 3 or 4 miles from its banks? With good roads they might come in a greater distance.
550. There would be a considerable amount of land between here and the Brunswick which the improvement to the river would not affect? Yes, a great deal.
551. And which would only be served by the railway? I think so.
552. Do you get any goods from Queensland? No.
553. Do you know if any of the goods brought to this river come from Queensland? I have known small quantities of goods to be brought from Queensland.
554. Is there not a vessel regularly trading between Brisbane and the river? No. There was a steamer in the timber trade.
555. For exports, not imports? Yes.
556. The export of timber is a considerable item in the produce of the district? Yes.
557. Do you think it at all likely that any of the timber would go by railway? I think that very little log timber, if any, would go from here by railway. It is possible that with the establishment of mills sawn timber would go that way.
- 558.

Mr.  
A. Easthauffe.  
22 Nov., 1889.

558. The log timber would still be floated down the river? Yes.
559. It does not matter to a man on a raft whether he is a week or two getting down? They seem to be satisfied with that progress.
560. Do you know whether the timber in the district is giving out? The distance which they have to draw it is becoming greater, but I think that there is a considerable quantity of timber in the district still.
561. Do you think, if the Richmond were your port, that any sawn timber would go by railway? I think so.
562. Instead of its going by log, much of it would be sent down in that way? In supplying orders time is a great object, and no doubt much of it would go that way.
563. Can you give us the tonnage of general merchandise that comes to this township from outside ports—Sydney, for instance—in a year? No. The "Karuah" is the principal boat that brings supplies—in fact, she is the only regular trader with merchandise. Her tonnage is about eighty. She makes a trip every ten days or a fortnight. Sometimes, when the bar is silted up, she is longer. Just now the bar is good, and she is making trips about every ten days.
564. Does she come full every time? I could not say.
565. Then the railway, if constructed, would have to depend upon 80 tons of goods this way in a fortnight? I think that if a railway were constructed a great deal more land would be put under crop.
566. But if the railway were constructed now all it would have to bring would be 80 tons in a fortnight? People cannot grow produce now.
567. But, supposing the railway were running now, all the traffic it would have would be 80 tons a fortnight? I suppose so. In addition to that there is sugar; but the principal part of it goes by sailing boats.
568. Of the inward goods the railway would have to bring only 80 tons in a fortnight? That is merchandise.
569. The cost of this line will be £198,000;—80 tons a fortnight would not pay interest on that? With the construction of a line the increase would be tenfold in our immediate neighbourhood.
570. You think that if the railway is to pay there will be more obtained from the exports of the district than from the imports? The increased population necessary to cultivate the land would require a considerable amount more merchandise.
571. Is not the best land in the district alienated? No; there is a considerable quantity unalienated.
572. Is it a fact that individuals hold very large areas,—1,000 or 1,200 acres each. There are cases of that kind.
573. Do you not think that that is a very large area for people to own? I think it is too large.
574. If you had the power, would you burst some of them up? I think that such an area is too large for a man to hold.
575. What do you think would be sufficient to make a living out of? For cultivating, I think 40 acres would be plenty.
576. *Chairman.*] I suppose that is as much as most men can afford to bring into cultivation? A great deal is put under grass because we are not able to get produce away.
577. You are clearly of opinion that if railway facilities were given it would add very much to the increase of population in this district? I quite believe that.
578. Do you think that the people would take their goods to the Richmond if there were no port at Byron Bay? I do not think that the bulk of the goods would go that way. I think we look to Byron Bay a good deal as our outlet, together with the construction of this line.
579. We are to consider then that, unless the Byron Bay breakwater is constructed, it is of no use to construct the railway? That would be just for our neighbourhood.
580. For every place north of the Brunswick it would be the same? The distance becomes shorter as you go south. They have no other outlet, and would have to avail themselves of the railway, while we have the river.
581. It is about 30 miles from here to Byron Bay? About 30,—a little over.
582. And about double that distance to Lismore? It is not that by the road; that is by the railway.
583. What is the distance by road? You can get to Lismore under 50 miles.
584. By buggy? No; the buggy road would be longer than that.
585. By way of Byron Bay? By that way it would not be less than 60 miles.
586. The road you speak of takes a more direct course—is there a steeper grade? Yes.
587. Is it good land through which it passes? Yes, all round the ranges.
588. Are you engineer enough to say whether the line could be taken that way? No.
589. You know the line which comes down to Byron Bay? Yes.
590. Do you think that the reason for taking it so near the coast was to avoid any natural difficulty, or merely to bring it within touch of Byron Bay? I think a good deal to avoid the ranges to the westward. It would be necessary to come down there to avoid the ranges.
591. And there was a secondary consideration—the probability of getting stuff away by Byron Bay? That is my opinion.
592. *Mr. Lee.*] Are the Committee to understand that 80 tons of goods a week supply the large population of this district? The steamer is 80 tons register; but no doubt she often brings more than that.
593. Are there not sailing vessels trading here? Yes.
594. Do they bring merchandise? Not a great deal. The principal part comes by the steamer.
595. What is the population of the Tweed District? I really could not say.
596. There is almost a complete absence of maize in this district—is the land unsuitable for the cultivation of maize? No; it will grow.
597. Why is it not cultivated, then? There is a difficulty about getting it to market. Last year the farmers were arranging to charter a boat and take it to Brisbane themselves, so as to be able to send it away when they wanted.
598. The alternative crop would be sugar? Yes.
599. If the land were not good enough for sugar, what would they do? They could put it under grass and use it for dairying.
600. I am speaking of crops? I could hardly tell you what crop they would put in.

- Mr. A. Easthauffe.  
22 Nov., 1889.
601. Maize is the staple product, and then comes sugar; after that they go in for dairying? I think the soil would grow anything that you put into it.
602. I want to ascertain how it is that they cannot grow maize on the river? There is the difficulty of getting it to market.
603. You say that in consequence of the difficulty of despatching maize to market the farmers have given up growing it as a bad job? Yes, several of them have.
604. Is there much land cultivated away from the river banks? Not a very great quantity. The principal cultivation is around the river banks and near the creeks.
605. Is there much land suitable for cultivation? A considerable quantity not alienated yet.
606. Why is the land not cultivated? There is the difficulty of getting the produce away. There is the road traffic, and then the uncertainty of getting the produce away by river.
607. Is there much cultivation between here and the Brunswick? At present there is not. They are putting down grass, that is what the land is principally used for between here and the Brunswick, after you leave the rivers.
608. They do not cultivate maize or sugar, because they could not get it to market? They only cultivate sugar where they can get the river-carriage.
609. The river is very little use to the settlers for getting their produce to market? With the exception of those just on the banks, and they grow sugar principally.
610. We can see that the river banks are cultivated, and we can see that the river is the nearest and easiest way to market for the people living near it, but you have told us of rich lands at the back;—does the river offer a medium for getting produce away from those lands? Certainly not.
611. Consequently they are not tilled? Yes.
612. Would the railway benefit those people? Yes.
613. Would they be able to pay the ordinary railway freights, and still send produce to market? I think so. Having a port, large steamers could take the produce, so that the freights by them would be less, and the expense of railway carriage would not be anything like that which we have to bear now, while there would be no uncertainty about getting the produce away.
614. You wish to impress upon the Committee that some more regular and more secure means of outlet is required for the district than you already have? Decidedly.
615. Which would you suggest. As a resident, which do you consider is the best outlet? Interests are so divided. Those on the banks would say the river.
616. You must take a wider view. I am speaking of the whole district? I think the railway would be serviceable to a great number.
617. It would serve the greater number of people? Taking into consideration the certainty of getting produce away, no doubt the railway would serve the greater number.
618. You are of opinion that the railway would be the best and most certain means of opening up the district? Yes.
619. The next is, what about a port. If Byron Bay were made a suitable and safe harbour, capable of berthing vessels of large tonnage, would it serve the requirements of the district? Together with the railway.
620. I am speaking of a railway in conjunction with it? Certainly.
621. If the port were constructed, would it answer the requirements of the people living between this and the Brunswick? Yes.
622. Would the people residing at the head of the river be likely to use that line instead of the casual river traffic? I think so, largely.
623. Is dairy-farming increasing in the district? Yes; but it is in its infancy. It has hardly started yet.
624. To dairy on a large scale I presume a quick market must be found for the produce? Yes. I have brought down butter and dairy produce, and have had to throw it away, because I could not get it to market at a price that would pay me.
- 625-6. You would hardly like to put 2 or 3 tons into the steamer and let it lie inside the bar for a week? No.
627. If dairying is to be carried on in the district there must be a quick market? Yes.
628. The river will never give you an outlet? I do not think so.
629. Would the railway? I think so. No doubt there would be many coasting-boats that would take away the produce.
630. Byron Bay, although 30 miles from Murwillumbah, is as close as the Tweed Heads? Yes, it is almost.
631. And you would be within an hour and a half of that port? Yes.
632. Would you be likely to get your goods up that way? Yes, to a great extent—almost all of them, I think.
633. You, like most business men, find that the great delay in obtaining goods leads to loss of business? Yes.
634. And in consequence of the uncertainty of the steamer you do not enter into speculations in the district—to buy grain or other things, which you would otherwise be likely to do? It is not possible as things are at present.
635. You know a good many of the farmers and settlers about here;—are their holdings of a *bonâ fide* character, or are they dummies? I do not know of any individual cases of dummies down here. We hear of selections being transferred occasionally.
636. Is the settlement *bonâ fide*? It is undoubtedly *bonâ fide* settlement, taken as a whole.
637. The land has been taken up by men who have improved it, and desire to make a living for themselves and a home for their children after them? Yes.
638. Do you know the site chosen for the terminal point of the line? Yes.
639. Is it a suitable one? Yes.
640. Is it accessible to the people of the district? I think so.
641. Have any meetings been held in the town about it? No.
642. Has there been any agitation at any time? No.
643. The people are satisfied that it will be within easy range, and suitable for all requirements? Yes.
644. Do you own any land on the route? I am sorry to say that I do not.

644½. *Chairman.*] Do you think it likely that the settlers through whose land the railway will pass will be willing to give the land required by the Government free of charge? I could hardly answer that question now.

Mr.  
A. Easthauffe.  
22 Nov., 1889.

645. I understand that you are one of the Committee formed in the district for the purpose of putting evidence before this Committee. Do you not think that it would be a very potent argument in favour of the line that the people were willing to give up the necessary land; they would benefit more by the railway than any one else? Yes; I think the settlers in the majority of cases would only be too glad to give up the land.

646. What about the sympathy of this district—is it generally with Brisbane or with Sydney. Do you think the people would sooner go to Sydney than to Brisbane? That would depend to a great extent upon the price obtained for produce.

647. Out in the west people never think of Sydney as the capital of New South Wales—does that feeling pervade this part of the Colony? I do not think so. There is nothing done with Brisbane of any account.

648. Do you think it would be possible to open up markets in the New England district from here? I am not acquainted with the New England district. I should not like to say.

Mr. James Buchanan, farmer, sworn, and examined:—

649. *Mr. Lee.*] Where do you reside? In South Murwillumbah.

650. What is your occupation? I am a farmer.

651. What is the extent of your holding? A little over 1,000 acres.

652. Do you desire to give evidence before this Committee? Yes.

653. What is it? All I have to say is, that I believe that a railway from here to the Richmond would be of great benefit to the district—more so if Byron Bay were made a port. I believe the land in the Tweed district is capable of growing anything—crops, fruit, and grass. I think that no district in New South Wales will, in proportion, carry a larger population than this will, and I know a little of New South Wales.

654. Where were you residing before you came here—in what portion of the Colony? I have resided in different parts. I have resided on the Clarence, in New England, in parts of Queensland, parts of Victoria, and parts of New Zealand.

655. How long have you been living in this district? About fourteen years.

656. Consequently you are in a position to speak as to the general progress of the district? Yes.

657. Has the population increased very much during that period? Yes; I suppose more than three or four fold since I have been here.

658. What is the nature of the settlement? It is *bonâ-fide* settlement.

659. Of a permanent character? Yes. I do not think there is any in New South Wales more so.

660. You, in common with other settlers in the district, are anxious to have some outlet for your produce? Yes.

661. You think that the proposed railway would give you the necessary relief? I think so.

662. You think that if you were able to ship your produce at Byron Bay that would be a still greater advantage? I think it would be the making of the district.

663. Supposing the Clarence were converted into a good and safe port at all times, would you be able to send your produce there for shipment—a distance of 140 miles? It would only be a very small quantity of goods. Some perishable goods might go that way, but not the bulk of the produce.

664. Would you be able to send grain that distance? I think not, unless the railway freight were very cheap.

665. You do not look upon the extension of the railway to Grafton as being of much advantage to you, or consider Grafton is your port? No; I do not look on Grafton as our port.

666. You look for a port nearer home? We look for a port at Byron Bay. There would be a great amount of perishable goods—butter, fowls, eggs, and pigs sent to the Richmond if a port were not made at Byron Bay; but we should prefer a nearer port.

667. Would Byron Bay serve all the upper portions of the Tweed? I think it would.

668. The distance is about 32 miles? Yes.

669. Do you produce any maize? Yes.

670. Much of it? In some seasons. I have lost a great deal by it.

671. In what way? I have shipped it at the wharf, but the vessel has had to lie inside the Tweed Heads, and by the time the maize has reached the market it has been damaged. That used to be more often the case when we sent it to Brisbane. I have had a telegram from Brisbane that maize was 4s. 9d. per bushel, and have shipped it within four days of the receipt of the telegram, but it has lain three weeks at the Tweed Heads, and my return when it reached Brisbane has been 6d. per bushel.

672. Just describe the process of getting away 100 bags of maize. How far do you live from the Tweed? About  $\frac{3}{4}$  of a mile from Murwillumbah, and my property fronts the river.

673. How do you get to market? We bring the produce to the wharf on the river bank, and put it on board a drogher, which goes to the Heads. It is then transhipped to the steamer, and sent to Sydney. The freight is 2s. 6d. a bag.

674. With all those risks and uncertainties it is more than probable that you could send the same produce by rail from here to Byron Bay—32 miles—for less money, and with considerably less trouble? Yes. There would not be the same risk attached to it.

675. I suppose the return from your produce is a matter of moment to you? Yes.

676. And the sooner you get to market the sooner you get a return? I sent produce to Sydney something like two months ago, and I have had no return from it yet.

677. Is that in consequence of the delay in transit? Partly, and partly because of the dull market.

678. Have you any suggestions to make as to an improvement in the route between this and the Richmond? No, not that I am aware of, between Murwillumbah and the Richmond.

679. As a *bonâ-fide* settler of fourteen years standing, and holding 1,000 acres of land, you are strongly of opinion that the railway is the proper means of opening up this district? Yes.

680. *Chairman.*] What is the value of your land per acre? That I could not say. There is some of it of great value, and some of it of but little value.

681. If you had to sell it, what would you ask for it, at the present time, all round? All round it would be difficult to say. I think about £4 an acre. Some of it I spent a deal of money on.

682. All round you would want £4 an acre for the 1,000 acres? Yes.

2 (a)—C

683.

Mr. J.  
Buchanan.  
22 Nov., 1889.

Mr.  
J. Buchanan.  
22 Nov., 1889.

683. How much of that is cleared and fit for cultivation at the present time? Between 500 and 600 acres. It is not altogether fit for the plough, but the timber has been felled for a number of years, and fires have been over it. There may be some stumps on it, and some logs.

684. All round what has it cost you an acre to clear. I suppose yours is fair average farming land? Yes. I could not say exactly what it cost, but I have done a great deal with my own labour.

685. Your own labour is worth money. If you had not been able to do it yourself you would have had to pay someone else to do it for you. What do you think it has cost you all round per acre to bring your land into the state in which it is at present? I think from £6 to £8 an acre. That is what what is felled has cost me.

686. Then you value the 1,000 acres at what it has cost you for the improvements—you expect to get £4 an acre all round, and £6 an acre for 500 acres would be £3,000? I do not know what I would get for it, but I am certain I would not get the same amount of improving for £6 an acre.

687. These lands are worth £4,000, and you have no market for what you produce from them? Comparatively none.

688. If you were to cultivate the whole 1,000 acres you could not find a market for your produce? I could not cultivate it to pay.

689. Then you could not find a market for your produce? No.

690. If a railway were made here, and you could get your stuff away quickly—dairying produce and cereals—what do you think the land would be worth per acre? I think it would be worth very nearly double what it is now.

691. £8 an acre? Yes; and I am certain that where I cultivate 1 acre now I could cultivate a great deal more then.

692. Do you not think that, in the interest of the general public, you hold too much of the good land of the district? No; I do not. I think that if every man in the district had improved his land as I have improved mine, the district would be in a very much more advanced state.

693. We have been told by some of the witnesses who have been examined before us that 40 acres is plenty of land for a man to occupy. A man about Maitland gets a fortune from about 10 acres? That may be, but he would not employ much hired labour on it.

694. Does this railway go through your land? It does not touch any of my land, but it is near enough to satisfy me.

695. Would you be satisfied to give the Government the land that the railway would go through? I should be very satisfied.

696. *Mr. Garrard.*] What have you got on the 500 acres that are fit for cultivation? I have 30 or 40 acres under cultivation, and the rest under grass.

697. What is the nature of the cultivation? Sugar cane, maize, and potatoes, and a little oats and hay.

698. Who takes your sugar? The Colonial Sugar Co.

699. The maize you send direct to Sydney? I sell some of it on the river. I have sent maize to Brisbane, but none to Sydney.

700. What about potatoes? I can sell them on the river. I have grown as much as 10 tons of potatoes to the acre—two crops.

701. What do they charge a ton to take the potatoes to Sydney? I have never sent them, but they would be charged 2s. 6d. a bag.

702. Do you know the nature of the country through which the proposed line passes? I know the greater part of it.

703. Is it good, bad, or indifferent? I should say that the bulk of it was good.

704. Do you know the alternative line on the coast, running to Cudgen? I know very little of it. I know from the Cudgen wharf to the settlement, but I was never along the coast side of the range.

705. What do you call the settlement—where the mill is? Yes.

706. You do not know anything of the country between there and the Brunswick? No.

707. Do you think that the proposed line—the inner line—would serve a larger number of people or a larger area of land than the coast line would serve? Yes.

708. I suppose that if the coast line were constructed it would be of very little use to you? No; I have land within 1½ mile of it, if it is continued to the Tweed Heads.

709. It would be a benefit to that land; but it would be of no benefit to your holding up here? No.

710. If the terminus were at the south head of the Tweed, would it not pay to punt your produce down? I could much more easily take it to the terminus here.

711. Supposing the coast line were adopted, and the terminus were at the south head of the Tweed, would you send your produce down the river in order that it might go by railway—would it pay you to do that? I do not see how there could be a terminus at the south head of the Tweed.

712. There is a line having its terminal point at Murwillumbah, and another having its terminal point at the south head of the Tweed; if it were decided to construct the latter, would you send your produce there in order to get it taken south? It will all depend upon which was the cheapest.

713. Do you think that if you had to send your stuff down to the Heads, you would rather put it into a vessel than send it down by the railway? It would be a question of cheapness.

714. You know Terranora? Yes.

715. Do you think it at all likely that the people there would send their stuff down to the Tweed Heads, and up again to Murwillumbah, if this were the terminus of the railway—would you do it? Yes, with some class of goods.

716. What class? Butter, cheese, and perishable goods that I wished to send away quickly.

717. You would go down the river and up again 20 miles? There are parts of Terranora that could come to the main river with going down the Tweed. There is a road from Tumbulgum to Chindera.

718. Do you know anything about the terminal point at the other side of the river? Yes.

719. Do you think that it is a suitable place? I do.

720. How would the people on this side get to it—by having a bridge constructed over the river? At the present time we use a punt.

721. Where is your land—on the other side? Yes.

722. Is there more trade on the other side than there is on this? There is more cultivation at the present time on the other side. I do not know what it could be.

723. Is the country between here and the border—the Macpherson range—good country? Yes; some of it is very good.

Edwin

Edwin Hill Johnson, Esq., licensed surveyor, sworn, and examined :—

724. *Mr. Garrard.*] What is your occupation? I am a licensed surveyor.
725. Residing at Murwillumbah? Within 4 miles of Murwillumbah.
726. In private practice? I do Government work. I am in charge of the Government district on fees.
727. Is Murwillumbah your head quarters? Yes. I live within 4 miles of here.
728. How long have you resided here? Eight years.
729. Where have you resided before? At Goulburn, and at Sydney.
730. Have you a selection of you own here? Yes.
731. What is the area of it? 560 acres.
732. In what direction is it? Nearly north.
733. Near to the dividing range? Yes; within a mile of the dividing range.
734. Is the country in your part of the world nearly as good as that round the river banks, which we can see from here? Yes. This is most alluvial; there is a great deal of rich scrub land there too.
735. Have any cultivation? Yes.
736. What are you growing? I have fruit trees and maize.
737. How do you get your maize to market? I grow it for myself only.
738. Is it the same with the other products? I have not had any quantity of fruit.
739. You have not sent any to market; you have only grown enough for your own requirements? That is all.
740. I suppose you anticipate a time when you will have enough to send to market? Yes.
741. How would you get your surplus products to market? I believe I could get them to market if the railway were constructed.
742. Without the railway is it likely that you would put more land under cultivation? Not under cultivation; I will put it under grass.
743. Are you familiar with the whole of the country between here and the Richmond? No. As far as my district goes I am familiar with it.
744. How far is that? It goes to Crabb's Creek, nearly to the Brunswick—from here 15 to 20 miles in places.
745. Are you familiar with the route of the proposed line? I do not know the route itself, though I have crossed it in places. I know the character of the land through which it goes.
746. Could you tell us by looking at the plan whether the country through which it passes between Murwillumbah and the Brunswick is good land or not? The Brunswick itself is good land. From about 5 miles north of the Brunswick it is swampy land; after that it goes through scrub land nearly the whole way.
747. The remainder of it is good land? Yes.
748. Is it taken up; is much of it under cultivation? It is taken up, but it is not under cultivation; it is under grass in places.
749. Do you know anything of the character of the country between the Brunswick and the south head of the Tweed—the coast line? Yes.
750. Do you know that surveyed line? Yes; I know the coast line.
751. What is the nature of the country through which it passes? Very poor; except at Cudgen, there is no good country on the line. There is swamp, and heath, and a little poor forest country.
752. Does not the line go through Cudgen? I said that the land was poor, with the exception of that at Cudgen.
753. There is very little good land other than that at Cudgen? Very little.
754. I suppose the settlement there is very slight? It is very slight. The land has only been taken up lately.
755. You think the inland line would serve the larger number of people and also the larger area of country? I am certain of that—much the larger.
756. Do you know the proposed terminal point at Murwillumbah? Yes.
757. Do you think it convenient? I think it would be more convenient to have it on this side.
758. That would mean a bridge? Yes.
759. Would it not be very costly? Not if they went farther up where the line comes in to the river. The country is nearly as good there, and the bridge would not be an expensive undertaking.
760. Have you any knowledge of the cost of the construction of bridges? No, not professionally.
761. Do you think that if the line were constructed the people would send their produce to the Richmond for shipment? With the exception of timber, I am certain that they would, as the river is now.
762. You do not think that any timber would go by the railway? I fancy not. They are not in a hurry with it, and could get it out by the river.
763. So we are to exclude all export of timber in considering the traffic of the railway? Unless the sawn timber.
764. Do you think that it is likely that if railway communication were given, instead of the timber being sent down in logs, it would be sawn here? I think so.
765. Then some of it might go by the railway? Yes.
766. Do you think the agitation for the railway has been made in the hope that Byron Bay will be made a harbour? I believe that they thought that that would be a port.
767. If there were no hope of a port there, do you think the people would be as anxious as they are now? Not so anxious. They would be anxious for it.
768. They would use it? They would have to use it at present, as they have no way of getting out.
769. They have the river? They cannot send a great deal of produce that way. None of a certain class of produce goes by the river.
770. Has much land been taken up in this district? Within the year there has been a large quantity of settlement.
771. What is your opinion as to the quantity of land from which a man could make a living in the scrub country? There are very few who cultivate 40 acres, I think.
772. Do you think that a man could make a good living out of 40 acres? Yes, they do.
773. Where does the scrub country begin—at the Brunswick? There is a large quantity of scrub country up the Brunswick; but along the coast the country is poor.
774. Do you know the nature of the land in the reserves shown on the map—is it good, bad, or indifferent? I know most of it.

E. H.  
Johnson,  
Esq.

22 Nov., 1889.

- E. H. Johnson, Esq.  
22 Nov., 1889.
775. I suppose the alienated land is much better than the unalienated land. People take up the good land first? Yes, that is so, with the exception of the reserves.
776. You think there is still good country in the unalienated portion? Yes.
777. I suppose you come into contact with the landowners very frequently? Yes.
778. I suppose they would be glad to give the necessary land for the construction of a railway rather than lose the railway? I believe they would be only too glad to give it. I have had a look at the country, and I believe that you could easily make a connection from Murwillumbah to the Queensland border.
779. *Chairman.*] Where at? To go through the Macpherson Range.
780. *Mr. Garrard.* At what point? It is about 6 miles from Murwillumbah, where they would have to tunnel through the range.
781. Close to the road? About three-quarters of a mile from the road.
782. At a place called the Gap? It is not what is locally known as the Gap. Where the road crosses is what they call the Gap; but this place is more of a gap than where the road crosses.
783. Is it east or west of the road? West of the road.
784. Do you think that a line could be constructed there very easily? Yes.
785. Does it come down near your place? Through my place. I knew it at the time I took the land up.
786. Is there good land between that and Nerang, on the other side—have you any knowledge of it? Yes, it is fair country. It goes all through the Currumbin Creek country.
787. Does it compare favourably with the land on this side of the range? There is good scrub land.
788. Not as good as the land on this side? I think so; but they have not the same rainfall. I consider the rainfall and the heat the best features of this district.
789. If the line were constructed through there do you think the produce of the district would go to Brisbane rather than south? Not with the present duties. I do not think it would. I think the Sydney market is a better market than the Brisbane market.
790. There was a time when a large amount of the produce of this district went to Brisbane—before they were protected? I think some did, but it was before my time.
791. You always considered Sydney to be the market of the district? I know that it is a better market. I have studied it myself.

Mr. William Robert Baker, newspaper proprietor, sworn, and examined:—

- Mr. W. R. Baker.  
22 Nov., 1889.
792. *Chairman.*] You are the proprietor of the local newspaper? Yes.
793. What is it called? The *Tweed and Brunswick Advocate*.
794. How long have you been here? Thirteen months.
795. Did you reside in these coast districts before you came here? I resided on the Clarence, somewhere about thirty years.
796. What part of the Clarence? In Grafton and at Maclean. I was running a newspaper at Maclean for eleven years.
797. Did you come here from Grafton? I came from Maclean.
798. Have you any property in Maclean? I have two or three town allotments.
799. Any in Grafton? None.
800. Have you any land here? None in the Tweed district. I have some in the Brunswick district.
801. Farming land? A conditional purchase.
802. Will you be good enough to give the Committee any evidence that you can with reference to this proposal? Yes. When I came here I was so struck with the richness and fertility of the district that I was fairly dumbfounded at the want of facilities for getting produce away. I really could not understand how the people were living at all. I found that they were existing rather than living. I think that some communication is really necessary. If you travel through the district and see how the people have had to exist in the past you will be with me in that.
803. Have the people since you have been here tried to stick to their land? Yes.
804. Under the greatest difficulties? Under the greatest difficulties imaginable.
805. Those difficulties drew your attention to their position? Yes.
806. What do you think would be a remedy for those difficulties? I came to the conclusion that a remedy they must have of some sort. Then came the question which would be the best remedy. There is not the slightest doubt, to my mind, that if the river were navigable with a depth say of 12 feet of water from here to the Heads it would serve a very large number of people; but I doubt the possibility of making it navigable with that depth.
807. What is the distance from here to the Heads? I think 22 miles. My reason for thinking that it is impossible to keep it a depth of 12 feet is that, although our rainfall is very great, the quantity of country draining into the river is small, and even in flood the Tweed, compared with the other northern rivers, is only a rivulet. In ordinary weather the little steam launches bump on the flats. I do not think it could be kept open to a depth of 12 feet by continual dredging, which would be expensive.
808. And the construction of a channel in the first instance would be enormous? Yes. There are a great number of little flats, and I do not think there would be a sufficient force of water to keep a channel open when it was once made.
809. On account of the expense you have discarded the notion of keeping the river open as the highway for the district? Yes.
810. What do you think would best serve the district. I suppose whatever would serve the district and enable the settlers to find markets for their produce would induce other settlers to come here, and largely benefit the district? Yes.
811. What would do that? A railway.
812. Where to? The nearest point from which we could ship. We do not care if the railway runs from here to the Brunswick if you construct a good port there. If you made it to Byron Bay it would be acceptable; but if not it should be made to the Richmond. I am not speaking from a selfish point of view. I think the people along that route are as much entitled to consideration as the people on the banks of the Tweed. I have been over the country a good deal since I have been here—in fact I have been looking for a place, and I am sure that you do not get a fair idea of what the country is like by travelling along the road.

813. You say that you have been through the district a good deal looking for land. You know the Clarence well; is this district equal to the Clarence in richness and fertility? This district for its area is capable of carrying as large a population as the Clarence is.
814. But is not the Tweed land district as large as the Clarence? Not nearly so large.
815. Do not the rich lands extend further back from the river here than from the Clarence? Yes; it is nearly all gone between here and the Clarence. The Clarence land is river-bank land, and if you get a river-bank farm there I do not think there is anything on the Tweed or on the Richmond equal to it; and besides, they have means of access to market.
816. The difference between the Tweed and the Clarence is that the lands generally in the Tweed are superior to the lands generally on the Clarence, except those on the banks of the Clarence? Yes.
817. And you say that they are capable of sustaining a larger population, acre for acre? Yes. The back lands here are very rich scrub lands, and even where they are too stony to be cultivated, they make really magnificent grazing lands—the very best of dairying land.
818. Have you any statistics for the Committee? Yes; in the Tweed land district.
819. The boundaries of that district have not been changed? Yes. In 1884, and previously, 9,874 acres were taken up. During 1885, 7,362 acres were taken up; during 1886, 10,909 acres; during 1887, 4,257 acres; during 1888, 8,884 acres; during 1889, 88,917 acres—that is taking in conditional leases.
820. Which carry with them a right of purchase? Yes. The whole acreage of this district is 400,000 acres. The total amount of land alienated is 230,968 acres. These figures were not run up by myself. Mr. Easthauffe now says that the area for 1889 should be 13,000 acres.
821. I have taken out the conditional purchases from the land book, and they come to 7,928 acres, and the conditional leases to 2,480 acres, making altogether 10,408 acres, so that even your amended figures are a great deal out when compared with the book? I got my figures from the book; they should tally.
822. Who took them out? Mr. Easthauffe and I took them out, and Mr. Easthauffe ran them up.
823. What other figures have you? The number of reserves; but I think that the parish maps would give you a better idea of the settlement.
824. What other figures have you;—perhaps you had better leave the land alone. Is there any information you can give us about the products of the district? I know there is very little produce grown in the district, because people cannot get it away.
825. Do you know of any farmers who have tried to cultivate but who have had to give it up? Yes.
826. Many? I know of several.
827. What have they cultivated? Maize; and they have had it rotting in their barns.
828. Do you know that of your own knowledge? Yes.
829. Did it not suggest itself to the farmers that they could give it to the pigs? Pigs cost money, and the farmers are not in a position to get them.
830. Do you know that in America it is not uncommon to turn the pigs into the maize? Yes; but you must have the pigs to start with.
831. Do you know that the farmers have given up cultivating the land simply because they have no market for their produce? Yes.
832. We have heard that it is very expensive to bring the land under cultivation—more expensive here than in most parts of the colony? Very much more so. It costs nearly double here what it would to bring the Clarence land under cultivation.
833. At any rate a great deal more? Yes.
834. Have you been along the line from here to Byron Bay? No, I have not. I have been along the road.
835. To Brunswick? I have been up the Brunswick river, and to Byron Bay, but not along the railway line.
836. Have you been back from the range that runs along towards Byron Bay? No; I know nothing of the country beyond the Brunswick, towards Byron Bay, except from travelling along the main road to the Richmond.
837. What is the character of the country between here and the Brunswick;—is it like what we have seen? No.
838. Is it good? Yes. It is different land altogether. The land up to the Brunswick and towards the Pocket is heavily covered with scrub timber. Some of it is red soil, and some of it is black soil.
839. Is it as good as the general run of the land here on the river? Yes. I think it is better.
840. Is there anything else that you would like to tell the Committee? No; I do not know that there is anything else.

Mr. Gavin Pettigrew, farmer, made an affirmation, and was examined:—

841. *Chairman.*] What are you? A farmer.
842. Where do you reside? At Broadwater.
843. How far is that from here? Between Tumbulgun and Cudgen—10 or 11 miles.
844. Will you give the Committee whatever information you have that has not been given by somebody else? There is one point which I want to impress upon the Committee, which has not been mentioned before; that is the natural capability of the district for raising products that cannot be raised at the present time because of the want of certain and speedy communication. Certain and speedy communication is a necessity in fruit growing, and in semi-tropical fruits we can grow nearly anything. I have experimented to a considerable extent with these products, and I have found that they could be grown very extensively, especially on land not available for other crops, that is on the hill sides. In the rich scrub lands bananas and pine-apples could be grown, and a good deal of money obtained from them, if we had the right to our own market in Sydney. I sent a sample of coffee to an exhibition in Sydney on one occasion, and it was pronounced by experts to be very fair marketable coffee. These things have not been attempted because there is no certain communication with the market, and the capability of the district in this direction should be taken into consideration by the Committee. At one time I intended to cultivate bananas extensively. We were taunted in the agricultural columns of newspapers because we did not produce these tropical fruits when we had the climate and soil to do so, but it was patent to everyone who knew anything about the matter that they could not be grown profitably with the communication which we had. The only communication we had was across the bar. The roads have been of very little service to us for carrying produce, so that the cultivation must necessarily be confined to the banks of the river.
845. Then you are in a worse position here for getting bananas to the market than they are in Fiji? We are. I have had maize lying behind the bar for five weeks, and the price has come down from 4s. 6d. to 2s. 6d., while there has been a depreciation in the value of the grain caused by the weevils.

Mr.  
G. Pettigrew.  
22 Nov., 1889.

Mr.  
G. Pettigrew.  
22 Nov., 1889.

846. That uncertainty discourages the farmers? Yes. We have lands here which, if they were cleared and drained, and so forth, would produce hundreds of thousands of bushels of maize. It is splendid land for maize. I have done a certain amount towards reclaiming swamp land in this district, and I say that there is no better land anywhere for growing corn and potatoes. The capabilities of the district are enormous, but there is no inducement to develop them. I have been acquainted with the district for over twenty years, and we have been fighting against difficulties all the time. I was one of a deputation which went to Sydney to press on the Government the necessity of doing something for the navigation of the river. I think Mr. Garrard was Minister for Works at the time. Now and again we have made spasmodic efforts to get something done, but we have been too far from Sydney. If we had been connected with Brisbane it would have been different.

847. You think so? We have the assertion of a Minister of the Crown in Queensland to the effect that if we separated—

848. Whatever they said was gospel truth? Well, it is what they said. The Hon. Mr. Macrossan, when Minister for Works, told us that if we liked to separate and come to Queensland they would make a railway straight away—that it would be to their interest to do it.

849. I suppose they would do it if they were allowed to do it? Yes.

850. You think that if you had means of getting to the southern markets where there are hundreds of acres under cultivation now, there would be thousands of acres under cultivation? The great thing is to have reasonable facilities for getting to market. That would be a great incentive to production. Another thing I might mention, although you may say that it is politics, is that we want the right to our own market first.

851. If you had your own market secured to you,—if you had facilities for getting to your natural markets in this colony, you believe that there would be a larger quantity of land cultivated than there is at the present time? I am certain of it.

852. You believe that there would be a great increase in the settlement of the district? Decidedly.

853. Do you not think that it would be a bar to the increase of settlement in the district, enormous areas being held by individuals;—do you not think that that would limit settlement in the district? It would limit it to a certain extent for a time; but of course people who hold land are not going to hold it for nothing for ever, and if they can turn it to account by leasing it to people who will cultivate it, they will do so.

854. Mr. Garrard.] How many acres of land have you? I have several selections. I have brought my total up to about 260 acres altogether.

855. How much have you cultivated? I suppose about 150 acres.

856. Maize or sugar? Sugar mostly. Of course some of the land is natural grass land.

857. If the line were constructed do you think it would be made use of by the people here in order to get to their markets? Certainly.

858. Even if they had to go to the Richmond? Yes; if there were a certainty of communication with the Richmond. Sometimes we are blocked altogether for weeks and weeks.

859. You are aware that the entrance to the Richmond is being improved to a great extent, and that in all probability there will be a good port there? If there is a good port there, there is no doubt that it will be availed of.

860. Do you think the inland line will be a greater benefit to the people of the district than what is known as the alternative line—the coast line? That is a moot point, and people are a little divided on the subject. For myself I favour the coast line.

861. Do you know the country along the coast line? Yes; to a certain extent.

862. Is it good country? Fairly. It is not so rich.

863. Not so rich as on the inland line? No.

864. Of course, being on the sea coast, there would not be as large an extent of country on either side as on the inland line? There are certain advantages and disadvantages on either line. I will give you an illustration in point. In Queensland they projected a north coast line from Brisbane to Gympie, and there was rich scrub land between the Brisbane and the Mary, which was on the alternative line. The coast line went through land similar to that which this coast line would go through. It touched several places—Caboolture, Mooloolah, and Maroochie, where there were patches of good land on the banks of the rivers, but otherwise it went through poor country. The Queensland Government before constructing the line took the opinion of a competent surveyor, who went over each route and set forth its merits and demerits. That inland line had the advantage of going through better country, but it was longer and would have been more expensive in construction, while the coast line was shorter but went through poorer country. The inland line would have cost about £770,000 while the coast line would have cost about £450,000. They finally decided that it would be better to construct the coast line, and to construct branch lines into the rich country to feed the coast line, thus taking advantage of the shorter route and the easier gradients, and giving quicker communication between the two centres. They are constructing that line now. Our case is very similar. This coast line is some 4 or 5 miles shorter than the inland line, and it goes through level country, and it probably will only cost half the money to construct: I mean from where it diverges at the Brunswick.

865. Would the coast line be of any advantage to the district immediately about Murwillumbah? No line can be constructed that will serve every one equally well; we can take that for granted. The coast line would serve people further down the river better than the people up here, but it would make very little difference where there is navigable water. It is only in shipping the stuff into the droghers that expense is incurred. It is just as cheap to send it by water 12 or 15 miles as 5 miles.

866. Do you think it would be to the advantage of the district if the money were laid out on the improvement of the river instead of on the railway? It would be very desirable to have the river improved, and we have been trying for a great number of years to get that done. When Minister for Works you told me straight that I had made out a good case, but that you were not in a position to help me. The river navigation is right enough in itself; but it will not serve the purposes of a railway. We owe no thanks to the New South Wales Government for improvements to the river. The Government never spent a 6d. on the river until they commenced dredging lately, although it is the highway of the district.

867. Are you familiar with the works that have been done by the dredge? I have my business to attend to, and I am not hovering about to see what is being done.

868. You do not know what has been done? I have it on good authority that a great deal has been done that is useless.

869. Is it a fact that what has been done is absolutely useless? I am not a professional engineer, but I have an opinion of my own, and from the reports I hear I believe that what is being done is of no use.
870. You send your produce down the river? I have done so.
871. Do you do so now? I have not sent much lately.
872. You know that there are certain flats which it is difficult to get through? Yes.
873. Are they less of an annoyance now than they were before the dredging began? No. The dredge is working outside the channel.
874. Do you know that she has been working for some time, and that what she has been doing is useless? I do not know it—she has not been working in the channel.
875. You have taken a great interest in the concerns of the district;—you have made representations to urge that improvements should be made here, in your own interest, and in that of the inhabitants? Yes.
876. Was it to improve the district, or to get money spent here, that so many agitations have taken place? Getting money spent was of no benefit to me whatever. I am not a business man; I am not running a public house; I am a producer; and money spent in the district is of no value to me, unless it effects some improvement.
877. Do you not think that if a man in the community knows of a waste of public money it is his duty to try and stop it? Certainly.
878. You acknowledge that this dredging has been a waste of money; but you have taken no steps to stop it? I do not know it of my own knowledge. I have heard reports that it is of no value.

Mr.  
G. Pettigrew.  
22 Nov., 1889.

Charles Henry Caswell, Esq., Surveyor, Railway Department, sworn, and examined:—

879. *Mr. Garrard.*] You are a surveyor in the Railway Department? Yes.
880. Have you been engaged upon the survey of the line between here and Byron Bay? Yes.
881. On what portion of the line? From about 5 miles below Brunswick to here, and also on the Cudgen route in various lengths.
882. What are you engaged on now? On the Cudgen permanent survey.
883. That is the coast line? Yes.
884. What were the last instructions you received about that line; what is the date of them? Nothing further in connection with the work upon it. The last I heard from the office was a few days ago that I was to meet the engineer.
885. No instructions have been given about discontinuing the survey of that line or further work upon it? None whatever.
886. What is the distance from the Brunswick River to Cudgen? To Chindera it is about 22 miles.
887. And it is about how many miles from the Brunswick to Murwillumbah? About a similar distance; I do not know exactly.
888. What is the nature of the country between the two places? One is generally flat and the other generally mountainous.
889. I mean the capabilities of the country for production? The upper line runs through the richer country.
890. But it is more difficult for railway construction? Considerably more.
891. Would it be half as expensive again? I do not know exactly; I have never taken the estimate of it.
892. Roughly? About two to one.
893. Is there as much population on the coast line as upon the inland line? No, not so much, naturally.
894. And the line would certainly not serve so large an area of country? I suppose not.
895. In moving about the district you have heard the opinions of people about these routes; which do they favour most? I think most people favour the inland route, because most people have to deal with it.
896. Which do you think is likely to pay best? That is a question I cannot answer; it all depends upon future extension. It is a more comprehensive question than merely the railway from Grafton to the Tweed.
- 897-8. We are not dealing with the whole line from Grafton to the Tweed, but from Byron Bay to the Tweed; surely you can give us an idea which would be better—the line from Byron Bay to Murwillumbah, or from Cudgen to Byron Bay? The coast line, I should say, because if that should be constructed the traffic would go that way, and the interest on the cost of construction would be much less, and the working expenses would not be so heavy.
899. What would be the ruling gradient on the coast line? It would be nearly level, but there would be one or two grades in it.
900. When I say "ruling gradient" I mean what is the steepest pinch? I suppose the most difficult would be 1 in 60;—that would be the ruling gradient.
901. Could that be reduced? It would all depend upon how much money you would care to put into the cuttings.
902. What do you expect the ruling grade will be on the inland line? I am not prepared to say—about 1 in 50, I suppose. But I think there will be one grade of 1 in 40 approaching a tunnel.
903. A short tunnel? Yes.
904. That could be eased down with a little expenditure? I cannot say, as I did not prepare the sections.
905. Do you know where the line terminates opposite Murwillumbah? Yes.
906. Do you think that that is a good position? It is the best I should say.
907. With a view to actually crossing the river? I do not think that the terminus has been decided upon, except that it is to be on the other side.
908. You had no instructions when surveying near the terminal point as to the necessity of crossing the river? No.
909. You have had nothing to do with the idea of taking it further north to the Dividing Range? No. I looked at it on my own account; but I had no instruction.
910. Where do you think would be a good place to take it to the border to meet the Queensland line? I never examined it in such a critical way as to give a definite opinion.
911. It would be rather difficult to extend it if we took the line to Cudgen? Yes, there would be two expensive bridges.
912. If the railway is to be extended to the border the upper line would be preferable, because there would be less bridge work upon it? Yes, there would be less bridge work.
913. Is the only good land between Brunswick and Cudgen the 2,000 or 3,000 acres near the sugar-mill? No.

C. H. Caswell,  
Esq.  
22 Nov., 1889.

- C. H. Caswell, 914. Are there many swamps further south? It is all swamp.  
 Esq. 915. All swamp? Well, about one fourth of it.  
 22 Nov., 1889. 916. Have you been over the country between Coolangatta and Southport? No. I have been from Murwillumbah; but not along the coast.  
 917. There is a good deal of swamp on the Cudgen line? Yes.  
 918. Will not that necessitate long viaducts? No, the swamps will be easily drained, and they have good sound bottoins.  
 919. The expense will be nothing in proportion to the cost of the cuttings and tunnels on the upper line? No.  
 920. Do you know where the surveyors on the inland line are? Yes. One is half way between here and the Brunswick, about 12 miles from here, and the other is at the Brunswick.  
 921. What is the first one doing—permanently surveying? Yes; continuing the survey. He is doing as I am doing on the coast.  
 922. Has he been through the whole line? No; only as far as the camp.  
 923. Have you been on the line between Byron Bay and Lismore? I have been on part of it, about 10 miles this side of Lismore. I was out preparing it for permanent staking.  
 924. You think that you have taken the best route that could be found? I think so.  
 925. Is there any necessity for taking a railway so near the coast as Byron Bay, excepting to escape the ranges? I do not know that it is possible to get a grade off the range from the back of Byron Bay.  
 926. To escape the range you must come near the coast at Byron Bay? I would not say must. There must be a big tunnel there, or a gradient down to Byron Bay.  
 927. *Mr. Lee.*] Were you employed on the inner line at Byron Bay—the line from Murwillumbah? They are identical to the Brunswick.  
 928. In the neighbourhood of Byron Bay? For 3 miles north of Byron Bay I had the staking of the lines.  
 929. Have you received any recent instructions to endeavour to improve the lines at that locality? No; but some of the other surveyors may have done so.  
 930. Then between Brunswick and Cudgen there is very little good land? Yes; there is very good land between the two lines; they border on similar country. There is only 4 miles distance between the lines at Burringbar.  
 931. Is there any country along that line equal to that held by the Cudgen Sugar Company? Not of the same character, not the red soil.  
 932. I suppose there can be no doubt about the superiority of the land between this and Byron Bay over that on the Cudgen route? No doubt.  
 933. And in course of time it is likely to yield a larger traffic? I should think so.  
 934. Have you succeeded in reducing any grades or curves on the proposed line? There is nothing on my part of the line to reduce.  
 935. How will the line cross the Brunswick? In what way?  
 936. The line crosses the Brunswick—what kind of bridges have you provided for? Two lines have been laid out—one for a high level, and the other for a low level bridge.  
 937. Which has been adopted by the department? They will not adopt anything until the line is decided upon, I suppose.  
 938. Is the river navigable there? Not beyond the entrance.  
 939. What is the depth of water there? About 8 feet at high water.  
 940. Have you taken any soundings or borings? No.  
 941. That is not in your department? It belongs to the department, but comes after our work.  
 942. *Mr. Garrard.*] How far from the coast does the coast line run? An average distance of about half a mile.  
 943. It would not have much available country to draw on on the east? No.

Mr. Charles Anthony Brady, silk-grower, sworn, and examined:—

- Mr. 944. *Chairman.*] Where do you reside? At a place called Anthony, near Tumbulgum.  
 C. A. Brady. 945. How far from here? 6 or 7 miles—8 miles it may be.  
 22 Nov., 1889. 946. How long have you lived in the district? Sixteen years.  
 947. In what occupation have you been engaged during that time? What originally brought me here was silk culture, but besides that I have been engaged in a number of other occupations.  
 948. Will you be good enough to tell the Committee what you have to say in regard to this proposal? In regard to the disadvantages of a railway I think we may dispose of them in a word; I know of none; but the advantages I may state, as, perhaps, one of the originators of the idea to construct a railway from Brisbane to the Tweed, and from the Tweed southward to Byron Bay. The reason of that project being mooted was the difficulty of getting produce to market after it was grown. The river navigation when I first came here was far better than it is now. Ocean going steamers came up many miles above the place where we are now, to a place called Byangum. Byangum is properly the head of navigation, and if there is any question where the chief settlement of the river should be, it is the place. It opens up a large extent of back country and is admirably situated because of its supply of fresh water, and its many other local advantages. Failure to get produce away and supplies brought here was for many years a cause of very severe practical suffering to the early pioneers of the district. For as many as seven months at a time I have known people to be without any communication with the outside world. This state of things continued until it became pretty near unendurable, and a number of the best settlers had to cave in and leave the district.  
 949. We have heard a good deal about the settlers in the district having very large areas of land, and I would like to know whether that has been brought about by reason of other people having to sell out and go elsewhere? I am able to say from my own knowledge that that has been the case.  
 950. That is how these big properties have been put together? They have been built up by devouring the weak and helpless.  
 951. The weak had to go? Yes.  
 952. And other people bought out their selections? It was a mere nominal thing; they were dummied or bought out, because the poor creatures could not hold on any longer.  
 953. You think that if there had been fair communication with the outer world instead of these big properties there would be a number of smaller ones now? That is precisely it. 954.

954. Do you think that if the district is fairly opened up, either by water or by railway, smaller men will be able to settle on smaller estates? Yes. It will bring families to the district rather than farmers.

955. They are men who came to speculate and clear out? Yes, and to take high wages and are no more seen. The Colonial Sugar Company have certainly given a value to a great deal of land here that was valueless before; but at the same time the same amount of land would be capable of supporting a very much larger population, and a very much more profitable one, in a national sense. People have bought the land for speculative purposes, to sell again, so that the actually industrious man is handicapped by having to pay an enormous price, without anything having been done to improve the land. Some of the settlers who sold out had made a little improvement; but that made it the worse for those who bought after them.

956. But if the first settlers had not sold out could they have held on? No; because they could not have got their produce to market.

957. If they had not sold out they would have lost their selections, and it was better to sell out and get something than to get nothing for them? They did not sell out. They were indebted for a few pounds to the stores, and were allowed to go—that is the English of it. With regard to the character of the country, I may as well direct your attention to the peculiarities of the climate, which is something remarkable. I was not aware that I would be likely to give any evidence to-day, because, although I heard of your coming, I did not know that you had arrived, until late this afternoon. I have prepared a rough memorandum of the rainfall. If it will be agreeable to you I will read it. It shows the quantity of rain which fell monthly for nine years, commencing with the year 1881. I find that the average fall of rain in January for the nine years was 7.18 inches on sixteen days, in February 8.32 inches on sixteen days, in March 9.09 inches on nineteen days, in April 6.64 inches on nineteen days, in May 5.14 inches on fourteen days, in June 3.64 inches on nine days, in July 6.01 inches on eleven days, in August 4.33 inches on ten days, in September 2.89 inches on twelve days, in October 4.32 inches on thirteen days. Then for the months of November and December which are incomplete, the amount was 6 inches and 6.2 inches respectively. The average for the whole period of nine years, including 1889, as far as November, is about 70 inches. There is a remarkable thing to which I would like to call your attention. No month during the nine years has been entirely without rain. The least rain on any one month was 0.43 points; that is something short of half an inch. The greatest fall was 33.38 inches. The driest month on the average during the nine years was September with 2.89 points on twelve days, in the driest year that we had. The wettest month on the average during the nine years was March, with 9.09 inches on nineteen days, so that there were twelve dry days, and the rest of the month wet. The greatest number of wet days in any one month was 28, and the least number of days when rain fell in any month was 4. The driest year was 1885 with 39.22 inches on 157 days, so that our driest year by authentic records had a rainfall of close upon 40 inches, which is a much greater rainfall than many parts of the Colony ever had. The wettest year was 1887, and then we had 114.51 inches on 202 days. This is what accounts for the extraordinary growth that is to be seen in this part of the world. I would also beg to call your attention to the character of the flood here. The highest measured flood at Anthony was at the landing place, and it only came 6 feet 7 or 8 inches above high water mark at spring tides. This is owing to the small gathering ground.

958. You mean the small water-shed? Yes. The small gathering ground draining to the Tweed, and the short distance that the river has to travel to the sea. It is about 30 miles from the head of navigation to the sea. There is also a large extent of swamp land back from the river, and a rise of the flood waters beyond, about  $5\frac{1}{2}$  feet requires a very heavy and continuous downfall. In common with most of these rivers that are subject to flood, the river banks on each side are higher than the land at the back, consequently when the water rises very nearly to a level with the bank, the creeks and open water-courses take it, and it comes in at the back. I have never known a flood to go over the banks. Of course in the upper parts, what you may call the gorges, which are the feeders to the river, the rise is more, but generally two or three hours will carry off the water. But floods do very little real harm, beyond causing inconvenience to settlers on low land, and obliging them to shift. On the contrary, they are generally of material benefit, the silt, and rich vegetable and animal matter, of which a large quantity is brought down and deposited, supplying fertility to the soil exhausted by the greed and ignorance of the farmers, whose limited intelligence and lack of spirit demand from their lands a continuous yield of crops, while they seldom or never attempt to restore the mineral and other constituents carried off by the crop. They do not manure here, and consequently sugar is to a large extent dying out. The farmers have hitherto relied upon the extraordinary climate to fertilize the soil. They omit a very essential duty—the supply of mineral elements. A very small quantity of manure, perhaps 2 or 3 per cent., would restore the elements of fertility; but that is now neglected. While speaking of floods, I should mention that it is the low ground that is the most valuable, not only in this immediate neighbourhood, but in the whole district. The swamps in reality are worth more money—are more intrinsically rich than the uplands. They are capable of producing far more largely, and are far more worthy of attention than the land on the ridges, which produce such a luxuriant growth. I can say that of my own knowledge. I can give you an instance. A good deal of this land, that has been cultivated for only a few years, is so impoverished that it is ruining the farmers; whereas, the land that is subject to flood gives, not only a large growth of cane, but also a large quantity of sugar in the cane, and that is greatly to be considered. All the years that I have been here we have not had a hot wind, and there has never, during the whole of that time, been a single instance of what they call “southerly busters,” which are characteristic of New South Wales and Victoria. They never reach up to this district. Cool and even cold sea breezes are not uncommon, though they are seldom severe. What is called a “black north-easter” down south has never been felt in this district, so that the climate is an exceedingly equable one. There are frosts, and it is a remarkable thing that these frosts are often quite as strong on the sea beach as they are a good distance inland. This is a very singular thing that I do not know how to account for, but it has happened on a number of occasions. There has been ice on the sea beach when there has been a perfectly calm pleasant night at Tumbulgum. The fertility of the climate is attributable, in my opinion, not merely to the amount of rain that falls, but also to its remarkably even distribution throughout the year. The uniform but not excessive warmth adds to the luxuriance of the vegetation. The high temperature and the moisture together produce a very heavy growth of timber. This timber re-acts upon the climate very largely, and assists very largely to keep it in its moist state. It would be a very serious thing to cut down the timber, and in all probability would materially alter the climate.

959. There are men who have kept records for sixty and seventy years, who say otherwise. Dr. Draper of America says otherwise? That is in a different part of the world.

- Mr. C. A. Brady. 22 Nov., 1889.
960. But it is timber just the same? You were good enough to ask me what I was particularly engaged in. I came here with the idea of raising silkworms. They certainly did thrive in a way that I have never known to be equalled in any other part of the world. They became healthy, and have been healthy ever since, and are so now, while the disease among them still continues in Europe, and especially in Asia Minor, which is a very large silk-producing country. The misfortune about silk-culture is that it is an entirely new thing to English-speaking people. In no part of the world where the English are settled is there one individual to my knowledge, except myself, who makes a special effort to grow silk. I did this experimentally at first, with the object of gaining for this country a stock with which to supply other countries, availing myself of the advantages of our climate, and so on, to get rid of the disease; but my fellow-countrymen, not knowing the value of this industry, have hesitated to take advantage of it. But not so the foreigner. He has obtained our grain from Australia, and is working on that grain, and rearing his stock from what was produced in Australia, and with his cheap labour and knowledge of the subject I cannot compete with him, and am beaten out of my own market.
961. I suppose you have no colonial market for it? No colonial market.
962. But if the grain is so valuable have you not a market for it? I used to sell grain for £3 5s. or a shilling more per ounce, but now I can only get 5s. or 6s. and I have to wait one or two years for that.
963. How do you account for that? Simply because it takes very little labour and expense to grow the grain, and cheap labour and very expert people who devote themselves to the work are employed.
964. Was not that the case when you were paid £3 5s. per ounce? No. There was the labour, but they had to get our grain to work upon. They have reduced the thing to a system, and boys and girls with very good eyes examine every egg with a microscope. They become very expert at this, especially the girls—girls from 10 to 13. As each egg is passed through it is either saved or rejected.
965. Is there no market for the raw silk? Yes, to any extent.
966. How are you beaten out of the market with that? It requires a larger number of people to grow silk. I have offered to teach the process and give the material, but nobody responds. It is like taking horses to the water; you can take them there but you cannot make them drink.
967. I suppose the bulk of the people look upon you as a fanatic? They say, and I believe that they are right, that I am a fool. There is no bigger fool in the country than I am. I ought to have left the country, and I deserve my punishment for living here.
968. Can you give us any other information? Amongst other things that can be produced here is coffee. Coffee thrives here admirably, and there is a very large extent of country adapted to its cultivation. It is a permanent and paying crop, and does not require much labour. The few coffee plants that I had came into bearing in the third year, but that was very early. The fourth year is the earliest that you can reckon for, and then the trees go on bearing for twenty or thirty years.
969. Have you grown tobacco here? Yes, and it thrives capitally. The tobacco plant is perennial, and it will grow as high as you like, up to 10 feet. I grew some Havana tobacco, which is esteemed greatly for wrappers—the outside leaves of a cigar—and it had as fine a leaf as I ever saw in Europe, and I had great experience in my younger days in tobacco. The curing of tobacco requires a considerable amount of skill, although to grow it is easy. It requires a considerable amount of judgment to know how to make use of the leaf when you have grown it. This country is essentially fitted for dairying. There is an amazing amount of food absolutely wasted every month throughout the year for want of intelligence to make it into ensilage. There is a great poverty of ideas among the settlers here. There are a very few who have any knowledge whatever of farming. We want a schoolmaster here very badly—the agricultural schoolmaster. It would add very much to the development of the country if the farmers were to bring something like scientific knowledge and common sense to bear upon their agriculture.
970. I suppose there are not many farmers here who could tell you the quantity of nitrogen, lime, potash, phosphoric acid, sulphuric acid, magnesia, &c., drawn from the soil by a crop? I do not suppose that there are three persons in the district who could do that, and not one in 100 would know what you are talking about. With regard to the direction that the railway should take, I would like to say that it is open to opinion. People in the very large majority of instances want it to come where the population is, or where the settlers are supposed to be, and they take it for granted that because one man has squatted down entirely haphazard in a place the railway should come near him. I take it that the direction of the railway should be decided upon by skilled engineers, without reference to the population, only taking into consideration the lay of the country and its productiveness. In the early days the survey was brought in through Dunbible. I happened to see it, and I thought it was a rather extravagant idea. It would come through rugged and broken country;—fine country of itself, but by no means suitable for a railway, and I took it upon myself one day, when I was in Sydney, to call the attention of the authorities there to the fact that if they looked in a certain direction they would find a far cheaper and a superior route. I got, as you may suppose, pretty well snubbed for my interference; but I gave them the information, and I told them that if they liked to make use of it they could. To my great surprise a second route was surveyed, and that is the route now before the Committee; but it is not precisely the one I indicated. I think that if a party were sent out they would find a better route than either of those that are now surveyed, and I believe it would avoid a great deal of expense, though I am only speaking from guess. The cost of the line from Byron Bay to here will be at least £200,000, and probably not much short of a quarter of a million, and I think it right to call your attention to that. Before going into a large expenditure like this we should not consider what would please A, B, C, or D, but what would be a benefit to the whole district, and as this is a national work, it should be considered in the national interest, even more than in the local interest. The railway, I understand, will be used for military purposes. That would indicate that it should be carried out to serve national purposes more than local purposes. It is not my province to indicate anything more; but I respectfully suggest to you that it would be worth while to inquire a little further as to where would be the proper route. I may as well say that I have no interest in one class more than in another. I am absolutely free from bias. There are many industries which are capable of very large development here, and amongst others I should say that of grape-growing and wine-making. In my experience there is no place where the grape thrives so well as it does here. The soil and the climate are peculiarly suited to it, and there is a vast extent of land adapted to its cultivation. The oranges produced in this part of the district are singularly luscious. The tree comes into bearing early, and the crop is very paying, provided that there are means of getting it away. As it is, numbers of my neighbours, as well as myself, grow fruit merely to see it rot on the ground. I have lost tons of fruit merely because I had no means of turning it to account.

Mr,

Mr. William Kelly, hotelkeeper, sworn, and examined :—

Mr.  
W. Kelly.  
22 Nov., 1889.

971. *Mr. Garrard.*] Do you reside at Murwillumbah? Yes.
972. What is your occupation? That of a hotelkeeper.
973. How long have you resided in the neighbourhood? Twenty years.
974. Have you been engaged in the same occupation all the time? No.
975. In what other occupation have you been engaged? Twenty years ago, when I came here first, I took up some land and started as a farmer. I continued growing maize for three or four years, until I was completely ruined, and could not do it any longer, for want of a market.
976. Because you could not get to market? Yes. Since then I have followed other occupations, and have pulled myself together again; but up to the present time I have seen no possible chance for a farmer to grow maize and make a success of it, for want of facilities to get to market.
977. I suppose you believe in the productiveness of the district in which you are living? Yes.
978. And if means were given for getting to market there would be a large increase in the population? Yes.
979. You know the route of the proposed railway from Byron Bay to the Richmond? Yes.
980. Do you know the country? Between here and Byron Bay—not well.
981. Do you know it between the Brunswick and the south head of the Tweed—along the coast? I do not know that line.
982. What is the nature of the country between here and the Brunswick? A rich class of country.
983. Is it taken up? It is nearly all taken up.
984. But it is not much utilised? No.
985. For the reasons to which you refer? They have no encouragement to go ahead for want of a market.
986. Have you known the river to be in a better state than it is in now? In what regard?
987. In regard to the depth of water? I have known it to be better.
988. Has it been in the same condition as it is in now for a number of years? For the last twenty years it has been similar.
989. All the produce has to be punted down to the Tweed Heads? Yes.
990. Do you think that if the railway were constructed the people would send their produce away by it, say to the Richmond? Under the present circumstances they would send the greater part of it to the Richmond.
991. Do you think that if the railway were constructed to Grafton they would send it to the Clarence? Only a small quantity of it.
992. If the railway were constructed to the Richmond, would they send it there? Some of it—not all.
993. Are the people of this district urging the construction of the line as far as Byron Bay only with the hope that that will be their port? That is their idea.
994. But if they could not get Byron Bay as a port they would go as far as the Richmond? They would go as far as that with perishable goods.
995. I suppose timber forms a large item of export? Yes.
996. Would it be taken by rail? A great quantity would—not from the immediate vicinity of the Tweed, but between here and the Brunswick.
997. That is sawn timber, of course? All kinds of timber. The timber actually on the Tweed is pretty nearly exhausted. I think there would be a large quantity of timber coming in between here and Byron Bay, or Lismore.
998. I suppose you do not think that there is sufficient at the present time to pay a railway. A railway would only pay, because if it were constructed it would lead to larger settlement? Yes. It would cause the population to flow in and make trade greater.
999. If the construction of a railway from Murwillumbah to Byron Bay, and the making of Byron Bay a harbour for shipment, would cost somewhere between £300,000 and £400,000, do you think that the country would be justified in going to that expense? I think so. I think the district is decidedly entitled to it. It is large and the land is very rich.
1000. Do you think that this district, even if brought to the highest pitch of perfection in the way of production, could pay interest and working expenses on a railway costing £100,000, and harbour improvements costing £300,000? Looking at it from different lights, I think it would. It would be a national benefit, as well as a benefit to the settlers round about the district.
1001. In what way would it be a national benefit? Byron Bay would be a place of refuge in rough weather, and would give us a port from which we could ship to any part of the world. I think we are just as much entitled to have that amount of money spent here as other parts of the country were entitled to have money spent there.
1002. The national benefit would be the benefit of the people of this district—what benefit would these works be to the people of the Colony? I cannot say; I have not gone into it in that light.
1003. You are clearly of opinion that if it were found to be impracticable to make a harbour at Byron Bay, and the line were extended to the Richmond, it would be a benefit to the people? It would be a benefit to us.
1004. Do you think that the line along the coast would be of as much benefit as the line from Murwillumbah? It would be a benefit, but it would not be of as much benefit as this line. The country through which it would pass would not be so extensive. In the first place there would be land on only one side of it.
1005. How far is it from here to the Border? I am not positive—somewhere between 6 and 9 miles.
1006. If the Queensland Government extended their railway to the Border, do you think that the people of this district would take their produce there, and send it north? The distance to the Brisbane market is shorter, but the market is much more easily glutted. Sydney is our main market.
1007. If the line were constructed here, and the Queensland Government made their line to the Border, would you send it there? We would send it wherever we could get most money for it.
1008. You would not look at it from a national point of view then? No.
1009. Do you think that the people of the district would prefer to have the water communication improved, or to have railway communication? I should not be satisfied with either the river or railway. I think we require both. What the railway would do the river cannot do; and what the river will do the railway would not do.
1010. Then I understand that you want a railway from Murwillumbah to Byron Bay, and a harbour at Byron Bay, at a cost of £300,000, and an equal amount spent on the improvement of the navigation and entrance to the Tweed? Yes.

Mr.

Mr. Richard Dodd, butcher, sworn, and examined :—

- Mr. R. Dodd. 1011. *Mr. Lee.*] Where do you reside? At Cudgen.  
 1012. What is your occupation? I am a butcher at the present time.  
 22 Nov., 1889. 1013. How long have you been residing in this or in the neighbouring districts? Close on eighteen years.  
 1014. The greater part of that time you have been at Cudgen? Nearly the whole of that time at Cudgen.  
 1015. You are pretty well acquainted with that portion of the river? Yes; I was cedar-getting there for a good number of years.  
 1016. You know the Tweed District as a whole pretty well? Fairly well.  
 1017. Do you know anything of the country beyond the Tweed towards the Brunswick? Yes, I may say that I do.  
 1018. As far as Byron Bay? Yes.  
 1019. Beyond that again to Lismore? As far as Ballina. I have been through the scrub once, that is all.  
 1020. What is the nature of the evidence which you wish to give to the Committee? I am ready to answer any questions which they may ask me in regard to the railway.  
 1021. Have you any special evidence to give in regard to the route? I do not know whether it is special, but I think that the beach route would be the best—first, because it would be cheap, and, secondly, because of the immense quantity of land that would be thrown open by it, not in hundreds but in thousands of acres.  
 1022. Land that is now available for selection? Yes, and a good deal of it is selected; but a great portion of it is locked up in reserves.  
 1023. What is the character of the land? Scrub, and in some parts of it swamp, but they seem to say that the swamps are better than the scrubs; they are draining them extensively at the present time. The swamps are 25 feet above the level of the sea.  
 1024. In your opinion the coastal route, by way of Cudgen, would be of the most benefit to the residents at that end of the river? Not expressly at that end of the river, but to all the people in the place. I take it that the object of the railway is to get produce away from the farmers who grow it, and along the coast there are thousands of acres of good land that the railway would tap after it crosses at Chindera. Chindera is across the river from Cudgen. There is a forest reserve called the Chindera Forest Reserve, containing 640 acres of good land, equal to that which you have seen to-day round the mill of Cudgen.  
 1025. Are there as many residents on that part of the river as on the other portion of it? There are more selections—more people taking the land up there, and the land is of better quality. I do not believe that they are residing on it now. Some of the people who have taken it up reside in New England. One gentleman who has taken up a lot of land there resides in New England.  
 1026. Would a railway along the coast to Cudgen benefit as many of the residents as if it were made to Murwillumbah? There is no doubt that at Cudgen and Denanbar there are 6,000 or 7,000 acres fit for growing maize. Robb & Co. have 1,000 acres there.  
 1027. Your evidence tends to show that if the railway were constructed by the coast it would be of more benefit to the Cudgen people, but I gather that it would not be of the same benefit to the people in the neighbourhood of Murwillumbah as to those lower down the river? It would not only be a benefit to Cudgen, but if it went in the way proposed none of the places down there would be benefited at all. The coast line will be a deal cheaper than the other—some thousands of pounds a mile cheaper.  
 1028. How do you arrive at that? A gentleman who understands figures pretty well told me so.  
 1029. The engineers do not know it? This gentleman was qualified to tell the price—he had been connected with railway engineering.

Mr. Henry Clarke, selector, sworn, and examined :—

- Mr. H. Clarke. 1030. *Chairman.*] What are you? I am a selector. In reference to the two routes, I think the lower one goes through or close to the best land. The upper one goes through very broken country; the lower one runs close to the beach, and although it does not go over much good land, it goes close to it—within a mile or a mile and a half of it.  
 22 Nov., 1889. 1031. Is the land as good as that between the Tweed Heads and Southport? It is as good as any land on the Tweed. I can show you land within a mile of the railway as good as any on the Tweed River. The worst of it is better than that between Southport and the Tweed Heads. To the west of the upper route it is rough broken country, as bad as that near Bulli. The only good land on the upper route is between the two lines.  
 1032. How far is it from the upper route to the lower route? In some places 4 miles, and in some places 10; it widens as the coast falls away.  
 1033. Do you not think that a district is pretty well served if it gets a railway within 10 miles of it? I believe so; but I believe that we should make a railway as cheaply as possible. We shall be taxed to pay for it, and I do not think that it should be made except in the cheapest way.  
 1034. You are only giving it as a matter of opinion that the route which you suggest is the best? I believe it to be the cheapest.  
 1035. You believe that it would serve the people, the bulk of the settlers, just as well as the upper one would? It does not matter where the railway goes, some one will be out in the cold. They cannot all be suited. If it goes that way there will be no occasion to cross the flats, and produce can be taken down the river. I think our market is Brisbane, and that if the line is constructed the best of our produce will go to Queensland.  
 1036. Then we had better not construct it if Queensland is going to make a railway for you? I think it would be foolish to make an expensive line when a cheaper route is available.  
 1037. Did you come here to tell us that you do not want a railway? Not if we are to be heavily taxed in freight to pay for an expensive line.  
 1038. Near the river you will go to Brisbane? Well, we went to Brisbane before. At the start Brisbane was our market, and all our produce went there. We had steamers trading there.  
 1039. The country is too good to leave to Brisbane;—have you anything else to say? Nothing, except that I hope you will take notice of the country to-morrow.  
 1040. If the coast line is connected with the Brisbane line, you will want a bridge like that over the Hawkesbury at Cudgen? We could have a steam-ferry until a bridge could be built.

Mr.

Mr. John M'Collum, overseer of a sugar plantation, sworn, and examined:—

1041. *Chairman.*] What are you? Overseer of the Cudgen Sugar Plantation.  
 1042. How long have you been living in the district? Three and a half years.  
 1043. Have you lived in the coast district for any length of time beyond that? Almost five years.  
 1044. At Cudgen there is a sugar plantation owned by Robb & Co.? Yes.  
 1045. We are told that the area of that is 2,876 acres? Yes. That is as near an estimate as I can give you.  
 1046. And the 2,000 acres are first-class agricultural land, highly improved, and under cultivation? There are about 1,000 acres under cane.  
 1047. Two thousand acres are first-class land, highly improved, and under cultivation? That is the estimate. Some of it is under grass.  
 1048. That has been put under grass? Some of it has; some of it was naturally grassed.  
 1049. What number of men are generally employed there all the year round? About 180. At present there are about 300.  
 1050. You say that there are 180 men employed on the farm during the whole year? In farming and in connection with the mills.  
 1051. Is it proposed by the Company to make further improvements there? So I understand.  
 1052. A tramway? Yes.  
 1053. Have you any idea what the cost of machinery was? Only from the estimate that I have heard, and from the books—from £50,000 to £55,000.  
 1054. The land that the Company has is the pick of the district; there are not many more thousand acres like that? There is more land in that block which the Company does not own.  
 1055. As good as it? Yes, as good as the Company's land.  
 1056. Have you anything else to tell us,—do you know the land from Cudgen along the coast to the Brunswick? Some of that land I know. I am not intimately acquainted with it.  
 1057. You do not know the railway line surveyed there? Part of it, not all of it.  
 1058. Does it go through as good land as that at Cudgen? I have only been on the border of the line. I have not been back far. People say that there is good scrub country, but I have not seen it myself.

Mr. J.  
M'Collum.  
22 Nov., 1889.

Mr. William Rodgers Isaacs, manager of a sugar-mill, sworn, and examined:—

1059. *Chairman.*] You are manager of the Colonial Sugar Refinery Co.'s mill on the Tweed? Yes.  
 1060. Where is it situated? At Condong.  
 1061. Can you tell us the average yield of sugar cane per acre in the district? It varies very much; I should think it would average from 30 to 35 tons an acre.  
 1062. How many cuttings do they get from one crop? To advantage, I think they could take three.  
 1063. How long does it take the first crop to mature? That very much depends upon the description of the cane. There are some kinds that mature in from eighteen to twenty-two months. There are other kinds that may be cut when they are from 12 to 15 months old.  
 1064. Will each kind yield about 35 tons to the acre? No. The cane that yields that quantity is that which is 18 or 20 months old. I should think that the other on good land would give from 28 to 30 tons.  
 1065. What kind is grown most in this district? At the present time a cane that may be cut when it is 18 or 22 months old.  
 1066. Have these canes distinctive names? Yes.  
 1067. What are they? The Rappo and the Singapore.  
 1068. The Singapore takes twenty months to mature? It may be cut when it is 15 or 18 months old.  
 1069. What does the Company pay for the cane per ton? The stipulated price is 10s. a ton, but of course that is regulated in some cases by the value of the cane, which is arrived at by analysis. Some canes of course may not be worth 10s. a ton. By the Company's agreement, 10s. a ton is paid for sound ripe cane. There may be cane not quite so good for manufacturing sugar as other cane, and consequently not worth 10s. a ton.  
 1070. Who determines whether the cane is sound and ripe? We keep a chemist, and determine that by analysis.  
 1071. And the farmers are satisfied? Yes, I think so; but it is only reasonable to suppose that a man does not like his price cut down.  
 1072. Can you give us any idea of what it costs per acre to cultivate the cane? Well; I should think from £3 to £5 an acre.  
 1073. Do you cut it? We cut it, and we give 1s. for drawing it to the river banks, and provide the drays.  
 1074. I suppose the construction of a railway, or the improvements of the river, would not very much increase the production of sugar? I think the construction of a railway would materially increase it, for, from what I know of the country some little distance off the river, I am of opinion that there are many spots in which cane could be cultivated with advantage if there were means of getting it to a mill.  
 1075. That is on the upper line? Yes.  
 1076. Do you know that country fairly well? I know it very well.  
 1077. What is the character of the country on the two lines? I cannot say that I know the character of the country on the lower line, I know it on the other line.  
 1078. What is the character of it on the upper line? It is a succession of open ridges, with scrub in places; but off the road there are very large areas of good country, which you do not see at all by travelling it—rich scrub land, totally different from that which you see along the road.  
 1079. You think the railway would assist people to develop the land by growing sugar on it? Certainly.  
 1080. *Mr. Garrard.*] Supposing this land were cultivated half a dozen miles along the line, the producers would have to load it on to the railway, bring it to the river, tranship it into punts, and punt it to the mill—would not that add to the cost and diminish the profits of the producer? No, because I think that if cane were brought into the river in that way, the Company would construct a line of their own, so that the trucks could be shunted on to it. It is not absolutely necessary for our purpose to have the cane on the river in punts; we can put it on to our cane carrier from the bank.  
 1081. The railway would have to be carried to your works, or legislative power given you to construct a branch line to that? Yes.  
 1082. Have you tramways running over the line now? We have a tramway which we run up and down the bank.  
 1083. Only on your own land? Yes.

Mr. W. R.  
Isaacs.  
22 Nov., 1889.

- Mr. W. R. Isaacs.  
22 Nov., 1889.
1084. You have no legislative power to go over other peoples land? None at all.
1085. Do you think that if a railway were constructed, you would send your produce—your sugar by it to Sydney? I cannot say. It does not come within my province; that would rest wholly and solely with the authorities in Sydney.
1086. At present you suffer some disabilities in sending your sugar down? We suffer very great disabilities.
1087. You have to punt it down to the Tweed Heads, and tranship it into a vessel there? Yes.
1088. Which may or may not be bar-bound? Yes.
1089. That does not matter very much to you—sugar is not a perishable article? It is a perishable commodity in one way—it might happen that we wanted the sugar.
1090. Under these circumstances, do you not think it reasonable to suppose that your company would avail themselves of the railway to take the sugar to a port which would be always open—either Byron Bay or the Richmond? I cannot say definitely that they would use the railway; but it is possible. If they thought it to their advantage they would do so.
1091. The chief productions of the district are sugar and timber? There is maize.
1092. Not much? Because there is no means of getting it away.
1093. Do you think that there would be a large development with the railway? Unquestionably.
1094. Therefore, the Committee in considering the outward freight of the railway, cannot look upon sugar as an important part of it. We have it in evidence that we must not expect much from timber; so that the traffic will come from the future development of maize growing? Dairying is another industry.
1095. The development of maize growing and dairying must take place in the future? I suppose it will be in the future.
1096. Knowing the district fairly well, you consider that the proposed line to Murwillumbah would give the greatest amount of benefit to the largest number? Yes.
1097. *Chairman.*] I suppose sugar cane would stand the cost of haulage as well as coal would? I should think so.
1098. *Mr. Lee.*] Would you have any objection to tell the Committee the number of tons of sugar, you send from your mill to Sydney per annum? I could not tell you that from memory, because I am not prepared with the figures.
1099. Have you any idea of the number of tons of coal that you receive in a year? That very much depends. The largest amount we ever received was 1,800 tons—sometimes it is 500, 600, or 700 tons, according to our requirements.
1100. I want to ask you a few questions about Byron Bay. The distance from Murwillumbah to Byron Bay is 32 miles. Supposing a harbour were made at Byron Bay, which would give a perfect shelter to vessels in all weathers, so that they could load and unload, do you think it at all likely that your company would send their sugar from there to Sydney, and receive their coals back that way? Of course I could not answer for what they would do.
1101. Would the fact that a secure harbour means reduced insurance, and low freight be a consideration? Yes; that would be a consideration.
1102. At the present time, may I ask, do your company take the sole risk, or do they insure? They insure. I do not think it is customary for them to insure coal; but they insure sugar.
1103. Could you tell me the rate of insurance which they usually pay? I do not know what it is.
1104. Have you any objection to say what the freight per ton is from Newcastle to the mill? I think the contract this year is either 13s. or 15s.; I am not sure which.
1105. Is that the freight? For a cargo of coals up, and sugar back.
1106. That is the freight alone? Yes.
1107. If Byron Bay were made a harbour, what ought to be the freight, considering that it would be so much closer and a safe port? I do not know. Judging from the freights that are charged to Brisbane, I think they ought to bring it to Byron Bay for about 8s.
1108. The distance from Byron Bay to Murwillumbah being 32 miles, and the specified rate for coal as set down in the railway rates, 1d. at ton,—you could bring it up for 10s. 8d., instead of 15s. as you pay now. If that were the case would you be likely to use the Byron Bay route? I think it likely that if the freight were reduced to that extent, the company would use the railway.
1109. Your company is not wedded to any particular route? Not that I am aware of.
1110. Are they likely to make use of the cheaper route? I think it likely that they would make use of the cheaper route.
1111. And the safer? Yes; and the safer.
1112. If Byron Bay breakwater were constructed, and proper facilities given for loading and unloading, and it were cheaper, you would probably use the railway? I should say that the company would take it into consideration, but I am not prepared to say what they would do.

Mr. William Wardrop, storekeeper, sworn, and examined:—

- Mr. W. Wardrop.  
22 Nov., 1889.
1113. *Chairman.*] You are a storekeeper in this town? Yes.
1114. How long have you been there? A little over eleven years.
1115. Will you tell the Committee anything that suggests itself to you? I would rather the Committee would ask me questions.
1116. You are in the habit of getting goods from Sydney? Yes.
1117. Which way do you get them? By steamer and by sailing vessels.
1118. That is to the Tweed River Heads? They are delivered at the wharf by drogher.
1119. What does it cost you a ton to get the goods delivered at the wharf here? On the average 30s. a ton. There are three rates—for dead weight, measurement, and parcels. Of course they very often charge by the parcel, as that is the best paying rate. They charge up to £8 a ton by the parcel.
- 1119½. If you send down fifty packages, and they put them as parcels, you have to pay the rate? Yes.
1120. Have you to keep larger stocks in your store by reason of the uncertainty of communication than you would otherwise have to do? Certainly.
1121. That is a source of loss to you and an additional cost to the people who deal with you? Yes; before the steamers started to trade here we generally kept three months' stock in hand; now we can afford to do with about one month's.
1122. Do you ever run short now? Occasionally we run short, of course.
1123. That might place one storekeeper at a disadvantage? We are all on the same footing.
- 1124.

1124. If the railway were constructed, say to Byron Bay, and a port made there, do you think that the produce from this district—from the greater part of the district, both that settled now, and that which will be settled in the future—would go by it? Not unless the freights were cheaper than steamer or sailing vessel rates.

Mr. W. J. Wardrop.  
22 Nov., 1889.

1125. Do you know the present railway freights? I heard it stated just now what they are for coal.

1126. I suppose you do not know anything about the general railway freight? I have had nothing to do with them; but I observe that there are great complaints in other parts of the Colony about the charges. The rates of insurance, I might mention, are 25s. per £100 by steamer and 40s. by sailing vessel.

1127. Can you tell us the cost of freight to the Richmond River? From 17s. 6d. to 22s. 6d.

1128. What is it to the Clarence? From 15s. to £1 dead weight and measurement.

1129. So that you are paying from 7s. 6d. to 10s. 6d. a ton more than the Richmond River people? Just so.

1130. Do you think that the people would get their goods from and send their produce to the Richmond River in the event of this railway being constructed? Not if the river were open.

1131. Then to make the railway pay it would be better to put a log of wood across the entrance to the river? I do not say that. I reckon that the railway would act as a feeder to the river if it were open.

1132. Do you think that if the river were open there would be sufficient trade along the line to make it pay? I do not think that it would pay for some years.

1133. How many years do you think it would be before it would pay? I do not think that it would pay for the next decade.

1134. Do you think the Parliament of this country would be justified in recommending a railway that is not to pay for a decade? Not for this particular part of the district.

1135. Do you mean for the township of Murwillumbah? No. That is but a small portion of the district.

1136. All the country between here and the Brunswick or Byron Bay? That is only a small portion.

1137. Is that the portion you refer to? I say that I do not think the people would send the bulk of their goods that way if the river were open, unless the rates were much cheaper than those of the sailing vessels or steamers.

1138. The fact of getting more rapid and regular communication would have nothing to do with it? If the river were open we should get just as good communication by it as by Byron Bay.

1139. Is the river open now? No; it has not been open for some years.

1140. What is your definition of an open river? When a steamer can come up.

1141. Have you had an open river? Yes; the "Arracoan," a steamer from Brisbane, delivered goods here when I first came up. She carried about 70 tons, and her register was about 36 or 40 tons.

1142. How far did she go? I have seen her 2 miles above where we are.

1143. Has the river been silting up since then? I believe the flats have been getting worse. In fact, the channel I came up first was where the dredge has been working.

1144. You do not think that there is a likelihood of a railway paying for many years if it is constructed, and that if the river is open it certainly should not be constructed? I do not say that it should not be constructed.

1145. As a member of the community, you do not want to see the people's money thrown away—you do not think the railway would pay? I do not think it would pay for some years.

1146. Surely you would not, just for the sake of seeing a locomotive running here, advocate the expenditure of this money? No.

1147. Do you know anything of the route between the Brunswick and the Tweed River Heads? The coast line?

1148. Yes? No.

1149. You are familiar with the country on the route which we are considering? I know it by travelling along the road.

1150. Is it good country? Fairly good.

1151. Is it as good as we see about here? Some quite as good.

1152. Do you think that if this line were constructed it would serve the greatest number of people? Certainly.

1153. It would serve the greatest area of land? The most of the land is about the north, south, and middle arms of the river.

1154. If the railway is to be used this would be the best place to bring it to? Either here or a little bit higher up.

1155. Do you think that if the Queensland authorities construct a railway to the border the people will avail themselves of it? I suppose people will deal in the cheapest market. This will be a great dairying district, and no doubt if they find the market better at Brisbane the people will send their produce there.

1156. What is the reason that the Brisbane boat left off running here? The ship they ran here was lost. First they had the "Arracoan," and then they had the "Kalara," but she was a failure in delivering goods up the river, and went down a mile outside the heads.

Mr. James Black, farmer, sworn, and examined:—

1157. *Chairman.*] What are you? A farmer.

1158. Living where? About a mile from Murwillumbah, three quarters of a mile on the south side of the ferry.

1159. How long have you been living here? Over twenty-two years.

1160. Have you made your fortune? Not yet.

1161. How much land have you got? 280 acres where I am living.

1162. What have you to tell the Committee;—what do you principally cultivate? My principal crop of late years has been sugar-cane, with maize and potatoes when the season is favourable.

1163. Is this a good season for growing potatoes? Very good. I have raised very good crops of potatoes.

1164. What do you call a good crop? I consider them a payable crop. I never actually weighed a quantity per acre. I have grown them and sold them in the district.

1165. Do you know what the yield of potatoes is;—We were told that 5 tons or 6 tons per acre had been got? I do not doubt it. I believe that that quantity could be got in favourable seasons. A wet season is detrimental to the crop. With our dry land they can be grown in any season.

1166.

Mr. J. Black,  
22 Nov., 1889.

- Mr. J. Black.** 1166. How many bushels of maize can you grow to the acre—what is the highest quantity that you have known? I have grown over 60 bushels to the acre on the farm on which I am living. Of course it was virgin soil at the time, and that makes a vast difference.
1167. Have you continued growing maize? Occasionally; not where I have been living of late years. Of course I may mention that I am indirectly interested in this line. My son has another selection near the proposed coast route, and we have grown maize on that, but with not such good results. The soil is of volcanic formation—red soil, the same as at Cudgen, and I have found from experience that that is not as good for maize growing as the alluvial land on the banks of the river.
1168. Do you know the country between here and the Brunswick on the two lines? Yes; I have been over a good part of it.
1169. Which line do you think would serve the district best? The upper line most decidedly. There is no doubt in my own mind about the quantity of country that would be opened up.
1170. Are you interested in land on the lower line? On both lines.
1171. You have a good knowledge of the country? I have. I may state that I have been over the whole of the Tweed district. I have traversed it in many different parts. I went through the country where the proposed railway will go years before there was any settlement there. I have started from the coast and run the country up, and come out at the head of the south arm of the Tweed.
1172. So you have a good knowledge of it, and with that knowledge you say that the upper route would be of most advantage to the people? Most certainly. There is no question about the extent of country on the two routes.
1173. Would there be more country available for settlement on the upper route than on the lower? By far.
1174. Is there anything else you would like to tell the Committee? I have been an advocate for the opening up of the river. I believe that the river should be opened up, and I believe that the improvement of navigation would be a means of feeding the railway if constructed, and would cause it to be a better paying line than it otherwise would be. I do not mean to say one word against the Byron Bay scheme, but I treat it as premature. I think that if a railway were constructed between the deep-waters of the Richmond and the navigable waters of the Tweed, and a little improvement were made in the Tweed, all requirements for the next half century would be answered. I do not say but what Byron Bay will become necessary when there is a large trade, and the country is densely populated; but at the present time I do not think it is required. If we had a line of railway to open up the country between the two rivers, and an outlet at each end, so that the settlers could send their produce away by it, all requirements would be met, and the expensive works of Byron Bay would not be necessary.
1175. You think a line of railway ought to be constructed between the two rivers—the Tweed and the Richmond? To my mind it is simply a question whether the Government is going to leave the best portion of their territory locked up or open it by a railway, because, without a railway, it is impossible for the country to be settled, or the settlers to make a living.
1176. You think that a railway running between the two rivers would induce settlement? I do.
1177. What chance do you think there is of the railway paying interest and working expenses? I do not say that it would pay from the start, because it will take a certain amount of time to develop industries. The settlers up to the present time have only been making the improvements that the Act requires—it is all that they have been able to do, so that of necessity it will be several years before the land can be properly brought into use. If the railway were a certainty, no doubt the settlers would start at once and improve their holdings. I do not think it could be expected that the line would pay from the commencement.
1178. Do you think there is a fair chance of such a line ultimately paying £6,000 or £7,000 a year? That depends very much upon the prosperity of the country. If the country is prosperous I am under the impression that there is not a line in the Colony which will pay better, because of the fertility of the soil here and the extent of good land.
1179. *Mr. Garrard.*] Do you know anything of the country between Casino and Grafton? I know it well.
1180. Do you think it is desirable to construct a line between these two points? I do not know. It will depend very much upon where the line will terminate at Grafton.
1181. At Grafton itself, in the city. The project before us is a line from Grafton to the Tweed. If any portion of that line were a dead horse, the rest of the line would have to carry the loss;—do you think that the southern terminal point of the line should be at Grafton or at the Richmond? I am not in a position to answer that question. I believe it could not be so densely settled as the land between the Richmond and the Tweed could be. The land is not of the same quality, although there is good land there. The good land does not exist to the same extent as between the Richmond and the Tweed.
1182. I suppose there is very little prospect of anything going past the Richmond to Grafton? I think so. There might be a market at Grafton, but I do not think that if there were means of shipment at the Richmond it would be likely that anything would pass that river.

SATURDAY, 23 NOVEMBER, 1889.

*The Sectional Committee met at Burringbar, en route to the Brunswick River.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

JACOB GARRARD, Esq. |

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to The Tweed.

George Wilkins, Esq., railway surveyor, sworn, and examined:—

- G. Wilkins, Esq.** 1183. *Mr. Garrard.*] You are a surveyor in the Railway Construction Department? Yes.
1184. How long have you occupied that position? Nearly nine years.
1185. How long have you been in this district? Three years.

1186.

G. Wilkins,  
Esq.

23 Nov., 1889.

1186. Engaged in the survey of this line all the time? Yes.
1187. Are you familiar with the country between Byron Bay and Murwillumbah? No; but between Byron Bay and Burringbar.
1188. Not further north? No. I have been over it, but I do not know it in detail.
1189. The more difficult portion of the line is north of this? It is all difficult from Brunswick to the Tweed.
1190. Do you know anything of the alternative or coast line? Yes; I surveyed the trial line there.
1191. What do you think would be the ruling grade upon that coast line? There is no question of grade there. It is all easy country.
1192. What do you think will be the best grades on this line;—have you any idea? The steepest grade?
1193. Yes? It would be 1 in 40 unless our present attempts to reduce it to 1 in 50 are successful.
1194. You cannot get anything less? There will perhaps be one or two short places of 1 in 40, but in general it will be better than that of course.
1195. Do you think that this inland line serves the more people and better country of the two? Yes. It goes through a better class of country than the coast line.
1196. There will be a great deal of difference in the cost of construction? Yes, there will be a large difference.
1197. But there can be no comparison between the quantity and quality of good land? No. This is the better in every respect.
1198. Are you engaged upon any deviations? This is the permanent survey. I am making a few alterations as I go on.
1199. Are you going right through to Murwillumbah? Yes.
1200. There is no one on the route now? Mr. Lloyd is following me with the levels.
1201. Where is he? At the Brunswick.
1202. You have finished, then, from Byron Bay to the Brunswick? We have finished from Byron Bay to the Brunswick.
1203. And from Byron Bay to Lismore? It is finished.
1204. Did you do that line? I did a part of it.
1205. Who did the rest? Mr. Lloyd did part of it.
1206. All the way to Casino? Mr. Lloyd began at Grafton. We did it in alternative pieces with other surveyors to Byron Bay.
1207. Mr. Lloyd is the only surveyor in the district who knows anything about that? About the far end.
1208. You only know it from Byron Bay to this place? From near Lismore to this place.
1209. Do you think that the best route has been secured along there? Yes, certainly I do.
1210. The line goes right down to Byron Bay;—is that necessary to avoid ranges, or only to touch the bay? I cannot say whether an alternative line could be obtained to avoid touching Byron Bay, because no trial surveys have been made.
1211. How long do you estimate that it will be before you finish your work through to Murwillumbah? Four or five months.
1212. *Mr. Lee.*] This coast line starts west of Byron Bay, at a point marked 105 miles? Do you mean the deviation?
1213. Yes? The junction is at the Brunswick.
1214. At 120 miles? At 120 miles.
1215. The surveyed line from the 120-mile peg to Cudgen runs parallel with the coast the whole way, and but a short distance from it? Not more than half a mile from it.
1216. Consequently, it is a considerable distance away from the bulk of the rich land and the settlement? Yes.
1217. Do you know anything of the line from peg 110 into Murwillumbah? Yes.
1218. Have you been engaged on it recently? Yes.
1219. Have you succeeded in altering the original survey? Yes.
1220. By reducing the grade in any way? Yes.
1221. And straightening the line? Yes.
1222. To any considerable extent? Yes; there is a saving of nearly 4 miles, between Byron Bay and the Brunswick, on the original line. It went along the base of the main coast range all the way.
1223. The line has been reduced by at least 4 miles? Yes.
1224. Have you succeeded in reducing the grades? There was no question of grade there; it was all easy country.
1225. Between there and Murwillumbah? Between Brunswick and Byron Bay.
1226. What about the piece between Brunswick and Murwillumbah? There are several bad grades.
1227. Would you look upon that as the most difficult portion of the line? Yes.
1228. The most costly to construct? Yes.
1229. Having gone over both lines—from Byron Bay to Murwillumbah, and from the Brunswick to Cudgen—you have no hesitation in telling the Committee that the route to Murwillumbah passes through the best land? Yes; I certainly think so.
1230. Do you think that that route would serve the greater number of settlers? Yes.
1231. Do you wish to make any suggestions to the Committee while they are on the spot as to either route? No. I do not think there is anything that occurs to me.
1232. *Chairman.*] Do you think it will be possible to reduce these grades to 1 in 50 at anything like a reasonable expense? Yes; we are now engaged in trying to do that.
1233. And you hope to get that grade? Yes.
1234. You have been in many other parts of the Colony engaged on surveys? Yes.
1235. Have you ever seen superior land to that through which the proposed line passes? Never.
1236. And I suppose the worst of the land here is better than the bulk of the land in the Colony? I could not say that. Of course there are bad patches in this country as well as anywhere else.
1237. What would you call the land we have come through to-day? That is fairly good. It is not so good as you will find further on.
1238. Apart from the lands on this river, the whole of the land through which the line goes is good? Yes.
1239. What surveys have you been on? Goulburn to Cooma, Goulburn to Crookwell, Robertson to Moss Vale, St. Peters to Liverpool, and Grafton to the Tweed.

- G. Wilkins, Esq. 1240. Are the bad lands here as good as the generality of the lands there? Yes.  
 1241. What are called bad lands here are as good as the average lands between Goulburn and Crookwell?  
 Yes.  
 23 Nov., 1889. 1242. And the good land in this district is superior to any land in the districts which you have mentioned?  
 No. There are very fertile patches in the neighbourhood of Crookwell, perhaps equal to almost the best land in this district.  
 1243. Not of the same extent? Not of the same extent. They are only small patches.  
 1244. This district per acre would sustain a very much larger population than the other districts which you have mentioned? I certainly think so.

SATURDAY, 23 NOVEMBER, 1889.

The Sectional Committee met at the Court-house, Brunswick River, at 3 p.m.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

JACOB GARRARD, Esq.,

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Grafton to the Tweed.

Mr. John M'Gregor, farmer, sworn, and examined:—

- Mr. J. M'Gregor. 1245. *Mr. Garrard.*] What is your occupation? I am a farmer.  
 23 Nov., 1889. 1246. How far do you live from here? Seven miles.  
 1247. How long have you resided in the district? Eight years.  
 1248. What area of land have you? Four hundred acres.  
 1249. How much of it is under cultivation? One hundred and twenty acres of it are cleared and under artificial grasses.  
 1250. Is any under corn, or anything of that kind? There will be some shortly.  
 1251. What you have cleared is principally under grass? Artificial grass.  
 1252. What is the principal product of the district? At present we are engaged in dairying pursuits, but the district is eminently suited for the growth of sugar-cane, and that industry would have been established had it not been for the difficulty of access. We had a letter from the Colonial Sugar Company to that effect.  
 1253. Where do you send your produce—to the Richmond, the Tweed, or the Brunswick? Some of it goes to the Richmond. This entrance is so uncertain that the dairy produce deteriorates in quality before it reaches the metropolis.  
 1254. How far is it from here to Ballina? Thirty miles.  
 1255. How far to Murwillumbah? Twenty-five miles.  
 1256. Some of your produce goes to the Richmond—to Ballina? Some of it goes to Ballina.  
 1257. You know the proposal to construct a railway from Grafton, *via* Casino, Lismore, Byron Bay, and Brunswick, to Murwillumbah? I understand that.  
 1258. Do you know anything about the route it takes? I know a little about the route. I have been over some of it.  
 1259. Do you know anything of the country which the line would serve;—is it good, bad, or indifferent? All the country within 2 miles of the coast is of the very best description, in my opinion.  
 1260. Between Byron Bay and the Brunswick a line runs within three-quarters of a mile of the coast—would that serve the people, or would it be better if it were taken further inland? Settlers would derive more benefit by having the line further inland.  
 1261. Do you know anything about the country between Brunswick and Murwillumbah? I have travelled through it frequently.  
 1262. Is it good land? I consider it some of the very best land.  
 1263. Do you know anything about the alternative route leaving the Brunswick and running to the south head of the Tweed. I know very little about that.  
 1264. Do you know anything about the country at all? Only along the coast.  
 1265. Is it any good? It is not so good along the coast. There is a strip of barren country along the coast.  
 1266. Would a line further inland serve the people better than the coast line? Yes, I believe so.  
 1267. Supposing the line were constructed, where would be the market for the Brunswick people? The nearest shipping-port that would offer the greatest facilities.  
 1268. Either Byron Bay or the Richmond? Either Byron Bay or the Richmond.  
 1269. I suppose you look upon Byron Bay as being the best place for a port? In my opinion it will serve the people of the district.  
 1270. I suppose you do not see much prospect of the Brunswick being made of much account? We feel very confident that it is necessary to improve the Brunswick, because there is sufficient cedar and other timber to keep vessels going here for a number of years.  
 1271. Supposing there were no harbour at Byron Bay, and your nearest deep-water port were Lismore, do you think the products of the district would go there—would a railway there increase the products? Yes. Unless there was a regular and quick communication between here and the metropolis, it would pay better to send it to Lismore.  
 1272. As a matter of fact, there is not that communication now? No.  
 1273. Nor likely to be? No. Of course, when the bar is improved I cannot say what it will be.  
 1274. Do you think the people of the district would use the railway if it were constructed? Most assuredly. There will be a great trade between this district and the Richmond.  
 1275. Is there much dairying produce sent from here? I consider that the district is suited for dairying.  
 1276. Is there much dairying at present? Nearly all who are engaged in anything are engaged in dairying and cattle-raising.  
 1277. Nearly all the produce goes via the Richmond? Yes.  
 1278. So that a railway would give you quicker communication? Yes. 1279.

1279. Do you know the nature of the country between here and Lismore? Yes.
1280. The line is brought very close to the coast at Byron Bay—are there any natural difficulties—a range or anything like that—which necessitate the railway being pushed out to that point? I believe there is a range close to the coast, but I do not know that that offers any obstacle.
1281. You think that the desirability of getting to Byron Bay may have had something to do with the direction of the railway? It is probable.
1282. If the railway were constructed do you think there would be a large increase in the population and the production of the place. Most assuredly I do.
1283. Do you know the estimated cost of the railway? No.
1284. £192,000 from Grafton to the Tweed—that is a large amount of money on which to pay interest and working expenses. There is nothing in the district now to pay that—it is only the future development that will warrant the expenditure? I think the future development would warrant it.
1285. Do you know anything of the country between Casino and Grafton? No, except what I have heard.
1286. Do you think people would pass by Lismore and carry produce to Grafton? I do not think they would pass the Richmond.
1287. You think that the Richmond would be the nearest port after Byron Bay? Yes.
1288. And that they would not go beyond Lismore? Yes.
1289. So that the people in this district have no interest in the portion of the line between Casino and Grafton? Not the slightest.
1290. And if there is less likelihood of that portion earning interest on the capital it will be a drag on the whole line? Yes, to a certain extent.
1291. And, therefore, it is to your interest that it should not be constructed? Well, it would be against our interest as members of the community.
1292. Is there much timber left in this district? I understand that there are several millions of feet of timber—a considerable quantity of it standing, at the present time, far back at the very head of the Brunswick—or rather on the Richmond River waters.
1293. Do you think that if the railway were constructed any timber would be carried by it—the timber at the present time goes in the log? Yes.
1294. Do you think that if railway communication were given it would lead to the establishment of saw-mills near where the timber was growing, and that the dressed stuff would be sent to market? I think it probable that saw-mills would be established in the district, and that there would be a considerable amount of freight for the railway in supplying the various parts of the country.
1295. You know where it is proposed to cross the Brunswick by the railway? Yes.
1296. I suppose the river is not navigable there? It is considered navigable 8 miles up for a fair-sized punt.
1297. A railway bridge would not interfere with that—your punts, I suppose, are not more than 6 feet above the level of the water? A punt has no mast, of course.
1298. The construction of a railway bridge at the proposed site would not be any hindrance to the navigation of the river, if you are dependant upon punts? In my opinion it would not be.
1299. Is there anything else which you would like the Committee to know? I think they ought to know that we have endeavoured to establish the sugar industry in the district, and have petitioned several companies to that effect, but the invariable reply we have obtained is that owing to the difficulty of access they could not see their way to invest capital in the district. We are, therefore, debarred from growing sugar-cane, which ought to be the staple product of the district.
1300. Where is your farm? South-west from here.
1301. I presume it is better country than that nearer to the Brunswick? Yes; this is what I referred to as lying close to the coast.
1302. It would not be fair to judge the Brunswick by what we see between the ferry and here? Certainly not. I might say that we offered to grow cane for 8s. a ton, which is a great deal less than the farmers on the other rivers get. In some cases they get 14s.
1303. The difficulty of getting the sugar away is so great that no company will establish a mill? Yes.
1304. There is not sufficient capital among the people here to establish a mill? We tried to do that, but we considered that the risk was too great, as we should have had to mortgage our farms.
1305. Were you engaged in farming before you came here? No.
1306. Are you a native of this Colony? No; I am a native of Scotland.
1307. *Chairman.*] Would cane stand the cost of haulage from here to Lismore or to Murwillumbah at the ordinary rates, supposing there were no mills at all. For example, the cost of getting coal is 11s. a ton, the cost of haulage on the railway, 1d. a ton per mile. We are told that the cost of producing sugar cane is about £6 a ton, and that the value of the sugar cane is about £17 10s. an acre. Would it be of such value as to bear the cost of carriage from the Brunswick, either to the Tweed or to the Richmond? I do not understand you—the sugar cane would not be carried; it would only be the manufactured article.
1308. You would have to carry the unmanufactured article if you had not a mill—what I want to know is would the difference between the cost of producing the cane, and the value of the cane when grown, be sufficient to bear the cost of carriage? Certainly.
1309. Then you are prepared to sell for 2s. a ton less than they are selling it for on the Tweed? Yes.
1310. It would not matter to you if the company bought it from you, whether they carried it up or down? We offered to sell it for 8s. per ton on the land.
1311. And they are paying 10s. a ton on the Tweed? Yes.

James Anderson, Esq., licensed surveyor, sworn, and examined:—

1312. *Mr. Lee.*] Where do you reside? At present in Lismore.
1313. What is your occupation? I am a licensed surveyor.
1314. Are you a land owner? Yes; I have a section of land.
1315. In this district? 4 miles from here, on the Brunswick River.
1316. Have you resided in this district? I have resided here six years as the Government surveyor.
1317. Is that the extent of your residence in this portion of the Colony? In this immediate neighbourhood it is.

Mr. J.  
M'Gregor.  
23 Nov., 1889.

J. Anderson,  
Esq.  
23 Nov., 1889.

1318.

- J. Anderson, Esq.  
23 Nov., 1889.
1318. I should be glad to hear what you have to say with reference to the railway proposal—first as to the route? Yes; that is the most important thing. I know all the land along the coast line, and it is certainly very inferior country when compared with that on the other route.
1319. Is that the Cudgen route? Yes; I do not consider that it goes through a really fertile farm all the way between Cudgen and the Brunswick. That 20 miles of line could be constructed without a station being necessary. The only place where they could get good land in the vicinity of the coast route would be at Burringbar Creek, and take the loading from there to the coast at Mooball Creek. The Burringbar Creek extends from 3 to 8 miles westward of the coast route, but the inland route travels right through it.
1320. Now what about the route which we are investigating—from Murwillumbah to the Brunswick? That passes through very rich land.
1321. Are you acquainted with all the country along the route? I have been all through that district.
1322. Surveying portions of it? I have surveyed nearly all of it.
1323. You are intimately acquainted with it? Very intimately acquainted with it.
1324. What do you think of it as a producing country? I think it could produce very heavy crops of maize and sugar-cane. I have not been a producer myself.
1325. Still you are thoroughly acquainted with the capabilities of the district? Yes, and I think that they are very great.
1326. Now, as to the rainfall of the district? On one occasion in three months we had only thirteen dry days. I have never kept any return of it, but I have seen by the newspaper reports that we have a rainfall of somewhere between 80 and 90 inches in the year.
1327. How will the line now surveyed from here to the Byron and thence to Lismore answer the requirements of the bulk of the residents in the district? The line from the Brunswick to Byron Bay?
1328. Yes? That would be sufficient for our local wants.
1329. How would it meet the requirements of the settlers in the Brunswick district? No produce from anywhere near the Brunswick would go to the Tweed—it would all go to Byron Bay.
1330. Could any deviation be made in the line that would better serve the interests of the residents here? It avoids altogether the Mullumbimbi residents, by going straight across here; but to my knowledge there is a very high range there, and I do not think it would be possible to cross it. I think the surveyors have tried it.
1331. You think that the most available route has been obtained? I do.
1332. And you think that it will fairly suit the requirements of the bulk of the people? I do.
1333. Which port would be the most suitable and convenient for the people to ship from? Byron Bay, most undoubtedly.
1334. Do you know anything of the Tweed Heads? I cannot say that I do. I have crossed over there two or three times, but I have never paid much attention to the country.
1335. What kind of craft trade to this river? The vessel in at present, the "White Cloud," is the regular trader. She belongs to Mr. Kethel.
1336. What is about her tonnage? Thirty-five tons they say. I do not know anything about shipping.
1337. Are there any steamers trading here? Not regular traders.
1338. Occasionally? We have had one occasionally.
1339. Do they not come here because there is no produce to send away, or because of the bad entrance to the river? I think that the bad entrance to the river has as much to do with it as anything.
1340. What is the chief thing sent away from here at present? Timber.
1341. Any maize? I think maize is grown.
1342. Is there much grown at present? I do not think so. I think the difficulty of getting it away prevents the farmers from growing it.
1343. Would there be much grown if a ready means of transit could be found? I think so.
1344. Do I understand that the district requires an outlet for the produce that could be grown here? Yes.
1345. That means some port to which ships could come at all times? Yes.
1346. Do you know about how much land has been taken up in this immediate locality? A great deal has been taken up since I left here two years ago. On a rough estimate I should say something like 40,000 acres. I include Mooball and Burringbar.
1347. Is the country in that locality equal to the scrub country you came through this morning? Yes.
1348. How far does the scrub country extend west of the road which we came down this morning? I really could not tell you. I know that it goes right on to what we call the Night-cap Range; and when you are there you can see the scrub land far out to the west.
1349. What distance would that be? Over 30 miles, I suppose.
1350. Have you any suggestions to make to the Committee? I have no suggestions to make. I am of opinion that if the country were properly developed, even an entrance to the Brunswick would not be sufficient to take away half the produce.
1351. You must get to some better port to meet a better class of steamers, and the only means of getting to a better port is by a railway? Yes.
1352. Such a port if constructed at Byron Bay would answer all your requirements? Yes.
1353. Failing that you would have to go to Lismore? Yes.
1354. Byron Bay would serve this part of the country better than Lismore would? Yes.

Mr. William Caleb Andrews, constable, sworn, and examined:—

- Mr. W. C. Andrews.  
23 Nov., 1889.
1355. *Chairman.*] What are you? Constable, stationed at the Brunswick.
1356. How long have you been here? Over three years.
1357. How far does your district extend down the Brunswick;—is it a portion of the Tweed Police District? The district in which I collect the Electoral Roll, and which I reckon includes my district, goes about 9 miles to the north, and runs in a narrow strip towards Lismore, about 16 miles south. It runs towards Cape Byron for 7 miles. My district extends the whole length of the Brunswick River; that is, running 16 or 18 miles west.
1358. How many inhabitants do you think there are at the present time within 10 or 12 miles of the Brunswick River? Between 500 and 600.
1359. Men, women, and children? Yes.
1360. Are the lands back from the Brunswick good lands? Excellent lands, 1361.

1361. Similar to those on the Tweed River;—do you know the lands about Murwillumbah? I think they are equally good, if not better, at the back of the Brunswick.
1362. Has the settlement been increasing at all? Yes; it has increased very much during these last two years.
1363. Is the timber at the back of a superior character? Yes.
1364. Is there much of it there still? Yes, plenty.
1365. I suppose, in travelling about the district, you hear an occasional complaint of the difficulty of getting produce to market? Yes.
1366. I suppose those complaints are pretty general amongst the farmers and settlers? Yes. I have a pretty good knowledge of the roads myself, and two years ago you could not get through at all—it was so wet and boggy.
1367. Do you think a railway from Murwillumbah, running south, would open up a market for people here? Yes.
1368. And have the effect of increasing the settlement in the district? Yes, very greatly.

Mr. W. C.  
Andrews.

23 Nov., 1889.

SATURDAY, 23 NOVEMBER, 1889.

The Sectional Committee met at Byron Bay, at 5 p.m.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

JACOB GARRARD, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Grafton to the Tweed.

Mr. Frederick Valentine Wareham, farmer, sworn, and examined:—

1369. *Chairman.*] Where do you reside? About 3 miles from the bay.
1370. What are you? I am farming now.
1371. How long have you been there? A little over six years—six years and three months.
1372. Has your attention been directed to the proposal to construct a line of railway from Grafton to the Tweed River? It has.
1373. Do you know the country lying between those two points? I only know the country between Lismore and the other side of the Brunswick—5 miles the other side of the Brunswick, which is the richest and most productive land I have ever seen.
1374. Productive of what? Everything put in the soil and properly attended to. All tropical fruits, such as bananas and pine-apples will grow.
1375. From Lismore to the Brunswick? Yes. Sugar-cane, pine-apples, coffee, mangoes, and oranges will grow here.
1376. Your difficulty here in developing the land is the want of a market, I imagine? Yes. We have been six years here, and have made nothing off the place.
1377. Are there men in the same position as you are? There are hundreds of families in the big scrub that have been here eight years, and have been putting up with great difficulties.
1378. In the first place, I suppose the bulk of the land here will require the expenditure of a great deal of money to make it suitable for cultivation? At least £10 an acre.
1379. Is that the bulk of the land? The bulk of the land in what is known as the big scrub. To make it fit for grazing about £5 an acre would suffice.
1380. When you have made the land fit for cultivation where is your market? We look to Sydney for our market, with an outlet at Byron Bay.
1381. That is what you hope for—an outlet from Byron Bay, with a market in Sydney for your produce? Yes. If we had the railway that we have been expecting for eight years from Tenterfield we should have a splendid market for our tropical fruits there, and they would have a market for wheat and other products here. If a railway and a breakwater were made at Byron Bay the population in one or two years would be four times what it is now, and that would create an immense local market for Tenterfield, and therefore make that country productive, so that it would be able to support a greater population than it does at the present time.
1382. What is the average size of the holdings between the Brunswick and Lismore? I think between 200 and 300 acres. The largest are 640 acres, and the smallest are 100 acres.
1383. Those are the original selections; but I suppose there are plenty of people who have swallowed up several of these selections? That has happened in a few cases, but not very often.
1384. What do you think is a fair size for the farms in this wonderful country, that you call a scrub? Forty acres will keep a family in comfortable circumstances, and 100 would be enough for anybody. Forty acres, if thoroughly attended to and worked, would produce more than 100 acres half worked, because the weeds grow up so fast.
1385. If the railway were constructed to the Richmond, would that be of any advantage to you? It would place us in a better position than we are in at present; but we hope, with such a splendid port as could be made here, to get our stuff away from the bay, because the freight would only be about 10s. a ton to Sydney from here, as against about £1 per ton, together with railway freight, if it went by way of Lismore. The railway would be an immense advantage over the present state of affairs. I am sure that the construction of a breakwater at Byron Bay, with a railway from Tenterfield, via Casino and Lismore, and another from the Tweed River, via the Brunswick, having their termini at the bay (part of what is known as the Grafton-Tweed Railway), is the only solution of the problem of developing the resources of this vast and phenomenally rich country. It is almost impossible to estimate the quantity and variety of valuable products the country between the Tweed and Richmond Rivers is capable of growing; and it is a well-established fact that, with ordinary care, 30 to 40 acres of land will very comfortably support a family—in many cases much less than that area. Ten acres under fruits will return a very handsome income if facilities be granted for quick and cheap means of communication with a market. Bananas, pine-apples, mangoes, custard-apples, sugar, coffee, rice, and almost all productions peculiar to the tropics, grow with great luxuriance by the side of English clover and other vegetation peculiar to temperate climates. The Fiji banana attains a great size upon certain soil, thousands of acres of which exist near the bay. A thousand

Mr. F. V.  
Wareham.

23 Nov., 1889.

Mr. F. V.  
Wareham.  
23 Nov., 1889.

thousand bunches, as large, or even larger, than the one produced, may be annually taken from 1 acre of land. The country for many miles back from the bay has, with the exception of reserves, been settled upon over eight years, by practical settlers, who have had a very hard struggle to make even a bare subsistence, scores having been compelled to leave and seek a living elsewhere, after spending from five to seven years vainly striving to make a living here, and all the time submitting to unparalleled hardships, and paying the annual interest to the Lands Department. Were it not for the fact that the railway has been dangled before our eyes for eight years, the entire population would have deserted the country in utter disgust years ago. Great numbers have mortgaged their selections to enable them to hold on till the long-promised works are started and completed. The timber of the district is of immense value. Even pine, which sells at 8s. per 100 feet, has distributed much wealth amongst those who have been engaged upon the Richmond in the timber industry. There are many thousands of trees near the bay worth (in Sydney) from £25 to £30 a tree. Cedar trees have been cut, each worth from £200 to £400. With the vast increase of population that must follow the construction of these works, the wheat growers of New England would have an almost unlimited market here for their produce, and settlement there would progress, especially with a railway to the coast to give them cheap carriage, instead of having to pay for its transit all the way to Sydney or Newcastle. The interchange of produce would be an inestimable benefit to both districts, and create an immense traffic for the railway. Wool would go direct to Europe from the bay. The settlement of a dense population here would return a great revenue, independent of that which would be derived directly from the railway, which would also be great. Independent of the idea of making Byron Bay a port of shipment, it should be converted into a harbour of refuge. I have seen as many as nine vessels (including four steamers) lying in the bay for shelter during south and south-east gales. Hundreds of ships put into here for shelter each year. As shown in the accompanying statement the rainfall here is great, and in ordinary seasons well distributed throughout the year. The average for the three years preceding the present, was 85.41 inches. The average for four years, including the quantity already recorded for 1889, would be over 91 inches.

1386. Are the returns about the rainfall from your own observations? Yes.

1387. Do you keep a register and rain gauge? Yes, and I furnish the Government Astronomer with reports.

1388. Have many selectors in the district gone away from here? A great many have gone away and allowed their places to be overgrown with weeds. Perhaps they will come back and work them when facilities are offered for getting to market.

1389. I suppose that in this district as in others many of them have sold out? Some of them have, but not a great many round the bay.

1390. We are speaking now of the country between Brunswick and Lismore? Some have. I know of two or three between this and the Brunswick, who have sold out because they could not hold on any longer. They had mortgaged their places, and were pressed, and had to go.

1391. Is the land round the bay of any value? It is very valuable indeed. As far as Lismore, it is all chocolate soil. There are 7,000 acres of reserves close to the bay, and a lot of valuable land included in them.

1392. What would that land bring an acre, if you had a railway and harbour works? I think that with the standing scrub it would fetch £15 an acre, and perhaps more. There is a considerable quantity of swamp which can be drained which is fine rich land.

1393. Do you think that the land round the town in the reserves would average £10 an acre? I think it would average a good deal more than that.

1394. Do you know anything of the other reserves—the Clarence forest reserves? No, I know nothing about them.

1395. You say that the population would rapidly increase if the proposed works were carried out? It would.

1396. I notice by this map that the land is pretty well alienated; would those who have got the land lease it to settlers? They would sub-divide and sell. Those who hold 640 acres would sub-divide their land into as many as six farms and lease it or sell it, as they have done at Lismore.

1397. Do you think a man could afford to pay a fair rent, and yet make his farm profitable? Yes very profitable.

1398. I see that there is timber shipped from here now; is there any quantity of it shipped? About 100 logs a week. There were about 125 I believe taken away by the last trip but one, of the steamer, and eighty to ninety by the last trip.

1399. Does a steamer come here regularly now? Yes, pretty regularly. At all events she does a trip a week. There is one regular trader and two others. A little boat from Ballina does a trade here, and the "Kuruah" sometimes calls here.

1400. *Mr. Garrard.*] You have included in the produce likely to come to Byron Bay, the produce from Lismore, is it likely that any produce will come from Lismore, or within 10 or 15 miles of it, when they have a waterway of their own? I think that the freights from Byron Bay would be so much cheaper that they would bring their stuff here by railway, because large ships will be able to come here, and large ships can always take freight more cheaply than small ships can.

1401. Your market is Sydney? Yes.

1402. What large vessels will call here? We hope to get larger vessels than those that trade to the Richmond now.

1403. Do you know that they are spending a large sum of money in making the Richmond a good port; do you not think that produce 15 miles from the Richmond will go to the Richmond? I do not think 15 miles back on this side will go to the Richmond.

1404. What is the distance from here to the Richmond? To Lismore it is 36 miles by the road; but there is a large bend—you can go straight to Wardell.

1405. You do not think that the trade would go 10 miles to the Richmond, but that it would go 20 miles to Byron Bay? I think dairy produce would come this way. Dairymen do not seem to care about sending their produce down the hot Richmond river.

1406. Is it not as warm here as at the Richmond River? It is not nearly so warm here as it is at Lismore. I have spoken to scores of dairymen and they say that they prefer coming here to going to the Richmond.

1407. You intend to concentrate the trade from the north, south, and west at Byron Bay? That is my idea—that the bay is the great outlet for all this northern district.

1408.

Mr. F. V.  
Wareham.  
23 Nov., 1889.

1408. Then it would be very foolish to waste any money on the Tweed and Richmond; we should concentrate all our efforts to improve Byron Bay? No. The Richmond has a trade of its own that will warrant the expenditure of the money there, and Byron Bay has a country at its back that will warrant the construction of a breakwater here.
1409. You have complained of the want of facilities for getting produce to market—if the railway were constructed, would your produce go to Lismore, putting aside the Byron Bay scheme? It would go to Lismore, or at least half of it would. I do not know that the perishable produce would.
1410. I want you to dismiss from your mind for a moment the possibility of any improvement being made to Byron Bay. If the railway were constructed would it allow you to send your products to market? It would when the bay was rough.
1411. How often is that—twice a year? More often than that.
1412. How many days in a year? A steamer may be detained perhaps fifteen or twenty times in a year when heavy north-easters, or heavy south-easters are blowing causing a big swell.
1413. For nine months out of the year you would avail yourselves of the present facilities of Byron Bay, and during three months you would send your produce by the railway? Yes, if we could not get it away by any other means.
1414. Would the country be justified in making a railway to carry produce for only three months in the year? There would be a great deal of produce sent between this and Lismore. I look upon the railway as part of a railway to the table-land.
1415. Are you going to bring all the stuff from Casino here as well? I believe so.
1416. Do you not think that a rather visionary prospect? I do not think so.
1417. You anticipate bringing all the trade north from the Tweed, and south from Casino to Byron Bay? Even from the western portion of New England to Byron Bay. It would be better to send stuff direct to the coast than to take it down to Newcastle and Sydney by rail.
1418. What is the sugar cane we see here? It is grown here.
1419. What is done with it? There is a mill close to the Bay. A considerable amount of cane was put into cultivation, six or eight years ago, but unfortunately the owner of the mill failed, and everybody had to burn his cane, or give it to cattle, after spending hundreds of pounds over it.
1420. The only thing exported from here is timber? Timber, butter, pigs, and all sorts of farming stuff.
1421. How many pigs go down during the year? The trade of the district has only just started, with the completion of the jetty and the erection of the crane.
1422. *Mr. Lee.* You know the Richmond River? I do; I have travelled over it.
1423. In what direction does the river flow before entering the Heads at Ballina? It comes from a south-easterly direction.
1424. I want to know in what direction the river follows the coast? It is almost parallel for some distance. It takes a bend in a south-westerly direction until near Coraki, and then it flows northward.
1425. Will you point out to the Committee on the map the locality in which the rich lands of which you have been speaking are situated? The whole of the land south-west of Byron Bay in one block is of the richest basaltic formation.
1426. Is it scrub land? It is all scrub land with the exception of a few patches of forest land near Lismore, which is also rich.
1427. Will the railway be in such proximity to this land that the settlers can make use of it? The railway runs down the valley of the Byron and Wilson's Creek, where there is very rich land; the richest in the scrub, though it is all rich, to the tops of the hills.
1428. About what distance would the line be from the 85 miles to the nearest shipping place on the Richmond River? I cannot say.
1429. Is it a fact as it has been so often asserted by the residents here that those living in the locality just indicated by you are unable to take advantage of the river for their produce? They can do it, but it will not pay them.
1430. Will you give me a reason or two why they cannot? In the first place the roads are very difficult to travel over, especially in this moist climate, and then they would have to pack the produce most of the distance.
1431. On horseback? Yes. For a great deal of the distance they would have to pack the produce, and there would be such an immense amount of labour in that, that it would not pay them to do it.
1432. Owing to the bad state of the roads, the settlers are unable to cart their produce to a shipping port on the Richmond River? Yes.
1433. And that is the reason why you think a railway should be made—to give them communication either with the Richmond or Lismore or with Byron Bay? Yes.
1434. Do you wish the Committee to understand that the whole of the trade from Casino and Lismore would be likely to come to Byron Bay if the breakwater were constructed? I do not know whether the whole of it would, but I think a great deal of it would, from Casino and right away beyond Casino. I am informed that there is an immense tract of rich country between Casino and Tenterfield, and I believe that if a railway were constructed the produce from there would come straight down to the bay.
1435. On the banks of the Richmond itself the population is rather dense? Very dense.
1436. And there is a large quantity of produce raised there? An immense quantity.
1437. The largest proportionally that is raised in the district? By far.
1438. The reason for that is that the land is close to navigable water? Yes.
1439. The produce from that land will always be sent by water? Always where the land is near good deep water.
1440. You are of opinion that the importance of the Richmond River alone will always keep it open for traffic? Yes, the lower Richmond.
1441. You still hold that the Richmond does not serve the bulk of the settlers round about Byron Bay, and where you have indicated? It does not.
1442. Nothing else would be of use to you except a railway? The railway and the breakwater.
1443. To make the bay a port? Yes.
1444. I am speaking of means for conveying your produce to an outlet? Yes. We need some means for getting it away after the terrible difficulties that have had to be encountered for many years past. The whole country would be depopulated if it were not for the prospects of getting a railway. The settlers have been living on the hope of getting a railway and a port.

- Mr. F. V. Wareham.  
23 Nov., 1889.
1445. Is there much dairying carried on at the present time? Yes.  
1446. Dairy produce requires sending to market quickly? Quickly.  
1447. It is what you call a perishable commodity? Yes, very perishable. I am not an authority on dairying.  
1448. Is there any additional information which you wish to give the Committee about this line;—supposing it were decided by the Government not to construct harbour works at Byron Bay what about the railway communication then? If they decided not to construct the breakwater we should have to send perishable stuff when the bay was rough by the railway. It would cost more, but it would be better than nothing. We would not think of sending stuff to the Richmond from this country if the bay were a harbour. I consider that even to make it a harbour of refuge the breakwater ought to be constructed.  
1449. Knowing the district, and the people, and the difficulties they have been under for so many years, you are clearly of opinion that the proposed route will serve the best interests of the majority of the settlers? It will go through the heart of the country.  
1450. And offer means of communication with Lismore at the one end and Byron Bay at the other? Yes.

Mr. Thomas Temperley, selector, and Inspector of Northern Fisheries, sworn, and examined:—

- Mr. T. Temperley.  
23 Nov., 1889.
1451. *Chairman.*] Where do you reside? At Ballina at present.  
1452. At the mouth of the Richmond? Yes.  
1453. How far is that from here? It is about 20 miles from here.  
1454. How long have you resided in this district? I had a selection in this district six years.  
1455. Have you got it still? Yes.  
1456. Do you know the route of the proposed railway? Yes.  
1457. Do you know the line 15 miles back from that to the westward, between Brunswick and Lismore? Yes. I am well acquainted with the land in the neighbourhood of the bay.  
1458. Right into Lismore, and back west from the bay? Yes.  
1459. What is the character of that land? It is, as a block, the finest land in the Colony. I reckon that we have, within a radius of 15 miles of Byron Bay, an extent of country that is unequalled in the Colony. To my knowledge, between 80 and 90 per cent. of the land within that area is fully equal to the land which is now being alienated as special areas in portions of this electorate.  
1460. What quantity of land within that 15 miles would it be necessary to allot to a man in order that he might make a fair living out of it? Forty acres, or 90 per cent. of it, would be sufficient to support a family. A smaller area would be sufficient if the family were engaged in the fruit industry—an industry that the country is well adapted for.  
1461. If there was a good market for the produce? That goes without saying. It is my duty to travel through a large portion of the coast districts of the Colony. I am the Inspector of Northern Fisheries, and I am thoroughly conversant with the coast districts of the Colony, and I say, that within the neighbourhood of Byron Bay there is an extent of fertile land that cannot be found in any of the coast districts outside the Richmond electorate.  
1462. You know the Hunter River district well—Maitland, West Maitland, Morpeth? I have been to Maitland and to Morpeth.  
1463. Do you know the Shoalhaven district—the farming land? I know the extent of farming land there, and I know that it is very often fringed with hardwood country.  
1464. Are the lands here equal to those lands? They are all scrub lands here, or nearly all.  
1465. Equal to the best of those lands? Yes, and on the Richmond River there are five or six mills, all of which are engaged in cutting soft-wood—scrub-wood; you cannot say the same of any other saw-mills in the country. It shows the extent of the brush land. It is the almost unbroken extent of brush land in this district that is the real glory of it, and what gives it an advantage over the other parts of the Colony which consist of hardwood country.  
1466. You have hardwood here? Very little.  
1467. Do you know the country out to the Tweed River? Yes.  
1468. There is a good deal of hardwood there? There is a good deal there, but there is not much in this locality, in fact, if you went away from the coast here you would have very great difficulty in finding a decent patch of hardwood country 15 miles from Byron Bay.  
1469. If a railway were carried out, as proposed, from Byron Bay to Casino, but the breakwater at Byron Bay not made, would the people within that radius be served by it? Certainly.  
1470. Do you think that they would have to use the railway? Certainly. It would be of great advantage in taking the produce to the nearest shipping port available.  
1471. And the people here would be better off than they are now? Certainly. The people would put their produce into the train and send it to the nearest shipping port available. It has been stated publicly by several people that there is no good land within 4 miles of Byron Bay; but as a matter of fact within a radius of 4 miles of the jetty we have thousands of acres of magnificent brush-land—fertile land, equal to the land that is being alienated as special areas.  
1472. That land ought to be very valuable if unalienated? The land in the neighbourhood has been alienated, but further west there are thousands of acres of special area country unalienated.  
1473. And that is worth from £10 to £15 an acre? It would be if made accessible.  
1474. Do you think that if it were thrown open in special areas of 40 acres each, and a railway made, those wanting land would pay the Government as much as they would pay a private individual? Just so. The reserves, if there were means of access by railway, would sell at a high price.  
1475. Do you think that they would bring £10 an acre if the railway were constructed? Yes; I should like to invest in some of them at that price, when the railway is constructed.  
1476. All round there would be no trouble in getting £15 an acre for the land? For a great part of it.  
1477. The greater part—and higher? Yes; there is land in this district which, if you could put a railway through it, would be worth £15 an acre.

Mr.

Mr. Edward Stephen Atkins, sugar planter and manufacturer, sworn, and examined:—

Mr.  
E. S. Atkins.  
23 Nov., 1889.

1478. *Chairman.*] What vocation do you follow? I am a sugar-planter and manufacturer.
1479. Where are you living? At Byron Bay. About  $2\frac{1}{2}$  miles from the jetty.
1480. West I suppose? Barely west—more to the north-west.
1481. Is it there that you have got your mill, and your cultivated land? Yes.
1482. What do you grow there? Sugar-cane is the only thing that I am growing now.
1483. How long have you been growing that? Two years and three months. It had been growing there previously to my going, but the place had been left to go to ruin.
1484. What is the result of your cultivation of sugar-cane—do you produce a good cane? The land will grow splendid cane, equal or better than that grown at the Clarence River. I might mention that I was fifteen years on the Clarence River, employed in the same occupation as I follow now.
1485. Do you know the cane grown on the Tweed River? No; I cannot say that I know it.
1486. I suppose it fetches about the same as the cane grown on the Clarence? About 12s. for the cane, and 1s. for carting to the punts—13s.
1487. Is the cane you produce in this locality equal to that? Quite.
1488. And would be worth that money to the producer? If there were a means of getting it away.
1489. Getting the sugar away, or the cane to the mill? Yes.
1490. Do you buy any cane? Farmers were growing cane for the party who had the mill before me, but he failed and they are frightened to cultivate it again, for fear that they will be left in the same way.
1491. They are afraid that you will "go broke"? No. My mill is not a very large one. If the proposed works were carried out capitalists would come to the district, and give a large price for the cane.
1492. How much would you want to supply your mill? Two hundred and fifty or three hundred acres. My holding is 600 acres.
1493. Is it forest land? No; all scrub land.
1494. There is no reason why the district immediately behind Byron Bay should not produce sugar-cane equal to that grown on the Clarence and in other parts of the district? There is nothing to prevent it. Our climate is better than that of the Clarence. We have not the frosts here that they have on the Clarence.
1495. Is there not more extensive country between the Richmond and the Tweed than there is on the Clarence? Within a short radius of Byron Bay we have more land suitable for cane than there is on the Clarence.
1496. There is a very small area on the Clarence suitable for cane? Very small. There is a narrow ridge along the banks of the rivers and creeks, in some cases not extending back more than a few chains.
1497. Does the good land extend back from the Clarence any distance? In some places.
1498. Fifteen or 20 miles back? No; but up some of the creeks 5 or 6 miles.
1499. How far back could you go here? Ten or 15 miles.
1500. And up and down? Yes.
1501. You know the country fairly well? I cannot say that I know much of the country.
1502. Do you know the country between here and Lismore? Yes; and 8 or 9 miles at the back again.
1503. Then if you had means of communication you are satisfied that this industry would be very largely developed in the district? Very extensively developed.
1504. That would find employment for the farmers and labourers? Yes.
1505. How many men do you employ in your small establishment? In the crushing season I have from twenty-two to twenty-four men.
1506. How long does that last? It depends upon the quantity of cane that there is to be crushed. With sufficient cane the season would last five months.
1507. You would employ that number of men even for your small establishment? That would be in working the mill and cutting the cane; but there would be other men employed on the plantation.
1508. Apart from the growing? The number I have mentioned would be those employed in the manufacture of sugar.
1509. What number of men do they generally employ in the cultivation of sugar on a farm of 40 acres? The amount of labour varies. I should think 40 acres would give employment for four men all the year round.
1510. If you had 80 acres would you require eight men? It would take about eight men on the average to work the land; but then in parts of the year more men might have to be employed.
1511. What is the rate of wage paid in this district to farm labourers? £1 a week and their rations.
1512. What is the average wage paid to those engaged in the mill? From £1 a week up to 30s.
1513. I suppose the carters and cutters get the same? The carters 25s. a week, and the cutters from 30s. to £2.
1514. They take it by the acre? By the ton.
1515. How many tons per acre will this land yield? I believe that the land where I am now has grown as much as 70 tons to the acre.
1516. But what is the average? 40 tons.
1517. Would that be an average crop? I think it would be a little more here. I would be safe in saying that 40 tons an acre would be an average crop here.
1518. What is about the average crop on the Clarence? I have seen the returns of the Colonial Sugar Company there, and one season I believe it was 18 or 20 tons. In one season when I was living on the Clarence I remember the cane inspector saying that the crop only averaged 20 tons per acre.
1519. What was the nature of the season, good, or bad? Most of the land was not suitable for cane, and the frost had been very heavy in the winter.
1520. I was trying to ascertain the average crop in a fair season—that is, what the land would produce in an ordinary way under ordinary circumstances. I would like to know, in order to compare the two places? I might say 30 tons. While I am speaking of cane I might draw your attention to some of the cane that I have grown (*Sample of cane grown in the district shown to the Committee*).
1521. This cane was grown by you? Yes. At Byron Bay.
1522. What is the height of it? Some of it is over 7 feet of crushing cane. I might mention that it is not picked cane. I did not cut it myself, but I sent my children to bring me a few straight stalks. The cane you see was planted last December, and there were only five or six months of growing weather before the cold weather set in.

- Mr. E. S. Atkins. 1523. Is that the cane that matures in a year? It is what they call the annual variety.  
 1524. *Mr. Lee.*] What is the name of it? Gray Fiji.  
 1525. Is it the most suitable kind of cane for the climate? It is the most suitable cane for this district and for the Clarence. It is most generally grown on the river.  
 1526. How many tons of cane does it take to produce a ton of sugar? I believe that with proper machinery 10 tons of cane would produce 1 ton of sugar.  
 1527. Do you know the proposed railway route? Partly.  
 1528. Does it go anywhere near your premises? Well, one part of the line goes through my land. There are two surveys I think, and it is the first surveyed route that goes through my land.  
 1529. Suppose the line went through your land, would you feel disposed to give to the Government free of cost whatever was required for railway purposes? It is leasehold land, but I believe it would be given by the proprietor.  
 1530. Do you know whether that would be generally done in the district? I do not know for certain, but I think it would be.  
 1531. You are of opinion that the line would be of immense advantage to the settlers in the district? Yes, I am of that opinion.  
 1532. Do you think that if the line were carried to Tintinbar and Emigrant Creek it would give a reasonable outlet for the people? Yes, it would, and if the railway went through there, the country would be very thickly populated.  
 1533. What is the nature of the land between Tintinbar and Emigrant Creek? It is similar to the land about here—all heavy scrub land.  
 1534. But supposing the line were not diverted to Tintinbar, but taken to Lismore, would that meet the requirements of the settlers at this end? It would meet the requirements of the settlers at this end.  
 1535. Is there any route which would suit their convenience better? I have not thought that over.

Mr. Robert Campbell, dairy farmer, sworn, and examined:—

- Mr. R. Campbell. 1536. *Mr. Lee.*] Where do you reside? At Byron Creek.  
 1537. What is the nature of your occupation? I am a dairy farmer.  
 1538. A leaseholder or a freeholder? A freeholder.  
 1539. How long have you been living there? Eight years.  
 1540. How far is Byron Creek from here?  $6\frac{1}{2}$  or 7 miles, as near as I can say.  
 1541. Is it near to the proposed line of railway? The proposed line runs through my place.  
 1542. How long have you been engaged in dairying here? It is about six years since I commenced here, but I have been dairying all my life, off and on.  
 1543. What is your annual production of butter? I could not exactly give you that.  
 1544. Approximately? I suppose I am making a little better than 100 lb. a week.  
 1545. In round numbers 4 tons a year? Somewhere about that. I have not done that all through, since the time I commenced; but that is about what I am doing now.  
 1546. It took you some time to get your land cleared and grassed? Yes, and it is not all done yet.  
 1547. Where is your market for that butter? Sydney.  
 1548. How do you get it there? Most of my time I have had to take it on a pack horse, with the horse up to his belly in mud.  
 1549. Where? To Ballina. That is the port that we used before we had a steamer to Byron Bay. At the present time I ship at Byron Bay.  
 1550. Can you get to Byron Bay more easily than you can get to Ballina? I am 7 miles from Byron Bay, and 20 miles from Ballina.  
 1551. It is only recently that a steamer started running to the bay? Yes.  
 1552. Is your production likely to increase? Yes.  
 1553. Are you bringing more land under grass? Yes.  
 1554. Are you devoting any portion of your land to the cultivation of grain or maize? I have grown maize and all kinds of crops on it for my own use. It is of no use growing for a market, because I have no access to one. We are forced to work on dairy produce.  
 1555. You find that the most profitable now because you can pack it to market, while you could not pack sugar or maize, or anything like that? Yes.  
 1556. Suppose the railway were constructed? Then we would grow maize, potatoes, and other crops, and make money out of things that we cannot attempt to produce now.  
 1557. The Richmond River is of very little use in opening up your part of the country? The Richmond is almost useless as far as we are concerned.  
 1558. It has been alleged over and over again that the proposed railway is to serve a large population lying back from the river which the river does not serve and is not likely to serve—is that correct? It is. You can see what I have gone through. A man is not going to let his land drift into the hands of the banks. When I have not been able to make two kegs of butter a week I have had to hang stones on one side of the horse to balance the keg on the other. I come from the Hunter River, and I reckon the land there as good as any in New South Wales barring this scrub. I do not think the Richmond is as good as the Hunter. Some time ago land sold on the Hunter, at a place called Narrowgut, for £100 an acre; but I believe that for our business the land here is equally as good as that, if not a great deal better, and I believe that it will produce as much farm produce, barring hay. The Hunter is better suited for lucerne than this district is, though we can grow lucerne here.  
 1559. Are there many settlers in the locality who are in the same position as yourself with regard to means of transit? Hundreds. I have a map here showing the settlement on the land, and I can point out to you places where people are in the same position as I am in.  
 1560. Are there any creeks or branches of the river running through or near these lands? There is the head of the Richmond River—Wilson's Creek—4 or 5 miles from me, but it is not navigable.  
 1561. If there were any navigable waters you would not be likely to pack 20 miles? Not likely. No man will go further than he can help.  
 1562. That being the case, is the dairying industry likely to increase very rapidly? Yes; it would increase at a great rate if we only had proper access to market. In fact I might say that we have almost no access to the water, but yet we are supposed to compete against the outside world. 1563.

1563. The construction of this railway would be of very great benefit to you? Yes; it would be the making of the district and of the people.
1564. As this line will be such a benefit to you, will you be prepared to give to the Government the portion of land which it will be necessary to take it through? I pay my share to the State as much as any man does, so why should I give up my land? I would not give it up.
1565. Supposing everyone else was to do the same? Then they would be doing what has been done on other lines. Personally I should oppose this railway, because it will do me a lot of harm—it has cut my water frontage off, but I am not going to oppose it, although I shall be personally injured by it.
1566. Have you any additional evidence to give the Committee? No.

Mr.  
R. Campbell.  
23 Nov., 1889.

Mr. Edmund Williams, storekeeper and selector, sworn, and examined:—

1567. *Chairman.*] Where do you reside? At Coorabell Creek, 7 miles west from the bay.
1568. How long have you resided there? I have resided there more than two months, but I resided just below there for six years.
1569. On a selection of your own? On a selection of my own.
1570. Is this other selection a new one? It is a new one.
1571. What have you been doing with the land? I have been putting it under grass. I have a store also. I am a storekeeper and selector.
1572. What are you doing with the new selection? I am just commencing to work on it.
1573. What is the area of each of them? The original selection was 200 acres. This selection contains 100 acres conditionally purchased and 80 acres conditionally leased.
1574. What do you want to tell the Committee? A great many of us were attracted here about seven years ago with the intention of growing sugar-cane, for which the land is well adapted; and we picked out the best land that we could find for the purpose. We were under the impression at that time that the Government would give us a railway and a port at Byron Bay. We held a meeting here, and I have a report of it, showing that that was the expectation of the settlers.
1575. What is the date of that meeting? 15th September, 1883. The report shows what our difficulties were, and what the people were led to believe.
1576. By whom were they led to believe? I cannot say, but we understood from the then Government that they were going to carry out some of the works that are now proposed.
1577. I suppose you know that the Government cannot construct a railway without the consent of Parliament? Your grievances now are, I suppose, the same as they were in 1883? Those grievances have not been altered. Until three months ago we had not a place where we could ship our stuff with any degree of safety, and the expenses of shipping have been something enormous, and have precluded us from sending produce to market. We could send nothing away from here except butter or grass seed, or something that we could carry away on horseback to a port.
1578. Could you not take vehicles to a port? We have within the last two years been able to take vehicles to Lismore; but many a person in the scrub within 10 miles of here has never had a vehicle near his door.
1579. But you have completed residence on one conditional purchase and have now taken up another—you seem to like it? I cannot say that I have been very successful. I have endured hardships that I would not endure again.
1580. You are going through them again? The selection that I am taking up now is alongside the main road, and I am doing it with an eye to business. With the place of business I have now, it has cost me until within the last three months very nearly £4 a ton to get goods landed here.
1581. What has it cost you with a steamer running from Byron Bay? The freight is about half. I had to pay £1 a ton to land the stuff from the vessel on to the shore, until within the last three months.
1582. That is what you pay now—£1 a ton on the jetty? I pay £1 a ton for any goods that I get from Sydney. Until lately I had to pay from 30s. to 50s. a ton, and £1 a ton besides that for getting the goods from the vessel to the shore. After that I had to cart them 7 miles, and on one or two occasions I have been two days getting them from here to my own place.
1583. How many miles is that? Seven miles. I had more than 7 miles to go then, but the distance by the road now is about 7 miles.
1584. The Government did not make those difficulties for you, did they? Certainly not.
1585. You knew of them when you started here, and you faced them? Yes.
1586. Do you think that if railway communication were given, say to Casino, the settlement of this part of the Colony would be very much larger than it is at the present time? Certainly.
1587. Of course, if you had direct communication with Byron Bay, it would be still larger? Certainly it would.
1588. We have heard about the richness of the land here for cultivation; but you have told us that you have put yours under grass? Just so.
1589. For stock I suppose? The reason I laid my land down in grass is this: when the sugar-cane was a failure—and I may say that I brought sugar-cane all the way from the Clarence, and round the beach from Ballina—the only way I could get it—I had to give it to the pigs. No capitalist would come here and erect a mill, and I was unable to erect one myself, and did not feel inclined to do so. We could then produce nothing except butter and grass seed, which we could carry away easily; I could grow anything I like, pretty well, if I could get it away.
1590. Is there anything else which you would like to say? I would like to say that if the railway were constructed, it would certainly benefit me in many ways. It would be the means of helping me to get produce away to Lismore and Casino, or even up to the Tweed. I could send butter to any of these places, as well as to Sydney.
1591. *Mr. Lee.*] Would you be likely to send any of your products to Grafton for shipment? Well, yes, I daresay we would be able to send something to Grafton too, in the way of butter or light produce—we should never send heavy produce there.
1592. Do you know what the distance would be by the railway line? I cannot say exactly.
1593. Is Grafton likely to be the port for the produce raised in this district—sugar, maize, and dairy produce? Not at all. We should never send the whole of our produce to Grafton.
1594. You would send it to the nearest shipping port, wherever that might be? Yes.

Mr.  
E. Williams.  
23 Nov., 1889.

1595.

- Mr. E. Williams. 1595. And as a necessity, part of your produce—perishable goods—would require quick transit? Yes.  
 1596. Do you know anything of the proposed route? Yes. I cannot say that I know a great deal about it; but I know pretty well where it is going.  
 23 Nov., 1889. 1597. Do you think it is best calculated to serve the interests of the people of the district? I think so.  
 1598. You have no suggestions to make as to deviations? No. I cannot say that I know of any better route than the one proposed at present.  
 1599. Are you a member of the Progress Committee? Yes.  
 1600. Secretary? No.  
 1601. A prominent member? I cannot say; I sometimes attend.  
 1602. What is the feeling of the people generally in reference to the route—are they satisfied with it? Yes: they feel very satisfied with it.  
 1603. They would be quite satisfied if it were constructed? Yes.

Mr. Owen Bishop Wareham, farmer, sworn, and examined:—

- Mr. O. B. Wareham. 1604. *Mr. Lee.*] Where do you reside? At Byron Bay.  
 23 Nov., 1889. 1605. How far from the jetty? Three miles.  
 1606. What are you? I am a farmer.  
 1607. What is the size of your holding? Two hundred acres.  
 1608. What are you producing? Grass, bananas, pine apples, and maize; and I am shipping timber off the land—soft timber, such as pine, cedar, beech, &c.  
 1609. Where do you find a market for that? In Sydney.  
 1610. By which route do you send it to Sydney? From Byron Bay by the *Alice*—direct from Byron Bay to Sydney.  
 1611. Have you a statement to make to the Committee? Yes. It is as follows:—As the country dependent upon Byron Bay is, from its recent occupation, almost entirely undeveloped (although all selected by *bonâ fide* holders, with the exception of a few reserves) I have no statistics to submit—I can only give the distance between certain localities, and declare that the land is very extensive, of the richest nature, and has an annual rainfall of nearly 100 inches; that rye grass, clover, oats, barley, maize, sugar-cane, bananas, pine apples, coffee, and most of the varieties of fruits, and also vegetables flourish here; that in addition to these we have growing in immense quantities, studded through this huge brush, timbers of the most valuable descriptions, such as the red, white, and pencil cedars, rosewood, beech, red and black bean, mahogany (red) teak, three varieties of pines, deals, and very many ornamental woods such as the tortoise-shell tulip, white ditto, with all the varieties of hardwoods. The Clarence River people are aware that when Byron Bay is converted into a safe port it will be a serious rival, and may prevent their own river improvements from being carried out. The majority of the land on the Clarence is developed, whereas development has scarcely started in the Byron Bay District. The residents of the Clarence, and some of the other rivers, are exceedingly jealous of Byron Bay, and are striving to stop the proposed works, because when converted into a safe and deep harbour, they imagine it will remove the trade from their river. When the Grafton-Tweed railway, *via* Byron Bay, has been constructed, and the breakwater a reality, all the passenger traffic to and from Byron Bay, the Brunswick River and Tweed districts (the latter 35 miles to the north), and also many of the products of those large tracts of rich country will find their way to Byron Bay; and it is more than likely that holders of land in the southern portion of Queensland will also use the bay as their shipping port. To the west and north-west lies a large area of the richest brush land (including the parish of Jasper); this, for a distance of fully 15 miles back, has been selected, the holders desiring Byron Bay as their shipping port. There is a large area of unalienated brush land extending many miles still further in a west and north-westerly direction, that will be immediately taken up when the breakwater and railway works have been commenced. There is also the country to the south-west embracing Tyngrah, 'Possum Shoot, Currable Creek, 'Possum and Byron Creeks, Eureka, Clunes, the latter locality being 18 miles towards Lismore on the Richmond, depending upon Byron Bay as their shipping port. Then lie the districts to the south and south-east, embracing Byron and Wilson's Creeks, Newrybar, the "Three-mile Scrub," and Lennox Head, 15 miles towards Ballina and Tintinbar. The whole of the land embracing the localities named, is of the richest nature, as will be seen by yourselves when travelling from Byron to Lismore, whichever route you may decide to adopt. It is impossible to convey heavy produce overland to the Richmond on account of distance and the yielding nature of the soil. Besides, Byron Bay is the natural port for these districts. Passengers for and from the inland centres would gladly use Byron Bay in preference to either the Clarence, Richmond, or Tweed Rivers, because, when converted into a safe port, much larger vessels will trade to this place than to the rivers named. When the larger steamers run to the bay direct, or the Queensland boats make Byron a port of call up and down the coast, freights will not be more than from 7s. 6d. to 10s. per ton to and from Sydney, thus explaining the opposition to the works by the smaller ship-owners trading to the rivers. The residents of Tenterfield and adjacent table-lands desire to use Byron as their port, if the Government construct a railway from Tenterfield to join the Grafton-Tweed line at Casino or Lismore. Without such breakwater as proposed, Byron Bay can never be relied upon as a port of shipment, because it is completely open to the north and north-east, from which quarter, during the spring and summer months, the prevailing winds blow, making it impossible for vessels to come up and lie alongside the wharf to load or discharge cargo whilst they continue, which is from three to six days at a stretch. Vessels are, therefore, seriously delayed, in consequence of which owners are compelled to charge such high freights, that it does not pay producers to ship. Underwriters will not insure sailing vessels trading to this bay on account of the greater risk this class of vessels run of being driven ashore. Upwards of £15,000 have been expended upon the jetty, and many thousands of pounds upon roads leading to it, and the permanent survey for railway from Grafton to the Tweed runs *via* the Bay; but unless a breakwater is constructed this expenditure of public money will almost have been in vain, seeing that the port is so unreliable. The construction of a breakwater will make Byron Bay a splendid harbour, capable of floating any of the modern-built vessels, and would afford a calling-place for passengers and cargo for the large Queensland steamers, and also for the larger ones trading between the Colonies and Europe. But apart from the immense benefit the construction of such a breakwater as proposed would confer upon the whole of this vast tract of rich land, from a national point the works should be immediately started to protect,

Mr. O. B.  
Wareham.  
23 Nov., 1889

protect, not only the vessels trading at present or in the future, but the hundreds of boats which put into port at various times during the year for shelter. Some few months ago no fewer than five vessels ran into this bay at one time for shelter from a strong southerly gale, which eventually veered to the north-east, and all came ashore, making the seventh during the last three years. If the allotments and various reserves in the vicinity of the bay are sold when the proposed works are started, the proceeds would nearly be sufficient to construct the breakwater. I would recommend that the reserves be sold in small areas of, say, 40 acres each. A splendid sample of stone in any quantity has been discovered about  $3\frac{1}{2}$  miles from the Bay.

1612. Is there a measured township here? Yes.

1613. Can you tell me what price the land brought at the last auction sale? The land we are now on brought at the rate of £800 an acre.

1614. And in addition to the owner giving at the rate of £800 an acre for the land he has erected buildings on it to the value of another £800? About £1,000 altogether.

1615. How do you get the produce away from your place? By horse and bullock-drays. Bullock-drays for the heavier stuff, such as timber; horse-drays for the lighter produce.

1616. Why do you not use the Richmond River as a port? It would be impossible.

1617. Why? In the first place it is too far, and in the second place the roads are in such a state that no vehicle could carry produce over them, it would not pay us to send goods over there.

1618. Then the Richmond River would not serve the district where you are living? No.

1619. You require some facilities for taking your stuff to market? Yes. Of course I may state that the railway would be of little use to myself individually, because I live so near the port; but to the bulk of the people it would be of immense advantage; in fact, they could not do without it.

1620. Then your immediate interests are connected with Byron Bay as a shipping port? Yes.

1621. Would you be likely to use Grafton for a port, supposing it were made a reliable one? I should not care to do so.

1622. *Chairman.*] I see that you had a public meeting here in August, 1883? Yes.

1623. Are you the Mr. Wareham who spoke at that meeting? Yes.

1624. Do you remember saying at that time that if the Government would only build a jetty for you you would have everything in the world you wanted? I may have said so then, but since then I have found out that it is impossible for a vessel to lay alongside the jetty in all weathers, and load or discharge cargo. The *Alice* has traded here three months, and during that time she has had to stand off three or four times, and the north-easterlies that blow in the spring and summer have not commenced yet. They may not blow every day during the season, but they blow every week, and the steamer might come up when they were blowing and have to stand off for two or three days.

1625. Your predictions about the breakwater may be just as far out as those about the jetty in 1883? They may be, but I do not think so. We have a natural wall to the west, south, and south-west of the bay, and if we were protected from the north-east we should have a safe port. At the present time we are exposed to all the winds from the north-east.

1626. Would the farmers about here be very much better off with a railway than they are at the present time? I think so.

1627. If they do not get the breakwater at all? Yes.

1628. You would be in Eden almost with a breakwater and a railway? I think we are entitled to such an expenditure of public money, considering that this block of land is the largest and the richest, not only in this Colony, but also in Australia.

1629. You mean from the south of Queensland to Grafton? Yes; and I could also say the block of land that is dependent on Byron Bay.

1630. For which £1 an acre has been paid by the settlers with deferred payments? That has been paid.

1631. It would not go far towards the construction of a breakwater? If the reserves were sold they would pay for the construction of a breakwater.

1632. Do you think they would bring £400 an acre? No.

1633. Do you think that the Government would be justified in spending £242,000 upon the construction of a breakwater, and £102,000 upon the construction of this line? I think so. We would not be the only people who would reap the advantages of the railway—Byron Bay, the Tweed, the Richmond, the Clarence, and the Brunswick would all be benefited by it as well as by the construction of the breakwater.

1634. What benefit will the Grafton people reap from it—you have just told us that no produce would go to the Clarence? I would not send any of mine there.

1635. I suppose it would be the same with all the others—it would not pay them? Yes.

1636. In the event of your having no better port than you have at present you might use the railway to take your produce to the deep waters of the Richmond; but you would not send it to Grafton? We would certainly prefer to ship our produce at the Richmond—we would not cross the Richmond.

1637. I suppose you are firmly convinced that there is not sufficient trade at present to pay the interest on the capital and working expenses of the railway if it were constructed—about £6,000 a year? It is not what there is now but what there will be. When a railway is constructed people crowd to a district, and selectors who hold 640 acres or even less would subdivide.

1638. How long do you think it would take, by increased cultivation, to pay £6,000 a year to the railway? I could not say.

1639. I suppose the ill-success of your prediction about the jetty has made you chary about making further predictions? With regard to the jetty I now see that since it has been constructed, we must have something further to protect the shipping that comes to it.

1640. The jetty cost £15,000? No, £9,000; but the crane, the mooring-buoys, and the store, ran it up to about £15,000.

1641. Have you given any attention to the breakwater—as to the shape or size of it—have you seen the plan before the Committee? No; I saw a plan of the breakwater, close to the jetty, in the *Daily Telegraph*.

1642. Knowing the trade that exists at the present time, and allowing for the probable trade in the future, do you think that that breakwater would enclose a sufficient area of water? I believe that a district like this is capable of expanding to an enormous extent, and that it would be unwise to build a breakwater close to the jetty in too shallow water. It would be better to construct one in deep water that would answer for all time.

1643.

- Mr. O. B. Wareham.  
23 Nov., 1889.
1643. I suppose the outside scheme of Captain Howard's would suit you better? I think the curved one would be the better—No. 2.
1644. But the outside one would include the larger area? I should think the second breakwater would give ample room.
1645. You are clearly of opinion that Parliament would be justified in throwing £242,000 into the Pacific for the purpose of giving you a harbour? I certainly think that the district is entitled to that expenditure.
1646. *Chairman.*] Would you take shares in a company created to make the breakwater? Yes, I would not mind. I know of a syndicate who will give £200,000 for this reserve, if the breakwater is constructed, and the railway brought down here.
1647. What is the area of the reserve? Four square miles.
1648. Do you tell me that that would bring £200,000 if the breakwater were constructed? I was told that they would pay that if the Government would construct it.
1649. *Mr. Garrard.*] Do any members of the syndicate live in Byron Bay? No.
1650. *Mr. Lee.*] Having had the plan before the Committee explained to you, are you of opinion that number 2 breakwater would be sufficient? Yes, I think so; for the present and all future requirements.
1651. You stated that the steamship *Alice* runs here regularly? Every six or eight days.
1652. Does she take away full cargoes? Now she does.
1653. Are there any other steamers trading here? Two others erratically—the *Karuah* and a little steamer from the Richmond which brings sawn stuff.
1654. Any sailing vessels? Not now.
1655. The jetty is not altogether a mistake? No; the only thing is that there is an uncertainty about the communication.
1656. It has afforded a certain amount of accommodation? Yes.
1657. If the jetty were protected by a breakwater, so that it could be used at all times, would there be a larger quantity of cargo shipped from here? I should imagine a great deal more.
1658. What you are doing I suppose some of your neighbours are doing? Yes.
1659. Like most of your neighbours, you are only cultivating a portion of your land? Yes. If these works were carried out people would come here, and we would be willing to let portions of our land to them. That would settle a larger population on the country.
1660. You think that if the proposed works were carried out the trade of the district generally would be concentrated here? I am certain of it.
1661. What reason have you for thinking so? I cannot see where else they would take it. It would not pay them to ship from the Richmond River, and they would certainly not ship from the Brunswick or the Tweed. We have no navigable streams here at all. We have no feeders to the port like they have on the Richmond.
1662. I presume people on the Tweed will be more likely to send their stuff here to ship it? I think so.
1663. But they would not be likely to send it to Grafton? They would be very foolish if they did.
1664. It would be a question of freight—the cheapest market is the way for everybody? Trade will find its natural channel.

Mr. Edward Boyle, dairy farmer, sworn, and examined:—

- Mr. E. Boyle.  
23 Nov., 1889.
1665. *Chairman.*] Do you reside near here? Yes; I reside in the parish of Byron, 6 miles from here by road.
1666. What are you? A dairy farmer.
1667. How long have you been here? I selected here in 1881. I have been here about eight and a half years.
1668. That was your first selection? Yes.
1669. When did you make your second selection? In the same year—an additional.
1670. And the next? I have no more selections.
1671. How much land have you altogether? I selected 352 acres originally, and I parted with 100 acres; that leaves me with 252 acres.
1672. Has land been a source of great profit to you? Not as yet.
1673. What did you get per acre for what you sold? £4, some time ago.\*
1674. When did you buy it? In 1881.
1675. With a balance of 15s. due on it? Yes.
1676. You have not done badly? I have not done well.
1677. What had you to spend on the improvements on that 100 acres—had you cleared it? No.
1678. You sold it as you got it? Yes.
1679. What did you want to tell the Committee? Nothing that I know of. I think that a dairy farmer has already told the Committee everything that I could tell them. As we are situated here, we have to take to dairy farming. I have been a dairy farmer for the principal portion of my life, but I was induced to come here as a cane-grower. Finding after I had been here two years, though I was supposed to be on the best land in the district for cane growing, that the small mills were a failure without water carriage, I thought I had better take up dairy farming. I satisfied myself that the climate was suitable for it, and I brought cattle here from the south coast. It has been a hard struggle of course to start a dairy farm in this scrub. The land is all scrub. We have no natural grass; we have had to clear the land. When starting first on a small scale we had to pack our butter to Ballina, a distance from my place of 25 miles, along very bad roads; in fact, what many men would call impassable roads. We thought it a relief when we could pack our butter something like 8 miles, and pay 2s. 6d. a keg to have it carried by team to Ballina; but when I came to reckon it up I found that it reduced my profits a lot.
1680. It has therefore not been an eminent success since you came here? No; though I have tried pretty hard with it. I cannot claim it to be a success as we are situated now.
1681. Were you obliged to sell 100 acres to meet your expenses in connection with the rest? No.
1682. Have you anything more to tell us? I think dairying in this district was too hard a pursuit for a man to follow for a livelihood until the steamer started trading here—The *Alice*. Of course she has not given great satisfaction as yet, though she has made trips almost weekly, and it has been a great change to what we have been used. I cannot say that I consider that the railway will be an immediate benefit

\* NOTE—(on revision):—The £4 I named was only a valuation between me and my sister. In reality the land sold by me was a deed of gift to my sister.

benefit to myself personally. I look for my future benefit to the construction of a breakwater at Byron Bay, though the railway will enhance the value of my land, if I ever made up mind to sell it. I have friends living further back from the Richmond, relations of mine—sisters and brothers—and this month I had an argument with them as to the shipment of our butter. I maintained that, if a railway were constructed, butter for 9 miles north of Lismore would be shipped at Byron Bay, if there were a steamer making regular trips here. I was teamster to a railway before I came here, and I understand a little of the freights. I feel certain that it is in the 75 miles of river journey that the Richmond butter receives all its damage. I cannot see that the land lying to the north of the river can look upon the river as its port—though things will certainly be better when the steamers can go straight out, and not be delayed on the bar. If a railway is constructed, and a safe port made at Byron Bay, I think that dairy produce will be shipped from here.

1683. And you think that the industry will be largely developed? The dairy farmer will be the large farmer of the Richmond, because there is more dairy farming on the Richmond than there is cane or corn growing.

Mr. E. Boyle.  
23 Nov., 1889.

MONDAY, 25 NOVEMBER, 1889.

The Sectional Committee met at Eureka.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX. | JACOB GARRARD, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to the Tweed.

Mr. Andrew Johnston, J.P., selector, sworn, and examined:—

1684. *Mr. Cox.*] Are you a selector in this district? Yes.
1685. Have you resided here for any length of time? Yes.
1686. How many years? I took up a selection on the 14th July, 1881, and I have resided here ever since.
1687. Do you occupy a large area? I occupy 633 acres—that was my original selection. Since then I have purchased a little piece more. I have about 700 acres altogether.
1688. How much of the original selection have you cleared? About 230 acres.
1689. How do you clear it? By felling the timber and letting it lie for some time, and then putting a fire in it, and burning it off.
1690. That, of course, only clears it in a very perfunctory manner? Yes. It only does away with the light branches. Then we wait about three years and burn it off clean.
1691. What do you do before the second burning? Sow grass and put cattle on the land.
1692. What are the grasses that you find most suitable? Rye-grass, prairie, and clover are what we sow.
1693. Have you done any cultivation? Not much; only just raised corn, potatoes, and vegetables for my own use.
1694. You have not grown any sugar-cane? I have given it a small trial. It seems to grow well, but I could not make any profit out of it.
1695. What is the nearest sugar mill to your selection? I do not know what it is called.
1696. How far is it from your selection in the way that you would have to go to it? It think 9 miles, more or less.
1697. It would not pay you to grow sugar cane to take it 9 miles to a mill? No.
1698. Are you aware of the direction of the proposed railway? Yes.
1699. How far would it be from your selection? On the nearest road leading to the line, about 2 miles.
1700. Do you think you could grow sugar-cane at a profit by carting it to a railway line, and then running it out to some large mill in the neighbourhood—would that suit you and your neighbours? I have such a slight acquaintance with sugar-cane that I could scarcely answer the question.
1701. What occupation do you follow? I am a dairyman.
1702. How many acres have you cleared? Altogether about 250.
1703. How many cows have you upon that? I could not tell you the exact number of cattle on it; but the maximum number that I milked last season was 43 or 45.
1704. How many cattle have you altogether—big and little? I have something over 100.
1705. Is your land fully stocked? No; in addition to these I have had nearly fifty head on the place belonging to other people.
1706. What do you suppose is the grazing capability of the country when fairly laid down with grass and clover? In a good season I think  $1\frac{1}{2}$  acre would be sufficient to keep a milch cow. In a season like this an acre of cleared land would be amply sufficient for a cow; but the seasons are not always as good as this has been. A milch cow would take nearly as much again to keep her in proper trim as a dry cow or a bullock would.
1707. Presuming there were a railway, what benefit would you derive from it? A very considerable benefit by having my produce placed on the market so quickly that it would not deteriorate. I was a considerable loser last season. On one occasion I had as many as eleven kegs of butter behind the bar, on the *Tomki*. This butter was sold at 1d. a lb. less than it ought to have been sold at, and as there were 65 lb. in a keg, you can estimate my loss.
1708. *Chairman.*] Did you miss a particular market? No; but the butter deteriorates by keeping.
1709. *Mr. Cox.*] Of course in this warm climate butter would necessarily deteriorate? It goes bad quicker here than it does in a cold climate.
1710. You are aware that the Government intend to spend a large sum of money at the Richmond River to make the bar passable? Yes.

Mr. A.  
Johnston,  
J.P.  
25 Nov., 1889.

Mr. A.  
Johnston,  
J.P.  
25 Nov., 1889.

1711. Do you not think that that ought to be sufficient, without a railway? I scarcely think so. I would like the railway to be continued on to join the Northern line, and not to stop short at any of these ports, so that we could put our produce into the Sydney market.

1712. Do you know what it would cost to send produce to Sydney? I know that the cost would be considerable; but I, and I think most men, would be willing to pay it. Of course bulk produce, such as maize, potatoes, and other things would go by water; but our produce will generally go by rail.

1713. As the Government intend to spend a large sum of money in making the entrance to the Richmond navigable, at all events, except in very heavy weather, do you think they would be justified in making this railway? I think so.

1714. The proposed railway of course would not go to Ballina, but it would go to Byron Bay? Of course Byron Bay would be the outlet for all the people on the north of the ridge between Ballina and Lismore—it is the natural outlet for all those people.

1715. Presuming a railway were made from Lismore to Byron Bay, and there were a good port at Byron Bay, where would you send your produce? Of course to Byron Bay.

1716. You know the country between Lismore and Byron Bay thoroughly; do you think there is a sufficient extent of country that would be used to warrant the Government in making an expensive line of railway between those two points? I am sure of it. I can judge of the future by the past. I know that when the Southern line was made, it was proposed to build a little station at Bowral, and there was great opposition to it. Most people cried out that Mr. Roberts was only getting accommodation for himself—as that station is only backed up by Kangaloon; but no station on the Southern line has paid better than it has, and it has had to be enlarged several times.

1717. If a railway were constructed you would enter into various pursuits which you are now debarred from following—you have to dairy now because you could not get any other produce away? We have to raise produce which will cost the least amount to place on the market—the least amount of freight, in proportion to the money value. We cannot raise anything but dairy produce to place on the market with profit.

1718. Have you ever sent calves to the Sydney market? No. The voyage is too long, and the risk too great.

1719. If a railway were constructed, would you set to work and clear a considerably greater portion of your land, and make it more valuable? I cannot clear more than I am doing now; I am doing my best now. Since April I have shipped 108 kegs of butter and 53 pigs.

1720. *Mr. Lee.*] Where were you living before you came here? At Kangaloon for sixteen years.

1721. You left there to come here? Yes.

1722. Supposing the railway were constructed according to the proposed route, from which port would you be likely to ship—from Byron Bay or from Lismore? From Byron Bay.

1723. Why? Because it is nearer or equally as near as Lismore, and it is nearer to Sydney than Lismore in point of time, because so much time is lost on the river—even when the bar is excellent. A boat leaving Byron Bay this morning would be in Sydney twenty-four hours before a boat from Lismore.

1724. Where do you ship from? From Lismore.

1725. The road from Lismore is a main road? Yes.

1726. It is available for you? Yes.

1727. Is it available for all the selectors living between this and the Byron? No, only for a few along the roadside. There are a number of people at the back who have no road.

1728. Would they be able to ship at Lismore? No; they are more likely to go to the Bay.

1729. You say that you are acquainted with the route of the proposed railway—necessarily some of the settlers will lie considerably to the north of that proposed route? Rather to the west of it. The bulk of the settlers are to the west of it.

1730. Which service would suit them best—by way of Lismore or by way of Byron Bay? By way of Byron Bay.

1731. Why? Because they are nearer to it, and it brings them nearer to Sydney by twenty-four or at least twelve hours.

1732. How could they get their produce to the railway? There must be various roads leading to it.

1733. How do they manage at the present time in wet weather? It is very awkward indeed. The greater part of the produce is brought on horseback. There is no such thing as putting a vehicle even on the main road in wet weather.

1734. Did you ever know a man put a keg of butter on one side of his horse and stones on the other? Yes, it is often done.

1735. If he did not pack his butter to his nearest market, either by way of Byron Bay or of Lismore, what would become of it? He might give it to the pigs and make it into bacon.

1736. You have no other market? No.

1737. There is no local market? No.

1738. Would a series of good roads to the port answer your requirements as well as a railway would? No; because the road traffic would always be so expensive and slow in comparison with the railway traffic. The great thing we want is speed, so that our produce will be delivered to Sydney, or any other market, as quickly as possible.

1739. Do I understand you to say that you do not cultivate maize or sugar-cane at the present time because it is impossible to get it to market? Yes, the cost would be too much.

1740. So you fall back to the next best paying thing—dairying? Yes.

1741. Would you in this country cultivate maize to any extent if you had a market? Yes.

1742. What is the feeling of the people in this district as to the port from which they would like to ship? They would like to ship from Byron Bay.

1743. You look to Byron Bay as a place from which you could have certain and regular shipment? Yes.

1744. *Chairman.*] I suppose the land about here is superior, or equal, to the Illawarra land? Superior to it at the present time. The Illawarra land may have been as good in the early days; but ever since I saw it, twenty-three years ago, with the exception of some particular spots, it was inferior to this land.

1745. This has the heavier rainfall? I think that has something to do with it.

1746. I suppose your case with regard to cultivation is the case of scores of farmers in the district? Yes.

1747. With rapid communication and more certain markets you think the land would be more largely developed than it is at the present time? Certainly.

1748.

1748. Do you not think that a number of the farmers hold too large an area? I do not know what may be considered too large an area.

1749. Do you think that with such land as you have in this district men could make fair livings out of smaller areas than they hold at the present time? Certainly. I could make a living off one-sixth of what I hold.

1750. Supposing rapid communication were given, do you think those holding larger areas would let out their lands to the people who wanted them? Certainly, but most of those who have large areas have a family to divide their land amongst.

1751. I suppose many have taken up large areas with the idea of dividing them ultimately among their sons and daughters? Yes.

1752. The men have come here and have taken large areas for the sake of their children? Yes. I know of cases where a family in the south coast has sent one of its members up here to take up a section of land.

1753. That is not uncommon? No.

1754. How many children have you? Seven sons and three daughters. I have only 100 acres for each of them.

1755. In the interest of the country do you not think the land in this district should be reserved until the proposed public works are constructed, so that it would help to pay for them? Yes. But I think it would be an injury to the district to do that.

1756. But would it not be to the interest of the country to do it? I think so.

1757. At the present time are there not large quantities of timber being destroyed which might be shipped to Sydney if it could be got away? Yes.

1758. If proper facilities were provided, that timber would be used instead of destroyed? Yes, a great deal of it would be used.

Mr. Moses King, dairy farmer, sworn, and examined:—

1759. *Mr. Lee.*] Where do you reside? About  $2\frac{1}{2}$  miles, or it may be 3 miles, from Eureka.

1760. Are you a selector? I have purchased a selection.

1761. How many acres do you hold now? 640 acres.

1762. Where did you reside before you came to this district? At Jamberoo, Illawarra.

1763. What occupation are you engaged in now? Dairying—I am a dairy farmer.

1764. Would you have any objection to say what is about your monthly or annual yield of dairy produce? That is a matter into which I have not gone. I have nearly 200 acres cleared, but it is not all in first-class order. I have never gone into figures, and am not prepared to say what yield per acre I have had.

1765. We should be very glad to hear what evidence you have to give us—as to whether your dairying has been kept back through want of an outlet, or any suggestions you have to make as to the railway route? The money which my father gave me I invested in land here, to the extent of 640 acres, and of course I intend to make a living for myself and my family off it. I think it is only reasonable that we should have a proper outlet for our produce, which I consider we scarcely have at the present time. In leaving home I have to put my keg of butter on one side of my horse, and a few stones in a bag on the other side, and bring it about  $2\frac{1}{2}$  miles.

1766. To what point? To a point a short distance from here. Then a waggon takes it something like 15 miles to Lismore. I think that the people of this locality would be benefited by the construction of a railway. Our butter gets too much handling, as it is; while, the less handling it gets, the better it is for us. I consider that it would be a boon to the Richmond if we had a railway, inasmuch as the carriage of produce would be greatly facilitated. If we had a port at Byron Bay, our butter and produce would go to market more readily, and bring a better price. In the Illawarra district money has been spent on the Robinson basin at Kiama, and more or less at Shellharbour—money has also been spent on the formation of a basin at Wollongong; and I think that, taking into consideration the vast extent of good country there is here compared with what there is in the Illawarra district, we are very far behind them. It is a pretty well known fact now that you cannot get as great an extent of the best land anywhere in Australia as there is here.

1767. You are speaking of the scrub land generally? I speak of the scrub land generally.

1768. Could you tell us from what point it extends? I have only been here about three years, and of course, follow my own vocation more than that of travelling about. Although I have travelled a little, I am not in a position to answer the question.

1769. You have been here sufficiently long to judge whether the district is capable of producing grasses suitable for dairying purposes? Certainly.

1770. What is your opinion on the matter? My opinion is that it is capable of growing grass, and does grow it, suitable for dairying purposes. When butter was 1s. 9d. in Sydney, I have made butter on the Richmond, and have got 1s. 9d. for it. This was in the winter, when, if the butter was a shade longer on the road, it would not injure it.

1771. Does the Richmond River itself serve the people in this locality, and between this and the bay, as well as a railway would serve it; would the railway, if it were constructed along the proposed route, give you greater facilities for getting to market than you have now? It would give us greater facilities. If the railway were constructed I could bring my produce to the station in the morning, and be back for milking in the evening—it would also be a benefit to those at a greater distance than I am.

1772. If you had greater facilities for getting to market, would you be likely to grow maize and sugar-cane? That is a thing for the future. I am a dairyman, and I look to dairying and breeding of cattle to support me. There is not a doubt that maize will be grown, and sugar-cane also, if the price of sugar keeps up.

1773. The difficulties to which you refer with reference to getting butter to market would apply with equal force to your getting supplies back home? We would get the supplies more quickly if a railway were constructed.

1774. Have you to pack your supplies home? Well, at present I have only to pack from where I bring my butter to. We are charged extra by the local storekeepers.

1775. *Mr. Cox.*] I should like to know the present value of some of the land here—when you came here three years ago what area of land had you cleared? When I bought Mr. Malcolm's farm they considered that there were 100 acres, or a little more, under grass.

2 (a)—G

1776.

Mr. A.  
Johnston,  
J.P.  
25 Nov., 1889.

Mr. M. King.  
25 Nov., 1889.

- Mr. M. King. 1776. You have cleared the rest since you were here? I have cleared the rest, which makes pretty near 200 acres.
- 25 Nov., 1889. 1777. If it is a fair question to ask you, what did you give for your 640 acres—I would like to know what is considered the value of the land about here? Would other land not do—for instance, the land we are on?
1778. I tell you the reason I ask this question—the Committee want to know the value of the land. They perhaps may be asking the Government to spend large sums of money here, which they probably would be chary of doing if the land were not of much value? I bought it exceptionally cheap. The land which we are on cost £6 an acre the other day.
1779. *Mr. Garrard.*] How far is your place from the nearest point of the proposed railway? I could not say exactly how far it would be—my place is nearly west of there.
1780. The other side of the road that we have come along? Yes.
1781. I suppose it would be within 5 miles of the railway? I think that I should have a station within 5 or 6 miles of my place.
1782. Byron Bay is 20 miles from here? I do not think it is, in a straight direction.
1783. What is it by road? As near as can be, 20 miles.
1784. What is the distance to Lismore? It is reckoned 14 or 15 miles.
1785. Why should you prefer to go to Byron Bay instead of to Lismore? One of our surveyors told us that we can get a road from Eureka to the Bay, which we propose asking for shortly, which will make us nearer to the Bay than we are to Lismore.
1786. If you get the Byron Bay breakwater then you will not want the railway? We think it would be a great advantage to have both.
1787. Which would suit the people of this district better—the railway or a harbour at Byron Bay? We want both. I think one depends a great deal upon the other. We want the bay for a port—we consider that it would be our best port; and a railway would facilitate our getting produce to it.
1788. But if it were 20 miles from here to the bay, and 15 miles to Lismore, is not that rather handicapping you? It is 20 miles, going round by the road, which is pretty near the shape of a horseshoe.
1789. What would be the distance by the proposed road? I have not been over the road, so that I am not prepared to say.
1790. Would it be shorter than the present road to Lismore? It would be much shorter than the present road to Byron Bay.
1791. It would be much the same distance then to Byron Bay as it is to Lismore? We have always looked upon Byron Bay as our port.
1792. If you get the new road it will save you about 5 miles of your present journey to Byron Bay, and will make the distance between this place and Byron Bay, and between this place and Lismore, the same—is that so? Yes. The Richmond River entrance is not improved sufficiently yet, and we think that our produce could be got away from Byron Bay more readily.
1793. You cannot get it away from there now? Not at the present time.
1794. Do you not think that there is a probability of making the Richmond a navigable port in a short time, considering that the works are actually being proceeded with? I would not like to say that Sir John Coode's method of getting rid of the bar will be a success.
1795. Suppose the Richmond River entrance is made as good as the entrance of the Clarence? They get bar-bound there occasionally.
1796. How often? I could not tell you. I have seen by the paper that the *City of Grafton* was outside the Clarence bar.
1797. Would you be surprised to learn that the steamers have not missed one trip during the last year? That is very good.
1798. If that was the case at the Richmond, would it not be a very good outlet for you? Certainly, if we had it.
1799. *Chairman.*] You have 60 or 70 miles to go down the river when you get your produce to Lismore? Nearly 70 miles.
1800. Is the steamer from Lismore the one that goes outside? Yes.
1801. *Mr. Garrard.*] How many miles is it from Byron Bay to the Richmond Heads? I have been told by Captain Jackson 22 miles.
1802. A very much smaller and slower boat goes from Byron Bay than from the Richmond? If we had a good harbour we would have a better boat.
1803. It is a very much smaller and slower boat that goes from Byron Bay now than the boats going from the Richmond? Yes; it is a smaller boat.
1804. *Chairman.*] If the breakwater were made you would have better steamers coming to Byron Bay than ever come to the Richmond? Yes.

MONDAY, 25 NOVEMBER, 1889.

*The Sectional Committee met at Clunes.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to the Tweed.

Mr. George Thomas Hindmarsh, dairy farmer, sworn, and examined:—

- Mr. G. T. Hindmarsh. 1805. *Mr. Garrard.*] What is your occupation? Dairy farming at present.
1806. Do you live close to Clunes? 2½ miles away.
1807. In which direction? North-west.
- 25 Nov., 1889. 1808. How long have you resided in the district? A little over eight years.
1809. What land have you? 640 acres of scrub land.
1810. Are you engaged in anything else but dairying pursuits? I have a small number of butcher's sheep.
1811. I am breeding them.

Mr. G. T.  
Hindmarsh.  
25 Nov., 1889.

1811. What land have you cleared? About 200 acres.
1812. Your principal industry is dairying? Yes.
1813. Where do you find a market for your produce at present? In Sydney.
1814. What way do you get to it? By Lismore.
1815. How far would the nearest point of the proposed railway be from your place?  $4\frac{1}{2}$  or 5 miles.
1816. In the event of its being constructed would you use it for conveying your produce? I would.
1817. And send it to Lismore? No. We have always looked on Byron Bay as our outlet for produce.
1818. Then why do you not send it to Byron Bay now? Because there is not a sufficiently good road.
1819. What is the distance between Byron Bay and here? Fourteen or 15 miles by the nearest road.
1820. And from Lismore to here? Fifteen miles to our place.
1821. I suppose the relative distance would be much the same if the railway were constructed? About the same.
1822. Why would you send your produce the longer distance instead of the shorter? Because it would not be longer in point of time—it would be quicker getting to Sydney, and dairy produce wants quick and regular transit.
1823. You presume that the Byron Bay works will be completed and that there will be a large harbour there? We hope to see that some day. We have always looked to that being done. I was one of three appointed six years ago, at a public meeting at Clunes, to mark out the road to Byron Bay. We marked out the Clunes portion of the road.
1824. Is the produce sent to Lismore very often detained in its [transit to Sydney? Yes; by the bar, and the irregularity of the steamers.
1825. Are not the steamers running regularly? Yes; but not sufficiently so.
1826. Are they not running more regularly than they are running to Byron Bay? They are at present.
1827. Do you know that the Government are spending a large amount of money to improve the Richmond River entrance? Yes.
1828. If as good an entrance can be obtained there as there is at the Clarence, would not the Richmond be your best port? Not the quickest to market.
1829. The cheapest? I do not think it; not if the line were constructed to Byron Bay.
1830. Though you are so close to Lismore? There is only 3 miles difference, by the present road, and there are 75 miles of river transit.
1831. Do you think that the Government would be justified in spending £100,000 on a railway from Lismore to the Tweed, and another £242,000 upon improving Byron Bay? I think so, considering the district that there is behind Byron Bay.
1832. You are not thinking of its present population, but of the probable increase if these facilities were given? If the population increases at the rate it has done during the last ten years, I consider that they would be quite justified in incurring the expenditure.
1833. Do you think that people nearer to Lismore than we are would send their produce to Byron Bay? I believe so, if the railway were constructed.
1834. The people close to Lismore? Those in the scrub land—there is not much dairying done in the open country.
1835. Do I understand that dairy produce 5 miles from Lismore would come by the railway? Yes. Although it would cost a little more freight, we would gain by having it sent more quickly.
1836. You are looking forward to having large steamers at Byron Bay? Yes; quick travelling steamers with cooling apparatus for dairy produce.
1837. As things are at present, the Richmond River is your best port? It is the only one at present, on account of there not being a good road to the Bay. I believe there would be a trade *via* Byron Bay if the road were good.
1838. Do you think that a railway from Casino to Grafton would be of any benefit to this place? Yes, as a main coast line from Sydney. I believe it would develop the northern coast district to a much larger extent than it is developed at present.
1839. Then you can shut up the Richmond and the Clarence? Not at all; there is the sugar industry to be considered, and there is maize growing on the banks of the river from Lismore to its mouth.
1840. For all the back lands you think that Byron Bay would be the best place for shipment? I am certain it would.
1841. Has there been much increase in settlement since you came to the place? A wonderful increase. Ten years ago there was not a track with the mark of a horse's hoof from Bexhill to the Brunswick. There was not a settlement between those two places. Eight years ago there were two small clearings where we are now.
1842. Have you taken up your land as a free selection? Yes.
1843. Have you added to it since you selected? No.
1844. What is the value of land here? £5 or £8 an acre.
1845. Is that for scrub land or for improved land? Every farm is improved to a certain extent; some have been sold at £5.
1846. What do you think is the value of unimproved land in this district? I believe it is worth £5 or £6 an acre.
1847. How far does this scrub land extend westward? I could not give you the extent in miles.
1848. You know the district intimately? Yes, I have been all through it.
1849. Where were you residing before you came here? At Gerringong, near Kiamā.
1850. Were you engaged in dairying there? Yes, with my father.
1851. How does this country compare with the Illawarra district? It has many advantages over the Illawarra district as a dairying district, inasmuch as feed is much more easily grown in the winter time; the cattle thrive better, and the land is better watered.
1852. Do you think that anything else besides dairy produce would be raised here if the railway and harbour works were constructed—sugar or maize? I believe there would be a great growth of cereals, and a large trade done in fruit, but the fruit industry seems a long way off. This land would all grow sugar. If there was money to be had out of the sugar-cane the farmers would grow it.
1853. Would that produce go to Byron Bay, or to Lismore, do you think? I believe it would go to Byron Bay if there were a harbour there.

- Mr. G. T. Hindmarsh.  
25 Nov., 1889.
1854. *Mr. Lee.*] You are aware that the question that the Committee are considering is the advisability of constructing a line from Grafton to the Tweed? Yes.
1855. You are about midway on that line? Nearer the northern end.
1856. In the event of the Clarence Heads being made a safe entrance at all times for large vessels, would the residents in this part of the district be likely to send their produce to that river for shipment? I do not think it.
1857. Why? Because it would be cheaper to send it by the Richmond.
1858. The distance is too great, and the railway charges would be too high? It would be cheaper to send it by the Richmond.
1859. What is your reason for thinking that Byron Bay would be your port of shipment? I do not know whether it is that I have educated myself to it from the first; but we have always looked upon it as the natural outlet to this part of the district.
1860. Byron Bay being more conveniently situated than the Richmond River? Certainly—it is really not closer.
1861. The distance is about the same? Yes.
1862. What is the distance by water from Lismore to the Heads? 70 or 75 miles.
1863. Then, as you are equi-distant from Byron Bay and Lismore, if your produce were shipped at Byron Bay, it would reach Sydney 24 hours sooner than it would if shipped from the Richmond? Yes; and if the Richmond bar were bad, very much sooner.
1864. Dairy produce requires regular and speedy transit? Yes.
1865. Are you living near the Byron Bay Road, or off the road any distance? I am living north-west of Clunes—about  $2\frac{1}{4}$  miles from the main road.
1866. What is the road like in wet weather? Very bad. Last April most of our produce had to be conveyed to Lismore on pack-horses. The road from here to Lismore was almost impassable for vehicular traffic.
1867. I presume that you prosecute dairy farming now in preference to cane or maize growing, because it is easier to get the produce to market? I was engaged for two years in horse-breeding, and owning stallions; but my brother and I found that that would not pay, so we took to dairying—getting the greatest value in the smallest bulk.
1868. Do you wish the Committee to understand that although you are living near the Richmond River, it would be more convenient for you and other residents to ship your produce from Byron Bay? It would be more convenient, and it would pay us better to do so.
1869. Supposing no harbour works were constructed at Byron Bay, would the contemplated railway serve the residents in the district through which it runs? It would to a certain extent.
1870. What I want to know is this: the river is already a benefit to you to a certain extent; does the railway run in such a direction that it will benefit the settlers by giving them better access to the river? Yes.
1871. Do you think it centrally situated so as to suit the majority of the selectors? Yes.
1872. If it were constructed would you in fine weather send your produce to market by it, or by drays? I think we would send it by the railway. The drays jolt dairy produce about more than is desirable, and they are very much slower than a railway.
1873. You would naturally expect to have the same facilities here for the carriage of dairy produce as they have in the south—cool chambers? Yes, that is what we need.
1874. *Mr. Cox.*] Are you sufficiently acquainted with the district to know whether the land on the map shown white is of any value? I believe most of it is rich land, from what I have seen in passing through.
1875. In the event of the Government spending large sums of money on the construction of a breakwater at Byron Bay, and a railway from the Tweed to Lismore, do you think they would be justified in keeping back the lands marked green, and selling them at a price that would probably pay largely for the work? I believe that the Government would be justified in doing that, but if the reserves were thrown open the district would be benefited.
1876. These reserves only fetch 2s. an acre, and the scrub is so thick that it will not pay a surveyor to survey it for that? They are getting more than 2s. an acre.
1877. But you spoke of their being thrown open to selection—if they were made into special areas it would be different? All the land thrown open for selection is special area land. The reserves, especially when they join a farm, are a great source of annoyance to the farmers, because they harbour vermin.
1878. The land already alienated has been taken up by selection? Yes.
1879. When a man has taken up land and served his five years upon it and improved it to a sufficient extent to warrant the Government in giving him a certificate for it, at what rate would it sell? Much of it has been sold for £5, and some, more highly improved, for as much as £10.
1880. To satisfy the requirements of the Land Boards what amount of clearing is considered necessary? A very small amount.
1881. If you had 640 acres, how much would you have to clear to get a certificate? I got a certificate when I had less than 100 acres cleared, but I had a lot of buildings on the land. That land I could make a living out of, but I did not pay expenses from it.
1882. What did the land that has been cleared cost you? Not less than £6 an acre. It took me five or six years to clear it.
1883. When you commenced to clear this scrub land, how much did you give for cutting down the trees? 25s. an acre.
1884. How do you make up the difference between 25s. and £6? Grass has to be sown and the timber burnt off—that takes months and months in this wet climate.
1885. When land is finally laid down in permanent pasture what do you consider is its value? I consider that at the present time it is worth about £10 an acre when it is cleared.
1886. How are you going to get interest on your money when you have paid £10 an acre for the land? The land will feed almost a beast to the acre—a dairy cow all the year round.
1887. What is the net return from each cow that you milk—what return do you think each cow gives you per annum? I have not the least idea.
1888. *Chairman.*] You say that in the interest of the district it would be well to throw the reserves open, but you have also told us that the growth of population here is enormous. We have heard during the course

course of our inquiry that the growth of population in this district has been something like  $22\frac{1}{2}$  per cent., while in the Colony, as a whole, it has only been  $4\frac{1}{2}$  per cent.—if that is to continue for the next ten years will not the land increase greatly in value? It will.

1889. Would it not be to the interests of the country to keep the land for future settlement? The Government would get more money, but the district would not be benefited.

1890. The district is asking for half a million of money, and it is only by people being settled here that the interest on that money can be paid? Yes.

1891. How many people living in the district now would have a slapdash for these lands if they were thrown open to-morrow? I think that most of them have as much land as they want.

1892. Have you any doubt that in a few years if a port were made at Byron Bay, and the railway constructed, these lands would double in value? I believe they would—the reserved lands.

1893. *Mr. Garrard.*] Do you know the route of the proposed line? Yes.

1894. Do you think that it is the best that could be taken in the interest of the district generally? I believe it is.

*Mr. G. T. Hindmarsh.*  
25 Nov., 1889.

Mr. James Gibson, dairy farmer, sworn, and examined :—

1895. *Mr. Cox.*] Where do you reside? At Clunes.

1896. How far from where we are now sitting?  $1\frac{1}{2}$  miles.

1897. How long have you been a resident of the district? Eight years.

1898. Are you living upon your own selection, or did you purchase your lands? I am living on my own selection.

1899. How much land have you? 483 acres.

1900. How much of that is cleared? I have 180 acres cleared.

1901. But it is not productive? 60 acres I have felled lately. The rest of the land is productive.

1902. What occupation do you follow? Dairy farming.

1903. How many cows have you? I am milking twenty-three.

1904. Upon how much land are those twenty-three cows kept? Upon about 120 acres. I have young stock also.

1905. How much young stock? Somewhere about twenty head, and I have three horses.

1906. About fifty head altogether? Nearly fifty head altogether.

1907. What do you find is the capability of the country;—what could your land carry if fully stocked? If it were fully improved I believe I could carry a beast to every 2 acres.

1908. What has it cost you up to the present? I have given 35s. an acre to have it felled—a portion of it. The other improvements—burning off and sowing grass—I did myself.

1909. Your labour would be as valuable as that of other people? Yes; but I did not actually pay for it.

1910. Your labour would be equal to 35s. an acre? Yes.

1911. What would you expend upon the land to make it capable of keeping a beast to 2 acres? I could not tell you actually—I believe £6 or £8.

1912. Then there is the value of the stock? There is the value of the stock.

1913. What would be the return per head from the stock, in dairy produce? Three years ago, when butter was 1s. 9d. and 2s. a lb., from ten cows in two months, I realized £50 5s.

1914. What is the price of it now? From 4d. to 7d.

1915. How much will a cow give you a week? I have averaged 7lb. and over of butter from a cow per week.

1916. In summer-time you would get the price you now give us; but in winter the price would be double? The average price would be about 1s. a lb.

1917. For how many months in a year does a cow remain in milk? As a rule we milk them nine months.

1918. A cow is worth about £6? We give £10 for some.

1919. Say that a cow is worth £6; you would get the whole of that value back again within twelve months, from her production? I believe so.

1920. So that the cow pays for herself in the first year, and the expense attendant upon keeping her would be the cost of improving the land—2 acres at £6 an acre? A cow produces more than that even. There is her calf, and the milk, with which we feed pigs. The calf when it is twelve months old, if it is a heifer, is worth at a low estimate from £1 to £2, and even more.

1921. Speaking as fairly as you can, what would be the interest which you would get from each acre of your land? I would not like to let my land to any man on a lease of less than 10s. an acre—the land I have improved.

*Mr. J. Gibson.*  
25 Nov., 1889.

Mr. Thomas Moses, storekeeper, sworn, and examined :—

1922. *Chairman.*] What are you? I was a storekeeper until two months ago.

1923. In Clunes? Yes.

1924. You are now out of business? Yes.

1925. How long have you lived in this district? A little over six years.

1926. During that time I suppose you have been intimately connected, by reason of your business, with the farmers and settlers here? I have.

1927. Have you given any consideration to the proposed railway from Grafton to the Tweed River—as it affects this district? I have.

1928. Do you think that the most practicable route has been selected, and the route that will give most benefit to the settlers? I believe so.

1929. Do you know anything of the country from the bay further on? No.

1930. How would it affect future settlement if the reserves were thrown open, and fresh land selected? I think it would be better.

1931. You would be fairly served if you could get good roads? Yes.

1932. You have heard some of the evidence given with regard to the produce going to Sydney via Lismore and the Richmond River;—which port do you think would be most generally used if the railway were constructed;—Lismore or Byron Bay? Byron Bay.

1933. You are going on the assumption that harbour works will be made there? Yes.

*Mr. T. Moses.*  
25 Nov., 1889.

- Mr. T. Moses. 1934. Why do you think that they should be made? In the first place they would allow the farmers to get their produce to market much more quickly, because the steamers, after leaving Lismore, call at different places all down the river to Ballina, so that the butter and farm produce becomes almost unfit for market.
1935. I suppose if the railway were constructed the farmers could send their produce to Byron Bay and avoid the detention in the holds of the steamers, which now takes place? Certainly.
1936. Do you think that if the railway and harbour works at Byron Bay were constructed much additional settlement would be induced to come here? I do decidedly.
1937. You have heard a great deal about very large holdings, not fully improved, being owned in the district;—do you think it likely that farmers would lease those lands to tenants? Either lease them, or sell portions of them.
1938. I understand that many of the farmers who are settled in this district came here to find homes for their children, as well as for themselves? I believe that is what they have done.
1939. Because they were not able to get large enough areas in other districts. You think that they would be willing to lease some of this land? Yes.
1940. Do you not think that it would be a wise thing in the interests of the Colony at large, suppose the works are to be constructed, for the Government to withhold the land from sale? No, I do not.
1941. Why? Because I consider that it is a most necessary thing to settle people on the land, and if the Government sold these lands, or allowed them to be thrown open to selection, the people would settle on them, and the extra amount of produce raised would pay interest on the works.
1942. Do you think it is desirable that these lands should be alienated in large blocks of 640 acres each? I do not.
1943. We have been told that 40 acres of land, properly managed, is an independency for a thrifty man in this district? I believe a man could make a living on 50 or 60 acres, properly cleared, but I should say that 150 acres were enough for any man.
1944. In many places that would be too much for a man; would it not be beyond the means of the bulk of the selectors to improve 150 acres? I do not think so. The majority of them here have taken up from 200 to 640 acres.
1945. How much of that have they cleared? They have not cleared it all.
1946. So far as the country is concerned, then, it might as well not be selected, because it is yielding nothing? No.
1947. If these large selections are not yielding anything to the country, why should that state of things be allowed to continue? You must remember that these people have only been settled on the land for a few years. In the course of a few years they will have more land cleared. Those who first took up land had not money to select with, they had to go out to work to get money to pay for their clearing.
1948. The growth of population in this district, we are told, is greater than that in any other part of the Colony; do you think that that will continue? I do, until the land is occupied.
1949. If the proposed public works were constructed, the growth of population would be still greater in the future than it has been in the past? Decidedly.
1950. There would be a greater demand for land? Yes.
1951. And when the demand is great the price is higher? Yes.
1952. As the Government may be going to spend nearly £1,000,000 in this district upon public works, largely for the benefit of the people already settled here, would it not be better if they got some of that money back from the increased value of the land? I consider that they are getting a fair share back in the way of interest.
1953. You pay interest on any debt;—if you bought land from me you would have to pay interest on the balance due? Look at the difficulties the people have had to put up with.
1954. They would get all the advantages if the works were constructed, and they are not asked to pay for them? They pay their share indirectly.
1955. You have not been engaged in farming land? Not here.
1956. The selectors here have not been trafficking in land, buying and selling—they are *bona fide* men? Yes.
1957. Many of them have had to struggle and lose their selections from want of means, but otherwise you think they are *bona fide*? I do, decidedly.
1958. Do you think that if the harbour works were constructed at Byron Bay, return cargoes would be sent there for the use of the people of the district? Yes, decidedly.
1959. Do you agree with other witnesses that the bulk of the produce would go that way? Yes.
1960. For the same reasons? Yes.

MONDAY, 25 NOVEMBER, 1889.

The Sectional Committee met at the "Commercial Hotel," Lismore, at 8 p.m.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).  
 The Hon. GEORGE HENRY COX. | JACOB GARRARD, Esq.  
 CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Grafton to the Tweed.

Mr. Alexander Meston, sugar manufacturer, sworn, and examined:—

- Mr. A. Meston. 1961. *Mr. Cox.*] What is your occupation? Sugar manufacturer.
1962. How long have you resided on the Richmond? Fifteen years.
1963. Previous to that, where were you residing? I was twenty years on the Clarence.
- 25 Nov., 1889. 1964. What occupation did you follow on the Clarence? General farming and sugar growing—it is about twenty-six years since I went into sugar.
1965. Do you grow sugar now, as well as manufacture it? Yes.
1966. What information would you like to impart to the Committee? I consider that a railway from here to the Tweed is absolutely necessary. It would go through magnificent country the whole way, as

Mr.  
A. Meston.  
25 Nov., 1889.

- I daresay you have seen. The land is all good, and I know that it is fit for sugar growing. My son, who is boiling for myself, was boiling on the Brunswick, and he considered that the quality of the juice obtained from cane grown there, was better than that obtained from Richmond River cane.
1967. How do you account for that? It was something in the soil.
1968. Is the cane that your son is growing on the flats, or on the hills? On the hills.
1969. Is it red soil? Yes.
1970. You found that the cane grown in that soil was richer than the cane grown on the Richmond? Yes. It varies in different seasons. Sometimes it is better on the mountains, and sometimes on the flats; as a general rule the mountain cane is the best.
1971. You think that if railway facilities were given, a large quantity of this scrub would be utilized for the growth of sugar? Yes.
1972. Do you know what use it is put to now? It is mostly used for grazing. They are too far from a market or a mill to raise sugar there. I would have no hesitation myself in putting up a mill there.
1973. Do you think that if the land was wholly used for grazing the Government would be justified in making the railway? Certainly not.
1974. You think that if the railway were constructed, the land instead of keeping cows, would be able to keep a large number of human beings, and produce something infinitely more valuable than butter and milk? That has been my experience, whenever a railway has been put through good land.
1975. The people who keep dairies employ no labour; but if they were sugar planters they would have to employ a considerable amount of labour? Yes.
1976. Consequently by sugar planting the population must increase considerably? Yes. You want a large population to grow sugar.
1977. You think that the prospects of sugar-planting there are so good that you would be prepared to put up a factory on some of this scrub land? I should not be in the least afraid to put one up, though I am getting rather old for new enterprises.
1978. Supposing that would justify a railway between the Tweed and Byron Bay, is there anything to justify a railway between Casino and Lismore and Byron Bay? The land between Lismore and Casino is not much good. I do not think I should feel inclined to recommend it at all.
1979. You have good water communication between Lismore and the coast? Oh, yes.
1980. But there is no water communication between Casino and the coast? Yes. The droghers run to Casino, although the deep water is a little way from Casino.
1981. Then in your opinion the Government would be quite warranted in expending money upon the construction of a railway from Lismore to Byron Bay, but not from Casino? No; because it is not good land there.
1982. Why do you think it desirable that we should make a railway from Lismore to Byron Bay, when you have good water carriage here? But the people at Byron Bay and the Brunswick have not good water carriage.
1983. Presuming they were quite justified in running a railway from Murwillumbah to Byron Bay, would the Government be also justified in running a railway from Lismore to Byron Bay, since people here have water carriage already? Yes; but how are you going to let the Tweed and the Brunswick out.
1984. If the Government made a railway from the Brunswick and the Tweed to Byron Bay, what would justify them in making one from Lismore to Byron Bay? The tract of country between Lismore and Byron Bay.
1985. Do you think that that would be sufficient? Yes.
1986. Have they no means of getting to the water now? Not with heavy goods—only by drays; and that is very tedious and expensive.
1987. So that unless a railway were constructed you think that all the good country between this and Byron Bay would remain as it is now, in the occupation of dairy farmers? I do. Other produce is too heavy for drays to transport.
1988. You are aware that in that country there is a large amount of blue metal;—the best stone in the world with which to make roads? Yes. The roads are not equal to railways for carrying produce. I believe you can carry for 1½d. a ton per mile on the railway, but you could not do that on the road.
1989. This is very hilly country, and the railway could only run in one line;—how would the people reach the railway from the various points? There must be stations along the line to which they can bring their produce at less distance than they have to go at present.
1990. Do people now reside at any great distance from the main road? Yes; some a great way.
1991. How do they get their produce to market? The best way they can. They only have dairies, so that the produce is not very heavy to transport. It would be quite different if it were sugar, or maize, or produce of that description.
1992. Do you think that Byron Bay, as it is at present, would be of any use to people if there were a railway? Not as it is at present.
1993. That would necessitate the construction of a breakwater at a large expense in order to make a harbour;—do you think the country would be justified in making that breakwater? I cannot say that I am competent to judge. I have no idea what it would cost.
1994. £242,000. Do you think that the Government would be justified in expending that sum of money in making a harbour at Byron Bay for the benefit of the people we have just been considering? If there were a railway through, and the whole country settled, I think they would be perfectly justified in doing it.
1995. Are you aware that the Government propose to expend a very large sum of money in improving the entrance to the Richmond? I am aware of that.
1996. Do you think that would be sufficient to meet the requirements of the district, without spending any more money at Byron Bay? It is a long way for people to have to take their produce to the river, and then tranship it again.
1997. Do you know the country between Byron Bay and Ballina? Yes, perfectly.
1998. Is it very easy or very rough? Pretty hilly, but splendid land. It is all dense scrub—about 40 acres of it is quite sufficient to support a family.
1999. Which do you think would be the best, to make a breakwater at Byron Bay, or a railway from there to Ballina? And spend the same amount on either—I think the breakwater.
2000. Do you know Sir John Coode's scheme for improving the entrance to the Richmond River? Yes; I have read it.
- 2001.

- Mr. A. Meston.  
25 Nov., 1889.
2001. Do you know anything at all about the result of making breakwaters and training-walls? I know that they have been a failure at the Clarence. I believe that that river was better thirty-five years ago than it is now.
2002. Has any money been spent on the Richmond? Not a shilling.
2003. Have you suffered any considerable loss by the want of a good harbour at Ballina? No. I am one of the largest shippers of produce on the Richmond River, with the exception of the Colonial Sugar Refining Company.
2004. *Chairman.*] Do you ship sugar only? Yes. I have never had any delay during sixteen years, and I have never insured 6d. worth, or lost it.
2005. *Mr. Cox.*] Have you ever owned any vessels? No. The delay I have experienced is very little, and only happened at long intervals.
2006. *Mr. Lee.*] You are aware that a very large proportion of this scrub land to which you refer lies to the west or north-west of the Richmond River; for instance, Clunes, Eureka, Cooper's Creek, and thence out to the Tweed—is that country at present served by the Richmond? Yes. There is no other way to get from it.
2007. Do you think that one of the reasons why maize and sugar-cane are not produced there at the present time is the difficulty of getting to market? Yes; the difficulty of transit.
2008. Supposing a railway were made to that country, would sugar-mills be established? Yes.
2009. Of course they could not be placed at every plantation? No; certainly not.
2010. Consequently the cane would have to be carried for some distance from the plantations to the various mills? Yes.
2011. As a business man can you tell me whether the sugar cane would stand the cost of transit from the plantations by rail to the nearest sugar-mills? How do you propose to charge for it?
2012. 1½d per ton per mile? Well, we will say 12 miles—that would be only 1s. 6d. Yes, certainly it would be quite as cheap as water carriage.
2013. Can cane be conveyed in the barges in the river at the present time at the rate of 1½d. per ton per mile? Of course for about 50 miles it would cost that—if you went further it would not.
2014. What is the average return of cane per acre? It varies very much according to the soil and the cultivation.
2015. What ought this particular country to yield? A two-year crop ought to yield about 60 tons per acre.
2016. Have you known any ground on the Richmond to yield that? I have cut 84 tons.
2017. Had you any experience on the Clarence? I cultivated sugar there for three years.
2018. What is the average yield there? It was about the same in the early years—it is falling off very much now. Cane is a very exhaustive crop, and ought to be taken in rotation.
2019. If the cane can stand the cost of transit by rail at 1½d. per ton, and the yield is so enormous, the freights on the railway line would be very great, and the revenue obtained would go a good way to pay the working expenses and interest on the construction? The line ought to be used very much for the conveyance of cane. I see that at a meeting on the Brunswick they offered to grow cane for a company at 8s. a ton.
2020. Why did they offer to grow it for so low a price? To induce the company to extend their operations there. At present they have no market, and their cane has to rot. No one likes to go there, because of the difficulty of transit.
2021. Are there places there where sugar-mills could be erected? Several places.
2022. You have no hesitation in saying that the line would be utilized for the conveyance of cane? Not at the freight you have mentioned, because the difference in price would bear it.
2023. You notice the route of the line—what country would be served by it? Five miles on each side ought to be served, even for cane.
2024. What would it cost to cart the cane 5 miles? I have had it carted 5 miles for 2s. a ton—on a good road of course.
2025. But in that country would you get it carted for that? It would cost more. But you could grow an immense quantity of cane within a mile of the line.
2026. The country west of the line is not served by the Richmond River at the present time? No.
2027. Would the line serve that country? Yes, to a very great extent.
2028. In your opinion does the line take the proper course? Yes. It goes through a lot of fine land.
2029. Could you suggest any better route? No, I do not think so.
2030. As to the Brunswick and Tweed, you have no doubt that the line is an absolute necessity? Yes.
2031. You see that the line runs down to Byron Bay—could you give the Committee any information about Byron Bay as a port for shipment? At the present time?
2032. If it were converted into a harbour would it, in your opinion, be used by the Tweed and Brunswick people, and the people along the line? They certainly would use it in preference to coming here. It is much nearer, and you could get larger vessels in than you could get here, unless you improved the river. The larger the vessel the cheaper the freight.
2033. Supposing Byron Bay is not made a harbour, do you think it at all probable that the Tweed and Brunswick people will send the goods by this line round to Lismore? It is a long way.
2034. Which do you think is their proper port? Byron Bay, certainly.
2035. Do you know anything about the land on the proposed line from Lismore to Grafton? Yes.
2036. What is the nature of it? It is certainly not worth putting a railway through—the soil is very poor.
2037. Suppose the Clarence were made navigable for large vessels, do you think that the people residing upon any portion of the Richmond, or along the proposed line of railway, would send their goods there for shipment? No; they would not send an ounce.
2038. *Mr. Garrard.*] Where were you living on the Clarence? At Ulmarra.
2039. Were you frequently down at the heads? Yes.
2040. You spoke just now of the Clarence works having been a failure—do you speak from any knowledge of the works there? Yes; and I have heard the captains say that the bar was better before.
2041. You do not speak from actual knowledge, then? No.
2042. *Chairman.*] Have you ever known 100 tons to be grown to the acre in this district? No; 84 tons to the acre is the highest crop of sugar that I have had.
2043. *Mr. Garrard.*] Whereabouts on the Brunswick did your son grow sugar? He simply manufactured it—at Atkins'.
2044. Atkins' plant is rather old fashioned? Yes.

TUESDAY, 26 NOVEMBER, 1889.

*The Sectional Committee met in the Court-house, Lismore, at 9 a.m.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX. | JACOB GARRARD, Esq.  
CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to the Tweed.

Charles Henry Gale, Esq., Crown Lands Agent, sworn, and examined:—

2045. *Chairman.*] You are Land Agent for the Land District of Lismore? Yes.
2046. How long have you been here? Just ten months.
2047. Have you got the records of the Crown land sales at Byron Bay? Yes.
2048. When was the land sold there—in the village of Cayvauba? The first sale was on the 31st May, 1887, and the second on the 14th October, 1887.
2049. Were many allotments sold at those sales? At the first sale half the allotments put up were sold, and a great number were also withdrawn.
2050. What did they average? The average is not worked out, but I can give you some particulars as to the upset prices, and the amounts realized.
2051. Give us the upset prices? The upset prices of lots sold at the first sale were £10. Several lots at £50 were not sold. They realized at the first sale £12. £18 10s.—these are £10 lots. Two £10 lots were sold at £40, one £10 lot at £31 10s., one £10 lot at £16, one at £20, and one at £10 10s.
2052. Were the purchasers distributed, or was one person buying? They seemed fairly well distributed.
2053. Now at the next sale? At the next sale sixteen lots were offered and fourteen sold. The other two were not offered for.
2054. For how much above upset price? £12 10s. was the upset price for the first allotment, and it realized £212 10s.; the second allotment, the upset price for which was £12 10s., realized £160 10s.; the third allotment, the upset price of which was £12 10s., realized £55; the fourth, upset price £12 10s., £40; the fifth, upset price £12 10s., £65; the sixth, upset price £12 10s., £66; the seventh, upset price £25, £50; the eighth, upset price £25, £36; the ninth, upset price £25, £32; the tenth, upset price £25, £36; the eleventh, upset price £25, £52; the twelfth, upset price £25, £40; the thirteenth, upset price £25, £25; then there were two not offered for, and the sixteenth, the upset price of which was £25, realized £32.
2055. Were those allotments purchased by different people? There were about eleven different purchasers.
2056. What was the area of each of those allotments? The first six lots were 1 rood; they were the ones that brought the biggest prices. All the others were  $\frac{1}{2}$  an acre (2 roods).
2057. The first lots were near the jetty? I cannot say without referring to the map. I did not conduct the sale myself; it was held before my arrival here.
2058. You have been here during the whole of this year? I took charge here on the 1st February.
2059. How do the conditional purchases made since then compare with those made during the last few years? This present year has been better than any year since 1884.
2060. How many conditional purchases were made this year? 123.
2061. The number of selections was 123. What was the average area of those selections? About 104 acres. I got this return out hurriedly this morning, and took the average of twenty selections.
2062. I suppose some of the selections are pretty large? There are very few large selections—they are nearly all small.
2063. What do you call small? They very rarely went over 200 acres, and were generally from 70 to 80 acres. In special areas the quantity of land that can be taken up is limited to 160 acres. They cannot exceed that under the present Act. Fifty-six of these selections were taken up in special areas, so that they could not exceed 160 acres.
2064. Have you any idea of what the price was in those special areas? For most of them £2 10s., and for some of them about £4. In one case the price was something like £15 or £20, at Riley's Hill, down the river. The average price would be £2 10s., for residential conditional purchases, of course.
2065. Is there much transferring of land going on here? There has been a great deal since I have been here—a great deal of buying, selling, mortgaging, &c.
2066. But has the land been passing from one to another absolutely to any great extent? Yes; there have been a good number of *bona fide* sales. The men from the south coast are coming up here in considerable numbers and buying up the old selections.

C. H. Gale,  
Esq.  
26 Nov., 1889.

William Gibbon Walker, Esq., Government Surveyor, sworn, and examined:—

2067. *Chairman.*] You are a licensed surveyor? No, a Government surveyor.
2068. In the Land District of Lismore? I go outside Lismore, into Casino, and I work a little into the Tweed as well.
2069. How long have you been here? A little over three years.
2070. I suppose you are fairly well acquainted with the country—not only in this district, but in the adjoining districts? Yes, with the exception of right up on the Tweed, as far as the Brunswick, or a little further, perhaps.
2071. Do you know the extent of the Lismore Land District? It nearly takes in the whole of the eastern half of the county of Rous.
2072. That would include the Tweed then—the Tweed is in the county of Rous? Although it does not take in the Tweed it goes into the country of the Richmond.
2073. Have you been kept pretty busy since you have been here? Yes.
2074. Surveying? Surveying and reporting on the revocation of reserves and roads.
2075. Can you give us any idea of the average cost of surveying per acre in this scrub land? No, I cannot exactly. All I can say is that the licensed surveyors are allowed 100 per cent. on the scale of fees.

W. G. Walker,  
Esq.  
26 Nov., 1889.

- W. G. Walker, Esq.  
26 Nov., 1889.
2076. What is the scale of fees per mile or per chain? About £2 per mile. They get £4 per mile for surveying in this scrub land.
2077. The cost of the survey, then, in many instances, must be more than the deposit paid on conditional purchases? Considerably more for this district.
2078. Is there very much land unalienated in this district at the present time? Yes, a considerable quantity. Do you mean particularly in the Lismore district?
2079. No, in the districts with which you are acquainted? There are a great many reserves, and a good deal of Crown land.
2080. How much of those reserves are fit for farmers—the class of people who are coming here? Nearly all of them.
2081. Is there much good land similar to this scrub land to the westward—Tenterfield way? Of course the further back you get from the coast the more you get into the forest country.
2082. Is the land of a rich character? Yes.
2083. And there is very little settlement? Yes.
2084. Do you know the route of the railway from here to Byron Bay? Yes.
2085. Have you been along it? I have picked it up here and there. I have a very good idea of the direction of it.
2086. Have you been back amongst the land coloured white on the map? I have not been much in the county of Drake. I do not know much of the land to the west, outside of the counties of Richmond and Rous.
2087. Is the country you do know to the west of Lismore, which is unsold at the present time, good average country for farming? Yes.
2088. And I suppose it is only its remoteness from the centres of population, and the difficulty of access to those centres, that has prevented it from being taken up already? That is all. It is very nearly as good as the scrub land.
2089. You say that you have picked up the line of the proposed railway here and there. With your knowledge of the district, do you think that any better route could be got than that selected by the surveyor—that is, a general route? No, I certainly do not.
2090. Would that railway, passing down to Byron Bay, serve a large number of farmers? A very large number.
2091. And away to the north, to the Tweed? Yes.
2092. Have you given any consideration to the proposed harbour works at Byron Bay? I cannot say that I have given them very much consideration.
2093. Do you know from travelling about the district what the general opinion is with regard to them? The general feeling is that they ought to be proceeded with.
2094. People generally think that they would be a great advantage to them if they were constructed? Yes.
2095. For what reason? Well, a harbour there would give them a good outlet to any market that they liked to make use of. There is deep water there for vessels to go in.
2096. Do you think the Government would be justified in making improvements at the mouth of the Richmond, and also at Byron Bay? I think so, considering the great extent of the country, and its richness, and the immense population that it could carry.
2097. I suppose there is no doubt that this country will never be settled until you get better roads, and better communication? No.
2098. Better communication to the sea-board and from that to the centres of population? Exactly.
2099. Is there anything else that you would like to tell the Committee? Nothing, except that I have never seen land to equal that in this district, and I have been a good deal over the country. I have been at Hay, down Bowral way, and in New England.
2100. You have never seen land to equal this? No. I was knocking about the sea for nine years, and I never saw any country outside the Colony to equal this. I consider 40 acres quite sufficient to keep a family, and every reserve that I recommend for revocation I recommend as a special area.
2101. Do you not think that it would be a wise policy to withhold all these reserves until the works are carried out or determined upon—would not the money derived from them go largely towards paying the cost of the works? The land would double in value if the works were constructed.
2102. The population is increasing? Rapidly.
2103. We were told that the population here had increased 22 per cent. as against 4½ per cent. in the colony at large? Yes.
2104. Do you think that that would continue if there were a certainty of the country being opened up by a railway? Yes.
2105. It would create a demand for land, and consequently the Government would get a better price for it than they do now? Certainly.
2106. Do you think that much of the land of this district is being taken up for speculative purposes? I think a great deal has been, but I do not think much is being taken up now.
2107. I suppose it is impossible for land to be taken up in this district unless a man has some amount of capital? He could not do it without money. There is a good deal of valuable timber in the scrub, which, if there were a market for it, would be saved, but now it is destroyed wholesale. There is beech, teak, long jack, woolly butt, and other timber.
2108. *Mr. Cox.*] There are no squatting leases in any portion of what they call the scrub land? No, I do not think so. I think they have been mostly abandoned.
2109. Are you aware that the present squatting leases in the coast district will expire next year? Yes.
2110. Then a large area will be thrown open for selection? Yes.
2111. I suppose you anticipate having a large amount of work when that takes place. When the hundreds of thousands of acres held in the large squattages at the heads of the Richmond are thrown open, will there not be a rush for the land? I do not think there will be any great rush, because a great deal of the resumed area has not gone yet.
2112. Will you be prepared, in the event of the leases falling in next year, to recommend a certain portion as special areas? Oh, yes; some of them could certainly be proclaimed special areas.
2113. And you would take care that the country would get a fair return for the land? Yes.
2114. *Mr. Lee.*] Do you know anything of the country between Casino and Grafton? Only about 20 miles south of Casino, on the Grafton Road. I have not travelled further than that. 2115.

W. G.  
Walker, Esq.

26 Nov., 1889.

2115. What is the character of the country? It seems to me that the further you go south the poorer it gets—spotted gum ridges and that sort of thing.
2116. Does this huge belt of scrub country extend from Casino towards Grafton? No.
2117. What would be about the outside boundary of the scrub country in that direction? I do not think there is much scrub country south of Casino. As I say, it extends over the whole of the Richmond district northerly to the Queensland boundary.
2118. You know the country pretty well, between here and Cape Byron? Yes.
2119. According to the map, there has been a large amount of alienation there, and it would appear that the railway is too close to the river to serve a number of people living west of it—can you give the Committee any reason as to why the line is likely to be taken in that direction? Well, I think it was taken there chiefly on account of the country—as you get back to the west you get to the hills.
2120. Do you think that the easiest railway route has been obtained? I think there is not a doubt about it.
2121. Are the people lying to the west of that route likely to be served by the railway? Decidedly.
2122. In fact, to get to the river, they must cross the railway? They must cross it.
2123. Does the river serve that western country at the present time—you have a pretty good knowledge of the state of the roads, and that sort of thing? It has to serve it after a fashion. This country is all being neglected. The fact that people cannot get to market from there accounts for all the unalienated land in the country lying to the north-west of Byron Bay.
2124. Is that country served by the river? At the present it is.
2125. Is the river the only means they have of getting their produce to market? A steamer has started now to trade to Byron Bay, and they are making use of that.
2126. From the nature of your duties you are obliged to go over the country in all weathers? Yes.
2127. What is the state of these scrub roads in winter? They are almost impassable.
2128. Is it possible to use vehicles? Not in wet weather.
2129. I have noticed in travelling through the country that there is an utter absence of the cultivation of maize or sugar-cane—can you assign any reason for that. The difficulty of getting to market.
2130. There can be no doubt about the capabilities of the line? No doubt.
2131. You think that a valid reason why grain is not grown there? I think it is the only reason.
2132. I notice that dairying is the chief occupation here—what is the reason of that? Because it is more easy to get the produce away.
2133. You think that if the district were opened up grain, maize, and cane, would be cultivated? I am sure of it.

George Wolfe West, Esq., Inspector of Conditional Purchases, sworn, and examined:—

2134. *Chairman.*] You are an inspector of conditional purchases, but you were a forest ranger? Yes.
2135. You have been a forest ranger in different parts of the Colony? Yes, at Gunnedah.
2136. How long have you been here? Four and a half years.
2137. Your duties compel you, I presume, to travel all over this land district? Yes; over the Tweed, Casino, and Lismore Land Districts.
2138. Are those three land districts? Yes.
2139. You go into them all? Yes.
2140. So that you are very well acquainted with them? I only had the Lismore district up to this time last year, and then I got the Tweed and Casino districts.
2141. Do you know the proposed line of railway from Lismore to Byron Bay, and then on to the Tweed—have you been along it, or struck it at any point? Yes.
2142. Do you think any better route could be obtained between Lismore and Murwillumbah? I do not think so.
2143. Why? I think this is the easiest and best route.
2144. Because of the mountain ranges? Yes, and the creeks.
2145. Going about amongst the farmers to the north and west of the proposed line, have you had an opportunity of hearing their opinions as to the value of the line to them as a means of getting to market? Yes.
2146. What is their opinion? They all think that they ought to have a railway.
2147. What is the general opinion about the port? The people about the Brunswick, Clunes, and Byron Bay wish to have a port at Byron Bay. I know that the settlers for a long distance back would use Byron Bay if they could.
2148. You know the land through which we came yesterday from Byron Bay? Yes. The people along that road would all use the Bay.
2149. Is there much land similar to that unalienated in this district? Yes, in reserves.
2150. The white pieces on the map are unalienated lands;—do you know anything about the unalienated land near the Clarence forest reserve No. 2—is it good land? Yes; it is good scrub.
2151. Can you assign any reason for that being unalienated at the present time? Yes; they have no market, and no means of access to market.
2152. Do you not think that if the works were carried out those lands ought to be reserved? It would increase their value considerably.
2153. I suppose most of the selectors who are here have got quite sufficient for their means? A good many of them are selecting again, when their time is up.
2154. Although their original selections are not cleared? No; they select again.
2155. They make one selection, improve a part of it so as to fulfil the necessary conditions, and I suppose many of them exceed those conditions? Some do, and some just barely fulfil them.
2156. Without completing the improvements on their own selections, when the time arrives they select again? Yes, in many cases.
2157. Is that for speculative purposes, or to secure land for their children? Some of them sell part of their original selections, and then select again.
2158. So as to get larger areas? Yes. They think they cannot get it elsewhere as good. I know that many selectors have left the district and gone away, and have had to come back again.
2159. You have seen a great deal of the Colony—have you ever seen better land than there is in this district? Not such a large area of good land.

G. W. West,  
Esq.

26 Nov., 1889.

- G. W. West, Esq.  
26 Nov., 1889.
2160. What is allowed in the scrub land per acre for clearing? It depends upon how it is cleared. If it is cleared properly, and put under grass, it will cost £10 an acre.
2161. That is after the second burning off? Yes; that is burning it twice. If you got a good running fire it might only cost £4 an acre.
2162. That is the first burning? Yes. It all depends on the first burning.
2163. It costs you say from £4 to £10 an acre? Yes. If you miss your first running fire, and have to cross burn it, or hand burn it, it will cost you as much as £10 an acre, whereas with a running fire it might cost only £6 an acre.
2164. A running fire is when you only burn out the scrub itself? Yes.
2165. A cross fire is when you have to haul out the logs and cut them up and burn them? Yes.
2166. You have had a good deal of experience here and elsewhere—do you think that the bulk of the selectors here are *bona fide* men who have taken up land for the purpose of making homes for themselves? Yes, the bulk of them are.
2167. I daresay there is a little speculation, but apparently there is less here than there is in many places? That is likely.
2168. There is not the dummies class that we found out on the plains? Not now.
2169. You think that the bulk of the selectors here are *bona fide* men who have taken up the land to benefit themselves and their families? Yes.
2170. *Mr. Garrard.*] Do you think that the people at Clunes would use Byron Bay as their port? I am sure that they would.
2171. Although they are 20 miles from Byron Bay and only 10 from Lismore? A great many of them would.
2172. But there would be an increased cost to them? I do not think so.
2173. Surely a horse would run 10 miles more quickly than he would run 20 miles? But then there is the extra water carriage to the Heads.
2174. How many miles is that? Seventy miles.
2175. What is the rate of freight from Lismore to Sydney? I do not know.
2176. From Byron Bay to Sydney? I do not know.
2177. How then do you assume that they would get any consideration by going to Byron Bay;—is not Lismore a far safer port than Byron Bay? Yes; but I am supposing that harbour works are carried out at Byron Bay.
2178. Supposing the works at Byron Bay are not constructed, but only the railway, do you think the people at Clunes will go to Byron Bay with their produce, or to Lismore? They will go to Lismore.
2179. Do you not think that the Richmond River will be a good port for them when the improvements now going on at the Heads are completed? I suppose if they can get in and out at all hours they will use the Richmond.
2180. If the Richmond is made as good as the Clarence, do you not think that it will serve all their purposes? There is a large district to serve about the Brunswick and Byron Bay.
2181. I want to keep about 10 miles from Lismore;—do you think that those people would still go to Lismore? I heard a great many say that they would use Byron Bay—a great many use it now.
2182. Do you think that that was said for the purpose of inducing the Government to make a harbour at Byron Bay, without any serious thought as to whether it would suit their interests best? I could not say.
2183. I think you said that the railway route as laid out was the best to be got? As far as I know, it is.
2184. Do you know anything of the country on the coast line from Brunswick to the Tweed Heads? Yes.
2185. What sort of country is it? Swampy. There is a good deal of swampy country.
2186. Are you aware that an alternative line was surveyed there? I believe it was.
2187. You have no doubt that the line shown on the plan would be far preferable to that coast line? Yes. There is a lot of swampy land, and three or four large creeks between the Brunswick and the coast.
2188. Is it very difficult country between the Brunswick and Murwillumbah? I do not think that it would be as difficult as that along the coast. There is a great deal of swampy country along the coast.
2189. The coast country is level—you cannot say that of the country between the Brunswick and Murwillumbah? No. It is ridgy; but the line will go through the heart of the settlement.
2190. Do you know the country down to the Clarence? Yes.
2191. What sort of land is it between Casino and the Clarence? Poor land, compared with the Lismore country.
2192. Do you think that the people of Lismore, since the Clarence is a better port now than the Richmond is, would send their goods there if there were a railway between Lismore and Grafton? No.
2193. Do you think that the people of Grafton would send their produce to Lismore? No.
2194. What is the use of the railway between Lismore and Grafton—you do not think that it would be of any use at all? I do not say that; but I do not think produce will ever be sent from the Clarence to the Richmond, or from the Richmond to the Clarence.
2195. Then what is to pay the railway—the passenger traffic? There is a fair passenger traffic.
2196. Do you know the estimated cost of this line from Grafton to the Tweed Heads? No.
2197. £198,000—and you think that one portion of it would probably be a “dead horse”? I do not think that they would send the produce of one district to another.
2198. Are the people advocating that portion of the line for the purpose of seeing a locomotive run there? There is a lot of land there that would be taken up and settled if there were a railway.
2199. Is it likely to be taken up when there is such a large area of land to the north? I think every acre would be taken up—it is being taken up very largely now—nearly every week there is a fresh selection taken up.
2200. *Mr. Cox.*] The Byron Bay breakwater and the railway must be taken as one matter; a breakwater at Byron Bay would be useless without a railway, and the railway would be useless to a large extent if Byron Bay were not improved? Yes.
2201. The railway must be contemporaneous with the breakwater at Byron Bay? Yes.
2202. In the event of there being no breakwater at Byron Bay, and because of the limit to the accommodation now afforded by the steamers trading there, would it be well to carry out a railway from Byron Bay to Ballina, for the benefit of the Tweed and Brunswick people? Besides the proposed line to Lismore?

G. W. West,  
Esq.  
26 Nov., 1889.

2203. Yes, instead of harbour works? It would certainly go through a lot of good country.
2204. Do you not think that the long railway carriage from Murwillumbah to Ballina would kill the freight? I think it would help to.
2205. Therefore you think that both proposals should be carried out? I think that a breakwater at Byron Bay will be better than a railway to Ballina.
2206. Do you think that in the event of a railway being made from the Tweed to Byron Bay and thence to Lismore, a large amount of wood would be carried? Yes. There is a large quantity of timber in the district now not worked.
2207. Not only not worked, but actually destroyed? Yes.
2208. This would be utilised if a railway were constructed? Yes; if there were a railway, or if the Byron Bay works were carried out.
2209. You are well acquainted with the country at the head of the Tweed and Brunswick? Yes.
2210. On this map of the contemplated improvements at Byron Bay, the breakwater marked No. 2 is the one we are considering. On this map of the country you will see the position of the railway marked as it runs into and leaves Byron Bay, and goes thence on to the Tweed and Murwillumbah. You have already sworn that the country in this locality is extremely rich and largely settled? Yes.
2211. Have the people in the locality of Murwillumbah and the Brunswick any proper and regular outlet for their produce? No.
2212. I presume that they can produce anything that the Richmond River district can produce? I think so. I do not say that the land is as rich right through as the Richmond district is.
2213. But it is capable of growing anything that can be grown in the Richmond district? Yes.
2214. Taking the relative positions of Murwillumbah and the Tweed, and Lismore and the Richmond, if harbour works were constructed at Byron Bay would the people on the Tweed use that place as a place of export and import? I think so.
2215. Supposing there were no harbour there at all, would they be likely to send their goods to Lismore? It would depend upon the state of the bar at the Tweed Heads; the bar there is uncertain.
2216. What I want to ascertain from you is whether the proposed line would give an outlet? I am sure that they would send from Murwillumbah and the Brunswick to Byron Bay.
2217. What about the people living at the 100, 95, and 90 mile pegs—between Byron Bay and Lismore? A great many of them, as far as Clunes, could use Byron Bay.
2218. Would the people lying between the 90 mile peg and the Tweed—the selectors living to the north-west, be likely to make use of Byron Bay—which would be their easiest and cheapest outlet? A great many would use Byron Bay.
2219. Which would be the cheapest for them—it is not a matter of sentiment or fancy—they, like other business men, would use the cheapest and most direct route—which would that be? A great many of them would ship at Byron Bay.
2220. Supposing no harbour works were made at Byron Bay, and the contemplated improvements at the Richmond have not the result expected, and the Clarence Heads are made a harbour of shipment, do you think the people of the Tweed, the Brunswick, or at Lismore, would send their produce to the Clarence for shipment? By rail?
2221. Yes? No; I do not.
2222. Do you know anything of the country west of this—between this and Tabulam? Every inch of it.
2223. And do you know that there was once a trial survey for a railway made there? Yes.
2224. Do you know the distance from Tenterfield to Lismore? About 133 miles.
2225. What is the nature of the settlement west of Casino—is there much free selection going on there? Latterly.
2226. Is it of a *bona fide* character? Yes. I would like to add that there is a lot of valuable timber on the line between Casino and Grafton—ironbark on both sides of the line.
2227. *Mr. Garrard.*] Is the timber to which you refer on the road between Casino and Grafton, or more in the direction of Lawrence? It is nearer to Casino, for the first 20 or 30 miles.
2228. Do you go through more of it from Casino to Grafton, or from Casino to Lawrence? I do not think there is much good timber after the first 25 miles. After you branch off from the turn off to Lawrence good timber is very scarce; but from Casino to that point there is valuable timber on both sides of the line.

Edward Macarthy Allman, Esq., Road Inspector, sworn, and examined:—

E. M. Allman,  
Esq.  
26 Nov., 1889.

2229. *Mr. Cox.*] You are Road Inspector for the Lismore district? I am.
2230. What is called the Lismore district in your Department? Well, it extends from Lismore down to Ballina, and is bounded by the Richmond River, taking in one or two roads on the other side of the river, going towards Wardell. From Ballina it goes to Byron Bay, and from Byron Bay back to Lismore, and out towards the Tweed in a north-westerly direction.
2231. How far towards the Tweed? To the Dividing Range, about 24 miles—to the watershed of the Tweed and the Richmond.
2232. How many miles of road have you under your supervision? Last year I had 397 miles.
2233. Is it costly to make roads in this district? Not on the whole.
2234. Metal is abundant? Yes, as a rule. In the scrub country it is as a rule plentiful.
2235. But although roads in the scrub country without metal are very good in dry weather, what are they in wet weather? Very bad as a rule—very bad indeed—that is, where no clearing has been done alongside the road.
2236. What is the cost per mile of cutting and metalling in that scrub country? I estimate the cost, including culverts, at about £1,000 a mile.
2237. That is not a very heavy price, considering the character of the country; but I presume that, metal being so plentiful, there is no great distance to cart it? Yes. And timber is also as a rule very plentiful.
2238. You are still at work at these roads, and there are a number of others surveyed but not yet cleared, I presume? Yes. Of course there are some that have not been touched yet; but something has been done on most of the roads in the district.
2239. Besides these main thoroughfares there must be a number of by-roads for the convenience of free selectors, branching off in all directions? A great number.

- E. M. Allman, Esq.  
26 Nov., 1889.
2240. Those have not yet been touched as a rule? Many of them—yes.
2241. In travelling through the district do you find that much cultivation has been done? Yes, a good deal. Of course there is not so much in the centre of the scrub, where the land is difficult of access, because there are no means of getting produce, such as grain, or anything of that kind, away.
2242. They utilise the country chiefly for dairying? Yes.
2243. If a railway were constructed the land might be much more profitably used than for keeping cows upon? I think so.
2244. Cane could be grown upon it? I do not know about cane. I have not had experience of it myself; but I imagine that it would grow. It grows at Rous, which is similar country.
2245. There would be the advantage of an absence of frost on the hills? Yes.
2246. Do you think that that would be a sufficient inducement to the selectors to grow the cane on the hills, notwithstanding the great difficulty of cultivation? I imagine it would compensate in great measure for the other difficulties under which they might labour.
2247. With respect to this projected railway from the Tweed to Byron Bay, and thence to Casino, I presume it must be considered in connection with the contemplated breakwater at Byron Bay? I should think so.
2248. The railway would be of very little use if there were not a pretty good port at the end of it? I certainly think that the two schemes should go together.
2249. One would be of little good without the other—it would be of no use to make a breakwater at Byron Bay unless you had communication with that place by rail; and on the other hand, it would be of very little use to make a railway unless you had a breakwater? The one would make the other more useful—most decidedly.
2250. You think that in future the products of this rich country would warrant the heavy expenditure which would have to be incurred in making a railway and a harbour at Byron Bay? I think it is very likely.
2251. Do you know what the cost of these works will be? No; I do not, exactly. I believe that the breakwater is estimated to cost somewhere about £240,000, and I think that the railway will cost somewhere about £12,000 a mile.
2252. Do you think the country will be justified in going to that expense, taking into consideration the amount of traffic which now goes by the little coasting steamers once a week? Yes; but I imagine that not only the present, but also the prospective traffic would be taken into account. I think that the construction of these works would have the effect of increasing settlement and production in the scrub country.
2253. So that, although the traffic is now done by one or two little steamers from the Tweed and Byron Bay, you believe the country is sufficiently rich to warrant the construction of a railway, because you are certain that the population will increase enormously? I think there is no doubt about that, as far as I can foretell. The country is certainly very rich. I have never seen anything better.
2254. In the event of the two railways—from Casino to Byron Bay, and from the Tweed to Byron Bay—being constructed, would you still have to do as much work as you do now, in order to make feeders for the railways? Certainly. There is no doubt about that.
2255. *Mr. Lee.*] In 1888 you received £16,440 as a vote for your portion of the district? Yes.
2256. That does not include the whole of the Richmond River district? Certainly not.
2257. How many road officers are there in the district which the proposed railway will traverse? Do you mean from Grafton?
2258. Leaving off at Casino—taking the Richmond, the Tweed, and the Brunswick? Three.
2259. Do they receive as much as you do? I do not think so.
2260. You receive the largest share? Certainly.
2261. Would they receive half as much as you do? Yes.
2262. In 1889 you received £22,085? Yes.
2263. If there were two others besides yourself, they would possibly receive £22,000 between them? I do not know the exact amount of their votes. I know that they do not receive nearly so much as I do.
2264. If they received half as much, there would be a road expenditure in this district of about £44,000 a year? Yes.
2265. That has been going on for some years? I think that the expenditure has increased during the last couple of years.
2266. *Chairman.*] I suppose the more you get the more costly the roads become? Possibly.
2267. *Mr. Lee.*] The more money you would have to spend? Possibly.
2268. At any rate, we can calculate that £44,000 per annum is spent on roads and bridges in the district traversed by the railway? About that.
2269. Does the country receive anything from tolls, or in any other way, for this expenditure? No tolls are levied, except on the ferries.
2270. Although these roads give facilities to the people for getting about, the State receives no benefit from them whatever? Not directly.
2271. In addition to this, there is an annual charge for maintenance of £75 per annum? That is merely an estimate for the maintenance of a mile of metalled road.
2272. Each mile of metalled road which you have in your district costs you that amount? I do not know that it actually costs that, because I have included in that the repair of culverts and bridges.
2273. How many maintenance men have you in your district? About twenty-four.
2274. Are they paid out of the annual vote? Yes.
2275. The maintenance men have to be paid out of the £22,000, and the balance is expended on the roads? Yes.
2276. So that you have really not £22,000 to expend on the roads? It is expended on the roads.
2277. And so much is spent in maintenance? Yes, but the old roads must be kept in order. Of course you reduce the amount to be spent in new works on roads by the cost of maintenance.
2278. *Chairman.*] If the railway were built you would still want this money? I do not imagine that the vote would be reduced.
2279. Would it not be increased? Possibly it would. It would just depend upon the position of the roads.
- 2280.

2280. The construction of a railway would not save much in the construction of a road? I do not think it would save much. The following is a return showing the expenditure, &c., on the roads during 1888 and 1889, and the estimate for 1890:—

E. M.  
Allman, Esq.  
26 Nov., 1889.

1888.			
No. of roads, 31; Milage = 343 .....	Schedule votes ...	£12,740	
	Special sums .....	220	
	Bridges .....	3,480	
		<u>£16,440</u>	
1889.			
No. of roads, 40; Milage = 397.....	Schedule votes	£16,170	
	Special sums .....	3,715	
	Bridges .....	2,200	
		<u>£22,085</u>	
1890 Estimates.			
No. of roads, 48; Milage = 430.....	Schedule votes	£17,000	
(Chiefly additional sums).....	Special sums ...	750	
	Bridges .....	2,500	
		<u>£20,250</u>	

Greatest length on Schedule, 21 miles; Shortest, 1 mile; New classification, £50, £40, £30, £20, £15, £10, £5; Old, £50, £25, £15, £10, £7, £5.

No. Roads, 1st class (1890) = 22; 2nd class = 7; 3rd class = 15; 4th class = 4 = 48.

Works executed to end 1888 (approximately).

Culverts.	Crossings.	Metal. m. chs.	Ballast. m. chs.	Formed. m. chs.	Cleared. m. chs.	Pipe-drains.
232	202	38 10	18 20	66 37	166 44	23
134	102	5 40	2 44	28 60	15 19	Executed or proposed 1889.
<u>366</u>	<u>304</u>	<u>43 50</u>	<u>20 64</u>	<u>95 17</u>	<u>181 63</u>	<u>23</u>

No. of bridges over 12 feet span, end 1888 ..... 81 }  
Since built or in course of erection or proposed ..... 7 } 88

Average cost, 80 chains, metalled road, including culverts, up to ordinary first-class (say), £1,000  
Add for bridges up to £1,000 (per mile) ..... 200

£1,200

(Metalled road—one man, 6 miles.) Cost of maintenance per mile per annum (say) £75.

Right Rev. Jeremiah Joseph Doyle, Bishop of Grafton, sworn, and examined:—

2281. *Chairman.*] Is your diocese a very large one? From Point Danger to 10 miles south of Port Macquarie, extending westwards to Mount Seaview and Mount Lindsay. Mount Seaview is on the Hastings, and Mount Lindsay on the Queensland border.

Right Rev.  
J. J. Doyle.

2282. Do you go about the district very much? Yes.

26 Nov., 1889.

2283. Up and down? Yes.

2284. Do you know the route of the proposed railway—have you seen the map? Yes; I know the country very well.

2285. Do you think that the line is being taken along the most practicable route? I think so—to get to the population at the principal centres.

2286. Going north from Lismore, do you think it would serve the farmers to any great extent? I think so.

2287. I suppose you mix with the farmers a good deal? Yes.

2288. Do you think that the development of the land is in any way retarded by the difficulties they have in getting to market with their produce? I am sure it is.

2289. What is generally grown near Lismore, and along the river, where the facilities for getting to market are very great? Sugar-cane and maize.

2290. Is there any dairying? Yes, a great deal.

2291. As you go out 15 or 20 miles? The dairying is more extensive as you go away from the river banks.

2292. In fact there is little cultivation as you get out? They have no chance of getting their produce away. Dairy produce is more easily handled than farm produce, and that is the reason that the land is not cultivated.

2293. The soil out back is good enough to produce whatever is produced about Lismore? It is splendid soil.

2294. Do you know the country from Byron Bay right on, fairly well? Yes.

2295. Is that country similar to the Richmond River country? I do not think it is quite so good in some places.

2296. They have a better rainfall? Much the same—a little more at Byron Bay.

2297. Do you know the average rainfall here? Some years we have 60 or 70 inches—I am not sure what it is.

2298. On the Tweed River we were told that the average rainfall there for nine years was 80 inches? I may be very much mistaken. I do not know the rainfall.

2299. Going out west from the proposed railway line the farmers, you say, have great difficulty in getting to market at all? They have.

2300. And there is rarely any encouragement for them to develop their land to the fullest extent? None whatever.

2301. Do you think that if they are given facilities for bringing their produce to a port, either at the Richmond or at Byron Bay, the land will be more largely developed, and a greater yield of produce result? I think so.

2302. Have many people been coming here since you have been here? Yes; when I came here in 1878, there were in this municipality of Lismore, which was just then being established, but 500 people, and I think we have nearly 4,000 now.

2303. Is there anything else about which you might give us some information? I do not know. I think the railway will be a great benefit, and that it is very necessary for the development of this district; and I hope it will be continued towards Sydney in time.

2304.

- Right R.  
J. J. Doyle.  
26 Nov., 1889.
2304. You do not think that the facilities which may be given by the construction of the works at the Richmond River will be of any use to this district? I do not think the river could serve the district, unless there were a railway.
2305. *Mr. Cox.*] You know the country between Casino and Grafton? Yes.
2306. What kind of country is it? Fairly good country—not so excellent as that from here to the Tweed.
2307. Are there many selectors settled there? There are a good many selectors just at present. A good deal of land has been taken up in that part of the country.
2308. Do you think that a railway constructed between those two points would be likely to pay a fair interest on the outlay? I think the railway, on the whole, would pay very well.
2309. What would be carried on that railway? Maize and dairy produce.
2310. Is the country of which I speak suitable for growing maize? A good deal of it is.
2311. There would be no communication, I presume, between Casino and Grafton—what one river grows the other river grows, and consequently there would be no produce going across? The selectors between the two points must send their produce somewhere or another.
2312. That would be the only traffic which could be relied on? I do not know—the passenger and other traffic must be considered.
2313. Would it be large? I do not know.
2314. Is there any at present? There is.
2315. How many coaches are there running between those two points? They cannot get that way. There is no coach direct. They go round by a circuitous way to get to Grafton. They generally go to Woodburn, across to Chatsworth, and then up the Clarence River.
2316. Do you think the passenger traffic would be a factor in paying the expenses of the line? I think the coaches that are running at present between the two rivers do very well.
2317. What do you suppose would be the passenger traffic between the two rivers? I could hardly form an estimate.

Thomas Campion Lodge, Esq., Manager Australian Joint Stock Bank, sworn, and examined:—

- T. C. Lodge,  
Esq.  
26 Nov., 1889.
2318. *Chairman.*] You are Manager of the Joint Stock Bank here? Yes.
2319. How long have you been here? I have been about ten years on the river altogether. Five years on the lower part of the river, and about five years here.
2320. You have taken an active part in the agitation for a railway in this district? Yes, latterly.
2321. How long has that been going on? I have interested myself in the movement as far as this particular line is concerned since I came to Lismore.
2322. Have you a return prepared to submit to the Committee? Yes. When the Railway Commissioners were here some time ago we prepared a statement and had it printed, and I am desirous of tendering it as evidence. I am prepared to say that to the best of my belief the statements contained in it are true.
2323. Could you give the Committee some idea as to how the figures were arrived at? From information obtained in the Statistical Register to a very great extent, and also from information derived from the local Government officers, especially the figures connected with the land returns. Most of the information given here was obtained from the Statistical Register. I have the opportunity of knowing, from my long connection with the district, that the returns are fairly accurate. The statement will be found in the appendix.
2324. *Mr. Garrard.*] In all that, you have made no reference to the intermediate port at Byron Bay—do you think the people of the Brunswick and the Tweed are likely to bring their produce to Lismore, when they have a port capable of improvement, at Byron Bay? I think that if Byron Bay is made a good port the produce from the Tweed will go there.
2325. Do you think that the produce from the district between Byron Bay and Clunes will also gravitate to Byron Bay? Certainly.
2326. What use, then, would the railway be between Clunes and Lismore? I think that all the settlers between Lismore and Clunes would send their produce to Lismore, but the settlers between Clunes and the Bay would send their produce to the Bay.
2327. Do you estimate that there will be much freight or traffic on the proposed railway from Casino to Lismore? I do.
2328. In what direction—they have already an arm of the river there? I think the Casino people will find it cheaper to get their goods from Lismore.
2329. At present they drogher them down? Yes. They will be able to get their goods more cheaply by railway than by droghers.
2330. Do you think that if the railway were constructed, instead of sending the goods by droghers down the south arm, they would send them by rail to Lismore? Yes.
2331. What is your opinion about the portion of the line between Casino and Grafton—do you think that that would be used in any way. Would the Casino people go to Grafton, or *vice versa*. Do you know the nature of the country? I have been across there.
2332. It is not to be compared with the Casino or Lismore country? No.
2333. You do not see where the freight is to come from to pay the cost of that part of the line? Unless it were part of a through line.
2334. If the line terminated at Grafton? I do not think that there is sufficient communication between the two rivers to make it pay.
2335. Unless the line is to be continued right through as a coast line, you think that the southern terminus should be at Casino, and the northern at Murwillumbah? I should say so.
2336. You do not think there is the slightest possibility of the trade of this district going down to the Clarence, where there is better navigable water? There is no possibility of the trade of the Richmond ever going to the Clarence.
2337. Do you think that the Government would be justified in making this railway, which would cost in round numbers £100,000, and in addition paying £242,000 for a breakwater at Byron Bay? I think the Government would be fully justified in incurring that expenditure, in view of the increased value of the unsold land and the development of such a large agricultural area.
2338. Whereabouts down the river were you stationed? At Woodburn.

2339. Do the people now, between the proposed line and the river, use the river as a means of export? Yes.
2340. Do you think that half of the people between these two districts will continue to use the railway and half the river. Is there any portion of the district between the river and the proposed line which would be left unprovided for? The people down the river and along the banks, and for some distance back, would still use the river, but the others would use the railway.
2341. Would they use the railway within a distance of 6 miles on each side of it? Yes.
2342. You think that the line would serve the district between it and the river, and that, where it failed, the river would take it up? Yes.
2343. Do you know anything of the country between Byron Bay and Murwillumbah? Yes.
2344. Do you think that the line is kept too near the coast between Byron Bay and the Brunswick—would it be better to go further inland? There were two lines surveyed—one along the coast, and one inland.
2345. You are speaking now of from the Brunswick north. I am speaking of the line between Byron Bay and the Brunswick. It keeps close to the coast. Would it be better if it were taken further inland, or are there difficulties which would prevent that being done? I believe from the character of the country that there are some difficulties.
2346. Do you know anything of the country between the Brunswick and the Tweed Heads? Yes. I have travelled along the beach.
2347. Are you aware that there is an alternative line there? Yes.
2348. Do you consider the inland line preferable? The Murwillumbah line will give the most general benefit. You were asking just now about the cost of the line. There are about 4,000 acres of unsold land at Cape Byron, and you were told to-day the prices realised at a sale there.
2349. In the future, then, if this line is constructed, a great deal of the trade which now comes to Lismore will, you think, undoubtedly come to Byron Bay? Yes.
2350. Then Lismore will be going back instead of advancing? Not necessarily. I think there is room for all these outlets.
2351. With a full knowledge that some of the trade which now finds its way to Lismore will be diverted to Byron Bay, the people of Lismore urge the construction of the Byron Bay works? I believe that they will be a great benefit to Lismore and to the whole district.
2352. In view of the large amount of money being spent on the Richmond to make a good entrance, do you think the Government could spend £242,000 at Byron Bay? I think that is the only way that they can develop the districts between Lismore and the Tweed—Mullumbimbi, Clunes, and Eureka.
2353. You have no doubt that the statement made by the Clunes people that they would send their produce to Byron Bay is a correct one? I believe they are doing it now. I believe they are shipping their butter to Byron Bay.
2354. *Mr. Cox.*] When you prepared the statement you have just read it was intended for the Commissioners, who were only concerned with the railway scheme? Yes.
2355. You are fully aware that the two schemes must be considered as one? Not necessarily, by any means. I consider that if the Government did not see their way to construct a breakwater at Cape Byron, and make a good port there, it would still be a great advantage to the districts mentioned to be connected with the Richmond River by railway.
2356. What chance would the people living on the Tweed have of getting their produce to market at anything like a fair price? Certainly Byron Bay would be the best port, but, failing that, the Richmond would be of great advantage to them.
2357. Do you think the people of Murwillumbah could send their produce all the way to Lismore, and pay for that long railway carriage? I do. It would only be two or three hours' carriage.
2358. But are you not aware that the Government charge according to the mileage? I believe it would pay, considering the delays they experience at present, unless something were done to their own river.
2359. Do you think that such a bulky article as maize could ever pay that? It would be a very heavy tax on the maize growers. A great deal would depend on the freights the Government charged. If they made the freights as reasonable as possible, I think the quantity of maize sent along the line would be very considerable.
2360. As commercial men the Commissioners are bound to charge such freights as would pay the working outlay—there can be no sentiment with them? If they saw that a small charge would increase the trade and encourage agriculture, they might reduce their freights.
2361. And carry the produce at a loss to the whole community? As the trade extended they would probably meet the interests of the farmers in that way.
2362. As the manager of the bank, do you give easier terms to people who live a long way off than to people who live in the immediate neighbourhood? I do not think that there is any analogy between the two cases.
2363. My object in asking you the question was to find out whether it is not an absolute necessity to consider these two schemes as one. I know a little about what produce will bear, and I know that it will not bear much carriage. Could the people of Murwillumbah grow maize and send it all the way to Lismore, to be afterwards shipped to Sydney, and make any profit out of it? I think that, so far as the sugar industry is concerned, they could well afford to pay the cost of carriage. Of course it would depend very much upon the price of maize in the Sydney market and the railway charges whether it could be sent. If maize was low it might not pay the growers to send it to Sydney in this way; but there are other things besides maize. If it were found not to be possible to make Byron Bay a harbour, the line would be justified as part of a future extension to the table-land. I also think this would be the shortest and quickest route from Sydney to Brisbane.
2364. That is beyond our inquiry, and therefore I cannot go into it;—do you think that it is imperative that the Government should be asked to expend £242,000 in making Byron Bay a safe port for the benefit of the people on the Tweed and the Brunswick, and those living nearer Byron Bay and in the Richmond district? I think the expenditure would be justified, because I think it would be the means of opening up the country, and would be met by the increased value which the Government would derive from unsold land.
2365. On the whole of the northern coast there is not a single harbour of refuge. Would that be a sufficient reason for expending this money to make Byron Bay a port of refuge? Yes.

T. C.  
Lodge, Esq.

26 Nov., 1889.

- T. C. Lodge,  
Esq.  
26 Nov., 1889.
2366. *Mr. Lee.*] You have been intimately connected with the railway agitation here for some years? I, in connection with other citizens, have taken an interest in the movement.
2367. The valuable information which you gave us just now was gathered by the Railway League? Yes.
2368. Therefore we must presume that you have a sound and solid case to go upon, or you would not make such a statement as you have made to-day? I am quite satisfied of that.
2369. That being the case, although you have had water communication for so many years, you have found that it has not developed the district? Yes.
2370. The river you have always had, and if there has been any change, it has been for the better. yet you come to us and say, "we find that the river will not develop the district;"—is not that the substance of your evidence? If a good harbour can be made to Cape Byron it would tend immensely to the development of the district.
2371. Although you have had this navigable river to the town of Lismore for many years it has not developed the district? No.
2372. And it is necessary that some additional outlet should be given? Yes.
2373. Therefore you advocate the railway? Yes.
2374. Then you comprise the country beyond you, which you admit is equally good—the Tweed and the Brunswick—in your scheme, and you assert that the proper shipping port for them is Byron Bay? If it could be made a good harbour.
2375. That would naturally divert some of the trade from Lismore? Yes, where my interests are principally centred.
2376. Is there any division among the people here as to the harbour works at Byron Bay? I think the general opinion here is in favour of the works.
2377. Notwithstanding that Lismore is the head of navigation the people as a whole still advocate the construction of harbour works at Byron Bay? I think they are generally in favour of them.
2378. Why? They look upon the work as the means of developing more fully the country between here and the Tweed.
2379. And that portion of the country can never be developed by the Richmond River? Not so thoroughly I think. Byron Bay would be a cheaper and more convenient outlet for them. If it could be made a good harbour there would be a better class of vessels trading there, and therefore cheaper freights; and in that way it would be a great acquisition to the Tweed.
2380. Have you any information as to the freights and rates of insurance between Lismore and Sydney? I have no definite information.
2381. If the figures which you have given the Committee were ever realised it would take an enormous fleet of ships to remove the stuff? Yes.
2382. Consequently there must be some better means of conveying it to market than the present coasting steamers? I believe there will be ample trade directly from all these districts.
2383. The trade if it develops must be carried in larger bottoms? Yes. The population and the trade is increasing very largely here, and there will be ample use for both outlets.
2384. You give an estimate of the possible increase of the trade of the district? Yes.
2385. If your figures are approximately correct, any one can see at a glance that it will require very large ships? Yes.
2386. Would the depth of water at the Richmond provided for by Sir John Coode in his scheme—15 feet, admit vessels of sufficient tonnage to carry the trade. At Byron Bay there is an average depth of 24 feet, giving jetty accommodation of 20 feet, and an extreme depth of 30 feet? I would not express an opinion about that. I consider that Byron Bay would be a cheaper and more convenient port.
2387. At all events there is no doubt in your mind that if the harbour works were constructed at Byron Bay it would be an immense assistance to the Tweed and Brunswick people, and also to the people living back from Byron Bay? Unquestionably.
2388. You have no doubt about that? No.
2389. Is it the prevailing opinion in the district? I believe that is the general opinion.
2390. You also urge the construction of this line on the broad ground of State policy—what does that term comprehend? I regard this line as only an instalment of a through line from Sydney to Queensland, and I think that on that ground it is justified, because it would be the shortest route from Sydney to Brisbane.
2391. By the coast? Even by way of Tenterfield it would be the shortest route.
2392. I presume that what you mean by State policy is that you anticipate that this line will ultimately be connected with the other railway systems of the Colony? Yes, and the interest of the State is concerned in the development of such a large area of fine agricultural land.
2393. I will ask you another question about Byron Bay. The contemplated expenditure there is large, and, if the work happened to be a failure, it would be a terrible misfortune to the country. I do not wish you to express an engineer's opinion about the work, but are you in a position to assure the Committee that if the Byron Bay works were constructed the majority of the people in the localities already indicated by me would use the harbour as a place of export and import? Undoubtedly, provided that it was a good one.
2394. I cannot say whether it will be a good or bad one—you can see for yourselves? I would not like to express an opinion as to whether the scheme is practicable. I am taking it for granted that it would be a good harbour.
2395. That it would be a safe anchorage in all weathers? Yes; and give access to ships of large tonnage.
2396. *Mr. Garrard.*] Do you think the unalienated land and reserves in the district should be kept back from sale by the Crown until the railway and harbour works are constructed? Or until they are in course of construction.
2397. Until the Crown can get the increment of value naturally arising from the construction of the works? Yes. I said that I believed the expenditure was justified, and I believe that the Government would be warranted in doubling the reserve prices on unsold land the very day that they decided to go on with the work. So far as the large reserve at Cape Byron is concerned, I believe that they would be justified in putting £20 an acre upon it as soon as it is determined to go on with the work. There are 4,000 acres there, and taking the value of the town allotments there and of suburban land, I do not think I am exaggerating when I say that that price would be justified.

2398. It would not be doing an injustice to anybody, because the people there would get the advantage of it? The people could afford to pay that price. I pointed out in my statement that there is a very large area of unalienated land in the Tweed district. This work would affect the value of that land to such an extent that the Government would be justified in increasing the price of the same. T. C. Lodge, Esq. 26 Nov., 188.

Mr. Louis Armbruster, sugar planter, &c., sworn, and examined:—

2399. *Mr. Garrard.*] Where do you reside? At Lindendale, near Wollongbar, near Merum Creek.

2400. About 5 miles to the south-east of the proposed line? About that.

2401. What is your occupation? I am a sugar grower and manufacturer, and I am a farmer, dairyman, and fruit grower. Mr. L. Armbruster. 26 Nov., 1889.

2402. What area of land are you possessed of? About 320 acres.

2403. How much of that have you under cultivation? One hundred and fifty acres.

2404. What have you got—maize and sugar? Yes.

2405. More sugar than maize? More grass than anything.

2406. Your principal occupation is that of dairying? And fruit growing.

2407. Do you manufacture sugar? Yes.

2408. Have you a mill of your own? Yes.

2409. What is your output of sugar yearly? I have not a great deal of cane—only about 15 acres.

2410. You manufacture for other people, I suppose? No; only for myself.

2411. Does it pay you to maintain a mill to deal with 15 acres of cane? It has not paid me as yet.

2412. As a matter of fact, a number of small men went in for manufacturing sugar some time since before they found that it was not a success? The small mills do not pay so well as the large ones do.

2413. It is found that large plants pay better than small ones? Yes, I would go into sugar growing if I had a larger plant.

2414. Where do you find a market for your produce here? At Lismore.

2415. For shipment to Sydney? Yes.

2416. Lismore is your local market, and you use it as a port of shipment to Sydney? Yes.

2417. If the proposed railway-line were constructed, would it benefit you? I believe it would.

2418. In what way? I think we could get our produce to market more quickly.

2419. If you were some 5 miles off the line, and 5 miles from Lismore, would you not still continue to cart your stuff into Lismore? If there was not a railway-station near to me I would have to do so.

2420. You would not cart it 3 miles to a railway-station for the sake of taking it 5 miles by train? I do not think I would.

2421. In all probability you would not use this line at all; you are near enough to Lismore to be able to cart your produce in without any great trouble? I think the railway would be a benefit to us.

2422. As a member of the community, perhaps, but not directly? Sometimes.

2423. Do you know the direction in which the line goes? No.

2424. Are you growing more sugar-cane now than you grew before, or less? Less.

2425. For what reason? It is running out.

2426. Is there more cane growing in this district now than there was a few years ago? No; less.

2427. Then the sugar industry is going back? It is improving in some parts, and going back in others.

2428. Is it because the land hitherto used for sugar-cane has become exhausted? No, it is not exhausted.

2429. What is the reason then that it is giving out—are people finding something that will pay better? I do not know the reason exactly.

2430. They are tired of growing one thing, perhaps, and want a change. You can give us no idea why the sugar industry has gone back in some portions of the district? In some parts it has gone back, and in others it has advanced.

2431. What is your own case? The reason it has gone back with me is that my mill is too small.

2432. You are growing up to the full capabilities of your mill? Yes, I have been.

2433. If your mill were larger you would grow more cane? I should.

2434. Is sugar-cane looked upon as the most profitable product of the district? I cannot exactly say that it is.

2435. What is—dairying? There is not so much labour attached to that.

2436. Is your farm what is called scrub land? It is all scrub land.

2437. Is there a large increase in the number of people who have come to take up the scrub land in this district? Yes, they are increasing fast.

2438. Did you take up your land as a selection originally? No, I bought it from Mr. Porch.

2439. What is the value of improved land within a few miles of here? £10 or £12 an acre.

2440. Land cleared and laid down, and grassed? Yes.

2441. What is its value unimproved? £6 an acre.

2442. And it costs nearly £6 an acre to clear it? All that. [*Witness exhibited samples of fruit, potatoes, and lemons, grown by him, and a sample of sugar manufactured from cane grown on his land.*]

Mr. Theodore Osborne, farmer, sworn, and examined:—

2443. *Mr. Cox.*] Where do you reside? At Bex Hill.

2444. How far from Lismore? Five miles. My own residence is further.

2445. How far from Lismore do you reside? Eight miles.

2446. Have you a large farm? I have 300 acres, and my son has another 100 acres adjoining.

2447. Do you work this as one farm? We intend doing so.

2448. What do you produce? Maize, pigs, and fruit.

2449. How much land have you cleared and utilised? About 100 acres. We have other land felled, and ready to be burnt during the present season, that will bring the area up to 150 acres.

2450. Do you keep accounts of your profits? I have not done so systematically.

2451. You can give us an approximate idea of the profits you make from this farm? Yes.

2452. What pays you best? Pigs.

2453. What do you grow to feed the pigs? Maize and pumpkins. I should have also mentioned fowls and eggs. 2454.

Mr. T. Osborne. 26 Nov., 1889.

- Mr. T. Osborne.  
26 Nov., 1889.
2454. Do you employ any labour on your farm, not taking into consideration the work done by yourself and your son? No.
2455. Not taking into consideration the value of your labour, what can you clear from your farm in twelve months? It has only been occupied five years. Of course the profits will increase when we get it into full working order. The profits are small, but increasing.
2456. I suppose you have no objection to tell the Committee what you have made off your farm during the past year? It would include partly our own support.
2457. What would you clear off the farm, not including your own and your son's labours? You mean what is sold as well as what we consume ourselves?
2458. Yes? I really could not say—£100.
2459. How much land have you under cultivation? We have a very small portion of land brought under proper cultivation.
2460. How much? Only 2 acres ploughed; but when the scrub was first burnt we planted corn without doing any ploughing.
2461. What I call cultivated land is land that has been under the plough? Maize is largely produced where the land has not been ploughed. We plant maize with a hoe during the first year.
2462. What I mean by cultivated land is land upon which you have used some implement with which to put the crop in—other than grass land? I have 40 acres under maize.
2463. What has been the cost of getting the 100 acres into the state in which it now is? There has been no expenditure, except the labour.
2464. You and your son have done it all? I have a family of sons.
2465. What would you say was the actual cost, valuing your sons' labour at a fair rate? For each acre?
2466. Yes? £5.
2467. Last year you got a return of £100 from it, after deducting the portion consumed by the family? Yes.
2468. That is £1 an acre from the land now available? Yes; but there is a quantity of grass land.
2469. Is not a large portion of the land in that part of the country used for dairying? Yes, it is.
2470. Why is that;—does dairying pay better than anything else, or what is the reason? One of the chief reasons is that dairy produce is easily got to market.
2471. If the facilities for getting produce to market were greater, more land would be put under cultivation? I think it would.
2472. About what is the value of land in your neighbourhood;—presuming that you wanted to sell the 100 acres that you have improved, what would you think a fair price for it? £7 an acre.
2473. Are you aware that the Government have sold some land recently as special reserves, and have got from £15 to £20 and £30 an acre for it? I am aware of that.
2474. Is that land generally better situated than your land that it commands such a price? That is the reason, the situation of the land. It has a river frontage.
2475. If your land was within a mile of Lismore you would expect that price for it? I would value it at double what I do now.
2476. If you had a railway running past your land you would at once put an extra price on it? Yes.
2477. And would be able to make more money out of it than you do now? Yes.
2478. Do you sell your pigs alive or make bacon of them? Alive.
2479. Do you meet with a ready sale here in Lismore? They go to Sydney.
2480. Have you ever met with any losses in sending live stock to Sydney by reason of a vessel being bar-bound for any length of time at the mouth of the river? Never.
2481. Have you ever heard of any heavy losses in live stock? I have heard of losses, but I have never experienced them.
2482. Would the railway from Lismore to Byron Bay go near your place? Within about 3 miles of it.
2483. So that probably it would be of very little advantage to you? It would be of very great advantage to me.
2484. In what way? I should be able to reach the line in 3 miles.
2485. Do you not think that the cost of sending goods by rail would be heavier than that of sending them by steamer? I do not think that it would all the way to Sydney.
2486. Then you are presuming that Byron Bay would be made a good port, so that large vessels could enter and give you certain means of communication with Sydney? Yes; that is the vital point—certainty of communication.
2487. You would prefer sending your goods by train to Byron Bay to sending them down a circuitous river to the heads at Ballina? I should.
2488. Notwithstanding that you may be charged something more for freight? The freight might possibly be a little more, but the other advantages would more than counterbalance that.
2489. In sending perishable goods, you would prefer a certain to an uncertain means of transit? Yes. Fruit is a matter in which I am specially interested.
2490. Do you grow fruit largely? Yes; I am beginning to grow it largely.
2491. What kind of fruit do you find most profitable? Grapes and peaches.
2492. Oranges and lemons? Oranges. I believe that if early fruit could get direct carriage to Sydney it would be very valuable.
2493. Would you be surprised to find that early fruit in Sydney even now fetches an extremely high price. I saw to-day that some apricots brought 4d. each? I sold ripe peaches in October in Lismore.
2494. Then ready means of communication at almost any rate of freight would pay you handsomely to get early produce into the market? Yes; and I could send any quantity. Grapes also grow here.
2495. So that you could compete successfully with the Sydney growers, inasmuch as you would be in the market a week before them? Undoubtedly; a month or more.
2496. You are quite sure that the railway would be availed of by people near the line for carrying perishable articles? Certainly it would.
2497. And they would not grumble at having to pay a fair rate? Not the least.
2498. Do you not think that it would be detrimental to the interests of Lismore—Lismore being the capital of the Richmond—to have a shipping port at Byron Bay; do you not think that this town would suffer materially if goods were sent to Byron Bay? It would affect it to some extent, but I am not prepared to say how much.
- 2499.

2499. You believe that the whole of the people in the district are in favour of having a railway to Byron Bay, and a harbour there, irrespective of any interest that they may have in the town of Lismore? I should not like to say that the whole of them are, but the large majority are.

Mr. T.  
Osborne.

26 Nov., 1889.

Mr. Stanley Gordon Woodrow, selector, sworn, and examined :—

2500. *Chairman.*] Where do you reside? At Mullumbimbi, on the Brunswick River.

2501. What are you? A selector.

2502. What area of land have you got there? 180 acres.

2503. Scrub land, I suppose? It is mostly scrub land—a little of it is mixed hardwood and scrub.

2504. Is it north-west of Byron Bay? Yes. My place is about  $3\frac{1}{2}$  miles west-north-west from the township of Mullumbimbi. It is the last selection but one, going westwards.

2505. How far are you from the proposed railway line? About 10 miles. The township is 8 miles up the Brunswick River.

2506. Is the Brunswick River 8 miles long? Yes; there is navigable water for that distance.

2507. Then are you due west from the township? Yes; almost due west. The river branches into two parts—the main arm and the Mullumbimbi Creek, and my selection is on the Mullumbimbi Creek.

2508. Have you had a meeting of selectors out there? Yes. We have a Progress Association.

2509. Do you represent that Progress Association now? Yes.

2510. What did you come all this way to tell us—how far is it from your place to Lismore? It is about 30 miles. I started off to the Bay, but finding that you had left the Bay I came on to Lismore.

2511. What is it you wish to tell us? That in the opinion of the Mullumbimbi Progress Association, if a deviation were made in the proposed line from Tyagra Grass, going through Mullumbimbi township—that is, going through good land instead of along the coast—and then joining the line again further along, it would cause an immense amount of traffic. Nearly all the produce of something like 30,000 acres of ground would be carried from Mullumbimbi to the Bay.

2512. That is presuming that the harbour works will be carried out? Yes.

2513. Has not the attention of the surveyors been directed to this deviation? Yes. The deviation was applied for several years ago, and a party of selectors went out to find a route, and then a surveyor came up.

2514. Who was he? Mr. Wilkins. He came up and examined the route, and he said that there was no difficulty whatever in taking the line up to Mullumbimbi township; but that on the other side of the township, going towards the Tweed, the selectors who were looking for a route had made a mistake in supposing that a railway could be taken round side cuttings. The men had been accustomed to side cuttings on the road, but the route they chose for the railway was not available. He said that if they would look again, and find a place where the railway could run along level ground, and strike a point on the ridge that could be easily cut through, or tunnelled under, he would come again. The selectors are now of opinion that they have found a suitable route; but the surveyor has not been out.

2515. Have you represented the matter to the surveyor? We have lately represented it to the authorities by an application from the Progress Association.

2516. Have you put yourselves into communication with Mr. Burge, who has just been sent up to Murwillumbah? No.

2517. Have you seen Mr. Wilkins about it? Not lately.

2518. *Mr. Garrard.*] To whom did you make representations? We made them through the members for the district about two months ago.

2519. Have you received no reply? We have received no reply up to the present time. Another application will be made directly, by petition to the Public Works Committee.

2520. This route of yours will go to the eastward of what are called the Twin Peaks? Yes.

2521. You propose to leave the present survey at Tyagra, pass through Mullumbimbi, and join the line again as soon as practicable? Yes.

2522. Do you propose to go through the Twin Peaks? To the eastward of them.

2523. *Chairman.*] But there is a range near the township trending out towards the west? Yes, there is a spur from the Twin Rocks.

2524. Then you would have to go into the township, and turn round to the east to get out again. Is the township of sufficient importance to justify such a deviation? It is not the township, it is the ground. The land on the main arm and Mullumbimbi Creek is flat scrub land, and more suitable for agriculture than for any other purpose. To the westward of the township the spur dips down almost to nothing, and then rises again, and we propose to run the line through the gap.

2525. How far would the township be from the present line? I think about 6 miles by road, as the line is at present surveyed. It would answer better to strike it at Tyagra than at the Brunswick Heads.

2526. Your nearest point from the village is not more than 4 miles? In a straight line, but by the road as at present surveyed, it is between 7 and 8 miles.

2527. How far is it to Byron Bay? By the road 12 miles. But then the main part of the settlers live beyond that. It is all good ground between Tyagra Grass and Mullumbimbi.

2528. What is the nature of the country north of the Brunswick at the 120-mile peg, running up the north arm of the Brunswick? Well, it is not anything like as good.

2529. Is there anything else you would like to tell the Committee? I do not think there is anything else.

2530. Do you know the nature of the country to the westward of you? Not for any distance. I have never been further than the top of the range.

2531. You are the last selector but one? On the Mullumbimbi Creek. They go out about 6 miles on the main arm.

2532. There is a great deal of unalienated country to the westward of where you are? Yes. But there is a range that divides that part of country from the coast.

2533. Is there good country at the back of that range? I was never over there. I believe there is some good country.

2534. Where you are speaking of, there is a large amount of unalienated land shown on the map—do you know anything of the character of that country? I do not know the country further back than the range.

2535. And you do not know exactly where the Progress Committee propose to rejoin the line? No.

2536. You do not know whether their deviation is to the east or to the west of the Twin Peaks? To the east. It is proposed to join the old line again at a place called the Pocket.

2537. Do you know Burringbar? Yes.

2538.

Mr. S. G.  
Woodrow.

26 Nov., 1889.

Mr. S. G.  
Woodrow.  
26 Nov., 1889.

2538. How far from that towards the Brunswick would it rejoin the line—about half way between the Brunswick and Burringbar? Yes. There is at present a road through there, but it was considered at one time that it could not be made.
2539. The deviation which you propose would add some miles to the length of the line? In the opinion of Mr. Wilkins it would not do so. I think it would shorten it.
2540. *Mr. Cox.*] Did the surveyors consult with the residents, or take their own course? I do not think that they consulted with the residents much.
2541. Did they go along the dray track? There was no dray track. They have made a number of trial surveys between the bay and the Brunswick.
2542. The residents there in their various travels about the district would be the most likely people to know the best track, either for a road, or for a railway—you are always going about there? Yes. But the settlers not being surveyors, do not understand the engineering part of the business.
2543. But the route that would make a good road would make a good railway. You know the kind of track that would make a good road? Yes; but we are told that there is a difference—that a road can go round a side cutting, but that a railway must go straight through.
- 2543½. But do you not think that the settlers who have been living in the place for years must know the lay of the country better than the surveyors? Yes, they know the lay of the country, and I have no doubt that they could give the surveyors a lot of information.

Mr. James Barrie, storekeeper, sworn, and examined:—

Mr. J. Barrie.  
26 Nov., 1889.

2544. *Chairman.*] What are you? A storekeeper, residing at Lismore. I have been residing in the district for twelve years.
2545. What do you wish to tell the Committee? I wish to tell the Committee specially of the commencement of the agitation for railway communication in this district.
2546. How long ago is that? It was in 1881. A number of us who were new residents then, seeing the capabilities of the district, thought that it would be an immense advantage to have railway communication with the table-land. At that time there were grave doubts whether anything of practical value could be done to the Heads at all, and we jumped at the conclusion that Byron Bay would be the port by which we could get access to the outside world. Resolutions were carried at a public meeting, asking the Government to construct a breakwater at Byron Bay, and a railway from there to the table-land.
2547. There is no truth whatever in the statement that the agitation for a breakwater at Byron Bay was got up by a syndicate which had bought land here? None whatever.
2548. As a matter of fact no land syndicate has bought up the land there? I know of none. I have looked up the report of the speech that I made, and one of the reasons I gave then, why the railway should be constructed was, that I had heard from the surveyors that there were 600,000 acres of land between here and Byron Bay then available for selection.
2549. I suppose your business has brought you intimately into connection with the selectors in this district? Yes.
2550. The bulk of them have taken up the land *bona fide* for the purpose of making homes for themselves and their families? I do not know any part of the Colony where there is more *bona fide* selection than there is here. The only thing is that people have taken up the land in such large areas with insufficient capital, and many of them have been obliged to sell out.
2551. The men who have had to clear out have been men who did not start with sufficient capital at the commencement? That is just it.
2552. Do you not think that in future it would be well to lessen the area? I think that no person should be allowed to take up more than 100 acres.
2553. In the new Land Act concessions are granted to allow of family selections that would get rid of some of the difficulties of taking up large areas? Yes.
2554. Do you not think that these men have taken up these large areas to provide a home for their families? There is not the slightest doubt about that. I hardly know of an instance where settlers have come here without a *bona fide* intention of using the land.
2555. Of late years there has been a great influx of settlers from Illawarra? That commenced at the time of the railway agitation. Mr. Larkin, Mr. Stocks, myself, and some others took the trouble to get the district advertised in the Sydney newspapers, so as to make known the quality of land open for selection.
2556. They are good men who have come here? They are a splendid sample of the pioneers of settlement.
2557. In this scrub land they must labour under great difficulties in getting to their market for want of roads? It is impossible to form any idea of what these men have gone through even to get provisions out.
2558. And the selectors going further afield will have exactly the same difficulties in future? Yes. I might be permitted to say that at one time on the road which the Committee travelled yesterday there was not even a bridle track. There were only tracks which had been used by cedar-cutters for roads, and provisions used to be sent up in a boat to where there is now a bridge 3 miles from Lismore, so that the settlers would have less distance to carry them.
2559. If the railway were constructed to Byron Bay, and thence on to the Tweed, there is no doubt but that it would give greater facilities to a great number of settlers already on the land? There is no doubt.
2560. And would have the effect of opening up other land for settlement? The great bulk of the best land is in reserves, and my opinion is that it would be manifestly unfair to the pioneers, who have gone out and taken up land, to let this land go at the same price as they have paid for theirs.
2561. You think these reserves might fairly be withheld until it is determined by Parliament whether the works shall or shall not be carried out? I do not think that an acre should be sold until the question is decided.
2562. Do you think that those reserves would to a large extent pay the cost of these proposed works? I have only made a rough estimate. I had something to do with the statistics prepared, and I think the money derived from the land would more than repay the construction of the line.
2563. And the harbour works at Byron Bay. We heard to-day that there are 4,000 acres there that would realise £80,000 if the harbour works were constructed; I suppose it is almost impossible to know what they would realise? To give an idea of what people thought of the land at the time that the sugar rush began, I may say that I have known scrub land to be sold at £10 an acre, without anything being done on it. Of course the value has gone down since sugar fell in price. It was then selling at from £38 to £42 a ton. It is now down to £25 and £30 a ton.
2564. What is your opinion about the port at Byron Bay? I have been dubbed an enthusiast about this port at Byron Bay, because I have always conceived that it is the natural outlet for the district, and the land beyond it as far as Warialda and Moree.

2565. From here to the Queensland border? From here to the Queensland border, and to New England. *Mr. J. Barrie.*
2566. You say that you have given the matter a great deal of consideration? I have been agitating about the matter, or thinking over it, ever since I came to the district. *26 Nov., 1889.*
2567. You are a resident of Lismore, and the bulk of your interests are in and round Lismore? Yes.
2568. I suppose it would be much better for you personally to concentrate all business round Lismore? Yes. I have no interest now in Byron Bay beyond one allotment.
2569. In the interests of the country from here to Queensland, you think that Byron Bay would be the most useful port that could be obtained? I have a very strong opinion that it would be. I did not agree with the first proposal of a breakwater, from its being too small.
2570. That is the inner breakwater;—you do not think it extensive enough? I do not.
2571. No. 3 was proposed by Captain Hixson as a shelter for the jetty. No. 1 was proposed by Mr. Darley to provide a harbour of refuge and a port. Then apparently Mr. Darley abandoned it—after a visit to the place, I think—and proposed No. 2, which will give an area of 500 acres of protected water. That is the scheme I would like to see carried out.
2572. *Mr. Cox.]* How long is it since you knew Byron Bay first? I think it is about thirty-two years ago since I saw it first; but until within the last twelve years I had no further knowledge of it.
2573. Do you think that the sand has silted into the bay much since you first knew it? I should not like to give an opinion, because my visits have only been occasional.
2574. Your attention was not much drawn to it? No. I do not think I shall be able to say anything definite on that point, except what others have told me.
2575. There is a rumour that there was at one time a bed of rock where the jetty is now? I have heard that spoken of, and I have heard others say that it is not so. I am not in a position to say yes or no.
2576. You say that when a great rush took place here some years ago, when sugar was at a good price, land fetched extreme prices;—are you aware that the price of land has fallen because the land has become worn out by the sugar-cane, which is a very exhaustive crop? I have only heard of it.
2577. Have you grown sugar? Only a little, experimentally.
2578. You do not think that it has impoverished the land? I have not heard of any instances of its doing so, and several of the farmers have told me that although they have cultivated their land for a long while the sugar is better now than it was at first.
2579. You know Mr. Meston? Yes.
2580. He has a knowledge of cane growing as well as of sugar manufacturing? Yes; Mr. Meston is one of the best practical men with regard to sugar.
2581. He has given it as his opinion that the continuous cropping of sugar exhausts the land,—is that correct? I should not like to question Mr. Meston's opinion. He knows more than I do about sugar land.
2582. Would not the periodical floods leave deposits, and enrich the fields? I have no doubt that they would, but I was speaking more of the cultivation on the hills.
2583. *Mr. Lee.]* From your long residence in the district you are pretty well acquainted with the country between this and the Tweed and Byron Bay? Moderately well.
2584. Have you given any attention to the route selected for the contemplated railway extension? I have given considerable attention to it.
2585. What is your opinion about it? I believe it is the best route that could be chosen. At one time I favoured a route nearer the coast, between here and Byron Bay, but in view of the number of people that would be served by this present route, I think it is the best.
2586. Do you think that the route will serve the interests of the people residing on the Tweed and on the Brunswick? I have no doubt whatever in my own mind that a railway from Byron Bay to the Tweed would serve the people along the route, and would give them a market which they cannot get in any other way. I would not like to say whether those on the banks of the Tweed would use the railway.
2587. How do you think it would suit the convenience of the people between the bay and Eureka, Clunes, and places to the north-west? I have little doubt, from what I have gathered from the residents out that way that they look upon the bay as their natural port.
2588. Of course you have the river now, which is navigable to Lismore, and is in a better condition than it has been for some time past; I believe that you have a better class of steamers trading here now than you used to have? The bar is better now than it has been since I have resided on the river.
2589. And you have better communication now than you had some years ago; if access were given to the river by a series of roads running through the district, would not that enable the residents to get their produce to the river? Well, they would be at a great disadvantage from as far out as Eureka.
2590. Do the Committee clearly understand that the river—serviceable as it is for those within easy distance of its banks, is of little or no use to the residents in the localities which I have indicated? I am perfectly satisfied that the settlers beyond Eureka will never be able to cultivate their land to advantage if they have only the river to look to. I say it deliberately, after studying the cost of freights by land.
2591. You are a business man, and have taken into consideration freights and insurances, so I want you to be careful in answering this question? I am perfectly satisfied that what I say is correct. The difference in the settlement between Clunes and Lismore, and Clunes and Byron Bay would show you exactly how the people have been affected by the present state of things, and give you practical evidence that the people beyond Eureka have simply existed.
2592. And they want railway communication for an outlet? I am satisfied that nothing else will do those people.
2593. And you think that outlet should be at Byron Bay? I think so.
2594. The cost of making a harbour at Byron Bay would be £241,723. Do you, as an intelligent man of business, think that the country would be justified in expending that amount of money in making a harbour? I am perfectly clear in my own mind that the country would be recouped for the outlay by the sale of the land, and if they had taken it earlier they would have been much better recouped.
2595. Suppose the Richmond River Heads were made secure and navigable for rather a better class of coasting steamers than you have at the present time, would not that serve the interests of the people? Not beyond Eureka. They would need a tramway or something to put them on a fair footing.
2596. So that no matter what is done at the Richmond Heads some other outlet must be given? These people must have some other outlet.
2597. Do you think the importance of that part of the country is a sufficient justification for the expenditure

- Mr. J. Barrie. expenditure of that amount of money? I think the unoccupied land is sufficient to justify the outlay. I might say further that the population per acre which this land will carry would justify the outlay.
- 26 Nov., 1889. 2598. Supposing the country were to adopt the scheme for improving the bay, but that when they commenced operations they found it to be impracticable, and supposing that the works sanctioned at the Richmond Heads were found to be a failure, and those at the Clarence were found to be good and serviceable, would you send your produce from the Richmond to the Clarence for shipment? Certainly not. People might occasionally get a ball dress or a wedding present that way, but general produce would go out of the Richmond, even supposing the bar were as bad as it has been since I have been here, and it has been so bad that I have known there to be only 2 cwt. of flour in the whole of the district about Lismore from the impassable state of the bar.
2599. I suppose it is the cost of carriage that would prevent you from going to the Clarence? Yes. There is no produce that would stand the cost of carriage.
2600. I suppose the Richmond River people look on a port at the Clarence as utterly out of the question? Yes.
2601. *Mr. Garrard.*] Do you know the site of the station at Lismore? I do not.
2602. Do you know the nearest point that the railway comes to Lismore? I know that it is over in what they call North Lismore. I know where it is staked out, also the highest land in that part of the township.
2603. Do you think that it might be brought nearer to the centre of the town with advantage, or would it cost too much? I do not think that it would make any material difference in the cost. We have left the matter of the station arrangements for the Department to deal with, but we are anxious that there should be a connection with the deep water. We look upon that as an absolute necessity. It is one of the strong points that we would like to be brought under the notice of the Department, before the matter is thoroughly settled. It seems to me that they go too far away from deep water at the present time, with the station appointments.
2604. *Mr. Cox.*] Is not the land here very much flooded? No. We have higher land than where they have gone. I do not know if there are any engineering objections to the alteration; but it seems to me that the line must connect at South Lismore with the navigable waters of the Richmond, and to do this with the line as now surveyed they will have to make a branch line to deep water. If the Committee will look at the surveyed line they will see that it is a long way off from navigable water, and should be altered so as to avoid the branch line. I wish to add that two of the Committee inspected the surveyed route and fully agreed that a fresh survey should be made.

James Francis O'Flynn, Esq., Mayor of Lismore, sworn, and examined:—

- J. F. O'Flynn, Esq. 2605. *Chairman.*] You are Mayor of Lismore? At the present time I am.
- 26 Nov., 1889. 2606. How long have you been living in the district? I have been nearly seven years in Lismore, and I was about thirteen years on the Clarence.
2607. I suppose you are familiar with both districts? Yes; I am.
2608. In your opinion, which district is capable of sustaining the larger population? Undoubtedly this district.
2609. Is the land suitable for farming more extensive here than it is on the Clarence? Infinitely so.
2610. I understand that on the Clarence the good land is only on the banks of the river and of the creeks? In some places it is only a chain or two wide.
2611. That is so? It is so—and on the islands.
2612. You cannot measure the good land by chains here? No; by miles.
2613. Will you tell the Committee what has been the growth of this municipality during the last nine or ten years? I have not taken much notice of municipal matters until recently. It is about nine years since the municipality was established, and the population now is, as near as I can ascertain from inquiry, about 4,000 souls.
2614. What was it nine years ago? 500. It took one solitary vote to make up the 500. Bishop Doyle made up the 500.
2615. What were your rates at that time? I was not here then. I could not tell you.
2616. What are your rates now? I presume that they would not be far short of £2,000.
2617. General rates? Yes; general rates.
2618. And you have established gas and water works here? Yes.
2619. And I understand that you have a little sewerage? Scarcely. We have made application to the Government for that under the Country Towns Water Supply and Sewerage Act. What we have done is hardly worth mentioning.
2620. Is the town still growing? Rapidly.
2621. And now it is entirely dependant on the district at the back of it? Yes. It would not exist without the district at the back.
2622. And as those districts improve so must the town improve? Naturally.
2623. You for a long time were engaged in the sugar industry? Yes. For many years I was chief engineer for the Sugar Company on the Clarence, and also on the Tweed for a time.
2624. Are you competent to give an opinion as to the value of these lands for sugar purposes? I ought to have a reasonable opinion.
2625. Is the land on the proposed railway, which can be used for sugar, extensive? The great bulk of it can be used.
2626. Without the railway the land is so far away that it would not pay to grow sugar? That is, I think, the principal reason why it is not more cultivated. It is only cultivated in the immediate vicinity of the town, and on the navigable creeks and rivers.
2627. Do you know what they pay for sugar-cane here? For many years the Sugar Company has, to my knowledge, been getting it for 10s. a ton, but latterly they have been paying 12s. 6d. It was sold by some farmers back here at Rous for as low as 8s.
2628. That is because there is no market? Where there is no competition the mill-owners take advantage of it.
2629. They sold it to the local mill, far back from navigable waters? Yes; they are 8 or 9 miles from navigable waters.

Mr.

Mr. William Barnes, selector, sworn, and examined:—

Mr.  
W. Barnes.  
26 Nov., 1889.

2630. *Chairman.*] Where do you reside? At Dunoon, on the Tweed road.  
 2631. What area of land have you there? 127 acres.  
 2632. How much of it have you brought into cultivation? I am cultivating 5 acres now.  
 2633. How long have you been cultivating the land? About five years.  
 2634. Have you a wife? Yes, and six children.  
 2635. Born in the district? Not all of them.  
 2636. Have you been depending on the 5 acres alone for those years? No; during the last three years I have been living on the land; before that I went out to work, and kept my selection going until I could get my fruit up. I now get my living from it, and hold a license to go to Lismore to sell it.  
 2637. Could you give the Committee any idea of what you make from the land a year? This year it has given close on £100—last year I got close on £50 from an acre of bananas.  
 2638. This year you have made £100? Not quite, but I shall do before the year is out.  
 2639. Is that from the 5 acres alone? That is from the 5 acres alone.  
 2640. How far are you from Lismore? Nine miles.  
 2641. Are any of your sons grown up and assisting you? My eldest is eight years of age.  
 2642. *Mr. Garrard.*] You said just now that you had a great deal of your land cleared? Yes.  
 2643. How much? About 30 or 40 acres down—not cleared. It is overgrown with weeds and underbrush; but I shall be able to cut it down again.  
 2644. You are not doing anything with it? No; I have only a cow running in it.  
 2645. How much stock have you got? Only one cow and one horse.  
 2646. What are your other products? I only produce fruit and vegetables.  
 2647. Do you ship your bananas to Sydney? No; I sell them in Lismore and Casino.  
 2648. In what direction is your place? I think it is north or north-west from Lismore—it is on the old mail track from Lismore to the Tweed.  
 2649. Is your land better than the land in the district generally? Not in the least—it is the same all through. I see no difference in it.  
 2650. Have you a good road by which to bring your produce? Pretty fair. It is getting better every day. It was pretty bad two years ago, before they started to improve it.  
 2651. What kind of fruit do you grow there, besides bananas? These elevated lands will grow almost anything I have seen growing in other parts of the world. I have a large variety of fruit growing. The almond grows here to perfection; loquats and pine-apples also. By applying guano I have produced tobacco equal to any I have seen in America.  
 climate; I have apples, peaches, plums, grapes, guavas, apricots, and figs.  
 2652. *Mr. Cox.*] How far are you from the proposed line of railway? I could not give a decided answer; but, as far as I can understand, I would be 3 or 4 miles in a direct line. I do not think the distance would be more than that.  
 2653. Would the construction of the railway benefit you materially? Decidedly.  
 2654. In what way? Because I could get my produce in in the winter time, when the roads were bad, and I would save 5 miles. It is a day's work going to Lismore.  
 2655. You would put more land under cultivation if you had the railway? I should put it under cultivation at once. I am waiting for the railway.

Mr. Felix Tonkin, farmer, sworn, and examined:—

Mr.  
F. Tonkin.  
26 Nov., 1889.

2656. *Chairman.*] Where do you reside? At Hanging Rock.  
 2657. How far away? Seven miles.  
 2658. How much land have you there? 319 acres.  
 2659. Is it scrub land? Part of it is.  
 2660. Have you done anything to clear any part of it? Yes; I have 12 acres worked.  
 2661. What do you do with the 12 acres? I garden on it.  
 2662. Raise fruit? No, vegetables.  
 2663. Bananas? No, I do not sell them.  
 2664. You have water near you, I suppose? There is a creek.  
 2665. Where do you find a market for your vegetables? At Lismore.  
 2666. And round about? And round about, where I can sell them.  
 2667. How much a year do you estimate that you make out of these 12 acres? I have been working on the land for nine years.  
 2668. Has it kept you and your family during these nine years? Yes.  
 2669. How many of you are there? I pay a man 15s. a week, and his keep, from it.  
 2670. How many have you in family? A wife and two children.  
 2671. Do they help you at all? No; they go to school.  
 2672. How much a year do you make out of that 12 acres? I cannot tell exactly. I have bought two farms since I have been here—one I gave £2 5s. an acre for.  
 2673. How many acres? Eighty-nine, and the other I gave £2 an acre for—40 acres.  
 2674. Did you save that money out of the 12 acres? Yes, and paid cash for them, and I have got money to spare now.  
 2675. Have you made money by any other means during these nine years? Yes. I keep some store cattle.  
 2676. On what? On the remainder of the land.  
 2677. Have you got your land cleared? It is all fenced in.  
 2678. And cleared? The scrub land is all cleared—part of it is forest.  
 2679. How many cattle do you generally keep there? Sixty head.  
 2680. Do you do any dairying? No.  
 2681. You just buy cattle and fatten them and sell them? I do not fatten them. I sell them as store cattle when I have enough. I rear them and sell them.  
 2682. Then you have not made all your money out of the 12 acres? Not much has been got out of cattle.  
 2683. What do you estimate that you would make out of the 12 acres in the year, after paying wages? I get two crops a year out of this land, and some years I have got 5 tons of potatoes to the acre. I sell them in the town wholesale.

- Mr. F. Tonkin.  
26 Nov., 1889.
2684. Tell us roughly, if you can, what you think you make out of it every year, after paying wages? I should say about £200.
2685. After paying your man's wages? No, including all that.
2686. Are there any Chinese gardeners in the district? I suppose there are around the town.
2687. Notwithstanding that competition you are able to make this amount? Yes.
2688. Which is your principal market—Lismore or Casino? Lismore, and round amongst the settlers.

- Octavius Lloyd, Esq., surveyor in the Railway Department, sworn, and examined:—
- O. Lloyd, Esq.  
26 Nov., 1889.
2689. Mr. Garrard.] You are a surveyor in the Railway Department? I am.
2690. How long have you been so engaged? Eight years in this colony. I was four years on the same work in Victoria.
2691. You have been engaged on the railway from Grafton to the Tweed? From Grafton to about 5 miles beyond the Brunswick, on the Murwillumbah side. I know nothing of the country beyond that.
2692. What is the nature of the country between Grafton and Casino? It is sandy country. Some of it has a clayey sub-soil. It is very good grass country in wet weather, but I do not fancy that it is country that would stand a drought at all.
2693. Has a permanent survey been made between those two points? Yes, and deviations.
2694. What is the ruling gradient on that line? 1 in 40. That is the determinate grade. It exists only in one place, and can be cut out. I suggested how a portion of it could be cut out, and I believe that my suggestion has been approved of.
2695. By lengthening the line materially? Only about 30 chains, and that will reduce the works.
2696. It will leave the grade what? 1 in 50, or, if you like, lighter.
2697. What is the nature of the country between Casino and Lismore? The richest possible land.
2698. You come into scrub country? A little beyond Lismore, at Bex Hill, you get into the scrub country.
2699. There is no comparison between the two? There is no comparison.
2700. What are the grades between Casino and Lismore? There are no steep grades. There is a tunnel, I think. I have not seen the section, but I am sure that 1 in 50 is the steepest grade.
2701. Did you survey the line near Lismore? I surveyed the line from the crossing at Leicester Creek, to about 2 miles beyond Bex Hill.
2702. What was the object of keeping the line so far from Lismore? To keep on the high ground for station purposes. There is a flood level of nearly 12 feet at Bex Hill. The Engineer-in-Chief —
2703. Mr. Whitton or Mr. Deane? Mr. Whitton—and I infer Mr. Deane concurred—thought that to put a station on the flat ground would necessitate raising the line 12 feet the whole of the way to Bex Hill, and as it is only slack water, and the flood lasts only a few days, it was thought more economical to make the line nearly flat on the surface, but to put the station on high ground, so that trucks standing there, filled with valuable goods, might be secure from damage.
2704. That is the only reason? Yes, so far as I know.
2705. What is the nature of the land between Lismore and Byron Bay? There are 70 chains of 1 in 40 on the main route.
2706. Can that be cut out? Yes.
2707. Have any steps been taken to do it? I have nothing to do with that part of the line, except in levelling it. We were told to work to 1 in 40 grades, so as to get the easiest possible works, and the line was laid out on that condition. The grade is from the top of the hill to the flats. The mean grade is 1 in 50, and that can be got. I suggested some weeks ago to the Acting Engineer-in-Chief a way by which a larger expenditure, I thought, could be saved, and I think that is under consideration now.
2708. Has not Mr. Burge been sent down to confer with the surveyors on the various deviations? He has been through measuring waterways.
2709. Has he been down here? Yes; he has been right through the line.
2710. Have you conferred with him in reference to these deviations and alterations? I told him about the deviation when he was down.
2711. When was Mr. Burge here last? He was here six weeks or two months ago.
2712. You are aware that he is in the district now? Yes, to see about some modifications north of the Brunswick River.
2713. Not for anything further south? No. He has already dealt with the line further south.
2714. What is the reason that the line from Lismore runs so far east to the sea coast—is it for the purpose of avoiding ranges, or of tapping Byron Bay;—what were the instructions given in surveying the Byron Bay line? The original survey was carried out eight or ten years ago. The country was then practically a wilderness, and I fancy the surveyor got the easiest line he could, and it has been followed since without much consideration.
2715. You know the country between here and the bay intimately? Yes.
2716. Knowing the country so well, do you think that the best route has been taken? Unquestionably I do. I know nothing about the Mullumbimbi route, but the route from here to the bay, with slight modifications, is the best that could be got.
2717. If you were aiming to get from Lismore to Byron Bay, and to serve the largest number of settlers, the present line would be the best? Yes, I think so.
2718. Supposing the desire was to get from Lismore to Mullumbimbi, what then? I have only heard that it is a rough route. I could not tell you about it.
2719. I suppose it would be a rather heavy line to construct between here and the bay? I do not think so now. The determination seems to be not to avoid these heavy flood-levels by raising the line.
2720. Have you any idea of the cost per mile? I fancy that from Walmesley's, the crossing at Wilson's Creek, up to the top of the coast range, there being very little rock, the line, could be constructed for about £8,000 or £9,000 a mile.
2721. It would not be a cheap line to construct, then? Hardly that; the bridge work would preclude that.
2722. There are so many watercourses to get over? Yes.
2723. I understand you to say that you know nothing about the proposed deviation to Mullumbimbi? No; only that I had heard that it is difficult.
2724. You have not been there? No.

O. Lloyd,  
Esq.  
26 Nov., 1889.

2725. There have been two or three deviations between Byron Bay and the Brunswick? Yes, but they are only of trifling importance; the last one goes up to Tyagra Flat.
2726. Do you recognize the pencil line put on the plan by Mr. Wilkins? Yes. There is one line near the coast, and there are modifications of it which affect the crossing of the south arm of the Brunswick. There is another that goes up to Tyagra, and of that the Commissioners appear to approve? The station I imagine would be on a large reserve, and near the Mullumbimbi country.
2727. Then the red line on the plan would be subject to a little deviation—it would come further westward? No. The last line I have is as far west as the Engineer-in-Chief approves of.
2728. Where are you now? I have been on the Brunswick, but I am now at Leicester Creek to superintend the borings for the bridge.
2729. You know nothing of the line beyond the Brunswick? Five miles beyond there.
2730. You come into difficult country then? Heavy country, but the grades are good.
2731. What is the object of going so near the coast from the Brunswick? There are two lines—the coast line and the heavy line. At the present time I believe Mr. Burge is examining the possibility of connecting some portion of the coast line with the heavy line.
2732. The coast line from Byron Bay to the Tweed Heads was the first under consideration; then you deviated with your survey to what is known as the inland line beyond the Brunswick? The first line was the inland line—the coast line was run subsequently.
2733. What reason was there for taking the line so near the coast beyond the Brunswick? To avoid works. You have heavy swamps, but the question was whether it was a good line to tap the Tweed.
2734. Do you know anything of the country beyond the Brunswick? Nothing at all beyond five miles.
2735. Your 5 miles brought you into heavy country? The heaviest work.
2736. Do you know the grade between the Brunswick and Murwillumbah? The works are heavy, but the grades cannot be very heavy.
2737. Coming into contact with the people of the district as you have done, do you think the line shown on the plan would serve the largest number of people and the largest area of land? I fancy it would.
2738. Do you know anything of the country west of Byron Bay? I know it for some little distance.
2739. It is rough broken country? Broken country; but it is all good country.
2740. What is the estimated cost of the bridge across Leicester Creek? I could not tell you. I do not know what sort of bridge they propose to make, and I do not know whether they intend to raise it much above the maximum flood level.
2741. What do you estimate would be the cost of construction between Casino and Grafton? Between £5,000 and £6,000 a mile. They have everything close at hand there. They have timber on the work.
2742. Have you any knowledge of harbour works? I was connected with harbour works for seven years—five years with one, and two years with another engineer.
2743. Have you seen the plan for the improvement of Byron Bay? Only the sketch in the newspaper.
2744. Have you given any thought to it? I only hold an opinion.
2745. You would not like to express an opinion on the project? I had better not, perhaps.
2746. Does it strike you that there is any defect in it? Only that I do not think that they have enough data to work upon to elaborate a scheme.
2747. In what respect? As to the silting of the bay or the currents. Anybody who has lived there any time can see all that for himself. It is a matter of years to ascertain that sort of thing.
2748. Do you know that their scheme is based on surveys made many years ago by Captain Howard, and observations taken more recently by Mr. Keele, of the Harbours and Rivers Department? I do not question Mr. Keele's observations at all, extending over the limit of the time that they do.
2749. Do you think that it is a desirable thing to have an opening in the breakwater near the mainland? That would depend upon extensive observations of the tidal flow and the northerly set. It is a matter that could only be determined on after you have actually settled how things are going, on what at present, in my opinion, we know next to nothing.
2750. You think it would be desirable to leave the opening so that you would not have to remove a portion of the breakwater in the event of the bay silting up? Yes, but it is too big a thing for me to express an opinion upon.
2751. *Mr. Cox.*] When you were in the neighbourhood of the Brunswick River, were you met by some residents there complaining about being left in the cold, and saying that they would show you a better route for the line? No. I was not the pioneer of the line. There were trial surveys. I have only been staking out the permanent line from plans that I could not depart from.
2752. *Mr. Lee.*] Did you make a provisional survey? No, I did not.
2753. Were you employed in the district at that time? No. I made several modifications in the line about Grafton. I made a report, suggesting several modifications between Casino and Grafton, and they were all carried out.
2754. Where were you employed in 1880? In Victoria. I joined this service in 1881.
2755. You were not employed in the service of this country? No.
2756. What railways have you laid out? From Cootamundra to Gundagai; the line over the mountains which has been so much cavilled at—Bell's line, from Richmond to Wallerawang; and also the modifications from Goulburn to Cooma.\*
2757. In traversing this scrub country it is a matter of great difficulty for a surveyor to get the best track? It is.
2758. Since this survey has been made the country has been cleared to a considerable extent? A little.
2759. Would it be easier to obtain a better line now than when the survey was made? I think not, but after the trial survey was made in last January I suggested modifications near Byron Bay that may be carried out and embodied in the present survey.
2760. They will reduce the grade and straighten the curves? Yes.
2761. Will the result be the lengthening of the line in any way? It will tend to shorten it a little.
2762. It will not increase the cost? Not if a grade of 1 in 50 is adopted.
2763. The changes will result in a reduction of cost? Yes.

Mr.

\*NOTE (on revision):—I omitted to mention that I was also engaged on the Permanent Survey of the line Kiama to Jervis Bay, and about 100 miles of trial line in connection with the proposed North-Coast Railway.

Mr. William Walmesley, dairy farmer, sworn, and examined:—

- Mr. W. Walmesley.  
26 Nov., 1889.
2764. *Mr. Lee.*] What are you? A dairy farmer.  
2765. Where do you reside? At Wilson's Creek, about 2 miles from Clunes, and about 9 miles from Lismore.  
2766. How many acres do you own? 944; also 223 acres on Cooper's Creek, and 200 acres on the Brunswick River; a family living on each.  
2767. How many of these are cleared? I could not say. About 140 acres are cleared and under grass, and a small area is under crop; and there would be about 350 acres more felled and partly fired—pretty well burnt.  
2768. What do you desire to tell the Committee? I have been there for some time, and our dairy produce very often gets damaged before it gets to market, particularly on the river, and that causes us loss. When the butter is put on the decks of the steamers and covered with a tarpaulin the sun makes it hot and soft, so that it does not fetch the same price in the market as it would otherwise do.  
2769. How do you bring your butter to the steamer? In a spring cart.  
2770. Is the road to your place pretty good? It is fairly good at the present time.  
2771. Then what do you want a railway for? If we had a railway we would ship our produce direct from the Bay.  
2772. Do you think the damage done to your butter is done on board the steamers coming down the river? The greater part of the damage would be done there.  
2773. Supposing you shipped it from the Bay, how far would you have to carry it then? It would leave the spring cart, and be on the ocean at once.  
2774. But if it is the practice to carry the dairy produce on deck, would the butter not be carried on the deck of the ocean steamers? Yes; but there would be a current of fresh air caused by the swiftness of the steamer.  
2775. If you had a railway and a port at Byron Bay it would suit you better? I fancy so—very much better.  
2776. How far is the proposed railway from your place? It is close to it.  
2777. Half a mile? Not a quarter. It goes right through the place.  
2778. Then it would be very convenient for you? Yes, it would be convenient.  
2779. Consequently you approve of it? I should think so. I would be wrong if I did not.  
2780. Do you grow any corn? Not for market—only for my own use.  
2781. Do you grow any sugar-cane? Not any.  
2782. Do you confine your attention solely to dairying? It would not pay me to send anything else away.  
2783. You would not want a railway to send your butter here? Not unless it was for the benefit of the country as well as for myself.  
2784. Would you produce anything more? Yes; I should be producing a great many things now if I could get them away at a reasonable rate.  
2785. It would take a good deal of butter to load a train every day? Yes; but there would be a great lot produced in the district, if there were a railway.  
2786. Would you be likely to cultivate anything else? Yes; 300 or 400 acres of corn very likely, and lucerne.  
2787. Is your land suitable for the cultivation of cane? A portion of it is.  
2788. And if facilities for getting to market offer themselves you might cultivate that? Yes.  
2789. *Mr. Cox.*] What profits do you make out of your dairies? We are milking between sixty and seventy cows.  
2790. I suppose you are getting a very low price now for butter? Yes. About 6½d. I have been getting less.  
2791. You send pigs away as well? Yes.  
2792. Does it pay you to send your butter to Sydney at 7d. a lb.? I can do nothing else with it.  
2793. What return will each cow give you on an average throughout the year? A cow would milk about nine months, or over nine months, and would average about £5—sometimes you might make more than that, and sometimes not so much.  
2794. Do you keep sixty cows? We will have this summer over 100.  
2795. How much are you getting for your butter? From 6d. to 2s.  
2796. In winter you get a good price, and in summer less? Yes. You could take an average.  
2797. With railway communication you could make better use of your land than by growing grass on it? Yes. I have sufficient for grass, and 200 or 300 acres under cultivation. I have a small piece of land growing potatoes—2 acres—and I expect to get over 6 tons an acre from it.  
2798. Where do you come from—Wollombi? I have been there, but I lived in Kiama. I was in Kiama fifteen years before I came here.  
2799. The only adjunct of the dairy is pigs? Pigs and calves.  
2800. Do you sell them here, or in Sydney? In Sydney.  
2801. Have you ever met any loss in sending your pigs to market, by the detention of steamers at the bar? Two or three months ago, through the steamer not getting away for four or five days, some of them died. I believe that they died on the steamer.  
2802. You believe that with railway communication and a good port at Byron Bay, you could increase your production very much, and get your produce away without any danger of loss? I am quite convinced of that.  
2803. Have you any children? Nine.  
2804. That is 100 acres apiece? Quite that.  
2805. You would not justify any one man in taking up 900 acres? You could not make use of the land.  
2806. I suppose you Illawarra farmers left Illawarra because you could not get enough land for your growing families? I had 100 acres there, but it was of no use for my family.  
2807. So you came here to make a home for yourself and for them? Yes.

Mr. James Stocks, farmer and dairyman, sworn, and examined:—

- Mr. J. Stocks.  
26 Nov., 1889.
2808. *Mr. Cox.*] Where do you reside? At Caniaba.  
2809. How far from Lismore? About 6 miles.  
2810. What do you follow—farming and dairying? I do not incur any expense myself. I live on the property, but I have a practical working farmer who works the land and carries on dairying.

2811.

Mr. J. Stocks.

26 Nov., 1889.

2811. What acreage have you? About 1,448 acres.
2812. Is that all taken up by yourself and family as a conditional purchase, or have you been purchasing from others? No; it was partly taken up by myself and my son, and some others whom I bought out; and some of the land was purchased at auction, or selected after being offered for sale at auction.
2813. How much of this land is cleared and in occupation? It is all in occupation, with the exception of a little scrub land, say 20 acres.
2814. Was it originally scrub? No. I do not suppose that there is 20 acres of it scrub. About 120 acres of scrub have been cleared.
2815. Consequently you had nothing to do, except to utilize the grass? And make improvements.
2816. Do you cultivate much? Only for my own consumption.
2817. Why do you cultivate only for your own consumption—does it not pay to cultivate for the market? Not to pay wages.
2818. In what way are you able to make it pay? We want better means of communication by a practicable road to Lismore for shipping purposes.
2819. With better communication you would cultivate more largely? Certainly.
2820. Of course the communication which you are anxious to obtain would be with Byron Bay—you would wish to have a port there, and get your produce away to market without the vexatious delay that sometimes occurs on the river, in consequence of the state of the entrance? That would not meet my case at all. Caniaba is west of Lismore, in a direct line to Tomki and Casino, and a railway would make no material difference to me.
2821. Do you advocate or deprecate the construction of a railway? I have advocated the construction of a railway for the last twenty years.
2822. Not that you would benefit by it, but that it would be beneficial to the district? Yes.
2823. If the district were benefited it would be an advantage to your property? I daresay it would—though that did not influence me much.
2824. Do you know Byron Bay? I do.
2825. How long have you known it? I have been connected with it more or less for thirty years.
2826. Has the bay changed since you first knew it? Not appreciably.
2827. What alteration has taken place? None that I could recognize.
2828. Are you aware that there were rocks where the pier is now, and where it is apparently a bed of sand? No; I am not aware of that.
2829. You are not aware that the bay has silted up to any appreciable extent during the last thirty years? No.
2830. Therefore any well-constructed or well-devised breakwater would not have the effect of silting it up? Not so far as I am able to form an opinion.
2831. *Mr. Lee.*] You are an old resident in the district? I have been here a little over thirty years.
2832. Consequently you are pretty intimately acquainted with all the surrounding country? I know all the surrounding country.
2833. Have you seen the plans showing the proposed railway route? I have not.
2834. Just tell the Committee what you think of that route—as to how it would serve the settlers, and whether in your opinion a better track could be obtained? Of course, when I said that I had not seen the plan of the railway route, I meant the plan that you had here. I have seen the plans of the surveyors, and, so far as the land taken up is concerned, I could not conceive a better route.
2835. You are aware that this railway, if carried out, would cost a very large sum of money, and that the interest would be very great? I am aware of that.
2836. You have seen the district develop very much in thirty years? Yes.
2837. Do you think the Government is warranted in going to the expense of constructing a line? I think the Government is warranted in going to the expense now. As matters are now, and have been for some years past, many people have gone to considerable expense, and have been absolutely ruined, simply because they had no means of conveying produce to market. I also know a number who are in a precarious state now, and unless they obtain relief from outside, such as the construction of a railway line, they must come to grief.
2838. Do you think the railway would give the relief they require? I am sure that it would.
2839. I presume you take a more patriotic view of the question than the desire to see money expended in the district. In conjunction with other citizens you wish to see every railway pay interest. Having in view the rapid development of this district, and its probable still further increase, do you think that the produce of the district would be sufficient to pay interest and working expenses on a railway? I think the line from the Tweed to Lismore would be likely to pay you—not handsomely, but sufficiently for working expenses and interest.
2840. What do you think of the proposed harbour at Byron Bay? That I have also taken a great deal of trouble about for the past ten or twelve years, merely because I considered that it would be beneficial to the district if it could be carried out.
2841. Although you are resident at Lismore you have no feeling of jealousy about the opening up of Byron Bay? None whatever.
2842. Because you believe that it would give relief to the settlers in that part of the district? I believe that it would be the natural outlet for 10 or 12 miles to the west, south, and up to the Tweed River north. It would by a long way be the best outlet that could be devised.
2843. You know the country between here and Casino? Yes.
2844. What is the character of it? Generally good.
2845. Is it well settled? Not so thickly settled as this locality, but two-thirds of the land is alienated.
2846. Are there any well-to-do farmers along here? Yes.
2847. Does that particular piece of the line offer a fair and reasonable prospect of yielding a return? I think so, but there is one source of income connected with that route that I have not heard of, and I confess that I am somewhat surprised at it. There is a large extent of very superior country north of Casino known as the Upper Richmond, that seems to have been snuffed out and ignored as being no sort of profit. I know personally that there is a very large extent of very superior country there with very good natural roads to Casino, and the railway would give an outlet for it either to Lismore and Coraki or to Tenterfield. Unless something of that sort is done, it must, I presume, be occupied in the future as it is occupied now. There are a few large selectors there, but the bulk of the land is taken up entirely by squatters. Of course I am not averse to squatters—I look upon them as being in the main the backbone of the country, but as the population increases the squatters must retire.

2848.

- Mr. J. Stocks. 2848. Do you know anything of the country along the proposed railway route from Casino to Grafton? I do. I know it all.
- 26 Nov., 1889. 2849. What do you think of that country? The first three or four miles is fairly good. I think I may say the first 5 miles. It then deteriorates, and is poor hungry soil, or at least what we on the Richmond describe as such. As you go further south it does not improve until you get beyond what is called the cross-roads, about 40 miles south of Casino. From there on to Grafton there is some improvement. It is not nearly so bad after that as before you get there.
2850. To Lawrence? No, not to Lawrence, but to Grafton. When the Commissioners were here that matter came up, and when I described the land as inferior Mr. Oliver said, "You mean that it is inferior by comparison with the land in the Richmond district proper?" I said "yes;" but he asked, "What is it compared with the land about Yass and Goulburn?" I said, "It is equal to that."
2851. At any period during your long residence in the district has it been the practice to send the produce of the Richmond over to the Clarence for shipment? No.
2852. Supposing a railway were constructed there, do you think any Richmond produce would be shipped at the Clarence? Nothing worth much.
2853. Is there likely to be any interchange of produce between the two rivers? It will be very small. The productions are similar, and I cannot imagine what could induce anyone to go from the Richmond to the Clarence, providing they had a proper water way to the sea themselves. That is not the only light in which I should regard the line to the Clarence, though it is one aspect of the matter.
2854. Do you think that, in addition to the water-ways which you at present have, the district requires another outlet such as Byron Bay? In that locality, as I stated before, taking a distance say 12 or 15 miles to the west of Byron Bay, and a similar distance south, and the entire distance to the Tweed, I think all that country very urgently requires much better accommodation than they have by going to Lismore or to Ballina.

Mr. Henry Brown Chisholm, farmer, sworn, and examined:—

- Mr. H. B. Chisholm. 2855. *Chairman.*] Where do you reside? At Cooper's Creek, about 4½ miles from Bex Hill.
- 26 Nov., 1889. 2856. How far is that from Lismore? Nine and a half miles.
2857. Are you a farmer? Yes.
2858. Have you been farming for any length of time? For five years on the Richmond.
2859. Where did you come from? I came from the Clarence.
2860. Were you farming on the Clarence? No; I have not farmed on the Clarence.
2861. The Committee would be glad to hear any information which you desire to give as to the productiveness of the country which you farm, or anything else—what acreage have you? I hold 90 acres.
2862. In the scrub lands? Yes.
2863. How much have you cleared? I have 75 acres down, and 17 under cultivation.
2864. What are your principal crops? Maize and potatoes.
2865. And fruit-trees? Fruit-trees of different kinds.
2866. Are you making your living out of them? Yes.
2867. You have stock I suppose? Yes, I have about 30 head of cattle. I combine dairying with farming.
2868. In this district, if you had a good market, from 90 to 100 acres is ample for any man? Yes, it is quite sufficient.
2869. He would want a little more if he had a growing family? Yes.
2870. Can you give me any idea of the yield of maize on that land? About 60 bushels an acre.
2871. On the average? Yes, that is about the average.
2872. Any other crops? Six tons of potatoes have been taken from an acre in that locality.
2873. Do you get two crops of corn in a year? No. We have not time. There is time for two crops of potatoes.
2874. Is your sugar cane good? In the locality where I live there is a great deal of high land adapted for sugar.
2875. Uncultivated? Yes.
2876. Simply because I suppose you are not near enough to a mill? Yes. Some farmers there started the industry, and erected a small mill, and put a small area under cane; but they had to abandon it, because their appliances were not sufficient, and the carriage was too far.
2877. Are there any farmers there? There are a great number of small holdings.
2878. Do you suffer much from want of markets? A great deal, especially in dairying.
2879. Suppose the railway were constructed from Lismore to Byron Bay, and a breakwater was constructed at Byron Bay, would you increase the area under cultivation to any great extent? Certainly.
2880. Do you think that the construction of those works would be an incentive to the bulk of the farmers to increase the area under cultivation? Yes, they would give us two markets.
2881. You do not think that the men are holding the land for speculative purposes? There are no speculative holdings—they are all *bona fide*.
2882. If Byron Bay were made a port there would be a very large increase in the quantity of land cultivated? Yes.
2883. Do you know the line of railway? I do for a considerable distance.
2884. Do you think it fairly serves the present and future settlement? I think it does.
2885. Do you know the reserves? Yes.
2886. The land there would be very valuable if the works were carried out? Yes.
2887. And would go a long way towards paying the cost of them? Yes, certainly.
2888. Do you think Byron Bay would be used very largely by the farmers to the north of Lismore, away from the banks of the river? I think it would be used almost wholly.
2889. Do you know the country beyond that? Not beyond Byron Bay. I have been through it; but I could not give any definite information about it.
2890. How do your farmers get supplies? From Lismore.
2891. I suppose you are better off than the bulk of them, inasmuch as you have a fairly good road? Yes.
2892. How do men 15 or 20 miles out get their food? They pack it out principally on horseback.
2893. Anything that they produce they have to bring in in the same way? Yes. They produce nothing, further back, but butter. They could not bring in anything else.
- 2894.

2894. I suppose they are struggling along? Yes; but they are in a very bad way.  
 2895. If the railway were constructed they hope that roads will be opened up to give them facilities for getting their produce away? Yes.  
 2896. If not to Byron Bay to Lismore? Yes; but Byron Bay would be preferable.  
 2897. Is there anything else which you would like to tell the Committee? Simply that Byron Bay would open up two markets;—it would give us an opportunity of sending to Brisbane. At the present time we send our produce to Sydney, the agents buy it from us there, and reship it for Brisbane.

Mr. H. B. Chisholm.  
 26 Nov., 1889.

Thomas Campion Lodge, Esq., Manager Australian Joint Stock Bank, sworn, and further examined:—

2898. *Chairman.*] You wish to state? I wish to qualify the evidence I gave with reference to that portion of the line between Casino and Grafton. I was asked the nature of the country there, and I said that I thought that it was not to be compared with the land out this way. I may state that I was speaking of the land to be seen along the present mail road. I have no other knowledge of the country.

T. C. Lodge,  
 Esq.  
 26 Nov., 1889.

WEDNESDAY, 27 NOVEMBER, 1889.

*The Sectional Committee met at Broadwater, Richmond River.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX, | JACOB GARRARD, Esq.,  
 CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Grafton to the Tweed.

Mr. R. F. Holden, sugar-cane inspector, examined:—

2899. *Chairman.*] What are you? A cane inspector at the Colonial Sugar Company's Mill, Broadwater, Richmond River.  
 2900. You say that many of the men from the Italian settlement come here during the sugar season to get employment? About thirty.  
 2901. So that these people do not entirely depend upon the produce of their own land for the means of subsistence? No.  
 2902. Are they paid at the current rate of wages? There are two working at the mill now. They get the same as the other employés do. Those outside work by contract, and are on the same footing as all our other cane-cutters.  
 2903. *Mr. Garrard.*] Have they been coming to the mill ever since they settled in the district? Since 1885 I think if you went through their settlement in the sugar season you would not find half a dozen able-bodied men there. They are either working for us, or for the small mills, or for the farmers on the river banks. They are able to exist and to carry on their homes upon the amount which they earn. They also depend a great deal upon timber-getting for a livelihood.

Mr. R. F. Holden.  
 27 Nov., 1889.

THURSDAY, 28 NOVEMBER, 1889.

*The Sectional Committee met at the Court House, Casino, at 11 a.m.*

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX, | JACOB GARRARD, Esq.,  
 CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Grafton to the Tweed.

Richard Barling, Esq., licensed surveyor, sworn, and examined:—

2904. *Chairman.*] What is your position in the Government service? I am a licensed surveyor.  
 2905. A staff officer? No; but in charge of part of the Casino land district.  
 2906. You are stationed in the land district of Casino? Yes. My district also includes part of the Lismore land district.  
 2907. Is the whole of the Casino land district in your charge? No; only the southern side of the river.  
 2908. And then on to Lismore? No, it does not reach Lismore; it goes down as far as Woodburn; as far as the coast—it is the county of Richmond.  
 2909. You have been residing within the land district of Casino for about twenty years? Quite that.  
 2910. Continuously for the whole of that time? Continuously.  
 2911. Have you a general knowledge of the land in this district? I think so—as much as any man.  
 2912. You have been all over it? Over very nearly every part of it, except the far part, up the river—Mount Lindsay.  
 2913. Can you tell us what is the total area of the land district of Casino? Something like 60 miles square.  
 2914. Tell us in acres? Over 2,000,000 acres.  
 2915. Can you tell us how much of that has been alienated? I daresay not half of it. I daresay 1,000,000 would be unalienated—2,000,000 acres is an under-estimate. I have not the figures here.  
 2916. Where is the bulk of the conditionally-purchased land located? It follows the main part of the river and its tributaries.  
 2917. The creeks? Yes.

R. Barling,  
 Esq.  
 28 Nov., 1889.

2918.

- R. Barling, Esq.  
28 Nov., 1889.
2918. How far back from them does it go? Taking the whole district of course the back part?
2919. I am asking you where the bulk of the selections are located? On the banks of the rivers.
2920. How far back has that settlement extended from the rivers and from the arms of the rivers? Miles back in some places.
2921. What is the furthest place back where there is any considerable settlement? It is settled between Ballina and Lismore—a distance of 18 miles.
2922. What do you call settled—alienated? It is selected.
2923. Are they residential selections? Residential selections. It is also selected from Lismore to Casino, on both sides of the road.
2924. For what purpose do the selectors generally use the land? For agriculture and for grazing.
2925. Do they use it for agriculture to any great extent? All along the rivers and creeks the land is used for agriculture.
2926. How do they get their produce away to market? By the steamers—the steamers go to Lismore. The people have to send their produce by drays to the different wharves, and the droghers take it from there to the steamers.
2927. And then it goes out of the Richmond River heads? Yes.
2928. What is the character of the bulk of the land about here—is it good agricultural land? It is good agricultural land on the northern side of the river—I am reckoning the south arm as the main river—and for a distance of 10 or 12 miles south of the river.
2929. Are the lands held in large areas, or are they fairly well distributed? Along the banks they are fairly well distributed. The agriculture is carried out in small areas.
2930. And when they get into the grazing districts? They take 640 acres, or 1,280 acres with a lease.
2931. Are any of the lands now used for grazing fit for agricultural purposes? Yes.
2932. Will the railway, if constructed here, bring those lands within a reasonable distance of a market? Yes; I have no hesitation in saying that.
2933. To any great extent? To a great extent. All the people now on the back creeks have no means of getting to market. If the railway were constructed there would be double the settlement.
2934. I suppose the people who are so far back from the river use the land for grazing purposes because they have no facilities for getting to market? Yes.
2935. I suppose those lands are not as good as the land close to the rivers; but are they good agricultural lands? On the banks of the creeks. The farther you get up the river the better it is.
2936. Is there any quantity of land reserved? A great quantity.
2937. Close to the town? Not just close to the town itself, except within the population boundaries.
2938. Are there any reserves on the rivers and creeks? Yes; on the creeks there are plenty, and there is a large reserve on the Tenterfield line, within 10 or 12 miles of the town—thousands of acres of the best description.
2939. Is there any good timber in the back country you are speaking of? Yes; all kinds of the very best.
2940. If the railway were constructed, do you think that it would bring that timber to market? Yes.
2941. How far would they have to haul it? Well, they are hauling cedar now for 40 miles.
2942. Would they haul that by the railway? It might pay to make a light line to bring it in.
2943. Do you know the route of the railway as laid out? Only on the rough.
2944. If the lands within the population area were thrown open for conditional purchase would they be taken up under the new Act, which provides that a few acres may be selected in that way? Every bit of the land will be taken up.
2945. At how much per acre? I should say at £3 or £4 an acre now, but the smaller areas near the town would be more valuable—£10 an acre.
2946. That is within a short distance of the town? Yes. The larger reserves of which I was speaking are on the western boundary of the counties of Richmond and Rouse, and contain very valuable timber.
2947. You know the reserves running along the railway line from here south to Grafton? Yes.
2948. All that land has been open for years; these are only recent reserves? The land has been reserved for the last five years.
2949. The whole of it? I fancy so. Some of the reserves were made in 1881; the others might be a little later.
2950. Are these railway reserves? The chief part are railway reserves.
2951. There is a great deal of unalienated land to the south of Casino, and to the east of Myrtle Creek, right out to the coast? Yes.
2952. Those lands are unalienated? Yes.
2953. Is the country different there—is it good, bad, or indifferent? Following the creeks it would be good. There are portions you see picked out on the creeks.
2954. Very few portions as compared with the total area of the country to the east of Myrtle Creek? Yes. You must bear in mind that the leasehold areas have cut up this land so that it cannot be selected. Every bit of the resumed areas has been taken up since it was thrown open. A portion of Myrtle Creek is in the resumed area, and it has all been selected on the Wyon Run.
2955. These leases will all fall in next year? Yes; I understand so.
2956. Do you think there will be a rush for the land then? Yes. I have heard of several who have looked out land in the leasehold areas already.
2957. What is the value of these lands now in the leasehold area of that particular run? 25s. an acre, to take up a selection.
2958. I am asking you what they would be honestly worth if put into the market—the unalienated land and reserves? In their present state I should not put them down as worth more than 25s. an acre. I would put that as the upset price.
2959. What about the reserves near Casino—what are they worth per acre? £4 or £5, and £10 close to the town.
2960. Within the population boundary? Yes.
2961. Is that the largest value that you would put upon any of the reserves in the Casino land district—£5 an acre? Yes, at the present time.
2962. Without the railway? Yes.
2963. And the unalienated lands within the leasehold areas of the runs you say are now worth 25s. an acre? Yes.
- 2964.

R. Barling,  
Esq.

28 Nov., 1889.

2964. Supposing a railway were constructed to Casino, what would be the value of the unalienated land within the reserves and leasehold areas in the land district of Casino? The value would be more than doubled within 10 miles on each side of the railway.
2965. The reserves between Casino and Grafton seem to be pretty extensive? Yes, they are.
2966. Would you apply the same value to the lands right through to Grafton which you do to those around Casino? Yes. I should put their value at double what it is now if the railway were made. If they are worth £5 an acre now they ought to be worth double that if a railway were made.
2967. Is the land, as you go further south, as valuable as the land round Casino? No.
2968. It is poor country? Without following the watercourses. The road itself goes through the very worst of it.
2969. The good country which is unalienated and fit for agricultural settlement is on the creeks? Yes.
2970. You have some idea of what it is proposed to spend in these districts at the Clarence River Heads, the Richmond River Heads, Byron Bay, and on this railway;—do you not think that in the interests of the country these lands should all be reserved until a determination has been arrived at with regard to the construction of these works. I am not speaking of the interests of the district, or of the present land-owners who want land? I do not think it would be in the interests of the country to reserve all the land; though it might be reserved within a certain distance of the railway.
2971. Take the reserves—do you think that any of them should be thrown open before railway communication is given, if it is to be given? Not until it is decided whether the railway will be made.
2972. Would they be of as great value when it was decided that the railway should be made as if the railway were made? If it is once decided to make the railway their value is made.
2973. Do you think the value will be as great when it is decided to construct the railway, but before the railway is constructed, as it will be after the railway as constructed? It will double the value now, and it might give ten times the value to the portions remaining.
2974. Do you not think that the country should get a fair value from the land to recoup the expenditure on these public works? Yes.
2975. It would not do any injury to anyone, except the land-grabbers, to reserve the land? I think not within a distance of the railway.
2976. Take Myrtle and Myall Creeks? I think they ought not to be reserved. They would bring population, and the population would give traffic to the railway.
2977. Then there is not population enough for a railway at the present time? Yes; but this country would be a feeder to the railway.
2978. Would not the country get the enhanced value of these lands better after the works were carried out than before? I think not.
2979. *Mr. Cox.*] I think you mentioned that you expect that a large amount of land will be taken up as soon as the leasehold areas fall in? Yes.
2980. Do these leasehold areas contain much valuable land? Yes. The land is of just as much value as that which is already taken up.
2981. As a rule, are they more valuable than the resumed areas? No; I think not. They are about the same.
2982. When the leasehold areas fall in, where do you think the greater settlement will probably take place—up the river, or between the Richmond and the Clarence? Up the river from here.
2983. That is really the most valuable land? Yes, up the river.
2984. So that next year the population will probably settle up the river above Casino? Yes.
2985. Consequently a railway from Casino to the coast would help those people very considerably? Yes.
2986. At the present time there is very little agriculture carried on in this neighbourhood for want of a market? For want of means of transit.
2987. Do you think the railway would give better means of taking the produce to market than the present river gives? The communication is so uncertain at the present time. We have to depend upon the droghers, and the channel gets blocked up by every flood. None of the ocean steamers can come up here.
2988. You think that speedy communication by rail with the coast, although perhaps not cheaper than the river traffic, would be largely availed of, because of its greater certainty? Yes, in a great many cases, especially for perishable goods. Of course it would not be used for heavy timber.
2989. Where do you think is the proper part of the coast to take the railway to? I think that the railway, as I see it marked on the plan, would feed all the rivers. Lismore is the head of navigation for ocean boats, and the railway would feed that place, and, if Byron Bay was made a port of call for steamers, it would also feed it; but the Casino traffic would not pass Lismore and go to Byron Bay—it would go down its own river.
2990. Therefore the advantages of a railway between Casino and Lismore would be to give speedy and safe traffic for all produce going down the river? Yes.
2991. Is that in the event of the Richmond Heads being made available for larger steamers? Even if there was no more done there a great deal would go out of the Richmond Heads.
2992. Is there much traffic between the Richmond and the Clarence? There is passenger traffic between the Richmond and the Clarence? Lawrence is our port on the Clarence.
2993. Does much produce go to Lawrence to be shipped? None from here, but if the railway were constructed it would feed the Clarence at one end and the Richmond at the other.
2994. When this expected influx of population to the heads of the Richmond takes place, they are not likely to send their produce to the Clarence? No, I should think not.
2995. Is there a large amount of passenger traffic between the two rivers? Not very large. Since we have had more certain steam communication half the passenger traffic has gone through the Richmond Heads. Formerly the whole of the passenger traffic went by the Clarence.
2996. In the event of the Richmond River Heads being made more available for traffic, there would be little chance of any produce from this river going there? I think so.
2997. In the event of a railway being constructed between Casino and Grafton, what are the prospective profits—how would they arise? The land all along the line which is fit for agriculture would be settled, and half of the produce would go to the Clarence and half to the Richmond.
2998. But that settlement would not take place until all the superior land on the heads of the river was taken up? I think it would take place at the same time in one part, but not so readily. I say that that is where the rush would be—up the river.

- R. Barling, Esq.  
28 Nov., 1889.
2999. I am to infer from what you say that if a railway were made anywhere it would create a certain amount of traffic? It would create a certain amount, but you must have the land.
3000. Is the whole of the land between Casino and Grafton available for settlement—would it support a considerable population? I have been over the whole of it, as far as my own district is concerned, to 40 miles from here, but I would not answer for the other part.
3001. What I want to gather from you is, whether the land is of sufficient value to warrant the railway being made, or whether, the railway being made, the land, though inferior, would be taken up because of it? It is inferior along the road, but on the creeks it is not. People passing along the road say,—“Oh, this is very poor country; it will never pay a railway”; but on the banks of the creeks there are thousands of acres that would be productive.
3002. Those lands are not productive now, because of the want of means of transit? Yes.
3003. *Chairman.*] Looking at the map, you can see how the land has been alienated on the Tweed and on the Richmond for a considerable distance back? Yes. But I said that all the country between Ballina and Lismore was taken up.
3004. And away to the north the land has been alienated at the back of the mountains where there are none of these watercourses? Yes, but that is in prospect of having some means of transit.
3005. The same thing might apply to the country between here and the Clarence—how is it that so much of the country has remained unoccupied? The good was picked up first—the worst is always left to the last.
3006. Does not that rather go to show that the land on the Tweed, and on the Richmond back from the creeks, is superior to the land back from the Clarence and between here and that river? I would not say that.
3007. Do you know the country at all? Yes, back from the Tweed.
3008. Do you know the distance from here to Grafton? 70 miles.
3009. Sixty-two and a half miles by railway, and the railway is estimated to cost £776,000; the annual charge on it will be £23,280;—is there any possibility of that being paid. The working expenses are generally another 3½ per cent., so that the total charge on the line would be about 7 per cent.;—do you think that if the railway were constructed, and all these lands thrown open, the line would even pay its interest? I think not. To stay at one place, at Grafton, I think not.
3010. What would make it pay interest? If it was part of a national coast railway, when it was continued it might pay, but I should advocate its joining the main line somewhere. I should only look upon it as a feeder to the rivers at the present time.
3011. The non-settlement of the land by the people before 1884 goes to show that it was not worth taking up? The rush has set in during the last few years.
3012. Do you know how the population has increased during the past five years? I could not say. I have known it this twenty years.
3013. *Mr. Garrard.*] Have you any land of your own in this district? I have a little near the town.
3014. What area? About 400 acres freehold, and 640 conditionally purchased.
3015. In what direction is your land? Up the river. Within the municipality and up the river, about 4 miles out.
3016. The distance from Lismore to Grafton is about 80 miles? More than that—90 miles.
3017. You think that half way between Lismore and Grafton the trade would go to Lismore, and for the other half it would go to Grafton? Yes; that is my idea.
3018. Do you know the route of the line between Casino and Grafton? Yes.
3019. Do you think it is the best route that could be taken to serve the greatest number of people and the largest area of good land;—would you go further east or west? No; I think it is as well where it is.
3020. To tap the rich lands on the creeks? Yes. I think they could all come on to the line laid down on the map.
3021. Is the land between here and Lawrence better than that between here and Grafton? No; it is the same.
3022. You think that the line between here and Grafton could not be improved? No; I do not think that it could. I do not know that you could tap any richer land by moving it.

Frederick Burgess Gulley, Esq., Mayor of Casino, sworn and examined:—

- F. B. Gulley, Esq.  
28 Nov., 1889.
3023. *Mr. Garrard.*] What is your occupation? I am a storekeeper.
3024. You are also mayor of the borough? Yes.
3025. How long have you resided in the Casino district? Fourteen years.
3026. Has there been much progress made in the district during that time? Yes, great progress.
3027. Where do the people at the present time find a market for their produce? Sydney is the principal market.
3028. Do they send it down the river from here or from Lismore? They send it via Irvington.
3029. That is on the main river? Yes. That is where the Government wharf is—it is about 2 miles from Casino.
3030. At present you have to tranship your inward and outward goods to the ocean steamers at Coraki? Yes.
3031. Do you think that if the railway were constructed people would use it at all? I do.
3032. Where would be their port of shipment then? For the portion of the district between here and Myrtle Creek, Casino would be the port of shipment; and beyond that, Grafton.
3033. Then the railway would only get the 20 miles of traffic between Myrtle Creek and Casino? Casino would get the whole of the traffic perhaps as far as Myall Creek.
3034. That would be brought to Casino? Yes.
3035. Then put into droghers and taken to Coraki, and transhipped into the ocean steamers? No; that is the present mode of doing things; but there is no doubt that if a railway were constructed it would be largely used instead of the droghers.
3036. Where to? Very probably a portion of the traffic would go to Lismore and to Byron Bay.
3037. If the railway were constructed, produce, instead of being sent out from Casino by the south arm, would go on to Lismore for shipment to Sydney and other outports; or would it go by Grafton? It would go to Sydney by Lismore. It would certainly not go by Grafton except from south of Myall Creek.
- 3038.

F. B. Gulley,  
Esq.  
28 Nov., 1889.

3038. You would look upon Lismore as your deep seaport? Yes.
3039. And all the trade to the south of Myall or Myrtle Creek would find its way to Grafton? I think so.
3040. How far is Myall Creek from here—south? About 30 miles.
3041. Roughly half way to Grafton? Yes.
3042. Half of the district between this and Grafton would find its market at Grafton, and the other half at Lismore? Yes.
3043. Do you know the country between here and Lismore? Yes.
3044. Is the soil good? In comparison with that in other portions of the district we consider it only third rate, but in comparison with other parts of the country it is very fair land.
3045. In comparison with the brush land it is very poor, but in comparison with other parts of the Colony it is average land? Yes.
3046. There is a large amount of good land still available for settlement? Yes.
3047. I suppose it would naturally be taken up before this comparatively poor land? Yes, but I know for a fact that there are a great number of persons waiting for the leases to be thrown open, and when they are thrown open there will be a great deal of competition.
3048. *Chairman.*] You mean in the number of applications—there can be no other competition? Yes.
3049. *Mr. Garrard.*] Do you get any of your goods via Grafton or Lawrence? No.
3050. No produce is sent that way? No.
3051. You send it via Coraki? Yes.
3052. Do you think that if the railway were constructed there would be a large increase in the quantity of land put under cultivation? I do.
3053. What is the principal product in this part of the district—within a radius of 10 miles of Casino? Maize and dairy produce.
3054. Dairying is a recently established industry? Quite recent.
3055. Is it being developed very largely? It will be a very important industry—one of the most important in a few years.
3056. It is absolutely necessary for the development of that industry that the produce should have speedy transit to market? Yes.
3057. Have you, during your residence in Casino, suffered much from the detention of goods in or out, through the bad state of the bar? We have suffered severely. To give you an instance that came under my own notice. Some years ago I happened to be at Ballina, and I saw thirty-seven sailing vessels and two steamers—the “Susannah Cuthbert,” the only steamer then trading to the river, and an auxiliary screw steamer called the “Examiner”—in all thirty-nine vessels, detained there. Some had been bar-bound for four months, and the “Susannah Cuthbert” was bar-bound for six weeks. I went to Sydney in her. A great number of these vessels had maize and perishable cargoes on board, and when they arrived in Sydney the cargoes were perfectly worthless.
3058. You are speaking of what happened many years ago;—have you during the last five years suffered any serious loss from the detention of goods at the Heads, or outside? Yes, repeatedly.
3059. Would it not be better in the interests of this district if you were connected with the Clarence, where there is deeper water, than with this river, where you are subject to so much loss? Certainly not. We contend that when the improvements at the bar are carried out we shall have all we want in the shape of river accommodation.
3060. You have so much confidence in Sir John Coode, and in the common sense of the Committee who recommended the work, that you think that the port will become a good one? Yes.
3061. Lismore will be your shipping place then? Yes, for the great bulk of the produce.
3062. Do you think it would retard the district at all if all the unalienated lands were withdrawn from sale until a railway was constructed? I am afraid it would.
3063. Do you not think that the country should get the benefit of the increased value that would naturally arise from the construction of the railway? I am inclined to think that they would to a great extent.
3064. The unalienated land should not be absolutely withdrawn from sale during that time? No, I think not. I am quite satisfied that when it is known for a certainty, that we shall get a railway from Grafton to the Tweed a very large area of land now lying idle will be utilised, and the railway used.
3065. So far as you are concerned to Lismore? Just so. There will be a very large influx of population from all parts of the Colony.
3066. A railway to Grafton is out of your consideration;—it is a railway to Lismore that you want, because you tell us that from 30 miles south of Casino the produce will come to Lismore? I am of opinion that it will.
3067. How long has Casino been incorporated? About ten years.
3068. What has been the growth of the population and the rates during that time? The population, I should say, is three times as large now as it was when the town was incorporated.
3069. You had 500 inhabitants when you were incorporated? About that.
3070. And you have 1,500 now? About that.
3071. What is the growth of rates? The rates now are about double as much as they were at first.
3072. What is your annual rate now? About £800. That, of course, does not include the subsidy.
3073. You have outgrown the subsidy, except by special favour of Parliament? Yes.
3074. *Mr. Cox.*] In making a railway, although there may not be a prospect of the country being immediately reimbursed the large expenditure which it incurs, there must be a fairly immediate prospect of the railway paying; all matters of this kind must be conducted, as far as possible, on commercial principles? Yes, I am aware of that.
3075. Would the Government be justified in expending very large sums of money unless they saw a prospect of the works paying for themselves in the immediate future? I think not.
3076. A railway between Casino and Lismore would be  $17\frac{1}{2}$  miles long; and would cost £10,000 or £11,000 per mile; the interest on that would be  $3\frac{1}{2}$  per cent., and the working expenses  $3\frac{1}{2}$  per cent., in all 7 per cent.; do you think there is any immediate prospect of an amount of money necessary to pay the interest and working expenses being obtained from a railway between these two places? I think that within a reasonable time the line would pay.
3077. What would be the chief products that the line would foster and develop in this district? The dairying industry would perhaps be the principal.
3078. What would be the produce of the dairies? Butter and cheese largely.

3079.

- F. B. Gulley, Esq.,  
28 Nov., 1889.
3079. Do you think there would be sufficient butter and cheese made to warrant the construction of a line to carry it to market? Not solely for it.
3080. What other produce would there be? There is a large quantity of maize grown on the south arm. There is more maize grown in the vicinity of Casino than on any part of the river.
3081. In the event of a large settlement taking place when the leasehold areas are thrown open it would tend no doubt to a still larger production? It would; there is no question about that.
3082. Then would come in the cost to the farmer; would the cost of railway traffic be so heavy as to prevent a farmer from getting any fair return for his labour? If the rates were at all reasonable he would get a fair return.
3083. With the present scale of charges do you think that a railway would induce farmers to grow grain? I think so. There is a large quantity of unalienated land suitable for wheat growing, and I believe that if they could get the wheat to market readily a great quantity of it would be grown up the river on what is known as the Upper Richmond.
3084. Would it pay to carry timber down by railway? I think it would. There is a large quantity of valuable timber between this and Myall Creek—a very large quantity; and within a radius of 20 miles from Casino there are thousands of pine trees—some millions of feet of pine, which, no doubt, if there were a railway, would be brought into Casino.
3085. Do you think the railway would compete with the water carriage between Casino and Coraki for timber? That is doubtful.
3086. Then you think it is very doubtful that there would be any traffic in wood on the proposed line? At present, of course. There is a great demand for piles for the Melbourne and other markets. There are a great quantity of trees suitable for that purpose between this and Myall Creek, and I think it would pay to cut them if there were a railway. At present they are almost valueless.
3087. Presuming that you are right in your expectation that eventually a large population will be settled on the heads of the streams running into the Richmond, and that the heavy produce that will be brought down by rail, do you think that that would also take place if a railway were constructed between Casino and Grafton? I do.
3088. What could be produced in that country that would warrant the very large expenditure that would be incurred in making the railway? There is a lot of unalienated land to be taken up, and a large portion of that land is suitable for cultivation. As I stated before, the balance of it must necessarily go to Grafton. The rest of it would come to Casino from about midway.
3089. Do you think the people would settle there at the same time that people were settling on what we hear are richer lands on the heads of the rivers and creeks? I feel confident that they would.
3090. Only because of the railway? Simply because of the railway. If the railway is not constructed a large quantity of this land will not be taken up for many years to come.
3091. And the probable receipts of this line from Casino to Grafton would be halved between the two towns, and would come from farm produce and timber? Yes; there would be a large quantity of timber.
3092. Sufficient to pay the working expenses and a fair interest on the capital? There would be hides and tallow, and lots of things. There are a large number of cattle in this neighbourhood, in fact this is where nearly all the cattle are reared.
3093. *Chairman.*] It is proposed to start a railway from Grafton. It runs out from there 25 miles into what is known as the Clarence forest reserve No. 1. That place is about 10 miles distant from Lawrence. What is to be gained by taking the line this 25 miles;—you must bear in mind that the whole of these settlers are in reach of the river? As I understand it this railway is part of a scheme for a north coast line.
3094. We are inquiring into a proposal to construct a railway from Grafton to the Tweed? If the line were part of a Great Northern coast railway, then it would have to go to Grafton.
3095. Then we would only be justified in taking it to Grafton in the event of the line being part of a north coast railway? That would greatly affect the matter.
3096. The line passes almost alongside the farms situated on the banks of the river or close to the river. If this is only to be a line to the Clarence is there any justification for taking it to Grafton when it could go to Lawrence? No.
3097. If the object of the railway is only to feed a port on the Clarence, from which produce could be taken to Sydney by water, would it not be better to find that port at Lawrence rather than at Grafton, and thus save 15 miles of railway? I think it would.

Frederick George Crouch, Esq., storekeeper, sworn, and examined:—

- F. G. Crouch, Esq.,  
28 Nov., 1889.
3098. *Mr. Cox.*] What are you? I am a storekeeper, residing in Casino.
3099. How many years have you been residing here? I have been here nearly fourteen years, and I resided on the Clarence about ten years previous to my coming here.
3100. Have you any interests still on the Clarence? I have some small interest on the Clarence. My chief interest is on the Richmond.
3101. Do you own any large extent of land in this district? Principally town and suburban land, and one or two farms.
3102. No agricultural land? One or two farms.
3103. Do you farm them yourself? No, I do not—they are leased.
3104. I presume that you are fairly well acquainted with the district round here? I am thoroughly well acquainted with it, I think.
3105. You know its capabilities and potentialities? Its capabilities are immense, and it has progressed by leaps and bounds since I have been acquainted with it.
3106. Have you any statistics to show the trade of Casino? They will be submitted by a later witness.
3107. In the event of a railway being constructed between this place and Lismore, and continued thence to Byron Bay, do you think it could successfully compete against the river traffic? I do. I consider that in the near future the Richmond must seek the markets of the world rather than a local market for her produce.
3108. In that case you would ship it in larger vessels? I think that ultimately that would have to be done. At present it is taken by the droghers to Coraki, and there transhipped again into comparatively small vessels.
- 3109.

3109. If you wanted to trade with the outside world, and Byron Bay were made a safe port, would you ship there? I think that that must come about in the near future.
3110. Do you anticipate that there will be a large settlement next year, when the leasehold areas will be thrown open for selection? I anticipate confidently that there will be a large accession of population. Already people are coming to the district, and selection is going on to a large extent, as can be proved by the Land Office records. The immense area of good agricultural land that is now simply held for grazing purposes will, as time goes on, be brought under cultivation.
3111. As a man who has lived here for some time, and who has represented the district in Parliament, you must know that a railway is not payable if taken to a pastoral district? Certainly; but the present and previous Governments have constructed railways to carry wool.
3112. In the event of the country above Casino being held for purely pastoral purposes, or even for dairying purposes, do you think that it would support a railway? Dairying will not be the only industry. We can produce fruits, tobacco, hay, and wheat, on the ridges.
3113. Do you think these things will be produced? Yes, to a very large extent, if facilities are afforded when once the settlement comes.
3114. What do you know of the country between this and Grafton? I have traversed it repeatedly.
3115. What kind of country is it? By comparison with other parts of the country where railways have been constructed, good.
3116. *Chairman.*] Do you include in that category Bourke and Hay? Yes. I speak comparatively. As pointed out by Mr. Gulley, this land, compared with our richer scrub lands, is inferior; but, compared with land in other parts of the Colony, where railways have been constructed, and which is known to be fair average land, it is good.
3117. *Mr. Cox.*] After you leave the banks of the Clarence, according to the map, comparatively little land is taken up? No agricultural produce could be made to pay there, because the land carriage would be excessive.
3118. How is it that all the land on both sides of the Richmond have been taken up—the circumstances there are the same? It is better land.
3119. But your argument is, that this land has not been taken up because there is no access to market; but the other land has been taken up, where there is no access? Yes; but there is no comparison between the two. The land which has been taken up between here and Grafton has been taken up for grazing purposes principally.
3120. Would it pay to run a railway through that country, if it is to be used merely for grazing purposes? I think that is questionable. I think that a good portion of the land that is not now used for any but grazing purposes will be used for agricultural purposes—that is, on the banks of the creeks. On Myall and Myrtle Creeks there is excellent land, and on Deep Creek there is magnificent land, both up and down—scrub land, too.
3121. Probably only half the produce from that land would come to Casino? Only one-half. It would certainly not come from beyond Myall Creek.
3122. The other would go to Grafton? Yes.
3123. Do you think that the traffic would be sufficient to warrant a very large expenditure on the railway? It must always be borne in mind, I think, that this will be part and parcel of the north coast line, which has been spoken of with some degree of authority by Sir Henry Parkes, and by previous Premiers.
3124. That is not the question which we are considering now. Do you think that the country would be warranted in making this line, presuming that there was to be no extension. What traffic would there be in the event of a line being constructed from Casino to Grafton, except the produce raised on the banks of the creeks. There is a large amount of timber there? Yes, a large amount of timber—hardwood, ironbark, and so on—that would find its way to market. It is now being carted to Lawrence and to the Richmond.
3125. Do you think that they would take that to Grafton and ship it from there, rather than to Lawrence? I think so, because the difference of transit, when you once have the timber on the line, is so trifling compared with the shipping and transshipping, that I think it would go to Grafton.
3126. If the produce from the country between the two rivers was to be taken to the nearest port, do you not think that Lawrence, which is very much nearer than Grafton, would be the most desirable place to take it? There is a difficulty about taking the line to Lawrence, because, if it were intended to go further south, the cost of bridging the Clarence there would be an insuperable obstacle.
3127. But leaving that out of the question? Certainly Lawrence is the nearer port of the two, but there are other considerations which would govern the direction of the line.
3128. It is your opinion, at any rate, that a railway constructed between Casino and Lismore would pay? I am satisfied that it would in a very few years.
3129. And you believe that it would develop a very large trade in years to come, especially if Byron Bay were made a harbour? Yes, I have no hesitation in saying so. There is one industry that has not yet been alluded to, and that is the frozen-meat industry. We have at the present time something like 160,000 horned cattle in the district. Fat cattle were now taken from the district, and trucked at Tenterfield, and if the Government offered facilities, in the way of freezing-chambers and freezing-depôts at Darling Harbour, the intercolonial trade would, in the near future, be a very important industry, and we should probably ship carcasses to England in very large numbers.
3130. *Mr. Garrard.*] You made a comparison just now between the land between this and Grafton and that in other parts of the Colony—you have a knowledge of other parts of the Colony? Yes.
3131. To what part of the colony would you liken the land between here and Grafton—to Bowral, the south coast, or where? You are taking the best parts of the Colony.
3132. To Bourke? This land is very much superior to that.
3133. Do you know the rainfall at Jerilderie? I do not know it exactly, but I know that ours is large and regular—40 or 50 inches annually.
3134. Jerilderie does not get more than 25 or 30 inches? I suppose it does not.
3135. If Jerilderie only got 25 inches per annum, while you got from 25 to 40 even though your land was not better in quality than the land at Jerilderie, would not the rainfall make it much better? Yes, undoubtedly.

F. G. Crouch,  
Esq.  
28 Nov., 1869.

- F. G. Crouch, Esq.  
28 Nov., 1889.
3136. Therefore, the fact of your having a better rainfall would place the land between here and Grafton in a better position than similar parts of the Colony where the rainfall was less? Precisely. I have been in the district fourteen years, and we really have not known what a drought is. With facilities for regular communication, I have no hesitation in saying that the district will go ahead.
3137. Can you tell me what is the cost of conveying a ton of produce by the Clarence? From Sydney to the Clarence?
3138. Yes? There is a difference of about 2s. 6d. per ton deadweight in the freight between Sydney and the Richmond and Sydney and the Clarence, and of about 3d. per bag with maize.
3139. If we have been told that the average freight to the Clarence was 15s. 6d., and that to the Richmond 17s. 6d., is that correct? Approximately.
3140. Do the people of Casino have to pay more freight than the people of Lismore pay? We have to pay additional freight, to compensate for the drogherage.
3141. What does it cost you to take your goods to Sydney by Coraki? For dead weight we pay from £1 to 25s. a ton. Flour is carried at a different rate from that at which other heavy articles are carried.
3142. You expect that in a few years you will have the market of the world open to you, and that you will have to go to Byron Bay to ship your goods;—do you know the distance between Casino and Byron Bay? About 46 miles.
3143. And the nearest point of the Clarence—Lawrence? About 50 miles.
3144. I suppose you are aware that the freight from Byron Bay is more than the freight from the Clarence? Not a great deal more.
3145. Five shillings? About five shillings.
3146. Do you not think that it would be better to avail yourselves of the good navigable waters of the Clarence, if you have only to convey your goods a few miles further, than to pay the increased freight from Byron Bay. Do you think that the Government would be justified, seeing that the Clarence is so near to you, in spending £242,000 in making a harbour at Byron Bay? My reason for saying so is this: I think the produce of the district must so increase in the course of a few years that the present class of vessels trading here would be unequal to it—we must have vessels of a larger draft.
3147. The Clarence at present has vessels with a draft of 16 to 18 feet of water? No vessel drawing over 13 feet could reach Grafton.
3148. Sixteen feet of water? We have that on the Richmond.
3149. You are aware that vessels drawing 15 feet of water can and do use the Clarence River? No, I am not aware of it. The Clarence River steamers draw from 10 to 12 feet.
3150. Are you aware that with Sir John Coode's improvements it is anticipated that vessels drawing from 18 to 20 feet will come into the Clarence? They may enter the Clarence, but I question whether they will get to Grafton.
3151. Would you be surprised to learn that there are no bars which could not be dredged, so that vessels could get to Grafton? I know a little about it, and I say that it would be some time before vessels drawing 16 or 18 feet of water would get to Grafton.
3152. There are no obstacles but what could be removed by dredging? No. The river could be dredged.
3153. Do you think the Government would be justified not only in improving the Richmond and the Clarence, but also in making a harbour at Byron Bay? In view of the connection at Byron Bay, certainly—that must come about, in my opinion.
3154. Taking it in its narrowest aspect, which is before the Committee now, the connection between Grafton and the Tweed, do you think the Government would be justified not only in making this railway at a cost of about £200,000, but also in constructing a breakwater at Byron Bay at a cost of £242,000? Yes. Byron Bay is in the centre of a very large and rich district.
3155. Do you think the Government would be justified in expending money on the four public works that I have mentioned? I do, in view of the advantages that will accrue from the expenditure.
3156. And the future north coast line, and line to the Tableland, which you cannot get rid of? I think that must come about. I find that the rate of freight between Sydney and Grafton is 15s. a ton.
3157. That is dead weight? Yes. The freight from Sydney to Casino, including droghers and so on, is 25s. a ton.
3158. What is it to Lismore—do you know? Lismore, I think, pays £1 a ton; but I am not quite certain.
3159. Can you give us any information as to what the freight is to Byron Bay? Only from hearsay. I have no knowledge of it, but I have been told that it is £1.

Mr. John Charles Irving, pastoralist, sworn, and examined:—

- Mr. J. C. Irving.  
28 Nov., 1889.
3160. *Chairman.*] Where do you reside? At Tomki.
3161. How far from Casino? 5½ miles.
3162. Have you been a resident there for any length of time? Since 1865.
3163. What pursuits have you been following? Pastoral pursuits.
3164. In connection with cattle stations? Yes; I have been managing a cattle station.
3165. You have done nothing in the agricultural line? Only in connection with the station.
3166. What do you wish to tell the Committee in connection with this railway;—what information can you give? I have no wish to give any evidence; but I shall be very glad to answer any question which you like to ask me.
3167. Where do you find your markets for fat cattle;—I suppose that it is only fat cattle that you send away? Fat cattle mostly. I am a buyer of store cattle. Sydney is the principal market—that is, if the prices are high; if not, Ramornie is.
3168. Those are the meat-preserving works? Yes.
3169. If the railway were constructed in what way would it be to the advantage of the graziers of the district? It would benefit them largely—indirectly, if not directly.
3170. By bringing population to the district? Yes.
3171. But it would not open up any other than the local markets. Would it assist you to get your produce away? I have no doubt that it would.
3172. Do you think that that would be a source of profit which may be fairly reckoned upon if the railway is made? I should say so.
3173. Have you ever gone into the question of the carriage of stock on the railway? I cannot say that I have.
- 3174.

3174. Do you know that there is no profit whatever made from it, or next to none? Do you mean as far as the railway is concerned?
3175. Yes? No; I cannot say that I am aware of that.
3176. If that is so, you can hardly take into consideration the carriage of stock? Yes.
3177. All the runs in this Eastern Division will be thrown open to selection some time next year? I believe so.
3178. Do you think that when these runs are thrown open there will be any greater advance in the settlement of the district? I do most certainly.
3179. And the reserves, I presume, are looked upon longingly by a great number of persons at the present time? Very much so indeed.
3180. Do you not think it would be to the interests of the country to keep the reserves locked up until it is determined whether the railway should be constructed or not? I think it is a good precaution to take to keep reserves in every part of the Colony, and not to have every part of the land thrown open to selection?
3181. We have been told of one reserve in the locality of Byron Bay of 4,000 acres, which, if the railway were constructed and the harbour made, it is estimated would bring £80,000; if the proposed works were carried out, do you not think that the value of the lands in the district would be enormously increased? Of course it would.
3182. And that that would assist in paying for the construction of the works? Yes.
3183. You know that we are nearly emptying the Treasury into this district at the present time? At last it is spoken of spending some money here.
3184. Do you not think that it would be a wise policy to keep back the alienated land from sale until an enhanced value had been given to it by the construction of these works? Most certainly.
3185. Do you know the Tweed River district? No. I have been to Byron Bay and to the Brunswick, but I have never been from there to the Tweed.
3186. From the Brunswick south the bulk of the country is good agricultural land? The bulk of the land is very good indeed.
3187. Down to Lismore, and there is a good deal of good land about here? A great deal.
3188. Equal to that which we see about Lismore? I think so—yes.
3189. Do you think the area is as great? There is a very large extent of good land both about Lismore and about this place.
3190. Passing on to Grafton—if you look at the map you will see that the country in the Richmond district is alienated from the coast right back almost to New England, and on the banks of the Clarence; do you know the country between Casino and the Clarence? Yes.
3191. Do you know it further out west, towards the New England district, in the county of Drake? Not very far out. I have been out part of the way. I know it to about Drake.
3192. Is it not a fact that land there has remained unalienated because the character of the soil makes it unfit for small settlers? Not entirely. To some extent it is. It is not taken up because of the want of communication.
3193. Does not that exist in a tenfold greater degree in the big scrub? That is nearer the river than up here.
3194. What about their facilities for getting to market; there there is a dense scrub through which everything has to be packed? If any one went far in.
3195. Within 15 miles of Lismore we are told that everything that is taken into or brought out from a number of these selections is packed on horseback, and yet that country is taken up? I know that that used to be true; but I should say that it is a little overdrawn at the present time.
3196. We have had it on oath from not one witness but several? There may be some isolated parts in which it is necessary to do it.
3197. What is the character of the country near Casino? Open forest country.
3198. Iron bark country? It varies very much. There is some iron bark, some scrub country, some sandy, and some spotted gum ridges.
3199. Assuming that the railway is only being constructed for the purpose of affording facilities to settlers to get to a port, is there any reason why it should go into Grafton rather than to Lawrence,—if it went to Grafton would it make both the railway journey and the water journey longer? It would be much more advantageous and cheaper to take the railway to Lawrence—that is, if it is merely a question of taking a line to the Clarence.
3200. Of course, if this is to be a north coast line, Grafton is the best place at which to cross the river? Undoubtedly.

Mr.  
J. C. Irving.  
28 Nov., 1889.

Mr. Robert Pyers, timber merchant, sworn and examined:—

3201. *Mr. Cox.*] Have you been long a resident of this district? About nine years.
3202. From where did you come? From Grafton.
3203. How long did you reside in Grafton? About nine years.
3204. What caused you to change your residence from Grafton to Casino? I was in the timber trade at the time, and I found that I could do better here than on the Clarence. That is what brought me here.
3205. Is that your occupation now—timber getting? I am an auctioneer and timber dealer.
3206. Have you any land? I have no land.
3207. You have had no experience of carrying timber by railway, I presume? No, none whatever.
3208. You either carry your timber to market by waggon or by water? Yes.
3209. For what distance can you afford to drag timber by waggon? It depends upon the class of timber.
3210. Cedar, being a very valuable timber, would stand a long land carriage, I presume? Yes; you can drag cedar a long way.
3211. How far can you afford to draw valuable timber? The people here are drawing timber 60 miles. I do not think that they make anything out of it.
3212. Can it be obtained nearer than that? 50 miles would be the nearest distance that you could get it. Of course if you could go in a straight line it would be nearer.
3213. With what other timber do you supply the market? With pine and hardwood. The hardwood is used for piles and girders.

Mr.  
R. Pyers.  
28 Nov., 1889.

- Mr. R. Pyers. 3214. Where do you chiefly obtain the timber? The piles and girders are obtained between here and the Clarence. There has never been any got north of this.
- 29 Nov., 1889. 3215. To which river do you generally take them? To both rivers.
3216. In the event of a railway being constructed between these two points would it pay you to carry that timber by rail? Yes, it would.
3217. Do you think that the timber trade would largely develop if railway communication were given? I am sure it would.
3218. What other trade would be likely to develop if railway communication were given? A trade in produce. Hay would be largely grown on the road from here to Grafton. All that land would grow hay and wheat.
3219. You are not a grower? No, only for my own use.
3220. Are large profits made in the timber trade? Yes, a good profit is made in the timber trade.
3221. Who gets the lion's share—the middlemen, or the cutters? Well, I should think the middlemen got the best of it.
3222. Are there very large forests of timber between this and the Clarence? Yes, I have been on all the coast rivers, and there is no better hardwood to be obtained than between here and the Clarence—iron bark, spotted gum, stringy bark, tallow-wood, and other classes of timber.
3223. Do you know the course that the railway would take? Yes.
3224. Does it run through good timber country? It runs through fine timber country.
3225. But country that is not much good for anything else? It is good for wheat and hay growing.
3226. Is it good for wheat growing where the timber is? Yes.
3227. Can you account for so little land being taken up in that part of the country all these years compared with the very large area that has been alienated in other places? The land is poorer, of course, or else it would have been taken up years ago, but there is a want of communication with a market. The same thing applies to the land at the head of the river, which is the best in the Richmond district; it has not been alienated because there has been no prospect of getting the produce away.
3228. *Chairman.*] That will still be the case? Yes.
3229. *Mr. Cox.*] How far is it to the head of the river? Fifty miles, right to the head—Mount Lindsay.
3230. Do you think that in some future time the grand country there would warrant the extension of the line? Either that or the locking of the river.
3231. Would locking the river make it navigable? Yes.
3232. Do you know anything about the locking of rivers? No, I have had no experience of it. I have read about it.
3233. It would not be a costly work? That I could not say.
3234. Would the line between Casino and Lismore be largely availed of for the business with which you are connected? I do not think so. It would only be used for the carriage of goods and produce.
3235. The quantity of produce would probably be increased if a railway were constructed? Yes.
3236. Is there much passenger traffic between the two rivers? There is a good deal of passenger traffic, but it goes chiefly by Woodburn, which is the more convenient and cheaper way.
3237. *Mr. Garrard.*] You spoke just now of there being a large amount of hardwood between here and the Clarence—is it on alienated land? No, on Crown land.
3238. In large quantities? Yes.
3239. You have an intimate knowledge of our hardwoods, and you say that, in your opinion, there is a larger quantity of hardwood there than on any other river? Yes, there is more hardwood there than on any of the other rivers with which I am acquainted, and I have followed the trade for a great many years.
3240. Where would that timber go to? Partly to the Richmond and partly to the Clarence—mostly to the Clarence.
3241. Would that timber be taken on the railway? Any of it would go to navigable water within 10 miles of the river by team; beyond that it would go by rail.
3242. As log timber or sawn? As log.
3243. Do you ship much timber? Yes; cedar.
3244. Cedar only? Yes.
3245. In log? Yes.
3246. Do you know the country between here and Grafton? Yes; well.
3247. And on the Clarence? Yes.
3248. Do you know the greatest depth of water that the vessels going up there draw? I think a vessel can get up drawing 14 feet. I do not know whether she could get out drawing more than that.
3249. You do not know of there having been any delay at the Clarence Head for twelve months? No.
3250. Has there been any detention at the Richmond during that time? Yes.
3251. Is the Clarence entrance very much superior to the Richmond entrance? Yes, because it has been improved. A lot of money has been spent on it. The Richmond has had nothing done to it.
3252. Do you not think that the Clarence will always be better than the Richmond? In my opinion it will.
3253. Therefore a larger class of vessels will be able to go up the Clarence than can go up the Richmond? Yes; but the Richmond can be used.
3254. Do you know anything about Byron Bay? Yes; I have been to Byron Bay a few times, to my sorrow.
3255. What do you think of the project to make a harbour there, is it feasible? No doubt it can be done.
3256. Do you think it would be a benefit to the district, or would it be better to bring the produce of that part of the district to the deeper waters of the Clarence? Byron Bay would be a benefit to the people who live there.
3257. And only to those? It could be used by deep-sea vessels, such as those going to England or foreign parts; but as to Byron Bay ever getting anything from Casino if it is made a harbour, in the way of produce, in my opinion, it will never get one bag.
3258. Excepting for foreign shipment? Yes, or for deep-sea vessels.
3259. Or for intercolonial trade? The river will be used for that.
3260. Do you mean the river to Lismore or the main river here? The North Arm, as they call it. The main river will be used in preference to going to Lismore.
- 3261.

3261. Do I understand you that none of the produce for the intercolonial markets from in and around Casino will go further north than Lismore? I do not think so. It will never go to Lismore.
3262. Then, so far as the railway is concerned, it will only get freight for 20 or 30 miles south of Casino? The population within 30 miles would patronise the railway to here, to Lismore for some products, and to Byron Bay for others.
- 3263-4. Have you any land in the district? No, I cannot say that I have; my son has.

Mr.  
R. Pyers.  
28 Nov., 1889.

Donald Campbell, Esq., J.P., pastoralist, sworn, and examined:—

3265. *Chairman.*] Where do you reside? About 5 miles above Casino.
3266. How long have you been residing in the district? Thirty-seven years.
3267. What business do you follow? Well, I have been looking after station property.
3268. You have been the manager of a station? For the greatest part of the time.
3269. Are you still? No; for the last three and a half years I have been living on a small place of my own.
3270. What have you been doing with it? I have used it partly for cultivation and partly for grazing.
3271. What information can you give the Committee;—do you know the proposed line of railway? I do not know it all. I think I know partly where it is meant to go. I have come across the line in places.
3272. Do you know the Lismore district? I know all this side of Lismore.
3273. And down to Grafton? Yes.
3274. Do you think that if a railway were constructed there is a fair chance of its paying interest and working expenses within a few years? I think so. I think it would settle a great population on the soil.
3275. Of producers and consumers? Yes.
3276. We have been told that the lands between here and Grafton are of an inferior character, and the map shows that they have not been sought after much? I think myself that the reason why that land has not been alienated so much is that there are no conveniences for getting to market.
3277. Because of the difficulty of getting produce to market? Yes.
3278. You have seen similar lands further back in other parts of the district which have been selected and laid down in grass;—why should that not be done here? There is no doubt that if ever a railway comes here you will find the whole of that country taken up. Very little of it will be left. There is a great deal of it that is very valuable for wheat-growing.
3279. Have you seen any wheat growing in the district? Not for many years.
3280. Is there any hay grown in the district? Yes.
3281. Oaten hay? The country between here and Grafton is grand country for growing hay and wheat. It would grow any quantity of oaten hay.
3282. What quantity of land there would be a fair area for a settler to make a living from. At present they can take it up in 1,248-acre blocks, and they will not touch it? A great deal of that land has been taken up within the last year or two. They are beginning to settle on it now.
3283. You think that if facilities were given for taking their produce to the Clarence the bulk of the land would be taken up? Yes.
3284. How many years have you known the country? Thirty-seven years. The population that has been coming here for the last few years is something wonderful, and if it keeps on as it is doing now there will be very little land left, whether they get the railway or not.
3285. You mean between here and Grafton? Even between here and Grafton.
3286. Do you know any of the wheat-growing districts of the country—Tamworth, or lower down? I have seen part of it.
3287. Tamworth is a fairly good wheat-growing district; but do you know anything of the Hunter River District—the upper part. Are the lands which you speak of outside Grafton equal to that land? I believe there is a lot of it better, because when the timber is ringbarked, and the country is worked, it is wonderful how well it improves.
3288. Is there anything else which you can tell the Committee? The country up above here is far superior to the country below.
3289. Where do you mean? Up the river from here to Lismore, and right to the west, between here and the head of the river, and towards Tabulam.
3290. But this railway would not serve that country? I believe it would bring a population to settle on the land.
3291. This railway is very near the head of navigation, so that it will not bring the western land any nearer to navigable waters than it is now. How can you take the settlement on that country into consideration? It is wonderful how the population has been coming during the last few years. It is only lately that the people have been finding out the land.
3292. They are taking the best of it at present? They are all going for the best at present, you may depend on it.

D. Campbell,  
Esq., J.P.  
28 Nov., 1889.

Mr. Thomas Carlill, senior, grazier and timber-getter, sworn, and examined:—

3293. *Chairman.*] Where do you reside? At Spring Grove.
3294. How far from Casino? About 8 miles.
3295. What business do you follow? Rather a various business. Myself and my family are timber-getters and graziers.
3296. What area of land have you—you and your family? A little over 4,000 acres.
3297. Conditionally purchased? Yes.
3298. How many in family have you? Three boys and myself.
3299. You use your land for timber-getting and for grazing? Yes.
3300. What have you got on it? Horses and cattle. A little over 500 head of cattle and thirty or thirty-five head of horses.
3301. That is 6 acres for each head of cattle? Yes.
3302. Is the land fully stocked? We have about seventy or eighty head of working bullocks.
3303. Then there are about 5 acres for each beast? Yes.
3304. Is the land fairly well stocked? There is a great deal under scrub that does not produce grass.

Mr. T.  
Carlill, sen.  
28 Nov., 1889.

- Mr. T. Carhill, sen.  
28 Nov., 1889
- 3305 How much of it? About 800 acres in all.  
3306 What does it cost you to improve your land? What has it cost me?  
3307 Yes? I could not tell you—a great deal  
3308 Have you to fell any scrub? Yes, a great deal I think we felled nearly 400 acres of scrub.  
3309 Did you lay that down in grass? Yes I sowed artificial grass in some of it, but the expense is £1 5s or £1 10s an acre for felling alone  
3310 Where do you find a market for your produce—your fat cattle? There are local buyers.  
3311 And your timber? The timber I dispose of to Mr Yager, at Coraki  
3312 You, at all events, would not be a customer for the railway—what have you got to send by it? We have any amount of land that we could till if there were a way of getting produce to market  
3313 Surely you do not think that 8½ miles is an unreasonable distance for people to go to market? No, but there would be people who would lease the land  
3314 Then you are holding the land in hopes that some one will come and buy it from you? Lease it or buy it if required  
3315 You are only 8 miles from Casino, so that you do not want the railway? I think the country would be benefited by it—though I might not be myself perhaps  
3316 Do you know what it would cost the country to pay the working expenses and interest on this railway? No  
3317 You have not taken that into consideration? No  
3318 If you wanted to buy a piece of land yourself you would calculate what you could make out of it, and you would expect a fair rate of interest on the money put into it? Yes  
3319 You have not entered into any such calculation with regard to the railway? I have always left that to people who are better able to do it than I am myself  
3320 You are a taxpayer, and just as much interested in it as anyone else You are not prepared to plunge the country into the construction of unprofitable works? I see a little ahead of the times I see that the railway will pay eventually, and will pay well  
3321 How can you come to that conclusion when you have not taken the trouble to work out what the cost of the railway would be? I can see a great opening for it  
3322 What do you anticipate would be the earnings of the railway between the Tweed and Grafton if it were constructed? It is a thing which I do not understand, I could give you no opinion

Robert Page, Esq, journalist, sworn, and examined —

- R Page, Esq  
28 Nov., 1889.
- 3323 *Chairman*] What are you? I am a journalist, and have resided at Casino for six or seven years  
3324 Have you written out any statement? I have written out a statement showing the trade of the Richmond District for the six months ending 30th September last  
3325 Where did you get the figures? I got the pilot at the Heads to send me a report of each vessel that went out, and I checked that by the report in the *Sydney Morning Herald* The figures were compiled with great care, and are not in any sense exaggerated. They are as follows —

Richmond River Shipping Statistics for six months ending 30th September, 1889

Timber (unspecified)	2,860,900 feet	Eggs	1,557 cases
Do do	143 logs	Molasses	2,747 casks
Pine	575 "	Poultry	211 coops
Do	279,954 feet	Bones and horns	313 bags
Cedar	802 logs	Skins	78 bales
Do	18,000 feet	Calves	59
Box material	511 bundles	Horses	12
Do	9,200 feet	Potatoes	57 bags
Beech	51 logs	Fish	146 cases
Do	12 fitches	Hay	114 bales
Piles	520	Soap	60 boxes
Sleepers	1,800	Honey	6 pkgs
Hardwood	10,000 feet	Fruit	44 cases.
Maize	18,824 bags	Pumpkins	120 bags
Sugar	7,476 "	Wild ducks	51 pairs
Do	2,368 mats	Minerals	20 bags
Do	1,040 tons	Bacon	11 pkgs
Butter	6,214 kegs	Peanuts	9 bags
Cheese	362 packages	Oysters	22 bags
Hides	5,030	Beeswax	2 pkgs
Pigs	4,129	Chaff	10 bags
Tallow	173 casks	Sundry cargo	1,719 pkgs

(Shipments from the Tweed, Brunswick, and Byron Bay not included )

Coal imported, 7,550 tons

Arrivals seaward, 148 vessels, departures seaward, 155 vessels Total, 303, or nearly twelve per week.

Passengers by Richmond River steamers only —Inward, 1,143, outward, 833 Total, 1,976, or an increase to population of 310 in six months This return does not include passengers to and from the Clarence or Tenterfield

- 3326 So far as you know and believe that statement is correct, and in no way exaggerated? Yes, it is in no way exaggerated, but if anything the other way about.  
3327 The return of the export of sugar cannot embrace the yield for this year? Oh, dear, no—only up to the 30th September, which is but a small portion of the year The export of sugar will continue up to the end of December, or the beginning of January. My figures do not show one-third of what the total exports will be  
3328 I suppose, like all newspaper men, you are ubiquitous—here, there, and everywhere? I go about a little occasionally  
3329 Going through the district, have you made yourself fairly acquainted with it? Yes, from personal observation, and from what I have heard from those who have taken up the land  
3330 Have you gone in amongst the farmers to any extent? Yes  
3331 The farmers who hold land near the river, I suppose, are perfectly well satisfied with their conveniences for getting to market? They are not as well satisfied as they will be when the bar is made better  
3332 The bar is very good now? Yes.

3333.

3333. Going back from Casino do you think that many of the farmers are prevented from cultivating to any large extent, by reason of the difficulty of carriage? I am quite sure that they are. R. Page, Esq.  
28 Nov., 1889.
3334. If a railway were constructed from here to Lismore, and from here to Grafton, do you think that it would benefit the farmers already on the land? I do.
3335. Have you been from here to Grafton? Yes.
3336. By the railway line? Not on the line itself.
3337. But through that way? Yes.
3338. Do you think that if a line were constructed it would be an incentive to the farmers to cultivate more than they have done? There is no doubt of that. There have been two or three parishes wholly selected during the last three years, on the understanding that the line would be constructed.
3339. The dairy industry here is developing? Yes; we have the largest factory in the district.
3340. How many others are there? There is another on the road which you are going, and there are others starting.
3341. I suppose the success of one tempts others to try the same thing? Yes.
3342. Have you thought of the cost of the railway? Yes.
3343. You know that the working expenses and interest on all the lines which have been made, have come to nearly 7 per cent.—do you think that if this line were constructed it would be able to pay that? At the present time, between here and Grafton, and adjacent to the line, there is country that would be served by the line, that is now being selected at £1 an acre. I am satisfied that the greater portion of that land, if a line were constructed, or if it were known that a line was to be constructed, would be applied for at from £2 to £3 an acre, and the first cost of the whole line would be realised from the sale of that land.
3344. You think that if national works are carried out the country should be recouped the expense from the increased value of the land? Yes; there would be no harm in keeping the reserves; but the same object could be obtained by putting a price on the land now.
3345. You would put a price on it which you imagine would be fair if the work were carried out? Yes.
3346. If the people chose to buy at that price you would let them do it? Yes.
3347. You would not reserve the land until the line was constructed? No; I think it would be a mistake. This portion of the district has not developed as that from Lismore down—that portion has not been locked up from settlement; the other portion has.
3348. Have they no runs on the Richmond? Not in the district between Lismore and the coast.
3349. What you think is, that the leasehold areas here between the coast and the proposed line, and between the proposed line and the western boundary of the district, have to a certain extent stopped settlement? To a very large extent. I noticed that fact because I am intimately connected with the selection of land.
3350. The Clarence River district is well settled? In the immediate vicinity of the river.
3351. But if these lands were so good as you and some other witnesses describe them, why have the people not gone out further;—they have done it in the scrubs, where it has cost them from £6 to £7 an acre to clear the land? I might explain that in the past the land law was so worked that a large proportion of the water frontages to the creeks and the picked portions of the country were secured by private purchase, and there were no means of conveying produce or anything of that kind to market.
3352. But with an average rainfall of from 40 to 50 inches in a year there can be no want of water? No; but that would retard settlement.
3353. How do you think the lessees on the Darling get on? They are in a position to conserve water.
3354. You say that inability to secure water frontages has terrified energetic settlers from coming here, although there is a rainfall of 40 inches in the year? I do not say that altogether. I say that it has to a very large extent prevented settlement.
3355. The absence of water? The alienation of the water frontages.
3356. That is, men, if they could not get water frontages, would rather do without the land altogether? For the time being.
3357. Now you say that if a railway is built they will not mind these difficulties? Because the railway would give them a means of communication with the market that they have not got at the present time.
3358. Will the people at the back of Casino and of the Clarence be any nearer a market with the railway than they are now? They would in a way.
3359. Take any unoccupied line to the west of the railway line about Casino or Grafton;—how would a railway give it communication with a market? But if you worked out west you would have 20 or 30 miles to go to Casino. There would be stations at various points, and settlers would only have to travel 12 miles to a station instead of 20 or 30 miles.
3360. Is there anything else which you would like to tell the Committee? Something has been said of the value of the land between here and Grafton. I produce some wheat which has been grown at Camden Valley, near Sandy Creek, 11 or 12 miles from Casino South.
3361. Can you say how many bushels to the acre that land has produced? No, I cannot. I have not had an opportunity of ascertaining.
3362. Do you know how much the owner has got under crop? I understand that he has about two acres—he only selected eighteen months ago.
3363. Do you know of any other wheat being grown? Yes. At Myrtle Creek, a man from Victoria has 3 acres.
3364. Has any attempt been made in this district to produce wheat or oats? Not up to the present time as far as I know. But thirty years ago the squatters used to a large extent to grow their own wheat and make their own flour. If that could be done then, it could be done now.
3365. But you have no records of what they did? That, I believe, is a fact.
3366. You think that if the railway were constructed right through from the Tweed to Grafton, within a few years—4 or 5 years—it would pay interest and working expenses? I do.
3367. On an average cost of £12,000 a mile? I do, considering the increase of population.
3368. I suppose you base your opinion on the fertility of the district, and the former increase of population here? Yes. I think that the railway will lead to the development of the mining industry to a large extent. Within 18 miles of Casino there are some of the largest coal deposits in the Colony.
3369. We have only got the Newcastle series and the southern and western series? There is some on the Clarence too.

- R. Page, Esq. 3370. Have they ever got 50 tons out? No. This is undeveloped. I sent some to Sydney, and the analysis of it was very favourable. Mr. Wall, a mining authority, spoke very highly of it.
- 28 Nov., 1889. 3371. Have you got a copy of the analysis;—who analysed it? The Mines Department. I have not a copy of it, but I will send you one.
3372. Was this an outcrop, or was the seam opened up? This was a seam in the bed of the creek.
3373. The outcrop? Yes, but it was the seam in the creek. The seam could be seen.
3374. Where the creek had passed through it? Yes.
3375. What was the thickness of it? I could not say. It has not been opened up.
3376. You only know that coal has been found there? I know that the coal is there.
3377. Did they sink at all to get the specimen for analysis? No, they did not. They sank a foot or two in the creek at the outcrop.
3378. You say that it is a good analysis? Yes, as compared with many other analyses that appeared in the mining report.
3379. Have you anything else you which would like to tell us? No, I have nothing else.
3380. *Mr. Cox.*] Are you aware that the Committee have recommended the expenditure of some £300,000 or £400,000 at the Richmond Heads? Yes.
3381. With this large expenditure to facilitate traffic on the river, do you think it advisable that the country should expend large sums of money in competing with that river by a railway? I take it that the railway would not compete with the river—it would simply feed it; it would simply show the greater necessity for spending money on the river.
3382. In what way would the proposed railway between Casino and Lismore, and Lismore and Byron Bay feed the river? In the first place it would open up a large extent of country for settlement which is at the present time not used, and the produce from that land would necessarily go to Byron Bay or to Lismore.
3383. I am now speaking with regard to the Richmond River. Looking at the fact that £300,000 or £400,000 is to be spent at the Richmond River Heads, would it be desirable to compete with the river traffic by making a railway? Certainly not. I think it would be folly to construct a line of railway simply to compete with water traffic.
3384. Then you would deprecate the construction of a line unless as a feeder to the river? Yes.
3385. Have you given any consideration to the question of making Byron Bay a harbour? I know nothing at all about the bay myself; I am simply guided by the scientific evidence which has been given. I am satisfied that Byron Bay would serve the requirements of this district, and I do not know how soon the produce may be so great that it will have to be shipped into a class of vessel that could not possibly come into the river itself.
3386. *Chairman.*] If the anticipations of Sir John Coode with regard to the Richmond River are carried out, do you not think that a very much larger and superior class of vessels will be able to come here? There is no doubt about that, but Sir John Coode's scheme would not give a depth of more than 18 feet, and, therefore, you could not get in a vessel drawing more than 14 feet.
3387. Could the "Newcastle" and "Namoi" come in? There are some much larger coming down the coast, which, if they could get in, would call at Ballina, and carry much more cheaply than the boats running direct.

Mr. Alfred Clarke Simpson, timber merchant, sworn, and examined:—

- Mr. A. C. Simpson. 3388. *Mr. Garrard.*] What is your occupation? I am a timber merchant.
3389. Residing at Casino? Yes.
- 28 Nov., 1889. 3390. How long have you resided in the district? Twenty-two years.
3391. Have you resided in this portion of the district all the time? Yes.
3392. I suppose you export a considerable amount of timber? Yes—from £6,000 to £10,000 worth a year.
3393. In the log, or do you dress it here? In the log.
3394. Where is your market for it? At present we get it towed to Coraki from Irvington, a little below Casino.
3395. It is carried down to Casino and towed to Coraki? Yes, but the difficulties are getting very great. With large logs we have to wait for freshes. A log drawing 4 feet 6 inches, or 5 feet, will not float down.
3396. At Coraki it is shipped into a Sydney-going boat? Yes; there is only one steamer that can take large timber at present—that is the "Tomki."
3397. What is the greatest distance that you can bring this timber? It is brought 60 miles westerly.
3398. I suppose it is only a matter of time when that trade will cease, owing to the long distance which the timber will have to be carried? I think it will be some years.
3399. What is the distance that you had to go for timber when you first came to the district? There was no timber industry on this arm at that time; it was confined to the lower parts of the river, where they were almost on deep water; but the distance that they draw the timber now has extended gradually from 20 miles to 50 or 60 miles.
3400. But you can only bring cedar that distance; it would not pay you to carry pine or any other wood? There is pine within a shorter distance in large quantities—pine, beech, rosewood, and silky oak.
3401. You deal in all these classes of timber? Most of that timber we cannot raft. We can only raft pine or cedar.
3402. What good would the railway do you;—what you want is more water carriage? Yes; but if the railway were constructed we should probably send large quantities of cedar and other wood to Lismore for shipment there.
3403. But you would be getting your timber at right angles to the railway line? Yes; we should still have to draw it some distance to tap the line.
3404. You propose to draw it to the railway, and then take it to Lismore and load it there? Yes. It would suit us and the Company better.
3405. Would that be better than to take it to Coraki? It is just as easy to load on to a railway as it is to load on to a wharf.
3406. Are you aware of the nearest point on the line to the shipping place at Lismore? Judging by the line as lock-spitted and marked out, I should think that our timber-carriers would draw it to Casino.

3407. You propose to draw it from the bush to the railway, to take it by railway to Lismore, and then draw it from Lismore railway station to the steamer,  $1\frac{1}{2}$  miles; would it bear all that handling? At present they have to put it on the timber trucks, take it off, put it on again, put it into the water, float it to Irvington, pay a man to look after it there, and drogher it to Coraki, and when there is a fresh in the river the timber is swept from the banks, and we lose sometimes as much as £200. All these things make it rather expensive.

3408. As a business man, you think it would pay you to make use of the railway for carrying the timber? You construct it, and you will soon find out.

3409. Would it pay you to take the timber to Grafton? Certainly not.

3410. Is there not a larger class of steamers going to Grafton? There is very little difference. The "Tomki" runs to the Clarence occasionally, and the "Electra" runs here.

3411. What is the difference in freight from the Clarence and from the Richmond? It is precisely the same, I think, in timber.

3412. So that undoubtedly it would pay you to go to Lismore? Undoubtedly.

3413. Is it likely that you would go to Byron Bay? Byron Bay would open up the Brisbane market and markets further north, such as Townsville and Rockhampton. We are shut out from those markets at present. We would have a good market there during the greater part of the year for cheese.

3414. How long do you estimate it will be before the timber which you deal in will all be cut down in this district? I do not anticipate living to see it exhausted in that enormous belt of scrub that runs across the Tenterfield road.

3415. I suppose you have seen the timber yourself in the forest? Yes.

3416. Are you connected with the butter and cheese industry? Yes.

3417. That is in its infancy at the present, I suppose you consider? I do not know. We have two very large factories in the district, and the possibilities are very great.

3418. These are owned by co-operative companies? No; by private people.

3419. Do they graze their own cattle, or do they get their milk from adjoining holders? Partly; and they purchase from adjoining holders. In the case of the Tomki dairy, I think I am right in saying that the milk is the produce of their own cattle, and that they grow their feed on their own ruin. We have already shipped to Brisbane under great difficulties, sending it by coach to the line, and thence by train, and have found a good market.

3420. *Mr. Cox.*] At the present time the cheese goes to Sydney and is sent back to Brisbane? Yes.

3421. *Mr. Garrard.*] I suppose that if the trade were sufficient you would get a vessel to go from Brisbane to the Richmond? I doubt whether they could keep a vessel trading continually between the two places.

3422. You would only avail yourselves of vessels that went by occasionally? There would probably be a place of call for mails, or something of that kind at Byron.

3423. Do you know the country between here and Grafton? I have been over it frequently.

3424. Do you think that there is any occasion for making a railway from Casino to Grafton? I can only speak by comparison. I think so, if the Government were justified in constructing railways to other parts of the Colony.

3425. Looking at it as a question of pounds, shillings, and pence? I am afraid that they have not been considered in times gone by.

3426. Supposing that it were considered desirable to connect the Clarence with the northern portion of the Colony, and there were no intention of an extension south for a north coast line, do you think Lawrence would be a better place at which to tap the Clarence than Grafton—the distance there would be 15 miles less? I should not think so. There must be a large local market at Grafton.

3427. But is it not supplied from the district immediately around it;—what do you grow that they do not grow? I think that the products of the two rivers are identical.

3428. Then they would supply their own wants—you would not supply any? We would not supply them, but probably half the produce would gravitate that way, and the other half would draw this way. It depends on the condition of the road.

3429. Is there not sufficient land cultivated in and about Grafton to supply all the wants of Grafton? No. I think that they import an enormous quantity of grain and cereals from Sydney, together with potatoes.

3430. Do you know the nearest point of the line to Casino township? Yes.

3431. Do you think the route of the line is the best that could be chosen in the interests of the people;—would it go through too much valuable property, or is it too far away? I think the line has been marked out in the interests of economy for the Government.

3432. And also of convenience for the people? Yes.

Mr. William Joseph Fanning, pastoralist and dairyman, sworn, and examined:—

3433. *Mr. Cox.*] You reside at Wooroowoollgen? Yes, 3 miles from Casino.

3434. How long have you been living there? I came here in 1879, and I have been here nearly ever since. I was away for two or two and a half years.

3435. Your pursuits are wholly pastoral? Principally pastoral; I look after a dairy as well.

3436. How long is it since you started dairying? Since last March.

3437. Have you found that it has succeeded up to the present? Well, it was a heavy expense starting the business, and I cannot say at present that anything has been made out of it.

3438. Will it warrant you in still further developing the industry? I believe it will.

3439. In fact, I suppose you will do so? We intend to do so. We did not expect to make anything out of it at first.

3440. Do you think the dairying industry is capable of large development? Yes.

3441. I presume also that you would do a considerable trade in fattening calves for market? No; we have not done anything of that sort.

3442. You have room for all your calves? I think the rearing of calves is generally done at these dairies.

3443. Attached to your dairy have you a large number of pigs? I have some—sixty or seventy at the present time.

Mr. A. C. Simpson.  
28 Nov., 1889.

Mr. W. J. Fanning.  
28 Nov., 1889.

- Mr. W. J. Fanning.  
28 Nov., 1889.
3444. Have you found them profitable? I have not as yet. The affair is so much in its infancy that I cannot say whether any profit has been made.
3445. Since you commenced have other people in the neighbourhood also started dairying? I believe some of them have.
3446. Will you be prepared, in the event of your enterprise succeeding, to take the milk of all your neighbours—selectors and others? I am prepared to take it now from anyone who will send it. In fact, I am taking milk from some of them.
3447. So that in that way a large amount of good will be done to the selectors and others in that district? I think so.
3448. Do you think that in the event of a railway being constructed from Casino to Lismore, and thence to Byron Bay, it would foster agricultural pursuits in the district? I believe it would.
3449. Do you think, considering the cost of train carriage, that such heavy produce as potatoes and maize could be carried at a profit? I have had so little experience that I am not prepared to offer an opinion.
3450. Have you ever had anything to do with timber? No; nothing at all.
3451. Next year the leases in the coast district will expire—how many acres will be thrown open then that you now occupy? I could not tell you. In the leasehold area I suppose there are about 80,000.
3452. Do you think that that will be taken up very largely? A great deal of it will be taken up.
3453. Is that land fitted both for agricultural and for pastoral purposes? Some of it is very bad, but some of it will bear cultivation.
3454. This district is as a rule well watered? Very well watered. It has creeks, lagoons, and swamps.
3455. That of course tends to develop settlement? Yes.
3456. Do you know the country between Casino and Grafton? I only know it from having travelled along the coach road between Casino and Lawrence.
3457. You do not know the surveyed line of the railway? I cannot say that I know it anywhere beyond the boundaries of Wooroowoollgen Run.
3458. Do you think that in the event of large areas being thrown open next year that land will be taken up? I think that the greater part of the land in the neighbourhood of the railway so far as it passes through Wooroowoollgen, has been taken up.
3459. I am speaking of the land generally between this and Grafton? The land beyond, as far as one can see it from the coach road, does not recommend itself to the pastoralists at all.
3460. You recommend the construction of a railway from Casino to Lismore and thence to Byron Bay? I think that that would be a desirable line.
3461. Do you think that it could be made to pay the interest on the construction and working? I have not given the matter sufficient consideration to be prepared to say.
3462. In the event of Byron Bay being made a safe shipping port, would you avail yourselves of it for shipping large stock? I do not know that we should. We should probably make use of it to ship cheese to Brisbane. Our fat cattle has been sent by train from Tenterfield lately, and they have also been sent from Lawrence by steamer at different times, but the consumption in the district has been large.
3463. So that at the present time you would hardly see your way to make use of Byron Bay as a shipping port? Not as a shipping port.
3464. In the event of the production of meat being in excess of the requirements, do you think it is likely that freezing or canning works would be started on this side of the country similar to those at Ramornie? I should think it very probable.
3465. Of course you are aware that the nearer stock are slaughtered to their pastures the better it is for the meat? Yes.
3466. In the event of Byron Bay being made a shipping port large vessels would come in and alter the present state of trade on the rivers? Probably.
3467. Do you not think that that would make people ship cattle from there? Cattle get knocked about by the steamers.
3468. More so than going from Tenterfield by train? I do not know that there is very much to choose.
3469. *Chairman.*] You have topped the market with your cheese? I believe we have once or twice.

Thomas George Hewitt, Esq., newspaper proprietor, sworn, and examined:—

- T. G. Hewitt, Esq.  
28 Nov., 1889.
3470. *Chairman.*] You are the proprietor of a newspaper? I am the proprietor of the *Northern Star*, published at Lismore.
3471. Will you tell the Committee precisely what you have to say? I have heard the evidence given by Mr. Pyers as to the quantity of timber between Casino and the Clarence, and I would confirm that evidence. At the present time timber is conveyed long distances to Grafton by water and by land for use there, and a railway would be largely used to carry it if one were constructed.
3472. You say that a railway would be largely used for the conveyance of timber to Grafton? For the carriage of hardwood.
3473. For local consumption? For local consumption and export.
3474. Export where? Export to Sydney, Victoria, and New Zealand.
3475. You know that timber in the log is not an article which can stand very many charges? I estimate that it would bear the charge of the distance it would have to be carried there. There are large areas of timber land within 20 miles of Grafton.
3476. Why go to Grafton with it if you want to get it to Sydney by steamer. You give it 15 miles more railway carriage, and an additional water carriage, which it would not have if you took it to Lawrence? I take it that the water carriage between Grafton and Lawrence counts for nothing. A steamer would convey it for the same price from Grafton as from Lawrence.
3477. Do you know what hardwood is worth in the log in Sydney? I cannot say what it is worth at the present time, but some time ago I believe it was worth 8s. or 9s.
3478. Do you know what it is worth in Grafton, in the log? I could not say what they are paying at the present time; but I know what they are selling cut timber at.
3479. Do you think that any railway in the Colony would be payable simply from the timber traffic on it? Certainly not from the timber alone.
3480. The timber traffic would not pay for the engine driving? Perhaps not; but I believe that every acre of land between Casino and Grafton would be taken up if the line were constructed. 3481.

T. G.  
Hewitt, Esq  
28 Nov., 1889

3481. In large areas? There is no doubt that people would prefer it in large areas if they could get it.
3482. They could get 1,280 acres? Well; it would be taken up in 1,280-acre blocks.
3483. For grazing? For grazing and agriculture combined.
3484. Can you point to a farm in the Colony of 1,280 acres? Not an agricultural farm.
3485. There must be millions of acres between here and Grafton? I would not say millions of acres, but there is a very large area for 10 miles on each side of the line, which I take it, would all be available.
3486. For grazing and agriculture? Combined.
3487. You have nothing to base your opinion upon? Exactly; but I have nothing to gain by giving this evidence. It has been said here that the land has remained vacant and has not been taken up. I believe that is to a great extent due to the fact that the people did not know what to do with the land. They saw the land on the banks of the Clarence, and nothing would satisfy them but similar land that would produce sugar-cane or maize with a return of 50 bushels to the acre. That has been seen on the Richmond to a great extent. Even the people that first took up the rich scrub land which you have seen there did not know what to do with it.
3488. They know fairly well what price to ask for it? Yes. I was going to point out that that land was being developed by people who have gone there recently from the south coast, who, knowing the value of it, put it under grass. They are showing the other people what to do with it, and others are now following their example.
3489. Do you think that the people from Illawarra will come to the Clarence and take up land which the Clarence river people will not look at? I know of one case where a man has taken up land which would be reckoned by the majority of people on the banks of the Clarence as unfitted for them—he is Mr. McGill.
3490. Whereabouts is that? He purchased a run called Glenreagh West, and he has taken up land on it to secure it.
3491. You do not call that settlement? I think it is settlement. He intends to dairy, I understand.
3492. I suppose the agitation for the throwing open of the runs in these districts began because the land was taken up by the squatters? No, certainly not with stock.
3493. You say that this gentleman has bought the land? He has bought the run, and he is taking up land to secure it. He had tried previously to buy an estate nearer Grafton.
3494. Can you mention any other settlers who have taken up the land there? We have not had south coast men up there, for the simple reason that they prefer the scrub land. I mentioned that one man, because he came from the south coast. It had been said that the land along the surveyed line of railway is not good. From my knowledge of the country I can say that the section that is traversed by the railway is about the poorest land that you can find there. Better land exists out of sight on either side, particularly along the creeks—Myrtle Creek, Camira Creek, Myall Creek, and Sandy Creek.
3495. You do not want a railway to the Clarence to serve Myrtle or Myall Creek? I take it that if there were a railway from here to the Clarence it would suit them to use it to take their produce to the market.
3496. The cost would be £733,000? I am aware of the estimate, but I consider that the State is in the position of a large landed proprietor who is justified in laying out money in order to make his estate more valuable.
3497. In giving a sprat to catch a mackerel? Yes, you can put it that way. I think we would all do that.
3498. *Mr. Cox.*] It is your opinion that if the Government carried a railway through fairly good or even indifferent land the country round would be shortly taken up? Yes.
3499. Do you not think that it would be more desirable to run a railway through better land, and let that be taken up? If a better route could be found, I certainly think so.
3500. I am not speaking of routes. If better land than that could be found in other parts of the country would it not be better to make a railway there? In a general way certainly. If a district had superior land which could be opened up it would have quite as good a claim as this district. As a matter of State policy, I believe it would be more advisable to construct railways where the best land exists.
3501. Are you aware that there is very superior land at the head of the Clarence River? I am.
3502. Ought not a railway to go there rather than through this poor land? If a line could be taken there at a reasonable cost I think it would be a judicious thing to take it there.
3503. Would it not be better to do so? I do not think it would be advisable to take it there in preference to making it here, because here you are connecting two important districts—the Clarence and the Richmond—already largely settled.
3504. Which produce the same articles, and therefore there can be no exchange? We can scarcely say what exchange there would be. I am aware of places in the district where, if a person had suggested a few years ago that there would be a traffic, he would have been laughed at, but now there is important traffic.
3505. I could quite understand a contention for making a railway from the coast to the table-land, because the products of the two ends of the line would be very different, and there would be an exchange; but I cannot understand why a railway should be constructed where there can be no exchange? It would develop the passenger traffic that is there.
3506. Why would the people leave the port of Lismore to go to the port of Grafton? At the present time people have to go over. A short time ago a number of witnesses had to go over simply because they were subpoenaed there. People have to go there because their business takes them there.

THURSDAY,

THURSDAY, 28 NOVEMBER, 1889.

*The Sectional Committee met at Myrtle Creek.***Present:—**

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).  
 The Hon. GEORGE HENRY COX. | JACOB GARRARD, Esq.  
 CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to the Tweed.

Mr. William Morrison, farmer and grazier, sworn, and examined:—

- Mr. W. Morrison.  
 28 Nov., 1889.
3507. *Chairman.*] What are you? I am a farmer and grazier.  
 3508. Where at? My farm is on the Clarence at Copmanhurst, and my conditional purchase is situated about 6 miles from Myrtle Creek, westward from here.  
 3509. What area have you? 1,280 acres.  
 3510. That is a conditional purchase and lease? Yes.  
 3511. How long have you held it? I applied for the land in October, 1887.  
 3512. Is it near the main road between Casino and Grafton? It is in the parish of Wyandah.  
 3513. Do you know the number of it? No; I do not. It was a surveyed block when I applied for it.  
 3514. You are near the Tenterfield and Lawrence Road? Yes.  
 3515. Have you got the land fenced in? I have.  
 3516. What have you got on it? Store bullocks.  
 3517. What business do you carry on? Fattening cattle at present.  
 3518. What have you got to say in reference to the proposal to construct this line of railway;—do you know what it will cost? I do not know exactly, but to the best of my knowledge it was estimated that it would cost £14,000 a mile.  
 3519. The estimate is £12,000 right through. There will be 62½ miles of railway from Grafton to Casino, and the total cost will be £733,500;—do you think there is a reasonable prospect of such a line paying interest and working expenses? I do.  
 3520. Do you know what the interest and working expenses come to? No; I have no idea.  
 3521. Then how do you know that the railway will pay interest and working expenses? For this reason, that there is a considerable area of good agricultural land locked up here that will never be cultivated, until it has access to market. If a railway were made, where one man is now trying to drag out an existence, I am satisfied that five or six families would make a living.  
 3522. What produce would you raise? Almost any produce that could be raised in the northern district, excepting sugar-cane.  
 3523. Then why do you want 1,280 acres for farming purposes—is not that locking up the land? Not by any means. I should divide my 1,280 acres, and lease out the land to several families.  
 3524. Are you on any water-course? A water-course runs right through the conditional purchase and lease.  
 3525. And how is it that conditional purchases have not been taken up to any extent in that parish away from the water-courses? The whole of the land has been selected for about 6 miles.  
 3526. On the water-courses? Certainly; but 6 miles west from the proposed railway line.  
 3527. On the water-courses? They are not all on the water-courses.  
 3528. What do you think the working expenses and interest would be? It is a thing I have not studied very much.  
 3529. Then what is the value of your opinion as to the railway paying expenses? That is a matter of opinion.  
 3530. We want to test the value of your evidence;—you tell us that this railway will pay? To the best of my knowledge.  
 3531. You must have some reason for coming to that conclusion, otherwise your opinion is of no value? I have come to the conclusion that it would pay, because a great part of this land would be cultivated, and a great deal of produce would be sent along the railway.  
 3532. Where to? It would depend upon the end of the line. My idea is that the best market would be in Grafton.  
 3533. That would be the best local market? Yes.  
 3534. Would you produce anything here which cannot be produced on the Clarence? No.  
 3535. Are the farmers there not able to produce enough for the local market? A great deal of the land about here is very suitable for growing oats, and they do not grow oats on the Clarence to any extent, to my knowledge.  
 3536. They bring them from Sydney? Yes; and I have bought chaff and hay that has come to Grafton from Victoria.  
 3537. Yet the farmers there will not try to grow oats? They do not grow any quantity. Further than a local market, I think Grafton would be the route that most of the produce would take to Sydney.  
 3538. Suppose all the country to the west of the railway were conditionally purchased, do you think the farmers would raise sufficient grain and produce to pay £50,000 or £60,000 a year to the railway? That is more than I can say. There is also land selected to the east.  
 3539. Do you think the line between Casino and Grafton would pay £50,000 or £60,000 a year—you say that you are satisfied that it would be a paying line? I did not say that I was satisfied that it would pay. I said that to the best of my belief it would. I selected in 1887, and we looked upon the railway as a certainty then. Since I selected there have been 21,842 acres taken up in this particular district.  
 3540. And used for grazing purposes? Some of it is used for nothing—they are living in hopes of getting a railway.  
 3541. *Mr. Cox.*] It was taken up on account of the railway? To the best of my belief and knowledge.  
 3542. What is the area of your farm on the Clarence? I am farming in conjunction with two brothers, about 95 acres, the area of our farm being 153 acres.  
 3543. What do you grow? Maize wholly and solely.  
 3544. What do you raise per acre? A good average crop is 15 bags per acre, which means 60 bushels.  
 3545. Your market for that is Sydney, of course? Undoubtedly, 3546.

Mr.  
W. Morrison.  
28 Nov., 1889.

3546. If the projected railway from Casino to Grafton had not been mentioned, would you have taken up the land here? I would not, because when I came here I thought I should be a certain distance from the proposed railway, and I made the remark to my friends when I went back that what induced me to select land here was that I looked upon the line as a certainty.
3547. Do you think that other people took the land up also for speculative purposes? To the best of my knowledge they have taken it up in the hopes of getting a railway to take their produce away.
3548. You have bought the land, not intending to farm it yourself, but to sell it to farmers? I said that I did not intend to farm part of it. If there were means of getting produce to market, there is no doubt that it would pay me better to farm than to grow cattle.
3549. That is taking up the land for speculative purposes? To a certain degree it is.
3550. What produce do you suppose could be raised on this country about Myrtle Creek? That is a very broad question.
3551. Supposing the whole of it available for cultivation was actually under cultivation—and I imagine that Myrtle Creek and Myall Creek have land fairly good for cultivation—what produce would you grow—you say oats and hay? I say maize, lucerne on selected patches, potatoes, oats, and wheat. There has been wheat grown on the creek here, and without a particle of rust on it.
3552. What was the yield per acre? There was only a little crop of it grown for a test, and there is a stalk of tobacco at the back grown on uncultivated land.
3553. *Chairman.*] Is the sample I produce as good as that grown there? Yes.
3554. *Mr. Cox.*] Could you raise 60 bushels of maize to the acre here—you say that you raise it on the Clarence? Not from the whole of the land. I daresay I could from a great part of it.
3555. What is the distance between this and Grafton? Somewhere between 45 and 50 miles.
3556. You think you could grow maize and carry it 40 or 50 miles by rail, and then compete with people on the river who have richer land? I feel satisfied about growing maize, and having it carried to Grafton and sent to Sydney. I have known people who grow maize and carried it on bullock-drays for 20 miles, which is far more expensive than railway carriage. Their land is poorer than that we have about Myrtle Creek.
3557. You think that if the whole of the land at Myrtle Creek were under cultivation it would give sufficient to pay the working expenses and interest on a line between Casino and Grafton? I do not mean to say that it would at once. In the course of time—after some years—it would.
3558. After how many years? This is a new place. I should say that it would take five or seven or perhaps ten years to get it started as an agricultural centre.
3559. You are aware, of course, that all these matters must be conducted upon strictly commercial principles. The Government must occasionally spend money for some prospective advantage, but you could not expect them to spend three-quarters of a million merely to carry a few bushels of oats, wheat, and potatoes to and from Grafton at a cost of £50,000 a year? My opinion is that it will not be only a few bushels.
3560. You could not pay very much for the cost of transit? I think we could compete with most places.
3561. Do you think you could see your way within the next ten years to make the line pay £50,000 a year? I would not say that, but, to the best of my belief, if a line were constructed between Grafton and the Tweed, upon the whole it would pay. The whole of the land between Casino and Grafton is fairly good. There is none of what I call really barren soil.
3562. We are not asking you anything about the country between the Tweed and Byron Bay or Casino, but only with regard to the country of which you have some knowledge. Have you any knowledge of the country about the Tweed? No.
3563. *Mr. Garrard.*] Would this be the nearest point to your land, if a railway were constructed? I could go to the railway in a direct line without coming this way. I could take half a mile or a mile off.
3564. You said just now that you considered that Grafton would be your port of shipment;—is it likely that you would go 50 miles to Grafton when you have only 25 miles to go to Casino? There is no doubt that it would depend greatly upon the prices. Wherever people could obtain the highest price, there they would send their produce.
3565. I suppose you anticipate that your oats would be for the local market only? No.
3566. Do you think you could compete with the Sydney market? I do not see why I could not compete as well as with water carriage.
3567. Is it possible for water carriage to compete successfully with the railway or road carriage? It is a matter of opinion. If oats were grown on the banks of the Richmond or the Clarence, and sent to Sydney, I think we could compete almost with the same advantage by sending it to Grafton by rail.
3568. If you had 40 miles of rail carriage you would compete at a disadvantage. We have come along the main road from Casino to Grafton—is there much traffic on that road? There is not a great deal of traffic on the road.
3569. Is there any other road by which the traffic goes, between Casino and Grafton? Undoubtedly there are other roads by which the passenger traffic comes to the Clarence, between Woodburn, Chatsworth, and Swan Bay.
3570. I mean within a radius of 12 or 15 miles from here? There is a road to Coraki, but whether there is any passenger traffic on it is more than I can say.
3571. Is the land which you have taken up as good or better than the 21,000 acres that have been taken up during the time you spoke of? No; I think it is about the average—similar to what has been taken up.
3572. Do you know the rainfall of this district? I could not give it to you exactly.
3573. Is it greater than it is on the banks of the Clarence? I believe I could safely say that. I was on the Clarence the other day, and they were very badly off for rain, while we have had a splendid season.
3574. The land here is not to be compared with the land on the banks of the Clarence? No.
3575. You think it is possible that the extra rainfall may compensate for that? It is quite possible.
3576. Do you know anyone who has grown wheat here? Only the gentleman I spoke of; he is a Victorian farmer.
3577. Do you know if he put in half an acre? No, I do not think he did. He grew it just for a test.
3578. All breadstuffs come from Sydney or other parts of the country? Yes.
3579. Therefore, if wheat could be grown here there would be a considerable local market for it? Yes.
3580. You think the waters of the Clarence would be your best place of shipment. Suppose the railway were

- Mr. W. Morrison, 28 Nov., 1889.
- were constructed, do you think it would be better to go to Grafton or to Lawrence—Lawrence is 15 miles nearer? I think Grafton, by all means.
3581. Would it not be to your advantage to have less railway carriage by 15 miles? It might be a lesser distance, but Grafton is the port of the Clarence, and I certainly think that the line should go there.
3582. That is a mere matter of sentiment, that does not rule in business. If your destination was Sydney, or anywhere outside of the Clarence Heads, and you could save 15 miles of railway, you would save it, but at Grafton you have a local market as well as an outside market? Yes.
3583. You prefer to have the terminus of the railway at Grafton because it would give you the option of a local market at Grafton and a market outside the Clarence Heads? Yes; and there is another argument in favour of the railway going to Grafton. I believe that the country between the Flying Horse—the junction of the Lawrence, Grafton, and Casino roads—and Grafton is better than the country between Lawrence and the Flying Horse, and the railway would open up the better country.
3584. You have an intimate knowledge of the country? A pretty good knowledge.
3585. You think it is better from the Flying Horse to Grafton than from the Flying Horse to Lawrence? In my opinion it is.
3586. Is there any timber along this route? Yes, there is.
3587. What is it? The principal timber is iron-bark, spotted gum, grey gum, and bloodwood.
3588. There are several large forest reserves between here and Grafton? Yes.
3589. Is there good timber on them—I mean hardwood? Fairly good.
3590. Do you think that if the railway were constructed a great deal of this timber would go to Grafton for shipment to outside ports? I feel pretty well satisfied about it.
3591. *Mr. Lee.*] Do you wish the Committee to understand that when you selected your land here it was with the view of speculating in land because the railway was coming? Not by any means.
3592. You selected your land because you were under the impression that if the railway were constructed you would be able to make use of the land to advantage? Undoubtedly.
3593. As a matter of fact, if a railway were constructed you would be able to use it for the conveyance of your produce? Yes.
3594. You have spoken about growing hay and wheat—do you know whether there is much hay grown on the Clarence—oaten hay? There is very little oaten hay grown on the Clarence.
3595. If it is not grown there it is not likely that you will grow it here? The country is better adapted for it here.
3596. Would you not depend more on your maize? Undoubtedly it would be my principal product.
3597. The freight for the railway would be maize, timber, live stock, and dairy produce—those would be the principal freights? I think you might include hay also. I am satisfied that there would be a deal of hay grown here.

Mr. Thomas Arthur Small, selector, sworn, and examined:—

- Mr. T. Small, 28 Nov., 1889.
3598. *Mr. Lee.*] Where do you reside? Three miles from here, on Myrtle Creek.
3599. Are you a selector? Yes.
3600. How many acres do you hold? With a conditional purchase and lease, 1,052 acres.
3601. How much of that do you cultivate? I have about 7 acres.
3602. What do you grow? I have had corn, barley, potatoes, and millet on a small scale.
3603. What do you do with the rest of the country? I use it for grazing, and I keep stallions.
3604. Do you do any dairying or cheese-making? No.
3605. What is the usual occupation pursued by the farmers in your locality? Well, the residents here have only recently come. They are hardly settled.
3606. When did you take up your land? It was confirmed on the 5th July, 1888.
3607. You are comparatively a new comer? Yes; I have hardly completed fencing.
3608. What freight would you be able to give to a railway if one were constructed? The principal things my land would grow would be oats and lucerne. Oats, lucerne, and maize are the only things that I have grown on the Clarence. I am not acquainted with the growth of wheat.
3609. At the present time you are not a producer, and you are not qualified to speak as to the actual capability of your land? I have grown oats in several parts of the Clarence, and from the nature of the soil here I think it is suitable for that crop.
3610. You intend to try them? Yes.
3611. Would Grafton be your port of shipment. I think so.
3612. Would Lawrence suit you better? As far as distance is concerned.
3613. Which place would you be likely to go to? With the present condition of affairs, having to draw my produce with teams, I should take it to Lawrence.
3614. But supposing the railway were made? It would all depend on the market. If there were any sort of local market I should prefer Grafton.
3615. Supposing the line were made from Lismore to Grafton, would you send your goods to Grafton or to Lismore? That is a question that I could hardly answer.

Mr. James Wells, farmer, sworn, and examined:—

- Mr. J. Wells, 28 Nov., 1889.
3616. *Chairman.*] Where do you reside? At Myrtle Creek.
3617. What are you? A farmer.
3618. What area of land have you? 640 acres conditional purchase, and 640 acres conditional lease.
3619. When did you take up the land? I think it was confirmed on the 6th July this year. I am not quite certain about the date.
3620. At all events it was confirmed this year? Yes.
3621. Where is your other farm? I have no other in this Colony.
3622. Where did you come from? From Victoria.
3623. Were you farming there? Yes.
3624. In what part? At Kerang, 200 miles west of Melbourne, on the Murray.
3625. You have got a railway to Kerang? Yes. The railway goes on to Swan Hill.
3626. What area had you there? 320 acres.
3627. I suppose you have not cultivated any of this land yet? I have put in about 4 acres of corn, and 1½ acres of wheat.
- 3628.

Mr.  
J. Wells.  
28 Nov., 1889.

3628. Is it ripe now? Yes.
3629. Have you cut it? I have cut a portion of it. Some of the land is down in vegetables.
3630. About how many bushels to the acre did it go? About 25, I think.
3631. Is that on a flat or a watercourse? It is on flat country.
3632. On a watercourse? On the bank of a creek.
3633. Is the land extending back from the banks of the creek similar to this? Yes, similar.
3634. Covered with spotted gum and ironbark? There is no spotted gum. It is ironbark and apple-tree.
3635. How long have you been in this district? About fifteen months—perhaps a little over.
3636. Were you working here before you selected? No. I was only here about a fortnight before I applied to the Government.
3637. You know that it is proposed to construct a line of railway from Grafton to Casino, and from Casino to the Tweed, the distance between Casino and Grafton being 62 miles, and the cost of that part of the line £733,000;—are you in a position to show the Committee how the country is going to be paid £50,000 a year by that railway? I think it is a good farming district which will guarantee payment.
3638. I suppose you have not gone into figures at all as to the cost of the railway in working expenses or interest? No, I have not.
3639. You think that if the railway were constructed it would induce settlement? Yes.
3640. And by that means tend to produce the freight which would be necessary to make the line pay within a reasonable time? Yes.
3641. Do you think it would pay the interest on the money now if it were constructed? I think so; perhaps not just at the present, but before very many years are over.
3642. £24,000 a year? That is a good sum, certainly.
3643. £49,534 a year working expenses and interest;—it would take a tidy lot of produce to pay that? There is no doubt that within a few years there will be a tidy lot of produce grown here.
3644. You think so, and hope so, having this large farm? I am almost certain of it. I know that if there were the same people here as there are in Victoria they would make it pay.
3645. You have only been fifteen months in the district? About that.
3646. Could they not find an older resident than you to work out this difficult railway problem? I dare say they might have done so if they had tried.
3647. Your evidence is simply what you believe? Yes, and what I have seen.
3648. There is not very much traffic here, is there—from here to Casino? I think there is a good deal.
3649. What do you call a good deal;—how many tons of goods go along this road in a week? I am sure I could not say, but I see a good many carts going by.
3650. Why, the road is hardly formed;—what would the carts carry? I suppose they carry goods between Lawrence and Casino.
3651. Have they been sending goods from Casino to Lawrence, or from Lawrence to Casino? I do not see what else the traffic can be.
3652. Have you seen goods being carted from Lawrence to Casino? I could not tell what was in the carts.
3653. How many carts have you seen in a week? I have not counted. I am not living on the road to see what goes by in a week.
3654. Looking at the road, do you think that it carries much traffic;—do you think that there are a dozen carts passing between here and Casino in a week? Yes.
3655. Do you know that there are? I could not swear it, not living on the road.
3656. *Mr. Garrard.*] Where will you find a market for your produce? If I had anything to send I should find it in Sydney.
3657. But where would you take it—to Casino? To Casino or to Grafton.
3658. How many miles would that be from here? Between 18 and 20.
3659. What produce have you actually taken to Casino? I have not taken anything.
3660. Have you taken any to Grafton? No.
3661. You have not taken anything off your land? No.
3662. But you have made up your mind where you will take your produce? I must take it to one place or the other.
3663. It is 40 miles to Grafton—would you take it there when Casino is only 20 miles? It would depend upon where I could get the best price for my grain.
3664. If you had to go to the Clarence, where would you go—to Grafton or to Lawrence? Lawrence is the nearer.
3665. Are you to the eastward? Yes.
3666. You are between here and Lawrence. You would go to Lawrence in preference to Grafton, but if the line were made to Grafton you would go to Grafton? I have to get on to the main road to get to Lawrence now, so that I would have to come to the line.
3667. Is the land that you have left in Victoria better than this? I believe the soil is better.
3668. Do you know the rainfall;—have you a better rainfall here than there? Yes; about three times the rainfall here.
3669. That would go to compensate for any loss in the quality of the soil? Yes. You could not grow anything for six months of the year through drought.
3670. You estimate your wheat crop at 25 bushels to the acre;—what did you get at Kerang? Fifteen, generally; but we had to irrigate there or else get nothing.
3671. But you think you will be able to depend on the rain here? Yes.
3672. That would enable you to grow wheat more cheaply, and with better results? Yes. I worked 300 or 400 acres four years in succession, and got nothing from the land.
3673. Do you think that if a railway were made there would be a great increase in the quantity of land put under cultivation in this district? Yes.
3674. You do not know much about the country otherwise than at Myrtle Creek? I have been through between Casino and Grafton several times, but I have never been further up the creek than about 8 miles.
3675. Is this creek about the best of the numerous small watercourses between here and Grafton? I think it is.

- Mr. J. Wells.  
28 Nov., 1889.
3676. I suppose you looked round before taking up land to see which was the best position? I travelled for twelve months before I came here. I did not go up the creek.
3677. Had the proposal to construct this line anything to do with your fixing upon this district for your home? It had something to do with it.
3678. If there had been no possibility of getting a railway, would you have chosen this place for your home? Yes; but I would not have gone in for farming; I would have gone in for grazing.
3679. Mr. Cox.] You said that you would not have bought the land only that you knew that the railway was likely to pass here? No, I did not.
3680. Did you take it up *bona fide* for a home for yourself? Yes.
3681. And not with the hope of being able to sell it after five years? No; I knew no person in the Colony when I selected here.

FRIDAY, 29 NOVEMBER, 1889.

The Sectional Committee met at Lawrence.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed railway from Grafton to the Tweed.

Mr. William Olive, innkeeper, sworn, and examined:—

- Mr. W. Olive.  
29 Nov., 1889.
3682. Chairman.] What are you? I am an innkeeper, residing at Lawrence.
3683. How long have you been residing in this district—when did you first come here? I think that I came here about 1843.
3684. You have been living on one or other of the rivers ever since? I was in Victoria for fourteen months, and I was in New England for about eighteen months.
3685. The greater part of your life has been passed on one or other of these rivers? Yes.
3686. What do you desire to tell the Committee with regard to the construction of the proposed railway from Grafton to the Tweed River? What I wish to say to the Committee is that the line could be made shorter, and would pass through better country, if it were taken from Lawrence to Coraki. We are at the head of deep-water navigation here. I am told that there is about 70 feet of water under the hill here where the Government buildings are, but from here to Grafton the dredge is continually at work keeping the river deep enough for the vessels now trading here—that is estimated to cost about £20,000 a mile.
3687. How far is Coraki from Lismore? 13 miles.
3688. Would you go from Coraki to Lismore? Yes, and thence to Byron Bay and the Tweed.
3689. Is the country between Coraki and Lawrence similar to that between Casino and this place? It is better in one respect, and that is for grazing. The grass is sweeter, and the cattle would stop there.
3690. Between Lawrence and Casino it is purely grazing land, is it not? Yes.
3691. Better as you get towards Casino than at this end—it is poor grazing land at this end? Ten or 12 miles out the country gets better.
3692. It is only about second-class grazing land from here out for 14 or 15 miles? That is all.
3693. Is this country similar to that between Grafton and the Flying Horse? That is about 26 miles.
3694. As against what from the Flying Horse to here? About 11 miles the way you came.
3695. Is the country between the Flying Horse and Grafton superior to that between here and the Flying Horse? Ten times worse.
3696. Absolutely unfit for grazing, I suppose, until you get on to the alluvial banks? Or anything else.
3697. Do you know it well? Every inch of it.
3698. After you leave the alluvial flats of the Clarence? Until you get to Riley's. About 12 or 13 miles from here it begins to get better, but from that until you get to Deep Creek, within about 6 miles of the Richmond, it is not good grazing country. There is plenty of grass, but the cattle will not stop on it, and that is the reason why there is so much. The land is practically no good.
3699. Do you know of any land between here and Casino that could be occupied for agricultural purposes to advantage? No.
3700. Have you had any experience of wheat-growing? When I was a boy on the Hunter I saw plenty grown. I was reared on the Hunter, and I came from there to this country.
3701. You know something, then, of wheat-growing? Yes.
3702. Do you think there is any wheat land at the back between here and Casino? There is no wheat land until you get to New England.
3703. No land on which they could profitably grow hay? I do not think it. There are beautiful scrubs on the creek, but the land would not grow oats—at least it would grow them, but it would be no good.
3704. The rich land on the creeks, with the heavy rainfall, is not suitable for oats? No.
3705. And the land back from the creeks is too poor? It is too poor where you came from this morning.
3706. Myrtle Creek? Yes. That is the best spot.
3707. Of course, the object of giving railway communication with the Clarence is that people may get to Sydney by the shortest route? Yes.
3708. If the railway were brought to Lawrence, how many miles would it save as against going to Grafton? At a rough guess I think it would be about 30 miles to Coraki.
3709. We are assuming that the line comes as far as Riley's? It does not go that way.
3710. The surveyed line—how far is it from Riley's to Grafton direct, and from Riley's to Lawrence direct? From Riley's to Grafton would be 28 or 29 miles, and from Riley's here it is 13 or 14 miles.
3711. Going by Coraki, how far is it? About 30 miles.
3712. As against what going to Casino? It was always called 70 miles from Grafton to Casino. Take 30 from that and it will leave 40. From here to Casino is 54 miles.
3713. From Coraki to Casino is what? They reckon that 20 miles.

3714.

3714. Then you would leave Casino out altogether? Yes. My nephew drove twenty-four passengers up from Coraki during the last races in his coach—from Coraki to the Lismore races.
3715. You mention that to show the character of the country—that it is level? That it cannot be bad when that can be done. It is supposed to be 13 miles.
3716. Do you anticipate that if a railway were taken from here to Casino, or to Coraki, or from Grafton to Casino, or to Lismore, that these lands for 20 or 30 miles back would be occupied for anything except grazing? I do not think they would.
3717. Do you think they are fit for anything else? I do not think they are fit for grazing at the present time. They want ringbarking and fencing.
3718. Do you know Myrtle Creek? Yes.
3719. Do you know the land on either bank of the Creek? Yes.
3720. Is it fit for agricultural purposes? I do not think it. It is all sandy there.
3721. Is it suitable for growing oats? I do not know.
3722. Is it suitable for wheat-growing? I think not.
3723. Is it suitable for growing maize? No. You can see that by the paddocks round about the place now.
3724. With your project the Richmond River would have to be bridged at Coraki? Yes.
3725. That would stop all use of it for navigation to Lismore? No; they would still have the use of that arm.
3726. Do you propose to cross the river from Coraki to the north side? Yes.
3727. Would not that cut off all communication with Lismore? No.
3728. Where would you cross? The river branches into two arms at Lismore—you must cross one of them.
3729. Would you cross it at the same place as it is proposed to cross it now? I hardly know where that is.
3730. About a mile above the junction of Leicester and Wilson's creeks, on Leicester Creek. What is the nature of the country between where you would cross the south arm at Coraki and Lismore? Beautiful brush land.
3731. In the event of the proposed railway being connected with the main coast railway to the metropolis, you would have to bridge the Clarence here, supposing the line were brought to Lawrence? If you wanted to take it to Grafton you could use the road which you are going to traverse this evening.
3732. Then you would be doubling back? It would be a straight line to Grafton, and this would still continue straight.

Mr.  
W. Olive.  
29 Nov., 1889.

Mr. Edward Shields, J.P., carpenter and builder, sworn, and examined:—

3733. *Chairman.*] Do you reside at Lawrence? Yes.
3734. How long have you been living here? Twenty years.
3735. What business do you follow? I am a ship carpenter, but I do not follow my calling much. There is not much to be done at it here. I can do any kind of carpentry.
3736. You are a builder also? Yes.
3737. And you are a Justice of the Peace? I am.
3738. What do you desire to tell the Committee? I just wish to point out the possibility of getting a somewhat shorter route for the railway by going from Coraki to Lawrence. By comparing the two routes on the map that would save about 46 miles, and the line would come to the head of navigation on the Clarence, because between here and Grafton the water is shallow.
3739. And has to be dredged continually, so that vessels can get up? About 2 miles here has been dredged three times, and it has been stated in Parliament that it cost £20,000 per mile each time, so that the dredging comes to a good penny. The river is very little deeper now than it was, and the dredge will have to come again in a year or two.
3740. Between here and Grafton? Yes. Half of our town fronts shallow water, but from there down to the heads there is no obstruction to the navigation.
3741. You have no difficulty in getting in and out of the heads? Very little, excepting in very rough weather.
3742. Such weather as would keep a ship inside Port Jackson? After stormy weather the entrance shoals up, but in a little while the water opens it again. I think Byron Bay is a better place for a permanent and good harbour.
3743. Do you know Byron Bay? I have been near it on the sea. I have a fair knowledge of many of the bays on the coast, some of which have been improved—Wollongong, Kiama, and Ulladulla. I know those well.
3744. You think that Byron Bay might be made a port for the whole of this district for a larger class of vessels than can come up these rivers? Yes.
3745. Do you not think that if the entrance were improved larger vessels could come inside of the river and droghers do the work on the river? Yes; but the entrance will always be liable to silt up after heavy floods and long droughts. The shoal extends in front of the breakwater about 3 miles, I believe, and it will increase as the breakwaters go out.
3746. Do you know the land back from here to Casino? No; only by what I have heard from others. From the description they gave me of the timber growing on them, I should not think the lands were good. Spotted gum and iron bark, to my knowledge, never grow on good land in any quantity. I have a good knowledge of timber.
3747. The land adjoining the alluvial flats on this river is poor country and not fit for agriculture? As soon as you are off the flats it is useless, except for grazing, and it is very poor for that.
3748. *Mr. Garrard.*] Do you know anything of the timber between here and Casino;—is there much of it? I only know what I hear people say—that it is plentiful and good.
3749. I saw some timber lying on the banks here; where does that come from? That comes from not far out. I know the country for 14 or 15 miles out, and the timber is good.
3750. Is that on the road we have come, or further east? It is on both sides of the road.
3751. Does the timber get thicker and better, or is it the same all along? I do not think there is much difference.

Mr.  
E. Shields  
J.P.  
29 Nov., 1889.

3752.

Mr.  
E. Shields,  
J.P.  
29 Nov., 1889.

3752. Occasionally there is a fair-sized tree and at other times the trees are small? Yes, it is a good place for colonial hardwood.
3753. What would you do, supposing the railway were made from Lawrence to the Tweed, and eventually it was decided to make a coast line, how would you join the coast line—you could not bridge the Clarence here? I think the Clarence could be bridged very well at Cowper, just above Woodford Island,—you would not deviate a quarter of a mile.
3754. Would it not practically make the river useless higher up? I think the river is wide enough to make a high bridge.
3755. It would stop the "Helen Nicoll" from going up? I think it might be made high enough to let the "Helen Nicoll" through, but I think the river would not be needed above the bridge, except for droghers.
3756. Then you would wipe out Grafton? I would make the depôt Lawrence.
3757. What is the name of the dredge here? The "Clarence."
3758. Has she been working here? Yes—backwards and forwards; she is at the heads now.
3759. And has frequently been drawn off from here to go and work at the Heads? She is never away from here, except when she is at the Heads—she has not often been drawn off.
3760. Do I understand you that the work she has done here is of very little use? Very little. That is proved by her coming here three times in twenty years.
3761. Has not the dredging given an increased depth? The channel was deep after she left, but it silted up again. It was very temporary work, and always will be temporary while done on the same plan.
3762. Are you aware that Sir John Coode's scheme takes in not only the entrance to the Clarence, but also certain works up here, such as training banks and protection banks? I do not think he would do much up here.
3763. Did you think that Sir John Coode's scheme was only for the improvement of the entrance, or for the improvement of the whole river? I thought he dealt principally with the Heads.
3764. Are you aware of any improvements suggested by Sir John Coode in the river above Maclean? I am not sure that I noticed anything. I did not pay much attention to Sir John Coode's report, further than to that part dealing with the Heads.
3765. What is done with the timber we see lying here? It is sent to Melbourne principally.
3766. In the log? Yes.
3767. Is the ship at the wharf going to load logs? Yes, she is loading now.
3768. How often do you have a vessel loading here? Not very often. There are only three teams drawing.
3769. Are they employed regularly? Yes; they have been for a couple of years, at any rate.
3770. There are no saw-mills in the neighbourhood? Yes, there is a saw-mill, but it is shut up now. The proprietor got into difficulties.
3771. Was it from want of trade? I do not know; I do not think so.
3772. What is it keeps Lawrence going? The carrying business from Tenterfield, and the surrounding farmers. This is the point where the Tenterfield traffic comes in, and the Richmond River trade is done from here. The coaches travel from here with the mails twice a week.
3773. Does not the passenger traffic from the Richmond go over from Woodburn to Harwood Island? Yes, a good deal of it connected with the Lower Richmond.
3774. How many coaches daily? I could not say—two I think.
3775. *Mr. Cox.*] Are there any shoals between this and the heads? Not any to stop vessels.
3776. Of what draft? A vessel drawing 20 feet could safely come up from the Heads to here.
3777. So that the difficulty in river navigation would be between here and Grafton? Yes;—it begins here.
3778. *Mr. Lee.*] On the road from Coraki at which end does the good land lie? I do not know.
3779. Do you know the route of the proposed railway from Grafton to the Tweed? I have seen it on the map, and that is all that I know about it, except by report.
3780. Do you think that a more suitable route could be found? From the Richmond to the Tweed: I could not say.
3781. From the Richmond to the Clarence? Yes—between here and Coraki.
3782. Is the land better at the Coraki end or at this end? The land, as far as I can ascertain, is a little better at the other end.
3783. Consequently, there is likely to be more settlement at that end? Yes.
3784. Is there any settlement at this end? None.
3785. What traffic would there be across? The same as on any other route.
3786. But if a connection were made between the Richmond and the Clarence, at the points mentioned by you, what traffic will there be across in the shape of goods? I do not think much would come. I am certain that none will come by the long route from Casino to Grafton. If you cut off 46 or 47 miles from the length of the railway that might make it come.
3787. Is it likely that the Richmond people would send their produce to the Clarence for shipment to Sydney? If their bar was bad they might occasionally send the more valuable kinds.
3788. Are you aware that the Richmond River is to be improved? Yes, I have heard so.
3789. If it is improved so that coasting vessels can get in and out in ordinary weather do you think that people would send their produce here? I do not think so. I do not think they would be wise in doing so, and I do not think we would send anything to them. If it were found to be better to go lower down the river I would be in favour of that. Do not think that I have come here as an advocate of the claims of Lawrence. I do not care a button for Lawrence. I come here in the interests of the country. I have for many years studied this question, and have written about it, and have done my best to insist that the shortest and best route should be taken. I have always maintained that the Government should be allowed to pick the route, and that the interested parties should not interfere.
3790. *Chairman.*] You cannot see any object at all in connecting the rivers if they are both to be made good? No. The only reason I can see for the line is as part of a coast line.
3791. So far as you know from your residence here, and from what you have heard, it is not likely that a railway would develop an agricultural population between here and Casino, or here and Coraki? Not of any consequence.

SATURDAY, 30 NOVEMBER, 1889.

The Sectional Committee met at the Court-house, Grafton, at 9.30 a.m.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).  
The Hon. GEORGE HENRY COX. | CHARLES ALFRED LEE, Esq.

The Sectional Committee further considered the proposed Railway from Grafton to the Tweed.

Patrick Riddle Donaldson, Esq., District Surveyor, sworn, and examined:—

3792. *Chairman.*] You are a district surveyor? For the whole of the Land Board district of Grafton, extending from Kempsey to the Tweed.

3793. To Queensland, practically? Yes.

3794. That embraces how many land districts? It embraces the land districts of Kempsey, Grafton, Casino, Lismore, and Murwillumbah.

3795. Approximately, what is the area of country within those districts? About 10,000,000 acres.

3796. How long have you been residing in Grafton? Twenty-nine years.

3797. That was long before free selection came into operation at all? I came here in 1861, the year that the free selection Act came into force.

3798. It came into force on the 1st January, 1862. I suppose you came up here to make ready for it? Yes.

3799. And you have been here ever since? Ever since.

3800. Of course you have a general knowledge of the whole of the district under your charge, and you have travelled through it? Yes, I have. I have a statement here which I should like to read to the Committee:—

“The whole of the country between Grafton and Casino is well adapted for grazing and dairy-farming, and a great deal of it, in proximity to the watercourses, for agriculture. Settlement on this part of the district is retarded for want of better means of communication than the ordinary roads, and the land cannot be profitably utilized for anything but grazing purposes under present conditions. Yet notwithstanding existing drawbacks, and as showing the faith entertained in the future of this part of the district, there has been taken up during the last four years, within a distance of 5 miles on each side of the railway line, and within the 46 miles, commencing about 8 miles from Grafton and extending to the same distance from Casino, an area of 32,500 acres in fifty-three separate holdings, averaging 615 acres each conditional purchase and conditional lease combined. This has been taken in the resumed areas alone. The leasehold areas, where the land is equal, if not superior, will not be available for selection until the leases expire in 1890, and therefore could not be touched, but will be selected when available. The land between Casino and Murwillumbah embraces a better class of country, nearly all being suitable for either agriculture or dairying purposes. Although some parts are very broken, the soil is all rich except near the coast and the highest ranges. The land near the railway line has nearly all been alienated, the greater part several years ago, or else is reserved pending decision as to whether the railway is to be carried out or not. It cannot be fairly utilized without better means of access to markets or places of shipment. Comparatively little progress has been made in developing its great resources, principally in consequence of this want, and a large proportion of the alienated land remains in its natural state. The area of unalienated land within 10 miles on each side of the railway line now available, and which will be when the leasehold areas are opened in 1890, including railway and other temporary reserves that may be revoked, is 375,000 acres; estimated value, £395,000; this is situated between Grafton and Casino; whilst between Casino and Murwillumbah there is an area of 222,000 acres, valued at £215,000. Exclusive of the above, there is a large extent of town and suburban lands, and country lands adjacent to towns, through which the railway will pass, at present protected from sale by population areas, which could be sold after completion or pending construction of the railway. The estimated area is 25,000 acres, and the amount it may be expected to realize £150,000, giving a total area of 622,000 acres, estimated to realize £760,000, within 10 miles on each side of the railway line. \* The above sum does not include the amount that may be expected to be realized from the sale of allotments in any new towns and villages that may be projected on the railway route. The construction of the railway will materially assist in the development of the timber trade in these districts. The Colonies of Victoria and New Zealand draw largely on the resources of the Clarence for timber, such as ironbark piles, girders, and sawn timber for decking of wharves, bridges, &c. At present the timber is obtained within a reasonable distance of water carriage. When this supply becomes exhausted, and the industry cannot be profitably carried on by the employment of horse or bullock teams, the railway could, if constructed, then be availed of for carriage from the back lands. There are large quantities of timber in the vicinity of the line, and thirty-two timber reserves within 10 miles on each side of the line, embracing an area of 144,000 acres, whilst beyond that distance there are other extensive timber reserves, containing, in addition to the usual hardwoods, iron and stringy bark, bloodwood, blackbutt, gum, oak, &c.; pine and cedar in some of those which are least easy of access. The section of railway between Grafton and Casino runs through country very favourable for construction of a railway, a large extent being nearly level. The cost of the construction would be small, compared to that of the section to the north of Casino. I have no doubt whatever that if the railway is constructed the sale of the land would realize more than would pay the cost of this section. The unalienated land in the three counties (Clarence, Richmond, and Rous) alone, through which the railway will pass, amounts to 2½ million acres. Of this, I estimate 65 per cent. is suitable for occupation for agriculture, dairying, and grazing purposes, by selectors; 25 per cent. suitable for grazing only, but not considered good enough to be profitably occupied by selectors; and 10 per cent. inferior, practically valueless, broken, and scrubby. I have indicated by pink tint on index map herewith the parishes on and in close proximity to the proposed railway, showing in red figures the percentage of Crown lands in each parish, and a schedule in two sheets showing the approximate percentage of—1st, alienated; 2nd, reserved; and 3rd, of land now available for selection in those parishes. From the schedule, which I hand in as an appendix, it will be seen that the proportion of land at present available for selection between Grafton and Casino is very small—twelve parishes being wholly in leasehold areas not available until next year, and five partly so. In the section Casino to Tweed, the land, where not alienated in the vicinity of the line, has been reserved. There are

\*NOTE (on revision):—In explanation I stated to the committee that these estimates were the amounts the land would realise if the railway be constructed.

P. R.  
Donaldson,  
Esq.  
30 Nov., 1889.

P. R.  
Donaldson,  
Esq.  
30 Nov., 1889.

are no leasehold areas to prevent settlement, and, although large temporary reserves exist in four or five parishes, the percentage of available land on this section is much greater than on that from Grafton to Casino."

3801. That you swear to as the truth, and tender as your evidence? Yes.

3802. What do you estimate the present value of the land between here and Casino, if put on the market now? I cannot say, as there is no demand. In my estimate I have taken some of it as of no value whatever, and the rest, excepting the railway reserves, at £1 an acre. The land in the railway reserve I value at £2 per acre, so that you will see that my estimate is very moderate. I believe that the land will realize very much more than that, but I have put that down as moderate.

3803. Do you know the road from Lawrence to Casino? I do.

3804. And of course you know Wooroowoolgen? Yes.

3805. Is there any land along that road on either side, which you would say is fit for dairying purposes? Yes; about Myrtle Creek.

3806. Is there much of it there? Yes; there is a large extent of it there.

3807. Which you say is good for dairying? On the road itself there is perhaps 2 or 3 miles, but it extends up and down, following the watercourse.

3808. There are not many watercourses between here and Casino? Yes, there are.

3809. What are they? The larger watercourses are Myall Creek, Batten's Bight, Myrtle Creek, Sandy Creek, Deep Creek, and on the Grafton side, Salt-water Creek and Sandy Creek.

3810. According to the map before us, there is only a comparatively small fringe of land alienated on the Clarence—the alienation extends no distance back from the river? No; nor will it do so until we have better means of communication with the river. The alienation will continue, and as a matter of fact the average alienation for the last five years in this district has been upwards of 30,000 acres per annum.

3811. As a matter of fact, did not that alienation set in just about 1884? I can give you that.

3812. Tell us what the applications were in 1883? I have only taken them out since the new Land Act came into force—for 1885, 1886, 1887, and 1888.

3813. That is two years after the proposal to construct this line of railway. I want to test the *bona fides* of these applications, and I want to compare the year previous to 1884 with the year subsequent to it. According to the map before us, which we got from the Lands Office, there is an enormous area of land round Grafton which is now as it ever was. The Act came into operation in August, 1885? Yes. The number of applications and the area applied for between that date and the 23rd November, 1889—four years and three months—in the Grafton land district, were 1,008 and 154,301 acres respectively. In the Casino land district there were 452 applications, embracing an area of 134,000 acres. In the Lismore district there were 449 applications, embracing an area of 59,295 acres. In the Murwillumbah district there were 423 applications, embracing an area of 64,440 acres.

3814. Can you tell the Committee how many acres were allotted to the applicants? No; I am not able to give you that information.

3815. Do you know that in 1884 £1,980,000 were voted for the construction of a line of railway from Grafton to Casino, Lismore, and the Brunswick? Yes.

3816. And the Land Act of 1884 came into operation in August, 1885? Yes. The principal disallowances were in the year 1885.

3817. When the applicants were probably not acquainted with the Act? Yes. In the Grafton district the disallowances have been almost nil recently. From the system which is adopted few mistakes occur.

3818. What was the average area of the application in the Grafton district? The average holdings in the Clarence electorate—that embracing the lower part of the river—in the year 1888, were 133 acres. In the Grafton electorate the average holdings were 237 acres, and in the Richmond electorate 318 acres.

3819. The railway will not bring the people in the Clarence electorate within better communication of the port than they have now? It would a portion of them—in the parishes of Lawrence, Southgate, Banyabba, and Stuart.

3820. Banyabba is to the north of Grafton, on the railway line? Yes; on the boundary between the Clarence and the Richmond.

3821. What I should like to know is the average area of the holdings along the railway line, or within 5 miles on each side of the railway line, out from the parish of Clifton? I can only give you the average of the holdings that have been taken up since the new Act came into force. I presume that is what you want, but will exclude the land within 8 miles of Casino, and within 8 miles of Grafton. The land has all been taken up in large holdings—by fifty-three separate applications, embracing 615 acres each—that is, conditional purchases and conditional leases combined.

3822. Really those lands have been taken up for pastoral purposes, not for agricultural purposes? They are held now for pastoral purposes, but in the hope that a railway will be given them, so that they can be turned to a better use.

3823. You were saying a while ago that a great deal of the lands which are now vacant round Grafton, and in the Clarence district, are vacant because of the want of access to market? Yes. Of course there are exceptions.

3824. For want of roads and for want of railway communication? Yes.

3825. Yet the bulk of those lands are good for grazing or dairying purposes? Yes.

3826. And much of them for agriculture? Yes, on the banks of the creeks.

3827. Are the difficulties of getting to market from round Grafton and in the Clarence electorate greater than the difficulties in the Richmond electorate, or are they as great? They are not as great.

3828. Do you know of any places about here where the settlers have to get their dairy produce to market on pack-horses? No.

3829. Do you know that such is the case in many places in the Richmond electorate? I have heard so. I do not know it of my own knowledge.

3830. Looking at the alienations in the Clarence River electorate, and those in the Richmond electorate, how can you account for the fact that so much land has been taken up on the Richmond, and so much land has been left on the Clarence;—is it that the Richmond land is very much better than the Clarence land? That which is gone is very much better.

3831. You see that it has gone in the Richmond district from the east to the west, and much further west than any alienations appear to have been made in the Clarence district? The part from Lismore to the Brunswick is very much better, excepting the high ranges there—the watershed between the Brunswick and the Richmond, and between the Brunswick and the Tweed.

3832. Is not the bulk of the land from Casino right round to Queensland on the water-courses, and away from the water-courses, much better than the bulk of the land in the Clarence district? Yes, I think so.
3833. And you see that the settlement has extended almost as far east as it can in those districts? There is comparatively little settlement on the principal part of the Richmond.
3834. Are the water-courses in the Richmond districts better than they are in this? I think so generally.
3835. And more available;—the rivers go through a greater extent of country, I suppose? The river itself is hemmed in; the principal part of it is hemmed in as it gets towards the border.
3836. Do you know that they are laying down a great deal of the land in this Richmond district in grass? Yes, in the neighbourhood of Lismore.
3837. Have any of the selections in this district since 1884 been laid down in grasses, that you know of? No. There is always some natural pasturage here, but on the Richmond there is no grass at all, unless you clear the scrub and plant it. I have put in grass myself as an experiment.
3838. Is the whole of the land from the east coast to the railway line, say from Lawrence, timbered with iron-bark, such as we see on the road? Not the whole of it. There are large reserves. The principal part of the timber land is reserved. There are good ridges here and there.
3839. We want to know the class of timber that grows on it? Ironbark, stringy-bark, blackbutt, gum, forest oak, and tallow wood occasionally.
3840. That is very good timber, is it not? It is all good timber. Of course, there would be no good timber near the banks of the water-courses. It would be on the ridges and ranges. The worst country is where the timber would be.
3841. Has not a great deal of this settlement in large areas along the railway line taken place since the proposal, in April 1884, to construct a railway? It has all taken place since 1884.
3842. Since £1,900,000 were voted by Parliament for a railway? Yes. All that I have mentioned just now.
3843. All the agricultural lands along the river are within ready access of the river at some point or other—the bulk of the lands we see marked on the map as alienated? On the Clarence?
3844. On the Clarence? Fairly so.
3845. So that all that those settlers would want is good roads? Yes, on the lower part of the river.
3846. And on the upper here about Grafton? About the railway line they would be too far away to get in.
3847. What is the distance from Grafton to the furthest settlement north along the railway line? How far north?
3848. In the parish of Clifton? Ten or 12 miles—Burkhardt's.
3849. Is that too far away for it to be profitable to farmers to bring their produce to market? No. I think they could manage to bring it from there. They are no very great distance away.
3850. But it is not obligatory upon them to bring their produce to Grafton—they could touch other points on the river? The road goes to Grafton, and they could not touch the river anywhere else so easily.
3851. Can you tell me why the railway should come to Grafton at all? No, excepting that it would be the best place to cross the river, and continue the line to the land to the south, which is now being taken up.
3852. But suppose the railway is only to be constructed from the Tweed to the Clarence. Is there any reason why it should come to Grafton? Certainly not.
3853. If it is only for the purpose of bringing the settlers into communication with the river, it had better go to Lawrence, had it not? For that part of the country between Casino and Grafton it would be decidedly the shortest way to go to Lawrence.
3854. But if the railway is to be extended south, you think that it ought to go to Grafton, that being the better place to get away from? Yes, and the interests of the town, which I presume, would be considered as the centre of the district?
3855. The cost of a railway from Grafton to the Tweed will be £1,728,100—that is a very large sum? About £12,000 a mile.
3856. £11,000 odd from here to Byron Bay? The whole of the expenditure would be at the other end, comparatively.
3857. Twelve thousand pounds a mile for a railway is a tidy expenditure anywhere? This end will not cost £12,000 a mile.
3858. Eleven thousand pounds a mile to Byron Bay? That is putting in the bad country and the bridge over the Richmond. Between Grafton and Casino, or Lawrence and Casino, there is no bridge, and it is flat country—£6,000 or £7,000 a mile would make that portion.
3859. There could be no justification for the expenditure of that money for the present population? No.
3860. Do you know what the interest and working expenses will come to, assuming that the working expenses on this line are similar to those in other parts of the Colony, though there is every reason to suppose that they will be much greater, because the line will not be connected with the other systems? No, I have not gone into figures; I simply looked upon it that the sale of land would recoup the expenditure on the line. I certainly thought that any traffic there might be would pay for the working expenses.
3861. The interest alone would be £25,772 a year? But if the land paid for the cost of the railway the interest would be gone.
3862. Then the working expenses, at the most reasonable calculation, are 3½ per cent. on the capital—that makes another £25,000,—in all, £51,544 a year. Do you think there is any chance of that sum being paid to the country within a reasonable time, apart from the sale of the land? No; and I think if the matter is to be tested in that manner there will be no more railways constructed in this Colony.
3863. The object of the Committee is to test these proposals by commercial principles. Hitherto it has been a complaint that railways have been built without consideration;—do you think that within a reasonable time the railway would earn £51,000 a year? That is a matter which I have not gone into, and I should not like to say. My impression is that as the sale of the land on this section would certainly recoup the expenditure on the line, and that the land on the other section would go a long way towards doing so, that would be a justification for constructing the railway, because the settlement which would be brought about would be an advantage to the Colony generally, by increasing the population.

- P. R.  
Donaldson,  
Esq.  
30 Nov., 1889.
3864. Do you know the class of settlers who have been taking up land here since 1884 along the railway line in these large areas? I know several of them.
3865. Do you think that they are *bona fide* settlers, or are they speculators? I have not the slightest doubt of their *bona fides*.
3866. Have you heard of such a thing as a syndicate being formed to buy up the land along the railway line? There has been nothing of the kind.
3867. Have you heard of any such syndicate being formed to buy up land at Byron Bay? I do not know of any syndicate being formed to do anything of the kind.
3868. So far as you know the settlers are *bona fide* men? I would not quite say that. I could not say that.
3869. There is a little speculation? In that neighbourhood there is, but there is nothing of the kind at this end. There is no doubt that there has been speculation ever since the Byron Bay scheme was mentioned.
3870. And on the line from there to the Tweed? Yes, since there has been a chance of the railway being constructed.
3871. Has not the same thing been going on here since 1884? I do not think it.
3872. If the lands on the Clarence are so good for dairying and grazing purposes, can you tell the Committee how is it that there were such enormous areas of Crown land unalienated until this vote was passed by Parliament? The difficulty of getting anything away from them is, I presume, the principal reason.
3873. Greater difficulties, you tell us, exist in the north? Yes; but not for such considerable distances. That country is broken up by the rivers and creeks.
3874. Is it not a fact that the land is not worth taking up? I think it is shown that that is not so by the fact that the land is being taken up now.
3875. Along the railway line and along the creeks? They are extending back from the creeks. They cannot get within a mile of the railway because of the reserves.
3876. But they could have done that until a couple of years ago? No. The land has been reserved for at least four years. It was reserved in 1885.
3877. Do you not think that the alienation speaks for itself—if the country was worth taking up it would have been taken up, notwithstanding these difficulties? No; because the greater part of the country in the north has been taken up comparatively recently. It is only since there has been such an immense expenditure upon roads that that country has been taken up so much from Lismore northward.
3878. The expenditure for roads in that district would be comparatively high compared to this? Yes; compared to this.
3879. Notwithstanding that, you have not had sufficient roads to enable people to get their produce to market? Roads are only good to a certain extent. It is not profitable to carry on roads beyond a certain distance—10 or 15 miles, I should think. The land within 10 miles of here is shown to be taken up. As you get back the land is not so good as it is on the banks of the river.
3880. Is the land between the railway line—the 30-mile peg and the coast—poor land? There is a lot of fair land out in that direction—on the creek and extending back.
3881. That is in the parish of Gibberagee? Yes.
3882. There is good land to the east of the railway out towards the parish of Gibberagee, but too far away for settlers? Too far away.
3883. Will they be within reach of the railway line? Yes; land was taken up there shortly before the Act of 1875 came into force to block selection in the interest of the owners of the run.
3884. They have not taken it up very wisely for that object? It answered the purpose at the time.
3885. *Mr. Cox.*] I understand from your remarks that although the land between Grafton and Casino has not been alienated hitherto, on account of its inferior quality, yet, in the event of a railway being made, you believe it would all be taken up, or sufficient to pay the cost of the railway? I do.
3886. If the railway is only to be made to facilitate settlement, would it not be better to take it into better country than this;—if the object of the Government is to induce settlement, would not that settlement be better induced by taking the railway through rich country rather than through poor country? Yes.
3887. Is there not much better country in these districts through which a railway could be taken than that between Grafton and Casino, so as to induce settlement and be more profitable to the community? Yes; there is rich country about the head of the Orara.
3888. What justification has the Government for putting railways through poor country when there is rich country asking for a railway? Because you would have to bring a railway through some poor country to get to a shipping port.
3889. But if it is one of the primary objects of the Government to settle population on the land, why should that not be done? Because you would then take it through a lot of similar country to the Richmond country.
3890. Do you know the country in the upper parts of the Richmond? Yes.
3891. Is that not very good country? Some of it is very good; but a large proportion of it is perfectly worthless, except for the timber.
3892. Up the banks of the river is not the good country? On the banks of the river the country is exceedingly good; but the greater part of the good land on the banks is alienated.
3893. But is there not a considerable quantity of good land up the rivers, at the heads of the Richmond, still unalienated? There is a large quantity of it; but the best has been bought in the interests of the runs.
3894. Do you not think that there will be a considerable rush up those rivers next year when the leasehold areas fall in? There are only one or two parishes up the Clarence which the leaseholds will affect. The majority are over in the Richmond direction.
3895. Are there any runs in the vicinity of Casino that have now a large amount of leasehold land that will be thrown open next year? The greater part of the Wooroowoollgen run is in that direction. Runnymede is nearly all gone. At Kyogle the greater part of the rich land has gone, but at Wiangarie there is some good land, and there is also good land at Ettrick and Dyrabba.
3896. A railway constructed in that direction would pass through rich land, although it was alienated? These lands are 20 or 30 miles from the proposed railway.

P. R.  
Donaldson,  
Esq.

30 Nov., 1889.

3897. But if it were thought desirable to construct a railway for the settlement of the people on the land, would it not be better to go up to this rich country rather than to go through poor country? It depends very much upon the amount of poor country that you have to go through to touch the rich country—upon the proportion of the rich country to the poor.

3898. But would you go through any poor country to touch the heads of the river? There is very little poor country there up the river; but much of it is forest country, a shade superior to that over this way—better grazing country.

3899. In answer to a question by the Chairman I understood you to say that if all that was needed was to connect the Richmond and the Clarence, it would be desirable to go to Lawrence in the event of a coast railway not being under consideration? I did not go so far as the coast railway. I said, "In the event of there being no railway to open up the land on the south side of the river." In that case I presume the two railways would be connected, and you could not do that anything like so easily further down the river as you could do it here. The river is three-quarters of a mile wider at Lawrence.

3900. Why could not a bridge be made over the river at the top of Woodford Island? Because the river there is as wide as at Grafton, and you would also have the south arm to cross. You would then have to go through a lot of low flat alluvial country, very liable to flood, and cross the Coldstream, or work between it.

3901. Are there not flats in the neighbourhood of Grafton? Yes, excepting where the railway line is. It is nearly out of water, the whole of it, and the distance is very short.

3902. Would the expense be an insuperable objection to crossing the river at Woodford Island? I do not think there is anything insuperable in railway construction after the Blue Mountains and the Hawkesbury Bridge, but the railway would not cross here—it would cross higher up.

3903. So that it would not come into Grafton at all? It would come within 5 or 6 miles of Grafton and cross there, if it was a continuation of the coast railway.

3904. The projected railway would come within 5 miles of Grafton? I am speaking of the coast railway. Of course the Grafton people would take a branch to the railway if the Government would not bring it to them.

3905. You say that you believe the land through which the railway will pass, although of a poor description, would realize sufficient to pay the cost? I said that, referring to the section Grafton to Casino. I have not the slightest hesitation in saying it.

3906. You stated that there were about 370,000 acres of Crown land in this district? Three hundred and seventy-five thousand which I estimated at £390,000 on the Grafton to Casino section.

3907. Are you aware of the cost of the projected railway? I know that it averages £12,000 a mile, taking in the Casino, Brunswick, and Lismore bridges, and all the rough country; and therefore I take it that £5,000 or £6,000 a mile ought to make this comparatively level section, where there are no bridges.

3908. We have been given to understand that the cost of a railway between Grafton and Byron Bay would be £733,000; consequently the land which you say would be sold would not realize half that? If the average cost of the whole railway was £12,000 a mile, this piece would certainly not cost more than £5,000 or £6,000 a mile.

3909. Well, if the cost of the railway were recouped from the sale of the land, all that would have to be met would be the working expenses? That is what I am thinking.

3910. Do you think that if the whole of the land were taken up sufficient would be produced to warrant the expenditure of this sum of money. Is there any possibility of a repayment to the extent of £25,000 a year for working expenses? I am not prepared to say. I have not gone into anything of that kind. The figures that I have given I have taken out with a great deal of care. I am not prepared to make any rash statement, especially about the probable traffic. The Commissioners themselves would not venture to do that, and I think it would be an impertinence for me to do it.

3911. You see it is desirable that we should know if there would be sufficient produce to warrant the carrying out of the line? You have travelled through the Colony, and know the country through which railways have been made. The country has been brought under a kind of mixed settlement—cultivation and grazing have gone on together, and I think this country will be similarly settled.

3912. *Chairman.*] Can you tell us what is the average rent for farm land in the Clarence district—do you know the highest and the lowest rents that are paid? I have heard that £2 10s. an acre is paid. I am receiving £2 myself.

3913. You have some farm lands here? I have one farm.

3914. You get £2 10s. an acre rent for it? No, not for the farm. I get 30s. for it—it is quite close to Grafton.

3915. I see that Mr. Campbell states that he was informed that the average rent of farm land was about 30s. per acre per annum? For agricultural land I daresay that would be right.

3916. I am informed; however, that the general average rent for farm land is at present about 30s an acre, and that the tenant farmers are paying in some cases as much as £2 10s. an acre? £1 an acre is said to be the usual rent, but of course there are farms for which very much more is paid. The returns that I have given are only approximate. I went through the figures myself, but it is impossible to get every thing exact.

3917. Are any of these good lands in the district now being conditionally purchased in large areas? No.

3918. The large areas taken up by conditional purchasers are grazing lands? They are all ordinary lands—grazing land and agricultural land mixed.

3919. What steps have you taken as district surveyor to reserve any of these good lands in view of the construction of the railway—have you recommended reserves being made? There is a reserve of a mile wide along the railway line.

3920. But the construction of the railway will influence the value of land further away than a mile? Excepting in choice spots nothing has been done.

3921. Do you not think that if an increased value were given to Crown lands by the construction of a railway, that land ought to be retained in the interests of the country? When you were Minister you wanted all the reserves throughout the country cut down, and I have cut down a good many since that.

3922. They have been thrown open since I was in office, in this district? Yes.

3923. Do you not think that it would be a good thing to keep these reserves until it is determined by Parliament whether the railway should or should not be constructed? Yes, but there is great pressure brought to bear to get the reserves, and I am made the scape-goat.

3924.

- P. R. Donaldson, Esq.  
30 Nov., 1889.
3924. You do not care for that? Well, I have not been a public officer for twenty-nine years to take much notice of that.
3925. You think it would be a wise thing to keep those lands until it is determined by Parliament what is to be done with regard to the construction of the line? Yes.

Mr. George Herbert Gibson, Land Agent, sworn, and examined:—

- Mr. G. H. Gibson.  
30 Nov., 1889.
3926. *Chairman.*] You are the acting land agent? I am.
3927. How long have you been here? I took charge of the Crown Lands Office here on the first of the present month.
3928. You are only a relieving officer? I am one of the relieving officers of the Department.
3929. Have you brought the registers with you? I have brought the land agent's registers.
3930. In 1881 there were 143 conditional purchases in the Grafton land district, in 1882 there were 289, in 1883, there were 216, in 1884 there were 222? Yes.
3931. Conditional purchase was stopped from 31st December 1884, until the 6th August, 1885? It was.
3932. Then to the 31st December of that year there appear to have been 121 conditional purchases; in 1886, 174; in 1887, 161; in 1888, 137; and up to the 28th November, 1889, 149—is that so? That is so, according to the register.

John Cummins, Esq., Railway Engineer, sworn, and examined:—

- J. Cummins, Esq.  
30 Nov., 1889.
3933. *Mr. Cox.*] What is your position in the Government service? I am a railway engineer.
3934. How long have you been in the Clarence River district? I was here about two or three years altogether.
3935. Have you been making any recent surveys in the proposed line of railway between Grafton and the Tweed? Not for three years. Three years ago I was on the work. I made the first trial survey from Grafton to Casino, and I was on the permanent staking between Casino and Lismore.
3936. Are you at present at work on these lines? No; I am making a trial survey for the proposed line from Grafton to Guyra. I started a fortnight ago.
3937. How far have you got on that line? 4 miles, and I have shifted camp about 8 miles from Grafton.
3938. Three years ago you had something to do with the railway line between this and the Tweed? Yes; as far as Lismore. I do not know anything of the country beyond Lismore.
3939. Do you think the best route has been taken between Grafton and Lismore, or would it be possible to find a better? I do not think it would be possible to improve it much now.
3940. What is the steepest grade between this and Casino? It was 1 in 40 when I was on the line, but now I believe they are going to change it to 1 in 50.
3941. Is not 1 in 40 a very steep grade compared with 1 in 50? 1 in 40 would, in my opinion, be cheaper. The first thing that increases the cost is the flattening of the grades.
3942. *Chairman.*] But how about the haulage hereafter? Well, calculations ought to be made to show which is the cheaper.
3943. *Mr. Cox.*] Consequently your duty is to try and get a railway line which can be made as cheaply as possible, quite irrespective of the cost hereafter? Yes.
3944. The working expenses have nothing to do with your business? That is considered, but the ruling gradients are always fixed by the Engineer-in-Chief.
3945. So that if you could get a grade of 1 in 40 you were quite content? I would make it 1 in 50, if I could. On the survey from Werris Creek to Dubbo I tried at first to get a grade of 1 in 100; then I tried 1 in 80; and at last 1 in 50. The other surveyors close to Dubbo were obliged to use a grade of 1 in 40. I got through that far with 1 in 50 to show that I had tried to get as flat a grade as possible.
3946. This would be a main line—is it not desirable to have the easiest possible grades on such a line, for the purpose of taking the largest amount of traffic? You must get the best grades you can, for the money allowed.
3947. Would not your recommendations weigh with the Engineer-in-Chief? Yes. I think the first thing to do is to get the flattest grade possible for the money.
3948. What is the greatest curve on the line between Grafton and Casino? I think the curves are very flat. There is no difficulty with them.
3949. Is it a fairly considered line, and there are no intervening ridges to avoid? Yes. There is only one range to cross between here and Casino, and it is very low—I think it is called the Richmond Range.
3950. I presume you know the line of road as well as the line of railway? Yes. Within a few miles on each side of the railway I know the country very well. I have been over every inch of it.
3951. Is the land through which the railway runs superior to that through which the road runs? Well, the railway keeps within a mile or two of the road all the way, and runs through the same country.
3952. Have you had any experience of land—are you able to judge of its quality? I have done no farming in this country; but I was born and bred on a farm. I consider the land very good, especially if it is improved. It wants improvement in some places—the clearing off of scrub and so on. There is no better land than that on the flats along the creeks and rivers.
3953. What would be the area of that land? Well, it is not very wide on the creeks. It is 60 miles from Grafton to Casino, and the land is fairly level. In quality it is good, bad, and indifferent.
3954. You never had any alternate route given to you between Grafton and Casino? No. Some surveys have been made since I left the district, to improve the line. I believe that they have made a deviation at a place called the Flying Horse, since I was on the work.
3955. Was this line surveyed wholly with the idea that it would form part of a future coast line? Yes, it was.
3956. So that anything else would be subordinate to that? Yes. Ultimately it was intended to connect at Morpeth.
3957. In the event of its merely being intended to connect the Richmond and the Clarence Rivers, would you have taken the railway between Casino and Grafton? That is for a local line.
3958. Merely to connect the two rivers—would you have taken the line between Casino and Grafton, or between some other places, if it had been needed to do that? I do not know the country very well along the coast—it is very rough indeed about Lawrence, and for 6 or 7 miles out—very unsuitable country for a railway.

3959. Do you know the country between Lawrence and Coraki? No; I have never been over it, but I think it would be difficult to make a railway there above the flood-level.
3960. Do you know the river on the west of Woodford Island? No; I do not know the river except from going up and down it in a steamer.
3961. *Chairman.*] Do you not know that in the Old Country now there is a great desire, at almost any expense, to keep the grades low? There is a great deal of heavy traffic there, and they can afford to do it.
3962. The traffic will have to pay for these heavy grades. Do you not think that it would be better to cut down the grades now than to make the customers of the railway pay for them for all time? Most decidedly, if we can afford it. I understand that the Victorian surveyors are actually proposing a grade of 1 in 30 and 5 chains curves in Gippsland. I have been five months making a survey at Bombala, and I met some of them there. It has not actually been decided what grade they will use, but the tendency there is to increase the grade. It is the through line between Sydney and Melbourne, via Monaro and Gippsland.
3963. *Mr. Cox.*] That line would not be a main trunk line? Probably not.
3964. *Chairman.*] But it is into an agricultural country that it is thought will carry a good population? Yes.
3965. Do you know that there is a proposition in England to reduce the grades from 1 in 100 to 1 in 200? Where there is a heavy population no doubt it pays, but they had to construct the railways with a grade of 1 in 40.
3966. But it is more costly to reduce the grade after the line is made than it is to make a low grade at first? It would cost double, because you have to keep the line open for traffic.
3967. Then there is really no economy in making a grade that you would have to reduce afterwards? No; but the ruling grade is made under the authority of the Engineer-in-Chief. He says, "Make a trial survey between Grafton and Casino, with the steepest grade 1 in 40, and the sharpest curve 15 chains."
3968. Are you an engineer or a surveyor? Both. I have been for years at both.
3969. Are you on the list? I am not a member of the Institute of Civil Engineers.
3970. Do you not know that instructions are given that the surveyors are not to work on a less grade than 1 in 40, and that it is left to themselves to use that? Yes. But now the grade is 1 in 50, and it is very difficult to work to that. In the last line that I was on I would have a steady rise of 1 in 50 for 4 or 5 miles; while if I had had a grade of 1 in 40 I might have got level pieces. With a grade of 1 in 50 you cannot pick your ground at all—you have no break—no level.
3971. If a grade of 1 in 50 costs the country so much now, and a grade of 1 in 40 costs the country so much in the future;—if the former grade is adopted the people will have to wait for their railways until they can afford them? Yes.
3972. You think there is no difficulty in getting a grade of 1 in 50 between here and Casino? I think not. There is only one little bit where I got 1 in 40. The curves are very flat—probably 20 chains.
3973. That is nothing? Comparatively nothing.
3974. *Mr. Lee.*] Are you at present in the Railway Department? Yes.
3975. What portion of the line now under consideration did you actually survey? I made the original trial survey between Grafton and Casino, and I staked out the permanent line which is now being altered between Casino and Lismore. They went in the wrong place first in doing the permanent staking. I propose to go round by Dawson's. I believe the line has all been altered and improved.
3976. When you receive your instructions from the department to proceed from one point to another, do you try to find out the best and most direct route? Yes.
3977. Could you find a better route between Casino and Grafton? I walked over the ground seven or eight times.
3978. Is there any better route? Certainly not, or I should have suggested it.

Mr. William Goodger, late farmer, sworn, and examined:—

3979. *Mr. Cox.*] Have you resided long on the Clarence? Thirty-one years.
3980. What part? At Ulmarra, about 10 miles down the river.
3981. Are you a farmer? I was farming for a number of years, but I am not farming now.
3982. How many acres have you? Two hundred acres in Ulmarra—four farms.
3983. What do you grow chiefly? Maize and oats.
3984. Sugar-cane? I did grow cane, but my land is not of the quality for growing cane—river-bank land is the best for it.
3985. You do not front the river? No.
3986. What is the average yield of maize in this district? I should put it at 55 bushels on the average.
3987. Is there any great difference between the alluvial lands on the banks of the river and the land which you occupy, with regard to the yield of maize? Yes. The river-bank land has a much larger yield.
3988. What would be the difference between the yield on your land and that on the river banks? About 20 bushels an acre on an average.
3989. What kind of land is it that you farm? It is forest land, with small patches of scrub.
3990. Do you know the country between Grafton and Casino? I have been through it several times.
3991. Is there any land there equal to the land you farm? Some of it is.
3992. Where? On the creek banks, and on several of the flats I noticed going through.
3993. Would it be possible on portions of that land to cultivate corn at a profit? Corn, oats, fruit, and potatoes on parts of it, but not on the whole of it. The rest of the land would make good grass land if it were improved.
3994. None of that land is at present cultivated? Some parts of it are—there are patches on Myrtle Creek.
3995. For what reason is that land not put under cultivation? I think it is for want of means of transit.
3996. The cost of getting produce to market by dray takes away all the profit? Yes.
3997. What would you consider the area suitable for agriculture in that country—have you any idea what it would be? I could not give you an opinion about that. I have travelled it several times, and there are good patches of country that would grow anything, I believe. A lot of this land is suitable for dairying. I have a large dairy, too.

Mr.  
W. Goodger.  
30 Nov., 1889.

- Mr. W. Goodger.  
30 Nov., 1889.
3998. Have you heard what the cost of constructing a railway between this and Casino would be? I have read it.
3999. You are aware that it would amount to many thousands? Yes.
4000. Do you think it would be possible to get any fair return for that large outlay. We would have to pay 7 per cent. on it for interest and working expenses before we could get any profit. Do you think the country would warrant the expenditure—would it give a fair return? I think it would eventually. If the line were constructed as part of a coast line there would be a great deal of settlement there. The district is growing very fast. I can notice the growth during the time I have been here, and the increased value of the land.
4001. So that at Myrtle Creek or at Myall Creek the farmers would send their produce to Grafton and to Casino, as it suited them? To wherever the freight was cheapest.
4002. Do you think that they could ever compete successfully with the growers of corn on the rivers, having to pay railway freight on their produce? Not in a local market, but of course with fair prices they could send it to Sydney.
4003. But do you not think that they would be very considerably handicapped by having to pay freight on the railway? Of course they would.
4004. Would not that tend very much to stop agriculture in that part of the country? I think dairying would be followed there a great deal, because dairy produce is so much more valuable, and the freight no higher.
4005. Would it not pay to carry on dairying there now—butter is easy to carry? But the steamers have not a freezing apparatus.
4006. But how would that apply to the people there now more than if a railway were constructed? They could send their produce in at night, and have it put on the steamer in the morning.
4007. Would not that be possible now? No; they are too far away. They could not possibly travel in the time, especially with the roads that they have.
4008. If they had good roads? Then it would be a long way by waggon. Of course you cannot drive fast with a load of produce.
4009. You have been many years a farmer, and you are a practical man. Do you think it would be possible to load the railway with butter and other produce of that kind between this and Casino so as to pay the working expenses? It would be some considerable time before you could do that.
4010. How many years do you suppose? From ten to fifteen years, judging from the strides that the Clarence has made since I have been there. Timber and other things would go by the railway.
4011. Do you not think that it would be better to wait ten or fifteen years before constructing a railway? That would retard the settlement of the district. At first we had to make our own road with considerable trouble.
4012. There is no traffic between the Richmond and the Clarence—they both produce the same commodities? Yes.
4013. With the exception of a small passenger traffic? Not that I know of.
4014. The only other article that would be carried by the railway would be timber? Yes, but timber-getting is a very large industry.
4015. Do you think there is sufficient good forest timber between this and Casino to pay anything like the working expenses of a railway? I do think so.
4016. Do you urge this railway construction purely for the sake of increasing the population? Yes, and as part of a through line. I understand that this is part of a through line between here and Morpeth.
4017. What benefit would it be to have a through coast line? It would open up the heads of all the rivers south, and of the Richmond, Brunswick, and places to the north.
4018. What would be the use of that if they had to pay the enormous amount of freight that the carriage over that long distance will impose? I believe that the Government would be reimbursed by the sale of the land. There are lands on the south side that would bring from £5 to £10 per acre, if the people there could get their goods to market.
4019. But those goods could never go to market if they had to pay freight for 300 or 400 miles? They have to pay that now.
4020. But they use the sea now? Yes. Then they could take them either way. If water carriage was cheaper they could send their goods by sea.
4021. Are you not aware that railways can never compete with water carriage? I should imagine so.
4022. Therefore to get all the rich portions of the country in communication with the metropolis and the neighbouring colonies you would only want to run down from the interior to the sea? Yes. But there are a lot of places where they cannot get over the bar, because the water is too shallow. That is the case at the Bellinger and the Nambuccera. I have been over that country, and that is a great drawback to it.
4023. What would they benefit by having a railway? They could send their goods straight on.
4024. What could they grow that would pay the cost of transit—do you think corn would pay it? I think corn would go.
4025. Could it bear a freight of 1½d. per ton per mile for that distance—would not the freight completely shut out these people from the market? I do not see a clear way at that rate of freight for sending stuff by rail.
4026. It is only within a very reasonable distance that farmers could afford to send such heavy rates to market by rail? Yes.
4027. Would it not be better for the people about these rivers to have good entrances to their harbours—would not they be sufficient without a railway? Of course I am of opinion that we require both to open up the district properly.
4028. Then you advocate this railway to Casino only on the understanding that it is to be carried right through as a coast railway? Yes; I look upon it as a part of the coast railway.
4029. But you are unable to see how it would pay if the people had to pay the cost of carriage that I have mentioned? I believe it would increase settlement.
4030. The rest of the people in the community would have to pay the cost of the railway to benefit the people living along the line? I do not believe a railway yet has paid working expenses when first constructed.
4031. Is that any reason why the Government should run into debt over this one? It may follow that it will pay. It is a fine district.
- 4032.

Mr.  
W. Goodger.  
30 Nov., 1889.

4032. *Chairman.*] You have been here thirty years? Yes.
4033. You have seen the land taken up from the very commencement under the Land Act? Yes.
4034. What has been your experience as to the large holdings—have they accumulated, or have they been gradually cut up and sold to smaller men? Of course capitalists have taken up the land, and in several instances it has been subdivided.
4035. There is a tendency in the district to subdivide the larger holdings? Yes.
4036. Has that been going on as the place has been more developed? Yes; more people are coming into the district.
4037. The farmers on the river banks either rent their land in small areas, or own it in small areas? Yes. At Ulmarra every bit of it has been taken up in a solid block.
4038. The whole of these areas has been utilized? Yes; every inch of them.
4039. Is there any dairying? Yes. I have the largest dairy in the district.
4040. What is your output? 120 lb. of cheese daily.
4041. How long have you been at that? Three years.
4042. Have you found it profitable? I have lost, I suppose, £1,000 at it, through Free Trade.
4043. As there is a demand for farms here, the bigger men subdivide, and either lease or sell? Yes; that is the tendency.
4044. You think that that would go on throughout the district, if the land were better developed by roads and railways? I believe that the land would be taken up and legitimately settled.
4045. Dairy-farming is only in its infancy in this district? Yes; it has just begun.
4046. *Mr. Lee.*] Is your dairy at Ulmarra? It is about 9 miles from Ulmarra.
4047. On the opposite side of the river from here? Yes, towards the coast.
4048. Consequently on the side of the river opposite to where the railway will come? Yes. I have no interest whatever in Grafton on this side of the river.
4049. Supposing the railway line were constructed, would you be likely to send your produce across the river and then some distance to meet the railway, instead of sending it by the steamers? The railway would be too far away from me. The line is already surveyed.
4050. So that it would be very little benefit to you? No benefit at all. It would only benefit the district generally.
4051. And you, like most business men, would send your produce to market in the most direct and cheapest way, whether by water or by railway? Yes.
4052. Maize is a product which will not stand a heavy rate of freight? It will not.
4053. *Mr. Cox.*] What do you think farmers could grow corn for, delivered at the bank of the river? If they cleared 2s. 6d. a bushel it pays them very well.
4054. Not less than 2s. 6d.? 2s. 6d. is what a farmer could live on, pay labour, and put a little by. He would have to be very industrious to do that.

Mr. Cornelius Duggan, butcher and grazier, sworn, and examined:—

4055. *Mr. Lee.*] What are you? I am a butcher and grazier.
4056. Where do you reside? About 9 miles from Grafton.
4057. How long have you been living in the district? Thirty years.
4058. You wish to give evidence before the Committee—will you give as precisely as possible the information which you have? What is it you wish to know?
4059. We shall be glad to hear anything you have to say—reasons for the construction of the line? I think myself that the line would induce settlement along the route, and south of it.
4060. The matter under consideration is the advisability of constructing a line from Grafton to the Tweed—can you give us any information about the route of that line, or as to what the settlement will be on the line, or on any portion of the line of which you have a personal knowledge? I cannot speak of the Tweed or the Brunswick, but I think that between the Clarence and the Richmond the line would induce settlement.
4061. Are the selectors likely to grow larger quantities of produce than they are doing now? No; I do not see that they are likely to produce larger quantities.
4062. But if there is more population I presume that the produce will be greater? Certainly.
4063. What are they likely to do with that produce when they raise it—is there a local market? I think not.
4064. Where is it generally sent for sale? To Sydney.
4065. Would it be sent to Sydney if a railway were made along the coast from Sydney to Grafton? I do not believe it would be sent along the coast. It would be sent to the nearest available waterway.
4066. Would the Clarence be the nearest available waterway to the people residing in the Clarence River district? Yes.
4067. Can you give me any other reason for the construction of the line? As a through line I think it would be advisable. I think it would be justifiable as a national undertaking.
4068. You know something about stock, I presume;—what do you think of the country between Grafton and Casino as grazing country? From fair to good, and some very good.
4069. What is it like in dry weather? It is tolerably fair country in dry weather. It is fairly watered, and I believe if its grazing capabilities were improved it would carry considerably more stock than it does at the present time.
4070. Do you think any portion would be suitable for agriculture? Yes.
4071. In what localities? Some of the land about Myall Creek and about Saltwater would be suitable for agriculture. I am cultivating myself a little about 9 miles from here. The land yields fair crops. I think I can say that I have a yield of 3 tons of hay to the acre this year.
4072. Is that land as near to the banks of the Clarence as it is to the route of the proposed railway? No. It is closer to the railway route.
4073. What we want to arrive at is this: if the railway were constructed, what would there be for it to carry? There would be maize, oats, oaten hay, timber, and fruit. The greater part of the country is, I think, very suitable for the growth of fruit and the vine.
4074. You think that if the line were constructed by the Government settlement would take place between here and Casino? I think so.
4075. *Chairman.*] Have you anything else that you would like to tell the Committee? I think not.

Mr.  
C. Duggan.  
30 Nov., 1889.

Samuel See, Esq., Mayor of Grafton, sworn, and examined:—

- S. See, Esq. 4076. *Chairman.*] Are you the Mayor of Grafton? I am.  
 30 Nov., 1889. 4077. How long have you been living in the district? About nineteen and a half years.  
 4078. What business have you followed? For the first six years I was on the Clarence River I was farming, and previous to my coming here, from a boy, I was on a farm. Since then I have been dealing in maize, and have had the general management and control of steamships running between Grafton, Sydney, and Melbourne.  
 4079. You have taken a great interest in the proposal to construct this line of railway? I have taken some interest in the proposal to construct a line of railway from Grafton.  
 4080. Have you gone into any calculations to show the possibility of this line paying working expenses and interest within a reasonable time? Not actual calculations; but I have made mental calculations, and I am firmly of opinion that, taken as a part of a proposed line through Grafton and away south, it would pay.  
 4081. Within what time? I think probably within the time that it is possible for the land to pay the freights.  
 4082. Do you think that the southern extension would have to be made before the line would pay? No, I do not.  
 4083. How far would the line have to go south from here before it would begin to pay? I think it would pay from the moment it was constructed from here to Casino.  
 4084. What is to make it pay—the people of Casino would not exchange any produce with the people of Grafton? No; I do not think they would.  
 4085. You produce what they do, and they produce what you do? Yes.  
 4086. Would it not be nearer to them to send their produce by the Richmond rather than by the Clarence? Probably it would, bearing in mind the improvements to the Richmond Heads. But those are prospective. If the line were constructed now from here to Casino, I think the probability is that it would be availed of by the people of Casino at the present moment.  
 4087. Not at the present moment, having regard to the condition of the bar? Well, they report 15 feet this morning, as against our 12.  
 4088. We were there the other day, and were told the same thing. Your freight is somewhat influenced by the insurance, is it not;—is not the insurance charged against the consumer? Our insurance is very much less.  
 4089. But in estimating your freights you have to take into consideration the insurance which is charged against you? Yes.  
 4090. If it is a high rate, you charge that proportionately in the freight against your customers? Well, it is not the insurance that makes the difference; it is the fact of being able to trade regularly. The freights are cheaper between the Clarence and Sydney because we can trade regularly.  
 4091. If the works now being carried out at the Richmond River had the effect anticipated, the trade of that district would be done by the Richmond? I do not anticipate that any of that trade will come when the railway is constructed.  
 4092. Do you anticipate that there will be sufficient produce passing to and fro to pay for the construction of the line? Yes, taking the timber.  
 4093. How much of that line will trade to Casino? I think for 40 miles Grafton will get the benefit of it—from Myrtle Creek, 42 miles.  
 4094. Casino would get the rest of the traffic? I imagine so. Of course it is impossible for me to say from what point the traffic will go to Casino. We should probably get it from a little beyond Myrtle Creek.  
 4095. Do you know that country at all? No; I am not acquainted with it.  
 4096. You were never there until the other day? No. Of course I know the country on this side of it pretty well.  
 4097. What do you mean by this side? The back of the land to the west. I know the character of the country for a distance of 20 miles. Past that I only know it from what I have seen on the road.  
 4098. What is the character of the country to the west? The country between here and the point to where I am acquainted with it is land that would grow oaten hay, wheat, and fruits. There are also large forest reserves.  
 4099. You could only find a local market for oaten hay? I think we could find a Sydney market.  
 4100. Could you compete against New Zealand? I think so, especially under altered circumstances. I think that oaten hay would grow. I am growing it at the present moment on land very much inferior to that which I am speaking about. I have had crops for three years, and have obtained from  $\frac{3}{4}$  to  $\frac{1}{2}$  a ton per acre. I consider that the land out there will produce 1 ton to the acre.  
 4101. What we saw? Yes. Of course it would be quite different from the hay grown on the Hunter—that is too coarse.  
 4102. You think that 1 ton of hay to the acre would pay a farmer to carry it 30 or 40 miles by train and 260 to Sydney by water? Yes. He could grow maize, which, on the present tariff, he is charged 1½d. a bushel, or 6d. a bag, for 60 miles—that is about 5s. a ton.  
 4103. Is it a special class? I am speaking of grain now, and I am taking a distance of 50 miles, which is, of course, considerably beyond the limit. Farmers getting land out there would probably be able to acquire a larger area than they could get here, and of course the mode of living would be cheaper. Taking everything into consideration, I think a man could grow maize and barley out there. Barley grows here, but the land on the banks of the river is not as good for it as the land out there is. A man out there with a fair area of farming land would be able to compete with a farmer here, remembering the rent that a farmer on the Clarence would have to pay—on the average, 30s. an acre.  
 4104. There is no doubt that it would take some time to develop all this—five or ten years? It would; but we shall have a population coming along in that time. There are thousands of boys growing up for whom we have to make provision.  
 4105. Has not the population of Grafton increased very much lately? No.  
 4106. Is it not a fact that you have a good number of vacant houses? We have a few, but it is the same all over the country.  
 4107. The population of the district has not decreased? No; it has increased.

4108. Have not a number of your farmers gone further afield—north? A good many of them have gone south. S. See, Esq.  
30 Nov., 1883.
4109. But have not a good many of them gone north, to Byron Bay and the Brunswick? A good many have; more of late years than to-day. Some have come from the Richmond here.
4110. *Mr. Cox.*] What is your charge for corn between Grafton and Sydney? Ocean steamer, 1s. 3d., without drogherage.
4111. 1s. 3d. a bag? Yes, 12s. 6d. a ton.
4112. That is 260 miles? Yes.
4113. To carry that by train 40 miles would be another 5s.? That would be a ton. We are anticipating, in fact, we are certain that there will be a reduction in the freight, providing that a harbour is made, so that the vessels can enter the rivers at the same time. I quite anticipate a reduction of 25 per cent. in the freights. I am mentioning that incidentally, to show that a man living 50 miles out from here could compete successfully with a man at Tumut.
4114. Is it a fact that you can only produce less than a ton to the acre here? I produced and stacked 3 tons to the acre the other day, but I am giving what I consider the minimum for the whole of the land available for agriculture.
4115. If you can grow 3 tons an acre on the river, will there be any inducement for people to go to Myrtle Creek to grow 1 ton? Yes; here we have to pay 30s. an acre for the land.
4116. Is it your chief desire to have this railway so that a population may settle on the land? There are many desires. We consider that we are entitled to communication with the people to the south. We also think that the Government should make provision for absorbing the population that is growing up. They will have to go somewhere—they are going somewhere.
4117. Are not many parts of the country here richer than the land between Grafton to Casino? Yes.
4118. Would it not be much more desirable to settle people on the rich land than on the poor land? I think the land is pretty well alienated, excepting in the reserves, which are locked up.
4119. The lands now reserved will eventually no doubt be thrown open? They may be, but there are lots of people ready to take up the land.
4120. Are you aware that next year all the eastern leases will fall in, and all the land will be open for selection? Yes.
4121. Do not some of these leasehold areas contain superior land to that between Grafton and Casino? Probably they do.
4122. Would it not be more desirable to carry the railway into that neighbourhood rather than into this comparatively poor country? It is desirable to carry it there, but it is more desirable to carry it here.
4123. Is it not more desirable to save our money and to carry the railway to good country than to try to induce people to settle on comparatively poor country? It may be desirable certainly; but I think it is desirable to develop all this land.
4124. But the rich first, I suppose? I would select between here and Myrtle Creek if I could.
4125. If the line were merely for the purpose of connecting the two rivers, the proper route would not be between Casino and Grafton, but where the rivers are much nearer each other—say between Coraki and Lawrence? Quite so—between Chatsworth and Woodburn, and direct on through the big scrub to the Tweed, missing Byron Bay; that is the true policy; there is no doubt about it, if you wish to get where the population is.
4126. Do you think a sufficient quantity of produce would be grown between Grafton and Casino to warrant the expenditure of the large sum of money that it would take to construct a railway? Yes, I do; together with the increased passenger traffic that would take place. The increased passenger traffic over and above what we have now would be considerable.
4127. Do you think that the timber trade would develop to any extent? I do. We have an enormous timber trade here, and my experience as one who carries timber, and knows something about it, is that the timber alone will warrant the creation of facilities for carrying it. It is developing into a large industry here, and giving employment to hundreds of people. The cutting down of the timber is the first question towards clearing the land, and it could not all be carried by dray. I do not think that these lands should be alienated until after the construction of the line, as otherwise they might be taken up for the purpose of speculation and not for the purpose of settlement.
4128. Is it a fact that a very large amount of valuable timber is now destroyed when men take up land for selection, simply because they have no means of getting it away? That is a fact. There has been more timber burnt on the Clarence than has been sold, and the same thing is being repeated every day. I consider that between here and Casino there is probably some of the finest hardwood in Australia. It may be excelled in the south, but not by much.

Hamilton Fisher, Esq., licensed surveyor, sworn, and examined:—

4129. *Mr. Lee.*] You are a licensed surveyor, residing in the Clarence district? Yes; I reside in Grafton. H. Fisher,  
Esq.  
30 Nov., 1883.
4130. How long have you been here? Seventeen years.
4131. Have you had much to do with the survey of lands since you have been here? I have been continually engaged since I have been here in measuring Crown lands.
4132. Within the immediate district of the Clarence, and outside it? In the Clarence, Richmond, and Tweed districts, and nearly down to the Macleay.
4133. Do you know anything of the route of the proposed railway? Yes; I know the line well between here and Casino, and I may say right through to the Tweed.
4134. What is the quality of the land through which it passes? The whole of the land between here and Casino is suitable for settlement, and I believe every inch of it would be bought at once if the railway were constructed.
4135. *Mr. Cox.*] For how far on each side of the line? Within 7 or 8 miles on each side.
4136. *Mr. Lee.*] For what class of settlement is the land adapted? Chiefly for agricultural settlement.
4137. What would be grown? Nearly the whole of the land is suitable for growing oaten hay, fruit, and vegetables, *i.e.*, potatoes, &c., also tobacco.
4138. Is it suitable for maize or sugar-cane? No, excepting in limited areas. There is no land at all suitable for sugar-cane, but there is a limited area of land suitable for maize-growing.

- H. Fisher,  
Esq.  
30 Nov., 1889.
4139. Some of this land would lie close to the Clarence River? None of it would lie close to the Clarence River, but some of it would lie close to the Richmond River. I am speaking of land away from the immediate vicinity of Grafton.
4140. Not yet alienated? Yes. From within 8 miles of Grafton to Deep Creek.
4141. Would any of the produce raised there find its way to the river for transit? No. Between the surveyed line and the river, for a long distance, the country is intersected by numerous deep and wide swamps, across which it would be very expensive to construct good roads, and several such roads would have to be made to bring the produce within 15 miles of the river.
4142. Not any of it? No. I think it would all go by road either one way or the other.
4143. Some to the Richmond and some to the Clarence? Exactly; according to the distance.
4144. Is there any better land than that which the line passes lying either to the west or east of the route between here and Casino? Only on the river bank.
4145. Would it be possible to divert the line in any way so as to get into a better class of country? No.
4146. *Chairman.*] Is the country through which the line runs a fair sample of that 8 or 10 miles on each side of it? Yes. The line passes over the main water-courses, on which the best lands are to be found, in such a way that only a very small portion of the best land can be seen. The main road between Grafton and Casino, or rather, between Grafton and Deep Creek, passes over the very worst of the land.
4147. *Mr. Lee.*] And you think it would be settled if opportunities were given to people to get produce to market from there? I am quite sure that the whole of it would be settled.
4148. Are you a land owner? No; I have not any land in the district only a small indirect interest.
4149. You are not personally interested in any land along the proposed route? Certainly. I am personally interested as much as every other man in the district, but I have no landed interest outside the town.
4150. Is there anything else you would like to tell the Committee? I should like to invite your attention to some land in the district which, though of much poorer quality than most of the land along the railway line, has been brought under cultivation.
4151. Where is it situated? Well, take that piece of country now called New Italy, between Chatsworth and Woodburn. Before it was taken up and successfully cultivated, we always looked upon it as the poorest land in the district. It is white pipe-clay soil, covered with the heaviest timber, but it has been successfully cultivated for some years. If that land could be cultivated, I am sure this could.
4152. *Chairman.*] Do you think a farmer could live under the same conditions as those under which the Italians are living? I do not think that they live under uncomfortable conditions.
4153. Have you read Clifford's description of New Italy? No, I have not.
4154. What do they produce there? Fruit in large quantities. They have beautiful vineyards. There is no doubt that the land is very inferior to that on the railway lines.
4155. Is the vine cultivated to any extent on the Clarence? Yes, it is, to a considerable extent.
4156. Is any wine made? Yes. I do not know in what quantity; but there are several wine-making establishments.
4157. The chief products of the river at the present time are cane and maize? Yes.
4158. But the soil is capable of producing many other things? Yes.
4159. Is tobacco grown in any quantity? No.
4160. Cane and maize are cultivated at the present time, because they yield the best crop, I presume? They are cultivated because they grow on the very richest soil. The reason that the second class quality land is not cultivated is, that it does not pay to cultivate it, because the means of communication with a market are bad. If there were reasonable means of communication with a market, land of an inferior quality could be successfully cultivated.
4161. At about what distance do the lands of which you are now speaking lie back from the river? Some of them are 20 miles from the river.
4162. Down the river from Grafton? Mostly in to the river. The geological nature of the country prevents the making of good roads. It would cost an enormous sum to make a good macadamized road over the sandstone formation between here and Casino. I do not think that I can add anything to Mr. Donaldson's estimate of the value of the land. You asked one or two of the witnesses whether they had looked upon the line merely as a connection between two rivers. It has never been so looked upon.
4163. How do you look upon it? I look upon it as a section of the coast line. If you want to connect the two rivers, you would go across from Woodburn to Iluka—the line surveyed and recommended years ago. You would not have to come up here.
4164. *Mr. Cox.*] Have you ever been to New Italy? Yes, frequently; both before and since the land was taken up.
4165. Do the people make a living off the land? I am not aware whether they do now. They certainly did not when they took it up first.
4166. How long have they been there? Six or seven years, or more perhaps. They were the remnant of the Marquis de Ray's expedition.
4167. Do you know what area they occupy—some 3,000 acres? About that.
4168. Do you know the number of Italians settled there? About thirty families.
4169. Do you know whether they could subsist there without help from outside? I believe that they are making homes for themselves, to live there altogether on the land.
4170. Do you think it at all likely that they will be able to support themselves on the products of the land? I think so, judging from what I have seen.
4171. Are you aware that a large number are now employed in cutting timber? I have no doubt that there are.
4172. Are you aware that a large number are also employed in the sugar works on the river? They always have been, since they went there.
4173. Consequently they only make the land their home? There is no doubt that if they can get better wages by working at the sugar mills during the season they will do so, but from what I could see of the land, going over it, I think they could live off it if they chose.\*
- 4174.

\* NOTE (on revision):—No Crown land in a state of nature in this district is capable of supporting anybody, hence people without capital who settle upon the lands are compelled to earn a living for some years outside their homesteads. The men who settled New Italy were practically penniless, and their efforts have been apparently directed towards the creation of orchards and vineyards, which must necessarily take some years before becoming capable of supporting families. The Italian women also work much more in the field than is usual with Australian women of British extraction, thus enabling the men to absent themselves to a greater extent.

4174. Do you think an Englishman could live on the products of that land? I do not see why he could not. H. Fisher,  
Esq.
4175. Are you aware that these people, as a rule, never taste meat? I do not know that they are the worse off for that. Some of the men are fine, healthy, strong-looking fellows—you cannot take exception to their appearance. 30 Nov., 1889.
4176. I suppose they live well when they are working for wages? I think they live well in their own places too.
4177. You would justify the taking of railways into poor country because this is an instance of poor country being made profitable? I did not say poor country—I said it was land of second class quality. The land about here is of the richest quality.
4178. Is all the richest land in the district taken up. Are there 1,000 acres of rich land still to be taken up, or is it all alienated? No, certainly not.
4179. Then why do you try to induce settlement upon the poorer land when there is a large quantity of rich land still to be taken up? We do not contend that the line is to be made to induce settlement only.
4180. Then in the event of the north coast line not being made it would not be worth while to make a line from Grafton to Casino? Certainly not. Even if the north coast line were not made, there would be sufficient settlement along this line to pay for it. The section of the line between Grafton and Casino is much less expensive than that between Casino and the Tweed, and the difference in the cost of construction should be allowed for in estimating the interest and working expenses. The line is only a section of the line from Morpeth to the Tweed.
4181. What could be produced on the land 10 miles on each side of the line—an area of about 250,000 acres—that would warrant the expenditure of some hundreds of thousands of pounds, and an annual cost of £40,000 or £50,000? It would not only be for the settlement immediately along the line. The construction of a railway would bring other land within touch of a market. I believe it is generally estimated that it will pay to carry produce by road for 10 or 15 miles, according to the state of the road.
4182. Is all the land within 15 miles of the Clarence taken up? No, not all.
4183. Why is it not taken up, if persons could make it pay within 15 miles from good carriage? I did not say that they could make any land pay.
4184. Is this land so utterly bad that no person could take it up? Some of the land within 15 miles of the town is quite worthless for agricultural purposes.
4185. We are not only speaking of agriculture—you say that for general purposes the land could be made available within 15 miles of a railway or river? Agricultural land.
4186. Is all the land between Grafton and Casino agricultural land? The greater part of it is suitable for agriculture.
4187. Is the land between this and the Flying Horse suitable for agriculture? That is about the worst bit of country that we have, but even along there you will find a good deal of good land. There are patches of good land on the Saltwater Creek. There is a good piece of land on Sandy Creek, and there are several odd patches of good land even along that very bad piece of country.
4188. Do you think that within the next ten years there will be a sufficient population and sufficient produce grown to pay the working expenses of the railway here? That I am not able to answer.
4189. The Committee could not recommend the expenditure of money on a railway unless they saw a fair prospect of the railway paying—not perhaps in the immediate, but in the near future? Exactly. All I can say is that the land would be taken up or sold, and a large proportion of it made productive. Whether there will be sufficient revenue produced to pay for the line it is quite impossible for me to say.

Mr. John Bede Carlton, sworn, and examined:—

4190. *Chairman.*] Where do you reside? Near Brushgrove, on the Clarence River.
4191. What do you desire to tell the Committee? I wish to point out the benefit that would be derived from the construction of a line from the Tweed to Grafton, to form part of the coast railway at some future date. Mr.  
J. B. Carlton.  
30 Nov., 1889.
4192. It would give a greatly increased value to the land held in the district? No doubt; and it would increase the value of the unalienated land too.
4193. To what extent would it increase the value of private land? I am not prepared to say.
4194. It would not be of any value to settlers on the river? I think it would.
4195. In what way? It would benefit people bringing stock across from the Richmond.
4196. Would that give much traffic to the railway? In certain times of the year it would. At Ramornie there is one of the largest meat-preserving establishments in the country, and the stock used there comes from the north.
4197. Would it surprise you to learn that the Government makes nothing out of the carriage of stock? That I cannot understand. I was under the impression that stock-carrying was very profitable.
4198. You know very well that if the railway rates were increased it would have a tendency to drive stock from the railways to the road? Not in all cases. It might if grass were plentiful and the distance were short.
4199. Those are precisely the circumstances here? Yes; but you can get cattle trucked much more cheaply than you can take them by road.
4200. Have you had anything to do with the trucking of cattle? No.
4201. What is the trucking from Tenterfield to Maitland? I do not know. From Armidale to Farleigh is 12s. or 13s. per head.
4202. Do you suppose a single fat beast would be sent such a short distance as from Casino to Clarence by railway? I have known them to be sent by train a short distance.
4203. In large quantities? Yes. As a rule they generally bring their cattle from Tamworth to Armidale by train.
4204. The butchers, for the local market? Yes.
4205. Is not that only in winter? I have seen them do it in summer-time.
4206. In what other way will this line obtain revenue? It will be the means of settling people on land that is not settled now. People will take up land when they can send their produce from it to market.
4207. That is if they can get a market for the produce. We have had evidence from a gentleman here that in three years he has lost £1,000 by dairying? There are many things that people take up that they do not understand. If people have not had experience they are bound to lose. 4208.

- Mr. J. B. Carlton. 4208. Have you anything else to tell the Committee? I have nothing more. It was said, "Why will not a railway do lower down the river." I know for a fact that in flood-time a railway would not be seen here, and would be carried away.
- 30 Nov., 1889. 4209. That would be a matter for the engineers to decide? Yes; but the line would have to stand a very strong current in flood-time.
4210. *Mr. Cow.*] How far is Ramornie from here? It is 7 or 8 miles to the meat-works by land.

Thomas Bawden, Esq., ex-Mayor of Grafton, sworn, and examined:—

- T. Bawden, Esq. 4211. *Chairman.*] Have you any statement to make to the Committee? Yes. But in dealing with the questions of railway construction and harbour improvement, for many years past I have done so upon national grounds solely. My statement deals with the two questions from that standpoint, for the reason that in my opinion, shorn of localism, the two questions are inseparable, and should be considered together.
- 39 Nov., 1889. 4211½. You may make your statement in the form you have it? It is as follows:—The question of railway extension and harbour improvement in these districts being a vital one, it will probably be interesting to see what the Statistical Register says of them, the districts referred to being the electorates of the Clarence, Grafton, Richmond, Tenterfield, Glen Innes, Inverell, part of New England, and the Macleay. Those districts form the north coast tableland and north-western districts of the Colony, and all will be largely affected by the construction of the harbour improvements at the Clarence Heads, and the authorized lines thence and their extensions. The benefit will be chiefly as regards the tableland and north-western district, through their being brought into communication by the shortest means with water communication, as well as with an extensive market for the products of those districts. Besides this, the coastal line from the Macleay to the Tweed, with the line from Grafton to the west, will place the western district in direct communication with districts producing commodities which go largely into consumption in those western districts. I look upon it that the true interests of these districts lie in their being drawn together by the closest bonds of commercial unity, if not of political unity also. Hence it is that I group them together. In the first place I find that on the 31st March last the total area of land in the whole Colony is given at:—Alienated, 22,686,748 acres, and here I would remark that the term alienated only includes freeholds; it does not include conditional purchases which have not yet had the balance of purchase money paid on them; unalienated, 173,195,402 acres, or a total of 195,882,150 acres. Now, our group of districts contains in all 20,108,050 acres, of which 1,681,151 acres only are alienated, leaving 18,426,899 acres still the property of the Crown—that is to say, a little under 1-10th (about 9·7) of the area of the whole Colony is comprised within these districts. Of the alienated land, the proportion as to the whole Colony is nearly 13·5. The area of land under cultivation in the whole Colony is 994,679 acres; in these districts only 150,158 acres are under cultivation, although there is no better agricultural land in the world for the growth of cereals than those vast areas on the tableland and western slopes. The distribution of that cultivation is given as follows, in the respective electorates, indicating that all that is required is means of communication with a market to ensure a much larger area being brought under cultivation, as those districts most convenient to water carriage show the largest areas under cultivation:—The Clarence, 23,956 acres; Glen Innes, 8,333 acres; Grafton, 13,392 acres; Inverell, 12,815 acres; Macleay, 32,446 acres; half New England, 8,028; The Richmond, 47,016 acres; Tenterfield, 4,172 acres. Now, taking the principal crops, the acreage of the whole Colony under wheat is 407,641; maize, 171,093; oats, 93,423; potatoes, 15,419. Of the above districts it is—wheat, 10,484; maize, 73,602; oats, 8,845; potatoes, 2,663. The produce of the Colony being—wheat, 1,450,503 bushels; maize, 4,910,404 bushels; oats, 109,931 bushels; potatoes, 36,839 tons. The produce of these districts being—wheat, 54,257 bushels; maize, 2,396,943 bushels; oats, 32,533 bushels; potatoes, 6,456 tons. Taking the districts in detail, results show some very interesting facts in support of the railway construction contention. First, as regards the acreage of the chief crops:—

	Wheat.	Maize.	Oats.	Sugar-cane.	Potatoes.
	Bushels.	Bushels.	Bushels.	Tons.	Tons.
The Clarence .....	1	17,499	51	6,000	197
Glen Innes .....	1,974	1,431	3,321	.....	523
Grafton .....	9	11,361	294	275	557
Inverell .....	4,716	4,432	812	.....	189
New England .....	2,812	768	2,940	.....	569
Macleay .....	.....	24,626	58	165	102
Richmond .....	25	11,323	605	8,835	224
Tenterfield .....	947	1,662	764	.....	297
Totals.....	10,484	73,602	8,845	15,275	2,663

The produce of the acreage above given in crop was as follows:—

	Wheat.	Maize.	Oats.	Sugar-cane.	Potatoes.
	Bushels.	Bushels.	Bushels.	Tons.	Tons.
The Clarence .....	.....	588,421	.....	27,764	489

Another

T. Bowden,  
Esq.  
30 Nov., 1889..

Another important indication of the necessity for providing facilities for reaching markets not now available lies in the extent of the holdings. Contiguity to or readiness of access to markets brings increase of settlement, the bursting up of large holdings, and the increase of production, through the land being more carefully cultivated. The average acreage of the holdings in the Colony, from one acre upwards, is 853. The average holdings in these districts are—the Clarence, 133; Glen Innes, 752; Grafton, 237; Inverell, 643; Macleay, 169; New England, 464; Richmond, 318; Tenterfield, 335;—proof here, I submit, that the Clarence, Grafton, and the Macleay, by reason of their facilities for export by water-carriage, have an advantage, and that if the other districts were brought into communication with them the average areas of the holdings would speedily be cut down by reason of the demand for land. Not only this, but large quantities of the unalienated land would be taken up. These are points that should not be overlooked. Leaving the subject of agriculture, I come to that of live-stock, and I find that our grouped districts possess 51,461 horses, 342,301 horned cattle, 1,077,860 sheep, and 28,956 pigs. The figures given are taken entirely from the official statistics, and should be convincing to the sceptical of the vast importance of these districts even at the present time, an importance which I submit more than justifies the construction of railways, even now, as a commercial undertaking. But what shall be said of the result of railways leading to the natural ports of those districts in serving to promote settlement in what, notwithstanding present production, is literally a waste. The population of the districts I have grouped together numbers, roundly, 120,000 souls. The prosperity or non-prosperity of whom must reflect beneficially or injuriously upon the whole people. But what shall be said of the population these districts are capable of sustaining. I believe that following the speedy construction of the lines of railway advocated, in these districts, within the space of fifteen years after their completion, the population will be far nearer one million than 120,000. I also propose to append to my evidence some statistical figures taken by myself from the Statistical Register for 1888.

4212. You also hand in a map illustrating your statement? Yes, showing the scheme that I advocate.

4213. The statistics you hand in are true extracts from the Statistical Register? Yes.

4214. In the statistics which you have handed in, showing the alienated and unalienated land, you have carried into the column of the unalienated land the conditional purchases and conditional leases? Yes.

4215. And you say that Mr. Coghlan has done the same in the Statistical Register? Yes.

4216. So as to show the true quantity of unalienated land the conditional purchases in the various counties should be deducted? From what appears here as unalienated.

4217. Do you know the country between Grafton and Casino? Yes.

4218. Do you know it further north between Lismore, Byron Bay, the Brunswick and the Tweed? I know it to the Brunswick and to the Tweed, but I have never been to Byron Bay. I have never been off the road.

4219. There is a great deal of good country all along there? Yes, I am aware of that.

4220. Rough, but good; with an extraordinary rainfall? Yes.

4221. The country between Casino and Grafton is more a grazing country than an agricultural country? Yes. The land at the other end is covered with a dense scrub. There is no grass at all upon it, except where the timber has been felled.

4222. But a few miles this side of Casino there is fairly good dairying land, is there not? Yes.

4223. Do you, as a resident of Grafton, really think that there will be any settlement on the land between Grafton and Casino to pay the interest and working expenses of the line of railway? I do. I would like to explain that when I speak of working expenses I consider that the State should provide facilities for settlement, and they should not immediately look to the railway itself for both interest and working expenses. The life of a railway is a very long one, and that should be extended to those who use it after the present generation.

4224. But the life of interest is not so long—it has to be paid yearly? No; but the life of debt is; and the State should look to the increased production from a railway. I think railways should precede settlement.

4225. The object of railways is either to produce settlement or to help settlement; here there would be no justification for helping settlement? No; but there would be for my scheme as a whole.

4226. Apart from your scheme, there would be no justification for the construction of this railway at the present time? I would not go so far as to say that.

4227. Do you think there is the slightest prospect of the line paying interest and working expenses during the next ten years—£51,000? I do not think that the interest upon this section of the railway would amount to that.

4228. Why? Because I understand from the railway engineers that this part of the line could be constructed for £6,000 per mile, and I do not think that it is right to charge this end for the expensive portions of the line. Instead of the line having to pay £50,000 it would probably only have to pay £25,000.

4229. Do you think a railway will produce settlement in the next ten years to pay interest and working expenses? Yes. I think the timber forests on the line should be largely utilized in making it.

4230. Do you know that the working expenses are likely to be more than the estimate that I have given you, because if the line is not connected with the main system of railways there will have to be independent workshops? I am aware of that, but I hope that it will be connected as I advocate.

4231. Which connection do you advocate? That from here direct west.

4232. To Glen Innes? Yes; as the shortest distance to get to the present railway system.

4233. Do you know what is the best grade that they have been able to get on that line? The heaviest grade is 1 in 40. In my calculation of the passenger traffic on the line between here and the Richmond, which was a very rough one, I estimated that in the very early stages of its existence the line would produce £6,000 a year. There are pretty close on 6,000 passengers a year travelling across by the very inconvenient mode of communication that exists at present—some coming from Sydney and some from other parts of the country.

4234. But assuming that the Richmond entrance is made as good as this, if not superior to it, what would bring passengers here at all? I think people will come here then from other parts of the country. They would prefer travelling by land to travelling by sea, even if you made the harbour good. Of course I speak always in view of my complete scheme.

4235. The interest and working expenses for the whole 40 miles of line will be £120,960;—do you not think

T. Bawden,  
Esq.  
30 Nov., 1889.

think that a great deal of produce which would be sent along the railway would be sent along the rivers if their entrances were made good? I consider that between the rivers the railway will act as feeder to the rivers, and will induce a settlement between the rivers that could not otherwise exist, while adding to the trade on the rivers. I do not anticipate that any produce will be sent from one river to another, neither do I look forward to the time when produce will be taken from here to Sydney by rail. It would be too expensive to do that; but I think produce would be conveyed to the table-land by rail from the Tweed and from the Macleay.

4236. *Mr. Cox.*] Nature has behaved very unfairly to the coast districts by placing a terrible difficulty in the way of communication with the table-land? Yes.

4237. What would be the great traffic between the table-land here and the coast? I think that a great deal of the merchandize required by the settlers on the table-land would go up from the nearest port, and I think the agricultural lands on the table-land would be developed by a short line to the coast. We, in these coast districts, have to import all our breadstuffs. I am not a believer in growing wheat here, and I look to the table-lands of New England as the place from which to get our breadstuffs. Not only will we get them from there but the whole Colony could also be supplied from the same locality.

4238. Little or none comes down from there now? None, and very little other trade is done between the table-land and coast districts, owing to the differential rates. They appear to have been established to cut the throat of this district.

4239. Which takes the greater amount of traffic—the road between Grafton and Glen Innes, or the road between Lawrence and Tenterfield? I think the road between Grafton and Glen Innes. Some years ago it had the trade altogether. I have not been acquainted with the trade on either road for the last few years.

4240. There are two sources from which trade goes to Tenterfield—the Richmond and the Clarence. A large amount goes from Lawrence? I do not believe any trade in the shape of merchandize or produce goes to the Richmond. I believe an attempt was made a short time ago when the Fairfield diggings broke out to establish a trade between Coraki and Fairfield, but I do not think that it succeeded.

4241. Do you know anything of New Italy? I have never been there, but I know the character of the country. I have been very close to it. It is 17 miles off the surveyed line to Casino. I know something about the habits of the people there and that sort of thing.

4242. Do you think it is desirable to encourage population to settle on poor land rather than on rich land? I think that wherever there is land available for settlement facilities for communication with a port should be given by the State. There may be reasons for people settling down close to the present population instead of going a distance away. The settlement along the line from here to Casino is either by families already established in the district, who do not like to go very far from their old homes, or by people coming here from other districts. I know of a man the other day selecting land at Myrtle Creek, when he might have gone to the Orara, and got much richer land—land of a different description, scrub land.

4243. Did he go to Myrtle Creek in the hope that a railway would be made there? I do not think so. That may have influenced him to some extent, but there is a hope of a railway going towards the Macleay.

4244. What would be grown between Grafton and Casino? I think hay and fruit principally, and dairying would be carried on to a limited extent.

4245. Why do you suppose that the land is so suitable for the growth of hay? We grow very little hay in this district—we import most of our hay, because the land under cultivation is too valuable to grow it. It pays the people better to use it for growing other crops, such as maize. If this poorer land were thrown open, and hay grown there to a large extent we should be enabled, when the entrance to the river was improved, so that larger vessels could come up, making a reduction in freights, to send hay to Sydney and sell it at a profit.

4246. Are there not large areas of land in the vicinity of the river suitable for hay growing? There is not very much of it.

4247. Why is the land not suitable? It is rather too rich.

4248. But adjoining the alluvial flats on the river? I do not think they are suitable. The back lands are generally too swampy.

4249. Is not that the case with a great deal of the land between Grafton and Casino? I do not think so, not if it is cultivated; it generally gets too dry, I fancy.

4250. Is not the Wooroowoolgen land very wet? It is wet in wet seasons.

4251. Would it be suitable for the cultivation of hay? I think it would be if it were cleared; it might require a little draining.

4252. Could the land be drained sufficiently well to be put under cultivation? I think sufficient fall could be obtained.

4253. *Chairman.*] Do you know Mr. Darley, the Engineer-in-Chief for Harbours and Rivers? Yes.

4254. He said that this land is some of the poorest country in Australia? I do not think that Mr. Darley knows anything about land, though he may be a very good engineer.

4255. We have heard the land between the Flying Horse and Lawrence spoken of as good grazing land? I think it is too heavily timbered to be good grazing land.

4256. Have you ever seen good grazing lands growing ironbark and gum? Yes, I have.

4257. Where? On the Darling Downs, and I have seen it on the head of the Richmond River.

4258. You have resided in the district a great number of years? Yes, rather over forty-nine years.

4259. And at one time represented the Clarence in the Legislative Assembly? Yes.

4260. You have had ample opportunity of seeing the progress of all the northern districts? Yes.

4261. Has the development of these districts gone on very rapidly during the last ten years? Yes.

4262. More so than in other parts of the Colony? I believe so.

4263. Has the production developed in proportion to that in other parts of the country, or to a greater extent? I think to a greater extent.

4264. After your long experience of the district you have come to the conclusion that a railway here would not serve the district sufficiently? Not unless a connection were made.

4265. Of the two you favour a connection with the table-land of New England? Yes.

4266. You are strongly of opinion that an outlet for the west would do more to develop the resources of this great country than the coastal railway would do? Certainly. My opinion is that there should be a coastal

T. Bawden,  
Esq.  
30 Nov., 1889.

coastal railway from the Macleay to the Tweed; and a connection with central New England and the country further west. That would do more to develop the resources of the district and settle people on the land than anything else, accompanied of course with the improvement of our harbours.

4267. The production of maize on the Clarence is something enormous? Yes. That would go by water to Sydney at 12s. 6d. per ton.

4268. What would it cost to take it by train 300 miles? It would come under class A and cost £1 1s. 10d.

4269. We have been informed to-day by a ship-owner that if the Clarence heads were improved the rate of freight would probably be reduced? I think so. Some time ago when there was a brisk competition between the steam companies maize was carried at 6d. a bag, and with larger steamers it could be carried at that now.

4270. Consequently very little of that could be expected to go by rail? Very little. It would always go by water.

4271. You deal with this railway question as a whole? Exactly. I have never looked at it as a local question.

4272. You are probably willing to admit that there are sections that will not pay? That is very likely, if they are taken alone.

4273. You know that the annual cost of the railway would be very large? Yes.

4274. Do you think there is any prospect of its giving a reasonable return? I believe so, within five or six years, because I think that the vast estates on the Richmond will be broken up, and a large number of families settled there.

4275. You can take no account of the traffic in maize, which is a very large item in the produce at the present time? Yes. But I think that it is very likely that the people residing on the rich brush lands between Lismore and the Tweed may require maize, and if they follow up dairying pursuits they will also require fodder.

4276. Is there any other source from which the railway might obtain freight? I think a large income would be derived from timber. That magnificent forest between Sandy Creek and Myrtle Creek should, I think, in the interests of the State, be carefully tended, and no trees in the reserve sold unless they were properly matured, and a good price got for them. The consumption of timber in the Clarence district is very nearly 1,000,000 feet annually. To bring that here now costs 4s. 6d. per 100 feet, but to bring it by rail it would not cost more than 1s. 9d. or 2s.

4277. *Chairman.*] There is no doubt whatever, that if there were railway communication between this part of the Colony and the table-land of New England, there would be an absolute interchange of commodities, because you grow here what they do not grow there, and they produce there very largely what you want down here? Yes.

4278. So that, instead of the market for maize being limited to Sydney, you would have the whole of that north-western country for a market? Yes.

4279. Do you think that the farmers here would grow lucerne to any extent if they had a market? Yes.

4280. It grows very well here? Yes.

4281. Do you know what the yield is? I cannot say.

4282. It is not largely cultivated, owing to the absence of a market? A few persons grow lucerne, but only for local requirements, because the freight in the present steamers is too high to allow them to send it to Sydney, and we have no back market. The connection with the table-land would give us a market, and relieve the Sydney market.

4283. It would give you a larger market, and almost a monopoly of the north-western market? I think it would. I think we could deliver it more cheaply there than we could from any other part of the Colony. I have just learned from a reliable authority that the trade on the Glen Innes Road is four times that on the road to Tenterfield, and 60 bales of wool came in yesterday from Glen Innes. I hand in a return showing the railway merchandise rates in comparison between Tenterfield, Glen Innes, Inverell, and Armidale on the one hand, and the respective ports of Sydney, Brisbane, Grafton, Newcastle, and Byron Bay on the other.

Herbert Valentine Haynes, Esq., licensed surveyor, sworn, and examined:—

4284. *Chairman.*] Are you a licensed surveyor? Yes.

4285. In the district of Grafton? In that part of the district traversed by the railway from Grafton to the watershed between the Clarence and Richmond Rivers.

4286. You are working under the District Surveyor? I am.

4287. What evidence have you to give us that has not already been given by the District Surveyor? Well, the evidence that could be brought forward with reference to this railway is so extensive, that I very much doubt whether anyone could give it all. One of the Committee referred just now to the unkindness of nature to this district, because we are so isolated. We are so cut off that we may be regarded as a colony within a colony; but whereas a colony has the advantage of managing its own affairs, and of spending the proceeds of its land upon itself, we are debarred that privilege. If this part of the Colony had had the disposing of things here, it would have undoubtedly constructed railways. We claim—at least I claim—and I am sure I am speaking the mind of all the residents here—that we have a right to a railway.

4288. We are not discussing your right, or what you would do if you were a separate colony. We want you to give us what information you can with regard to the railway from Grafton to the Tweed? I know the district very well, having traversed it in many directions, and I am also well acquainted with other parts of the Colony, such as Bathurst, Orange, Molong, and Sydney, with which this favourably compares. It has been said that because the land here is comparatively poor, the railway should not be constructed, but I desire to point out that it is sometimes an advantage to have a railway constructed on poor rather than on rich land. Sydney was founded in poor country, and as a consequence the people had to push out early until they found better. Now, if we had a railway across the poor country here the people having first settled that, will push out further and find the rich. It is quite a mistake to suppose that there is no rich country between this and Casino. I know Saltwater Creek very well, having been instructed by the Government to survey and report upon it. It is the creek draining the greater part of the country within the Grafton district through which the railway will pass.

H. V. Haynes,  
Esq.  
30 Nov., 1889.

- H. V. Haynes, Esq. 4289. *Mr. Cox.*] How far is it navigable? It is navigable for about half way between Saltwater Bridge and the Clarence River.
4290. *Chairman.*] How many miles? I suppose 7 or 8.
- 30 Nov., 1889. 4291. They do not want a railway there if it is navigable for that distance? It is navigable for small craft.
4292. How many thousand acres of agricultural land are there on the banks of that creek? I suppose there are 6 or 7 miles on both sides of the creek frontage.
4293. How many thousand acres? About 14 square miles of agricultural land.
4294. That is 7 miles fronting the river and a mile wide? Yes. That is taking the average. Of course it would be impossible to find one block of that area, but, taking one piece here and another there, I have no hesitation in saying that there would be as much.
4295. How much of this land has been taken up? It is now, I believe, within a leasehold area, and none of it has been taken up—an argument why a railway should be constructed.
4296. How far is that from here? It varies from about 16 to 23 or 24 miles.
4297. How far is it from Lawrence? About 17 miles.
4298. Does it run into Broadwater? No. It runs into the Clarence, just below Lawrence.
4299. It is navigable 7 miles up from Lawrence, so that they would only have about 7 miles of haulage for a railway;—is that a justification for spending £733,000? I am not aware that because there is a river to which produce could be brought it proves that produce would not be brought to a railway. It might be brought to a railway when it was not brought to a river.
4300. Is not water carriage cheaper than train carriage? It may be cheaper.
4301. If a railway were constructed it would be to bring produce to market? To bring it ultimately to some market. If a railway were constructed, there would be a larger local market available than there is at present. With regard to the comparison of distance between Lawrence and Grafton, I think it is an undoubted fact that the chief settlement on a river, and I have witnessed a great many in this Colony and in other parts of the world, is at the head of navigation;—such is the case, for instance, on the Thames, and on the Hooghley.
4302. Can you give us any evidence showing a reason for the construction of the line, and the possibility of its paying working expenses? I have a piece of land myself which came into my hands about four years ago which is very similar to the land that will be traversed by the proposed railway. At that time it was grazing land, but I have grown many varied and profitable crops upon it. I have grown potatoes, turnips, carrots, parsnips, vetches, beans, mustard, chicory, hay, sugar-beet; besides rearing pigs and poultry.
4303. Do you know the North Shore? Yes.
4304. Well, I have grown everything there that you have mentioned, with the exception of chicory? This country is better than that of North Shore.
4305. What area have you? About 40 acres.
4306. How much profit have you made by growing these articles? Enough to pay a man and his keep.
4307. How much was that? About £70 a year, but then only a small part of the land was under cultivation—not more than about 18 acres was under cultivation.
4308. How many loads of manure did you put on it? I put none on it.
4309. Has the land a water frontage? It has.
4310. To what creek? To the Clarence River.

Mr. John Henry Munro, stock and station agent, sworn, and examined:—

- Mr. J. H. Munro. 4311. *Chairman.*] What is your business? I am a stock and station agent.
- 30 Nov., 1889. 4312. You have been residing in Grafton for a long time? Yes, sixteen or seventeen years.
4313. Would you tell the Committee what you want them to know? I could confirm a great deal of the evidence that you have heard to-day, but it struck me that one matter has been omitted with regard to the return from the railway. I think it has been calculated that the profit to the revenue is something like £3 a head for each individual. I think there is very little doubt that there would be a population between here and Casino within 5 or 10 miles of the line of 5,000 people, and that should be taken into consideration when the revenue of the railway is spoken of.
4314. Would you apply the whole of that £15,000 to the reduction of the annual cost of the railway? Certainly not; but a great proportion of it. But if these 5,000 people were there, in the nature of things they would increase, and consequently the revenue would increase with them—that is the only point that I think has been omitted.
4315. *Mr. Cox.*] No doubt the very fact of a railway being constructed through a piece of country tends very materially to the development of that country, and the settlement of people upon it? There can be no question about that.
4316. Is there anything else to warrant the taking of the line in this direction, when we know that in other portions of the country there are lands of a superior quality? If this is to be a main line I see no other direction which it can take.
4317. You only look on this line as being desirable in the event of a north coast line being constructed? Yes, and a line to the table-land.
4318. You would not advocate the expenditure of this large sum of money merely to make a line from Grafton to Casino? If it were not for a future connection I should not advocate a line between here and the Tweed. I have had something like twenty years' residence in the western district, and I think I know it as well as any one in the country. I have resided in the Gwydir and Barwon districts, and I think that if a line were taken from here to the table-land, it would develop those districts as well as these on the coast.
4319. Do you advocate a line between Grafton and Casino, in the hope that in the future it will be extended to Tenterfield? No. I do not think that Tenterfield is the centre of New England, or that a line there would meet the wants of the people of New England.
4320. Your reason for advocating this line is, that it should be a great coast line from south to north, eventually connecting with the table-land? With the central table-land.

4321. It would be of far more importance to you to be connected with the northern system than with the southern? I believe so; but there is a great deal of rich land unoccupied to the south, between here and Macleay.

Mr. J. H.  
Munro.

4322. If we spend immense sums of money to construct ports, do you not think that it would be better to take the railway to those ports instead of to Sydney? I am certain of it.

30 Nov., 1889.

---

Samuel See, Esq., sworn, and further examined:—

4323. *Witness.*] I should like to supplement my evidence. I wish to inform the Committee about something which I have a little delicacy in speaking, inasmuch as I am interested in it, and that is a coal-seam within 22 miles of Grafton up the river—I think 8 or 9 miles from the river.

S. See, Esq.

4324. *Chairman.*] How far have you proved it? I have gone down to 75 feet in depth from the top, and I have struck a seam 46 feet from the surface, of 8 feet.

30 Nov., 1889.

4325. Clean? Good coal. I have had sections of it exhibited in Grafton. There is an 8-ft. seam, a 4-ft. seam, a seam 4 ft. 6 in., and another 3 ft. 6 in.

4326. Has Mr. Wilkinson reported on it? Mr. Wilkinson has inspected it. He has not reported upon it officially.

4327. Have you had an analysis made? Yes.

4328. Have you got it with you? No. Dr. Robinson has seen the sections I have sent away, and has pronounced them excellent. I have engaged him to visit the district. I have spent something like £8,000 over it.

4329. When Mr. Wilkinson saw the mine how deep was it? I had not got these seams.

4330. It was only an outcrop that he saw? No. I had driven to get shale, and discovered the coal.

4331. Dr. Robinson has not seen it yet? He has seen the section. Mr. Wilkinson has not seen the larger seam, but he directed that certain works should be done where it would be found. He also informed me that there was a coal-measure underlying Grafton at a depth of 600 or 700 feet.

## C

## STATISTICS OF TRADE AT THE TWEED RIVER.

Sir, I have the honor to forward herewith, at the request of the Chairman of the Sectional Public Works Committee, some statistics relating to the trade outwards from the Tweed River. As, at the time of the visit of the Committee to the Tweed Heads, I was suffering from an affection of the throat, which precluded me from speaking, except in a low tone, I trust my evidence, with the addition of the enclosed memoranda, will be found to be satisfactory.

Customs, Tweed River Heads, 10 December, 1889.

I have, &c.,

EDWARD OSLER,  
Sub-Collector.

To the Secretary, Public Works Committee, Sydney.

In 1880—Vessels outwards, 49 sailing and steam = 5,062 tons register, including 922 tons in ballast.  
In 1881—Outwards = 5,434 tons, including 1,881 tons in ballast.  
In 1882—Outwards = 6,042 tons, including 360 tons in ballast.  
In 1883—Outwards = 6,500 tons, including 625 tons in ballast.  
In 1884—Outwards = 7,873 tons, including 464 tons in ballast.  
In 1885—Outwards = 10,841 tons, including 712 tons in ballast.

This tonnage in ballast is principally Colonial Sugar Co.'s steamers.

In 1886—Outwards = 12,668 tons, including 491 tons in ballast.  
In 1887—Outwards = 12,354 tons register, including 960 tons in ballast.  
In 1888—Outwards, 107 = 7,751 tons, including 276 tons in ballast.  
In 1889 (ten months)—Outwards, 90 = 6,953 tons; none in ballast.

The s.s. "Karuah," 82 tons, replaced the s.s. "Tweed," 151 tons.

The s.s. "Tweed," 151 tons, started to run the latter end of 1885, during 1886 and 1887. Was lost early in 1888.

The s.s. "Terranora" stopped running here in 1885, early.

30 November, 1889.

EDWARD OSLER,  
Sub-Collector.

## Outwards from Tweed River.

	Value.
	£ s. d.
1880—	
382 tons sugar, at £20 per ton .....	7,640 0 0
89 tons molasses, at £10 per ton .....	890 0 0
891,000 square feet timber, at £5 per M .....	4,445 0 0

8,434 bushels maize, at 2s. 6d. per bushel .....	1,054 5 0
34 bags bones, at 5s. each .....	8 8 0
31 casks tallow (say 10 tons), at £15 per ton .....	150 0 0
4 tons potatoes, at £5 .....	20 0 0
12 pigs, at £1 .....	12 0 0
2,000 lb. butter, at 1s. .....	100 0 0
564 packages sundries, at £1 .....	564 0 0
Total .....	£50,632 3 0

1889.—This has been a bad year for sugar, also no vessel carrying timber to Brisbane.

EDWARD OSLER,  
Sub-Collector  
Memos.

30 November, 1890.

## Memos. re Tweed River.

In December, 1886—s.s. "Tweed" arrived in Bay, 17th instant; came inside on 29th. Bad weather and shallow bar. Five schooners inside ready (three since December 20, two since January 1, 1887). They and the s.s. "Tweed" did not get out till January 12, 1887.

January 1, 1887—"George Thornton" in bay till 11th instant.

September, 1886—s.s. "Tweed" and two schooners in bay for seven days.

April, 1887—s.s. "Tweed" and one schooner bar-bound for twenty days; also five other schooners part of this time.

April, 1888—s.s. "Tweed" bar-bound for nine days.

During 1888 the vessels were going out often with only their registered tonnage on board instead of being always full. For instance, a 66 tons registered vessel trading here carries 90 tons when loaded, and on account of the shallow water on the bar went out with only 66 tons about.

During the past year (1889) the water has been deeper on the bar. The vessels have not been bar-bound so often nor so long; but I understand it is getting shallower again.

There are fourteen public-houses or hotels on the river, or within a mile or two of the river, and about fourteen or fifteen stores.

We have daily communication with Brisbane by coach and rail, except Sundays.

There is no trade much at present with Brisbane, and no regular communication by water, which is only 90 miles via Southport passage.

30 November, 1889.

EDWARD OSLER,  
Sub-Collector

## Outwards from Tweed River.

In 1874—Twenty-four vessels = 1,310 tons register. Smallest, 12 tons; largest, 64 tons.

In 1880, &c.—The vessels have been generally of a larger size and more trips since the establishment of the sugar-mills on the river:—s.s. "Terranora," 199 tons register; s.s. "Tweed," 151 tons register; "George Thornton," 182 tons register; "Sussex," 97 tons register; "Kent," 104 tons register; "Spurwing," 90 tons register, besides several smaller. The "Terranora," I find, has taken out over 200 tons cargo. The "George Thornton" (January, 1887) brought in 100 tons coal and took out 60,000 feet timber (cedar and beech). The vessels (steam and sail), as a rule, have taken more than their registered tonnage every trip.

In 1888—Vessels out in ballast—

	Tons.	
S.S. "Tweed," tug	32	To Sydney for repairs.
S.S. "Victoria"	20	To Richmond River, having brought salvage gear to wreck of s.s. "Tweed."
S.S. "Comet"	56	To Richmond River, brought sawn timber.
S.S. "Muriell Bell"	26	To relieving tug.
"Jonathan"	43	To Macleay River for sawn timber.
"Georgine Davis"	62	Camden Haven, brought sawn timber here.
"Maggie Taylor"	37	Camden Haven, brought sawn timber here.
Total	276	

1889—No vessels out in ballast.

30 November, 1889.

EDWARD OSLER,  
Sub-Collector.

## Outwards from the Tweed River.

In 1872—Carried in 38 vessels = 1,458 tons register. Smallest vessel, 15 tons register; largest vessel, 65 tons register.

322,000 feet cedar to Sydney.

42,672 bushels maize to Sydney and Brisbane.

145 hides to Sydney.

1 cask tallow to Sydney.

2 cases maizena to Sydney.

No record of any sugar, live stock, eggs, &c.

1875—First sugar sent from the River, 7 tons.

As sugar-cane growing increased maize seems to have decreased. Probably paid better, for in 1880 we find there were only 880 bushels sent away from the River.

In 1887 there was no maize sent away from the River. We had to get maize from Sydney or Brisbane for horse feed. During the same year we sent away 2,716 tons sugar and 389 tons molasses. There has been a large quantity of log timber going to Brisbane, but none now from this river, partly through the increased duty, partly through depression in the timber, and large importations of sawn timber from other places—some from the Nambucca River, N.S.W.

30 November, 1889.

EDWARD OSLER,  
Sub-Collector.

## D.

## LAND SELECTED IN THE TWEED RIVER DISTRICT.

Crown Lands Office, Murwillumbah, 26 November, 1889.

Sir,

Adverting to the inquiry held here by you on the 23rd instant, in reference to a proposed railway from the Clarence to the Tweed, and your personal application in connection with same for all land selected in this district during the year 1888; I have the honor to report that during such period the total amount of land applied for as conditional purchases, exclusive of any that has been disallowed, would appear from Register to be six thousand six hundred and sixty-seven acres (6,667), and that conditionally leased amounts to two thousand four hundred and forty-nine (2,449) acres.

The land taken up in 1889 up to the present date is conditional purchases 13,957 acres, and conditional leases 9,456 acres; this is also exclusive of any disallowed applications.

The Chairman Public Works Committee.

I have, &c.,  
E. A. BARRINGTON.

## [To Evidence of Mr. E. Shields.]

## F.

Sir, When I was giving evidence before you the other day I was not prepared. I intended to wait upon you on Saturday, and would have arranged my ideas accordingly, but your coming to Lawrence unexpectedly took me before I was prepared, and I forgot a few items that I deem important, and with your kind permission will supply them now.

Lawrence, 2 December, 1889.

- 1st. The route from here *via* Coraki to Byron would be a saving of 48 miles, as compared with the present surveyed route, and there will be no resumption of improved land, and very little of any kind.
- 2nd. The surveyed line comes within 8 miles of Lawrence, at a place known as the "Yellow Pinch," and from that point to Grafton by the surveyed line is 28 miles, whereas the distance between Lawrence and Grafton is 17 miles; with 8 to the Yellow Pinch makes 25 miles; here is a saving of 3 miles, and the land to be traversed the best in Australia between Lawrence and Grafton, and by the present line it is the very worst.
- 3rd. If it is objected to cross the river at Cowper, then follow the river back to Grafton; the 3 miles before stated will be saved, the train will traverse a country that will supply freight, and the terminus will be at permanent deep water.
- 4th. If Byron Bay becomes a port for foreign shipping in the future, the Clarence would be a good customer to the railway, provided the shortest possible route is taken between the two places; and you will see by looking at the map of the Colony that the route from Lawrence *via* Coraki to Byron Bay is about as direct as a sunbeam.

I will be glad if you will add the above to my evidence, which is as much upon oath, as the former portion, my object being to further the good of the Colony at large, and not any isolated spot like Lawrence or Grafton.

Yours, &amp;c.,

E. SHIELDS.

To the Chairman of the Public Works Committee.

## G.

STATEMENT READ BY MR. T. C. LODGE, TO SECTIONAL COMMITTEE AT LISMORE ON 26TH NOVEMBER, 1889.

The Australian Joint Stock Bank,  
Lismore, 20 December, 1889.

Sir, In compliance with a request made by the Sectional Committee when they were here, I now send you herewith a statement which was read to them at the inquiry held here *re* Grafton Tweed Railway on 26th ultimo.

As suggested by the Committee, the statement contains all recent available information about this electorate, and I trust it will meet the requirements of the Committee; should it not do so, I will be glad if you will kindly return it.

I have, &amp;c.,

T. C. LODGE.

The Secretary, Public Works Committee, Sydney.

I also send you for comparison original statements marked by the Chairman.—T.C.L.

In coming before you to give evidence with regard to the proposal to construct a railway from Grafton to the Tweed River *via* Lismore, I wish to place before you some reliable information with regard to the Richmond River Electoral District that will serve to indicate to you its past progress, under great disadvantages in the way of internal communication, and its future prospects under the more favourable conditions that will follow the work in view.

In the first place, I desire to mention that the Land Districts of Casino, Lismore, and the Tweed represent a total area of about 3,000,000 acres. The total area of freehold land is about 250,000 acres, of conditionally purchased land 600,000 acres, and of land still available for settlement about 2,150,000 acres; the total extent of holdings is say 850,000 acres, and the average of each holding 318 acres.

The rapid advancement of the district during the past few years is made evident by the fact that the population has increased by about 20,000 since 1879, and the area under cultivation by about 33,200 acres. In 1879 the Richmond and the Tweed Rivers formed a part of the Clarence Electorate; now they are a separate electorate, with three members, and the Murrumbidgee is the only agricultural constituency in the Colony with a larger number of voters, and it is shown that we are rapidly overtaking that district in the way of population.

In 1879 the town of Lismore was a small village, with no formed road or streets, and very few houses, but it now has a municipality, with gas-works and water supply. Unimproved town land considered dear at £2 per foot in 1879 is now worth £30 per foot. Although a hamlet ten years ago Lismore has now a population of over 3,000, and a corresponding rate of progress is shown throughout the electorate. There are municipalities in Casino and Ballina, with populations of 2,000 and 1,000 respectively, and flourishing townships at Coraki, South Woodburn, North Woodburn, Broadwater, Wardell, Gundurimba, Wyrallah, Brunswick, Murwillumbah, Tumbulgum, and Tweed Heads, while there are settlements at Swan Bay, Byron Bay, Cudgen, Alstonville, Rous, Clunes, Eureka, Bexhill, Tatham, Tintenbar and Blakebrook. All these places are directly or indirectly concerned in the matter of railway communication, the effect of which will be to make them important centres of population.

The railway line as at present surveyed, runs through at least 60 miles of rich soil between Lismore and the Tweed, the capabilities of which for agricultural and grazing purposes cannot be over-estimated. Almost every inch of this land available for selection, and not reserved, has been taken up, and the industrious and enterprising owners are working hard, clearing and otherwise improving their holdings, so as to be ready when the opportunity comes to get their products to market. At present a great many of them produce very little beyond what is required for their own consumption, owing to the ruinous cost of carriage to the nearest port. Ordinary roads will not meet their requirements, because of the nature of the soil and the distance of cartage.

Mr. Campbell, of the Mines Department, in a report to the Head of his Department writes of the Richmond River as follows:—"The district is simply magnificent, and its natural fertility almost unequalled. It is blessed with beautiful undulating land for the most part, and rich flats along the river and creeks, an annual rainfall second to none in the Colony, a wonderfully temperate climate, absolutely free from malaria and extremely healthy, an absence of hot winds, and watercourses every few miles, fresh and ever-flowing even in the most severe drought."

Apart from the watercourses referred to by Mr. Campbell, which are simply numberless, the north and south arms of the river (from their confluence with the main river at Coraki), and Leicester and Wilson's Creeks—navigable for steamers for about 100 miles altogether—contain fresh water. Even if the rainfall, therefore, was less satisfactory than it is, the practicability of a cheap and convenient system of irrigation is beyond all doubt.

Possessing therefore such unusual natural advantages, the district must become a great agricultural centre. No place in Australia seems so suited to support as dense a population if the facilities for the transport of produce were provided. With such a diversity of fruitful land, such a favourable climate, and such a splendid water supply, we can grow nearly every product of agricultural wealth, as well as all the tropical and semi-tropical fruits, and many of those indigenous to the more temperate zone—for instance, sugar, maize, barley, oats, potatoes, rye, lucerne, linseed, jute, tea, coffee, cotton, rice, arrowroot, ginger, tapioca, yams, tobacco, pumpkins, squashes, grammas, melons, beans, and vegetables of all sorts; mangoes, pineapples, bananas, nuts, gooseberries, figs, plums, guavas, dates, olives, almonds, peaches, apples, apricots, nectarines, quinces, oranges, lemons, limes, citrons, shaddock, grenadillas, pomegranates, loquats, and varieties of grapes.

Cane and maize growing and dairying, are however the principal industries. In 1887, about 8,947 tons of sugar were manufactured, which represented a value of fully £200,000. The value of the sugar manufactured in 1888 amounted to about the same sum, but the returns for this year and next year will probably be the largest yet known in the district. The maize crop in 1887 came to about 234,000 bushels; and in 1888 to about 362,803 bushels. The dairy produce made in 1887 consisted of 259,422 lb. of butter, and 88,431 lb. of cheese; and in 1888, 1,056,542 lb. of butter (or an increase of 797,120 lb.) 65,922 lb. of cheese, and 214,815 lb. of bacon.

Until

Until recently it was thought that the climate was unfavourable to the making of butter and cheese; but this notion has now been completely dispelled. In January last, one of the hottest months in the year, 32,500 lb. of butter were exported from Lismore alone. Probably an equal, if not a larger, quantity was shipped during the same month from the various townships lower down the river. The result is that dairy-farmers from older and more settled parts of the Colony—as for instance, Shoalhaven, Wollongong, and Kiama—are coming here in considerable numbers, and are purchasing scrub farms for dairying purposes. It is principally in this way that the population has increased so rapidly of late. These men, who have had long experience in the occupation, are spending large sums of money in clearing their properties, and planting artificial grasses, and in importing a good class of dairy cattle. Already several factories have been established, on the lines of those now working so successfully in the South Coast, and they are under the management of men well grounded in the general and technical knowledge of their business. The Richmond is quickly becoming the chief dairying place in the Colony.

Another important industry that will be greatly benefited by the railway is the timber trade. There are now in the electorate thirteen saw-mills, turning out sawn timber of the annual value of £100,000. The value of log timber exported from the Richmond River alone last year amounted to somewhere about £65,000. Unfortunately I have no returns showing the quantity sent away from the Brunswick and Tweed Rivers, but it must have been considerable. The proposed line passes through a stretch of country thickly studded with various kinds of scrub and forest woods, suitable for building and cabinet-making purposes, or for the construction of piers, bridges, ships, railway-carriages, trucks, waggons, sleepers, felloes, spokes, wood-paving, &c. Among these may be mentioned cedar (two varieties), pine (two varieties), bean (three varieties), cudgaree, long jack, rosewood, bogonion, beach, sycamore, teak, white myrtle, blue fig, silky oak, sassafras, ironbark, gum, (several varieties), peppermint, turpentine, blackbutt, tallow-wood, bloodwood, box, mahogany, &c. Millions of feet of these valuable timbers, which are well known and appreciated in the other colonies, and some of which were greatly admired at the recent Melbourne Exhibition, are being destroyed every year in clearing land for cultivation, because the difficulties and cost of carriage to the nearest port are so great. A railway will afford the required means of conveyance to the outside markets of the world, and the trade already established between certain other parts of the district (having easier access to water-carriage) and Queensland, Victoria, and New Zealand will become more general.

Among the minerals known to exist in the district is coal, which is found in numerous outcrops. When more pressing demands arise, and easier access to shipping ports is available, these seams will be opened up, and no doubt profitably worked.

With regard to the subject of the cost of the proposed railway and the probability of its paying, I desire to point out how this district differs from other places where railways have been taken, or are likely to be taken. Nearly the whole of the proposed line passes through productive land and marketable timber. The produce to be grown and the timber locked up must be carried on the line on their way to market, because there is no other means of carriage for them. The Tweed River Bar blocks shipping communication there, except with very small boats, and the Brunswick Bar is equally unsatisfactory and unreliable. Within 6 miles of each side of the line there are fully 350,000 acres suitable for sugarcane, maize, or dairying, and capable of producing 350,000 tons of sugar, or 10,000,000 bushels of maize per annum, and maintaining an agricultural population of fully 50,000 people. Over 5,000,000 tons of cane can be grown along the line annually, and this must find its way to the mills through the agency of the railway, which will become to our inland settlements what the droghers now are to our river. The sugar business here is no dead force, but a strong and vital one. The companies have difficulty in providing machinery equal to the supply of cane, and no one can foresee to what state of importance the industry will yet attain. In no other part of the Southern Hemisphere is the outlook for it more cheering. Every branch of the business is worked on scientific principles, and with European labour. The manufacturers and planters find employment for many people, and more agricultural labourers are employed here than in any other district in the Colony.

Independent, however, of all these considerations which tend to show the traffic that must follow the construction of this line, the question should be considered as to how far a railway will improve the value of the Crown lands in close proximity to it. Only recently the Government placed reserves of £15 and £30 per acre on a special area thrown open for selection, a great part of which was taken up and keenly competed for; and is it not reasonable to conclude that if such prices are fair value, proportionate prices will be obtained for the extensive areas of equally productive land along the route of the line, and now reserved from sale, or for some of the 300,000 acres awaiting selection and occupation on the Tweed. In no other district in the Colony does the Government value agricultural land so highly as in this.

In conclusion, let me say that I do not urge the construction of this railway on local grounds only, but on the broad ground of State policy. It is for the good of the Colony generally that agricultural settlement should be encouraged, and that every facility should be offered for the development of our agricultural lands by placing them within practical reach of natural markets. "The surest foundations of progress rest in the earth." We have land sufficient in extent and richness to grow most of the principal necessities of life for the rest of our fellow-colonists, and all we ask is that the means should be put in our way of turning our resources to practical account. The Richmond, Brunswick, and Tweed Rivers, under more liberal treatment, will yet provide comfortable homes for fully half a million people, and will be an important and prosperous part of our future Empire. Nature has lavished all her best gifts upon us in the shape of soil, climate, timber, and rainfall, and railway communication will enable us to reap the full advantage of our splendid inheritance.

I will now place before you some further statistics (compiled chiefly from official returns), which will also help you to form a correct estimate of the position and future prospects of our agricultural, pastoral, and commercial interests.

#### Number of Electors.

In 1881-2, 2,673; 1887-8, 5,439; 1888-9, 5,930; 1889-90, 6,250.

#### Area of Electorate, also Land taken up and to be taken up.

About 3,000,000 acres. Freehold land, say, 250,000 acres; conditionally-purchased land, say, 600,000 acres; Crown land, say, 2,150,000 acres.

#### Holdings—Year 1888.

1 acre to 500 acres, 1,775, area cultivated.....	32,113 acres.
500 acres to 1,000 acres, 159, .....	7,815 "
1,000 " 10,000 " 54, .....	6,765 "
10,000 acres and upwards, 8, .....	323 "

Total number of holdings, 1,996 (largest of any country electorate in the Colony). Average area of each holding, 318 acres.

#### Conditional Purchases made in 1888.

Number of applications, 245.

Area applied for, 29,865 acres 2 roods 32 perches.

Deposits paid, £3,637 17s. 11d.

Total deposits paid in various land districts in Eastern Division of Colony, £43,130 15s.

#### Land Revenue received from 1st January to 24th November, 1889.

	£	s.	d.
Revenue received at Lismore Land Office between 1st January and 24th November, 1889, inclusive	19,786	8	8
Tweed River	6,495	0	0
Casino, same period, about	12,000	0	0
	38,281	8	8

#### Area under Cultivation (in acres)—Year ended 31st March, 1889.

Maize, 11,323; oats, 695; potatoes, 224; sorghum and imphee, 281; sugar-cane, 8,835; artificial grasses and lucerne, 24,969; grapes, 37; oranges, 55; orchards, 172; market-gardens, 64; barley, 121; wheat, tobacco, rye, and other crops, 285. Total area cultivated, 47,061 acres.

In the year ending 31st March, 1881, there were only 13,790 acres under artificial grasses and other cultivation; in eight years, therefore, the area under cultivation has increased by 33,271 acres.

Area

*Area Enclosed (uncultivated)—Year ending 31st March, 1889.*

Area enclosed but not cultivated, 391,737 acres.

*Principal Productions.—Year ended 31st March, 1889.*

Maize, 362,803 bushels; sugar, 7,764 tons; wine, 755 gallons; potatoes, 533 tons; barley and rye, 1,695 bushels; butter, 1,056,542 lb.; cheese, 65,922 lb.; bacon and hams, 214,815 lb.

Only four districts in the Colony produce larger quantities of dairy produce, viz.:—Camden, Eden, Kiama, and Shoalhaven.

*Soils.*

The land in the district is composed of the various productive soils known in Australia, which may be grouped into the following classes:—

- 1st. Alluvial scrub soils.
- 2nd. Forest soils.
- 3rd. Chocolate-coloured scrub soils.
- 4th. Black stiff wheat soils.

*Rainfall from 1st January, 1885, to 15th November, 1889.*

Do November 15th, 1889	...	...	...	...	...	...	...	...	59.96
									246.46.

or an average of 49.29.

Total number of wet days this year, 149.

The greatest rainfall during this year occurred on 19th July, viz.:—5.80.

*Principal Agricultural Implements in use—Year ending 31st March, 1889.*

Carts, 1,314; chaffcutters, 326; cheese presses and machines, 62; corn-crushers, 340; corn-shellers, 575; harrows, 1,090; ploughs, 1,496 (only three districts in Colony with more, viz.:—Macleay, 2,011; Clarence, 1,673; Murrumbidgee, 1,561); scarifiers and scufflers, 685; steam-engines, 34.

*Manufactories—Year ending 31st March, 1889.*

Number of works, 64; approximate power of plant and machinery, 1,586 horse-power; approximate value of machinery, £344,665; approximate value of land and buildings, £80,065.

*Employment—Year ending 31st March, 1889.*

In manufactories, 1,438; in agricultural pursuits, 3,368 (largest in Colony for one district); in pastoral pursuits, 148.

*Live Stock.—Year ending 31st March, 1889.*

Horses, 13,309; cattle, 131,341. More than a twelfth of total number in Colony, and more than double the number held by any other district.

*Municipalities—Year 1888.*

 Average number of schools opened every year ... .. 5  
 Schools at present in course of construction, or about to be constructed... .. 5

Total school accommodation at end of year, 5,240 children; attendance, about 5,000 children.

Applications for new schools are being received constantly from outside places.

Schools are now thriving in localities which were five years ago uninhabited wildernesses.

Judging from Inspectors' reports and results of University examinations, the schools in the district bear favourable comparison in the matter of efficiency to those in any other electorate in the Colony.

There are now 437 children on the rolls of the Lismore Public School, and the attendance in the school has doubled within the past five years, notwithstanding the fact that convent schools have since been established and have a large attendance.

*List of Exports.*

Timber unspecified, 7,156,900 feet; 183 logs; pine, 2,055 logs; pine, 236,554 feet; cedar, 1,511 logs; cedar, 33,000 feet; box material, 1,307 bundles; box material, 19,200 feet; beech, 78 logs; 146 fitches; 23,000 feet; piles, 1,100; sleepers, 9,743; hardwood, 10,000 feet; maize, 40,658 bags; sugar, 16,707 bags, 8,549 mats—3,617 tons; butter, 15,703 kegs; cheese, 466 packages; hides, 9,649, 7 bags; pigs, 7,625; tallow, 330 casks; eggs, 2,815 cases; molasses, 5,852 casks; poultry, 497 coops; bones and horns, 579 bags; skins, 166 bales; calves, 130 head; cattle, 19 head; horses, 27 head; potatoes, 893 bags; fish, 170 cases; oysters, 879 bags; grass-seed, 33 bags; hay, 360 bales; soap, 60 boxes; bark, 126 packages; wool, 30 bales; honey, 6 packages; beeswax, 2 packages; chaff, 10 bags; fruit, 80 cases; pumpkins, 120 bags; wild ducks, 51 pairs; machinery, 15 tons; ore, 20 bags; bacon, 11 packages; pea-nuts, 9 bags; sun-try cargo, 4,054 packages.

No proper record has been kept of the imports and particulars of the shipping trade of Byron Bay, and Brunswick and Tweed Rivers are not available.

The approximate value of the yearly export trade of the whole electorate is between £400,000 and £450,000.

## LETTER FROM THE SECTIONAL COMMITTEE TO THE SECRETARY FOR LANDS ON THE RESERVATION OF CROWN LANDS IN THE LAND DISTRICTS OF LISMORE, CASINO, AND THE TWEED RIVER.

Sir,

Department of Public Works, Lismore, November 26, 1889.

The Sectional Committee of the Parliamentary Standing Committee on Public Works appointed to inquire into the proposal to construct a railway from Grafton to the Tweed River, and of a breakwater at Byron Bay, have travelled from the Tweed River to the Richmond River, a distance of 60 miles, and have taken a great deal of evidence at various points on the route. From our own observation and from a great deal of the evidence tendered to us, we have come to the conclusion that it would be to the advantage of the country that all the Crown lands at present reserved in the land districts of Lismore, Casino, and the Tweed River, should be retained as at present reserved, until such time as it may be determined by Parliament whether the proposed railway and harbour works are to be carried out or not. It appears also that in the districts mentioned there are at the present time large areas of Crown land which have not been reserved from sale. Our own observation and the evidence given in the districts mentioned leads us to strongly recommend that all these lands should be reserved from sale, pending the determination of Parliament in regard to the works referred to. The value of the bulk of the reserved lands is, we are informed, at least £2 an acre, and the same lands in their present state will bring more than double should the works referred to be carried out; in fact we are inclined to believe that the increased value given to the Crown lands and to the reserves referred to would largely repay the cost, and possibly the whole cost of constructing these public works. We have been informed that at Byron Bay there are 4,000 acres of reserved land, which, if the works proposed are carried out, will realise at the least £80,000.

Again, the present holders of land, having borne the heat and burden of the day (living, as we have been told, from hand to mouth for years), are clearly entitled to some consideration, and new-comers should not get the benefit of the hardship of those who have gone before.

We venture to address you upon the subject in the interest of the Colony at large.

We have, &c.,

J. P. ABBOTT.

G. H. COX.

C. A. LEE.

JACOB GARRARD.

The Honorable the Secretary for Lands.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM MARRICKVILLE TO THE BURWOOD ROAD.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Marrickville to the Burwood Road, a distance of 4 miles 40 chains," have, after due inquiry, resolved that it is expedient the railway should be constructed; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway is 4 miles 40 chains in length, commencing at the southern end of the Marrickville railway station on the Illawarra line, and going almost due west through the Municipalities of Marrickville and Canterbury to a point near what is called the Burwood Road. It crosses the Illawarra Road at a point 4 miles from Sydney; Cook's River, after passing through Canterbury, at 6 miles 11 chains; and the Canterbury Road at 6 miles 27 chains; terminating near the Burwood Road at 8 miles 3 chains. Virtually, it is part of the suggested line known as the St. Peters to Liverpool line, but it is not put forward as such. It is placed before the Committee as, in itself, a suburban line, the object of which is to open up a new residential suburb, but it is pointed out that as population gathers around the new line the necessity for extending it will be considered, and possibly, in time, the whole length of the suggested line to Liverpool will be constructed.

2. In their inquiry concerning this proposed railway the Committee examined a large number of witnesses, and, accompanied by the Acting Engineer-in-Chief for Railways, personally investigated the route and the localities in its immediate vicinity. In every direction which appeared desirable, evidence has been sought, and the larger scheme of the loopline to Liverpool, so far as it relates to the question of providing railway accommodation for the population west of the Illawarra line and towards Liverpool, and so far as it may eventually include the Marrickville to Burwood line, received attention as well as the proposal actually before the Committee.

3. The estimated cost of the proposed line, for a single line of rails and exclusive of land and compensation, is £90,250, or £19,000 per mile. A cheaper line, the Acting Engineer-in-Chief for Railways, in his evidence explains, could be laid out if the original object of saving distance and of having very good grades were not adhered to. The steepest gradient on the line as proposed is 1 in 90, and with a view to shortness the line has been laid out as straight as possible. A close study of the contour of the country, however, shows, the Acting Engineer-in-Chief says, that some slight deviations from the straight line would result in a considerable saving of expense, and after going carefully into the question he estimates that, by altering the grades and doing away with the necessity for bridges over George's River, a saving of something like £78,000 could be effected on the whole cost of the line to Liverpool, and a proportionate amount (about £8,000) on the length from Marrickville to the Burwood Road. With these alterations the line would be half-a-mile longer

longer in the whole distance to Liverpool, and 10 chains longer in the length from Marrickville to Burwood Road, with a ruling grade of 1 in 66. By adopting a grade of 1 in 100, and increasing the length of the line as stated, a saving of about £40,000 could be effected on the complete line to Liverpool, and on the  $4\frac{1}{2}$  miles to the Burwood Road about the same amount as in the other case—£8,000. The £78,000 would include the saving of the expense of bridges over George's River by taking the line round the bend of the river by Landsdown Creek. If the proposed alterations were made, 30-chain curves would have to be reduced to curves of 20 chains; but that radius is not regarded as objectionable, and the line would be an easy one to work, and would be better graded than the existing line from Liverpool to Sydney. Only one bridge of importance occurs on the railway from Marrickville to the Burwood Road, and that would be made suitable for a double line of rails, though the proposal in connection with the railway is for only a single line.

Opinions of  
the Railway  
Commis-  
sioners.

4. From the documents published with the evidence it will be seen that the Railway Commissioners have reported upon both the proposal immediately before the Committee and the whole length of the suggested loop-line from St. Peters to Liverpool. With regard to the latter, their report represents an annual loss on the line, if constructed, of £19,137, and they state that the theory that the construction of the line would avoid the necessity for increasing the carrying capacity of the existing line from Liverpool to Sydney should not have any weight in the consideration of the question, as the construction of the line would only relieve the parent line to the extent of about four trains per day in each direction. But they go on to say, that "if a branch line were constructed from St. Peters through to Canterbury, to a point 8 miles from Sydney (that is, 4 miles from the present Illawarra line), it would accommodate Canterbury, and a fairly good district for residential traffic; and at the suggested terminus of the line we observe that two large properties have been laid out for the purpose of encouraging a suburban population." The construction of a branch line to the point indicated, they state, is the only course they could recommend. It would, in their opinion, have the effect of giving another suburban outlet for Sydney, and if this were done the traffic created would probably pay working expenses, and in a few years would doubtless be a good investment. The line, they further say, should take the exact route laid down for the proposed through line, so that when the proper time arrives an extension may be made, and probably the line ultimately carried through to Liverpool. Their report upon the proposed railway actually under inquiry by the Committee also shows a loss in the comparison between the working expenses, interest, &c., and the probable traffic returns, but the Commissioners consider that by giving a frequent service and taking other matters into account, one of which is the probable speedy development of the district, the working expenses would within two years be more than recouped. They give it as their opinion, however, that the line should be a double line, as otherwise a most unsatisfactory service for residential purposes would be afforded.

Division of  
opinion on  
the part of  
the Com-  
mittee.

5. The Committee are very evenly divided on the question of the expediency or otherwise of constructing the proposed railway. On the 19th December, 1889, a resolution was passed by a majority of six to five that it was not expedient the railway should be carried out, and on the 18th February, 1890, the question having subsequent to the first decision been reopened, it was resolved by a majority of seven to six that it was expedient the railway should be constructed.

Reasons in  
favour of the  
proposed rail-  
way.

6. The reasons advanced in favour of the proposed railway may be summarized as follows:—

- (1.) The railway would be a suburban line which would open up a new residential suburb, where land would be available at prices considerably below those at which it can be obtained in the suburbs already served by railways, and the new suburb would become another outlet for the overcrowded population of the city.
- (2.) There is a considerable population about Marrickville, Undercliff, Canterbury, and some of the districts beyond Canterbury, who are not directly benefited by any railway or tramway in existence, and who, with the increased number of residents which the proposed new railway would bring to the locality, would make the railway very profitable.

(3.)

- (3.) A large quantity of land in the districts which the railway would serve has been sold in allotments, and the purchasers are waiting for railway communication before building and taking up their residence there.
  - (4.) The attendance of the public at the Canterbury Park racecourse at different times through the year would of itself be a large item in the earnings of the railway.
  - (5.) There will be no great engineering difficulty in connection with the line.
  - (6.) The line, if constructed, may eventually form a part of a complete loop railway from Marrickville to Liverpool, and for this purpose the route is the best of the different routes which at various times have been under consideration.
  - (7.) If the railway were constructed right through to Liverpool it would materially shorten the journey from Liverpool to Sydney, and the loop-line would therefore be very largely patronised.
  - (8.) The probable traffic upon the proposed railway is very much underestimated by the Railway Commissioners.
  - (9.) The formation of new residential suburbs by the establishment of railway communication between the districts to be served by the proposed line and the Metropolis is justified by the success which has attended the Illawarra Railway as a suburban line, and by the experience gained from the construction of a system of suburban railways at Melbourne, Victoria, which, in the matter of suburban railways and the accommodation afforded by them to the population, is far ahead of Sydney.
  - (10.) No extension of any existing tramway, and no branch tramway from any existing railway station, would adequately meet the prospective wants of the district.
7. The reasons urged against the proposed railway are the following :—
- (1.) The construction of the line will cost £19,000 per mile.
  - (2.) The complete loop-line to Liverpool, according to the Report of the Railway Commissioners, would not to any appreciable extent relieve the traffic on the Great Southern Railway.
  - (3.) The line from Marrickville to the Burwood Road will run for about a mile almost parallel to, and within a short space of, the Dulwich Hill Tramway.
  - (4.) A portion of the district through which the proposed line will go is already served to a certain extent by the extension of the tramway to Dulwich Hill, and by the railway to the Western Suburbs.
  - (5.) The construction of branch tramways connected with the railway at Ashfield or Burwood might be made sufficient to meet the requirements of the residents for some time to come. A single tram-line could be constructed for about £5,000, as compared with £19,000 for the railway, per mile, and a double tram-line for about £8,500 or £9,000 per mile; and in the case of a tram-line there would be no resumption of land required, except, perhaps, at some of the corners, which would be only a small item.
  - (6.) There are no large industries in the locality which would be likely to bring traffic to the line.
  - (7.) The Department of Public Works and the Railway Commissioners do not agree upon a very important point in relation to the proposed railway. The proposal before the Committee is for a single line. The Railway Commissioners say the line must be a double line, as "otherwise a most unsatisfactory service for residential purposes would be afforded." A double line would cost considerably more than the estimate for the single line—fully £20,000 more than the present estimate.
  - (8.) The proposed railway, unless extended beyond the Burwood Road, will not meet the views of the residents of Bankstown and the residents of other localities in that direction.
  - (9.) Even with the proposed railway, Canterbury Racecourse, which is put forward in the evidence as a certain source of large revenue, will still be some distance from railway communication.
- (9.)
- Reasons unfavourable to the proposed railway.

The decision arrived at by the Committee.

8. The decision arrived at by the Committee is shown in the following extracts from the minutes of proceedings :—

On the 19th December, 1889 :—

Mr. Dowel moved—

“That the Committee proceed to consider the evidence with reference to the proposed railway from Marrickville to the Burwood Road, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Tonkin, and passed.

Mr. Dowel moved—

“That the Committee approve of the construction of the proposed railway from Marrickville to the Burwood Road, as referred to them by the Legislative Assembly.”

Mr. Tonkin seconded the motion.

The motion was negatived on the following division :—

Ayes, 5.

Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Tonkin,  
Mr. Dowel.

Noes, 6.

Mr. Abbott,  
Mr. Lackey,  
Mr. Cox,  
Mr. Copeland,  
Mr. O'Sullivan,  
Mr. Lee.

Mr. Lackey moved—

“That the Committee do not consider it expedient that the proposed railway from Marrickville to the Burwood Road, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Copeland seconded the motion.

The motion was passed on the following division :—

Ayes, 6.

Mr. Abbott,  
Mr. Lackey,  
Mr. Cox,  
Mr. Copeland,  
Mr. O'Sullivan,  
Mr. Lee.

Noes, 5.

Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Tonkin,  
Mr. Dowel.

On the 15th January, 1890 :—

Mr. Hurley moved—

“That this Committee are of opinion that the vote arrived at in regard to the proposed railway from Marrickville to the Burwood Road, on 19th December, be rescinded with a view to its reconsideration.”

Mr. Garrard seconded the motion.

The motion was passed on the following division :—

Ayes, 7.

Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Garrard,  
Mr. Tonkin,  
Mr. Dowel,  
Mr. Hurley.

Noes, 6.

Mr. Abbott,  
Mr. Lackey,  
Mr. Cox,  
Mr. Copeland,  
Mr. O'Sullivan,  
Mr. Lee.

On Tuesday, 18th February, 1890 :—

Mr. Hurley moved—

“That the Committee proceed to consider the evidence on the proposed railway from Marrickville to the Burwood Road, with a view to reporting on the subject to the Legislative Assembly.”

The motion was seconded by Mr. Dowel, and passed.

Mr. Hurley moved—

“That, in the opinion of the Committee, it is expedient the proposed railway from Marrickville to the Burwood Road, as referred to the Committee by the Legislative Assembly, be carried out.”

The motion was seconded by Mr. Dowel, and passed on the following division :—

Ayes, 7.

Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Garrard,  
Mr. Tonkin,  
Mr. Dowel,  
Mr. Hurley.

Noes, 6.

Mr. Abbott,  
Mr. Lackey,  
Mr. Cox,  
Mr. Copeland,  
Mr. O'Sullivan,  
Mr. Lee.

Published with this Report will be found the evidence given by the various witnesses examined, together with some appendices, and copies of the plans which were before the Committee during the inquiry.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 2 April, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM MARRICKVILLE TO THE BURWOOD ROAD.

TUESDAY, 19 NOVEMBER, 1889.

Present:—

- |  |                                  |
|--|----------------------------------|
| The HONORABLE JOHN LACKEY (VICE-CHAIRMAN). |                                  |
| The Hon. ANDREW GARRAN.                    | JAMES EBENEZER TONKIN, Esq.      |
| The Hon. FREDERICK THOMAS HUMPHERY.        | WILLIAM SPRINGTHORPE DOWEL, Esq. |
| The Hon. GEORGE HENRY COX.                 | EDWARD WILLIAM O'SULLIVAN, Esq.  |
| The Hon. WILLIAM JOSEPH TRICKETT.          | JOHN HURLEY, Esq.                |

The Committee proceeded to consider the proposed railway from Marrickville to the Burwood Road.

Joseph Barling, Esq., Under-Secretary for Public Works, sworn, and examined:—

1. *Vice-Chairman.*] You are the Under-Secretary for Public Works? Yes.
  2. You are aware of the project to construct a railway between Sydney and Liverpool duplicating the line? Yes.
  3. Are you acquainted with the proposed line between Marrickville and Burwood Road? Yes; and with the permission of the Committee I will give an account of the proposal:—The proposition before the Committee is for the construction of a length of railway of 4 miles 60 chains from Marrickville to the Burwood Road, and is part of a proposed line known as the St. Peters to Liverpool loop-line. I hand in a *précis* of the papers, which will give details I need not trouble the Committee with. The earliest reference to this proposal, so far as I can ascertain, occurs in the annual report of the Commissioner for Railways for the year 1882, in which is the following passage:—"I have called the attention of successive Ministers of Works for the last two years to the desirability of providing for the increased traffic on the southern line, and creating and developing additional suburban traffic by the construction of a line from Liverpool to meet the Illawarra line within the neighbourhood of Newtown. Such a line would open up a large area of country capable of cultivation, and would give an additional outlet for the overcrowded population of the city." From that time to the present a number of deputations have waited upon successive Ministers in support of the proposal, and, as the papers will show, a large amount of correspondence upon the subject has taken place. The present proposal, however, is limited to that portion I have already named, viz., 4 miles 60 chains. In other words, whatever may be done in the future, at present it is considered purely as a suburban line for the purpose of opening up a new residential suburb. I may mention that I am authorized by the Minister to say that it is not looked upon as the terminal point, but that, as population gathers round the new line, the necessity for extending it will be considered, and possibly, in time, the whole length of the line will be constructed. I think it is estimated that the cost of the line will be £30,000 per mile. Seeing that the land beyond is only sparsely populated, and can only be put down as agricultural land, the Minister does not think he is justified in proposing any further extension until the increase of population along the line has shown the necessity for it. The Minister also is not insensible to the argument which has been put forth, that the carrying out of the loop-line in its entirety will shorten the distance by 6 or 7 miles to Sydney. He thinks that that is an important point, although not of sufficient importance at present to justify the carrying out of the whole proposal.
- 3½. *Mr Trickett.*] This line is not to join the southern line, is it? Not at present; but ultimately it may be continued to Liverpool where it would join that line. The description of the line is as follows:—

J. Barling, Esq.  
19 Nov., 1889.

#### MARRICKVILLE TOWARDS LIVERPOOL.

Portion—Marrickville to Burwood Road: Length, 4 miles 60 chains.

Estimated cost, £90,250, or £19,000 per mile, for a single line, exclusive of land and Compensation.

THIS proposed railway leaves the Illawarra line at 3 miles 23 chains 5 links at the southern end of the Marrickville Station, and proceeds almost due west through the municipalities of Marrickville and Canterbury. It crosses Illawarra Road at 4 miles; Cook's River, after passing through Canterbury, at 6 miles 11 chains; crosses the Canterbury Road at 6 miles 27 chains, and terminates near the Burwood Road at 8 miles 3 chains.

The cost of land and compensation will be a very important item of expenditure.

The following is the report of the Railway Commissioners on the proposed line:—

Office of the Railway Commissioners of New South Wales, 29 December, 1888.

Proposed Loop-line of Railway—St. Peters to Liverpool—14 miles.

In accordance with the provisions of the "Public Works Act, 1888," section 13, we beg to report as under:—

#### Cost of Construction—

The Engineer-in-Chief estimates the cost of construction of the railway, with a double line of rails, exclusive of land and compensation, .....	£349,324
---	----------

J. Barling,  
Esq.  
19 Nov., 1889

*Annual Cost—*

Interest on cost of construction, at 3½ per cent. ....	£12,226
Estimated cost of maintaining the permanent-way, per annum.....	£3,500
For first two years an additional cost of .....	800
Traffic Department expenses .....	1,820
Locomotive expenses .....	3,000
	9,120
Total annual cost .....	£21,346

*Traffic Estimate—*

The new passenger traffic which will accrue to the line will, for a long time, be very small, and would probably not exceed .....	£3,300
The goods traffic also would not exceed .....	1,900
	£5,200

As the bulk of the population is located within 5 miles of Sydney the marketing would be done in Sydney and carted direct. Bricks and firewood would to some extent be carted also.

The shortening of the route to and from Liverpool and places south thereof by 5 miles would cause an annual loss of .....	£17,423
And it is estimated that traffic would be diverted from Petersham and Ashfield to the extent of .....	1,714
	£19,137

The theory which has been put forth, that the construction of this line would avoid the necessity for increasing the carrying capacity of the existing line from Liverpool to Sydney, should not have any weight in the consideration of the question, as the construction of the line would only relieve the parent line to the extent of about four trains per day in each direction; and the quadrupling of the line out of Sydney to Homebush is required to accommodate the increasing purely residential service of trains; and the doubling of the line from Granville to Liverpool will be required for the development of the country along that route, which is being fairly rapidly settled.

If a branch line were constructed from St. Peters through Canterbury to a point 8 miles from Sydney (*i.e.*, 4 miles of new line), it would accommodate Canterbury and a fairly good district for residential traffic; and at the suggested terminus of the line we observe that two large properties have been laid out for the purpose of encouraging a suburban population.

The construction of a branch line to the point indicated is the only course we could recommend, which would have the effect of giving another suburban outlet for Sydney; and we believe if this were done the traffic created would probably pay working expenses, and in a few years it would doubtless be a good investment.

The line should take the exact route laid down for the proposed through line, so that when the proper time arrived an extension might be made, and probably the line ultimately carried through to Liverpool.

The Common Seal of the Railway Commissioners of New South Wales has been hereunto affixed by the Railway Commissioners in the presence of,—	}	E. M. G. EDDY, (L.S.) Chief Commissioner.
		W. M. FEHON, (L.S.) Commissioner.
		CHARLES OLIVER, (L.S.) Commissioner.
		D. VERNON.

With regard to the necessity for forming new suburbs connected by railway with the metropolis, I should like to place before the Committee a comparison of the railway accommodation, which we have at present for Sydney and suburbs, with that of Melbourne, taking a radius of 10 miles from the centre of each city. Mr. Hayter, the Victorian Statistician, has very kindly furnished me with the present population of Melbourne and Suburbs. His letter I will hand in. He gives the population at 437,735. The present population of Sydney and suburbs is given as 366,684. Melbourne has a system of Suburban Railways (within the radius named) comprising a length of 74¼ miles with stations or calling places. This gives a population of 5,896 per mile of railway. Sydney and suburbs within the same radius is served by only 23 miles of railway with twenty-seven stations, which gives a population of 15,543 per mile. In other words Melbourne has more than three times the length of Suburban Railway than Sydney, and about three times the accommodation per 1,000 of the population. I venture to think this shows conclusively how very far we are behind the sister metropolis in this very essential adjunct of modern civilization, *viz.*, railway accommodation. Since that was written I have received a telegram from the Secretary of the Victorian Railways, with whom I have communicated as I wished to verify my figures. The telegram was put into my hands just as I was coming to give my evidence before the Committee, and it is as follows:—"Melbourne, November 19:—Your telegram only reached me this morning.—Miles of suburban line open 103; number of stations 95; number of platforms 175.—P. P. Labertouche." There is a discrepancy between the figures given by Mr. Labertouche and those which I have placed before the Committee. The difference is probably due to the fact that Mr. Labertouche has given me the whole length of the suburban line, whereas I have restricted my comparison to the 10-mile radius. To deal now with another branch of the argument, namely, the direct one as to whether the line is likely to pay, I will with the permission of the Committee read a report from Mr. Thompson, land valuer, as to the prospects of the line. I think his remarks are very suggestive, and to the point. He says:—

In compliance with your verbal instructions of the 18th instant, I have now the honor to submit the following report on the proposed railway extension from Marrickville, at 3 miles 23 chains on the Illawarra line, to the 8-mile mark, near Canterbury. The country through which this extension passes, is mostly poor as regards soil, timber, and grass, but notwithstanding these disadvantages, and the fact that it is at present rather sparsely populated, most of it is well adapted for building purposes.

The point of divergence of this extension from the Illawarra Railway is 72 chains north of Cook's River, and as it proceeds westerly it rapidly approaches that stream, crossing it in the old settlement of Canterbury 2 miles 68 chains from the point mentioned, and thence a further distance of 1½ miles to the proposed terminus at the Burwood Road, and about 60 chains south of Cook's River.

The country between the river crossing at Canterbury and the proposed terminus is much superior to that between Marrickville and that crossing. The former comprises several large subdivisions, notably Bridgewater, Golden Park, Silver Park, Campsie Park, and Harcourt, most of which appear to be lying dormant, probably awaiting the approach of the railway, or at least the certainty of its construction.

With a few conspicuous exceptions, the buildings in the vicinity of the line throughout are small and not numerous. The land from Marrickville to Meeks' Road is low and swampy, and occupied by Chinese gardeners; thence to Livingstone Road it is of better quality and improved by enclosure, clearing, and a few small buildings; thence to Canterbury, excepting Wm. Starkey's property, which is highly improved, the land is poor and barren, and but little of it has been enclosed. In the settlement of Canterbury some good land is taken, and west of the river the country is of much better quality, being good undulating open forest, with patches of fairly good orchard land. This improvement in the character of the country I believe continues as far as Liverpool.

The

The sparse population and large proportion of unimproved land on this line is in view of the creation of new suburbs, which will naturally follow railway communication, one of its principal advantages, as thereon thrifty mechanics, and men of moderate means will find an opportunity for investment, which is practically denied them on the existing lines by reason of the exorbitant price of land.

The cost of the land is not likely to exceed an average of £100 per acre, probably much less, but I have not had time to satisfy myself on this point.

J. B. THOMPSON,  
Land Valuer.

J. Barling,  
Esq.  
19 Nov., 1889.

I may, perhaps, also be permitted to take as an argument the development of traffic which has taken place in connection with the Illawarra suburbs since the railway was open. The Commissioners for Railways have kindly supplied me with statistics, which I will hand in, and from which the following statement has been compiled.

At the Rockdale station the number of season tickets has increased from 16 in the year of the opening of the line, to 824 for the present year. In the same period the coaching receipts have increased from £44 4s. 11d. per mensem to £434 17s. 8d. The item of workmen's tickets issued at this station exhibits in a marked degree the progress of settlement. In the nine months ending 31 October, 1888, 5,496 of these tickets were issued, while in the corresponding months of the current year 7,873 have been issued, showing an increase in one year of 2,377 tickets.

At the Kogarah station the figures stand thus:—Season tickets issued in the opening year, 14; in the current year, 483. The coaching receipts at this station have increased during the same time from £46 4s. 4d. per mensem to £393 9s. 8d.; and the issue of workmen's tickets from 3,605 in 1888, to 5,605 in the current year.

At Hurstville the issue of season tickets has increased from 4 in the opening year, to 441 in 1889. In the same period the coaching receipts have increased from £138 8s. 4d., to £324 17s. 2d. per mensem; and the issue of workmen's tickets for 1889 shows an increase of £612, as compared with the previous year.

It appears also by returns furnished by the Town Clerks of the respective places, that at Rockdale the number of houses has increased from 199 at the time of the opening, to 972 in the present year. The number of the inhabitants at the time of the opening was 995, and the population is now estimated at 4,960. Hurstville also shows an important increase in the number of houses and in the population, but not in so marked a degree.

At Kogarah, at the time of the opening of the line, the population was under 1,000. It is now considerably over 2,000. In the interval over 200 new houses have been erected.

I am aware that it may be said, in reply to this argument, that there are at present a large number of empty houses in the existing suburbs, and further that we are not likely to repeat so soon in the suggested new line the rapid development which has taken place in the instances quoted. I think, however, a sufficient answer to this may be found in the present high value of land which obtains both in the Illawarra and Western suburbs.

I have received the following valuation from Messrs. Hardie and Gorman:—

1. Petersham	... ..	£5 to £20 per foot.
2. Ashfield	... ..	£5 to £25 "
3. Croydon	... ..	£3 to £15 "
4. Burwood	... ..	£4 to £50 "
5. Strathfield	... ..	£3 to £20 "

Higher prices, of course, are business sites close to stations. Building sites for "homes" are becoming more and more difficult to obtain, at even the minimum prices put down, except by going a distance away from railway communication.

I have also received from Messrs. Mills, Pile, and Wilson the following letter in reference to the value of land in that district.

Sir,—

"Sydney, November 19, 1889.

Referring to your request that we should furnish you with our ideas of the approximate values of Suburban Lands within a radius, say, of a quarter of a mile of the Railway, we beg to state them as under:—

Macdonaldtown	£2,000 per acre.	Strathfield	£1,500 per acre.
Newtown	£2,500 "	Homebush	£1,000 "
Stanmore	£2,000 "	St. Peters	£2,000 "
Petersham	£2,000 "	Marrickville	£1,000 "
Lewisham	£1,000 "	Tempe	£1,000 "
Summer Hill	£1,500 "	Arncliffe	£700 "
Ashfield	£1,500 "	Rockdale	£1,200 "
Croydon	£1,000 "	Kogarah	£1,200 "
Burwood	£2,000 "	Hurstville	£1,500 "

These are averages over a considerable area, immediately at the stations; in some of the localities mentioned land cannot be bought in the business spots under £25 to £40 per foot. Yours, &c.,

The Under Secretary, Department of Public Works.

MILLS, PILE, & WILSON."

It is clear, therefore, that the price is becoming too high to admit of the working classes and those with limited means getting away from Sydney, or living at places far distant from their work, and it must be admitted that the opening up of fresh land for residential purposes will be the means of reducing the average value of the land for a time, at all events, and thus enable the poorer classes to leave the crowded parts of the city to seek healthier and better surroundings in the suburbs. The Minister thinks this is a very important aspect of the case, and it is considered that the opening up of this new suburb will certainly, for the reasons I have given, be as successful as has followed similar action with other suburbs. The statistics I have given have been collected by direction of the Minister since he delivered his speech in Parliament in August last, when the proposal was referred to this Honorable Committee on his motion.

4. *Vice-Chairman.*] I take it that this work is now submitted to the Committee as a suburban line? At the present moment, with a view of eventually, perhaps, of carrying out the whole.

5. The Commissioners, I suppose, are opposed to the duplicate line, and in favour of the construction of this 4 miles of railway as a suburban line? Yes.

6. That is the report of the Committee to the Department? Yes; although the Minister thinks it a matter of importance that it will effect a saving of 7 miles as regards the through trains from Melbourne.

7. *Mr. O'Sullivan.*] What is the reason of the abandonment of the proposed line from St. Peters? There are reasons which will be better given by the engineer.

8. *Mr. Trickett.*] In the *précis* there is a reference to one route the owners along which have offered to give the land free if a railway is constructed;—does that apply to this proposal? I should speak with some reserve on that point. The promise was on condition that the line was carried through to Liverpool. I see that that is mentioned again and again in the papers.

9. Have you any definite information? I could hand you in the papers so that the promises can be analysed.

10. Do they apply to this or to the St. Peters route? They would apply to the route then proposed. Mr. Deane, will show the various routes on the plan.

- J. Barling, Esq.  
19 Nov., 1889.
11. *Dr. Garran.*] Were the promises made as to the other route exclusively? I have read a great number, and I see that it was a loop-line from St. Peters to Liverpool that was referred to.
12. Then the promises would not apply to this route? I think there would certainly be room for reconsideration in the matter. I would point out that it is really not so important now as it was then. Since that time the Public Works Act has been passed, and it provides that in estimating the value of the land taken for Public Works the increased value given by the works to the adjoining land must be taken as a set off against it. The Act was not in force when those promises were made. There was therefore, then, far greater reason to be careful on that point than there is at present. If the land has been cut up and sold in small allotments we cannot expect the small holders to give land for a railway.
13. You mean that you do not care about the promises now that that Act has been passed? No; I say that they are not of so much importance.
14. *Mr. Cox.*] Is any portion of the line between Marrickville and Burwood land, the owners of which promise to give their land if a railway was made? I think so; but I am not certain.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

- H. Deane, Esq.  
19 Nov., 1889.
15. *Vice-Chairman.*] What are you? Acting Engineer-in-Chief for Railways.
16. Where is the point in the Burwood Road which this line crosses? About 8 miles from Sydney. The line—which was proposed as a loop, was to start from St. Peters, but Marrickville was found to be a better junction. That is why Marrickville has been substituted.
17. How many lines have there been surveyed? Taking all the deviations into account, about six, independent of a survey that was made from Arncliffe.
18. Was that made by the Department? No; outside of the Department.
19. Then the proposal to construct a line to Burwood Road is one which the Department recommends as the best? Yes. The first line that was surveyed by an officer of the Department was a line going through Belmore.
20. Have you traversed that line yourself? I have been over most of it—not over the whole length.
21. By whom was the survey carried out? I think that the surveyor was Mr. Kennedy, junior. Mr. Cumming improved the line afterwards.
22. Have you examined the proposed line between Marrickville and Burwood Road? Yes; all except a small portion of it.
23. Are you in a position to give any estimate of the cost of the land? No.
24. You could not give it approximately? No; but I understand that the land valuer has been over the line.
25. Are the engineering difficulties great on the proposed line? No; there is no great engineering difficulty. There will be a bridge over Cook's River at Canterbury. The country between Marrickville and Canterbury is rather rough, so that it could not be made a cheap line.
26. Being a suburban line, I suppose it would not be desirable to make it a cheap line? The object is to make it as direct a line as possible. A much cheaper line could be laid out if the original object of saving distance, and of having very good grades, were not adhered to. On this line which has been staked out the steepest gradient is 1 in 90. We tried to get a gradient of 1 in 100, but found it impossible without increasing the cost of the line enormously.
27. The estimate of £19,000 a mile for the construction of the line—by whom was that fixed? By the Department.
28. You think that the actual work could be done at a cost of £19,000 per mile? Yes.
29. That is without the compensation for the land? Yes.
30. Are the bridges intended to accommodate a double or a single line? A double line. There is only one large bridge on that portion—the bridge over Cook's River.
31. What is the estimate for that bridge? £9,274; and then there is immediately after that one over the Canterbury Road, which will cost £3,000.
32. *Mr. Trickett.*] The proposed line is part of the direct line to Liverpool? Yes.
33. And it is the straightest line procurable? Yes.
34. It appears almost a straight line from Marrickville to Liverpool? Yes.
35. Is this line from Marrickville to Burwood road recommended to us as a line by itself, or only as part of a through line to Liverpool? It is really part of the proposed through line to Liverpool.
36. Do you consider that it would be undesirable to construct a line only from Marrickville to Burwood road? I consider that it is a good proposal for a suburban line. The country there is very good country for residential purposes, and I believe that the line, if constructed, would, in a very short time, pay.
37. Even from Marrickville to Burwood road? Yes, or a little beyond. It must be remembered that on the other side of Cook's River there is a very small population indeed, and until very recently nearly the whole of the land there was bush land. A good deal of it has, within the last two or three years, been cleared and subdivided.
38. Then you look upon this proposal as a desirable line, even if it should go only to Burwood road? Yes.
39. Looking at it as a large question—as a proposal to construct a line which will ultimately form a duplicate line to Liverpool—do you think this is the best way to reach Liverpool? Yes, undoubtedly.
40. You think that the line is the most direct and the most easily constructed? Yes. It may be worth while to consider whether it could not be deviated slightly; but, practically, it would be the same line.
41. I ask that because I see from the plan that there are several rival routes through to Liverpool—do you distinctly state that of all those routes the one from Marrickville to Burwood road is the best to adopt in view of the ultimate construction of a line to Liverpool? I do.
42. You think that, besides being the best line to Burwood road, it will be the best commencement of a duplicate line to Liverpool? Yes. I think I might give a short history of these different routes, showing why they have not been carried out. The first line laid out was the one going through Belmore, and the Belmore residents were among those who first agitated for the line; that line followed up the continuation of the Canterbury Road, passed over the hill at Belmore, then dropped into the flat, then pursued a direct line, crossing George's River in two places, and on to Liverpool. There is a deviation from that line to the

H. Deane,  
Esq.  
19 Nov., 1889.

the north, to serve Bankstown. There is a proposal to avoid the crossing of George's River, and bring the line down to the Landsdown Creek, going round the back of George's River, to avoid a bridge. The southern route still remains the shortest. In 1885 I went over the southern line with Mr. Whitton. It goes by the name of Bell's line; and Mr. Whitton proposed afterwards that a practically straight line should be made between Canterbury and Liverpool, and this is the result. The first line was laid out almost a straight line, but it was improved and cheapened by putting in two curves.

43. How did that cheapen it? It made it conform more to the configuration of the country.
44. I think that a more northerly line was surveyed? Yes, the line passing through Lower Bankstown; but this permanently-staked line is the one which is being considered by the Department.
45. Of all these rival lines the department have come to the conclusion that the permanently staked line is the best? That is the best.
46. Is that only from an engineering point of view? It is the best for the principal object of the loop-line. It is the most direct, and has the best gradient. If a cheaper line is wanted it will be better to deviate it slightly.
47. How will that serve the various centres of population between Marrickville and Liverpool? There are no centres of population except Canterbury at present.
48. Is not Bankstown one? It is almost too far away. There is a proposal for a tram-way to go to Bankstown.
49. Then there are no centres of population between Marrickville and Liverpool where it would be desirable to diverge the line to serve? No. The only places where there is any population at all are Belmore and Bankstown.
50. Therefore this line will take a middle course between the two? Yes.
51. Can you give the Committee any information as to the owners of the property along the route of this permanently staked line, being willing to give the land for the railway free of cost? They were, in the first instance, but I am not aware that they would give it now.
52. I suppose there are documents in the office that would give us that information—are there any written promises? Latterly there have been no arrangements made.
53. As far as you are aware the land owners along the route are not willing to give the land free of cost? I do not think the residents on the permanently staked line have proposed to give it.
54. Have you any fixed opinion as to the desirability of constructing the line right through from Marrickville to Liverpool, apart from the engineering aspect of the question, for purposes of traffic or otherwise? I should say that the Commissioners would be better able to give information on that point than I am. I understand from the report of the Commissioners that they are not favourable to this line, as a loop-line, as affording any relief to the traffic, because only four trains a day each way would be saved. What is really wanted is the quadruplication of the existing line, so as to run the suburban traffic on different rails from those on which the main line traffic is carried.
55. *Dr. Garran.*] Can you tell me what is the objection to the most northerly of the routes that avoided the two bridges? It does not save the same distance.
56. It is a little longer between the two termini? One of the objects of the promoters was to save distance between Sydney and Liverpool? The more direct the line of course the shorter the distance. If you try to save expense and make curves in the line you will lengthen the distance.
57. How much longer was the more northerly line than the one you have staked? There is a distance of about a mile.
58. And against that you have the expense of two bridges? Yes.
59. What is the greatest elevation that your staked line gets above high water mark? 148 feet above high water.
60. What is the greatest elevation between Sydney and Parramatta? I could not say from memory.
61. Is the summit level of this line lower than that of Petersham? No; it is higher.
62. And the traffic from Liverpool would have to attain a greater elevation? Yes; but that I believe is held out as one of the inducements to construct the line, owing to the elevation being more favourable to settlement.
63. But although you have to get a higher summit level you have easier gradients all through? Easier gradients taking the whole line to Liverpool; but between Sydney and Parramatta the ruling gradient is 1 in 100.
64. All the way? Yes, between Sydney and Granville. There are two portions near Cabramatta with gradients of 1 in 66, but between Sydney and Granville the gradient is 1 in 100.
65. Is it 1 in 100 between Newtown and Petersham? Yes.
66. I understood you to say you were quite clear that this is the best line for the through route? Yes.
67. But you are not so clear that it is necessarily the best for the suburbs through which it passes? If I laid it out as a suburban line merely, and there was no object in saving distance, and no object in having the very best grades, some slight deviation might be adopted with the result of economy.
68. You could make a cheaper line? Yes.
69. Does this line best serve the intervening district? Yes; I think the general direction of the line is a good one.
70. But although it comes before us as a purely suburban line, you keep your eye fixed on the fact that it will ultimately become part of the proposed through line? I think that it is probable that it will.
71. You think that the Committee should keep that in view? Yes.
72. *Mr. O'Sullivan.*] From your evidence, and the opinion of the Commissioners, it is apparent this line will not serve to any great extent to relieve the traffic on the southern line? No.
73. It has been said by the Commissioners that it will only take off four trains a day? Yes.
74. That being so do you think it is wise for the Commissioners to sanction a line 4 miles in length merely for its own traffic? I believe it to be the best thing for Sydney to have lines radiating in all directions, but, if possible, to make them economically, so as to allow population to settle in other places than those now available.
75. But could that not be done by tram-ways in a much cheaper way? It could be done perhaps much more cheaply, but the district would not be served in the same way—a tram-way running 8 miles into Sydney would be a very slow affair indeed.
76. But as it will be purely passenger traffic could it not be accommodated by a tramway? We have nothing so long as 8 miles in tram-ways.

- H. Deane, Esq.  
19 Nov., 1889.
77. Does not a tram-way line run out to Dulwich Hill in this direction? Yes.
78. How long is that tram-way? That line stops short of what would be on this line the 5-mile point.
79. What length is the Dulwich line from Sydney? I do not remember exactly.
80. Considering that a portion of the route is largely served by the Dulwich Hill tram-way, would not the tram-way be sufficient? Only a small portion is served by the Dulwich Hill tram-way. The parts on the Cook's River side are not served by it.
81. I notice in this report that the cost of the Landsdown Creek route is the lowest;—even lower than that of the permanently staked line? The length is 14 miles 4 chains, and the estimated cost £346,393? Yes.
82. And the estimated cost of the permanently staked line now before us is £349,344? Yes.
83. And that is 14 miles long;—only 4 chains shorter than the Landsdown Creek line? To go round by Landsdown Creek would be more economical than to go straight across George's River.
84. Still you think the advantages of the direct route outweigh the extra cost? Certainly; if the line is taken on to Liverpool.
85. If the line is taken on to Liverpool by the permanently staked line it will still have to cross the George's River twice? Yes. If you go round the bend of George's River, you will certainly add a mile to the length of the line.
86. So that in crossing the George's River twice, you would have to erect two expensive bridges to reach Liverpool? Yes. There is a question with regard to the estimate of this line, in regard to which I would like to read a report which I wrote to the Minister of Public Works. There was a deputation complaining that the estimate was such a large one. The members of the deputation stated that they were quite sure that the line could be made for £200,000. This is a report I wrote to the Minister of Public Works on the 27th September, 1889. I promised to look into the matter and furnish the Minister with some *data*. I pointed out at the time, that if it were not necessary to save as much as possible in distance, and not necessary to have the good grades we had laid down, the line could be very much cheapened. I will read the report:—

Department of Public Works, Railway Construction Branch,  
Sydney, 27 September, 1889.

Marrickville (St. Peters) to Liverpool.

When this railway was first proposed, one of the main arguments put forth by the promoters, was the saving of distance between Sydney and Liverpool, and the advantage that would thus arise in conducting the traffic between Sydney and Melbourne.

In order that this advantage might be realised to the fullest extent, it was clear that the railway should be made for a double line of rails, follow the most direct course, and have easy grades for working the express traffic. With this end in view a route was ultimately selected, giving a saving in distance of  $4\frac{1}{2}$  miles, and a ruling grade of 1 in 90; it involved, however, very heavy earthworks and two crossings of George's River. The estimated cost, exclusive of land and compensation, was £393,870. Some modifications were afterwards introduced, and a new estimate was made (dated 21st December, 1888), amounting to £349,343.

As I had reason to believe that the estimate could be still further reduced, I had it carefully revised, with the result that it now stands at £308,546.

This is for the line as at present laid out for a double line of rails, with heavy earthworks, a ruling grade of 1 in 90, and two crossings at George's River, and I do not believe that a line could be found which, under the same conditions, will cost appreciably less.

If, however, the saving in distance is not an object, I will undertake to lay out a line which will cost very much less, but will answer all the purposes of suburban traffic.

I have examined carefully this question, and am prepared to state that a reduction to the extent of about £78,000 can easily be effected, leaving the estimate standing at, say, £230,000.

Acting Engineer-in-Chief to Under-Secretary for Works.

H. DEANE.

87. In face of the fact that the main line between Sydney and Liverpool is to be quadrupled, and in face of the opinion of the Commissioners that only four trains a day can be accommodated by this loop line, do you think it is probable that this proposed line will be taken on from the Burwood Road to Liverpool? The way I look at it is this—that this proposed portion to the Burwood Road makes a good suburban line, and when population increases in the district it may be carried for 2 or 3 miles further, and so it will gradually approach Liverpool. When the gap is very much reduced it would seem to be a very natural thing to bridge it over, and those would be the circumstances under which the whole line, I think, would be completed.

88. Then you consider the line would not be justified at the present time in going right through to Liverpool? No, I do not.

89. But it may be justified if population increases between Burwood Road and Liverpool? Yes. If, as a suburban line, this line were continued, and population sprang up, and it were worked into Sydney, and there only remained the gap I speak of, it would be a very natural step to complete the line between those two points.

90. *Mr. Humphrey.*] Is it intended that this shall be a suburban branch line? Yes, at present.

91. Engines and carriages will connect at Liverpool? No, they will run right through from Sydney.

92. You spoke of some deviations which would lessen the cost of construction—will you state what the difference in length will be if those deviations are adopted? To Burwood Road it would be practically the same—it would not make more than 5 or 6 chains difference at the most.

93. Then there would be no appreciable reduction of cost? Yes, there would be some reduction.

94. What will be the cost of the line between Marrickville and Burwood Road as staked—the cost of construction without resumption? The estimate is £90,250.

95. How much a mile is that? About £19,000.

96. Why is the construction so costly? It is by no means level country. That part crossing the George's River\* is the worst of the whole route.

97. But this is not the George's River—this is the Cook's River? Well it is the roughest part of the country.

98. After leaving Marrickville how does the proposed line pass? It crosses the Illawarra Road at the  $4\frac{1}{2}$  miles peg, then it strikes for a point a little to the right of the bend of Cook's River. At 5 miles it strikes to the north of the bend at Cook's River. After leaving the 5-mile peg it twists around a bend.

99. Do you come into Canterbury near the river? Yes, close to the river.

100. Where will the 7-mile peg be? About three-quarters of a mile beyond the bridge.

101. Then your line is to the north of the Belmore Road? Yes.

102.

\* NOTE (on revision):—I should have said Cook's River.

H. Deane,  
Esq.

19 Nov., 1889.

102. Could a less expensive route than that be found? No, it would be practically the same route, but some slight deviation might be made with sharper curves, but it would be chiefly in altering the gradients that a saving could be effected.
103. Where will there be heavy cuttings along that line? At about  $4\frac{1}{2}$  miles there would be a cutting 32 feet deep, and another one 34 feet.
104. That is about  $4\frac{1}{2}$  miles from Sydney? Yes.
105. That will be very near Marrickville then? Rather more than a mile from Marrickville. After crossing over the flat at Marrickville, on low ground, you begin to rise, and there are two spurs which run up as prominent features in the landscape, and which there is no means of avoiding. They are too sharp to get round, and they are high, and the depression in between involves a bank of 40 feet in depth. The line winds round by the river, and you cannot avoid a considerable amount of earthworks.
106. Then, it is owing to the costly earthworks that this route will be expensive? Yes; beyond the crossing of Cook's River there is a large cutting.
107. The cost of working the railway will be considerably less than the working expenses of a tramway? Yes.
108. I think we have evidence here that the tram expenses were £4,000 a mile, against £19,000 per mile of railway;—do you not think that is a strong reason for constructing a railway instead of recommending the construction of a tram? Yes; but I think apart from the question of working, the distance is too great to work a tram-line for the convenience of the public. You can run trains much more expeditiously.
109. If a tram-line were constructed the distance would only be 4 or 5 miles from Burwood to Marrickville Road? Yes. I understand you mean you would not propose it as an extension of the Dulwich Hill tram.
110. *Mr. Hurley.*] Is it your province to estimate the revenue in relation to the cost of construction? No.
111. Do you know the estimated cost of the line right through? Yes.
112. Will it be as laid down by the Railway Commissioners—£349,000? That was an estimate furnished to them by the Construction Department, and which I referred to as having been made at the end of last year, but I have had that revised since then, and have cut out about £40,000.
113. And the cost of the two bridges—an estimate was submitted to the Minister that the bridges would cost £100,000 to £150,000? They would not cost that. That was for the original position of the crossings, but we found very much better crossings after that, with very much less flooded land.
114. You have not taken the payable results of the line into consideration? No.
115. That rests with the Traffic Department? Yes.
116. But in the construction of this portion of the road, you have had in view an ultimate extension to Liverpool? I think the best way of putting it is that this is a portion of the line laid out to connect Liverpool.
117. And the object of that was to relieve the present heavy strain on the Southern line, as well as to accommodate the large numbers residing on the proposed construction? I believe the late Commissioner considered that it was.
118. That was the inducement for the construction of the line? Yes.
119. You have only to see that the line is constructed on the route selected? Yes.
120. You don't take into consideration the payable results of the line, or as to whether a more favourable route could be secured? Certainly, as to a more favourable route.
121. Looking at the map would it not be to the interests of the country to save the expense of those two bridges of £100,000 to £150,000, and have a detour? In my report to the Minister I pointed out that if the line were carried round and avoided the bend, we should save £78,000 on the newer estimate.
122. Then you recommend that, do you? If a cheap line is required.
123. But you recognise that the cheapest is not always the best? Yes.
124. But taking into consideration the vast amount of money which could be saved by that detour, would it not be advisable to put down a first class line, considering that the distance by means of the detour is so little more? It makes a mile difference.
125. If you can save £70,000 by a detour of a mile do you not think you would be justified in recommending it? Yes.
126. Therefore you are favourable to that detour as it will only increase the length by a mile? I may say that I am, certainly. I will give you the estimated cost of the bridges, because I should like very much to correct that statement. That was made when the line was originally thought of, and when as good a crossing of the river had not been found. The first crossing of the river is estimated at £24,838, and the second crossing of the river, which is a much shorter one, is only £10,706, or a total, the two together, of about £35,000. Flooded land is almost entirely avoided there. The bridges altogether, including the Cook's River Bridge, and some other openings which would be necessary, amount to £52,597.
127. And that may be saved by an additional mile being added to the length of line by that detour? £35,000 may be saved.
128. Looking at this document which has been laid on the table in regard to the proposed loop line—St. Peters to Liverpool—can you remember when you received instructions with regard to those surveys, what those instructions were—the inducements which led the Government to submit the instructions to you—whether it was as laid down in the statement on the third page, to the effect that large industries had been established in the locality, and would bring traffic on to the line, and that the construction, moreover, would give work to the unemployed? That was the statement of the deputation, I suppose.
129. Do you remember when you received your instructions whether those were the reasons assigned why those surveys should be carried out? There were no reasons given.
130. *Mr. Tonkin.*] Do I understand you to say that by making this detour you save the construction of those two bridges—one to cost £24,813, and the other to cost £10,706? Yes.
131. And by so doing you lengthen the construction by 1 mile? Yes.
132. If you lengthen the construction by a mile it costs £19,000, and you have to deduct that from the £35,000, so that you only actually save £16,000? Yes, but a line through that portion of the country would not cost £19,000 a mile.

- H. Deane,  
Esq.  
19 Nov., 1889.
133. It would cost less? Yes. The portion under consideration is, as regards earthworks, the most costly portion of the whole line. The end part is, comparatively, through flat country, and would not cost so very much.
134. Could you give us an idea of what the remainder of the line would cost after getting over this difficult part—from the Burwood Road to Liverpool? Yes. Deducting the bridges, I do not think it would make very much difference.
135. Then there would only be a saving of something like £16,000 or £17,000? Yes.\*
136. Under those circumstances would you prefer going round that mile than going direct? Not if the present line with the gradients is adopted. Supposing we make a cheaper suburban line it would be desirable, but if the present line is adopted, with the view to quick running of express trains, and good grades, it would be better to go straight across the rivers, and not avoid the bridges.
137. Do you not think, although at the present time, the traffic would not warrant this loop line being constructed, it will only be a short time before it will do so? I believe it would prove to be a benefit in the future. If not a necessity, it would be a convenience.
138. Taking that into consideration, don't you think it would be advisable to have a direct route across the bridges? Yes; I do under the circumstances.
139. With regard to the first part of the line under consideration—do you believe, without taking into consideration the remainder of the line from Burwood Road to Liverpool—that that portion, if constructed, is warranted by population, and that it will in all probability pay working expenses and interest on capital? I am quite sure that it would in a very short time. I am sure that as far as Canterbury, very good returns would be obtained, and I am sure in a few years time, the piece beyond would prove a very good investment.
140. This estimate, of course, is for a double and not a single line? No, a single line.
141. Do you think £19,000 a mile is a very high estimate for a single line? I cannot help it—it is just how the country happens to lie.
142. What would be the difference in the cost of a single and a double line? If you made the excavation for a double line, it would perhaps cost from £8,000 to £10,000 more. The permanent way and ballasting, which would also be affected, would be £10,000—that is to say, you can make a double line for about £20,000 more than the present estimate. That would be £110,000 on 4 miles and 16 chains.
143. The estimated cost is £90,000 now? Yes, £90,250. There can be no doubt about what is required. These quantities have been taken out from actual survey. There are approximately 240,000 cubic yards of cuttings taken to embankment; and if tenders were called for, the price of tenders put in might be lower than what we have here, in which case that sum of money would not be required, but the quantities approximately would be the same.
144. Supposing this line were constructed as a single line, would there be any material difference in making it into a double line afterwards? No; I do not think it would make very much difference.
145. *Mr. Douel.*] When was the survey of the line from Marrickville to Burwood Road staked and completed? *Mr. Kennedy's* survey was completed in 1886 to the best of my recollection. *Mr. Cumming's* improvement of the line with deviations was made last year.
146. The length of the whole line to Liverpool you estimate at 16 miles and some chains? No; it terminates at 16 miles and some chains from Sydney, but the whole length of the line to be constructed would be about 13½ miles.
147. Have you any information about the line which was surveyed by *Mr. Sanderson*? I believe we have had some in the office, but I have not seen it.
148. You could not say what length of construction that would involve;—about 6 miles, and that would give you this connection straight to Liverpool? Yes.
149. Have you any idea of what the estimated cost of that particular portion would be? I do not believe it was estimated.
150. The Department has no information on the subject? I have not seen any.
151. *Mr. O'Sullivan* has asked you some questions in reference to the construction of a tram-line—do you think that the public convenience would be served by the construction of a line from Marrickville to Burwood Road? No, I am decidedly against a tram-line. It would be 5 miles in length, and that would mean 50 minutes travelling, apart from the railway journey, whereas if you run the trains direct out you would run into Sydney in half that time.
152. But if a tram-way were constructed would not the public convenience be better served, and more facilities afforded for the residents of that particular district, not taking into consideration the speed? I do not see how they would.
153. Are there any engineering difficulties in the construction of a tram-line from Marrickville to Burwood? I have not considered the question. I expect there would be some steep hills, but I have no doubt they could be got over. I believe there are some steep hills in Canterbury which might be trouble some.
154. You estimate the cost of the construction of this railway at about £19,000 per mile? Yes.
155. What would the cost of a single tram-line be? I daresay, making allowances for cutting down the roads where the gradients are too steep, it could be done for about £5,000 per mile.
156. What would be the cost of a double tram-line? It would cost about £8,500 or £9,000 per mile.
157. A tram-line could be constructed for half the money which would be required to construct a railway? Yes.
158. Would that involve any resumption of land, or would no resumption be required? It might at some of the corners.
159. But the resumptions would not be a large item? No.
160. In your proposed railway are there any level crossings? Yes. It is impossible to avoid them.
161. Do you not, as a professional man, consider level crossings very objectionable in railway construction? If they can be avoided they ought to be avoided.
162. Are they not objectionable on the score of danger, and also on the score of cost involved in looking after them? Yes, they may be objectionable on the score of danger where the road traffic is large, or where there is not proper supervision, but of course, proper supervision can be provided.
163. You are aware that the Commissioners have stated that if a line is constructed to Liverpool, they do not anticipate more than four trains going over that particular length in one day? Yes. 164.

\* NOTE (on revision):—The estimate for the Burwood section is for a single line; that for the complete loop line to Liverpool is for a double line.

164. Therefore they could have no intention of diverting the main traffic from the line for the purpose of easing the traffic on the existing line? Really, I do not quite understand their report in that particular.
165. Supposing that is to be the railway policy carried out by the Commissioners, and that no portion of the main traffic is to be diverted upon this particular loop-line;—do you not think the interests of the public generally would be better served by the construction of a tram-line than by the construction of a railway-line—both on the score of cost and general convenience? No; I do not think so. In considering whether this line should be made or not, I should leave out of consideration altogether the question of connecting with Liverpool. I believe, as a suburban line, it is a good one. I believe that tramways for long distances are altogether inadequate to carry the traffic.
166. This would be only 4 miles, would it not? But there is the extra distance from Marrickville into Sydney.
167. That is already provided for by the existing lines? Yes; but still there is that distance to travel over, and then you have to break at Marrickville, and again when you get into the tramway at Redfern.
168. Have you been over the whole of the line from Burwood Road to Liverpool? I have not walked over every inch of the road.
169. But you are familiar with the proposed route? I think I may say I am.
170. Are you aware whether any surveys and subdivisions have lately been made on that particular route? I believe they have.
171. If the line should be constructed from Marrickville direct to Liverpool at some future time, do you think it desirable that the Government should take steps to immediately resume what land would be necessary, before it changes to smaller holders? I think the Government should, if possible, get an undertaking from the residents along the line to give the land.
172. With regard to those who would not give the land free of cost to the Government—would you recommend that any other land which was intervening should be resumed? Do you mean beyond the Burwood Road?
173. Yes; having in view the probable construction of the line to Liverpool, which you say you recommend? If the Government make up their mind eventually to continue the line to Liverpool it would be a very wise step to take.
174. *Mr. Cox.*] You only advocate this line as a suburban line as far as Burwood Road? Yes.
175. How far is Burwood Road from the Burwood station on the Western line? The term is very misleading. Burwood Road is merely a local appellation. The Burwood Road in Burwood does not connect with the Burwood Road, which this particular proposed line of railway crosses.
176. How far are they apart? It would be nearly 3 miles from Burwood Station.
177. You have expressed yourself that you are altogether against the construction of tramways for public convenience? I think I hardly expressed myself in that way.
178. Would it not be possible to meet all the wants of the people upon this proposed route from St. Peters to Burwood Road, by giving them one, two, or more lines, and connecting them with the main Western line? The people who are resident at present along the line, I have no doubt, would be served well enough by a branch tramway from one or other of the railways, but in view of future settlement I am sure that a railway would be the best and most paying thing. A much larger and better population would spring up where a railway is constructed, and they could get rapidly into town without changing.
179. Are you aware that when the tramway was constructed to Waverley it caused an enormous influx of people into that neighbourhood? Yes; but of course there are no changes, and there is not the distance.
180. You are aware that there is a tram from Kogarah to Lady Robinson's Beach? Yes; the whole length of the tram is only a mile.
181. It is only 3 miles from Bridge Road to Burwood? That is a deal of difference.
182. Then we have such a thing as a tram-feeder to the Southern line from Campbelltown to Camden, and the people seem to be content with it? I expect they would like a railway if they could get it.
183. In calculating the expense, you have only taken the actual cost of construction—£19,000 a mile—irrespective of resumption, which might cost as much more? I do not think so, from what I have heard. The land valuer would be able to give you information about that. The resumption on the railway would not be such a very large amount.
184. *Mr. Humphery.*] Could you avoid the construction of a bridge over Cook's River by starting a line below instead of on the Sydney side of the present bridge? —
185. That would save £10,000 in a bridge, would it not? It would not serve the same district; it would be a different line altogether.
186. What is the next station to Marrickville—St. Peters? St. Peters is on this side of Marrickville.
187. What is the first station? Erskineville. Tempe is on this side of Cook's River, and Arncliffe on the other.
188. It would not be necessary to start as low down as Arncliffe? Yes; you would have to start on this side of Arncliffe, a little beyond Cook's River bridge on the river.
189. As a suburban line would that be suitable? What I say is that it would not be the same line. You could not look upon one as a substitute for the other.
190. Is there any particular reason for constructing the line from Marrickville to Burwood Road instead of from Arncliffe to Burwood Road? There is a considerable population at Canterbury which the present proposed line serves.
191. Would not the line from Arncliffe to Burwood Road serve Canterbury? No.
192. How close to Canterbury would it go? It would be about  $1\frac{1}{2}$  to 2 miles from Canterbury. In fact it would be further off than Canterbury is from Ashfield station at the present time.
193. What would be the difference between Arncliffe and Liverpool? About 13 miles.
194. And by the proposed route? About the same distance. The proposed route is  $13\frac{1}{4}$  miles.
195. So that the route will be shorter? I think it will be about the same, but I have not the exact distance.
196. Is it your opinion that, for a suburban line, it will be better to start as you propose from Marrickville, instead of from any other point? I believe so.
197. Of course you know Marrickville is at present served by tram and railway? Yes. There is a consideration, which I think I should point out, with regard to the substitution of a tramway to the Burwood Road.

- H. Deane, Esq.  
19 Nov., 1889.
- Road. It could not be so well extended as a railway. Supposing it were desirable to make 5, or even 3 miles of a branch tram line, it would make a very long tram line indeed if you wanted to carry it on, and it would be objectionable on that account.
198. But treating it in regard to the subsequent extension to Liverpool? Not merely to Liverpool, but the subsequent extension to serve the population which may spring up between Belmore and Bankstown before you get to the crossing of the George's River, where a good deal of it is good country for settlement.
199. Have you any doubt that Marrickville is the best starting point for this proposed line? No; Marrickville is the best, I believe.
200. *Mr. O'Sullivan.*] If the Dulwich Hill tramway were extended out to the Burwood Road, the streets or roads could be utilised, and there would therefore be no cause for resumption? No, except at some sharp corners.
201. And the same remark would apply to a tramway taken from Burwood, and running over in the direction where the terminus would be? Yes.
202. *Mr. Dowel.*] How many stations or stopping-places do you propose to erect between Marrickville and Burwood Road? I think that has been decided; I should say three.
203. Taking into consideration the great depth of the cuttings and the heavy embankments, would there be any great difficulty of access by the residents who are settled now, and who will in all probability settle on the land between Marrickville and Burwood Road? No.
204. Would it not be much more convenient for the residents of this particular district to be able to step into a tram, than to have to go some considerable distance to get to these three stopping-places which you refer to? I think you might look at it in this way: Supposing the present suburban line were taken up and the tramway put down, would the residents like it. Go where you will a railway is always preferred to a tram line. Is not that a fair way of putting it?
205. I think not. Referring to the question put to you by Mr. Humphery, in reference to the construction of the tramway to Waverley, do you, as a railway engineer, think the people would be as well served by the construction of a railway from Waverley to Sydney as they are at present? I am sure a great many of the Waverley residents would prefer a railway, and they have told me so.
206. They would have to have a great number of stopping-places, and I do not think the public would be so well served as now? A tramway serves a different purpose. A tramway has many advantages. It has the advantage that you can stop at any street corner, or where you like; but you cannot stop a railway except at recognized stopping-places.

Joseph Graham, Esq., Mayor of Marrickville, sworn, and examined:—

- J. Graham, Esq.  
19 Nov., 1889.
207. *Vice-Chairman.*] You are Mayor of Marrickville? Yes.
208. Have you been a resident of Marrickville for a number of years? About twenty-six years.
209. You are residing there still? I have been living there over twenty years.
210. You were there before there was a tramway or railway? Yes; or 'bus.
211. Now you have both railway and tramway communication? We have.
212. Are you cognizant of the route of the proposed railway from Marrickville to Burwood Road? Yes.
213. What is the Burwood Road? I am not quite certain about it. I know Chapel Road better.
214. That is not what used to be called the Punch Bowl Road? No; I am not quite so well versed in the locality after leaving Canterbury. I was over the line with the late Hon. John Sutherland exclusively. He would not go with anyone else for the reason that I owned no land, and was not interested in it in any way.
215. Then you have no land beyond where you reside yourself? None whatever.
216. Nor are you interested in land? None whatever.
217. Were you made aware of the different routes proposed by the authorities for the construction of the line from Marrickville, or from the Illawarra line to Liverpool? There is not much until you get across Cook's River at Canterbury, and then there is what is known as Bell's line, diverging in a sort of small circle, and another is known as Kennedy's line, which runs in a perfect straight line.
218. Population has increased very rapidly about there since your time? Very much.
219. And there is a large population there now? Very large.
220. The population extends towards Punch Bowl and Burwood Road? Yes.
221. And Dulwich Hill? Dulwich Hill has become quite a town.
222. And they have a tramway to Dulwich Hill now? They have an extension to the upper part of Dulwich Hill.
223. Was there an agitation for a tramway service from the Ashfield station towards Druiitt Town? Not that I am aware of. There was a hint that if a railway were made to Cook's River a branch line would run through Croydon.
224. Is it your opinion that the population, and the traffic which would belikely to arise would be sufficient to justify the Government in constructing this line to Burwood Road? Most undoubtedly.
225. You are aware that it is a rather expensive locality through which to construct a railway owing to the configuration of the earth, and the heavy nature of the country? Yes; until you cross Cook's River, but not more than the one to Hurstville, and there is a very great deal more encouragement on this line in the shape of population, and the suitability of the soil for settlement.
226. Is land there very valuable? Not particularly valuable. The ground is nicely undulating for drainage purposes. It is not too abrupt, but there is plenty of fall.
227. Is it your opinion that a railway would be necessary, or that a tramway would provide the necessary means of communication for the travelling public? My idea of the trams is that they will never pay. The wear and tear is so great that the railway is the cheapest and most suitable, and will be the best for the people and the Government. Motor tramways will never pay on account of the wear and tear. Cable trams might pay, because there is not so much wear and tear.
228. You are aware that the tramways in one sense give more accommodation than the railways—they stop at street corners, and in many places where a railway would not? There is no doubt of that; but judging from Petersham, when I knew it first, there were about two passengers to each train. Now there are nearer 500.
229. Have you ever seen the tramway between Campbelltown and Camden? I have been upon it.

J. Graham,  
Esq.

19 Nov., 1889.

230. Are you aware it is paying well? I think it is an abortion of a thing. Like all cheap things I think it will never pay.
231. But the evidence is that it is paying? The gradients to my mind are very steep, and the wear and tear must be very great.
232. Do you know the estimated cost of the railway from Marrickville to Burwood Road? I have heard it.
233. Have you heard the engineer's estimate of the cost? I have heard the former one, but that is some years ago.
234. The estimate of this single line is £19,000 a mile? I have no doubt that until it crosses Cook's River, it will be very expensive.
235. And this is without compensation for land? Yes.
236. I suppose the people there are not philanthropic enough to give land for the purposes of the line? They are on the other side, I understand, but you could hardly expect it in Marrickville, because the divisions there are smaller.
237. Do you think they would give the land if the railway were extended on towards Liverpool? They have offered to do so.
238. But some of them have withdrawn their offers, I think? That I cannot say, but I know they were very free at one time, and I don't see any reason why they should not be free now.
239. Would the terminus be nearer Ashfield or Burwood Station? I think it would be nearer Croydon.
240. How far would it be from there? About  $2\frac{1}{2}$  or 3 miles.
241. How far would it be from the point the tramway reaches at Dulwich Hill? That I could hardly tell, I think it would be pretty well on to 5 miles.
242. Would it be so much? Yes; it is over one mile from Dulwich Hill to the Cook's River, and I think it would be 3 or  $3\frac{1}{2}$  miles more to that part; I may be mistaken.
243. Then you think, judging from the present population, and the probability of further population springing up there, it would be desirable thing to construct this line? I am almost sure of it.
244. And you would be strongly in favour of a railway instead of a tramway? Decidedly.
245. *Mr O'Sullivan.*] Are you aware that if this line is constructed from St. Peters to Liverpool, which is virtually the same starting place, it will cost £349,324, without land resumption? This is a question I can hardly answer, because both ends of this line unfortunately are where the heavy expenses will be—over George's and Cook's Rivers.
246. Are you aware that is the estimate of the Railway Commissioners? I am not aware of the estimate.
247. Are you aware that the Commissioners estimate that the total annual cost of working it will be £21,346? No; I am not.
248. Are you aware that the traffic estimate for the line from St. Peters to Liverpool is only £5,200 per annum? No; I am not.
249. If these figures are correct, they would show a loss of £16,140 on the annual working of the line? That may be; but I understood it was only to be a suburban railway.
250. I am treating this as the line from St. Peters to Liverpool, which it may become. We bear this fact in view in recommending or disapproving of the line—I am treating it upon the estimate formed by the Commissioners as to the cost of the line from St. Peters to Liverpool;—are you aware it would show a loss of £16,140 per annum? If the line is constructed to Liverpool it will carry the whole suburban traffic.
251. The total annual cost, as you are aware from this estimate, would be £21,346 per annum. The total income would be £5,200, leaving a loss of £16,146. Then we have these other losses, including the shortening of the route to Liverpool and places further south—£17,423, and it is estimated that traffic would be diverted from Petersham and Ashfield to the extent of £1,714, making a total of £19,137. If that be added to the £16,140 loss on the annual working, it gives you a total loss of £35,277? Of course these figures are gone into by gentlemen who know about them, but I am speaking of the line going to Burwood Road or Chapel Road, and making it a suburban line—I have no doubt whatever about its being a financial success. The question of its going on to Liverpool is a different one, and I have nothing to do with that. Liverpool is provided with a good railway and ought to be satisfied.
252. Under the circumstances, and with the Railway Commissioners figures before you, do you think it would be wise to recommend this line? I should not say so to Liverpool, but as a suburban line.
253. Treating it as a suburban line, you have a tramway to Dulwich Hill? Yes.
254. That is part of the railway to Burwood Road? Yes.
255. As a suburban line it could only be a passenger line—do you not think passengers could be served materially well by a tramway line that would not cost anything like the railway, and could be worked more cheaply? I am not engineer enough to go into that question—the undulation of the ground would make it very expensive to go even up and down through Canterbury.
256. Do you think, under the circumstances, we would be justified in recommending a suburban railway to a district that is already to be served by a tramway line? But this district would not be served by the present line, because it goes from half a mile to a mile from the tramway.
257. But still a portion of the district would be served? A very small portion.
258. And the other could be served by a tramway from Burwood to the end of the Burwood Road? In the meantime Canterbury would be just where it is now.
259. Supposing you take tramway on from Dulwich Hill through Canterbury to Burwood Road? That would give them a better access than they have now.
260. Do you not think that would be sufficient for the people, in view of the enormous loss that must ensue from a railway? I cannot say. If they went as far as the Commissioners have resolved on to Burwood Road, there would not be that loss. There are about 5,000 people in Marrickville alone who would use it.
261. These figures would not apply to the line to go to Burwood Road—I only apply them from St. Peters to Liverpool, to show the enormous loss every year, and no doubt a portion of the loss would apply to the line as far as Burwood Road. Bearing that in mind would we be justified in recommending that line of railway? I cannot say if the Commissioners could possibly have known the populations there, and the probable advantages to be derived from such a fine fresh water stream as exists there. There is a racecourse there, and at the last races there were 8,000 people there, and they have races every fortnight. There would be an enormous passenger traffic, and there is some of the finest brickmaking earth there to be had in the Colony. There would be a great deal of building also going on if the Committee recommended and Parliament approved of this line.

WEDNESDAY,

WEDNESDAY, 20 NOVEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN.)

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

The Hon. J. H. Carruthers, Esq., M.P., Minister of Public Instruction, sworn, and examined:—

- Hon. J. H. Carruthers, Esq., M.P.  
20 Nov., 1889.
- 262-3. *Vice-Chairman.*] You are one of the members for Canterbury, and at the present Minister of Public Instruction? Yes.
264. The proposed railway will be in your electorate? Yes; entirely.
265. In the early part of the project you took some interest in it? Yes; up to the present time I have taken interest on behalf of my constituents.
266. You know the locality very well? Very well indeed.
267. You know the route that it is proposed to take? Yes; and also two or three routes which have been proposed in times gone by as alternative routes.
268. You are aware that originally there were two or three projects to connect Liverpool and Sydney? Yes.
269. And that the project now before the Committee is simply a suburban railway from Marrickville to Burwood Road? Yes.
270. Which may form in time a portion of the duplicate line to Liverpool? A portion of what they call the loop-line to Liverpool.
271. Is the population pretty large about there? There is a fairly large population between Marrickville and Cook's River, and then when you cross the river it diminishes considerably, though it is not what you would call sparse.
272. Is the population sufficiently numerous to justify the Government in constructing this line? If you will allow me I will give an instance on which I base my experience and my evidence. I have been living for a considerable time on the Illawarra line. I went to live there seven or eight years ago. At that time at Kogarah the population was far more sparse than it is now, at even the extreme portion of this line, in the proportion of about one to three; that is to say, the proposed line at its worst portion, as far as population is concerned, is now three times as thick as it was on the Illawarra line when I went to reside there. The whole traffic of that district was conducted by two omnibuses, which ran once a day, coming into Sydney at 8 o'clock in the morning, and going out again at 4 o'clock in the afternoon. The day the Illawarra line was opened they had to put on thirteen trains to accommodate the traffic, and that has increased up to something like thirty trains. These trains are crowded each trip sometimes by from 300 to 500 passengers. A similar development, I anticipate, will take place in this locality, because there is no point of vantage the Illawarra line possesses over this portion of the country, and on that assumption I consider that you can form a fairly good conclusion that if the Illawarra line, as far as Hurstville, by its suburban traffic has justified its construction, then there is just as much data with regard to the proposed extension as there was with regard to that, and as there now exists.
273. You think that the extension to Burwood Road would receive an amount of traffic equal to that which is now accommodated by the suburban line towards George's River? I think it would be almost as popular. It would not be quite so popular, because George's River is a holiday resort, but against that we have the Canterbury Park racecourse close to the terminus, which attracts large numbers of racegoers. And even admitting that it would be hardly as popular perhaps as the Illawarra line there would be very little distinction between the two as regards settlement. The country there is very good; it is held by small owners chiefly, and the tide of settlement would go there just as quickly as it did on the Illawarra line, and many people prefer it because there is the objection to the Illawarra line that people suffering from bronchial affections cannot stand the sea air. They would be removed from the sea air by a ridge at the back, and a great number would sooner go there than to the Illawarra line. As inducing settlement it would be just as popular as the Illawarra line.
274. How far would the Canterbury Park racecourse be from the proposed line? From  $\frac{1}{2}$  a mile to  $\frac{1}{4}$  of a mile.
275. Sufficiently close for the traffic to the racecourse to go by this means? Yes. I believe that if the proprietors of the racecourse were examined, they would state that they intend to lay down at their own expense a short branch of a  $\frac{1}{4}$  of a mile to connect with this line.
276. How far is the proposed terminus at Burwood Road from the southern line? About 4 or 5 miles.
277. How far from Dulwich Hill? At one point the line would be about  $\frac{3}{4}$  of a mile from the nearest point of the Dulwich Hill tram-way, but it immediately diverges at an obtuse angle.
278. *Mr. Trickett.*] Do you regard this line from Marrickville to Burwood Road as desirable in itself, or desirable only as a part of a projected line to Liverpool? I think in itself. It would be a wonderfully good paying line. If you look at the paying capacity of the other suburban lines you will find that it affords a great argument for this as a suburban line. It would be very largely patronised as a suburban line, because the country through which it is to go is good.
279. Can you mention any centres of population at the present time which the line would serve? At Canterbury itself there is a large centre of population. I was there about four months ago at the opening of the new Town Hall. I gave permission for the school children in the Canterbury municipality to attend the ceremony, and we had 1,100 scholars in the building on that day. These children represented the children of parents who resided in the immediate vicinity of the line at Canterbury.
280. How are these people situated at the present time with regard to access to Sydney? They have five omnibuses I think.
281. No other means of conveyance? No.
282. How far are they from the nearest railway station? Most of them are from 3 to 5 miles. This line is almost equi-distant between the Illawarra line and the western line. The Illawarra line is about 5 miles and the western line is about the same distance, it may be more or less at different points, but that is the general average distance. The Dulwich Hill tram-way is about  $\frac{3}{4}$  of a mile from the nearest point,

point, but that is just near the Illawarra line itself, and then the tram-way runs away from this line and does not meet the traffic at all which the railway will meet. The tram-way, if it robs any line of traffic, robs the western line.

283. Would any other places be served by the railway? Moorefields, which lies between the Canterbury Road and the Illawarra line. It is rather closer to the Illawarra line than to the Canterbury Road, but it is prevented from getting access to the Illawarra line by what is known as the Woolli Creek where a deep gully renders it impossible to construct roads or bridges with the limited means at the disposal of the municipality. The people all take their produce to market, and otherwise do their business through Canterbury which will always be the centre of traffic for them. At Moorefields there is a considerable old settled population.

284. Have you any idea of the number? The attendance at the Public School there is fairly considerable. I cannot say what the population is; but I should think that at Moorefields there are 200 or 300 families who are chiefly engaged in orchards, market gardens, small farms, and the general work of the neighbourhood.

285. Are there any other places? Then there is Belmore, which is a little distance beyond the terminus. I suppose Belmore church, which may be taken as the centre, is about a mile beyond the terminus. There is a fairly good settlement there. It is scattered—consisting chiefly of farmers and settlers. Towards Canterbury again, in the lower parts of Enfield, there is settlement of a tolerable extent; but at Marrickville itself—the portion of Marrickville lying towards Cook's River, called Undercliff—there is a good large population, extending from Undercliff to Canterbury. It is in the Municipality of Marrickville, though it is really part of the Canterbury district. That is the most thickly-settled portion of the whole of the line, and it is chiefly held by allotment holders. I think there is hardly one large landed proprietor in the whole distance. The settlement there is no doubt larger than on the northern line at Ryde or Hornsby, or any of those places, and as large as the settlement at the present time between Homebush and Burwood.

286. Is not Marrickville already served by a tram-way? Not that portion of Marrickville, because they are two or three miles from any tram service.

287. Could not the tram-way be extended to these suburbs easily? You could extend the tram-way there; but the tram-way running through Marrickville at the present time is paying very well. The cost of working a tram-way is very great, and the inconvenience of a tram service to the people is very great. I look on a tram-way as only a make-shift for meeting the convenience of the people.

288. How long does the train take to run from Marrickville in to Sydney? It runs in in ten or eleven minutes.

289. How long does the tram-way take to run from the present Marrickville terminus into Sydney? Between thirty and forty-five minutes, and sometimes an hour.

290. Then if the tram-line were extended to Undercliff it would take people an hour to get into Sydney by tram? It would take from three-quarters of an hour to an hour.

291. Whereas by train it could be done in about twenty minutes? By train it takes twenty minutes: it takes ten minutes to Redfern, two minutes for shifting, and eight minutes from the railway station to King-st.

292. You have not mentioned Bankstown? That is another suburb, it is beyond the terminus. As Belmore lies to the eastern side, so Bankstown lies to the western side. It is also an old settled place; but it has not made much progress.

293. Why? There have been no means of communication.

294. Can you mention any other established places? There is part of what they call Peakhurst. The western portion of Peakhurst would be inconvenienced somewhat by the extension of the railway to Burwood Road. It would bring the people of that place within 3 miles of railway communication, whereas they are now 8 or 9 miles away. Then there is settlement at a place called Beaconsfield. It is only of recent origin; but the people would be brought within 5 miles of the railway, whereas they are now something like 15 miles away. These places would all be inconvenienced by the extension of the line to Liverpool. It would bring them within a mile or 2 miles of the line.

294½. This line has been referred to in former evidence as the "staked line"—do you know it by that term? Yes. It is what they call the "lock-spitted" line.

295. There is a surveyed line to the north as well as to the south of that line? Yes.

296. And it is the middle line we are referring to now? Yes.

297. Which do you think is the best of the three surveyed lines? I have long since made up my mind to abide by the decision of the Department, and I have come to the conclusion that this is the best. The line which is lock-spitted is one which the people have brought themselves to be satisfied with. It has got rid of all agitation. The people have accepted it as a fair compromise, and no reason has been offered against its adoption. I think it is one which most fairly meets with the requirements of the public. I have some land about 3 miles beyond its terminus. The line to the south-east passes through my property, so that it would be to my personal interest to have that line constructed. But although the lock-spitted line is a couple of miles away from my property, and will not benefit me to any appreciable extent, still, in the interests of the whole of the people, and for the sake of getting a line running through the centres of population, and running through good land for engineering purposes, I think it is the best and most direct.

298. You think it will serve the places you have mentioned best? It would not serve Belmore so well.

299. But taking them altogether? It would serve Belmore fairly well. It would serve Bankstown very well, but nobody could really grumble at that line. It is a fair direct line without favouring anybody. It is the best engineering line that could be proposed.

300. The line marked blue on the map is the line now under consideration? Yes.

301. That is the line which you think would serve all parties best? Yes.

302. I see that on the 15th July, 1887, you introduced a deputation to the Minister, with regard to what was then called the Liverpool loop-line, and in the *précis* which is laid before the Committee these words occur,—“Mr. Carruthers intimated that he was getting an undertaking, giving the land free, signed by nearly every owner on the route.” Did you succeed in that effort? I got the undertaking, and handed it in. It is in the records of the Public Works Office. It was pointed out that you could not ask an allotment holder to give up all his land, and the country from Marrickville

to

Hon. J. H.  
Carruthers,  
Esq., M.P.

20 Nov., 1889.

Hon. J. H.  
Carruthers,  
Esq., M.P.

20 Nov., 1889.

to Cook's River is chiefly held by allotment holders. One proprietor of some few acres—Mr. Moyes—signed to give his land without any hesitation. I believe he is a very liberal, generous man; he is an old resident, and not a land speculator, and would, I believe, give his land freely. When we crossed Cook's River we got the land, except in two cases—one being the case of a trust estate, where it was difficult to get the trustees to sign, as they were scattered over the world; and the other being the case of an old individual, who, try whatever persuasion you liked, could not see that it was a good thing to give his land when other people had been paid for theirs. You could not shift him from that determination, but the Public Works Act meets his case, because the railway would so improve his property that he would get no compensation. It was signed by nearly every owner on the route.

303. Those are the only exceptions you have mentioned? They are the only important exceptions.

304. Most of the others signed? Yes.

305. Was that right up to Liverpool? I believe it is right into Liverpool. The last estate, Moorebank, then owned by the Bishop of Sydney, is now sold I believe, but the owners of that estate made some provision for this line too. There was Mr. Forester's estate, where the racecourse is, and he also made provision for the line.

306. I understand that between Marrickville and Burwood Road there are a good many persons whose consents you have obtained? No, they are nearly all allotment holders, but the larger proprietors gave their land. I think they would give it to-morrow. I know that Mr. Tidswell, who owns the sugar-mills, will give his land. I believe that all who own to any considerable extent will give their land.

307. You believe that all the large land-holders between Marrickville and Burwood Road will give their land free? I am sure of it.

308. I asked the question because one of the Departmental officers said he thought the offer only applied in case the line were taken right on to Liverpool; but as far as you can ascertain the feelings of people, you think they would give their land free if the line were made only to the Burwood Road? The people protected themselves as far as they could by making the offer conditional on the line being constructed or commenced to be constructed within a couple of years. They did not like to permanently encumber their property with conditions which might interfere with them in selling it hereafter. You will find the same spirit pervading the people now. They recognise the great convenience and the great value to themselves of having railway communication, and if they can fairly give the land they will do so.

309. Have you considered this proposal in connection with its possible extension to Liverpool? Yes.

310. What are your views on that head? My views on that head differ entirely from the views of the Railway Commissioners, because I believe that a saving of 5 miles in construction will be an immense gain to all the people who travel along the southern line to Sydney. It will remove the congestion on the present western line. It must remove that congestion very materially—just as much as the quadrupling of the line, because it will make four lines on which to run the traffic. It will also diminish the working expenses by having 5 miles less to run the rolling stock. It will bring larger settlement in the neighbourhood of Liverpool and all that country by making it 13 instead of 18 miles from Sydney, and the increasing of settlement will increase the local traffic from Liverpool to Sydney. At Liverpool there is the Warwick Farm racecourse, which is now patronised by a considerable number of people, but which would be patronised by a much larger number if it were brought 5 miles nearer to Sydney. As it is now, they are continually blocked coming from the racecourse. There is not half the patronage now that there would be if the line were constructed. There is also the racecourse at Canterbury Park. Altogether I think as an alternative line, saving passengers from the southern districts 5 miles travelling and leaving them an unimpeded traffic, it must be profitable, economical, and convenient. It has been saddled with the expense of some bridges across George's River. You have to cross the river twice. The expense charged for the bridges has been most exorbitant and extravagant compared with the actual outlay incurred in constructing bridges for railways elsewhere. The bridge over George's River at Como cost something like £70,000 or £80,000. You will find that the estimate for the bridges over this neck of land is very large and very extravagant.

311. The railway from Marrickville to Burwood Road is estimated to cost £90,250. Having regard to the traffic which you anticipate will take place, do you think it would pay interest and working expenses on that outlay within a reasonable time? I think so. The Illawarra line, which had to bear the cost of bridges and overcome engineering difficulties, and which was diverted out of its true course, in order to run through the properties of some Members of Parliament, and other land jobbers like them, paid in its first year, and according to Mr. Goodchap's estimates which have been adopted, it paid in the second or third year between 6 and 7 per cent. It was constructed through country which was a howling wilderness compared with the country through which this line will go. The suburban line to Granville has been paying working expenses and good interest too, and this line will pay the same within a year or two. There is another route which has been suggested. An alternative line from Arncliffe has been advocated by Mr. Myles M'Rae. It would perhaps save a bridge over Cook's River. It would run through property of mine; it would benefit me to the extent of £20,000 or £30,000, but it is not a line which ought to be considered or constructed, because it will not meet the requirements of suburban traffic. It will leave all the suburban traffic. It will go through country which is not fit for suburban population on account of its broken nature, and it will by no means make any saving of distance between Sydney and Liverpool. I mention the matter, because in the discussion in the House Mr. M'Rae advocated the adoption of the route, and it may be that the Committee will have evidence offered by the larger land-holders there, but I unhesitatingly condemn it as being a proposal which can in no way be brought into consideration with this line. I may say that I have no land which may be benefited by this proposal, and that the part of the line which the Cabinet rejected—its further extension to Liverpool—does not go nearer than a mile or 2 miles of my property. That is the only portion which could benefit me in any way. It will not benefit me largely by adopting this route. Despite that fact, I say it is the best route which could be got to suit the convenience of the people, and to adequately recompense the Government which undertook its construction.

312. *Dr. Garran.*] You have spoken of the expensiveness of these two bridges;—do you think it would be wise to avoid that by taking the more northern of these three lines? No; I think it would be penny wise and pound foolish. It is better to go by that straight line and avoid the distance, and convenience the traffic, even by a little more outlay than to go winding round. The expense could be very considerably reduced in the extravagant estimate which has been formed.

Hon. J. H.  
Carruthers,  
Esq., M.P.

20 Nov., 1889.

313. You think the superiority of the middle line is such as to be worth the extra expense of the two bridges? I do.
314. Does the middle line run through land suitable for suburban residential purposes? Almost every bit of it. The only part that is at all low is a very little portion of Canterbury, which is already settled. The village of Canterbury though it is low, is already settled. The other part which is a little bit low is at the banks of George's River, and it is settled by people who go in for farming. Otherwise the whole of the land is beautifully situated for residential settlement. There is Dr. Tucker's model farm, which consists of beautiful rich soil going up to the summit of a hill, with splendid views all round. The rest of the country is all similar to that—good elevated land, well drained, and in good positions.
315. Is not a good deal of St. Peters and Canterbury rather low? For about 300 yards—only the Marrickville flats.
316. All the rest is good residential land? Yes.
317. Do you think this line goes far enough to give a full and fair development to this fresh locality—it is rather a short line? It is rather a short line. My own opinion is that the line ought to go on to Liverpool.
318. You have given us a reference to the line to George's River, the line to Hurstville is much longer than this line is to be—it gave much greater scope for settlement? Hurstville is 9 miles from Sydney, Burwood Road will be 8 miles.
319. You would not recommend that it should go further on—say to Bankstown, as a fair test of the district? No; I think that if you were to take it further on without taking it to Liverpool, you would saddle it with an unremunerative portion.
320. You think we go as far as we ought to go as an experiment? Yes.
321. You think that this extension of about 4 miles will be a fair test of the capabilities of the district? Yes.
322. You are willing to test the chances of its extension to Liverpool by that length? I am certain of the result of that piece.
323. You have known the district west of Sydney for some years? All my life.
324. You have seen the gradual growth of population along the Western line? Yes.
325. Do you think there is an increasing demand for land on that side of Sydney? The land all round has got above its value, and that has stopped the increasing demand. I do not believe that this railway will raise the value of land along the route one penny, for the simple reason that it has already been forced above its value.
326. You think the value of land has been already discounted? The improvement has been already discounted.
327. The utmost the railway can do, will be to bring the land into use? Yes.
328. And people will be willing to sell at present prices without asking for anything more? Yes. It is owned to a very large extent by allotment holders. I have heard the line spoken of as a land speculators' line, but the whole of the estates through which it passes were subdivided long ago. The present holders are persons who cannot speculate with their allotments, they will go and reside on them.
329. There are already a very large number of landholders to be accommodated? Yes.
330. It will not depend on merely one or two owners? Not to that point. Further on the land is locked up in the hands of people who own from 5 to 10 and 30 acres.
331. That is a very good reason for stopping at that point for the present? I do not know about that. There is no prospect of settlement along there, unless they choose to sell their land for settlement.
332. If you had the control over the railway policy of the country would you go right through to Liverpool at once? I would, in the interests of the southern traffic, and of the western traffic.
333. You think that this extension of 4 miles will, of necessity, drag the full line with it some day or other? It is bound to do so.
334. Looking at the fact that the line to Hurstville has already given accommodation to a large suburban population, do you think it is reasonable to expect an equally rapid development on this line? Oh, yes; just as quickly. The development going on at Hurstville and at other places is greater to-day than it ever was. Almost every day, as I walk from my house up to the station, I see the foundation of a new residence being put in. A few days before the railway station was opened, I lost myself in the bush within 400 yards of the station, but now the whole of the place is built upon. There are churches, schools, public halls, rows of shops, and streets in every direction, all showing the wonderful development which is going on.
335. Looking at the rapid growth of Sydney, and comparing it with that of Melbourne, and seeing the very successful development of suburban railway traffic there, do you think that we, as a country, can go wrong in our policy by multiplying our suburban lines? I do not think we can. I think we have gone very wrong in the other direction. On one side of Sydney, the south-east, the whole of the extension of the city is blocked. We have 4,000 acres of Church and School lands which are, as it were, locked up against the people. The Randwick racecourse, the Centennial Park, the Quarantine reserve, the reserve on which the Little Bay Hospital is situated, and all that part of the country should be opened for settlement; but it is locked up against settlement, and will be so for a few years to come. Where is the extension of the city to go? The extension is to go out to the Illawarra line, and between there and the Western line. If you go to the north it is almost blocked by the waterway. It is blocked except at one or two points, and this is one of the points where there is an outlet for the development of the city.
336. You think we have done rather too little than too much in the way of suburban railways? Too little. I think they have rescued our railways from financial ruin. Our suburban railways have paid us so handsomely that they have brought the returns for the whole of the railways up to a reasonable figure. But if you took away the returns from the suburban lines they would not pay 1 per cent. I hazard that opinion, and if it is looked into it will be found to be correct.
337. You think the best railway speculation is to increase the suburban railways? Most decidedly. I think it is a boon to the working classes. At the present time they are tossed and turned about in every direction by the re-building of the city. The Railway Commissioners are offering them facilities to travel on cheap workman's tickets, and every morning along the suburban lines, at 5 or 6 o'clock, you will see workmen hustled and jostled together in crowded cars. The Department cannot find standing room for them in the trains.

- Hon. J. H. Carruthers, Esq., M.P.  
20 Nov., 1889.
338. You are quite clear that we are not over-supplied with suburban railways? We are under-supplied.
339. You think this line is a fair experiment on that ground alone? Yes.
340. *Mr. O'Sullivan.*] Will you please point out on the map the position of Belmore, Undercliff, Warwick Farm, and Peakhurst? Belmore lies at about the 9½ miles peg, and to the south of the proposed line; Undercliff lies close up to Cook's River.
341. The proposed line would run through Undercliff? Yes. Peakhurst abuts on Belmore; it lies in a southerly direction. Warwick Farm is between the 15-mile and the 16-mile peg. It is about 1½ mile from Liverpool.
342. You said the proposed line is equi-distant between the line to the western suburbs and the Illawarra line? Yes.
343. And that the district has a tramway running to Dulwich Hill? Yes.
344. And another tramway running to Marrickville? It is the same tramway.
345. They are served by tram as well as by train? Yes.
346. Do you not think the people in that region are pretty well served? The tramway does not serve more than twenty or thirty individuals who will be served by this railway. The tramway runs within half a mile of the Illawarra line for three-quarters of a mile, and then it suddenly turns round and goes in a southerly direction. The tram to Dulwich Hill branches off at a right angle in a southerly direction, and the proposed railway branches off the Illawarra line at an obtuse angle.
347. Does not the tramway to Marrickville compete with the railway for passenger traffic? It must compete with it. People do not care about travelling by tram when they can travel by train in a third of the time. Although there is that competition the tramway pays 8 per cent. to Marrickville, and the railway is paying the same.
348. The trams run more often than the trains? No; about the same.
349. Would not the Dulwich Hill tram compete to a considerable extent with this proposed line? I do not believe it would.
350. You admit that there is competition now between the Marrickville tram and the Marrickville railway? The tramway already competes with the Illawarra line, but it will not compete with a line which every yard it goes gets farther away from it.
351. It competes so much so that it pays 8 per cent.? It does not pay 8 per cent. simply on account of the traffic which comes from the portion which competes, because that portion runs along what they call the Marrickville flats, where there is no population to speak of, and where there will never be any population to speak of. It is not fit for human population.
352. Are you under the impression that the line, if carried out, will not compete at all with the Dulwich Hill tramway? Not to the extent of a penny. It will rather add to the traffic on the Dulwich Hill tramway, because it will induce settlement, and these people, if they happen to miss a train, or want to go to Newtown or Enmore, will walk a mile or so and catch the tram. It will improve the traffic on the tramway.
353. Do you think it wise to run two lines just for the people who may happen to be a minute or two late? Oh, no; I do not think it is.
354. Can the district carry two state passenger lines, one being a tram line and the other a railway? Yes; but there are not two lines, one a tramway and the other a railway, because these happen to come to one point within three-quarters of a mile of each other, and then they run along getting a distance 2 or 3 miles apart. The Dulwich Hill tram is only three-quarters of a mile in extent, and every inch of that line runs at an obtuse angle from the proposed line.
355. Suppose you were to extend the tram line to Burwood Road, would not that serve the passenger traffic? No; because the large and thick population at Undercliff, who are now 3 miles away from a railway or tramway, would still be left out in the cold. There is a large traffic there which is absolutely lost to the railway now.
356. These people left out in the cold could be brought in by tram as well as by train? No; the extension to Dulwich Hill does not go in that direction at all.
357. A tramway could be taken in that direction as well as a railway? No. If you were to run a branch down there you would have to put on a separate locomotive and have all the expense of a branch line instead of an extension.
358. You know that the tramway serves Paddington, Woollahra, Waverley, and Bondi, where, I suppose there are five times as many people as would possibly be served by this railway? Yes. If you were to put a railway there you would find it would give five times as much profit as the tramway gives.
359. Up to the present time the tramway has been a very great boon to those districts, and, undoubtedly it has helped a good deal to take people out there? I do not know what the opinion of the people is, but my opinion is that it has been a curse to the community. I had my mother killed with one of them, and perhaps that is the reason I have such a horror of them.
360. How will the proposed line serve the Warwick Farm racecourse? It will not serve it at all.
361. You mentioned the racecourse as being a likely source of traffic? Not to this line, but to an extension to Liverpool.
362. Canterbury Park at present is served from Petersham? No. It is not served at all. People go to Ashfield and there they have to take the omnibus, but the omnibus people charge them a shilling or 1s. 6d. to carry them a distance of 2 or 3 miles. The omnibus traffic is totally inadequate to meet the requirements of visitors to the racecourse.
363. How many people do you think will be served by this line if it is carried out? Taking in Peakhurst and Belmore I should say from 15,000 to 20,000 persons.
364. Settled there already or to be settled there? Taking in Marrickville, I think there must be from 15,000 to 20,000 people.
365. It is hardly fair to take in Marrickville, considering that it is already served by a railway as well as by a tramway? I am sure there are fully 10,000 persons living near the Undercliff section of the line. You can have no conception of the population in this part of Marrickville. It is thickly populated.
366. *Mr. Humphery.*] The extension of the tramway from Marrickville to Undercliff would simply be a branch; going down the hill past the old Warren lodge? Yes.
367. The construction of this railway would be a least a mile or a mile and a half from the present tram station? Yes.

Hon. J. H.  
Carruthers,  
Esq., M.P.  
20 Nov., 1889.

368. You expressed the opinion that the line should be continued to Liverpool? Most decidedly.
369. Before arriving at that opinion had you seen the report that the construction of that line would involve the country in an annual loss of £35,000? Not before I arrived at that opinion. I arrived at my opinion as the result of a long conference with Mr. Goodchap, who was the founder of this line, as well as the founder of the proposed line. He showed me the profit and the saving to the department; and, seeing the country to be opened, and taking it for granted that his estimate was correct, I formed a favourable opinion. That opinion was very much shaken afterwards when I saw Mr. Whitton's estimate of the cost, and subsequently when the railway Commissioners formed their estimate of loss. But I have analysed the question since, and I have come to the conclusion that the Commissioners and their officers have not given credit for the wonderful expansion which always takes place in suburban traffic where a new suburb is opened up, if it is fit for suburban settlement. I do not think their estimate is one to which I should give any weight at all. The estimate of loss is I think an estimate of exaggeration.
370. Would you regard the suburban traffic as extending beyond the point to which it is proposed to carry the railway? It might be a mile further.
371. Having in view the fact that we shall have passed through the suburban area, do you not think the Commissioners are quite justified in recommending that the line should not be carried through to Liverpool? I think it would be right to recommend it right through, though not for suburban traffic.
372. Would not all the suburban traffic be secured by making the extension to Burwood Road, a distance of 8 miles? Yes; I think you would secure all the suburban traffic which would pay at present. It may go a mile further, but that mile would not be a remunerative portion of the line.
373. What advantage would it be in that case to extend the railway to Liverpool, the cost of extension appearing to be about £19,000 a mile, and the Commissioners being of opinion that it would entail an annual loss of about £35,000? I should not like to say what I would do in the face of that evidence; I should analyse the evidence, and I fancy there would be sufficient adduced to show me that it is not a fair estimate at all.
374. Would not the whole of Kingsgrove be served by the proposed line? Yes; I call it Moorefields; they adjoin one another.
375. You spoke of Dr. Tucker's farm,—would not that be quite a mile or a mile and a half beyond the terminus? It would be a mile away, but the line would bring the farm into settlement. The people would be only a mile away from the terminus, which is not an excessive distance to walk.
376. *Mr. Tonkin.*] You seem perfectly satisfied in your own mind that if this line is constructed it will be a payable one? Yes.
377. Are you so satisfied that you would be inclined yourself to form one of a syndicate to construct the line as a private line if you had permission from the Government? I think you would get fifty syndicates formed, and the money taken up; and I would go in for any one of them, if it were consistent with my position to do so.
378. These gentlemen you speak about forming syndicates are commercial men of common sense, who know perfectly well they would have a good return for their investment? Yes.
379. There is not a shadow of a doubt about it? No; the people have asked over and over again for permission to do it.
380. The men who would form the syndicate are not men interested in land about there, but would go merely for the construction of this line for the purpose of a revenue return from it? I do not know of any syndicates of that character, but I am sure you could get proposals from people to construct the line merely in view of the return it would give them, without any concern as to land at all.
381. You are satisfied about that? Yes.
382. You have been led to believe that these two railway bridges were to cost something like £100,000? It is a very large sum.
383. Allow me to tell you that the price is £35,000 for the two; and taking that into consideration, and that by the deviation to avoid these bridges it would make a mile difference in the length of the line, which would cost £19,000 more;—under those circumstances would you advocate the deviation instead of going across the rivers? No, I would not. I would go across the rivers and get the straight line, because if you go round you at once lengthen the line, which is to be avoided.
384. There would be only £16,000 difference in the cost of going direct across the bridges and going round;—you think it would be preferable to go direct and save the mile? Decidedly.
385. You have been asked questions about the Dulwich Hill tramway. In the event of that tramway being extended to the Burwood Road, would that serve the people in the district which the construction of this line would serve? No, it would not serve the people at all, because it goes a different route; it goes along a route where settlement is to a great extent avoided. You would have to go along the whole of the Canterbury Road, and the settlement there is not nearly so great as cutting along by Cook's River and Undercliff; and further than that—the cost of the tramway along a road is a large thing. Directly the track goes on the road the municipalities refuse to spend money to keep it in repair, and the Government has to do it.
386. Then you think it is no use suggesting a tramway in lieu of this railway? No, I do not think it would be a matter of public economy to do so. A tramway costs far more to maintain; its working expenses are greater, and the public are never inconvenienced.
387. And they would not be served as they would by a railway? No.
388. If this tramway were constructed to Burwood Road would that serve the Canterbury Park race club? Of course if the tramway went there it would be good to them; but it would not serve them anything like a railway. You will recognise that you will have to take 8,000 or 10,000 people to the race-course, and these people on a race-day would impede the whole of the traffic of the city on the trams.
389. Are there any large centres of population through which the tramway would not pass, and which the railway would pass? Between the terminus of the Dulwich Hill tramway and down to Canterbury there is a large quantity of open fields and lands, and that would be the route the tramway would have to take along the main road. You would not serve anything like the population the railway would serve except when you got to Canterbury itself. It would serve the people there in the same way as a railway in that particular spot.
390. *Mr. Dowel.*] Has there been any expression of opinion, by public meeting or otherwise, in reference to this particular line and the rival routes? There have been several opinions with regard to these proposed routes, and at every meeting for the last few years the agreement has been arrived at by the people that

- Hon. J. H. Carruthers, Esq., M.P.  
20 Nov., 1889.
- that whatever route the Government engineer, acting impartially in the best interests of the Government, should decide upon, that should be loyally accepted by the people, and that has never been, to my knowledge, departed from.
391. Having a large knowledge of this particular district through which these rival routes pass, are you of opinion that the one selected by the Government engineers is the best? I believe it is.
392. Are you aware that upon this particular route there are very deep cuttings and heavy embankments? There is bound to be when you have to go through a country broken up by two rivers; but there is nothing very great.
393. You do not think these deep cuttings and heavy embankments would be any difficulty to people having access to the railway station or stopping places? I do not think that the cuttings and embankments will be any larger, if as large, as on the Illawarra line.
394. Some of them are 30 feet deep? The same thing occurs elsewhere, and they have never impeded the access to and from stations at all.
395. Are you aware of the number of blocks of land which would have to be resumed for this particular portion? I am not.
396. There being 155—do you anticipate any difficulty about the cost of resumption? The allotment owners could not be asked to give up their land. They are bound to claim compensation.
397. But do you anticipate any large amount which would have to be paid in consequence of such a large number of persons having land? There would have to be a fairly large amount.
398. Are there many empty houses in the locality to which we are referring? There are a good many empty houses just about Marrickville Station, but they are empty on account of the mud flats. The low-lying land is constantly being flooded. Two hours of rain floods the land. But that is the only part where there is any number of empty houses.
399. But upon the proposed route? There is nothing to speak of at all.
400. And you are strongly of opinion that settlement would take place, and a large number of houses would be erected if the line were constructed? Decidedly.
401. Are you aware that the Commissioners, in their report, have stated that if this line were constructed to Liverpool there would only be about four trains per day running on the line to relieve the parent line? I was not aware of that.
402. I ask this question, because you said that if the line was constructed to Liverpool, it would be the means of relieving the parent line of traffic? Yes, so it would.
403. In spite of what the Commissioners say? If they like they can only run four trains a day. They could run one if they liked, and if they liked to relieve the parent line, and save five miles in the journey they could run twenty.
404. This is what the Commissioners say:—  
“The theory which has been put forth, that the construction of this line would avoid the necessity for increasing the carrying capacity of the existing line from Liverpool to Sydney, should not have any weight in the consideration of the question, as the construction of the line would only relieve the parent line to the extent of about four trains per day in each direction.”
- Do you think that statement is correct? I would not like to say it is correct or incorrect, but I say that any reasonable man would, if asked his opinion at the end of the journey, say he ought to have gone the shorter line. It is a monstrous thing to imagine they will run twenty trains a distance over 5 miles longer than they ought to, in order to get to their journey's end. It stands to reason they would send them the shorter distance.
405. Then you are clearly convinced that that is the best line that can be constructed, and you think that it would pay a short time after construction? Yes.

Joseph Graham, Esq., Mayor of Marrickville, sworn, and further examined,—

- J. Graham, Esq.  
20 Nov., 1889.
406. *Mr. O'Sullivan.*] I referred you yesterday to the report by the Commissioners on the line from St. Peters to Liverpool, and gave you a copy of the same. Have you read that report? I have not. I attended a meeting last night until 11:30. I do not think that report was the question before you.
407. In the absence of that report it might be as well for you to make any statement you like about the matter? I do not know that I can throw any further light upon it. As the Committee are intending to have a look at the place it would be better perhaps to say something afterwards. I would like to point out to you personally the advantages which might arise for making this short suburban railway.
408. Would you prefer to do it after we have visited the place? Yes.
409. *Vice-Chairman.*] I think you said yesterday you were fully impressed with the necessity of constructing the railway to Burwood Road, and you thought the population there would be large enough to warrant the construction of these suburban railways? I did.
410. And you adhere to that principal that the railway is the proper means of communication? I do.
411. Do you think it would meet the requirements of any portion of a suburban population which might grow up further on, say towards Bankstown? Certainly.
412. How far would the terminus from Burwood Road be from Bankstown? About 4 miles.
413. You know the country about Bankstown? Only superficially.
414. There is some good whinstone land on the north side of the river? All round there is capital land for cultivation and building.
415. And it suffers very much from want of communication? It is not further forward than it was 60 years ago. There is only one 'bus, and that is an apology for communication.
416. You feel sure that the present railway system on the western line and on the Illawarra line is not sufficient to give accommodation to the population about the Burwood Road? Certainly not. The distance is very great. I am sure when you go there you will be impressed with the fertility of the soil, and the suitability of the district for residences, garden purposes, and brick-making.
417. *Mr. Trickett.*] Can you tell us the names of the present centres of population which would be served by this proposed railway from Marrickville to Burwood Road? It would be the southern portion of the borough of Marrickville, and the portion known as Undercliffe. Then there is Canterbury. Then Croydon would be partly served, together with Belmore, and Bankstown and many of these places.

418. Would King's Road be served? That line is more towards Hurstville, which is a sort of equi-distance. Moorefield is about the same, and lies further on than the railway is contemplated.
419. What do you think would be the present population served by this railway? I could give you a rough idea of Marrickville.
420. I mean all the places you have named? I could hardly find the total. If I were to meet you again after visiting the place I could hunt up the information, and give it to you.
421. *Mr. Hurley.*] The question has often been raised as to the probable payable nature of this line as a national investment? Yes.
422. Has it always been looked upon by the majority as a good investment on the part of the country? It has always been looked upon as becoming one of the best payable lines; but there are a good many people beyond the river who would like to have it near their own door. I think now, however, they are pretty unanimous in saying the Government should make the line. They have been eight years trying for it.
423. Have you had a vote in your Council in regard to it? No; it has been more of a combination. Marrickville is partly interested in it, Canterbury also, and Belmore. We have been helping them all. We have the Marrickville and Petersham railway, and also the tram, so that we are pretty well provided for. It will accommodate a portion of the southern side of Marrickville and Undercliff. Canterbury has no communication short of  $1\frac{1}{4}$  mile from Ashfield station.
424. Has there been any antagonism to the project? No; excepting diversity of opinion as to where the line should go.
425. Has the matter been raised in regard to the land being given free for the construction of the line? I understand that where the land is in blocks it would be given free. There have been many subdivisions right through to Canterbury.
426. You do not think the people will recede from the proposals made? I have no knowledge that they would, because if they do not get the railway the land is of very little value, comparatively speaking. The railway would open up one of the finest suburbs, and when you see the district you will express yourselves highly pleased with the surroundings and the advantages which will accrue to the Government as well as the people from the construction of a railway.
427. Do you know whether any of the proposed lines pass through any properties belonging to Members of Parliament? I do not know.
428. Not to your knowledge? None whatever to my knowledge.
429. *Mr. Dowel.*] Have you any knowledge of the rival routes? I know some of them.
430. Are you of opinion that the people will be best served by the construction of the line coloured blue on the plan? I hardly know how to answer that. A large number of people are living on that line, and the Government having selected it, they say that, as they cannot get all they want, they must take what they can get.
431. From your knowledge of the district, do you think the interest of the people will be best served by the construction of the line as indicated by the Government staked line? As far as the general public are concerned they would be served by the shorter route. That line goes through splendid building land.
432. But taking all the surrounding circumstances into consideration, you are of opinion that the line as surveyed will be the best? I will not go as far as that, because a large number of people who have made their homes think that the railway ought to go near them.
433. Would you advocate any other route? No; I would leave it with the Government. I have told the people that whilst they dispute the Government will leave them at it.
434. Has there been any public meeting about this particular matter? Very many of them, and the resolution was unanimous to leave it in the hands of the Government.

James Slocombe, Esq., sworn, and examined:—

435. *Vice-Chairman.*] Are you a resident of Marrickville? Canterbury.
436. Have you long resided there? I was born there.
437. And you are living there still? Yes.
438. Do you travel backwards and forwards between there and Sydney? Yes.
439. What is your means of conveyance now? Omnibus.
440. How far are you from the nearest railway station? About 2 miles.
441. And which is your nearest railway station? Ashfield.
442. Do you come right to Sydney by omnibus? Yes.
443. How far is your residence from the proposed site of the railway terminus at Burwood Road? About 2 miles.
444. And if the railway were constructed with the terminus at Burwood Road, I suppose you would use that means of conveyance to Sydney? Certainly.
445. Do you think if the railway were constructed there is population about there to make it a remunerative one? I think there is quite sufficient.
446. Have you any idea of the population about there now within a radius of 2 miles of the proposed terminus? The population between Marrickville and Burwood Road would be about 6,000 at present.
447. And do you think that would be likely to increase if there were facilities for communication between there and Sydney? Certainly.
448. Does the country present favourable openings for settlement and for suburban residences and villas? I think it is the best suburban district for villa residences.
449. Is that from the quality of the soil? From the undulating land and quality of the soil.
450. Is the land good? Some of it is very good.
451. Do you think it would be a means of convenience to the people living beyond there—to Bankstown, —would they be able to use it. How far is it from the terminus? Some part of it would be about a mile.
452. Do you know much of the Bankstown district? Yes, fairly well.
453. There is good land about there? Very good.
454. What means of conveyance have they now? I think a coach runs along the Liverpool Road, and they get to Burwood station.
455. You know the tramway between Sydney and Marrickville? Yes.

J. Slocombe,  
Esq.  
20 Nov., 1889.

456.

- J. Slocombe, Esq.  
20 Nov., 1889.
456. Is that regarded as a source of convenience to the population there? Do you mean to Dulwich Hill.
457. Marrickville and Dulwich Hill? The people along there can use it, but it is not of much use to us.
458. You don't use it in fact yourself? I used it to-day coming in, but had to walk 2 miles to it. It is a long distance round. We come quicker by going to Ashfield and coming to town by train.
459. Would you favour the construction of a railway in preference to a tramway? Yes, I think so.
460. Through passengers of course would get to town much quicker by railway? Yes.
461. But it is a fact the tramway stops and gives conveniences to many people on the line which the railway does not? It will not when this railway is constructed. The Dulwich Hill tramway does not meet the requirements of the people in any way, living along where the line is surveyed.
462. But where the tramway is, does it meet the requirements of the people and their convenience? It meets those who live where the tramway is.
463. *Mr. Trickett.*] What is your ordinary means of coming to town? Omnibus.
464. All the way? Yes.
465. What time does it take? One hour and a quarter each way.
466. Have you any land along the proposed line of railway? I have allotments where I live.
467. Does the line pass through them? No; I do not think it does.
468. Are there any large blocks of land the line would pass through which have not been subdivided between Marrickville and Burwood Road? I do not think there are. I think it is all pretty well subdivided.
469. And you think the Government would have to pay for nearly all the land along this line;—there are no people there who would give the land? There is one estate—Campbell's. They promised to give the land, and I think they are still of the same mind. I saw a gentleman—Mr. Scroggy—this last week, and he said he had no reason to doubt but that they would do the same. It is a valuable piece of land.
470. Are the people pretty well agreed as to the route. I think so. As far as I know we are agreeable to the permanently staked line.
471. What do you think yourself;—do you think that is the best line? I think it is.
472. Would the tramway, if extended between Dulwich Hill and Marrickville, serve the people that this line is intended to serve? No.
473. Why? It would take too long to get to town.
474. And to travel along the road would be a very circuitous route? Yes; we could come quicker from Dulwich Hill by coach than tram.
475. Along the same line? No; the tram goes away from Canterbury Road through Marrickville.
476. You have stated you think there would be about 6,000 people benefited by this line; does this mean adults only, or men, women, and children? Men, women, and children. I speak from the opinions I have received from municipal councils.
477. A former witness said he thought there were from 10,000 to 20,000 people;—do you think that a high estimate? There might be more towards Marrickville whom I do not know of.
478. I mean the whole population who would be benefited residing between Marrickville and Burwood Road; what would be the estimate of the population there who would avail themselves of the railway? I dare say about 10,000.
479. *Mr. Humphery.*] Do you know how much of the land belonging to the Campbell family it would be necessary to resume in connection with this railway? I think there is about half a mile which the line would pass through that is not sold.
480. The railway would go 2 miles beyond Canterbury? Yes; beyond where I live.
481. As a matter of fact, you will be close to the station where you are living in Canterbury? I do not know where the station will be.
482. Are you not living in the heart of Canterbury at present? Yes.
483. Do you think the proposed line starts from the best starting point on the Illawarra line? I think it does.
484. And you think the terminus should remain where it is proposed it should remain—about 8 miles from Sydney and 2 miles from Belmore? I think it should go right on to Liverpool.
485. Do you think there would be any suburban population to support the line beyond that point at which it is proposed to stop? There is not a great population beyond there now, but I think there would be if the line were constructed.
486. Do you not think the distance would be too great to hope for settlement beyond the 8 miles peg? I don't think so. We have population further along the Parramatta line, there is no reason why they should not extend right to Liverpool.
487. You have not seen the estimate of the Commissioners as to the cost, and probable loss on the line if constructed through to Liverpool? I have heard of it.
488. Have you heard that in the event of the line being formed there will be an annual loss of £35,000? I have heard there would be a loss.
489. Do you know anything about settlement near to Kingsgrove—is there much settlement there? Yes, fair.
490. Is there much settlement near Belmore? It is fairly settled right through to Belmore.
491. The people of Belmore would be served by this railway? Yes.
492. They would make use of it to come to Sydney instead of travelling as at present? Yes.
493. How long are you coming to Sydney by tram? I was an hour coming in this morning from Dulwich Hill.
494. How many miles is it? From Dulwich Hill to Sydney about 4½ miles, but the tram has to go to Marrickville to get here. When we are at Dulwich Hill we are nearer Petersham than Marrickville.
495. Do you get into the tram at Dulwich Hill and go to Marrickville, Newtown, and Enmore? Yes.
496. And you were an hour coming in? Yes, the time is 50 minutes, but we were an hour.
497. And the same distance by rail would occupy not more than 15 minutes? No.
498. *Mr. O'Sullivan.*] What industries are established on the proposed line of railway? There are nothing but brickyards and stone quarries. We had an iron foundry there, but it is closed.
499. Whose iron foundry? Blacket's.
500. I suppose this line would be chiefly a passenger line? It would be used for luggage as well, or anything required in the district.
501. What is the nearest point on the western suburbs line to Canterbury? Ashfield, I think.
502. How far distant will that be? About 2 miles.

503. How far would it be from the nearest point on the western suburbs line to the end of Burwood road? About 4 miles—it might not be quite so much.
504. How far would it be from Belmore to the Illawarra line? About the same distance.
505. You see by the diagram that the district you propose to serve is about equi-distant from the Illawarra line on the one side, and the western suburbs line on the other side? Yes.
506. And this is already partially served by a tramway to Dulwich Hill? The Dulwich Hill tramway does not serve the district at all. It serves Dulwich Hill, but not Canterbury.
507. But it serves a portion of the district which would be served by this line? A very small portion indeed.
508. Do you think the State would be justified in recommending a line of railway equi-distant from two other lines, and which already has one tramway running into it, and which could be served by a tramway from Ashfield to Canterbury 2 miles long, or from Burwood to the end of Burwood Road, 4 miles long. Do you think this tramway, if carried out, would serve the passenger traffic in the district? No, people would not use them. They would prefer the coach to come straight in. We have seven coaches a day running now.
509. Do you think they would prefer to go in by coach than by tapping the western suburbs with a railway? Yes, because it would take longer to do it. They would have to shift into the western suburbs train, and then they would have to get out of the train into a tram at Sydney.
510. You have resided there from birth? Yes—forty-five years.
511. What progress has this district made in late years—in population—say in twenty years? It has increased wonderfully in that time. In fact, there is a population right out there. Twenty years ago there was a great blank between the city and those places.
512. What class of people reside there? The industrial classes principally, who go into town every day to their employment.
513. Have you opened up any gardens? There are gardens there further out.
514. And the district is still progressing in population? Certainly.
515. You said just now you thought, including Marrickville, 10,000 people would be served by this proposed railway? I think so.
516. Do you think that number would justify the construction of a line to be run mainly for passengers a distance of 8 miles? Yes, I think population will increase very fast. 2,000 allotments have been sold and people are only waiting to build upon it.
517. You are aware there is a population of about 40,000 between Darlinghurst and Bondi who are served by tramways? I know it is so.
518. And these tramways are largely patronised? Yes.
519. Do you not think the people would be glad to patronise a tram in preference to 'buses or coaches? The people between Darlinghurst and Bondi cannot help themselves. They have to use the trams.
520. They have the same convenience as you have—omnibuses and coaches? And they use them too.
521. It is a fact they use them when the trams are crowded;—is it not a fact that the trams to Waverley and Bondi are the best paying in the whole system? I daresay. They are very good for street traffic, but to bring people in from districts I do not think they are suitable.
522. Then you hold the opinion that a line of railway to Burwood Road—8 miles—would be justifiable to serve the passenger traffic of that district? I think so.
523. *Mr. Tonkin.*] What is the population of Canterbury proper? Between 3,000 and 4,000.
524. What means have you of communication with Sydney at the present time? Only by 'bus.
525. Is it your opinion that if this line is constructed through Canterbury the population would materially increase? Decidedly, in Canterbury and surroundings.
526. Have you any doubt that if this line were constructed it would pay? Not the slightest.
527. Are you in business as a commercial man? Yes.
528. You have had experience in different matters of this kind? Yes.
529. And you have no doubt that if the line were constructed it would be a good paying line? I have every reason to believe it would.
530. Is the Dulwich Hill tram of any use to the Canterbury people? No; we might just as well go to Ashfield as Dulwich Hill, and get the train.
531. Do you know the line right through to Liverpool? Yes.
532. What kind of country is it right through to Liverpool. Is it likely to be built upon? It is very good country.
533. Suitable for country residences? Yes.
534. *Mr. Dowel.*] Do you know Randell's subdivision, and Golden Park Estate, through which this line will go? I know Golden Park Estate, but never heard of Randell's subdivision.
535. Can you inform the Committee the value of those allotments; or has any of that land been recently sold on the Golden Park Estate? A sale took place on the Golden Park about seven years ago, and it brought about from £3 to 15s. per foot.
536. Only small prices? Yes; it is now worth considerably more.
537. You do not know anything about Randell's subdivision? I think you mean Redmond's subdivision.
538. Can you give any information about the value of that land? Yes. There is a great lot of Redmond's subdivision there.
539. I mean through which the line would pass? There is one called Kempsey Park—that may be the one.
540. The one I mean is subdivided by Mills and Pile. Can you inform the Committee what that land fetched, or what is about its value? The line does not pass through that subdivision—the Bridgewater Estate.
541. Yes; it is pegged out through the estate; you cannot say what the value of that land is? I could if I knew which it was.
542. Supposing it was Redmond's estate? I think it is worth about £2 a foot—that is further on than Golden Park.
543. Do you know a man named John Coleman occupying some land belonging to you? Not belonging to me, but to my brother, John Slocombe.

- J. Slocombe, Esq.  
20 Nov., 1889.
544. Is that a valuable property through which the line would pass? I do not think the line passes through it.
545. It does? I was not aware of it. I thought it passed close to it.
546. Is it a valuable property? I do not think it is of great value at present. I do not know what the value would be at present.
547. Is there a stone house upon it? There is some little place upon it.
548. The buildings are not large and expensive? No; of no value whatever.
549. Do you anticipate any goods traffic upon the line? There are brickyards upon the line.
550. There is good brick earth about there? Yes.
551. In all probability there may be some goods traffic as well as passenger traffic? I think so.

THURSDAY, 21 NOVEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

EDWARD WILLIAM O'SULLIVAN, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

William Lovell Davis, Esq., sworn, and examined:—

- W. L. Davis, Esq.  
21 Nov., 1889.
552. *Vice-Chairman.*] Where do you reside? At Petersham.
553. Do you know the proposed line? I know it very well.
554. You are connected, I think, with the Canterbury racecourse? I am one of the proprietors of it.
555. And do you consider that the proposed line would be a convenience to those who go to the races at Canterbury Park? It would be a very great convenience indeed. At present those who visit the racecourse have to go to Ashfield, and then to travel about a mile and a half. Some walk and some ride.
556. How are they accommodated—by omnibuses and carriages? By omnibuses and cabs.
557. You usually have a fairly large attendance there? Yes; I have had a list compiled by our secretary, giving an account of the last twenty meetings held there. The attendance amounted to 46,365 persons altogether, giving an average of 2,318 per meeting. I calculate that that number at 1s. a head would give a revenue to the Railway Department of £2,500 a year. That is according to the present attendance, but I am confident that if we had railway facilities we could rely on the number being increased by at least one-third, if not by 50 per cent. At our last races held on the Eight-hours Demonstration Day, some 2,000 people wanted to go to Canterbury Park, and could not get there, and they were left on the platform at Redfern. [*See Appendix A.*]
558. Do most of the metropolitan visitors go by Ashfield? Yes.
559. Do any go by Marrickville? None by the trams. It would take too long.
560. How far is Dulwich Hill from Canterbury Park? About  $1\frac{1}{2}$  mile.
561. How far would the racecourse be from the proposed line? It would be about half a mile.
562. Would that be at Burwood Road or at some nearer site? In the village of Canterbury. The racecourse is about a quarter of a mile from the village of Canterbury. I do not know the exact site of the proposed station. I imagine that it would be something like about half a mile from the course. People would not mind walking that distance.
563. How long is it since the course was first established? Five years.
564. How many meetings do you hold each year? Twenty-one. I have a list of fixtures for next year, giving all the dates. [*See Appendix B.*]
565. How many does that amount to? The legitimate racing fixtures, that is for horse-races, number eleven. These are appointed by the Australian Jockey Club. Then there are ten supplementary meetings—trotting races, and races for ponies and galloways.
566. Your racecourse is owned by a club, is it not, or a syndicate? We call ourselves a Company. There are only seven interested in it.
567. Your project is sufficiently successful to justify you in anticipating that it will be continued? I think we are the most prosperous racing company in New South Wales.
568. And if the railway were constructed you would consider it not only a convenience to the racing club, but also that the race club would be a means of contributing to the success of the railway? We could, of course, have greater success than we have had so far if we had the railway, and the public would be better able to attend the races.
569. You know that part of the country pretty well? I think I know every inch of it.
570. Has it increased in population during the last few years? Yes; very fast.
571. Do you think the railway would cause increased settlement in that locality? I am sure of it. There is no better land round Sydney for building purposes. It is undulating country, and if a railway is made there the land will soon be covered with houses. No better land for building sites could be got.
572. And the land is tolerably good for other purposes? Yes; as good as any land about Sydney.
573. *Mr. Trickett.*] Do you know the permanently staked line marked blue on the plan? I do.
574. Do you think that is the best of the three that have been surveyed? Yes; most decidedly. It is equi-distant between the other two lines. It is the straightest line you could get, and it has the best levels.
575. Have you considered the proposal to construct a railway from Marrickville to Burwood Road in connection with its future extension? I have.
576. What do you think of it? I think it would relieve the present line from Liverpool to Sydney and save an immense amount of haulage. It would save  $5\frac{1}{2}$  miles between Sydney and Liverpool. Instead of 22 miles the distance would be 16 miles.

577. Is the land beyond Burwood Road land which would also be suitable for residential purposes? Yes; it would be fairly suitable, but it would not be so suitable as the land within 6 or 7 miles of Sydney. I believe that the whole of the land beyond where it is proposed to construct the line would be given free of cost. I do not think it could be given at Marrickville, because you could not expect men who own small allotments to give their land.

W. L. Davis,  
Esq.  
21 Nov., 1889.

578. How far is the line from your racecourse? About half a mile.

579. Is the racecourse easily approachable from the line? Oh, yes; it would be all down-hill to the racecourse.

580. Have you made any calculations as to the present population that would be served by a railway from Marrickville to Burwood Road? At a rough estimate I should say from 12,000 to 15,000.

581. 12,000 to 15,000 residents there at present who would use the line if it were constructed in preference to any other route? Yes. I may mention that there is a very large estate near where the terminus would be. The proprietors have spent about £20,000 on that one estate. They have laid it out in magnificent building sites.

582. What is the name of the place? It is called Harcourt.

583. Does the railway go through the estate? It does not quite touch it, but it passes it.

584. Have you any land through which the proposed line will pass? No; I have land that would be very close to it, but not any large blocks.

585. I suppose you are in frequent conversation with the persons through whose land the railway would pass? Yes; I often meet them.

586. When this line was suggested in 1887 it was a *sine qua non* that all the landowners should give the property free of charge that was required for the railway;—do you know if they are of the same opinion now? I think they would give it with the exceptions that I have stated. I do not think that all were of that opinion at any time. You could not expect a man in the middle of Marrickville, close to the junction of the Illawarra line, to give his allotment, but anyone who had a large block through which the line would pass might give the land. Miss Campbell's estate lies on the route of the proposed railway, and I believe that the agent would now give the land which he promised to do then.

587. Are there any other owners of large blocks who would give their land? I do not think there are any owners of large blocks along the route until you get to Cook's River—then you get amongst blocks, the owners of which would give the land.

588. Is that on the line? It is  $1\frac{1}{2}$  mile this side of the terminus.

589. Do you think Marrickville is the best place from which the line should go? I do. I think it is the best both for population and as regards the expense. If you start before that point you will have more land resumed, and it will be more expensive as it is nearer Sydney.

590. And do you think it is also a good starting point, supposing the line were to be carried on to Liverpool? I do. The line will be almost straight.

591. What about the tramway to Dulwich Hill;—would not this railway line, if constructed, come into competition with that line? Not in the least. It would not rob that line of a single passenger. The Dulwich Hill tram cuts at right angles to the Illawarra line, and this line will come right away from it straight to Canterbury.

592. How are the people now served as regards communication with Sydney? They must travel by omnibuses or walk to Ashfield, or to the Dulwich Hill tram.

593. Do they mostly travel by 'bus? Yes.

594. What time does that take? The journey occupies an hour.

595. How many miles is the village of Canterbury from Sydney? About  $6\frac{1}{2}$  miles.

596. Do you think that if this line were constructed it would largely tend to increase the suburban population there? I am confident of it.

597. Have you ever heard expressions of opinion in that direction: that the present holders would build if they had better means of communication? I know that there are hundreds of allotments which have been sold, and that the purchasers are only waiting for railway communication before commencing to build. A friend of mine and myself had one subdivision, and we sold every allotment, the area being 20 acres, and nine-tenths of that land, were railway communication afforded with the city, would be built on.

598. They are not speculators? No simply buyers of building allotments.

599. *Dr. Garran.*] Do you know the point where the railway stops at Burwood Road? I do.

600. Is it a good temporary stopping place? I think it is one of the best that could be obtained.

601. I notice by the map that a little beyond the 9-mile point there is a cross-road, and it looks as if that point would, in some respects, make a better terminus of the line? I think not; you reach the greatest population at Burwood Road.

602. You do not think that the population would follow the line if we put the terminus a mile further on? Yes.

603. You think it would be best to stop at the 8-mile point? The line could not stop at a better place.

604. You think that as far as the present and the prospective traffic are concerned, that is as far as it is wise to go at present? Yes, unless you construct the whole line.

605. Do you know the country beyond the 8-mile point, as far as Bankstown? I know every inch of the route.

606. And is it good residential country between the 8-mile point and Bankstown? Very good; but as I said before, it is not so good as the undulating land within a radius of 6 miles of Sydney. For about 2 miles after you reach Cook's River, at Canterbury, it is beautiful land for building purposes.

607. Between the 8-miles and George's River you think it is not as good for residential purposes as the first part of the line? It would be very good for  $2\frac{1}{2}$  miles further. Then it would be flatter country until you come to George's River.

608. That would be a good reason for continuing the line further? But there is not such a large population.

609. But this is rather for a prospective than for the present population? I should take it so; but the population is there at the present terminus.

610. You would not undertake to say that the traffic afforded by the present population would pay interest on the outlay? I would guarantee that it would in two years. There is double the population there that there was at Hurstville when the line to that place was constructed.

611.

- W. L. Davis, Esq.  
21 Nov., 1889.
611. But that population came after the railway was made? Yes, and the same rule would apply here. But there is a greater population than there was on the Illawarra line when it was constructed.
612. There was a *bonâ fide* demand for suburban land at the time when the Illawarra line was constructed? Yes.
613. Is there the same demand now? I cannot say that there is; but a very large amount of land has been sold on this line.
614. In the expectation of a railway? Yes. We have been agitating for this line for ten years.
615. Is it in your knowledge that a large number intend to build? I am certain of it. The land has been bought for that purpose.
616. Do you think that the line should ultimately go through to Liverpool? I do.
617. Are you of opinion that it would relieve the main trunk line? I believe it will relieve the main line of the whole of the southern traffic, if that is wished.
618. Have you any personal knowledge of the traffic that passes through Liverpool station? I have not.
619. You do not know how many trains a day pass through that station? I should say about thirty trains a day.
620. We have it from the Commissioners that it would only take from the other line four trains a day each way if the proposed loop-line were made? Then, of course, they would not divert the main southern traffic; but if they did that, a person coming from Melbourne would save  $5\frac{1}{2}$  miles.
621. But it would afford no convenience as regards cattle going to Homebush? No.
622. Only to through traffic? Yes.
623. Are there more than four trains each day going through? Yes, most decidedly.
624. Taking it as a whole, you think it is wise to have the terminus at the 8-mile point? I should be very pleased to see it go right through. I am sure that it would pay in two or three years.
625. You think it more prudent for it to stop at Burwood Road? No; I am in favour of its going through. I believe in an extensive system of suburban railways. We are far behind our neighbours in this respect; and in Melbourne, I believe, the suburban railways pay.
626. If you could control the policy of the country, you would make the line right through to Liverpool at once? Yes. I could get a syndicate to take it up in an hour.
627. From your knowledge of the district, you think it would be judicious to make this line? I am perfectly certain.
628. *Mr. O'Sullivan.*] We have before us an estimate of the Commissioners with regard to this line, and they state that the total annual cost will be £9,558 a year, and they estimate the annual revenue at £3,000, showing a loss of £6,558 a year. What is your opinion? I think that the revenue is under-estimated. We will guarantee to find a revenue, if they wish it, of £2,500 a year.
629. You said that last year you had 46,365 visitors to the Canterbury racecourse—what do you think would be a fair charge per head for taking them to Canterbury and back? One shilling return.
630. And that for 46,000 would be £2,300? Yes.
631. Do you think that is likely to be sustained? I think it is likely to be increased by a very great deal.
632. You think that the Canterbury racecourse traffic would amount to very nearly the estimate of the Commissioners? I am almost positive. The attendance at the racecourse is a very large increase.
633. You were formerly Member of Parliament for Canterbury? Yes I was.
634. I presume that you are thoroughly acquainted with the district? I am.
635. You estimate that the population to be served will be from 12,000 to 14,000? Yes.
636. What centres of population do you take in? I should take all the further part of Marrickville through which the line passes, and the lower part of Marrickville, the whole of Canterbury, Rosedale, Enfield, part of Bankstown, Kingsgrove, Belmore, and the whole of the district beyond where the terminus will be.
637. You say you would take a portion of Marrickville. In doing that would you not take the portion of the passenger traffic already going to Marrickville? Yes; but you get the extra fares. Instead of walking a mile and a half they would ride and pay.
638. Would it not take the traffic from the Dulwich Hill tram? It would not take one passenger.
639. Does it not go near the route? No.
640. But the line will go through a portion of country that will be served by the tram? You could number by units the passengers that the line would rob the tram of.
641. On which side of the line is the Canterbury racecourse? Going from Sydney it is on the right hand side.
642. If the racecourse is on the right hand side of the line, would it not be better served by the more northerly route—the one to Bankstown? No; I think it does not deviate until it gets beyond Canterbury.
643. Your racecourse is a mile and a half from Ashfield? Yes.
644. Would not a tramway from Ashfield to the racecourse carry your passengers? I am not studying the interests of the racecourse proprietors alone. We agitated for the railway before there was a racecourse.
645. I regard the traffic to the Canterbury racecourse as a most important factor in the argument. No doubt it is larger than the Commissioners have estimated it to be; but I ask whether a tramway from Ashfield would not carry the passengers? No; because if you run a special train, it will bring from 300 to 500 passengers, and how could they be accommodated in tram-cars. They would require about twelve cars.
646. I might reply by asking you another question: If 500 passengers leave the train half a mile away from the course, how are they to reach the racecourse? They would walk, and enjoy it.
647. I ask whether a tram running from Ashfield would not best accommodate the passengers? It would be quite useless.
648. Could not the tram-cars carry 200 at each trip? Each car would carry fifty or sixty passengers, and at least ten cars would be necessary.
649. You mentioned an estate called the Harcourt Estate. Is that along the route of the proposed line? Yes; near the end of the proposed line.
650. Who are the proprietors of the Harcourt Estate? Messrs. Phillips and Co.
651. Has that estate been sold? Some portions have been sold, but not very many. If you visit that estate you will see that it is the best laid-out property about Sydney.

652. Were there any purchasers for it? It has not been offered at auction—only for private sale. The building conditions are very stringent; the buildings being of a certain value and in a certain style. W. L. Davis,  
Esq.  
21 Nov., 1889.
653. *Mr. Humphrey.*] Have you been living long in Canterbury? I have lived in the district twenty-one years—ever since I have been in the Colony.
654. Do you know it well? Yes.
655. You say that you began to agitate for this railway ten years ago? Yes.
656. Do you remember what was the value of the land about Canterbury then? Much less than it is now. Ten years ago you could buy land there at from £70 to £100 an acre.
657. Considerably less than that could you not? Not ten years ago.
658. Do you know Kingsgrove? Yes.
659. What could you buy land for there? I do not call that Canterbury.
660. It will be touched by the railway? Yes.
661. What could you buy land for there? From £15 to £10 an acre.
662. At present, without a railway, what is the value of the land there? About £50 or £60 an acre.
663. Can you remember how many houses there were at Canterbury ten or twelve years ago? There was only a very small population.
664. Has there been a great increase since? There has, and had there been railway facilities the population would have increased much faster.
665. Have there been many houses built on the Campbell estate? Yes, a great many. There is quite a large settlement on the left of the new Canterbury Road, down near the river.
666. Is there not considerable settlement a little beyond Canterbury? Yes; there is an estate called the Golden Park estate. It is all sold to *bona fide* purchasers.
667. Is there a large quantity of elevated land close to Kingsgrove? Yes; all suitable for building purposes.
668. Is the Harcourt estate near Kingsgrove? It is on the left,—and the Harcourt estate on the right. The Harcourt estate was known as Redman's land.
669. Is there any settlement there? Some houses have been built and some portions of the land are sold, but it has not been offered yet. I suppose that they are waiting for the result of the railway agitation.
670. Is the Redman estate between the river and Burwood? On the left of the river, and on the right of the Canterbury Road. Between the proposed line and the river.
671. Are you of opinion that this railway, if it starts at Marrickville and stops at the 8-mile point, will go far enough for all the purposes of suburban settlement? Yes; for the present.
672. Settlement is not likely to go beyond 8 miles from Sydney? Not at present, but if the railway is carried to that point it will push the population ahead again.
673. You said that £2,500 was a fair estimate of the probable revenue? Yes.
674. This traffic to produce £2,500 in connection with the racecourse would have to pass over the line between Sydney and Marrickville, and your estimate would include that? Yes. I am calculating the fares at one shilling return. In going to Randwick by tram you pay one shilling each way. If you go to Redfern you take a ticket to Canterbury and back.
675. The Commissioners would have to take into consideration that the traffic would have to pass over an already constructed line? I am confident that the public would pay 1s. 6d. as readily as they would pay 1s.
676. I daresay that the Railway Commissioners have taken into consideration that by constructing the railway we shall divert the present traffic by way of Ashfield from the existing line; it is proposed to make a single line only;—do you think that will be sufficient for the present and the prospective traffic? I do not think it will be sufficient very long. I think the construction of a single line a very unwise policy.
677. Do you think that a double line should be made at once, or should we first make a single line and afterwards have it duplicated? I think it would be best to make a double line at once.
678. You are of opinion that the increased traffic will justify the immediate construction of a double line? I am.
679. That railway will create traffic enough to cover the working expenses of the line? I am certain that it will in a couple of years.
680. *Mr. Tonkin.*] Do you feel confident that that return of £2,500 a year would not decrease? I think it would increase. The club is becoming more popular every day. We have been very successful ever since we started.
681. The Commissioners' estimate of revenue is £3,000, do you think that they have omitted the Canterbury racecourse altogether? I think they must have done.
682. Do you think that the returns, without including those in connection with the racecourse, would amount to £3,000 per annum? I think they would exceed that, independently of the racecourse.
683. Then you are of opinion that the Commissioners' estimate is less than it ought to be? I am.
684. If you could get permission to construct the line would you be prepared to form a syndicate to construct it on a thoroughly commercial basis? We should only be too pleased. I would guarantee to form it in one hour. I know a gentleman who would put £25,000 in it at once.
685. You have no doubt that it would be a payable line? I am certain of it.
686. Independently of having any interest in a land syndicate? Quite independently of that.
687. Does it show favourably in comparison with the Illawarra line, before that was constructed, as far as population is concerned? Yes.
688. On that line to Hurstville was there as large a population, or any indication of it, before the line was constructed as there is on this line now? There is a far larger population on this line than there was on the Hurstville route before the Illawarra railway was made.
689. How much more population? I should say 33 per cent. at least.
690. Are the facilities for building along this route equal to the facilities on the Illawarra route? Quite equal, and I think that the soil, if anything, is better.
691. You have no hesitation in saying that the extension of the tram from Dulwich Hill to Burwood Road would not meet the requirements of the district? It would not meet the requirements of the district, and the public would not patronize it. By tram it would take at least an hour to get into Sydney.
692. Then you think the Government will be justified in constructing the line to Burwood Road? I do.
693. *Mr. Dowd.*] You say you consider that the Railway Commissioners' estimate of the revenue from the railway—£3,000—is not a correct one? I think it is an under-estimate.

- W. L. Davis, Esq.  
21 Nov., 1889.
694. You have also stated that there are 10,000 or 12,000 people who would probably avail themselves of the railway. Is it likely that 500 persons are likely to travel each way by the railway every day from the start? I would not say that they would do that from the very start, but I would guarantee that they would do it in less than two years.
695. That would give £9,490 revenue, independent of the Canterbury races; taking that as a calculation, would you consider that that justifies your opinion as to the incorrectness of the Commissioners' estimate? I am confident that within two years the traffic would exceed 500 passengers a day.
696. From your knowledge of the district, do you think it is likely that in addition to this passenger traffic there would be some goods traffic? Oh, yes; there are several brickyards on the line, as well as a good deal of timber, and of course there would be a great deal of produce as the population increased.
697. You anticipate, in addition to the passenger revenue, revenue from goods traffic? Yes.
698. And a considerable portion of the land that would be reached is good agricultural land? Yes.
699. Are you aware that in making the line some deep cuttings would have to be made—cuttings about 30 feet deep, with heavy embankments? I daresay. You go through the worst part of the work in making this portion of the proposed line.
700. Do you think that the cuttings and embankments would involve any difficulties in regard to the approaches? No; I think they would not be long cuttings.
701. They would not prevent people from having access to the line? No. I do not think they would be any worse than those on the main line from Sydney to Parramatta.
702. Having a thorough knowledge of the country as far as Liverpool, I understand you to say that you strongly recommend that a double of line of railway be constructed along the whole length of the proposed route? I do. I think it ought to be done. At the same time, if the inhabitants cannot get a whole loaf they must take half a loaf. I am convinced that this portion of the line will pay within two years; and that may induce the Commissioners to recommend the construction of the whole line.
703. You do not agree with the Commissioners when they say that the construction of a line to Liverpool would only relieve the main line of about four trains a day in each direction? I cannot understand that at all.
704. Do you think it is a mistake to make the public travel  $5\frac{1}{2}$  miles further than there is any necessity for? I do. It means a great deal in the year.
705. Has there been much discussion in reference to the rival routes? There has in years gone by, and I think that that has been greatly to the detriment of this proposed line. Every man wants the railway against his own door. During the last two or three years, however, the inhabitants have been very unanimous; ninety-nine out of 100 believing that the proposed route will be the best.
706. *Mr. O'Sullivan.*] In the event of this line being constructed, are the Canterbury Park Racing Company likely to construct a branch line to connect it with the railway? They will take into consideration how far the railway is from the course, and if they think it desirable to have a branch line I have not the slightest doubt that we shall apply to have one, and no doubt we shall have to guarantee the interest on the cost of its construction. If the railway is within half a mile of the course probably no action will be taken, but if it is a greater distance away, I think we shall ask for a branch line to be constructed.

Mr. James McBean, Mayor of Canterbury, sworn, and examined:—

- Mr. J. McBean.  
21 Nov., 1889.
707. *Vice-Chairman.*] Are you the Mayor of Canterbury? I am.
708. How long have you resided at Canterbury? About thirty-three years.
709. You know that part of the country tolerably well then? Yes.
710. Do you know the route of the proposed line from Marrickville to Burwood Road? Yes.
711. How long has Burwood Road had that name? Five or six years. We used to call it the Old George's River Road.
712. Does it come near the Punch Bowl Road? Yes; it comes on to it.
713. Do you reside at Canterbury? Yes.
714. And of course you have watch the growth of the population there since you first went there? Yes. It has increased to a very large extent.
715. Are there many large estates in the neighbourhood now? No, there are very few. They are being subdivided.
716. Is the Campbell estate subdivided? It has been sold in blocks of several acres each.
717. Do you think the Government would be justified in constructing a railway between Marrickville and Burwood Road? I do.
718. How far will the terminus be from the nearest points of the Great Western and Southern lines? About four miles.
719. And what distance would it be from the tramway or railway at Dulwich Hill? I suppose between four and five miles.
720. Has the population increased along the route of the proposed line during the last few years? Yes; it has largely increased.
721. The locality affords good facilities for residents? Yes; very good.
722. And the land is fairly good? Yes; it is dry and good soil for any purpose.
723. Do you know anything of the route to Liverpool? Yes.
724. Do you think the line would be any advantage to a future population towards Bankstown? Yes.
725. Is the land fairly good there? Yes.
726. What communication have they along the old Liverpool Road? Only the coach from Bankstown to Burwood station.
727. Is there much population about Drutt Town? Yes; considerable population.
728. How far would the proposed terminus be from Drutt Town—say from the old Bark Huts? About two miles I think.
729. Then if this line were constructed would the population about the old Bark Huts go this line, or to Burwood or Ashfield? Most of the people would use this line. Part of the Bark Huts runs to the Punch Bowl Road—that is not half a mile off. But to the Bark Huts proper would be about two miles.
730. *Mr. Trickett.*] What is the population of Canterbury? About 3,000.
731. Can you tell us the value of the rateable property in the Borough of Canterbury? I could not tell you exactly. The Clerk of the Council could tell you.

Mr.  
J. M'Bean.  
21 Nov., 1889.

732. What is the amount of your annual rate? About £2,000.
733. That is for 1888 and 1889? Yes.
734. Is there any increase as compared with the previous years? Yes; the amount increases by about £200 a year.
735. How long has Canterbury been incorporated? Eight or nine years.
736. And there has been a gradual increase in the value of the property? Yes.
737. Is it by residences being erected, or only an increase in the value of the land? Residences have greatly increased, as well as the value of the land.
738. You know the permanently staked line? Yes.
739. Do you think that is the best of those which have been projected? I do.
740. You think that that would suit all parties the best? I do.
741. From having been in communication with a great number of the local residents, are you of opinion that they are in favour of this route? At meetings which we have had they were unanimously in favour of the line. There might be one or two exceptions; persons who want the line to go through their own land.
742. Were those meetings well attended? Yes.
743. Are there many people travelling between Canterbury and Sydney daily? Yes, a great number; there are seven coaches running.
744. Are they all doing well? Yes, or they would not continue, I suppose.
745. They are well patronised? Yes; the other night I saw over forty in one coach.
746. Are there complaints that the means of communication are unsatisfactory? Yes.
747. Is there a Public School in Canterbury? Yes.
748. What is the attendance? About 300.
749. And that I suppose has been increased during the last two or three years? Yes.
750. Do you know the course of the line from Marrickville to Burwood Road? Yes.
751. What are your views as to the present population of those districts which would be served by the railway? I suppose it would serve a population of between 6,000 and 10,000.
752. Would they be a class of people to frequently come into Sydney? Yes.
753. Do you know the owners of the property the railway passes through in your Municipality? Yes.
754. Are they large or small holders? Some large and some small. There is a lot of allotments, and some large land owners.
755. Have you heard them say whether they would be willing to give their land free for the purposes of this railway? Yes.
756. Can you give the names of any one of those whom you have recently heard state that? It was I who obtained the signatures for this line some years ago, and there were then only two exceptions who refused.
757. Is that document in the Department? It was handed to the Department at that time.
758. Have you seen these people lately? I have never heard anyone say other than that they would adhere to their former promise.
759. *Mr. O'Sullivan.*] What industry is carried on between Marrickville and Canterbury? The principal industries were brickworks, an iron foundry, quarries, and such like, but the iron foundry closed up through the cost of carriage.
760. Was that the only reason? I believe so. The brick-kilns are most of them closed up too, and I think it is through the same reason. They had to cart wood from the station, a considerable distance. There were six or seven kilns altogether, and I estimate they would use about 15 trucks a week of wood and coal. That is a considerable item if you have to cart it three or four miles, and load and unload. I have heard several of the brick-kiln proprietors complain this was a great drawback. In my own case I had a quarry there some time ago, and got some large grindstones for Hudson Brothers and Vale and Sons, and it cost me £1 to get each stone to Ashfield station, and I lost a day loading and unloading besides.
761. Have you heard that one of the reasons for the stoppage of the brick-kilns, is that they produce too many bricks? I do not know about that, but of course it may be due to the state of the market.
762. What class of people live out on the proposed line of railway? Some are market gardeners, others work on the roads, and take in wood to Sydney, and quarrymen.
763. Have you noticed any evidence of a desire on the part of a set of people to build residential homes there? Yes. I know several friends myself who have allotments there, and who would come out and build, and who would go backwards and forwards to business, but it takes three hours time every day to get in and out by coach now.
764. *Dr. Garran.*] You know the locality where it is proposed to stop at Burwood Road? Yes.
765. Is that a good place for a terminal station? Yes.
766. Would any object be gained by going a mile further? I do not know. I think it would be far better to go right on to Liverpool.
767. Short of going to Liverpool it is best to stop where it is proposed? I believe so, because it is a main road, and goes right across country from George's River to Burwood station.
768. Do I understand that the Burwood Road goes to Tom Ugly's Point? Yes.
769. So does the road at the 9 miles point, where the Punch Bowl Road crosses? I mean the old George's River Road. What is called the Burwood Road now, we used to call the Burwood lane, and that does not go to Tom Ugly's Point.
770. But still it makes a good stopping place? Yes.
771. And is the land between St. Peter's and that point north all good for building? I do not think you could beat it.
772. It is as good as anything on the western line? As good as anywhere I have seen within miles of Sydney.
773. Is there any of it as high as Petersham? Yes.
774. And none of it very low? None.
775. Do you know of any opposition to this line? No.
776. You have not heard of any? No.
777. The feeling of the district is pretty unanimous? Yes.
778. And they are contented with this route? They are content to leave it in the hands of the Government.

- Mr. J. M. Bean.  
21 Nov., 1889.
779. If this line were recommended there would be no opposition on the ground that rival routes would be preferable? I do not think there would.
780. *Mr. Humphery.*] You said there were 7 coaches leaving Canterbury for Sydney? Yes.
781. How many trips? Seven from Canterbury to Sydney.
782. Have you any idea how many passengers are carried by coach? There were over forty on one the other night.
783. What is the average? From twenty to thirty, I suppose, each way.
784. How many passengers do you think travel by coach from Canterbury to Sydney daily? They generally carry twenty to thirty a load.
785. But every coach would not be full? No.
786. Do you think there would be 100 going in from Canterbury to Sydney daily? Yes; that is between Canterbury and the Burwood Road.
787. What is the fare? Is. from Burwood Road and 9d. from Canterbury each way.
788. *Mr. Tonkin.*] You think you could average each coach twenty-five passengers? Yes.
789. That would be 175? Yes.
790. Would that include all the passenger traffic which would be served by the railway? I do not think so.
791. What other places would passengers come from to town? Some of the passengers walk to the tram; they will not wait for the coaches, as they do not run often enough. Some of them would come further across to the train.
792. Are there any centres of population where the people are not served by these coaches? Parts of the adjoining boroughs would be served. Some have their own vehicles, and such like.
793. Do some drive in? A great number.
794. Could you give an estimate of the other passenger traffic in addition to that which you have given already? I could hardly do that because there are so many outlets;—some drive in through Marrickville, and come through Undercliff way down to Tempe.
795. But there are no other licensed vehicles except the seven coaches? No.
796. If your statement is correct it gives £4,360 a year for those passengers;—what would you think of the Commissioners saying that the total revenue would only be £3,000 a year? I believe the passenger traffic would be close on what I say.
797. Can you give an idea of what the goods traffic would be? I am prepared to swear that there are six brick-kilns which are closed, which use fuel at the rate of fifteen trucks a day.
798. Is it likely they would open again if the railway were constructed? I have every reason to believe so.
799. Are there any brick-yards now working? Yes.
800. How many brick-kilns are there at work now which are consuming coal and wood? Only two.
801. Do you know how much they use daily? They would use what I have stated—about two trucks a day.
802. Between the two? Yes.
803. Where do they get it from? From Ashfield and Petersham.
804. What cartage do they pay from Ashfield? 2s. 6d. or 3s. a ton.
805. Then freight would be a large item in the revenue returns? Yes.
806. Is there any other freight besides coal and wood used;—where do the flour and other provisions come from? They are sent out on trollies and drays.
807. Then there is a large amount used which would go by train? Yes.
808. You have no doubt that the estimate of the Commissioners is under what it should be? No doubt at all.
809. Your estimate of the passenger traffic alone gives a revenue of over £4,000. In addition, the race-course traffic has been sworn to as £2,500—that makes £7,000, without any goods traffic at all;—you cannot therefore understand why the Commissioners should say the revenue would only be £3,000? I cannot understand it.
810. You are sure the figures you have stated are correct? To the best of my belief.
811. *Mr. Dowel.*] You say you know the whole of the country which this line would traverse? Yes.
812. You referred to certain centres of population—will you inform the Committee their names? It would tap part of Hurstville and Ashfield. It would benefit part of Enfield and Parkestown in the Municipality of Canterbury, and Kingsgrove, Moorefield, and Belmore.
- 812½. Can you estimate what the traffic would be from all these places? From 6,000 to 10,000 people—that is with Marrickville as well.
813. Do you think the traffic would run into some hundreds a day? Yes.
814. That is judging from your calculation of the coach traffic? Yes.
815. Do you anticipate, if the line is constructed, considerable additional settlement would take place? I am satisfied of it. If I had the means I would make one in a company, if I were privileged to do so, to construct a line myself.
816. Do you think a traffic of 500 passengers a day would be likely to rise in two years time, independent of such special occasions, such as Canterbury racecourse proceedings? I do, and more.
817. You also anticipate considerable revenue from goods traffic? Yes.
818. Are the brickworks in the locality good or bad? Good.
819. What is the character of the stone in the quarries you refer to? It is equal to anything you can get. The two lodge gates at the University were supplied from that material by myself. It will compare with anything in the town.
820. If the line is constructed on the proposed route, will it serve these quarries? Yes. They are not above 300 or 400 yards from the line.
821. In all probability some revenue will be derived from the quarries? Decidedly.
822. Is it the opinion of the people that this is the best line to be constructed? According to the meetings held the people are unanimous.
823. And it is your own opinion? Yes.

Walter D'Arrietta, Esq., sworn, and examined:—

824. *Vice-Chairman.*] You have lived for a considerable time in the neighbourhood of Canterbury? Eight or nine years.
825. Do you live at Canterbury or Belmore? Belmore.
826. How far is that from Canterbury?  $3\frac{1}{2}$  miles.
827. Were you acquainted with that part of the country before you went to live there? No, I have been in and out for the last ten or twelve years, and have been residing there permanently for the last three years.
828. You know the country where the railway line is proposed to be constructed? Yes.
829. Have they a railway committee or league? Not at Canterbury. The league is for the through line to Liverpool.
830. Is the league which has been advocating the construction of the line from Marrickville to Liverpool in accord with the proposal to construct the line from Marrickville to Burwood Road? The league is agreeable to accept that as an instalment of the through line. They believe it will go through ultimately.
831. At present they are in favour of this proposed extension? Yes.
832. Do you know the different routes which have been proposed? Fairly well.
833. Is it the case that the residents there concur that this lock-spitted line is the most desirable one? The majority of the league are in favour of leaving the choice of the line to the Government.
834. Has the locality about there increased in population of late years? It has increased fairly well, but the great drawback has been the difficulty of access to the city. The land in the locality is very favourably situated. It is undulating and easily drained and very healthy, and is suitable for the settlement of a suburban population.
835. The soil is fairly good? It is.
836. Are there many gardens around there? There are several on the river, but there is not a great deal of land under cultivation.
837. Not many orchards? Not many.
838. *Mr. Trickett.*] What is the population of Belmore? About 400.
839. Do they come in and out of town daily? Several come in to business from Belmore.
840. What is the means of communication? 'Bus.
841. Is there a direct 'bus? Yes, to Belmore and the city.
842. How many 'buses a day? Three each way.
843. And that is the only means of communication? The only public means.
844. What is the distance from Sydney to Belmore?  $9\frac{1}{2}$  or 10 miles.
845. How long does it take to come in, by 'bus? One hour and a half to come in, and two hours and a half to go out—they don't hurry back.
846. What is the fare each way? One shilling.
847. I suppose the 'bus service is not very good? It is fairly good, but it is a long journey.
848. Is the land cut up in small holdings about Belmore? After you leave Burwood Road they are nearly all large. There are very few small holdings.
849. Do you know the owners of the property through which this line will pass at Belmore? Yes.
850. Are they large or small holders? Nearly all large holders.
851. Would they be willing to give their land free? From the Burwood Road I think nearly everyone has promised to do so, with very few exceptions.
852. Do you know the country between Marrickville and Burwood Road? I know the line after passing Canterbury, but not so well between Marrickville and Canterbury.
853. Is it suitable for suburban population from Canterbury to Burwood Road? Eminently suitable. I think it reaches an elevation after passing the Burwood Road of 190 feet.
854. Would the people there be well served by tramways from the station on the Western Line? A tramway would not suit the convenience of the people at all. It would be suitable for street traffic up to a distance of 5 miles from where goods would have to be carried—and a large quantity would be required for the district—it would not be suitable.
855. A tramway could not be made to serve the various districts as well as a railway? I think not. It is too slow for one thing.
856. *Mr. O'Sullivan.*] What is your occupation? None. I am a Civil Service pensioner.
857. You were formerly in the Government Printing Office? Yes.
858. And are now living on your pension at Belmore? Yes.
859. What is the general character of the occupation of the people who live out there? It is the usual mixed population. There are some commercial men and some professional men there, and there is also the working class.
860. What are the callings of the working class who obtain employment in the district? Various;—market-gardeners, wood-cutters, poultry-farmers, &c.
861. How far is Belmore from the Illawarra Line?  $3\frac{1}{2}$  miles from the nearest point.
862. Why do not the 'buses run to that line instead of Sydney? It would be rather an expensive journey. Hurstville is the most central station, and the fare would be 7d., and if you add  $3\frac{1}{2}$  miles by 'bus to that you make the fare expensive.
863. What is the 'bus fare from Belmore to Sydney? 1s.
864. Do you think they would charge more than 6d. to go to the Illawarra Line? I think they would charge 6d., but you must take into consideration it is a very bad road. In ordinary weather it is difficult to get along it, and in bad weather it is almost impassable.
865. If the line were constructed to Burwood Road would it serve the people of Belmore? It would serve them to a certain extent. If it were to run through to Liverpool it would serve them better.
866. But it will not go through Belmore? No; it only touches Belmore.
867. And you would still have a 'bus ride to reach the railway? Yes, of  $1\frac{1}{4}$  or 2 miles.
868. Then you would be very little better off than now in regard to the Illawarra railway if you had a good road to the Illawarra Line? Yes, we would. It is across country there.
869. Have you noticed that a number of brickworks have stopped operations out towards Canterbury? I believe some towards Croydon have stopped work.
870. What is the reason for the stoppage? Dullness in trade—buildings are not going on to such an extent—and competition with large factories on the different railway lines.

W.  
D'Arrietta,  
Esq.  
21 Nov., 1889.

- W. D'Arrietta, Esq.  
21 Nov., 1889.
871. What is the population which will be served by this line of railway from Marrickville to Burwood Road? 6,000, and it would increase to a great extent in a very short time.
872. *Dr. Garran.*] If the railway were taken to the 9-mile point instead of stopping at the 8-mile point, it would suit Belmore much better? Certainly; and it would suit the pumping station for the Hurstville and the southern suburbs water supply, which will be at Belmore, as it would save the Government haulage in fuel.
873. Would the 9-mile point be a good place for stopping? Yes; it is fairly level land. I would not advocate putting it a mile further on. I would rather see it go through the whole distance or stop at Burwood Road.
874. Do you think there would be any advantage in the 9-mile over the 8-mile? It would suit the Belmore district, which has a population of 400.

Mr. Charles Moyes, sworn and examined:—

- Mr. C. Moyes.  
21 Nov., 1889.
875. *Vice-Chairman.*] Where do you reside? At Marrickville.
876. How long have you lived there? Between twenty-nine and thirty years.
877. You must be one of the early residents? Yes; one of the originals.
878. You have seen the progress of the district during the time you have lived there? Yes.
879. What was the land worth an acre when you first went there? I have bought land at £40, £80, and £400 an acre at that time, and I have seen land sold at £5 and £10 an acre. It realizes now £900 and £1,000 an acre.
880. What is the ordinary price of land in the district now? About £700 or £800 an acre.
881. Do you know the course of the proposed line to Burwood Road? Yes.
882. Do you think it would be a desirable route to take for a railway? Yes; as far as I know. I do not suppose there is anything else but the land which has been marked.
883. Do you think the population there and the trade would be sufficient to justify the Government in constructing a railway from Marrickville to Burwood Road? I think so.
884. Is the country well suited for residences? It is. There are many residences now going up in anticipation of this line. Within half a mile of my own place there are over thirty new houses going up, and they are not small places, but nice villas.
885. Do you live in the thickly populated part of Marrickville or further on—how near the tramway terminus? I live about half a mile from the late terminus.
886. You think population would increase largely with additional railway accommodation? There is not the least doubt of it. It is increasing now in anticipation of it. I do not know what it will be afterwards.
887. Do you think it would be likely for any industries to spring up which would give employment to numbers of people? Possibly on the banks of the Cook's River. I do not think there would be many on the higher lands.
888. Are there any tanneries out there? Not at present.
889. Have there been any? No.
890. There were several brick-yards? Yes.
891. Any other industries? No.
892. Any market-gardens? Yes; market-gardens, and dairies, and the like of that.
893. Poultry-farms? Yes.
894. A great number of people attend the Canterbury races? Yes.
895. And this proposed line would give great facilities for them to go backwards and forwards? Certainly, and much cheaper. It is very expensive to get from Sydney to Ashfield, and then from Ashfield to the racecourse.
896. It is regarded as a sort of inconvenience that you have no better communication? Certainly.
897. Where you reside is some distance from the tramway? Half a mile.
898. Would you sooner have railway than tramway communication? Certainly, the tramways are not suited for long distances.
899. They stop too frequently I suppose? Yes.
900. They give accommodation to the people along the tramway as well as at both ends? Yes.
901. When a tram is actually going it travels almost as fast as the railway? Yes; the 'buses will compete with the tramway. You can go straight in from Canterbury Road to Sydney sooner by a 'bus than you can come round by Marrickville in a tram.
902. The tram stops at the corner of every street? Yes.
903. The intermediate traffic would not be met by a tramway the same as by a railway? Certainly.
904. *Mr. Trickett.*] What part of Marrickville do you live in? What is called the Green Bank estate.
905. Is the tram service of no use to that portion of Marrickville? It is, because people have to come across from Arncliffe and take the tram. That is a mile beyond where I live. There are no 'buses now. They have given up running from the place; therefore the people have to come a long distance to get into Sydney.
906. I understand this railway is not to serve Marrickville so much as the district further on? Yes; the district further on. Of course it would be a great advantage to the western portion of Marrickville. Half of Marrickville would be served by the railway. Marrickville consists of about 2,000 acres, with a population, according to the last municipal list, of over 10,000. There will be close on 11,000 at the present.
907. Would these people walk to the Marrickville station or expect to get in somewhere else? They would go to the nearest station. Of course there will be stations every mile, I suppose, along the route.
908. How far is that part of Marrickville which the tram does not serve from the present Marrickville station. About a mile from where I live. Then there is another mile through to the boundary of Canterbury. All that district would fall in with the proposed railway.
909. Do not you think a train would compete with the tramway and reduce the revenue of the tramway? I do not think it. The tramway turns more to the right. The proposed line would branch off to the west, so that I do not think it would compete, unless for a very short distance, where it branches off.
910. Then you think that the proposed line would add to the revenue of the railway without decreasing the present tramway revenue? Certainly.
- 911.

911. *Mr. O'Sullivan.*] Your objection to the tramways appears to be that they lose so much time in stopping at every street? That is one of the objections.

912. Do you think a system of through trams, which would save a large amount of time, would serve the districts to which it is proposed this railway should be taken? No; it would be a great mistake to put on tramways at all along our streets out to the suburbs. You must begin to give some better accommodation than tramways, which might suit a few passengers. In a district like this, you must expect there would be a large amount of produce to carry. As soon as you go to Canterbury you come to what ought to be a manufacturing district.

913. What manufactures are carried on there? A large manufactory has been stopped simply because they could not pay carriage to town. I have been informed of a syndicate ready to start a large brick factory and pottery works if it were not for the cost of carriage. As soon as this line is decided upon there will be large companies that will start pottery works in that district.

914. You are aware that a number of brick-kilns have stopped? Mostly all. They are what we call hand-manufacturing brick-works.

915. Why have they stopped? Because they cannot compete with the present process of making bricks by machinery.

916. One of the arguments raised in favour of the line is that it will take a residential population out there; it will therefore be a passenger line? Yes, to a great extent; but why should there not be factories established along Cook's River as well as other places.

917. But this line will not serve the banks of Cook's River beyond where it crosses? It will, where it crosses.

918. But it will only serve one point? Yes; but still a large company would soon run a branch to their place of business from this line.

919. Between Sydney and Bondi there is a population of over 40,000 and that is entirely served by tramway? Yes; because they have nothing else. It is a great improvement on omnibuses, but still that would not serve this place you have mentioned like a railway.

920. You will understand you are already served on each side by railways; you have the western suburbs line on the one side and the Illawarra line on the other? Yes; if you walk 6 miles to each of them.

921. Supposing a tramway ran from Marrickville up to Belmore on one side, or a tramway from Ashfield to Canterbury Park,—would not this serve the greater portion of the passenger traffic? It might assist the passenger traffic, but it would give no encouragement to industries to settle along there. Even then, people would not be satisfied; they are not satisfied now with the tramway.

922. You understand we have already made a mistake in running a tramway to Marrickville and Dulwich Hill which competes with the railway line? No; it does not compete with it.

923. Does not it compete as far as Marrickville with the Illawarra line? It might as far as Marrickville station, because that is on the borders of St. Peter's. The Marrickville line is on the west of it.

924. At what do you estimate the population in the district to be served by the proposed line of railway? In the Canterbury and Marrickville districts, I should say there will be about 11,000 who would benefit specially by the railway.

925. Do you think the State would be justified in constructing this line of railway, notwithstanding that the people are to a certain extent served by the Illawarra line on the one side and the western suburbs on the other? Certainly; I do not think there is a better district for settlement than that round by Canterbury and the western portions of Marrickville, which are lying in wild bush at the present time.

926. What was the population from Marrickville up to Burwood Road twelve years ago? Twelve years ago I think there were 500 or 600 or 1,000. I know that twenty-five years ago there were only 500 or 600 inhabitants in Marrickville.

927. Including Canterbury and Belmore and the country along the proposed line of railway, you say there were only 500 people there twelve years ago? Between that and twenty years ago, I do not think there were more than between 500 and 1,000.

928. And you say that population has increased in thirteen years to about 12,000? I believe it has. The increase in Marrickville alone has been very great, and there has been very great settlement in the Canterbury district.

929. And that leads you to believe that there will be a still greater increase if the railway is constructed there? I am certain of it from the amount of land that has been sold. A great many have bought there for the purpose of building. The scheme has been going on for eight years, and people have been waiting for it.

Mr. Joseph James Cooper sworn and examined:—

930. *Vice-Chairman.*] You live on the other side of the Burwood Road? Beyond the Burwood Road.

931. What is the name of your place? Starland.

932. How far is that from the proposed terminus at the Burwood Road? About 4 miles.

933. Do you know the routes which have been proposed between Sydney and Liverpool? Some portions of them.

934. Do you know this line which is now accepted as the most desirable one of the three or four submitted? Not the Sydney end.

935. Do you know the other end? Yes.

936. You think it is a desirable course for a line to take? I think it is a mistake. It is the first point of a line which will run into a bog.

937. And which is the one you think, more desirable? The one selected by Mr. Hindman, a resident engineer, and known to the Department as the Lansdown survey, up on the watershed.

938. That is the line that goes through Bankstown? They both go through Bankstown, but one is more central between the two lines of railway and the two rivers.

939. Would this line, if constructed to the Burwood Road, give much accommodation to the residents in the part of the country you reside in? None whatever.

940. You would not use this line? We could not, however desirous.

941. What means of communication have you now? Auburn railway station. That is 4 miles from my residence—Liverpool Road; some say it is 5 miles.

Mr.  
C. Moyes.  
21 Nov., 1889.

Mr.  
J. J. Cooper.  
21 Nov., 1889.

- Mr. J. J. Cooper. 942. How far would it be from your place to the Burwood Road? Four miles as the crow flies; about 5 miles, I presume.
- 21 Nov., 1889. 943. Is there a direct road leading to it? Not from Bankstown.
944. Do you think it will be in the interests of the Government or the public to construct this lockspitted line from Marrickville to Burwood Road? So far as the other people are concerned, there is no doubt of it, but in the interests of Bankstown and Campbell Hill and outlying portions which require railway communication, none whatever.
945. They would still be as badly off as ever for communication? Every bit.
946. Is there a large population about Bankstown now? I sent into the Works Department some time ago a return of the estimate of the population; I think I made it 5,000.
947. *Mr. O'Sullivan.*] You are an old resident out Bankstown way? Not very old; I have been there about fifteen years.
948. How far do you reside from the proposed site of the terminus? About 5 miles.
949. The people in your vicinity will not be served by the Burwood Road railway? No.
950. Do you think the proposed line to Burwood Road would be the route best suited to the majority of the population? I am not prepared to say, so far as Marrickville or Canterbury is concerned. I do not know how the population stands to the east, or north, or south; but so far as the country behind this line is concerned, it would be better north.
951. You have been given to understand that the Railway Commissioners have reported adversely against the line between Marrickville and Liverpool? More is the pity, because the Commissioners' statement is far from being consistent. Their knowledge is far too limited to be able to report fairly on the railway.
952. That being so, do you think the State is justified in constructing the railway from Marrickville to Burwood Road? To answer that, I should need to state that, under some circumstances, it might, as far as population goes, serve the interests of the district; but when it is part of a project which has been agitated for for seven or eight years, it would be an injustice to the country to stop there.
953. Which line do you say would best suit the convenience of the people along that route? The Lansdown route would serve all the districts right through, and it would keep to the land where there is no fear of inundations.
954. Is that the most northerly of the proposed routes? It is the medium one.
955. How do you reach Sydney now—*via* Rookwood? Yes.
956. So far as you and the people round you are concerned, the main line would be quite as useful as this proposed line? Yes.
957. *Mr. Trickett.*] Do you object to the line from Marrickville to Burwood Road only because it does not go on further? I will not say I object to the line; because if the Government see fit to build it, by all means let them do so.
958. You think it would be a good thing to construct the line from Marrickville to the Burwood Road for the purpose of getting the traffic of that portion of the country? I should think there could be no two questions about that, so far as the traffic is concerned from Canterbury to Marrickville.
959. What is your opinion? Where there is a population I should say most decidedly take the railway; but as part of what we have been agitating for during seven years, I think it is a wrong thing to make a false start.
960. You say that Burwood Road—the terminus of this proposed line—is 5 miles to Bankstown;—that is by road I suppose, because on the plan it is shown, as the crow flies, to be only 3 miles? It is more than 3 miles; it is fully 5 miles.
961. In a straight line? I do believe it is, from Upper Bankstown.
962. Then if it is shown as 3 miles on the railway plan it is a mistake? Yes.
963. *Mr. Humphery.*] Have you followed the railway line as marked on the plan? No; I have a map I obtained from a Government officer.
964. Are we to understand that you have no objection to the line as portion of the Liverpool loop-line, but you object to it stopping short at Bankstown? It is my principal, but not my only reason.
965. You object to the route? Yes; in the interests of the localities and the country.
966. What is your objection to the route? It is a deviation from a more direct line, which can be made to better advantage, not only to the localities concerned, but to the Government.
967. Do you mean a more direct route to Liverpool can be obtained? Most decidedly, unless you are going to zig-zag about in the manner shown on these plans.
968. *Mr. Dowel.*] Are you fairly acquainted with the route from Marrickville to Burwood Road? Only on paper.
969. You have no knowledge of your own in regard to the population settled on that route from Marrickville to Burwood Road? No; beyond that I have travelled about it, and I see it is very thickly settled.
970. Do you know Canterbury? Sufficiently well to say yes. I drive through it occasionally.
971. Is there a considerable population? Yes. It is a great shame they have not had railways there long ago.
972. Do you know Parkestown? No.
973. Do you know Kingsgrove? I have been through it.
974. Is there a settled population there? Very fair and rising; it only wants a railway.
975. Do you know Moorefield? I know the outer parts.
976. Is it a settled district? I am not sufficiently acquainted with it to answer.
977. Do you know Belmore? Yes; I drive through Belmore Road occasionally.
978. Is there a considerable population? A scattered population.
979. From your knowledge of that particular country, is it likely the population would increase if it had railway communication? Without a doubt.
980. Do you think those places would be served by this particular line from Marrickville to Burwood Road? No.
981. None of those places would be served by the line? No.
982. Not Canterbury, where it passes right through? Canterbury would.
983. But none of the places to which I have referred? Belmore, Moorefield, and Kingsgrove would not be what I should consider sufficiently benefited.
984. What distance would they be from the railway? Portions of it 2 and 3 miles away.

985. And some much closer? Yes; and some further.  
 986. Have you been over the staked-out road? I have, over the far portion.  
 987. I mean between Burwood and Marrickville? No.  
 988. Do I understand you to say that the places to which you have referred would be served if this particular line were constructed? I am not referring to Bankstown.  
 989. But from your knowledge of the localities and the surroundings do you consider these places would be served—Canterbury, Bankstown, Kingsgrove, Moorefield and Belmore—by the construction of this line? Part would. As far as Canterbury is concerned it would, I should imagine, but these outlying parts—Belmore, Kingsgrove, and Moorefield—would not be served, because they are beyond it.  
 990. Would they not be served better than they are at present? It would be somewhat nearer to them certainly than what it would be to Bankstown.  
 991. What is the class of country between Marrickville and Burwood Road—is it fairly good for residential purposes? Yes; and good for agricultural purposes too.  
 992. And in all probability a large population at some time will be settled upon it? As soon as ever the railway is there.

Mr.  
 J. J. Cooper.  
 21 Nov., 1889.

TUESDAY, 26 NOVEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).	
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.	

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

993. *Dr. Garran.*] I understood you, on a previous occasion, to say that the line as now staked, was laid out by Mr. Whitton as straight as possible, with the view of making it the shortest line between the two points? Yes.  
 994. I presume the idea, then, to have a loop-line as a line for saving distance was the dominant consideration? It was a main consideration. I do not know about its being the dominant consideration.  
 995. What I mean is, that the straightness of the line was determined on with a view to shortness, and not after a study of the contour of the country? It was with a view to shortness.  
 996. And would a close study of the contour of the country show that slight deviations from that straight line would result in a considerable saving of works? Yes. I have gone into that question, and I find that it certainly would be so.  
 997. Without increasing the whole distance by how much? I could not say exactly how much, but I should think it would not be more than 25 or 30 chains.  
 998. On the whole distance between St. Peters and Liverpool? Yes; certainly not half a mile.  
 999. How much saving in money do you think would result with the same grades? I estimated that, by altering the grades, a saving of something like £78,000 on the whole cost of the line to Liverpool could be effected; that is to say, a saving on the revised estimate of £308,000, but the line would cost £230,000. I should think, without further going into the matter, that if the same grades were preserved as we have at present, or even with 1 in 100, about half that amount would be saved—say £40,000.  
 1000. On the  $4\frac{1}{2}$  miles? Yes; that is to say, that a line half a mile longer, but twisted about slightly, with a ruling grade of 1 in 100, about £40,000 could be saved on the whole estimate.  
 1001. That is to say, you put it thus: "Release me from the necessity of going quite straight, and I can make a line which will save £40,000, and not be half a mile longer"? Yes; with the same grades. If you allow me to put in steeper grades (say) 1 in 66, I am of opinion that £78,000 could be saved.  
 1002. You are aware that the Commissioners of Railways rather disparage this line as a main traffic line? Yes.  
 1003. And supposing their view be correct, and we have to regard it mainly as a suburban line, there is no such very great importance in running it quite straight? No.  
 1004. And we might as well save the money in construction? That is my opinion.  
 1005. Your modified line would be as easy to work? Yes.  
 1006. And as convenient for the district? It would certainly be an easy line to work. In two cases where we have 30-chain curves, I would put in 20-chain curves, and that radius is by no means objectionable.  
 1007. Would those curves be objectionable for heavy through traffic? No. They are not so good for running over as curves of a larger radius, but we have curves of very much smaller radius on the main line.  
 1008. Have you any curves of smaller radius on the line between Liverpool and Sydney at present? I believe not.  
 1009. Nor as small? I could not say without referring, but I should not think that there are any less than 30 or 40 chains.  
 1010. If this is to be a loop-line to concentrate the general traffic, we ought not in any possible respect to have it worse than the existing line, either as regards gradients or curves? No; it would be well to adhere to the same conditions.  
 1011. Therefore, if possible, we ought not to have any sharper curves or stiffer gradients? I think the gradients are of more importance than the curves. I do not think that 20 chains would be at all objectionable.  
 1012. Not for the modern rolling stock? No.  
 1013. I notice you have only one gradient of 1 in 90 on the whole of the line? Yes.  
 1014. That is rising from Cook's River? Yes.  
 1015. If that one could be cut out we should have nothing worse than 1 in 100 the whole way? Yes.  
 1016. What expense would it be worth while to go to, in order to cut that out? I would cut it out without expense by lengthening the line slightly.

H. Deane, Esq.  
 26 Nov., 1889.

- H. Deane, Esq.  
26 Nov., 1889.
1017. You think you could do that? Yes; I am sure.
1018. The last time you were here, or on a previous occasion, or in one of your papers, you stated it had been considered, but it was not thought that the expense would be justifiable? Yes; that is, preserving the same line.
1019. By an extra cutting? Yes.
1020. By a slight detour you could do that without an extra cutting? Yes. If the directness of the line is not such a consideration as hitherto, I believe it would be better to cross the Canterbury Road on the Sydney side of the bridge and cross the river in the bend here [*pointing to the map*]. There would be no valuable property to go through, and then we could start up in the direction of the point where the line cuts through the Burwood Road; we could keep lower down, and avoid the rather large cuttings there are about seven miles from Sydney, and we could utilize the whole, or nearly the whole, of that length for rising to the 8-mile summit.
1021. Would you be out of flood reach at the river banks? Yes.
1022. And would the bend be as good a crossing-place? I believe it would; in fact, it would be about square with the river, and therefore better in that respect. The line crosses the river on the skew.
1023. Then you take 2 miles to make your rise instead of 1? About  $1\frac{1}{2}$  miles I should say. We should not rise till a quarter of a mile from the river.
1024. What you would lose in expense by a slight increase of length you would gain by diminution in cuttings and embankments? Yes.
1025. So the whole result would be no increase of cost on the capital account? No; it would be a saving. I have examined this line also on the plan. We have cross sections; the straight line being diverged a little to the left, between 8 and  $8\frac{1}{2}$  miles, we could get a higher ground and make a better line. There are large and easy curves, which would make a slightly longer line.
1026. The further deviations would not be to avoid gradients, but simply to avoid cuttings? Yes.
1027. I understand that your revised line is a cheaper line and very slightly longer? Yes. I would like to make a correction: That £78,000 which I mentioned includes the saving of the bridge by going round the bend of George's River by Landsdown Creek. I think you will find it mentioned in my report that I propose by laying out the line in that way to save £78,000. That line would go round the bend of George's River, and avoid the crossing of the river itself and would cross the Landsdown Creek. Half of that saving would be due to earthworks and half of it to bridges, so that by no amount of alteration in the centre line do I consider you could effect a saving of more than £40,000. If you adhere to the same gradients as we have at present, instead of the 1 in 66, of course the saving would be considerably less. I do not think that it would be more than half, so that the figures I gave a short time ago should be divided by two.
1028. Then how much do you think we should save on the  $4\frac{1}{2}$  miles we have now under consideration—how much of the £40,000? I think we should save about £8,000.
1029. And at the same time get an improved gradient? Yes.
1030. And so far as gradients are concerned—we would make this line, if it went through Liverpool, as good as the existing line from Granville to Sydney, and better than the line from Granville to Liverpool? Yes.
1031. Because I understand you that from Granville to Liverpool we have a grade of 1 in 66? Yes.
1032. Your revised line would have a better gradient for heavy traffic than there is on the existing line from Liverpool to Sydney? It would be a better graded line.
1033. And not worse for curves? Except the 20-chain curves. I do not think that there are any 20-chain curves on the existing line. But curves of 20-chain radius are by no means objectionable. You can run round without slackening speed.
1034. The curves would not be objectionable for through traffic? No.
1035. In one of your printed papers, you expressed your opinion that this line ought to go on to the 9-mile post? Yes, I believe that myself.
1036. You still hold that opinion? Yes, I do.
1037. At the 8-mile we do not very much accommodate the Belmore people do we? No.
1038. And they were really the first to start this railway movement I believe? Yes.
1039. And are rather left out in the cold? Yes. The extension of the line to the 9 miles would serve them.
1040. And would be a slight advantage I suppose to the Bankstown people? I should think it would.
1041. So far as existing population goes, Bankstown is really the most westerly point on the line where there is anything like settlement? There is no centre of population further west.
1042. If we do stop at 8 miles, I presume it is almost a matter of certainty that we shall have to extend to Bankstown within a very few years? Yes.
1043. You do not think it is worth while to do that at once? I would recommend to go as far as the Punch Bowl Road—that is about 9 miles.
1044. At once? Yes, to serve Belmore.
1045. Would that be a difficult mile—from 8 to 9? As the line is at present laid out there is one heavy cutting just at 9 miles, but by the slight windings I recommend a good deal of the earthworks could be cut out.
1046. Is there a good place for a terminal station near the 9-mile post? Yes. It would be just beyond the 9 miles—between what is called here Wiley's lane, and the Punch Bowl Road.
1047. In fact, at the junction of the Punch Bowl Road, and the road that goes to Tom Ugly's Point? I believe so.
1048. That would make as good a place for temporary terminal purposes as the one now marked? Yes.
1049. *Mr. Humphery.*] How far west of the lock-spitted line would be the proposed deviation between Canterbury and the 8-mile peg? Just beyond the crossing of the river, it would be 15 chains north. The line runs from east to west. From there it converges and joins again at 8 miles.
1050. What increase of length of the line would that give between Canterbury and the 8-mile peg? I could not tell you as the line of course is not determined. This is only a sketch. But it would not make very much difference.
1051. Can you say approximately? I do not think there would make more than 7 or 8 chains difference in the length.
1052. It would be inappreciable? Yes.

1053. Have you any estimate of the probable saving between those points; I presume the cost of the line between Marrickville and Cook's River will not be affected;—will it? Yes; I should adopt the same principle between Marrickville and Cook's River. I should alter the line slightly.

1054. What do you think the increase of length would be over the whole line between Marrickville and the 8-miles peg? Not more than 10 chains, I should think.

1055. Estimating the cost of the line at about £20,000 per mile, that would be an increase of cost of £5,000? No; £2,500.

1056. What do you estimate the saving would be between those points? £8,000, I think I said.

1057. That would be less £2,500? No; I would take the whole saving as £8,000.

1058. And the grade not greater than 1 in 100? Yes.

1059. *Mr. Tonkin.*] Would this deviation in any way affect the serving of the traffic? No; I do not think it would be any worse. I think you would serve the traffic equally well.

1060. Do you know whether there is any difference in the cost of construction of the three routes—that is to say, the line we inspected yesterday and the other two lines that have been surveyed—one to the north and the other to the south of this proposed line? The country is very much of the same character. I believe the one to the south would be the most expensive line if the same gradients were adopted. It was laid out with grades of 1 in 60.

1061. That is the one that would go through Belmore? Yes.

1062. That would be the most expensive line of the three? Yes, if 1 in 100 were adopted as the ruling gradient.

1063. What about the one to the north—the line that goes through Bankstown? It would be very much of the same character.

1064. It would be quite as costly as the proposed line—this lock-spitted line? Yes, it goes through the same kind of country.

1065. Then, if there has been a statement made by any witness that the line we are investigating would be the most expensive line in construction, that is not correct? No, that is not correct. Of course you understand that the line is laid out; but taking the route generally, it is not necessarily the most expensive route. If you take a straight line and put on certain grades you may have an expensive line. This is an expensive line rather, but with the same general directions as economical a line could be made as on any other route.

1066. Supposing your deviations are adopted, you say that will be quite as cheap a line, if not cheaper, than either of the other lines? Yes, it would; I feel pretty confident about that.

1067. *Mr. Humphery.*] And only 10 chains longer up to Burwood Road, and about  $\frac{1}{2}$  mile longer from Burwood to Liverpool? Yes.

1068. *Vice-Chairman.*] Have you given any attention to the proposal to relieve the traffic of the main line by connection higher up the line towards Campbelltown? Not very much.

1069. There was such a project, was there not? Yes; I remember seeing a plan with a project, but I have not got it here. It ran parallel, I think, with the southern line some few miles beyond Campbelltown.

1070. Is it your own opinion that it would be advisable to have a duplicate line from Liverpool to Sydney? I do not think there is any necessity for it.

1071. If you were called upon to give an opinion as to the propriety of constructing the line we are now considering, would you make provision, or, in considering the matter, have in view the question of ultimately taking the line right through? Yes, I should; because, as I think I pointed out the other day, this line, if once commenced, will certainly be pushed on till it gets to George's River, and then the connection with the southern line across the river, I consider as a matter of course—only a question of time.

1072. With your information, would you feel that you were justified in recommending the line should cross the river twice, or would you go round the bend as you call it—north of the bend? I think I would cross the river twice, and make a direct line.

1073. You are aware of course that a considerable portion of that part of the George's River where the two branches meet—the southern branch and the branch coming from Prospect or Landsdown Creek—is subject to floods? Yes; it is subject to floods.

1074. Have you records in your office of the highest flood level? Yes; lately I sent a surveyor down there to examine the flood levels, because I was told that last May they had higher floods than ever before—during that very heavy rain in May.

1075. At what point was the flood level taken then, do you recollect? When I accompanied the Minister for Works up to Liverpool, the Mayor of Liverpool, Mr. Taylor, told me that the flood level in May last was higher than it had ever been before.

1076. Was that at Liverpool? Yes; and in further conversation I had with him, I asked him if he would go through this portion of the line with a surveyor whom I would send, and confirm or otherwise the previous flood marks, and he was good enough to undertake to do so. I sent the surveyor down there, and we have the best information about it.

1077. Have you ever been informed that the residents in the neighbourhood of Warwick Farm had been taken from the roofs of their houses in flood time by men in boats? I have heard very alarming accounts. Our present line keeps pretty well clear of floods; I mean the one crossing the river twice.

1078. Do you recollect what position the railway would take near the junction of the Landsdown Creek and George's River? The first line laid out went through a lot of flooded country. The line was laid out afresh, so as to avoid that. On the present line there is very little indeed.

1079. It is the case that, in the project now before the Committee, provision is made for a single line only? Yes.

1080. Do you recommend that as the best course? I went entirely by the advice of the Commissioners. I understood from Mr. Eddy that it would not be necessary to lay anything more than a single line, and so the estimate was reduced to that; but now I see that the Commissioners recommend a double line to be laid.

1081. Would that add to the expense very much? It would add about £20,000.

1082. Right through to Liverpool or only to the Burwood Road? The Burwood Road. The other estimate is an estimate for a double line right through. It is only this portion of the line which is limited to a single line.

1083.

H. Deane,  
Esq.  
26 Nov., 1889.

- H. Deane, Esq.  
26 Nov., 1889.
1083. Do you think that under any circumstances it would not be well to build bridges and culverts to accommodate a double line of traffic? This £90,000 includes the double-line bridge over Cook's River, but everything else is for a single line. I should build any over-bridges for a double line. That would not make very much difference.
1084. *Mr. Hurley.*] What grade can you obtain on that line? 1 in 100. In that proposed saving, where I proposed to save £78,000 to make it as cheap a line as possible, the gradients would not be flatter than 1 in 66.
1085. *Dr. Garran.*] That is where you speak of £230,000? Yes.

W. G. Cameron, Esq., sworn, and examined :—

- W. G. Cameron, Esq.  
26 Nov., 1889.
1086. *Mr. Trickett.*] You are acquainted, I believe, with the line known as the lock-spitted line from Marrickville to the Burwood Road? Yes.
1087. Are you in favour of or against that line? I am against the line.
1088. From beginning to end? From beginning to end.
1089. Would you give the Committee your reasons for your opposition to that proposal? I oppose the line for these reasons. I have no objection, and there appears to be no objection, as far as the line goes in the direction of Canterbury, until it comes to the Sugar-works.
1090. Then, up to the Sugar-works—from Marrickville to the Sugar-works you approve of the line;—is that so? I approve of the line so far. From there it makes a divergence in the form of a fork or angle. It takes two different directions in crossing the river. The line you are considering crosses over a very dangerous part of the river, and I have just copied from the *Sydney Morning Herald* a statement that at the crossing where it is proposed to carry over the lock-spitted line, the line crosses within a few feet of a bridge which was once entirely under water.
1091. We would rather have your own views, in preference to what you get from newspapers? I made a statement the other day when the Committee visited the site, and I was flatly contradicted, and I thought I had better get the statement which had been published in the *Herald*. If you like I will read it.
1092. You object to the proposed line, first of all because at the crossing it is proposed to take, the line itself, would be liable to be under water? Yes.
1093. What reason have you for stating that? I saw the district during the time the boy was drowned.
1094. When was that? On the 27th May, 1889. Some chains of lands on both sides of the river were under water.
1095. Was the portion of ground which the railway would occupy under water? Every inch—from I suppose about 3 chains on one side of the river to at least 2 or 3 chains on the other side.
1096. Did you see that yourself? Yes, with my own eyes.
1097. That was in the heavy rain in May last? Yes. There is another disadvantage. That portion of the line near where it crosses the river also crosses two roads, which appears to be very objectionable.
1098. What roads? The main road, and a road leading to the settlement called Parkestown. The line crosses those two roads within a distance of 2 or 3 chains. In 1860 there was a house there, or in the immediate vicinity, and it stood 14 feet high.
1099. Stood where? Within a few feet of the proposed crossing. That house was covered with water. You will find that corroborated in the *Herald* of the 1st May, 1860. It gives the height of the house. It says :—" At Canterbury there was a rise—"
1100. Is that a paragraph or a letter? A paragraph. The circumstance was related to me by an eye-witness, and in order to fortify myself I made a search, and I found that the statements made to me by word of mouth were borne out.
1101. What does that paper say? " At Canterbury there was a rise in the river of some 15 or 16 feet, the water reaching up to the roof of the round house—a building about 14 feet high. In all probability there would have been fatal results had it occurred at night."
1102. Was this house exactly on the same level as the railway, or was it lower? Where you proposed to carry the railway, I suppose the lower part of the house was about 3 feet lower than the present level of the road. I remember the house well. In passing the house an old resident pointed out the fact to me, and I wanted to make sure that there was truth connected with the statement, and I referred to the *Herald*, and found that the *Herald* corroborated the statement.
1103. That occurred in 1860? Yes.
1104. The last flood was in May, 1889? Yes.
1105. That was twenty-nine years afterwards? Yes.
1106. Did you ever hear of any flooding of that portion during that interval? No; I do not think I have.
1107. Those are the only two occasions when you heard of this line which the railway would traverse being flooded? Yes.
1108. What is your next objection to this line? My next objection is this: that it appears to be a land speculators' line, as there is no settlement after it crosses the dam at Canterbury.
1109. That is the part you have just been speaking of? Yes. There are certainly two or three houses; but within a mile of the line, I suppose there are not more than—well, there is very little settlement.
1110. Can you give us the names of any localities there are after passing the dam, and before you reach the Burwood Road? I do not know any localities actually. I know there are three or four very large estates that have been cleared, owned by large syndicates.
1111. Name one of them? There is the Silver Park Estate—that is one.
1112. To whom does that belong? I think it is advertised as the property of the Anglo-Australian Co.; and then there is another large estate, I suppose about half a mile to the east, called the Harcourt Estate; and there is another estate called the Kempsey Park Estate. I do not think that on all those large estates there are at the present time more than about a dozen persons.
1113. Where is Kingsgrove? That is on the other line altogether—on the other side of the Canterbury Road, going to Belmore.
1114. Would that not be served by this line? No.
1115. Why not? Because it is too far distant from this line.
1116. How far do you think it is? I have been over all the line, and I should think that the nearest point of Kingsgrove from it would be about 1½ miles.
- 1117.

W. G.  
Cameron,  
Esq.

26 Nov., 1889.

1117. What about Moorefields and Belmore? This line leaves out Moorefields and Belmore. It is  $1\frac{1}{4}$  miles from Belmore township. In order to make thoroughly sure I walked the distance the other day. Belmore contains a church and a public school; Moorefields contains two churches and a public school. These places will be left out entirely if this proposed line be carried out.

1118. It will not benefit them at all in your estimation? I have no doubt it will indirectly, but will not confer on them any immediate benefit. The old settlement will be excluded from the benefits of this railway line, and a new form of settlement will have to arise on these large estates which are owned by these syndicates. The old settled districts have been entirely ignored; that is, Parkestown, Kingsgrove, Moorefields, and Belmore.

1119. Do they lie to the south or the north of this lock-spitted line? To the south—on the south side of the Canterbury Road. There is a church at Parkestown, two at Moorefields, one at Kingsgrove, one at Belmore, and there is one Public School being enlarged at Belmore, but there is nothing of that sort on the line now being surveyed.

1120. Then do I understand you to say that you approve of a line to the north of this proposed line? Speaking in the public interests I would not be prepared to state that a line would pay at the present time.

1121. Even if it were made through those centres of population you spoke of? It might have some chance of paying, but the present line appears to me to have no chance of paying for some years, until settlement has occurred round the place.

1122. Do you not think that the people of those places would avail themselves of the railway in preference to their present mode of getting to the city? There are many objections. The distance from the present railway is a very great objection. The road access is bad in the first place. Roads would have to be made to the railway, whereas on the other line roads run parallel with the other side of the line.

1123. I understand you are opposed to the line altogether—to the construction of this short length from Marrickville to Burwood Road? Yes. Another thing I ought to have pointed out is the succession of hills—the succession of cuttings and fillings up that would be necessary on this line. There appear to be none of these obstacles on the other line.

1124. Which line? On the line not lock-spitted.

1125. That is the southern line? Yes. The lock-spitted line is the northern line.

1126. Would you advocate a line being made to Burwood Road along this southward route at the present time? There would be more probability of the line paying. No doubt, as took place on the Hurstville line, settlement would increase.

1127. You think that the line if constructed to the south of the present lock-spitted line would have a better chance of paying than this line as marked out? Yes; because settlement has taken place there.

1128. Is the land more level and suitable for population? The land appears to me to be of very much the same character, but the route that Surveyor Bell made seemed to have got over the difficulties of the rise; there seemed to be a sort of gradual slope all the way. It seems to be a sort of flat. You do not encounter a succession of hills on Bell's line as on the other line.

1129. Have you any property out there? I have got some property on the extreme boundary between Hurstville and Belmore, on the boundary of Hurstville; I am just between the two districts.

1130. Then either line would serve your property, would it? It does not make very much difference to me which line is adopted. The only line that would serve me, but which would not be in the public interests, would be the Hurstville line. I have no idea of supporting that, for I cannot see any chance of its paying.

1131. But taking these two lines we have been discussing—the lock-spitted and the more southern line—either of them would be as serviceable to you as the other? No doubt Bell's line would come nearer the property I own, but I am nearer to Hurstville.

1132. Would the southern line benefit your property at all? Indirectly it would no doubt.

1133. Would the lock-spitted line benefit your property? No, not at all, except indirectly.

1134. We have been told that between Marrickville and the Burwood Road a very large population is there now who would be benefited by this railway—who would avail themselves of it;—can you tell us what your opinion is as to the number of people who would at the present time be benefited if a railway were constructed from Marrickville to the Burwood Road—who would avail themselves of the railway? Those that would be likely to avail themselves of the railway if it were constructed would be principally the people in the vicinity of Marrickville and Canterbury.

1135. Can you give us an idea of their number? I think I am right in stating that in the whole of the municipality of Canterbury there are not more than 2,000 inhabitants, and that goes as far as Belmore.

1136. That is men, women, and children? Yes.

1137. How many people would be benefited at Marrickville? A goodly number. A considerable portion of Marrickville would be benefited.

1138. Some thousands? Two thousand or three thousand, I suppose, but not more. They have now the tramway to Dulwich Hill and the railway passing through their district.

1139. Then going out from Canterbury to the Burwood Road, can you give us any idea how many people there would be benefited; there must be some? No doubt. I do not suppose there are within a radius of a mile more than 1,000.

1140. A mile on each side of the line? Yes. Well, perhaps 2,000 or 3,000. I do not really think more than that.

1140 $\frac{1}{2}$ . Two thousand about Marrickville, 2,000 about Canterbury, and 2,000 or 3,000 between Canterbury and Burwood Road makes 6,000 or 7,000 people that would be benefited? Yes, as far as my judgment goes now. The northern portion of Canterbury is now served, and the northern portion of Dulwich Hill is now served by the existing suburban line. From the top of the hill at Canterbury you can walk conveniently to the Ashfield station in ten or twelve minutes.

1141. Do you think this district will be a progressive one if the railway is constructed? The district is a very fine district; there is no doubt about that.

1142. Suitable for residential purposes? Yes. Without regard to the rival routes I do not know of any district more suitable for settlement within a near distance of Sydney. The sites are good, and the ground is of a very good character on all the rival routes.

1143. You have seen the rapid growth of population along the Illawarra line? Yes.

1144.

W. G.  
Cameron,  
Esq.  
26 Nov., 1889.

1144. Do you think that this would within three or four years rival that? I hardly think that, because in the Illawarra line—I was one of those who interested themselves in getting that line—they carried the line through the existing settled districts of Kogarah and Hurstville; but in this proposal you are leaving out the settled districts and running through a district in which no settlement has taken place so far. There is settlement certainly in the southern slopes of Ashfield, Croydon, and Burwood; but it would be far easier for people there to use the suburban line than the line you are dealing with.

1145. If the line were proposed to be constructed to the south of the lock-spitted line, would you be in favour of it? Well, I believe there would be more probability of the line paying.

1145½. I would sooner you gave me an answer if you can;—would you be inclined to favour the construction of that line? Yes; I would rather than the other. I am not very enthusiastic about either. But I think there is more probability of that than the present line paying.

1146. You think that would pay? I think that in the near future it would.

1147. A line to the south in the more settled districts you think would pay in the near future? Yes.

1148. *Mr. Tonkin.*] Do I understand you to say you are not in favour of the construction of either of these lines? No. I oppose the other on grounds I have endeavoured to indicate, because I consider it presents obstacles, not only of a dangerous, but also of a costly character—that is the crossing of a bridge, and the fact that it leads out to unsettled districts, and the fact of the cuttings and fillings up that are to be encountered in the line now lock-spitted.

1149. Your objection then is from a scientific point of view? And a commercial one as well.

1150. A professional point of view—in opposition to the Government Engineer? No. I only wish to point out that, no matter how skilled an engineer may be in the science of engineering, natural contingencies may arise that the most skilled man may not be able to perceive. There is an enormous volume of water at the dam at Cook's River.

1151. Do you think that if the proposed line were constructed it would pay the Government working expenses? No; I do not think it would.

1152. Do you think that either of the other lines would—Bell's line, and the one to the north through Bankstown? I hardly think the Bankstown line would be likely to pay, and it is very questionable whether the line known as Bell's line would. But of the two rival routes, Bell's line would be more likely to pay, inasmuch as the old settled districts are to be found on that line.

1153. But you do not think that even that would pay? Judging from the experience we have had on the Illawarra railway, I think it might pay. I do not consider that the settlement on the Illawarra railway was very much more than would be found on that line.

1154. Do you know what the population of Belmore is? It is not very great. I do not suppose it would be more than 200 or 250 souls. I am not prepared to say.

1155. And Moorefields? The population of Moorefields and Kingsgrove would probably, I suppose, be close upon 600 or 700.

1156. And Parkestown? I do not suppose there are very many there. I do not suppose there are more than about 50 or 60 there. I am only giving you an approximation.

1157. Those are the four places that would be served by Bell's line, if that were constructed in preference to the proposed line? Yes. There is a settlement from there up to the main road which I have not included.

1158. Would not that settlement be served by the lock-spitted line? Indirectly, but not directly, as the people would have some distance to go to the line.

1159. From those places you mentioned—Belmore, Moorefields, Kingsgrove, and Parkestown—how do they get here? They come by 'bus.

1160. All by 'bus? I presume so.

1161. Does that 'bus go through Canterbury? It goes on the main Canterbury Road.

1162. Then that is the direct route from those places into the Metropolis—by a portion of the route along which this proposed line will run? This proposed line only passes over the lower portion of the Canterbury Road, near the bridge.

1163. Have they to come from those places, even by 'bus, along the same route as this line will take? They get on to the Canterbury Road higher up—a mile or two miles further along.

1164. The communication of those townships you have mentioned with the Metropolis is almost by the same route as that along which the proposed line would run—they have to tap that route somewhere, cross it somewhere? Yes, you are quite right.

1165. They could not get to town any other way? No.

1166. Then if this line is constructed, as proposed, it must serve them to some extent? No doubt, to a certain extent.

1167. But not so much as if it went by Bell's line? No, not so much.

1168. How far is it from Belmore to the nearest point of the proposed lock-spitted line direct? By road about a mile and a quarter. In order to thoroughly satisfy myself, I went over the road on Monday.

1169. That is the extreme distance of the outside populace that would be served by the construction of this line? That would be the distance to the settlement at Belmore.

1170. Is Moorefields farther away from the line? Yes, I think it would be about a mile and a quarter, or a little more. Kingsgrove would be a little nearer.

1171. And Parkestown? Both lines go very close to each other at Parkestown. It is not far from the crossing at the dam.

1172. Do you think that this line, if constructed, will be of any benefit as a line to relieve the traffic on the main line? That would be a question more likely to be answered to your satisfaction by the railway authorities, but I may state that that was one of the strong arguments used originally in favour of the construction of this line—that it would relieve the traffic on the Liverpool line, and shorten the distance to the southern stations if it were constructed to Liverpool.

1173. Is your property at Belmore? It is on the boundary between the Municipality of Canterbury and Belmore—between Belmore and Hurstville.

1174. What distance would the property be from the proposed line—the nearest point of it? About two and a half miles.

1175. Would it be nearer than to the Hurstville line? No. I generally go by Hurstville.

1176.

W. G.  
Cameron,  
Esq.  
26 Nov., 1889.

1176. Yes, but this line is not yet constructed; if this line were constructed what would you do? I should go that way still.
1177. If this line to Belmore were constructed would that affect your property? Indirectly.
1178. How far would you be from it then? About a mile from Bell's line.
1179. Your opinion is, that there is not sufficient population there to warrant the Government in expending this amount of money in the construction of this line? That is my opinion.
1180. And you do not think that the construction of the line would induce a sufficient population to warrant its construction—immediately, I mean? Not at the present time, but no doubt it would ultimately.
1181. Do you think that the Dulwich Hill tramway would in any way serve instead of the line if it were extended? I believe the tramway would serve the immediate requirements.
1182. Have you any idea of the amount of traffic from the intermediate portions—between the proposed terminus and Marrickville—at the present time—traffic by 'bus? I have no conception—not to give you any basis to form a judgment.
1183. Do you know what is the Railway Department's estimate of traffic on this line if it were constructed? I cannot tell you. So far as my judgment goes I think the Department would have to look for returns principally from passenger traffic. There are no manufactures of any character up there to speak of. People that are settled in the little townships follow agricultural pursuits, but I do not think I know enough to justify me in making any statement in regard to traffic.
1184. You have no idea I suppose what the passenger traffic by 'bus now amounts to? I cannot give you any idea of that.
1185. *Mr. Hurley.* I suppose you have no other interest but the public interest when you say you are in antagonism to the construction of what is called the lock-spitted line? None at all.
1186. You favour the construction of a line via Parkestown, Kingsgrove, Moorefields, and Belmore because of the population? I look at the question this way: I believe there is a probability in the near future of that line paying simply because settlement has already taken place for many years past.
1187. On the principle that settlement has followed the construction of the Hurstville line is it not probable that the lock-spitted line will, after its construction, afford inducement to a large population to settle on the land you spoke of as belonging to syndicates? I am prepared to admit that it must ultimately bring a settled population where the railway is run, and no doubt it is a very fine district.
1188. Are not the lands more suitable for settlement on the lock-spitted route than on the Illawarra line; is not the land more favourable up to Belmore *en route* to Liverpool than it is on the Illawarra line? Well, it is quite as much so I think—in every sense of the word.
1189. More favourable for residential purposes? I do not say more favourable, but I think it is quite as favourable. On the Illawarra line you have a view of the ocean, which is an attraction, and which we have not on the other line, on which, however, you have landscape scenery, which counteracts that to some extent.
1190. Have you at any time advocated the construction of a line in that district? Yes, I have.
1191. Would you look at that map and point out what you advocated? [*Witness indicated that he had advocated the southernmost line of the three rival routes.*]
1192. Why did you advocate that line; I presume you advocated it at a time when you were a candidate for the electorate of Canterbury? You are quite right, I did. But I advocated it before then and I will tell you why I like it less before the Committee now. If my memory serves me correctly, the Commissioners of Railways have made a statement that they can relieve the traffic on the southern line, and that they intend to do so by constructing a double line of railway from Liverpool. I think I am right in stating so; and one of the strongest arguments put forward for the construction of this line was that it would relieve the traffic on the southern line to Liverpool. I understand, if it is not already completed, that it is the intention of the Commissioners of Railways to double the line from Liverpool to Parramatta, and that lessens one of the strongest arguments in favour of the construction of this line—that it would save very considerably not only in mileage but in wear and tear of material.
1193. Therefore, you forego your previous advocacy of that line in public because of the proposal to double the line from Liverpool to Sydney? I did not say a proposal; I think it is a fact.
1194. You forego your advocacy of that line? I do not forego any advocacy, but I admit that there is a remote probability of the line paying. But at that time, when these conditions did not exist—when there was a certainty of a considerable amount of wear and tear being saved on the Government railways—it had a greater claim to advocacy than it has now, although I must admit that there is a probability of the line paying, but not immediately; while there is less probability of the lock-spitted line paying.
1195. A short time ago you said, in answer to a question, that the line would serve land speculators who hold large areas of land;—do you know who they are? I know, but I do not think that I would be justified in mentioning any names.
1196. Are you in personal antagonism with any of them? Not at all; I bear ill-will to no man.
1197. That land is likely to be taken up by a number of persons; if these people had not seized on it that land now held by land syndicates or companies would be in the hands of a great number—is that not so; is it land which people would have been induced to take up? No, I do not think it is at all likely. No settlement was begun on that land until it was known that this line was to be constructed. The land was in a virgin state, so to speak, until it was known that the survey had been made—not on Bell's line, but on the other side of the road. Immediately that line was known to have been surveyed I know for a fact that certain large blocks of land were taken up. One was purchased by a certain building society of considerable proportions in Pitt-street, and it was rumoured that certain gentlemen in high political positions were interested, but you must not ask me to give the names.
1198. I shall want you to give us the names of those persons who occupied positions in high places. It is a matter of urgent necessity in the public interest that you should, if you are in possession of these facts, tell us who the persons are? You must really excuse me from doing that; I do not think it is fair to ask me. It was stated to me; I heard that certain land transactions had taken place. I did state as a fact that I knew the land was at that time in what I might term a virgin condition.
1199. Do you, of your own knowledge, know persons who occupy positions in political life who hold any interest in those syndicates? One gentleman, whose name I do not wish to mention, was connected with a certain building society, but whether he is now connected with it or whether he had any connection with the transaction, I am not prepared to say.

W. G.  
Cameron,  
Esq.  
26 Nov., 1889.

1200. An ambiguous answer like that will not suit? I will give you any answer you wish.

1201. I want the name of any person or persons, who hold any distinguished position in connection with politics, who are interested in the land to which you referred? I am on oath, and would not be prepared to swear to any name, although I had heard it and have reasonable grounds for believing it. That is no reason why I should be prepared to swear to a thing as a fact. That would hardly be considered evidence in a court of law, it being a matter of hearsay, although I have in my own mind sufficient grounds for belief.

1202. Do you think that it is fair to insinuate against persons holding positions, and that when you are off your oath, you are going to whisper that there is a number of persons holding distinguished positions, influencing the construction of a railway for their personal benefit? You are drawing an inference from what I have said.

1203. If you will not give the names I have to draw an inference? I am sorry you have to look at it from that point. I will state again what I said before, and you will perhaps see it more clearly. I say that when Bell's line was originally surveyed a considerable amount of correspondence took place between those advocating it, and the Government Departments. Some time afterwards another survey, then known as Kennedy's line, and now known as the lock-spitted line, was made. A great portion of the land through which the line would go was in a virgin condition so to speak. I know that certain land syndicates purchased after that survey was made, and I heard it stated that certain gentlemen that occupied a considerable position in public life had an interest, but the fact of my having heard it stated is not evidence. Unless I am prepared to make a statement directly, if it comes from a second party it is not evidence, but I am simply stating what I believe to be true. I have sufficient grounds for believing that to be true. I cannot swear it is true although I believe it is true. There is a great difference between sources of information. I merely give it as hearsay evidence. But as to the land being in that condition I am prepared to declare that as a fact, and this I know is a fact, that certain land syndicates whose names were put up in large letters—

1204. *Vice-Chairman.*] The names of the syndicate? Yes.

1205. Where is that? There is a large board stating that allotments will be sold by the Anglo-Australian Company, and I think there are other Companies.

1206. *Mr. Hurley.*] Do you belong to a land syndicate yourself? I did.

1207. On that line, or anywhere near it? I do not belong to one. I have sold out.

1208. But anywhere in that vicinity? No.

1209. Anywhere in that district? No, not in the district through which the line has been surveyed.

1210. *Dr. Garran.*] I understand you to say that the whole of the district is suitable for settlement? Yes, every inch of it.

1211. Is it your opinion that the construction of any one of these three competing lines would have the effect of settling a large suburban population? In the future no doubt. There is no doubt about it.

1212. And so far as mere settlement is concerned for the future, one line has no particular advantage over the other? In the future—well yes, my experience is that where settlement has taken place, if means of access to and from the metropolis are increased the settlement is far more likely to increase there than in a new place—that is to say, with equal natural surroundings.

1213. With equal surroundings, do you think that any new purchaser who is going to put up a house cares whether there happens to be somebody in the neighbourhood or not? From my own experience I would rather go where there are a few people about.

1214. Do you not think that elevation, drainage, soil, and so forth are the determining considerations? No doubt they are, and this is a very fine district, having every one of those advantages.

1215. Still the construction of any one of those three lines would have the effect of settling a population? In the future no doubt about it.

1216. Ten years hence I suppose that if either of the three lines were made the population would be ten times what it is now? Not ten times, but a considerable increase.

1217. It is in evidence that this line was selected by Mr. Whitton and made by him as straight as possible; with the view of its being a loop line, so the line before us comes recommended by the Department as Mr. Whitton's line, and as the shortest line;—do you think that that is an advantage—to have the shortest line to Liverpool? No, I do not; that is to say, the difference in the distance is of a very fractional character, and that would be more than counteracted by the obstacles to be encountered. That is to say, I believe the other line possesses fewer obstacles to construction than this does. I think the difference is only about  $\frac{1}{4}$  or  $\frac{1}{2}$  a mile between the two routes.

1218. We are given to understand that Mr. Whitton's view was that any line would be good for a suburban line, and therefore that it would be best to make the line as straight as possible for a loop line, and to combine the two; do you think it is possible to combine the two? The most direct route of all would be from Arncliffe, if that is the question the Government have in view.

1219. But there were engineering difficulties on the Arncliffe line that led to that being thrown aside? Quite so.

1220. This we are told is a direct line, and it is a good suburban line is it not? No doubt. It is a very fine district all through.

1221. If in ten years' time the population will be ten-fold what it is now, should we not be right in looking rather to the prospective results than the number of inhabitants that are there at the present time? Yes, and I think the prospective results likely to increase as much on the one line as on the other.

1222. If we choose this line on the ground of its directness, and it is also a good suburban line, is its directness not a reason why we should prefer it? I should not do so, but of course you are the judges in the matter. It is a question of the cost of construction.

1223. I understand you to say you would determine the route out of regard to the present population? I would be very inclined to do so.

1224. Yet you admit that the present population is not one-tenth of what the population will be ten years hence? I am convinced of that.

1225. And ought we to disregard the nine-tenths out of consideration for the one-tenth? I do not understand you.

1226. Ought we not to consider the population of the future rather than the present few inhabitants? I am not prepared to give my opinion. Of course it is only a matter of opinion that it would be ten times as much in ten years.

W. G.  
Cameron,  
Esq.

26 Nov., 1889.

1227. Well, it will be a very great increase? I think it would be considerable.
1228. Is there justification for deviating from the directness which Mr. Whitton prefers, simply out of regard of the very limited population now existing in the district? I think so, because you have a revenue to begin with at once. In the other case, you would have to wait until a population had settled from whom revenue would be derived.
1229. You think it is national policy to sacrifice the future for the present? I think that the probability is that the future will be affected as much by one route as by the other.
1230. We have it in evidence that the Belmore line will cost less than the present line? I am not prepared to say it would, but am only taking what I think is a common-sense view of the situation—that a line going over level country would very likely be constructed more cheaply than a line going over a country with a succession of hills.
1231. But is not the level country lower country? No; it seems to be on the slope of the hill all the way up.
1232. What you call a succession of hills is good undulating country, is it not? It is very fine country all through.
1233. Undulating country is very good for residential purposes, naturally well drained, and easy to keep the roads in repair? Yes.
1234. Then it is not against a suburban line to go through undulating country? No. I am not saying it is against it, but it is a natural barrier, and expense must be incurred in overcoming those difficulties.
1235. We are told that the population of Belmore is about 400, is that your estimate? I hardly think it is 400. I gave it as less; but all witnesses are placed at a disadvantage unless one can say what is the population settled at a particular point. It all depends what radius you would include from that point. One might include a mile or two; another might include a mile, and so make a calculation. Unless you distinctly define what you refer to no doubt there will be a difference in the estimates of population.
1236. Well, taking 400 as the maximum population of Belmore, would you sacrifice the straightness of the line for all time for the convenience of those in the Belmore district? There are other districts—Moorefields, Kingsgrove, Parkestown. Those are all districts where settlement has taken place.
1237. But the population there is but a handful compared with what the population will be in ten years on any one of these lines? No doubt; but my opinion is that the population is far more likely to settle where it is centred now, because we are strangely constituted. We are of a social character, and like to go where people are, and where we can make purchases of the necessaries of life.
1238. Is not the population now between Sydney and Hurstville ten times what it was before the Illawarra line was made? I do not think it is.
1239. Well, how much increased? I can only at best give an opinion. It has increased very considerably.
1240. The new population is enormously greater than the old? There is no doubt about it.
1241. And in making a suburban line you do not think it is proper to consider the incoming population as much as the existing? No doubt about that.
1242. *Mr. Dowel.*] Where do you reside? At Drummoyne, on the Parramatta River.
1243. You do not reside in this district now under consideration? No.
1244. You have a very intimate knowledge of the various routes proposed, and of the whole of the district which would be served by this particular railway now under consideration? I have been over all the surveyed lines.
1245. You advocate another route because at the present time a larger population exists at some other places you have named? Yes, I did advocate it.
1246. Would not this lock-spitted line pass through Canterbury? Yes. Both lines pass through Canterbury.
1247. Can you inform the Committee whether those other places to which you have referred would be likely to give anything like such large returns as might be expected from Canterbury and the surrounding district, and from visitors to the racecourse? Both lines would be equally accessible to the racecourse. The crossings at Canterbury are within a few chains of each other—one crosses on the low and the other on the high land. The distance from the racecourse at Canterbury is only a matter of a few chains difference between the one line and the other. As regards Canterbury, the one route is as likely to serve the whole of the intermediate district of Canterbury as the other. The greatest difference between the two lines at Canterbury is, I think, 4 or 5 chains; there might be 6 chains, but I think not more than that.
1248. What advantages do you claim for this southern line in preference to the lock-spitted line? Along this line the population is not only settled, but the land is of a better character and equally suitable for settlement.
1249. Are there any large estates cut up and surveyed for sale immediately between these two lines? Not that I am aware of.
1250. Do you know the Harcourt Estate? Not by name.
1251. Are there any large estates on the line known as Bell's line? I am not aware of any, but as to others there are large boards fronting the Canterbury Road which everybody must see in passing.
1252. Can you point out where the house was to which you referred as being submerged some 14 or 15 feet? Within a chain of the bridge.
1253. Are you aware that the engineers who designed the construction of the line have placed the level of the line 34 feet above the level of the banks, so as to take it entirely out of flood reach? I was not aware of that.
1254. Can you give the Committee any information as to the difference in compensation that would be likely to be charged on the route to which you referred? Yes, I am very glad you have pointed that out. The owners of land on the route known as Bell's route signed a document, and put it in the hands of the Government Solicitor—I think it was Mr. Williams—stating that they were prepared to give the land required for the construction of a railway to the Government free of cost, and that they were quite ready to sign a document when called upon to do so. I think I have some documents to corroborate that statement.
1255. *Vice-Chairman.*] Did not that apply to the through line? I am not quite sure. I know that was signed

W. G.  
Cameron,  
Esq.  
26 Nov., 1889.

signed with regard to Bell's line. I think Mr. Wright was then Minister of Public Works. I saw the document, and I know that correspondence took place between the Government Solicitor and the Committee formed to advocate the construction of that line, and I know that a large number—I think, with one or two exceptions—signed a document promising to convey the land required for the construction of the railway to the Government, free of cost, if Bell's route were adopted.

1256. Did I understand you to say that there was scarcely any difference in the quality of the country through which any of the lines would pass? Making a general statement, I think the quality of the land in the district was equally good. It is very good land indeed on both routes. It is very fine land right on to George's River. It is a beautiful lovely district all through.

1257. Did I understand that your principal contention at the present time is that on the route you favour there is a larger population that would be better served than by the present staked-out line? Yes.

1258. *Mr. Humphery.*] What is the distance from the Burwood Road 8-mile peg to Belmore, on the lock-spitted line? I think about  $2\frac{1}{2}$  miles.

1259. What is the distance of Belmore from the 8-mile peg, on Bell's line—that is, south of the lock-spitted line? I should think that from Belmore it would not be more than 3 or 4 chains to Bell's line.

1260. I am speaking of the 8-mile peg;—is not the distance exactly the same? Excuse me. I don't comprehend.

1261. Is not the distance just the same from the 8-mile peg, south of the lock-spitted line, and on the lock-spitted line? No. The line now marked out at the 8-mile peg is, at least I should think, the best part of half a mile from the main Canterbury Road, and in going from Belmore there is no other means of access than going along the main road and turning up at the 8-mile peg.

1262. But taking a direct line, is not the distance of the 8-mile peg on Bell's line precisely similar to the distance on the lock-spitted line? I think the distance is about the same.

1263. What is the population between the 8-mile peg, on Bell's line, and Belmore—the surrounding district? The population is very very different. That is where the population is settled.

1264. And about what population would you think? I gave a very rough estimate when I stated it, and, at best, it is only an approximation. It has been stated there are about 400, and I said I thought rather less.

1265. Do you think that the settlement under the existing condition of things—the population now settled there under the existing inconveniences—would be likely to be lessened if the lock-spitted line were constructed? No doubt the inconvenience would be considerably lessened.

1266. And the settled population would not remove? I must admit that it would be a very great convenience to the settled population, but not as great as the other line. Of course the inconvenience would be considerably lessened.

1267. Did not the same thing occur between Sydney and Parramatta; were not the villages of Petersham and Burwood some distance from the railway, and all between the railway and those villages population is settled, gaps have closed up,—would not that occur here? Not necessarily. I am not prepared to say how far the settlements were from the line at Petersham and Ashfield, but from Kingsgrove and Moorefields to the 8-mile peg there is a big gap of country—I suppose the best part of the country—and it would be a long time before the gap was filled up. If it were within a radius of only a few chains it would no doubt quickly fill up. But there is a big difference, and it would take a long time to fill up. There are so many forces in operation now for suburban settlement.

THURSDAY, 28 NOVEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

Hon. George Thornton, M.L.C., sworn, and examined:—

Hon.  
G. Thornton,  
M.L.C.  
28 Nov., 1889.

1268. *Mr. Trickett.*] You are a Member of the Legislative Council? Yes.

1269. And a very old colonist? Well, I am a colonist—native born.

1270. Do you know the proposed Railway line from Marrickville to Burwood Road? There are three propositions.

1271. Do you know the line marked blue on that plan, and which is known as the lock-spitted line, and which is the one the Committee is considering? Yes.

1272. You are acquainted with that line? I know it particularly well, because it happens to be lock-spitted partly through my property.

1273. Where is that property? It is very near to George's River, in the southern part of Bankstown.

1274. Does this line go through your property? Partly.

1275. Between Marrickville and Burwood Road? Yes.

1276. Is that locality known as Bankstown? A part of Bankstown—Southern Bankstown.

1277. Have you known this district for very many years? Yes; I have known it—and have known it well—for more than forty years. I was going to say every foot of it, but I would say every portion of it, all about it, everywhere—Lower Bankstown, Salt Pan Creek, up George's River, north and south of Liverpool Road, particularly Bankstown—old Irishtown as it was formerly called—Lower Bankstown and Upper Bankstown. I particularly know those places. I have been acquainted with those localities for nearer fifty than forty years, and have held property there.

1278. What is about the population of Bankstown at the present time? It is sparse. The population is not what it ought to be, and it is scattered. But if I may be permitted to mention the cause it is this—that there is no means of access to and from the metropolis.

1279. What is the present means by which people get to and from Sydney? You can get to the railway by travelling a long distance.

1280.

Hon.  
G. Thornton,  
M.L.C.  
28 Nov., 1889.

1280. To what station do the people go? Take my own present place which I have cultivated lately—that is at the 14 miles stone on the Liverpool Road—the nearest railway to me as the crow would fly is Rookwood, but it is a very bad road, and, practically, that is the longest distance, because in wet weather the roads are so bad that you cannot get there. The nearest practical way of getting to the railway is by going to Liverpool, 6 miles, or Cabramatta, which is about the same distance. But then Cabramatta is unsuitable, practically, because the train does not stop there except about once a day.

1281. But, as a matter of fact, how do the people come in now? They come by the omnibus generally from Bankstown, a sort of very inferior conveyance which carries the mail from Bankstown—Upper and Lower—and that district, to Burwood Railway Station.

1282. How far is that? An average of 7 or 8 miles; or, perhaps, 7 would be the more correct average—a minimum of 7 miles.

1283. Those people, if they want to come into town by rail, have to drive about 7 miles, by Burwood Railway Station? Yes; or they can drive to Homebush, which is a little nearer, but which is very difficult of access, because there is no proper road to Homebush, whereas there is to Burwood all the way.

1284. With regard to this Bankstown district do you think it is suitable for a suburban population? I hold decided opinions upon that matter, and have done so for many years. I think the district of Bankstown, which includes a very large tract of country, is eminently situated and adapted for a thriving industrious, respectable population, because it has natural advantages—its healthfulness, the quality of its soil, and everything else that could make it a suitable place. A more favourable place we have not anywhere. It is nicely undulating country. The land in most places is cleared—nearly all cleared by the old people who composed the first settlers—the old Irish people who settled there in '98. It is called Irishtown for that reason. The land is mostly cleared and the soil is very good. It has been lying idle for 30 or 40 years, because if people cultivated anything they could not get the produce to the metropolis. For instance, I have a large orchard and vineyard under cultivation there, and the cost of getting the things to the metropolis is as much as they are worth—the distance is in fact prohibitory.

1285. How would this railway we are now considering serve the district of which you speak? As a matter of opinion only—and of course I speak with deference here—I hold strongly that the line marked blue on that plan, although it goes through my property and would favour me very much indeed—for I hold a great deal of land there—the construction of that line would give me a good railway frontage, and I should receive compensation and many advantages, but I think that that is for many reasons the wrong route. One reason is that it goes too far south. It gives Bankstown proper the go-by. The Liverpool Road runs, say, east and west. The line would run in an easterly and westerly direction, perhaps a little northern and a little eastern.

1286. You say generally with regard to the line that it runs a little too far south? Yes.

1287. Bankstown is situated north and south of Liverpool Road? Yes, and it is a large district. This would give all persons who settled on those properties the go-by. Another reason why I object to it, because its length is too great, its gradients too severe, and the crossing of the river in the broadest part would make the bridge a most expensive one.

1288. Where at? It crosses over just above Mr. Johnston's place—George's Hall—south of that. As well as I can recollect that is, I think, about the broadest part of the river, and, therefore, the most expensive for a bridge. I think the line would cross the river twice.

1289. But that is all towards Liverpool that you are speaking of now? At any rate, it crosses George's River twice.

1290. I would rather you confined yourself to Burwood Road, for the railway we are considering will not go beyond that at present? I can say nothing about that. I know nothing of the Burwood Road except to give an opinion generally, that it is folly to take the railway to the Burwood Road unless you intend to take it right through, for whilst it would benefit the people of Burwood—who are already supplied with a railway and tramway—it would not be a bit of good to the people higher up.

1291. The project the Committee are considering is to construct a line  $4\frac{1}{2}$  miles long, starting at Marrickville railway station, and going along that blue line on the plan to what is called the Burwood Road? The Burwood Road is a very long road.

1292. The spot where the line crosses the Burwood Road is  $4\frac{1}{2}$  miles from Marrickville, and consequently it stops considerably short of what you have been referring to at Bankstown? Precisely so; but it would be an enormously advantageous step in the right direction—that is, having in view an ultimate extension of the railway in the direction of Liverpool. It would be an enormously grand step in the right direction.

1293. Do I understand you that if the railway stopped at  $4\frac{1}{2}$  miles from Marrickville it would be of little or no benefit at present to the people at Bankstown? None whatever, because they can get by the old Liverpool Road to Burwood as easily as they could get to Burwood Road.

1294. Do you know the locality called Belmore? I know it very well.

1295. Would that district be served by this railway we are now considering? By a line indicated by the blue line on the map it would.

1296. Bring it within about a mile? It would.

1297. Do you know the district between this spot marked on the map here as Burwood Road and the Marrickville Road? Yes.

1298. Thoroughly? I cannot say thoroughly. I know it pretty well. It belonged to an old friend of mine, and families I knew very well. I have been over it many times.

1299. Having regard to that line you see there—the blue line—can you tell us which is the best line? I am not able to give you any opinion about that.

1300. Then I understand that the evidence you can give the Committee is in reference to a place further on—called Bankstown? Distinctly so.

1301. And you are of opinion that the railway going the way it is proposed would not benefit Bankstown at all? Except in so far as I have said. It would be an enormously valuable step in the right direction, because once you take it to Burwood I have no doubt in the world you must take it on to make it of any ultimate use.

1302. *Mr. Copeland.*] I understand that you are in favour of a line being constructed so far as the Burwood Road? Yes, distinctly so—emphatically so.

1303. Well, so far as the Burwood Road, do you particularly favour the blue line as against this line marked "Bankstown trial survey"? I may say, in answer to that, that I remember this one called the trial survey, and I very much prefer that to the blue line (although I have spoken of that going to Burwood

as

Hon.  
G. Thornton,  
M.L.C.  
28 Nov., 1889.

as being a great step in the right direction), for reasons I will give you if you will allow me. The most northerly surveyed line goes through Bankstown, and why I favour this is because, geographically considered, it has a lesser distance. That is one point in its favour.

1304. Lesser distance to construct? Yes; to construct to Liverpool. The next point in its favour is that there are fewer and far more convenient gradients. The gradients are on more level lines. By going round two hills near Bankstown they can have a level line nearly the whole distance. The other advantage is, that I do not think it crosses the river at all, but only Prospect Creek, whilst the blue line crosses the river in three places—one in the broadest part of the river, which would necessitate an enormous outlay.

1305. This northern line to which you refer crosses Landsdown Creek? Well, that is Prospect Creek, near Landsdown bridge.

1306. Supposing this northern line were constructed, you say it would be more favourable to the Bankstown people? Unquestionably; enormously.

1307. Would it not be less favourable to the Belmore people? Yes; it would be right away from Belmore, and more in favour of the Bankstown people, but I regard the Belmore interest as very inferior to that of Bankstown, because Belmore is of recent occupation. Whereas the people at Bankstown have been settled for seventy, eighty, or ninety years, and have established homes, and the soil is much better there.

1308. Better than the land about Belmore? I think it is.

1309. You think that the land about Belmore is not capable of cultivation? I cannot say that; but the land about Bankstown is very good indeed.

1310. Have you considered that this blue line—the staked line—runs about intermediate between Belmore and Bankstown, and would therefore give considerable advantages to the people in each settlement? Practically it is not so, though it appears to be so on the map. That blue line would give the Bankstown people the go-by. It would be of no use to them at all. By the map it does appear about equi-distant between Belmore and Bankstown, but it really is not.

1311. The scale of this map is 2 inches to the mile, and I take it that it would be very little more than a mile from Bankstown to the railway station on this blue line? If you make it a mile away, that is a long distance for people to travel.

1312. You cannot have a railway nearer than a mile to everybody's residence? True. I grant you that, and I think that if the people at Bankstown could get access to a railway within a mile they would have what they desire—all they require.

1313. Would not this blue line give them access within a mile? I do not think it would. An additional reason against that line is, that the cost of that blue line will be something enormous because of its crossing the river twice—once at the broadest part of the river, involving the outlay of an enormous sum of money for the bridge. And another reason against it—I speak slightly under correction, but I think I am correct in stating that the land in some seasons is under water 15, 16, and 20 feet, and a railway would have to be built which would avoid those flood waters.

1314. Which particular part of the line are you now alluding to? That would be between George's River and Saltpan Creek—about 2 miles from the Liverpool Road and very nearly, if not quite, on the line of that blue line. It might be on the other line, but it is somewhere about there. There is a natural fall, a natural dead hollow in which the water lies, in some seasons for six, eight, or nine months of the year, and makes the place impassable, except, perhaps, for steam-boats.

1315. Can you define that position on the map? No, I cannot, but I am inclined to think it is a little farther south than this blue line.

1316. How far back from George's River does this swamp extend? It extends back from George's River 2 or 3 miles. I intend to offer to the Chairman the names of some persons who were born there, and have lived there all their lives, who will be able to tell him what exactly this swamp is, where it is, and all about it.

1317. Are you quite sure that this blue line is marked through that swamp? No, I am not quite sure, but if it is not upon it, it is very close.

1318. And for 2 or 3 miles back from George's River there is a liability of having 16 or 17 feet of water? Yes. In time of flood unquestionably there would be somewhere about that blue line a swamp that would be impassable except for boats. In fact any engineer in forming a railway there would have to keep that in view, and make the railway high enough to avoid the flood water. It is a serious objection to it in my opinion, and I thought it was my duty to mention it to the Committee.

1319. Taking all these different questions into consideration, you strongly recommend the adoption of this northern line? Yes.

1320. From Bankstown? Yes. It is to the north of Bankstown. That, in my opinion, will benefit the general public, not only the people of Bankstown, but the general public of New South Wales, who might be interested in forming nice homesteads or small farms, small holdings, or places for a rural population.

1321. *Mr. Humphery.*] Were you not in error in stating to Mr. Trickett that you possessed property between Marrickville and the 8-mile peg at Burwood? I did not state that.

1322. Mr. Trickett, I think, asked you whether you owned any property between Marrickville and Burwood Road? No; he did not ask me that question; or, if he did, I did not hear the question properly, for I never did own property there. My property commences at the 14-mile stone on the Liverpool Road.

1323. If it should be decided eventually to extend the line to Liverpool, would not the extension take place from the 8 miles on to Bankstown to the north of the lock-spitted line? Undoubtedly.

1324. Therefore, your opposition to the present 4½ miles between Marrickville and Burwood would only arise in the event of the whole line being under consideration as lock-spitted? I answer the question in this way. I hold to it. I say that a line even to Burwood from Marrickville, as shown by that blue line, would be an enormous step in the right direction.

1325. If I am right there will be no error in making the line, as at present proposed, to the 8-mile peg, because from that point it could be extended to Liverpool in the direction of Bankstown? Undoubtedly. I would repeat that I approve very strongly of a line in the direction indicated to the 8-mile peg on the Burwood Road, because the other must follow as a necessary consequence. Whether it follows the line I have in view or the one other people have in view it is a big step in the right direction.

Hon.  
G. Thornton,  
M.L.C.  
23 Nov., 1889.

1326. Although you would approve very strongly of the northern line being taken to the Burwood Road, still you are not opposed to the present extension under consideration—that is from Marrickville to the 8 miles peg marked in blue? No; on the contrary, I am very much in favour of it. I am delighted with it, and I am sure that every reasonable, right-minded man will be delighted with it for the reasons I have given. I think it is a big step in the right direction.

1327. It is a matter for after consideration whether the line shall be extended along the lock-spitted route or be taken north or south? Irrespective of all that, I am quite sure that all the people in that direction—between Liverpool and Burwood Road—would hail it as a great boon to get it even so far as Burwood Road, as contemplated by the blue line. I say so as an experienced man, wishing them all well in that respect.

1328. It is only in the event of any extension beyond that, taken beyond the lock-spitted line, that you think that it could be improved by deviation? I do, for reasons I have stated.

1329. *Mr. O'Sullivan.*] If that line were taken on *via* Bankstown it would have to deviate before it came to Burwood Road, would it not? The blue line would have to deviate of course. You would have to take another angle entirely. The direction of that blue line is about west by south. The red line would go west by north almost, as well as I am able to judge. My idea is that it should go in this direction—west by north. There would have to be a deviation, or rather it would not be a deviation, but you would have to take the line that way, and then this way.

1330. Would it not be better to take the line to Bankstown on to Druitt Town, and serve that as well? Yes.

1331. But your deviation would not serve Druitt Town? Oh yes, it would.

1332. The proposed tramway to Druitt Town is marked on the plan? Yes; I see I am a little out. But that line would go much closer to Druitt Town than the blue line would.

1333. Would it not be preferable to follow the old survey, go through Lower Bankstown, and *via* Landsdown Creek? Yes.

1334. Then to carry out that line you would have to deviate about Canterbury? I am not prepared to answer that question, because I do not know much about Canterbury, although I have been there many a time. I have never had occasion to consider it with a view to a railway being constructed, and therefore could not give you any definite reply about that. I can only speak about Druitt Town and Bankstown with any authority, if I may use the term.

1335. But on the map you find there is a junction marked between the blue and the Lower Bankstown line? Yes.

1336. And that takes place at Canterbury? Yes.

1337. Then that appears to be the natural route to serve Druitt Town and Lower Bankstown? Unquestionably, and for the reasons I have mentioned the cost would be greatly decreased. I cannot estimate how much this line would cost less than the blue line would cost, in consequence of the natural difficulties in the way of that line—the swamp, river, and such things.

1338. The blue line to which you refer is the lock-spitted or permanently staked line? Yes; it goes through a part of my property, and, as you might judge, it would be of great benefit to me.

1339. *Mr. Tonkin.*] Do you believe that if this line, which is under investigation, from Marrickville to Burwood Road were constructed, it would pay working expenses and interest on the capital expended in its construction? Judging from my experience of the wonderful addition to population in those districts, seeing that which I have seen in my lifetime, and which appears to be almost incredible—the bush transferred almost momentarily, by magic as it were, into a place teeming with population—I have no hesitation in saying it would pay well in time.

1340. Is the land along the route proposed suitable for building purposes—I mean the whole of it? I am not able to speak with any accuracy of the land between Marrickville and Burwood. I know there is a great deal of good land about there, but I do not recollect it well enough to be able to answer that question with any authority.

1341. Have you any idea of the population that would be served by the construction of this line as proposed from Marrickville to Burwood? No; I am not able to give an answer, except that, judging from what I have seen the last few years, I have no doubt this place will be precipitated into a largely population-bearing place. For example, in places, where during some part of my life I used to go shooting—particularly in a forest of ironbark trees where not a creature was to be seen—there now stand beautiful towns. For example, Summer Hill, Petersham, and even Newtown. I remember the time when the boys went to Newtown to shoot parrots. We never thought there would be a population there. Look at that now, and look at Petersham. It used to be owned by one man, 2,226 acres being occupied by one person. Now there is Stanmore, Petersham, Lewisham, and Summer Hill. It is astonishing. The railway authorities know the extraordinary increase that has taken place in their receipts from those different places which, during a long portion of my life, I used to travel over and shoot parrots without any interruption.

1342. Do you think the railway has conduced to that wonderful alteration? Nothing else could have done it.

1343. Did you know a place called Hurstville before the railway went there? Not by the name of Hurstville. Kingsgrove, I think, we used to call it, or some such name as that.

1344. You know what a wonderful population is now settled there in consequence of the railway being constructed? I do.

1345. Do you think something similar would occur if this line were constructed? Much greater, for I think the land is more suitable in that northerly or north-westerly direction. It is a healthy district all about there. I speak of Bankstown and the district several miles near it—scores of thousands of acres in extent. No doctor could live there. People live to a great old age and do not die, or, at any rate, they do not want a doctor.

1346. You would prefer the northern surveyed line, but under any circumstances you think that the construction of any line as indicated would be a great benefit to the community? Unquestionably so.

1347. And also within a very short time be payable? Unquestionably so. I judge from the past, from what I have seen all around me, and from the anxiety of the people to have places out there to which they could get access. Land would sell at once at enormously increased prices, and people would be only too glad to get nice settlements—to buy land by the acre, instead of by the foot as they have to do now. I

am

Hon. G. Thornton, M.L.C.  
28 Nov., 1889.

am speaking in the interests of the general public. I might serve myself very handsomely by advocating the blue line route. It would be an enormous advantage to me if the line went in that direction, but I should be false to my principles if I advocated it, and I am speaking in the interests of the general public. I have suggested in this letter, which I now hand in, the names of some persons who would give you some useful, if not valuable, information, particularly with regard to Bankstown.

David Kirkcaldie, Esq., Chief Traffic Manager, Railway Department, sworn, and examined:—

D. Kirkcaldie, Esq.  
28 Nov., 1889.

1348. *Mr. Copeland.*] You know the suggested new route from Marrickville for some 4 miles 60 chains in the direction of Liverpool? I do.

1349. Do you know the country personally? Yes.

1350. I want to get some information from you, more particularly with reference to the saving that would be likely to be effected supposing this line were extended beyond what is now submitted to us, that is the 4 miles 60 chains;—supposing that line were carried through to Liverpool, what saving would be effected on the short journey from Liverpool to Sydney by the proposed route as against the Parramatta route? In what respect do you mean?

1351. Do you know the different distances? Yes.

1352. The length of the two lines? About 17 miles against 22.

1353. That would be a saving of 5 miles? Yes.

1354. We have a report here from the Commissioners for Railways, and they say, "The theory which has been put forth, that the construction of this line would avoid the necessity for increasing the carrying capacity of the existing line from Liverpool to Sydney, should not have any weight in the consideration of the question, as the construction of the line would only relieve the parent line to the extent of about four trains per day in each direction; and the quadrupling of the line out of Sydney to Homebush is required to accommodate the increasing purely residential service of trains; and the doubling of the line from Granville to Liverpool will be required for the development of the country along that route, which is being fairly rapidly settled";—Supposing this line were constructed from Marrickville to Liverpool, what amount of through traffic do you think would go by that route, 5 miles shorter, instead of by the old route, *via* Granville;—Would the passenger traffic go that way? Oh, yes.

1355. You think the passengers would travel that way, and save 5 miles of trainage? Yes.

1356. Do you think that any of the through goods traffic to Sydney would go that way? Unquestionably. If the railway were constructed, all the traffic from Liverpool and beyond would go and come by that route—that being the shorter route.

1357. Except, I suppose, the live stock that goes to Homebush? Yes.

1358. That would still go by the old route? That would still go by Granville.

1359. You anticipate that the passenger traffic would go by the new route? Yes.

1360. And save 5 miles of trainage? I think so.

1361. You will notice that the Commissioners say it would only be used to the extent of about four trains a-day in each direction? Yes.

1362. I find, by referring to the Government time-table, that there are at the present time thirteen trains one way and twelve trains the other way in the day from Liverpool to Sydney and from beyond Liverpool to Sydney? Yes.

1363. Can you account for the Commissioners stating that there will be only four trains a day in each direction? Well, I cannot from memory exactly limit myself to four, but those trains to which you refer also supply the district between Granville and Liverpool—not only Liverpool and stations beyond. They supply Cabramatta, Fairfield, and the district generally between Granville and Liverpool. The passenger trains which go beyond Liverpool number about four each way per day. There is the morning train, the express, the 5-17, and the mail. I think those are about the only trains which run beyond Liverpool.

1364. But there are a number of trains in addition to those; there are several trains which go to Campbelltown? Yes.

1365. Would not the people in Campbelltown be likely to avail themselves of the shorter route in coming to Sydney? Undoubtedly through passengers would.

1366. And the passengers from Liverpool *en route* to Sydney would also be likely to do so? Yes; no doubt they would prefer that route.

1367. So that, in your opinion, there would be a much greater traffic from Liverpool and from beyond Liverpool than what is indicated by the Commissioners' Report, which says four trains per day each way? I could not specify exactly the number of trains.

1368. I have told you that as far as I can gather from the time-table here there are thirteen trains one way and twelve the other, which go to Liverpool and beyond Liverpool? Yes, but a great many of those trains only run from Granville. They do not come on to the suburban line at all. They run between Granville and Liverpool in connection with suburban trains.

1369. The whole of those trains run from Sydney to Liverpool and beyond Liverpool, and from beyond Liverpool and from Liverpool to Sydney? Yes; but they do not run from Sydney, you understand, as individual trains. Many of them run in connection with suburban trains from Granville to Liverpool and back. They are not run as trains from Sydney to Liverpool, but from Sydney to Parramatta, and then a train joins at Granville and runs the passengers up to Liverpool, and so when the trains are coming back again.

1370. Will you take the time-table and find the Campbelltown and Liverpool trains; I have here what I took from the time-table—the down trains from Sydney to Liverpool and beyond; this of course includes the express and the other morning trains; they all go beyond Liverpool; there are trains leaving Sydney at 6-30 a.m., 9, 9-30, 11-30, 1-30 p.m., 4-30 p.m., 5-17, 6-30, 9, 9-30, and 11-30? Yes.

1371. The whole of those trains leave Sydney and go to Liverpool and beyond Liverpool? Yes, in the way I say. All those trains which leave at the half-hour—for instance, the 6-30, the 9-30, 11-30, 1-30, 4-30, 6-30—are Parramatta trains, and they junction at Granville with the local train to Liverpool—with a train which simply runs between Liverpool and Granville.

1372. Supposing that passengers were leaving Sydney for Liverpool or beyond Liverpool, would not they be likely to travel by the shorter route, and save 5 miles of trainage and time? Yes, undoubtedly, if they had an equally good service.

1373.

D. Kirkcaldie,  
Esq.  
23 Nov., 1889.

1373. Should not that additional traffic be taken into consideration in addition to those four trains each way to which the Commissioners refer? They would not get such a number of trains to Liverpool were it not for the local traffic between Granville and Liverpool. You have got to consider the stations—for instance, Merylands, Guildford, Fairfield, Canley Vale, and Cabramatta—which are all between Granville and Liverpool, and at which a considerable population is settled. For the Liverpool passengers alone it would never pay to run all those trains, but if you take the local traffic with the Liverpool traffic it is a different question.

1374. Still I suppose that if the suggested line were constructed, and the bulk of the passenger traffic came that way, other suburban towns would spring up? Yes, there might be.

1375. Towns would spring up on the new line? Yes.

1376. And traffic would increase on that line? Yes.

1377. Do you consider that if the proposed line were constructed the traffic coming from Liverpool and beyond Liverpool would materially assist in paying the working expenses of the new line? No, I do not, and I will tell you why. If we got the same rates from Liverpool and all stations beyond which we get at the present time I daresay it would be a very good thing.

1378. That is to say, if you were paid for 5 miles you did not run? Quite so. But if we are going to construct this line, and charge actual mileage rates, we shall lose far more money than we can possibly gain.

1379. Is not that a somewhat peculiar theory for the department to contemplate—to use a long route simply for the sake of enlarging the railway fares? I do not think so, seeing that a line already exists.

1380. Would you not be able to extend that principle considerably; you could make the line from Sydney to Parramatta 50 miles long, and have 50 miles of trainage? Of course there must be reason.

1381. Leaving out the interest of the department, would it not be in the interest of the public if they could be taken along a route 5 miles shorter, and be charged for 5 miles less, and be saved the time of travelling 5 miles? In the interest of the public it would, no doubt.

1382. Should not the interest of the public be the interest of the department? It is going to add a great deal more capital to the department, for which we are going to get no adequate compensation, as far as I can see, and without relieving the existing line to any appreciable extent.

1383. I am endeavouring to ascertain whether you would be likely to get sufficient traffic if the line were constructed through to Liverpool—whether you would get sufficient traffic *via* Liverpool, in addition to the suburban traffic—traffic inherent to the line itself—to make it a paying one? I do not think there is the slightest chance of it.

1384. Do you think there is a chance of its coming to pass within four or five years? Not within the next twenty years—that is my opinion.

1385. You do not think the line would be a paying one within the next twenty years? No, I do not.

1386. Do you think—supposing this line were constructed from Marrickville to the Burwood Road—there is sufficient settlement to make it a paying line, independent of its going through to Liverpool? Not at the present time, but I believe it would pay in the course of a very few years. There is not sufficient at the present time to make it pay.

1387. Do you think that the prospects are as favourable now for a paying traffic as on the Illawarra line when that line was commenced? I would not say quite so much, but I would say that it would come very near it. The Illawarra line was almost a remarkable line. The traffic developed at a wonderful rate from the time that line was opened.

1388. In estimating the probable traffic from the Burwood Road *via* Marrickville have you considered the fact that the Dulwich Hill tramway runs for about 1½ mile parallel with the proposed railway, and at only an average distance of about half a mile from it? Yes, we thought of it.

1389. Do you think that the suggested railway would be likely to take the traffic from the tramway? I do not think it would; but the tramway only runs to Dulwich Hill, and a railway out in the direction of Burwood road would create a traffic for itself.

1390. Yes; but so far as Dulwich Hill would not the traffic which would accrue to the railway be simply taken from the tramway to make the railway pay? To some extent it would, no doubt.

1391. From your knowledge of the district do you think there would be any necessity to maintain a tramway and railway too, seeing the two would run parallel for some distance? Well, it is pretty well the condition of Newtown over again. Of course the tramway to Newtown has robbed the railway revenue to a considerable extent; there is no doubt about that; but I think that if a railway were constructed out there the contour of the country is altogether so favourable that a railway would create a traffic in time.

1392. Do you not think that if it were extended beyond Burwood Road towards Liverpool it would create still more traffic? I do not think so, because the country becomes very poor after you get beyond there. I think that for suburban residence it would be of no use whatever.

1393. As traffic manager, do you think that if this line were constructed through to Liverpool, even supposing it did not pay immediately, it would not be of great benefit to the department in relieving the old line of such a large amount of traffic? No sir; very little. The suburban line must be quadrupled for a number of miles,—no matter whether you do or do not relieve it of the present southern traffic altogether.

1394. You are quadrupling it now as far as Strathfield? As far as Homebush it is being quadrupled. When that is done there will be no difficulty for a number of years to come in carrying the whole of the traffic of the main line without any assistance from a loop line.

1395. Then you do not look upon it as a departmental line at all? From a departmental point of view I do not consider it at all necessary.

1396. You think the line should rest on its own merits—on the question of accommodating the people in the locality? I do.

1397. At the present time you do not anticipate it will be a payable line? I am quite sure it would not be a payable line. It will not be a payable line for two or three years at any rate even for a short distance, but through to Liverpool it would not be a paying line for many years.

1398. *Mr. Tonkin.*] Do you know what the Commissioner's estimate of revenue from this line is, supposing it were constructed to the Burwood Road? Yes, I do; £3,000 for that particular length of line. Of course whatever we get there will add to the main line revenue as well.

1399. Do you think that that is a proper estimate of the returns? I do; I think it comes very near it.

1400. In what way did you calculate that return? We were guided to a considerable extent by our experience of some of the stations on the Illawarra line beyond Marrickville.

1401.

- D. Kirkcaldie, Esq.  
28 Nov., 1889.
1401. Do you know the number of 'buses there are daily coming into town through Canterbury from the district that would be served by a railway to Burwood Road? No; I do not.
1402. Do you not think that that would have been a better way of making a calculation than going to the Illawarra line? No; I would not pay attention to that. A railway would develop traffic, but a 'bus could not do it, except in an insignificant degree.
1403. Do you think more people would travel than by 'bus at the present time? Undoubtedly.
1404. Then if it can be shown that there is more revenue from the 'buses than what you estimate, don't you think that must be a mistake? It depends on what rates they charge by the 'buses.
1405. The rates are 6d. each way? We would not get that; our ordinary mileage rates would not give us that; and we are only going to get additional mileage from Marrickville. They get a through rate from Sydney. We would only get additional mileage from the terminus to the junction of the present line.
1406. In making your calculation, is that entirely for passenger traffic? The great bulk of it is.
1407. Have you allowed anything for goods traffic? Yes.
1408. Do you take into consideration the Canterbury race-course? Yes.
1409. And calculate that into it too? Yes.
1410. Do you know that that returns £2,500 a year? No.
1411. If that has been sworn to here, the figures brought here, that is not correct? I should say not. I should say that the Canterbury race traffic at the present time is worth about £700 a year to us. In the last four months the actual money that we have taken for passengers booked to Ashfield on the Canterbury race days was £215 12s. 1d.; that is on six race days. If you multiply that by three it gives about £650 a year, nearly. Of course we would simply get an extra mile. To Petersham the distance is 5 miles, and to Canterbury it is about 6—a little over 6.
1412. I suppose the Commissioner's estimate was compiled with your assistance? Yes, it was.
1413. And you have included not only the passengers to the race-course, but also the goods traffic? Yes; you understand that the traffic on that line would be considerably more, perhaps, than £3,000 a year if you included the whole of the race-course traffic, but we would only get an extra mile beyond what we are getting now. We get 5 miles to Ashfield. Consequently we would only get one-fifth more to Canterbury. No doubt we would get more passengers if we ran near the race-course. We took that into consideration. But what we would get on that line would be drawn from the main line.
1414. Do you think it would not be an advantage to you to have that traffic drawn from the main line on the race days? If we get the line quadrupled we can do a very much larger traffic than we are doing now. I do not regard the race-course traffic as being of such very great importance as that; but it would open up the country, and I think a branch line there would pay.
1415. You think you have not made a mistake in the calculation that the revenue from this railway would only be £3,000 a year? I do not think so. I think that is all you can add between the present main line and the terminus you propose.
1416. That, I understand, is the difference between what you receive now, and what you would receive from that line? Quite so.
1417. Have you allowed in this calculation anything for the extra haulage you would have on the main line? We allow double that amount—£3,000 more.
1418. If it were shown that these seven omnibuses were actually drawing now in fares £4,680 a year, would you still think that £3,000 is the proper estimate? Yes, I would. Of course the difference between the fare to Marrickville and the fare to the proposed terminus would be so little as compared with the 'bus fare that the £3,000 would be very nearly right. A very large bulk of the traffic would be drawn from the present main lines.
1419. Can you tell us what proportion of goods would be required for a population returning £3,000 per annum? No, I could not; and I do not attach a very great deal of importance to goods traffic out there, except such traffic as coal and heavy traffic, because we know from experience that goods to Canterbury would be taken generally by road. Carriers come in and deliver goods at Petersham and Leichhardt and all those places on the way.
1420. *Mr. O'Sullivan.*] Do you think it would be a proper step for the State to take to construct a line of railway from Marrickville to the Burwood Road, in view of the fact that a great portion of the distance is already served by tramway, and the remainder might be served by tramway from Ashfield to Canterbury? There is just the awkwardness of repeated changes. There is no doubt, I consider, that if a tramway were constructed to Canterbury quite double the number of people would go there on race days as now. People will not go to Ashfield and then go to the expense of vehicles to Canterbury, neither will they walk. If you take a railway near to the race-course you will get double the number of people to go there, and you will also get a settled population along the line.
1421. Is it a wise step to construct a line of railway to compete with an existing line of tramway? No, I do not think it is.
1422. And considering the other portion of my question—that a tramway a mile and a half from Ashfield to Canterbury would carry passengers to the race-course,—would not residential and precarious traffic be well served? It might; but people will always object to repeated changes of conveyance. They have got to take the tramway to get to Redfern Station, then a train to Ashfield, and then they would have to take a tramway to Canterbury. They will not stand that.
1423. They already change from a tramway at Sydney to get into a train to go to Ashfield? Yes, but you would double it.
1424. You think that the fact of a man having to go across a platform would prevent him from going? It would; that is our experience.
1425. I presume that putting aside this objection to a second change, you could serve the traffic on race-days from Ashfield to Canterbury, by having a proper number of carriages? Yes, quite so; but that would serve Canterbury alone.
1426. The other portion of the district is pretty well served by tramway now to Dulwich Hill? To Dulwich Hill, it is.
1427. And Burwood Road is only a little more than a mile from Canterbury? Yes.
1428. Therefore the construction of a mile and a half of tramway would serve the entire district? It would, in an incomplete way; but it would not be very acceptable.
1429. I admit it would be an inferior way compared with a railway, but are we justified in undertaking this

D. Kirkcaldie,  
Esq.  
28 Nov., 1889.

- this work, in view of the fact that we would have to compete with our own line, and we would give a fair amount of accommodation in the way of conveyances? I think so long as we can see a prospect of railways paying in a few years, the more accommodation we give people to induce them to live out of Sydney, the better. I do not think we can give too many facilities to enable people to live out of Sydney.
1430. Do you not give fair facilities by constructing a tramway, as in the case of Waverley and Bondi; have we not induced a large number of people to live out there? Yes.
1431. Do not the tramways in Melbourne serve the people well? The railways serve them far more.
1432. But I mean in the inside districts? Yes, they do.
1433. Along Richmond, Victoria Park, and Collingwood? Yes; but they have three intervening lines to Richmond.
1434. Then the tramways running to Clifton Hill and Brunswick serve the large suburbs out there well? Yes, they do.
1435. Could not tramways serve these suburbs equally well? Yes; they no doubt would; but you are going to apply them under different conditions. You are going to make people take the tramway to Dulwich Hill and then walk, or take a tram to Redfern Station, and then a train to Ashfield, and then another tram to Canterbury.
1436. We would be utilising a large link of our railway into Sydney? Yes, no doubt. Still you would have to supply Canterbury.
1437. The other portion would be pretty well supplied by the Dulwich Hill tramway? Yes.
1438. And if the remainder could be served by a mile and a half of tramway, what would be the necessity of making this line to Burwood Road? People will not walk such a long distance.
1439. Is it not a mistake now to run both a tramway and a railway to Marrickville, considering a railway would have done all the work and have given you the 10 per cent. you make on the tramway to add to the railway receipts? Yes.
1440. Do not those trains running to Campbelltown serve intervening places between Granville and Campbelltown? Yes.
1441. Then all that traffic would be lost if you ran the trains the other way? We would have to maintain a double service. We could not cut them off.
1442. If you were to run those trains from Campbelltown to Marrickville *via* Liverpool, you would have to supply the place of those trains that run to Campbelltown? Yes; or to Liverpool.
1443. So that it would be almost a useless expenditure to run those trains down there? Yes.
1444. You estimate that the Canterbury Park traffic would only be about £650 a year? Yes; under present conditions.
1445. You estimate that a tramway might double the attendance there, and of course a railway would do the same? Yes.
1446. We might fairly estimate that if a railway were constructed the receipts from Canterbury Park would be something like £2,000 a year? I should say about £1,300 or £1,400 a year.
1447. But looking five or six years ahead? I should say quite that.
1448. In your opinion, would this line pay in three years in view of the fact that it would compete with the tramway running to Dulwich Hill? I do think so, if we have anything like prosperity. If it has anything like the conditions that the Illawarra line had when it was open to Hurstville, it will more than pay.
1449. You do not think it will pay under the present conditions of the Colony? It will not pay as things are now.
1450. *Mr. Trickett.*] Which do you advocate, a single or a double line, if this line is constructed? Unmistakably a double line; you could not get a good service with a single line.
1451. You say that the soil beyond Burwood Road is not of a good character; does that apply to Bankstown? No; Bankstown is very nice, but when you get a mile or two beyond that, and towards Liverpool, the soil is very poor.
1452. Do you think then that it would be desirable shortly to extend this line on to Bankstown? I think it is very probable.
1453. Have you got any figures to show the population who would be served by this line? I have not.
1454. Have you not gone into that? No.
1455. Did you not ascertain the population of those places? Yes, I did, but I have not got it now. However, I do not attach a great deal of importance to it, because the change would be so great if they had a railway; I anticipate that in the course of a year or two present date figures would be pretty well useless.
1456. Would these places be served by the railway;—Marrickville, Canterbury, Kingsgrove, Moorefields, Belmore, and Bankstown? Marrickville would not, but beyond Marrickville would.
1457. If it has been stated that about 10,000 people are at the present time resident along this line, and would be benefited by, and use the line, do you think that is correct? No; I would not think so. I think that is excessive.
1458. Do you know about the attendance at the Canterbury race-course—whether a great many people do not go by road from Sydney? Yes; a good many drive.
1459. Have you estimated the number? No, I have not; but on an average 1,100 go on each day by train to Ashfield.
1460. The Commissioners state that the total annual cost of running this railway would be about £9,500, and the estimated revenue about £3,000 a year; do you think those figures are correct? Yes. Of course their estimate of £3,000 has also to be added to £3,000 from augmentation of present traffic on the main line.
1461. *Mr. Humphery.*] You spoke of the tramway service to Newtown coming into competition with the railway service? Yes.
1462. Does the traffic between Newtown and Redfern at the present time pay interest upon outlay—I mean the local traffic? No; I do not think it does.
1463. You think that the railway between Redfern and Newtown is running at a loss? Yes; as far as local traffic is concerned. The tramway to Marrickville and Newtown has probably taken 75 per cent. of the traffic we used to have between Sydney and Newtown.
1464. Is there not a 'bus service running in competition with the tram service? Yes.

- D. Kirkcaldie, 1465. Are you in a position to say whether the 'bus service pays? I cannot say.
- Esq. 1466. Is it not the custom to charge special fares for trams to the Randwick race-course? Yes.
- 28 Nov., 1889. 1467. Have you taken into consideration the question whether the railway could charge special fares to Canterbury on race days? We calculated ordinary fares.
1468. Do you not think it part of the system to charge special fares? No; I think not.
1469. *Vice-Chairman.*] Do you know the Moorefields district? I do.
1470. Is there not a race-course there also? Yes.
1471. By what service is that served? By train to Kogarah.
1472. How far would the Moorefields race-course be from the Burwood Road, approximately? I could not tell.
1473. It would not be affected in any way by the construction of a line to Burwood Road? No.
1474. *Mr. Copeland.*] You are in the habit of charging special railway fares to races and other places? To Richmond we do—to the Windsor races.
1475. Do you not charge special fares to the Rosehill race-course on race days? They are special fares but not higher than the ordinary fares.
1476. Would you not be justified in charging a higher fare? Perhaps we would; but the higher the fare the greater number of people we should prevent from travelling. The lower the fare the more people will travel to these races.
1477. Do you know that there was a special railway fare charged last night in connection with the Mayor's ball? Yes.
1478. What was the fare? 2s.
1479. If you only went to Macdonaldtown, a mile or a mile and a half? Yes.
1480. And 2s. also if you went to Parramatta? Yes.
1481. All along the suburban line you charged the one fare of 2s.? Yes.
1482. Of course you approved of that being done and considered it beneficial? Yes.
1483. And I have no doubt that the public considered it was beneficial, and they were well served by being able to travel at that time of night? Quite so.
1484. Would not the same principle apply to race days? No; the circumstances are altogether different. The people who went to that ball would have paid 5s. to get home at that time in the morning.
1485. Do you not think that people who go to races would pay more to go? No; you would prevent them from going.
1486. But they went to the ball? Yes; they would go to the ball. The matter of 5s. would not make any difference in that case.
1487. But why do you continue the system of charging special fares to Randwick and Rosehill? We are not charging more except for some trams to Randwick.
1488. Would not the same principle apply to other race-courses on race days? No; it is a special thing altogether.
1489. Do you not think that the people who attend races are rather liberally inclined that way, and if they want to go to races do not stand at a shilling? Regular habitués of the race-course would spend money to get there, but many people would be deterred from going unless they could have cheap fares.
1490. Do you think an extra shilling would deter a man from going to the races if he had made up his mind to go? Perhaps not, but the lowness of the fares acts as a powerful incentive to casual visitors.
1491. Do you not think that people would be inclined to pay an extra fare if they could see the first race run? People who generally go to races would no doubt pay an extra fare to get there, but on the other hand many people would not go except they had cheap fares.
1492. You seem to have a principle applicable to some places and not to others? No; I do not think so.
1493. Take Randwick? I cannot tell you much about that, as the tramways are not in my department.
1494. Do you know what is the omnibus charge from Ashfield to Canterbury? I think it is a shilling, but I cannot be sure.
1495. People still travel by it all the same; that does not deter them from going to the races? They cannot help themselves; but I should expect a great many more to go if they could go at a cheaper rate.
1496. You think that the people of this Colony are so calculating in connection with their day's pleasure, contemplated days before, that they would deny themselves the pleasure of seeing a race rather than pay an extra shilling fare? No; I do not. People who calculate many days would go no matter what it cost them.
1497. If people on arriving at the station found that the fare was 2s. instead of 1s., would they be likely to give up their day's pleasure, do you think? No, I do not. But on the other hand when we advertise a very cheap train to Melbourne we get the train full, whereas if we charged the ordinary fares people would either not go at all, or they would go by sea.
1498. Do you not find in connection with the Melbourne trains that there are a number of people prepared to pay special rates for special accommodation? Yes; but a much larger number go if they get cheap fares.
1499. Do you find that trains for which higher rates are charged are patronised? Yes; but the special trains at cheap fares pay better than the express.
1500. Are there not three, four, five, or six times as many people, who travel by express to Melbourne; and pay the extra fare, than by the ordinary mail train? Yes.
1501. Showing that they are willing to pay special rates for special accommodation? Yes; but on the other hand, if we start a special train to Melbourne on the morning of the day we start an express, and take several hours more on the road, but charge a pound or two less, we can get that special train filled.
1502. But are they not rather the surplus people that may be tempted to travel;—if you had a special train free you would get a still larger number—there is always a surplus of people who can be induced to travel at cheap rates? That is what I mean in connection with the races.
1503. But the bulk of the people who have made up their minds to go a journey, are not in that impoverished state that they would be deterred from a day's pleasure by your charging a fair reasonable rate? The bulk of the people go by the cheap trains. They take advantage of the cheap trains.
1504. You think that if you had charged a cheaper rate to the people attending the ball last night there would have been a larger number of people who travelled by rail? No, I do not. That was a special thing altogether. Those who attended the ball were the invited guests of the Mayor, and they went home by train because the charge was very much less than could have been obtained by any other conveyance.

H. T. Sanderson, Esq., C.E., licensed surveyor, sworn, and examined:—

H. T.  
Sanderson,  
Esq.  
28 Nov., 1889.

1505. *Mr. Copeland.*] Have you been employed in surveying any of these subdivisions on this route? Yes. I was employed on a line from Arncliffe to Liverpool.
1506. You are a surveyor, I believe? I am an engineer by profession, as well as a surveyor.
1507. You have been in the Public Service for some time? Yes, formerly.
1508. How many years were you there? Some five or six years, I think, altogether. I came here originally employed by the Government of New South Wales in 1855, as railway surveyor and engineer.
1509. You have been in the Government Service several years? Yes.
1510. How many years? I think, off and on, six or seven years, and on many subsequent occasions.
1511. Since that time you have been practising privately as a surveyor? Yes.
1512. You say you were engaged in making a survey of one of these projected lines of railway? Yes; in 1883 and 1884.
1513. May I ask who employed you on that survey? It was a private survey, and the gentlemen who appointed me were Mr. John M'Innes, of Cook's River, and Mr. Myles M'Rae.
1514. Is that Mr. Myles M'Rae, the present Member? Yes. Mr. Thomas Saywell and someone else—I forget his name now. But there were five or six of them altogether.
1515. I suppose the object of this private survey was to enable them to suggest a line to the Government? Quite so.
1516. In the direction of the land they held? No.
1517. I suppose this was a land syndicate? No. I do not think they were a land syndicate at all, but I think they were interested in a loop-line between the Illawarra railway and the Southern line.
1518. But what constituted their interest—was it pure philanthropy, or had they some land in that direction? I believe some of them had land. I know that Mr. M'Innes had land at this end—at Arncliffe,—but I do not think it interfered with any other portion of his land.
1519. Did you complete that survey? Yes.
1520. Which route was that; is it marked on that map? Yes.
1521. How is it described? I made a survey from a road on the Arncliffe side of Cook's River. I forget the name of the road.
1522. Your route, then, is marked on this map—"Mr. Sanderson's survey from Arncliffe to Liverpool"? Yes, that is my route. I provided a plan and section of the route, which I handed over to the Department of Works.
1523. Your survey junctioned on with the Government surveys? Yes, it junctioned on here. I did not take their line particularly, but ran in this direction to Liverpool. I junctioned at Belmore, I think at 8 or 9 miles, on Mr. Bell's survey.
1524. That route has not been adopted by the Government? No, it has not.
1525. Have you had any other employment in that district in the way of surveying lines of railway and suggested lines of railway? No, I merely gave a report on a suggested line of railway from Hurstville, and I believe the Government made a survey after that.
1526. Have you been employed as surveyor in cutting up any of these subdivisions? No.
1527. You have not done any land surveying? I have not had any interest in the affair at all, except that I made a survey for the purpose of showing that it is a shorter, better, and cheaper line than is proposed either from Marrickville or St. Peters.
1528. You know the line which has been lock-spitted from Marrickville? I do not know it latterly. I have not been over it.
1529. Did you volunteer to come here and make a statement? Yes; I volunteered to give the Committee any evidence they required in the interest of the country in regard to this railway.
1530. But you have no particular statement of your own to make? I have no particular statement, except to say this to the Committee: That the survey I made is a much better line, a shorter line, and a cheaper line than the line now proposed by the Government.
1531. What were the steepest gradients on that line? I have not the section, but I do not believe the steepest gradient is anything more than 1 in 90, or 1 in 100. It is a very easy line all through.
1532. Can you say what the distance was to Liverpool from where you branched off the Illawarra line? I cannot say now, because the original sections and plans are with the Government. I thought it would have been here to refer to, but not having the plan before me, I cannot say.
1533. Do you know the length of the suggested line—the blue line—the lock-spitted line? I know that my line was a mile and a half shorter when I joined Mr. Bell's survey from Arncliffe than the line from St. Peters.
1534. But had this present line, since adopted by the Government, been surveyed at that time? No; but I believe it would not make more than a quarter of a mile difference. I think the difference between my own survey and the present one would be about one mile and a quarter;—mine will be about a mile and a quarter shorter.
1535. Bell's survey had to cross George's River twice, had it not? Yes.
1536. And would necessitate two bridges? Yes.
1537. So that this line, of which your survey formed a part, would necessitate the erection of two bridges across George's River? Yes, or diverting the river. My line was nearly parallel with Bell's survey after leaving Belmore, and I did intend to have avoided crossing George's River, but at that time the owner of the property,—George's Hall,—stated that he would not give the property to the Government free of cost unless it was on the lower side of his house.
1538. Of course you know we are inquiring into this particular line submitted to us by the Government? Quite so.
1539. Can you give the Committee any information particularly with respect to this line? No; I cannot give the Committee any information with respect to this particular line on which they are now sitting; but I can only say this—that they could approach the terminus of the present line by taking that line of mine on the diagram, which I think would be all that would be required. It would be a cheaper line a great deal.
1540. How did you arrive at the conclusion that it would be a cheaper line, when you are not acquainted with the like suggested by the Government? I am acquainted with the country generally speaking on Bell's line.

H. T.  
Sanderson,  
Esq.

28 Nov., 1889.

line. I know, of course, Cook's River, and that it must involve an expenditure of a large amount to build a bridge or viaduct across that river, and which I avoided by going up Woollli Creek.

1541. But at the present time it is only contemplated to construct 4 miles 60 chains to accommodate people some little distance away from Marrickville, in the direction of Belmore; your line would not travel in the same direction at all? No. My line is simply part of the loop-line between the Illawarra line and Liverpool.

1542. If we were inquiring which is the better route of all the routes which have been surveyed, your opinion might be valuable to the Committee, but what we want is information with respect to the particular line submitted to us by the Government? All I can say with regard to the line submitted by Government is that my opinion is that it will be a very expensive line, and I do not think it will pay. It will be a great pity to bring the line in that direction. It is too near to Ashfield, and I think also that if it were eventually decided to bring that line to Liverpool the people would not be treated justly out towards the east, in the direction that my line would go. I think the people in that part of the country up Woollli Creek—up that part of the country—would be left out. All the ground is alienated and sold, and it is likely to be a largely populated country, and I think they would lose the advantages which would be given to Canterbury.

1543. How would you accommodate the Bankstown people with that line? Well, it was not intended, except by making use of the Government line.

1544. The only peculiarity about your line is that it would branch off from the Illawarra line some mile or more farther towards Kogarah than the present suggested deviation? Quite so; and it avoids this (*pointing to the map*). It is very expensive country at Canterbury.

1545. But your line would not accommodate the people of Canterbury? It would accommodate the people on the southern side.

1546. Are not the people to whom you allude already accommodated by the present Illawarra line at Hurstville? They have a long way to go to Hurstville.

1547. But if you take the line of your suggested route would it not necessitate the Canterbury people having a longer way to go? They are within a very short distance of Ashfield and Petersham. They could have a tramway to the railway at very little expense. They could extend their tramway, and get to Sydney at far less expense than by this line.

1548. Then, as an engineer, you consider that your own line is the best of them all? I hope I have no egotism nor any desire to consider myself better than any other engineer, but I think that in the present instance it would be throwing a very large amount of money away when Canterbury can be supplied by a tramway from the existing terminus of the tramway at Dulwich Hill.

1549. You would extend that tramway? Yes; I think it could be extended for a very small sum in comparison with the cost of making a railway.

1550. Do you know how long it takes for a tramway to get to Dulwich Hill? I believe three-quarters of an hour.

1551. Do you know the distance? I think the distance is something like  $5\frac{1}{2}$  miles.

1552. It is marked 6 miles on the map;—do you consider it a satisfactory mode of travelling in these days to take nearly an hour to travel 6 miles by steam? Of course travelling by tram would be very inferior to travelling by railway. Another thing I thought it necessary to point out to you was that, so long as the Committee is investigating the question of making a merely suburban line from Sydney to Burwood, it would not have the desired effect which was intended originally—to relieve the Southern line of the western traffic. If the line was to be made, or they proposed to make the line a loop line to Liverpool from the Illawarra railway it would be of very great benefit, but to stop short at Burwood, I think, would be throwing a great deal of money away.

1553. *Mr. O'Sullivan.*] You have heard of a system of through trams, have you not? Yes.

1554. They run much faster than ordinary trams? Yes.

1555. I suppose a through tram from Canterbury to Dulwich Hill would take about one-third of the time? I believe it would.

1556. You said in your evidence to Mr. Copeland that your line was a shorter line to Sydney than any other? Yes, the shortest line to Sydney, as shown on the diagram. It is the shortest between the Illawarra line and the Southern line, till you get to a place on the other side of Hurstville—that is the shortest line.

1557. The farther you are away from Sydney the more Illawarra line you have got to run over, and therefore the longer the distance between Liverpool and Sydney? Of course you utilize a great deal of the Illawarra line already made.

1558. Instead of constructing the Dulwich Hill tramway to Canterbury would it not be better to have a tramway from Marrickville to Canterbury? No doubt it could be done.

1559. By that means the Department would get a double traffic—the traffic on the railway and the shilling traffic on the tramway? Yes.

1560. *Mr. Hurley.*] Are you associated in any way with a Mr. Cameron of Canterbury? No, none whatever. I merely know him as a shop-keeper; that is all. I don't suppose I have spoken half a dozen words to him in my life.

1561. *Mr. Dowel.*] You are a professional engineer, I believe? Yes, I am.

1562. You have been employed in the Government service and also by contractors? Yes, I have.

1563. Were you employed on the Northern line? Yes.

1564. By whom? By Proudfoot & Co.

1565. And any other contractor? I have been employed by Peto, Brassey, & Co., years ago, upon the Queensland line.

1566. You consider yourself thoroughly competent to give an opinion on the various routes indicated on that chart? I do; from former experience, before I came to this country.

1567. Have you given any study or inquiry to the grades, the heights of the embankments, and the cuttings on the proposed line the Committee is now considering? No; I have not. I have not seen a section of the proposed line. I have not even seen the plan or section, and therefore I could not, but I know generally the country it travels over.

1568. Then you have formed your opinion that it would be an expensive line to construct from your knowledge locally of the country? From my knowledge locally of the country I consider the line I surveyed

is far superior, and if the estimated cost of constructing this line is £19,000 per mile, mine would not cost £10,000 per mile. The section of that line which I submitted to the Government shows a very easy line. There is only one cutting of considerable magnitude.

1569. When you were exploring the country and making your survey, and previous to it and afterwards, did you give any attention to the surrounding country? Yes; a great deal. I took levels from the point marked B to the point marked E on this map.

1570. You explored the whole of this intervening country? I did.

1571. And after making an exploration as an engineer—not as a surveyor—and considering the engineering difficulties, you came to the conclusion that that was the best route? I came to the conclusion that that was the best route.

1572. From an engineering point of view, not that of cost? From an engineering point of view. I looked upon it as the cheapest and shortest line.

1573. Having stated that you know all the intervening country thoroughly, and that you consider that the best line, would you be good enough to inform the Committee what class of country that intervening country is? From Woolli Creek the country to the east is not a country very fit for cultivation. It is ridgy, and in some places it is stony, but it could be utilised for building purposes and so forth, and I believe that since I made that survey it has been taken up and sold in building portions and so forth. I think the whole of that country has been taken up and sold by companies and so forth.

1574. That is, the whole of the country, as I understand you, is undulating, and suitable for residential sites? Yes.

1575. That description of the country would apply as much to one route as to another, would it not? Quite so.

1576. I presume you made yourself acquainted with the various centres of population that would be likely to be served by the construction of this line? My impression is there will be as big a population there as there will be on the other side of Cook's River and on the Belmore side. My impression is that the whole of this country will be taken up; in fact, it is being taken up. There are various properties along here; very valuable properties. In fact, the whole of this country has been taken up right to this point here, and is pretty well populated.

1577. What was the ruling grade of your survey? I think the average grade was 1 in 100.

1578. And the curves? They were nothing under 25 or 30 chains. I do not suppose I made a sharp curve. I think the sharpest curve was going from the Illawarra line—10 chains radius—and something like 20 chains, running into Belmore.

1579. What bridges? I think there would be three bridges in all.

1580. Any expensive earthworks? No. The only cutting of any consequence was one of 40 feet, and that might be brought down to a great deal less by altering the line a little bit.

1581. Supposing the line were constructed according to the blue line shown on that chart, would you say, from your intimate knowledge of the country, that the line would serve Canterbury South, Parkestown, Kingsgrove, Moorefields, and Belmore? It would serve this part of the country equally as well as the Southern line would.

1582. You are referring now to the intervening centres of population between your surveyed line and the Government line, marked blue? Yes.

TUESDAY, 3 DECEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE CHAIRMAN.)

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARREARD, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

Mathias Hamburger, Esq., sworn, and examined:—

1583. *Vice-Chairman.*] You live where? I live at Strawberry Hills at present.

1584. You have sent in a statement to the Committee containing your opinions on the propriety of constructing a railway from Marrickville to Burwood Road? Yes. [*Vide Appendix.*]

1585. The contents of that paper are your true opinions with reference to the proposed work? Yes.

1586. Is there anything you would like to supplement your evidence by? No.

M.  
Hamburger,  
Esq.

3 Dec., 1889.

Owen Blacket, Esq., sworn, and examined:—

1587. *Vice-Chairman.*] You reside where? At Auburn.

1588. You know the proposal to construct a railway from Marrickville to the Burwood Road? Yes.

1589. You know that country? Well.

1590. You know the route proposed? Yes; I know all of it.

1591. Do you know the other routes that have been proposed out in that direction—the other surveys, I mean? I have seen them, but have not taken so much notice of them as of this one.

1592. Do you think the proposed line from Marrickville to Burwood Road is a desirable one? Decidedly.

1593. You think it would be of value to the community? Of very great value.

1594. Of course you consider it would be of value to those who live in the neighbourhood? Yes, and to the country at large.

1595. You think it would give a sufficient return? Decidedly.

1596. *Dr. Garran.*] Do you know the three routes that have been marked out? Yes.

1597. Are you of opinion that this one before the Committee, taken as a whole, is the best of the three? Yes.

1598. On what ground have you formed that opinion? It is the shortest straight route.

1599. It is the best as a direct route? Yes.

1600. And also for local purposes? As far as I can see it is.

O. Blacket,  
Esq.

3 Dec., 1889.

1601.

- O. Blacket, Esq.  
3 Dec., 1889.
1601. It goes through ground as suitable for suburban residences as any of the others? Yes, all the same.
1602. And with such slight deviations as may be necessary for improving the gradients you think it is the best line we could take? That is my opinion.
1603. It has been stated here that this route has been determined by land syndicates—do you know if that is so or not? Not to my knowledge. As regards the property I am interested in, it was bought before we knew anything about a railway line being constructed. We intended to take our goods by the Illawarra line. Not till we had settled there did we know that there was a survey there at all.
1604. A line influenced by syndicates is very seldom a straight line? Not as a rule.
1605. Do you know a line influenced by syndicates which is a straight line? No.
1606. This is a straight line? Direct.
1607. And on the face of it, you do not think it would be influenced by land-owners? I should not think it is.
1608. We are told that it is Mr. Whitton's line—the line he told the surveyors to follow? That was what the surveyors told me, and they carried out his instructions.
1609. He is not one to be influenced by a land syndicate? I should not like to approach him.
1610. As far as you know it is free from any private influence—that is all I want to get at? Yes.
1611. *Mr. Hurley.*] You are interested in an industry up there—are you not? Yes.
1612. What is it? Manufacturing iron works.
1613. Would the construction of the line there very materially assist the development of your industry? Decidedly. It would be of all assistance to us.
1614. What difference would it make in freight compared with what you have to pay now? A railway would cost us 1s. 6d. and we have had to pay 7s. 6d. for cartage. The cartage costs us right through the year 7s. 6d. per ton.
1615. On your coal and pig iron? Yes, on our material.
1616. So a railway would assist to build up your industry? Decidedly. When we were in fair work we turned out 30 tons of castings a week. To each 30 tons of castings we required 8 tons of coke and 5 tons of coal. We had to cart all that, and also to cart the castings back to Sydney.
1617. Did you employ many men? We had about sixty hands at that time.
1618. In the event of this railway being constructed are you likely to continue those works? Before we developed it again we might look a little for assistance in the way of protection, but the works would be started if we could get any capitalist to put money into the concern. We have lost all our own money.
1619. If you could save 5s. 6d. a ton on your carting of coal and other material to and from Sydney? It would be a large saving to us.
1620. Would it not be equal to a protective tariff? No; we would have to pay on a wrong footing.
1621. If we gave you 5s. 6d. a ton, would not that be an advantage to you? Yes; we cannot make it pay now.
1622. You are at a stand-still, and are not likely to develop the industry unless some advantage is given to you? We cannot go on now.
1623. Are you interested in any land syndicates? No; not in any respect.
1624. *Mr. O'Sullivan.*] Do you think this proposed line takes the best route to serve the industrial population in that district? The population will follow the line. There is a very small population that would be affected one way more than another. The lines are a very little distance apart. A population would spring up as soon as the line was constructed.
1625. *Mr. Trickett.*] You know that it is proposed that the line should cross the river at Canterbury? Yes.
1626. It has been stated here that that part is very liable to floods, and that if the line were constructed there it would in all probability be washed away—what is your opinion? I have known it about twenty-five years, and I have never known a higher flood than the last flood; and the railway bridge will go about 30 feet higher than the top of the present bridge, so that I cannot see how, if the water went level with that bridge, it could flood the railway line.
1627. So you think that there is nothing at all in it? No.

Aaron Brown, Esq., sworn, and examined:—

- A. Brown, Esq.  
3 Dec., 1889.
1628. *Vice-Chairman.*] You are an Alderman of the Municipality of Canterbury? Yes.
1629. How long have you resided there? About twenty-six years.
1630. You know the various lines that have been proposed to connect that district with Sydney by rail? Yes;—that is I know what are called "Bell's and Kennedy's lines." Those are the two popular lines that I know. I do not recognise any other lines.
1631. *Mr. Trickett.*] Do you know the lockspitted line? Yes, that is Kennedy's line.
1632. What is your opinion of that line compared with the other surveyed lines? My opinion of that line is, that it is not marked in an equitable position. It does not treat the district fairly. It is too much on one side. It does not go fairly through the district.
1633. Is it too much to the south or to the north? Too much to the north.
1634. What districts does it avoid which you think should be served? It avoids the districts which claim a priority of right to the railway—the originators of it—Moorefields, Kingsgrove, and Belmore. It was the people in those places who were called upon to give their land for the construction of a railway; but this line leaves them out in the cold.
1635. How far would the line be from those places? Some,  $\frac{3}{4}$  of a mile; some, 1 mile; and some,  $1\frac{1}{2}$  mile; and some people would have to go 2 miles in order to get to this line.
1636. By the construction of this line would they be any better off as regards communication with Sydney than they are at the present time? Some would be and some would not be.
1637. Can you tell us how you think the line should go. To begin with, do you think it starts at the right place—at Marrickville station? I am not so much acquainted with that locality, but I believe it does start in a very fair place.
1638. And until it gets to the river at Canterbury, do you think it is all right so far? I think there has been

been no objection to the line so far as Canterbury, but beyond Canterbury and Bankstown, is where objection has been taken all through.

1639. Until it reaches Canterbury you approve of it? Yes, thoroughly.

1640. Do you approve of the mode of crossing the river at Canterbury? I do not.

1641. How do you think it should cross the river? I think it should cross the river nearly opposite the sugar works where there is a spur coming down alongside the Cup-and-saucer Creek. The line could cross there on the high-level banks, and the difficulty of constructing a bridge would be considerably less; besides saving upwards of 300 yards of embankment, and it would then be a more intermediate line. There are 8 miles between the Illawarra and the Parramatta lines, and I think that in fairness the line should go as square as possible between the two—not within 2 miles of the one and 6 of the other.

1642. You think that at Canterbury it should cross the river more to the south? Yes.

1643. How much more to the south;—a quarter of a mile? About one-eighth of a mile.

1644. After passing the river at Canterbury it would take a more southerly course? Yes; in close proximity to Canterbury Road, and cross it at the 9-mile peg; where you would have no obstruction whatever.

1645. Is that line surveyed? It is partly. Of course the route by Belmore, which I have been suggesting, is a sort of deviation to meet the people half-way;—to make a compromise between Bell's line and Kennedy's line. It would serve Moorefields, Kingsgrove, and Belmore, and then junction on to the lock-spitted line at Bankstown.

1646. We do not get on so far with this line under consideration;—Burwood Road is our terminus? But of course the line will eventually go there.

1647. Would the line which you are describing, and which you think desirable, work in to come out at the Burwood Road somewhere about where this line is proposed to go? It would come out at Sharp-street. It was originally Burwood Road, but the Council has named it Sharp-street.

1648. That is where the Government have made it go? Yes. Bell's line is surveyed there. There is a 7 or 8 miles peg—8 miles and 7 chains, or something like that—at Sharp-street.

1649. By taking the line you suggest, would not other districts be deprived of railway communication? Not that I know of.

1650. Is it not a fact that the lock-spitted line is a kind of compromise line so as to suit all the locality there to the best advantage? I do not agree with you there.

1651. I am only asking you? I say no it does not, because it goes on what I call the verge of all the population, and avoids the centres—the centre of the population of the Canterbury locality.

1652. Would the line you suggest be a suitable place for a growing population? My opinion is it would be far better than the lock-spitted line, as it is on the ridge of the high ground the whole way, and therefore on more eligible ground for settlement.

1653. Would it be a more expensive line to construct? In my opinion it would not be nearly so difficult. I have travelled over both lines on foot, and there are no hills at all on it, whereas on the other line it is up-hill and down dale all the way.

1654. We have had it stated in evidence by several witnesses that the lock-spitted line is the result of public opinion—accepted as a compromise; have you heard that? I have never heard that before.

1655. Are you sure that there are many people of your way of thinking—that the line should take a more southerly course? I think it should go intermedially.

1656. Do you know other people of the same way of thinking as yourself? There are other people who think the same way as I do—a great many of them; in fact the people there, if they had a voice in the matter would be more for Bell's line than for Kennedy's, that is provided they were sure of getting a line; for they have been under the impression that by objecting they will get no line at all, and therefore were satisfied to take an outside line. If they were sure of getting a line they would very nearly all go for Bell's line. In fact, some of the people who are now going for Kennedy's line, say that my line would suit them the best, but "what is the use of going against the Government" is their cry.

1657. That is what we have been led to believe all along—that they look on the lock-spitted line as the best compromise to suit all parties? They have looked upon it in that way, as they say it is better to take that outside line than have none at all, but if the people who had a prior right in the matter were sure of getting a line, they would go for Bell's line.

1658. Have there been meetings to arrive at the opinion you express? There have been meetings at my residence.

1659. How many people attended those meetings? I suppose about 150 at one time, and perhaps 200 or 300 at another time. I have had two meetings at my place.

1660. Residents of the locality? So far as I knew.

1661. I suppose that was an out-door meeting? It was a public meeting announced by hand-bills. Of course my place was not big enough to hold the whole lot so they stood outside.

1662. Do you think it would be better to have the lock-spitted line than no line at all? I certainly would agree with you there, better to have the lock-spitted line than no line at all; but I am sure that Bell's line is far before the lock-spitted line, both from a national and local point of view. I have a letter in my pocket which I have written to the press, and have been congratulated upon, if the Chairman would like to look at it.

1663. I suppose you are aware that you are almost the only witness who has given evidence in the direction you have stated, that all the witnesses called up to the present time have accepted the lock-spitted line as the best compromised line? Yes; for reasons. They are frightened we will get no line at all, but I never was of that way of thinking, but always said we were sure to have a line, because the line would pay, and would be of a national, even more than local, benefit.

1664. Do you think that the tramway extended to Canterbury would answer as well as a railway? I do not recognise trams at all, and never did. They are an abominable nuisance wherever they go.

1665. What are your ideas as to the probability of the line from Marrickville to the Burwood Road paying the Government? I am sure it would pay. My belief is that any line 10 miles out of the city would be a paying line.

1666. Have you ever calculated the number of people that would be benefited at the present time by a railway from Marrickville to the Burwood Road? I have. I should think from 10,000 to 12,000.

1667. Would that be by the route you advocate or by the lock-spitted line? Both alike, because there is very little difference between the two in that distance.

A. Brown,  
Esq.  
3 Dec., 1880.

- A. Brown, Esq.  
3 Dec., 1889.
1633. That is to say that in the part we are considering there is very little difference? It would not make much difference that I can see to the Burwood Road, but when you went further it would make a lot of difference.
1669. Then I understand that your chief objection is when it goes beyond the Burwood Road? My chief objection is, that it leaves the people who have a prior right to the line out in the cold—the originators of the line living at Moorefields, Kingsgrove, and Belmore.
1670. Are those places beyond the Burwood Road? With the exception of Kingsgrove.
1671. But do you object to the lock-spitted line from Marrickville to the Burwood Road? I am only objecting in this way—that I say it is not treating the people fairly and justly.
1672. Which people? The people of the district.
1673. What people? I say the people beyond Canterbury—that is the people who reside in Kingsgrove, Moorefields, and Belmore. Those are the people who were asked to give their land for the construction of this line, and now they are going to be left out in the cold.
1674. *Mr. Garrard.*] They will save their land won't they? No doubt they will, but they will not have the same convenience of transit in and out of the city.
1675. *Mr. Trickett.*] When this line reaches the Burwood Road is its position there suitable to its extension on to Bankstown? Most decidedly it is suitable.
1676. It might easily be extended on to Bankstown if thought advisable? Just the same sort of work to go through—cuttings and so on—as from Canterbury to the Burwood Road.
1677. I mean the line as marked out would be easy of extension to Bankstown? Quite so. It would not be any heavier work than between Marrickville and the Burwood Road.
1678. Then your chief objection to the line from Canterbury to the Burwood Road is that it does not come quite near enough to Moorefields, Kingsgrove, and Belmore? Yes, that is my objection. My objection is that the line is not a fair one for the whole district. It is only 2 miles from one existing line, and 5 or 6 miles from the other.
1679. Of which line does it come within 2 miles? The Great Southern and Western railway.
1680. *Mr. Hurley.*] You say there are persons that have a prior right to the line; will you state how they came to have any prior right? The original committee that was formed came along there and asked us to give our land for the construction of this line. We did so. They had a plan showing the line they wanted, and that line ran on the south side of Canterbury Road right away through to Liverpool. That line was surveyed by Mr. Surveyor Bell in 1834, the survey being completed, I suppose, somewhere about June or July in that year, pending the Stuart Government railway policy. They expected that the line would be included in that Government's railway policy, but we were left out in the cold. They held an indignation meeting because the line was omitted from that Government's railway policy.
1681. Shortly, it amounts to this, that because they were the first persons to move in the matter—agitate for a railway—they have a claim prior to that of any other person—that is the sum and substance of it? Yes. You would naturally think so when they were called upon to give their land.
1682. You were saying that they are not running the line equitably? No, they are not.
1683. They should go a certain distance to the south? Yes.
1684. One-eighth of a mile, I understand you? Yes, where they fork off, but as they go further on the distance increases. There is a length of 5 miles from where they fork off at Canterbury to where they join again at Bankstown.
1685. You say there is a difference of one-eighth of a mile? Yes, at that one spot.
1686. Would that materially interfere with the people resident in that district, they having to go 220 yards more to reach the railway? No. At that particular place it would not, certainly.
1687. So you raise an objection to the line because you think it should go farther south and will serve a larger number of people, with only a difference of 220 yards as regards its position? Yes, at that particular spot; but if you go along the lines farther on there is over a mile between, and that is where the people would suffer and not where there is only one-eighth of a mile between. Any sensible person would know the people there would not suffer, but it is at Moorefields and Kingsgrove where the people would suffer.
1688. You are smarting under a disappointment, are you not, because the Government have not adopted the route suggested by you? I am not smarting under any disappointment, but am only fighting for a just cause.
1689. That line will go through your land? Yes, and it is the proper place for it to go through. It must go through somebody's land.
1690. Does the lock-spitted line go through your land? No.
1691. But the original line did? Yes.
1692. And you think it ought to go through there now? That is if you want to make a fair and equitable distribution of advantages; but if you want to go on one side you can go where you like.

David Dunn Middleton, Esq., sworn, and examined:—

- D. D. Middleton, Esq.  
3 Dec., 1889.
1693. *Vice-Chairman.*] Where do you reside? Peakhurst.
1694. Where is that? About 2½ miles from Hurstville Station.
1695. You have taken an interest in the proposed railway extension out in that direction? Well, both as to the district, and also with regard to the large area of Crown lands; that is within, I should say, about 3 or 4 miles of one of the proposed lines.
1696. *Mr. Humphery.*] You expressed a desire to give evidence, did you not, with regard to this proposed extension of the railway from Marrickville to the Burwood Road? Yes.
1697. Would you be good enough to give the evidence you desire the Committee to have before them? I came here and examined those plans in connection with the locality and the location of the Crown lands, and also the different routes, and taking them into consideration, I think that Mr. Simpson's line is the best—that is the line into Arncliffe, or the line into Hurstville.
1698. You advocate the line that starts from Arncliffe? Yes.
1699. And then to take up Bell's line? Yes. With a deviation from the 11-mile peg into George's River slightly, as far as it could be taken, so as to make a direct communication with some 6,000 or 7,000 acres of Crown lands on the opposite side of George's River.
1700. What distance from Sydney? In a direct line as the crow would fly, within 10 miles of Sydney.
1701. By the proposed railway route you speak of? By the Hurstville route, about 16 miles.

D. D.  
Middleton,  
Esq.

3 Dec., 1889.

1702. The line under consideration is between Marrickville and Burwood Road; that is a distance of 8 miles from Sydney? Yes.
1703. You say you are living at Peakhurst,  $2\frac{1}{2}$  miles from Hurstville Station? Yes.
1704. Are you living between Hurstville Station and Burwood Road, or between Hurstville Station and Bankstown? Hurstville and George's River. I am about a mile from Oakley's platform, or a mile and a quarter.
1705. As a suburban line, do you think a railway between Marrickville and Burwood Road would be inferior to the line you suggest between Arncliffe and Burwood Road? I do.
1706. What population would be served by a line between Arncliffe and (say) 4 miles distant? That I could not say.
1707. Are you not aware that the proposed line is less than 5 miles from Marrickville? Yes.
1708. To arrive at that point 8 miles from Sydney—from Arncliffe, what population would be served? That I could not state.
1709. Do you know the country between Arncliffe and there? Yes; very well.
1710. Is it not rough country? Parts of it.
1711. Would it serve Canterbury? No; it would not.
1712. Would it serve South Marrickville? No, it would not.
1713. Can you say whether it would serve any settled population at the present time? The principal settled population would be the population on the Canterbury Road. That would be from Belmore. Of course it would be more central, and more between the two lines than the proposed line.
1714. Would not that be beyond the 8 miles? Yes.
1715. Within 8 miles of Sydney would it serve any population at all? It would serve population.
1716. What population? Well, if it did not serve a very great population at the present time it would create a population, because the country from Arncliffe to Bell's line has got no communication at all.
1717. You think it would be a suitable line to make? Yes; if the line were carried through to Liverpool it would be suitable, but if carried only part of the way I don't think it would, nor that any other line would. For instance, take the Hurstville line. I think it pays 5 or 6 per cent.; but if it stopped at Hurstville I do not think it would pay 1 per cent. Hurstville would never have been what it is, and the line would never have paid, but the line being carried farther on, and the communication being so much more, there are a great number of trains.
1718. You are not aware, I suppose, of the returns between Hurstville and Sydney? I have had them.
1719. You have not got them? No.
1720. As a suburban line do you not think that the line as proposed between Marrickville and the 8-mile peg would be a better paying line in every respect than the one you suggest between Arncliffe and the same distance? It would be if only constructed to the 8-mile peg; but as far as Canterbury is concerned they have got a tramway within about a mile of Canterbury.
1721. Do you know the lock-spitted route? Yes.
1722. You see where it stops at the 8-mile peg? Yes.
1723. Would it not be possible by deviation either north or south to serve population beyond the 8-mile peg, as you desire if it were deemed advisable—by a deviation would it not serve the district you speak of and also give access to the Crown lands to which you refer? Yes; certainly.
1724. Therefore, no injury will be done by constructing the line from Marrickville to the Burwood Road—that is, it would be possible to repair any injury you think might be done by constructing a line which would not give access to the Crown lands? Yes; by constructing that line in that way it would require a great deal more line to be constructed, and there would be a greater distance to travel through taking those deviations.
1725. Are you quite sure of that? Yes; it would create a greater distance than the line marked blue on the present plan—a considerable distance more. By going from Arncliffe a great deal of bridge-making also would be saved, and also embankments on the low flats in going into Marrickville.
1726. Would there not be a difference in length between Marrickville and Arncliffe;—would not passengers have to travel beyond Marrickville to Arncliffe before starting on the proposed line from Arncliffe to Liverpool? They would have to travel a mile and a half further on the Illawarra line.
1727. *Mr. O'Sullivan.*] Do I understand that the line you advocate is that surveyed by Mr. Sanderson, from Arncliffe to Bell's line? Yes.
1728. How do you propose to serve the Canterbury race-course? The Canterbury race-course would be served by the Dulwich Hill tramway, or by people being carried by tramway to Ashfield Railway Station.
1729. As far as this proposed line is concerned—the permanently-staked line, the one under consideration—all that country could be served by tramways? As far as the Canterbury race-course is concerned. That is the question you have asked me.
1730. That is almost the end of the proposed line to Burwood Road, is it not? Yes.
1731. And the Dulwich Hill tramway serves a large proportion of the remaining country—the country between Marrickville and Burwood Road; that is served now, to a large extent, by the Dulwich Hill tramway, is it not? To a certain extent it is, but not as far as Canterbury. But you put a question to me with regard to the Canterbury race-course.
1732. The main portion of that country being already served by the Dulwich Hill tramway, the remaining portion would be served by tramway from Ashfield to Canterbury? Not to the Burwood Road, but only Canterbury.
1733. Almost to Burwood Road? Yes.
1734. How far is Canterbury from Burwood Road? I should say about 2 miles.
1735. About  $1\frac{1}{2}$  mile, is it not? I should say it is 2 miles to the 8-mile peg.
1736. If the line were taken past Canterbury, it would serve the Belmore country as well? Yes.
1737. So the entire route could be served by the construction of a short line of tramway from Ashfield to the 8-mile peg, through Canterbury? Yes.
1738. So there is no necessity for this line at all? Not to the 8-mile peg, if you stop there.
1739. *Mr. Tonkin.*] Are you interested in any land in that district? I have my homestead at about  $1\frac{1}{2}$  mile from Oakley's.
1740. Is that near the line you are proposing now? I think it would bring me about the same distance from the railway.
1741. How much land have you got there? Fourteen to 15 acres.

- D. D. Middleton, Esq.  
3 Dec., 1889.
1742. I suppose if the line were constructed to Arncliffe it would materially enhance the value of that land? Not more than Bell's line, running through Canterbury.
1743. Would this line that is proposed—the line from Marrickville to the Burwood Road—enhance the value of your property in any way whatever? No.
1744. Would the line you suggest from Arncliffe increase the value of your property in any way? It might slightly.
1745. Do you think you are not influenced to a certain extent by the fact that that line would increase the value of your property in suggesting this railway? Not at all.
1746. Then why do you choose a railway where there is no population at present in preference to a railway which you must know would go through a populated district? My reason for choosing that is that I am employed in the Surveyor-General's Department, and am supposed, and am paid to look to the interests of the Crown lands; and that is one motive that has brought me here to-day and making a deviation, as I say, as near George's River as practicable, would increase the value of that land to the value of similar land an equal distance from Sydney harbour—that is to £200, or £250 per acre.
1747. Would a line from Arncliffe increase the value of the Government lands more than the proposed line would? No; it would not, if constructed only to the 8-mile peg.
1748. That is the only line we have got under consideration—at least an extension to Liverpool is not before the Committee? Yes. But if that line is constructed to the 8-mile peg, it is two to one if it is not constructed right through, and I wish to draw attention to the fact that there are Crown lands there to that extent. Within the population area of Sydney—that is a distance of 10 miles from Sydney in a direct line—there are between 5,000 and 6,000 acres of Crown lands, and on this side of George's River there must be something like 50,000 or 60,000 acres.

Myles McRae, Esq., M.P., sworn, and examined:—

- M. McRae, Esq., M.P.  
3 Dec., 1889.
1749. *Vice-Chairman.*] You are a member of the Legislative Assembly? Yes.
1750. For the Electorate of Morpeth? Yes.
1751. You know the proposed route? Yes; I was the originator of the loop-line.
1752. The loop-line to Liverpool? Between St. Peters and Liverpool. I advocated the loop-line. I believed that when the northern traffic would be junctioned on to the southern and western it would be incumbent on the Government to relieve the northern and western of the southern traffic, and that a loop-line between St. Peters and Liverpool would have that effect.
1753. Two or three different lines have been recommended, I think? Yes.
1754. Which of these do you recommend? We formed ourselves into a working committee of twelve, and we recommended a line from St. Peters by Cup-and-Saucer Creek, Moorefields, Belmore, and direct to Liverpool. Advocates of other routes condemned our route on account of the costliness of three bridges—one across Cook's River, and two across George's River. The Committee recognizing the objection, by resolution shifted to Arncliffe, thereby getting rid of one of the obnoxious bridges, and a mile and a half of railway construction, and the resumptions between Canterbury and St. Peters, and Marrickville all totalling up to about £100,000. I may say that the resumptions now between Canterbury and St. Peters will be far greater, because development has taken place there in the building of houses.
1755. It appears that the Government have abandoned the project of connecting the line between Marrickville, Cook's River or Arncliffe, or any of those places, and Liverpool, and the work submitted to this Committee now, is a line from Marrickville to Burwood Road? Yes.
1756. You know that line? Yes.
1757. You know the country? Yes. I may say in reference to this proposal before the Committee that we failed to enlist the sympathy of the residents of St. Peters. They objected to sign a petition which we presented to the then Minister of Works. I think it was Mr. Wright. They said "we already have railway communication and Marrickville is pierced by the tramway." They refused to co-operate with us. I myself think that the railway is required to relieve the northern and western railway of the southern traffic—a loop line is required to Liverpool or not required at all, but this section is only a sop to gratify the assumptions of ratepayers.
1758. It is hardly our business to inquire into. We are just to take evidence as to the propriety of constructing this line without reference to the other at all? I do not think it is required at all.
1759. Do you think that if it were constructed it would not pay? I think that were the Government to construct the line along the route which you are considering and which hugs the western railway and the southern railway they would be in the anomalous position of constructing a railway to make the present railway a dead letter. I can understand an opposition company constructing a railway to compete against the Government, but I cannot understand the Government constructing such a railway.
1760. *Dr. Garran.*] Do you think that if this line to Burwood Road were constructed it would lead to the settlement of a large suburban population along the line? The settlement has already taken place there because the inhabitants are the recipients of tramway communication and railway communication—the Illawarra railway on the one side and the Great Western on the other and the tramway between. So that of itself encourages settlement and any other expenditure that would detract from that would have a detrimental effect so far as the revenue of existing lines is concerned.
1761. Do you think that if this railway were made to Burwood Road, in ten years' time the population carried by that railway would be ten times what it is now? It all depends upon the increased population that the country is susceptible of—the metropolis.
1762. Do you think that as a suburban line it would be a dead failure? Yes; because the cost of resumptions would be too great.
1763. You think it could not possibly pay? I do not think it could. It would be at the expense of the tramway if it did.
1764. You think it would be a national loss? I think so.
1765. You are prepared to commit yourself to that as a public man? Yes; I have opposed the construction of a railway from Marrickville, because it is a low-lying country. To begin with it is a hot-bed of disease and the whole of that land should be resumed by the Government in the interests of public health. The Government should do nothing to increase settlement on a country that is not adapted for settlement.

1766. But we have it in evidence that that is a very short piece of about three quarters of a mile, and that as soon as the railway is over that flat all the rest of the land is good suburban land;—do you dispute that fact? No doubt all the country beyond is good suburban country. M. McRae,  
Esq., M.P.

1767. We are told that on the whole the Marrickville Station is the best to start from? I dispute that. No junction on the Illawarra railway will bear favourable comparison with a junction at Arncliffe; since the Government are making Cook's River a navigable commercial centre. You get the inland traffic with the ocean traffic, and consequently no other junction would bear any comparison with one at Arncliffe. As regards settlement take the Illawarra railway between Cook's River and George's River. Before the construction of that line there was hardly a dozen tenements, but now you can count them by the thousand. Settlement will follow, and the distance between Arncliffe and Liverpool is only  $11\frac{1}{2}$  miles, and by going direct it is over comparatively level country, you distribute your favours equally between the Southern Railway, the Western Railway, and the Illawarra Railway.

1768. You say that if a line is made from Arncliffe it will serve a large suburban population, but if made from St. Peters it will not? Not so great. That is taking everything into consideration. I may say that most of the landed proprietors between Arncliffe and Liverpool have agreed to give so much land as will be required, free of charge to the Government, and on account of the development not being so great as it is between Marrickville and the village of Canterbury, the State will be exempted from expense of resumptions.

1769. But you are aware as a Member of Parliament that under the Public Works Act, the Government when dealing with a fair sized estate can always take into account the benefit given to the residue of the estate by the improvement and recoup itself? I was not aware of that fact. I thought the Government had to resume land for railway purposes and pay the market value.

1770. But if there is any residue of the estate to a considerable amount, the Government can take into consideration the benefit given to that residue? That is a new departure. Most people have generally looked on the Government as a good milch cow, and have wanted double instead of making concessions.

1771. Under these circumstances—seeing the Government can always get justice for itself—do you think it is supreme importance to ask people to give their land? Giving the land reduces the cost considerably.

1772. I understand you to say you were one of the early advocates of a direct line to Liverpool;—that is a loop-line? Yes.

1773. Did I understand you to say that as a justification for the loop-line you laid great stress on the fact that it would give relief to the Southern and Western Railways? My opinion is that the only justification for the construction of the loop-line is that it would relieve the Western line of the southern traffic.

1774. If there is to be a loop-line, the shorter distance between Liverpool and Sydney the better, is it not? The Arncliffe route is a little shorter than any other route, and that was a great consideration with us. One of the "planks" that we adopted was that this railway should be constructed to bring the southern traffic the shortest distance to the metropolis, and Arncliffe is the starting point for that purpose.

1775. When you say the shortest distance, do you mean the shortest amount of new line to make? And the shortest distance as well.

1776. Do you mean that going from Arncliffe to Liverpool is a shorter distance than striking off from Marrickville? Yes. From Arncliffe to Liverpool is about 11 miles, and to Sydney about  $4\frac{1}{2}$  miles making 15. I think the other route is 17 miles.

1777. Does not the line from Arncliffe go between Woollli Creek and Cook's River? A survey has been made, and I think the steepest grade is 1 in 100 or 1 in 120. By going on one side of Woollli Creek you avoid a rise of undulating country, but the whole of the distance is comparatively level country, and then if Canterbury is required to be served a deviation could take place so that the line could go along to the south-eastern side of Canterbury and up Cup-and-saucer Creek.

1778. But we have it in evidence that if the line is pinched between Woollli Creek and Cook's River it will not be so easy of access from the other side as by the route it takes now;—can you dispute that? The Undercliff estate which is on one side was sold twelve months ago by the Permanent Building Society for something like £250 an acre, and the land on the other side, while the land mania existed, sold as high as £400. It is better adapted for suburban purposes than any other on account of the good drainage that exists there. The elevation is, I suppose, about 100 or 150 feet above sea-level.

1779. Do you dispute the statement that by running a line on the ridge between Woollli Creek and Cook's River the line is not so accessible 2 or 3 miles from each side of the line as the proposed line;—do you think it is as accessible? All that country is accessible because the elevation is not of that character that would make it inaccessible. It is only 100 feet above sea-level, and any person who is not a cripple could get up that height.

1780. It is not a question so much of elevation as the crossing of water courses? You avoid crossing Cook's River by starting from Arncliffe, and you follow Woollli Creek on the western side. It runs parallel with the proposed route.

1781. It crosses Woollli Creek, does it not? I think it runs on one side.

1782. But it crosses it? It may eventually cross it. Woollli Creek starts near Salt Pan Creek or perhaps a mile this side, and runs into Cook's River in a direct southerly direction, I think.

1783. I understood you to say that although you proposed to start from Arncliffe, you proposed to work north again to connect with Canterbury? I would not do anything of the kind because the valley of Canterbury is within a mile and a-half of the Great Western Railway, and the village of Canterbury has no cause of complaint. The tramway reaches to Dulwich Hill, and by continuing that another mile you could connect with the racecourse. Therefore Canterbury has no cause of complaint at all for want of railway communication.

1784. So you throw Canterbury out? Decidedly.

1785. And you go from Arncliffe to Belmore? Yes, and direct to Liverpool. To accommodate the southern traffic I would take a straight line between Arncliffe and Liverpool, so that the southern traffic would be brought near the city and save the enormous haulage which extra distance would involve through all time. I would not consider one paltry village in a work of this character. I should go direct. I would not consider a few villages or humpies.

1786. Your line is practically Mr. Sanderson's line? Not necessarily. This would not be a loop-line at all, but the whole of the southern traffic would go over it on account of the saving of distance, and I think that any line to be constructed for that purpose should go direct irrespective of the consideration of any person on either side or any settlement, because the settlement will follow immediately, as was the case on the Illawarra line.

- M. McRae,  
Esq., M.P.  
3 Dec., 1889.
1787. You would rather consider the settlement of the future than the settlement of to-day? There is settlement right through, but not to the extent that there is on the low land at Marrickville where there are houses that should be pulled down if we had regard to public health. There are 4 or 5 feet of water there every flood.
1788. Do you think we ought to deviate this line out of consideration for the little townships there are now? No; I would not deviate at all.
1789. You disregard Belmore and Bankstown and the whole lot of them? Yes. Belmore extends right across the country for miles; they call perhaps 4 or 5 miles of the country there Belmore—north, south, east, and west. You go through Belmore no matter what route you adopt.
1790. But you do not go through the heart of the population? There is very little population at Belmore. There are only a few houses there. At Kingsgrove and at Moorfields there are almost as many houses as at Belmore, but the people there do not sing out so loudly.
1791. Then practically you advocate what is here called the Belmore route, except that you start from Arncliffe? Yes; I advocate a direct route. The Government have Crown lands on the southern side of George's River which would be enhanced in value. I believe the Government intend to construct a bridge across George's River at Liverpool, and that bridge would be available for railway as well as for vehicular traffic.
1792. But so far as the bridge at Liverpool is concerned, the Belmore route and the lockspitted route are very much the same? Yes. There is a great reason why a junction should not take place at Liverpool. Because Liverpool is situated on the banks of George's River—the present station is on the banks of George's River, and there is hardly room to swing a cat there at the present time. I think that a junction beyond Liverpool—on towards Minto—would be much better, for it would go right through Government land.
1793. *Mr. O'Sullivan.*] Why do you suggest this line should be taken to Arncliffe? Well the Working Committee, of which I was one, decided after mature consideration, that Arncliffe would be far preferable as a junction to Marrickville, and we, in figuring the matter out, saw there would be a saving to the State of £100,000, which is a big consideration in railway expenditure. The Marrickville authorities, in fact the Municipality, are up in arms and want the Government to resume land not fit for settlement, and for that reason no junction should take place there.
1794. I understood that one of your reasons for suggesting a junction at Arncliffe, was that the Government are making Cook's River navigable? Yes.
1795. Do you think it is likely that traffic brought down by railway would be shipped upon Cook's River? Yes.
1796. Where would it go to? It would go for consumption the same as any other produce.
1797. Do you mean to say that large vessels could enter Botany Bay, go to Cook's River, load heavy cargo and get out again? There is a steamer on Cook's River belonging to Mr. Cass, which takes cargoes of blue metal and coal and lands it on the Government wharf.
1798. Do you think that Botany Bay and Cook's River would compete against Sydney? I believe Cook's River will be a second Darling Harbour within twenty years, and as soon as Cook's River is navigable produce from north and south will come in as freely as in Darling Harbour now.
1799. Do you know the depth of Botany Bay? It varies to a considerable extent. I suppose there is 15 feet of water there. Steamers that trade to navigable rivers can enter Botany heads now.
1800. Do you refer to intercolonial steamers? No; I do not.
1801. How could Cook's River become a *dépôt*, the same as Darling Harbour is now? The traffic at Darling Harbour is so great that persons sending drays to load there have to wait two and three hours before they can get their turn. At the present time produce from the north and south coast—agricultural produce, and timber—can be delivered from Cook's River to St. Peters, Newtown, Marrickville, Petersham, Ashfield, and Burwood, within a shorter distance than it is delivered from Darling Harbour, and there are no disabilities at Cook's River—no extra charges,—and coasters, in bringing their produce, will land it where they will be submitted to the least expenditure.
1802. I understand you to imply it will be an import trade? There will be the trade that is required for the consumption of the metropolis—the same as the trade of Darling Harbour supplies that want at the present time.
1803. You mean that the coastal vessels, instead of coming into Port Jackson, will go up Botany Bay, and land produce near Arncliffe, and it will be distributed by railway to the intervening suburbs towards Sydney? Well, it could be sent. The produce would come by ocean, would be landed at Cook's River, and sent by rail up country, as it is now from Redfern. You could junction the water carriage with the land carriage. Drays would distribute the produce to the different centres.
1804. So far as the intervening suburbs are concerned, between Arncliffe and Sydney, could not that be done at the present time by the Illawarra railway? But you were speaking about the produce that came up the open roadstead; and I say the produce could be distributed to the centres I mention from a shorter distance than by bringing it from Darling Harbour as they have to bring it now. The drays bring it out as far as Burwood.
1805. Admitting all that, and also that produce could be brought from the coast of Botany Bay, and into Cook's River, will not the present Illawarra and Western Railway do all you want without another line of railway being built? There is no doubt it will.
1806. How can the loop-line help this import trade to Marrickville, Newtown, Petersham, and Ashfield? I do not think the loop-line was considered to benefit the importation of produce.
1807. But I understood you to say that one of the reasons for suggesting Arncliffe was that it was likely to become a port? Yes; and so it will. I believe that in twenty years Cook's River will be a second Darling Harbour if the population increases.
1808. But now you suggest that Arncliffe will be a receptacle for the imports from the coast, to be distributed to Marrickville, Petersham, and Ashfield? Yes, by drays and trollies.
1809. That being so, you do not require a railway running west for imports that go to the east? No; you do not. But this loop-line will accommodate the people of the southern district. They will save 6 or 7 miles of haulage through all time by this loop-line being constructed.
1810. But they would not use the port? I do not see why they should not. Port Jackson is used by those parties now. When we have droughts, produce that comes by the ocean goes up the country in thousands of tons, and it could go from Cook's River.
- 1811.

M. M. Rae,  
Esq., M.P.

3 Dec., 1889.

1811. You say that the Marrickville and Dulwich tramway runs parallel with the Illawarra line for a certain distance, and then parallel with the proposed line;—do you consider the country between Marrickville and the end of Dulwich Hill is served at the present time by that tramway? I do.
1812. You say that Canterbury is about  $1\frac{1}{2}$  mile or 2 miles farther on;—do you think that if a tramway were laid down from Ashfield to Canterbury it would serve Canterbury and the race-course? Decidedly.
1813. And that being so do you think it is necessary to construct this line between Marrickville and Burwood Road? No; I am opposed to it.
1814. *Mr. Hurley.*] You own some land near Arncliffe, do you not? Yes.
1815. Is that anywhere in close proximity to the route you propose for any line? It is about equidistant, or perhaps a little nearer than the junction at Marrickville; but I do not think that bears on the question at all, because any railway expenditure will benefit all the land the line runs through. I have got no land at Arncliffe this line would run through, if that is what you are aiming at.
1816. Had you anything to do with the survey, or did you pay the cost of a survey of what is called Sanderson's line? Yes; I agreed to pay Mr. Sanderson a certain sum which I did pay—£10, I think, for a flying survey.
1817. Was that with a view of securing a better route than the one proposed? The Committee were very anxious about this loop-line. We presented a petition signed by 14,000 people. Of course you can get people to sign a petition for anything.
1818. Was that signed by those persons connected with the Marrickville flats? No; St. Peters absolutely refused to have anything at all to do with the petition, but we thought that the loop-line would be required when the northern traffic would be junctioned on to the western, and we knew also that it would open up a suburban country and would benefit all the land it passed through belonging to Brown, Jones, or Smith, or anybody else.
1819. So, practically you paid for the survey of that line by Mr. Sanderson? Well, there were two or three others as well—some of the Committee and myself.
1820. Was that done with the view of getting the Government to construct that line? We recognised the objection that was made to the Marrickville route, because it involved the construction of three bridges, and we wanted to get rid of one of the bridges. The bridge that carries the Illawarra railway now was in course of construction then, and that would carry the loop-line as well, so we got rid of a bridge and a mile and a half of railway construction and resumptions that would cost £100,000.
1821. From a national stand-point you believe that route is the most advantageous? Yes; I do. There is no junction that would bear any comparison with the Arncliffe junction.
1822. You believe it is a necessity? If the country believes this loop-line is required to relieve the northern line I say that the loop-line to Liverpool is either required to be constructed or it is not. I don't care whether it is constructed or not.
1823. Do you believe now it is not a necessity? I believe that a loop-line from Arncliffe to Liverpool, or beyond Liverpool, would have a beneficial effect. It would reduce the distance between here and Melbourne 6 or 7 miles, open up country, and prove remunerative to the State.
1824. We are dealing with the line only to the Burwood Road? Yes.
1825. You are in favour of the construction of that railway? I have been for the last six or seven years opposed to it. It is no use persons sticking bull-headed to one proposal. If you want to gain your point you must make concessions; and when we saw the opposition had fatal objections to Marrickville, and that the cost would be £100,000 greater, we, as wise men, shifted to Arncliffe; and I may tell you that one of the gentlemen who would be eulged in consequence of our shifting wanted the railway to go through his land.
1826. But the lock-spitted line held the "joker" all the time? I am telling you that I am opposed to the construction of this line, and have written to every Minister for Works, except the present, for many years.
1827. Have you not written and advocated the construction of a line through that country, and spoken about the health-invigorating power of eucalyptus? No.
1828. And told the people it reminded you very much of the sunny clime of Italy? Nothing of the kind,—you are dreaming—romancing.
1829. Have you not, when a candidate for parliamentary honors, advocated the construction of a line through that district—through Canterbury—through that portion of the district? I do not think I did. My connection with this loop-line was after I was a candidate.
1830. I am merely asking you for the purpose of clearing you from assertions made against you? I am in favour of this loop-line on national grounds, and am opposed to every loop-line that will not confer the greatest good on the greatest number.
1831. You believe that Sanderson's line would have that effect? I am certain of it. I know every inch of the country.
1832. You paid all the money out of your own pocket? No.
1833. Don't you think you should look to the Government for reimbursement? I leave that for you. I think you are being reimbursed now.
1834. Don't be impertinent? Well, you introduced it.
1835. Are you not in close proximity to the line you propose? What do you mean?
1836. Have you not land immediately adjacent to the line you advocate? I have not. My land is about three-quarters of a mile from it, and about a mile and a half from the present proposed junction of Marrickville. I have no land along there.
1837. *Mr. Dowel.*] Are you aware that the proposed line at Burwood Road is about equidistant from the Illawarra and the Western lines? I think it is nearly double as far from the Illawarra as it is from the Western until it comes to Burwood Road; then it is nearer the Western line at Burwood Road than it is to the Illawarra.
1838. You know the whole of the country through which the permanently-staked or lock-spitted line travels well? Yes. There are three lines.
1839. But the line marked blue is the one the Committee is considering—you know the whole of the country surrounding it? I have been over the whole of that country.
1840. What is the character of the country within a radius of 2 or 3 miles of the proposed line? It is very good country for suburban purposes.
1841. And for residential sites? Yes.

- M. McRae, Esq., M.P.  
3 Dec., 1889.
1842. The whole of it? No; There are a few hundreds of acres of low land at Marrickville, joining the Illawarra railway.
1843. But the general character of the country from Marrickville to Burwood Road is exceedingly good for residential sites for purposes of settlement. Yes; it is not as good as the North Shore, excepting the low land.
1844. But in your opinion from your knowledge of the country, it is good for residential purposes—for building purposes? Well, gentlemen would prefer living on higher land—on the Lane Cove Road—rather than there; but no doubt it would suit the working and middle classes to live along there. I do not think it is as good as the Illawarra line, because the elevation is greater there.
1845. Would Canterbury, Parkestown, Moorefields, Kingsgrove, and Belmore be served by the construction of this loop-line? No doubt they would.
1846. The whole of those localities? Well, it only extends 2 or 3 miles.
1847. But those centres of population would be served? Oh yes.
1848. You spoke about the residents of Canterbury being served by tramway at the present time? Yes.
1849. Are you aware that a number of omnibuses and coaches are running from Canterbury into Sydney now? Only two or three. I know there is a coachman at Belmore who had a bill of sale over his coaches. It did not do at Belmore. They had to subsidise the coaches at Belmore.
1850. But from Canterbury do not buses run direct into the city? Oh, yes, of course they do; and there are omnibuses running on the Cook's River Road, although they have got a railway there; but they only eke out a miserable existence.
1851. From your knowledge of settlement in the immediate neighbourhood of Sydney are you of opinion that if the line were constructed settlement would take place upon it, and that in all probability within a short time it would be a paying line? No doubt, with any line constructed out there the development would be rapid—this or any other line—that is when the times get better. Lately the development has not been very much; but with a return of prosperity, I suppose a development will take place.
1852. You referred to a gentleman who was annoyed because a railway was not taken through his land? Yes.
1853. Be good enough to name him? It was Mr. Lane, of Belmore; he was Chairman of the Committee.

WEDNESDAY, 18 DECEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

W. G. Cameron, Esq., sworn, and further examined:—

- W. G. Cameron, Esq.  
18 Dec., 1889.
1854. *Mr. Hurley.*] When you were under examination a few weeks ago, in regard to the construction of a railway from Marrickville to Burwood Road, you made certain statements concerning persons who were interested in land along the route, and you emphasized the statement that certain persons who were representatives of the House, and connected with political life, were shareholders in the syndicates along the proposed line of railway. If you remember rightly, I endeavoured to get the information from you as to who the persons were, and you hesitated about giving the names. Hence you are called back to give the names of the persons—to whom you alluded,—whether they belong to either branch of the legislature,—and to give any information in your possession as to their holdings and their position in connection with the land on the route referred to? Pardon me, but your statement is somewhat incorrect. I made no reference to any gentleman in the Assembly or in the Upper House,—none whatever. Here is my evidence, and there is nothing in it to justify you in making that statement.
1855. Did you insinuate that there were persons, holding high positions in political life, interested in the line of railway referred to? No, I did not insinuate anything of the kind. I should like to draw attention to question 1203,—that is what Mr. Hurley is driving at.
1856. Refer to question 1199 as follows:  
Do you of your own knowledge know persons, who occupy positions in political life, who hold any interest in those syndicates?  
Look at your answer to that question? Yes, the answer is  
One gentleman, whose name I do not wish to mention, was connected with a certain building society, but whether he is now connected with it, or whether he had any connection with the transaction, I am not prepared to say.
1857. I want you to give us the name of the person whose name you suppressed? I appeal to the Chairman that my answer has no reference to the Legislative Assembly, nor to the Legislative Council.
1858. Look at question 1197—There you say:  
Immediately that line was known to have been surveyed, I know for a fact that certain large blocks of land were taken up. One was purchased by a certain building society of considerable proportions, in Pitt-street, and it was rumoured that certain gentlemen in high political positions were interested, but you must not ask me to give the names.”  
I want you to give the names of those persons in high political positions? What I stated was that it was rumoured. I did not say that I knew the names, and I should have thought it very hard, when endeavouring to give the Committee a hint, to be compelled to give names. No names were mentioned, and there is nothing in the evidence from one end to the other to show that I knew the names.
- 1858½. *Chairman.*] Then you decline to give the names? I do.
1859. *Mr. Hurley.*] Then you now state that you made those assertions upon a scandal which you had gathered up in the city. Is it not a fact that you made the assertion upon statements made outside, and upon which you were not warranted in relying? That is a question with myself whether I was warranted in relying upon the statements made or not. I desire to point out that a considerable agitation existed for

for a line to this district. The people of Parkestown, Belmore, Moorefields, and Kingsgrove, commenced an agitation as far back as the year 1883, and they promised to give the land necessary for the construction of the line, free of charge. Mr. Secretary Wright, the then Minister for Public Works, promised that if the people over the districts, known as Bell's line, would give the land to the Government free of charge, it would be a strong reason why the line should be constructed. After this line was surveyed, by the instructions of Mr. Wright, another survey of a line was made, and that is the line before the Committee. After this other survey was made, large tracts of land, which were then in a virgin state, were purchased, and that gave rise to the statement I have made. We thought it very hard that a settled district should be left out, and that a line should be carried through an unsettled district which had been bought by land speculators. Eventually these speculators sold their land to a building society.

W. G.  
Cameron, Esq.  
18 Dec., 1889.

1860. Refer to question 1201 as follows:—

“I want the name of any person or persons who hold any distinguished position in connection with politics, who are interested in the land to which you referred.”

Your answer to that is—

“I am on oath, and would not be prepared to swear any name although I have heard it, and have reasonable grounds for believing it. That is no reason why I should be prepared to swear to a thing as a fact—that would hardly be considered evidence in a court of law, it being a matter of hearsay, although I have in my own mind sufficient grounds for belief.”

It is in the interests of the purity of political life that we are endeavouring to find out if any person, occupying a distinguished position, either as a Minister of the Crown, or as a private member of Parliament, is in any way interested in this line of railway. The matter is not one of contention with yourself, but a matter in connection with which we desire to get at the facts of the case. Kindly tell us the ground upon which you made that statement? I have stated that a rumour existed. A statement might be made to me without the informant giving the names. There is nothing in the evidence to show that I knew the names, and I never stated that I did know them.

1861. You have heard it then? I stated it was rumoured.

1862. You stated, “I have heard it and have reasonable grounds for believing it?” I do believe it.

1863. Give us the names of the persons? I cannot give you the names. It was told to me as I have told it to you.

1864. Have you not stated yourself that a Minister of the Crown, in the person of Mr. Carruthers, is interested largely in the land along the railway? This is the first time I have heard of it.

1865. You have not stated it? I most distinctly deny it.

1866. Then any statement you have made as to persons in political life having an interest in this line of railway, is merely from what you have casually heard in the city? You have got hold of a wrong impression. The statement made before the Committee on my last appearance here had reference to a period of three or four years ago, when this deviation was made. I am not speaking of the present time.

1867. Have you not made statements that persons holding high positions——? I made no statements. They were made to me.

1868. And you repeated them? I repeated them here in the public interest.

1869. I ask you for the names referred to? How can I give them when I have not got them.

1870. You said you had reasonable grounds for believing what you had heard? Yes.

1871. Then you do not know any Member of Parliament, or any man occupying a position as a Minister of the Crown, who is interested in the land along this line of railway? I did not know the names of any one connected with the matter at the time I made the statement.

1872. And at the present time you do not know them? I have not identified myself with the movement for a long time.

1873. Any statement you have made, which would bear that construction, is from what you have heard outside? Yes, from hearsay. I stated so in my evidence.

1874. Then you have heard nothing which would warrant the assertion being made? I believed the statement which was made to me, and I believe it still.

1875. You do not know any Member of Parliament interested in the land along that route? No, I do not at the present time; but I am not certain.

1876. *Dr. Garran.*] It is in evidence by Mr. Deane that Mr. Whitton, after viewing the ground, ordered this line to be surveyed as the most direct line between Marrickville and Liverpool. Are you prepared to dispute that? No, I am prepared to admit it.

1877. Do you believe Mr. Whitton, in so ordering that line, was influenced by any person in high position, or any land speculator? I am not prepared to say that.

1878. So far as you know, was Mr. Whitton free from the influences you speak of or not? I have not the remotest idea of forming a judgment in regard to Mr. Whitton.

1879. Had you in your mind—whether from hearsay or otherwise—any suspicion that Mr. Whitton was so influenced? No, I do not think Mr. Whitton has got anything at all to do with it.

1880. Then you believe that the line, as now laid out,—and part of which is before the Committee,—was determined on Departmentally, and entirely free from outside influence? Do you mean as far as the Government are concerned?

1881. Yes; as far as the Government are concerned? Yes; I do sincerely believe that.

1882. You say that after this line was surveyed, land syndicates and speculators took up blocks along the surveyed line? I do.

1883. But that does not imply that they influenced the selection of that line? I made no implication. I only made a statement to assist the Committee to come to a determination.

1884. But when you say that land speculators observe these blocks, and go and buy where they think the railway is going to be, do you mean to say they have previously used influence for the line to be taken in a certain direction? I do not mean to say anything.

1885. Do you yourself believe that those who took up land, after the line had been surveyed, had previously used influence to get it surveyed in that direction? I am not prepared to say what I believe in regard to that matter. I may have my own opinion.

1886. Is it usual for persons who wish to make speculations of this kind to wait until the line is surveyed, before using their influence, or do they use their influence before the line is surveyed? I should think before.

1887. You have said that these land speculators entered into their speculations after the line was marked and pegged? After the survey was made.

1888.

- W. G. Cameron, Esq.  
18 Dec., 1889.
1888. Yes, after the survey was made? I will tell you how that was. Mr. Wright, when requisitioned in regard to this survey of which we are speaking, stated that it was not a survey at all. This is where the mysterious part of the business comes in. He stated that it was not a survey at all, but simply a cross-section, and the Committee, of which I was at that time a member, pointed out to Mr. Wright that he was breaking his promise—that he would construct the Bell's line of railway if the people gave the land for nothing. I have that on record before me. It was a funny thing for a Minister of the Crown to have a survey made, and then for it to be said that it was simply a cross-section.
1889. Your statements raise a suspicion in my mind, and I want to know whether you think these speculators bought the land after the survey was made, or before? A purchase of the lands might have been made some time before I or others became acquainted of the fact. That is where the difficulty comes in.
1890. But you have already stated that they made speculative purchases after the survey; and you put that forward as a sort of charge against certain persons of distinction? I did. It is impossible for me to state when the land was purchased. It might have been purchased before the survey was made, and the fact may not have been known until after the survey was made. I did not know it until after the survey was made.
1891. Is that not a purely hypothetical suspicion on your part. You know nothing about it? I do know something about it. Supposing I purchased that land, I might have had it in my possession some time before it was known that I purchased it.
1892. When previously before the Committee, you did not go beyond the statement that after the survey was made certain persons bought the land. Are you prepared to go beyond that to-day, and to state that these persons bought the land before the survey was made? I am not prepared to say that.
1893. You have implied it just now? I have my own opinion, but I have no proof. I believe it possible that the land was purchased before the survey was made.
1894. I am trying to find out whether you can refute Mr. Deane's statement that this line was a purely departmental line. If the line were determined by syndicates, it could not have been determined by Mr. Whitton? I am not prepared to say that; but if the question were one of directness of route, the most direct would be the Arneliffe route.
1895. We have sworn evidence from a departmental officer of high character that this almost straight line was ruled on a map in obedience to Mr. Whitton's orders. The tendency of your evidence is to show that this line has been selected under the influence of politicians and capitalists? I did not say politicians.
1896. Persons in distinguished positions? Yes; it was stated to me in the same way as it might have been stated to you. The Committee is at liberty to take what I stated for what it is worth.
1897. You are not prepared to refute Mr. Deane's statement? No.
1898. And you are not prepared to give any justification whatever to your suspicion? Yes; I think I have given a fair justification for the suspicion from the fact that whilst it was generally known that the Government intended to carry the line of railway along Bell's route, which was said to be simply a cross-section, large tracts of land were taken up by speculators, and, I believe, subsequently sold to building societies.
1899. I suppose you know that land speculators look where land surveys go? I am not finding fault with it.
1900. Is it not the commonest thing in the world to do? I do not find fault with it; but I thought it was very unfair to take the line from the present population which had made the place valuable, through land on which no population has settled.
1901. Whilst you think it unfair, we have it in evidence that the reason was a departmental one. You say that it could not have been a departmental reason exclusively, and that it must have been biased by influential people? I made no reference to departmental matters at all. I stated, and I state now that it looked very suspicious that after the Government had promised to construct Bell's line of railway, this survey should be made under the plea that that was a cross-section. After the survey was made, these lands were seized hold of, and improved, and cleared. No settlement had taken place upon them, and a lock-spitted line was carried through.
1902. But that does not alter the question as to whether this is Mr. Whitton's line or not. Are you prepared to swear it is not? No.
1903. Are you prepared to swear he was influenced in any way by any person? I state that I believe Mr. Whitton was not influenced in any way.
1904. You are simply arguing that it was unfair to shift the original Bell's line to the present one? Yes, unfair to the population.
1905. We have it in evidence that Mr. Whitton altered it for surveying and engineering reasons—is that true or not? I must accept Mr. Whitton's statement; but I would point out that the difference in regard to straightness is so fractional, that the cost of constructing the other line would more than compensate for that difference, and would benefit a greater number.
1906. I want to know whether the selection of this route was influenced by political persons and speculators or not? I think, Dr. Garran, you drew an inference.
1907. You do not give straight answers to straight questions?—
1908. *Mr. Tonkin.*] You have mentioned that Mr. Wright stated to you that this survey was a cross-section? Not to me.
1909. To some deputation or other? Yes.
1910. You are sure that Mr. Wright made the statement to a deputation or in answer to a question in the House, that the survey was a cross-section and not the main survey? Yes.
1911. And at the same time that survey was actually the present line under discussion? Yes.
1912. Do you believe that Mr. Wright, at the time he made that statement, knew he was not stating what was a fact? I am not prepared to say that.
1913. Do you think he made that statement knowing that it was not a fact? I do not think he did. I am sure he would not.
1914. Have you any idea whether he would have any motive for a statement of that kind? I could not impute any motive, but I know he made that statement.
1915. Mr. Wright at that time was Minister for Public Works? Yes.
1916. Do you think a Minister could possibly make such a mistake as to make a survey of a main line into a cross-section? I hardly think so.
- 1917.

W. G.  
Cameron, Esq.  
18 Dec., 1889.

1917. Are you sure you are not making a mistake? No, I am not.

1918. I see from the Appendix that Mr. Secretary Wright was asked to name a day on which to receive a deputation, but he declined to receive a deputation on the ground that he was in possession of all the facts which could be urged. Is that the deputation to which you refer? I do not think it was a deputation. It was a correspondence which was being carried on between the Committee and the Secretary for Public Works.

1919. But if that statement was made by Mr. Wright would it not deter many people from purchasing land on that line? I do not know whether the statement was made public. It was a communication between the Department and the St. Peters to Liverpool Railway League.

1920. But is not all the correspondence between the League and Mr. Wright public property? No doubt.

1921. Then the statement of Mr. Wright that it was a cross-section must have been a public one? I have no doubt it was. I am not prepared to say that all the statements are public.

1922. If such a statement were made would it not be misleading to the general public? No doubt about it.

1923. You have no doubt you are correct when you say that Mr. Wright made that statement? I am prepared to state that he did say so.\*

1924. *Mr. Copeland.*] Can you give the names of any men in political life who are connected with land which this railway would benefit? No, I cannot.

1925. Do you consider you have good grounds for believing that any member of Parliament or Minister of the Crown has improperly used his public position to influence the Department in submitting this line of railway? I am not prepared to say that.

1926. Then you cannot give the Committee any definite information on the matter? No; I simply gave it as a cue in order that it might be of some service.

1927. You gave it as what you heard as a rumour? Yes, and I stated so in the evidence.

1928. But you have no information with which to support that rumour? None whatever. I simply stated it as hearsay and rumour.

1929. *Mr. O'Sullivan.*] What are the names of the land syndicates to which you refer in your evidence? As far as my memory serves me I did not refer to any syndicates specially. I stated that it was a land speculator's line, and I believed those large tracts were bought by large speculators, and subsequently sold to building societies.

1930. Can you tell me the names of any societies which have land out there, or which have bought property along the line? One society has a large board on the Canterbury Road. No one can go along the road without seeing it.

1931. What society is that? I believe it is the Anglo-Australian.

1932. Are any politicians connected with that society as directors? I am not aware of any.

1933. Do you know a society called the Land Reform Society? No.

1934. You do not know of any society of that name which has bought land along this line? No, not of that name.

1935. Or any name of that kind—the Land Reform Investment Society? No; I only noticed that board with large letters upon it fronting the main Canterbury Road.

\* NOTE (on revision):—The following remarks will probably clear up any doubt arising from answer given to question 1923. I wish to add in answer to question 1910, asked by Mr. Tonkin, that which I was unable to furnish when requested to do so:—

“Department of Public Works,  
Sydney, 31st January, 1885.

Dear Sir,—I have your letter of the 30th, re the proposed railway from St. Peters to Liverpool. Your committee need not be in any alarm about this. I have in no way changed my views, and the surveyor has received instructions to stake the line out; but before doing so, he is making the necessary cross-sections.

Yours faithfully,

(Signed) F. A. WRIGHT.

J. H. Legge, Esq., Chairman of Committee, proposed railway, St. Peters to Liverpool, 112, Pitt street, Sydney.”

This communication refers to Bell's line.

Also I desire to add to question 1912, asked by Mr. Tonkin, that the survey was not ordered by Mr. Wright—but by Mr. Whitton at the urgent request of certain interested parties—during a temporary absence of Mr. Wright.

A suitable reply was at once despatched to the foregoing intimation from the Minister that he had, at this date, selected the route of the proposed railway, and he was informed that 97 (ninety-seven) property holders along such route, were then prepared to make free grants of land, and to execute conveyances to the Government for that purpose immediately they were called upon to do so. Your committee believing that the time had arrived in which the areas of the respective portions of the lands required to be transferred, should be ascertained and described, also offered to render any assistance which the Minister might suggest, and which lay in their power towards that object, and likewise undertook to have all requisite conveyances duly executed if so desired.

On January 30, 1885, your committee wrote stating that they were unable to find that the line was being “staked out” in compliance with the last-mentioned assurance received, and pointing out that notwithstanding the Minister's announcement to a deputation advocating a different route that “there must be an end to these incessant trial surveys,” they ascertained that a fresh trial survey was being made, which would leave aside all the populated neighbourhoods, and which was quite divergent from the route proposed and already decided upon, as intimated by the Minister.

TUESDAY, 21 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

C. A. Goodchap, Esq., M.P., sworn, and examined:—

- C. A. Goodchap, Esq., M.P.  
21 Jan., 1890.
1936. *Mr. Trickett.*] You are at present one of the Members for Redfern? Yes.
1937. You were formerly the Commissioner for Railways? Yes.
1938. The Committee are at present considering a proposal to extend the Railway from Marrickville to a point on the Burwood Road. Are you cognisant of that proposed line? Yes.
1939. Have you been over it? I have.
1940. Do you know the length of the line? It is about 4 miles 60 chains from Marrickville to Burwood Road. I think the construction of the line would cost about £90,000.
1941. Are you in favour of the proposed line? Yes, I am decidedly in favour of it.
1942. Are you in favour of it as a line by itself, or as part of a possible extension further on? Well I think that as a line by itself it would be a remunerative undertaking.
1943. Would you give us your reasons for coming to that conclusion? I think that it offers great facilities for the location of a large population on the line; the land is admirably situated for residential purposes, and I believe it will be largely availed of by the public, the more so as it has this advantage over other suburbs that the value of the land there is very much smaller than it is on any other suburban line.
1944. The value of the land to be resumed? No; the land for residential purposes. I consider that the high value placed on land in many of our suburbs is a deterrent to a great number of poor people who might seek habitations there; I think that the land in the vicinity of this line will offer a great temptation to a large number of people to go and reside there.
1945. Do you think that the construction of the line would be a benefit in the way of promoting manufactures of any kind? I think that a great number of manufactories would start where there are water facilities, and at Cook's River there are great facilities for that purpose.
1946. You are aware that on either side of what is called the lock-spitted line there have been rival routes? There have been three lines proposed.
1947. This is the centre one? Yes.
1948. Do you think it the best of the three? That is my clear opinion.
1949. On what ground do you base that opinion? It will tap the most population.
1950. Can it be as easily constructed as any of the others? I do not know about that. I think that the cost of constructing this line may be comparatively greater than the cost of the other projected lines. A line was suggested from just beyond the river—Arneliffe—and of course that line might be cheaper to construct than any of the others, for the reason that it would not necessitate the construction of a bridge over Cook's River. I should decidedly say that the lock-spitted line would be the best of those proposed, as tapping the largest population.
1951. Then if the line started at Arneliffe it would avoid that population? Yes; I think it would.
1952. In some papers before me I find the following:—"Mr. Myles M'Rae drew the attention of the Minister to a scheme which he had propounded some years before for resuming land on an extensive scale along the course of the proposed line, and after the construction of the line disposing of the surplus land, which he maintained could be done at an enormous profit." Then there is a side-note which says:—"This was Mr. Commissioner Goodchap's scheme." Since then have you changed or modified your opinion in reference to the proposed line? When I was Commissioner for Railways I suggested to the Minister for Works that agents should be employed for the purpose of acquiring land at least a mile in width from the neighbourhood of St. Peters or Marrickville to Liverpool. It was then understood that the land was held in large estates, and it was thought that by employing agents outside the Government service, and getting that area of land under offer for six months, the Government would be enabled to submit a Bill to Parliament for availing themselves of the contracts which would have been made, to take up the land, form townships, construct a railway, and pay the cost of the acquisition of the land by the sale of the surplus, which I am sure we should have been able to do. The Minister of the day so far agreed with me that an agent was employed for the purpose of getting the land under offer; but, whether by the views of the Department becoming known, or by a singular coincidence, almost immediately afterwards an agitation was got up for the purpose of inducing the Government to construct the line. Of course the proposal to acquire the land in the way that I had proposed then became inoperative, and I suggested to the Minister that under no circumstances should the Government consent to construct the line unless the owners of the land through which it would pass would give free the land required for the line.
1953. This proposal to connect the Southern line with the Illawarra line somewhere about Newtown is no new idea of yours? I have had that idea for many years.
1954. You are still of opinion that it is a desirable thing to carry out? I am not so convinced of the desirableness of carrying the railway from Sydney to Liverpool as I was in those days, because at that time it was the alternative scheme to the doubling of the line from Campbelltown to Liverpool, and the quadrupling of the line between Sydney and Homebush. Now I believe that both those measures have been provided for; therefore the necessity for this line on the score of its meeting a congestion of the traffic is in a large measure removed. I may say that it is altogether removed. There is the other ground that it would save the public 5 miles of running, and that is the only ground on which the construction of the line to Liverpool can be advocated.
1955. The difficulty of relieving the traffic on the Southern line will shortly be removed by the quadrupling of one line and the duplication of another? Yes.
- 1956.

1956. Therefore that phase of the question is much modified? Yes, in my opinion.

1957. I ask that because the Railway Commissioners state that as a means of relieving the traffic of the Southern line the railway, if carried to Liverpool, will be of very little utility;—do you agree with that? I do; with the facilities that are to be afforded it would be of very little utility.

1958. Have you gone into details so as to ascertain what would be the main benefits accruing from its construction from Marrickville to Burwood Road? Yes; I have formed an opinion on the subject from my knowledge of the district; the population already there, and the population which would immediately follow, if the line were constructed.

1959. Can you tell us what opinion you have arrived at as to the probable result? I consider that the line for the first twelve months would realise £8,000 or £10,000. That is for the whole length, from Burwood Road right into Sydney.

1960. Do you look upon the Canterbury Racecourse as an important factor as regards the earning capabilities of the line? Yes; a very important factor.

1961. You think that it would be largely availed of by people going to the racecourse? I think that if the line were made a greater number of people would attend the racecourse than do now attend it. I think the returns would show a revenue from that source of £2,000 or £3,000 a year at least.

1962. You think that the probable revenue of the line from Burwood Road into Sydney would be £10,000 a year? £10,000 for the first year, and a continually increasing revenue afterwards.

1963. I suppose you could not separate the earnings on the first portion of the line from those on the line from Marrickville to Burwood Road? It would be a matter of proportion. It is 4 miles 60 chains from Marrickville to Burwood Road, and 3 miles 20 chains from Sydney to the Junction. I do not know that the 3 miles 20 chains should be altogether credited with an equal proportion of revenue. I think that the new line should have the benefit of that to a very large extent. Only the actual cost of running the traffic from the junction into Sydney should be credited to that portion of the line.

1964. The Railway Commissioners tell us they think that the revenue from this portion of the line will be about £3,000 a year? I have no hesitation in saying that it is altogether an under-estimate.

1965. Marrickville and Dulwich Hill are already served by a tramway? Some portion of Marrickville but not the western portion of it.

1966. Do you think that the making of this railway would be like robbing Peter to pay Paul, take traffic from the tramway to the railway? I think it would not do that in any material degree.

1967. For what reason? Because the traffic to be served—which I calculate is altogether beyond the province of the Illawarra line, or the Marrickville tramway to carry—is independent traffic at present carried by omnibuses.

1968. It has been suggested to the Committee that a tramway from the Ashfield Railway Station would carry the traffic to the Canterbury racecourse? I am clearly of opinion that it would do no such thing. The number of people to be carried on race days would necessitate a larger service than the Department could possibly supply, and I do not think that a tramway would be sufficiently attractive to the public.

1969. Has your experience been that where suburban railways have been made a rapid increase in population, and the railway revenues has accrued? Our experience has been entirely to that effect.

1970. And you think this a most desirable line to construct at the present time? I think so. If I had a voice in the matter I would certainly carry it beyond the 8-mile mark.

1971. You said that if the line were taken on to Liverpool the landowners ought to give the land required for it, but considering that the estates have been cut up into small areas do you think that condition ought to be imposed now? I do not, as regards owners of small allotments. It would be an absurdity to ask the owner of a small allotment to give his land free; but if the line should pass through any large areas—

1972. What is your idea of large areas? Areas of 600 acres or 700 acres.

1973. Then it would be only fair? Yes. Under the present Railway Act the necessity for demanding a free gift of the land required for a railway is not so great as it was at the time when I advocated it, because the compensation to be paid is to abate in proportion to the value given by the railway to the residue of the land.

1974. *Mr. Lackey.*] Have you given much attention to providing railways for suburban traffic? Yes.

1975. And supposing that this accommodation were to be provided, do you think that it ought to be on some definite system, or commenced in the way that this project is to be? I think that the locality through which this railway will pass offers special facilities for the location of a large number of people on the land, and I think for the reasons which I have already given, viz., that the value of the land there is so very much less than the value of other suburban lands that the people would go and locate themselves there to a much larger extent than they have settled on the other suburban lines. In fact the prices of land on the other suburban lines are prohibitory in a large measure to the poorer classes of the people who might desire to reside on these routes.

1976. When the project was first submitted, of which this line form a part, it was one to extend from Liverpool to Sydney? Yes.

1977. When you were in office did you receive applications for the construction of lines to other suburban districts, such as Saltpan Creek and Druitt Town? There were numerous petitions for the construction of lines in that direction to get settlement on the land.

1978. But nothing has been done to give effect to them? No.

1979. Supposing this project were carried out, do you think it would go a certain distance towards meeting the requirements of those residing further on? I have no doubt of it. I should advocate the construction of the line as far as the 11th mile. That would take it to the immediate vicinity of Bankstown.

1980. There is a settled population about Bankstown? Yes; Upper and Lower Bankstown.

1981. Is there good land? Excellent land, and excellent sites for residences up to within 2 miles of George's River. I think the ground is admirably situated for residential purposes. It is elevated land.

1982. Are you as strongly in favour of the construction of this part of the line as you were formerly in favour of the construction of the whole line? In advocating a through line to Liverpool I had in view the advantage of affording a suburban line to Bankstown. I think I stated in my report that it was an admirable line for curtailing the distance for the through traffic, and that it would take off the congestion of the traffic on the main line, and also afford a means by which the poorer classes of the people could obtain residences in the country instead of being cooped up in the town.

C. A.  
Goodechap,  
Esq., M.P.  
21. Jan., 1890.

1983. Do you think it would not be practicable to give the residents in those districts adequate accommodation by extending the tramways? I think not. I think the distance is too great for trams, and time being the essence of all arrangements of that kind, the time occupied in coming into town by a tram service would lessen very much the advantages to be obtained by rapid communication.
1984. That is supposing the tram service were conducted on a single line? It would not matter whether it were a single or a double line, the time occupied would be too great for people engaged in business in the town, and it would be that class who would reside in the localities to be provided for.
1985. Do you know at what rate the trams travel? Yes; the average, including stops, is about 6 miles an hour.
1986. Stopping at the corner of every street? No; at the recognised stopping places.
1987. Could we not have alternative services, one stopping at one place and the other stopping at another place? I think that that would cause the greatest possible inconvenience to the public. They would not know where the trams were going to stop, and they would always be in the wrong ones. The system, though good in theory, is practically inadmissible.
1988. Do you not think that in connection with a system of suburban railways a well thought-out system of that kind ought to be adopted? That plan is adopted now. There are through suburban trains and stopping suburban trains.
1989. I mean for the suburbs generally, such as Botany, Randwick, and others;—it has been said by those opposed to the tramways that some system of suburban railways ought to be introduced? Yes; I believe so.
1990. You are of opinion that a large tramway system would be incapable of performing the service between the metropolis and populous suburban districts? Yes.
1991. Suppose that this project were carried out, do you think it is desirable to commence in this way by making an isolated suburban railway, or ought some system to be adopted by which suburban tramways could be carried out? There is this distinction between the two. On a railway there are certain stations well marked stopping places, and it is possible on a suburban railway to run through trains and stopping trains, but I do not think that that could be made to apply to the tramway service.
1992. *Mr. O'Sullivan.*] You are aware, I presume, that this proposed line will run parallel within a mile and a-half of the line to Parramatta? No, I am not aware of that.
1993. Are you aware that the Canterbury race-course is only a mile and a-half from the Ashfield Station? It is about that distance.
1994. This line will almost touch the Canterbury race-course, will it not? I believe it will. At that point it is about a mile and a-half from the railway.
1995. As a matter of fact it gets a little closer to the line to Parramatta the nearer it approaches Marrickville, judging from the diagram? I am not sure of that. I know that as it leaves Canterbury, towards Burwood Road, it gets farther away.
1996. I am talking now about the greater length of the line from Marrickville to the terminus at the Burwood Road; would you say that it is within 2 miles of the line to Parramatta? I do not think that at Belmore it is within 3 miles.
1997. But this line does not touch Belmore? It is to the right of Belmore—to the north of Belmore. I think that the terminus at Burwood Road would not be within 3 miles of any station on the main suburban railway.
1998. As a matter of fact we know that the line at some points is within 2 miles of the line to Parramatta? Of the line to Parramatta, yes, but of no station. It is no use reaching a line unless you can reach a station.
1999. I give you one station—Ashfield—which, we have evidence to show, is between a mile and a mile and a half from the Canterbury race-course, and this line would go very close to that race-course; therefore the line could not be more than 2 miles distant from the Parramatta line? It is not at that point.
2000. Bearing in mind also that this district is to a large extent served by tramway from Dulwich Hill, which tramway runs parallel partly with the Marrickville line and then parallel with the proposed line, do you not consider that the district is already pretty well served by railway communication? In the first place I must, with great deference, correct your statement that the Dulwich Hill tramway at all attracts the traffic that will be attracted by this railway. Separating the traffic which avails itself of the Dulwich Hill tramway, I estimate that all that traffic which lies towards the river will be benefited by this railway, and the railway will not in any way interfere with the traffic which at present makes use of the Dulwich Hill tramline.
2001. Taking your statement now, supposing this line were not constructed at all, the people living in that district to be served by this proposed line must utilize the Dulwich Hill tramway if they want to go into Sydney speedily, or else must go on to the Parramatta line? The people I am considering now—the people who reside in western Marrickville—a large number of them would make towards the Tempe station on the Illawarra line.
2002. How far would those people be distant from Tempe? A mile and a quarter or a mile and a half.
2003. Do you not think that they are pretty well served as matters stand, in having railway communication only a mile and a half away? I should say that looking at the demand for facile communication, they would be considerably disappointed if they had permanently to rely upon those means.
2004. Of course in the future when there is a large population out there, that argument, I admit, might be of great importance, but does it not strike you that this is a work that might very well stand over for a while till that population is about there? I do not think that the population will be about there till the railway is there; the population will follow the railway.
2005. What do you consider the population out there really to be served by this railway? In course of time 20,000, 30,000, or 40,000 people; at the present time, I should say from 12,000 to 14,000, taking in western Marrickville.
2006. Including places already served by railways? Served inadequately by railways.
2007. You said in your evidence just now that you expected that this line would yield from £8,000 to £10,000 the first year? Yes.
2008. And that that would include 3½ miles of traffic on the Illawarra line? Yes.
2009. Will not that rob the Illawarra line of that 3½ miles' traffic? No; it will be new traffic. I meant 3½ miles from Marrickville to Sydney. All this new traffic will be brought on to that line.
2010. How does this traffic come now? It is coming by Bankstown, Canterbury and Belmore; it is being conducted by omnibuses.
- 2011.

C. A.  
Goodchap,  
Esq., M.P.

21 Jan., 1890.

2011. I understand you to say that in your estimate of £8,000 or £10,000 you include  $3\frac{1}{2}$  miles of line from Marrickville to Redfern? Over which this line will run. I am not including in that statement the ordinary traffic which now comes on that line—not the present Illawarra line traffic.

2012. Will not these trains interfere with that ordinary traffic? No.

2013. Will they not pick up passengers from Marrickville to Redfern? No doubt of it.

2014. By so doing would they not rob the Illawarra line? If they do that the revenue will be very much larger. As a matter of convenience they will pick up traffic, no doubt.

2015. If it is larger for this proposed line it must be smaller for the other line? I do not think so.

2016. If you rob the Illawarra line of 5,000 passengers a year they will be taken off by this proposed line? Although these trains may pick up this traffic it will be credited to the Illawarra line, as properly speaking it is that line's traffic.

2017. As a matter of fact, then, you can only rely on traffic between Marrickville and the end of this line as legitimate traffic for this line? That is all.

2018. Do I understand you to say that that would bring in from £8,000 to £10,000 a year? Yes, into Sydney.

2019. In the first twelve months? Yes; I am quite certain of it. I said in reply to Mr. Trickett that I thought it a very undesirable apportionment of the revenue to credit the Illawarra line with its proportion on a mileage basis. This is new traffic brought on to that line in consequence of the construction of a line from the junction to Burwood Road, and if we followed the English practice, and if it were a separate Company, it would take running powers over the portion from the junction to Sydney and pay a certain amount for that privilege, but it would not give up all the revenue derivable from that traffic.

2020. Still, you admit there would be a danger of this line robbing the Illawarra line? Not a bit.

2021. Not of passengers it would pick up, who generally go by the Illawarra line? Though picked up by these trains they would be credited to the Illawarra line. It would not rob them of a single passenger.

2022. Then your estimate of £8,000 or £10,000 is altogether outside that? Yes, altogether outside the Illawarra traffic.

2023. You appear to rely a good deal on the traffic to the Canterbury race-course; what do you estimate that at per year? From £2,000 to £3,000.

2024. Do you know the number of persons who have attended there? I am informed that in the last twelve months 46,000 people have gone there.

2025. Are all those people likely to go by railway? Certainly; with immaterial exceptions, I think they would all go by this line if it went near the race-course.

2026. Do you not think that a large proportion would consist of residents who live near the race-course, while another proportion might go in their buggies? I think that the facilities offered by railway are so great as to be sufficient inducement to people to travel by it rather than employ their own vehicles.

2027. In reply to Mr. Lackey, I think you said that a tramway from Ashfield to Canterbury could not carry the traffic to the racecourse? I am quite certain it would be altogether impossible. A train would go out with at least 600 or 700 passengers—perhaps a thousand passengers—in a special train for the races, and it would be quite impossible for any tram service to remove those persons from the railway station to the racecourse; it would necessitate the people being kept there—any desiring to go by the tramway—until the tram went and returned for them; and that inconvenience, I think, would be too much for the public.

2028. Could not provision be made to meet this to a large extent in a case of emergency? I think that the inconvenience and expense of it would be too great. Certainly, eight or nine tram-cars, or even a larger number than that, would be required to be at the station.

2029. Of course you know the tramway serves the Randwick racecourse? That is a very different thing.

2030. If the tramway there can be made to carry that large traffic, surely it could meet a case of emergency at Canterbury Park? The trams to Randwick fill up gradually; they are not brought to a large centre all at once and have to be dispatched from that centre; they get out to the racecourse during several hours in the day, and do not all go at once.

2031. In this case the people would arrive by railway at Ashfield? Yes.

2032. Could you not have enough tram-cars there to run them out to the Canterbury racecourse in half-an-hour? I think it would be possible to provide for that, but it would be very inconvenient and expensive to do so.

2033. If that would do, it would serve a large portion of the traffic that might be served by this line? I do not think that it would increase the traffic very much, and the inconvenience would be so severely felt by the public that they would abstain from going by it.

2034. Were you in office when this line was first proposed? Yes—not Burwood only; as far as the line to Liverpool.

2035. Then you did not have anything to do with the gathering of the data on which to establish the proposal? No—not as far as Burwood Road.

2036. How do you arrive at your estimate of £8,000 or £10,000 per annum? By my knowledge of the district, the number of people in my opinion located there, and by the fact—I believe it is a fact—that seven omnibuses are now employed in conducting that traffic daily.

2037. Those seven omnibuses do not all go from this district, do they; some go from the other side of Belmore and some go to Bankstown? Yes, some from Belmore and some go to Bankstown.

2038. The Bankstown traffic would not be served by this line? I think it would.

2039. Some of the Bankstown witnesses complain bitterly about this proposal? No doubt they would like it to go farther, and I would like to see it go farther.

2040. Is it not 3 miles from Bankstown? To some parts of Bankstown it is nearer than 3 miles; 3 miles would go almost to the other side of Bankstown.

2041. Do you think there are people living in that district now unserved by railways who would give £8,000 or £10,000 a year? No, I did not say that. I said in the first twelve months. I believe there will be a large influx of people to that district directly the line is authorized.

2042. You consider there would be some freightage? There would be some freightage.

2043. Building materials? Yes; they make bricks in the district, and I think that timber and other building material will be sent. There are some large quarries out there, the stone of which is sought after, and a large quantity of loam, I understand, is being carried into Eveleigh on this side, and to Parramatta on the other.

2044.

C. A.  
Goodchap,  
Esq., M.P.  
21 Jan., 1890.

2044. Do you think this line is likely to prove to be in the way of any proposal for a thorough system of suburban railways—one for the eastern and another for the western; do you think this is likely to affect any future proposal? I do not know that it is a scheme that would be affected in connection with any other scheme, unless, of course, the railway were constructed to Liverpool. Then I think it would be availed of very largely by the Liverpool people, and in fact by all the through traffic. They would save 5 miles of traffic.

2045. We have evidence from the Commissioners that they would utilise it only to the extent of four trains a day? Then I do not think they would utilise it to the best possible advantage. I should think that all the goods trains would go by that route. I think the public would insist on their going that way. By that way they would save 5 miles of freightage.

3046. Do you not think that in the future we shall have a proposal for a circular line of railway to serve the western suburbs and another to serve the eastern suburbs? I do not know that any circular line would go into the district to which you are referring now.

2047. Of course you know the suburban system of Melbourne? Yes.

2048. It runs round certain districts? Yes.

2049. Are we not likely to have something like that—one line to serve the western and another the eastern suburbs? I do not think so; not in the immediate future.

2050. If we should, then this direct line would simply be in the way of those lines? I do not know that it would. It would be a shorter route for the people to go, and they would avail themselves of it.

2051. *Mr. Hurley.*] I suppose that during your experience as Railway Commissioner you heard various schemes propounded—trams as against a railway; that trams would serve in lieu of a railway? I have never heard the public say that; the public have generally been the other way, and preferred a railway to trams.

2052. Do you not remember the time when a public man advocated a horse tram instead of a railway over the Blue Mountains? No; Mr. Arnold advocated a horse tram from Blacktown to Richmond.

2053. Do you remember the present Premier saying that a double line to Parramatta would be a very serious mistake on the part of the Works Department? I do not.

2054. In going through other parts of the world have you taken notice of the tram services; in the city of New York the tram service runs parallel with the railway line? They run right under it.

2055. Have you not noticed that the people avail themselves of the more expeditious train service in lieu of the tram which is underneath? Yes.

2056. And, when they know there are certain places to stop at, that a larger number of persons avail themselves of the railway than of the tramway? I have no doubt of it—a very much larger number.\*

2057. Therefore looking at the tram service referred to by Mr. O'Sullivan you are of opinion that that is only a very inadequate supply for the general public? Yes. I think a tramway service for the district to which we are now referring would be most objectionable—would not in any way meet the requirements of the public.

2058. Is there any comparison to be made between the supplying of the Randwick race-course and Canterbury? No proper comparison can be made.

2059. The one would have to pass over a very heavy grade whereas the other is a very light one; is that not so? Yes.

2060. Would the haulage power be 50 per cent. more than on the Randwick line? If you followed the roads it would. You would have to make a line, I think, of itself. You would not be able to follow the main roads without altering the levels in some way or other.

2061. You have noticed the wonderful progress of suburban places such as Ashfield, Stanmore, Petersham, and other places along the line; has not that been caused chiefly by the construction of the line through those suburbs? I should say that it has almost exclusively.

2062. Looking at that and having your eyes open in regard to your visits to other parts of the world, and viewing what has been done for the suburban traffic of Melbourne, you base your calculations chiefly, I presume, on the returns they have made? I am quite certain that where you can get a population of from 15,000 to 20,000 the best thing you can do is to make a railway to them. It will accommodate the public, and it will make a proper return on the capital invested in such an undertaking.

2063. Then the construction of this line will, you think, bring a population if there is not sufficient population there at present to pay for the railway? I think there is not at present. If it were to remain in *statu quo ante*—no improvements, no accession to the population, no manufactories, no industries, I should certainly say “don't make the railway;” but as our experience contradicts such an aspect of the case, and there seems to be special reasons why an extension of the railway to this district would produce the very opposite effect, I should say there is offered the very best possible reason for constructing the line.

2064. You have noticed that Mr. O'Sullivan wanted to pin you down to an expression of opinion that there was only a distance of 2 miles between Ashfield and the projected line of railway; you noticed that? I did not observe Mr. O'Sullivan's object in asking his questions.

2065. Does not this extension, the farther it goes towards Liverpool, go farther from instead of closer to Parramatta? Yes.

2066. The farther you go towards Liverpool the more the distance is increased, and therefore it would not be actually a parallel service? No, it would not. Nearing Liverpool it would be actually running at right angles nearly.

2067. Have you noticed the country beyond George's River towards Campbelltown? Yes; I know the country.

2068. Have you ever had under your consideration a project for a line to cross George's River at some point here (pointing to the map), and leading up to within a few miles of Campbelltown? Yes; Minto, I think, was the name of the place.

2069. Supposing a line from Minto towards George's River at some given point—say George's Hill—would not that reduce the distance and give facilities for the Melbourne trains to reach Sydney at least three-quarters

\* NOTE (*on revision*):—The elevated railway of New York is 9 miles in length, and for that distance it is the cheapest travel in the world. The uniform charge is 5 cents. The charge, however, is the same whether a passenger goes 9 chains or 9 miles. The number travelling is unprecedented; it is 9,500,000 per mile of line per annum. For volume of traffic there is nothing approaching it in the wide world. Its revenue is £96,000 per mile of line.

C. A.  
Goodchap,  
Esq., M.P.  
21 Jan., 1890.

three-quarters of an hour under the time now occupied? I should like to know what the mileage is—the difference between the mileage from Minto by the old route and from Minto by the new one. Including stoppage they would travel at the rate of 25 miles an hour.

2070. The distance from Campbelltown to Sydney is 32 miles and that would be lessened by one-third at all events: supposing it was lessened by one third, would not that be a great advantage to the travelling public? It would make a difference of nearly half an hour.

2071. Do you know whether the land on the south side of George's River is private or Government land? I believe there is a large quantity of Government land there—there is a large quantity of church and school lands there—but I think a great portion of it has been alienated.

2072. Looking at the probability of great traffic and of a large population settling beyond the 8-mile peg, would it not be to the advantage of the general public to construct a line beyond George's River to Minto? No doubt the travelling public would benefit because they would get their goods and themselves carried at a cheaper rate and in a more expeditious manner, but whether it would be for the benefit of the general public I do not know, because there is a large portion of the general public not benefited in that way.

2073. But that would relieve considerably the increasing traffic on the western, southern, and northern lines, would it not? The northern railway?

2074. Yes, coming in from Strathfield—the congestion of the northern and western traffic? That has all been met by the duplication or proposed duplication of the line. I think that the duplicated line will give ample facilities for conducting a very much larger traffic than there will be.

2075. For heavy traffic for all time to come? I would not say that altogether; but for the next twenty or thirty years.

2076. At all events you believe that the increased price of land in the other suburban districts shut out people of moderate means who would seek homes where this line would give them facilities? That is clearly my opinion.

2077. And if you were Commissioner for Railways, or Minister for Works, under the old régime, you would be in favour of that line on behalf of the general public? I would.

2078. And believe that, as a national investment, it would be equal to anything in the country? I believe so.

2079. *Mr. Lee.*] You were asked by Mr. O'Sullivan to divide the earnings as between Burwood Road and Marrickville, and Marrickville and Sydney; your estimated return from Burwood Road to Sydney is £8,000? From £8,000 to £10,000.

2080. For the sake of convenience we will say £8,000, and as the proportionate distance from Burwood Road to Marrickville is  $4\frac{3}{4}$  miles, and from Marrickville to Sydney  $2\frac{1}{4}$  miles, the proportionate part of the earnings from Burwood Road to Marrickville would be £4,150, and consequently—? I have already said that I do not think that it would be just to credit to the Illawarra line the revenue derived from those passengers passing over it.

2081. I am asking more particularly as to earnings between Burwood Road and Marrickville? It will be in proportion to the length.

2082. Whatever the main line might earn between Marrickville and Sydney would be in proportion—at the same rate? Yes.

2083. You have already stated that you think the Railway Commissioners' estimate of £3,000 a year an under-estimate? Yes, it is an under-estimate.

2084. Do you think your estimate of £8,000 a year is an over-estimate? No, I do not. I put £8,000 as the minimum.

2085. Taking the distance as  $4\frac{3}{4}$  miles from Burwood Road to Marrickville, about what would be the ordinary passenger fare? I think it is  $2\frac{1}{2}$ d. a mile first class, and  $1\frac{1}{2}$ d. or  $1\frac{3}{4}$ d. second class; I think that is the rate which prevails.

2086. At all events the first and second class journey, say, would average a little more than 6d.; I make it 8d. according to your figures? I think it would be between 6d. and 8d.

2087. And, at 6d. a fare, 180,000 would have to be carried in the year to give that amount? I would expect a very much larger number than that to be carried. If you take the average in Victoria, for instance, including the suburban traffic, you will find that each person in the country travels about thirty-seven times in the year. If there are thirty-seven million\* journeys to a million of people, it is crediting them with thirty-seven journeys for each person, and if you were to credit the people living in this district with thirty-seven journeys each in the year, taking them at 20,000 people, it would be a very much larger number than you estimate. Our people do not travel to the same extent, because they have not the advantage of suburban railways to the same extent as they have in Melbourne, and I think you will find ours is not more than sixteen or seventeen millions.

2088. But are there 20,000 who would use that line in the first year? No; I think there would be from 14,000 to 15,000 the first year, but that would very largely increase—month by month.

2089. That, I admit; I am speaking more as to the population at present—as to what would give the traffic the first year? I should credit everybody living in that locality with twenty journeys in the year, and I should calculate them at 12,000 which would be 240,000 journeys.†

2090. Now as to the taking of these lines to race-courses; can you give the Committee any information as to how that line from Granville to Rosehill is worked: has it been a financial success? I am told it pays very handsomely, indeed. I am told it pays the Rosehill company 3 or 4 per cent. I am not aware of the correctness of the figures, and I have not made any recent inquiry about the matter, but I was informed that the proportion of the revenue which the Rosehill Railway Company obtained from the traffic coming to the races paid between 3 and 4 per cent. on the capital expended on the line.

2091. At the present time the Canterbury race-course is not so popular as the Rosehill; I mean there are not so many races held there? I think there are rather more.

2092. Although Rosehill is easier of access than Canterbury? Rosehill is farther away than Canterbury. I dare say that the facilities for getting there are very much greater.

2093. The Rosehill railway will take the passengers right up to the stand? Yes.

2094.

\* NOTE (on revision):—It will be seen by the latest Victorian report that the number of journeys in the year equals 56 millions. The exact figures are 55,911,394.

† NOTE (on revision):—Twenty journeys is a very low estimate; it will be found to be far below the number travelling from any of the suburbs.

C. A.  
Goodchap,  
Esq., M.P.  
21 Jan., 1890.

2094. To what part of the district could this proposed line be advantageously extended? I think to the eleventh mile.
2095. In the neighbourhood of where? Bankstown. Chapel Road, I think, is the road that comes down to about that place. Chapel Road comes from the Liverpool Road and there are several roads running into it which would be a great centre for the traffic to gravitate to.
2096. If at any future time it were determined to extend the railway to Liverpool, could this line be utilized? It is the lock-spitted line to Liverpool.
2097. Although at present that does not enter into your consideration? No, unless it be considered that the advantage to the public would justify the construction by reducing the time of the journey and the cost of the journey by 5 miles, I do not see any reason for extending it.
2098. But in your opinion if this line were constructed as a suburban line there could be no possible doubt about its paying the working expenses and in a short time the interest on construction as well? Well, I should like to take it over as a private speculation.
2099. When you were in office, I presume you had to go into this matter very fully? Yes.
2100. You had every opportunity of making yourself thoroughly acquainted with the details of the whole scheme? I had.
2101. *Mr. Cox.*] Of course you are aware of the estimate made by the Commissioners as to the annual cost of this line? Yes. They have calculated, I presume, the interest on the capital, they have calculated the keeping together of the permanent way, they have calculated the locomotive charges, and the traffic charges.
2102. Amounting to £9,500 a year? If I were permitted to see the estimate I might be able to explain it better to you perhaps. I would like to point out, if I may be permitted to do so, the curious discrepancy there appears to me between these two estimates. The Commissioners say that the traffic department expenses for the whole of the line from Sydney to Liverpool would be £1,820, and yet for a shorter route, 4 miles 60 chains—the traffic expenses would be £2,600. It seems to me that while the traffic expenses should be lesser in consequence of the shorter distance they have made them greater.
2103. *Mr. Copeland.*] Is not one a double line and the other a single line? The one proposed as a single line they make the greater—£2,600 for a single line, and only £1,820 for a double line. In each case locomotive expenses are put down at £3,000. Surely it must occur to everybody that the locomotive expenses of running 17 miles must be considerably more than for 4½ miles. But they have put them down as the same.
2104. *Mr. Cox.*] They have estimated that the total revenue would be £5,200 a year? That is the Liverpool line.
2105. Consequently the revenue from the line from Burwood Road to Marrickville would be less? Not very much less, because in calculating that they take no note of any other traffic—they ignore the other traffic altogether in the route from Liverpool;—they put nothing for that; they call it “new” traffic, I think, and put it down at £5,250.
2106. In the estimated loss on the Liverpool and Marrickville line they put down £1,700 for traffic diverted from Petersham and Ashfield? I cannot understand why Petersham is introduced. I can understand why Ashfield is introduced—because of the race-course, but it seems to me to be a very large sum.
2107. Then you do not think it would have that effect and divert £1,700 traffic from the present line? There must be a very large traffic to the race-course if it would make that difference.
2108. You deal with this merely as a suburban line? I would deal with it merely as a suburban line.
2109. What paramount claims has Burwood Road for a suburban line over and above the other suburbs in the neighbourhood of Sydney? Have they not been supplied—the Illawarra line.
2110. There is no railway for instance to Waverley? But there is a good tramway service there.
2111. There is a tramway service here? Not so convenient. I think that while the people about Hurstville and Kogarah, and the people on the North Shore have railway communication, and also the people along the main suburban line at Petersham, Ashfield, and Burwood, it is not unreasonable to grant to these people a like facility, and for the reason that I have specially stated—that the locality offers more advantages for settlement owing to the smaller price of the land than those other places offer.
2112. But other suburbs have at present only tram communication with the city, and why should Burwood Road be singled out to have railway communication, while other suburbs have to be satisfied with the tramway? The reason that would weigh with me is that the line would be a remunerative one.
2113. Would not railway lines to, say, Waverley or Five Dock be remunerative? I do not think so; I think that the cost of putting a railway to Waverley would be exceedingly great.
2114. You mentioned incidentally just now the advisableness of having railway communication with the North Shore;—do you mean by a bridge over the harbour? No; I was alluding to the suburban railway from the Crow's Nest to Hornsby. I look upon that as a suburban line.
2115. You were asked a little while since by Mr. Hurley whether it would not be advisable to extend this railway so that the working classes in the city might have an opportunity of purchasing allotments of land at a cheap rate? I think it would be generally beneficial that the working classes, if they are cooped up in the city, should have an opportunity of obtaining land.
2116. Are you aware that some years ago it was computed that for every man, woman, and child in the community at least one allotment of land had been provided by cutting up the land round the city? I daresay it would average that, but I do not know that it is the case that every man, woman, and child has an allotment.
2117. How many years would elapse before this line would pay interest and working expenses? I think in about twelve months. The working expenses and interest could not be more than £10,000 or £12,000.
2118. *Mr. Tonkin.*] Do you know any suburban railway out of Sydney that does not pay? If you will except the North Shore line, I do not know of any.
2119. That is not a line out of Sydney? Well, North Sydney it is called.
2120. I mean any from Sydney? No, I do not.
2121. Have you any reason to believe that if the railway were constructed to this suburb it would be different from a line to any other suburb? For the reasons I have given, I think it would be very remunerative.
2122. Do you think that the facilities offered by this suburb are any different from those offered by others that have railway communication? I think that the facilities offered by this suburb are superior.

C. A.  
Goodchap,  
Esq., M.P.  
21 Jan., 1890.

2123. Do you think that many other suburbs at the time the construction of the railway to those places was advocated had the same facilities to offer that this suburb has at the present time? I think not. As far as my memory serves me, the location on the Illawarra line was considerably smaller than it is on this line.
2124. Have you any idea of the number of passengers carried by 'bus from the particular suburbs that will be served by this line? I estimate that these omnibuses must earn about £12 a week each. I am told that they actually earn about £20, but I cannot credit it.
2125. Do you know it is already taken in evidence that they earn over £2 a day each? I was not aware.
2126. Of course that would represent over £5,000 a year paid now by passengers coming in by 'bus? But the rate by omnibus would be slightly greater than it would be by railway.
2127. In your estimate of from £8,000 to £10,000 as the probable return, do you include the estimated returns from the racecourse? Yes.
2128. Supposing that the returns for passenger traffic over 4 miles of railway amounted to £3,000 a year, can you give us any idea what the goods traffic would be? I think it would materially depend on the character of the country and the industries established there. It may be generally estimated that in a residential population where there are no industries every person would require about 10 cwt. carried, and if there were no industries established in this place, and the traffic was purely residential, I should estimate that the goods traffic would amount, for 3,000 people, to about 1,500 tons. But there is a much larger number than 3,000.
2129. I am supposing that £3,000 were returned in passenger fares? I do not think that any comparison can be made on that basis.
2130. Do you think that  $2\frac{1}{2}$  per cent. of the population would be an over-estimate of the number of travellers by rail; say that there were 15,000 inhabitants to be served by this railway, do you think that if we estimate  $2\frac{1}{2}$  per cent. as travelling daily it would be an over-estimate? I should say it would be a very large under-estimate.
2131. That would represent about 400 passengers a day? Yes!
2132. So that the Commissioners' estimate of £3,000 as the total revenue from all sources—supposing this line were constructed—do you consider that is a fair and proper estimate? I think it is a very large under-estimate.
2133. And the working expenses—do you think that they are properly estimated, or do you think they are over-estimated—the estimated cost of maintaining the permanent way? I should think that was a little bit under-estimated.
2134. That is £800, and the traffic, £2,600? I should say that that is a little over-estimated, but it would depend very much on the number of trains run, especially as regards the locomotive expenses.
2135. But I suppose the Commissioners would not run trains at a loss, but would regulate them by the number of passengers? I should think that twelve trains in a day would be the number they would run.
2136. Have you any doubt that within (say) three or four or five years this will be a very remunerative line if constructed? My clear opinion is that it will be a very remunerative line.
2137. Have you heard any proposals to construct this line by private enterprise? Yes. I have never seen any substantive proposal of the kind, but have heard that people would undertake it.
2138. Supposing permission could be given to construct this line at the cost placed before this Committee, would you have any objection to putting in a large percentage of money, and taking shares in the thing, if you had permission from the Government to construct the line? I should like to ascertain in what way I should get from the junction into Sydney.
2139. You have no doubt in your own mind that this line, if constructed, will pay ultimately? I have no doubt.
2140. *Mr. Humphery.*] Do you estimate that the additional revenue between Sydney and Burwood Road will be from £8,000 to £10,000? Yes.
2141. That will be the additional railway revenue? The additional railway revenue.
2142. Assuming that traffic representing £8,000 or £10,000 were carried between Sydney and Burwood Road, what would be a fair proportion to allow annually for the use of the line between Marrickville and Sydney, three miles and a half, for working expenses? Everything is calculated on a train mileage basis. There is the permanent way calculated on a train mileage basis, and we know the number of trains run in the year, and what the average cost is of maintaining the railway per train mile run. Well, with the exception of a small charge for the use of signals and for pointsmen, there would be very little traffic expenses incurred, in fact the staff required to work the Illawarra railway would work the traffic of this railway without extra cost, as between Marrickville and Sydney. The permanent way is really the only item to be considered, and I should think that a very fair amount to offer for the privilege of running over the railway line from the junction into Sydney would be about one shilling per train mile.
2143. Assuming a traffic of about £9,000 a year, what would that total; I only ask you to give it to me approximately? I should say there would be 86,000 miles run if there were a good frequent service. I do not mean that at first there would be 86,000 miles run in the year, but a sufficient service for the first three years would, I think, average 86,000 miles, and that would be about £4,300.
2144. Would that be for the use of the line between Sydney and Marrickville? Yes.\*
2145. Not between Sydney and Burwood Road? No. That I should look upon as the parent line in connection with this consideration, and the route from Marrickville to Sydney as a foreign line over which this parent line would have the right to run—would have what is called "running powers."
2146. Presuming that the annual earnings would be £9,000, what would be a fair proportion to allow for the use of the line between Marrickville and Sydney. I ask this so that we may estimate how much additional railway revenue would be obtained by the construction of the line from Marrickville to Burwood Road? I quite understand your question. I say 1s. per train mile.
2147. Then you think that out of the £9,000, £4,300 should be allowed for the use of the line between Marrickville and Sydney? Yes. You understood me to say that that would be the average of three years' running. It would all depend on the number of miles run, and if not more than 20,000 miles were run £1,000 would be sufficient to pay. It is the running of trains that makes the wear and tear of the line.

2148.

\* NOTE (on revision):—In calculating 86,000 miles as the probable running in three years, I intended to include the whole line from Sydney to Burwood Road—8 miles. The proportion due to the line from Marrickville to Sydney,  $3\frac{1}{4}$  miles, would be about 35,000 miles.

C. A.  
Goodchap,  
Esq., M.P.  
21 Jan., 1890.

2148. You estimate that the revenue the first year would be between £8,000 and £10,000? Yes; but I do not know how many miles would be run. Calculating there would be six trains in and six trains out per day, there would be over that portion of the line 36 miles of trainage a day, and that multiplied by 300—I suppose they would not run on Sundays—would make 10,800 miles a year over that portion of the line.
2149. Then assuming it to be 10,800, the expense for the first year would be about £500? Yes.
2150. Then what would be the additional revenue obtained from the construction of that line after allowing for the working expenses between Marrickville and Sydney. I want to know how much additional net revenue would be produced by the construction of the line, on your basis of £9,000? That would be the additional gross revenue obtained—£9,000.
2151. Less how much for the use of the line between Marrickville and Sydney;—what would be a fair allowance to make for the use of that line? I think a fair thing would be to allow £1,000 a year, to be increased as the train mileage increased.
2152. Precisely; but then your revenue would increase proportionately? Yes; but the right to use this line would be a fixed sum.
2153. Then, allowing £1,000, you reduce the revenue to about £7,000 or £8,000? Yes.
2154. What should be charged against that for working expenses between Marrickville and Burwood Road? That will depend upon the number of trains run.
2155. To produce a revenue such as you estimated for the first year? You might get the revenue in one train, or for the convenience of the public you might run twelve trains, and each train might be only partly filled.
2156. What would be sufficient for the working expenses and maintenance of the line for the first year between Marrickville and Burwood Road? The Commissioners have estimated the maintenance of the line at £800. I think that that is a little under estimated; I think it would be from £1,000 to £1,200, for five permanent way-men would be required at about £120 a year each, and that would be £600 a year; and there would be reballasting the line, making up ballast and sleepers, and maintenance generally in the shape of material—£300 or £400; and certainly £1,000 or £1,200 would be required for permanent way, and there would be the locomotive and traffic charges, and these might safely be put down at 2s. 6d. per train mile run, which would be about £2,500. I think the working expenses of that line for the 4½ miles would be about £3,700 a year for the first year.
2157. Taking your lowest estimate, £8,000, less £1,000 between Sydney and Marrickville, that would give net over £3,000, would it not;—what would be left after deducting £3,700? There would be left about £3,300.
2158. You would have £3,300 net? Yes.
2159. The cost of construction is estimated at £90,000? That is only for a single line.
2160. You reckon for a double line? I should, and should put down the cost at £130,000, that is, supposing the other estimate, £90,000, is right.
2161. In your estimate of traffic you are having regard to a single line only? That is immaterial.
2162. The cost is estimated at £90,000; 3½ per cent. on that would be? £3,150, is it not?
2163. Therefore, you would have £3,300 to meet the interest, which would amount to something less than that? Yes.\* I am not at all sure that the Commissioners would agree with me that £1,000 would be a proper amount to allow for running over the rail from Marrickville to Sydney, but I say that in justice to a new line it would be a reasonable charge to make, and it is unreasonable to weight a new line by deducting from the revenue derived from its traffic that proportion which is derived from travelling over the old line on a mileage basis, although I am bound to admit the practice has been to do so.
2164. As a railway expert, you are quite justified, are you not, in expressing your opinion as to what you think would be a fair thing to do as between the new portion and that already constructed—a fair adjustment of the case? I would look upon that as a fair thing. For instance, when we ran over the Wallsend line I tried to persuade the Wallsend Company to be satisfied with 1s. per train per mile for the use of their railway, but they would not consent to that; they did for a number of years, but as traffic increased they wished to share in the benefit, and they went for a portion of the earnings. My theory is that a fair thing is to pay so much for the privilege of running over the line—so much per train mile.
2165. *Mr. Copeland.*] You say you think this line will be a very remunerative line? I think so.
2166. What is the population you estimate for at the present time? Of Western Marrickville?
2167. Yes? I think the population there must be close upon 7,000.
2168. Do you think that is a sufficient population to make this line a very remunerative one? No; but there is Canterbury to come in, and Rosevale and Kingsgrove and a lot of other places to swell the population from 7,000 to 14,000, I think.
2169. That is if the line is extended? No; even to Burwood Road it would command a population to that extent.
2170. Do not a large number of these people make their way at the present time to the existing lines? I think not. Certainly the people of Belmore would come on to this line, and the people of Bankstown would also make use of the line. It must be their nearest point.
2171. You are anticipating, I presume, a considerable influx of population there? Oh, yes.
2172. You say that the land is very cheap now? The land is very cheap.
2173. And if the railway were constructed the people would buy land? It is £1 per foot as against £3 to £5 in other places.
2174. Where do you anticipate these people would come from? I think there are a large number of persons resident in Sydney who would go. I am sure it will be an advantage to the city if the "Rocks" were cleared—if the population assembled there were moved out.
2175. You do not propose to put a charge of dynamite under them so as to remove them from the "Rocks"? I do not propose that.
2176. Are there not enough suburbs at the present time for these people to avail themselves of if they wish? I am sure there are, but the value of the land is so great that it is almost prohibitory for this class of people to get out there.
2177. Are there not other places besides the "Rocks" from which you think population is likely to be derived? Yes, I think Redfern and other places which are getting very densely populated now. 2178.

\* NOTE (on revision):—There would be in addition the locomotive expenses on the line from Marrickville to Sydney—say £750.

2178. Is there not sufficient room already for them to go to on the Illawarra line? Yes, I am sure there is sufficient room for them there, but as I said before the land is very dear there.

2179. Have not the Government several sub-divisions which they have endeavoured to sell on the suburban lines still on their hands; I think that on the Illawarra line they have one or two which they did not succeed in selling? I am not aware of it. I know that on the Field of Mars they have been subdividing, but they have not given the people railway communication—they have not carried out their promise of railway or tramway communication.

2180. Take the Illawarra line; is there not land at Heathcote at a grand elevation—800 or 1,000 feet—that still remains unsold by the Government? That is on the South Coast line. I should say it is beyond the suburban area.

2181. Well, at any rate, what I wish to get your opinion about is whether, if the people are desirous of going out to the suburbs, there is not plenty of suburban land available for them at the present time without building this line? Certainly; I have no doubt about it whatever.

2182. Are there not hundreds of empty houses in every one of the suburbs at the present time, showing that the people are not desirous of availing themselves of the existing lines and the existing houses? I believe there are a great number of houses empty.

2183. Has it been your policy—I am referring to your position as Commissioner—has it been the policy of the Government hitherto to build lines where the population was not? Oh, yes.

2184. Rather, has it been their policy to build lines where the population was? Where the population was not, but where the population was likely to come to. I might quote as a favourable instance of that, the Illawarra line, and as an unfavourable instance of it, the North Shore line.

2185. The Illawarra line, you must be aware, was built expressly for the purpose of carrying coal from Illawarra, and to give Sydney people access to what was generally denominated the "Garden of New South Wales"? No doubt that was its chief object, but incidental to that was, of course, the providing for a suburban traffic.

2186. Besides, that was a line that led somewhere; this is a line that leads nowhere? This does not go to any place beyond Burwood at present, or rather it is not now proposed to take it to any place beyond Burwood Road.

2187. I suppose you are aware that the price of land usually rises as soon as it is announced that the Government is going to construct a railway? Yes. I am informed, however, that the assumption was so strong that the railway would come to this place, that the land has already acquired its maximum value.

2188. Then is the maximum value a very low value, or a comparatively good one? As compared with other suburban land, I look upon land at £1 per foot frontage with a depth of 150 feet, as cheap land.

2189. Is there any reason you know why this land if it is in a desirable situation should be at a less rate per foot than land in other suburbs; is there anything special about it; do the breezes blow fresher there, or has it any other particular recommendation more than the other suburbs? As a matter of choice, I would rather give more for the land on this route than on the main line route; it is far better land, I consider, for residential purposes.

2190. At any rate, if it were announced that this line was to be built, would not the land in all probability immediately rise in its market value? Well, I have already said—

2191. You think it has risen to its maximum value now? Yes.

2192. Well, if its maximum value is only £1 per foot whilst land fetches £5 or £6 per foot in other suburbs, there must be something deleterious about this suburb that would make it not desirable? I could not argue that question with you; I cannot give the reasons which cause the difference.

2193. You said you were under the impression that manufactories would spring up if this line were built; can you say whether manufactories have sprung up on the other lines that have been built; say, for instance, on the Illawarra line where the railway crosses one or two rivers? They are salt rivers are they not; but Cook's River is a fresh water river at Canterbury.

2194. At any rate you base your calculation more particularly on the passenger traffic without going into these manufacturing works which are all in the air? I think it would be a passenger line at first and will grow into a goods line afterwards.

2195. You do not reckon that the population at the present time is sufficient to warrant the anticipation of deriving this £10,000 a year do you? No. I say that the population will increase before this line is completed. Before this line is completed and opened for traffic three years must elapse.

2196. How will that population increase in that period—by natural increase of population? No, I think by people going out there.

2197. How far will the Canterbury racecourse be from the railway line if constructed? About a quarter of a mile I understand.

2198. By the position of it on the map it would be about a mile? I thought there was some deviation which took the line nearer the racecourse.

2199. Well if it is half-a-mile do you anticipate that the people will walk that half-a-mile to the racecourse? I think they would, but I do not think it would be so popular a resort as it would be if the railway went close to it.

2200. The question is whether you would suggest that the railway be diverted to the racecourse or whether you would suggest the building of a tramway to carry the people from the railway terminus to the racecourse? I should certainly not advocate a tram from the railway to the racecourse, for the reasons I have already given.

2201. I suppose you would advocate the railway being diverted to the racecourse? If there are no engineering difficulties in the way, and it would not increase the expenditure very much I think it would be a wise thing to take it as near the racecourse as you can get it.

2202. Are you aware whether the racecourse is private property or not? I believe it is private property.

2203. And I suppose that if the railway is diverted so as to be brought nearer the racecourse it will enhance the value of the racecourse and the profits of the proprietors? I should think so.

2204. You said just now that you did not think that it was desirable to have a tram from Ashfield or any of these stations on the Parramatta line to the racecourse, because the Government would not be able to supply accommodation sufficient to take the passengers to the racecourse? I think that is very likely.

2205. But how is it the Government supply sufficient accommodation to convey passengers to Randwick racecourse?

C. A.  
Goodchap,  
Esq., M.P.

21 Jan., 1890.

- C.A. Goodchap, Esq., M.P.  
21 Jan., 1890.
- racecourse? They do not all offer at the same time; they are spread over a longer time, and do not offer in the same numbers. You bring up a train with a thousand people in it and you could not carry them away by tram, but in taking the passengers to Randwick you have four or five trams running, and at different portions of the day—spread over three or four hours.
2206. How many people will one of the double-decker trams carry? I should say about eighty or ninety if they sit down, but when they are overcrowded they take, I believe, 150 sometimes.
2207. Well, I suppose that each tram would carry 100? Yes.
2208. What is the estimated number of people that go to this racecourse? I am informed there are about 2,000 to 2,500 at each meeting.
2209. Well, 2,000 would be twenty tram-loads;—would it not be possible for the Government to convey them from Ashfield? I do not think that more than one double-deck car could be taken at a time by one motor along such gradients as those to be met with between Ashfield Railway Station and the racecourse.
2210. But is Ashfield the only place from which the tram could branch off? It would be the nearest place; and the difficulties would be as great near the course—the gradients are very steep indeed.
2211. What distance would it be from Ashfield to the Canterbury course? I should say not much more than a mile and a half, if that.
2212. By that plan it seems to be evenly situated between the two lines? They do not go as the crow flies, you know.

WEDNESDAY, 22 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Marrickville to the Burwood Road.

C. A. Goodchap, Esq., M.P., sworn, and further examined:—

- C.A. Goodchap, Esq., M.P.  
22 Jan., 1890.
2213. *Dr. Garran.*] While you were Commissioner did you ever give any consideration to the question of providing Sydney with suburban railways as a whole and systematically? Oh yes.
2214. Is it your opinion that, looking to the future, Sydney will need a system of suburban railways? I have no doubt about it. I think all the eastern suburbs should be connected with Sydney by railway.
2215. Do you look upon the present tramway system as merely a temporary makeshift or as a permanent institution? In its present form I should say it is a makeshift.
2216. Do you think that the tramways in any form will meet the requirements of Sydney so far as suburban requirements are concerned? I do not think that, so far as suburban portions of the community are concerned, tramways are the most effective means to meet the requirements? For street to street traffic in a city no doubt they are more effective than a railway would be.
2217. They put people down at the corner of a street as close as possible to where they want to alight? Yes.
2218. But when you get out of the city every increased mile tells against tramways as a system? That is my opinion.
2219. And the limit of tramways' utility would perhaps be about 6 miles? Six miles at the outside.
- 2219½. When beyond that the time taken is so great it comes practically worthless? Practically worthless in comparison with a railway.
2220. To make more of these suburban railways for Sydney, in the east, to which you referred, would be very expensive? No doubt.
2221. A great deal of tunnelling and rock cutting would be required? No doubt.
2222. The line we now have under consideration would be one of the comparatively easy ones of whatever lines we could make out of the city? I think so.
2223. Would you consider that the Government ought to wait before making that line until it had got a complete system, and was ready to go on with all the others? I should think not. I think it would be unjust to the public residing in that particular locality, and also unjust to the general public, because that line offers every expectation of being a paying line.
2224. If we made several suburban railways at once we might possibly over-do the supply, might we not? I think it is quite possible.
2225. Do you think that at present the supply of suburban railways is overdone? No, I do not.
2226. You think it is rather deficient than otherwise? I think it is decidedly deficient; compared with Melbourne, of course it may be considered to be very deficient.
2227. We have it in evidence that there are about 100 suburban railway stations within 10 miles of Melbourne; we have nothing like that with respect to Sydney? Nothing.
2228. Of course we have the steamboat traffic; but do you think that that would account for the difference? We have a tramway service which, no doubt, is in substitution for a suburban railway system.
2229. So they have a tramway service at Melbourne? They have, but it is confined, I think, within what might be termed the city area.
2230. Taking their railway and tramway system together, and our railway and tramway system, and our harbour steam traffic, do you think we are as well supplied as Melbourne is? I do not.
2231. You think we have something to do to fetch up arrears? I think so.
2232. Do you know any district out of Sydney more suitable for suburban extension than this Burwood Road line? No, I do not.
- 2233.

C. A.  
Goodchap,  
Esq., M.P.

22 Jan., 1890.

2233. Do you know any that could be more quickly and cheaply put into execution? I do not.
2234. Do you know any district more suitable for residential population? I do not. I think this particular district is exceptionally situated for residential traffic.
2235. Then on all grounds you look upon this as having, so to speak, a prior claim to any other suburban extension? Yes, I do.
2236. It has been given in evidence that there are several hundreds of houses now unoccupied between Sydney and Parramatta;—do you think that a sufficient reason for not making a new suburban line? No, I do not. I think that if these places be empty it is not an indication that they are not required. I think that with a little return of prosperity, and the general demand which arises therefrom for residential dwellings, they will not only be full but there will be room for others.
2237. According to your observation is not the population of Sydney increasing very rapidly? Yes.
2238. The same with regard to Melbourne? I think, at any rate, in an equal ratio.
2239. It seems to be a fact that in both these great metropolitan cities there is a great increase every year in population? No doubt.
2240. Is it not true that some parts of the city of Sydney are almost unwholesomely crowded now? I think so.
2241. Is it not also a fact that business premises are gradually displacing private residences? I believe that to be the case.
2242. So that there is a forcible movement of the population outside the city towards the suburbs? Yes; the tendency is to remove from within the city boundaries to the suburban areas.
2243. And to meet that a fair supply of suburban railway accommodation is required? Yes.
2244. Then looking at it in the interest of the metropolis you think this is a justifiable undertaking? As I have already stated, I think that, because of the natural features of the country commanded by this railway, and the fact that the land is cheaper out there than in any other suburban areas, this particular locality offers attractions of a superior kind.
2245. Now as to the finances; during the time that you were Commissioner did the profit on the line between Sydney and Homebush increase? Considerably.
2246. You were a witness to that increase? Yes.
2247. Has not the line as far as George's River also been a financial success? Yes; unexpectedly so.
2248. So far as your experience enables you to judge, the extension of this line from Marrickville for 4 or 6 miles would very soon also be a financial success? That is my clear belief.
2249. You do not think it would be any burden on the railway account? I do not.
2250. It would rather help to pay the loss on some of the country lines? Well, in so far as it would exceed working expenses and interest upon the capital, it would no doubt contribute, but I do not consider that the amount would be so considerable as to affect materially the loss on other lines.
2251. But it would be a valuable asset? Yes.
2252. Can you name any limit as to which the suburban traffic is thoroughly trustworthy and payable—limit of distance? I do not think it would be found to be remunerative a greater distance than 11 or 12 miles.
2253. Then you do not anticipate on the Illawarra line any great suburban traffic south of the George's River? I do not.
2254. Do you anticipate on the Newcastle line any great suburban traffic north of the Parramatta River? No.
2255. You think in each case the river is about the boundary? The river is about the boundary in each case.
2256. And that estimate would in your judgment justify an extension of this line as far as Bankstown? As far as the 11th mile-post—yes, as far as Bankstown.
2257. And quite certainly as far as Burwood Road? Quite certainly. I think it might be advantageously extended farther than that.
2258. You stated in your evidence yesterday that you made an effort quietly to secure for the Government the increment of value on this projected railway before you made any public announcement of it? Yes.
2259. At that time the "Public Works Act" was not in force, was it? It was not.
2260. Now that that Act is in force, and the Government gets recouped the increment of value that it creates for any residue of the estate;—do you think that any importance attaches to the stipulation that the people should give their land? No, I do not.
2261. If the valuation is really fair—and we are bound to presume it will be—the Government will give what is fair, and the owner will get what is fair? Yes.
2262. Is there anything we ought to ask for more than that? I think not. You could not expect the holders of small allotments to give the land required free, and the holders of large allotments would not receive any compensation, I consider, because the benefit which would be done by the construction of the railway to the residue of the land will be full compensation for what they give up.
2263. I am asking you whether under the new circumstances there is really any importance to be attached to those promises? I do not think so.
2264. Then if it should turn out that promises originally made with respect to this line on the assumption that it would go through to Liverpool have now fallen through, you would not stop the making of the line simply on that account? I would try to get those persons to adhere to their promises, in this view of the case—that when those promises were made there were large areas through which the railway would have passed, and since that time those areas have been cut up into small allotments; if they be still held, if still unsold though subdivided, I would, notwithstanding their subdivision, hold the people to their original promises.
2265. But we have been told that the original promise was conditional on the line going to Liverpool? No doubt that was so.
2266. And if that condition is not fulfilled all the promises would fall through, and I ask if they should do so, do you consider it a matter of great importance? Not of great importance.
2267. *Chairman.*] You said that to construct the line to Liverpool would save the public 5 miles of charges travelling south? Yes.
2268. Is that so? It is so.

C. A.  
Goodchap,  
Esq.  
22 Jan., 1890.

2269. Would not the increased locomotive expenditure be a charge on the public which would be more than the saving for the 5 miles haulage; you now do that service to Liverpool by one line—one set of stations? As a matter of fact the locomotive charges would be less, because they would travel 5 miles less than they would otherwise have to travel to Liverpool.

2270. You would be taking the locomotives two routes instead of one when one would answer the purpose? As regards locomotive service it would make no difference whatever.

2271. Why they might run one engine to carry all the passengers going south to Liverpool, and you would run two? But there are different services; there is the local service provided by one set of locomotives and the other service provided by another set, and it would be immaterial whether the other engine went via Parramatta to Liverpool, or by this other route. The distinct advantage of going by this other route is that they would save 5 miles of running.

2272. Would there not be additional expense in connection with stations and officers in connection with those stations? Those are traffic charges. No doubt the traffic charges would be increased.

2273. So I suppose that the public in the end would not gain very much by it? There are two publics to be considered in this case—there are the public who use the railway for that purpose, and there are the larger public who are not specially benefited by it. No doubt the larger public might lose, but it would be an advantage to those who make use of the railway.

2274. *Mr. Lackey.*] During the time you were in office there was, you said, a project for a system of suburban railways initiated? Not initiated.

2275. Spoken of? It was in the air—yes.

2276. It did not reach the extent of having any design or plans submitted? No.

2277. Did you have any plans submitted to you—skeleton plans, tracings, or anything of that sort? I can think of no plan other than that of Mr. John Young for bringing the railway into Sydney, going out round by Woolloomooloo, then up to Waverley, and then round by Botany, forming a suburban railway to the eastern suburbs.

2278. There was no general plan devised by the Department? No.

2279. The plan of which you speak now, submitted by Mr. Young, is available, I suppose; was it lithographed? I believe it was. I do not know that any sections were taken; I think it was only a ground plan.

2280. Is it not your opinion that any system of suburban railways ought to be of a uniform character; that they ought to fit in one with the other, as it were? No doubt, as far as possible.

2281. You do not know that this line would not fit in? I do not see how it would possibly fit in with an eastern service, such as I alluded to now.

2282. But I took it that the service was a general one; I have a sort of distant idea that it was a sort of circular service with branches going in different directions, was it not? I think it was a circular service going from Redfern and coming to Redfern again via the places I have spoken of.

2283. Not extending towards the Parramatta Road, or Five Dock, or those places? No.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Marrickville to the Burwood Road.

APPENDIX.

A.

PROPOSED LOOP-LINE, ST. PETERS TO LIVERPOOL AND RIVAL ROUTES; ALSO DUPLICATION OF THE SOUTHERN LINE, GRANVILLE TO LIVERPOOL.

[*Précis of Proceedings in relation thereto.*]

THE first reference which I find in the papers to a proposal to lay a loop-line from the vicinity of Liverpool to some point on the Illawarra Railway is contained in an extract of Mr. Commissioner Goodchap's Annual Report for the year 1882 of which the following is the text:—"I have called the attention of successive Ministers of Works for the last two years to the desirability of providing for the increased traffic on the southern line, and creating and developing additional suburban traffic by the construction of a line from Liverpool to meet the Illawarra line in the neighbourhood of Newtown. Such a line would open up a large area of country capable of cultivation, and would give an additional outlet for the over-crowded population of the city."

The attention of persons living on the route and connected with the properties likely to be affected by the line was directed to the subject, and Mr. Wearne of the Liverpool Paper Mills addressed the Hon. A. Stuart in advocacy of the scheme, but naming Hurstville as the point of junction with the Illawarra line. 20/4/83.

Mr. Commissioner Goodchap wrote a minute in substance the same as the before quoted remark, adding that if the Government would purchase or resume a mile in width along the route the cost of the line might be recouped by the sale of the unused land.

In the same interest an influential deputation waited on the Minister and presented a petition signed by 12,429 persons praying for the construction of a line from St. Peters on the Illawarra line *via* Marrickville, Canterbury, Kingsgrove, Moorfields, Belmore, and Bankstown to Liverpool. The deputation represented that if the line were made it would bring Liverpool within 15 miles of Sydney and would cause a large area to be populated. It was in view to construct tramways to some of the districts concerned but they thought this railway would be better in every way. The deputation seems to have held out a prospect of the land required being given to the Government free of charge. 31/8/83.

The Minister informed the deputation that the cost of the earthworks of this line would be £150,000 to which must be added £150,000 for three bridges over Cook's and George's Rivers, and £30,000 for rails. The item for land would be enormous, at least £250,000. The line *was* wanted to relieve the plethora of traffic on the main line, but in view of this monstrous outlay he could not recommend the proposal to Parliament, because Parliament would not approve it. It would be cheaper to quadruple the present line. If, however, a majority of the land owners along the route would sign an undertaking to present the land required to the Government, he should be prepared to recommend the line, and the necessary preliminaries should be carried out at once.

A few days after the Minister directed that a trial survey should be made of the line above referred to, a large number of the landowners concerned having complied with the Minister's condition in executing an undertaking to give the land required for the line free of cost to the Government.

On the 19th October a deputation waited on the Minister to advocate a rival route, *viz.*, from about Burwood to Liverpool, which they said would pass through easier country and avoid the bridges over George's River.

Mr. Wright informed the deputation that the route proposed by them had much to recommend it, but he had already ordered a trial survey to be made of the St. Peters route, which had strong claims inasmuch as it had been promised that the land would be given free. The ultimate recommendation of any line would depend upon the landowners, or the bulk of them, providing the necessary land.

Mr. Wearne's scheme was revived. A deputation waited on the Minister to ask for a trial survey of a line from Hurstville to Liverpool which, although they said a longer run from Sydney, would only require 10 miles of line to be constructed. One of the speakers stated he understood the large landowners on this route were also prepared to give the land. 4/1/85.

The Minister promised that a trial survey of the line should be made, and instructions accordingly were given to the Engineer-in-Chief.

Yet another scheme was shortly after proposed: On the 1st February, 1884, a deputation waited on the Minister to ask for a trial survey of a line from near Minto to the Illawarra line, between St. Peters and Hurstville. The arguments adduced were almost identical with those used in favour of the other routes.

The Minister informed the deputation that their proposal really meant the formation of a line from Liverpool to Campbelltown parallel with the existing line. Picton or any other town might just as reasonably make a similar proposal. He had been liberal in granting surveys but he could see nothing to justify his granting a survey in this case.

Mr. R. J. Johnson, one of the landowners who signed an undertaking to give the land required for the original scheme, wrote to say that there had been a departure from the proposal first made and that if this were persisted in he would not only not hold himself bound by his undertaking and claim compensation for any of his land that might be taken, but would claim compensation for severance and disfigurement of his property. 6/5/84

In reply Mr. Johnson was informed that the Minister would not recommend the line until the persons interested had given a conveyance of the land required.

Mr.

Mr. Johnson replied that he was still prepared to give land in the "grants" specified in his undertaking, but he certainly never intended to give *carte blanche* to take the line through any part of his property to his injury and loss. He had allowed ample margin for any reasonable divergence of the proposed route, but it was neither law nor reason to apply his promise to any or all other routes that might be proposed in opposition to the line he had accepted.

[I have specially noted this episode because it may have an important general bearing upon the promises made to give land. There are several instances in our records where similar promises have been made and afterwards, upon one pretext or another, evaded.]

The Government in submitting their railway proposals to Parliament in the succeeding session, omitted the line St. Peters to Liverpool.

A public meeting of the promoters was convened and was numerously attended. The beneficial nature of the proposal was affirmed by the speakers, and it was stated that the Commissioner for Railways was in favour of it, and that Mr. Secretary Wright thought so well of it that he had given a distinct promise to recommend it.

The outcome of this meeting was a deputation which waited on Mr. Secretary Wright on the 10th October. They reminded the Minister that he had promised to recommend the line, provided the land required was given free; and now they found that the line had been omitted from the Railway proposals. Those who had promised land were as willing as ever to give it. As regarded Mr. Johnson's correspondence with the Minister, that gentleman was prepared to give land if the line were taken from St. Peters, but not if taken from Hurstville. It was asked if there would be any objection to a private Company undertaking the construction of the line.

The Minister informed the deputation that he would oppose any proposal for a private Company to make the line. He was still, he said, prepared to recommend the line if they fulfilled the promise they had made in regard to the land, but he had ascertained from the Crown Solicitor that the written promises already given were not legally binding, and that unless the land was absolutely conveyed half the promises would not be kept. He looked upon Mr. Johnson's letter as a withdrawal of his promise, and moreover, he had learned that many of the landowners had since subdivided their land. He was still prepared to select one of the two staked routes and recommend it, but he must know at once if they would give the land, and he would have conveyances prepared. He did not expect small owners to give their land, nor did he expect to get the large areas required for Stations, but only sufficient to make the line the ordinary width from fence to fence.

This reply of the Minister's settled the fate of a scheme for making a line to Bankstown, a deputation in favour of which waited on the Minister on the same day as the above. Mr. Wright informed the deputation that they could not do better than to co-operate with the St. Peters-Liverpool promoters.

5/11/84. Mr. F. C. Rorke wrote to Mr. Hammond, stating that they wanted information in regard to the route it was proposed to take, in order that the land owners concerned might be communicated with as to the conveyance of the land required. This letter was forwarded to the Minister by Mr. Hammond, who was informed that the action promised by the Minister to the deputation was in progress.

22/12/84. The promoters were informed that the line was then in course of being pegged, and Mr. J. H. Legge replied that the Committee were making satisfactory progress in obtaining conveyances of land from the owners.

24/12/84. Engineer-in-Chief minuted that the Minister had authorized the permanent survey of the line commencing at  $3\frac{1}{2}$  miles from Sydney, on the Illawarra railway, passing through Canterbury, crossing George's River at 15 and  $16\frac{1}{2}$  miles, and joining the Southern line near Liverpool.

2/2/85. The attention of the Minister was drawn by a Mr. A. Childs to the liability of the route selected, to floods, and to the objectionable nature of the point at which it was proposed to place the bridge across the river.

Mr. Palmer explained that he was well aware of the liability of the locality to floods, that at the first bridge this would be provided for by a viaduct of  $1\frac{1}{4}$  miles, and at the second bridge by a viaduct of  $\frac{3}{4}$  miles, and that the crossing-places would be carefully selected.

2/2/85. Mr. J. H. Legge wrote that they were apprehensive from the proceedings of the surveyors, that that an important divergence from the original route was in contemplation. Mr. Kennedy, a Government Surveyor, was engaged, he said, on a new trial survey.

The reply given by the Construction Department was practically a disclaimer of any intention to depart from the accepted route.

28/6/85. The same gentleman again addressed the Minister, stating that his Committee had reason to believe that a serious divergence from the original route was in contemplation, and that if carried out it would have the effect of excluding Canterbury South, Rose Vale, Parkestown, Belmore, and Moorfields, from the benefits of the line.

The papers do not show what action if any was taken in connection with this letter, but

22/8/85. A public meeting was shortly after held at Canterbury to protest against the supposed intended deviation of route. References were made to promises given by Mr. Secretary Wright, that he would recommend the line through Canterbury South, Parkestown, Kingsgrove, Moorefield, and Belmore if the land were given for the purpose, and (it was maintained) the fact that ninety-seven landowners on the route had agreed to that condition entitled them to expect a fulfilment of those promises. It was finally decided to form a deputation to wait upon the Minister on the subject.

Mr. Secretary Wright was accordingly asked to appoint a day, but he declined to receive a deputation on the ground that he was in possession of all the facts that could be urged.

It would appear by a minute of the Engineer-in-Chief that the alternative routes were about this time submitted to the Minister for selection, but no decision was come to. From allusion in the papers it would seem these alternative routes were:—

(1.) Belmore route, length 14 miles 16 chains; estimated to cost £415,938.

(2.) Direct route, length 13 miles 52 chains; estimated to cost £393,870.

(3.) Via Lansdowne Creek, length 14 miles 4 chains; estimated cost, £346,393.

30/7/85. Although a little out of date a deputation which waited on the Minister in July, 1885, to urge the adoption of the Bell route, via Bankstown must not be passed without notice. The Minister informed the deputation that a number of surveys had been made, one of which was in the direction indicated by them, and that a line a little to the south of Bankstown would be the best, but no decision would be come to until the report of the Engineer-in-Chief had been received.

The following day a deputation waited on the Minister to advocate the duplication of the line from Liverpool to Granville. The arguments they desired to employ are set forth in a letter from Mr. McCulloch, M.L.A., to Mr. H. Taylor, M.L.A., which was handed to the Minister. It is there stated that the line in respect of width of bridges, culverts, &c., was prepared for a double road; that the traffic on the road was so large as to justify the duplication of the road. Even when the loop-line from St. Peters to Liverpool was constructed there would be a large traffic from Liverpool to Parramatta and from Liverpool to Homebush in coal and minerals. There was besides a large population of artisans, &c., along the line, and the traffic would soon be immensely increased. The Minister informed the deputation that the action of the Government would depend upon the practicability or otherwise of the St. Peters to Liverpool loop-line, that if the latter were carried out the whole of the through southern traffic would be carried over it, and there would be little but local traffic to provide for between Granville and Liverpool. If the proposed loop were abandoned then—and in that case only—the scheme referred to by them would have to be considered, and would in all probability be carried out.

The papers do not record anything further in connection with either of these proposals until after Mr. Wright went out of office and Mr. Lyne came into power as Minister for Works.

Soon after the accession of the latter to office a deputation waited upon him to advocate a duplication of the line from Granville to Campbelltown. Nearly the same arguments were adduced by the deputation as were employed by the deputation which waited on the previous Minister in favour of duplication between Granville and Liverpool. In addition to these arguments they maintained in connection with the duplication from Parramatta to Penrith, that the Southern line, in point of heaviness of traffic, had the better claims to consideration. The Minister in reply said that doubtless the proposed duplication would facilitate the traffic, but he thought the question was intimately connected with that of the loop from St. Peters to Liverpool, because if the latter were made it would relieve the present main line of a large amount of traffic. If the traffic on the Southern line was the larger as stated, the duplication of the line from Parramatta to Penrith was certainly an argument in their favour. He would, however, cause full inquiry to be made.

The Engineer for Existing Lines, in reply to the Commissioner, estimated the cost of the proposed duplication at £121,500, with an additional expenditure of £43,000 if the bridges were renewed, which it was thought would be necessary.

The action of the advocates of the quadruplication of the line, in urging their proposal upon the Minister, seems to have alarmed the persons who had the construction of the loop from St. Peters to Liverpool, in view—the two being, to a certain extent, rival schemes—and they in their turn formed a deputation to interview the Minister. No new arguments were employed; but the deputation stated that a well known firm of contractors were prepared to undertake the work for two-thirds of the estimated cost. The Minister said that this scheme was largely bound up with that of duplicating the line, for it was not to be expected that both works would be carried out, as the construction of a loop would do away with the necessity for duplication. The loop would be a very expensive work; but the fact of the greater part of the land being given free was a strong inducement to the Government to undertake it. He (the Minister) would promise that this should be considered with any proposal the Government might submit, but he did not think they would submit any that session.

On the 30th July another deputation, in the same interest, was received by the Minister. They advanced nothing new, but maintained that the line, as they were informed by practical men, could be constructed for £200,000. The Minister said there was really no occasion for them to come to him, as matters stood precisely as they did when they waited upon him a short time previously, and he could only repeat that the line should be considered when the next Railway proposals were dealt with.

Mr. Myles M'Rae drew the attention of the Minister to a scheme which he had propounded some years before, for resuming land on an extensive scale along the course of the proposed line, and after the construction of the line disposing of the surplus land, which he maintained could be done at an enormous profit. Mr. M'Rae also advocated making Arncliffe the point of junction with the Illawarra line.

The Minister declined to receive a proposed deputation in the interests of the duplication, Granville to Liverpool.

Again another deputation (St. Peters to Liverpool) equally barren of new facts with the previous one waited on the Minister who replied in substance as before, and minuted that the St. Peters loop scheme and the duplication question were in his opinion intimately connected and that if the former were carried out the latter would be unnecessary.

Mr. Commissioner Goodchap replied that there was no pressing necessity for a double line beyond Granville.

Another deputation waited on the Premier and the Minister for Works to urge the St. Peters to Liverpool loop. The Minister informed them that the question at issue was whether that scheme or the duplication should be carried out and it seemed to him that the advantages were in favour of the loop.

A Mr. W. W. Bucknall wrote advocating Arncliffe as the point of junction of the loop with the Illawarra line, but the Construction Department reported that that route had already been considered in connection with a survey made outside the Department by a Mr. Saunderson.

Mr. Secretary Lyne made a long promised visit to the locality and after inspecting the route told the promoters that they might reasonably expect that the line would be made, and that no long time would elapse before it was commenced.

About this time Mr. Lyne went out of office, but he left a minute on record to the effect that he had determined to submit the loop (St. Peters to Liverpool) to the Cabinet with a view to its being recommended to Parliament for approval. He had been over the line and considering the easy nature of the country he did not see how it was to cost anything like the estimated amount £395,000. Nearly the whole of the land would be given, and with the exception of the bridges over St. George's River there would be no work of any magnitude. As far as he could judge £6,000 a mile and £134,000 for the bridges making £214,000, should suffice for the work, and he would urge the Cabinet to submit the line for the approval of Parliament.

Immediately after this Mr. Sutherland took office, and very shortly afterwards received an unusually influential deputation in advocacy of the same scheme (the St. Peters to Liverpool loop). The Minister said the Government did not intend to submit any railway policy that session, and that he would not be bound by any promise given by previous Ministers. He knew, he said, that the line had been agitated for for a long time, and that action had been delayed by the disagreements of rival

syndicates. He would take an early opportunity of examining the route, and would appoint an officer to obtain information as to the prospects of the line. The Minister was anxious for the promoters to guarantee the erection of a certain number of houses if the line were constructed, but they declined to go beyond the undertaking to give land.

2/4/87. The following month a deputation waited on the Minister to press the duplication scheme (Granville to Liverpool). In addition to the old arguments they pointed out that large industries had been established in the locality and would bring traffic on to the line, and the construction of the latter moreover would give work to the unemployed. They disclaimed any idea of rivalry with the loop scheme, both works being they thought required. The Minister promised to obtain an estimate of the cost of the work (but discovered afterwards that an estimate had been furnished. "See page 3 of this paper") and to give the matter consideration. He looked upon the duplication as a necessity, but he did not regard it as antagonistic to the loop scheme. He was prepared to recommend the duplication to the Cabinet.

15/7/87. Another deputation was received by the Minister in the interest of the Liverpool loop scheme, but nothing new was advanced in advocacy of the line. Mr. Carruthers intimated that he was getting an undertaking to give the land free—signed by nearly every owner on the route. The Minister repeated his promise to depute an officer to obtain information as to probable traffic, &c.

In pursuance of this promise the late Commissioner deputed Inspector Hornidge to examine and report from a traffic point of view upon the several routes.

Inspector Hornidge, having examined the route, reported that having no statistics to guide him, he had been obliged to take population as his basis in calculating the traffic. Roughly stated the line would serve 14,500 persons, and the probable traffic would be—

Passengers, including 30,000 to Canterbury Races	...	...	...	900,000
Goods, inwards	...	...	...	22,000 tons
Firewood	..	...	...	18,000 "
Coal	..	...	...	30,000 "
Goods, outwards	...	...	...	100,000 "

In addition to this the following would pass through the loop to and from the south—Passengers, 583,721; Goods, 211,085 tons. As regarded the southern traffic, the Department would gain a little in haulage by the shortened route, but it would lose more in revenue from the same cause. The three proposed routes were so near to each other that the estimate of traffic would answer for them all, but the direct route had the advantage in being the shorter and cheaper, and giving slightly the greater traffic. The traffic might be estimated as

Coaching	...	...	...	...	...	...	...	...	£23,000
Goods, coal, and wood, inwards	...	...	...	...	...	...	...	...	20,683
"	"	outwards	...	...	...	...	...	...	7,500
									£51,183

The duplication project had been mentioned as an alternative to the loop; but it must be borne in mind that the mere duplication of an existing line could not create fresh traffic, and, moreover, the sections Granville to Liverpool were not those which most required relief. The two schemes were distinct. The loop passed through a country highly favourable to the development of a paying traffic.

The Traffic Manager concurred on the whole, but thought the loss of revenue on the southern line by the diminished mileage a serious matter. The time, he added, was not far distant when the quadruplication of the line to Homebush would be an absolute necessity, and when that was done there would be no difficulty in accommodating the southern traffic upon it.

12/10/87. Mr. Myles M'Rae wrote, informing the Minister that Mr. Coglean and party were boring for coal in the Bishop's 6,000 acres with every prospect of success, and stating that the line should pass that way, and that the junction should be at Arncliffe.

13/2/88. Mr. A. H. McCulloch, M.P., addressed the Minister, urging the duplication of the line from Granville to Liverpool. It would, he said, be an immense convenience to the public, and the cost would be only that of ballasting and laying the rails.

26/10/88. A deputation waited on the Minister to request the survey of an alternative route. The line already surveyed had to cross a large tract of country which was liable to floods, and, moreover, required two expensive bridges which would cost from £100,000 to £150,000. The direct route by Upper Bankstown which they advocated would avoid these bridges and pass through higher country, and a survey of it had been promised. The Minister promised to obtain a report, and if the facts were as they represented, to have the whole matter reconsidered.

A report accordingly was obtained with the result that a surveyor was sent to make a trial survey of the proposed alternative line.

25/4/89. The chairman at a public meeting of the residents of the Canterbury and Marrickville districts, held on this date, forwarded to the Minister copy of a resolution, carried unanimously at such meeting, to the effect that so much of the proposed line St. Peters to Liverpool, as it was understood, had been favourably reported upon by the Railway Commissioners, be at once transmitted for the consideration of the Public Works Committee.

3/5/89. The chairman of a public meeting held at Marrickville also forwarded copy of resolution carried in favour of the entire line.

5/4/89. A large deputation waited on the Minister to urge the construction of the line. They stated that previous Ministers had been in favour of it; that the undertaking would be a largely reproductive one; that all land required for the purposes of construction would be given to the Government free, and that if this line were made it would obviate the necessity for the quadruplication of the main line to Parramatta, while there would be a saving of £2,000 per annum in haulage. In the event of the Government declining to make the line, a syndicate was prepared to raise the funds and carry out the work. The proposed line, by furnishing an alternative route, would provide for the contingency of a block of the existing line, and would introduce two new sources of revenue—the Canterbury Park and Warwick Farm.

The Minister informed the deputation that the Public Works Act made it a *sine qua non* that an undertaking of this kind should be reported upon by the Railway Commissioners before being submitted to the Parliamentary Standing Committee. The report of the Commissioners was to the effect that the proposed

proposed line would result in a loss of £17,000 per annum; but they admitted that a line to Canterbury would pay, and might some day be extended to Liverpool. It was important that they should be prepared with evidence to meet the arguments of the Commissioners. The whole case would be laid before the Cabinet.

A list of "reasons why" this line should be constructed was on one of the foregoing occasions submitted by the promoters. I am not clear as to the exact place of the document on the papers, and I introduce a brief notice of the "reasons" here as follows:—(1) The line was necessary; (2) and would pay. (3) It had been asked for by 12,429 persons. (4) The land would be given free. (5) It would reduce the distance by 6 miles. (6) £20,638 per annum would be saved in haulage. (7) The value of the land given would exceed the cost of making the line. (8) It would give communication to districts already populated—Marrickville, Canterbury, Kingsgrove, Moorfields, Belmore, and Bankstown. (9) It would relieve the main line and render quadruplication unnecessary. (10) The Bishop, who was prepared to give 2 miles of the land, was about to cut up the estate, and the future owners might refuse to give. (11) It would give access to the fresh air of the country and enable many to get out of the overcrowded courts and lanes of Sydney. (12) The Canterbury racecourse, with thirteen meetings per annum, and the Warwick Farm racecourse, with twelve meetings, and in both cases an average attendance of 5,000 persons per meeting, require that provision should be made for the traffic.

The Minister minuted that he had promised to write to Messrs. Ritchie and Hobbs his reasons why the whole of the Liverpool loop-line could not be carried out, and to acknowledge that if the whole could be done for £160,000 the whole aspect of the question would be altered. "Propose interview *re* cost, and engineer will be present. Commissioners to visit again."

The Chairman of the Bankstown Railway Committee wrote complaining that that place had been cut off from the long-promised and expected railway communication.

Mr. Deane explained that it was on the recommendation of the Railway Commissioners that a portion only of this line had been submitted to the Parliamentary Committee.

The Under Secretary asked to be favoured with the expression of Mr. Deane's own views.

Mr. Deane replied that when he heard the Commissioners had recommended a portion of the line he thought they intended the Punchbowl Road (9½ miles from Sydney) as the terminus. This would have tapped Belmore, and would in his opinion be a proper length to make. If Bankstown were to be served the works must be continued as far, 11½ miles from Sydney.

The Chairman of a public meeting held at Bankstown on the 8th August, forwarded to the Minister a report of the proceedings at such meeting, of which the following is a condensed statement. The Chairman in opening the proceedings gave expression to the disappointment that was felt at the "seeming intent of the Government to again exclude the district of Bankstown from the long-expected and oft-repeated promised line of railway to the city." The Railway Commissioners, he said, had reported in a manner prejudicial to the interests of Bankstown, but they had done what they doubtless conceived to be their duty. Possibly with better and more correct information they might yet see their way to moderate their views in favour of the District. Those gentlemen could not be expected to know the rapidity with which the already subdivided land would receive population. Another speaker said the Commissioners had estimated the traffic at £5,000, but they must be astray in their reckoning, as he had that day seen a gentleman who was prepared to guarantee £5,000 for his own firm alone. Resolutions were carried expressive of the regret and disappointment of the residents that the hopes held out to them had not been fulfilled, and that the long expected and oft promised line to Bankstown was again deferred. They felt certain that the whole line if submitted to Parliament would be carried. The members for the District should be requested to arrange for a deputation to lay the whole case before the Premier and the Minister for Works.

Mr. Lyne, M.P., wrote to the Minister stating that he would not be able to accompany a deputation which was about to wait upon the Minister *re* the Liverpool loop-line. When Minister for Works he had had an estimate of cost made, and—speaking from memory—it was a little over £200,000. He had no hesitation in saying that, both as a relief to the Southern line, and as a suburban line, it would be a success.

The proposed deputation to represent the claims of Bankstown, waited upon the Minister. They stated that the people were indignant that the entire question had not been submitted to the Public Works Committee, as promised by the Premier. It was believed that the estimate for construction was much too high, and the estimate for traffic too low. The relief the line would afford to the main line traffic had been underestimated. They urged that the whole line should be submitted to the Committee, and that the Commissioners should be instructed to visit the district again.

The Minister replied that the deputation had advanced nothing new. He had no interest to serve but that of the public, but it was natural for them to advocate the line. It was clearly laid down that any proposal submitted to the Committee should be recommended by the Government as a desirable public work. How would the House be likely to treat a proposal accompanied by a condemnatory report? If they could bring rational arguments against the decision of Government, he was prepared if necessary to modify his opinion. He was prepared to meet a committee (say three) of their body who might bring with them a competent engineer, and he on his part would be accompanied by the Engineer-in-Chief with the plans and specifications. The whole question could then be discussed, and if they could show that the line could be constructed at smaller cost, and that the revenue would bear a fair relation to such cost, he was quite willing to take a different view of the question.

The report of the Railway Commissioners was to the following effect:—

Estimated cost	...	...	...	...	...	...	...	...	£349,324
Annual charges, including interest on capital	...	...	...	...	...	...	...	...	21,346
Anticipated new traffic	...	...	...	...	...	...	...	...	5,200
Annual loss	...	...	...	...	...	...	...	...	£16,146
But besides this the shortening of the route to Liverpool and places south would involve a further loss of	...	...	...	...	...	...	...	...	£17,423
Traffic diverted from Petersham and Ashfield	...	...	...	...	...	...	...	...	1,714
Further annual loss	...	...	...	...	...	...	...	...	£19,137

The Commissioners stated that the construction of the loop would relieve the main line only to the extent of four trains each way per day, and that the quadrupling of the main line was required for the development and accommodation of the traffic along the route. They recommended the construction of a branch line about 4 miles along the proposed route. It would accommodate Canterbury and a fairly good residential district. The traffic would probably pay working expenses, and in a few years be a good investment. The line should take the exact route laid down, so that at some future time an extension might be made and ultimately perhaps be carried through to Liverpool.

C.A.B., 23/10/89.

## B.

## REPORTS OF THE RAILWAY COMMISSIONERS.

Office of the Railway Commissioners of New South Wales,  
29 December, 1888.

Proposed Loop Line of Railway—St. Peters to Liverpool—14 miles.

In accordance with the provisions of the "Public Works Act, 1888," section 13, we beg to report as under:—

*Cost of Construction—*

The Engineer-in-Chief estimates the cost of construction of the railway, with a double line of rails, exclusive of land and compensation, at... .. £349,324

*Annual Cost—*

Interest on cost of construction, at 3½ per cent. ... ..	£12,226
Estimated cost of maintaining the permanent way, per annum ... ..	£3,500
For first two years an additional cost of ... ..	800
Traffic Department expenses... ..	1,820
Locomotive expenses ... ..	3,000
	9,120

Total annual cost ... .. £21,346

*Traffic Estimate—*

The new passenger traffic which will accrue to the line will, for a long time, be very small, and would probably not exceed ... .. £3,300

The goods traffic also would not exceed ... .. 1,900

£5,200

As the bulk of the population is located within 5 miles of Sydney the marketing would be done in Sydney and carted direct. Bricks and firewood would to some extent be carted also.

The shortening of the route to and from Liverpool and places south thereof by 5 miles would cause an annual loss of ... .. £17,423

And it is estimated that traffic would be diverted from Petersham and Ashfield to the extent of ... .. 1,714

£19,137

The theory which has been put forth, that the construction of this line would avoid the necessity for increasing the carrying capacity of the existing line from Liverpool to Sydney, should not have any weight in the consideration of the question, as the construction of the line would only relieve the parent line to the extent of about four trains per day in each direction; and the quadrupling of the line out of Sydney to Homebush is required to accommodate the increasing purely residential service of trains; and the doubling of the line from Granville to Liverpool will be required for the development of the country along that route, which is being fairly rapidly settled.

If a branch line were constructed from St. Peters through Canterbury to a point 8 miles from Sydney (*i.e.*, 4 miles of new line), it would accommodate Canterbury and a fairly good district for residential traffic; and at the suggested terminus of the line we observe that two large properties have been laid out for the purpose of encouraging a suburban population.

The construction of a branch line to the point indicated is the only course we could recommend, which would have the effect of giving another suburban outlet for Sydney; and we believe if this were done the traffic created would probably pay working expenses, and in a few years it would doubtless be a good investment.

The line should take the exact route laid down for the proposed through line, so that when the proper time arrived an extension might be made, and probably the line ultimately carried through to Liverpool.

The Common Seal of the Railway Commissioners of New South Wales has been hereunto affixed by the Railway Commissioners in the presence of,—

{	E. M. G. EDDY, (L.S.) Chief Commissioner.
	W. M. FEHON, (L.S.) Commissioner.
	CHARLES OLIVER, (L.S.) Commissioner.

D. VERNON.

Office

## APPENDIX.

Office of the Railway Commissioners of New South Wales,  
Sydney, 20 November, 1889.

Proposed Branch Line of Railway, Marrickville to Burwood Road, 4 miles 60 chains.

In accordance with the provisions of section 13 of the "Public Works Act, 1888," we beg to report as under:—

*Cost of Construction—*

The Engineer-in-Chief estimates the cost of construction of a single line of railway, exclusive of land and compensation, at ... .. £90,250

*Annual Cost—*

Capital expenditure, at 3½ per cent....	... ..	£3,158
Estimated cost of maintaining the permanent way	... ..	£800
Traffic expenses	... ..	2,600
Locomotive expenses	... ..	3,000
		6,400
Total annual cost	... ..	£9,558

*Estimated Revenue* ... .. £3,000

By giving a frequent service it is estimated that on the line a revenue of about £3,000 per annum would be secured, but, in connection with this there would also be an additional estimated revenue upon the existing line of a similar sum. A speedy development of the district, however, is confidently anticipated, so that within two years the working expenses would be more than recouped.

The line, if constructed, should be, in our opinion, a double line, otherwise a most unsatisfactory service for residential purposes would be afforded.

The Common Seal of the Railway Commissioners of New South Wales was hereunto affixed this twentieth day of November, in the year of our Lord one thousand eight hundred and eighty-nine, in the presence of,—

<p style="text-align: center;">JNO. D. WARD.</p>	}	E. M. G. EDDY, (L.S.) Chief Commissioner.
		CHARLES OLIVER, (L.S.) Commissioner.
		W. M. FEHON, (L.S.) Commissioner.

## C.

APPARENT ANOMALLY IN THE ESTIMATED EXPENSES OF WORKING THE PROPOSED RAILWAYS, MARRICKVILLE TO BURWOOD ROAD, AND ST. PETERS TO LIVERPOOL.

Sir,

Government Railways of New South Wales, Secretary's Office,  
Sydney, 3 March, 1890.

I am directed by the Railway Commissioners to acknowledge your letter of the 28th ultimo, relative to an apparent anomaly in the estimated expenses of working the proposed Railway Extensions, Marrickville to Burwood Road, and St. Peters to Liverpool.

I have to point out that the circumstances under which the estimates were framed are entirely dissimilar. In December, 1888, when the Railway Commissioners were asked for a report with regard to the loop-line St. Peters to Liverpool, it was considered that existing trains *via* Granville would give a portion of the train facilities required, and as the greater portion of the route would not call for any accommodation, being away from public roads, it was only intended to open two stations and one intermediate platform, and the fixed operating expenses would consequently not be heavy.

With regard to the proposal before the Committee for a line from Marrickville to Burwood Road, it was intended that this section should provide for developing a suburban district, and it was proposed to establish two intermediate stations and a terminus, and to give a frequent train service running from early in the morning until late at night. This would entail an independent set of trains, and consequently involve considerable cost in the way of guards, car cleaners, &c., in addition to the expenses incurred in keeping two sets of men at the proposed stations. The same consideration would apply to the locomotive expenses. A separate locomotive service would have to be maintained, whereas with the through loop-line the engines for the through service would be used to pick up the local traffic.

In the evidence it is stated that the Commissioners proposed to work the extension to Burwood Road as a single line, but I may point out that although the estimate of the Engineer-in-Chief provided for a single line of rails only, yet the Report of the Railway Commissioners, dated 20th November, 1889, stated:—"The line should be in our opinion a double line, otherwise a most unsatisfactory service for residential purposes would be afforded," and the calculations were based thereon.

I have, &c.,  
H. M'LACHLAN,  
Secretary.

C. Lyne, Esq., Secretary Parliamentary Works Committee.

[To Evidence of H. Deane, Esq.]

## D.

## ESTIMATE OF COST OF THE PROPOSED RAILWAY.

Department of Public Works,  
Railway Construction Branch, Engineer-in-Chief's Office.

Proposed Railway from Marrickville to Burwood Road.

Estimated cost of constructing a single line of Railway (exclusive of cost of land and compensation).

Length of main line, 4 miles 60 chains; length of sidings, 34 chains. Total, 5 miles 14 chains.

Class of work.	Estimated cost of works of each class.		Total cost.	
	£	s. d.	£	s. d.
Excavations .....			33,764	10 0
Culverts—				
Three 4 feet .....	591	16 0		
Three 6 feet 6 inches .....	1,457	0 0		
Three 8 feet .....	2,588	1 0		
Six rail openings .....	156	0 0		
Bridges—			4,792	17 0
Cook's River .....	9,274	16 0		
Canterbury Road .....	3,000	0 0		
Overbridges—Four roadways 24 feet wide .....			12,274	16 0
Level crossings .....			3,262	16 0
Diversions of roads .....			1,537	6 0
Permanent-way and ballasting .....			2,932	10 0
Stations .....			10,500	14 0
Fencing .....			8,084	4 0
Signals .....			2,137	10 0
			900	0 0
Cost of works .....			80,187	3 0
Engineering and contingencies, 12½ per cent. ....			10,023	7 11
Total (say £90,250) .....			90,210	10 11
Average cost per mile (say £19,000) .....			18,991	13 11

[To Evidence of J. J. Cooper, Esq.]

## E.

Starland, Bankstown, 20 November, 1889.

Sir,  
Having, since March, 1882, taken an active part in trying to obtain the much needed and just claim of railway communication with the city for Belmore, Bankstown, Auburn Park, and Campbell Hill Estates, I beg most respectfully to take exception to, and to direct the special attention of the Committee to, the erroneous statements reported in this day's *Sydney Morning Herald*, as made before the Committee yesterday by the Acting Engineer-in-Chief of Railways, *in re* the St. Peter's and Liverpool line of railway,—

Firstly,—That the originally proposed route was to the south of that now proposed, is incorrect. It is over 1 mile to the north.

Secondly,—It was the first, and not the second, as stated by Mr. Deane, that was petitioned for, March, 1882.

That passed through between Belmore, Bankstown, and Campbell Hill Estate, to the north. Mr. Deane states it is not desirable to deviate. Then why deviate from what each of the petitioners have asked for—the most direct practicable route? Again, that the construction of this line through would not greatly relieve the main line. It would relieve the main line after leaving the junction of not less than between thirty and forty trains daily, there being fully twenty-four south trains daily at the present period; and I would also beg respectfully to suggest that the Committee satisfy themselves. If it is not the adopted detour from a more direct line, repeatedly brought under the notice of the Department of Railways, that by causing the unnecessary expensive cost of the construction, is the obstruction to the construction of the whole of this line.

To the Honorable Joseph Abbott, Esq., M.L.A.,

Chairman of the Parliamentary Standing Committee on Public Works.

I have, &amp;c.,

J. J. COOPER.

Gentlemen,

Starland, Bankstown, 21 November, 1889.

I beg respectfully to supplement my evidence by stating that a line starting from the same point at Marrickville, running parallel, but at a certain radius northerly, would not interfere with the general interests of the Marrickville, Canterbury, Moorefields, or Belmore districts; would the better benefit the settled population of Bankstown; would pass along a more elevated route; would go through a sandstone and bluestone hill, which would furnish ballast for the line; would enable the Engineer-in-Chief to avoid the inundated portion at Long's Swamp, also the two bridges over George's River, which the Government estimate to cost at the very least £100,000; would tend to benefit the population represented by the 5,000 acres of subdivisive areas in the district; would be no longer, if not shorter, and, as shown by the Engineer-in-Chief's evidence, effect a great saving in the cost of the construction.

I have, &amp;c.,

J. J. COOPER.

To the Honorable Gentlemen of the Parliamentary Standing Committee on Public Works.

[To Evidence of Mr. M. Hamburger.]

## F.

## STATEMENT OF REASONS IN FAVOUR OF THE RAILWAY.

Sydney, 30 November, 1889.

Sir,  
As I have been informed that your Committee intends to call only a few more witnesses *re* the proposed construction of a railway from Marrickville to Burwood Road, I have put my statement down in writing, which please be good enough to place before the Committee.

Yours truly,

MATHIAS HAMBURGER.

The Secretary, Parliamentary Standing Committee on Public Works.

Gentlemen,

363 George-street, Sydney, 30 November, 1889

Having given my name to your Secretary as a witness wishing to be examined before your Committee, but being informed that only a few more witnesses would be called, I put my statement in writing, and trust it may be of some use.

I am a property holder at Belmore. The staked line is 55 chains (under  $\frac{2}{3}$  of a mile) distant from my property, which fronts the Canterbury Road, opposite Belmore Church. The survey known as Bell's is only 2 minutes' distant therefrom, and would be more advantageous to me. When Mr. Cameron stated that the staked line is 1½ mile distant from the Belmore Post Office he is in error. The distance is only 50 chains, or a little over half a mile. The staked line will suit the largest majority of the Belmore people, although Bell's line would be better for them. At a meeting called about seven years ago by Mr. Aaron Brown (a witness before your Committee, I understand), upon his own grounds, a resolution

resolution was proposed by him to urge Government to adopt Bell's survey. There were only three persons for this motion, and the amendment, "to leave the choice of route to Government," was passed nearly unanimously. The meeting was a representative one, and included most of the property holders of the district.

The staked line, recommended by Mr. Whitton, I consider as good a line as can be made. It is shorter by  $\frac{1}{2}$  a mile than Bell's survey. The distance from the Canterbury Road does not exceed 60 chains or  $\frac{1}{3}$  of a mile anywhere.

It is fair to presume that the new suburbs to spring up upon the construction of this line will fill this gap between the railway and the Canterbury Road. This has been the case in the old suburbs. Petersham, at the time of opening the Parramatta railway, was a hamlet on the Parramatta Road. It extended very soon to the railway line and across. The same was the case at Ashfield and Burwood, then small settlements along the Liverpool Road, but now densely populated, and extending from the Liverpool Road on one side to the Parramatta Road on the other.

The staked line is fairly suitable for the present population, and gives a great scope for the formation of new suburbs. The Harcourt Estate, laid out as a model township, is close to it, and settlement under such liberal conditions as to area of ground, &c., should be encouraged, and may be the means of promoting the laying out of other areas upon the same healthy conditions.

In my opinion a single line would be a mistake. In any case provision should be made that a double rail could be laid down without extra expense as to formation of the road bed, whenever required.

The estimate of the Commissioners as to probable earnings of the line I consider to be a very safe one. It seems to be based upon the present traffic.

I have no doubt that the racecourse traffic alone, estimated by Mr. Kirkcaldie at £750 per annum, will yield £3,000 as soon as the line is opened. It will quadruple the attendance at the meetings, which would be larger if the round-about way of getting there (*via* Ashfield and bus) did not deter the great majority of the people from attending. At 1s. return fare crowds would go where now there are only individuals.

I believe in having the line carried through to Liverpool. The intervening area is all suburban. The land is well adapted for settlement. It is mostly level, with some undulating tracts. It is easily drained. Woolli Creek, and George's River on the south, and Cook's River on the north, are the natural watersheds.

As the Government proposal is, however, only for the construction of the line as far as Burwood Road, I trust your Committee will see its way to sanction it as an instalment of the whole line.

I would suggest that, if your Committee cannot see its way to recommend the line being carried out through to Liverpool, that a suggestion to extend the line in the near future as far as the 12-mile peg (that is the Bankstown district) may be embodied in your report.

The line would then open up a most picturesque, elevated, and healthy district, which has hardly any communication with Sydney at present.

As to the more northern survey, mentioned in the evidence of Mr. Thornton, it would be too far away from the Upper Canterbury and Belmore district to be of any use. It would go through very sparsely-populated territory. The statement that such a line would not benefit Mr. Thornton I consider erroneous. His property is to the north of Liverpool Road, I am informed, and would be greatly benefited.

The four additional miles to 12-mile peg is the most inexpensive part of the line, and ought to be constructed for less than £20,000. The land is quite level. The 12-mile peg is at the Chapel Road, the principal thoroughfare from Belmore to the Liverpool Road, and would be just as central as the proposed terminus at the Burwood Road, the main cross-road from Burwood to the Canterbury and Illawarra districts.

Hemmed in as Sydney is, by the Pacific on one side, and the waters of Port Jackson and Parramatta River on the other, the natural outlet for any surplus population is the Canterbury district.

Settlement has only been prevented by want of proper communication. I am confident that within six months from the starting of the line at least £25,000 will be spent in building residences by parties like myself who were only prevented from residing upon their properties by the want of speedy access to the city. Dr. Benbow, Mr. Horn (jeweller, Arcade), Mr. Hust (late of the "Imperial Hotel," Wynyard-square), and many others who own property at Canterbury and Belmore will build at once. The distance from town is only the same as from Ashfield, Burwood, or Homebush, but, by the present mode of transit, Sydney cannot be reached under an hour to an hour and forty-five minutes by bus.

An extension of the tramway from Dulwich Hill to Canterbury would not suit at all. Fifty minutes is the time to Dulwich Hill, to which at least thirty minutes have to be added to reach Burwood Road. Even the through trams could not do the distance under one hour, while the railway ordinary trains will only take twenty-five minutes to Redfern or thirty-five minutes to the Post Office, and through trains will do it in twenty-seven minutes.

The Liverpool through line will, if completed, be the main line to the south and Melbourne, and a great boon to through travellers. Against the loss of revenue upon the Granville-Liverpool section of the old line ought to be set the saving in fuel, wear and tear, &c., by the shortening of the distance. It is, in my opinion, a very questionable policy to make the people pay for more distance and haulage than is necessary, just for revenue sake.

Mr. W. G. Cameron has stated before your Committee that none of the proposed routes would pay, in his opinion, for some time. This is in flat contradiction of his utterances when he was a candidate for Parliament in the Canterbury district, when he not only gave it as his opinion that the line would pay as well as the Illawarra suburban line, but promised to work for its being made. Whether his present evidence is a consequence of his defeat, or a desire to burke the line in order to get it made from Arncliffe or Hurstville, which would intersect his property, I am unable to determine.

I would further call the attention of your Committee to the necessity of constructing a belt line of railway to start from the Homebush sale-yards, about  $9\frac{1}{2}$  miles from Redfern, to the neighbourhood of the 10-mile peg of the proposed line Liverpool, and through to Hurstville, 9 miles 70 chains on the Illawarra line from Redfern. This line will be essential:—

- 1st. To transfer sheep, cattle, coal, and produce from the Northern, Western, Southern, and Illawarra lines, without the detour of going to Redfern, and thus blocking our old suburban line.
- 2nd. To enable people from all parts of our railway system to go to National Park. In connection with the duplication of the Illawarra line from Hurstville to the Park, this will actually open up the National Park to the whole of the New South Wales population. The traffic on holidays alone should recoup interest upon the outlay. Its length will be under 7 miles, and through level country.

The longer this necessary line is delayed the more it will cost to construct.

Although not within the province of the present proposal, I draw your attention as Members of Parliament to it.

In connection with my remarks *re* the Harcourt Estate, whose allotments are laid out in areas of not less than a quarter of an acre, I would draw your attention to the necessity of so amending Mr. Reid's Act, which merely prescribes minimum widths of roads and lanes, that it shall be made unlawful hereafter to lay out estates in the suburban area in less than quarter-acre allotments, and further, that it shall be unlawful to build more than one dwelling upon such allotment.

To the Parliamentary Committee for Public Works.

Yours, &c.,

MATHIAS HAMBURGER.

#### G.

#### CAPITAL AND ANNUAL VALUES OF MUNICIPALITY OF CANTERBURY.

Municipal Council Chambers, Canterbury, 6 December, 1889.

Sir, I have the honor, by direction of His Worship the Mayor (James M'Bean, Esq.), to forward you the following information relative to the capital and annual values of this Municipality:—

	£	s.	d.
1879-80—Annual value .....	11,553	10	0
Rate of 1s. in the £ .....	577	13	6
1889-90—Capital value .....	471,997	0	0
Annual .....	16,856	0	0
Assessed .....	38,779	0	0
Rate of 1s. in the £ .....	1,938	19	0

In the Municipal year 1879-80 no capital values were run out. In the present Municipal year, 1889-90, there are 939 acres of land in blocks of 20 acres and upwards taken at rental value, the capital value of which is £78,120. Of the 939 acres there are 450 acres within a quarter of a mile of the proposed railway. Number of allotments of land sold, 2,168.

I have, &c.

BENJAMIN TAYLOR,  
Council Clerk.

The Chairman, Parliamentary Committee on Public Works, Sydney.

H.

1890.

---

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

MARRICKVILLE TO BURWOOD ROAD  
RAILWAY BILL.

(MESSAGE No. 15.)

---

*Ordered by the Legislative Assembly to be printed, 2 July, 1890.*

---

*By Deputation from the Governor,*  
ALFRED STEPHEN,  
*Lieutenant-Governor.*

*Message No. 15.*

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the construction of a line of railway from Marrickville to the Burwood Road.

*Government House,*  
*Sydney, 25th June, 1890.*

REPORT

TOGETHER WITH

MINUTES OF EVIDENCE, APPENDICES, AND PLAN,

RELATING TO THE

PROPOSED RAILWAY

FROM

MOLONG TO PARKES AND FORBES.

---

Presented to Parliament in accordance with the provisions of the Public Works Act,  
51 Vic. No. 37, section 8.

---

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

## MEMBERS OF THE COMMITTEE.

## LEGISLATIVE COUNCIL.

The Honorable JOHN LACKEY, Vice-Chairman.  
 The Honorable ANDREW GARRAN.  
 The Honorable FREDERICK THOMAS HUMPHERY.  
 The Honorable WILLIAM JOSEPH TRICKETT.  
 The Honorable GEORGE HENRY COX.

## LEGISLATIVE ASSEMBLY.

JOSEPH PALMER ABBOTT, Esquire, Chairman.  
 JACOB GARRARD, Esquire.  
 HENRY COPELAND, Esquire.  
 JAMES EBENEZER TONKIN, Esquire.  
 WILLIAM SPRINGTHORPE DOWEL, Esquire.  
 EDWARD WILLIAM O'SULLIVAN, Esquire.  
 JOHN HURLEY, Esquire.  
 CHARLES ALFRED LEE, Esquire.

## MEMBERS OF THE SECTIONAL COMMITTEE.

JAMES EBENEZER TONKIN, Esquire, Chairman.  
 The Honorable GEORGE HENRY COX.  
 WILLIAM SPRINGTHORPE DOWEL, Esquire.  
 CHARLES ALFRED LEE, Esquire.

## GENERAL INDEX.

Report by the Committee.  
 Minutes of Evidence taken by the Committee.  
 Appendix to Evidence taken by the Committee.  
 Report by the Sectional Committee.  
 Minutes of Evidence taken by the Sectional Committee.  
 Appendix to Evidence taken by the Sectional Committee.  
 Plan.

## LIST OF WITNESSES.

[Examined before the Committee.]

	PAGE.
Joseph Barling, Esq., Under Secretary for Public Works .....	1-2
Stanley Alexander, Esq., District Engineer.....	2-4
Alexander Duff, Esq., District Traffic Superintendent, Railway Department .....	4-6
Henry Deane, Esq., Acting Engineer-in-Chief for Railways.....	6-7
John Charles McLachlan, Esq., Solicitor, Sydney .....	8-10
John Philip Sharkey, Esq., Civil Engineer .....	10-12
[Examined before the Sectional Committee.]	
Henry Augustus Crouch, Esq., District Surveyor in charge of the Orange Land Board District.....	1-3
Edye Hales Stobo, Esq., Crown Lands Agent in the Orange District .....	3-4
Mr. Samuel Landauer, Storekeeper, Cudal .....	4-5, 160
James Torpy, Esq., M.P.....	5-7
Mr. Edward Nathan, Manager at Orange for Messrs. Cobb & Co. ....	8-9, 61
Mr. William Moulder, Auctioneer and Commission Agent, Orange .....	9-11
Mr. Augustus Coulston, Auctioneer, Orange .....	11-13
Mr. Patrick Kenna, Hotelkeeper, Orange .....	13-14
Mr. Frederick Richardson, Railway Stationmaster, Orange .....	14
Caleb Robertson Barry, Esq., Bank Manager, Blayney.....	14-16
Thomas Kennedy, Esq., Surveyor, Railway Survey Branch, near Gulgong .....	16-18
Henry Harold Septimus Chippendall, Esq., Clerk of Petty Sessions and Crown Lands Agent, Molong .....	18-19, 20, 37
Mr. Edward Aland, Railway Stationmaster, Molong.....	19-20
Mr. John Black, Miller, Molong.....	20-21
Joseph Wren, Esq., J.P., Molong .....	21-23
Mr. John Francis Wynne, Hotelkeeper, Molong.....	23-24
Mr. John M'Groder, Hotelkeeper, Molong .....	24-26
Mr. John Lohan, Agent at Molong for Messrs. Wright, Heaton, & Co. ....	26-27, 30
Mr. James Haslam, Storekeeper, Molong .....	27-28

	PAGE.
Mr. John Robards, Miner, Molong.....	28-30
Mr. William Croasdaile Finch, Land Agent, Molong.....	30
Mr. Edward George Finch, Inspector of Stock in the Molong District .....	31
Mr. John Burgess, Auctioneer and Commission Agent, Molong .....	31-32
Mr. William Joseph Windred, Hotelkeeper, Molong.....	32-33
William Ross, Esq., Molong .....	33-34
George Cochrane, Esq., J.P., Borenore.....	34-36
Mr. Joseph Jefferis Morris, District Court Bailiff, Molong .....	34
Mr. John Rubie, Farmer, near Molong .....	35
Henry Samuel Marsden Betts, Esq., Mayor of Molong.....	35-36
Andrew Ross, Esq., M.D., M.P., Molong .....	36-37
Mr. Jonathan Atkinson, Senior-Constable, Molong .....	37
Charles MacDonell Stuart, Esq., Civil Engineer, Manildra .....	38-39
Mr. Daniel M'Innes, Storekeeper, Meranburn.....	39-40
Mr. Charles Augustus Miller, Farmer and Grazier, Manildra.....	40-41
Christian Miller, Esq., J.P., Manildra .....	41-43
Mr. William Williams, Farmer, Meranburn.....	43
Mr. Daniel Percy M'Innes, Assistant Storekeeper.....	43
Mr. Richard James Gosper, Farmer and Grazier, Meranburn .....	44
Mr. William Heper Cockram, Grazier, Mackay's Creek .....	44-46
Mr. Michael O'Donnell, Farmer and Storekeeper, Manildra .....	46
Mr. Jeremiah O'Brien, Sawyer, Meranburn.....	46-47
Mr. Henry Packham, Farmer and Innkeeper, Bumberry.....	47-48, 51
Mr. Alfred Townsend, Farmer, Bumberry .....	48-49
Mr. James Sharp, Farmer, Rocky Creek .....	50
Mr. Charles Townsend, Selector, near Manildra.....	50-51
Mr. John Schnabel, Farmer, Bumberry .....	51
John Alexander Rose, Esq., Mayor of Parkes... ..	51-55, 61
Mr. Mark Coleman, Gardener, Parkes .....	56
Mr. Angelos Pholoros, Storekeeper, Parkes.....	56-58
Mr. John Medlyn, Miner and Hotel-keeper, Parkes .....	58-59
Mr. Sydney Ephraim Close, Auctioneer, Parkes .....	59-60
Mr. Thomas Bridle, Selector, near Parkes .....	60-61
Mr. John M'Grath, Sheep-farmer, Genanagie .....	61-62
Mr. John Cusack, Selector, Trundle .....	62
Mr. James Drake, Selector, Trundle .....	63
Mr. Henry Alfred Croft, Grazier, Trundle .....	63-65
Mr. James Fox, Grazier, Bolderodgery Pastoral Holding.....	65-66
Mr. James Grimmett, Selector, Bolderodgery Pastoral Holding.....	66-67
Mr. Joseph Westcott, Farmer and Grazier, Kadina .....	67
Mr. Richard Wright, Mining Manager of the Bushman's Hill Co., near Parkes.....	68-69
Mr. Francis Nicholls, Farmer, Coobang Creek, near Parkes .....	69-70
Mr. James Maher, Miner, Parkes .....	70-71
Mr. John Charles Quin, Miller, Parkes.....	71-72
Mr. Frank Cottingham, Hotelkeeper, Parkes .....	72-73
Mr. Robert Nicholl Leslie, Grazier, East Billabong .....	73-74
Mr. William Metcalfe, Parkes .....	74-75
James Miller, Esq., Mining and District Registrar, Parkes.....	76
Arthur William Tempest, Esq., Bank Manager, Parkes .....	76-77
Mr. Robert Thornbury, Grazier, Parkes .....	77
Mr. William Aloysius Holbert, Public School Teacher, Parkes .....	77-78
Mr. James Cusack, Senior-constable, Parkes .....	78
Arthur John Kingsmill, Esq., Crown Lands Agent and Clerk of Petty Sessions, Parkes.....	78-79
Mr. Edward M'Gee, Miller, Parkes .....	79-80
Mr. Dennis Toohey, Hotelkeeper, Parkes .....	80-81
Mr. Robert Murphy, Constable, Parkes .....	81
Henry Harry Cooke, Esq., M.P. ....	81-83
Mr. James Thomas Corbett, Teacher of Broilgan Public School .....	83-84
Mr. Alfred Daines, Storekeeper, Tichborne.....	84-85
Mr. John Leonard, Farmer and Contractor, Tichborne.....	85
Mr. Daniel M'Millan, Publican, Tichborne .....	85-86
George Fairhurst Hutchinson, Esq., Mayor of Forbes .....	86-88
George Henry Sheaffe, Esq., District Surveyor, Forbes.....	89-91
James Wilson Taylor, Esq., Crown Lands Agent, Forbes .....	91-92
Arthur Sharp, Esq., Government Surveyor, Forbes .....	92-94
Edward Chapman, Esq., Post and Telegraph Master, Forbes .....	94
Mr. Matthew Bolton, Storekeeper, Condobolin .....	94-97
Mr. Humphrey William Grey Innes, Produce Merchant and Auctioneer, Condobolin .....	97-99
Mr. John Bouffler, Hotelkeeper, Condobolin .....	99-101

	PAGE.
Norman Gatenby, Esq., Pastoralist, near Forbes .....	101-2
William Gibson Dowling, Esq., Stock Inspector, Forbes .....	102-3

William Brooke, Esq., Journalist, Forbes .....	123-25
Mr. Thomas Tozer, Gardener, Forbes .....	125
Robert Matteson Vaughan, Esq., Grenfell .....	126
George Henry Greene, Esq., M.P. ....	127-28
Ernest Henry Kinleside Crawford, Esq., Manager of the Pinnacle Station for the New Zealand Loan and Mercantile Agency Co. ....	128
Mr. William Willis Priddle, Farmer, and Grazier, Little Bald Hills.....	128-29
Mr. William Walker Bell, Farmer and Grazier, near Grenfell.....	129
Mr. Thomas Andrew Crowe, Auctioneer, Forbes .....	129
Mr. Donald Cheshier, Grazier and Hotelkeeper, Eugowra.....	130-32, 145
Mr. Archibald McMillan, Farmer and Grazier, Eugowra .....	132-33, 134
Mr. Edward Herbert, Farmer and Grazier, Eugowra .....	133-34
Mr. Thomas Clyburn, Publican, Canowindra .....	134-36
Mr. Thomas Finn, Storekeeper, Canowindra .....	136-37
Mr. Robert Rice, Farmer, Canowindra .....	137-39, 178
Mr. William Cook, Constable, Canowindra .....	139
Mr. James Davison, Storekeeper, Eugowra .....	140-41
Mr. Michael John Dwyer, Contractor, Eugowra.....	141
Mr. Nicholas Edward Osberg, Sawyer and Farmer, Eugowra .....	141-42
Mr. Daniel John Robertson, Gardener, near Eugowra .....	142-43
Mr. William Niven, Beekeeper, Eugowra .....	143
Mr. Lawrence Kirby, Storekeeper, Eugowra .....	144
Mr. James Glazier, senior, Publican, Murga .....	145-46
Mr. Henry Green, Farmer and Grazier, Murga .....	146-47
Mr. Edwin Glazier, Miner, Murga.....	147
Mr. Charles Fuller, Farmer and Grazier, Murga .....	147-49
Mr. Isaac Wren, Farmer, Cranbury .....	149
Mr. Thomas Barton, Farmer, near Murga .....	150
Mr. Robert Kinnerson, Grazier, Nangar .....	150
Mr. Hugh Pryor, Farmer, Reedy Creek .....	150-51
Mr. Henry Thomas, Farmer and Grazier, Barrigan .....	151-52
Mr. Edward Taylor, senior, Grazier, Pretty Plains .....	152-54, 156
Mr. Charles Schramme, Hon. Secretary Cudal Railway League .....	154-56
Mr. Alfred Percival Gavin, Farmer, Cudal .....	156-57
Mr. William Craigie, Mail Contractor, Cudal .....	157
Mr. William Shield, Storekeeper, Cudal .....	157-59
Mr. John Taylor, Farmer, near Toogong .....	159-60
Mr. Walter Rennie Murray, Farmer, Mandagery Creek .....	160
Mr. Cornelius Dempsey, Hotelkeeper, Cudal .....	161
Mr. George Gavin, Farmer, Cudal .....	161
Mr. William Henry Couch, Farmer, near Cudal.....	161-62
Mr. Thomas Seale, Farmer, near Cudal .....	162-63
Mr. John Baker, Farmer, Bowen Park.....	163
Mr. Isaac Bates, Farmer and Grazier, Sisters' Rock .....	164
Mr. Patrick Ryan, Farmer, Mousehole Creek.....	164-65
Mr. Luke Hughes, Publican and Farmer, Cheeseman's Creek.....	165
Joseph Claxton, Esq., Postmaster at Cudal .....	165
Mr. Stephen Tierney, Hotelkeeper, Keenan's Bridge.....	166
Mr. Andrew George Peterson, Farmer and Grazier, Gheewong .....	166
Mr. Ambrose Minslow, Constable, Cudal .....	166-67
Mr. Peter Edward Murray, Spring Creek .....	167
Mr. William Henry Traves, Farmer and Grazier, near Canowindra .....	167
Mr. Alfred Underwood Alley, Manager at Orange for Wright, Heaton, & Co. ....	167-68

## PLAN.

PLAN, showing the proposed Line from Molong to Parkes and Forbes, together with the routes of the Lines from Borenore to Cudal and Forbes, Cowra to Forbes, *via* Canowindra, and Young to Forbes, *via* Grenfell; and the deviation on the Molong to Parkes Line through the Bocoble Gap.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM MOLONG TO PARKES AND FORBES.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of Railway from Molong to Parkes and Forbes," have, after due inquiry, resolved that it is expedient the proposed Railway should be constructed, and, in accordance with the provision of subsection IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly :—

1. The proposed railway is intended as an extension from the present terminus of the branch line from Orange, at Molong, to Parkes and Forbes, a distance of 71 miles 52 chains. Surveys have been made of two routes between Molong and Parkes— one *via* Flagstone Creek, and the other *via* Bumberry. The former, which is the route referred to the Committee, sweeps round the north end of the high land on which the town of Molong is situated, crosses Molong rivulet twice, and then goes in a south-westerly direction, on rising gradients, until it approaches Lord's Gap, which it crosses at a point about 6 miles from Molong. Mandagery Creek is crossed  $8\frac{3}{4}$  miles further on. From near Lord's Gap the gradients fall for 9 miles, and from Mandagery Creek they steadily rise again for about the same distance, at which point the line attains a height of about 2,000 feet. This height is maintained for 4 miles, and the line then descends almost continuously into Parkes. From Parkes to Forbes the line proceeds in a south-westerly direction over fairly level country, passing through the parishes of Parkes, Martin, Mumbidgle, and Forbes, county of Ashburnham, and terminating in the town of Forbes. Up to a point about 22 miles from Parkes the two surveyed routes between Molong and Parkes are identical; they then diverge, the route *via* Bumberry being more northerly than the other. Description of the proposed railway.

2. The estimated total cost of the proposed railway is £430,100, or something more than £6,000 per mile; but this, the Acting Engineer-in-Chief for Railways states, can, to a certain extent, be reduced. The cost of the line as far as Parkes by the Flagstone Creek route is set down at £329,700, or £6,444 per mile; and this estimate, it is represented, can be reduced by £67 a mile, which would make the total cost to Parkes £306,000. For the length from Parkes to Forbes the estimate is £100,400, or £4,950 a mile; this can be reduced to £90,450, or £4,412 per mile. In each case the estimate of cost is exclusive of land and compensation. Estimated cost.

3. The movement for affording railway accommodation to Forbes appears, from an exhaustive *précis* published as an appendix, to have commenced as far back as 1874, in May of which year a memorial was presented to the then Minister for Works in favour of a survey from Orange to Forbes. Nothing definite in that respect was done, however, until 1877, when a trial survey was commenced of a line from Orange towards Wilcannia and Menindie, passing within 7 miles of Forbes. Representations were then made that any railway intended to serve the country in the neighbourhood of the Lachlan River should go to Forbes, and, after various deputations to the Minister for Works, and petitions from different quarters, an amount History of the proposal.

amount of £705,000, for a railway from Orange *via* Molong to Forbes, was placed, in 1881, on the Loan Estimates, and passed by 74 votes to 2. In 1884 the route from Borenore to Forbes, *via* Cudal, was urged by a deputation to the Minister for Works, and in the same year a motion was carried in the Assembly proposing the sum of £705,000 for the construction of a line from Orange to Molong *via* Borenore, and from Borenore to Forbes *via* Cudal. This appears to have been regarded as a rescission of the vote in 1881 for a line from Orange to Forbes *via* Molong. In 1886 the plans of a line Borenore *via* Cudal to Forbes were approved in the Legislative Assembly, but negatived in the Legislative Council. The following year the movement in favour of a line from Cowra to Forbes *via* Canowindra and Eugowra was started, and the advantages of a line from Young to Forbes and Dubbo *via* Grenfell, first suggested in 1884, were also urged. Last year, 1889, the proposed line from Molong to Parkes and Forbes was referred for report to the Railway Commissioners, and subsequently by the Legislative Assembly to this Committee.

Railway  
Commissioners'  
Report.

4. The Railway Commissioners have reported upon the portion of the proposed line from Molong to Parkes, and also upon the line as a whole. The length from Molong to Parkes, in itself, they do not recommend, except as the means of opening up an admittedly good agricultural district around and north of Parkes, as they consider that little revenue could be expected from local traffic between the two places; but taking the whole line, from Molong to Parkes and Forbes *via* Flagstone Creek, they regard it as "an instance where the working expenses of the line will probably be covered by the traffic." A comparison between the total annual cost, which is estimated at £26,055, and the estimate of traffic, which is set down at £11,264, shows a loss of £14,791; but the total annual cost includes interest on the cost of construction, amounting to £15,155, leaving the working expenses as £10,900, and this, compared with the traffic estimate, shows an annual profit above working expenses of £364.

Rival routes.

5. Four routes or lines have been advocated in relation to the proposal to give railway communication to Forbes. One of these is that referred to the Committee, from Molong to Parkes and Forbes; another is from Borenore, *via* Cudal and Eugowra, to Forbes; the third is from Cowra, *via* Canowindra, to Forbes; and the fourth from Young, *via* Grenfell, to Forbes. Each of these has its supporters, and the relative merits of the different routes will be found clearly set forth in the evidence. Both the Committee, and a Sectional Committee who visited the districts affected by the proposal for the construction of the railway, have been careful to obtain, as far as possible, from whatever source it has been procurable, the fullest testimony upon the different branches of the subject, as well as upon the matter generally. Much of this testimony, it will be seen, supports one or other of the routes or lines, and disapproves of everything which is opposed to it.

The inquiry  
by the  
Committee  
and by the  
Sectional  
Committee.

6. The inquiry which has been held in respect to this proposed railway has been of a very comprehensive character. In the first instance, the Committee had before them the Under Secretary for Public Works, who handed in certain documents, and made a statement necessary to enable them to acquire a general understanding of the proposal before them. His examination was followed by that of the District Engineer in the Department of the Engineer-in-Chief for Railways, who directed the survey of the portion of the line between Molong and Parkes; the District Traffic Superintendent of the Railway Department, upon whose report the Railway Commissioners based their calculations in reference to the traffic on the proposed railway between Molong and Parkes; the Acting Engineer-in-Chief for Railways; and the surveyor who surveyed the routes from Orange to Molong and on to Parkes, and from Orange to Borenore and on to Forbes. These witnesses placed before the Committee, by their evidence, the principal points in relation to the proposed railway; and a Sectional Committee was then appointed to visit the districts concerned in the railway, and to take local evidence. The Sectional Committee examined 192 witnesses, taking evidence at Orange, Molong, Manildra, Bumberry, Parkes, Tichborne, Forbes, Eugowra, Murga, Cudal, and Cowra, and by this means obtained what appears to be a fair representation of the opinion of all parties interested in the railway.

Borenore to  
Forbes *via*  
Cudal route.

7. The route from Borenore to Forbes *via* Cudal is advocated on the ground that it passes through country much more fertile than that met with on the route from Molong, that in the distance to Forbes it is 17 miles shorter than the route from

from Molong, and that it would serve a large population. The witnesses examined by the Sectional Committee at Orange were in favour of this route, as were also some of the witnesses at Forbes. At Cudal, so strongly did the witnesses support it that they declared their determination not to have anything to do with any other route. On the other hand, it may be seen from the evidence of the Acting Engineer-in-Chief for Railways that the Cudal route is in parts very rough, two or three portions of it containing very heavy work, and the gradient in one portion being 1 in 40. Furthermore, a deviation of the line from Molong to Parkes and Forbes is proposed, which will bring the railway within 6 or 8 miles of Cudal, and in that manner enable the residents of the Cudal district to avail themselves of the facilities offered by the line for the conveyance of produce to market. The Sectional Committee carefully considered the evidence for and against this route, and they reported against it, for the following reasons:—"First, the steepness of its grades; secondly, that it would not serve as large an area as either of the two routes [the Molong to Parkes and Forbes and the Cowra to Forbes routes]; and thirdly, that its most thickly-populated portion, viz., Cudal, is already fairly served, and would by the proposed deviation, *via* Bocoble Gap, on the Molong to Parkes line, be brought within 6 or 8 miles of a railway."

8. The route from Cowra to Forbes has much to recommend it. A railway to Forbes from that town would pass through almost level country, capable of sustaining a large population. It would not be difficult to construct, and, taken altogether, it would not be expensive. Many of the residents of Forbes advocate it, principally on the ground that it would give the district the advantage of the Melbourne as well as the Sydney market. It is supported also for the reason that it is the only line which would serve Canowindra. The Sectional Committee gave considerable attention to it, the subject being dealt with very fully in their report; and it was duly considered by the Committee. In the view of the Sectional Committee there appeared to be so much evidence in its favour that some doubt existed in their minds as to the relative merits of a line by this route and that by the route from Molong *via* Parkes. The reasons in support of the Molong to Parkes and Forbes route are, however, of greater weight than those which favour the Cowra proposal, and both the Sectional Committee and the Committee came to this conclusion after a due consideration of all the evidence. The proposal to construct a line of railway from Cowra to Forbes is, moreover, not unlikely to be carried into effect in the near future, in addition to the railway which it is proposed shall go to Forbes from Molong. The Under Secretary for Public Works, when under examination, informed the Committee that he had authority to state that it was the intention of the Minister for Works to bring under the notice of the Cabinet the desirableness of connecting Forbes with either Young or Cowra, as well as of constructing a line from Parkes to Dubbo, and from Dubbo to Werris Creek; and this authorized statement has gone far to influence some members of the Committee in deciding that at present the preference in the question of routes to Forbes should be given to that referred to the Committee by the Legislative Assembly.

9. The route from Young to Forbes would be of advantage to Grenfell, and by it the line could be extended to Parkes and Dubbo. Evidence in favour of this route was given by representatives of Grenfell before the Sectional Committee at Forbes.

10. Starting from Molong the proposed railway would not benefit Grenfell or Canowindra, but it would, more than any other of the suggested routes, be generally beneficial, serving the largest population and opening up extensive tracts of good land. Along this route there is some rocky country after leaving Molong, but the land immediately surrounding these inferior patches is very good, and it extends for a considerable distance. In every direction the Sectional Committee found settlement of a satisfactory description, the farms and other fenced holdings being in many places continuous for miles. Between Molong and Manildra they saw for a distance of 6 miles an unbroken succession of farms, averaging in area about 200 acres, and generally there appeared to be a large and important farming population settled in the district. From Manildra to the neighbourhood of Bumberry other farms in a similar continuous succession are situated. Near Bumberry the good land becomes in extent narrower, in consequence of the vicinity of the Dungeon Range, and about this range the country looks very poor; but immediately the range is crossed, land of the best description,

description, and in every way suitable for agriculture, is met with, and this continues to Parkes. Around Parkes there is a large amount of settlement, and it shows unmistakable signs of increase. Especially is this the case to the north and north-west of the town. In whatever direction the Sectional Committee went about Parkes and its neighbourhood they found the land had been taken up and cultivated. Between Parkes and Forbes there is very little settlement, but there is very good country, the explanation of the absence of settlement being that most of the land in this locality is a gold-field reserve. Were this reserve thrown open for settlement, there would, without doubt, be a line of farms from Parkes to Forbes. At Forbes there is not much cultivation, but a large quantity of wool is produced in the district.

Traffic prospects.

11. The prospects relating to traffic on the proposed line appear to the Committee to be very good. The Railway Commissioners represent in the estimates contained in their report that the railway will pay working expenses; but there is reason to believe it will do more than this. An examination of the evidence and of the Sectional Committee's report will show that the amount of production in the districts which the railway will serve is, at the present time, very large, and, with railway facilities, this must greatly increase. A satisfactory traffic seems probable immediately the line is constructed, and in the near future the railway should pay.

Decision arrived at by the Committee.

12. After carefully considering all the circumstances connected with the inquiry, the Committee have arrived at the conclusion that the line as proposed, from Molong to Parkes and Forbes, should be carried out. The Sectional Committee recommend it for the reasons, chiefly, that "Parkes is at the present time a most flourishing and largely increasing town; that at Trundle, to the north-west of Parkes, about 90,000 acres, and at Kadina, direct north of the town, from 70,000 to 80,000 acres of land have very recently been taken up in comparatively small selections, principally by Victorian farmers, for the purposes of agriculture; and that in the event of it being found desirable to extend the line to the Darling River, to the south-west, the extension could be made with equal advantage from Parkes or Forbes." A majority of the Committee take a similar view, and are generally in favour of the proposed line because it will meet the requirements of a much larger number of people than would be served by a line taken along any one of the other routes, and open for settlement a very extensive area of country which only requires to be taken up and cultivated in order to make it profitable both to the holders and to the railway. The route from Cowra to Forbes impresses the Committee, as it did the Sectional Committee, as one that would probably prove very beneficial, and is worth constructing, but it may be dismissed from further consideration in this Report for the reason already mentioned, and to be found in the statement made to the Committee, at the opening of their inquiry, by the Under Secretary for Public Works. The route from Borenore to Cudal, and thence by way of Eugowra to Forbes, has the advantage of representing a line which, if carried on from Forbes to the Darling, would be shorter than an extension of the line commencing at Molong, but it has the great disadvantage of a grade of 1 in 40, and it would not serve Parkes. If the more thickly-populated districts between Orange, Borenore, or Molong, and Forbes are to be accommodated, and the trade of those districts, as at present available, secured, the Committee are of opinion that the line from Molong to Parkes, and thence to Forbes, is the right one to construct. The Committee took the evidence and the Sectional Committee's report into consideration on the 13th and 14th instant, and by a majority of 10 to 2 adopted the following resolution:—

"That, in the opinion of the Committee, it is expedient the proposed Railway from Molong to Parkes and Forbes, as referred to the Committee by the Legislative Assembly, be carried out."

The division upon the resolution was as follows:—

Ayes, 10.  
Mr. Abbott,  
Mr. Lackey,  
Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Garrard,  
Mr. Tonkin,  
Mr. Dowel,  
Mr. Hurley,  
Mr. Lee.

Noes, 2.  
Mr. Copeland,  
Mr. O'Sullivan.

Published

Published with this Report are the Sectional Committee's report; the Minutes of Evidence taken before the Committee and before the Sectional Committee; various appendices to the evidence, including a *précis* of the papers relating to the subject of railway extension in the direction of Forbes, submitted to the Committee by the Department of Public Works, and the Railway Commissioners' Report; and a plan showing the proposed line from Molong to Parkes and Forbes, together with the routes of the lines from Borenore to Cudal and Forbes, Cowra to Forbes *via* Canowindra, and Young to Forbes *via* Grenfell, and the deviation on the Molong to Parkes line through the Bocoble Gap, which it is intended shall serve the interests of Cudal by bringing the railway within 6 or 8 miles of that locality, and which deviation the Committee recommend.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 21 May, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM MOLONG TO PARKES AND FORBES.

WEDNESDAY, 22 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway from Molong to Parkes and Forbes.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Mr. Lackey.*] This project has been under the consideration of the Government for a long time? Yes.
2. There were different projects at first? Yes, a number of them; but this was considered to be the most feasible.
3. Is the proposed route of the line shown on the plan? I believe it is; but I can describe it. I will put in the papers relating to it. I will hand in the report of the Railway Commissioners on the proposed line from Molong to Parkes and Forbes, the length of which is 71 miles 52 chains [*See Appendix A*]. I also hand in the official description of the line [*See Appendix B*]. I may perhaps be permitted to draw attention to the words in which the Secretary for Public Works moved the resolution in Parliament referring the project to the Committee. He said: "I may state that the length of the line from Molong to Parkes is 51 miles 12 chains, and that of the railway from Parkes to Forbes 20 miles 30 chains, giving a total length of 71 miles 52 chains; hon. members are aware that for a long time two rival routes have been advocated regarding this particular district—one from Borenore through Cudal to Forbes, and another from Orange; but I can only say this—that after a very careful investigation of all the merits of these two routes it was decided by the Government, as a whole, to recommend this particular line which I am now laying before the House—from Molong to Parkes and Forbes." The Minister is fully aware that there are a great many reasons to be urged in favour of other routes, but after taking into account the whole of the circumstances he has come to the conclusion that this is the best one to recommend to Parliament. I think there are two main reasons which induced him to select this route. The first is that by adopting this line from Molong to Parkes and Forbes, as against the proposed line from Borenore to Cudal and Forbes, we shall have something like 11 miles of railway less to make. The Minister is also keenly alive to the fact that if the route from Borenore via Cudal to Forbes is selected, we shall have a short fork running from Borenore to Molong, which would simply go nowhere. By the adoption of the route now before the Committee we shall utilise the whole of the extension from Orange to Molong.
4. *Dr. Garran.*] Do you mean that if this line is adopted there will be 11 miles less of railway to make or that the distance from Sydney to Parkes will be 11 miles less? There will be 11 miles less to make to reach Forbes and Parkes. I am authorised to state that it is the intention of the Minister to bring under the notice of the Cabinet, the desirableness of connecting Forbes with either Young or Cowra. The Minister wished me to put his views before you because it might influence you in dealing with this particular line. He says it is his intention to bring under the attention of the Cabinet, a proposal to extend the railway from Forbes to either Young or Cowra, from a point not yet decided upon; also, that he intends to propose to the Cabinet the construction of a line from Parkes to Dubbo and from Dubbo to Werris Creek. This will give an independent line from Queensland without coming to Sydney. I have not the figures to show the actual distances.
5. The line from Forbes to Parkes would form a portion of that extension? Yes. The Minister promised in Parliament that he would lay before the Committee any papers that they wish to have about the other routes. Of course, he very carefully guarded himself against the supposition that he was submitting rival routes to the Committee. So far as any evidence might be considered as favoring another route the Minister would view it simply as negative evidence in regard to the route before the Committee. I shall place before the Committee as they go on any papers that they want in regard to the other routes. I have also to hand in a report by Mr. Thompson, our land valuer, who went over the route. His report is a very voluminous one. Mr. Thompson, also went over the Cudal route, and if the Committee wish it I will put in the papers in connection with that too.

J. Barling,  
Esq.

22 Jan., 1890.

- J. Barling, Esq.  
22 Jan., 1890.
6. *Mr. Lackey.*] Speaking of the extension from Molong to Borenore, you said that it went to nowhere; you are cognisant of the fact that when that railway was constructed it was part of a proposed through line from the Western line on to Wilcannia, and that it was constructed in conformity with a resolution of Parliament? Yes, the vote was taken in 1881 for a line from Orange to Forbes, via Molong, 83 miles, £705,000, also a vote for an extension to Wilcannia; but in the Loan Estimates of 1884 it was,—Orange to Molong, via Borenore, 21 miles, and Borenore to Forbes, via Cudal, 60 miles—£705,000. Under clause 7 of the Act of 1884, the appropriation made by Public Works Loan Act of 1881, for a railway from Orange to near Forbes, via Molong,—83 miles—is cancelled, the route as above being substituted therefor. Plans, &c., of the line from Borenore to Forbes, via Cudal, were approved by the Legislative Assembly on the 9th September, 1886, and disapproved by the Legislative Council on the 8th October, 1886.
7. *Mr. Lee.*] Is it to be a single or a double line of railway? A single line of rails.

Stanley Alexander, Esq., district engineer, sworn, and examined:—

- S. Alexander, Esq.  
22 Jan., 1890.
8. *Mr. Lackey.*] You are District Engineer in the Department of the Engineer-in-Chief for Railways? Yes.
9. Was the route of the proposed railway from Molong to Forbes and Parkes surveyed under your directions? It was from Molong to Parkes.
10. Only to Parkes? Yes.
11. Had the line to Forbes been surveyed previously? Yes.
12. And you took up that survey? I have not seen it from Parkes to Forbes.
13. Have you seen the other? Yes, from Molong to Parkes; I have been all over it.
14. Do you regard it as a difficult country in which to construct a railway? It is a mountainous country, and it is easy for a mountainous country. There is no particular difficulty in it.
15. Is there much cultivation there? On the first length it is all cultivated as far as Meranburn; that is the beginning of Croker's Range.
16. To which part of Meranburn do you refer; do you mean near the Post Office and the store? Yes.
17. There is cultivation considerably beyond that I think—there is one of the bends of the Lachlan along there? There is the Manildra Creek? Yes, there is cultivation, then the mountains are entered, and the next cultivation is about Bumberry, on one side of the range, and on the level ground running into Parkes on the other side.
18. At Bindogandra? Yes, at Bindogandra Flats and Bumberry.
19. Is the range very difficult to get over? No.
20. The gradients are not very steep? They are between 1 in 50 and 1 in 60.
21. Is there much timber there? The ranges are all covered with ironbark.
22. With good ironbark? No, not very good. I think that all the piles, all the sleepers, and, in fact, all the short squared timber will be got there, but not the long squared timber.
23. Is there much of it? Yes, any quantity of it.
24. Are there many water-courses to cross? Mandagery is the biggest river, but it is nothing very formidable. It would take about 100 feet of water-way.
25. Is it a high running stream? Yes, we cross it close to the ranges.
26. Did you have anything to do with the surveying of the line from Borenore to Forbes? No.
27. Have you been advised, from a political point of view, that the line between Parkes and Forbes is supposed to form part of a projected cross line from Dubbo to Grenfell, Young, or any of those places? I just know the fact, nothing more.
28. In the survey that you have made do you think you have selected the most desirable route? About the first 12 miles up I propose to deviate from the surveyed line so as to pass through an easier gap through the Pine Range just below Molong. A surveyor is out now making that survey. The new survey will pass through Bocoble Gap, and the old survey is through Lord's Gap. The deviation will give a much easier line.
29. *Dr. Garran.*] Have you been over all these rival routes? No, only between Molong and Parkes.
30. What is the character of that country? As soon as you pass through Bocoble Gap you get into cultivated land which continues right up to Meranburn and Manildra.
31. How many miles? 17 miles. It is all good land for a distance of 17 miles from Molong. We then get into Croker's Range.
32. What is the character of the country? It is sandstone, with granite here and there.
33. Is it poor country? No, it is not poor country. All the base of the hills is very good wheat country. The sandstone there is older than the Sydney sandstone; there is very good country on the top of the range; between the ranges and Parkes it is all very light red sand soil.
34. Is it under cultivation? The greater part of it is. It would be all under cultivation if it would pay to cultivate it.
35. Do you call it an easy line from Molong to Parkes? It is easy for a hilly country; the same as you see on the Crookwell line; no very deep cuttings or bad rivers.
36. Constant undulations and curves? Yes, it is Croker's Range that constitutes the whole difficulty.
37. What is the gradient? From 1 in 50 to 1 in 60. I think that a gradient of 1 in 60 might be got.
38. Did you make the estimate of £433,000 which has been put before us? Yes.
39. The part from Parkes to Forbes is comparatively level? Yes.
40. And that is the chief part of the line? Yes.
41. What do you reckon the cost of that per mile to be by itself? I do not know what I estimated it at.
42. The amount is £4,950 per mile. Do you agree with that? That is my estimate, but I have not seen the ground.
43. In round numbers it is £5,000 a mile for a very light line? Yes.
44. When you speak of a light line, what weight of rails do you propose? 60 lb.
45. Do you add fencing? Yes.
46. And in that part of the line, you would require very heavy earthworks? No; as I recollect the section, it is a light one.
47. And no rivers or creeks to cross? Yes, creeks, but no rivers.
48. No flooded lands? Yes, 4 miles of flooded land. That is what makes that estimate so high. It is flooded from the north of Forbes to Strickland's Reef.

49. Do you require to cross that on piles? Not the whole of it, but we must make ample provision for the water. S. Alexander,  
Esq.
50. What is your estimate of the cost of the line per mile from Molong to Forbes? Before I inspected the line I estimated it at £6,444 a mile. After discussing the matter with Mr. Deane this morning, I have come to the conclusion that the cost might be reduced to £6,000 a mile. 22 Jan., 1890.
51. What did you cut out to make that reduction? We did not go into details. It is principally in stations that we should make the reductions, and in the class of fencing to be used.
52. No cheapening of the permanent-way? No.
53. Nor in the bridges? No.
54. To the best of your knowledge the railway could be made at that cost? Yes.
55. It seems a high price for a light line? Well, it is a mountain line.
56. What is the difference between the length of the line between its two points and the length of a straight line between those points; I suppose we might add one-quarter to it from Molong to Parkes, in consequence of the hilly nature of the country? I should think it would be more likely one-third more.
57. But that is only a rough statement? Yes.
58. You do not know the line at all from Orange to Forbes? No.
59. Do you know the line from Cowra to Forbes? I do not.
60. Is there anyone in the office who could give us information about that line—it has been surveyed? Yes; but I do not know who surveyed it. I can ascertain, and inform Mr. Lyne. One thing I should like to point out. The Flagstone Creek was the line which was suggested for construction; but since my inspection of the routes I am inclined to think—it is my own opinion entirely—that the route to adopt, both for revenue purposes and the development of the country, as well as from an engineering point of view, is the Bumberry route.
61. But the one put before us is the Flagstone Creek route? Yes.
62. And you are inclined to give preference to the other? I am. I think the Bumberry route, though longer than the other, would be cheaper per mile.
63. Will you tell us why you favour it? I think it goes through better country. There is a very large extent of cultivated country to the north of the junction of the Flagstone Creek and the Bumberry routes.
64. But if the traffic comes to the junction, will it not be common to both lines? The Flagstone Creek line is cut off from the good country to the north.
65. What station would that come near on the Bumberry route? A station at the junction between the Dungeon and the Croker Ranges.
66. And between that and the other line there is a route, is there? The Bumberry route is on the top of a range; the Flagstone Creek route is about half a mile away, and several hundred feet lower. The whole of that country along the Billabong Creek would be favoured by the Bumberry route.
67. For engineering reasons, which route is the best? I think the Bumberry route. The Flagstone Creek line is on the range the whole way up to the 252 miles, whereas the Bumberry line may be said to be on the ranges only up to the 249 miles.
68. On the plan there is a cross line from the Flagstone Creek route down towards Parkes,—is that surveyed? Yes.
69. What do you call that cross-piece? That was intended as a sort of half-way line between Parkes and Forbes, on towards Condobolin.
70. Is that on easy country? I think it is level country from where it branches off from the Flagstone Creek line.
71. Do you descend much between Molong and Parkes? 700 feet.
72. Would there be any material difference between the levels of Forbes and Parkes, both being in the Lachlan Valley? The water is all running from Parkes towards Forbes. I do not think that the difference is more than 100 feet or 200 feet.
73. Can you tell us who can give us information about the line from Borenore to Forbes? No, I do not know.
74. *Mr. O'Sullivan.*] You say you think that the Bumberry route is the best, but how can you arrive at that decision if you are not acquainted with the other proposals? I was speaking of the Flagstone Creek and the Bumberry routes only. I have not compared the others.
75. *Mr. Lee.*] What are the routes of these lines? The Bumberry route leaves Flagstone Creek at Porcupine Gap, crosses the Dungeon Range where that range meets the Croker Range, then descends into Bindogandri Flats, passes through Bindogandri, and goes direct to Parkes.
76. I understand that the other goes from Flagstone Creek to Parkes, and thence to Forbes? Yes.
77. *Mr. Tonkin.*] In leaving Molong, have you much trouble in getting out through the limestone ridges? No; a new line has been laid out up a creek called Mossy Hollow. It goes round the north end of the town; it does not cut across the limestone ridges.
78. Is the country through which the line goes of a much rougher description than the country from Goulburn to Crookwell? Yes.
79. Is it a more expensive class of country to construct a line over? Some parts of it are, but then there are long stretches of flats—easy ground, which keeps down the general average of expense.
80. Do you know that the estimate for this line is much over the estimate for the Goulburn to Crookwell line? The Goulburn to Crookwell, I think, averages about £6,000 a mile.
81. On that line there is no timber whatever for sleepers, but on the line now before us there is plenty of timber,—should not that make a material difference? The estimate has not been got out in full detail since my inspection of the route. The first 12 miles are now being resurveyed and when the surveyor returns it will have to be re-estimated. We can make no better estimate than £6,000 a mile at present. The Bumberry route I put down at £5,700 a mile.
82. How many miles longer than the Flagstone Creek route will that line be? 3 miles.
83. That would be £7,100 over on account of the extra length, but it would reduce the cost of the total length by £300 a mile? Yes.
84. Does the line from Molong to Parkes go near the mail-coach road? Yes, with this deviation. It leaves the coach road close to Molong and does not reach it again until it gets to Manildra. It meets it now and then, and crosses it now and then.
- 85.

- S. Alexander, Esq. 85. What is the average distance from the surveyed route to the coach road? It is 2 miles away at the greatest distance.
- 23 Jan., 1890. 86. You say it is nearly all agricultural land from Molong to Parkes? All except on Croker's Range.
87. How much of that would be unfit for agriculture? 20 miles of it, or excepting the patches of good land, say 15 miles.
88. Is there any mineral country there? No.
89. What is the range composed of? Sandstone, highly altered.
90. A barren sandstone range? I do not think there is anything on it, except in patches.
91. Have you had any chance to form an estimate of the population on the route of the line? No.
92. Did you form any idea from what you saw as to whether the line would pay if run that way? If I gave an opinion it would be based on such insufficient evidence that it could only be misleading.
93. You have never seen any of the other routes? I have not.
94. *Dr. Garran.*] Do you know whether the Molong branch is paying? I do not.

THURSDAY, 23 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway from Molong to Parkes and Forbes.

Alexander Duff, Esq., District Traffic Superintendent, Railway Department, sworn, and examined:—

- A. Duff, Esq. 95. *Mr. Garrard.*] What is your position? District Traffic Superintendent.
- 23 Jan., 1890. 96. Are you the officer on whose report the Commissioners base their calculations in reference to the traffic on the proposed railway from Molong to Parkes? I understand so.
97. Have you seen the report of the Commissioners? Yes, I have it here.
98. Did you send any detailed report to the Commissioners on which theirs is based? I sent in a report based on the information which I received from local residents.
99. Have you a copy of that report? I have not.
100. Did you not keep a copy? There is a tissue copy at Wellington.
101. Would it be possible for the Committee to obtain a copy of it? Yes.
102. Did you travel over the whole route of the proposed railway, or did you go by the road when making your inquiries? I took the main road.
103. But the proposed line deviates from the road at many points, does it not? Not to any great extent.
104. What is the nature of the country between Molong and Parkes? Commencing 4 miles out of Molong you have 16 miles of very good country; but from there until you reach Bumberry the country is unproductive from a railway point of view.
105. Because of there being no settlement? There is no settlement; it is simply ironbark ranges.
106. Then if it has been given in evidence here that in the opinion of some people the line should go *via* Bumberry, because it is better country there, that is a mistake? I should imagine so.
107. Do you know that it is proposed to take a line *via* Bumberry? Yes.
108. And a little further on there is to be the Flagstone Creek line, another deviation? Yes.
109. Do you think that the line submitted to the Committee is better than the other two deviations from Molong to Parkes? I could not say. So far as production is concerned one is as good as the other.
110. You have given us as your opinion that the Bumberry district is not so good as the Flagstone Creek district? No, I have not said that. I say that commencing 4 miles out of Molong for 16 miles you pass there is good agricultural country. Then from that to Bumberry you pass through ironbark ranges, producing nothing but timber.
111. From Bumberry to Parkes? From there over the Dungeon ranges until you come within 10 miles of Parkes. The country is unproductive from a revenue-producing point of view.
112. The country is not nearly so good when you get 16 miles from Molong? It is not nearly so good after you have passed the 20-mile boundary.
113. You would not offer an opinion as to which is the best of the three lines? I think one is as good as another.
114. How did you obtain your information? From local residents. I verified the information by testing one man's veracity by the statements of another.
115. But it would be to the interest of those whom you examined to give a glowing description of the country? Yes, but I do not think that they overestimated it.
116. Did you come across anyone in your travels who was against the project? I met with people who were perfectly indifferent about it—not any who were against the railway.
117. I only want to find out the value of their evidence. Is there a large amount of cultivation going on along the route between Molong and Parkes? A very considerable amount along that 16 miles of country.
118. What is the nature of it? Principally wheat.
119. Where do the farmers find a market? At Molong and in the western country—at Orange.
120. Do you estimate that any of the traffic from that district will be carried over the trunk line to the metropolis or that it will go westward? It is more than probable that it would go west. Of course much would depend on the seasons.
121. Have you taken into consideration the extent to which the trunk line will be benefited by the traffic from the proposed line? We carry the whole of the traffic now over the trunk line. The estimate is only for the proposed line. I doubt whether the new line will make any great difference to the trunk line.

122. If the railway is constructed, will it not lead to a greater area being put under cultivation in those districts? As a natural consequence, yes. A. Duff, Esq.
123. Would not that bring more traffic on to the trunk line and make it pay better? It would depend altogether on circumstances. It is probable that they might find—I believe do find—a market for the whole of their produce west of Parkes. 23 Jan., 1890.
124. Well, it amounted to the same thing—whatever increase there is in the traffic on the existing lines will make them more remunerative? Yes.
125. Do you not think that some consideration ought to be given to the branch line that brings that remunerative traffic? I believe it has always been taken into consideration.
126. You have not allowed for it? The Commissioners may have allowed a certain percentage.
127. I understand that you have their report before you? Yes.
128. Does it tally with your report? I cannot say. I do not know the basis on which they have made their calculations.
129. Do you know whether the Commissioners have made an estimate of £4,000 the same as yours? I did not make an estimate. I merely stated the probable traffic. They would take a certain percentage as likely to travel.
130. You only gathered the statistics as to population and production? Yes. I made no reference to revenue. I merely showed the producing power of the country which the line will have to traverse.
131. Then you are not in a position to check this statement? No, by no means.
132. How long have you been employed in the Department? I have been ten years in the service.
133. How long have you occupied your present position? Nearly three years.
134. Have you had opportunities before of reporting upon proposed railways? Yes. I have obtained returns respecting them.
135. Have your returns been borne out? More than borne out—tested and found correct.
136. If anything, you under-estimated? Yes.
137. And you have adopted the same course in reference to this line? Yes.
138. And you have every confidence that your report is strictly accurate? I believe it to be approximately correct.
139. You do not know whether this would be likely to be a paying line in our time? I do not.
140. What line have you ever reported on before? The Nyngan to Cobar line.
141. But not any lines which have since been constructed? No.
142. Do you know of any branch line paying well now with which you can compare this as regards the nature of the country? No; there is no branch line that would compare with it, except perhaps the Mudgee and the Orange to Molong lines.
143. What about the Orange to Molong line? There is a fair traffic on it.
144. Is it paying? It is paying working expenses.
145. Not the interest on the capital? I do not suppose that it is paying that.
146. Do you think that this proposed line will pay the working expenses and the interest on the capital? I do not believe so.
147. How long do you think it would be before we might expect the line to pay working expenses and the interest on the capital? It would depend on whether it was intended as a main trunk towards Condobolin and that way.
148. I want you to look at it as it is from Molong to Parkes and Forbes? I do not think you could increase settlement within that 16 miles of good country, and which commences 4 miles from Molong. It is all taken up and settled.
149. *Dr. Garran.*] And the traffic goes to Molong at present? Yes, and the greater part of it will continue to go there.
150. Even if the railway is made? Yes.
151. *Mr. Garrard.*] By rail, of course? Not the whole of it. There are a great number of farms in the Gregra country.
152. Nearer to Molong by road than by rail? It would not be nearer; but the main road would join the proposed line within 2 miles of Molong.
153. If only going to Molong with their produce it will not pay them to put it on the railway? No.
154. But if the produce was going beyond there it would be sent by the railway? Yes.
155. You do not expect any increase of the produce of the land in the first 16 miles from Molong in consequence of the construction of the line? They are increasing the yield year by year.
156. What is the nature of the country between Parkes and Forbes? It is simply squatting country; nothing on it at present. I have no doubt that in the course of time it will produce to a certain extent.
157. Do you think it is not capable of being converted into an agricultural area? It may be in time; it is level country, and parts of it are under cultivation.
158. Then your evidence would lead us to believe that there is no probability of the line paying for some time to come? No; it is on the outside boundary of settlement.
159. Do you know anything of any of the other routes by which it is proposed to reach Forbes? I reported on both the Borenore and the Molong routes.
160. Do you estimate that the traffic on the Borenore line will be greater than that on the line under consideration? Most decidedly.
161. Do you think that that line would pay almost as soon as it was constructed? It would pay much better than the proposed line from Molong to Forbes via Parkes.
162. Is the town of Parkes increasing in size? Yes; I should not be surprised if in time it should outstrip Forbes.
163. What is the cause of its progress? There is extensive settlement at Parkes, but Forbes is surrounded principally with grazing-country. Land is more locked up around Forbes than at Parkes.
164. Is there any mining industry near Parkes? Yes.
165. Is it being developed largely? Yes; there is a considerable amount of mining going on there.
166. Is it true that there have been fluctuations? I have no doubt about that.
167. Then, looking at the relative value of Forbes and Parkes, would it pay to make a line to Forbes as against a line to Parkes? I do not know that Parkes and Forbes should be taken wholly into consideration. I should take the producing power of the country through which the railway would run.

- A. Duff, Esq. 168. Which line would pass through the best country, one from Orange to Forbes via Parkes, or one from Orange to Forbes via Cudal? The one from Orange via Borenore and Cudal.
- 23 Jan., 1890. 169. You have no doubt about that? Not the slightest doubt of it.
170. Judging of it as a railway-man, you would extend the line via Borenore? I would extend it according to the revenue-producing power of the country through which it would pass.
171. Which way do the wool-teams come from the grazing-country? Some one way and some another. They bring both wool and copper from the far country beyond Parkes and Forbes.
172. Taking Forbes as a centre to which the productions of the grazing-country gravitate, and then go on to the main line, which way does the traffic go? It depends a great deal on the back-loading that the teamsters are likely to get. In certain seasons they are bound to come along the river for water. They can come round by Parkes to Molong, provided they can get back-loading. If back-loading can be secured at Borenore they go there.
173. Do you know anything of the proposed line from Cowra to Forbes? I have not been over that country.
174. Do you know if there is much business done at Cowra and Dubbo? Yes, a considerable amount.
175. Is there more traffic at Cowra than at any other point between Blayney and Murrumburrah? No; Young and Cowra are almost equal.
176. What is the nature of the country on the Parkes-Forbes line, as against the Borenore-Cudal line;—which is the easier route? They are pretty well equal. The country about Toogong is very hilly.
177. Do you know anything of the difficulties which the survey parties had near Toogong? I understand that they had a difficulty in getting round there, but I believe they surmounted it.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

- H. Deane, Esq. 178. *Dr. Garran.*] What are you? Acting Engineer-in-Chief.
- 23 Jan., 1890. 179. Have you been over this line from Molong to Parkes and Forbes? I have not.
180. On what engineer do you principally rely for information? Mr. Alexander has been over this route.
181. Have you been over the line from Orange to Cudal and Forbes? Yes.
182. Have you been over the line from Cowra to Forbes? No.
183. Then you are only acquainted personally with one of the three competing routes? With only one,—the line which was permanently staked some years ago.
184. Who surveyed the route between Cowra and Forbes? I believe Mr. Cumming did.
185. Is he still in the service? Yes.
186. Who surveyed the line from Orange to Cudal and Forbes? The permanent staking was done at the Orange end by Mr. Sharkey and at the Forbes end by Mr. Geissow.
187. Was Mr. Sharkey engaged on either of the other two lines? I believe not.
188. Can you tell me the distance between Bathurst and Forbes by the Molong route? The distance from Sydney to Forbes by the Molong route is 285 miles.
189. What is the distance from Sydney to Orange and Cudal? 268 miles.
190. And from Sydney through Cowra to Forbes? 283 miles.
191. Then the shortest route will be that through Orange and Cudal? Yes.
192. What is the maximum elevation going by Molong from Sydney? The highest elevation would be on the mountains.
193. Between Bathurst and Forbes, by the Molong route? Milthorpe is 3,138 ft.; Huntley, 3,176 ft.
194. That point is common to the Molong route, and to the Cudal route, is it not? Yes.
195. And by Cowra the greatest elevation would be Blayney? Just at this side of Blayney, at Newbridge, 2,877 ft.
196. There is an elevation of 97 ft. more by the Orange route than by the Cowra route? Yes.
197. But the shortest distance is by Cudal? Yes.
198. As to the length of the line to be constructed, which will require the most construction of the three to get to Forbes? That requiring the least construction will, no doubt, be the line from Cowra to Forbes.
199. What is the length of that line? 64 miles.
200. And the length of the line from Orange through Cudal to Forbes? 66½ miles.
201. And from Molong to Forbes via Parkes? 71 miles.
202. That is by the Flagstone Creek route? Yes.
203. And the distance by the Bumberry route? About 2 miles further.
204. The two shorter lines would both leave Parkes out? Yes.
205. But Parkes would be included in the route suggested yesterday by Mr. Barling from Forbes to Dubbo? Yes.
206. Which do you consider the easiest line to construct? I have not any reliable information about the Cowra to Forbes line. There is an estimate for that which is very similar per mile to the estimate of the Borenore to Forbes line. It would certainly be a lighter line.
207. It follows the valley of the Lachlan? Not quite; it goes through Canowindra.
208. It would have to cross several tributary streams? Yes.
209. There would be some bridges on that line? Yes.
210. No heavy cuttings? Nothing heavy. It joins the Borenore to Forbes line at Eugowra.
211. How much of the route would be common to the two? The line from Cowra to Forbes junctions with the line from Borenore to Forbes at Eugowra.
212. How far is Eugowra from Forbes? About 23 miles.
213. What is the height of Cowra above the sea-level? 987 feet.
214. Would there not be a slight fall between there and Forbes? Yes.
215. No heavy ranges? Nothing remarkable.
216. Would it be a line of easy gradients? Yes.
217. And comparatively cheap to make? A portion from Eugowra to Forbes is easy, but there will be some amount of work elsewhere. It will not be an expensive line taken altogether.
218. Which of the other two lines will be the more difficult and costly to make? The Cudal route in part is very rough, and part of that route will be mere surface line. The estimate which I have is for £6,000 a mile, taking it all through.
- 219.

219. That includes the easy part, Eugowra to Forbes? Yes, two or three portions of it contain very heavy work. H. Deane,  
Esq.
220. Principally from Orange, I suppose? The descent from Borenore and two or three bad places. 23 Jan., 1890.
221. How are the gradients on that line? 1 in 40 on that descent. I could not say whether it would be possible to cut out that grade.
222. As to the cost per mile, Cudal and Molong are about equal? Yes.
223. And as to the cost of maintenance, would that be much the same? Very much the same.
224. As to expense there is nothing to choose between them? No. If the object is to get to Forbes and you add the Parkes and Forbes to the Molong to Parkes, of course you get a larger total.
225. If you merely want to go to Parkes and then to the westward? Taking the line from Borenore to Forbes, as compared with the Molong to Parkes, the Borenore to Forbes estimate appears to be the higher one, but adding the line from Parkes to Forbes to the Molong to Parkes, assuming that Forbes is the ultimate end of the line, it makes that line the more expensive of the two.
226. If we take Forbes as the objective point, then it is more expensive to go by Molong? Yes.
227. If we take Parkes as the objective point it is cheaper to go by Molong? Yes.
228. Can you give us the particular totals? According to the estimate furnished the Flagstone Creek route would cost £329,700. That is equal to £6,444 per mile. The estimate can be reduced by £67 a mile, making it £306,000.
229. The line from Parkes to Forbes would be how much a mile? The total is £100,400. I find that that estimate can be reduced to £90,450, being £4,412 a mile.
230. Then there is the route from Borenore to Forbes, via Cudal? That is 66½ miles at £6,000 a mile; total £399,000; but I believe that £6,000 a mile is excessive.
231. Then if we add the £306,000 to the Parkes to Forbes line, £90,000, that will make £396,000? Yes.
232. You would still make the Cudal line slightly cheaper? Yes; I have no doubt that the Cudal line can be cheapened.
233. But it would leave out Parkes? Yes.
234. But the Parkes and the Bumberry country would be accommodated with the line from Forbes to Dubbo? Yes.
235. Suppose the line from Forbes to Dubbo were made, what would be the greatest distance between that and the Molong line? Thirty miles.
236. You have traversed one of these routes? Yes.
237. What was the character of the country which you traversed as a traffic yielding country? It is a very good wheat-growing country.
238. Where does the trade go now? To Orange.
239. By road? Yes.
240. Are the roads pretty good? Yes, very fair.
241. Have the farmers much difficulty in getting their produce to market? I believe not.
242. So far as your experience goes, what distance on either side of it is fairly served by a railway in an agricultural country? I should say from 10 to 15 miles.
243. Do you find people taking up farms and settling within 20 miles of a railway station if there is a fairly good road to the station? Yes; they take farms at greater distances than that. In the Toogong district they have been growing wheat for a number of years, and the distance from there to Orange is more than 20 miles.
244. They have taken up the land knowing that they would have to carry their wheat more than 20 miles? Yes.
245. At present does the wheat from the district you have been referring to go to Borenore? It goes to Orange.
246. Is it carted all the way? Yes.
247. *Mr. O'Sullivan.*] There is one route of which you have not given the distance, that via Combing and Cargo? That is such an expensive one that I have not taken a note of it. The distance from Combing Creek to Forbes is 83 miles.
248. In the event of Peak Hill becoming an established goldfield possibly there may be a considerable population there, and they may want a railway in the near future, would not that start from the end of the Molong line? I should say that if the Dubbo to Parkes line is ever made it will be unnecessary to make another branch, or to extend the Molong branch.
249. Is it in contemplation to construct that line? Yes; it has been under consideration—all these cross-country lines to Werris Creek, Dubbo &c.
250. In the event of that line not being carried out would not the end of the Molong line be a good point of departure for Peak Hill? I think so. I do not know what the country is like.
251. *Mr. Garrard.*] In the event of the Werris Creek-Dubbo line being constructed, do not you think it would be better to take the line from Dubbo to Forbes and Young than to Cowra? Yes; the line from Forbes to Young has been surveyed.
252. *Dr. Garran.*] What would be the distance to Sydney from Forbes, via Young and Murrumburrah? 320 miles; 268 by Borenore and Cudal.
253. The difficulties of running on the Western line are very much greater than the difficulties of running over the Southern trunk line, are they not? The steepest gradients are the same on both lines.
254. But all the traffic coming to Sydney by the Western line has to come over the Blue Mountains? Yes.
255. The traffic from Forbes, coming by the Southern line to the metropolis, would escape all that heavy haulage? The heights to be ascended would not be so great on the Southern line; but there are heavier gradients on the Southern line against traffic coming to Sydney than there are on the Western line.
- 255½. But are they not limited, while on the Western line the heavy grades frequently occur? The steepest grades are about 2 miles on each line.

TUESDAY, 28 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.  
The Hon. ANDREW GARRAN.  
The Hon. GEORGE HENRY COX.  
JACOB GARRARD, Esq.

HENRY COPELAND, Esq.  
JAMES EBENEZER TONKIN, Esq.  
WILLIAM SPRINGTHORPE DOWEL, Esq.  
CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Molong to Parkes and Forbes.

John Charles M'Lachlan, Esq., solicitor, sworn, and examined:—

J. C.  
M'Lachlan,  
Esq.  
23 Jan., 1890.

256. *Dr. Garran.*] Where do you reside now? In Sydney now.
257. Have you resided in the west? Yes; for over twenty-seven years, until about a year ago.
258. At Orange? At Orange, for about twenty-three years; at Bathurst, for three or four years.
259. When did you leave Orange? In January, 1889.
260. Was the line to Molong open when you left? Yes, for some time.
261. Was that line carried out at the wish of the residents in Orange? Not specially, I think. I think the people were divided. Some were in favour of it, and some opposed to it. I think that the majority of the people there were opposed to it.
262. At the time it was started there was a general feeling that that should be the route to Wilcannia, was there not? Not at that time—not when it was started; that has been suggested since.
263. Whither was the extension supposed to go? I do not remember that there was any determination on that point. There was simply a resolution to take the railway to Molong; but beyond that I do not know that any determination was arrived at. I presume that the Government records would show. I do not remember any.
264. Then it was under pressure from Molong people mainly? I think so.
265. Without any ulterior portion definitely marked? Apparently. I understand that there was an idea of carrying it on to the Bogan to join the Great Western line, but that was merely the idea of some people. I was informed, but not by Mr. Whitton, that Mr. Whitton was in favour of a line to the Bogan.
266. It was the original idea that the line from Dubbo to Orange should go to Molong? Many thought it was a good route, as it would avoid a bridge at Wellington and at Dubbo, and serve Dubbo as well.
267. Do you know whether the traffic on the branch to Molong has been such as to justify the construction of that line? I do not know, but I think not.
268. That branch having been constructed, the question now arises whether Parkes and Forbes would be better reached through Molong or from Orange by way of Cudal, or, as some others think, from Cowra;—is that not so? Yes.
269. Have you from your long knowledge formed any opinion on that subject? I have.
270. Will you state what it is, and your reasons for it? In my opinion the line from Borenore to Forbes would pass through better and more thickly populated country, and a country more likely to give immediate returns to any railway. I believe it would pay almost at once. There is a very large population along that line.
271. Is it continuously good country between Borenore and Forbes? Yes; it is very evenly good between those places. In one part I should think that the Cudal district is one of the best wheat-growing districts in the Colony. There is excellent soil.
272. There are no large patches of bad country that the line would go through? No.
273. Is it capable of settlement all along the line? I think so.
274. And for what distance on either side of the line? For at least 8 or 10 miles, I should think, and more than that, but my intimate knowledge of that country is to that extent. I might mention that on that line the population would be much larger were it not for the number of reserves which constitute all the best land along that route. That would affect the matter in two ways: no compensation would have to be given for going through those reserves, and the land is exceptionally good.
275. In looking forward to railway construction we may regard those reserves as only temporary? I think so, because I think that if the line were constructed they would be scarcely necessary. Some little accommodation would be required for travelling stock, but not so much as at present, and that land would be available for farming operations, for which it is very suitable.
276. You mean that as the country passes from the pastoral into the agricultural stage those reserves will have served their purpose? Undoubtedly.
277. And I understand that you wish the Committee to believe that between Borenore and Forbes there will be for nearly the whole distance a belt of at least 6 or 8 miles on either side to contribute agricultural produce to the stations *en route*? I think so, contributing almost at once, and very much increased by railway accommodation there.
278. Whither do the farmers at present cultivating that locality send their wheat now? Chiefly to Orange, I think, and to some extent to Forbes.
279. What distance do they have to cart it? The chief wheat district would be Cudal and the surrounding country, and the village of Cudal is about 27 miles from Orange, but of course they could reach Borenore if they struck the railway line at Borenore, which is about 8 miles from Orange. There would be an average of about 20 miles of cartage from the Cudal district, which is the principal wheat district.
280. Then wheat-growers at present are carting wheat 20 miles? Yes; and there is hay—it scarcely pays to grow it. I have even seen it at £1 per ton, and I think a man can hardly live by growing it at that.
281. The construction of this line would bring railway communication within 6 or 8 miles of every farm on the route? I think so.
282. And that would mean a saving of cartage, and enable them to grow a more bulky crop of hay? Yes. It is a country very suitable for maize also, and for vineyards.
283. The maize would find a local market to some extent? Yes, because I think that most of the maize comes from this part. Orange is not a district for maize; it is too cold.

J. C.  
M'Lachlan,  
Esq.

28 Jan., 1890.

284. The growers there could hardly compete with the growers at the Richmond for the Sydney market? No, not in the Sydney market.
285. You think that the cultivation of maize would be limited to the local market supply? Yes.
286. And of hay, too? To a large extent. As the railway extended maize would be sent into the interior.
287. Is there any business with squattages in the interior with maize; is it forwarded for horse-feed at all? I do not think there is a great business because of the expense of cartage, but there would be if there were facility of carriage.
288. Take the line to Bourke;—is any quantity of maize sent to the north-west? I am not sufficiently acquainted with that business to be able to say.
289. In the dry season is hay sent on? Oh yes, in the dry season.
290. What is the average rainfall along this line that you favor? I have not noted that.
291. Can you remember how many seasons the crop has been destroyed by drought? No. There is not often a complete destruction. They are affected very much no doubt.
292. You think it will be a permanent agricultural district? I think so undoubtedly. Even now there are many prosperous farmers—under present conditions.
293. You speak of Cudal as being the choice spot on the line; is land near Eugowra good? It is very good also, but being farther from market than Cudal it is not opened up. I believe there is excellent land about Eugowra that would pay better to work than it does now.
294. Supposing a line were continued from Forbes through the Lachlan valley to Menindie, do you think that the growers between Orange and Forbes would find a market in the west for their produce? I think so. I know the land the other side of Condobolin—midway between that and Euabalong—and that is very good country.
295. Do you not think that as it is opened up the west will be the true market for farmers in the west rather than their sending to Sydney? I think so—eventually.
296. You think that pushing these railways will give them the chance of getting that western market? I think so.
297. Will you tell us what you have to say against the Molong-Parkes line? I do not know that I have so much to say against it. There is some very good land on that route, and some very inferior.
298. It is rather more patchy? About Dungeon Creek and Bumbury there is some which is not good land; to an ordinary observer it seems good, but the land is not so good. About Manildra and some other places there is some very good land. The greatest objection to constructing that line is that at no very distant date the farmers would almost be entitled to a line along by Cudal also, as there will be such a population there as will be entitled to railway communication even if the other line be constructed.
299. You do not think that between Molong, Parkes, and Forbes we shall have on either side of the line such a belt of settled productive land as on the other route? I do not think so. I might mention that some of that very country along the Molong line, such as near Manildra, would not be a great distance from the Cudal line.
300. If you look at that map you will see that the line from Orange to Eugowra runs, roughly, parallel with the line from Blayney to Cowra; what distance would those two lines be apart? I suppose that is better shown by the scale. I have been across the country from one point to the other, but this map is scaled and the distance would be more satisfactorily shown by scale than I could state it.
301. Supposing it to be 25 or 30 miles, the population between these two railways would be well provided for? I think so then.
302. Because you say it will pay to cart within 20 miles? It pays but not well. There are farmers there making a very good living, but some are not doing well.
303. Do you know the character of the country between Borenore, Cowra, Eugowra, and Blayney;—is it all capable of settlement? Not all, but considerable land would be taken up if there were proper railway communication, and it is very good land; the general character of it.
304. If the line went by way of Molong it would be north of the line you favour and would be a more intermediate line between the line to Dubbo and the line to Cowra? It would.
305. In laying out these lines it is very desirable to give the greatest possible accommodation to the people who settle, do you not think? All other things being equal I think so.
306. We cannot make lines everywhere, and if we can bring most of our settlers to within between 15 and 20 miles of a line it is better than making them too close together? Yes.
307. Would not your line be much closer to the line from Blayney to Cowra than the other proposed line would be? Yes.
308. It would over-accommodate some portions and under-accommodate others? Yes; but the settlement is not nearly so great in that district as here. When people settle on land not so near the railways—
309. You think that that is a proof that it is the better land? I think so. Ever since the Forbes gold-field was opened, before the railways were thought of, the tendency of the traffic was all along by Cowra, Cudal, and so on.
310. Looking at the number of present settlers, and the amount of present produce, you think that the Orange-Eugowra line would be a better national investment than the Molong-Parkes line would be? I think so.
311. And from your knowledge of the district as a whole do you think it would be a better railway for the district? I think so.
312. If we do not extend the line from Molong that branch will remain a solitary branch? Unless the idea should be carried out of continuing it along to the Bogan—which, as I stated I heard Mr. Whitton was in favour of—and eventually striking the Great Western Line at present running to Bourke; but that would hardly be constructed at present, I suppose.
313. Where do you propose to strike it? Somewhere about Nyngan, I think. That is a line I should hardly consider justified at present. That line would pass through Cumnock where there is very excellent land.
314. So far as you know the opinion of the Orange people do they prefer the Borenore line? I think so.
315. Orange is the natural centre for that district? Yes.
316. Permanently established as such? Quite so.
317. They have to climb by the present road to get to Orange? Yes.
318. It is at a good height? Yes. In any direction from Orange you descend. It is the highest point in that portion of the country.

- J. C. M'Lachlan, Esq.  
28 Jan., 1890.
319. All the people round have to go uphill to get to Orange? Yes.  
320. That is not adverse to it as a business centre? No, I think not. It has never been any detriment to it. When there were no railways all the Lachlan traffic up to Forbes passed through Orange.  
321. Have you been to Parkes? Yes.  
322. Is there mining going on there now? Yes.  
323. And at Forbes? Yes.  
324. As mining townships, is one more important than the other? From a mining point of view I should say that Parkes is. Forbes was originally a mining township, but to a considerable extent it has been converted into a squatters' township.  
325. Looking at the future of the two townships do you think that one has a distinctly better outlook than the other? I think that Forbes is the more important town. It is on the river Lachlan. There is very good land about both.  
326. Is either more naturally than the other the business centre of the district? Forbes I think is.  
327. In laying out a trunk line you think it more important to pass through Forbes than Parkes? I think so.  
328. If in planning a railway line you had to make either town subsidiary you would make Parkes subsidiary and Forbes the principal one? Certainly.  
329. You know that one of the suggested lines to reach Forbes is from Cowra, to which place the railway already extends? I know that.  
330. Have you ever travelled from Cowra to Forbes? No.  
331. Your knowledge of the intervening district would be only second-hand? Quite so. I cannot say that I have any knowledge that would be worth anything to the Committee; but so far as I can judge, it is very good country about Cowra.

John Philip Sharkey, Esq., C.E., sworn, and examined:—

- J. P. Sharkey, Esq.  
28 Jan., 1890.
332. *Mr. Lackey.*] What are you by profession? Civil engineer.  
333. Had you anything to do with the survey of either of these two lines—between Borenore and Forbes or between Molong and Forbes? I surveyed them all.  
334. When you say "them all" do you mean these two lines? Yes, both the line from Orange to Molong, and on to Parkes and the line from Orange to Borenore and on to Forbes.  
335. Had you anything to do with the survey from Cowra to Eugowra? Nothing whatever.  
336. Who surveyed that line? I cannot say. It has been surveyed since I left the department.  
337. The line between Borenore and Forbes—did you survey it right through? I was on most part of it. I did it nearly all myself. There were several surveys over that route until I prepared a permanently staked line.  
338. Was it a line showing difficult gradients in any parts? One portion of the line, going down from Borenore to Keenan's Bridge, had pretty steep gradients. That line was surveyed originally—before any other line was surveyed out from Orange—for the purpose of getting a line to Forbes, but the surveyors engaged upon the line were stuck up by the stiff gradients, and by the difficulty that arose in passing what they call Keenan's Swamp, and it was not until I had done the survey to Forbes that I was called upon to go over the work on that portion of the line and find out a practicable route. I was directed to do so by Mr. Wright, the then Minister for Works, and I found a line that obviated the necessity of crossing Keenan's Swamp, and therefore removed the difficulty that originally existed. By making a slight detour I also cut down the steep gradients which were considered strong features of difficulty in the original surveys, and consequently that line of survey was adopted by the Government of the day.  
339. Do we understand that the first surveyors sent up gave up this line as impracticable? It was considered so by the Government.  
340. On the report of the survey party sent up? Yes.  
341. What was the character of the detour you recommended? I recommended a slight detour by which a rising ground was taken in in the course of the line which helped as a kind of stepping-way and extended the gradient for an extra distance, which of course reduced its steepness.  
342. Was your alternative route, or the route you proposed, north or south of Keenan's Swamp? It kept south of the original survey as it approached Keenan's Swamp and passed to the south there, and kept outside of Keenan's Swamp—closer along the main road. The original survey went through a large spur with very steep cuttings, and then over the swamp.  
343. What was the steepest gradient in the improved line, the adopted line, the line you recommended? I think 1 in 40.  
344. How far did that gradient extend? For a good distance. You must remember it is some years since I was there. I have no means of refreshing my memory unless I had my plans before me.  
345. Then it went on from there to Eugowra? There was no difficulty after that. I think as far as my memory serves me that the grades are very flat indeed between that and Forbes.  
346. Did you take notice of the character of the country between Eugowra and Forbes so far as floods were concerned? I did.  
347. Did you make inquiry? I had the plainest evidence before me, because the big flood of 1870 was the largest flood recorded in that part of the country during the residence of white people. I could see the remains of the flood there at the time when the survey was done, and we were 6 feet or 7 feet above the highest flood-mark. My level book gives the record of this large flood of 1870 and the formation level for the line.  
348. You know a place, as you approach Forbes, called the Southern Cross? I do well.  
349. Is it the case that it was submerged by the flood of 1870? Yes; it was.  
350. How far was your line from that? It runs at the back. I am only speaking from memory, but I believe it is 4 or 5 miles at the back of that. There was a survey made—not done by me—which ran close to the Southern Cross, but in consequence of a report that it was under flood-level the direction was altered so as to take the top of this dividing ridge. It is hardly perceptible to the naked eye, but it is absolutely 5 or 6 or 7 feet higher than the adjoining country.  
351. Where does your survey end near Forbes? Within, I think,  $3\frac{1}{2}$  miles of the town of Forbes.  
352. Do you know the crossing of the Parkes Road where the original survey was? Perfectly well.  
353. Is it far from that? It comes up to the line I surveyed. I surveyed a portion of the cross line from

from Dubbo to Parkes and from Parkes to Forbes, and on by Grenfell, and it joins that line near the Parkes Road—within a few chains.

354. Have you ever heard of traffic on the road between Forbes and Eugowra having to be abandoned in flood time, and go round by Parkes? I have not, but I have not the slightest doubt it would be stuck up anyhow. Part of that road certainly would be submerged in a big flood such as that of 1870, but I do not think that any flood has taken place since then that would stop the traffic on that road. It would have to rise exceedingly high, as the rise from the summer level to the level of the road must be 50 feet or so.

355. You know the mail road now? Yes.

356. Have you heard the height to which the water rises on that in flood time? I have not, but I dare say I have a record of the level there too; but in the absence of my level or field-book I cannot give the information.

357. You became fairly well acquainted with the character of the country all through those districts? At that time I was thoroughly acquainted with it.

358. It is good rich land all through those districts? It is good rich land all the way from Orange. I think it is the finest land I have seen anywhere in the Colony.

359. Do you mean that no flood would reach the line of railway you marked out? The line of railway now marked out is, I say, above the big flood mark of 1870, and a flood would have to rise from 5 feet to 7 feet higher than that before it could possibly touch the present ground line of the line of survey.

360. Of the proposed railway line? Yes.

361. You have become well acquainted with the whole character of the country in these districts generally? Yes; I made it my business to do so.

362. You have been to Eugowra, Cudal, and Meranburn? Yes.

363. Do you know Townsend's, on the Parkes line? I know what is called Bumbury.

364. They are all wheat-growing places? Yes; but not of the character of the land on the Borenore line. Where you go off the Borenore line you get another character of soil; but that land there is a red chocolate soil, of considerable depth—4 ft. or 5 ft. or 6 ft. perhaps before you come to a change; but on the other line of country it is black soil country—very loamy country.

365. Have you seen both countries under crop? I have.

366. Which do you regard as the most successfully cultivated country of the two? Without any comparison the Cudal district is richer in every way.

367. Have you been in the Parkes district? I have.

368. What is the character of the soil there? In some places it is patchy; in some places there is very good soil; it is black soil.

369. Do you know the country along by Meranburn? I do well. There is a patch of good land about Meranburn and Manildra.

370. What do you call a patch? It is on the flat, and I consider it will extend from the main road a mile on either side. There may be patches here and there; but it is not in its general character the same as at Cudal.

371. I believe that the Forbes road was the old track? It was.

372. The settlements are older? Yes.

373. The country of which we are now speaking is comparatively new? I believe it was opened much later.

374. I take it that the older country would be more largely populated, and more cultivated? Yes, naturally.

375. Do you know the country about Brymedura? I know it well.

376. Is there wheat cultivation about there? None, that I saw there, except in the station paddock.

377. How long is it since you were there? About six years. There was not much extent of wheat cultivation there then.

378. I suppose you are aware of the circumstances under which the line was first constructed between Orange and Molong? Perfectly.

379. You recollect, probably, the contest that existed for some time as to whether the line from Orange to Wellington should go by Molong or Ironbarks? Perfectly.

380. And you know there has been a strong feeling between the people of Molong and of Orange as to the route this line should take? I do.

381. Do you know that most of the people recommend the line by Borenore? I believe they do.

382. The Molong people recommend the line by Flagstone Creek? Yes, I believe they do.

383. Is it your opinion that there is a strong prejudice in the minds of residents of both those towns as to which course the line should take? I have never seen much interest taken in the matter at Orange; but they seem to like the Borenore line. I know that the people of Molong are very anxious that the line should pass through their town to Parkes. The line from Borenore presents a feature I thought I might mention. On either side of the line there is good land right up to a place called Cargo.

384. You know the country round Cargo? I do well.

385. It is between the two lines, is it not? Yes; on the other hand the centres of good land, such as Manildra and Meranburn, are only 8 or 9 miles from the Borenore line.

386. Is it your opinion that one line of railway will meet the convenience of the whole farming population of that district? I think that the Borenore line is geographically situated to meet the requirements of the country, and if you make one line you will have people continuing to cry out for a line to relieve their traffic.

387. Do you think that the Government should be influenced in the construction of a line to Parkes or Forbes by the existence of towns, or should take it to the district most prolific in crops? I think that the Government of any country should deal with matters of railway on a commercial basis, and in the interest of the public all lines should be taken where there would probably be a remunerative traffic, and the Government should treat either towns or localities in the same manner.

388. The line you have surveyed does not go exactly into Forbes? No; within 3 or 4 miles. As to the matter of traffic, when I was out surveying I took notes of the traffic on the various lines I was on, and as regards the Forbes line—from Borenore to Forbes—I can safely say I never saw such heavy traffic in New South Wales as I did on that line of road. I have known in the winter season—just before the rainy season—about October or November, the Roads Department in Orange always put a coating of broken metal on the line, Borenore to Forbes, so as to enable the roads to withstand the heavy wool and wheat traffic

J. P. Sharkey,  
Esq.  
23 Jan, 1890.

- J. P. Sharkey, Esq.  
28 Jan., 1890.
- traffic into Orange. Immediately afterwards, when camped on that road, I have been astonished to see the way in which that broken metal was ground down into an even surface.
389. How long ago was that? I am speaking of 1885.
390. Most of the traffic of that part of the country came through Forbes at that time? Yes.
391. Currajong and Parkes have not been so long settled? But I was there about five years ago, and there was no comparison in the traffic. I have been camped on the Parkes Road—one of the finest roads in the Colony—and it is a fact that not a shilling has been spent on it for three or four years at a time, because the traffic was not sufficient to wear down the road. Another note I made at Molong was that before the railway was made there was a man with a two-horse van, and he actually did all the carrying into the town of Molong from Orange. Sometimes he had two and sometimes four horses, according to the nature of the traffic. But in two trips a week he carried into Molong all the goods that came there.
392. I suppose you know the country north of Parkes—the head of the Bogan? Yes.
393. How far have you been out north of Parkes? Not very far.
394. Do you know of any of the country about Curragery or Ganalleggy? Not sufficiently well to speak of it.
395. Do you know there has been a great deal of settlement there during the last few years? I have heard so.
396. Settlement of agricultural population? I believe it has taken place.
397. Much larger than in any other part of the district? It may have taken place.
398. When you speak of the great traffic on the Forbes road, of course you know that the Forbes road was an outlet to the country long before the line extended to what is called Parkes? Yes.
399. Parkes is considered a new town or district? It was a very important town in 1885.
400. How old is Parkes? I cannot say, but it was a good town at that time.
401. You know that the Parkes road, or the Currajong as it was previously called, is not to be compared with the road to Cudal, Eugowra, and Forbes? That may be.
402. If you know the country you must know it is so? I knew it only between certain periods.
403. The road to Parkes and Currajong is a road known only within the last few years? That may be.
404. You are not resident there now? No. I am a resident of Sydney. I am an engineer practising in Sydney.
405. Sometimes the officers of the Government settle down or buy properties in these parts of the country; that is not the case with you? No. I am practising as an engineer in Sydney, and am putting up some verly large works.
406. You are not in the Public Service now? No. I am practising myself; I am building the water-works for Windsor now, the Penrith and the Nowra.
407. You have no interest in either of these lines? None whatever. I speak impartially, without any motive on either side; but I was impressed beyond measure with the importance of the line. Before any question of competing lines arose, I reported on the country in the vicinity of Cudal, and that land opened up by the Borenore route would decidedly be, and should be, selected as a commercial speculation in preference to the other. I have had sufficient experience of railways in this country, and America, and Queensland, to enable me to procure sufficient data for a report on the commercial aspect of any railway, I think, in the world.
408. Do you recollect the date of your report? I could not say, but I have with me a report in which this question is mentioned.
409. Can you give us the date of it? I will give it to you, and also the report itself. [*Report handed in by witness*]
410. This is dated December, 1883? Yes. That was the first time when that question cropped up.
411. Would you be good enough to read that report, and then it will be noted in your evidence? This is a portion of my report under date 8th December, 1883, addressed to the Engineer-in-Chief for Railways, from the survey camp, Cudal. That portion that bears on the character of the country is as follows:—
- BORENORE, the locality of my starting point, is the centre of a prosperous and thickly populated agricultural district; from thence to the terminus of my survey all the available land has been selected for a considerable distance on each side. The class of settlers is decidedly agricultural, and a very large area is under cultivation. The wheat crop of this district is one of the largest in the colony, and gives promise of extensive traffic on a railway should it be constructed. As a matter of comparison of capabilities of land and the character and number of settlers on the country adjacent to this line and that passing Molong, I may state that but very little of the land in the vicinity of the line passing Molong is fit for settlement beyond Meranburn, which limit is 7 miles west of Manildra, and that there are no agricultural settlers beyond that point, and consequently no agriculture. Should the branch line to Molong be determined upon, the length from Orange to Borenore (9 miles 26 chains) on that line may be deducted from the gross mileage to Forbes, thus making a considerable reduction in the distance to be constructed to that place.
412. That is 1883—six years ago? Yes. Another matter I might mention is that the land beyond a place called Coates' Creek when I was in that district was the last open to settlement in that neighbourhood.
413. Your opinion was formed at the time you were there in 1883? Yes.
414. Have you been there much since? I was about that district till 1885, but beyond Coates' Creek there was no settlement whatever, and the line passes in through the Dungeon Ranges.
415. That is where it goes off to Flagstone Creek? Yes. There is little or no surface soil on the ranges, which fact gives rise to the name "Dungeon Ranges." There is no surface soil—the rock is nearly exposed.
416. Those ranges form the head of what is called the Billabong, I think? Yes.
417. Have you travelled the Billabong generally? No. It is the Flagstone Creek that I am talking of. The country was so rough that I never went much off the line of survey. I surveyed the line from Flagstone Creek to Parkes and Forbes.
418. How far from Parkes is the terminus there; how close is the line to the town of Parkes? The survey I made went right into the town of Parkes. I passed through that portion of the town and went to the extreme end of the town.
419. The country is very rough about Flagstone Creek? It is very rough, and there is no soil fit for any purpose. Flagstone Creek is a very difficult part of the line to make. While I was working on one side of the creek a heavy thunderstorm fell for an hour, and I was compelled to camp on that side, as I could not get across for several hours. The creek rose 20 feet in that time. As there was no soil through which the water could percolate it came into the creek, and flooded in that manner.
420. What is the character of the stone in the neighbourhood of Flagstone Creek? I think it is sandstone.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Molong to Parkes and Forbes.

APPENDIX.

A

RAILWAY COMMISSIONERS REPORTS.

Proposed line of Railway from Molong to Parkes and Forbes, *via* Flagstone Creek—Length, 71 miles 52 chains.

Office of the Railway Commissioners of New South Wales, Sydney, 27 September, 1889.

In accordance with section 13 of the "Public Works Act, 1888," we beg to report as under:—

Cost of construction—

The Engineer-in-Chief estimates the cost of constructing a light line of railway (exclusive of land and compensation) at ..... £433,000

Annual cost—

Capital expenditure, at 3½ per cent. .... 15,155

The estimated cost of working would be as under—

Permanent-way expenses ..... £7,300

Locomotive expenses ..... 1,800

Traffic expenses ..... 1,800

10,900

Total annual cost ..... £26,055

Traffic estimate—

Passenger traffic ..... £4,000

Mails ..... 864

Merchandise Traffic ..... 5,600

Live stock traffic ..... 800

£11,264

It will be seen from the foregoing figures that this is an instance where the working expenses of the line will probably be covered by the traffic.

The Seal of the Railway Commissioners of New South Wales was hereunto affixed this 27th day of September, 1889, in the presence of—  
H. McLAUGHLIN.

E. M. G. EDDY,  
Chief Commissioner.  
W. M. FEHON,  
Commissioner.  
CHARLES OLIVER,  
Commissioner.

Molong to Parkes Extension.

THIS is an extension of the branch line from Orange to Molong, which runs through a fairly good agricultural district, but on leaving Molong the character of the country changes, being of a rocky nature for a considerable distance between Molong and Parkes, and therefore but little revenue can be expected from local traffic, the settlement *en route* being limited.

We are of opinion that an extension from Molong to Parkes could not be recommended, except as the means of opening up an admittedly good agricultural district around and north of Parkes, but we would rather favour a line from Cowra or Young to Forbes, and from thence to Parkes, which would run through fairly good country, and give the residents the choice of either the southern or western lines for business purposes.

E. M. G. EDDY,  
W. M. FEHON,  
CHARLES OLIVER.

9th July, 1889.

B.

OFFICIAL descriptions of the proposed Railway.

Line from Molong to Parkes.

THIS line is an extension of the branch which leaves the Great Western Railway at Orange, and is a continuation from Molong, the present terminus.

A sum of £705,500 was voted during the year 1881 for construction of a line from Orange to near Forbes, *via* Molong, and a portion of this vote was used for the construction of the line to Molong; the remainder of the vote was rescinded in favour of the line from Borenore to Forbes *via* Cudal. Surveys have been made along two routes. They are named respectively—the Molong to Parkes, *via* Flagstone Creek route, and the Molong to Parkes, *via* Bumberry route. These two are identical up to 243 miles 66 chains 70 links from Sydney; at this point they diverge, the Bumberry route being the northerly one.

The Flagstone Creek Route.

Length—51 miles 12 chains 95 links—Estimated cost of a single light line of Railway, £329,700, or £6,444 per mile, exclusive of land and compensation.

THIS line is an extension from Molong station, at 213 miles 78 chains 85 links from Sydney. It sweeps round the north end of the high land on which the town stands, crossing Molong rivulet twice, and then turns south-westerly on rising gradients, as far as 219 miles, crossing Lord's Gap at 220 miles, and Mandagery Creek at 228½ miles; to this point gradients fall for 9 miles. The proposed village of Manildra is passed at 229 miles; from Mandagery Creek the gradients steadily rise again to 239 miles, and the height attained, *viz.*, about 2,000 feet above h.w.s.t., is maintained up to 243 miles. From this point the descent is almost continuous into Parkes, where the line is terminated at 265 miles 11 chains 80 links from Sydney.

Line

## Line from Parkes to Forbes.

Length, 20½ miles.—Estimated cost of a light line from trial section, £100,400; exclusive of land and compensation, £4,950 per mile.

COMMENCING at a point on the Orange to Wilcannia survey, *via* Molong and Parkes, 1½ chain east of East-street, crossing Austral, High, and East Streets, at the south-eastern end of the town of Parkes, and proceeding in a south-westerly direction to Forbes; passing through the parishes of Parkes, Martin, Mumbidge, and Forbes, county of Ashburnham; crossing the Parkes to Forbes Road at 2½, 9, and 17 miles, and Stephen, Lewis, Union, Dowling, Herbert, Clark, Barwin, Bando, and Ooma streets, in the town of Forbes—being a distance of 20 miles 40 chains.

January, 1889.

## C.

## PRECIS OF PAPERS ON PROPOSED LINES TO FORBES AND PARKES, WITH QUESTION OF EXTENSION TO WILCANNIA.

IN May, 1874, a memorial was presented to the Minister for Works (Mr. Sutherland) by the Municipality of Forbes, urging that a survey might be made of a line from Orange to that town, alleging in support of their request (1) the increasing population and importance of the district, (2) the badness of their roads as a means of communication, (3) the favourable character of the country for the construction of a railway, and (4) the extent of level country, unsurpassed for grazing, mineral, and agricultural resources which such a line would command. At that time no survey or exploration of the country had been made, and as the Engineer-in-Chief could not then spare surveyors consideration of the question was postponed.

No further movement seems to have taken place until June, 1877, when inquiry was made in the House whether a trial survey had been made of a line from Orange to Forbes, and the Minister replied that in compliance with a resolution of the House a trial survey was in course of being made from Orange towards Wilcannia and Menindie, and that with a view to avoid country subject to floods such line would pass 7 miles north of Forbes.

12/7/77. The Mayor of Forbes, acting in concert with a District Committee, requested that a survey might be made direct from Boree to Forbes, maintaining that any railway intended to tap the Lachlan should go to Forbes, and that inasmuch as out of the 4,000 or 5,000 acres selected weekly nearly all was on the south side of the river, taken for agricultural purposes; a railway passing so far to the north of Forbes would be of no service to the people, as they could get their goods cheaper from the Blayney station. In reply to the Minister (Mr. Hoskins), the Engineer-in-Chief said that a trial survey was in progress which would accommodate both Parkes and Forbes. It would pass 5 miles south of Parkes, and 7 miles north of Forbes. They could get no nearer on account of the liability to floods.

7/8/78. A public meeting was held at Molong, at which a resolution was carried that the great and increasing importance of Molong and its district, as evidenced by the large population, the fertility of the soil, and its large contributions to the public revenue, entitled it to railway communication with Sydney. As the outcome of this meeting, Mr. J. Shepherd, M.P., presented to the Minister (Mr. Sutherland) a petition from 432 inhabitants of Molong and its environs, praying for railway communication, and setting forth that Molong was the natural and best route for a railway, that the succeeding season's yield of wheat was expected to be 200,000 bushels, that from 7,000 to 10,000 bales of wool would be sent yearly to Sydney, that the country contains copper, shale, building stone, lime, &c., and that a line from Orange to Parkes, *via* Molong, would pay well, and be the shortest and cheapest to construct. The following statistics accompanied the petition:—

Land taken up during year .....	61,592 acres
Land alienated .....	150,000 "
Produce—Cereals .....	169,000 bushels
"    Hay .....	2,400 tons
Stock—Sheep .....	500,000
"    Horses .....	6,097
"    Cattle .....	14,044
"    Pigs .....	1,500

The Minister decided that a trial survey should be made.

Mr. Shepherd, M.P., wrote advocating a line *via* Molong in preference to that *via* Boree and Toogong.

Mr. Shepherd again wrote to same effect.

19/8/78. Mr. Whitton reported that the first trial survey towards Wilcannia was *via* Boree and Manildra, passing 10 miles south of Molong, 7 miles south of Parkes, and 6 miles north of Forbes. A trial survey had since been made from a point on the line surveyed from Orange to Wellington, passing through Molong, thence to a junction with the Forbes-Parkes line at Manildra. With a view to shorten the distance a deviation had been surveyed passing 2 miles south of Molong. The first-named survey gave 30 miles, the second 38 miles, and the last 36 miles; average cost per mile, about the same in each case.

12/8/79. The hon. secretary of the Wilcannia Progress Committee wrote, by direction, to the Minister, requesting that a sum of money might be placed on the Estimates for a line to Wilcannia *via* Parkes, Forbes, and Condobolin, with a bridge across the Darling. A petition to the same effect had shortly before been presented by residents of the district, and the following statistics were furnished:—

## Tonnage and value of goods for the Upper Darling.

1875 .....	19,034 tons .....	£339,170
1876 .....	23,190 " .....	489,000
1877 .....	23,198 " .....	494,475

Wool exported *via* Wentworth.

1875 .....	25,390 tons .....	£694,169
1876 .....	33,582 " .....	625,100
1877 .....	*8,450 " .....	153,260

Number of sheep in district 5,000,000, and of cattle 60,000.

The compiler of the statistics wrote that if this Colony desired to secure this rich harvest, they must touch the Darling near Wilcannia. If there were a railway, the trade would most assuredly go to Sydney, for although water carriage was cheaper, it was so uncertain that wool was often kept back for months, and goods for dealers and others were similarly delayed.

26/9/79. A petition was presented to Mr. Secretary Lackey from farmers and other residents of the Forbes district, setting forth that the want of a railway between Orange and Forbes was a serious drawback to the district, that the country which would be served by an extension to Forbes contained 20,000,000 acres of first-class agricultural and pastoral land depasturing 5,000,000 sheep, besides being rich in minerals, that the yield of wheat was 20 bushels per acre, that the settlers had no outlet for their produce, the freight charges being prohibitory, and that Forbes, by its position, progress, and importance, was entitled to have a railway into the town, and they prayed that a trial survey, *via* Flagstone Creek, might be continued close to the town, and that a sum of money might be placed on the Estimates for the construction of a line. Mr. Secretary Lackey minuted that he had just received a deputation in the same interest, and had promised that the country should be examined, and, if found to be as represented, the line should be taken by way of that town. Mr. Whitton was requested to have the country examined in regard to its liability to flood and to carry the survey *via* Young to the Southern line.

A

\* River not navigable, and wool detained.

A petition from residents of Orange and the neighbourhood was presented to the Minister by a deputation from Orange, which waited on him for the purpose, praying for the construction of the line to Wilcannia, and that Orange might be the point of departure from the present line. Dec. 1879.

Another deputation in the same interest waited on the Minister (Mr. Sutherland), and received a favourable reply. 31/1/80.

A leader appeared in the *Herald* stating that Mr. Sutherland appeared to be the only man who understood what was wanted to develop and utilize the so-called Darling country. When that gentleman was last in office, he thought the best means of making the most of that territory was to secure a permanent supply of water for navigation, and in that view gave instructions to prepare estimates for locking the Darling. There was not time to do that, but on the recommendation of the Engineer-in-Chief, £10,000 was placed on the Estimates for the commencement of the work. Mr. Sutherland retired soon after, and the locking scheme retired with him. Had he remained in Office, this great national work would have been undertaken, and the railway system of the Darling country determined upon in connection with it. They (the *Herald*) had no hesitation in saying it was beginning at the wrong end to construct the railways first and do the improvements of the Darling afterwards. If the river were locked as far down as Pooncarrie, the settlers would send their produce to, and receive their supplies from the terminus, and thus direct the trade to Sydney. In this scheme it was not the question of navigation only which was involved, but the equally important one of irrigation. 11/2/80.

Mr. Vaughn, M.P., inquired when the promised survey from Murrumburrah to Forbes *via* Grenfell would be made. It would seem that no reply was made to this question, and there is certainly no trace in the papers of any such promise having been given. 25/1/81.

Mr. Secretary Lackey proposed on the Loan Estimates an amount of £705,000 for a railway from Orange *via* Molong to Forbes, and it was carried by 74 votes to 2. 28/3/81.

Resolutions in favour of extending the line to Wilcannia were carried at a public meeting held at Forbes. 25/3/81.

Mr. Brodribb forwarded to the Minister certain statistics furnished by the Wilcannia Progress Committee (these statistics have already appeared in the paper, (see page 1), and proceeded to say that New South Wales with 312,000 square miles possessed 30,000,000 sheep, that Victoria with 87,000 square miles was fully stocked with 9,000,000, and yet she exported more wool than we did. As a fact, fully half the wool produced in New South Wales went to that colony and South Australia. In the years 1877 and 1878 Victoria exported 628,350 bales of wool, while in the same period New South Wales exported only 279,232 bales, the difference in favour of Victoria being 349,118 bales, the value of which, £5,236,770, was money lost to this Colony for want of railway communication with the Darling River. 28/3/81.

Mr. J. Bodel wrote to Mr. Secretary Lackey reminding him that he had promised to have a line surveyed to Forbes *via* Flagstone Creek provided there were no flooded lands to obstruct the route. He also asked for the survey to be so arranged as to place the station within a reasonable distance of the town. Mr. Whitton in reply intimated that the survey referred to should have attention. 28/3/81.

Petitions were presented to the House from Eugowra, Canowindra, and Goolagong, praying that Blayney might be made the starting-point of the line to Forbes.

The Minister, in reply to a question from Mr. Vaughn in the House, stated that a survey was being made from Parkes through Forbes to join the survey already made from Young to Grenfell.

Mr. H. H. Cooke, M.P., wrote to the Engineer-in-Chief asking him to have a survey made from 151 (251?) mile-post at the foot of Flagstone Hill to the original survey, near the crushing machine dam in the town of Parkes, a distance of 3½ miles, over level country and through Crown lands. Mr. Whitton gave the necessary instructions. 27/7/82.

Messrs. Vaughn and Coonan, Ms.P., wrote to the Minister asking that the surveyor who was engaged on a trial survey from Young to Forbes might be instructed to make the survey a permanent one. Mr. Whitton in reply intimated that the permanent survey from Orange, *via* Molong to near Forbes, had been made since the loan for that line was sanctioned. A trial survey only had been made from Young to Parkes, *via* Grenfell and Forbes. It was not usual to make permanent surveys of lines until the loans for them had been sanctioned. 11/5/83.

The Mayor of Wilcannia wrote to the Minister urging that railway facilities should be given to that town. 31/10/83.

Mr. Whitton, in reply to inquiries made by Messrs. Coonan and Stokes, Ms.P., reported that a trial survey had been made from a point on the Orange and Molong line, 7 miles from Orange, passing about 2 miles south of Cudal, thence about same distance south of Toogong to Long's Corner; thence by Mandagery Creek to Eugowra, and thence by a direct line to a junction with the line surveyed from Forbes to Parkes; and that two deviations from the Cudal route were under consideration. 19/12/83.

Several papers about this time which are shown by allusions in other papers to have been received are missing from the file. For instance, letters from Messrs. Coonan and Stokes, Ms.P., and from the Mayor of Forbes; also report of an indignation meeting to protest against the line to Forbes not being made.

A deputation waited on the Minister (Mr. Wright) to represent that any extension of the Orange and Molong line towards Forbes should not be taken from Molong but from Borenore and through Cudal, as it would then pass through a much more fertile country. The Minister replied that he believed the Cudal route was the best and shortest, and if his opinion was confirmed on investigation it would be his duty to ask Parliament to reconsider the resolution to take the line from Molong. 9/3/84.

Mr. K. B. Wilkinson wrote to Mr. Secretary Wright urging the construction of a line to Wilcannia from Forbes rather than from Nyngan. *Via* Forbes it would be a straight line from Sydney, and would first run through agricultural country and the rich copper district of Nymagee and Mount Hope, and then through one of the best squatting districts in the Colony, while a line from Nyngan would be very roundabout and pass through a scrubby poor country. 9/3/84.

Messrs. Coonan and Vaughn, Ms.P., introduced a deputation to Mr. Secretary Wright to urge the construction of a line from Young to Dubbo, *via* Grenfell and Forbes. They said it would open up a large extent of country, and be a convenient connection of the south and west systems. The Minister strongly concurred in the proposal. It was, he said, one of the first propositions he made on taking office with the addition of continuing the line from Dubbo to Werris Creek, thus uniting the three railway systems. He could not answer for the views of his colleagues, nor for the opinion of Parliament, but personally he believed that sooner or latter the line would have to be made. 22/2/84.

An influential deputation waited on the Minister to ask that a final decision might be arrived at as to the route to be taken by the extension to Forbes, as the progress of the district was much retarded by the existing uncertainty on this point. They were of opinion that the best route was from Borenore, *via* Cudal. The Minister replied that three routes had been surveyed (1) from Molong, *via* Manildra, (2) round by the Canoblas, and (3) *via* Keenan's Bridge and Cudal. He was aware that the last named went through better country, and if it were found more practicable in an engineering point of view it would probably be adopted. He, however, could not speak definitely as to the route, because if it were decided to alter the route already approved, Parliament would have to be asked to rescind that approval. 7/3/84.

Dr. Ross, M.P., wrote to the Minister complaining, in indignant terms, that tenders had not been called for the Molong extension. 14/3/84.

The same gentleman presented to the Minister three petitions (1) from residents of Manildra, (2) from residents of Garra and the neighbourhood, and (3) from residents of Parkes, Bumberry, Billagong Creek, Flagston Creek, &c., &c., praying for the immediate construction of the extension from Molong towards Forbes. April, 1884.

The Mayor of Forbes forwarded to the Minister copy of resolution carried at a public meeting held at Forbes in favour of the construction of the line from Borenore, *via* Eugowra, to Forbes. 3/6/84.

Mr. Stokes, M.P., presented a petition to the House from the residents of the Condobolin district, praying for favourable consideration for the Borenore-Cudal-Forbes line. 5/6/84.

A similar petition from residents of Eugowra was presented to the House. 19/6/84.

A petition from the residents of Parkes, the outcome of a public meeting held in that town, was presented to Parliament praying for the adoption of the rival scheme, viz: the extension to Forbes, *via* Molong and Manildra. 26/6/84.

Mr. Coonan, M.P., drew the Minister's attention to the fact that one mine alone on the route from Forbes to Wilcannia, paid annually £30,000 for cartage—freight which a railway, if constructed, would obtain. 21/7/84.

Dr. Ross, M.P., introduced to Mr. Secretary Dibbs a deputation to urge the desirability of constructing the line from Orange, *via* Molong and Manildra, already sanctioned by Parliament in place of that by Borenore, Cudal, and Eugowra which latter they alleged would be 36 miles longer. The Minister said it was an important question and would be decided on the principle of the greatest good to the greatest possible number. 25/7/84.

- 13/8 84. Dr. Ross forwarded to Mr. Secretary Dibbs copy of a resolution carried at a public meeting held at Molong to the effect that such meeting protested against a mendacious statement which appeared in the *Evening News* that the general feeling was in favour of the line branching off from Borenore, whereas, on the contrary, it was the general desire that the extension should be by way of Molong and Manildra, as sanctioned by Parliament in 1881.
- 17/9/84. Dr. Ross forwarded to the Minister a statistical statement referring to the Manildra and Gurra district, as under :—
- |                       |                 |
|-----------------------|-----------------|
| Land holdings .....   | 71,348 acres    |
| Land cultivated ..... | 7,950 "         |
| Cereals .....         | 135,151 bushels |
| Horses .....          | 1,019           |
| Cattle .....          | 1,225           |
| Pigs .....            | 329             |
| Sheep .....           | 44,748          |
| Population .....      | 1,211           |
- A paper was also furnished giving reasons as follow why the line should be made from Molong, *via* Parkes, (1) because Parliament had voted the money for that purpose, and the line was being made to Molong; (2) because there was a saving in distance; (3) because there were no engineering difficulties, and the country was thickly populated; (4) because it was the best line for Mount Hope and Wilcannia, and was level and free from floods; (5) because it was already surveyed; (6) because the population of Parkes was as great as that of Forbes; (7) because the population of the places touched by the line was much larger than on the other route; (8) because all the surveyed lines of railway west touched at Parkes, which already had a large farming population likely to be increased tenfold by a railway, and (9) because the plans and specifications were ready for this line and the adoption of any other route would cause delay. The following reasons were also alleged why the line should not be taken from Borenore, *via* Cudal :—(1) It would pass for 30 miles through private land; (2) it would pass for a mile through an almost bottomless swamp; (3) much of the country was liable to floods; (4) the population was scanty, the only centre being Cudal; (5) nearly all the land had been alienated; (6) it would be longer than the other route and serve fewer people.
- 12/10/84. Mr. Commissioner Goodchap wrote an important minute with reference to the proposed line, Forbes to Wilcannia, but it is not now on the file, and would appear to have been missing a few days after it was written.
- 22/10/84. Mr. Secretary Wright proposed in the Legislative Assembly a sum of £705,000 for the construction of a line from Orange to Molong, *via* Borenore, and from Borenore to Forbes, *via* Cudal. The motion was carried, and this was virtually a rescission of the vote of 2S/3,81 for a line from Orange to Forbes, *via* Molong.
- 19/12/84. Mr. T. J. Keenan wrote to the Minister suggesting a deviation of the Borenore line, by which he alleged a saving of 6 miles and £50,000 might be effected, and many difficulties avoided.
- Jan., 1885. A petition from persons interested was presented to the Minister praying that the original Borenore route might be adhered to.
- 12/1/85. The residents of Borce, Cabourn, and Barton also presented a memorial to the same effect, maintaining (1) that Mr. Keenan's proposal would inflict an injury on a large number of persons; (2) that by it 12 miles of rich agricultural land would be cut off from railway communication; (3) that the saving to be effected was much exaggerated; (4) that it would make the line pass through Mr. Keenan's own property and Mr. Smith's, such properties being mere sheep walks carrying no population, and therefore having no traffic for a railway, and (5) that the only person to be benefited was Mr. Keenan himself.
- 16/1/85. A writer in the *Daily Telegraph*, evidently a partisan of the Molong route, commented in sarcastic and angry terms upon the Minister's adoption of the Borenore scheme, accusing him of being led by a "cuckoo cry."
- 6/2/85. A deputation waited on the Minister to request the survey of an alternative line, but the Minister declined to entertain the application, stating that there must be some finality in the matter of surveys, and that the route had been finally decided.
- 21/3/85. The inhabitants of Toogong presented to the Minister a petition in favour of Beattie's line, in preference to Pitt's line. Mr. F. J. Smith, in behalf of himself, the Hon. J. Smith, and others objected to Pitt's line as being longer and less convenient and unnecessarily injuring property.
- 4/6/85. The Chairman, Forbes Railway League, forwarded copy of a resolution carried at a meeting of that body in favour of prompt action in carrying out the Borenore scheme.
- 22/8/85. Dr. Ross, M.P., forwarded to the Minister a petition from inhabitants of Orange and Molong, against making the Forbes line from Borenore, and suggesting Amaroo as the point of junction.
- 21/8/85. Mr. F. J. Smith wrote to the Minister again protesting against the adoption of Pitt's line on the score of the injury it would do to his property. Mr. Whitton reported that Beattie's line was being improved and would be adopted, and would do much less damage to Mr. Smith's property.
- Mr. Irvine also wrote, protesting in the name of the people of Toogong, against the adoption of any other line than Pitt's.
- 31/5/86. Mr. E. Quinn, M.P., addressed Mr. Secretary Lyne, stating that the Darling being in flood it was a favourable opportunity for getting rails and sleepers for the Wilcannia line brought up by water, and recommending that tenders should be invited. The Engineer-in-Chief minuted that nothing could be done until the plans had been approved by Parliament. The Minister, however, did not take that view, and by his instructions tenders were invited for 176,000 sleepers, and an indent was sent to the Agent-General for rails, fishplates, &c., of the value of £73,300.
- The matter was taken up adversely in Parliament, and ultimately no tenders were accepted for the sleepers. The materials ordered through the Agent-General came to hand in due course, and were taken into stock, to be used, it is said, for the Nyngan-Cobar line, or some other line requiring a light rail.
- The "Hansard" report of the debate in the House in connection with this episode has been submitted by the Under Secretary.
- 29/6/86. Messrs. Stokes and Coonan forwarded to Mr. Secretary Lyne copy of a resolution carried at a meeting at which the residents of Cudal, Eugowra, Forbes, and Condobolin were represented, deprecating further delay in moving the adoption of the Forbes line, a line for which Parliament had voted the money years before, and representing the inconveniences and losses which the people were suffering from the delay.
- 9/7/86. A deputation of Members waited on the Minister to urge immediate action in connection with the Borenore-Forbes line. The Minister informed them that he was fully alive to the fertility and importance of their district, and recognized their claims to a railway, and said that he would, on an early day, move the approval of the plans. He added that he had evinced his sense of the value of the Wilcannia extension by calling for tenders for the necessary materials with a view to facilitate matters.
- 5/8/86. A deputation of the Forbes Borough Council waited on the Minister to ask that the line Borenore to Forbes might be commenced forthwith.
- August, 1886. The Engineer-in-Chief submitted a report giving particulars of the line (from Molong) originally surveyed and approved by Parliament in 1881, and setting forth the circumstances which led to the survey of an alternative line (starting from Borenore). He pointed out that the original survey did not touch either Parkes or Forbes, that the proportion of good land in the district served by it was small, and the population scanty. On the route, Borenore to Forbes, on the other hand, the land was marvellously good, some of it being of the richest description, and the country was already fairly well populated. He also furnished the following statistics of the district through which the Borenore lines passes (8 miles on either side). They are for the year 1884 :—
- |                    |                 |
|--------------------|-----------------|
| Land holdings..... | 291,624 acres   |
| Land cleared ..... | 15,343 "        |
| Produce—Hay .....  | 3,252 tons      |
| "    Wheat .....   | 185,385 bushels |
| "    Oats .....    | 13,376 "        |
| "    Maize .....   | 5,740 "         |
| "    Barley .....  | 2,397 "         |
| "    Wool .....    | 916 bales       |
| Stock—Sheep .....  | 92,789          |
| "    Horses .....  | 2,608           |
| "    Cattle .....  | 4,739           |
| "    Pigs .....    | 1,139           |
- This

This return, Mr. Whitton thought, went to prove that the country was capable of supporting a very large population, and the suggested line moreover was the most direct from Sydney both to Forbes and Wilcannia. After giving particulars of the route of this Borenore-Cudal line, with table of gradients and curves, &c., the Engineer-in-Chief proceeded to show that the line taken from Molong would cost £192,000 more than that from Borenore.

On the motion of Mr. Secretary Lyne the plans, &c., of the line Borenore, *via* Cudal to Forbes, were approved in the Legislative Assembly by forty-one votes to nineteen, but were afterwards negatived in the Council by twenty-three votes to four.

An article appeared in the *Evening News* commenting upon this project (as part of the line to Wilcannia). It was necessary, the article said, to find employment for the thousands out of work, but it should be on reproductive works. This line would be a sucker, not a feeder, and to construct such a line would be stupendous folly—madness. A railway to Forbes would pay, but the extension to Wilcannia would pass for 300 miles through a comparative desert. What traffic would it get? That of a town of 1,500 inhabitants, and of a district where it required from 10 acres to 100 acres to feed one sheep. If a line were wanted, it could be taken on from Cobar. The Hay and Bourke lines had been made to catch the Riverina trade, and they did not pay interest, and would not for years to come, but this proposed line would take away half the traffic from each of them, and we should have three lines paying nothing on the capital instead of two paying, say, 1 per cent. By making the river navigable from Wilcannia to Bourke at a cost, say, of £100,000, we should secure the traffic and the Bourke line would, in that case, probably give a fair return upon the outlay. We had constructed more than one unwise line, but this Wilcannia proposal beat the record.

Petitions as under were presented to the Legislative Assembly—(1) from Mr. John Black, on behalf of the residents of the Molong District, urging the adoption of the line Orange to Wilcannia *via* Molong, and stating that most of them had taken up their holdings on the faith of the vote of the House in 1831, in favour of that line which was the shortest, the cheapest, and the most convenient; (2) from H. P. Miller, on behalf of the residents of Manildra, to the same effect; (3) from the Mayor of Parkes, on behalf of the people of that place, to the same effect; (4) from John Rubie, on behalf of certain residents of Garra, to the same effect.

Petitions in favour of the Borenore to Forbes *via* Cudal line were also presented to the Legislative Council—(1) from 56 residents of Eugowra; (2) from the Mayor of Forbes on behalf of the people of that town; (3) from W. Shields, on behalf of the inhabitants of Cudal.

A deputation from the Mount Hope District waited on Mr. Secretary Lyne to ask that the Wilcannia Railway might be arranged to pass that way. Mr. Lyne promised to make inquiry and give the matter consideration. The delay in preparing the plans, he said, was due to an agitation for carrying the line further south. There was, too, in the House, a strong feeling not to make the line to Wilcannia, but to take it further down the Darling. He thought a direct line to Silverton would be the best. A private line had been sanctioned from Silverton to the South Australian border, and a line to meet that, through Menindie, would be as near direct as possible.

Consequent on this statement of the Minister's views, an indignation meeting was held at Wilcannia to protest against the proposal to abandon the design of giving them a railway. It was stated by one speaker that the objections to the line emanated from an owner of steamers on the river (whose business would be injured by a railway). To deny them their line, they said, would throw the trade of 40,000,000 acres, carrying 3,000,000 sheep, and capable of carrying 7,000,000, into the hands of South Australia. It was absurd to suppose that the construction of a Menindie-Silverton line would bring the trade of that district to Sydney, when it could be done so much cheaper. Resolutions condemnatory of the policy foreshadowed by the Minister were carried.

The *Daily Telegraph*, in a leader referring to Mr. Lyne's intimation that the consideration of the line to Wilcannia would be deferred, thought that gentleman had done well, but they had no sympathy with the proposal to make a railway to Menindie and Silverton, which would be the greatest blunder ever committed here. The Silverton district was served better and cheaper by the Adelaide line than it ever could be by a line to Sydney. A railway between Menindie and Silverton would feed either the river (when navigable), or the South Australian railway. If the line terminated at Menindie the last 100 miles of it would only feed the navigation when practicable. The project must be condemned without qualification. Then as regarded the Forbes-Wilcannia scheme, we must be sure there was not a tax behind it. It must be shown by responsible experts that there was a reasonable prospect of its not imposing a new burden on taxpayers. There was no class of settlers with whom they had a deeper sympathy than those in the west, but sentiment should have nothing to do with the construction of a railway. The whole question should be, "Will it pay?" and upon this point nothing less than the testimony of responsible experts should be accepted. They doubted the capability of the district to carry 7,000,000 sheep. Their representative, recently there, heard nothing in support of this optimistic view. As to the extent to which it was alleged squatters would use the railway, they would use it when the much cheaper conveyance by water was not available. They (the *Daily Telegraph*) would be delighted to hear that the Wilcannia people could have their railway without risk to the taxpayer.

It appeared by a telegram in the *Evening News* that much local indignation was felt at Molong on account of the adoption by the Government of the Borenore route, and at Cudal on account of the rejection of the Borenore line by the Council, and they testified the intensity of their annoyance by the strange device of burning each others members in effigy.

A letter from the honorary secretary of the Cudal Railway League appeared in the *Telegraph*, giving the following particulars:—Between Borenore and Forbes there were seven stores, fourteen hotels, six post-offices, and eight townships, viz., Cudal, Toogong, Murga, Eugowra, Cargo, Canowindra, Manildra, and Meranburn, while within 8 miles of the line there were twenty-five public and three private schools, with an enrolment of over 1,000 pupils. The letter then proceeded to give statistics of production, &c., but as they were in confirmation of the figures already given by the Engineer-in-Chief (see page 3), they need not be quoted here.

A public meeting was held at Orange to protest against the rejection of the Borenore-Forbes line by the Council, and resolutions were carried to the effect that such rejection was inimical to the best interests of the Colony, and a great injustice to those who, in the faith that the Government would make the line, had invested their money in the district. Similar meetings were held at Cudal, Cargo, Burragan, Murga, Bowan, Toogong, and Cheeseman's Creek.

The Rev. Z. Barry wrote to Mr. Secretary Lyne, bearing testimony to the richness of the soil of the district which would be affected by this line, and intimating that there would be no difficulty in getting a railway made by private enterprise.

A deputation from Cudal, Toogong, Cargo, &c., waited on the Minister to present a petition, signed by 175 persons, expressing their disappointment at the rejection of the Borenore line by the Council, and their dismay at the resurvey of Townsend's line, which, if adopted, would involve a misappropriation of the money voted by Parliament, and be of little service to Cudal, Toogong, &c., and praying that in the event of the final rejection of the Borenore route, a survey might be made from Long's Corner to Coombing Creek or Carcoar, passing through Berrigan near Cargo and Cadia copper-mines, and about 8 miles from Cudal. The Minister promised compliance.

A deputation from Orange, Forbes, and Cudal, accompanied by several members of the Assembly, waited on the Premier to urge the construction of the Borenore-Forbes line. It was pointed out that the matter was ripe for inviting tenders, the only obstacle being the rejection of the line by the Council.

Sir Henry Parkes promised to represent the matter to his colleagues. The Government had no interest in the matter except to serve the country as a whole in the best manner. In this light the Government would consider the matter.

It would appear, in connection with the petition presented to the Minister, 12th March, 1887, that Mr. K. Mackenzie, a surveyor, under instruction from Mr. Jas. M'Killop, made an exploration of the Coombing Creek route, and prepared an approximate estimate of cost. He reported to Mr. M'Killop that the length of the proposed line would be 83 miles, and the cost (estimated) Coombing to Long's Corner, 43 miles 30 chains, at £5,200 a mile, £225,437; Long's Corner to Forbes, 39 miles 50 chains, at £4,500 a mile, £178,312—£403,749. Very little, he said, would have to be paid for compensation, most of the land-owners having signified their willingness to give the necessary land to the Government free of cost.

In compliance with the Minister's promise, a surveyor (Mr. Hardy) was sent over the route, but whether that officer's action went to the extent of a survey, or was confined to a simple exploration, the papers do not show.

Mr. Jas. M'Killop, as honorary secretary of the Coombing-Forbes Railway League, forwarded to the Minister duly executed undertakings from land-owners on that route to give the land required for a railway free of charge to the Government. Mr. M'Killop asked the Minister to signify his approval of the form of undertaking or to suggest any other form that he might desire. The Commissioner for Railways minuted that anything beyond an acknowledgment of the letter was unnecessary and inexpedient, that to comply with Mr. M'Killop's request would be construed into a promise to make the line if the land were given free.

- 9/6/87. Mr. M'Killop again addressed the Minister with reference to the unfavourable result of an exploration of this route made by Mr. Surveyor Hardy. A trial survey had been promised by the Minister, and the delay to carry this out was attributed by Mr. M'Killop to the unsatisfactory nature of the exploration. He maintained, however, that the discordance between Mr. Hardy's conclusions and those of Mr. K. Mackenzie was due not to any error made by the latter but to a defect in Mr. Hardy's "aneroid." They had tested the instrument on a fine morning, with the result that the levels were shown to be wrong to the extent of 70 feet in less than 2½ miles, and he referred the Minister to Mr. Hardy, who would admit the truth of this. The Minister caused Mr. M'Killop to be informed in reply that the Government was about to review the whole of the railway proposals.
- June, 1887. A movement was started for making a line from Cowra, *via* Canowindra and Eugowra, to Forbes which would pass, the promoters stated, through magnificent country and considerably lessen the distance to Sydney.
- 1/7/87. Mr. J. P. Sharkey, who, as a Government officer, had been engaged on a portion of the survey from Young, *via* Grenfell, to Forbes and Dubbo, furnished a report in regard to the nature of the country traversed by that line and to the prospects of the traffic to be expected. His opinion upon both points was of the most favourable character.
- 2/7/87. A deputation waited on the Colonial Secretary and the Minister for Works to advocate the construction of this line (Young, *via* Grenfell, to Forbes and Dubbo) and it then transpired that the plans, &c., of a survey made some years previously were destroyed in the Garden Palace fire. The speakers represented the prospects of such a line in very glowing terms. One gentleman stated the cost of carriage from Young to Grenfell only (33 miles) was considerably in excess of the freight from England or America to Australia. Sir Henry Parkes said that a glance at the map would convince any person that the line they proposed was deserving of consideration on several grounds, and he could promise them that it should be considered with a sincere desire if it were for the general interest to comply with their request.
- 4/7/87. Mr. M'Killop addressed a letter "to the Minister with a list of persons" from whom he had obtained undertakings (under seal) to give to the Government free of cost the land required for the Coombing-Forbes line.
- 11/10/87. Mr. Whitton reported that the Minister had already ordered surveys both from Cowra and from Coombing.
- Mr. A. Stokes addressed the Minister, urging the adoption of a line from Borenore to Parkes, *via* Forbes. The line had already been surveyed to Forbes, and a survey thence to Parkes (19 miles) was all that would be required. The land through which such line would pass was equal in point of fertility to any in New South Wales, and the line would run, moreover, through 40 miles of unalienated Crown land. The portion of the proposed line between Forbes and Parkes could be utilized hereafter for the line from Young to Dubbo, the construction of which was inevitable at no distant date. The line he proposed would pay as well as any existing line.
- 7/5/88. Mr. M'Killop forwarded original undertakings to give land in connection with the Coombing-Forbes proposal, and a list of persons who would look for compensation with amounts. The sum of the latter is £2,911.
- 12/5/88. Mr. M'Killop again wrote advocating the line from Coombing to Forbes, and giving a list of mining centres which would be commanded by the line.
- About this time the line, Young to Grenfell and Forbes was again mooted but with a difference. A list of reasons why a line should be constructed from Young, *via* Grenfell, Parkes, and Forbes, to a point near Narromine was forwarded. The chief reasons assigned for this proposal were the following:—(1) Vast quantities of stock pass through Parkes *en route* from Queensland to a market, and if this railway were made such stock would be trucked; (2) in times of drought a railway here would be the means of saving many thousands of sheep and cattle; (3) Parkes had a large and increasing farming population; (4) hundreds of selectors had settled along the surveyed route, and, as these people would in any case require roads, the wisest policy would be to give them revenue-earning railways; (5) they had no means of getting their surplus produce to a market; and (6) such a line would meet the views of all the persons in this district who had been agitating for a railway.
- 20/6/88. Messrs. Cooke and Stokes, M.S.P., forwarded to the Premier a copy of resolution carried at a public meeting held a few days previously in favour of the line Borenore to Forbes, *via* Cudal, and they requested that that scheme might be submitted to the Public Works Committee, and the approval of both Houses of Legislature obtained.
- 29/6/88. The Chairman of the Cudal Railway League forwarded to Mr. Secretary Sutherland copy of resolution carried at a public meeting, held at Cudal, in favour of the construction of the line Borenore, *via* Cudal, to Forbes, as part of the through line to Wilcannia, as being shorter and cheaper than the Molong line.
- 20/8/88. Resolutions of a similar character were also carried at a public meeting, held at Bowan Park, where a league was at the same time formed to agitate for the Borenore route.
- 11/12/88. A statement of the case as between the rival routes ("Borenore" and "Molong") appeared in the *Sydney Morning Herald*, but as it was evidently inserted by a partisan it is not of much value as regards the merits of the matter, but some figures derived from official sources are given, and are very significant.

	Borenore, <i>via</i> Forbes, to Cudobolin.	Molong, <i>via</i> Parkes, to Cudobolin.
Distance .....	128 miles	134 miles
Cost .....	£523,000	£608,684
Letters passed through post office, 1887 .....	192,612	74,370
Newspapers ..	54,219	14,940

These figures it is assumed convey an accurate notion of the relative importance of the two districts.

- 8/5/89. Messrs. Stokes, Ross, M.D., Cooke, and Greene addressed a letter to the Minister, requesting that for reasons stated, the entire line Molong to Parkes and Forbes might be referred as one section to the Railway Commissioners for report. They were informed in reply that the course suggested had been already adopted.

- 8/5/89. The Under Secretary minuted for information in regard to the line Young, *via* Grenfell and Parkes, to Forbes, the Minister having to receive a deputation on the subject.

Mr. Deane reported that this was a portion of a projected line from Young, *via* Dubbo, to Werris Creek to connect the Southern and Northern systems as under:—

Young to Grenfell, 34 miles.....	£7,804 per mile.
Grenfell to Forbes, 33 miles.....	£9,699 ,, ,
Forbes to Parkes, 20½ miles .....	£4,950 ,, ,

These estimates (from Young to Forbes) were for heavy permanent way materials. If it were decided to make a *light* railway the sections must be regraded and new estimates prepared. The section Forbes to Parkes had been thus treated, and the estimates reduced from £7,202 to £4,950 per mile, but the length had been increased from 19 to 20½ miles. This section had been submitted to the Railway Commissioners.

- 1/6/89. Mr. G. H. Greene, M.P., wrote to the Minister reviewing what had taken place in regard to the proposal to make a line from Young, *via* Grenfell and Forbes, striking the Great Western Railway about Dubbo or Narromine, dwelling especially on the favourable reply said to have been given by the Premier to a deputation which waited upon him on the subject, urging that immediate action should be taken in the matter, and intimating that the people would be quite satisfied if the line were referred to the Railway Commissioners to be dealt with on its merits.

The Under Secretary, by direction of Mr. Secretary Bruce Smith, requested the Railway Commissioners to advise him with regard to this proposal.

- 24/6/89. Mr. A. Stokes, M.P., forwarded to the Minister a letter which he had received from the Secretary of the Forbes Tenants' Union, embodying resolutions carried at a recent meeting of that body, to the effect that the Government be asked to refer the following railway routes to the Commissioners:—"via Molong to Forbes; *via* Borenore to Forbes; *via* Cowra to Forbes and Young to Dubbo; *via* Grenfell, Parkes and Forbes," for early report, and that a number of members of the Assembly be asked to unite to form a strong deputation to the Minister to represent the matter.

The Minister caused Mr. Stokes, M.P., to be informed that he was so impressed by the representations made that he had given instructions for the several routes to be reported upon at once. A

A meeting of the Crown Tenants' Union was held at Forbes, and was attended by a number of the members of the local Railway League. The object of the meeting was to arrive at an understanding as to which of the several railway proposals should receive the joint support of the two bodies. Ultimately a motion was carried that the Government be asked to submit the following surveyed railway routes to the Railway Commissioners for early report:—"Borenore to Forbes; *via* Molong and Parkes to Forbes; Cowra to Forbes; Young to Dubbo *via* Grenfell, Parkes, and Forbes; and to construct the line which was best in the interests of the district and the Colony at large." 4/6/89.

Dr. Ross, M.P., in fulfilment of a promise made to the Minister, addressed a letter to that gentleman, giving a *résumé* of the facts in connection with the Molong to Forbes scheme. Dr. Ross stated that this line was submitted and passed by both Houses of Parliament by an overwhelming majority—68 to 2—and, therefore had received the all but unanimous sanction of both Houses. It was rejected by the Council. The amount for the construction of the line—£705,000—was included in the Loan Bill of 1881, and the money had long since been obtained. Out of that money part of the line—Orange to Molong—had since been constructed. He felt sure that the extension to Wilcannia, originally proposed and carried in 1881, was the correct policy. That line was "the great natural outlet or national line to tap the Darling." The country, except for a few miles at Bumbleby, was not barren, as had been stated. It was, on the contrary, "magnificent fertile country," and "a great deal of it still Crown land." By a resurvey of the line the cost of construction had been reduced from £6,000 to £3,500 per mile. It was no question of localism or contending petty interests, but of a great national undertaking in which the best interests of the country and the development of the north-west interior were involved. Dr. Ross went on to say that he believed the intention of the Public Works Act was that only such lines as were approved by Government should be submitted to the Committee, and if so it was an infringement of the Act to refer the question of rival lines for their arbitrement. With his letter he forwarded certain documents—presumably of statistics—which, if now on the file, cannot be identified, and expressed a confidence that the Molong line with its extension to Wilcannia, would be "backed up" by the Minister and his colleagues. 11/12/89.

The Under Secretary, under instructions from the Minister, directed Mr. Thompson, the land valuer to explore the country between Molong and Parkes—5 miles on each side of the proposed line—and to report, as to the nature of the country and its capabilities—mining, agricultural, or pastoral; the population, and their occupations; the principal industries; the number of schools, and the attendance; the existing traffic, &c., &c. He was also to return *via* Forbes and Young, and report generally as to the country between those places. 1/9/89.

These instructions were subsequently modified by a telegram, directing Mr. Thompson to return from Forbes by way of Cudal and Borenore, and to abandon the journey to Young. 26/7/89.

The Under Secretary declined to comply with a request from Dr. Ross for a copy of the Railway Commissioners' report on the Molong-Forbes line. 26/7/89.

Messrs. Dalton and Torpy, Ms.P., forwarded to the Minister a pamphlet, purporting to contain an accurate statement of the case between the two rival lines—the Borenore-Forbes and the Molong-Parkes, and statistics of the country traversed by each of the two routes. The bulk of the statistics have already appeared in this paper, and, moreover, they are embodied in another document which will come specially under the notice of the Committee. This being so it is unnecessary to swell an already too-ample paper by any attempt to condense such statistics here. The object of the pamphlet was to show that the Borenore line is in every way the best, and Messrs. Dalton and Torpy maintained that, if constructed it would show as good financial results as any line in the railway system. The Under Secretary directed that Mr. Thompson should embody the statistics contained in this pamphlet—after verification—in his report. 30/7/89.

Dr. Ross forwarded copy of resolutions carried at a public meeting held at Molong, to the following effect:—(1) That the statement (assumed to have been made) that the Molong route passed through barren, rocky, and uninhabited country, was mendacious and misleading, and (2) that the Molong line was the best in every way, and should be constructed on the principle of "the greatest good to the greatest possible number." The Under Secretary in reply informed Dr. Ross that the Minister had arranged to have all statements thoroughly sifted by independent persons. 3/8/89.

Messrs. Dalton and Torpy, Ms.P., had an interview with the Under Secretary (in the absence of the Minister) with reference to a deputation from the Cudal Railway League, which was to have waited on the Minister this day, but had failed to put in an appearance. They explained that the non-attendance of the deputation was due probably to their having seen in the Orange newspaper an announcement that the Government had finally determined to adopt the Molong-Parkes route, and they asked that if that line were to be proposed that session the reports of Messrs. Thompson and Harper might be laid upon the Table of the House. 26/9/89.

The report of the Railway Commissioners will be submitted to the Committee; also the reports of Mr. Thompson, the Land Valuer. There is no trace on the file of any report from Mr. Harper.

C.A.B.,  
2/2/90.

## C 1.

### PRECIS OF FURTHER PAPERS RELATING TO THE PROPOSED RAILWAY LINES TO FORBES.

The following is a *précis* of further papers which have been found referring to the question of Railway routes to Forbes:—

22/1/86.—Dr. Ross, M.P., wrote to the Minister expressing a hope that the "suicidal policy" of carrying the line to Forbes by way of Cudal would not be persisted in. The line *via* Molong, as carried in the House by seventy-two votes to two, was the best route to Wilcannia, and the shortest by at least 40 miles—meaning a saving of £280,000. The plans of the Molong route had been laid on the table of the House and approved by both Houses.\* He hoped the "monstrous" resolution to carry the line by way of Cudal would be rescinded, and the original line by way of Cudal-Molong adopted again.

14/10/86.—The Hon. W. H. Suttor wrote to the Minister stating that if the Government intended to survey a trial-line from the Murrumburrah and Blayney line he would suggest that such survey should start from Eugowra, on the Borenore to Forbes line, and work back to the Murrumburrah and Blayney line. From Canowindra the country should be explored towards Lyndhurst, Wood's Flat, and Cowra, and he was confident an almost level line would be found.

Mr. Palmer reported that a survey from Eugowra had been commenced.

19/10/86.—Mr. Whitton reported to the Minister that, in compliance with instructions from the latter, surveyors had been detailed to make a trial-survey from a point about 12 miles north of Cowra (M. and B. line) to a point near Eugowra.

22/10/86.—Mr. Baker, M.P., also addressed the Minister in advocacy of a line to Forbes from some point on the Murrumburrah-Blayney line.

30/10/86.—The hon. secretary of the Cowra Railway League, addressed the Minister by telegram, asking that a line might be surveyed (a flying survey) from Grinshaw's selection, or other accessible point, on the Belabula River, to a point at or near Cowra. The League was prepared to give the surveyors every assistance.

The Engineer-in-Chief reported that the surveyors were then engaged in making a survey from Eugowra, *via* Canowindra, to Wood's Flat.

26/11/86.—Mr. Secretary Lyne paid an official visit to Orange, and was waited upon by a deputation from Cudal, relative to the Orange to Forbes Railway (*via* Cudal), which had been rejected by the Council. The district, the deputation said, had a right to a railway by reason of its settlement and productiveness. Large areas of land had been taken up and cultivated, but the crops were wasted, because, for want of the means of transit, it did not pay to send them to market. They asked, therefore, that the line might be resubmitted to Parliament, and they promised to arm the Minister with statistics of the population, productions, and resources of the district. The

\* A mistake only by the Assembly. It was rejected by the Council.

The Minister said, in reply, that this line had been carried in the Assembly by an overwhelming majority, but had been most unwisely rejected by the Council. In the debate on the question, it was stated that a line could be found between Cowra and Forbes which could be made for £2,500 or £3,000 a mile, and that route was being surveyed. Full inquiry would be made as to the best route, taking all circumstances into consideration. Upon the result of that inquiry would depend which of the several alternative routes would be adopted.

20/1/87.—The Engineer-in-Chief reported that the trial survey from Eugowra to Wood's Flat was completed; that if the line were taken from Wood's Flat instead of from Borenore, the distance from Sydney to Forbes would be increased by 6½ miles, while there would be 272 miles of railway more to construct. The estimate showed a reduction of £182,700 as compared with the estimated cost of the line from Borenore to Forbes. The reason of this large saving would be apparent on an inspection of the diagram section and table of gradients.

A comparative statement of the cost, as estimated, of the two routes, was prepared at the Minister's request, and it appeared that the estimate for the line from Borenore was £565,242, and of the line from Eugowra £383,235, the chief item of difference being earthwork £109,000, bridges £23,000, stations £10,000, culverts £12,000, and permanent way £10,000.

11/3/87.—A deputation waited on Mr. Secretary Sutherland, and stated that the survey recently completed from near Cowra (Wood's Flat) to Forbes—known as 'Townsend's line'—would practically shut out the best agricultural land in the district, be of no benefit to the bulk of the selectors, and not serve the principal mining industry. They suggested a line from Forbes, *via* Long's Corner, to Coombing or Carcoar, which, from every point of view, would be the best that could be adopted. The route had been examined by Mr. Mackenzie, a qualified engineer, who estimated that a line could be constructed here for £400,000, less by £150,000 than the estimated cost of the line *via* Borenore. They asked that an official examination of this line might be made.

The Minister informed the deputation that he would have an examination of the country made as requested, and in dealing with the railway policy would consider all the facts, but they must bear in mind that it was not always the shortest or the cheapest line which was the best.

A petition was presented by the deputation, but it is not on the file.

14/3/87.—A report of the above proceedings having appeared in the papers, and certain statements having been made as to the acquiescence of the people of Cudal in the proposal, the hon. secretary of the Cudal Railway League wrote to the Minister, denying that they had in any way concurred in the proposal referred to, and stating that it would be impossible to get a line from Cadia to Cargo, through the high southern spurs of the Canoblas, which would compare at all favourably with the worst part of the Borenore route, that the cost would be much beyond Mr. Mackenzie's estimate, and that the only result of a survey of this Coombing route would be to delay the making of a railway.

28/4/87.—The surveyor appointed, in compliance with the Minister's promise, to examine this route, reported that he started from the point on the Murrumburrah-Blayney line indicated by Mr. Mackenzie, that the crossing of Flyers, Creek showed 40 feet of bank and 40 feet of cutting, which would, however, be lessened by a detour, increasing distance but easing grades, cuttings, and banks, and that the country passed through was for the most part of the finest description and pretty well populated. The distance from Coombing to Long's Corner, as scaled from parish maps, was 43 miles 20 chains, increased on actual survey to 45 or 46 miles, probably. The line was well worth a trial survey, but Mr. Mackenzie had much under-rated cost of construction. The proposed line ran within 20 miles of Orange, 1 mile of Burnt Yards, 3 miles of Cadia, 30 miles of Molong, through the township of Cargo, 13 miles of Canowindra, 8 miles of Cudal, and 4 miles of Toogong.

31/1/88. The hon. secretary of the Coombing-Forbes Railway League forwarded to the Minister three undertakings to give land required for the Coombing line, free of cost, to the Government, and intimated that others were holding back from a fear that direct damage might be done by the cutting up of their farms.

29/5/88.—A petition, signed by 545 residents of Grenfell, was presented to the Legislative Assembly, praying for the construction, as early as possible, of a line from Young through Grenfell, Forbes, and Parkes, to Dubbo, and representing the advantages which would accrue to the district and to the country from such a line, and the disabilities and losses the district suffered from the want of the means of conveying their produce to a market.

6/6/88.—A petition in the same sense, signed by eighty-seven residents of Young, was presented.

Aug., 89.—A request was sent to the Minister, signed by fifty-two residents of Cadia—that the proposed line Coombing to Forbes, might be referred to the Railway Commissioners for report.

17/9/89.—The hon. secretary of the Coombing-Forbes Railway League (Mr. J. M'Killop) forwarded a petition, signed by 243 residents near the line of the proposed Coombing-Forbes railway, praying that that line might be submitted to the Railway Commissioners. They stated that it was the most central of all the proposed routes, and would serve the largest number of people; that it would secure the most traffic, and that it would serve many hundreds of settlers who were entirely neglected by any other route. The petitioners, in referring to the comparative cost of the several rival routes, give figures which are so absurdly inaccurate that it would be folly to quote them.

Mr. Deane reported that he could not recommend this line, that it would be nearly twice as expensive as the rival routes from Wood's Flat and Cowra, and that if Forbes was to be connected with the Blayney line, in preference to Molong or Borenore, the junction should be at Cowra, as the line would have better grades and be easier to construct.

The following is the length and estimated cost of each of the several proposed lines of railway to Forbes :—

	Length. Miles. Chains.	Estimate. £
Borenore to Forbes, <i>via</i> Cudal	66 46	565,242
Wood's Flat to Forbes, <i>via</i> Eugowra	64 0	383,235
Coombing to Forbes, <i>via</i> Long's Corner	83 3	714,845
Cowra to Forbes, <i>via</i> Canowindra	64 73	389,540

19/2/90. The hon. secretary of the Cowra Railway League forwarded to the Railway Commissioners statistics referring to a radius of 8 miles from Cowra and 6 miles on either side of the proposed line, Cowra to Forbes, for the year 1889.

Land-owners	157
Land-holdings	130,403 acres.
" cultivated	8,786 "
Stock sheep	138,423
" cattle	4,382
" horses	1,930
" pigs	1,594
Goods traffic between Cowra and Forbes, conveyed by 104 carriers' teams	5,183 tons.
Population of Cowra	1,800
" District of Cowra	5,000
Schools	10
Attendance	594
	£
Cowra Station earnings, 1887	16,026
" " 1888	28,682
" " 1889	36,742
And for the first month of 1890 the earnings amounted to	5,359

## RAILWAY LINE PARKES TO FORBES.

*Extract from Report by Mr. J. B. Thompson, Land Valuer.*

THE country between Parkes and Forbes is undulating with wide flats and long stretches of level land. The undulations are low ridges, many of them showing outcrops of quartz, and most of the flats have been more or less extensively worked for gold. The country is generally lightly timbered with white box, white pine, she-oak, &c., and some small black soil plains formerly covered with myall, but now denuded of that timber.

The soil throughout is of good quality, and a large proportion is fit for cultivation, and would in good seasons produce abundant crops. As pasture land it is of the very best description.

The town of Forbes is situated on the right bank of the Lachlan River, about 20 miles from Parkes. It is built on three hills, divided from each other by low flats, which are liable to inundations during excessive floods.

These three divisions of the town are known locally as "North Hill," Forbes proper, and "Camp Hill," or South Forbes.

North Hill has many scattered buildings on it, mostly used for residential purposes.

Forbes proper is upon a low elevation, nearly circular in shape, and which, during high floods, is an island. It is, however, well laid out, and compactly built. It contains a fine court-house, post and telegraph offices, and a number of other very superior public buildings.

The business premises in this part of the town are, many of them, large and substantial buildings, and the original weatherboard houses, shops, and hotels are being rapidly replaced by premises of a much superior description.

The streets are unusually well made, and tree-planting in them has been carried on to a greater extent than I have seen elsewhere. A good water supply is forced from the river to a reservoir on Camp Hill, and thence it gravitates throughout the town, which is thoroughly reticulated. The permanence of the supply has been assured by the construction of a weir across the river, which dams the water back for about 8 miles, and which, I may mention incidentally, cost only about £250. Camp Hill, or South Forbes, is south of the preceding divisions, and extends to the river bank. It is a considerable elevation, and is well built. On it are the hospital, police barracks, gaol, and water reservoir, and a considerable number of private residences and places of business, the latter including a large flour-mill and a brewery.

Forbes is even now a town of considerable importance, and taken together with the adjacent town of Parkes, whose interests are almost identical, and I think inseparable—and situated as they are in the centre of a magnificent pastoral country, and with fairly good seasons, an immense area of prolific soil, they are the seat of considerable local trade, and with improved means of transit will probably be found to be—as they are now to a great extent—a most convenient and central stock market, in which buyers and sellers from the western and north-western, and from the southern districts respectively, would meet and effect their transactions.

Gold-mining is still carried on about Forbes, but not at present to any great extent.

In the vicinity of Forbes, and chiefly on the banks of the river, there is a large extent of cultivation, chiefly wheat, hay, and fruit, for which the climate and soil are well adapted. As to fruit, I beg to state that all the English summer fruits flourish well, and that fruits of the citrus family are produced in abundance and of excellent quality. Several irrigation plants have been constructed along the river, and the beneficial effect upon crops of all kinds is very great.

## F.

## REPORT BY MR. J. B. THOMPSON, LAND VALUER, ON PROPOSED RAILWAY EXTENSION FROM MOLONG TO PARKES, VIA MANILDRA.

Department of Public Works, Valuation Branch, Sydney, 27 July, 1889.

IN compliance with your instructions of 12/7/89, received 15/7/89, I have now the honor to report, as desired by the Minister, first, as to the nature of the country between Molong and Parkes and its capabilities, whether for mining, agricultural, or pastoral pursuits; second, statistics in regard to the population, and the various occupations; third, a statement of the principal industries of the district; fourth, the number of schools and attendance thereat; and fifth, an idea of the traffic which passes along the roads between the places named, and any other particulars which might tend to throw light upon the question of the construction of the railway between the places mentioned.

1.—*As to the nature of the country between Molong and Parkes, and its capabilities, whether for mining, agricultural, or pastoral pursuits.*

I have carefully explored the country in accordance with my instructions, for a distance of about 5 miles on either side of a line connecting the towns mentioned. Before reporting in detail on the localities inspected, I may state generally that although the country for a distance of about 23 miles from Molong varies much in character, the whole of it is either pine ridges, usually rocky and poorly grassed, which occur at distant intervals, low gravelly hills well grassed and timbered with white box occurring more frequently than the former, or slightly undulating or level land suitable for agricultural purposes, of which there are thousands of acres of the very best description, and on which a considerable population is already settled. I shall now proceed to describe my exploration in detail and its results.

For a distance from Molong of about 3 or 4 miles along the road to Parkes, the country is rough and stony but well grassed; thence for a further distance of about 15 miles by a breadth of about 10 miles the country generally is of good quality and comprises localities, within arbitrary lines, laid down by myself for convenience of reference and description, without regard to parish boundaries. These localities I shall refer to as Garra, Gregra, Gumble, Manildra, and Mandagery, and excepting Gregra, they are so designated after the principal creeks by which they are watered.

Garra, which is about 8 or 10 miles west of Molong, and lying north of the proposed railway, contains, approximately, about 15,000 acres of land, a large proportion of which—about 6,000 or 7,000 acres—may be cultivated to advantage; the hills and their slopes being mostly deep chocolate soil of the best description, which is admirably adapted for the growth of cereals and fruit, and I think specially so for grapes. Some of the flats are light reddish sandy loam, which in fairly good seasons would produce abundant crops of wheat, and a considerable area is used for that purpose. Of the residue, about 6,000 acres is pasture land of good quality, being often white-box forest, well grassed, but rather too stony for cultivation, and about 2,000 or 3,000 acres consist of rocky pine forest ridges of little if any value.

Gregra, in which is Bocoble Creek, lies south of Garra and of the proposed railway and is of similar character to the Garra country, except that the southernmost portion of the area inspected is rich basaltic soil, and that the proportion of pasture land is somewhat larger.

Gumble is north of the proposed railway, and about 15 miles westerly from Molong. It contains an area of about 16,000 acres, and Mandagery, south of the proposed line, and of Gumble, contains a similar area. They do not differ in any important respects from Garra and Gregra. The agricultural land is equally good, the pasture land is of similar character, but the pine ridges form a smaller portion of the total area.

Manildra, about 20 miles from Molong, and extending about 5 miles north and the same distance south of the proposed railway, contains a large area of first rate agricultural land, chiefly on Manildra Creek, and between that creek and the lower part of Dulladerry Creek, but there is in this division a larger proportion of pine ridges (which are spurs from Croker's dividing range) than in any of the localities previously described.

At or near a point about 23 miles from Molong, there is a marked change in the character of the country for about 15 miles along the proposed line and for a distance of about 5 miles to the north. This includes the heads of Dulladerry, Billabong and Bindagandri Creeks, Croker's Range, and spurs therefrom, and with the exception of a considerable extent of good land on those creeks the country is unfit for agriculture and inferior for pasturage. It, however, contains some extensive forests of ironbark, from which an unlimited quantity of railway sleepers and fencing might be obtained. South of the proposed line, for the same distance, most of the country is very different and far superior. The Goaming country at the head of Reedy Creek, and the country at the head of Moura Creek, containing together an area of about 10,000 acres, is of first rate quality, much of it, probably about one-third, being rich agricultural soil and the remainder white box pasture and of the best description. Outside this area and within the 15-mile length mentioned there is some good pasture land, and some iron bark forest which is of little value, except for the timber thereon.

The

The foregoing brings me within about 10 or 12 miles of Parkes, and from thence to the town, whether it be approached by Flagstone Creek or Billabong Creek, the country is a wide expanse of good land, of practically unlimited extent, a great part of which, notably on the Billabong and Goobang Creeks, is of the most fertile description; and those parts which might be considered too light and sandy for cultivation, are splendid pasture land. These remarks refer to the country lying east, north-east, and south-east of the town; and I have to add that the country around Parkes, to the north, west, and south, is equally good for a distance of 4 or 5 miles, and I have no doubt far beyond the distance named, to which want of time compelled me to limit my inspection.

As to its capability for mining pursuits, I have to report that, except in the vicinity of Parkes, where gold-mining is still carried on with vigour and success, the only discoveries of any importance between Molong and Parkes have been Delaney's Dyke Gold-mine, about 8 miles north-west of Garra, which is now being worked with encouraging results, and a mineral deposit in the Gumble country, known locally as the Tin-mine, on which two shafts—now idle—have been sunk, and at the mouths of which some very fine specimens of copper carbonates and other ores are lying; but whether sufficiently rich, or in sufficient quantity to pay, I could not ascertain. In many other places what is technically known as the colour of gold has been found, but hitherto nothing payable.

I shall conclude my remarks under this head by stating briefly, and by way of recapitulation, that while between Molong and Parkes there is, in the pine ridges and ironbark forests referred to above, a large area of inferior country, there is a much larger area of country well adapted for agricultural or pastoral purposes, and, taking the one with the other, the average is good. I have been led to this opinion by the careful and thorough examination which I have made, and its accuracy is, to some extent at least, borne out by the fact that the Brymedura and Billabong runs, which formerly extended from Molong to the site of the present town of Parkes, and embraced the whole of the intervening country, were long regarded as two of the best runs in the western district.

2.—*Statistics in regard to the Population and the various Occupations.*

I have found it impossible to procure statistics for which I could personally vouch, but such as I have been able to gather are appended to this report, with the exception of the paper marked A, which I received with my instructions; those marked B, C, and D were furnished to me by J. A. Rose, Esq., Mayor of Parkes, whose signature they bear. I beg to state, with regard to them, that, although I believe they were compiled in good faith by Mr. Rose, and were strongly supported by other local gentlemen of respectability and position, I do not feel so satisfied that they are free from exaggeration, induced by strong local bias, as to feel justified in asking the Minister to view them as absolutely correct. It is only fair, however, to add, that after every allowance has been made for possible, or even probable exaggeration, they are sufficient to show that a large and important trade would follow the establishment of the proposed Railway, and so far I feel no hesitation in expressing my concurrence with them.

The occupation of the residents on and near the proposed railway may be briefly described, as, with very few exceptions, they combine sheep grazing with agriculture. It is worthy of note that nearly the whole area inspected by me is occupied by a most desirable class of colonists, viz., *bona fide* selectors, men who selected land for themselves, fulfilled the conditions required by the law, and thereon made permanent homes for themselves and their families, and who, despite losses in stock and crops from the recent disastrous drought, are generally a thriving and well-to-do body of settlers.

Parkes itself is an important town. It has been incorporated about five years, and has a population of about 2,000 souls within the municipal boundaries. The town proper is not more than about eighteen years old, and although it derived its origin from the gold diggings on which it was built, it has all the adjuncts which indicate a thriving and prosperous community, and which prove it to be the centre of considerable trade, such as churches (4), schools, banks (3), hotels (10), and stores &c.

3.—*A statement of the principal industries of the district.*

I have already explained the extent and character of the pastoral and agricultural industries as far as my exploration extended, and I now beg to submit such particulars of the important industry of gold-mining as I think may be regarded as reliable. Some of these particulars are contained in a statement marked E herewith, showing the quantity of gold purchased by the local banks, from which it appears that the quantity for the last half-year is a considerable increase on the average for the previous three years; and a statement given to me by the local mining registrar marked F herewith, which I only submit as it appears to contain one simple fact, viz., that "upwards of 600 miners' rights have been issued here this year," and as it incidentally refers to a considerable "rush" about 16 miles north of Parkes. Concerning this rush I have heard most conflicting statements, but I think on the whole that the discovery is likely to prove important. Stone from five claims in the immediate vicinity of Parkes is regularly crushed at the "Company's machine" in the town. Two of these claims, Hazlehurst's and Quail and party's are very rich, and the others are more than payable. A good deal of fossicking is also carried on, and there is reason to believe that there are many payable reefs in the neighbourhood awaiting development.

The only other industries necessary to mention are saw-mills, of which there are four at work, and another being erected, which are chiefly employed in cutting pine into flooring boards, and scantling of various kinds for building purposes and a large flour-mill in the town of Parkes. There is a large crushing machine at work in the town and another about to be erected, of which part of the machinery is on the site.

Agricultural machinery such as strippers, reapers, mowers, and steam-threshers, chaff-cutters, &c., are largely used by farmers, and all the various handicraft trades are carried on in the town itself, but I do not think it necessary to refer to them more particularly.

4.—*The number of schools, and attendance thereat.*

The following is a list of schools visited by me between Molong and Parkes, and others around the latter town within a radius of about 8 miles, showing the position and average attendance:—

Public School—Garra.	Attendance	43.	8 miles from Molong.
Do Gregra	do	30	3½ do Manildra.
Do Manildra	do	30	Parkes Road at do.
Do Meranburn	do	40	do 16 miles from Molong.
Do Bumberry	do	27	do 30 do do.
Do Bindogandri	do	24	8 miles from Parkes.
Do Goobang	do	32	6 do do do.
Do Trelowarren	do	30	1½ do do do.
Do Welcome	do	28	2½ do do do.
Do Tichbourne	do	43	6 do do do.
Do No Mistake	do	25	3 do do do.
Do Parkes	do	180	town of Parkes.
R. C.— do	do	60	do.

Total average attendance ..... 592

In addition to the above there are seven Public Schools northerly and north-westerly from Parkes, and from 8 miles to 20 miles distant, situated at Kadina (two schools), Warge Rock, Milpose, Bogan Gate, Broigan, and Trundle.

5.—*An idea of the traffic which passes along the roads between the places named (Molong and Parkes), and any other particulars which might tend to throw light upon the question.*

The traffic from Molong towards Parkes consists chiefly of the carriage of the usual merchandise to be found in country stores, with a large quantity of squatters' and selectors' supplies, such as rock-salt, fencing wire, corrugated iron, wool bales, &c., and occasionally heavy machinery amounting to a weekly consignment of about 72 tons, as shown on the annexed paper marked B. The accuracy of this estimate might be roughly tested by a reference to the returns on the Molong Railway Station, although those returns would not include goods forwarded from any of the business houses in Molong to their constituents along the route of the proposed railway, and thus would not be strictly accurate.

The up traffic would be mainly confined to the carriage of wool, live stock, sheep-skins, hides, and grain, and possibly a little copper from Mount Hope. Of wool, the clip from at least 460,000 sheep must be carried to Molong, being about 407,000 depastured on the stations surrounding Parkes, and about 53,000 on and near the proposed line, or about 920 tons of wool. In addition to this there are many other large clips which the construction of a railway would almost

almost certainly attract to a station or terminus at Parkes, amounting to about 1,300 (thirteen hundred) tons of wool. My authority for this estimate will be found on paper C, herewith, and I may say with reference to this most important statement, and to my previous remarks respecting these statistics generally, that I have consulted some station-managers, and they fully corroborated that statement as to the number of sheep, but they are of opinion—with which I agree—that the clips from Balgandramine, Mungery, Genanagy, and Wando Wandong, would most probably be conveyed to Naramine, on the Great Western Railway. The live stock traffic would probably amount to about 100,000 fat and store sheep, and about 1,500 head of cattle and horses. Grain, the production of which might be enormously increased, sheepskins, and hides would undoubtedly form considerable items in the traffic, but I regret that I am unable to give a sufficiently close approximation to their quantities to justify me in quoting figures. The requirements of passenger traffic are, at present, sufficiently met by a daily four-horse coach and a few private vehicles, but this would be immediately and largely increased were railway communication established.

I have now dealt with the several aspects of this question as required by the Minister, and before all things I have endeavoured to give a thoroughly impartial and faithful report. I have, I hope, adequately appreciated the great importance of the duty entrusted to me by the Minister, and trust I have performed it in such a manner as to meet with his approval

I have, &c.,  
 J. B. THOMPSON,  
 Land Valuer.

The Under Secretary for Public Works, Sydney.  
 Mr. Badham.—J.B., 10/9/89. Synopsis received.—C.A.B., 11/9/89. Put with proper file of papers.—  
 D.C.M.L., 5/12/89.—Mr. Badham. The Minister promised to send this to Mr. Eddy for perusal. Do so.—J.B., 3/8/89.

(A.)

STATISTICS.

Collected from the Manildra and Garra Railway League, showing the number of selectors, area of holding, area under cultivation, number of stock, number of inhabitants, schools, with number of scholars on the Rolls, all adjacent to the proposed line of railway from Molong, viz Manildra, towards Parkes, &c., commencing 3 miles west of Molong and extending 20 miles only.

 { JOSEPH WREN, Secretary. }  
 { JOHN RUBIE, Chairman ; } Garra Branch.  
 { BERTRAM GLASSEN, Secretary. }

Goods coming from Molong to Parkes at present average about 72 tons a week, or 3,744 tons per annum. The above includes goods for Parkes, fencing-wire, rock-salt, and building materials for the surrounding settlements. The above will be largely increased if a line is constructed to Parkes, without taking away from earnings of lines now in use, as a considerable quantity of goods are taken delivery of at Molong by settlers in our own neighbourhood, and of which we have no record.

JOHN A. ROSE,

Owned by selectors to the north, north-west, and north-east of Parkes, viz., at Kadina, Mickibri, Genanagy, Coradgery, Warge, Rock, Limestone, Wilga Vale, Melpose, and Trundle..... \*150,000  
 †1,140,000

When the selectors already here are fairly stocked they will have not less than 450,000 sheep.

JOHN A. ROSE,  
 Parkes, 27/7/89.

(C.)

APPROXIMATE number of fat stock that will be trucked annually at Parkes, 115,000 sheep and 2,000 cattle. The above will be largely increased as the country becomes improved. It is not possible, without a lot of trouble, to ascertain the quantity of land under cultivation at present. It will be fully one-third more this year than there was in 1887. All the land in the parishes of Bindogandri, Beargamil, Kamandra, Coobong, Currajong, Parkes, and Milpose, immediately surrounding Parkes, has been alienated under the "Repealed Acts." Under the 1884 Act up to date, 175,000 acres have been conditionally purchased, and 525,000 acres conditional leased.—Total, 700,000 acres. Attached is the grain and other statistics taken by Senior-Constable Atkinson in 1887.

JOHN A. ROSE, Parkes, 27/7/89.  
 (D.)

\*The above wool comes here now from Molong. †1,140,000, say 10 bales to the 1 000 sheep, and 5 bales to the ton=2,280 tons.

## (D.)

From a return furnished by Senior-Constable Atkinson, we gather that the total acreage under wheat in the Parkes agricultural district for 1887 was 3,306, and the total yield 41,863 bushels, giving an average per acre of 12½ bushels; 1,512 acres were under cultivation for the raising of other crops and for horticultural purposes, making a total of 4,817 acres under general cultivation. The average yield this year, as compared with that of 1886, shows a decline of 7½ bushels. Owing to the severity of the late rains, several large paddocks have had to be left, through the crops having been so thoroughly beaten down as to make it a work almost of impossibility to get the stripper to work on them, the owners preferring to turn in their stock to eat it off.

## (E.)

JOHN A. ROSE, Parkes, 29/7/89.

## (F.)

Sir,

Warden's Office, Parkes, 27 July, 1889.

I have the honor to report that upwards of 600 miners' rights have been issued here this year. There are about 300 gold-bearing reefs in this division of the Lachlan mining district, which are capable of giving permanent employment for upwards of 10,000 men for years to come.

The whole of the country running north and south is gold-bearing, and extends over 5 miles westerly and about 55 miles easterly.

The land is suitable for small settlers, and any extensive system of water conservation would make this one of the most prosperous districts in the colony of New South Wales.

At the new township of Alectown, about 16 miles north, there are over 600 miners, many of them holding golden claims.

I have &amp;c.,

JAMES MILLAR,  
Mining Registrar.

J. B. Thompson, Esq.

JOHN WHITTON,  
Engineer-in-Chief for Railways.

PARLIAMENTARY

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

RAILWAY FROM MOLONG TO PARKES AND FORBES.

REPORT.

YOUR Committee, appointed on the 12th February, 1890, to inspect, take evidence, and report upon the proposed railway from Molong to Parkes and Forbes, proceeded to Orange on the 21st February. They sat at the Court-house, Orange, on the morning of the 22nd February, when Mr. J. E. Tonkin was unanimously appointed chairman. The Committee subsequently took evidence with regard to the proposed railway. Ten witnesses were examined. Their testimony strongly favoured the construction of a railway to Forbes *via* Borenore and Cudal. It was pointed out that this route would be 17 miles shorter than the route *via* Molong and Parkes. Mr. Crouch, District Surveyor, produced a map showing the whole of the land on both routes alienated, unalienated, and reserved in his district. It appeared that a large area of land had been reserved for railway purposes upon the Molong-Parkes route, between Meranburn and Bumberry. The total area of land reserved for all purposes within 1 mile of the suggested route *via* Cudal in the Orange district was 12,700 acres as against 17,100 acres similarly situated on the Molong-Parkes route. In the judgment of Mr. Crouch, almost the entire district was suitable for agriculture, and contained a large amount of small settlements. Mr. Stobo, land agent, of the Orange district, said that although almost all the good land in the district available for selection had been taken up, frequent inquiries were made concerning land upon the leasehold areas, which would be thrown open to settlement in the course of a few months. Approximately, 20,000 acres would be thrown open to selection in the Molong district, and the witness anticipated that the whole of this area would be selected. Several witnesses instituted a comparison between the population on the two routes, greatly to the advantage of that *via* Cudal. They were of opinion that whereas the Cudal route would serve a great portion of the population in the vicinity of the northern route, the adoption of the line *via* Molong would place almost the entire population to the southward of the surveyed Cudal route at a great disadvantage. Mr. E. Nathan, representative of Cobb & Co., gave information relative to the passenger and goods traffic between Orange and Forbes and Parkes, from which it appeared that the bulk of the traffic went to Forbes *via* Cudal. The witness spoke very confidently of the progressive nature of settlement in the district, and, with others examined, was of opinion that the construction of a railway to Forbes and Parkes would largely increase the traffic on the main line. This increase would be composed chiefly of wheat, hay, straw, &c.

The Committee examined twenty-one witnesses at Molong, on the 24th February. They were unanimously in favour of the proposed route from Molong to Parkes and Forbes, with a possible deviation through Bocoble Gap, bringing the line within easy reach of the farming population of the Cudal district. They advocated the claims of this route mainly on the ground of the large area of valuable agricultural land within the leasehold areas and reserves, which would be shortly thrown open to settlement; having regard also to the large area under cultivation to the northward of the proposed route, and to the rapidly increasing passenger and goods traffic from Parkes and intermediate centres. Mr. T. Kennedy, railway surveyor, said he had made deviations between Molong and Meranburn, but

that he had not inspected the line between that point and Parkes. The deviations made reduced the grade to 1 in 50, the length being increased 2 miles. Mr. Chippindall, land agent, said there were about 30,000 acres of leasehold land within 10 miles on either side of the proposed line. From inquiries which were made he believed that the greater part of this land would be selected as soon as it was available. Mr. E. Aland, station-master, informed the Committee that, for the twelve months ending the 31st December last, the passengers booked inwards at the Molong station numbered 4,060. The outward goods for the six months ending 31st January, 1890, were 2,338 tons of merchandize and 57 tons of coal. In the same period there were five cattle-vans and sixty-five sheep-vans trucked. The inward goods aggregated 1,346 tons, and the wool 1,367 bales. The live stock inwards comprised twenty cattle-waggons and ninety sheep-vans. About 830 tons of grain were forwarded inwards in the month of January. Mr. Wren, as showing the increase of land under cultivation, said that in 1885 the whole area under crop between Molong and Bumberry was 7,950 acres, producing 135,150 bushels of wheat. This area had been increased to 9,399 acres within a distance of 9 miles of Molong and 2 miles south and 4 miles north of the Molong-Parkes route. Several witnesses referred to the probable large increase of population in the direction of Peak Hill and Alectown consequent upon the development of the mining industry. Mr. J. Lohan, agent for Wright, Heaton, & Co., at Molong, testified to the large increase in goods traffic to and from Molong. It appeared that, on the opening of the Molong railway, the firm were paying for freight, between Sydney and intermediate stations to Molong, between £400 and £500 per annum, whereas they were now paying £1,000 per month on the outward freight. The firm, during the last six months, had despatched an average of 250 tons per month along the Parkes route. Mr. Haslam, a storekeeper of Molong, speaking with regard to the cost of cultivation, said that Mr. Peterson, of Ghewang, sowed, reaped, and bagged wheat at a cost of from 20s. to 21s. per acre. He also informed the Committee that some farmers in the district had as much as from 300 to 400 acres under wheat—that many had 250 acres under that crop—and that any area under 100 acres would be regarded as a very small farm. Several witnesses examined were of opinion that the revenue anticipated from the proposed railway by the Railway Commissioners would prove considerably short of the actual receipts. They also took exception to the report of the Commissioners descriptive of the character of the country through which the proposed line passes. The land referred to by the Commissioners as being of a rocky nature for a considerable distance between Molong and Parkes was described by these witnesses as comprising some of the best agricultural land in the colony. The ironbark timber at the Dungeon was spoken of as likely to contribute a large revenue to the railway. Evidence was also forthcoming with regard to the *bona-fide* position and general prosperity of the farmers of the district, whose wheat crops were said to have averaged in the past season from 17 to 20 bushels to the acre. The average area of farm holdings was estimated to be from 100 to 640 acres. Several old residents of the district objected to the line being taken *via* Cudal to Forbes, on the ground that the projected route passed almost entirely through large freehold properties not likely to be subdivided, whereas the proposed route to Molong would pass through small holdings, and would serve large tracts of Crown lands, the leases of which will expire in the middle of the year. Many witnesses described the farming population on the Molong-Parkes route as being considerably in excess of that on the route *via* Cudal.

Several witnesses examined at Molong having expressed their dissent from the report of the Railway Commissioners relative to the rocky nature of the country on the route of the proposed line, your Committee proceeded, on the morning of the 25th February, to make a careful inspection of the land lying on each side of the staked survey between Molong and Manildra. Leaving the main road at a distance of about 5 miles from Molong the Committee drove through the very fertile district of Garra, north of the staked line. The road traversed for a distance of 6 miles an unbroken succession of farm holdings, averaging in area about 200 acres. The Committee afterwards crossed the road and drove through the Gregra Parish. Here the holdings were even larger—one holder having 400 acres under wheat. The land appeared uniformly fertile. The Committee were satisfied from their personal observation that a large and increasing farming population was settled in these parishes. The extreme southern point of the Bocoble deviation was passed at an estimated distance of 5 or 6 miles from Cudal.

At

At Manildra, on the afternoon of the same day, the Committee examined ten witnesses. They obtained some important information from Mr. C. M. Steuart, C.E., respecting the deviation survey through Bocoble Gap. It appeared that the grade did not exceed 1 in 60, and that the line would be brought within 6 miles of Cudal without increasing the total length. This, in all probability, will supersede any deviations previously proposed. At this place, also, a very considerable area of land was under cultivation, and very valuable evidence was given as to the timber. It was stated that girders, 30 feet long and 12 inches square, of iron-bark, perfectly sound, had been obtained in a very extensive forest in the vicinity, and that an unlimited number of sleepers could be obtained there. Valuable statistics were handed in by Mr. D. M. McInnes. He informed the Committee that he had collected them within a distance of 5 miles on either side of the line from Mandagery Creek to Coates' Creek. One witness stated that he had put in and taken off his crop at a total cost of 15s. per acre. In this case, however, a disk was used.

Continuing their inspection of land in the neighbourhood of the proposed railway, the Committee left Manildra on the morning of February 26th, and at Gosper's Sawmill inspected some ironbark and some pine logs of a sound and serviceable character. They shortly afterwards left the road on the north side, crossing the railway line at B.M. 94 in a good box country; they subsequently entered ironbark ridges, with fertile flats between.

At Bumberry, five witnesses were examined. They all testified to the good quality of the adjacent ironbark, and of the soil of the district from an agriculturist's point of view. The wheat crops averaged 20 bushels per acre, and population and traffic were said to be increasing. On leaving Bumberry, the Committee passed some very good agricultural land; this extended to the Dungeon Range, which is of a very barren nature. The country, however, vastly improves on the Parkes side of the range, and continues to do so until the town itself is reached.

The Committee met at Parkes Court-house at 10 a.m. on the 27th, and examined fifteen witnesses. The evidence strongly favoured the construction of the proposed line, on the ground of the large and increasing settlement in and around Parkes, especially in the districts to the north and north-west of the town. Mr. Rose (the Mayor), while affording the Committee information from carefully-compiled statistics relative to the settlement and progress of the district, estimated that Parkes alone would contribute to the revenue of the proposed railway to Molong no less a sum than £10,008 annually. He estimated that a similar return would be given by Forbes, making a total of over £20,000 per annum from these two districts, exclusive of the intermediate traffic. He stated that one lessee in the district had guaranteed haulage upon the line to the value of £600 in the first year of the railway's existence. The representative of Wright, Heaton, & Co. at Parkes said the goods received from Molong for the twelve months ending December 31st, 1889, amounted to 3,448 tons, the inward goods from Parkes to Molong consisting of 1,500 tons of merchandise and 6,000 bales of wool. This estimate was exclusive of the grain. Speaking of the firm's business, he said that whereas three or four years ago they found that six or seven teams were sufficient to carry goods between Parkes and Molong, and *vice versa*, there was at the present time sufficient traffic between the abovenamed places to find constant employment for seventeen large teams. He estimated that the railway return on goods alone between Molong and Parkes would be £8,000 annually. Several witnesses referred to the rapid increase within the last few years in the value of township and suburban allotments. Within the last four years nearly the whole of the resumed areas of runs to the north-west and west of Parkes had been selected. The rapid growth of the parish of Trundle, to the northward of Parkes, was referred to in illustration of the growing popularity of the district among agriculturists and small graziers. Most of the witnesses who had selected land to the north-west and west of Parkes held the maximum area allowed in the division. They were grazing on the average about one sheep to the acre; they intended embarking in agriculture immediately they were assured of railway communication; and were of opinion that in average seasons no better district could be found in the colony for the growth of wheat. We were assured of the existence of a succession of farms from Kadina to Molong, a distance of 45 miles. The Committee examined several practical miners; they are at present engaged in mining in the vicinity of the township and are of  
opinion

opinion that the mining prospects of the district would of themselves justify the construction of the railway. The Committee continued to take evidence at Parkes on February 28th. The testimony respecting the agricultural capabilities of the district, taken on the preceding day, was supplemented by valuable information from several witnesses engaged in agriculture. Mr. Quin, who is a partner in a firm of millers, and who is also engaged in farming, said that, given the average crops of the district, wheat at 3s. a bushel would leave a profit of £1 7s. 3½d. per acre. At 2s. 6d. a bushel it left him a profit of £102 8s. 4d. on 122 acres. This harvest was gathered by paid labour, at the rate of 8s. per diem. He considered that if the present railway rates were maintained farming could be carried on in the district at a good profit in competition with other districts of the colony and with markets of the outside world. The dray carriage to Molong, 9d. per bushel, had operated as a serious check to the growth of wheat for the Sydney market. Several witnesses were of opinion that if the railway were constructed two acres would be put under crop for every acre now sown. The following advantages were enumerated as attaching to the proposed line, as distinguished from any other route, viz., the existence of excellent timber for sleeper, culvert, and bridge purposes, as well as of good building stone, freedom from flood, and excellent agricultural land. The present prosperity of the district was attributed to the increased settlement of *bonâ fide* farmers, although it was asserted that the development of mines on the field had also contributed to the general progress. In the parish of Kadina, due north from Parkes, 17,000 acres had been already selected in small holdings alone, and to the north-west of Parkes, in the parish of Trundle, 19,000 acres had been similarly selected. The Committee were somewhat surprised to learn that the majority of the new selectors to the north and north-west of Parkes were Victorians, in whose judgment the land they now occupy is even superior to the best agricultural land in the neighbouring colony. The mining registrar informed the Committee that there had recently been a great increase in the number of applications for miners' rights and gold-mining leases, and a witness representing the united banks in the town said, that during the last four years, £90,000 worth of gold had been purchased by the banks, and that last year alone no less than £31,000 worth was purchased by them. The Committee inspected at one of the banks over 1,000 oz. of alluvial gold, obtained from Alectown and Peak Hill. The increase in the electoral roll of the Parkes division of the Forbes electorate was, for the present year, 236.

On the morning of Saturday, March 1st, the Committee drove out to the Little Billabong, a distance of about 6 miles from Parkes, through an exceedingly rich agricultural country, containing a large number of improved farm holdings. We also visited the Dayspring and Bushman's mines, and saw a public quartz battery in operation. At 1 o'clock we started for Forbes; the land bordering upon the whole distance of the road, from Parkes to Forbes, appeared eminently suited to agriculture, but is not available for settlement, being set apart for a gold-field reserve. At a distance of about 7 miles from Parkes the Committee found the small settlement of Tichborne, and there examined four witnesses, who were of opinion that the whole of the land between Parkes and Forbes would be taken up immediately upon the cancellation of the reserve. The present population, amounting to about 100, would become permanently settled under the operation of the amended mining law, permitting 10-acre miners' tenements. The fertility of the soil was so great that 10 tons of potatoes to the acre, and 3½ tons of hay to the acre, had been grown in the present season. The average attendance at the public school was 50, and there had been an increase in the average by 20 during the last four years.

The Committee commenced to take evidence at the School of Arts, Forbes, on Monday, March 3rd, and examined twelve witnesses. The evidence was invariably favourable to railway communication between Forbes and the existing system, but was conflicting as regards the route which should be adopted. The majority of the witnesses were in favour of a railway *via* Eugowra to Cowra, but several witnesses preferred the route *via* Cudal to Borenore, and all agreed in condemning the proposed line *via* Parkes. The chief argument advanced in support of the Cowra line was that it would give the district the advantage of the Melbourne as well as of the Sydney market. This consideration, it was urged, was of special importance, in view of the live stock traffic. The route *via* Cudal to Borenore was preferred to the Parkes route on account of the shorter distance. Three witnesses from Condobolin were examined. They acknowledged Forbes to be the
