<b>DISORDER :—</b>		
Mr. A. G. Taylor, removed from Chamber by Sergeant-at-Arms, by direction of the Speaker, for refusing to obey the Chair, Mr. Speaker gave reasons for his action in removing Mr. Taylor; motion made, ( <i>Mr. Garvan</i> ), that House disapproves of action of Speaker and amendment proposed, ( <i>Mr. Willis</i> ), that Mr. Taylor be heard in his place, and negatived; Mr. Garvan's motion negatived, 395-6.		
The Chairman reported disorder from the Committee of Ways and Means; and also that he had directed the removal from the Chamber of the Member for West Macquarie ( <i>Mr. Crick</i> ); Mr. Crick admitted by direction of Mr. Speaker, and invited to explain; Mr. Crick addressed the House, and refusing to obey the Chair, was ordered to be removed from the Chamber; and having used certain disorderly words, was adjudged guilty of disorder, &c., and was expelled from the House, 430-1.		
<b>ARISING WHILE THE HOUSE IS IN COMMITTEE :—</b>		
Mr. Speaker, having observed grave disorder when the House was in Committee on the Broken Hill Water Supply Bill, resumed the Chair, and expressed astonishment that the Honorable Member for Burrowa ( <i>Mr. Slattery</i> ) did not obey the ruling of the Chairman; and also stated that if the Honorable Member did not do so he would have to take an extreme course; Mr. Slattery explained, Speaker gave ruling, and Committee resumed, 419.		
Motion made ( <i>Mr. Dibbs</i> ) that when any Member refuses to obey the Chairman the case shall be reported without debate to the House, to be dealt with after explanation from the offending Member; and amendment moved ( <i>Mr. Garrard</i> ) to give the Chairman the right to make an explanation—amendment and original motion negatived, 436.		
<b>DISTRESS FOR RENT BILL :—</b>		
Motion made ( <i>Mr. Walker</i> ) for leave to bring in, presented and read 1 <sup>o</sup> , 26; Order of the Day postponed, 76, 195; Order of the Day discharged and Bill withdrawn, 553.

Referred back to Select Committee, 436.		
PRIVILEGE:—		
SEAT OF HONORABLE SYDNEY SMITH, SECRETARY FOR MINES:—		
Motion made ( <i>Mr. Crick</i> ) to refer to Elections and Qualifications Committee, 27.		
NEWSPAPER ARTICLE:—		
Motion made ( <i>Mr. Copeland</i> ) that article in the <i>Daily Telegraph</i> headed "The Vernon Boys" is a breach of privilege, 177.		
Mr. Hurley called attention to article in the <i>Maitland Mercury</i> , and stated his intention to move a motion of Privilege thereon; article read by the Clerk, and Mr. Hurley not being present to make the motion of Privilege Mr. Dibbs moved a motion censuring the Honorable Member, 352.		
NEWSPAPER ARTICLE:—		
Motion made ( <i>Mr. Traill</i> ) that House do to-morrow proceed to inquire into statement that bribes had been offered to and asked for by Members of Parliament, and that the editor of <i>Truth</i> be summoned to give evidence at Bar, 291-2; Order of the Day read and Question put, that House proceed to the consideration of the statements referred to, and agreed to—Speaker informed House of issue of summons to editor of <i>Truth</i> , and motion made ( <i>Mr. Traill</i> ) that the editor of <i>Truth</i> be now examined at the Bar and agreed to—Mr. Adolphus George Taylor conducted to Bar, sworn by the Clerk, and examined—Witness withdrew, and on motion of Mr. Bruce Smith was discharged from further attendance—Order of the Day discharged, 299.		
THE HON. J. H. YOUNG:—		
Mr. Dibbs referring to certain correspondence in reference to alleged Bankruptcy of Mr. Speaker, drew the attention of the House to section 26 of the Constitution Act and section 4 of the Bankruptcy Act under which he considered Mr. Speaker's seat was vacated. Sir Henry Parkes having stated that, in the opinion of the Attorney-General, Mr. Young had not become a bankrupt within the meaning of the 26th section of the Constitution Act, Mr. Dibbs laid the correspondence on the Table, 375 .....		709
Motion made ( <i>Mr. Crick</i> ) that seat be referred to the Committee of Elections and Qualifications and negatived, 380.		
CHARGES AGAINST MEMBERS OF PARLIAMENT:—		
Motion made ( <i>Sir Henry Parkes</i> ), instructing Mr. Speaker to require Mr. Crick to state whether he had, at Lambton, denounced the Parliament as being "rotten and corrupt." Point of Order: That the matter not suddenly arising was not one of privilege, overruled; amendment proposed ( <i>Mr. Crick</i> ) for appointment of Royal Commission to inquire into charges of corruption and bribery in reference to the Broken Hill Water Supply Bill; amendment negatived; original motion passed. Mr. Crick denied having used the specific language as quoted in the resolution, 524, 525.

<b>S</b>		
<b>SPEAKER (continued) :—</b>		
Reports attendance of House in Council Chamber to hear Opening Speech, 2.		
Reports issue and return of writ, 1 (?), 171, 213, 239, 255, 395, 503.		
Reports presentation of Address in Reply to Governor, and Answer to Address in Reply, 15.		
Reports resignation of Member, 139, 157		
Gives casting vote, 164, 342.		
Reports receipt of Certificate notifying death of Member, 161, 223.		
Informed the House that Sir Henry Parkes would resume his duties on 27th August, and asked for the departure from certain rules for that purpose, 267.		
Clerk announces receipt of letter from James Henry Young, Esq., resigning Office of, 387.		
Joseph Palmer Abbott, Esq., elected, and presented to His Excellency the Governor, 387.		
Refers to an amendment made by the Legislative Council in the Board of Water Supply and Sewerage Offices Erection Bill, 294.		
Calls attention to nature of amendments made by the Legislative Council in the Marrickville to Burwood Road Railway Bill, 359.		
Clerk informs the House of the unavoidable absence of, 385.		
Commission to Administer the Oath, 388.		
Orders removal of Member from Chamber for disobeying Chair, 395, 430.		
Motion that House dissents from action of, and negatived, 396.		
Having observed grave disorder in Committee resumes Chair, 419.		
Authorised to present Appropriation and Loan Bills to Governor for Assent, 558.		
<b>RULINGS OF :—</b>		
That the Agricultural Society of New South Wales Lease Bill was not beyond the order of leave, 104.		
That he could not accept the Public Works Act as governing the proceedings or limiting the powers of the House, 125.		
That under section 13 of the Letters Patent, in the absence of His Excellency, Message signed by the Lieutenant-Governor by deputation from the Governor was in order, 154.		
That amendment was in order to substitute another name in a motion to appoint a member to the Parliamentary Standing Committee on Public Works, and against a demand for a ballot, 181.		
That special reference to provision in the Crown Lands Bill, in reference to the repeal of existing legislation, was not necessary in the Title, 208.		
That clause 9 of the Crown Rents Bill which interfered with actions pending or a judgment obtained should be mentioned in the Order of Leave, and that therefore the Bill was improperly before the House, 208.		
That since the adoption of the Additional Standing Orders, altering the character of the Motions for Adjournment, the practice of the House of Commons in respect to two motions of a similar character being moved consecutively, did not apply to these questions, 247.		
That Papers should not be laid upon the Table of the House which reflected upon the conduct of a Member of, or referred to a debate in, the House, 265.		
That Bills coming from the Council could not be ruled out of order in this House on the ground of informality in its initiation there, 265.		
That the Order of Leave to bring in the Imprisonment for Debt Abolition Bill was sufficiently comprehensive to cover the Bill, 227.		
That papers did not refer to the action of a Member in this House, and could be laid on Table, 272.		
That the Borough of Newcastle Electric Lighting Bill was beyond the Order of Leave, 288.		
That Sessional Order relative to New Business after 11 o'clock rescinded after that hour in the same sitting was not in force to end of sitting, 337.		
That motion for expulsion of Mr. Crick was in order, 431.		
That no dissent from, could be made without notice, 432.		
That Bank Holidays Act Amendment Bill was beyond the Order of Leave, 423.		
That Early Closing Bill did not involve expenditure, and did not require to be covered by a Message from the Governor, 436.		
That Boats Registration and Regulation Bill was beyond the Order of Leave, and was therefore out of order, 461.		
That question as to what was a matter of "public importance" under the Additional Standing Order in reference to Adjournments of the House was not a matter for him to decide, 465.		
That in future cases of swearing in new Members he would put in operation the Standing Orders of the House of Commons, passed on 30th April, 1886, which prevented the interruption of the business, 505.		
That provision in Marrickville to Burwood Road Railway Bill (No. 2) was covered by the order of leave, 511.		
That in Supply, during the discussion of a Minister's salary, reference could be made to subsequent items, as the Committee had a right to criticise the Minister's policy when voting his salary, 517.		
That Honorable Members should sit in the Chamber in a manner respectful to other Honorable Members and to the occupant of the Chair, and so that the passages would be left clear between the seats, but that it was a matter to be left to the good taste of Honorable Members, 517.		
That certain provisions in the Eight-hour Bill were beyond the order of leave, and also referred to rules in reference to preparation and drawing of Bills, 521.		
That the Net-fishing in Port Hacking Prohibition Act Amendment Bill was beyond the order of leave, 521.		
That motion was one of privilege dealing with language which denounced Parliament as "rotten and corrupt," 524.		
That motion in reference to charges of Bribery in connection with the passing of the Broken Hill Water Supply Bill was substantially the same as an amendment submitted the previous night, and, therefore, could not be put, 529.		
<b>SPECIAL ADJOURNMENT :—</b>		
Motion made for, and passed, 14, 373, 383, 393.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM NYNGAN TO COBAR.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "constructing a line of railway from Nyngan to Cobar," have, after due inquiry, resolved, that it is expedient the proposed railway should be constructed, and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway from Nyngan to Cobar, a length of 80 miles 49 chains 62 links, will leave the Great Western Railway at 378 miles 9 chains 38 links from Sydney, at about a mile to the north of the Nyngan Station. The general direction of the line is parallel with the main road, excepting just at the terminus at Cobar, in Jindera-street, at a distance of 458 miles 50 chains from Sydney. The estimated cost submitted by the Department for a light line of railway is £207,360, or £2,560 per mile, exclusive of cost of land and compensation, which, however, will not be heavy, as throughout its whole extent, with the exception of a few chains about the middle, and in Cobar, the line will be upon Crown land. According to the evidence of Mr. Henry Deane, Acting Engineer-in-Chief for Railways, the ruling gradient will be not steeper than 1 in 75, and although this involves an improvement upon the original plan, which contained grades of 1 in 40, Mr. Deane thinks it will not cost any more than the estimated £2,560 per mile. There will be no curves sharper than 20 chains radius.

Description  
of the pro-  
posed line.

2. In inquiring into the expediency of constructing this railway, the Committee have had to bear in mind always that the line from Nyngan to Cobar was referred to them in view of the probable extension of the railway from Cobar to Wilcannia and Silverton, and so on to the South Australian border. The necessity for such an extension is set forth at length by the Railway Commissioners in their report. They point out that the question is of considerable magnitude, and cannot remain long undetermined, in the interests of the places named, and the western district generally; that this will afford a means of direct communication between Sydney and South Australia, and ultimately, when a line is constructed connecting the Northern and Western lines, a direct route from Brisbane. They urge as further reasons for the construction of a line to Wilcannia and Silverton the necessity for providing facilities to the pastoralists in dry seasons to obtain supplies, to forward their wool to market, and to remove their stock to more favoured feeding grounds. They also allude to the marvellous development of the mining industry at Broken Hill, where the population already numbers 15,000, and is still increasing; and they affirm that the trade of this place is out of the hands of New South Wales, and the sympathies of the population to a great extent are with the Colonies of Victoria and South Australia, on account of the communication with New South Wales being so difficult. The Committee, therefore, in making their investigations, have not confined themselves merely to the expediency of constructing a railway as far as Cobar, but have directed their attention also to the larger question of opening up communication by railway with the extreme north-western portion of the Colony.

Part of ulti-  
mate extension  
to the South  
Australian  
Border.

Mode of  
inquiry.

3. In order to carry out these objects effectually, the full Committee, in Sydney, took evidence almost entirely of a departmental and professional character, and carried out the greater part of their investigations by means of a Sectional Committee, consisting of six of their members, who began their inquiries at Nyngan, and five of whom proceeded thence to Cobar, Wilcannia, and Broken Hill, where they were rejoined by Dr. Garran, the other member of the Committee. They also visited Silverton, taking evidence at all those towns, as well as at various stopping places on the route, as will be seen by their report herewith. The Sectional Committee examined no less than 109 witnesses, in addition to those who gave evidence before the full Committee in Sydney. Among those examined were pastoralists, farmers, mining managers, local officials, bank managers, hotelkeepers, storekeepers, merchants, teachers, journalists, carriers, surveyors, engineers, and others, representing every class of society, and almost every variety of occupation to be found in the country districts. The mass of evidence thus gathered, though sometimes varying in details, is in the main so consistent and direct that the Committee were enabled, without much hesitation, to come to a conclusion, which is embodied in their report submitted to the General Committee.

The Nyngan  
to Cobar  
district.

4. With regard to the railway from Nyngan to Cobar, now more immediately under consideration, it appears that the line was first staked out in 1885, and the line now proposed is practically the same, with only a few slight deviations for the purpose of improving the grades. These deviations, however, would have the effect of lengthening the total line by about three-quarters of a mile. The estimated cost in the first instance was some £34,000 more than the present estimate, but the estimate has since been revised, and the cost of labour is now lower than it was. Among other ways in which it is proposed to reduce the expense of constructing the line it is intended to do without fencing on a great part of the line, and in fact to fence only within the range of settlement. It has further been arranged that the Railway Commissioners shall only charge 1d. per ton per mile for the carriage of the ironwork for this particular line, instead of the previously usual charge of 4d. per ton per mile, which will be a reduction of about £470 per mile in the construction of the line. The soil in most parts through which the line would pass consists of a rich red loam, which, with a sufficient rainfall, would be very fertile. Where cultivation has been tried it has been found that excellent crops of wheat and oats are obtained in favourable seasons, and several witnesses expressed the belief that by early sowing satisfactory crops of these cereals would be obtained three years out of four. The wheat and oats are mostly made into hay. Splendid lucerne-paddocks were also inspected by the Sectional Committee on some of the Yarran flats near Cobar, while oats 6 feet 11 inches high were measured near the same town. It may be stated that numbers of equally good flats for cultivation were to be found almost all the way between Nyngan and to within a few miles of Wilcannia, while equally good opportunities occur also between Wilcannia and Broken Hill. If facilities for transit were given by the construction of a railway, it was thought that an average of alternately successful crops would prove remunerative, as good markets for fodder exist at Nyngan, Cobar, Wilcannia, and Broken Hill. Various kinds of fruit, including grapes, are found to thrive when cultivated, and vegetables grow remarkably well by the aid of irrigation. The country traversed by the proposed railway is capable of considerable improvement for grazing purposes. By scrubbing and ringbarking where necessary, and with a sufficient water-conservation, this part of the colony would be well adapted for sheep-farming in even average seasons; while in a specially good season, such as prevailed when the Sectional Committee were making their examination, the country might be described as a grazier's paradise, with waving flowers and grass 2 to 3 feet high. On the other hand, in times of drought the face of the country is completely changed. The stock have, under such circumstances, to depend solely upon the remnants of salt-bush and other drought-resisting herbage, which, in their turn, give out, having been eaten down till scarcely a root remains. Should the drought be prolonged, the stock are kept alive by cutting down such edible scrub and trees as the country may supply; while on many of the runs thousands of sheep necessarily perish from sheer inability on the part of their owners either to remove them to better country or to find food of any sort with which to avert starvation. The district is rich in mineral resources, especially in the neighbourhood of Cobar, where is situated the mine of the Cobar company. Mr. Russell Barton, Chairman of the Board of Directors of the  
the

the Company, was examined at great length before the full Committee. He stated that the mine had been at work for about seventeen years, but had suspended operations a few weeks previous to his examination. The want of facilities for communication had been the great drawback of the district. Flour has been as high as 1s. a pound, and this state of scarcity was brought about equally by wet or by dry seasons, but by wet seasons especially, when the roads became perfectly impassable, even for horses. The mine required from 300 to 500 tons of firewood per day, and they had used up all the available wood within 10 or 12 miles of Cobar, having, in fact, constructed a tramway of about 15 miles, in order to facilitate the supply of fuel. The mine was closed partially on account of the low price of copper, but principally, Mr. Barton stated, because they found it impossible to get a supply of wood. In his opinion the construction of a railway from Nyngan to Cobar would remove that impediment to the successful working of the industry. He looks upon the supply of ore in the Cobar copper-mine as practically inexhaustible, and the idea of the directors is, if they get the railway, to open the mine and take coal to it, returning ores to the coal-fields—to smelt at both ends, in fact, and have trucks running one way with ore, and returning with coal. With regard to the roads it is stated that at times 2in. of rain renders them impassable. The local Road Superintendent says that to make a properly metalled road from Nyngan to Cobar, 20 feet wide, would require as much as £200,000, and then it would cost for maintenance £10,000 a year. In his opinion the construction of a railway would be much cheaper. There is no good metal for road making to be got in the district, but porphyry, suitable for ballast for a railway, can be procured along the line. There is, besides, a large quantity of slag or refuse which has accumulated around the Cobar Copper Company's mine, which would be suitable for ballast, and which, Mr. Barton says, the Company would be willing to give for that purpose. The traffic with Cobar at present goes chiefly by way of Nyngan, Coolabah, or Bourke, and occasionally by the River Darling, *via* Louth. The river route is not much patronised, owing to the uncertainty of the river keeping open in dry weather. There is comparatively little difference between the distance by road from Nyngan to Cobar and from Coolabah to Cobar, and the latter route, though longer by rail, seems to have been adopted in consequence of some difficulty with the carriers. Strange as it may seem, some classes of goods are sent to Cobar by way of Bourke, notwithstanding the fact that this involves a further distance by rail of 126 miles. This is in consequence of the differential rates charged on the railway, by which it becomes actually cheaper to send the goods on for this extra 126 miles, as the diminished charge for the extra distance by rail more than compensates for the slightly additional charge for carriage by road from Bourke to Cobar over the rate from Nyngan to that place.

5. The country beyond Cobar towards Wilcannia was found by the Sectional Committee to be generally of the same character as that between Nyngan and Cobar. Witnesses state that the country would be taken up largely in home-stead leases if only there were better means of communication. A large proportion of the trade of this part of the district is transacted with Wilcannia, when the river is navigable, which, however, is occasional, and then it takes from three to five weeks to get goods up the river, so that storekeepers are put to great expense in keeping large stocks to tide over times of accidental delay in obtaining supplies. Very little business is done with Sydney at present, in consequence of the lack of means of communication, but in the opinion of some of the witnesses, if a railway were constructed from Nyngan to Wilcannia, more business would go in the direction of Sydney, as it would save time as well as interest on the value of the heavy stocks that have now to be kept. The wool would probably mostly go down the river when it was navigable, but would be conveyed by train in dry seasons. The railway to Wilcannia would largely convenience the miners in the Mount Browne district, with which a large trade is done by the business people of Wilcannia. The population of the town of Wilcannia is stated to be now from 1,000 to 1,200, and for the year 1888 the Customs collections there amounted to £10,535.

6. Broken Hill has at the present time a population of about 15,000, and appears to be rapidly progressing, the chief attraction being its mining industry, which is said, however, to be as yet only in its infancy, the deepest existing shaft on the main lode being only 300 feet. Firewood is largely used for mining purposes

purposes, but the local supply is dying out, and coal and coke will have to be used. Coal at present costs 54s. per ton at Broken Hill. It is sent from Newcastle to Port Pirie, and is taken thence to Broken Hill by rail. The coke used is English, and costs about five guineas per ton at Broken Hill. Lime and iron ore are largely used as fluxes in smelting the silver ore, and these minerals could be procured along the line between Wilcannia and Broken Hill, and would be sources of traffic to the proposed railway. Large quantities of timber are used in the mines, which is now mostly imported by way of South Australia; and fodder, in the shape of hay, bran, and chaff, is largely procured from the same quarter, but supplies could be obtained from our own Colony if means of transit were available. The wool of the district mostly goes by the river when communication by that means is open, otherwise it is sent to Adelaide or Port Pirie, and the bullion from the mines goes in the same direction. The road from Wilcannia to Broken Hill, according to the local Road Superintendent, could not be properly constructed and metalled at much less than £1,300 or £1,400 per mile, for a width of 18 feet, and the roads in the plain country would cost nearly double that sum. He says it would be almost impracticable to form those roads, and it would not be desirable if it were practicable. He considers it would be decidedly preferable to construct a light line of railway. There would be an ample supply of ballast for a railway to be obtained between Broken Hill and Wilcannia. There is at present a tramway running between Broken Hill and Silverton, and thence on to Cockburn, on the South Australian border, a distance of 36 miles. This tramway is the property of a private company, managed by a Board of Directors in Melbourne. The manager of the company was examined at some length by the Sectional Committee, and his evidence shows that there is a large and profitable business done by the tramway in conveying ore and bullion from Broken Hill, and in bringing back coke, coal, and mining timber. Silverton is another mining township, with a population, including the mining districts around, of 3,000 to 4,000 persons. The trade of this place is principally done with Adelaide, though one witness stated that he dealt partly with Sydney, receiving his goods by way of Port Pirie or Port Adelaide. His reason for procuring goods from Sydney was not that there was any difference in the price, but because, as a citizen of New South Wales, he preferred to keep his money within the colony to which he belonged. Crushed ore from the Silverton mines is sent to Port Pirie or Port Adelaide, either to be smelted or sent to Europe. Fluxes, such as lime and ironstone, are found in the neighbourhood, and are sent thence to Broken Hill, and good building stone is found adjacent to the township. In the opinion of one witness the town of Silverton is likely to become the sanatorium for Broken Hill, being singularly free from typhoid fever, and having a good supply of water, and a pure atmosphere.

Alternative schemes to connect with Broken Hill and Silverton.

7. While considering the question of establishing railway communication between Sydney and Broken Hill and Silverton, the Committee have not ignored the fact that other routes have been suggested by which to reach those localities without adopting the line from Nyngan to Cobar at all. The railway already extends to Hay, a distance of 454 miles, and thence to Broken Hill would be 274 miles as against 355 from Nyngan to Broken Hill, or a saving of 81 miles of new line to construct. The total length of line from Sydney to Broken Hill *via* Nyngan and Cobar would be 732 miles, while by way of Hay it would be 728, involving a saving of only 4 miles on the total length. There is yet another route which has been suggested, and that is to go along the valley of the Lachlan River, by way of Forbes and Condobolin, striking the Darling at Menindie, and thence proceeding on to Silverton. This line, it appears, has not yet been surveyed; but, according to a return furnished by Mr. Deane this route would be the shortest by about 64 miles. The railway in this direction is as yet only constructed as far as Molong, 216 miles; so that, in order to reach Broken Hill, about 450 miles of new line would have to be constructed as against 355 miles by the Nyngan-Cobar route. But it must be borne in mind that the last-named route will embrace the thriving township of Wilcannia and district, which would not be served by any other proposed route.

Conclusions of the Committee.

8. Under these circumstances, and especially considering the necessity for establishing railway communication with the great mining centres of the north-western portion of the colony as soon as possible, the Committee, after due consideration, have come to the conclusion that it would be better to recommend the adoption of the line from Nyngan to Cobar, as part of a line eventually to extend'

extend to Wilcannia and Broken Hill, and to connect with the South Australian Railway system. From the nature of the country the line will be comparatively a cheap one, but although the Committee urge the adoption of economy in regard to fencing, station buildings, &c., they are of opinion that as the line will be an important one, the permanent way should be made sound and substantial. The Committee also suggest, with a view to expedite the work, that the contract should be let in sections. On the 17th of December, the Committee having proceeded to consider the evidence, Mr. Trickett moved "That the Committee consider it expedient that the proposed Railway from Nyngan to Cobar, as referred to them by the Legislative Assembly, be constructed." The resolution was seconded by Mr. Tonkin, and carried unanimously.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 18th February, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM NYNGAN TO COBAR.

WEDNESDAY, 25 SEPTEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWAL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Railway from Nyngan to Cobar.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] You are Under Secretary for Public Works? Yes.
2. Have you any statement which you would like to make in reference to the proposed line from Nyngan to Cobar? Yes; it is as follows:—

Nyngan to Cobar.

Length, 80 miles 49 chains 62 links.

Estimated cost of constructing a light line of railway is £207,360, or £2,560 per mile, exclusive of cost of land and compensation.

THIS line would leave the Great Western Railway at 378 miles 9 chains 38 links at about a mile to the north of Nyngan Station. Curving to the west, the line passes into the travelling stock reserve and follows it alongside the main road throughout the whole distance, excepting just at the terminus at Cobar. It crosses the road to Nymagee at 390 miles 65 chains, and is terminated at Tindera-street at Cobar at 458 miles 59 chains from Sydney. Throughout its whole extent, excepting for a few chains about the middle and at Cobar, the line is within Crown land.

I may mention that at the present time there are three surveyors engaged upon the line improving the grades, with a view to altering the ruling gradient from 1 in 50 to 1 in 75, if possible. It will be necessary to restake almost the whole of the line, because when it was staked in 1885 it followed the travelling stock route for pretty nearly the whole of the way, and many of the stakes are now missing. When the proposed extension from Nyngan to Cobar was referred to the Railway Commissioners it was in view of the probable extension of the railway from Cobar to Wilcannia and Silverton, and so on to the South Australian border. I will read the report of the Commissioners upon that subject:—

Proposed railway extension from Cobar to Wilcannia and Silverton.

15 July, 1889.

In the reference to us of the proposed Nyngan and Cobar line we were requested to report in regard "to the question of ultimately extending the line to Wilcannia, and thence to Silverton, with a view of connecting it with the South Australian system." We have therefore inspected the route from Cobar to Wilcannia and Broken Hill.

The question of railway communication with Wilcannia, Broken Hill, and the South Australian border is of considerable magnitude, yet it is one that cannot apparently remain long undetermined, not only in the interest of the places named, and the western district generally, but as a means of direct communication with South Australia from Sydney, and probably at no distant date by the construction of a line between the Northern and Western lines—a direct route from Brisbane. Lines of this character can only be dealt with upon national principles, yet there is also a commercial aspect.

While Wilcannia and the surrounding district depends at present upon water carriage for its supplies, and as a means of getting wool to the seaboard, the carriage is uncertain, and it is fair to assume that a portion at least of the traffic would go by rails if such a means of transit were available.

The pastoralists are at the present almost helpless in times of drought and their losses during the past season have been great. A railway would have a material effect on their prospects, by affording the means of selling part of their stock in bad times, or of removing the same to more favored feeding grounds.

The rates now paid for getting the stores used on stations are excessive in consequence of the great distances to be travelled to reach the railway at Hay, Nyngan, or Broken Hill.

Another very great consideration is the fact of the marvellous development of the mining industry at Broken Hill, where there is a population of 15,000 souls at present existing, and we were assured it would rapidly increase.

The whole of this trade is out of the hands of New South Wales, and the sympathies of the population are, to a great extent, with South Australia and Victoria, as the communication with New South Wales is so very difficult.

We were assured by the manager of one of the mines that his railway carriage account amounted to £18,000 per month; and were assured that if a through route existed with Sydney, a fair proportion of this traffic might be obtained, in spite of our long route. It is probable also that a market would be opened up for coal and coke for our western coal-fields.

This route would also be as short from Sydney to Adelaide (and of course to places north of Adelaide shorter) as that now existing *via* Melbourne; but the New South Wales Railway would receive a 771 miles of proportion, instead of 387 miles as at present to Albury.

With regard to our northern system and Queensland, if a line is constructed from Werris Creek to the Western line a shortening of distance between the North and South Australia of about 400 miles would be effected.

J. Barling,  
Esq.  
25 Sept., 1889.

The line is only now being roughly surveyed from Wilcannia to Broken Hill, but making the lines throughout on as cheap a principle as possible without fencing, it is roughly estimated that it will cost as under:—

Cobar to Wilcannia.....	£497,000
Wilcannia to Broken Hill .....	390,000
Broken Hill to Cockburn, <i>via</i> The Pinnacles and Thackeringa .....	150,000
	£1,037,000
Interest at 3½ per cent.....	£36,295
Rough estimate of cost of working.....	51,000
Interest on rolling stock .....	3,339
Cost per annum.....	£90,634

Of course it is impossible to offer a pronounced opinion upon the probable financial success of such a large undertaking from the outset, but there is no doubt ultimately it will be successful; and as it is most desirable to open up communication with remote portions of the Colony of New South Wales, which are at present nearly, if not wholly, commercially connected with our sister colonies, we strongly advise the Government to adopt the scheme and to commence it in about four sections, so as to get it opened throughout as quickly as possible.

We suggest the route for the line from Broken Hill to the South Australian border at Cockburn, *via* the Pinnacles and Thackeringa, as the mining industry at the Pinnacles requires the aid of a railway to develop it, and a private company is also being projected to afford this facility, and we would advise the Government not to grant powers to any other private company in the district.

The Bill now before Parliament for constructing an extension of the present Silverton tram-line to the River Darling, at Menindie, a distance of about 80 miles, regarding which we have been asked to report, is also affected by this scheme. We are of opinion it would be unwise to authorize the line, yet it is desirable that access should be given with the river from Broken Hill, and if the Government decide to make the Wilcannia line we would advise the rejection of the Bill.

I may mention, in this connection, that the Minister received a letter from a gentleman whose name I cannot give the Committee at present, because his letter is confidential, but if I did the Committee would recognize that his remarks are worthy of attention. He points out that in August, 1889, when he wrote, he was only just sending away his wool clip of 1888, which had been delayed in Wilcannia for twelve months. It may also be interesting to the Committee to hear a report from Mr. John Whitton, the Engineer-in-Chief for Railways, which was called for by, I think, Mr. Secretary Fletcher. It is dated the 28th February, 1889, and is as follows:—

Department of Public Works, Railway Branch, Engineer-in-Chief's Office,  
Sydney, 28 February, 1889.

MINUTE PAPER.

*Subject:*—Proposed Railway from Nyngan to Cobar, Wilcannia and Silverton; and to connect with the South Australian Railways at the latter place.

In reply to the Minister's minute of this date I have no hesitation in stating that if it be considered desirable to construct a railway to connect Wilcannia with the railway system of the Colony, and which might eventually be extended to Silverton, the best route to adopt would be from Nyngan to Cobar, thence to Wilcannia and Silverton.

This route would form almost a direct line from Nyngan to Silverton where connection could be made with the South Australian Railways, thus providing a through route to Adelaide.

In my opinion this would form a very important line and would directly connect Adelaide with Sydney, and the distance would be nearly the same as the line now passing through Victoria.

The country from Nyngan to Wilcannia is remarkably easy for Railway construction, no important bridges or heavy cuttings will be required in the whole distance.

The following Tenders were received for the construction of the Railway from Nyngan to Cobar:—

	£	s.	d.
1. Carey & Maund .....	182,838	10	0
2. Fishburn & Co. ....	144,048	1	0
3. Hardy & Morton .....	121,799	8	4
4. Angus & Co. ....	133,747	6	8
5. Halliday Owen & Co. ....	150,154	5	4
6. Fergus & Blair .....	159,457	5	0
7. Salmond, Denne, & Co. ....	153,344	4	6
Engineer's estimate .....	126,579	0	0

Messrs. Hardy and Morton's Tender being the lowest was recommended, but no Tender was accepted.

The comparative distances from Sydney to Adelaide via the respective routes are as under:—

	Miles.
Sydney to Adelaide via Melbourne .....	1,086
Sydney to Adelaide via Nyngan, Cobar, Wilcannia and Silverton, <i>viz.</i> :—	
Sydney to Wilcannia .....	616
Wilcannia to Silverton, estimated from map.....	135
Silverton to Adelaide by rail and tram .....	320
	1,071

On the present route Sydney to Adelaide, the distances travelled on the New South Wales Railways is only 388 miles, whereas by the other route (*viz.*, Nyngan, Wilcannia, and Silverton) the distance travelled on our lines would be 771 miles.

The distance from Sydney to Silverton via Melbourne and Adelaide is 1,406 miles, and from Sydney via Nyngan and Wilcannia to Silverton, is 771 miles only.

JOHN WHITTON.

The Minister for Works regards this extension chiefly in connection with the proposition to carry the line further on to Broken Hill and the South Australian border, and the report of the Committee will determine him as to his recommendations to the Cabinet with regard to the further extension alluded to.

2. *Mr. Trickett.*] You state that a very large proportion of the land through which this line will pass is Government land—you cannot tell us the amount of private land? I think you will find that on the plans.

3. When were the surveyors set to work to alter and improve the grades? I cannot give you the date. Mr. Deane will give you that information. They are at present on the work, and it is estimated that they will take six weeks or two months to complete it.

4. *Chairman.*] Have you had any flying surveys made on any of the other routes? I believe surveys have been made, but Mr. Deane would be able to give you that information.

5. *Mr. O'Sullivan.*] Do you know how the statistics of trade were prepared? The statistics were first obtained by Mr. Hornidge, who is now in the employ of the Railway Commissioners. The officer who can give you the most complete information will be Mr. Harper, who is one of the goods superintendents now.

6. Is he available? Yes, I saw him this morning. He has been over the line three times and knows it thoroughly. Mr. Kirkcaldie will also be able to give you information.

7. We can also obtain returns with regard to the river trade? Yes. Mr. Kirkcaldie has given a great deal of attention to the matter.

8. *Mr. Dowel.*] Have you received many requests from the residents of Broken Hill, Silverton, and Wilcannia with reference to the construction of this line? You will be able to find that in the printed *précis*.

9. Do you know anything of a public meeting having recently been held at Broken Hill in reference to this matter? I cannot speak from memory—it will be seen in the papers.
10. Are you aware that arrangements have been made by the Minister to receive a deputation from the residents of Broken Hill about it? I believe that a deputation from Broken Hill will wait upon him to-morrow.
11. Do you know of any meetings that have been held at Cobar, or whether any deputations were recently appointed to wait upon the Minister? I do not remember any recent deputations from Cobar. No doubt a great many meetings have been held.
12. Do you know anything about the amount of bullion that comes from Broken Hill? No; I cannot give you that information; but I can easily get it. The Government Statistician furnished me with statistics of the trade of 1888, and I will send them to the Committee.
13. You cannot say what amount of bullion is produced in Broken Hill per week or per month? I have no direct knowledge. In the Report of the Railway Commissioners which I read they say: "We are assured by the manager of one of these mines that his railway carriage account amounted to £18,000 per month, and that if a through line to Sydney existed a fair proportion of that might be obtained in spite of the long route."
14. *Mr. Tonkin.*] Do you know whether the estimate of cost is exclusive of the whole of the fencing? It includes the fencing I think, where the Department proposes to fence.
15. The line is not to be fenced except where there is population? Yes.
16. Does the estimate of cost include the necessary fencing? I believe so.

J. Barling,  
Esq.  
25 Sept., 1889.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

17. *Chairman.*] What is your position in the Service? Acting Engineer-in-Chief for Railways.
18. What position did you hold before you held that? Inspecting engineer of railways under construction.
19. Do you know anything about the proposed line from Nyngan to Cobar personally? I have not been over it, but I have had a good deal to do with the making of plans and surveys.
20. Can you tell me what surveyors have been engaged upon this line? The first surveyor out there was Mr. Henry Hardy. He was recalled in 1885, and Mr. Martin and Mr. Hixson completed the survey.
21. Those are the only surveyors who have been upon the line? They are all who were on it at that time. We have some surveyors at work there now improving the line.
22. Are the three gentlemen whom you have named engineers as well as surveyors? No.
23. None of them? No; they are surveyors.
24. Nothing was done between 1885 and the present time as far as the surveyors were concerned? Yes; Mr. D. C. Simpson, who is district engineer, was over the line last year with a view to improving it.
25. Who else? The men engaged there at present in improving and restaking the line are Mr. Stewart and Mr. Stawell, district engineers' assistants, and Mr. Marshall, a surveyor.
26. When was the line first permanently staked out? In 1885.
27. Up to that time had any engineer inspected it? I am not quite sure whether Mr. Palmer, who was at that time in charge of the trial surveys went over the line.
28. Will not your papers show whether he did or did not? I daresay I could find out whether he was over the line.
29. Were the plans now before the Committee prepared when the line was permanently staked? Yes. It is the same line practically. I think there is one small deviation.
30. I want to confine your answer to the plans laid on the table of the House on the 29th April, 1886? Yes, that was the line.
31. The line surveyed by Messrs. Hardy, Martin, and Hixson? Yes.
32. You cannot say positively whether Mr. Palmer inspected the line before the plans were laid upon the table of the House? I do not think he did.
33. Any checking in reference to these surveys would be done in the office in Sydney without any knowledge of the contour of the country except from what was shown on the plans? Yes. Mr. Hardy, when I asked him about the matter on a subsequent occasion, said that he had instructions from Mr. Palmer to lay out a line which was through nearly the whole of its length parallel to the travelling stock route.
34. Can you tell me what the steepest grade was on the line laid out in 1885, and shown on the plans laid on the table of the House in 1886? I am not quite certain. The plans, I think, were prepared first with grades of 1 in 40; but afterwards the section was altered to 1 in 50.
35. At all events you say you think the steepest grade was 1 in 40? The steepest grade when the plans were first completed was 1 in 40. Afterwards it was improved on the section only to 1 in 50—there was no restaking.
36. Was that alteration made before the plans were submitted to the Legislative Council and Legislative Assembly for their approval or afterwards? I cannot say. I am sure that the line which was approved of had grades of 1 in 40.
37. *Mr. Lackey.*] Would that be the average grade or a special grade? The ruling grade for short lengths here and there.
38. *Chairman.*] Of course one grade would influence the haulage on the whole of the line? It would depend upon the length of it. If it were only short, and you could take a run at it, you might get over it.
39. Must it not necessarily influence the haulage on the whole of the line? Unless it were only a few chains in length.
40. We will say that the haulage power of an engine is 200 tons on a grade of 1 in 40? The momentum of the train, if there were only 2 or 3 chains, would carry it over.
41. Is not that severe on the rolling stock? Certainly not.
42. These plans were afterwards referred by Mr. Secretary Sutherland to the Engineer-in-Chief, Mr. Whitton, for him to try and find out better grades? Yes; last year.
43. Mr. Simpson then inspected the line? Yes. He had his instruments with him, and he cross-sectioned the line and found how it was possible to make some improvements. He made a report upon the subject.
44. When instructions are given to the surveyors, are they told what the steepest grade is to which they must bring the line—that they are not to get a higher grade than 1 in 40 or 1 in 50? A surveyor is told to get the best grade that he can.

H. Deane,  
Esq.  
25 Sept., 1889.

- H. Deane,  
Esq.  
25 Sept., 1889.
45. But it must not be more than a certain steepness? Occasionally that instruction has been given.
46. Have you got the instructions which were first issued to the surveyors about the Cobar line? No.
47. Can you get them? I can see whether there were any written instructions; but I expect that the instructions given were verbal.\*
48. Were they burnt in the Garden Palace fire? No; if any written instructions were given they would not have been burnt.
49. Mr. Simpson was the first engineer who visited the line? Yes.
50. That was after the house had been invited to approve of, and did approve of, the plans and sections of the line? Yes.
51. What did he reduce the grades to? His steepest grade was 1 in 50.
52. What was the difference between the original cost and the cost of the line as laid out by him? There was not any difference worth considering. His estimate came to within a few hundred pounds of the other.
53. *Mr. Garrard.*] Per mile? No;—altogether.
54. *Chairman.*] How did the plans now before the Committee come to be produced? The original working section was taken, and the formation line altered so as to give grades of 1 in 50.
55. By whom? By my orders.
56. By whom was the work done? By the men in the office.
57. Without going on to the ground at all? Yes. We had the levels all the way along the line. You can lay down any grade you like, and can calculate the earth-work involved without going on to the line; that is all office work.
58. Could you do that in broken country as well as in level country? If you had all the information you wanted. You would not go and measure the cuttings and banks on the ground. You would take levels along the centre line, and if it were rough and uneven country cross-sections would be taken. Those would be sent to the office, and the earthwork calculated there.
59. The map before the Committee showing a grade of 1 in 50 was prepared under your instructions in the office? Yes.
60. Since then Mr. Simpson has been sent out? No. Mr. Simpson's alterations involved a number of deviations, and when it was desired to have the work proceeded with, I think in April, those deviations not having been staked, Mr. Whitton considered that it would occasion too much delay if men were sent into the field to stake them, and the longitudinal section was altered so as to give a gradient of 1 in 50 instead of 1 in 40 as before.
61. Do I understand that Mr. Simpson's alterations were entirely discarded, and that the office went back to the old 1 in 40 plan, and altered it to 1 in 50? Yes. I asked Mr. Whitton to have the deviations staked out as recommended by Mr. Simpson, but there was an anxiety on the part of the Minister, Mr. Bruce Smith, I think, to get the work started so as to give employment to those who wanted it. It was considered that too long a delay would be occasioned if the line were restaked. It would have taken a couple of months extra.
62. Did the Minister know then of Mr. Simpson's recommendation? I am not sure, I did not see the Minister about it. My communications at that time were with Mr. Whitton. I got my instructions from him.
63. At all events when this line with a grade of 1 in 50 was recommended there was a survey in the office, the result of Mr. Simpson's inspection, which showed that a grade of 1 in 60 could be obtained at an additional cost of a few hundred pounds? Yes. I think the way it occurred was this: The Minister wanted to get the works commenced as soon as possible; Mr. Whitton was ill at home, and I was sent for to say how soon the work could be put in hand. I happened not to be in the office at the time, and Mr. Drewitt, who is in charge of the drawing department, went instead of me. He promised that all the plans should be ready in about a fortnight. When I heard that, I went over to see Mr. Whitton, and pointed out to him how desirable it was that the deviations should be staked out, and that if that were done we could not possibly get the plans ready in a fortnight. Mr. Whitton said that the work being pressing, and the plans having been promised, it would be better to alter the present longitudinal section.
64. There was an impression that as the House had approved of the line the contract might be let? Yes.
65. How long have the surveyors who are now on the line been there? About a month, I think.
66. Can you tell us what instructions have been given to them? They have had instructions to make a ruling gradient of not less than 1 in 75. They have had the line marked out for them on the plan, and that is the line which they have to stake; but they are to report as to its suitability or otherwise, and suggest deviations.
67. Could that line with a grade of 1 in 75 be constructed at the estimated cost of £2,560 per mile? I do not think it will cost more. I have a progress report from one of the surveyors showing a deviation which does not materially lengthen the line. It commences at about 405 or 406 miles, and terminates about 412 miles. I believe it will be cheaper than the old line, and it will certainly be better, because the country is not so undulating. It reduces the grade from 1 in 60 to 1 in 75.
68. By this deviation what will be the ruling grade on the line? 1 in 75. The other deviations will be treated in a precisely similar manner.
69. Those deviations, gives a grade of 1 in 75, will cost a comparatively small sum? Yes.
70. Do you think you could work out for us what the saving would be by constructing a line with a grade of 1 in 75 instead of 1 in 40? In construction?
71. Altogether you might take the Commissioners estimate of the traffic as the basis? Yes, I could work it out.
72. *Mr. Garrard.*] You spoke of one deviation; but there is a large number of grades of 1 in 50, 1 in 55, and 1 in 60? They will all be taken in succession. This is only one I bring as an example.
73. Have you sufficient data to show that all the others could be taken as economically as the one to which you have just referred? Not at present; there is only the probability. I had some information about the levels of the country before giving the surveyors instructions.
74. *Mr. O'Sullivan.*] Is the deviation you spoke of before you come to the granite ridge at Florida homestead, near "Budd's Hotel"? Yes, it would be before that, I think.
75. The deviation would be to avoid that granite ridge? It is made to avoid one of the ridges; but they are so frequent on this line. I find that the deviation is 20 miles back from Budd's.
76. Where does it come out? It extends about 4 miles altogether; it comes out about 410 miles.
77. Then the line will go past Budd's and Florida homestead, as marked on the plan? Yes. 78.

\* NOTE (on revision):—The instructions were verbal.

78. *Mr. Hurley.*] Is there no difference in the length of the line with a 1 in 40 grade and with a grade of 1 in 75? Yes. With a grade of 1 in 75 the line will be slightly longer.
79. By many miles? I cannot tell you exactly, but I think by about three-quarters of a mile.
80. Do you think it advantageous to the Department and to the country to send out ordinary surveyors on such an important mission as the survey of a railway line instead of civil engineers? I think it is quite possible to get good work out of surveyors if they are properly looked after by an engineer.
81. As the expenditure of some hundreds of thousands of pounds is concerned in a work of this character, should it not be the duty of the person in charge of the Department, the Engineer-in-Chief, or of some other equally competent man, to go over the line before it is decided upon? I consider that Mr. Palmer ought to have gone over the line; but I believe that he did not do so.
82. Is it not the general impression that those surveys were made merely because political pressure was brought to bear upon the Department at the time? That I cannot answer.
83. At all events, you believe that some negligence has been manifested in not sending efficient persons over the line in the first instance? I explained what Mr. Hardy told me as to what was the nature of the instructions which he received. Of course it is possible that if he had been left to himself he would have obtained a better line.
84. If an efficient man had been sent out in the first instance, a man competent to judge or to carry out the survey properly, would there have been any necessity to make four or five surveys in such level country as that between Nyngan and Cobar? Mr. Hardy was a competent man; but he was hampered by his instructions.
85. So that the country has been saddled with the expense of five surveyors, where one would have sufficed had he been left to himself in the first instance? I have no doubt that he would have adopted a different line; but he said that he had to take instructions. The fault certainly lies with Mr. Palmer.
86. You are of opinion that in all matters where much money is to be expended one of your most efficient officers should be sent to inspect the line—if not the Engineer-in-Chief himself? I think that an engineer should inspect a line which has not been laid out by engineers.
87. Seeing that there is such a difference in the grades as that between 1 in 40 and 1 in 75, you think a proper and efficient survey was not made in the first instance? Not in the first instance. The second survey was when Mr. Simpson went over the line. He got a good line.
88. Can you give us any idea of the reason for going *via* Budd's instead of to the north or south. Near Budd's there is a large basaltic range;—was it the intention to secure metal for the whole of the line in that particular spot? The reason for going along that way was to keep as near to the road as possible—in fact to keep along it. There would certainly be an advantage in going near basaltic hills where ballast could be obtained.
89. *Mr. Dowel.*] What position does Mr. Palmer occupy in the Service? He is not in it now.
90. Have you had considerable experience in railway construction? Yes, I have had a good many years at it.
91. Outside the Colony? Yes.
92. Where? In England and in Europe—in Hungary.
93. Do you not think it desirable that where a line is being laid out a competent railway engineer should always be associated with the surveyors? I consider that the surveyors should have a certain amount of engineering experience; but I think that most of our surveyors have sufficient. Some of them are actually engineers; men who have been brought up as engineers.
94. Although you term them surveyors they have a large knowledge of railway construction? Yes, as to the principles of the economic laying out of lines.
95. I presume their instructions will be to get the best grade possible? Yes.
96. They would not be confined to any particular set of instructions? They certainly are not now. I can only speak from my own experience. They have always had instructions to get the best gradients they can.
97. They are not restricted in any way at all? Except that frequently a limit had been put on. They are told that in certain country they must not go beyond a grade of 1 in 40 or of 1 in 50.
98. Are their instructions to lay out a line that will not exceed £2,560 a mile? To lay out the cheapest line possible.
99. As a rule is it not a fact that easy gradients could be obtained at some considerable cost in excess of what it would take to get a grade of 1 in 40? In this country, certainly.
100. What about broken country;—would not that materially affect the cost? I mean the Colony;—not the country between Nyngan and Cobar.
101. Would it not materially affect the cost of construction of this line if a grade of 1 in 75 were adopted instead of 1 in 40? Not in the way I have shown. I have shown that by making deviations in the line at various points we can get better gradients, and no heavier earthwork; and in fact in some cases lighter earthwork; but there is a slight increase in the cost in the length of the line.
102. That rule would not apply to broken country—hilly country? No, probably not. Each country must certainly be taken on its own merits. I should be better prepared to give an opinion if I knew the particular country and had been over it.
103. Was it not one of Mr. Palmer's duties to make the final inspection of the line? Yes.
104. Mr. Palmer was a qualified engineer? Yes.
105. Did he inspect this line? I believe he did not. I believe he was satisfied with the work which was done in the field, and that he thought it was not necessary for him to go over the line.
106. The levels and cross-sections so satisfied him that he thought it was not necessary to make an inspection? Yes. He considered that the information got from the surveyors was sufficient.
107. Have you any reports in your office as to the class of country which the line will traverse? You will find a good deal about it in the papers laid before Parliament about the Cobar railway. There is a report there by a traffic inspector, Mr. Hornidge.
108. Do your engineers furnish you with reports as to the character of the country in which cuttings have to be made? Yes; we always have a report as to the character of the country and its resources.
109. *Mr. Tonkin.*] Do you know what the estimated cost of the line was per mile with a grade of 1 in 40? The estimates have been revised since, and the prices have been altered, but the cost of labour is lower than it was. I do not think the original estimate would be very much of a guide. The estimated cost in August, 1886, was £241,661.
110. About £34,000 more than the present estimate? Yes.

H. Deane,  
Esq.  
25 Sept. 1889.

- H. Deane,  
Esq.  
25 Sept., 1889.
111. The estimate now before us is for a grade of 1 in 75? The present estimate is for a grade of 1 in 50. It is my belief that the estimate will not be materially affected by having a grade of 1 in 75, though I could not speak positively about it.
112. If you had a grade of 1 in 50 a mile long you would not call that a short grade? No; we have no grades of 1 in 50 that length.
113. There is a grade of 1 in 50 half a mile up and half a mile down;—do you not think that it would be better if there is only one grade of 1 in 50 to expend a little more money and reduce it? To expend a little more money—yes.
114. There is only one 1 in 50 grade on the proposed line? Yes; but to get a ruling grade of 1 in 60 you would have to cut out the 1 in 55 grades.
115. But would it not be advantageous to reduce the grade to 1 in 55? Yes; but the difference is not very much.
116. Does it not materially alter the haulage power;—is there not a great deal of difference between the power required to pull a load up a grade of 1 in 50 and that required to pull it up a grade of 1 in 60? Yes; roughly speaking it would make about one-fifth difference.
117. If you had had the drawing of those plans, would you not have tried to reduce the 1 in 50 grade, seeing that it is the only one on the whole line? If it were the only one on the whole line, and all the rest were good grades, I should certainly have tried to cut it out, even at a considerable cost in earthwork.
118. You know that the grades have a great deal to do with the working expenses of a line? Yes.
119. That the easier the grades the less the working expenses? Yes.
120. Taking that into consideration, in constructing the lines you would make the grades as easily as possible? For that reason I gave instructions to the surveyors to adopt a grade of 1 in 75, and not to get anything steeper.
121. Do you think that it would have been a mistake if the country had decided to construct the line upon the plan now before us? I do.
122. You have no doubt that we shall be able to get a 1 in 75 grade? I have not the slightest doubt of it.
123. *Mr. Humphery.*] About when did you issue instructions to alter the grade to 1 in 75? It was before the surveyors who are at present engaged on the work left. In the beginning of July I saw Mr. Eddy about this matter, and made special reference to the Nyngan and Cobar line, and the extensions. I was very much in favour of reducing the grade, and Mr. Eddy was also very anxious to have them reduced. I arranged there and then that if possible we should get grades in the western country from 1 in 75 to 1 in 100. Acting upon that, I applied for sanction from the Minister to have the line from Nyngan to Cobar examined, improved, and restaked, so as to get a ruling gradient of 1 in 75.
124. Has that sanction been granted? Yes; it was in consequence of it that the surveyors were sent out.
125. The delay in the construction of the line has been of material advantage to the country? I believe it has.
126. That is to say we get a good railway with a grade of 1 in 75 instead of 1 in 40 at the same cost, or without an increased cost? Yes; I believe the cost will be about the same.
127. Did the plans show a grade of 1 in 40 when approved of by Mr. Palmer? Yes, I think so.
128. Mr. Palmer was satisfied with the plans showing a grade of 1 in 40, and therefore did not inspect the field-work? Yes.
129. Do you know if special instructions have been issued by the Department to the surveyors to be satisfied if they can get a grade of 1 in 40? Nothing more than verbal instructions have ever been given, as far as I know.
130. Was that the general instruction, that if a grade of 1 in 40 could be secured the surveyor was to be satisfied, and not seek for a better grade? I do not think so. One reason why the 1 in 40 grade was adopted on the Cobar line was to cut down the expense. The centre line had been adopted, and in order to cut down the cost of construction the steepest grade allowable was made use of.
131. As a matter of fact you have ascertained that the grade can be reduced from 1 in 40 to 1 in 75 without an increased cost? Yes.
132. And without any appreciable lengthening of the line? And without any appreciable lengthening of the line.
133. *Dr. Garran.*] I understood you to say that the original surveyors were instructed to keep as close as they could to the stock route? Yes.
134. And if they followed the surface by that route they could not well avoid a grade of 1 in 40? No.
135. You are now making deviations? Yes.
136. But they are only deviations from that line as originally staked? Yes, that is all.
137. So that even the engineers now on the ground are in bondage to the original instructions to stick to the stock route? They have instructions to report if they see any other deviation or route that can be adopted with advantage.
138. Still they are practically tied to a moderate degree of deviation from that route? Well, if they saw that by deviating considerably from the line they could obtain an advantage they would be expected to report to the office to that effect, and if the deviation proved a good one they would have instructions to make it.
139. I see in the *procès* under the date 6/7/87 that Mr. Secretary Sutherland stated in the House that "he had been informed that a line could be found with grades of 1 in 100." Do you know anything of the possibility of constructing a line with grades of 1 in 100 between Nyngan and Cobar? No.
140. Do you think that it would be possible? I really could not say. From the information which we have I should not think that it was possible.
141. If the original surveyors, or the subsequent surveyors, had been told that they might disregard the stock route altogether and simply lay out the best line they could, could they have got a grade of 1 in 100? We could get 1 in 100 on the present line as staked out, if we went in for a certain amount more earthwork. It is quite possible that when the line has been staked out and the levels come in it may be found advantageous to make 1 in 100 the ruling grade. At present the surveyors are working to 1 in 75. It is a question of earthwork, and it is quite within the range of possibility that it may be desirable to alter that to 1 in 100. If the earthwork caused by that alteration would not be excessive, I shall certainly make it.
142. Has any surveyor been instructed to travel between Nyngan and Cobar, holding himself perfectly free from the stock route altogether, to see if he could get a line of 1 in 100 that would not require considerable cuttings? Not within my experience.
- 143.

H. Deane,  
Esq.

25 Sept., 1889.

143. How many grades have you to alter to establish a grade of 1 in 75? A great many.
144. So you have to make a great many deviations from this fixed line? One deviation will sometimes cut out a great many grades.
145. It is not worth while to consider at the present stage of things the feasibility of an altogether fresh route, that might be 5 or 10 miles north or south of the stock route? I think a satisfactory line will be obtained in the present position.
146. You do not see any necessity for going further afield? No.
147. Are the ridges of which you spoke sand or rock? Some of them are rock.
148. Of what description? I believe basalt.
149. If you had to cut through those at any depth it would be expensive work? Yes.
150. Do the rocky ridges or the sandy ridges make the worst grades? I could not tell you which are which. From the reports I do not think there is much sand in the country.
151. The surveyors' report do not speak of sand ridges? No.
152. If there were sand ridges they would be comparatively cheap to cut through? Yes.
153. *Mr. Copeland.*] I suppose the line as surveyed is a pretty straight one, is it not? Yes, it is fairly straight. The diagram plan will show that.
154. There are no sharp curves? No. With those deviations I think we shall have curves of 20 chains radius, but not sharper.
155. What is the general method adopted in making flying surveys;—I suppose you send a surveyor out and he goes over the ground merely with an aneroid? Yes.
156. You expect after that to improve the levels, do you not? He would have to use a spirit-level also. If that exploration promised well, a proper survey would have to be made with a theodolite and a spirit-level.
157. But I suppose that in all cases you expect to improve upon your first survey? Yes. A great deal of attention is paid to the surveys, and a great deal of trouble is taken to find out the best line. I could show you places where several deviations have been tried in order to improve upon the original route.
158. Is it an unusual occurrence in the Department for you to have first of all a line with a grade of 1 in 40 and then to be able to reduce it to 1 in 75;—is this the only instance you know of where that has been done, or has the grade been similarly reduced in other cases? I do not remember any other surveys that have been treated in the same way. I think that probably the same scope for improvement has not been afforded.
159. I suppose you seldom have such a long period in which to experiment and make additional surveys as you have had in this case? If the batch of lines that were voted in 1884 had been commenced straight off I should not have had the chance of offering an opinion.
160. Supposing the line had been constructed on the plan then passed by Parliament with a ruling grade of 1 in 50? It was 1 in 40 in the first instance.
161. Was the grade on the plan approved of by Parliament 1 in 40 or 1 in 50? I think 1 in 40.
162. It will prove of immense advantage to the country if the line is constructed with a grade of 1 in 75 instead of with a grade of 1 in 40, as was first suggested? Yes.
163. It would be an immense saving on such a long line as this would be from Nyngan to Silverton or to the South Australian border to have a grade of 1 in 75 instead of 1 in 40? Yes, an immense advantage.
164. The saving would be equal to 30 or 40 per cent. on the working expenses, would it not? I could not tell you exactly. On the haulage expenses you would save 30 or 40 per cent. The cost of maintenance of permanent way, and some other expenses, would practically remain the same.
165. Do you think that hitherto the Department have paid as much attention to reducing the grades as you are paying now? I scarcely know.
166. I suppose you could say without committing yourself whether on many of the railways that are now constructed the grades could be materially reduced without any great difficulty? Many of the grades might have been reduced with a considerable increase of the cost.
167. You do not anticipate that the reduction of these grades will lead to an increase of the cost? No; but this is a different kind of country. I should not like to give an opinion upon that unless you were to specify one particular line, and I were to see it.
168. *Chairman.*] I will mention one—the line from Gunnedah to Narrabri—they have a grade there of 1 in 40? 1 in 50. There is a grade of 1 in 40 this side of Gunnedah. I do not know what I myself should have recommended in that case.
169. Have you any knowledge of the country between Cobar and Wilcannia;—have you had a flying survey made? We have had a trial survey made. We have had a complete section taken.
170. What do the levels show between Cobar and Wilcannia? They have not been thoroughly worked out, but they justify me in believing that grades could be obtained similar to those on the proposed line. With the exception of a few miles there will be no difficulty about it.
171. All the way to Wilcannia? Yes.
172. You think you would be able to get a grade of 1 in 75? Yes.
173. Have you any knowledge of the country beyond Wilcannia towards Broken Hill? We have surveyors up there, between Wilcannia and Broken Hill, and they have had instructions to find a line with a ruling gradient of 1 in 75, and to report if the country became excessively difficult; but we have had no reports to that effect. They were not to lay out a line if such a gradient could not be obtained without reporting to the office, and obtaining sanction of the work.
174. Suppose this line is constructed, and you have to take coal or coke out to, say Broken Hill, it will be an immense advantage as far as haulage is concerned to be able to run on a grade of 1 in 75 instead of 1 in 40 or 1 in 50—will it not? Yes.
175. You will be able to carry the coal at a less rate and with more profit to the Department? Yes.
176. *Mr. Trickett.*] Cannot you tell us when the last surveyors were sent out? I have not the date here.
177. The report of the Railway Commissioners is dated 15th July, 1889, and the concluding paragraph says, "Great attention must be paid to the gradients on the line, if necessary slight detours being made to avoid ridges, as it will only be by having easy grades, thus enabling heavy trains to be taken, that we can hope to secure the traffic of the far west from the sister Colonies, which have for so long enjoyed our traffic." Was it in consequence of that paragraph that you sent out the surveyors, or was the consultation which you spoke of prior to that? It was before that date. I have here a minute on the subject dated

the

- H. Deane, Esq.  
25 Sept., 1889.
- the 12th July. Some time previously, when Mr. Whitton became ill and I had to undertake a good many of his duties, I paid a good deal of attention to it.
178. Can you give the Committee any information as to how the surveyors were instructed—are their instructions merely verbal; have they printed regulations; or are they told that a railway is to be constructed from such a place to some other place and that they have to survey the route? Their instructions are nearly always verbal.
179. Are they told to get the easiest grades possible? As a rule they are told to get the easiest grades possible. Sometimes they have written to say that they cannot get anything lighter than (say) 1 in 40, and they have been told that they must make further attempts to improve the grade.
180. In the *précis* I find this: "19/1/89. The Engineer-in-chief forwarded to the Minister Mr. D. C. Simpson's report upon certain proposed deviations of the line which would have the effect of reducing the steepest grade from 1 in 40 to 1 in 50, and of otherwise improving the grades. The Locomotive Engineer in reply to the Commissioner reported that this easement of the grades would have the effect of increasing the haulage capacity of the engines 60 per cent., that is to say, if an engine could haul 100 tons on the original grades she could haul 160 tons on the improved grades." Could you say how much an engine could haul if the grade were reduced to 1 in 75? That paragraph is not correct—it would not reduce the hauling capacity 60 per cent. Approximately the reduction is in proportion to the grade.
181. That is what he says, "If an engine could haul 100 tons on the original grades she could haul 160 tons on the improved grades"? That would not be the case—it would only be about 125 tons.
182. Who was the locomotive engineer on the 19th January, 1889? Mr. Midelton.
183. The grade would not have as great an effect on the hauling capacity of an engine as he says it would? No.
184. In your opinion if the original plan had been carried out, leaving the grade at 1 in 40, it would have been a mistake? Yes.
185. Financially and otherwise? Yes.
186. *Dr. Garran.*] You have no survey between Hay and Wentworth? No; there has never been any survey made.

THURSDAY, 26 SEPTEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Nyngan to Cobar.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and further examined:—

- H. Deane, Esq.  
26 Sept., 1889.
187. *Dr. Garran.*] Who is the surveyor who was first sent out to survey the Nyngan to Cobar line? I believe Mr. Hardy was the first.
188. From whom did he receive instructions? From Mr. Palmer.
189. It was Mr. Palmer who was responsible for telling him to keep on the cattle route? So he says.
190. Have you arranged on this line for gates at the level crossings or for cattle stops? For gates.
191. Entirely? Yes.
192. Have you gone into the question whether cattle stops would be cheaper? It has been specially considered with regard to the Nyngan to Cobar railway. Cattle stops are certainly very much more expensive for private crossings.
193. Would you have gate-keepers' houses at these crossings? It is proposed to do without fencing on a great part of the line, and in that case no gates will be required. It is proposed only to fence within the range of settlement.
194. How many watering-places will you have for the engines? Four have been allowed for.
195. They are all provided for in the estimates? Yes.
196. Will you get your supply of water from the Government excavations? Yes, that has been contemplated.
197. You will not require to go to any special expense in making tanks of your own? No; but we shall have the usual tanks on stages.
198. Have you provided for any excavations for tanks? No.
199. How are you going to get your supply when you cannot depend on the Government water? There are three tanks on the road at convenient distances, about 20 miles apart.
200. Will there be any stations where there are at present no tanks? I cannot tell exactly where the stations will be provided, but that would not be of any importance.
201. How would you provide the stations with water if you had no tanks;—would you trust to the rain water? Yes; or it could be brought along with the engines.
202. The Commissioners say that they have put the rates of carriage of material at the lowest possible price. I presume by that that you are going to be charged less for the carriage of the iron work than has been customary? Yes.
203. What is the amount of the reduction? 3d. per ton per mile. We used to be charged 4d. per ton, but the Commissioners have arranged to charge for this particular line a 1d. per ton per mile.
204. That is one-fourth of the usual rate? Yes.
205. What difference will that make on the whole line or per mile? I have not the exact account with me, but it would make a reduction of about £470 per mile.
206. Then in comparing the estimated cost of construction of this line, namely £2,560, with the cost of previous lines, we must bear in mind that it has a special favour to the extent of £470 a mile which the others have not? Yes, if you like to call it a favour. I think the other lines have been very unfairly treated.

207. What I mean is that this line has a special advantage which was not granted to the others? Yes, with the newer lines we have arranged with the Commissioners to have the iron carried for 2d.
208. When you were making the line from Nyngan to Bourke you were charged 4d.? Yes.
209. So that if we compare the cost of the line from Nyngan to Cobar with that of the line from Nyngan to Bourke we must remember that the former line had a special advantage to the extent of £470 a mile? Yes.
210. If we did not remember that, the comparison would be deceptive? Yes.
211. So that while a reduction is made in the cost of the line it is at the expense of the railway account? Yes.
212. In other words we are paying £470 a mile and lightening the loan account by that? I do not think that the carriage of rails for new lines is a fair item of revenue.
213. It has always been considered a fair item of revenue? By Mr. Goodchap.
214. I am simply contrasting the two. Hitherto our revenue has been fostered at the expense of the loan fund—now we are going to lighten the loan fund and charge a lower rate for carriage which will give us less revenue? Yes.
215. I only want to draw attention to the fact that the cost of £2,560 a mile is not all due to economy pure and simple? No.
216. Part of it is simply due to a lighter charge for the carriage of permanent way? A juster charge.
217. A lighter charge? Yes.
218. If we added £470 to £2,560, it would bring the cost up to about £3,000 a mile, which would be the proper comparison to make with other lines? Yes.
219. You promised to supply me with the ruling gradients on several of the lines? Yes, they are as follows:—Orange to Dubbo, 1 in 40; Dubbo to Nyngan, 1 in 50; Nyngan to Bourke, 1 in 80; Junee to Narrandera, 1 in 40; Narrandera to Hay, 1 in 55. Lines surveyed only—Molong to Parkes, 1 in 40; Parkes to Condobolin, 1 in 50; Condobolin to Wilcannia, 1 in 60.
220. In looking at the traffic from Sydney I suppose we can get nothing as far as Dubbo without going in for a gradient of 1 in 40? No.
221. The loads must be adapted to that? Yes.
222. Between Dubbo and Nyngan we come down to 1 in 50? Yes; that gradient is just a short distance out of Dubbo, and then the grades are pretty light.
223. What are they after that? I think about 1 in 80.
224. If we could have got rid of that 1 in 50 we should have 1 in 80 all the way between Dubbo and Nyngan? I believe so.
225. Do you know the locality of that grade? I have not been over that portion of the line, but I know the section where it occurs.
226. Do you think that at a moderate expenditure it might have been reduced? That I could not say.
227. It would have been a great advantage to the traffic on the whole line if it could have been cut out? Undoubtedly.
228. It spoils the load for the whole distance? I am quite of opinion that an isolated grade of 1 in 50 is a great drawback.
229. When the train gets to Dubbo it can, with a better grade of 1 in 50, take a slightly increased load as far as Nyngan? Yes.
230. But from Nyngan to Bourke you come down to 1 in 80? Yes.
231. Would it not be desirable to bring the Nyngan to Cobar line down to 1 in 80 too and make it light? There is not much difference between 1 in 75 and 1 in 80.
232. It simply means adding another truck or two to the load? Of course, the flatter the grade you can get the better. I have not the slightest doubt that we can get a grade of 1 in 80 on the line which is now being laid out at a slightly increased cost.
233. You say that you have a grade of 1 in 40 in Dubbo with the same engine, how many tons could you add to the load in going over the 1 in 50 grade between Dubbo and Nyngan? If an engine drew 100 tons between Orange and Dubbo, I should say that it would take about 125 tons between Dubbo and Nyngan.
234. And what could the same engine draw between Nyngan and Bourke in a grade of 1 in 80? About double what it could in a grade of 1 in 40.
235. 200 tons? Yes.
236. On the surveyed line from Molong to Parkes there is a grade of 1 in 40, and between Parkes and Condobolin the grade is improved to 1 in 50? I have not the slightest doubt that that can be cut out.
237. Between Condobolin and Wilcannia you get a grade of 1 in 60? Those are only trial lines. I have not the slightest doubt the bad features can be cut out.
238. If it is possible to get a grade of 1 in 60 from Condobolin to Wilcannia, would it not better to start with that and have it all through? I could not say without investigation what extra cost it would involve.
239. At anything like a moderate cost it would be an immense advantage? Yes, it is a mistake to have to break and make up trains at different stations along the route.
240. Especially as you are leaving the more settled part to go through the places where there is less population? Yes.
241. If these lines through the flat country are to pay, it will be by our taking the largest loads we can at a time, and minimising the number of trains? Certainly.
242. If we had a heavy grade at the beginning of the journey we could not do that? Of course it is very much better to have the same ruling gradient over the whole length, but the extra cost of earth works involved might be a serious consideration.
243. But if you had a heavy grade between Molong and Parkes, and then a light grade to Wilcannia, you would have to take two trips from Molong to Parkes to make up a load for the flat grade? From Molong to Parkes might be considered a distinct section. To some extent there would be a different traffic. There would be a lot of agricultural produce between these two points.
244. You consider that the point of departure from the Western line is practically passed? Yes. I may say that between Molong and Parkes there is some pretty rough country. I know there are difficulties in the way of getting a good line there. We have had a good deal of trouble, and a good deal of time has been spent in making deviations along portions of the route.

H. Deane,  
Esq.  
26 Sept., 1889.

- H. Deane, Esq.  
26 Sept., 1889.
245. Is not the country between Junee and Narrandera remarkably level? It does not look so on the section.
246. You have not been over it? I have not examined it.
247. Do you know anything of the country between Hay and Wentworth or between Hay and Menindie? No, I have not been out there; but a little way beyond Narrandera the country gets pretty flat.
248. Even between Narrandera and Hay you have a grade of 1 in 55; the line running beside the river banks all the way? I think that 1 in 55 is near Narrandera. If you would like to see the section I could send for it.
249. What I should like to see would be an easier grade? The grade is already made.
250. Does it not strike you that to have a grade of 1 in 55 when starting over flat country like that between Narrandera and Hay is to be avoided if possible? Yes. Of course, generally speaking I should avoid them myself. I can scarcely tell what the conditions were that induced Mr. Whitton to adopt this grade.
251. Without criticising this particular line is it not a very undesirable thing to have a stiff gradient when starting out, and easy country for the rest of the journey? It is objectionable.
252. And a very considerable expenditure would be justified in order to get rid of it? My general opinion, of course, is that gradients should be eased as much as possible. I quite agree with everything you say, but I am not prepared to criticise any of those lines. I have not examined them with that purpose, and I should really rather not do it.
253. *Mr. Lackey.*] You were saying a few moments ago that you thought some of the lines which had been constructed in the past had not been fairly treated through the charges made for the carriage of the rails? Yes.
254. Do you mean that the charges were too high? Yes.
255. Were they out of keeping with the usual charges for carrying heavy material, such as iron rails? It was the schedule rate.
256. All goods of a similar character would pay the same rate? Nobody except the construction branch wants rails carried. There is nothing in the handling of them that necessitates such a high charge.
257. Is not the handling the same as would be required for heavy iron goods of any description? These pieces of iron are all the same length, and they pack together very easily.
258. What would be the cost at home in England? I do not know, but I do not suppose that more than 1d. per mile per ton is charged, and perhaps less.
259. You think the charge here has been an exorbitant one? Yes.
260. Do you base that opinion upon a comparison of it with the charges in England for the carriage of similar material. The Deniliquin rails did not go over our lines at all? No.
261. Are there cases where old rails have been carried to Mittagong or Lithgow for smelting purposes, or to be worked up again? Yes, I believe so.
262. Do you recollect what was charged for the carriage? It has not come under my notice. It has not been done for construction purposes, but for renewals.
263. Do you object to the charges with which the public account has been debited for the carriage of rails? Yes.
264. You think that the public account ought to be debited with the haulage of rails for railway construction? I think the cost of the haulage ought to be charged, but not an exorbitant profit.
265. You think that hitherto it has been too much? A great deal too much.
266. You have not yourself traversed the line between Molong and Parkes? No. I have been over the line from Borenore to Parkes, the parallel line.
267. Those two lines have both been regarded in the Department as a portion of the extension from the Western line to Wilcannia? Yes.
268. Have you been right through from Borenore to Forbes? Yes.
269. You found some considerable impediments, did you not? At the first start off, for a few miles from Borenore, there is a very awkward descent; there is a great descent on the road.
270. And very swampy country, I think? I do not think the swampy country afforded any difficulty.
271. Do you recollect that the Department encountered any difficulty in making a survey through a place called Kean's Swamp, or in the neighbourhood of Kean's Swamp? I do not remember that.
272. Is it within your recollection that the engineers on the line gave up the survey, and said that it was impracticable? Can you tell me where Kean's is?
273. It is in the neighbourhood of the descent of which you spoke? Yes; I remember it. It is a narrow swamp alongside the road.
274. You have no doubt that the gradients on the line between Nyngan and Cobar will be considerably reduced by further surveys? I have not the slightest doubt that the grade of 1 in 75 will be practicable.
275. Have you a report from your officers recommending grades of 1 in 75? I considered the matter in the office with the engineer who went out there, Mr. Simpson; and I decided afterwards to adopt a grade of 1 in 75.
276. *Mr. Copeland.*] In the paper which you have handed into the Committee you show the ruling gradient between Orange and Dubbo at 1 in 40? Yes.
277. Do you know how long that grade is? No. I will send for the section if you like.
278. What I want to know is, whether it would be possible to reduce the gradients at anything like a reasonable cost? I think there are a number of them.
279. Are the trains broken now at all between Orange and Bourke on account of the grade of 1 in 40? I cannot tell you how the Commissioners work the traffic.
280. I suppose you have seen the paper that was put before the Committee containing the history of the agitation for the line? No.
281. Are you conversant at all with the anticipated traffic on the line between Nyngan and Cobar? I have the Commissioners' report.
282. Do you know anything about the line between Dubbo and Nyngan where the grade of 1 in 50 is—are you personally acquainted with it? No.
283. You cannot now say whether that could be dealt with—whether the grade could be reduced? No, I cannot. If you get the heavy grades in a batch and the light grades follow on, the line is easily worked. It is a succession of good grades and bad grades alternately that is objectionable, because it necessitates a continual breaking and making up of trains. If at one point of the line you get an altogether new class of country I do not see that there is any difficulty in working it.
- 284.

H. Deane,  
Esq.  
26 Sept., 1889.

284. Do you know the grades this side of Orange? On the mountains we have 1 in 30 and 1 in 33.
285. Do you know the grade between Orange and Bathurst? There is a grade of 1 in 40 at George's Plains nearly 3 miles in length.
286. It would be quite useless to attempt to cut out these grades of 1 in 40? Yes. It could not be done without increasing the cost very much.
287. *Mr. Trickett.*] The Commissioners in recommending this line recommend that it should be constructed as cheaply as possible—has that recommendation been carried out in any other direction except by dispensing with the fencing? Yes; the cost of the station buildings has been reduced to a minimum.
288. Anything else? I think that is almost the only way in which you can reduce the expense.
289. Is there any difference in the mode of ballasting? No, it was decided afterwards that the ballasting should be done as on the main lines, so that there is the usual quantity of ballast, 6 inches under the sleepers.
290. The sleepers the same distance apart? Yes.
291. And is the same sort of stone used for ballast as has been used in the past? The best ballast will be used that we can get in the neighbourhood.
292. I see that the estimated cost of the line is £2,560 a mile;—that is a cheap rate of construction for this Colony, is it not? Very cheap.
293. If it is constructed at that price will it be the cheapest line that has been constructed? Yes.
294. Can you tell us what would be the next cheapest? I could not without looking it up.
295. Have you considered the policy of this line with regard to its extension beyond Cobar? Yes.
296. What are your views in the matter? I can give you a copy of a report by Mr. Whitton.
297. Is he favourable to the construction of the line? Yes.
298. To the line in itself or as the commencement of a further extension? As forming a connecting line.
299. Do you agree with the views expressed by Mr. Whitton in that minute? I do.
300. You think that if the railway is to be taken to Wilcannia, you think that this the best line that can be adopted? I think it would be.
301. The country between Nyngan and Cobar is very swampy difficult country? No; but there are bad places.
302. Boggy parts? There are some boggy parts. There are long stretches of country, where in wet weather it is difficult for a horse to get a footing.
303. Do you know what the cost of constructing an ordinary road along there would be? No, I have not considered it.
304. *Mr. Hurley.*] What is the distance from Molong to Wilcannia? About 360 miles.
305. And from Nyngan to Wilcannia *via* Cobar? 239 miles.
306. Do you think the difference in length determined Mr. Whitton to extend the line through Cobar? Possibly, I did not discuss the matter with him.
307. Have you heard anything of the character of the country through which each line passes? Yes, I remember the reports from the surveyors who were out between Condobolin and Wilcannia.
308. Would the construction of one line lead to a greater settlement than the construction of another? I should say that the country between Nyngan and Wilcannia, and between some point beyond Condobolin and Wilcannia would be very similar, and only suitable for pastoral purposes.
309. Therefore, as a matter of economy, the line from Nyngan to Wilcannia would be the best to construct? Yes.
310. *Mr. Lee.*] What is the distance from Nyngan to Orange? 185 miles.
311. So that in point of fact from Orange to Wilcannia by the Nyngan route is 424 miles as against 360 miles by the other route? I think I am mistaken in the distances. I will try and get them corrected.\*
312. Has the policy of tapping the far western country been considered by your department—I mean apart from any political influence? We would have to consider the capabilities of the country.
313. Has the question of the best way of reaching the western portions of the country been considered by the department? I believe that it has been considered that a railway would not pay if it were constructed for the purpose of tapping the western country, but only as a connecting line such as this between Nyngan and Wilcannia.
314. Your department being charged with the railway development of the country would naturally have to consider from time to time the probable route which a line would take. Has this line through Silverton and Broken Hill, and on to the South Australian border been thought out by your department? It received some attention at the beginning of the year.
315. Has the alternative route by way of Parkes and Condobolin been thought out? Not as a connecting link with South Australia.
316. You said yesterday that by this route the distance between Adelaide and Sydney would be the same as it is now *via* Melbourne? Yes.
317. Have you taken into consideration the possible connection of the line in the future with the great Northern and Queensland lines? Yes.
318. I suppose the map before us is approximately correct? Yes.
319. Could you give the Committee any information as to the character of the country between Werris Creek and Nyngan? I shall be very glad to get you that information. I have all the distances made out.
320. *Mr. Copeland.*] In the construction of this line have you taken into consideration the question of dispensing with platforms? Yes, that has been suggested.
321. Can you form any estimate as to how much would be saved if we were to treat the railways, as I believe they do in America, and as we do our tramways, not having platforms? The saving would not be very much I think—between £2,000 and £3,000 at the most.
322. How many stopping places do you purpose having on the line between Nyngan and Cobar? It has not been decided.
323. Have you any idea of the general cost of these platforms? It could not be more than £300 or £400 a piece.
324. To have a raised platform all the length of the station? Yes.
325. You do not think that more than a couple of thousands of pounds could be saved on this particular line by dispensing with platforms? No.
326. Do you think it would be possible to dispense with platforms, if you had the ground round the station properly metalled? It might be done if the carriages were suitable. Long carriages with doors at the ends would have to be used.

327.

\* NOTE (on revision):—The correct distances are Orange to Wilcannia, *via* Cobar, 422 miles; Orange to Wilcannia, *via* Molong, 420 miles.

- H. Deane, Esq.  
26 Sept., 1889.
327. Why would not carriages with doors at the sides do, if you had an additional step? I do not think that could be managed, because you would want a projecting step, and then the carriages could not be run through the stations already built.
328. Would there be any necessity for a projecting step? It would be very awkward if there were not a projecting step.
329. I suppose one of the chief advantages of a raised platform is the facility it affords for loading goods such as wool or farm produce? That would be done at different platforms.
330. You would find it necessary in any case to have a raised stage, from which to load goods? Yes; certainly.
331. So that the only saving would be in the platforms at the passenger stations? Yes.
332. What sort of buildings do you purpose to construct on this line;—what have you provided for in the estimate? Wooden buildings.
333. With corrugated iron roofs? Yes.
334. What about the goods sheds? We have always made them of wood with iron roofs. Those on this line would be made in that way.
335. Would not corrugated iron walls be better than wooden walls for buildings of that character;—would not such buildings be less likely to catch fire than wooden buildings? The sides are covered in with corrugated iron; but the studding and framing is wood.
336. Would it not be an improvement in a very hot district like Cobar, where everything is liable to take fire at any time, to have iron studding instead of wooden studding, so as to have the whole building made of iron? The great danger of fire would be in the weatherboard covering. The studding itself would not be a source of danger.
337. You would not cover the sheds with weatherboard and with corrugated iron too? No, I should abolish the weatherboard and substitute iron, that does away with a great source of danger.
338. On this particular line I suppose you purpose having wooden station master's houses? Yes.
339. *Mr. Humphery.*] When did you arrange with the Commissioners for Railways for the reduction of freight on materials to be used in the construction of the line? I think it must be about six months ago. A reduction was arranged for the other lines, that is to say, the freights were to be reduced to one-half. Almost immediately on Mr. Eddy's arrival, he was spoken to on the subject, and he agreed to the reduction. The freights in this particular line were arranged about six months ago, as nearly as I can say from memory.
340. Can you explain the difference between £3,000 a mile and £2,560 a mile, shown on the two papers before the Committee, one dated August last year, and the other July. On the paper dated July, the Engineer-in-Chief estimates the cost of the construction of the line at £241,000, and in the other paper he has estimated it at £207,000? The reduction did not take place between those months. The Commissioners have taken their estimate from the estimate that was furnished to them some time ago.
341. The estimated cost of the work as placed before the Committee is £241,661? That was the original estimated cost.
342. That is the present estimated cost as proposed to the Assembly? I think the estimated cost proposed to the Assembly was £207,360.
343. No? I do not understand it then, because the Minister was furnished with this statement.
344. You think the estimated cost of £241,661 must be an error? Yes; I know that that was the amount of the former estimate, and the estimate which the Commissioners were furnished with, but reductions have been made since in the carriage of rails and the fencing. The reduction in the fencing came to £10,000.
345. The Committee will have to deal with the estimate of £207,000, and not with the estimate of £241,000? Yes.
346. *Mr. Lackey.*] That would be considerably more than the estimate when tenders were called for some two years ago? I do not think so; I think it is less.
347. *Mr. Humphery.*] The lowest tender was £122,799 8s. 4d.? That was without the rails. The following is a statement of the cost of the line:—

ESTIMATE OF ENGINEER-IN-CHIEF.		£
Works .....		126,579
Less fencing portion .....		10,000
		116,579
<i>Permanent Way Material.</i>		£
60-lb. rails, 84 miles at £600 .....	50,400	
Freight .....	13,525	
Loading and unloading 8,610 tons at 2s. ....	861	
	64,786	
Water supply .....	4,000	
Turntable .....	1,000	
Interlocking .....	1,850	
	6,850	
Engineering expenses and contingencies .....		19,000
		£207,215

348. *Mr. Lackey.*] I think you said some time ago that you knew the character of the country between Deniliquin and Moama? Yes.
349. Have you been over that line? No.
350. You know that the character of the soil there is something similar to that between Nyngan and Cobar—decomposed granite? I am not aware of that.
351. The Cobar soil is a strong granite soil? Yes.
352. And the soil is the same on the Deniliquin line? Yes.
353. Is it the case that the ballast on the Deniliquin line is formed from the excavations at that side? Yes.
354. That would make the line cheaper to construct? Yes.

H. Deane,  
Esq.  
26 Sept., 1889.

355. Do you not think that the same could be done on the Cobar line instead of stone being used? If it is found suitable no doubt we shall use it, but it is very desirable for a line that is to be worked profitably that ballast should be used that will allow drainage from the sleepers.
356. The Deniliquin line is a private line, and has been used and worked profitably from the time of its construction? They have such a large traffic.
357. The ballast has been obtained entirely from the excavations made at the side of the line, and it seems to me that the same could be done on the Cobar line? I may point out that we have put down a very low price for ballast, and it is expected that any suitable material will be used.
358. *Mr. Tonkin.*] In the estimate of cost I suppose proper provision has been made for all flood openings, water courses, culverts, and bridges? Yes.
359. Do you know whose estimate is taken for that particular work? The estimate was made some time ago: but I am not quite certain who made it. It was made, I believe, from information given by the surveyors in the drawing office here.
360. Is it probable that the estimate for this work was made by the same parties as those who did the Nyngan to Bourke line? No, I do not think so.
361. Was the cost of the flood openings and bridges on the Nyngan to Bourke line put down on the recommendation of the surveyors? I do not think so. The process usually adopted is, that after the line has been laid out, and the plans and sections prepared, some responsible officer goes over the work and decides what openings shall be made. I am not aware what was done on the Nyngan to Bourke line, because I had nothing to do with it.
362. You do not know who is the officer responsible for those openings? No.
363. You do not think it is the same officer who has given us the estimate of cost for this line? I should think that on the Nyngan to Bourke line it was either the district engineer of the previous section or Mr. Wade who made the estimate.
364. Can you tell us who has made the estimate of the cost of these bridges, culverts, and openings on the proposed line? Do you mean as to the number required or as to the design?
365. The design, number, and size of each opening? As this estimate is to be entirely revised through the restaking of the line, I think that probably the timber openings will undergo consideration again by the engineer in charge of the surveys. He will probably go over the line and make a report upon it to see if it is all right.
366. Then the size of these openings is not ultimately settled? No. I think that this estimate so far should be taken only as approximate, seeing that the line is being restaked.
367. Do you think that if the estimated cost of these openings is considerably under what it should be it will materially alter the cost of the line? I think not. I do not think that there are likely to be any alterations which will come to more than a few thousand pounds. £3,000 or £4,000.
368. Do you know that the water courses and flood openings on the line from Nyngan to Bourke has been a complete failure? I do not know anything about it.
369. Do you know that alterations are now being made with regard to them? I have no information about it.
370. You do not know that where they originally put in 6 feet openings they have had to tear up the line to make 24 feet openings? I think it is very likely. I know that in plain country it is very difficult to tell where the water is coming, and it is sometimes difficult to tell which direction it will run.
371. You know that it is much more expensive to make alterations of this kind after a line is constructed than it would have been to construct openings of the proper size originally? I am aware of that; but still in the first instance you very likely have not the information to go upon. Suppose, for instance, you had a series of dry years—there may not have been many inches of rain fall at a time for perhaps ten years and nothing like local floods—you could not tell from the levels of the country the extent of any particular catchment area; you could only guess the amount of water which would have to pass through the embankment in a particular place. I know that the effect has sometimes been very surprising. There have been floods in places not anticipated by the residents even: and perhaps where the residents have said that it is necessary to provide large openings we have had scarcely a drop of water.
372. Might not that be accounted for by the fact that the construction of the line made a sort of dam on this flat level country? All that must be considered of course.
373. But after the experience on the Nyngan to Bourke line is it the intention of the Department to take into consideration the necessity of enlarging these floods, openings, and water-ways? I am sure ample provision will be made.
374. You know that on the Bourke line these openings are a failure? I know that there have been cases of failure.
375. Having that experience ample provision will of course be made on this line? I should say that the fact of other openings having been a failure will not be taken into consideration in connection with the Nyngan to Cobar railway—that line will be dealt with on its own merits. The best information that can be obtained will be obtained, and no doubt that information will be more valuable than the information which was available with reference to the line between Nyngan and Bourke, because within the last two or three years there have been falls of rain which will guide us as to the best places to make openings. It would not do to be frightened because the water-ways on the other line have been too small, as it would very likely lead to great extravagance.
376. Do you know that where the water is backed up by a railway embankment it eats away the embankment and endangers the line, and that the expense of maintenance is on that account much greater? I have heard a great deal about that.
377. What is your opinion about the culverts in this hot country where the timber is subject to the ravages of the white ants;—do you not think that you could substitute something that would be better and cheaper in the long run than timber? No, I think not.
378. You do not think that iron girders would be better? They would be very much more expensive. Iron girders would be of no use unless you had concrete or brick abutments.
379. Do you not think that they would be very nearly as cheap as the wooden piles? I am pretty sure that they would not. I have in many cases compared the cost, and I have found that brick or concrete piers and abutments with an iron superstructure are very much more costly than wooden piers.
380. Do you know that at the present time nearly the whole of the wooden culverts between Nyngan and Bourke are eaten through with the white ants, and will have to be replaced? I have not seen any report upon them.

H. Deane,  
Esq.  
26 Sept., 1889.

381. That comes under your Department, does it not? No.
382. It is dealt with by the Permanent-way Department? Yes; by the Commissioners' Department.
383. If that is a fact, do you not think that it would be better, supposing the cost of the culverts were increased by twice as much, to substitute brick and concrete piers and iron girders instead of wood piers in this particular part of the country where the timber is so subject to the ravages of the white ants? Before giving any opinion I should like to see the extent of the damage that has been done. I know that the white ants in some cases merely attack the sap wood, and leave the heart alone. If they attacked the sap wood only, very little damage would be done.
384. Could you give us an estimate of the difference in the cost between a culvert with a 12 feet opening constructed with iron girders and brick piers, and a wooden culvert of the same dimensions. In this country you would not have to go much beneath the surface for a foundation for the piers? I should very much doubt that. It has been already stated that a good deal of the country is very boggy when wet weather sets in, so that some depth of foundation would probably be necessary. I could prepare an estimate; but I should have to assume a certain depth of foundation—perhaps 3 or 4 feet—according to circumstances.
385. You could not give us an estimate now? Not at the present moment.
386. What depth have you to drive the piles? It depends upon the nature of the ground. I should not under any circumstances drive them less than 8 feet, but they might have to go down 20 feet or more.
387. In the estimated cost for this line you have made every provision for flood water? The provision will be made, but it has not been made already. Everything will be revised before the contract is let and these water ways will be carefully considered.
388. Taking that into consideration, you still think that the estimated cost of £2,560 per mile will not be exceeded? I do not think that it will be materially exceeded. I think it possible that the deviations from the line may cost a little more, but I do not think the cost will be materially exceeded, and I do not think that the extra openings, if any are required, will materially add to the cost of the line.
389. At any rate you are quite confident that even the deviations required, and the possibility of the water ways being increased, will not make the cost of the line exceed the original estimate of £241,661, which is nearly £40,000 in excess of the revised estimate? I am quite sure that will not be exceeded.
390. *Mr. Garrard.*] Is it a fact that on the Homebush to Newcastle line the ballast used has been obtained from the cuttings through which the line passes? Yes.
391. The ordinary broken metal ballast has not been used? At this end the ballast is all sand-stone rock.
392. But between Wyong and Newcastle? I think that all the way from Gosford the ballast was obtained from the cuttings.
393. Has the ballast been found satisfactory? Yes.
394. *Mr. Douel.*] Does a grade of 1 in 40 necessitate the use of the heaviest engines you have? It depends upon the load—it does not necessitate it.
395. Is it not a fact that they are usually employed on that grade? Yes.
396. What is the weight of those engines? The engines themselves weigh 50 tons, and with the tenders, 72 tons.
397. What weight of engine would you use on a grade of 1 in 100? It is rather difficult to say—do you mean if one were ordering new rolling stock?
398. For the same load? You would require a much less heavy engine. I suppose an engine of thirty-five or forty tons would be sufficient.
399. Would not a twenty-four ton engine do the same work? I daresay it would.
400. A twenty-four ton engine on a grade of 1 in 100 would do the same work as a fifty-ton engine would do on a grade of 1 in 40? I think it would be fair to say that, assuming that the engines are similar of course, everything depends upon the design of the engines.
401. Are you aware that the late Minister for Works, the Hon. John Sutherland, was of opinion that a grade of 1 in 100 could be procured on the line from Nyngan to Cobar? I do not know. I do not suppose he would have any reliable information except through the Department. I think I remember that he did express that opinion.
402. If you will refer to the *précis* handed in by Mr. Barling you will find that he stated that "he was informed so;"—that, I presume, would be by the department? I have not a copy of the *précis*.
403. What kind of sleepers do you propose to use on this line? The same as on the main line—iron-bark.
404. Are you aware that large quantities of pine can be obtained nearly all along the route? Yes.
405. Would it not be much cheaper to use pine timber for sleepers instead of iron-bark? It might be cheaper, but it would be very undesirable. I should not recommend pine on any account.
406. Not for sleepers? No.
407. Suppose you increased the dimensions of the sleepers, and made them of pine, would not your objection to that wood be removed, and the cost of the sleepers be materially lessened? I think not. There would be several objections to the use of pine. In the first place it is a brittle timber; secondly, it is not so durable by a long way as iron-bark, and it is not so tough and incompressible. The rails would work into it and soon render the sleepers useless, and the screws and spikes would not hold in the same way as they do in iron-bark or other hard wood.
408. Therefore you consider the use of pine for sleepers not desirable? Certainly.
409. Would you use pine for fencing? I should have no objection to pine for fencing.
410. How many sleepers do you propose to use to the mile? About 2,000.
411. Have you had any experience at all in constructing railways with longitudinal sleepers? I have never constructed any myself; but I have seen many railways where they are used.
412. Are you aware that in England longitudinal sleepers are used on several lines? They are used on the Great Western line.
413. Are they found to be more advantageous than cross-sleepers? No. Nearly all the companies adopt cross-sleepers.
414. Which is the cheapest mode of construction, cross-sleepers or longitudinal sleepers? I should say cross-sleepers.
415. In your opinion they are the best? Yes. I think that the use of longitudinal sleepers here would be most undesirable, because the wood warps.
416. Is the country through which the line will run granite or basaltic? There are basaltic hills, and it is expected that possibly we may get some ballast from the main line.

417. It is not a granite country? I do not think so. I understand that the soil consists of decomposed granite, but I am not aware of its being a granite country.

418. Your information with regard to the ballast points to its being basaltic country? Yes. The ridges that we pass are basaltic.

419. The whole of the ballast you would use would be broken metal? That does not follow. We should use the best material available. If we could get anything like sand or clean grit from the cuttings we should use that because only a low price has been put down in the estimate for ballast, as it is believed that sufficiently good material will be found on the line itself.

420. Do the reports of your officers inform you as to what material would be available—metal, gravel, or sand? There are reports of that kind, I have them here.

421. The reason of my asking you that question is because Mr. Lackey directed your attention to the fact that the Deniliquin line was ballasted with material from the side cuttings and excavations—do you propose to ballast this line in that way? If the material obtained was suitable. I believe from some of reports that have been furnished to me that suitable material will be obtained from some of the cuttings; but it is not intended to use that all the way along.

422. Ballast is a very important item in the cost of the construction of the lines? Yes.

423. Does the information which you have had from your officers show that the line can be ballasted as cheaply as the Deniliquin line or not? I do not believe that the line can be ballasted in the same way as the Deniliquin line is ballasted.

424. Supposing the grades on the line were reduced to 1 in 100 would not that cheapen the working expenses very much since light rolling stock could be used and heavier loads carried? I do not believe that that matter will enter into consideration, because I do not anticipate that such very heavy loads will have to be drawn.

425. You are aware that if the line is constructed to Broken Hill, there will be a large amount of heavy traffic in the shape of bullion? You will want a good deal of silver to make up a train load.

426. I suppose you are aware that between 400 and 500 tons of bullion came from there every week? I was not aware of it.

427. That would make up a pretty good train load? Yes.

428. Of course you are aware that large developments are continually taking place in that mineral country? Yes.

429. And that the output in future will in all probability be larger instead of smaller? Yes.

430. Is it not likely that the late Minister for Works, the Hon. John Sutherland, would make a statement to a deputation about the grade on this line unless he had good grounds for doing so? He might have considered that he had good grounds.

431. From the information you have at your command are you of opinion that a grade of 1 in 100 can be obtained on the line? I should be in a better position to say when the new section is out.

432. You cannot say from the information you have at hand? I think it is quite possible that we may get a grade of 1 in 100 by increasing the cost of the earth works. When I get the section, that matter will be taken into consideration.

433. *Mr O'Sullivan.*] It is pretty well understood that the land between Orange, Condobolin, and on to Wilcannia is of a superior character to that between Nyngan and Cobar, and thence on to Wilcannia? All down the Lachlan the land is of a fine character; but I believe that as soon as you leave the river it is very poor. You go through a lot of mallee scrub.

434. You say that the land is very good from Orange to where the line leaves the Lachlan River? I believe it is.

435. As a matter of fact, the land between Nyngan and Wilcannia is not what may be called good land for agricultural purposes? It is decidedly pastoral country.

436. I presume that the advantage which the Orange to Wilcannia line has in passing through better country has been counterbalanced by the fact, that a line from Nyngan to Cobar, being extended to Werris Creek would be a short line from South Australia to Queensland? That advantage has been considered.

437. In designing this line I presume the Department has been swayed more by what might be termed intercolonial views than by considering the mere question whether it is the best line for settlement? I do not think the question of settlement came so much into consideration.

438. You are aware that it is the opinion of the Commissioners that a line should be made between Nyngan and Werris Creek? Between Dubbo and Werris Creek.

439. In order to connect the northern with the western line? Yes.

440. And thus give a shorter route between Queensland and Victoria and South Australia? Yes; I should say that there would be about the same extent of country only adapted to pastoral pursuits on either of the two routes.

H. Deane,  
Esq.

26 Sept., 1889.

WEDNESDAY, 2 OCTOBER, 1889.

Present:—

THE HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. GEORGE HENRY COX.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed railway from Nyngan to Cobar.

Russell Barton, Esq., sworn, and examined:—

- R. Barton, Esq.  
2 Oct., 1889.
441. *Vice-Chairman.*] You know the route of the proposed line of railway between Nyngan and Cobar? Perfectly.
442. You have been for some years intimately connected with the Cobar district? Yes, for twenty-five years.
443. You are connected with it still, I think? Not much now, but I have interests there.
444. You were a large shareholder in the Cobar Copper Co.? I was at one time.
445. You were one of the directors, I think? I am still.
446. Were you chairman of the Board of Directors? Yes.
447. Are you chairman still? Yes.
448. Then you take an interest of course in the success of the Cobar Copper Company? Yes.
449. Is it in active work still? No, it has stopped these last few weeks.
450. How long has it been in work? Since 1872, that will be 17 years.
451. During the whole of that time you have been actively connected with it? I have been connected with it since the very inception of the work.
452. Have you found during the time you have been connected with the Company that it has suffered from want of facilities for communication? That has been the great drawback of the whole district ever since I have known it. When we first opened Cobar, carriage there was £40 per ton. Even within the last twelve months the people there have been almost starving. They have used up all the tinned preserves, and they have no flour there, this article being brought in at a cost of 1s. per pound during last year.
453. That would be in specially wet seasons? In seasons like this.
454. Would that be brought about by wet seasons or dry seasons? By both; by wet seasons especially, and by great droughts such as we have just passed through. In 1870, and again in 1873, the country around there was perfectly impassable, even for horses. I had teams of horses on the road for three months, and could never move them. They were twelve months all but a fortnight in getting from Orange to Bourke via that route, and they were lightly loaded, too. The country becomes, in such seasons as this, perfectly impassable. Of course, in consequence of the establishment of tanks, &c., they are generally open in any ordinary drought, but such a drought as this last one has entirely closed them.
455. Do you recollect the population of the town of Cobar? About 4,000.
456. You employ a great number of hands in the Copper Co.'s mine? Well, you may say the whole population, directly or indirectly, is employed by the mine.
457. Is the population increasing? No, the population is decreasing in consequence of the mine shutting up. The mine is closed partially because of the collapse of copper, but principally because we found it impossible to get a supply of wood. We require from 300 to 500 tons of wood a day, and in a sparsely wooded country like that we found it utterly impossible to supply it.
458. Then you have used up all the wood within available reach? Yes; within 10 or 12 miles of Cobar.
459. And you have constructed a tramway? Yes.
460. What was the length of the tramway? About 15 miles.
461. And that received the wood which was supplied by carters from different directions? Yes; that is the only way in which we have been getting it now for the last four or five years, and even that has come to an end, because it became too expensive.
462. Supposing a railway were constructed between Nyngan and Cobar;—would that impediment to the successful working of the industry be removed? Entirely.
463. You would be able to get fuel? We have made a calculation that we could get from thirty to forty years' supply of wood along the line between Nyngan and Cobar, and within 5 miles of the railway, which would be an easy distance for carrying. That is within 25 to 30 miles of the mine. The supply of ore in Cobar, I may say, is practically inexhaustible; but the idea of the directors is, if they get the railway, to open the mine and to take coal to it, returning ores to the coal-fields. It is their idea to smelt at both ends, and to have trucks running one way with ore and returning with coal.
464. Then you would not smelt at Cobar under those circumstances? Oh, yes; we should smelt about half the ore at Cobar and half at the other end. We think that by having the same trucks employed running both ways it would be more advantageous and economical to the mine, and we could obtain freights at a much less cost.
465. What is the nearest coal supply to Cobar? Twelve miles from Dubbo. That is the coal-field which we have tested. We have smelted ore with coal, and we find it adapted for the purposes of copper smelting.
466. You found it suitable for smelting in every way? Yes; that is the report of the manager.
467. Then there is no scarcity of ore;—there is plenty of ore in the mines? There is ore for generations. The lode is enormous and solid throughout.
468. All you require then is fuel? That is so.
469. And you feel certain that if a railway were constructed between Nyngan and Cobar, that difficulty would be removed? I think so. The whole thing, from my point of view, depends upon that, and I am speaking altogether without prejudice. I have only enough shares to keep me on the board, and I have no interest in the district beyond a few hundred pounds.
470. Are there any other industries in the Cobar district besides copper? Yes; there is gold-mining. The last escort brought 800 ozs. of gold from there. There are very large gold mines there employing a great number of hands.
- 471.

R. Barton,  
Esq.  
2 Oct., 1889.

471. Are there any other minerals about there? Yes; there is silver as well as copper. We have partly opened up another large mine originally known as C. S. A. We have done a great deal of work upon it. Then there is the Nymagee Copper-mine, which is one of the finest copper-mines in the world. That is one mine also depending upon cheap carriage.
472. Would the Cobar railway affect the Nymagee mine? It would make the difference between 70 miles of carriage and 35. It would lessen the distance by one-half.
473. There is a large pastoral district around Cobar? Yes; and a very fine pastoral district too. The whole of the land is available for pastoral purposes right through to Wilcannia. I know the whole of the country. It is good, fair, average, dry, pastoral country.
474. Not many rivers or creeks? There is no impediment to the railroad whatever, except in a hill here and there, and those hills in every case can be avoided by a detour.
475. Still it is a well watered district, is it not? It is well watered from tanks and dams, and probably will be by artesian boring.
476. Of course there is no cultivation carried on there? Very little—none of any moment.
477. Have you made yourself acquainted with the route of the proposed line? Only to Cobar; not beyond it.
478. You know the features of the country very well? I do.
479. You think the surveyors have hit upon the right line? No, I do not think so. They have gone over very high hills in one or two cases, where by a slight detour they could have got on level ground. In one place especially, where I have an hotel, they have gone past the front of the hotel and over a steep piece of ground. If they had gone a quarter of a mile to the back of the hotel, they could have kept on level ground all the way.
480. *Mr. Hurley.*] Is that at Budd's? Yes.
481. *Vice-Chairman.*] That is near the Station called Florida? Yes; I understand the Commissioners are going there, and they will see it.
482. Have you given any attention to railway construction at all? Yes; I made it my study here for many years.
483. Have you ever seen the line between Deniliquin and Moama? Yes.
484. Has it ever struck you that there is some similarity between Cobar country and the Deniliquin country? It is very much the same.
485. It is a red granite soil? Yes, red soil right through.
486. Is it the case that the Deniliquin line has been ballasted by the soil which has been taken up on either side of it? Yes.
487. Could that be done in the case of the Cobar line? I will not say it could. One of the great expenses on all our inland railways is the expense which is incurred in excavation. The natural surface of the ground is the firmest and hardest, and every inch that is moved injures the line of railway. I have called attention to it before; in fact Mr. Whitton has twitted me with it many times.
488. Then you think the line could be constructed at a lower price than anything the Government has ever constructed before? If my opinion is worth anything I think we should not construct what are called light railways in any case, but should have our rails the same weight as those now in use. But when you have timber on a line of railway which will answer every purpose of sleepers, it is a great farce to go away hundreds of miles to obtain sleepers at great expense, and having them cut to one particular size. I think that we should have the rails fully as heavy as the rails used on the lines over the hills. That is all the expense you need go to. No expense need be gone to for sidings, stations, or anything of that kind.
489. Nor for fencing? Nor for fencing. Let the squatters look after their own cattle.
490. You recommend the same gauge as the other lines? Yes; but carry it through on the surface of the soil, and in places where you now put in culverts or viaducts to cross over, let there be a dam and thus supply water for the engines. I had to get out of a train the other day and walk half a mile, and in consequence of the water not being dammed back I fell through between the rails, and I was injured.
491. Did that arise from the culverts not being large enough? Yes, or from dams not being put in to keep the water back.
492. The line was covered with water in places? No, it was not, but the top looked solid. Being a level country and no creeks there, they had not taken the trouble to put in culverts to carry off the surface water. Therefore the surface water soaked into the line and it gave way.
493. Is it not the case that the culverts on the line between Nyngan and Bourke have, in some instances, been found insufficient to carry off the water? Exactly, because it is so difficult there to get the levels of the country and to ascertain the area in which the water would collect.
494. You were speaking about the timber for sleepers;—what timber do you suppose will be available for sleepers on the line between Nyngan and Cobar? There will not be any great quantity of timber along there. We have found plenty of timber for the construction of our tramway, but of course our sleepers are shorter than you will require them with lines of the present gauge.
495. Would you recommend the use of pine for sleepers? No, I think not. Pine is a bad wood to have touching the ground on the surface. It is a good wood in the ground, but it is a bad wood to lay on the ground. Whenever a pine log is cut and is laid down for a short time it commences to rot, although it will not do so in the ground.
496. You think timber sufficiently durable for sleepers would be found along the line? In some places, but not in many, there is a good deal of box between Nyngan and Cobar, which I think might be used. We have found this box, even if partly hollow, last better than the timber you will get from more favoured places where it grows free and contains more sap. We have found the bastard box for sleepers and for timbers in the mine last wonderfully well.
497. You are aware that tenders were called for by the Government some time ago for the construction of the line between Nyngan and Cobar? Yes.
498. Do you know the amount of the lowest tender? I was told the gross sum at the time.
499. You do not know what it came to per mile? I do not.
500. Then you have not had an opportunity of forming an opinion as to whether the tender could have been fairly carried out? No.
501. Did you ever hear that a tender had been sent in to construct a line at £1,500 per mile? Yes, without rolling stock. That was my estimate for constructing the line, given the railway freight from the sea-board to Nyngan.

- R. Barton,  
Esq.  
2 Oct., 1889.
502. There has never been any proper road made between one place and the other—it is simply a track? There is no road at all; you could not make one. The road would cost as much as the railway, because of the distance you would have to carry metal. In fact, I think all over the western portion of the country railways, properly constructed, would be cheaper than macadamised roads, and there would not be the after cost of keeping them in repair.
503. Would you recommend the system of railway without fences to begin with? I would.
504. And without Station houses? Yes.
505. In that case people would bring their own teams and platforms and provide their own tarpaulins? Just so, as they would have to do now.
506. *Mr. Copeland.*] How many tons of coal or wood would you require if the mine were in full work? That is a very difficult question to answer. For instance, we have never been at full work, owing to the difficulties we have experienced in obtaining wood to smelt. But we have used for years equal to 300 tons per day.
507. 300 tons of wood per day? Yes.
508. Is there any assurance that if this line were constructed the mine would commence full work? That would depend upon a certain rise in copper.
509. Suppose copper were to keep at its present price, and the line was opened, would the mine be at work? No, I do not think it would. Perhaps you know that the present surplus of copper at the present price is being absorbed at the rate of over 1,000 tons a week. No mine can produce copper to make it payable with the exception of one or two at the present prices, and these are not simply copper mines, but mines which depend upon other products such as silver and gold for their profits. No copper mine that I know of could continue working at the present crisis.
510. Then in the construction of this line, one of the chief inducements held out to the Government would be the supplying of the Cobar mine. Yet if the line were opened one would have to depend rather upon the price of copper if the mine were to be kept at work or not? I don't say it is the chief inducement. I think myself that this mine has been looked at too much from the Cobar point of view. There is an enormous district there—300 miles by 250 miles—without any roads or means of conveyance, except what nature has provided from the earliest times. The whole of that country for many years was supplied from South Australia and Victoria with goods, in consequence of the utter impossibility of getting them from Sydney. I was the first pioneer, as it were, in opening up that country; and the Cobar Co. and the Nymagee Co. reduced the price of carriage from £40 to £4 per ton plus the railway freight. Still, even now, in fair seasons, nearly the whole produce of that district comes from those two Colonies. It comes up the river and is scattered through the whole of the district. Beyond that, from Nyngan to Cobar, from Cobar to Wilcannia, and from Wilcannia to Broken Hill, is a most direct line of road, and it is all good pastoral country without any engineering difficulties. The line is as straight as an arrow. It goes right through from Dubbo to Nyngan, from Nyngan to Cobar, and from Cobar to Wilcannia, and it is as certainly as good a country as any through which any other line could be proposed from any other direction. The mineral resources of the country have lain dormant in consequence of the difficulty in unearthing them. Cobar has succeeded through being an immensely rich mine. If Cobar had been placed with fair railway communication, I have no hesitation in saying that it would have paid millions in dividends, and would have employed three and four times the number of hands it has done. But the immense difficulties which have been met with have simply cramped the industry and to a certain extent have ruined it. There are other mines in that district, and no doubt there will be a great many more when there is railway communication. There is the Nymagee, the Mount Hope, the Burra Burra, the gold mines, and the C. S. A. mine, all of which have been cramped for want of carriage.
511. Which is the C.S.A. mine? It is an enormous lode, 7 miles from Cobar. There are known to be other mines there which would be opened up, and which would find work for thousands of people, if they had facilities for getting their produce to market. The bugbear has always been that the Cobar mine and Russell Barton, connected with it, had prevented justice being done. That is the feeling which exists.
512. You say that the mine would be using 300 tons of firewood per day if it were in full work? I beg pardon. I said it had used that amount. Its capacity for using is really three times that amount. If that mine were opened up again its capacity would be equal to at least 300 tons of coal per day.
513. What equivalent in wood do you reckon a ton of coal? 3 tons of wood to 1 ton of coal for smelting purposes.
514. And you estimate that the mine, if in full work, would consume 300 tons of wood per day? I think so; but I would put it in a different way, and say it would be probable we should use from 100 to 200 tons of coal per day brought from the coal-mines, and that we should return the trucks with 100 or 200 tons of ore to the mines for smelting. That is the theory the Company has laid down, and we have gone into the matter of necessary improvements to be made in our machinery and furnaces to enable us to do the work.
515. You would obtain this coal, I presume, from Dubbo? From the nearest coal-mine available.
516. At present that is Dubbo? Yes; it is 12 miles on this side as it were of Dubbo, but the coal-measures go about 12 miles on the other side of Dubbo.
517. What distance are the coal-mines from the railway? At present, 12 miles. I have never been to them, but I am given to understand that that is the distance.
518. Is Dubbo the nearest station? I think it is.
519. Do you estimate that it would pay you to carry this ore from the Cobar mine to Dubbo, and then carry it 12 miles by teams? No, by rail. We should never think of carrying it by teams.
520. Would you construct a railway for yourselves to the coal-mine? Certainly.
521. You said just now that Cobar was principally supplied from the river;—what distance is it from Cobar to the shipping port on the river? 80 miles from Louth.
522. But what distance is it from Cobar to Nyngan? 80 miles.
523. So that Cobar is midway between the river and Nyngan? No. It is the same distance from our place, but it is at an angle.
524. How is it then that they can afford to pay for carriage from the river to Cobar, a distance of 80 miles, and cannot afford to pay the carriage from Nyngan to Cobar, a distance of 80 miles? First, because the vessels bring up the provisions from Adelaide at a lower rate than the railway can; and, secondly,

secondly, because the road between Cobar and Louth is often open and available when the road between Nyngan and Cobar is closed up.

525. But would not the river remain open all the same if the railway were constructed—would we not have to compete with the river? The river is sometimes not open for three years, and that spoils its usefulness to the settler there. You cannot depend upon it. It is just possible that the squatter up there may have had all his wire and shearing supplies landed when up comes the river. You can never calculate when it will be navigable.

526. Are there no dams and tanks between Nyngan and Cobar? It is not that matter, but the matter of the road being shut up through wet seasons, and although there are tanks there they are not sufficient for all times. Stock have access to them, and in dry seasons and in droughts they have to be sent away to pasture.

527. I am not alluding to stock, but more particularly to horses and the teams. I understood you to say that you have paid 1s. a pound for the carriage of certain articles by coach? Yes; flour, for instance.

528. Is there not sufficient water for teams? Yes; but there is no feed. Along a line of road like that travelling stock making their way to market eat every blade of grass which they can get at.

529. Cannot they supply themselves with oats or feed from other places by train to Nyngan? Yes; but do you know what the cost of fodder was in that district last year? They were paying as high as 6d. a lb. for chaff to feed their teams on. That will give you an idea of the difficulties to be contended with in that district.

530. That is at Cobar, I presume? In that district.

531. How much a pound did you pay for oats? I do not know I am sure, but I know that is what was paid for chaff.

532. I should imagine it would be cheaper to buy oats than pay 6d. a pound for chaff? I have paid myself 1s. a quart for oats to feed my horses on, and that is equal to 32s. a bushel. People in Sydney cannot understand this kind of thing.

533. What has been the usual price for carriage from Nyngan to Cobar for mine supplies? I could not tell you exactly, but I think the average in fair seasons has been about £4 or £4 10s. a ton.

534. What do you pay for the carriage of the copper from the mine to Nyngan? £2 10s. to £3; but at times we have had hundreds of tons—as much as 1,500 tons—of copper on the mine, utterly unable to get it away.

535. Supposing the mine were at work again, could you give the Committee an idea as to the amount of carriage which would accrue in bringing copper from the mine? That would depend upon whether we elected to smelt part at the coalfields or not. If we smelted the whole there we should reckon on having about 5,000 tons of copper a year.

536. Could you tell the Committee how many tons of copper you sent away the last year you were at work, and how many tons of firewood you used? I cannot tell you from memory, but I could send the information to you. I could get it at the office at any time.

537. Will you prepare a paper and send it to the Committee, giving the information required for the last half year you were in full work? Yes, I shall be glad to do so.

538. Is there not a copper mine somewhere about Hermitage Plains? Yes; it is called the new Burra Burra.

539. Do you know anything about the mine? Yes; it was under offer to me and I inspected it.

540. Is that mine likely to supply much carriage to the railway? I think it is a fairly good mine. They talk about it being twice as big as Cobar, but that is all nonsense. It is not a quarter as big.

541. How many miles will that mine be from the proposed line of railway? About 3 miles; but there are several mines there as good as that. I know of one or two which have better surface indications than that mine. The Government would therefore not have to depend solely on the Cobar mine. I believe that if there were a railway through the country, and given copper at its lowest price, £50 a ton, you would have from six to twelve mines at work directly.

542. Have you ever seen wheat grown at Hermitage Plains, at Mr. Hall's place? Yes; I have seen as fine wheat there as any I have seen in my life, and it is produced in marvellous quantities. There is also lucerne and hay grown there.

543. Do you think there would be any chance if the wheat were sown early enough to get the benefit of the winter rains, to grow wheat extensively in that district? I do not think so. I think that most of the cultivation that will be carried out there will consist in growing the fodder which is used in the district. I believe there is more fodder grown there this year than will be used in the district, as this is an exceptionally good year. I hear that the crops are heavy everywhere, but I do not think you could depend upon the district for wheat growing, as the seasons are too variable. No doubt the average rainfall is sufficient for wheat growth, if it came at regular seasons, but it does not do so. We have an enormous number of rains which are under an inch, and they are no good for anything.

544. Do you know of any limestone in the district? Plenty.

545. Do you know of any iron lodes in the district? Yes; some of the largest I ever saw in my life are in that district.

546. You have stated that you have given railway construction a good deal of attention, and you have suggested converting the culverts into dams? Yes, in places where water is required.

547. Did it never strike you that these dams would be likely to overflow and wash away the railway line? No, I would not allow them to do that. Instead of making a deep culvert I would make a level culvert, there would then be no rush of water. If a puddle-dam were placed alongside the line it would throw back water for three-quarters of a mile.

548. Would not that soon evaporate? Of course it would evaporate.

549. Assuming that the water extended back from the line half a mile, would not there be a danger of it rising higher than the dam and overflowing the line? No, not if the culvert was made under the rails and at a level with the line. There would be the by-wash.

550. How would you get a by-wash without taking it over the railway? I would take it over the railway. We could not do better. I think that is what is being done in many cases all through northern Queensland.

551. But have they converted their culverts into dams there? Yes, and they supply their engines from them.

R. Barton,  
Esq.

2 Oct., 1889

- R. Barton, Esq.  
2 Oct., 1889.
552. And do they lay the sleepers down on the ground? Yes, in some places. They lay them on longitudinal sleepers, and fill up with stones, and let the water go over them. In other places they put in stone-wall dams.
553. Do they use metal between the sleepers for ballasting? In some places they do. My own idea is that the difficulty is that our railway engineers have been in the habit of constructing railways for enormous traffic, and they want to run trains at a greater rate of speed than there is any necessity. What does it matter when you get into the interior, over the Dividing range, whether a train occupies twelve or twenty-four hours on its journey. In going to and from Cobar it would not matter to us whether the copper was two or three days on its journey. We do not want trains so very often. There is no necessity to run a daily train as is done to Bourke.
554. Don't you think there is a probability of the people swearing a little if they ride in a train travelling at so slow a speed? They will swear under any conditions. They will swear if they do not get a train, and they will swear if they do get one, and they will swear if they get their goods at half the cost they paid for them before. I never could understand why you should carry freight into the interior below a paying price. I have been in the habit for twenty years of paying £15 a ton for the carriage of my wool from Bourke to Sydney. Why should I grumble now at paying £5. The Government seem to imagine that in running a railway train in the interior they must run at a pace which is run in the settled districts.
555. You have had a station near Cobar for some time? No; I have had two or three near Bourke for many years.
556. You do not know what the cost of carriage of wool from Nyngan to Cobar is? Yes; I do know the cost has always been sufficiently high to take the teams from the carriage of copper.
557. *Dr. Garran.*] I understand you to say that if the line were constructed, and you were working the mine, you could always fill the returned coal trucks with ore? That is the idea. It is only a theory of mine in working the mine in the future, and it is borne out by the advice of our late manager, in whom we have a great deal of trust.
558. But you are not prepared to say positively that you could give the Government a full load both ways? No; but it would not make any difference to the Government at all; because if we did not send our ore away we must take wood or coal in place of it. It is to our own advantage that the trucks should go up loaded. I am given to understand by the late Commissioner of Railways that if our trucks travelled 100 miles full, and returned full, they could carry produce at a very low rate per ton per mile. They have even gone as far as to say that a large amount of produce could be carried at a half-penny per ton per mile each way. It is done in America and in other places. Even private railways in America carry as low as a half penny per mile over level country. In making my calculations upon that basis, I came to the conclusion that it would be an immense advantage to us to take up 200 or 300 tons of coal to the mine, and return with 200 or 300 tons of ore, carried over the same line and in the same trucks, the Government simply doing the hauling.
559. But acting on the principle which you explained to Mr. Copeland, you would not think of asking the Government to carry at that price? This is a Company. I am speaking before individuals.
560. You remember that for many years there was a return trade between Wallaroo and the Waratah coal-mines, carrying ore one way and coal the other? No, I was never there often enough to find out.
561. Supposing the Dubbo coal did not turn out so satisfactorily as you seem to anticipate it will, what would be the next nearest coal-mine—the Wallerawang? I am not sure. I think there is coal in the vicinity of Wellington. Father Curran, of Cobar, has told me that he has seen some magnificent coal between Dubbo and Wellington, only 12 or 15 miles back from the line.
562. If the coal was of the same quality, and the Dubbo coal should not turn out well, it is possible that the Wellington coal may not turn out well? It might not; but we have tested the Dubbo coal, and we know that if the quantity is there, the quality is good enough for smelting purposes. We had a good many tons carted to Cobar, and used in the furnaces for the purpose of testing it. It was a good, fair, commercial test, made for our own satisfaction, and in order that we might know whether, if the railway were constructed, we could depend upon getting supplies necessary for smelting purposes.
563. You say that you made a small tramway to get your wood? Yes.
564. What did it cost you per mile? I could not tell you that. I can only tell you it cost us at first double what it cost us after we got experience in laying it down; and after we had become experienced, in using wooden instead of steel sleepers. The tramway was originally imported from Sir. John Fowler and Co. It was supposed we could lay down a quarter of a mile per day. We found it would be to our advantage to use wooden sleepers, and we have used them since. I can however append all the information that is asked for to my evidence.
565. Was that a narrow gauge-tramway? It was.
566. Did you gain any experience in the laying down of that line to show whether that was really a cheaper design than a branch line would be? Yes; we got this knowledge of it: that the cheapest and best line is a steel rail on wooden sleepers; but where we gained an immense experience—which I place at the disposal of the Commissioners of Railways—was in regard to the cost of keeping the tramway in repair. The tramway has not cost us more than 10s. per mile per month to keep in repair since it was laid down. You can compare that with the Government line. We were running 32 trains a day over it of seven carriages each.
567. How many tons did you carry? About 18 tons of wood, and we ran as many as 32 trains a day. The cost of repairs will be considerably reduced when we get all the wooden sleepers laid down. I think you might reckon the cost of repairs per mile per month on the Government railways is at least £10.
568. Did you use horse-power haulage? Oh, dear no; we used steam.
569. What was the full carrying capacity of that line per day? I could not tell you that; because our engines and everything else were out of repair, and we had not the proper workshops to mend them.
570. But did the loads you carried test the power of your engines fully? Yes; we only had small engines, said to be equal to 30 tons over the gradients we laid down.
571. What were the worst gradients you had? I think 1 in 40.
572. An engine of that power would not carry traffic between Cobar and Nyngan? No; it would be too light.

R. Barton,  
Esq.  
2 Oct., 1889.

573. If you were making this line from Nyngan to Cobar, you would put down steel rails? I would make them nearly as strong as on the main trunk line.
574. You would not save in the metal? No; I should not try to save in it. I should try to save by putting down such sleepers as I could get within reasonable distance of the line, and I should lay them as nearly as possible on the crust, simply constructing a drain on each side to keep the water off.
575. But in laying out the line you would instruct surveyors to get the easiest gradient? Yes.
576. Do you think you could get gradients of 1 in 100 between Nyngan and Cobar without deviating very much? Yes.
577. I understand that you have no wooden sleepers on this line of yours? Yes we have. Originally we had steel sleepers, but we have thrown them away.
578. You did not use the iron posts to rest the rails on? No; we had steel sleepers, which rested on the surface of the ground.
579. Did they cut into the ground? No; but they vibrated and shifted, through the jar caused by travelling.
580. Did you make side cuttings and throw up the material as ballast? No; we never dreamt of it. We carried it wherever we could on the dead level.
581. Then you have not made any experiments in that particular locality as to whether the side cutting would serve for ballast? Oh, yes; wherever we had to make a cutting for the side we used the earth for ballast.
582. Did you make any experiments? Oh, yes, for several miles.
583. How did it answer? Very well.
584. When rain came did it wash the stuff away? No.
585. Did it harden after being thrown up? Yes, and it had a good crust upon it.
586. I understand you to say that the crust of the ground there is hard, and that if you cut through it becomes soft? Yes.
587. Then the stuff you threw up would be soft? It would be soft at first, but being exposed it would become stiff and hard. Of course it would be rammed down before the sleepers were put on.
588. The estimate before us for this line from Nyngan to Cobar is about £2,500 a mile;—do you think it can be made for that? Does that include everything.
589. Yes, exclusive of rolling stock, I think, and exclusive of land? I believe there is not much land to purchase—there could not be more than a few acres.
590. Do you think the line could be made for that? I think it could, and a good line too.
591. Do you think there is any need for fencing on that line? Not the slightest. You do not want to travel at high speeds, and there is no necessity for travelling by night.
592. We should want nothing but a few level crossings? That is all.
593. Did you, on your own tramway, make the dams you speak of? No; we had no necessity for them. It was only a short line, and we had a large tank at one end with water laid on, so that we could always fill the engines from there.
594. Would you make the by-washes you speak of of wood or concrete? Of wood. I should not use concrete or sandstone all along the line. I should use timber throughout.
595. A shallow by-wash would carry off the waters? Yes.
596. You said that you had seen places where this was done in Queensland? Yes.
597. Were they made of wood? Yes; all of wood.
598. Does not the wood rot through this alternate exposure and covering? I daresay it would; but it is cheap. We find that our overshot dams there last for a great many years.
599. What particular wood did you use? Box.
600. Did it last well? Wonderfully well.
601. Do you think it would be good enough for a Government railway? I do; and on the river, when you go to the other end, red gum would be obtained.
602. You said that you think that the country could, in fair seasons, grow fodder;—do you think that it would pay to export any of the fodder if there were a surplus? No.
603. The growers must look to the local market to get rid of it? Yes; what they grow one year they can sell at high prices the next. They were selling hay last year at £20 a ton, resold at £40.
604. Will they be able to grow more this year than they will want? Yes; they will probably be able to stack it, and next year they will get good prices for it if there is a dry season.
605. If the local market was the sole market for produce there would not be much carried on the railway? There would be a traffic in hay in dry seasons in three out of five years.
606. But there would be no produce exported? No; because the probability is that when there was a good season there would be a good season elsewhere, so that it would pay them better to stack their hay than to send it away.
607. The only return traffic we can expect will be wool, live stock, and minerals? And supplies.
608. I mean traffic from the district? Yes; wool, livestock, and stock going away to pastures in great drought. It is a great saving to the country if you can take stock away to other pastures in time of drought.
609. You have recently paid a visit to Silverton? I have.
610. There is a private tramway there? Yes.
611. Is it paying? Enormously.
612. Do they charge at the Government rates? No; their rates are a great deal higher than the Government rates, and the Adelaide rates are higher than ours.
613. Would that tramway pay at the Government rates? I could not answer that question; I do not know.
614. Where private people are at liberty to charge a price that their customers will pay, these railways are profitable;—we have two instances in the Colony of private railways paying? I think so. This tramway at Silverton is paying enormously, and they are trying to get a duplicate line from the Border to Broken Hill.
615. Do you think that there is room for both railways? I do; and both will pay enormous dividends on the money expended.
616. You explained to Mr. Copeland, I think, that there is a line of copper mines between Cobar and the

- R. Barton,  
Esq.  
Oct., 1889.
- the Lachlan? They do not come near the Lachlan. There are a great number of mines there. Nymagee is only 30 miles from Cobar, and then there is Mount Hope.
617. There is nothing between there and the Lachlan? Not that I know of.
618. I asked that question because I wanted to know whether a line from the Lachlan would suit the district better than a line from Nyngan to Cobar? It would not suit it so well.
619. Would it suit the pastoral traffic of the district so well? There would be only the same pastoral traffic on it.
620. The line from Nyngan to Cobar leaves the main line at an angle, and therefore it does not collect any traffic for some distance. That is taken by the main line? Yes; it only takes traffic from the centre.
621. And as we go west we have to compete with the Darling? When the river is up.
622. Would a line from the Lachlan through Cobar give more general accommodation than the proposed line? I do not think that it would.
623. You do not think that there would be anything gained by making a line parallel with the existing line further to the south? I do not think so. You would have to go over rougher country.
624. The country would not be so easy? No. I rode over it on purpose to see.
625. If the district is to be accommodated you think that on the whole Nyngan is the best point from which to start? Yes.
626. Looking at Broken Hill as the terminus to be reached by our railways, do you think that this route is better than one from the Lachlan, through Condobolin, or from Hay? I do.
627. Do you know the country between Condobolin and Menindie? Yes.
628. Is it as good as that between Condobolin and Wilcannia? It is in some places, but there is a lot of swampy ground.
629. I suppose that actually the shortest route we could make to Silverton would be from Hay? I suppose it would.
630. Do you know the country between these two points? No, I do not.
631. From your knowledge of the district bordering on the Darling, you think that this is the best route to get to it? I do.
632. I understand that to Dubbo the gradients will be easy; but that between Dubbo and Sydney are the worst gradients that we have? Yes.
633. You do not think it would be better to make a line to serve this district from the southern line? —
634. You have said that we cannot trust to the mineral traffic from this district unless copper reaches £50 a ton. Supposing that it does not reach that price, do you think that the other traffic will pay? —
635. Do you think it would be better to run through to Wilcannia than to Cobar? No, not unless the line were run through to Broken Hill.
636. If it were your own private speculation you would rather run from Nyngan to Broken Hill than stop at Cobar? I should, because Broken Hill must be in the future the best district in New South Wales. It is going to be an enormous district, 100,000 people residing there.
637. Although there will be a large population there, you do not suppose that we should take the whole of the traffic? We should take a considerable portion of it. At the present time silver is coming here from there by water; but if there were a railway it would come by train, and there would be an enormous traffic.
638. Must that silver be smelted with coke, or can coal be used? It must be smelted with coke. That is the present way of smelting. They have no furnaces in which to smelt with coal.
639. Could they make furnaces? They have not found any way of doing it yet.
640. We could not send coke from any of our coal-fields in the eastern parts of the country to Broken Hill as cheaply as they could import it from England? I think we could. I think we make coke equal to any English coke. The coke will be taken from the mountains to Broken Hill, and the ore will be brought back. I have spoken to a number of the large mining managers there, and to people interested in the mines, and it is their idea that if they had a direct line to Sydney they would bring coke one way and send ore the other, supposing that the freights were fair for the haulage power only.
641. They have tried our coke. Does it contain more or less ash than that brought from England? They told me that it was admirable.
642. Could we lay it down at better prices? I fancy that we could lay it down as cheaply, and we should have the advantage of taking back the ore.
643. On equal prices do you think that we could cut out the English coke? I think we could.
644. With a difference of 5 or 10 per cent. you are sure that we should? I think we should be about on a par with the English coke; and I have no doubt that in the future we should be able to compete with it. We could also send large quantities of timber, which at present they have to get from New Zealand, Tasmania, and Swan River.
645. *Mr. Cox.*] Of course you are aware, having had a long experience there, that the timber grown in that dry country is very much harder than that grown in moister climates? I believe that is so.
646. And that apparently poor timber will last very much longer when used than better looking timber grown in a moist climate? Yes.
647. Believing that a railway could be made from Nyngan to Cobar, and then on at the rate of about £1,500 per mile—and we have reason to suppose that it could be made at that price because a tender was made at that amount—do you think the traffic to the metropolis in wool, minerals, and live stock, and of goods outwards would be sufficient to warrant the expenditure of that money? I do, and to show you that it was thought so by thoroughly practical business men, I had the whole capital for the Cobar railway subscribed when I asked for permission from the then Government to construct it. Mr. Lackey was then Secretary for Works, and Sir Henry Parkes Colonial Secretary; but I did not get an answer to my letter until that Government went out of office. When Sir Alexander Stuart came into power he answered the letter within a few weeks. Mr. Copeland was then, I think, Secretary for Works, and I know that he was against a private railway, because he told me that he would not have one constructed. The answer of the Government was that they would not allow us to construct any more private railways in New South Wales.

648. Your interests do not extend westerly, beyond Cobar? I have no interest at Cobar now. I have no interest in the district except one little station near Bourke.

649. Therefore you do not think that Cobar should be the terminus of the railway? Certainly not now. At the time I advocated the railway I thought that there was good warranty for the construction of a railway to Cobar—that it would have paid a private company or the Government to construct it. Of course, since the development at Broken Hill, and the opening up of the whole country north and west of Wilcannia, I think that the railway should go on.

650. *Mr. Garrard.*] And because of the shutting down of Cobar? As I said before, Cobar was shut down simply because we could not get firewood.

651. Is the country between Cobar and Wilcannia all equally good? It is not equally good; but it is all level grazing country.

652. There are no engineering difficulties in the way of the construction of a railway? None at all. I think the Department know that now. They have had a rough survey made of the whole of it, and have all the facts before them.

653. You are familiar with the whole of the country between the western line and Wilcannia and Wentworth—I mean the country east of the Darling? I know it all.

654. Do you know the route of the proposed line through Forbes? Yes.

655. Do you think that the proposed line from Nyngan to Cobar and on to Wilcannia is the best that can be made? I do. I think that is the first line that should be made; but I also think that the line through Parkes and Condobolin across to the Darling should be made at some future time, and no doubt some day it will be made. I think that the Nyngan to Cobar line should be made at once. It is the most important line that we have, and will connect the enormously wealthy district of Broken Hill with Sydney. I think it is a standing disgrace, as I said the other day at Broken Hill, that no steps have been taken to make that line before.

656. You said just now that you were firmly under the belief that the trade would justify a line from Nyngan to Cobar? I proposed to make such a line myself. That is proof that I am.

657. At that time the mines in and about Cobar were working very much more fully than they have been of late? Yes, because then we were in hopes of getting a railway. We have been buoyed up by promises from every Minister who has been in power that we should get a railway, and the House approved of its being made. Because of those promises we extended our works until we found out that the promises of politicians were not to be depended upon.

658. But there has been no development in the district lately, but rather a going back because of the low price of copper? Other mines have been discovered. Gold-mines are being opened up in every direction.

659. You told Mr. Lackey that if the railway were constructed you did not think the mines would be reopened because of the present low price of copper? Our mines are not shut. It is only the Cobar mine that is shut. Nymagee is still working, and the other mines will undoubtedly go on. Cobar is peculiarly placed. It has an enormous supply of low class ore, but it would be necessary that copper should be £50 a ton before we could employ the thousands of men that we should have to employ to make the mine pay. £50 a ton is below the minimum price of copper. We could work Cobar at that. There are only a few mines in the world that can work copper at a profit at the present time.

660. I suppose all the wool west of Cobar would naturally gravitate to the Darling? No, except when the Darling was in flood. When you have a railway it is open at all times, and though you may not be able to get teams this week, next week, or the week after, you can get them at some time to take your wool, but with the river it is different. It is only open for a few weeks, and if you cannot run in your wool to catch the steamer you cannot send it. You would say "the river is falling and it will take the drays a week or a fortnight to get there, so that I shall not be able to send it," and it would be sent by railway. The river does very little compared with the railway.

661. Is it not a fact that since the railway has been constructed to Bourke a large quantity of wool has been sent by the river? I cannot tell. My station is on the river and I have never yet sent a bale of wool by it.

662. How far are you from the river? I am 9 miles from the railway and right on the river.

663. Supposing the Nyngan to Cobar line were out of consideration altogether, and that it were proposed to make a line from the present Western line through Condobolin, should it go to Wilcannia or to Wentworth? Certainly not to Wilcannia. I should take it down to Menindie, or below Menindie.

664. Which is the more important town, Menindie or Wilcannia? Menindie is a very small town. It has never been a thriving place. Wilcannia has always been the more important of the two.

665. At any rate you do not think that the Forbes line should go to Wilcannia, but that it should go further down? That it should catch the trade lower down. I should take it from the bend of the Lachlan, below Condobolin, straight through to the river, by the best road you could get.

666. *Mr. Humphery.*] Do you know what the cost of coke is at Broken Hill at the present time? No, I do not.

667. You have no information whatever upon that subject? Not here. I brought back certain memoranda for comparison, but I cannot recollect the figures now.

668. In the event of the Cobar mine ceasing to work, what would be the other source of revenue to the railway? The traffic from the other mines in the district—wool, stock, tallow, hides, and all kinds of pastoral produce, as well as the whole of the supplies for improvements going on in the district.

669. Without going over any portion of the evidence, or any of those points that have already been worked out by the gentlemen who have examined you, I wish to know whether the line would be a profitable one even if it were not extended? I am quite sure that a line going to Cobar alone, if it did not go a mile further, would be profitable if worked upon purely economical principles in the way that you and I would work it if we had an interest in it, not having expensive stations, and a great number of men hanging about, doing nothing. If economically worked, the railway to Cobar would pay, and would always have paid since the conception of the idea.

670. Can you furnish a statement to the Committee showing the probable earnings of the line and the cost of working it? We have furnished the probable earnings of the line to the Government on several occasions.

671. Will you furnish us with such a statement? Yes, I should be very glad to do so.

672. *Mr. O'Sullivan.*] In answer to the Chairman, I think you spoke of the surveyors having taken the line

R. Barton,  
Esq.  
2 Oct., 1889.

R. Barton,  
Esq.  
2 Oct., 1889.

line over a difficult portion of the country near "Budd's Hotel," and you recommended a detour;—would that be likely to increase the cost of the line much? No, certainly not. It was one of those points in the laying out of the line which you find are notorious in the immediate district. People called my attention to the matter, and said, jocularly, that they supposed I had got it done to suit my public-house. I said, "Where would you take it," and they said, "Through the back of the 40 acres, and round the hill"; and I saw it in a moment. I did not go over the route; but when it was pointed out to me I saw that a curve would have avoided the ridge.

673. About what length would the curve be? I cannot tell you. It did not look to be a long one, because you could stand at the hotel door and see the plain going round.

674. Would that be less than 3 miles? I think so; but as I said before, I did not go over the ground.

675. Would this detour be to the north of the dam at Budd's? Yes; it would leave Budd's altogether. Budd's is really my property.

676. You also spoke of a mine called the C.S.A. mine;—what is the proper name of that mine? It was a copper mine—the Cornish Scottish and Australian mine. The shares at one time were up to £16.

677. *Mr. Lee.*] What are they now? Nothing.

678. *Mr. O'Sullivan.*] In your evidence you threw out a suggestion that the trains on the proposed line, instead of going every day, should run two or three times a week? As often as was necessary.

679. I suppose you are aware that all that time the wages of the maintenance men would be going on? I do not think that we should have those men. I do not know why they are appointed. I never see them doing anything when I pass in the train. I think myself that the work is only to give billets to the unemployed. When I tell you that our tramway, with thirty-two trains a day going over it, only costs us 10s. per mile per month for maintenance, you will understand what maintenance men are required. These men are all sorts of things. They keep all kinds of stores and goods, and in some places they have sly grog-shops. In other places they are accused of putting rabbits over the line for the squatters. I do not say that they do these things; but if they were fully employed they would not be accused of doing them. There are three or four of these men where there should only be one.

680. You think that a large number of the maintenance men could be dispensed with? Undoubtedly.

681. In view of the trains being run on the lines two or three times a week instead of every day? In view of anything. If you ran as many trains as you liked there would be too many maintenance men.

682. Do you think that the Bourke people would consent to an arrangement like this—that the trains should be run three days a week to Bourke and the other three days to Cobar? That I do not know. I would sooner leave Bourke out of the question. They will say, "You want to do all you can for Cobar, but you do not care anything about Bourke."

683. Putting out of sight the fact that the Cobar line is a mere local line, which you contend would pay as that,—do you think that if it were taken through to Broken Hill and the South Australian Border, and a connection made to Werris Creek, it would become a great intercolonial line? I do not know anything about that.

684. I mean, if a connection were made between the western and northern lines at Dubbo and Werris Creek? I would not give an opinion about that. The other line I have studied.

685. Which line? The Nyngan and Cobar line. I know all that part of the country, but I could give you no information about the country near Werris Creek.

686. Are you aware that it is the design of certain officials and gentlemen who have made a study of this matter that a connection should be made between the northern line at Werris Creek and the western line at Dubbo, so as to form a direct line from South Australia to Queensland? I am not. It is a matter to which I have never given any attention.

687. Supposing a line were made from Werris Creek to Dubbo or to Nyngan, and extended from Nyngan through Cobar, Wilcannia, Broken Hill, to South Australia, would it become a great intercolonial line between Adelaide and Brisbane? I think the principal traffic from Cobar and Broken Hill would go to Sydney instead of to Adelaide.

688. I want to know, you being a gentleman of wide experience in the four Colonies, whether such a line would be a successful intercolonial line? It would be, as far as direct intercourse between Queensland and South Australia, or between Queensland and Broken Hill was concerned; but I should take it that a large portion of the trade between Queensland and New South Wales was done in Sydney, and that therefore people coming from Queensland would go on to Sydney.

689. I am referring now more particularly to the trade that might arise between South Australia and Queensland and to the passenger traffic;—would it not be likely to go that way instead of going 500 or 600 miles further by another route? Of course they would take the shortest route for any trade between the two Colonies; but I do not know what that is.

690. If the line were carried out, would you consider that its chief intention? Which line.

691. From Werris Creek to Dubbo, and through Nyngan on to South Australia;—would you consider the intercolonial aspect of such a line its chief recommendation? No; it would be a recommendation. My idea about railways is that a cheap line of railway is the cheapest possible road you can construct and keep in repair, and it gives the greatest advantage to the people holding or cultivating land on each side of it. I think that where it can be shown that a line of railway will pay interest on the capital expended on it, or anything near that, it should be constructed, not always at once, but some time in the near future. I could not give an opinion about the capabilities of country about which I know nothing. I know perhaps less of the country near Werris Creek than of any other place in the Colony.

692. You know that a large amount of bullion from Broken Hill is sent to Port Pirie and brought on to Sydney? Nearly the whole of it is brought to Sydney at the present time.

693. To be used as "stiffening" for ships bound to London? Yes.

694. Would that come by train if the railway were constructed? Yes; it would all come by the railway. It is one of the chief reasons why they are agitating for a railway to Broken Hill—to send away ore and to bring back coke.

695. I understood you to say that our coke would be equal to the English coke, and that it could compete with it? That is what I gathered from a conversation with the mining manager when I was there. They had it tested, and they thought that if a railway were constructed a very large amount of freight would be carried backwards and forwards.

696. *Mr. Tonkin.*] What prices do you pay per ton for the wood consumed in the furnaces, or what have you been paying in the past? An average of about 7s. 6d. per ton.

697.

R. Barton,  
Esq.  
2 Oct., 1889.

697. What price do you suppose you would be able to pay for coal if you got it delivered there? Of course we should get it as cheaply as we possibly could. We have not thought that 7s. a ton for good wood was a very high price. We fancy that we could take it at that price, and in that case we should pay £1 or 25s. for coal.
698. You would not be able to pay £1 12s. 6d.? I cannot say that we should not; but we should not if we could help it.
699. Do you know whether there is sufficient coal at Dubbo to supply your wants? My information about it has been derived principally from Father Curran. He says that when the mines there are opened up and worked they will produce large quantities of coal.
700. Why have they not been opened up? Simply because there is not a large demand for coal.
701. Do you not know that the local consumption would command a fair output if it could be made? I should not have thought so. I should not think the local demand for coal was large enough to justify the opening up of the mines.
702. Do you know where the coal which is consumed round about Dubbo comes from? From Wallerawang.
703. Do you know what they pay for it at Dubbo? I do not.
704. Do you think they pay £1 a ton for it there? I should not be surprised.
705. Do you not think that it would pay the proprietors of the mines at Dubbo to put out the coal when they could get £1 a ton for it, while it is sold elsewhere for 8s. 6d. at the pit's mouth? I have been mixed up with one or two syndicates formed to open up these mines; and the reason why they have never succeeded is because they thought there would not be a sufficient demand for the coal to enable them to make a railway.
706. Do you not know that the Government have promised, that if they supplied a sample of the coal, the locomotives on the line would use it? I have heard so.
707. Do you not know that they have no coal except a little bit that has been dug up for samples? No; certainly not. I have been given to understand that there are excellent seams of coal there, though they are not very large.
708. Cannot you give us the reason why they are not worked? Simply because a company working a coal-mine within 20 miles of Dubbo would have to construct a railway, and capital for the work has not been forthcoming. I have been asked to form a company for the purpose; but I could not see my way clear to do so, because the consumption round about the town would not pay for the outlay.
709. Have you had the coal analysed? Yes; with a very good result.
710. Is not 30 per cent. of it ash? The analysis showed that it was a very fair coal. I am speaking of a property that Mr. Burslem, of Dubbo, was connected with. The property was under offer to some other gentlemen and myself.
711. Did you ever use any off the property that Mr. Penzer discovered? I do not know Mr. Penzer at all in the matter.
712. Have you any idea what was the average number of tons consumed monthly while the mine was at work; I do not mean wood altogether, but merchandise of all descriptions? I could give you that from the reports. I could not say from memory. If I had had an intimation previously that you wished me to give evidence I should have had all these facts prepared; but I only heard by chance that you wanted me, through seeing the Chairman. I am not prepared with any statements, which I might have had if I had been notified in time.
713. Have you ever tried any of the Lithgow coal? No; we have only tried 10 or 20 tons of coal sent from Dubbo.
714. The reason why I asked you whether you could pay £1 12s. a ton for coal was this: My opinion is that you would not get the coal at Dubbo, and putting it at the very worst, the Lithgow coal could be delivered at Cobar for about £1 12s. per ton; it is a very superior coal? What would be the carriage per mile?
715. Nearly a penny a mile? That would give the Government 50 per cent. profit on the hauling power; and I think that is more than any Government ought to have.
716. You said that the English coke was superior to the colonial coke? That is generally conceded; but several of the managers have said that they have tried colonial coke, and that it is nearly as good as the English coke.
717. Do you know where it came from? From two places—from Lithgow and Newcastle.
718. Is not the Newcastle coke superior to any inland coke? I am told that there are mines at Lithgow that could produce better coke than any Newcastle coke. It is better adapted for this purpose. I know nothing of coke or coal myself, except what I hear from other people.
719. What is the lowest price for copper at which you would be able to work the mine, supposing you had to pay 7s. a ton for firewood? £50 a ton for copper—that is to pay fair dividends on the mine.
720. Supposing the price of copper kept so low that you could not start the mine again, could you tell us what would be the population now employed in the gold and other mines that would not be affected by the price of copper? I could not tell you. Gold-mining there is entirely new; but at present there are a good many people employed, though the Cobar people themselves look forward to the day when there will be ten times as many people there. They say that payable mines are being opened up all over the district, and that mines are being discovered which only require machinery to make them pay well. That is partly proved by many of the mines that are already working under exceptional difficulties. It is probable that Cobar itself will be opened again as a gold-mine. We have lodes there, and it is quite a question whether in a few months it will not be reopened and a large number of hands employed in gold-mining.
721. I heard you say that in constructing a line you would in all cases, where you could possibly do it, lay the rails on the surface of the ground. Is your reason for that the fact that when you break up the surface of the ground it never stands the pressure of the sleepers as well as it did before it was broken? I think it would stand after a time; the ground settles down, and gets a cake or skin on it, which is very hard and lasting. My object in laying the rails in that way would be to save expense. I see no reason for raising the line above the surface of the plain, as we have done between Dubbo and Nyngan; it is only throwing away money. Instead of taking the stuff required to level up and make sidings from the tanks they excavated along the line, they let a contract for sinking the tanks at 2s. 6d. a yard. Those are things which I have seen going on under my very eyes.

- R. Barton, Esq.  
2 Oct., 1889.
722. Do you think that when this ground has once got a crust on it it stands as well as the unbroken surface does? Perhaps so. I would sooner have the line on the surface if I could get it.
723. Have you not just told us that on the line from Nyngan to Bourke, where there is an embankment and no rush of water, the ground is being dissolved and the rails undermined? If those rails had been put on the surface the surplus would have run over the line and disappeared, but as it was banked up 2 feet 6 inches in height it formed a sort of lake half a mile across, and soaked under the sleepers, making the soil the consistency of mortar.
724. It is not only a saving of money, but it is also much better for the rails to be on the surface than on the embankment? I think it is cheaper and better in every way.
725. Do you not know from your own experience that the soil in that part of the country dissolves when water lies on it or against it? I know the soil of which you are speaking, but it is not that kind of soil there. It is red soil, and will make good embankments and dams if taken out and thrown up. It will never become soft when it has once hardened.
726. Is it not the same formation as that between Nyngan and Bourke? In some places.
727. How was it that the softening which you spoke of occurred there? Because the soil was not hardened down properly. After the trains had been going over it for some years it would have hardened and the water would have soaked under the line.
728. I thought you were speaking of a case that happened a few months ago? No; it occurred soon after the railway was constructed.
729. Do you know that a few months ago a similar thing happened, and that they are now putting in culverts 24 feet wide where they had 6 feet openings? I was not aware of it. With the construction which I suggest no culverts would be required; the water would simply go over the line. There is no wash, because there is no fall on the land.
730. Do you think that the whole of the residents of Cobar, where copper-miners, gold-miners, pastoralists, or agriculturalists, would require 300 tons of produce per day, including coal, wood, and every other necessity? I should not like to answer that question without going into the facts. I have all the data. I have an estimate of the produce of the district in wool, stock, and everything else, and it might be very misleading to answer the question without looking at the figures.
731. You have promised to furnish that? Yes.
732. *Mr. Copeland.*] Can you tell the Committee what was the average yield of the ore during (say) the last six or twelve months that the mine was worked? The last year the mine was at work would hardly be a fair criterion of the average yield of ore, because no development was taking place. We should not have kept open the mine if we had not thought that the railway would be constructed. We instructed our manager simply to take out the ore that was available, but not to carry on any exploring works whatever. The average has been as high as 14 per cent. for the year, and it has been as low as 8 per cent. Some years it would go up to 11 and 12 per cent., and at other times it would come down to 8 and 9 per cent., according to the sort of ore which we were using.
733. Have you not worked out all those good quality ores? Our sulphides are at present a higher class than any we have had yet.
734. Can you say what they are worth? From 7 to 8 per cent. in bulk.
735. Can you say what the lowest percentage would pay? That would depend entirely upon outside circumstances—the price at which we could get our wood and labour, and the quantity we could put through. It would pay us probably to take out 10,000 tons a year when it would not pay us to work 5,000 tons. We must have large works with as little manual labour as possible, using machinery throughout. If we do that we can make the bulk of our ores pay well at what has been the minimum price of copper for many years—£50.
736. If copper were £50 a ton could you pay dividends on 8 per cent. ore? We could.
737. Could you do so without the railway? No; because we could not get fuel. We cannot open up the mine without getting a supply of fuel, and the only way we can get it is by the railway.
738. Are you quite satisfied that there is a large quantity of ore in the mine that would show 8 per cent.? I am quite satisfied.
739. If the railway were constructed you could pay dividends? If the railway were constructed, and the price of copper were £50 a ton, we could pay dividends.
740. To what number of men could you give employment in connection with the mine? 2,000 at any rate.
741. Directly or indirectly? Yes. I am not speaking of their families; I mean carriers, wood-cutters, miners, and outside men.
742. *Mr. Hurley.*] With regard to the annual output of copper, it is represented that 1,905 tons have been put out on the average per annum during ten years. I suppose that is pretty accurate? I have no idea.

THURSDAY, 3 OCTOBER, 1889.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Nyngan to Cobar.

Russell Barton, Esq., sworn, and further examined:—

- R. Barton, Esq.  
3 Oct., 1889.
743. *Mr. Hurley.*] Representations as to the condition of the Cobar Copper-mine were made in a petition which you presented some few years back;—can you say whether the statements contained in that petition are accurate? I do not know to what petition exactly you refer. A good many petitions have been presented from time to time in reference to the Cobar railway. A *précis* of what has taken place

place in regard to this line was put in my hands yesterday afternoon, but I find that the very first paragraph is wrong. "The first suggestion of a railway from Nyngan to Cobar is contained in the notice of petition from residents of Cobar, presented to the House, 27th August, 1884." The first time that the Cobar railway was thought of was at a large meeting held at the Chamber of Commerce in 1880, from which a deputation waited upon your vice-chairman, who was then Secretary for Works, on the 23rd January of the same year. Numerous petitions with reference to the line were sent in between that time and 1884.

R. Barton,  
Esq.  
3 Oct., 1889.

744. An agitation for the railway had been commenced in Sydney four years prior to the time mentioned in the first paragraph of the *précis*? Yes, in 1880.

745. Were you then a Member for the district? I was not, but I moved the resolution at that meeting, and spoke on the subject before Mr. Lackey. Then further down in the *précis* it speaks of *The Daily Telegraph* ridiculing the idea of a railway. But on the 23rd or 24th of January, 1880, that paper had a leading article commenting upon my speech, and strongly in favour of the railway.

746. But since then that paper has been consistently opposed to its construction? Yes.

747. At the time you presented the petition and took such an active interest in the line you had large interests at Cobar? Yes.

748. And you were also representing the district in Parliament? For part of the time. I represented it for seven or eight years.

749. Now you have virtually no interest in the construction of the railway? Nothing beyond a few hundred pounds in the whole of the district. I happen to have a mortgage or a claim of some kind on a public-house there, which I spoke of yesterday.

750. You are prepared to substantiate now the representations that you made when Member for the district? Of course. I never made any representation to the Government, I hope, for my own personal benefit.

751. The eighth paragraph of the *précis*, dated 29/4/86, says:—"Shortly after a petition from the residents of Cobar in favour of the proposed railway was presented to the Minister by Mr. Russell Barton. The petition stated that during the previous ten years the mines had produced an average of 1,905 tons of smelted copper per annum, of the value of £1,444,500, in the production of which there had been expended an average per annum of, for wages, £96,000; for cartage, £15,000; and firewood, £24,700; for railway freight, £5,500; hands employed, 700"? That is immediately in the mine, irrespective of wood-carters and outside men.

752. Continuing that paragraph down to the number of inhabitants in the district, do you believe that the representations made there are accurate? They were perfectly accurate at that time. I obtained this morning from one of our balance-sheets facts bearing that out. I find that we have spent in labour and material on the Cobar mine alone, irrespective of Nymagee and the other mines, over £1,500,000 sterling. Those are figures which speak for themselves.

753. How is that £1,500,000 spent? Principally in wages, and for the material required for the works.

754. Could you give us any idea of the actual return from that expenditure? Yes, I can. We have paid that money out of the mine and £154,000 in dividends.

755. What was the capital of the Company? The nominal capital was £80,000; but it was never called.

756. What amount of capital was called up? I think somewhere about £40,000 in all, from the very first of taking up the land. There were originally 20,000 old Cobar shares, upon which nothing was called—that is to say there was a trifle called on them for current expenses; but in the first year they paid a dividend of 5s., which far more than covered all the cost. That was from ore sold in Port Adelaide, which is not included in my estimate here, because we have no data whatever. That amount was 50 per cent. more than the whole of the expenditure up to that time. Then the mine was incorporated with another mine called the South Cobar mine. That mine had a capital, and it was divided altogether in 80,000 shares, Cobar I think taking 40,000, and Cobar South taking 40,000. I think about £30,000 was called up on the South Cobar, and that was all the capital that was ever called up. The rest has all been made.

757. In conveying machinery from the line to the mines, a very large amount of money has been paid for the carriage. You made a statement to the effect that if the line were constructed, your Company would be prepared to pay double rates? At that time.

758. Do you think that in the event of the construction of the line, and of the mine being properly worked as heretofore, you would carry out that proposition? I think so. I suggested at that time that the Company and the large storekeepers should individually become responsible for double the average freight charged on the line to Bourke; and our own firm, Barton Bros., of which I was a member at that time, together with the Cobar Copper Company, agreed to those terms, and I believe wrote letters to the Department stating their willingness to pay double freight for so many years—five years I think.

759. It says this in the *précis*, 9/6/87: Barton Bros. offered to enter into a bond to pay double rates if the railway were constructed. The Manager of the Cobar Copper Company also offered to pay double the local rate on copper from, and all goods to, Cobar, firewood to be excepted, and the arrangement to continue in force for five years. He was of opinion that others interested would consent to the same terms? That I think is right.

760. Do you think the Company would be prepared to carry out that proposition if the line were constructed now? I should fancy so. I have not heard anything to the contrary.

761. Do you believe that if the line were constructed the Company would put the mine into active work again? Of course. The mine is only in abeyance until the railway is constructed. We are not bankrupt. We have thousands of pounds invested at call, so as to be able to open the mine again at any minute.

762. The low price of copper and the difficulty of carriage prevents you from doing so? Yes.

763. The mine itself is in as good a position to produce a large quantity of copper as it ever was? Quite as good.

764. And you have other expectations? We have other lodes which we have never opened or touched—enormous lodes. The lode called the champion lode has never been touched.

765. You have a large area of land lying in the same district as the gold-reefs? The gold-reefs opened up there, if permanent, run through the whole of the Cobar property.

766. That is a matter of theory? It is a matter of theory, but from the bearing of the present lodes that are opened up they go through the Cobar property.

767.

- R. Barton,  
Esq.  
3 Oct., 1869.
767. From the report of your manager is it anticipated that work can be carried on in the old Cobar mine with advantage to the shareholders for many years to come? I had better, perhaps, in answer to that, read you a paragraph from the last report of our manager to the directors. This was written in the face of the present depression, and the falls in the price of copper, and he mentions that they have almost given up the hope of getting the railway. [*Paragraph read.*] Yesterday I said that at £50 we should go to work and open up the mine again if we had the railway, and this report exactly bears out my statement yesterday.
768. The question of firewood is of enormous importance to the mine? Yes.
769. One ton of good coal is equal to three tons of firewood? Yes.
770. If you could get coal at anything like 22s. 6d. per ton you would prefer it to wood? Certainly, because there is less labour in using it.
771. In your replies to Mr. Tonkin yesterday something was said about the coal in the immediate vicinity of Dubbo;—can you give us any information with regard to the difficulty of getting coal from Dubbo? I do not know that there would be any difficulty given the line from Dubbo. As I said yesterday, I am sure that the reason of those mines not being worked is the large expenditure that would be required between Dubbo and where they are situated. If those mines had been in close proximity to the station I should long ago have formed a syndicate to open them up; but I knew that before we could do anything in the matter we would have to construct 12 or 20 miles of railway over a rough country.
772. So that even if a line were constructed from Nyngan to Cobar before this coal could be of use to you another line of some 20 miles in length would have to be constructed from Dubbo to the mines? I am not sure of that. I am told that between Dubbo and Wellington the coal measures come close to the line. But the coal there was of no use to us without the railway, and as I could see no prospect of the railway I did not open it up.
773. Do you know that the Mines Department have put down several bores between Wellington and Byrock? I have heard something about it, but they would not be between Wellington and Byrock. They would not go beyond 10 miles of Dubbo.
774. At all events within 15 or 20 miles of Dubbo they have been putting down bores? I do not know. I have only heard of one bore near Dubbo. I do not know of anything beyond that.
775. There has been some coal discovered near Dubbo;—do you know the name of the company or the people to whom it belongs? The person from whom we get coal, and with whom we were in treaty about the matter was Burslem. There were some people interested with him in Sydney.
776. Have you any knowledge of the analysis that was made of that coal;—was it satisfactory? We gave it a better test than any analysis. We took 10 or 20 tons of the coal to Cobar, and tested it in one of our furnaces alongside of wood in the other. We found it was admirable coal for all purposes connected with smelting. You could not have a better test than that.
777. It is quite possible that if the mines round Dubbo were opened up it would be to the advantage of the Cobar people to take the coal? That is, given carriage at a reasonable rate.
778. If you could have it delivered at 22s. a ton? Yes.
779. Looking at the character of the country between Nyngan and Cobar, could you say whether, if water were conserved, the land would be suitable for agriculture, taking a range of 10 or 20 miles? Eight or nine years ago I should have said that the finest agricultural country in New South Wales was in the vicinity of Cobar; but having seen what has taken place during the last eight years through the extraordinary droughts which sweep over it, setting at defiance almost the laws of nature in reference to the rainfall, I should be very cautious in answering the question. Undoubtedly I have seen the finest crops of any in the Colony in the vicinity of Cobar in good seasons, but I have seen a rainfall of nearly 20 inches producing not even grass, because of its having fallen at the rate of an inch in twenty-four hours. The rainfall there is equal to the rainfall in places where magnificent crops are produced, and the soil is certainly equal to anything in the world for wheat; but sometimes even the native grasses will not grow for two and three years together, and consequently all the stock die off. I have travelled from Dubbo to Nymagee with the Honorable John Lackey, without seeing a living creature in the way of stock. We saw nothing but one or two crows until we got to Nymagee. That will show you the terrible state of that country during drought.
780. Have you heard from any scientific man, or could you give the Committee any information of your own in regard to the formation of the country between Nyngan and Cobar,—could you tell us whether it is a cretaceous formation? No; I think it is not.
781. Getting outside the boundary reefs? No. After leaving Nyngan you have primary rocks continually cropping up, and therefore you would not be likely to find any cretaceous formation along the line.
782. Is there not for 10 or 20 miles a red porous soil? Yes.
783. Is it not possible that there might be tributaries there leading to underground rivers? It is possible, but where the old seas and bays are covered up it is not possible to tell how far the indentations extend. Even the best geologist could not put his hand down on any particular spot, and say, "Here you will find water, and here you will not." That has been proved lately. We have found water at different depths from the surface, and you may get it at one place and not in another. It is just as if the harbour were covered over with 500 or 600 feet of soil. You would have to go down to the deep parts for water, and if you happened to strike upon an island or headland, or a sandy patch, you would not get it. We have been sinking over undoubtedly cretaceous country, where in all probability in five places out of six we shall get water in abundance; but in other places, where there is exactly the same formation, you may perhaps sink upon a higher bottom, and therefore will not get a water supply. They have been sinking at a place called Yandra, where the formation of the soil is similar to that in which we are boring; but so far their bores have been unsuccessful. They have got no water.
784. Still it is worth while the Government testing that country to see whether it is watered or not? It would be worth while. I discovered a cretaceous formation, and on my representation the Minister sent down Mr. David, and he bore out what I had said. Then some years ago, when Mr. Abbott was Minister for Mines, he gave instructions that a bore should be put down between Byrock and Bourke—but that has not yet been done. For 40 or 50 miles there is a cretaceous formation, and it would be of enormous benefit to the railway and to the stock route if water were found there. It has been proved that on this side of the Darling there is cretaceous country.

785. As a storekeeper doing a large trade in Cobar, did you generally get your goods from Sydney or from other places? I do not know anything about the storekeeping business; I never interfered in it. I was unfortunate enough to put a great deal of money into it, but I never took anything out of it. I never had anything to do with the management of it. I left the business to my partner and all I had to do was occasionally to find a few thousand pounds to put into the sink. R. Barton, Esq. 3 Oct., 1889.
786. Can you say whether any goods were conveyed up the Darling to Louth and then taken by waggon? Yes; but what proportion of our goods came up that way I do not know.
787. What would be the object of their coming that way? Cheaper and surer freight. Probably the road from Cobar to Dubbo was closed. In a drought or wet season the road is closed and you have to look about for some other way to bring your goods. At one time we got our goods from Hay across the back country. They came up to Deniliquin and were carted from there by teams as far as Bourke, simply because there was no other way to come. It was before the present tanks were sunk, and there was no water on the roads.
788. *Mr. Dowel.*] Can you say what is about the area through which the proposed line will pass that has been proved to contain payable minerals or metals? I could not give you that.
789. Is it a large area? A very large area.
790. It has been proved? It has been proved.
791. Is there any basalt through which the line will pass? Yes, there is a strip of country running from about 20 miles north-west of Parkes to about 25 miles north of Cobar. The whole of that country is more or less basalt, containing minerals—silver, gold, copper, tin, and iron.
792. Can you say what are the pastoral capabilities of the company? Yes. In some years the pastoral capabilities are nil. I do not care what improvements the squatters have. I have seen seasons there when the sheep will die whatever the improvements on the land may be; but in a year like this you could not overstock the country. It is subject to those terrible droughts to which that particular latitude all over the world is subject. They can stand one year's drought very well; but when it comes to 2, 3, or 4 years continuously they cannot do so. I have had thousands of pounds expended upon tanks there, and it has been three years and nine months before I have had an inch of water put into them. When the rain falls in quantities that will not fill your tanks the country is utterly useless. In some years the country will take ten sheep to the acre, while in others you could not keep a sheep to 50 acres, and in other years again you can keep a sheep to 4 or 5 acres.
793. Then not much revenue will be derived by the railway from the pastoral resources of the country? On an average it would carry about a sheep to 10 acres on improved runs.
794. Do you know whether there has been much land alienated there? Ever since the first promise to construct a railway to Cobar a great many homesteads have been taken up in anticipation of it; but a large number of these have now been abandoned. The proprietors found that the promises held out year after year were never performed. At one time driving to the Nymagee mine you would see selections with nice little cottages and gardens all along the road; but now you would not see one. They have thrown up their selections because they cannot get the railway there.
795. Because they have no cheap or direct communication with a market? That is it.
796. What is the thickness of the seams of coal at Dubbo? I do not know anything at all about that coal, except that I have been asked to form a syndicate to work it. My objection to doing so is that there is no railway there, and no demand for the coal other than the local demand, which is very small. The seams are said to be 3 feet and 3 feet 6 inches thick. I never went to inspect or see them, nor do I know much about coal.
797. It is also stated that some of the seams were not more than 18 inches thick? Yes.
798. You have expressed an opinion with regard to the construction of railways—are you a professional engineer? Not a bit of it. I have been a railway contractor for some years.
799. What lines of railway have you constructed? I have never constructed any line independently. I was on the South Australian lines some years ago—on the northern line in South Australia.
800. Did you take any personal supervision of that particular line? Yes.
801. Then you must have had some experience in the construction of railways? I have had a considerable amount of experience in matters of that sort throughout the country during the last fifty-one years, as a general contractor, and at times as a road maker.
802. You have stated that you are of opinion that it was only necessary to lay the sleepers down on the surface of the soil. Are you aware that it is the custom of the Department, and of railway engineers generally, to lay the sleepers on metal or ballast of some description? I am.
803. On this particular country you think the ballast could be done away with? I am quite sure of it. We have constructed 20 miles of tramway without using any.
804. What is the weight of the engine on your line? The engine is just sufficient to take 20 or 30 tons in a train.
805. What is the weight of it? I could not answer that.
806. Is it as large as an ordinary locomotive, or is it only a toy? You might call it only a toy, but it is equal to drawing 20 or 30 tons in a train, and 30 trains a day.
807. Do you know the weight of the lightest engines on our lines? No.
808. Would the line to which you are now referring carry an engine of 25 tons? No; it is a narrow gauge, and it is not constructed for that. But if it were constructed so that the load could be spread over it, there is no doubt that the line would carry any ordinary traffic, travelling the same rate as we do. We have used the ordinary soil as we went on to ballast the sleepers instead of using gravel and metal as they do elsewhere.
809. What is the character of the timber between Nyngan and Cobar? Every possible character you could have; but the trees are not very large nor very straight. The timber is small and stunted, as all the timber in the west is.
810. Ironbark? Some; not very much.
811. Is it not a fact that there is a large quantity of pine? A good deal of pine, and a great deal of box, and a sort of blue gum, which is a very hard and durable timber.
812. From your experience as a railway contractor have you any objection to half round sleepers for a railway? I should use them in preference to anything else, because they are much cheaper, and would answer every purpose required. They were used in South Australia in the early days, and were found to answer admirably.

- R. Barton,  
Esq.  
3 Oct., 1889.
813. *Mr. Lee.*] Fuel is of considerable importance to the Cobar mines? Yes; it has been hitherto the great difficulty.
814. At all events, the cost of fuel would be an important factor in working of the mines? It would be a very important factor.
815. What I should like to ascertain from you is, whether, knowing so much as you do about railway matters, and about the kind of trucks used for conveying stock, you could offer any suggestion to the Committee by which the empty stock trains could be used to carry coke, coal, or goods? I thought that was done at present. I thought the Government had latterly paid a very high price, £15,000 or £16,000 for a patent that was to get rid of that difficulty entirely. I know that some time ago I was asked to inspect a truck made on the combination principle, and looking at it apart from its adaptability to carry goods traffic, I thought it was the best possible truck I had seen for stock; and when I afterwards saw it loaded with goods as an experiment I thought it was just as good for carrying merchandise as it was for carrying stock. If it were not considered strong enough that difficulty could very easily be remedied. The truck I speak of was one invented by Mr. Wilkinson.
816. So far as you know those trucks are not in general use now? I do not think that anything further has been done about the matter. The Evans truck was adopted by the Department, but the Wilkinson truck, which seemed equal to it in other respects, was far better adapted to the carriage of stock.
817. You are aware that the departmental estimate of the cost of running a train, be it empty or full, is 4s. 6d. per mile? I am aware of that; but I do not know how it is got at.
818. At all events that is the departmental estimate? Is that over the mountains, where there are steep gradients and sharp curves, or on level country?
819. It is the average estimate. To bring stock from the country you are aware that it is necessary to run trains empty one way, and that there is a dead loss of 4s. 6d. per mile per train? Yes; but I do not know why.
820. If the trucks could be utilized to carry coal or coke for these large mines at a nominal cost, and I mean by a nominal cost, a cost that would enable the mine owners to purchase the commodity, would it not materially assist the development of the mines? Yes, and I think the development of the railways still more.
821. A great deal of return traffic to the railway would be created in the shape of ore? Of course there would.
822. Is it your opinion that if a combination truck were made that would carry both stock, or goods or minerals, it would be a great saving to the country and an important factor in the development of those mines a long distance from Sydney? There is no question about it. But I do not admit that 4s. 6d. per mile is a fair charge for trains on that level country.
823. *Mr. Tonkin.*] Could you give us the average number of stock trains that would run between Nyngan and Cobar? I could not tell you that at all.
824. You have an idea that this line could be laid down cheaply if trains were not run over it at as high a rate of speed as they are run over trunk lines? Just so. On these lines they have a maximum and an average gradient. The maximum gradient might be 1 in 40, while the average gradient would be less. By having lighter and slower trains it is not so important that you should lessen the average gradient so that the line could be constructed more cheaply. I think that it would serve this district just as well if trains took twenty-four hours instead of twelve hours to go to Cobar.
825. You are supposing that Cobar is made the terminus of the line but you would not say that trains should run at that rate of speed if this were a through line? Certainly not. If I expected the line to go through, and it were an intercolonial railway, I should make my gradients accordingly.
826. You think that if the cost of the construction of the line could be materially reduced, if trains were run on it at a less rate of speed than they are run on the main lines, it would be advisable to run them more slowly? I do, and I have always held that in that way we could construct two miles to one that we construct now. I think that a railway is about the only and the cheapest road that we can make in the interior.
827. Have you any idea what the cost would be of making a macadamised road there? No, nor has anyone else. We could not do it. We could not afford to cart the metal to make the road. I am sure that we could not make such a road for the same price at which you could make a railway. You would have to cart your metal for many miles at a stretch to get over the bad places.
828. *Vice-Chairman.*] With reference to the trucks of which you have been speaking, you think that they could as a rule be utilized for the purpose of carrying stock as well as goods traffic? I am sure they could.
829. That was the object of buying the invention? When I looked at Wilkinson's truck I merely looked at it from a squatter's point of view to see how it would do for the carriage of sheep and cattle. I consider that it is expressly adapted for the carriage of sheep because it is on the end loading principle, so that you can load right through and it makes no difference whether you have 50 or 100 trucks. I afterwards saw it loaded with goods and I think that, though Evans truck is adapted both for carrying stock and merchandise, yet it cannot compare with Wilkinson's as a stock truck.
830. The special merit of these trucks is that they can be used for goods traffic as well as for stock, so that instead of having to haul empty trucks for hundreds of miles into the country in order to bring stock back the trains can be loaded each way? Yes, and I know that the trucks are used in that way in other countries. I have been corresponding with some gentleman in America lately, and I have ascertained the fact that stock trucks are used there to convey goods as well.
831. You know the country well between Cobar and Wilcannia? I do.
832. Do you know the country between Condobolin and Wilcannia? Not so well. I rode across it once with the express purpose of seeing what the line was like.
833. Do you think the country between Condobolin and Wilcannia is as good as that between Cobar and Wilcannia? No. I think the line would be better if it went lower down so as to avoid the stony mulga ridges you meet with between Condobolin and Wilcannia. If you keep to the south you avoid those ridges and get into better country.
834. You are an old resident of the district? I have been there twenty-five years.
835. You have a tolerably accurate knowledge of the whole country and of the Darling especially? I think so.
836. Do you think that if a line is to be constructed to Wilcannia with the idea of eventually going on to

Broken Hill the route from Nyngan to Cobar would be the proper one? I think that that is the best line for the country.

R. Barton,  
Esq.

837. And you would recommend that the railway be constructed on an economical basis? Yes, everywhere, in order to enable us to get more railways.

3 Oct., 1889.

838. You are sure that the ballast could be taken from the sides of the line? In most places. In some places you would go over  $\frac{1}{2}$  a mile of swampy land where the soil would not be good for ballast. The local name for these places is "spew holes." I think it would be wise whenever you came across them to use other soil for ballast. They are invariably low places and would probably require some little ballasting to bring them up to the average level.

839. *Mr. O'Sullivan.*] Have you read of the report drawn up by Mr. Kirkcaldie with regard to the probable traffic on the lines? No, I have not, because Mr. Kirkcaldie or any one else would not have all the data on which to form an estimate of traffic. A great deal of the stores and supplies of the district were sent to Bourke in order to take advantage of the cheap freights under the differential system. Wright, Heaton, & Co., laid themselves out for this business, and enormous quantities of goods were sent to Bourke and distributed from there instead of from Nyngan. I know that at one time they were sending out a great deal.

840. You think that Mr. Kirkcaldie being a stranger to the district could not have been well enough acquainted with the local circumstances to be able to give an accurate report? I did not read his report. I read some of it and it seemed to me that he was not seized of all the facts. I know some of the parties who gave evidence about the freight before him, and he cut their estimate down one half.

841. You know that the report was an adverse one? I take that for granted by reading some of extracts here.

842. *Mr. Hurley.*] Is it not a fact that round your mine there are some tens of thousands of tons of slag which would be suitable for ballast? Yes.

843. Seeing the great advantage which the mine at Cobar would reap from the construction of the railway; do you think the Company would have any objection to making over to the Government any interest they had in that slag? Not a bit. It would be an immense item in the construction, if we used ballast.

844. The slag would be most suitable for ballast? Very suitable.

845. At Cobar we could get a great deal of ballast from the slag, and about 23 miles out we could get it from a place called Florida. That is the only basaltic formation between Cobar and Nyngan? Yes; but there are lots of other places where, if necessary, you could get ballast. There are large ridges from which you get great quantities of small quartz as they did on the Bourke line—that would be good for ballast if it were required.

846. Could you make arrangements with the Company for giving that slag to the Government for ballast? I am quite sure that the Company would be quite prepared to hand over the whole of their slag to the Government for railway purposes. With regard to the roads, I may say that in dry seasons they are as hard as a metal road, but in wet weather when the trams go through them they become very bad. On one occasion, when it was impossible to take the mails to Cobar, I went to Girilambone and drove to Cobar easily in a day, keeping along the squatters' roads, though they do not like you to do that, as a rule. Although these roads were good, the main roads were so bad, that in some places they would "bog a duck," as they say.

847. Will you have a letter written to the Committee offering the slag to the Government? I shall be very glad indeed to do so, if it would facilitate the matter. It is of no use to us. I have no doubt that they would continue to give it for ballast for some years to come if it were required.

John Harper, Esq., Railway Goods Superintendent, sworn, and examined:—

848. *Vice-Chairman.*] You are in the Railway Department? Yes, I am goods superintendent.

849. Have you any special district? No; I am in charge of the whole of the lines.

J. Harper,  
Esq.

850. Are there other goods superintendents besides yourself? No.

851. You have had considerable experience, I take it, in connection with the Western Railway? Yes; I have been twenty years engaged in the goods branch.

3 Oct., 1889.

852. You have frequently been over the country between Nyngan and Bourke? Yes.

853. You know the country between Nyngan, Girilambone, Trangie—all that district? Yes.

854. You are aware that it is proposed to construct a line between Nyngan and Cobar? Yes.

855. Have you ever been asked to give any information in reference to that line? Yes; I have reported on it.

856. How long ago? In January, 1888.

857. Did you traverse the line then? Yes.

858. You went through Cobar? To Cobar.

859. Did you go any further? I went out to Billago.

860. That would not be on the same line? No, it would not be on the line of extension to Wilcannia.

861. Have you furnished an official report to the Department? Yes.

862. Have you it with you? Yes; it is dated 9th January, 1888. [*Produced.*]

863. You took evidence, I suppose, when you went out into that district? I met the Progress Committee there, and they laid before me all the facts which they had at their command. They generally admitted that the estimate of traffic taken out by Mr. Kirkcaldie some few months previously was correct.

864. What do you reckon the distance between Nyngan and Cobar? It will be observed that in my report I simply add to Mr. Kirkcaldie's figures, taking all his totals.

865. Then Mr. Kirkcaldie made a report before yours? Yes.

866. Has he been out in the district? No, he never went to Cobar.

867. His was simply a return? Yes; compiled from the different stations at which the traffic came in.

868. A return showing the estimated traffic? No, the known traffic; the then present traffic.

869. What were the results shown by Mr. Kirkcaldie's investigations? I have only one copy of his report here.

870. What did he give as the annual income? £14,683.

871. What would have been the interest on the outlay according to his estimate—is that given also? No, he did not give it; that was dealt with by the late Commissioner. He simply gave the earnings, without showing the working expenses.

872.

- J. Harper,  
Esq.  
3 Oct., 1889.
872. Have you given the estimate made by the Commissioners? I think you have it at the back of the report which I have handed in.
873. According to this report the construction of the line would make a deficit? Yes.
874. You say that you have been over the proposed line yourself? Yes; I have been at Cobar twice.
875. Did it occur to you that the traffic of the district would be likely to be augmented or increased by the construction of the railway proposed? Not beyond that estimate.
876. Supposing that the railway were constructed further on, to Wilcannia and ultimately to Broken Hill, do you think there would be an increase in the traffic? May I be allowed to venture an opinion as to that extension. I think it would be a great mistake to take a railway that way to Broken Hill and Adelaide. I think it would be far better to follow the Lachlan, and strike the Darling at Menindie. It would be a big mistake to go that way.
877. Which do you call the Lachlan line? Through Forbes, Condobolin, and Menindie, to South Australia. The mileage, I believe, would be less, though the route has not been surveyed. Scaled on the map it is less.
878. Where to? To Silverton. I understand that it is proposed to construct a line to Forbes, and if that is constructed there will be so much less line to be made on this route.
879. What do you estimate will be the number of miles from Orange to Wilcannia? I should not suggest a line from Orange to Wilcannia. I think that is too high up. I would rather tap the river at Menindie. I think we should still lose a lot of the traffic between Wilcannia and Menindie if we had a railway through here. If we had Rowley's map I should be able to illustrate my meaning.
880. A line in that direction is at the present time only constructed as far as Molong? Yes.
881. How far do you estimate it from Molong to Menindie? From Condobolin to Silverton I should imagine would be about 250 miles, and from Borenore to Condobolin it is 119 miles as surveyed. I do not know what the distance would be through to Menindie. The total distance through to Adelaide from Sydney would be about 30 miles less by that route, taking it out roughly by scale, than the distance via Cobar.
882. You have been on the Darling? Yes.
883. The traffic on that river fluctuates with the seasons? I should like to read to the Committee, with your permission, some remarks which appeared in the *Herald* in 1885, when we first began to compete for the trade there. [*Extract from S.M. Herald read.*] A paper emanated from the Commissioner for Railways, and Mr. Kirkcaldie went through the Darling and made certain recommendations. We then started to compete keenly for this traffic, and the very thing predicted here must happen.
884. *Dr. Garvan.*] You have given some attention, I gather, to the rival routes across to the Darling and on to Adelaide? Yes.
885. Is it not a great advantage of the Nyngan and Cobar line that we are much nearer to the Darling at Nyngan than we are by the lower routes? Yes.
886. We have a shorter distance in which to hit the Darling? Yes; but we lose all the trade from the country below. We fight every year for the wool from there, but it mostly goes to Hay and then down the Murrumbidgee.
887. Looking at it from a departmental point of view, with a desire to capture the trade, would the extension of the line from Hay have the required effect? It would if we had river dues. The mileage is less to Wentworth.
888. Do you think the wool coming down the river by boat would unload at Wentworth and go by rail, or continue down stream? I think it would go on.
889. You think that if a squatter sent his wool down to Wentworth there would be a great chance of its going right on? Yes, though they have an uncertain river between Menindie and Wentworth.
890. You may remember that some years ago there was a proposal to go from Hay to Pooncarie;—do you think that would be high enough up the river to catch the trade? No; I think it would be better to strike the river further up. The line would then be nearer Broken Hill, and the trade would be intercepted better.
891. You are introducing another subject now. At the time you made your report Broken Hill was not developed? No; I had not in view an extension of the line at all.
892. The shortest way to Menindie from our present line is from Hay? Yes.
893. Have you considered the expediency of constructing a line from Hay to Menindie? No; it would represent a distance of 880 miles from Sydney to Adelaide.
894. How many to Menindie? I have not got that.
895. We have a line as far as Orange and Molong at the present time, so that we could continue the railway either from Molong or from Cowra, along the Lachlan Valley if we liked? Yes.
896. Suppose we had a Lachlan Valley extension from our Western line at either place, going through Condobolin, we could strike the Darling at Menindie or Wilcannia. The engineering difficulties in either case would be nil. Would you recommend the Condobolin to Wilcannia or Condobolin to Menindie line? I should recommend the line to Menindie.
897. Do you know anything of the intervening country? No.
898. Is there not a long billabong, the Willandra Billabong, on the Menindie line that would give water for railway purposes? I dare say it would, but I do not know it. I have been as far as Hillston, and I have been to Condobolin.
899. If we were to dam the entrance to the billabong would it not in good seasons drive the water back and conserve it? I do not know.
900. Do you know the pastoral character of the country at all? Only by the sheep it carries.
901. Is it as good as the Cobar country? I think it is.
902. Do you know anything about the mineral characteristics? I believe there are some minerals along the route.
903. You calculate upon having a railway to Forbes, so that when you compare the Lachlan Valley line with the line from Nyngan you consider it as going from Forbes? Yes.
904. You think we should take it as a matter of certainty that we shall have a line to Forbes? I do. I think a district like that must have a line directly.
905. As between Sydney and Silverton the Lachlan Valley line would be the shortest? Yes, I think by about 30 miles.

906. As between Sydney and Adelaide the Hay and Wentworth route would be the shortest? Yes, by over 200 miles. J. Harper, Esq.
907. But the Nyngan to Cobar line has the advantage at the present moment of being the quickest available? Yes; there is less mileage to be constructed. 3 Oct., 1889.
908. Looking at the payable character of the two lines—the northern and the middle, as we may call them—do you think that the middle line will pay equally as well as the northern? I think so. I think that as far as Cobar is concerned its mineral development will not be very much retarded because of its being 80 miles from a railway station.
909. Supposing we had the middle line constructed a line could easily be made from Condobolin through Nymagee to Cobar? Yes.
910. Would there be any advantage in it? I do not know whether it would be regarded by the Committee as of sufficient importance to be made.
911. Not taking mining into consideration at all, and considering that we have to make a cheap railway merely to accommodate the pastoral settlement in this district, would a line from Condobolin through Nymagee accommodate a larger area of pastoral country than this line would? Yes, simply because it would accommodate a larger number of people.
912. How far on either side would such a line be of real value to the pastoralists;—20, 30, or 50 miles? Yes, that is not very much.
913. You have given a good deal of study to the traffic which comes from this district? I have.
914. When we make a branch of an acute angle from the main line as is proposed here, we do not get the same amount of new traffic as would be obtained if we branched off at right angles? Necessarily so. We do not offer extra facilities to such a large number of people. The people below do not benefit to such a great extent.
915. There would not be a large traffic area for some distance out of Nyngan;—you would not give any new accommodation? None whatever. The people there would be able to use Nyngan station as well as any station on the proposed line.
916. It is not until you get a certain distance from the existing line that you obtain new traffic? I do not know that it would obtain any new traffic. So far as this district is concerned there is not the least doubt that we get all of it. We lose none of it. But if the line were made lower down we should intercept some of the traffic that now goes down the Murrumbidgee.
917. You think that if the middle line were constructed we should accommodate nearly all this traffic and intercept a great deal that now comes down to Hay and goes by the river? Yes.
918. You were considering this matter in the interest of your department? We want to get as much as we can for the railway.
919. From that point of view, with your hunger for traffic, you would rather see the central line constructed than the northern? Yes.
920. You think it is of importance that we should make a line out to Broken Hill? We should get very little traffic at the present time. The charge for coke in South Australia is 1d. per ton per mile and 1½d. for ore. We could not carry it for that, and we should have to take it 700 miles, while they only take it 300.
921. Some of their coke they get from England;—could they land coke as cheaply from Port Pirie as we could land it from Sydney? I do not think so—not the same kind.
922. We should have an advantage in sending coke there? No; South Australia would.
923. You do not think that if we sent coke from Dubbo it could compete with the coke sent from England? Not unless we come down in our charges. A half-penny a ton would not pay us, because we could not get back loading.
924. It would not pay you unless you could? No.
925. Suppose you had a paying load the other way, you could take coke at a half-penny a ton? That would be another feature. Practically this country gives us no traffic with the exception of live stock, during six months of the year, which has to be carried in a peculiar class of waggon, and during the other six months we carry wool. The coke required to be sent from Dubbo would have to be carried all the year round, and the loading back would not represent the capacities of the trucks.
926. I understand that you have to compete very hard with the steamers when the river is up? Yes; they are carrying wool from Brewarrina to Adelaide for £3 a ton.
927. For what do you bring it from Bourke? For £4 and £5.
928. Even that barely pays? It pays, because we get a good loading. We get £25 a truck. If we did not get it in quantity it would not pay us, but because we get full truck loads it is payable.
929. Do they get full boat loads? Oh, yes. I heard of iron the other day being sold at Bourke at a lower price than it could be bought for in Sydney. A contract was made to bring up goods to Brewarrina, and this was put in to make up the loading.
930. As “stiffening”? Yes.
931. If you have a hard matter to compete with the river at Bourke, it would be still harder to compete with it at Wilcannia? Yes.
932. Do not you think that a line would be able to compete with the river when it is up? Practically we get all the wool from about there.
933. Does it make any difference to you whether stations are owned by persons living in Adelaide or not? It does to a certain extent. People are influenced naturally by their associations, although I cannot say that they are altogether influenced by them, because I know one clip of wool on the Murrumbidgee—the Barrag wool, where all the associations one would think were in New South Wales, which because of the difference of 2s. a ton, was taken to Melbourne.
934. As a traffic line, you do not think the line from Nyngan to Wilcannia would be very productive;—not even if extended to Broken Hill? I should not think any great advantage would be received from it.
935. And so far as the national interests are concerned they would be as well served by the middle line? Yes, better.
936. If we make a line we had better go through Condobolin? Yes.
937. So far as the accommodation of the pastoral interest is concerned in the district, of which Cobar may be taken as the centre, do you think it would be better served by a branch from the middle line than by a branch from Nyngan? You mean the line through Nymagee, parallel to the present line?
938. Yes? I think so.

- J. Harper, Esq.  
3 Oct., 1889.
939. *Mr. Trickett.*] Have you made any further report since 1888 of the probable traffic of the line? That is my last report.
940. I find this in the *précis*: "1/5/89. The Mayor of Cobar asked the Commissioner by wire to send an officer down to examine and report as to the traffic. Mr. Harper, under instructions from the Minister, undertook that duty"? That is a mistake; I have not been there since 1888.
941. You say that you obtained your information from the Progress Committee? Not the information on which I based my estimate. The information which I used had been obtained six or eight months previously by the Progress Committee and Mr. Kirkcaldie. They went through the books at Nyngan, Girilambone, Byrock, and other places, and the estimate set down was given by the Progress Committee as a fair estimate.
942. Mr. Kirkcaldie worked with them? Yes; in conjunction with them. You will see that they produce the stock reports of that year, and I gave them 32 per cent. addition on the wool and stock.
943. What is the state of the traffic at the present time compared with what it was at that period? Nothing like it. It is not half as great. Of course the mine having shut down has materially affected it.
944. Have you any personal knowledge of the country of which you were speaking, between the Lachlan and Menindie? I have no personal knowledge of it. What I know of it is by hearsay.
945. What is the character of the country? It is represented to me as being of the same description as that between Cobar and Wilcannia, and out west.
946. As good as that? Yes; that is the representation. The number of sheep on it is about the same, and I judge from that that the country must be about the same.
947. When you were in the district I suppose you heard a great deal about the inconvenience from which they suffered? Yes, and experienced it myself.
948. In what time of the year were you there? I think I was there once in June, and on another occasion in January. On one occasion the roads were very bad indeed.
949. That was after rain? Yes.
950. How long did it take to get from Nyngan to Cobar? Twenty-four or thirty hours.
951. At that time was the road impassable for dray traffic? There were some teams on it, but not many. There were very few who would tackle it.
952. What is your opinion about the cost of constructing an ordinary road between those two places? It would naturally be expensive. There are a lot of holes and boggy places, and very little metal could be obtained.
953. *Mr. O'Sullivan.*] You suggested just now that a line should be made from Condobolin to Menindie;—is that merely your own opinion or the opinion of other officials? It is purely an opinion of my own, arrived at after discussion with brother officers.
954. You know that the line has been made as far as Hay;—would not an extension of that line to Broken Hill, *via* Menindie, serve the country as well as the line which you have suggested? No; it would not serve the Lachlan District.
955. Would not the line from Hay to Menindie intercept that traffic? Yes; it would intercept a lot of it, but it would not bring in the Hillston trade.
956. Supposing there was also a line from Molong to Condobolin, as a feeder to the main line,—would not that serve a large portion of the country? You do not serve the best part of the Lachlan at Condobolin. There is good country down as far as Hillston which would not be served if you stopped short at Condobolin.
957. *Mr. Tonkin.*] Do you think that the construction of this line would not increase the traffic beyond your estimate? No; most decidedly not.
958. Was your estimate made at the time the mines were working, or when they were closed? If you will refer to it, you will see that I put down the maximum number of furnaces that the mine was capable of working, and the maximum quantity of wood and coal that would be consumed.
959. But do you not think the construction of the line would very largely increase the traffic? Most decidedly; but that is a matter of conjecture, which I do not venture to take into account.
960. Do you know if any of the branch lines that have been made for the express purpose of tapping the country to serve pastoral interests are paying;—do they pay the working expenses and interest on the outlay? Not as far as my knowledge from published reports goes.
961. Then do you think it would be advisable to construct any line purely for that purpose? I certainly should not think so.
962. You are advocating a line, I take it, from Condobolin to Menindie? Yes.
963. What would be the resources of that line? That trade is worth about £3,000,000 a year. That is the last estimate we have of the Darling trade.
964. Is that in wool? It is the value of the traffic—wool, and stores sent in return for wool.
965. It would be an exceptional line, differing from any other branch line constructed for that purpose? I should not regard it as a branch. I should regard it as the main trunk line.
966. What do you call the Hay line? A branch line, and a very bad one, too.
967. If the Hay line were carried on to Menindie, would you regard it as a branch line then? I should still regard it as a branch line.
968. What would be the difference between a line from Hay to Menindie and a line from Condobolin to Menindie? There would be none whatever. I am speaking now of the line running through to South Australia.
969. Could you not go from Hay to Menindie as well as from Condobolin to Menindie? Decidedly.
970. What would be the difference between the two lines as far as the returns were concerned? Even if the Hay to Menindie line were constructed, a lot of the traffic would go down the Murrumbidgee; but a line higher up would catch the traffic. The wool was taken from Hay this year to Melbourne for 32s. 6d. per ton down the Murrumbidgee by steamer.
971. Does not your estimate refer more to the mineral traffic than to the pastoral traffic? It refers to everything.
972. But would not the principal traffic come from the mines? Decidedly.
973. Then if you have to go through country where there are no mines, are you likely to have such a payable line as if you went through a country where there are mines? I should not think so. Mines bring population, and population means traffic.
974. Do you not think that the line from Cobar to Wilcannia will tap a pastoral country as much as the line from Condobolin to Wilcannia will? Most undoubtedly it will tap pastoral country.

975. Would not that be advantageous? Well, there are four or five stations there, and it would be advantageous to them, and would pick up a certain amount of traffic on either side. I think a railway lower down, which would intercept the trade which we are losing now, would be better than a railway which would serve the interests of a given number of pastoralists.
976. Do you know that there are branch lines tapping pastoral country in order to take the wool and stores? Yes.
977. None of these are paying—they are all a dead loss? Yes.
978. Then why do you think that a line from Condobolin would be an exception? Because I regard this part of the country as being capable of carrying a large population not connected with pastoral pursuits. I believe that Menindie could be made the principal town of the Darling. It does not follow that because Wilcannia is larger to-day it will be so always. I believe that Menindie can be made a very prominent place, and then we shall have Silverton beyond.
979. Do you think that that country would carry a larger population than the country between Werris Creek and Narrabri;—is not the country between Werris Creek and Narrabri likely to support a larger population than the country between Condobolin and Wilcannia? I should not like to express an opinion about that, except so far as the line running there is concerned.
980. I mean beyond it? That country I have not seen. I would not like to express any personal opinion about it.
981. Do you think, from your own knowledge, and from the information you have gathered in compiling this report, that the Cobar line will not in a few years pay working expenses and interest on capital? I do not see what is going to make it pay. It might have a development like Broken Hill. If so, it would pay.
982. Without that it would not? Without that, and as it stood when the estimate was made, it certainly would not.
983. And the extension to Wilcannia will not materially increase it? No, I do not regard that as of much importance.
984. Even if it were carried on to Broken Hill? Yes. We should get a certain amount of traffic; but I do not think the long distance over which we should have to carry coal and ore would enable us to compete with South Australia.
985. Do you not think that if fuel could be got near Dubbo we could compete with South Australia? Our mileage then would be a great deal more than from Port Pirie.
986. But it would be all through level country? Not necessarily. I do not think the railway to Cobar would be over very level country.
987. If there is to be no grade more than 1 in 100 would not that be level? Yes.
988. Supposing 1 in 100 were the ruling gradient, could coal be carried from Dubbo to Broken Hill as cheaply as it could be taken there from Adelaide? I should not be prepared to say that. They would still have about 100 miles advantage, which I think would more than make up for the easy country.
989. Do you know the distance from Dubbo to Broken Hill? 470 miles.
990. Do you know the distance from Port Pirie? 249 miles.
991. Then there is a difference of over 200 miles? Yes.
992. *Mr. Copleland.*] You appear to favour a line from Condobolin to Menindie and thence to Broken Hill;—do you not think that there would be room for another line for Cobar to Wilcannia? That would be another question.
993. Do you know the distance between Menindie and Wilcannia? Yes; Pooncarie is 130 miles from Wentworth; Menindie is 220—that is a difference of 90 miles. Wilcannia is 320 miles from Wentworth; Louth is 450, and Bourke 528.
994. What distance is it between Menindie and Wilcannia? 100 miles.
995. Do you not think that there would be scope for a railway from Cobar to Wilcannia and then out to the north-west corner of the Colony where a large gold-field is now being worked—Tibboburra I think is the name of it? Towards Milparinka.
996. Yes;—do you think that if the line were constructed from Menindie to Condobolin there would not be a scope for another line out that way? I do not know the country at all.

TUESDAY, 8 OCTOBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

{ The Committee further considered the proposed railway from Nyngan to Cobar.

John Harper, Esq., Railway Goods Superintendent, sworn, and further examined:—

997. *Mr. Humphery.*] You stated last day that in your opinion it would be better to take the railway from Condobolin to Menindie;—will you give your reasons for thinking that Menindie will be the most important town on the river? My opinion is that we can make an important town at any point where we cross the river with a railway.
998. You expressed an opinion that Menindie would become the most important town there;—had you any special reasons for giving that opinion? None whatever. I regard it simply as in the line of a most direct route, apart from Wentworth, from the Western Line across the Darling; and I think that any place at which the railway crosses the Lower Darling must become the site of the principal town there.
999. Do you know the character of the country? Only from general descriptions; not from my personal knowledge.
1000. You have not been there? No; I simply recognize the river as a big carrier to our railways from the western interior.
1001. I think you stated that the clip of Burragogie wool was being sent by water instead of by rail, owing

J. Harper,  
Esq.  
8 Oct., 1889.

- owing to a difference of 2s. in the freight? Not this year. The difference is greater now. It was two years ago since a difference of 2s. lost us the wool.
1002. What is the rate of carriage from Hay to Sydney? £2 19s.
1003. How much a mile is that? That is an arbitrary rate, fixed for the purpose of competing with the river steamers.
1004. What is the distance from Hay to Sydney? 455 miles to Darling Harbour.
1005. What is the rate from Bourke to Sydney? £4 0s. 3d. and £5 0s. 3d. per ton. for greasy or scoured wool.
1006. How many miles is it? 504 to Darling Harbour. We always reckon the mileage from Darling Harbour.
1007. Bourke is about 50 miles further away than Hay then? Yes.
1008. What is the difference between the freight charged in each case? £1 1s. 3d.
1009. There is no competition, I suppose, on the line from Bourke to Sydney? Yes; there is, unfortunately.
1010. Excepting the water? That is all.
1011. What is the rate from Wagga Wagga to Sydney? £2 12s. 9d.
1012. How many miles is it? 310 miles.
1013. Then you are carrying at a lower rate from Hay than from Wagga Wagga or Bourke? Yes.
1014. Does the rate which you charge from Hay to Sydney (59s.) leave any profit? Yes.
1015. Then the rate from Wagga Wagga leaves a greater profit? Yes.
1016. And from Bourke still more? From Bourke still more.
1017. What is the lowest price at which you could carry per mile? I should not like to express an opinion upon a subject of that kind, because it would be controlled by so many conditions. As I explained before, wool is good loading, because we can get 6 tons into a waggon readily—6 tons of greasy wool. We are controlled by so many conditions that it would be impossible to express an opinion as to the rate at which we could carry.
1018. Assuming that a line is to be carried out between Condobolin and Menindie, what are the probabilities of the traffic increasing? I think such a line would intercept a lot of traffic which at present finds its way to Hay, and goes thence by river to Melbourne and Adelaide—traffic coming from about Paddington station, Mossgiel, and down the Lachlan.
1019. As far as you can judge, would the population along the route be increased? At mining centres, such as Mount Hope, I dare say it would.
1020. Do you know of any agricultural land between those points? I have only been along the Lachlan as far as Condobolin.
1021. You have not been beyond Condobolin? I do not know anything about the agricultural resources of the country beyond that.
1022. What probability is there of new traffic being created by constructing a line from Nyngan to Cobar and thence to Wilcannia? We should get a few clips of wool which we do not get at the present time, by having lower rates; but I do not see anything outside of that.
1023. Would the railway create any new traffic? I do not think it would. No matter how we carry the line, I do not think that we can successfully compete in the carriage of ore to the coast, or of coal to Broken Hill, with South Australia and Port Pirie, as we have 400 miles more to carry those commodities.
1024. Do you think there is a probability of the line from Condobolin to Menindie paying;—would the earnings of such a line be sufficient to cover the cost of working and fair interest on the cost of construction? No; I do not regard it very hopefully. I only speak of it relatively, as compared with the line to Cobar.
1025. Your opinion is that it would not be a profitable line? I do not think so, not for some time to come.
1026. Is it your opinion that the line from Nyngan to Cobar would give a less return than the line from Condobolin to Menindie? Yes.
1027. You think that they would both be unprofitable lines? Yes; that is my opinion.
1028. They would not only be unprofitable at first, but would also continue unprofitable? Yes; under existing conditions. I do not know how those conditions may be altered by irrigation or in other ways; but at present I do not see very much hope of either of them paying.
1029. *Chairman.*] You said that if the line were continued out by Mount Hope it would intercept goods going to Hay and thence by river to Melbourne;—is there any great quantity of goods going down the river to Melbourne or to Adelaide from the northern side of the Murrumbidgee? I handed over to the Sectional Committee the last return of which we were in possession. It was there estimated that the traffic on the Darling was worth between £2,000,000 and £3,000,000 a year.
1030. On the Darling? That would be the estimated value of the traffic passing down the river to South Australia.
1031. You said just now that if we had a line to Condobolin you might possibly intercept goods going to Hay, and thence by the river to Melbourne? Yes; I spoke of the section of the country between Cobar, Mossgiel, and towards Hay.
1032. Does the wool from that part of the country go down the river at all? Yes; last year we had the wool from Paddington. It came in from Paddington at Nyngan; but the wool from the two adjoining runs went down the river through Hay. It was brought to Hay; and, instead of being trucked at the railway station there, was taken on board of the steamers, and sent down the Murrumbidgee to Echuca.
1033. You talked of the value of the traffic going down the Darling;—do you know that last year's wool is only just going away from there, or that it was only just going away a short time ago? Yes; but unfortunately it is passing out of our Colony altogether. If we had a railway there, even though the wool is only going away now, we should have some hopes of intercepting it and bringing it to Sydney.
1034. You could get nothing else from the Darling but wool? Nothing else.
1035. So that you might shut the railway up for nine months at a time; you might take the supplies out at shearing time, and bring the wool back; there would be no other traffic? That is the position.
1036. You have been on the Darling? As far as Louth; I have not been on the Lower Darling.

J. Harper,  
Esq.  
8 Oct., 1889.

1037. Assuming that the country is of the same character all the way down the Darling as it is between Bourke and Louth, do you think it would be possible to place small settlers on it? No.
1038. The country must be occupied for a long time, at all events, by the same class of people as those who live there now? By pastoralists.
1039. So that if we had railways to every point on the line it would not increase the population to any great extent? No, I do not believe it would increase the population. Wilcannia I regard as an incidental point on the line.
1040. That is near to the gold-fields? Yes.
1041. *Mr. Cox.*] You say there is no profit from the railway to Hay? Not from the earnings of the line. There is a profit on a particular class of traffic when we get it; but we cannot always get it.
1042. As far as I can learn from the last reports of the Commissioners for Railways, the traffic on the Hay line shows a loss? Yes. I was speaking about a particular class of traffic. There is a profit on it; but we do not get enough of it.
1043. Then the line from Junee to Hay is really a cause of loss to the community? We have always regarded it as so.
1044. By analogy, do you think that the same kind of traffic will result in an equal loss on the line from Nyngan and Cobar to Wilcannia? Yes.
1045. But then comes this view of the question: The people at Hay have an alternative route to the river, while the people in the dry country between Nyngan and Wilcannia have no alternative route; therefore you would be almost sure of the traffic from one place when you would not be sure of it from the other? Not necessarily. I do not know precisely how many years on the average the river is open for navigation; but I think that it is only one out of every five that is not navigable during certain seasons. Generally speaking, we find to our loss that it is navigable at the wool season—at the time when they want to shift their wool. We are suffering from that now. We are losing a lot of the wool that we expected to get this year.
1046. Where is that wool going from—certainly much below Bourke? Some of it is going from as far north as Brewarrina, some of it is coming from the west of Paroo, some from Queensland, and some from Fort Bourke, which is really in the town of Bourke. A portion of the wool from that station is going down the Darling.
1047. It did not do so last year? I am not quite sure; but I fancy that some of it went down last year. They had a river early in the season, but they lost it later on, as far as I remember.
1048. When you were giving your evidence here last Thursday, Dr. Garran asked you whether an alternative route between Molong, Condobolin, and Cobar would be preferable to the proposed line from Nyngan to Cobar; and I think you said that it would? Yes.
1049. Do you know the country between Condobolin and Cobar? No; I know the country between Condobolin and Forbes, and between Molong and Condobolin.
1050. Between Condobolin and Cobar, you cross over what is the dividing range between the waters of the Lachlan and of the Darling. Yes; I know the country down as far as Nymagee, in a southerly direction.
1051. The country between the two rivers is comparatively rough—that is, compared with the country running down the course of the rivers? At Condobolin you would strike a point which I think would almost avoid it altogether. The railway could leave the Lachlan at Euabalong, going to the south of Mount Hope, and thence to Menindie.
1052. You know the country down the Lachlan? As far as Condobolin.
1053. You have not been towards Barragan? No; I have not been north of the Lachlan; but I have been down in the neighbourhood of Hillston.
1054. Have you ever been to Ivanhoe? No.
1055. Are you aware that the river flats extend from the Lachlan, past Willandra, to Ivanhoe? Yes.
1056. When you get to Ivanhoe you get into the scrub country? I do not know that district at all.
1057. Are you aware that between Ivanhoe and Menindie, or between Ivanhoe and Wilcannia, it is very poor scrub country? I do not know. I have noticed, from a return of the number of sheep on it, that it carries, if not as much as the Cobar district, about the same.
1058. You say that you do not think that the railway would create any other traffic than that now in existence? I cannot say that it will.
1059. Are you not aware that in times of drought a very large live stock traffic takes place? It does not pay. We regard the stock traffic in this light: that we have to keep the sheep alive in order to get the wool, and hence we carry them really at a loss.
1060. *Dr. Garran.*] I understood that our railway system has already tested, with two termini on navigable waters, our power to compete with river transit, and in both cases the river transit beats us when the water is up? Yes.
1061. You cannot carry with paying rates from Bourke to Sydney as cheaply as the steamers can carry to Goolwa or Echuca? No.
1062. And it is the same from Hay? Yes.
1063. So that our New South Wales squatters prefer to send their wool to South Australia or Victoria by water instead of sending it along the railway constructed at the cost of the country? Yes.
1064. If we continue the line from Cobar to Wilcannia, we simply make another terminus on a navigable river? Yes.
1065. We shall be no better off with Wilcannia as a terminus than we are with Bourke or Hay? Except when the Murrumbidgee and the Darling are not navigable.
1066. Whenever a river is in a condition to compete with you it beats you? Yes.
1067. Your only chance is when you have a monopoly; and when you get a monopoly you do not raise your rates? Yes.
1068. You have not tried a system of charging the usual railway rate and making a rebate when you have to submit to competition? No.
1069. You have brought down your rates to the terminal stations as low as possible, in order to compete with the river transit? Yes.
1070. And you only get those rates, even though there may be no competition? That is all; they are fixed rates.

- J. Harper,  
Esq.  
8 Oct., 1889.
1071. If the line were continued from Cobar to Wilcannia and the river were navigable, would there not be some danger of the traffic between Cobar and Wilcannia that now goes to Nyngan going to the river? I have recognized that as a source of danger, unless we impose river dues.
1072. Wilcannia, although in our own territory, may become an output for our trade? Yes, and I should not be surprised to see us losing a lot of traffic which at present does not go down the river.
1073. Does any produce go along the railway to Bourke to be shipped on the river? Wool?
1074. Yes? No; we do not carry any wool from the east of Bourke to the river.
1075. You have not found so far that taking the line to the river has tended to shunt traffic there? No.
1076. If it has not done so at Bourke why should it do so at Wilcannia? Simply because the competition would be keener at Wilcannia, and there are a number of stations there which for years have sent their wool down the river and will continue to do so. The river there is later than it is at Bourke.
1077. You could only attempt to compete with it there by cheaper rates? Yes.
1078. And you have gone down to almost the cheapest point? Yes.
1079. The river people know that? Yes.
1080. They can go down a little lower? I do not know how low they can go. They will be carrying it for nothing directly, I suppose.
1081. *Chairman.*] The most of them are hawkers? Yes.
1082. *Dr. Garran.*] Hay being a navigable point on the river, even if we continue the line from that place to Wentworth, the produce of our own squattages will still cross the railway and go to Echuca? I should expect that unless we have legislation to compel the steamers to raise their rates in order to meet the charges levied upon them.
1083. We should have to put a prohibitory charge on river traffic? Yes, where we have river communication.
1084. How much can you take on a full load on the present grade between Nyngan and Bourke? It depends very much upon the class of engine;—from 300 to 350 tons.
1085. The engines you run there are of the smallest class? No, we have to run at a high rate of speed.
1086. A high rate of speed is only wanted for the live stock? The traffic is so small that we run mixed passenger and goods trains, and consequently we have to have a good engine to travel at the speed necessary for the convenience of the public.
1087. I understand that you can take from 180 to 300 tons of paying load at one haul? Yes.
1088. Of course you could take as much on the Cobar line? I do not know. I have forgotten the sections on it.
1089. It is proposed to reduce the grades there to 1 in 75? There are no grades between Nyngan and Bourke of 1 in 75.
1090. The grades are easier than they would be between Nyngan and Cobar? Yes.
1091. With your lightest engine at work, how much could you carry over the 1 in 75 grade to Cobar? I should think about 150 tons.
1092. Not more? No.
1093. Do you happen to know what was the maximum trade between Cobar and Nyngan in the best traffic year that you have yet had? In the report which I handed into the Committee I think I have given more than the best trade which we have ever had from Cobar.
1094. How much was it? I have not expressed it in tons. It is expressed in value at £15,000.
1095. Each way, or is that the gross? Both ways, including Nymagee, and giving Nymagee a mileage, which it is doubtful that it would have.
1096. *Mr. Garrard.*] What do you mean by a "a mileage, which is doubtful that it would have"? There is a road which has cost about £7,000, and is supplied with tanks, branching off 12 miles on the proposed route to Nymagee. This mileage has been calculated at a point at right angles from Nymagee to the road.
1097. *Dr. Garran.*] The evidence that the Sectional Committee got at Nyngan, was to the effect that they would not make it at right angles—that the existing road had tanks, and that the Roads Department was inimical to any other? That is shown in my report; but we always make these estimates as favourable as possible.
1098. Then £15,000 is an over estimate? Yes. I have put down so much for wood, but it is questionable whether we shall ever have to carry a ton of it. Then I have also calculated for a lot of fodder, which is now carried up for the horses engaged in connection with the mine. We must either lose one or other of these sources of traffic.
1099. Then £15,000 is exceedingly favourable? Most favourable. It represents the maximum amount of work at the Mines.
1100. Does it include stock driven into Nyngan? It includes many doubtful clips of wool. It is doubtful whether the people will not take their wool elsewhere.
1101. How many full train loads of 150 tons each would take the whole of the traffic both ways? Three trains a week.
1102. Each way? Yes.
1103. Three one way, and three the other? Yes; if you had the traffic all the time.
1104. But very often the traffic is concentrated into two months? Yes.
1105. So that for a long period one train a week each way would answer all purposes? In many cases you might be running with only one or two waggons.
1106. During the time of the heaviest traffic a train every alternate day would be sufficient? I think it would be.
1107. That would be the same as we have on the Jerilderie line? Yes.
1108. So that the payableness of the Jerilderie line would be to some extent an indication of the payableness of the Cobar line? No. We have a population at Cobar.
1109. The Jerilderie line is surrounded by less favourable conditions? There is nothing at all there.
1110. *Mr. Cox.*] You said just now that you thought that when the railway was established the traffic in fodder would cease—why do you say that? Because the horses to consume it would not be required.
1111. Are you aware that there is now a tramway bringing wood to Cobar? Yes.
1112. What brings the wood to the tram? Horses.
1113. Would they not be necessary to bring wood to the railway? I imagine that if the railway were constructed they would use coal at the mine, that being more economical.
- 1114.

1114. In your estimate you have taken that into consideration? Yes; and have shown that it will mean less revenue.

1115. *Mr. Garrard.*] Is the Murrumbidgee always navigable between Hay and its junction with the Murray? Not always; but it is generally navigable when we wish it was not open. After the snow begins to melt, during the wool season, it is almost invariably open.

1116. It is not so liable as the Darling to close up? No; it gets the advantage of the Darling waters. It is banked up by them.

1117. So that you have a continuous competition for your Hay trade which you do not have for the Darling trade? Yes.

1118. *Mr. Lackey.*] Although, of course, the railway loses to a very large extent by good seasons such as this, when the rivers are up, there are intervals of dry seasons when they greatly profit by the traffic? I do not know that when interest on the capital and working expenses are paid we profit much.

1119. It is the case that you have done all the trade in the back country—you did it five years ago, for instance? Yes.

1120. The people out there had exhausted their supplies and could not get any from Melbourne or from Adelaide? Yes.

1121. Do you recollect how long that state of things lasted? As far as I can remember, we had the wool for two years running.

1122. You had also the supplies from Sydney out? For one year. At that time they used to take in very heavy supplies.

1123. You had a large traffic in fodder—oats, and produce of that sort? For the carriers' horses.

1124. And for station horses? Yes. It will be noticed that I say in my report that 75 per cent. of the teams which I met were carrying fodder.

1125. You think it would be wise to pass some legislation with regard to the river traffic which would balance the trade? Yes.

1126. You think that if the country is called upon to expend large sums of money in snagging and keeping the Darling open, river dues should be imposed? Yes.

1127. In that case it is possible that some of the trade which now goes to Melbourne and Adelaide when the rivers are up will come to Sydney by train? Yes.

1128. Have you travelled over the proposed line between Nyngan and Cobar? Yes.

1129. It is tolerably level country? It is a bit broken in places; but it is generally level.

1130. You went along the road I suppose? On one occasion, and on the other I followed to some extent the route of the railway.

1131. Did you ever travel what is called the old Cobar Road from Goolba to Cobar? No; but I have heard it favourably spoken of. I went out to the first tank on the road in going towards Billago. It is the only tank on the road.

1132. *Mr. Humphery.*] Do you know what was paid for the carriage of wool from Bourke to Dubbo before the railway was opened? I could not say. I know that it has been as much as £9 and £10 a ton, or at least I have heard so. I have not known any contracts to be made at that price.

J. Harper,  
Esq.  
8 Oct., 1889.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Nyngan to Cobar.

APPENDIX.

A.

PRECIS OF PROCEEDINGS RELATING TO THE PROPOSED RAILWAY NYNGAN TO COBAR, WITH SUGGESTED EXTENSION TO WILCANNIA AND BROKEN HILL.

THE first suggestion of a railway from Nyngan to Cobar which I find in the papers is contained in the notice of petition from residents of Cobar, presented to the House, 27th August, 1884, by Mr. Russell Barton, praying for the construction of a line from Nyngan to Wilcannia *via* Cobar.

September, 1884.—This was followed by a petition to the Minister (Mr. Wright) of similar purport, but the request was limited to Cobar.

15/6/85.—It would appear that prior to this instructions had been given to survey a line, for on this date Mr. Secretary Wright gave instructions for the permanent plans to be pushed on as rapidly as possible for submission to Parliament.

16/9/85.—Plan, section, and book of reference were laid on the Table of the House, but before any action could be taken the Ministry resigned.

In anticipation of the action of Parliament the Commissioner instructed the traffic manager to make inquiry as to the prospects of the traffic on the line. Mr. Kirkcaldie replied that, the district being otherwise a pastoral one, the traffic would depend upon the mining industry, which was languishing, and would never again, many alleged, be what it had been. If, however, the mining became a permanent industry there would be a justification for the construction of a line, and in that case it might be well to carry it on to Wilcannia, the distance being very much less than that from Forbes. If, on the other hand, the line to Cobar were not constructed, the line from Forbes was the best, as it would more fairly space the country between the Western line and the Murrumbidgee.

The Commissioner minuted that he might or might not agree with the traffic manager, but Government had presented the scheme to Parliament, and although the policy might be reconsidered when the plans came before the House, the estimate of traffic asked for must be furnished.

3/12/85.—Traffic manager thereupon forwarded report to the effect that 10,000 tons of goods might be expected to go on to the proposed line in the year, two-thirds of the quantity only to Cobar, and the remainder to Hermitage Plains, 26 miles from Nyngan, *i.e.* four trucks per working day to the former, and two trucks to the latter. The up traffic might be estimated at 4,250 tons of copper, 15,000 bales of wool, and 500 tons of general goods, equal to five trucks a-day, the bulk of it to come from Cobar. The live-stock traffic was difficult to estimate. The sheep in the district amounted to about 1,500,000, but the bulk of the sheep sent from Nyngan to Homebush came from the north. Any increase of the traffic could only be looked for from Wilcannia, distant 150 miles through country in most seasons well grassed and watered, but in good seasons the competition of the river for that traffic would render substantial concessions necessary. It was impossible to predict the future of the copper industry, as very conflicting opinions were held with regard to it. After obtaining some explanations from Mr. Hornidge, Mr. Kirkcaldie further reported that that officer's report confirmed his previous conviction that a line to Cobar would bring no new traffic, but it would simply bring that which at present came by way of Nyngan—a traffic difficult to estimate on account of the uncertainty with regard to the copper mines.

29/4/86.—Nothing further is recorded until Mr. Secretary Lyne laid the plan, section, and book of reference upon the Table of the House. Shortly after a petition from residents of Cobar in favour of the proposed railway was presented to the Minister by Mr. Russell Barton. The petition stated that during the previous ten years the mines had produced an average of 1,905 tons of smelted copper per annum, of the value of £1,444,500, in the production of which there had been expended an average per annum of,—for wages, £96,000; for cartage £15,000; and firewood £24,700; for railway freight, £5,500; hands employed, 700. As firewood was getting scarce not less than 28,000 tons of coal per annum would be required. All building material had to be brought from Sydney. The pastoral industry would be benefited in obtaining readier access to a port of shipment, and wool which now went to South Australia, *via* Wilcannia and Louth, would come to Sydney. Many mines which were idle by reason of the difficulty of access would be worked if a line were constructed. The town and district contained 3,000 permanent inhabitants. Other favourable circumstances were stated.

18/5/86.—In May, 1886, a deputation waited on Mr. Secretary Lyne to advocate the construction of the line, employing the same statistics that had been advanced by the above petitioners. The Minister gave the deputation a favourable reply. In August of the same year another petition was presented to Mr. Secretary Lyne, to urge the construction of the line, stating that the railway had been promised by every successive Government since 1879, that permission to construct a line was refused to a syndicate, the Government promising to construct a line at once; that a large traffic was assured; that in reliance on the promises of Government considerable sums of money had been vested in improvements; that in 1884 Parliament voted the money for the line; that the construction of a railway would lead to the development of new copper lodes known to exist in the locality; and that if a railway were not made, large sums of money would have to be expended on the ordinary roads.

7/8/86.—Mr. R. B. Wilkinson forwarded to Mr. Secretary Lyne copy of a resolution carried at a public meeting held at Nymagee, urging upon the Government the necessity for a speedy construction of the line to Cobar.

9/9/86.—On the 9th September, 1886, the plan, section, and book of reference were approved by the Legislative Assembly without a dissentient voice.

15/9/86.—A few days after a petition in favour of the line was presented to the House. In this document the previous arguments and statistics were employed.

8/10/86.—The approval of the plan, section, and book of reference was carried in the Legislative Council by 15 votes to 11.

11/11/86.—The line was formally approved by a minute of the Governor in Council.

20/12/86.—Proclamation was issued under the corporate seal of the Commissioner. The goods manager was deputed to visit the spot with a view to decide the question of station and siding accommodation, and his report was not encouraging in regard to the traffic to be expected. He specially remarked upon the sparseness of the population, and he insisted that the buildings and appliances should be of the most inexpensive character. Nymagee which is 36 miles in a bee line from the nearest point of the railway, sent 93 tons of goods, and received 50 tons per month, and the question of the point to which these goods should be carried on line, would have to be considered. Local opinion on the point varied greatly. At present the traffic went from a point 12 miles along the Cobar Road (53 miles to Nymagee), and here at least temporary accommodation should be provided. From "Hall's hotel" (at 27½ miles) a surveyed road joins the Nymagee Road (Nymagee 46 miles) and here, as there are three wool sheds in the vicinity, temporary accommodation should be provided. A petition was

being got up to make 38 miles (Muriel's tank) the point for the Nymagee traffic, and if a road could be got, this would suit the Department well on account of the additional mileage. At 67 miles (Budd's) was the nearest point to Nymagee, but the country was broken and there was some doubt as to the practicability of making a road, and moreover there might be difficulty with some of the Crown tenants. At 58 miles (Burrumugga tank) a siding for wool should be put in. Did not think much stock would be carried from intermediate points, and therefore the question of trucking yards might stand over.

Early in 1887, under instructions from the Minister, tenders for the construction of the line were invited and received. But the Commissioner had grave doubts as to the prospects of the line in a financial point of view, and he therefore directed that an officer should be deputed to make exhaustive inquiries as to the traffic to be expected, remarking that working expenses would probably not be less than £13,000 per annum in addition to which there would be interest on the cost.

4/3/87.—Mr. Kirkcaldie undertook the duty of making these inquiries, and reported—(1) that there is not a single acre of cultivated land along the whole route; (2) that the population of Nymagee (1,500) was steady, while that of Cobar had decreased in two years from 4,000 to 3,000, and was still diminishing; (3) that the Cobar goods traffic he estimated would not exceed £4,508 per annum; (4) that the Nymagee traffic would amount to £300 per annum if it left the line at mile 12, but would be £1,100 if it were carried to the further point mentioned in Mr. Harper's report; (4) that passengers, parcels, and mails might produce £1,000; and (5) that the total earnings of the line would therefore not exceed £6,908 per annum. Was quite certain it would never pay interest on cost.

The unfavourable nature of this report becoming known, a deputation waited upon the Minister and represented that the information given by Mr. Kirkcaldie was based upon wrong data. Mr. Secretary Sutherland informed the deputation that the information obtained by the Commissioner was unfavourable to the construction of the line, and that already we had a number of lines which were simply a drain upon the revenue. He was, however, prepared to suspend action in order that the persons interested might obtain what they believed to be more accurate information.

The traffic manager, who was called upon to report, maintained the accuracy generally of his conclusions.

A public meeting was held at Cobar to protest against the delay. It was stated that it could be easily proved by statistics that the line would give a surplus of £18,000 after paying working expenses, and 4½ per cent. on cost, and a committee was appointed to collect information.

15/3/87.—The Commissioner drew the traffic manager's attention to the circumstance that the latter had put down £1,000 as the proceeds of passengers, mails, and parcels, whereas mails alone at £12 a mile would realize that amount.

Traffic manager in reply admitted that he had through inadvertence put down £1,000 where he intended to enter £2,000, and that his estimate must be increased by £1,000.

23/3/87.—Traffic manager further reported that since his previous reports had been sent in he had ascertained that some traffic had gone by way of Girilambone, Byrock, and Coolabah, and that his estimate might be increased (including the £1,000) to £8,412.

29/3/87.—A deputation waited upon the Minister and submitted a statement of estimated traffic (based upon the information collected) amounting to £21,629. Their estimate, they said, was based on present returns and on existing conditions, but the construction of a railway would greatly extend the area of production. The Cobar line moreover was the nearest route to Wilcannia and Silvertown, and the whole country being rich in minerals, a railway would cause new mines to be opened. The mining industry was so hampered for want of the means of conveyance that the Cobar Company had serious thoughts of closing the mine if a railway were not made, and that would deprive 3,000 people of their means of living.

The disparity between the estimates respectively of the traffic manager and the compilers of the statistics being so great, it was thought desirable that there should be a conference between them to discuss the matter.

Mr. Kirkcaldie accordingly met Messrs. Grainger, Barton, Morrison of Cobar, and Leah of Nyngan. In his report Mr. Kirkcaldie stated that the compilers had made their calculations upon a wrong basis, a mistake which they themselves had already discovered. Adopting within certain limits the figures of the compilers' estimate he found the amount did not exceed £14,683, and nearly half of that was firewood, very problematical in his opinion and at the best not very profitable traffic. (It is shown by the Commissioner that we must have an annual traffic of over £23,000 to pay working expenses and interest on cost.) Mr. Kirkcaldie wound up by stating that he could come to no other conclusion than that there was no probability of the line paying for many years to come unless some unforeseen development took place.

April, 1887.—In a minute without date, but written about this time, Mr. Secretary Sutherland remarked that the effort of the previous Government had been to make the Cobar line as cheaply as possible, but a line with ruling grades of 1 in 40, and laid with 60 lb. rails might be cheap to construct, but it was not economical to work, and what was gained in the one way was lost in the other. He had determined to have another survey made with a view to ascertain if easier grades could be found. If that could be accomplished more effective loads might be carried, and the working expenses so reduced as to admit of such a line, even with a limited traffic, being made profitable.

2/5/87.—Mr. Grainger Barton addressed a letter to Mr. Kirkcaldie stating that only a few tons of goods had been received from South Australia by the river, and going into details to show that it would pay better to receive and send goods by railway than to employ the water route.

Mr. Kirkcaldie intimated that he was informed that 60 tons of general goods had come up the river to Louth for stations between there and Cobar, and that such goods must have come by railway if the river had not been navigable.

17/5/87.—Mr. M'Elhone moved that no further step should be taken towards the construction of the line Nyngan to Cobar, but under sessional order the motion fell through.

31/5/87.—Mr. J. Penzer sent to the Minister a statement of "reasons why the railway should be made." (1.) It would cause new copper mines to be opened. (2.) Pine of splendid quality for sleepers could be had all along the line at one-third the cost of hardwood, and fencing would not cost more than £50 a mile. (3.) One train a day would satisfy. (4.) It would be cheaper to send by rail wool which now went by water. (5.) The worst cutting on the line could be avoided by a detour of 15 chains and the grade be at the same time made easy.

1/6/87.—A meeting of the Railway League was held at Cobar, and much indignation was expressed because on the strength of Mr. Kirkcaldie's report (!!) the line was not at once proceeded with.

9/6/87.—Barton Bros. offered to enter into a bond to pay double rates if the railway were constructed.

9/6/87.—The Manager of the Cobar Copper Co. also offered to pay double the local rate on copper from, and all goods to, Cobar, firewood excepted, the arrangement to continue in force for five years. He was of opinion that others interested would consent to the same terms.

10/6/87.—The manager of the Nymagee Company also made—*mutatis mutandis*—a similar proposal.

10/6/87.—Mr. M'Elhone's motion of 17/5/87 (see page 13) was now revived, and was now negatived by 26 votes to 2.

6/7/87.—Mr. Secretary Sutherland stated in the House that the difficulty with regard to this line was that, having grades of 1 in 40, it would require the heaviest engines in the service to work it, and that meant a heavy and costly permanent way. He had been informed that a line could be found with grades of 1 in 100, and if that were so a cheap line could be constructed and light rolling stock be used. A survey with that view would be made. The surveyed line would cost £327,000.

7/7/87.—The following day a sub-leader appeared in the *Herald* commenting upon the above remarks, and stating that an engine of 24 tons would carry a net load on this line of 131 tons, and that the engineers thought it undesirable, in view of this fact to go to the expense of deep cuttings when a cheap surface line would meet all requirements. The estimated cost of the line, moreover, was £250,300 and not £327,000.

As regards the estimate the *Herald* was correct, and the Minister must have included in his statement something more than the mere construction of the line, but as regards the net load it was shown that we had not a single engine capable of hauling a net load of 131 tons up an incline of 1 in 40.

12/7/89.—Mr. Hans Andra addressed the Minister recommending a different route from that adopted by the surveyors, pointing out that by his route the following advantages would be secured—high ground without heavy grades, good water, and no land to be purchased.

Sept., 1887.—The papers relative to the Nyngan-Cobar line were laid upon the Table of the Legislative Assembly.

30/9/87.—The *Daily Telegraph*, in commenting upon the papers, stated that no sane man could read through them without arriving at conclusions adverse to the construction of the line, and that the person who moved for the production of the papers deserved the thanks of the community. The article went on to say that the Commissioner, the traffic manager, and the assistant traffic manager had earned the thanks of the country by their brave performance of duty in persistently contending that under existing industrial conditions of that portion of the Colony, the line could not be made to pay.

## APPENDIX.

B

The local paper (the Cobar and Louth *Herald*), replied to this article by abuse of the *Telegraph* and the Railway officers, and by insinuations of "pique and professional jealousy," and other unworthy motives.

19/1/89.—The Engineer-in-Chief forwarded to the Minister Mr. D. C. Simpson's report upon certain proposed deviations of the line which would have the effect of reducing the steepest grade from 1 in 40 to 1 in 50, and of otherwise improving the grades.

The Locomotive Engineer, in reply to the Commissioner, reported that this easement of the grades would have the effect of increasing the hauling capacity of the engines 60 per cent., that is to say, if an engine could haul 100 tons on the original grades she could haul 160 tons on the improved grades.

1/5/89.—The Mayor of Cobar asked the Commissioner, by wire, to send an officer down to examine and report as to the traffic.

Mr. Harper, under instructions from the Commissioner, undertook that duty, and submitted a report of which the following are the chief features: Mr. Harper pointed out the importance of the copper industry in this district, and stated that the Cobar Company was working under a guarantee of a favourable character from the French Copper Syndicate, and while this was in force the output of the mines would not be diminished, but it was only for three years, and moreover, many persons doubted the stability of the Syndicate. There was sufficient ore in the mine to last for many years, but much of it only yielded from 7 to 9 per cent., and that did not pay to work when prices were low. Mr. Harper was under the impression that before long the Company would substitute coal for firewood for smelting purposes. They had used up all the firewood up to 12 or 13 miles from the works, and as 1 ton of coal did the work of 3 or 4 tons of wood, it would now be cheaper to bring the former from Lithgow. That, however, would mean a large diminution of the population, as the means of livelihood of the many men employed in cutting and carting the firewood would be taken away, and these men would have to move elsewhere with their families. Mr. Harper says much of the soil of the district is good, and might grow wheat, but for one drawback, and that an irremediable one—the want of rainfall. It would be folly to talk of growing wheat where there was no certainty of securing a crop in more than one year out of three or four, and therefore, in estimating the chance of the line paying this must be dismissed from the calculation. As a matter of fact the bulk of the traffic from Nyngan to Cobar was wheat, flour, chaff, &c., the freight of which was £3 10s. or £4 per ton. With such an incentive the people would not be slow to cultivate if they did not know that farming could not be a paying undertaking. He was convinced that if the line were opened coal for smelting would be substituted for firewood, and therefore in calculating the traffic the Traffic Manager's item of £7,054 for firewood must be eliminated, and coal and a smaller proportion of firewood substituted. He (Mr. Harper) estimated the traffic as under:—

	£	s.	d.
Traffic other than wood and coal, as shown in Traffic Manager's return .....	6,131	13	1
Additional copper and fodder do. do. ....	542	14	3
Wood—7,000 tons, at 2s. 1d. ....	729	3	4
Coal (say) 4,000 trucks, 16s. 2d. ....	3,233	6	8
Nymagee traffic.....	1,353	12	0
<b>Total .....</b>	<b>£11,990</b>	<b>9</b>	<b>4</b>

Or £3,091 10s. less than the Traffic Manager's estimate. Traffic Manager concurred.

The Commissioner minuted that the estimated cost of the line, plus rolling-stock, would be £250,000, interest upon which at 4 per cent. would be .....

£10,000	
Add working expenses .....	13,000
<b>Total.....</b>	<b>23,000</b>

Deduct Mr. Harper's estimate of traffic .....

Annual loss .....

Even in the improbable event of the Traffic Manager's estimate of £15,082 being realized, there would still be a loss of £7,918.

12/7/88.—A number of residents of Nyngan forwarded a petition to the Premier against the line, on the grounds (1) that it was not wanted, (2) that it would not pay, and (3) that it would paralyze the trade of Nyngan.

14/7/88.—A deputation waited on the Premier to urge the construction of the line. They stated that in 1886 13,433 tons of goods were sent from Nyngan to Cobar, and it might be estimated that not less than 17,535 tons of goods would pass over the line in one year. In the year 1886, Cobb & Co. received £4,370 for carriage of passengers and parcels on this road. \* More than 70,000 tons of firewood were used annually at the mine, and the carriage of this alone would prove a source of revenue. The Premier in reply pointed out that out of the population of the district there could not be more than 1,500 producers at an extreme calculation, and the expenditure of £300,000 for that number would be a very large sum per man for the State to pay. He did not mean to say that the line would not be made, but the Government must be clear that they were on solid ground. Parliament had created a power to sift such calculations as had been placed before him. It would be for the Public Works Committee to ascertain if the line would pay, and if it were found that it would not pay, it would be the duty of the Committee to reject the railway.

16/7/88.—Mr. F. B. Martin of Cobar addressed the Minister in opposition to the line which, he maintained, would hardly pay the cost of the axle-grease used. It was a well known fact, he said, that the Cobar mine was nearly exhausted, and if the Minister would obtain from the Chief Inspector of Public Watering Places a return of the teams watered on the Nyngan Cobar road for the last five years, he would see that every month the traffic had been getting less. Mr. Martin closed by stating that he had no personal interest on either side of the question.

16/7/88.—The Secretary of the Nyngan Railway League, in a letter addressed to Mr. Lyne, stated that the opposition to the Cobar line was got up chiefly by the carriers, the forwarding agents, and a few publicans.

Mr. Kirkcaldie remarked thereon that he had no doubt both the advocates and the opponents of the line were actuated by motives of self-interest.

17/7/88.—The Manager of the Cobar Copper Company wrote to the Premier drawing his attention to the offer which had been made to pay double rates on certain classes of goods.

Thereon Mr. Kirkcaldie minuted that even if the Company paid double rates on copper and goods for the mine, still the line would not pay.

23/2/89.—Mr. Secretary Fletcher in minute of this date asked the Engineer-in-Chief to express an opinion as to the desirability of proceeding with the work on the basis of the tenders already received with a view to ultimately extending the railway to Wilcannia. A large amount of labour was available in the country and, Mr. Fletcher said, this work would afford relief to some of the men out of employment.

The Engineer-in-Chief replied that, if Wilcannia were to be connected with our railway system, the Cobar route would be the best. It was almost a straight line to Wilcannia and thence to Silverton, where we could connect with the South Australian Railway. This would give a through route to Adelaide, 15 miles shorter than that by Melbourne, and moreover 771 miles of N. S. Railways\* would be used as against 388 miles by the Melbourne route. The lowest tender received was that of Messrs. Hardy and Morton, £121,799 8s. 4d., and it was of great importance that employment should be found for the men out of work and for those who would in a few weeks be thrown on the labour market by the completion of existing contracts.

2/3/89.—Angus and Co., whose tender of £133,747 6s. 8d. was the next above Hardy and Morton's wrote to the Under Secretary intimating their willingness to carry out the contract on the terms of their tender.

4/3/89.—Mr. Secretary Fletcher addressed a minute to the Attorney-General giving the history of the proposed line and asking his opinion as to whether there was anything in the Public Works Act to debar him from accepting one of tenders before received.

\* See Mr. Harper's opinion.

The Attorney-General was of opinion that the P. W. Act did not apply to a case in which all the requirements of the then existing law had been complied with and in which steps had been taken towards a commencement of the work.

7/3/89.—Hardy and Morton wrote that they were *not* prepared to carry out the works of the Cobar line on the terms of their old tender.

30/3/89.—An article appeared in the *Daily Telegraph*, not by any means favourable to the line. The article directs attention to the fact that the line passes through some of the driest country in the Colony, and terminates in a township subject to the influences of the fluctuations of the copper market. The project had been persistently opposed by the permanent head of the Railway Department, who felt convinced that this would prove another of the Colony's unproductive railways. Would the present Commissioners, it asks, reverse the decision arrived at, after much painstaking inquiry, by Mr. Goodchap and his assistants? It was proposed to continue the line *vid* Wilcannia to Broken Hill, a distance of 800 miles from Sydney. Was there the smallest probability of this long line securing traffic enough to pay working expenses; and how could Sydney, at twice the distance, compete successfully with Adelaide for the trade? Our past experience of these wool railways had not been encouraging, and it behoved Parliament to deal with this proposal with the utmost deliberation and caution.

5/4/89.—The Engineer-in-Chief submitted revived alternative estimates as under:—Laid with 71½ lb. rails, £267,776; laid with 60 lb. rails, £246,596; and reported, with reference to Sir John Fowler's estimate of £2,500 a-mile for a light railway upon the fallacy of laying down a general rule to be made applicable to all lines, seeing that the conditions which govern expenditure—quantity of earthwork, depth of cutting, nature of soil, cost of conveying materials, &c.—vary upon every line.

8/4/89.—The Crown Solicitor forwarded Mr. Attorney-General Simpson's opinion, to the effect that the provisions of the Railway Act, 22nd Vic. No. 19, having been complied with, it was not necessary to submit this line to the Public Works Committee.

2/5/89.—Mr. B. R. Wise handed in a memo. for the Ministers' information. Mr. Wise stated that he had just returned from a tour in the Western district, where he found all classes of the community complaining bitterly that they were shut out from the markets of the Colony. It was universally admitted that Sydney is the best market if it were accessible. He found wool of the value of £800,000 lying at Wilcannia and stations around, and it had been so lying for the last twelve months; and in the same period 800,000 sheep had died in consequence of there being no means of removing them to other districts. During his stay in Wilcannia, eggs and butter and fodder of all kinds were selling at fabulous prices, and yet Wilcannia was the depôt from which the stations as far back as Cooper's Creek drew their supplies. The demand for agricultural produce in Wilcannia was therefore very great, and if communication with the Western districts were given it would be enormously increased. Wilcannia should be the depôt of all the country west of the Darling, for a large part of the south-west of Queensland, for a portion of the South Australian territory, and even for some parts of the gulf country in North Queensland. He would say nothing as to rival routes, but to bring about this result railway facilities must be given, and if this were not done the western trade would be lost to us and go to South Australia. The locking of the Darling should be carried out, not as an alternative, but as a necessary consequence of railway communication. It would give us the command of the trade and bring traffic to the railway. The locking would throw the water back into anas and creeks a distance of 40 or 50 miles. This would increase settlement and raise enormously the value of Crown lands.

9/5/89.—The Under Secretary forwarded the papers to the Railway Commissioners with a request that they would report on the proposed line Nyngan to Cobar, taking into consideration the question of ultimately extending it to Wilcannia and Silverstone.

31/5/89.—Mr. T. Waddell, M.L.A., applied for an increased grant for the road from Nyngan to Cobar, the present allowance being utterly inadequate.

9/6/89.—Road-Superintendent Adams confirmed the inadequacy of the allowance. In his monthly report he had often pointed out that a railway only would meet this case. The soil was of such a character that after heavy rains it seemed to have no bottom, and horses and drays sank down in it. He estimated that to put the road in proper order would cost £130,000, and to construct a light line would cost very little more.

24/8/89.—His Honor Judge Docker, in a letter addressed to the Minister, stated that he knows the district well, and that independently of any question of the Darling a light line should, in his opinion, be made to Cobar, it being a great mining centre, as well as the entrepôt of a pastoral district. The copper industry was depressed, but there was no reason to doubt that it would recover, and the gold discoveries were creating a new industry. Now, also that the country had been so much denuded of wood for smelting, a large traffic would be done in coal, and it might pay to take the ore elsewhere to be treated. The country between the Bogan and the Darling was eminently fertile, and well suited for cereals, but one essential condition was wanting,—the country was waterless, *i.e.*, without rivers, and the rainfall was scanty and precarious. There was probably no artesian water, and water conserved in tanks was too precious to be used for irrigation. Parts of the country seemed well suited for viticulture, and if water could be got for a little irrigation a trade in wine might spring up. There being no engineering difficulties, a light line should be inexpensive to construct. The length of new line to be laid might be lessened by making Girilambone or Coolabah the point of departure, but the mileage from Sydney would be increased, and the prospect of this line becoming an intercolonial one should outweigh all other considerations.

#### WILCANNIA AND BROKEN HILL.

Two routes have been suggested—rival routes, I may term them—for railway communication with Wilcannia and the West (1) by an extension of the proposed Nyngan-Cobar line, and (2) by an extension of the proposed Forbes line.

27/7/84.—The first of these was advocated in a petition from residents of Cobar, and presented to the Legislative Assembly by Mr. R. Barton.

Mr. Kirkcaldie in reporting upon this proposal, stated that in his opinion the Forbes route was the best, as it spaced the country better, and would attract business that is now done with Melbourne, via Balranald.

Inspector Hornidge also was of opinion that unless very substantial concessions were made (in rates) we must not hope for any great accession of traffic from the Wilcannia district.

In a petition from persons interested, presented to the Minister by Mr. Barton, it is asserted that the construction of such a line (Cobar) would command the whole of the Middle Darling and Barrier Range traffic.

2/4/87.—On the other hand, Mr. Kirkcaldie in reporting on this subject, said—"No doubt Cobar would be the nearest route to Wilcannia and Silverton, but a railway to the former town would be of no benefit whatever as far as securing the trade of those districts is concerned."

12/6/88.—A paragraph in the *Daily Telegraph* states that public feeling was, that the Cobar route was preferable to that by Forbes, as being shorter and more quickly made, but that the people would be satisfied to have a railway whatever route it might take.

2/5/89.—A memo. by Mr. B. R. Wise, submitted for the Minister's information, stated that he (Mr. Wise) had just returned from a tour of the Western Districts, where he found all classes of the community complaining bitterly that they were shut out from the markets of this Colony. It was universally maintained, that for a large proportion of that country Sydney was the best market if it were accessible. He found wool of the value of £250,000 lying in Wilcannia for want of the means of getting it away, and it had been there for twelve months; and in the same period 800,000 sheep had died of starvation, because there was no way of removing them to country where grass and water were attainable. During his stay in Wilcannia, eggs and butter, and all kinds of fodder, were selling at fabulous prices, and yet Wilcannia was the entrepôt from which the stations as far back as Cooper's Creek drew their supplies. The demand for agricultural produce in Wilcannia was therefore very great, and, if communication were given with the districts further west, would be enormously increased. Wilcannia should be the entrepôt for all the country west of Darling, for the southward of Queensland, and a portion of South Australia, and even for some parts of the gulf country in Queensland. To bring about this result—he would say nothing of rival routes—railway facilities must be given, and if this were not done the western trade would be lost to us and go to South Australia. The locking of the Darling should be carried out—not as an alternative but as a necessary consequence of railway communication. It would give us the command of the trade and bring traffic to the railway. The locking would throw the water back in the anas and creeks for a distance of 40 or 50 miles. This would encourage settlement and rise the value of Crown land "enormously."

2/4/89.—The *Silver Age* in an article of this date, referring to the visit of the Railway Commissioners and to the duty confided to them, stated that surprise was felt that steps in the direction of an effort to secure the Barrier trade were only now being taken. South Australia, it was pointed out, had early recognised the value of the trade, and had carried a line to

to the border. It had been frequently debated whether a railway (in communication with Sydney) to Broken Hill would pay, but the writer believed it only required proper management to make it in time "highly payable", not only to the Railway Department but to the Colony. With an inexhaustible supply of coal at one end we should be able to run our trains cheaply, and compete with South Australia for the traffic.

4/7/89.—The *Sydney Morning Herald* says "there would scarcely be wisdom in constructing a line from Nyngan to Broken Hill or Silverton unless we were sure of a great deal of the trade of the districts referred to. It is purely a matter of pounds, shillings, and pence. We recognise a duty to the west, but it is possible that in doing a little right (to those districts) a great deal of wrong may be done (to the Colony as a whole), as wrong *would* be done if a railway were constructed to the Darling country which would be taken advantage of only in part. Adelaide, the writer points out, "in her proximity to the border", has enormous advantages in respect of the trade. If, "he asks", we establish a railway will those advantages be increased or lessened? "This", he adds, "is the problem to be dealt with, while we see at the same time the necessity of preserving the integrity of the Colony and of keeping our resources within our own border."

The *Western Grazier*, a local paper, published some remarks addressed by a Mr. Donkes to the Railway Commissioner, on behalf of the Wilcannia Railway League. Mr. Donkes quoted statistics freely, but as they were, for a great part, of old date they are not of much value for the present purpose. One fact, however, which he mentioned is worthy of note, viz., that during the year losses of sheep to the extent of 1,000,000 or 1,250,000 had occurred, which might have been avoided if the mean of removing the sheep to another district had been available.

24/8/89—His Honor Judge Docker, in a memorandum addressed to the Minister stated—speaking from an experience of the district extending over twenty years—that few people in Sydney had any idea of the amount of traffic passing through Wilcannia, not only to the Darling, but to the wide country of the Paroo, away to the Queensland border. The bulk of this traffic went to South Australia, and unless we were prepared to acquiesce in the practical annexation (to South Australia) of those important districts, railway facilities should be provided. He was of opinion that if all the traffic, of which Wilcannia was the entrepôt, were carried by railway it would fully justify the construction of a light line. But the soil of the Darling valley was so fertile that, with the help of irrigation, he expected to see that river become the Nile of Australia, and he knew of no country which presented such facilities for a system of irrigation. A railway would not obtain all the traffic. The bulk of the heavy goods would inevitably go by the river when navigable, but the earnings of the railway for wool and fodder would probably make up for the deficiency in rainy weather. Did not see, however, why a revenue by dues or tolls should not be derived from the river, as it was the expensive snagging operations which had rendered it navigable; and this plan should certainly be adopted if the river were locked, which it ought to be. If the river were rendered permanently navigable it would act as a feeder—not a competitor—of a railway. If a line to Forbes had been made, the best route to Wilcannia would have been by an extension from that point to Euabalong, and thence across the country to Mount Hope, but, under existing circumstances, there could be no doubt that Nyngan should be the point of departure. The distance from Sydney would be only some 20 or 30 miles, while the amount of new construction would be considerably less.

C. A. B., 26/10/89.

## B.

### REPORT BY THE RAILWAY COMMISSIONERS.

Office of the Railway Commissioners of New South Wales, Sydney, 15th July, 1889.

#### PROPOSED RAILWAY EXTENSION FROM COBAR TO WILCANNIA AND SILVERTON.

In the reference to us of the proposed Nyngan and Cobar line, we were requested to report in regard "to the question of ultimately extending the line to Wilcannia, and thence to Silverton, with a view of connecting it with the South Australian system." We have therefore inspected the route from Cobar to Wilcannia and Broken Hill.

The question of railway communication with Wilcannia, Broken Hill, and the South Australian Border, is of considerable magnitude, yet it is one that cannot apparently remain long undetermined, not only in the interest of the places named, and the Western district generally, but as a means of direct communication with South Australia from Sydney, and probably at no distant date, by the construction of a line between the Northern and Western lines—a direct route from Brisbane. Lines of this character can only be dealt with upon National principles, yet, there is also a commercial aspect.

While Wilcannia and the surrounding district at present depends upon water-carriage for its supplies, and as a means of getting wool to the seaboard, the carriage is uncertain, and it is far to assume that a portion at least of the traffic would go by rail if such a means of transit were available.

The pastoralists are at the present almost helpless in times of drought, and their losses during the past season have been great. A railway would have a material effect on their prospects—by affording the means of selling part of their stock in bad times, or of removing the same to more favored feeding grounds.

The rates now paid for getting the stores used on the stations are excessive, in consequence of the great distances to be travelled to reach the railway at Hay, Nyngan, or Broken Hill.

Another very great consideration is the fact of the marvellous development of the mining industry at Broken Hill, where there is a population of 15,000 souls at present existing, and we were assured it would rapidly increase.

The whole of this trade is out of the hands of New South Wales, and the sympathies of the population are to a great extent with South Australia and Victoria, as the communication with New South Wales is so very difficult.

We were assured by the manager of one of the mines that his railway carriage account amounted to £18,000 per month, and were assured that if a through route existed with Sydney a fair proportion of this traffic might be obtained in spite of our long route. It is probable also that a market would be opened up for coal and coke for our western coal fields.

This route would also be as short from Sydney to Adelaide, (and of course to places north of Adelaide shorter) as that now existing via Melbourne, but the New South Wales Railways would receive a 771 miles proportion instead of 387 miles as at present to Albury.

With regard to our northern system and Queensland, if a line is constructed from Werris Creek to the Western line, a shortening of distance between the North and South Australia of about 400 miles would be effected.

The line is only now being roughly surveyed from Wilcannia to Broken Hill, but making the lines throughout on as cheap a principle as possible, without fencing, it is roughly estimated that it will cost as under:—

Cobar to Wilcannia .....	£497,000
Wilcannia to Broken Hill.....	390,000
Broken Hill to Cockburn, via the Pinnacles and Thackeringa.....	150,000
	<hr/>
	£1,037,000
Interest at 3½ per cent. ....	£36,295
Rough estimate of cost of working. ....	51,000
Interest on rolling-stock .....	3,339
	<hr/>
Cost per annum .....	£90,634

Of course it is impossible to offer a pronounced opinion upon the probable financial success of such a large undertaking from the outset, but there is no doubt ultimately it will be successful, and as it is most desirable to open up communication with remote portions of the Colony of New South Wales, which are at present nearly, if not wholly, commercially connected with our sister colonies, we strongly advise the Government to adopt the scheme, and to commence it in about four sections, so as to get it opened throughout as quickly as possible.

We suggest the route for the line from Broken Hill to the South Australian Border at Cockburn, *via* the Pinnacles and Thackeringa, as the mining industry at the Pinnacles requires the aid of a railway to develop it, and a private company is also being projected to afford this facility; and we would advise the Government not to grant powers to another private company in the district.

The

The Bill now before Parliament for constructing an extension of the present Silverton tram-line to the River Darling, at Menindie, a distance of about 80 miles, regarding which we have been asked to report, is also affected by this scheme. We are of opinion it would be unwise to authorize the line, yet it is desirable that access should be given with the river from Broken Hill; and if the Government decide to make the Wilcannia line, we would advise the rejection of the Bill.

The Seal of the Railway Commissioners of New South Wales was affixed hereto this sixteenth day of July, one thousand eight hundred and eighty-nine, in the presence of,—

W. V. RLAD

E. M. G. EDDY,  
Chief Commissioner.  
W. M. FEHON,  
Commissioner.  
CHARLES OLIVER,  
Commissioner.

## C.

## OFFICIAL ESTIMATE OF THE COST OF THE PROPOSED RAILWAY.

Nyngan to Cobar.—Revised Estimate, 15 July, 1889.

Works—Estimate of Engineer-in-Chief . . . . .		£126,579	0	0
Less fencing portion . . . . .		10,000	0	0
		116,579	0	0
Permanent Way material, 60-lb. rails—84 miles at £600 ..	£50,400	0	0	
Freight . . . . .	13,525	0	0	
Loading and unloading, 8,610 at 2s. . . . .	861	0	0	
		64,786	0	0
Water supply . . . . .	4,000	0	0	
Turntable . . . . .	1,000	0	0	
Interlocking . . . . .	1,850	0	0	
		6,850	0	0
Engineering expenses and contingencies . . . . .		19,000	0	0
		£207,215	0	0

Average cost per mile, £2,560.

JOHN WHITTON,  
Engineer.

7 September, 1885.

## E.

## INFORMATION REGARDING DISTANCES.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 29 October, 1889.

In compliance with the request contained in your letter of the 11th instant I forward herewith details of the various distances asked for.

Application has been made to the Railway Department for information regarding approximate cost of fares between Brisbane and Adelaide by the Werris Creek, Dubbo, and Nyngan route and also by the present route *via* Melbourne. This, together with similar information regarding goods rates, will be sent you as soon as received.

W. H. QUODLING,

The Secretary, Parliamentary Standing Committee, Public Works.

Secretary.

Distance Sydney to Adelaide *via* Melbourne by existing lines of Railway, 1,085½ miles:—

Sydney to Albury .....	m. ch.	386 0
Albury to Wodonga .....		3 40
Wodonga to Melbourne .....		187 0
Melbourne to Serviceton .....		312 60
Serviceton to Adelaide .....		196 0
		————— 1,085½ miles.

Distance Sydney to Adelaide *via* Nyngan, Cobar, and Wilcannia, 1,068 miles 70 chains:—

Sydney to Nyngan .....	m. ch.	377 0
Nyngan to Cobar, 81 miles 50 chains 1 mile 10 chains of existing line .....		81 50
Cobar to Wilcannia .....		156 40
Wilcannia to Silverton .....		135 0
Silverton to Cockburn .....		20 0
Cockburn to Adelaide .....		298 60
		————— 1,068m. 70ch.

Distance Sydney to Adelaide *via* Hay and Wentworth, 880 miles:—

Sydney to Hay .....	m. ch.	454 0
Hay to South Australian border, by scale .....		243 0
South Australian Border to Morgan .....		78 20
Morgan to Adelaide .....		104 60
		————— 880 miles.
		Distance

Distance Sydney to Adelaide *via* Menindie and Silverton, 1,062 $\frac{1}{2}$  miles :—

	m. ch.	
Sydney to Hay .....	454 0	
Hay to Menindie .....	210 0	
Menindie to Silverton .....	80 0	
Silverton to Cockburn .....	20 0	
Cockburn to Adelaide .....	298 60	
	<hr/>	1,062 $\frac{1}{2}$ miles.

Distance Sydney to Adelaide *via* Forbes, Menindie, and Silverton, 1,004 $\frac{3}{4}$  miles :—

	m. ch.	
Sydney to Forbes .....	266 0	
Forbes to Menindie .....	340 0	
Menindie to Silverton .....	80 0	
Silverton to Cockburn .....	20 0	
Cockburn to Adelaide .....	298 60	
	<hr/>	1,004 $\frac{3}{4}$ miles.

Distance Wallangarra to Werris Creek Station, 236 miles.

Distance Wallangarra to the junction of Werris Creek to Dubbo trial line, 240 $\frac{1}{2}$  miles.

Distance Werris Creek Station to Dubbo, including 4 $\frac{1}{2}$  miles of existing line, 154 miles.

Distance Werris Creek to Dubbo from junction of trial survey, 149 $\frac{1}{2}$  miles.

Distance Muscleebrook to Dubbo *via* Cassilis, 161 miles :—

	m. ch.	
Muscleebrook to Cassilis .....	77 0	
Cassilis to Dubbo .....	84 0	
	<hr/>	161 miles.

Distance Werris Creek to Nyngan *via* Dubbo, 253 miles :—

	m. ch.	
Werris Station to Dubbo, including 4 $\frac{1}{2}$ miles of existing line ..	154 0	
Dubbo to Nyngan .....	99 0	
	<hr/>	253 miles.

Distance Werris Creek to Nyngan *via* Wellington, 279 $\frac{1}{2}$  miles :—

	m. ch.	
Werris Creek Station to junction of trial survey with Great Western Railway, 1 $\frac{1}{4}$ mile north of Wellington ..	150 40	
Wellington Station to Nyngan Station ..	129 0	
	<hr/>	279 $\frac{1}{2}$ miles.

Distance Werris Creek to Nyngan (by scale, direct route), 200 miles.

Distance Wallangarra to South Australia *via* Sydney by existing lines of railway, 1,379 $\frac{1}{4}$  miles .—

	m. ch.	
Wallangarra to Sydney ..	490 0	
Sydney to Albury .....	386 0	
Albury to Wodonga .....	3 40	
Wodonga to Melbourne ..	187 0	
Melbourne to Serviceton ..	312 60	
	<hr/>	1,379 $\frac{1}{4}$ miles.

Serviceton to Adelaide, 196 miles, which, added to 1,379 $\frac{1}{4}$  miles, gives a distance of 1,575 $\frac{1}{4}$  miles from Wallangarra to Adelaide *via* Sydney and Melbourne.

Distance Wallangarra to the South Australian Border *via* Werris Creek, Dubbo, and Nyngan, 882 miles 10 chains :—

	m. ch.	
Wallangarra to junction of Werris Creek to Dubbo trial line ..	240 40	
Werris Creek junction of trial survey to Dubbo ..	149 40	
Dubbo to Nyngan ..	99 0	
Nyngan to Cobar, 81 miles 50 chains, includes 1 mile 10 chains existing line ..	81 50	
Cobar to Wilcannia ..	156 40	
Wilcannia to Silverton ..	135 0	
Silverton to Cockburn ..	20 0	
	<hr/>	882 m. 10 ch.

Cockburn to Adelaide, 298 $\frac{1}{2}$  miles, added to 882 $\frac{1}{2}$  miles, gives a distance of 1 180 miles 70 chains from Wallangarra to Adelaide *via* Werris Creek, Dubbo, Nyngan, Wilcannia, and Silverton.

Distance Brisbane to Adelaide *via* Werris Creek, Dubbo, Nyngan, Cobar, and Cockburn, 1,414 miles 70 chains .—

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

---

SECTIONAL COMMITTEE.

---

RAILWAY FROM NYNGAN TO COBAR.

---

REPORT.

---

THE Sectional Committee appointed to inspect and take evidence in reference to the above proposed railway, beg to report that five of their number visited the district through which the survey for the line has been made, traversed its route, examined witnesses, and obtained information generally in regard to the project. In considering the matter the Committee have had regard to the fact that the Minister for Works, in submitting this question to the full Committee, represented the Nyngan to Cobar Railway as being directly connected with the project to carry the line further on to Broken Hill and the South Australian border, and, with that end in view, the Sectional Committee have conducted their inquiry, and submit the following Report:—

The Sectional Committee left Redfern Railway Station by the 8 p.m. train on October 3rd, and arrived at Nyngan at 11.30 a.m. on October 4th. The Committee met at the Court-house, Nyngan, the same day, when the following witnesses were examined:—J. Prince (Forwarding and General Agent) and A. Adams (Road Superintendent).

On the following day the Committee resumed their sittings, when A. J. Rowling (Stationmaster, Nyngan), T. Barrett (Hotelkeeper), P. Lynch (Forwarding Agent), A. T. Bleatley (Storekeeper), T. H. Rowe (Chairman of Progress Committee), R. T. Clay (Postmaster), A. Mackellar (Manager of Commercial Bank), S. F. K. Lane (Manager of A.J.S. Bank), A. Lyne (Grazier), W. Jurd (Public School Teacher), J. G. Kean (Forwarding Agent), J. Harris (Storekeeper), and H. Brownlow (Storekeeper), were examined. These witnesses gave evidence as to the amount of trade done at Nyngan and surrounding district, the character of the soil and its capabilities, the amount of stock in the district, the population, the trade transacted between Nyngan and Cobar, and also as to the probable results to be obtained from the construction of the proposed railway. The majority of the witnesses examined expressed their opinion that the construction of the railway was desirable as tending to promote settlement and improve the trade of the district. One or two witnesses were hostile, on the ground that the railway, if extended, would injure the trade of Nyngan.

On Sunday, October 6th, the Committee (with the exception of the Hon. Dr. Garran, M.L.C., who returned to Sydney) started for Cobar; and as heavy rain had fallen, they had the opportunity of seeing the condition of the road in wet weather, with the result that they were only able to cover a distance of 27 miles, by continuous travelling, from 10.15 a.m. to 5 p.m., when Hermitage Plains Hotel was reached. The evidence of H. F. Hall was taken, and he was strongly in favour of the railway. Hall's evidence is important as showing that he had prospered in the district upon a small holding, his property proving that the soil was very suitable for the growth of wheat and barley, his average crop being 18 bushels to the acre. He also stated that the district was very suitable for sheep raising; and that, in the drought, his loss was very trifling; and that want of better communication was his greatest drawback. At this place the Committee inspected a fine crop of wheat of over 30 acres, averaging fully 30 bushels to the acre.

On Monday, October 7th, the Committee continued their journey towards Cobar, arriving at Muriel Tank at 11 a.m., when the evidence of F. Malarky, the lessee, was taken as to the stock that watered at the tank, and the general traffic passing by. The Committee proceeded onwards, and reached Budd's Hotel at 3.15 p.m., when the evidence of the proprietor, W. Budd, and of H. Sutherland was taken. At this place the Committee inspected a most luxuriant garden, in which fruits, flowers, vegetables, and wheat were growing. Mr. Budd stated that he generally got three crops out of four; his residence is in the Western Division, which commences about two miles nearer Nyngan than Budd's.

After leaving this place the Committee proceeded to Cobar, which they reached at 10 p.m.

On Tuesday, October 8th, the Committee met at the Court-house, Cobar, when they took the the evidence of W. J. Hogan (the Mayor), F. Mackell (P.M. and Mining Registrar), D. H. Penhall (Mining Agent), Stewart (Stock Inspector), Peter Andrew (Butcher and Farmer), M. O'Neill (Publican and Farmer), C. M. Stewart (C.E.), J. Cotton, and A. Adams (Road Superintendent).

On Wednesday, October 9th, the Committee resumed their sitting at the Court-house, when the evidence of E. James (Storekeeper), H. J. Cornish (Hotel-keeper), H. Simpson (Manager of A. J. S. Bank), J. G. Lee (Public School Teacher), S. A. Fox (Manager of the Commercial Bank), L. Corbett (Labourer), H. Lewis (Auctioneer), T. Duffy (Storekeeper), and C. R. Ferguson, (Builder), was taken; and Cotton, Hogan, and Lewis were recalled. Later in the day the evidence of H. J. Holsten (Carrier), was taken at the Commercial Hotel, and D. R. Kinaine (Post-master), gave particulars as to postal business. On the same day the Committee visited the various gold-mines at Cobar, taking the evidence of Robert Jackson (Manager of the Chesney Cobar Gold-mining Company). They then inspected the large surface works of the Cobar Copper-mining Company, which at the present time are idle. The Committee visited several cultivation holdings, where the crops, vegetables, &c., were of the most luxuriant character. In one instance the oats measured 6 ft. 11 in. in height. Many acres were planted with lucerne, which was fully 3 ft. high; and all this without irrigation.

On Thursday, October 10th, the Committee started at 9 a.m. *en route* for Wilcannia, traversing part of the proposed railway line, and passing through splendid country included in Meryula and Bulgoo Runs, and reaching the Double Gates Hotel, situated on the latter run, 28 miles from Cobar, at midday. Here the Committee examined Mr. A. Fulton (Manager of the Station), as to the character of the country; and a noticeable feature of his evidence is the admission that fully one-half of the run was suitable for agricultural purposes. H. W. David (Store-keeper on Bulgoo Station), and F. Sallaway (Hotelkeeper), likewise gave evidence. Here also a splendid crop of wheat was inspected, and garden produce was also found to be thriving. Journeying onwards the Committee passed through Messrs. Frews and Macpherson's runs, and arrived at Sandy Creek Hotel, 42 miles from Cobar, about dusk. In the evening the evidence of E. W. Meredith (Hotelkeeper), and of John Cameron (Manager of Marfield Station), was taken; and the latter gentleman also stated that half his run was suitable for agricultural purposes. On Friday, October 11th, the Committee left early, and reached Horan's Belarabonn Hotel, Paddington Station, about 72 miles from Cobar, at midday, and Holan's evidence was taken. Here again an excellent crop was growing. Passing onwards the Committee visited the wool-scouring operations on Paddington Station, owned by Macpherson & Co., which is a holding of eight and a half 10-mile blocks. Wool-scouring is here carried on for this and other stations. Mr. Macpherson's evidence was taken, and he admitted that he did no scrubbing whatever on the run, and that the scrub was rapidly growing and spoiling the grass, also that the rabbits were very troublesome. Proceeding, the Committee arrived at Thermungya Hotel, on Nekarboo Run, at 6.30 p.m., 88 miles from Cobar. At 7 a.m. the next day the Committee examined the proprietor, J. Tomlinson (Hotelkeeper), and Sydney Walker (part owner of Nekarboo Run). It may be here noticed that it was shown that wool is being taken from this district to Hay and shipped down the Murrumbidgee for Echuca or Port Victor. Leaving this place the Committee proceeded through Fulham Run, which they reached at 12.15, and examined the proprietor, C. J. Moule. The wool on Fulham Station is shipped at Wilcannia for Adelaide. Here also a fine crop of wheat was inspected, and Mr. Moule stated that the land  
had

had not even been ploughed, only harrowed. Leaving here, the Committee arrived at Kew Station, 145 miles from Cobar, at 6:30 p.m. This is a run embracing one 10-mile block, and it was noticeable that the herbage was the best the Committee had seen. Mr. Turner (the owner) was examined, and he seems to have improved his run in many ways and to great advantage, the whole being fenced with rabbit-proof fencing, splendid tanks having been constructed, and storage of grass in silos having been effected.

On Sunday, October 13th, the Committee started on their journey, and the road was so bad that from 10 p.m. to 7 p.m. only 24 miles were travelled, and the Committee camped out for the night at the tanks on Cultowa Runs.

At daybreak on Monday, October 14th, the Committee started again, passing through Cultowa and Murtee Runs, having lunched at Murtee at 12 noon, where the statement of H. Roach, the hutkeeper, was taken. At this place a capital well had been sunk, with good and permanent water. Along the whole route, and especially after leaving Cobar, the Committee noticed the luxuriant growth of grass and herbage; but here—about 20 miles from Wilcannia—the character of the country changed, and the soil, instead of having that red, loamy, rich appearance, was more of a grey marl character, and seemed very poor. After leaving the hutkeeper's, the Committee crossed the Tallywalka, an ana-branch of the Darling, and passed through a lignum swamp and along very flat country until they reached the Darling at Murtee Homestead, driving along its banks, and crossing at Wilcannia at 4 p.m. The Committee then interviewed the Mayor, and made arrangements for taking evidence next morning, viz., Tuesday, October 15th, when they met at the Court-house, and examined O. C. Macdougall (the Mayor), M. J. Darey (Customs), J. R. Holding (Postmaster), H. W. Jackson (Coach Agent, and Editor of the *Western Grazier*), G. H. Doake (Storekeeper and Forwarding Agent), J. C. Tully (Inspector of Stock), and H. F. T. Bode (Railway Surveyor), after which they adjourned until the following day, October 16th, when W. T. Corney (Merchant and Forwarding Agent), F. T. Ottaway (Merchant and Forwarding Agent), F. Lang (Land Agent), J. M. Burns (Dealer), T. Byrne (Publican), J. Booth (Grazier, of Cultowa), E. O'Donnell (Agent), A. W. R. Pratt (C.P.S.), and R. Ashworth (Public School Teacher), were examined, and Tully and Holding were recalled.

The evidence taken at this place was of a very important character, as showing that Wilcannia is the centre of a very large district. An immense amount of trade is done here, and special attention is directed to the detailed evidence on this head, one witness (W. T. Corney) stating his belief that it would be within the mark to estimate the freight inwards and outwards at £80,000, and other witnesses giving confirmatory evidence. The following figures, showing the inward and outward trade done at Wentworth, where the Customs returns are kept, were supplied by the Collector there:—Inwards: For year 1886, 176 vessels, 26,066 tons; value, £191,393. For 1887, 218 vessels, 36,170 tons; value, £283,387. For 1888, 170 vessels, 23,958 tons; value £149,214. For 1889, to 16th October, 1889, 81 vessels, 15,611 tons; value £76,490. Outwards: For 1886, 164 vessels, 26,552 tons; value, £1,015,631. For 1887, 222 vessels, 26,552 tons; value, £1,098,543. For 1888, 173 vessels, 22,718 tons; value, £133,764. From 1st January to 16th October, 1889, 241 vessels, 22,264 tons; value, £581,600. The low figures for last year were owing to a low river.

Wilcannia is also the centre of the trade for the Paroo, Mount Browne, and the south-west corner of Queensland. Evidence was also given here as to the terrible loss of sheep during the last drought. The actual loss was stated by the Stock Inspector at 1,000,000 sheep, and an indirect loss of 750,000 through there being no increase, and it was stated that had a railway existed during the drought 500,000 sheep could have been sent away and saved. Evidence was forthcoming as to the inconvenience and uncertainty of the river transit, and the varying and occasionally exorbitant rates of carriage.

The Committee left Wilcannia at 9:15 a.m. on 17th October, and passed through Netley and Winterega Runs, *via* Caulker's Wells, arriving at Glenlyon Station, 60 miles from Wilcannia, at 2 a.m. on 18th October. Changing to the mail-coach, the Committee at once resumed their journey, reaching Burke's Cave, still part of Glenlyon Run, at 7:15 a.m. Journeying onwards they crossed Yancowinna Creek, on Topar Run, at 1 p.m., passing through Kinchega Run, and reaching the "Gorge," on Stevens' Creek, 17 miles from Broken Hill, at 8 p.m.; thence to Broken Hill, which they reached at 11 p.m., where the Committee were rejoined by the Hon. Dr. Garran, M.L.C.

On

On Saturday, 19th October, the Committee met at the Council Chamber, Broken Hill, at 10 a.m., when they examined the Mayor (Z. Lane), C. Chapple, (Carrying Agent), F. Wickham (Government Surveyor) and T. R. Firth (Government Engineer). On the same day the Committee inspected the Broken Hill Proprietary Company's works, and descended Block 11, examining the vast extent of the mine.

Resuming their inquiries on Monday, 21st October, the Committee examined John Bristowe (Accountant of the Broken Hill Proprietary Mine), F. H. Clark (British Blocks Co.), A. Stenhouse (Timber Dealer), T. Coombe (Timber Dealer), W. J. Hanna (Road Superintendent), C. E. Hogg (C.E.), J. Nolan (Prospector), F. Jolly (Mining Manager, Junction Co.), F. J. Odling (Mining Manager, Pinnacles Co.), E. Hornsby (Timber Merchant), and J. Stubbs (Manager of the Bank of Australasia).

On Tuesday, 22nd October, the evidence of Chas. Eley (Traffic Manager to the Silverton Tramway Co.), W. W. Harper (Mining Manager to the Broken Hill Proprietary Co.), O. Maddox (Customs Officer), T. M. M'Kenzie (Storekeeper, Menindie), R. Scobie, W. M. Wetherall (Postmaster), F. Whysall (Telegraph Master), R. M. Gibson (Mining Registrar), and F. E. Randle (Produce Merchant) was taken.

On Wednesday, 23rd October, the Committee again met at the Council Chamber, when the evidence of J. Logan, as to deep-boring operations at Brisbane Blocks, was taken; this being to the effect that silver ore had been discovered at a depth of 1,600 and odd feet.

The Committee left Broken Hill at 11.15 a.m. on the same day, reaching Silverton at 12.45 p.m. Here, evidence was taken at the Municipal Chambers, and the following witnesses were examined:—H. Brown (the Mayor), U. Dudley (Manager of the Umberumberka Mine), C. Ring, (Manager of the Flux Company), F. Spence (Station-master, Silverton Tramway Company), J. J. Collier (Manager of Iron-mine), A. H. Gibson (Carrying Agent), R. Mooney (Sub-Collector of Customs), J. F. Williams (Mining Registrar), and J. Saunders (C.P.S.)

Two members of the Committee (Messrs. Garran and Copeland) here visited the Umberumberka and Thackaringa Mines, obtaining information as to those mines, and rejoining the Committee at Cockburn.

The Committee left Silverton at 10 p.m. for Adelaide, which place they reached at 1.15 p.m. on Thursday, 24th October, and they at once interviewed the South Australian Railway Commissioners, and valuable information was elicited as to railway construction and traffic generally. Adelaide was left at 3.30 p.m. on the same day, and Melbourne was reached at 10 a.m. on Friday, 25th October. On the following day the Committee had an interview with Mr. Speight, Chairman of the Victorian Railway Commissioners, in reference to branch railways and agricultural lines, grades, &c.

The Committee left for Sydney at the earliest opportunity, namely, by express train, on Monday, 28th October, reaching Sydney about midday on Tuesday, 29th October.

#### SUMMARY AND CONCLUSIONS.

From the voluminous evidence taken, and personal observation, the Committee arrive at the following conclusions:—

The country traversed between Nyngan and Broken Hill is in no way adapted for road-making, being of a red, loamy, or rotten nature, especially difficult for horse or wheel traffic in wet weather; and it seems apparent that if satisfactory communication is to be opened up and maintained between these points it must be by means of a railway.

The Committee have been very much impressed by the rich character of the soil over the greater portion of the route which they traversed. They found this to be of a rich, chocolate, loamy nature, and admirably suited for agricultural purposes, a very noticeable feature being that wherever agriculture has been undertaken, this year, it has been a very marked success, and the crops, fruits, and vegetables reared, have been of a most luxuriant character. The evidence taken tended to show that an average of three out of four crops could be obtained. The country along the greater portion of the route is well suited for small holdings, combining agriculture with grazing. The smaller pastoral holdings appear to be the best managed, and more under control, and consequently suffer less loss from drought or rabbits.

From a mining point of view the projected line to Broken Hill traverses some very promising fields. Although the Copper-mine at Cobar is closed at present, that

at

at Nymagee is still working, and a new one has been discovered at New Burra Burra, near Cobar, which gives evidence of great richness. There are also several promising gold-mines in the Cobar district, some of which are being actively worked. A railway line to Wilcannia would serve what is considered to be a very valuable mineral district known as the Mount Browne District, where 700 miners are already located. Broken Hill, which is the mining centre of the Australasian Colonies at the present time, appears to be marvellously rich in silver and other minerals. It has a population now, of 16,000 and will probably double that number, at the present rate of progress, in a few years. There is every evidence that the mines here are of a permanent character, one mine alone, the Broken Hill Proprietary having an enormous output, that for the week ending 1st August last being 3,179 tons, yielding 455 tons bullion, and many of the other mines showing large outputs and extensive future workings. The evidence of the various witnesses as to actual trade done in imports and exports is truly astonishing, and special attention is drawn thereto, and as evidencing the very large amount of traffic to this place, a perusal of the South Australian Railway Report for 1887-8 shows that nearly one-seventh of the entire railway revenue of that colony for that period was derived from Broken Hill. Two large goods trains, one mixed train and one passenger train, are stated to go daily to and from Broken Hill.

The Committee found Broken Hill to be a well-established Municipality, in which many substantial buildings of brick and stone are to be found. The hotels would do credit to any first class city. The streets are metalled, well laid out, and planted with trees; the population, apparently, thriving and sober.

The sanitary arrangements at Broken Hill have, since its incorporation, been greatly improved, and steps are being taken to give the place a good supply of water. A striking feature of Broken Hill is the fact that the business of the local postal and telegraph office is second only to Sydney, and is double that of Newcastle. The amount already received by the Government from land sold at Broken Hill is £27,425; the revenue from miners' leases and miners' rights from September, 1887, to September, 1889, was £9,362. A very large amount has yet to be received from land.

The town of Silverton is substantially built and well laid out, and its future advancement depends mainly upon the successful development of its mines.

A railway line from Nyngan to Cobar, and thence by Wilcannia to Broken Hill, would go through one of the largest pastoral districts in the colony, as evidenced by the amount of sheep in the Wilcannia district, which is stated by the Stock Inspector to be 3,000,000. In good seasons there is abundance of grass for feed, and in dry seasons salt-bush and edible shrubs and herbage have been found in the past to sustain the stock. The principal losses would probably be through want of water. This difficulty to a great extent could be minimized by the construction of dams and the sinking of wells. Evidence was forthcoming that some of the tanks, wells, and dams which had been constructed, had never been known to give out. The Committee took evidence at various points as to the rainfall, and the following were found to be the figures recorded at some of the places where gauges were kept:—

	For 1887—	For 1888—	To October, 1889—
Cobar ... ..	19·14 inches.	9·08 inches.	16·24 inches.
Paddington Station ... ..	24·0 ”	7·0 ”	18·39 ”
Nekarboo Station ... ..	25 ”	4·2 ”	13·0 ”
Kew Station ... ..	25·77 ”	4·29 ”	16·10 ”
Wilcannia ... ..	21·99 ”	3·22 ”	10·60 ”
		May to December :	
Broken Hill ... ..	No record.	1·77 inches.	15·95 ”

The rainfall for this year is high, consequently the country presents an appearance of special luxuriance.

All along the route the witnesses testified to the immense benefits which would result to the land from irrigation. In certain districts it has been tried in a small way with marked success. The land on either side of the Darling, for a considerable distance from Wilcannia, could easily be irrigated from the river, and rendered permanently productive. The locking of the river would throw the water back into the creeks and ana-branches to distances of from 20 to 50 miles.

The Committee ascertained that throughout the whole route from Nyngan to Cobar, and thence to Broken Hill, ballast for railway purposes was easily procurable, and admirable building stone can be obtained both at Cobar and Wilcannia, and it was also ascertained that no timber, in any quantity, could be obtained for railway purposes along the line.

PROSPECTS

## PROSPECTS OF TRAFFIC.

One of the chief features of the enquiry has been to ascertain the prospects of traffic if a line were constructed. At the outset the evidence tended to show that between Nyngan and Cobar the amount of business to be done would not exceed £15,000 per annum, and the statement of Government officials and residents of Cobar (see the Mayor's evidence) seem to agree as to the probable trade. To this must be added the traffic from Nymagee and its mines, which would strike the line about 30 miles from Nyngan, and the probable further traffic from the new Burra Burra mine, about 60 miles from Nyngan. Between Cobar and Wilcannia a pastoral traffic only could at present be relied upon, much of which is now going to Victoria and South Australia, via Hay, and the rivers. In the event, however, of this land being settled by small holders, a considerable traffic will, no doubt, arise. At Wilcannia, which appears to be an important centre of river and back block trade, a very large traffic may be relied upon. The line would probably operate here, as it is stated to have done at Bourke, to intercept a large trade which is now going by river to South Australia and Victoria. It would also command the Paroo, Mount Browne, and South-western Queensland trade. Between Wilcannia and Broken Hill, there are but three or four pastoral holdings, the trade from which is likely to be only trifling. It is probable, however, that a considerable trade in fat stock would be done along this line by stations en route, sending their sheep and cattle to Broken Hill for slaughter. The amount of traffic likely to be derived from Broken Hill is difficult to calculate, but it will be chiefly derivable from the carriage of coke, coal, timber, lime and ironstone, fluxes, ores, bullion, wool, fodder, building material, and general merchandise, the total tonnage of which, according to the statement of the Sub-Collector of Customs at Silverton, amounts to about 2,500 tons weekly.

This traffic is likely to further develop with the increase of population.

The evidence adduced goes to prove that a very large amount of freight is earned along the line of route, the amounts for Nyngan to Cobar being stated to be about £15,000, and Wilcannia about £80,000, while at Broken Hill and Silverton the freight must be enormous, and special reference to the evidence on this point is directed. The Committee could not ascertain the amount earned by the Silverton Tramway Company as the Station-master stated that the books were kept in Melbourne, but that officer's evidence shows that the business is very extensive and remunerative.

In addition to the receipts from the foregoing traffic, it is probable that the line would be largely availed of by pastoralists for the removal of starving stock in seasons of drought, and also for the conveyance of fodder to stations, thus adding further to the receipts of the railway, and increasing its utility to the district.

There is no doubt that the line to Broken Hill, if constructed, would be largely availed of by the travelling public, it being the shortest and most direct route to the Barrier Ranges from Sydney and the important intervening centres.

Some of the witnesses pointed out that a cross country line from Nyngan to Werris Creek, on the northern line, would allow of sheep being sent up in seasons of drought from the western plains to the New England country, and would form a connecting link between Queensland and South Australia, and would probably attract an intercolonial traffic.

## SUGGESTIONS.

In conclusion the Committee desire to express the following opinions and make the following suggestions :—

1. That, although Cobar has doubtless many claims to a railway, still, looking at the probable traffic, it would not be desirable to construct a line from Nyngan to Cobar, unless a further extension beyond the last named place was contemplated.
2. The western portion of the colony, especially Wilcannia and the Broken Hill settlement, justifies the construction of a line to the western border via Cobar, Wilcannia, and Broken Hill.

The Committee therefore suggest and recommend the construction of the line from Nyngan to Cobar, as the first instalment of a through line to Broken Hill, for the following reasons :—

1. That the line would serve the Cobar District.

2. Its extension to Wilcannia would tap the trade of the Darling and Mount Browne, the Paroo trade now centred at Wilcannia, and the trade of the south-western portion of Queensland.
3. Its further extension to Broken Hill would tap the trade of the important and progressive mining centres of the Barrier Ranges.
4. The whole would serve as a starving stock line, and it would be a valuable intercolonial line, should a connection be made between Nyngan and Werris Creek.
5. The line would open up a considerable area of valuable agricultural land, and be a means of promoting settlement.
6. It would connect with the line between Port Augusta and Port Darwin.

The Committee desire to state, in conclusion, that the line from Nyngan to Cobar, and its suggested extension to the South Australian border, can be said (as the result of personal inspection and from evidence obtained) to present no engineering difficulties in the way of construction; also, that from the Committee's observations and from information gathered from the Railway Commissioners of South Australia and Victoria, they are of opinion that it would be inexpedient to construct a line, such as the one proposed, without ballast. Although a saving may be effected in dispensing with expensive stations, fencing, crossings, platforms, &c., experience in the neighbouring colonies has shown that it is false economy to attempt any so-called cheap construction of a permanent way.

They consider that the whole line from Nyngan to Broken Hill, if undertaken, should be constructed without delay, and that the work should be let in sections, as it is apparent that New South Wales is being deprived of a considerable amount of its legitimate trade owing to the want of proper and speedy means of transit to the Darling River and Barrier Ranges, and efforts are still being made, and also contemplated, to further attach and secure the trade of New South Wales to other colonies.

W. J. TRICKETT,

Chairman Sectional Committee, Nyngan to Cobar Railway.

31st October, 1889.

MEMORANDUM BY DR. GARRAN.

IN two of the main conclusions at which the Sectional Committee has arrived I entirely concur. In the first place it is clear, from the evidence, that a railway from Nyngan to Cobar taken by itself is not at present justifiable. One train each way on alternate days would in a month take the traffic of a year, and the money the line would cost could be spent more to the national advantage elsewhere.

But there is a justification for immediately constructing a trans-colonial line to Broken Hill. Under any circumstances the Far West has considerable claims. But the sudden development of the mining industry at Broken Hill has precipitated the demand and has fixed the immediate point to be reached. Broken Hill is now, in respect of population, the second city of New South Wales. It has sprung up suddenly within 35 miles of our western border; it has been neglected, and it feels the slight. It will be a great and growing centre of industry for many years, and it ought, for political, as well as commercial reasons, to be linked with the capital without further delay. Broken Hill is at what appears to be the southern end of a mineral belt of country, about 40 miles in breadth, and running north to the Queensland border. Whether this mineral belt extends southward to the Murray is not yet determined, but it has been shown that with the exception of one interval, where the soil is sandy on the surface, the mineral indications are traceable all the way to Mount Browne. It is the opinion of mining experts that this district will be the scene of considerable mining activity, and should paying mines be opened along this route a line running northward from some point of the route between Menindie and Broken Hill would accommodate the whole of this district. At present the whole trade of our north-west goes to Adelaide, and all the prospective trade of that district must go there too unless this portion of the colony is connected with the New South Wales system. It is not to be supposed that the making of a railway will draw to Sydney all the trade that now goes to South Australian ports, for Broken Hill is only 334 miles from Adelaide, and only 218 miles from Port Pirie, while it is distant 670 miles from Sydney by the nearest possible railway route. But there will be a considerable passenger traffic and some trade in bullion and general merchandise. It is not, however, only the trade with Sydney that has to be considered. It is the possible trade

trade with other portions of New South Wales, and especially that portion which lies west of the Blue Mountains. The evidence goes to show that there is room for a large and profitable business in coal, coke, mining timber, and firewood, and a still larger trade in fodder, fruit, and dairy produce. Much that Broken Hill now draws from the west it could more conveniently draw from the east, if only transit were provided. To provide this transit is the business of the State, which, in this colony, has the railway monopoly, and this should be done not only for the sake of Broken Hill, but for the sake of our producers, who are the natural purveyors for the wants of Broken Hill. For want of a railway we are not only losing trade, but we are keeping down the settlement of our lands and the extension of our agricultural industry. The railway, therefore, is a national and an urgent necessity, and should be undertaken with the least possible delay.

But when this is recognized, there still remains the question as to the route by which Broken Hill should be reached. My colleagues, who traversed the route by way of Nyngan and Cobar, have been much impressed by the richness of the country—which they have seen in an exceptionally favourable season—and also with the favourable commercial position of Wilcannia as the focus of the trade with the mid-Darling, and with the country to the north-west; and to these considerations great weight is due. But, if we are to deal with this question as a national one, we must look at it comprehensively, and altogether apart from the present importance of different townships. Happily the problem is not much complicated by existing lines or vested interests. The map of our west is, so far as railways are concerned, almost a *tabula rasa*, and we can deal with it as we please. And on looking at the map it will be seen at once that the most direct line from Sydney to Broken Hill is through Forbes. Distance is an important element in the discussion, because one object of the proposed line is to capture as much as possible of the trade, and as we are already heavily handicapped in respect of distance it would be unwise to increase that difficulty by taking an unnecessarily round-about route. According to the list of distances furnished by the Public Works Department, the distance from Sydney to Broken Hill, via Wilcannia, is 732 miles, while that from Sydney, via Forbes, is 670 miles, the comparison being 62 miles in favour of the Lachlan route. It is indeed argued that the line to Nyngan being already made, it will need less new line to start from that point and go through Wilcannia than it will to open out the Lachlan route. That is true; but it would require still less new line to reach Broken Hill from Hay, via Menindie. From Nyngan to Broken Hill is 355 miles, while from Hay to the same point is only 274 miles, so that if the length of new line were the determining consideration the line to the Barrier should spring from Hay, which would give a saving in construction of 81 miles. It will probably be recognized, however, that the natural extension of the Hay line is to Wentworth and the Border, which would give the shortest through line from Sydney to Adelaide, and that the national line to Menindie is via the Lachlan Valley. Moreover, in measuring distances we might fairly take Forbes as a starting point, because a line to that township has been already submitted, and there is great probability of its being approved, the main dispute being as to the route by which Forbes shall be approached. Even supposing that that line should not be approved, the existing railway system already touches the Lachlan at Cowra. Taking that as a starting point, the line from that township to Broken Hill would be very easy of construction. Cowra is less than 1,000 feet above the level of the sea, and Broken Hill is about the same altitude. The whole of the route between the two is, for railway purposes, practically a level, the lowest point being the crossing of the Darling at Menindie. But neither directness of route nor facilities for construction constitute the chief recommendation of the Lachlan Valley Line. That recommendation from a national point of view is that it offers the maximum opportunities for the settlement of an agricultural population along nearly the whole length of the line. On the Cobar route water can only be conserved in surface tanks or raised from wells, and the area of land capable of irrigation must therefore be limited. Apart from irrigation, cultivation must be precarious. But from Cowra to a point below Condobolin the line would go by the side of a running stream, which not being a navigable river could be dammed at intervals so as to throw the water back up all the tributaries. From that point for many miles westward lies the Willandra Billabong, whose course is parallel with the railway route, and which can also be easily made a line of water storage available for the irrigation of the adjacent land. Between the head of this Billabong and the head of a channel along which the water of the Darling will naturally flow, is a short distance of slightly

slightly elevated land. One witness, indeed, asserts that there is no such elevation as will prevent a continuous canal from the Lachlan to the Darling, but this statement was made without measurement, and might not be confirmed by actual survey. But it is in evidence that without any artificial work the flood water of the Darling runs 80 miles back towards the east. This means that all the way from Cowra to Menindie the railway may run side by side with an invaluable conduit, capable of supplying all the water required for fodder and crops, orchards and vineyards. To the westward of Menindie, the Darling runs backward in creeks to a distance of more than 15 miles, and as it is only 65 miles from Menindie to Broken Hill, there is only a distance of 50 miles between these two points above the elevation of naturally running water. At the present time all the fodder for Broken Hill is brought a distance of 200 miles and more, from South Australian farms, which are dependent on precarious and generally defective rainfall. A great deal of the milk supply too is brought a similar distance. By a railway on the route I propose irrigable farms could be established within 50 miles of Broken Hill, and from that point eastward there could be a continuous line of them all the way to Cowra. The importance and the profitableness of fodder cultivation has been increased by the recent experience gained with respect to ensilage, proving as this does the ease with which it can be made and preserved, and its superiority to hay. The construction of such a continuous line of agricultural holdings right through the heart of our colony, from the western foot of our Blue Mountains to the eastern foot of the Barrier slope, would work a practical revolution in agricultural settlement, and would begin a new era for New South Wales. And the market for the fodder raised would be not only in the mineral district at the terminus of the line, but would be found in all the squattages lying to the north of the Lachlan.

Much of the pastoral trade, too, of Central Riverina which now goes down to Hay for shipment by the river would be intercepted by the route described, and on this point the evidence of Mr. Harper (the Railway Goods Superintendent) is very clear.

So far as coal is concerned, it is true that it has been found some 17 miles from Dubbo, and this coal could be conveniently sent to the west by the Cobar route, and would be available for the mines in that locality. But too little is known at present as to the quantity and quality of this coal to enable us to speak of it with any confidence. We are, however, quite sure of the coal of Lithgow and its neighbourhood, and this will find a market in the far west as soon as railway transit is provided. If the coal proprietors could learn how to make coke equal in quality to that imported from England—and it is reasonable to hope that they will—there will be a still further market for their produce. The line I suggest, made substantially as a trunk line, might cost £5,000 a mile, exclusive of the bridge over the Darling, which would cost not less than £60,000—a gross outlay for 470 miles of (say) £2,350,000; or, allowing for a margin, £3,000,000. But in this expenditure there is nothing to cause alarm, because we have in the land adjacent to the line an asset in the shape of unsold land, which, with time allowed, would defray the cost of construction. If a reserve were made of a few miles by the side of the line, and fairly valued as railway land, and if the surveyed farms were alienated under the “special area” provisions of the Land Act, the instalments of the purchase money would, in thirty years, repay the interest and principal.

I give the preference, therefore, to the Lachlan Valley route over that via Cobar and Wilcannia; firstly, because it is the shortest line as between Sydney and Broken Hill; secondly, because it makes the best connection with our developed western coal-fields; thirdly, because it provides extraordinary facilities for establishing a continuous line of agricultural settlement right across the great plain; and fourthly, because in the area of unsold land adjacent to the line there is a golden opportunity of transmuting that land into railway capital.

If Broken Hill is to be reached by way of Menindie, Cobar will of course be left out, but should the copper-mine be reopened, or should the gold-mines be so developed as to demand a railway, then a branch line could be made at a profit, or the same point could be reached by a line from Condobolin through Nymagee, along a route already known to be metalliferous, and this line could be extended to the Darling. Such a line if hereafter justified would accommodate the country intermediate between the present line to Bourke and the proposed line to Menindie.

ANDREW GARRAN.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

[TAKEN BEFORE SECTIONAL COMMITTEE.]

RAILWAY FROM NYNGAN TO COBAR.

NYNGAN, FRIDAY, 4 OCTOBER, 1889.

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
The HON. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.	

The Sectional Committee proceeded to consider the proposed Railway from Nyngan to Cobar.

Mr. John Prince, forwarding manager for Great Cobar and Nymagee Copper Mines, sworn, and examined:—

1. *Chairman.*] Are you a resident at Nyngan? Yes.
2. Are you engaged in business? Yes; I am a forwarding manager for the Great Cobar and Nymagee Copper-mines.
3. Do you conduct a separate business also? Yes, as forwarding agent.
4. Are you a justice of the peace? Yes.
5. How long have you been resident at Nyngan? About six years and four months.
6. What is the population of Nyngan at the present time? Close upon 1,000 at present. Normally it is about 850.
7. During the time you have been here has the population increased or decreased? It has varied every year. When Nyngan was the railway terminus the population during the wool season was as high as 1,500. Of late years, since the railway has gone on to Bourke, it has decreased, and the normal population is about 850. As it is now about the middle of the wool season the population is 1,000.
8. Do you know the proposed route of the railway from Nyngan to Cobar? Yes, very well; I have been over it.
9. What is the character of the country? I call it fairly good western country, capable of doing a great deal more than it is now used for.
10. Is it purely pastoral country? Yes, at present. It is also mineral country.
11. What minerals are obtainable? Copper. We have a new copper mine, which has been worked about six months, about 48 miles on the road to Cobar. It is called the Burra Burra, and is owned by a small company. They have just commenced smelting.
12. Is it a large concern? It is not at present. It is just being developed. It promises to be a very good one. Geologically the country seems very favourable for copper and silver.
13. Has any rival route or other route been mooted for the railway between Nyngan and Cobar? No.
14. What is the nature of the country between here and Cobar as regards its suitability for constructing a railway? It is exceptionally good. Ballast is easily obtainable; the gradients are very favourable. It is one of the most favourable countries for railway construction that could be imagined. Gravel ballast can be obtained from the ridges, and stone ballast from the ranges. There are 30,000 or 35,000 tons of good slag at the copper mine which would make exceptionally good ballast, and which could be obtained at a very small price.
15. Do you think it would be possible to make the railway without ballast? I cannot conceive a railway being made without ballast of some kind. I know it has been mooted, but I never saw it in my experience.
16. What is the state of public feeling in Nyngan with regard to this line? As in most young towns, the people are afraid of the trade leaving the town. My own feeling is that perhaps for a time the railway would disturb the business of the town, but eventually it would do so much good to the country generally, that although I hold a good deal of town property, I would like to see the railway carried out.
17. Would the success of the railway depend a great deal upon the mining industry? Yes; I am speaking of the possibility of the railway opening the country beyond Cobar. There is a valuable tract of country without any railway communication at all.
18. What is the position of the mining industry? The Great Cobar mine in its prosperous days was sending about 3,200 tons of copper per year to this town, and there was, I suppose, about 2,000 tons of backloading for the mines and the township. There were about 60,000 tons of fuel required, and some coal was brought from Dubbo.
19. Is the Great Cobar mine closed at present? Yes.
20. What is the reason? The principal reason is the low price of copper. Another reason is the heavy cost of carriage. When the French copper syndicate raised the price of copper our mine was considerably

in debt; but in a very short time the debt was paid off, and now there are several thousands of pounds available for payment of dividend, or for working the mine in the event of the price of copper going up again.

21. Can you give us any figures to show what would be the probable revenue derivable from a railway between Nyngan and Cobar? The figures were carefully gone through about five years ago, especially in the Railway Department, and as far as I remember it was then reckoned that there would be about 2,000 tons of goods sent to Cobar per annum, and about 3,200 tons of copper sent down here. Then there was a large amount of fuel required, as nearly all the wood around the mining township was used up. The company constructed a tramway a considerable number of miles towards Nyngan to carry wood, and that was working seven or eight years.

22. Was the fact of all the wood in the neighbourhood of that tramway being consumed one of the reasons for discontinuing work at the mine? Yes; I have heard from a very good authority, not connected with the mine at all, that there is quite twenty years work to be done there—not with a very rich class of ore; but if we had fuel at a reasonable rate it could be worked even at the present low price of copper—that is, if the fuel was obtainable at the same price as at first.

23. What was the price? I think 4s. 6d. per ton.

24. Do you know anything about the coal obtained at Dubbo? Yes; we obtained two or three truck loads for a trial. It was thought to be fairly good coal.

25. Was it suitable for smelting purposes? Yes; I understand the coal mine at Dubbo was but just opened, and only partially worked, and the people who sent the coal said that as the mine was developed the coal would be very much better.

26. What is the rate of carriage now between Nyngan and Cobar? £3 15s. per ton. We have paid as much as £10, and even £25 per ton within the last twelve months, during the wet weather. The people in both the mining townships were almost famishing for food.

27. What time do the teams take to get from Nyngan to Cobar? Five days in fine weather, and ten weeks in bad wet weather. You can hardly imagine a worse road in wet weather. If the mine had continued there must have been a metal road made.

28. When the road is bad has there to be a special contract made with the carriers every time? Yes. Although a union has been established here, it has been made so elastic that when the roads get very bad they can charge almost any rate.

29. What are your views as to forming an ordinary road? It would be very expensive. With regard to ordinary roads I have had thirty or thirty-three years experience, and I think it is a very great mistake to make such roads in this country. They are not only very difficult to make, but a large amount of money has also to be spent annually for maintenance, and they are continually fretting away. A railway seems to be the only proper means of communication with a place like Cobar.

30. Is there any possibility of the district being converted into an agricultural district? I do not think it will be a great wheat growing district; but I believe that if a fair amount of water could be obtained for irrigation, it could grow anything. It is the finest district in Australasia. At my own place I have a vine planted only three years ago, and it promises to bear 2 cwt. of grapes this year.

31. What is the average rainfall here? It varies very much. During the last ten or twelve years it has gone down as low as a little over 3 inches. About 13 inches is the general average. This year we have had already about 18 inches of rain.

32. What was the average during the last two or three years of drought? Last year, I am told, was one of the most serious years ever experienced in the district. There was no rain up to the latter end of March, 4 or 5 inches then fell in Nyngan, and there was less in other parts of the district. The previous year was rather a good year. In 1887, there were 5 inches in February, and continuous rain that supplied an immense amount of feed up to June, then the weather dried up. During the whole of 1888 it was very dry, and it continued so until March, 1889. These were fifteen months of the driest weather ever experienced in the district. That has had a bad effect on the prosperity of the district.

33. Now that the season has been so good, are there evidences already that the prosperity of the district will be materially increased? Yes; there are strong evidences of it. The people are more hopeful, and they are beginning to spend money.

34. I gather from your remarks that you are favourable to the construction of this railway from Nyngan to Cobar? Yes; I represent a Company that want it very badly. Although I believe that for a time it would do me an immense deal of harm, eventually the country would be very much benefitted by it.

35. An officer of the Government, Mr. Harper, estimated that the revenue for this railway would be in round numbers, £12,000 a year. That was in the beginning of 1888. Can you say whether or not it is a fair estimate? I know that at the Board meetings of my Company, we thought he had very much underestimated the traffic for the purpose—so it was said—of blocking the railway. I myself saw Messrs. Harper and Kirkcaldie, and they were very unfavourable to the railway. They said to me, "Suppose you had the money, would you build the railway yourself?" I replied, "Certainly not as a commercial matter if it was offered to me; but I think from a national standpoint it should be done at once." They seemed to be under the impression that if the railway was constructed to Cobar and through to Wilcannia, a large amount of wool would drift into South Australia and do the railway great harm; but I pointed out that the river was so seldom available, and was so desperately unreliable that if people established commercial relations with Sydney, there was no doubt that that city would derive the benefit of the traffic.

36. If Mr. Harper states that the revenue would be £12,000 a year;—do you think that is an underestimate? It is very greatly under-estimated, I think.

37. That is for the traffic between the two places merely? Yes.

38. Have you considered the question of this railway being extended beyond Cobar? Yes.

39. What are your views on that subject? I have made some inquiries with respect to the construction of this line to the west from other points, and I have come to the conclusion that the extension from Cobar would be by far the most favourable, and that it would be more easily constructed than any other. The country is very favourable for railway construction, and the railway would reach Wilcannia within a distance of 175 miles. Its further extension to the silver country would be a very great national good.

40. Do you think it would have the effect of bringing traffic from Wilcannia and the other western districts to Sydney? Yes; very largely.

41. Have you had any conversation with graziers or others in the locality of Wilcannia as to whether or not

not they would send their produce by rail to Sydney? No. There is a strange diversity of opinion even amongst pastoralists themselves. They think that a railway will bring a lot of people who will swoop down on their runs and pick out the best parts of the country, and they are doubtful whether or not the railway will be beneficial to them. I think it is really because they have not thought of the railway from a national standpoint.

J. Prince,  
Esq.  
4 Oct., 1889.

42. Is there any railway league in Nyngan? No. The only body is the Progress Committee; and I daresay the evidence of its members would be contradictory. Those who hold interests in the town, and who think the trade will leave it, are opposed to the railway; others think that it will do good.

43. Do you think the Great Cobar Mine would be worked if the railway were constructed? Yes; if they could get fuel at a reasonable price. They cannot obtain fuel within a radius of 10 or 14 miles. That is a very serious thing. Even under the best conditions a copper mine pays away nearly all the money obtained in labour and material, and when the price of copper gets very low the mines succumb. That is the reason why the mine is closed, and not because it is short of copper ore.

44. *Dr. Garran.*] On this railway map before us you see a line from Dubbo to Bourke, and a line from Werris Creek to Narrabri, which it is proposed to continue to Walgett? Yes.

45. So long as the districts between those two railways remain in a purely pastoral stage do you think they are sufficiently provided with railway facilities? I am not well aware of the character of the country, but my impression is that it would bear another railway between the two.

46. Do you not think that a squatter is reasonably well off if he is within 50 miles of a railway station? Yes. I do not think that squatters like to have railways made very close to them, as they think people will then come and overhaul their runs.

47. Looking at the country between the two railways I have pointed out, does the traffic of the western half come here or does it drain down to Dubbo? The Coonamble traffic goes to Dubbo. That saves 100 miles of carriage.

48. They prefer to take a longer road to save railway carriage? Not always; but the roads go in that direction, and people often prefer to go a few miles farther along a road they have been accustomed to travel, and where their interests are centered.

49. Do you get the Quambone business here? No; it goes to Nevertire and Trangie. The Mount Harris traffic comes to Nyngan.

50. How far is that from Nyngan? About 50 miles.

51. Do you get anything to the east of Mount Harris? We do at times.

52. Then this line to Bourke does not sweep any traffic from the east for a greater distance than 50 miles? I might say 60 miles.

53. From how far west does the trade come to Nyngan? As far as Mount Hope. We have a good deal of traffic from there.

54. Does Nyngan get the whole of the Cobar traffic? I do not think I would be right in saying that. When the country got very dry and water was very scarce, a large amount of traffic went for a short time to Coolabah.

55. Is there any case in which it would go to the Darling? I can hardly conceive that there would be.

56. Do you get any pastoral traffic west of Cobar? Yes, from Nekarboo which is about 70 miles away.

57. That would be not more than 40 miles from the Darling? Yes. During the 6½ years I have been here the Darling has only been open for one whole year.

58. When the Darling is open as it is this season how far back to the east will it draw the wool? For a radius, say of 60 or 70 miles.

59. Then we can only guarantee for a railway from Nyngan to Cobar, the trade west of it in years when the river is unnavigable? There are times when the river carriage is immensely cheaper than the railway carriage, but the river is open very seldom and it is unreliable. When the river is navigable our roads are in a very bad condition.

60. Even in a wet season like this are the roads bad for more than a fortnight after the rain? That depends altogether on the season. There were ten weeks during which the roads to Cobar were almost impassable.

61. Is that the longest time you know of the roads being bad? No; I remember another part of the year when the roads were even worse for a longer period. In the Nymagee township, with a population of something like 1,800, there were not more than 2½ bags of flour.

62. If Cobar were a mining township in full swing as it was once, the question of speedy transit would be very important? Yes. Besides the copper there are many gold-mines opened out in the Cobar district, and they promise very well.

63. If Cobar again becomes a mining township, do you think that a railway to it is an absolute necessity? Yes.

64. Supposing copper does not come up to £50 a ton, and Cobar simply remains a pastoral township, would there be any justification for making a railway? A great number of gold-mines are waiting, apparently, for a speedier means of transit. The uncertainty of getting supplies has been so great as to hinder the owners from putting on men.

65. Are any of those gold-mines distinctly profitable? I believe there is a very fair prospect of several being payable.

66. Can you go so far as to say that at present gold-mining has got to such a point as to justify making a railway? Not of itself.

67. Supposing that neither copper nor gold-mining would justify a railway, would the pastoral productiveness of the district itself justify a railway? Yes. If a railway is not made a macadamized road will have to be made, and a road is always a source of expense.

68. Supposing the mines collapsed, would we be justified in making a macadamized road or railway looking at Cobar as a pastoral centre? Not to Cobar only; but it is an absolute necessity for the country beyond. To stop at Cobar would be hardly wise. From a national standpoint I think the railway is an absolute necessity. I consider that a line to Cobar and on to Wilcannia would be justifiable on national grounds even if there were no copper nor gold-mining around Cobar.

69. Would it be possible to find a grade of 1 in 100 between Nyngan and Cobar? Yes; I am almost sure of it.

70. Is the country capable of growing fodder for the supply of the district? Yes.

- J. Prince,  
Esq.  
4 Oct., 1889.
71. If it grew more than it wanted in a good season would there be any export? Yes. If a railway were made to the silver country we could compete with Adelaide. We would have no advantage over people on the Darling, but the soil here is capable of growing anything.
72. Have you had any railway experience? Yes; as a contractor, for twenty-five years.
73. What do you think would be the cost of a workable line from Nyngan to Cobar? A light line with station buildings could be put down for £2,500 a mile. A trunk line to the silver country ought to be made more substantial. £4,000 a mile would do.
74. Do you mean by a light railway rails of 40 lb.? No; heavy rails with light construction. I think that to use light rails is very false economy.
75. Do you think that the railway to Bourke has been made needlessly expensive? Yes. I believe that on the railway from Dubbo to Bourke there has been at least £1,000 per mile spent on unnecessary earthworks.
76. Would you recommend similar extravagance on the line to Cobar? No. I would recommend cheap railway stations, constructed of galvanized-iron, which, in this climate, lasts twice as long as it does in Sydney.
77. Is there timber here suitable for sleepers? We have pine which resists white ants; and there is ironbark within a reasonable distance.
78. Have you had experience of tramways? Yes.
79. Would you recommend a tramway instead of a light railway from Nyngan to Cobar? No. It would be a very great mistake, in view of the large mineral traffic that will probably exist. Tramways are not suitable for a greater length than 20 miles. There is no saving in the working of a tramway. The only difference is in the first cost.
80. Do you think that a majority of the inhabitants of Nyngan are opposed to the construction of a railway to Cobar? The opposition comes from people who have an idea that a township necessarily collapses after a railway passes through it. I believe myself that for a time the railway might be detrimental to the interests of the town.
81. Are the people of Cobar unanimously in favour of the railway? Yes.
82. Are the squatters in favour of it? Very many are; and others are against it, for reasons I have already told the Committee.
83. *Mr. O'Sullivan.*] Was the Great Cobar Copper-mine worked for a considerable time under a guarantee from a French syndicate? No. The Company sold its copper to the French syndicate for £60 per ton, the syndicate restricting the Company as to quantity.
84. Have you heard a report that the high grade ores in the Great Cobar Mine have been exhausted? Yes. There is no other mine on which so little has been spent in prospecting. Owing to the enormous drain upon the mine for carriage both ways, prospecting could never be carried out as it should have been.
85. Do you think that if the railway were constructed, and even if the price of copper were much less £50 per ton, the Great Cobar Mine would be reopened? Yes; I believe it would be reopened to-morrow.
86. Is Cobar a town which depends upon the fluctuations of the copper market? Although it depends largely upon that it does not do so altogether. There is a large pastoral country at the back which draws supplies from Cobar. I believe that the town will hold its own even if gold as well as copper-mining should collapse. Many people are now thinking of taking up homestead leases.
87. Have supplies ever been received at Cobar for South Australia *via* Louth? Yes, I have heard so. Ore has also been sent by that route in times past, I know.
88. In the event of this proposed railway being constructed do you think that any such competition would disappear? Yes, altogether.
89. It has been stated in official evidence that the country between Nyngan and Cobar and Wilcannia is the driest in New South Wales—is that a fact? It is very dry country.
90. In the event of several dry seasons in succession would there be traffic for the railway? From a national standpoint the railway should be made to keep the country open. In dry seasons I am sure the railway would be utilized by the squatters to send away their stock to mountain runs. It would thus save millions of sheep.
91. Do I understand that you consider the line would not pay commercially, as a local line, but that it ought to be constructed from a national standpoint? I do not feel sure that the line would not pay as a local line, but from a national standpoint I think it is essentially necessary.
92. Do you say that the squatters are opposed to the railway, because they fear it might bring settlers on to their runs? I hope that is not the general opinion of the squatters, but I know that that view has been mooted. I believe that there are only a few squatters so stupid as to think that the railway would hurt them; and, as far as I know, the squatters along the proposed line are not of that class.
93. *Mr. Tonkin.*] Do you think that there are 7 tons of goods sent from here per week to Cobar at present? Yes, and a great deal more. I believe I am safe in saying that the average is 5 tons per day.
94. Is it a fact that the Great Cobar Copper-mine is nearly worked out? No.
95. What is the average weekly tonnage of goods sent from here to Nymagee? About the same as it is to Cobar. There are times not very far distant when we have sent from our own establishment at least 30 tons per day.
96. If the copper and gold industry fail, will there be sufficient back country to support the township? Yes, and a railway.
97. Does not the back country receive its supplies from Cobar at present? No; because the river is open.
98. To what price would copper have to rise before the mine could be started again? I think I have heard them say that if it went up to £48 they could start the mine. I believe that if fuel could be obtained at a reasonable price, operations might be commenced at the present price of copper. At present they pay about 8s. per ton for wood.
99. What is the present percentage of the ore? From about 6½ to 10 per cent.
100. If copper went up to £45 per ton, could you afford to pay 8s. per ton for wood? If copper were sold at £50 per ton the mine would pay dividends.
101. Are you of opinion that it would be necessary under any circumstances to construct a macadamized road, if the Government did not construct a railway? I think I am justified in saying that the Government are constructing some portion of a macadamized road. A first-class road would cost at least £1,800 per mile. I think that a macadamized road especially in a country where there is not much stone is one of the greatest mistakes possible.

102. Do you think the Government would be justified in constructing this line when it is estimated that the annual loss will be £11,100, assuming the mines to be in full work as in days past? I can say that those figures are not correct. From the figures I have seen the country would not lose anything like that sum. In the estimate you have quoted, the Nymagee traffic is under-estimated.

103. How much do you think would be a fair estimate for the Nymagee traffic? I cannot quite remember. I think over £2,000 would be a fair estimate.

104. Does pine make first class sleepers? No, but I believe that it makes sleepers that will not be attacked by white ants. Iron bark would make better sleepers.

105. Is it not a fact that where the iron bolt goes through a pine sleeper the timber immediately splits open? Not always, but a pine sleeper would be nearly as expensive as a sleeper of a better class of timber. Extra chairing would be required. There are immense forests of ironbark about Dubbo, Narramine, and Trangie.

106. If the line were constructed, do you suppose the inhabitants would be satisfied if the Government only ran a train three days per week? I should imagine that the people would hardly express a wish to have trains run more frequently if the traffic would not warrant it.

107. Do you agree with Mr. Kirkcaldie's evidence, that even when Cobar was enjoying the best of its days, and the copper mine was in full swing, four trucks a day would more than supply the demands of the traffic? I have a very great respect for Mr. Kirkcaldie's opinion, but I am quite sure that he commenced his inquiry with a strong prejudice against the line. He was determined that the line should not go to Cobar if he could help it, and he expressed himself to that effect. We have sent more than four trucks per day away from our own establishment, and we were comparatively only doing a small business.

108. *Mr. Hurley.*] You have stated that there is a justification for the construction of the railway, because the geological features of the country indicate the existence of copper, gold, and silver? Yes, combined with the industrial prospects of the district.

109. Are you a geologist? No; but I have made the subject a very close study. I have had considerable experience in mining.

110. Would you desire to set up your opinion on this subject as a geologist? No.

111. Is there a likelihood of the gold mines around Cobar employing a large number of men in future? Yes.

112. Do you estimate that the output of copper was 3,200 tons per annum? Yes, that was when the mine was producing copper largely.

113. If a statement emanated from your board from the Company's books, or any other source, to the effect that the actual output only amounted to 1,905 tons per annum, would you still adhere to your statement? I would say that both statements might be correct. This evidence with regard to the railway was taken six and-a-half years ago, and the output was what I have stated. In later years it has decreased considerably, because the price of copper has come down.

114. If the railway were constructed to Cobar would the people there use Dubbo coal? I am not prepared to say, but I think they would be certain to use it if its quality was very good. As far as I remember, when the Dubbo coal was used at the mine, the report made was that it was not of very best quality, but bad as it was, it would take the place of wood if wood could not be obtained at the low rate at which it was first obtained.

115. Would not there be a difficulty in getting Dubbo coal owing to its distance from the railway station? I think so. The distance is formidable, and that would render Dubbo coal only equal to the Lithgow coal for our purposes. However, it is all carboniferous country about Dubbo.

116. Do you think that the country between here and Cobar is suitable for agriculture? Yes; I believe the larger part of it is.

117. Do you think that the country between here and Cobar is included in the cretaceous formation? Yes; I believe it is.

118. From your knowledge as a forwarding agent, do you think that the estimate of £15,000 per annum for all classes of goods between here and Cobar is a fair estimate? I think the present estimate is only £12,000; I think I am fairly within the mark in saying that where the conditions of the country were what they were previously, there would be from £18,000 to £20,000 per annum of traffic, instead of £12,000.

119. Estimating the cost of the line at £241,661 and the net revenue at £15,000 would there not be a loss of £8,000 a year to the state? I cannot say from memory but I am sure that while there might be a little loss to the country for a number of years it would be nothing like £11,000 per annum.

120. Taking the actual loss at £8,000 per annum do you think that in the face of that the Government would be justified in making the railway? In the first place I do not think there would be such a loss, and secondly considering the chances that exist of the country being opened out and the traffic being very much increased within a short time I think the Government would be justified in making the railway even at a loss of £7,000 per annum for a year or two, as it has parted with so little of the fee-simple of the country.

121. Especially taking into consideration the fact that if the cretaceous formation exists between here and Cobar there are various agricultural areas which might be opened up in the event of water being conserved? I am quite sure it would.

122. Have you heard your Company say that they would be prepared to pay double rates on this railway if it were made as compared with the rates charged on the railway between Sydney and Bourke? I think such an offer was made by the Company and I think they made some sort of offer to construct the line themselves from here to Cobar.

123. Do you think that the future working of the Cobar copper mine depends upon a rise in the price of copper? Not altogether. A rise in the price of copper would assist us under any circumstances, but if a supply of firewood and ordinary stores could be obtained at a reasonable rate it would help us more than anything else.

124. Independently of a rise in the price of copper do you think the mine would resume work? I think the mine would resume work if copper went up to £48 per ton.

125. Are you a shareholder in the Company? No.

126. Do you advocate the line from a national stand-point? Yes.

127. Do you own any land on the route of the railway? Not an acre.

J. Prince,  
Esq.  
4 Oct., 1889.

Alexander Adams, Esq., Road Superintendent, sworn, and examined:—

- A. Adams, Esq.  
4 Oct., 1889.
128. *Chairman.*] What position do you hold? I am a civil engineer and surveyor, and I hold the office of Road Superintendent for the Cobar district. I have held that office for seven or eight years.
129. What is the character of the road from here to Cobar? It is very bad after rain. Two inches of rain makes it thoroughly impassable for teams, or almost anything. There is really no road with the exception of a mile and a half of metalling about 10 miles on this side of Cobar.
130. What has the Department done with regard to that portion of the road? They have formed a road half a chain wide and metalled it for a width of 20 feet. It is drained at the side, and metalled with clay, slate, ironstone, and quartz, obtained in the vicinity. The cost has been about £600 per mile.
131. Has the work been done effectively? Yes; the road will answer very fairly. It will require maintenance now and again.
132. Is the metal of a good quality? It is not the most suitable, but it is the best in the vicinity.
133. Have you had considerable experience in making roads throughout the Colony? I have had much more experience in New Zealand than here.
134. Have you had experience in making roads over country of the same character as that between Nyngan and Cobar? Not quite the same, but still I could form an opinion on the subject.
135. What is your estimate of the cost of making a good road from end to end between those two points so that drays and all sorts of vehicles could go along it at all times? In reply to a telegram which I received from the Secretary for Public Works a short time ago I estimated the cost at £130,000. I had not time to look into the matter properly then, but I have since found that it would cost considerably more than I estimated.
136. Have you any details as to how you arrived at your conclusions? I divided the road into sections of 20 miles. I estimated that the first section of 20 miles from here would cost £62,100—that is the most expensive part of the road. I estimated that the cost of the second section of 20 miles would be £46,900, the third and fourth sections £32,500 each—that would make a total of £174,000.
137. What would cause the great extra expense in the first section? There is no metal to be got along the road.
138. Where do you propose to get the metal? To bring it down from Girilambone by train to Nyngan, and cart it along the line.
139. What is the quality of the metal? Granite.
140. On the other sections where you estimate the cost would not be so much, is there good metal? There is fair metal, but not the most suitable. It consists of quartz and porphyry. I may mention that I have estimated this road for a width of 20 feet. I received a telegram from the Department asking for an estimate for a road 24 feet wide. It would make the cost over £200,000. I considered that a width of 20 feet was sufficient.
141. What would be the cost of maintaining the road you have estimated for? £10,000 a year.
142. After the road was made in the first instance would it last for 12 months? Yes. In my estimate I took into consideration culverts, box-drains, and works of that character, of which there would be a good many.
143. Have you had any experience in railway construction? No; but I have laid out railways in New Zealand, and seen a large amount of construction, though not in charge of the works.
144. Were those narrow gauge railways? Yes.
145. Are those railways constructed on ballasted roads? Yes.
146. From your experience in road making and in regard to the construction of railways, which do you think it would be better to construct between Nyngan and Cobar—a road or a railway? I have no hesitation in recommending a railway. Where a railway can be constructed at nearly the cost of a road a railway is preferable by far. The country between Nyngan and Cobar is very suitable for railway construction. It is nearly level country. It is gently undulating country and a line could be constructed at very little expense. The grades are very easy. I believe there are some pretty steep grades as the line is laid out, but I think the route might be altered. At present it runs over a number of ridges which might be avoided by a detour of half-a-mile.
147. What grade would be obtained by making the diversion you refer to? I think that in several places where at present there is a grade of 1 in 40 to 1 in 50 the line might be made almost level. A grade of 1 in 100 could be easily obtained.
148. Could that be made the ruling grade? Yes.
149. Have you a thorough knowledge of the road? Yes.
150. Can you name any particular place where there has been palpably a wrong grade? Yes, there is a place called Budds Gap where there is a deep cutting through the hill, which might be entirely avoided by a small detour. Then between Cobar and 16 miles there is a series of ridges that could be avoided entirely by keeping to the right or left hand side. There are also other places between Hall's and Budd's.
151. What facilities would there be for obtaining water for the engine along the line? There is a large Government tank about 16 or 17 miles from Nyngan full of water. There are 28,000 yards of excavation in that tank. 40 miles from Nyngan there is another tank with abundance of water, and 20 miles further on there is another Government tank close to the road.
152. As a professional man and looking at all the circumstances would you certainly recommend a railway in preference to a road? Yes.
153. *Dr. Garran.*] Is there at the present time such traffic as would justify the making of a macadamised road 24 feet wide? I think 20 feet wide would be quite enough for the amount of traffic.
154. Has there ever been such traffic as would justify the making of a macadamised road from end to end? I cannot say that there has been, looking at the very large expenditure that would be involved.
155. Could you at a moderate expense patch the worst parts of the road so as to make it equal to the present necessities of the traffic? After a fall of two inches of rain the road is impassable all along. Some places are worse than others.
156. For how long? For a few weeks in summer and in winter perhaps for a month or two.
157. What is the smallest amount of ballast or metal which would give the road a moderate degree of hardness? A depth of 9 inches at the least.
158. How much a mile would that come to? The estimate I have already given is based on that depth.
159. Even if a railway is made would the side traffic be shut off after rain? Yes.

160. Then if we have 3 inches of rain no traffic could get to any of the side stations? Not for the time being. The roads to the side stations would not be cut up very much, and they would dry up quickly. The main road, however, gets so cut up that it becomes impassable.
161. You would still have to make approaches to the side stations? There would not be so much traffic to the side stations as there now is along the main road.
162. In that case the Nymagee traffic would be cut off in bad weather? Yes.
163. What would you estimate to be the cost of a railway between Nyngan and Cobar, the rails to be 60 lb. steel rails, the railway being made as economical as possible in all other respects? Between £2,000 and £3,000 a mile.
164. Do you think that £3,000 is the outside figure? Yes.
165. The estimate of the officials is £2,560 per mile, on condition that the iron work is brought up at 1d., instead of 4d. per ton—do you agree in the main with that estimate? Yes, pretty well.
166. What ballast would you use on the line? I would use the ballast from Budd's Gap. There is porphyry there.
167. Would not the slag in the Cobar Co.'s mine be good ballast? It would answer, but is not so good as the metal at Budd's.
168. Would you make the formation level considerably above the surface level? No.
169. Would you lay the sleepers right on the surface level? I should be inclined to raise it a little.
170. Do you think that the waters, as they collect after heavy rain, might be allowed to go under the rails in broad by-washes? Yes.
171. You think that that would not injure the permanent way? No.
172. Do you think that the railway might be useful as a dam for holding back the water in several places? Yes, but there should be a provision made for a by-wash in the event of too much rain falling.
173. Would not a shallow by-wash under the rails do? Yes.
174. Is the Bourke railway a good model? I think it is a very good line.
175. Do you think that you could cheapen a line from Nyngan to Cobar, as compared with the Bourke railway? Yes, I think there has been unnecessary expenditure on the Bourke railway with regard to station buildings.
176. What is your opinion with regard to the permanent way? The line to Bourke is of a very substantial character. I think that a lighter line might be constructed to Cobar with respect to the rails.
177. What weight would you have? I think from 50 lb. or 60 lb. would answer the purpose.
178. Even in view of a possible extension of the railway to Wilcannia and Broken Hill? Yes.
179. Would such a railway carry all the mineral traffic? Yes.
180. Have not engineers found as a rule that it is foolish to err on the side of light rails? Yes.
181. Do you know any such case? Frequently in the case of tramways, where the rails have been very light.
182. Do you know any case where people have put down heavy rails and they regretted it? No.
183. *Mr. Tonkin.*] What is the width of that part of the road which you had constructed with metal? 20 feet.
184. Is that piece of road of a substantial character, and sufficient to carry the traffic? Yes. It might have been made better, but we had only a limited amount of funds available.
185. With half as much more metal as you put on, it would be a very good road? Yes.
186. Seeing that this road only cost £600 a mile, a road for the whole distance of 80 miles might be made for £50,000? Yes; but it must be remembered that in this case the metal was close at hand. In other cases the metal would have to be carried so long a distance, so that would make all the difference.
187. In constructing a railway over this country would you prefer to have the sleepers above the surface? Yes.
188. Do you not think that it injures the foundation to break the surface of this bad country? I do not think so.
189. Would the only necessity for an embankment be that you think it would be better to have the sleepers laid on an embankment than to have them laid on the surface? I think it would be better to have them raised, but at the same time they might answer on the surface.
190. Have you any objection to half-round sleepers for constructing the line? I prefer the square ones, but I have not had much experience of half-round sleepers.
191. Is it possible to get sleepers along the proposed railway line? I would not regard the timber there as suitable. There is ironbark between here and Dubbo.
192. *Mr. Hurley.*] Did you ask for the expenditure which has been made in metalling a small part of this road? There is a certain amount of money voted every year for roads, and the amount spent on this road was put upon the Estimates.
193. Was it at your suggestion that the money was spent on that part of the road? Yes.
194. Is this bit of road-making an experiment, and do you intend to spend a certain sum of money from year to year? That was the idea. Seeing that money was available it was thought to be desirable to improve some of the worst parts of the road.
195. Is there not another part of the road which is fifty times worse than where you have put this metal? The place where the metal has been put is the worst place.
196. Is it not a wasteful expenditure of public money to spend anything on such a road from time to time? Not in this case. This place where the road was made was exceedingly bad. Teams were bogged there repeatedly.
197. *Mr. O'Sullivan.*] In the event of the railway not being constructed, and if the Great Cobar copper mine resumed work, would it be absolutely necessary to make a road between Nyngan and Cobar? It would be necessary to keep the road constantly open.
198. Do you think that the present road patched up would carry the traffic in wet weather? It would be considerably better if certain parts were repaired, but after rain the whole road is bad.
199. In wet weather have teams been stuck up on the roads for considerable periods of time? Yes; from a fortnight to a month. I have heard of their being two months on the road.
200. Was that near the portion where you have been making repairs? Yes; and at other places.
201. *Chairman.*] Do I understand that the expenditure which you have made in repairing a portion of the roads would be of very little use in wet weather, because most parts of the remainder of the road would be impassable? Where the road has been repaired is one of the very worst sections. If the very bad sections were repaired the road would be improved to a certain extent, but still it would not be fit for traffic.
202. In order to carry the permanent traffic would the road have to be made from end to end? Yes.

NYNGAN, SATURDAY, 5 OCTOBER, 1889.

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. ANDREW GARRAN.  
HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Albert Smith Rowling, Railway Stationmaster, Nyngan, sworn, and examined:—

Mr. A. S.  
Rowling.  
5 Oct., 1889.

203. *Chairman.*] What position do you occupy? Railway Stationmaster at Nyngan. I have been here three years.
204. What business has been done at Nyngan since you have come here? I have before me press copies of returns made out for the Department at various times. The first is a return dated 24th March, 1887. It is probably for 1886 and 1887. The date has been omitted, but I am of opinion that it is a return for one year. Wool from Cobar and district, which it is supposed would be drawn by the proposed line, is estimated at 7,020 bales, 697 tons 9 cwt., value to the Railway Department £2,597; goods, 130 tons, freight £251 4s.; copper, 169,500 ingots, 1,520 tons, freight £3,756 10s.; goods to Cobar, 2,500 tons; there is no freight given.
205. *Mr. Tonkin.*] What would the freight on those goods amount to? As third-class goods it would be about £8 10s. a ton. The return continues as follows:—Live stock from Cobar and district, 426 trucks, £3,154. Nymagee district: Wool, 4,000 bales, 710 tons, freight £2,580; goods, 45 tons, freight £125; copper, 139,900 ingots, 1,220 tons, £2,971; goods to Nymagee, 1,500 tons; live stock from Nymagee and district, 21 trucks, £160.
206. *Dr. Garran.*] Would you get freight for the whole distance to Nymagee? No, only to the changing station, which is fully a third, if not more, of the distance to Cobar. The next return made out was a return of traffic from Nyngan to Cobar, from 1st July, 1886, to 31st March, 1887. From Nyngan to Nymagee, from Cobar to Nyngan, and from Nymagee to Nyngan. This is a fuller return than the last, as every class of traffic is separate.
207. *Chairman.*] Can you supply the Committee with copies of these returns? Yes.
208. *Dr. Garran.*] How much do the engines carry on the line between Nyngan and Bourke? Thirty loaded trucks. The maximum load on a truck is 6 tons, so that we can carry about 180 tons each time.
209. Is that the maximum? Yes; for the class of engines we are running here.
210. Then at the outside, thirty trains could have taken all the goods which passed backwards and forwards between Cobar and Nyngan during the year, for which you have given us the return? Yes.
211. Then in addition to that you would have had the Nymagee traffic over a little more than one-third of the line? Yes. At present we are receiving freight for 377 miles, on account of the goods which are mentioned in this return, and if the railway were made we would only get the extra freight along the new line.
212. *Chairman.*] Since that return was made up has the traffic increased or decreased? Owing to the depression and the bad seasons throughout the country, the traffic has decreased.
213. Are the returns which you are to supply us with in excess of or under the returns which you have just read? Speaking from memory, I should say that they were slightly under, but nothing material.
214. Was it a good or bad season during that period from 1886 to 1887? It was a very fair season. The drought had broken up about that time.
215. Which is your next return? It is a return showing the coaching earnings for Nyngan station for 1886: 4,591 passengers, £5,321 11s. 2d.; horses, carriages, dogs, £254 2s. 8d.; parcel traffic, £522 7s. 11d. The return for 1887 is as follows:—4,401 passengers, £5,988 12s. 8d.; horses, carriages, and dogs, £236 9s. 11d.; parcel traffic, £609 3s. 4d.
216. What is your next return for goods traffic? A return of tonnage of goods inwards, and the revenue derived from 1st January, 1887, to 19th March, 1888, at Nyngan station. These of course would include all the districts. They are taken out per month. From 1st January, 1887, to 19th March, 1888, 7,993 tons 15 cwt. 3 qrs. inwards. Outwards tonnage for the same period, 8,412 tons 1 cwt. 1 qr.
217. What is the next return? An approximate return of tonnage to Cobar via Nyngan, and to Nymagee via Nyngan, from March, 1887, until March, 1888.
218. Since you have been here has there been a marked increase or decrease in the traffic which you could point out to the Committee? Lately the traffic has decreased. I refer to the last twelve months.
219. Do you mean the general traffic inwards and outwards at Nyngan? Yes. In September, 1889, wool alone was 300 tons less than in September, 1888, but that does not show that the wool is not in the district, because I believe that a very great portion of the deficiency was taken to Coolabah and Girilambone. These are two places which are now open to Cobar and Nymagee, which were not open three years ago. That is one reason for the falling off. Another reason is the bad seasons. A large number of sheep died off owing to the wretched condition of the country.
220. During the period of extreme drought was there a large amount of fodder brought into the district? Yes. I have a return of the forage received at Nyngan from the 1st June, 1888, until the 31st May, 1889, consigned to the various produce dealers. I should say that by far the greater portion of that fodder was consumed at Nymagee and Cobar. The quantity brought from the 1st June, 1888, to the 31st May, 1889, was 5,492 tons 8 cwt.
221. It would appear that in a good season a large amount of wool is sent away, and that in a bad season there is a large amount of fodder brought to the district? Certainly.
222. With regard to the traffic on the railway, does the one compensate for the other? I think you get more out of wool than out of forage;—a good season is the better one.
223. Have you a return showing the traffic at the Nyngan station up to May, 1889? I can give returns to the month of September, 1889. During that month 441 passengers left here inwards and outwards; goods, 1,189 tons, yielding a revenue of £1,868 7s. 10d. In September, 1888, the return for the month was 566 passengers, 2,528 tons of goods, earning a revenue of £2,991 10s. 3d.
224. Are those the best months in the year for traffic? From September to December are about the three

three best months. In the month of September, 1887, there were 303 passengers and 1,147 tons of goods, earning a revenue of £1,787 10s. 10d.

225. Can you give any reason why there should be such a disparity between those years? There was nearly 500 tons difference in the wool of 1887 and 1888. In 1887 the wool was about 364 tons, whereas in 1888 it was 869 tons. In 1889 the wool was very short; that is accounted for by the season. This year the shearing is late. Even if there were as many sheep in the district as there were last year the same tonnage would not be shown during the same months.

226. Would copper be a large item during the months you have quoted? Yes, but it is almost impossible to trace what quantity was sent.

227. *Mr. Tonkin.*] Do you think that if a line were constructed from here to Cobar it would pay expenses? No.

228. Do you think there would be a very heavy loss? It would be very hard for me to say what the loss might be as there are many branches of the service of which I know very little. I am led to believe, through compiling these returns, that there is nothing to justify the expense of making this line as far as Cobar itself is concerned.

229. *Mr. Hurley.*] Do you think that if an additional  $\frac{1}{3}$  of freight were charged for carrying wool between here and the metropolis, such an increase could be made without losing the trade? I think if we increase the freight we would drive more wool to the river.

230. Do you think that wool from the west of this place would be taken from here to Bourke and shipped there on the river? No, but there are a number of stations that lie out towards the river which cart their wool direct to the river. There are stations which used to ship their wool here before, but they are now carting the wool to the river.

231. How do you account for the fact that before there was any railway here, the station owners sought for railway accommodation, and offered to pay increased rates as compared with the river rates for carriage? The only way I can account for it is that the river carriage is very much cheaper. We cannot compete with the river when it is up. I think the only chance of competing with the river is to keep down the freight charges.

232. Is it not a fact that goods are now carried to Bourke for something like the same price as they are carried to Nyngan, although the latter is 100 miles nearer to Sydney than the former is? We carry goods to Bourke at the same price. The charges to Byrock are heavier than the charges to Bourke, although Bourke is 126 miles from here, and Byrock is only 79 miles. We allow Bourke a concession in order to compete with the river.

233. Is it in order to compete with the trade of the other colonies that this low freight charge is made? Yes, certainly.

234. *Mr. O'Sullivan.*] Have not the rates to Bourke been increased recently? No, I think they are decreased, if anything.

235. Do you think that if the line were constructed from Nyngan to Cobar it would tap any of the river trade? Not much of it.

236. Do you think that if a line were run from Nyngan to Wilcannia, and from Nyngan to Werris Creek, the squatters would avail themselves of the railway to move their sheep in seasons of drought, in order to save them from starvation? I have seen that in the south, but generally the sheep were left on the runs so long, in the hope that the weather would change, that they get into very poor condition, and shifting them about in trains kills them altogether. The stock might be saved by removing them, but I think the owners would want to have them carried at a nominal rate.

237. *Mr. Tonkin.*] Do you think that the construction of this proposed line would bring any new traffic to Nyngan or to the trunk line? I cannot see where the new traffic is to come from.

Mr. Thomas Barrett, hotelkeeper, Nyngan, sworn, and examined:—

238. *Chairman.*] Are you an hotelkeeper in Nyngan? Yes.

239. *Mr. O'Sullivan.*] How long have you resided in Nyngan? About eight years.

240. Are you well acquainted with the state of business in this district? Yes.

241. Do you know the country between here and Cobar? Yes.

242. Do you think it would be justifiable expenditure to construct a railway between Nyngan and Cobar? No; there is no traffic on the line, and every year it is getting worse. There is a great deal more doing in a dry season than in a wet one.

243. How many teams are going from here to Cobar? I think that two good teams per week would do all the traffic.

244. Was there much traffic to be done between Nyngan and Cobar in the most prosperous period—when the Great Cobar mine was working? There was a good deal, but three parts of the stuff carried was forage. All that trade in forage is now stopped, because the squatters and carriers want none. I have seen twenty truck loads of chaff in the station yard at a time, but now you will not see one truck load in a week.

245. Would not the ordinary business between two towns like Cobar and Nyngan supply a good traffic for a railway without regard to the dry seasons? No. If the railway went farther into the country than Cobar, the railway might pay. A line from here to Cobar alone will not pay.

246. Are you able to judge of the passenger traffic between here and Cobar? I know that it can hardly keep a decent coach on the line.

247. Have you not heard the returns quoted stating that in September, 1888, there were 566 passengers between the two towns? A great many of those passengers would not go to Cobar. They came from Bourke, and went through the station here.

248. If they came from Bourke why should they get out at Nyngan? They do get out here, and a great many passengers get in at Nyngan from all parts.

249. Does not that indicate that Nyngan is a natural starting point for passengers going into the country? Yes; they start off from all places—at Girilambone, and all the way down.

250. If business is so bad in Nyngan, how does it sustain eleven public houses? I think some must go to the wall. I can answer for myself that business is very slack. The hotels are mostly kept up by the carriers and a few travellers.

5 (a)—B

Mr. A. S.  
Rowling.

5 Oct., 1889.

Mr.  
T. Barrett.

5 Oct., 1889.

251.

Mr.  
T. Barrett.  
5 Oct., 1889.

251. Where do the carriers mostly go to from here? They go all over the country—wherever they can get a load.
252. Is there much traffic between here and Louth? Not a great deal. There are plenty of teams waiting at my place, but they cannot get a load to go out with.
253. Do you think that if a railway were constructed a large amount of business now done in this town would cease? Yes; the passengers from Cobar, instead of stopping here for a day or half a day, would go right through, and the carriers would be obliged to leave Nyngan.
254. Do you think if a railway were made right through to Wilcannia it would secure any of the traffic now done on the river? When the steamers could not come up the river it would get all that trade, but the steamers have been running pretty well during the last few years.
255. *Mr. Tonkin.*] How many years is it since you first had any knowledge of the traffic to Cobar? About seventeen or eighteen years.
256. Do you think that in the best of times the traffic to Cobar was sufficient to warrant the construction of a railway between Nyngan and Cobar? There might have been at first, when Cobar was in full fling, but Cobar is now going down.
257. How many teams are there going between here and Cobar? About two or three teams per week.
258. Are there 30 tons of produce leaving here for Cobar weekly? No; 12 tons is as much as there is.
259. Is this a slacker time than any other time of the year? It ought not to be—at this time of the year things are generally pretty lively.
260. Has there been a great decrease in the traffic since the Cobar copper mine closed? Yes.
261. How many teams on an average per week used to leave for Cobar when the mine was in full work? You could hardly tell, because there was so much forage taken. Every team used to go out three parts full of forage.

Mr. Peter Vincent Lynch, commission agent, Nyngan, sworn, and examined:—

Mr.  
P. V. Lynch.  
5 Oct., 1889.

262. *Chairman.*] What business are you engaged in? I am a commission agent.
263. Have you any knowledge of the trade between here and Cobar? From where I live I see the whole of the traffic going in and out.
264. What is your estimate of the amount of traffic? Owing to the mines closing down at present in Cobar, of course there is a falling off in the copper traffic, and consequently in general merchandise there is also a general falling off. I know one firm in Cobar, which used to take out every fortnight or three weeks when the road was passable 40 tons, but that is now decreased to 6 or 7 tons—that is solely owing to the mine closing.
265. What loading did that consist of principally? General merchandise and sometimes corn and chaff.
266. Have you any knowledge of the road between here and Cobar? Yes, a thorough knowledge.
267. Is there any outlet for traffic of any kind between here and Cobar? At present there are different stations. If the line were constructed it would cause outlets and inlets to be established to those different places. Nymagee is an established road.
268. Do you think the construction of this railway would bring more traffic to Nyngan? Yes, it would facilitate the business of the district, and the squatters having better facilities for the dispatch of their stock and wool, and for receiving goods from Sydney, would put more stock on their runs. I am convinced that the number of stock would be doubled. The greater part of the runs are not half stocked at present. During the last few years, when the droughts occurred, the runs have been stocked up to their capacity, and many sheep have had to perish. Valuable horses and cattle were left in the back country to perish, because there was no means of conveying them to some place where there would be a chance of saving their lives.
269. From how far do you think would traffic gravitate to the railway? On the southern side it would come a long distance. A great deal of the traffic that now goes to Hay would come by this line. I think any traffic within 60 or 70 miles would gravitate towards this line.
270. Do you think that if the line were carried on to Wilcannia it would make a material difference in the traffic? Yes, it would open up some splendid country, and people would be justified in stocking up their runs.
271. Would it not possibly be the means of diverting our trade to the river and to the other colonies? That would rest altogether in the hands of the railway department. If exorbitant rates were charged on the railway I dare say some of the traffic would go to the river; but it is not a certainty to get produce down the river at all times. There is stuff going this year to the river which used to come here, but that is owing to the very bad state of the roads.
272. If there was only a very small difference between the rates charged on the railway and on the river, do you think that people would prefer to send their goods by rail? Yes.
273. Has that proved to be the case at Bourke since the railway was opened? I think very few goods go by the river from Bourke since the line was opened.
274. Do any of the stations east or north-east of Bourke send their goods away by rail? At present, owing to the bad state of the roads, I believe some wool is going down that way. A great quantity of goods is going through Coolabah at present, owing to some misunderstanding with the carriers' union.
275. Are the roads in a bad state now? Yes; about Cobar the roads are all bush tracks.
276. Do you think that a railway to Cobar would pay? It might not for the first few years, but it will create a larger population and traffic. It will be the means of setting the Great Cobar mine to work again, and the population there will be doubled. The reason why the mine is shut down at present is the terrible price they have to pay for hauling wood.
277. How long have you been resident in Nyngan? Thirty-one years.
278. Does the proposed railway excite much attention in the town? Latterly it has caused a great deal of discussion. There are men who object to the railway, but for what reason I do not know. Those people blacken the proposal as much as they can.
279. Are there many objectors? Not a great many. As a general rule the people are in favour of the railway. The principal opposition comes from business men on the northern side of the railway line.
280. *Mr. O'Sullivan.*] What misunderstanding did you allude to as existing between the squatters and the carrier's union? The misunderstanding is not with the squatters and the union, but between the storekeepers and others who are taking goods into Cobar and the carriers' union. The dispute is with reference to the rates for the haulage. The result is that a great quantity of goods which used to go through here are now sent from Coolabah and Girilambone.

Mr.

Mr. Arthur Thomson Bleakley, Nyngan, sworn and examined:—

281. *Dr. Garran.*] How long have you been in Nyngan? Twelve months.  
 282. During that time has the season been very good? The early part of the season was bad, but since then it has been good.  
 283. Has the change stimulated business in the township? I think we were doing rather more business during the drought, because there was then a very large quantity of forage and feed required.  
 284. Then the business people in the township make a profit in good or bad times? Money is more plentiful in good times.  
 285. During bad times do the squatters and carriers suffer most? Yes.  
 286. Do the storekeepers do good business in bad times? No; we have to give too much credit, and find it is a hard matter to get money in.  
 287. Do you think that a railway between Nyngan and Cobar would pay? I am not in a position to say, but I believe it would after a time.  
 288. If it were a private speculation would you invest in it? I cannot say that I would.  
 289. Do you think that a railway would concentrate more traffic than comes here already? I do. I think that the Great Cobar mine would begin work again and that would employ a large amount of labour.  
 290. Supposing the price of copper would not justify the working of the mine, would the railway make a great increase of business? I do not think so.

Mr. A. T. Bleakley.

5 Oct., 1889.

Mr. Thomas Henry Rowe, hotel-keeper, Nyngan, sworn, and examined:—

291. *Chairman.*] What is your occupation? I was a hotel-keeper in Nyngan until the last two or three days. I first came to Nyngan about ten and a-half years ago. I have been mail contracting and doing other work throughout the district.  
 292. What are your views with regard to constructing a railway from Nyngan to Cobar? I would not expect it to pay for a short while; but if the line were carried beyond Cobar there is no doubt that it would pay. I believe that a light line from Nyngan to Cobar only would pay in a very short time. Some new discoveries of copper have been made, and a railway would enable the mines to be developed either with cheap wood or with coal from Lithgow or Dubbo.  
 293. The railway would cost £207,360;—do you think that a line from Nyngan to Cobar at that cost would pay interest and working expenses? I think so. There are large numbers of stations on the western side of the line which would supply traffic to a railway. I have heard people connected with those stations say that it would be a great benefit for them to have a railway to Cobar. At present it is impossible for them to get away their stock in times of drought.  
 294. Do you think that population is likely to increase between here and Cobar and the surrounding districts? Yes; there is a great deal of good land lying on each side of the line which would be taken up by people who wish to settle.  
 295. Do you think that that land is such that it would pay selectors to take it up and cultivate it? I feel confident it would. There are two or three large farms within 28 or 30 miles of this place where they have never missed a crop except once in five years. On another farm they have only missed one crop in six years. The crop grown there has been chiefly hay. I have never seen better fruit than is grown in this neighbourhood.  
 296. Do you know of many selectors settled on land in this district? I think there are 35 within 7 or 8 miles of this place. They are making a fair living. They are increasing in number, and they are trying to get hold of more land. Several men were here lately from Victoria to take up land to the west of this place.  
 297. During your residence in this district, has it been progressive or otherwise? It has been progressive; but within the last six months trade has been very much depressed—that is owing to the heavy drought from which people have not yet recovered.  
 298. Do many carriers come to and go from Nyngan? I think the average is about 4 or 5 per day leaving Nyngan. Those teams come from Nymagee, Cobar, and the surrounding back districts. Several come in from the west of Nymagee.  
 299. Do the bulk of the carriers come from the direction of Cobar? Yes; Cobar and Nymagee.  
 300. *Dr. Garran.*] Do you think that this district is fairly stocked at present? No; because a lot of stock died during the drought and the stations have not been re-stocked.  
 301. Before the last drought, was the country fairly stocked? Yes.  
 302. Is the reason for not re-stocking the fact that the squatters fear a drought again? Yes; and because there is no way of getting stock away in case of drought.  
 303. Do you think that if there were a railway running from here to Werris Creek, we could find room in New England for all the perishing sheep in this country? Not if the whole of them were removed there; but there are a great many other places besides the New England district. There is very often a good season at Orange when there is a bad season here.  
 304. Were not many of the stations taken up and stocked in the first instance when the distance from a railway was twice what it is at present? Yes.  
 305. So that the long cartage did not keep back the stocking of the runs? No; but the squatters then had the land on much easier terms.  
 306. Supposing no more railways were made at all, would that keep back the stocking of the country? At present it does keep it back. If there was a railway the squatters would stock every inch of unstocked country.  
 307. Do you think that more sheep would then be kept within a certain radius of Cobar than are kept at present? Yes; because the squatters could get fat stock to market at a day's notice.  
 308. *Mr. Tonkin.*] Is the river at Wilcannia always navigable? No; I have known a whole year when it was not navigable. It is only during nine months of the year that they can get light loads from Wilcannia.  
 309. Do you think that if the proposed railway were constructed, the traffic that now goes by the river would be diverted by the railway line? I think that at least one half of it would. I have known teams to be stuck up for three months when they have been loaded with wool.  
 310. Have you ever known any stations where they have had to store the wool because they were not able to get it away by the river? Yes; I have known that to occur at Tiltagura, 80 miles west of Cobar.

Mr. T. H. Rowe.

5 Oct., 1889.

- Mr. T. H. Rowe.  
5 Oct., 1889.
311. Would the railway benefit that station? Yes. They send their wool this way now, but it is a long distance.
312. Do you think that if a railway were made the squatters would be inclined to pay more than the usual railway rates in return for the benefits they would derive from the railway? I think they would, on account of their being able to get away their produce quicker than they are able to do at present.
313. Do you believe that if the railway were constructed beyond Cobar to Wilcannia and Broken Hill it would be immediately a payable line? Yes.
314. Do you think that if it is constructed to Cobar only it would be worked at a loss for some time? Yes, for a short time; but I believe that Cobar will be a very rich gold-mining district.
315. When the river has not been navigable, how do people obtain their provisions and stores? By means of teams from Hay, 100 miles west of Cobar; to that distance from Nyngan.
316. Mr. O'Sullivan.] Do you think that millions of sheep could be saved in this district during the drought if they could be taken away to the mountainous country by rail? Yes.
317. Dr. Garran.] Are you chairman of the Progress Committee here? Yes.
318. Do you think that the opinions you express are the opinions of the people generally? The people generally in Nyngan are in favour of the proposed railway, and there are only a few opposed to it.
319. Are you the spokesman of the Progress Committee? Yes.

Mr. Ralph Stephen Pemberton Clay, postmaster, Nyngan, sworn, and examined:—

- Mr. R. S. P. Clay.  
5 Oct., 1889.
320. Chairman.] Are you the postmaster at Nyngan? Yes, since 1883.
321. Has there been much progress in the district since you have been here? For two years after I came here the progress was very marked. When I first opened the Nyngan office, in 1883, my telegraph cash was £40 per week, which meant messages transmitted. The messages received would amount to another £40 a week. Allowing for free matter telegraphed, that would amount to another £10 per week: so that £90 per week would be the receipts for the telegraph office. That lasted from 1883 to 1884, and up till the middle of 1885, when Byrock was opened. In 1884 the postal traffic was enormous. In twenty-eight days we used to sell £100 worth of stamps; that would be in small numbers. The same business was carried on during 1884 and 1885, until Byrock was opened; until that time this was the terminus of the railway. At that time the population of Nyngan was estimated at about 3,000.
322. What happened in 1886? It became droughty then. 1883 saw the end of a very bad drought. I believe it had not rained for two years.
323. To what do you attribute the prosperity of the years 1883, 1884, and 1885? To railway communication solely. This town was a sheep-run until the railway came here.
324. When the railway passed on was there a marked difference? The railway was opened as far as Byrock in 1885. There was no difference felt for the first six months afterwards, but after that there was a gradual fading away. People then began to make Byrock the centre.
325. Was 1886 a bad year? About that period, I think, the drought again set in for fourteen or fifteen months.
326. What has been the business in your department since the railway was opened as far as Byrock? It has been diminishing gradually. I think it has now reached zero. Notwithstanding that, there is great traffic in my department, because there are five towns concentrated here.
327. Is that for the distribution of letters? Yes.
328. Is that business remunerative? Yes; that is what sustains Nyngan. It is foreign traffic. I believe that a railway to Cobar would bring back a certain amount of traffic which we are losing.
329. What makes you think so? There are nine or ten squattages between here and Cobar. I believe that the rapid transit by rail would induce people to settle on the land along there. I think that previous witnesses have overlooked an important fact—that is, that in times of drought a railway would enable squatters to carry water to their perishing stock. I have known water to be brought from Trangie to Nyngan.
330. But would not that be only for household purposes? It might be used in many ways.
331. Dr. Garran.] Are not the sheep scattered all over the country, and how could you carry the water to the sheep, or the sheep to the water, seeing that there is no grass in times of drought? I understand that the railway would pass in the immediate vicinity of the squattages to which I refer. The squatter could bring his stud sheep, cattle, and horses down to the railway line. In that case the railway would only benefit those men whose stations abutted on the railway.
332. What business is done between here and Cobar as regards postage? It is a thing of no moment.
333. Has it fallen back very much since the Cobar mine has been closed? Even when the Cobar mine was in full swing there was not much postal traffic between the two places.
334. Are you in favour of the proposed railway to Cobar? Personally I should be a great loser if the railway were carried to Cobar; but knowing from experience how a railway develops the country, I think it would be a great public advantage to make a railway. The opening of a line to Cobar would develop a great deal of country beyond Cobar.

Archibald R. M'Kellar, Esq., Manager of Commercial Bank, Nyngan, sworn, and examined:—

- A. R. M'Kellar, Esq.  
5 Oct., 1889.
335. Chairman.] Are you the Manager of the Commercial Bank at Nyngan? Yes.
336. Can you state in a general way the financial position of the people in this district? People in the town are not, I think, in a very good financial position, but all the large holders in the district are, I think, pretty well to do. The inhabitants here seem to be a struggling population.
337. By the people in the district do you mean the large pastoral lessees? Yes.
338. Do they appear to be on a good financial basis? Yes, taking an average.
339. Have you any business to do with the selectors in the district? Yes, slightly.
340. Are they financially sound? I think so, taking them all through. Of course a selector here cannot manage unless he has capital behind him. A selector coming to the district with no money could not do anything.
341. Do you care to state if any selectors in the district are mortgaged? None are mortgaged to us. I am not in a position to give definite information as to whether or not they are mortgaged elsewhere.

342. Have you been in the town for a long time? Fourteen months.  
 343. While the financial position of the people is not what might be called remarkably sound, can we regard it as fairly good for a country town? Yes, for a new town like this.  
 344. Is the state of the town better or worse financially since you came here? It is about the same.  
 345. *Dr. Garran.*] Is the financial position of the town largely due to its being depressed, as compared with its previous prosperity? I think that the depression is due to the drought. If there is any difference in the financial position of the town, that would be the cause of it.  
 346. Is there room here for a town as the centre of a large district? Yes.

A. R.  
 M'Kellar,  
 Esq.  
 5 Oct., 1889.

Sydney F. H. Lane, Esq., Manager of the Australian Joint Stock Bank, Nyngan, sworn, and examined:—

347. *Chairman.*] Are you the manager of the Nyngan branch of the Australian Joint Stock Bank? Yes.  
 348. How long have you been here? About five months.  
 349. How many banks are there here? Two. There were three until quite recently. There was a branch of the Mercantile Bank here, but it closed about a month ago.  
 350. Was that in consequence of a falling off in business? Yes.  
 351. By reason of other banks coming here? Perhaps so. There were three banks in existence here for three or four years.  
 352. Is the financial position of the town generally a stable one? The townspeople generally are in a very fair position.  
 353. Are the free selectors in the district doing well, or otherwise? I understand there are not many selectors in the district. We have about half a dozen of them on our books, and with the exception of one or two they appear to be in very good positions.  
 354. Have they been here any length of time? About twelve or eighteen months.  
 355. Are their farms largely cultivated? I only know of three selections in the district that are cultivated. I have not had an opportunity of seeing many of the outlying places since I came here.  
 356. Is the district progressive or retrogressive as regards banking business? I think the banking business has fallen off during the last few years; but I fancy I can notice a revival—that is, during the last month or two; but perhaps it is on account of the large shearing operations going on in the district.  
 357. Do the squatters operate largely on your books? They keep small local accounts for paying shearers.

S. F. H. Lane,  
 Esq.  
 5 Oct., 1889.

Augustus Lyne, Esq., grazier and agent, sworn, and examined:—

358. *Chairman.*] What is your occupation? Grazier and agent.  
 359. Where is your run? It is all round Nyngan and joins it. It is called Nyngan East run. It is partly selected and partly leasehold. It comprises about 10,000 acres.  
 360. What are your views with regard to the proposed railway from Nyngan to Cobar? It certainly would be a benefit to the squatters in the back country; and I believe that if the line were made, a great deal of country would be taken up in small areas for agriculture, and selection would go on to a great extent between here and Cobar. I do not know anything about the country on the other side.  
 361. Since the railway has been extended to Nyngan, has it caused much selection? Every inch of land available anywhere near the line has been taken up under the free selection clauses.  
 362. Are they doing good business? I think most of the selectors are in a very fair way of prospering.  
 363. Do they cultivate much? No, they graze—principally sheep, and sometimes cattle.  
 364. How do they manage for water? In some cases they select on the river, where there is natural water; in other cases they have to make tanks.  
 365. Is there a large amount of land available for settlement between here and Cobar? I think the whole of the land between here and Cobar, except a few odd patches, is open for selection.  
 366. Is it suitable for that purpose? I think so.  
 367. What about the want of water? They would have to conserve water there the same as they have to do on this side of the river. They have better means of catching the water out there than we have on this side, because the country there is more or less hilly.  
 368. Would not any selector there have to be a man of some capital, or would he not have to be considerably assisted at the outset? Yes; just the same as on this side. If he started with nothing the chances are he would break.  
 369. What would be a reasonable amount of capital for a selector to start with? I should think that £1,000 would be required to make a certainty of it.  
 370. Do you think that if this railway were constructed to Cobar it would be the means of drawing in a large amount of business that does not now come to the railway? I think a great many selectors would follow the line along and take up every inch of land available.  
 371. With regard to existing industries and squattages, do you think it would be the means of drawing wool and stock to the railway? I cannot say. I do not think it would increase the traffic very much. At present the stations generally send their wool to the railway at some point. I do not know anything about the mining industry; but I have heard that there is a large mining industry in the Cobar district which only requires working up.  
 372. *Dr. Garran.*] When you first took up your run, which was the nearest railway station? Dubbo.  
 373. Do you keep more sheep per acre now than you did then? Yes.  
 374. Is that due to your greater proximity to the railway? No; it is due to improving the land by ringbarking.  
 375. Has not the extension of the railway induced you to stock your run more? No.  
 376. Do you think that the construction of a line from here to Cobar would lead to the district being more heavily stocked? No; except that the selectors would take up the land and improve it more than the stations do at present. Then the land will carry more stock.  
 377. Do the free selectors about here keep more stock per acre than you do? Near Nyngan the land has only been taken up about twelve months, and some of the selectors have not stocked up to the present. I think that the land will carry more stock than they keep at present, in proportion to the land they have, when improved.

A. Lyne, Esq.  
 5 Oct., 1889.

- A. Lyne, Esq.** 378. Do you think that on the selections more sheep per acre will be kept than under the large station system? Yes; by improving the land, by making water, and ringbarking.
- 5 Oct., 1889.** 379. Do you think that the selectors will go in for cultivating the soil in future? Yes; they are doing it already.
380. Do you think that the prosperity of the country will be advanced by the subdivision of the present holdings? Yes.
381. Does every fresh railway extension tend to develop that change? That has been proved to be the case so far as Nyngan district is concerned.
382. *Mr. O'Sullivan.*] Can you estimate the number of sheep and cattle which died during the last drought in this district? No; but I have heard that on several stations they have lost about one-third of their stock. Some have lost more and some less.
383. If a line were constructed from Nyngan to Wilcannia, and from Nyngan to Werris Creek, so as to give access to New England, how many sheep could be saved in a drought? I cannot give an opinion; but during the last drought, if the proposed railway had been in existence, pretty well all of the sheep might have been saved if they were removed. However, people have a prejudice against moving their sheep. They very often prefer to leave them to die on the station.
384. Do you think that the railway to Cobar would be likely to pay as a local line within a reasonable period? I do not know any of the figures connected with the line; but I think trade would increase very considerably if a line were made to Cobar.
385. Does the route of the proposed railway run through the leasehold or the resumed areas? Through both, I think.
386. Is it good land for settlement? Yes; I should call it very good land. It requires improvement. The water will have to be conserved and ringbarking carried out. It is very rich soil. With fairly good fortune as to seasons, the selectors could do very well if they started with a little capital.
387. *Mr. Hurley.*] How long have you been in this district? About eight years.
388. Where used the wool be sent to before the railway came to Nyngan? To Dubbo.
389. Are the squattages in a healthier state financially now than they were then? I think they are just about the same.
390. Has the construction of a railway been a great facility in squatting pursuits here? Yes, in one way; but as it brought selectors it was perhaps a disadvantage in another way.
391. Are you aware that cattle trains are run at a loss at present? I have heard so.
392. Do you not think that the pastoralists could pay a higher freight than they are paying at present for sending cattle to market? The present rate is about one-fourth the value of the stock, and I think it is quite high enough.
393. Has not the making of the railway afforded facilities to the pastoralists, while it has been a loss to the State? Yes, that is possibly the case.

Mr. Walter Jurd, Public School Teacher, Nyngan, sworn, and examined:—

- Mr. W. Jurd.** 394. *Chairman.*] Are you the Public School teacher? Yes; I have held that position for two years and nine months.
- 5 Oct., 1889.** 395. What is the attendance at school at present? The average weekly attendance is 148. One day this week there were 154 at school. In 1888 the average attendance for the year was 101·9. In 1887 it was still less; in 1886 it was only 75·5.
396. We have had it stated in evidence that the population of the town is falling off very largely? That is not borne out by the attendance at the school. When I first came here the school was a small building, and it was nearly large enough. We have now got a new school building, capable of holding 150 children, but it is not large enough for the present attendance.
397. Are they new comers to the district? Yes, most of them are.
398. Do the same children keep on coming to school? The population has been more settled during the last six months than during the previous year. This year the attendance is more regular than it was last.
399. Are there any other schools in the district? There is a Roman Catholic school, at which, I believe, there is a large attendance. I think there are going to that school about two-thirds of the number which we have going to the public school. It may be a little less.
400. Do you think that the children now attending are the children of people who are settled in the district? Most of them have been here since the beginning of the year. We have had about twelve new comers during the last six months.
401. *Mr. O'Sullivan.*] We have it in evidence that the population of the town has decreased;—how do you account for the fact that the number of children has increased? I was not aware that the population had decreased.
402. May it be accounted for by the fact that in the earlier days of the town the pioneers did not bring their families with them, and that they have since done so? That has not been the case since I have been here.
403. How far does your school district extend? Most of the children live within a radius of 2 miles.
404. At your school and the Roman Catholic school there are about 250 children receiving instruction in Nyngan? Yes, fully that; because what I have given is the average attendance. There were nearly 200 children on the rolls last quarter.

Mr. John G. Keane, auctioneer, and Secretary to the Carriers' Union, Nyngan, sworn, and examined:—

- Mr. J. G. Keane.** 405. *Chairman.*] What is your occupation? Auctioneer and Secretary to the Carriers' Union.
- 5 Oct., 1889.** 406. How long has that Union been established? Two years in June last.
407. Is it merely a local society? Yes; it has been established at Coolabar recently. There is no Union at Cobar.
408. What are your views with regard to the Nyngan-Cobar railway? If the railway goes to Cobar and stops there it will never be a paying line. If it goes through to Wilcannia and Broken Hill I have no doubt it will be successful.
- 409.

409. What is the amount of traffic between Nyngan and Cobar at present? The general merchandise loaded for the township would not exceed at present 12 tons a week from Nyngan to Cobar. At present we have the wool season on, and the traffic in wool is great. We have twenty teams a week from Cobar to Nyngan, and each team averages 5 tons.

Mr.  
J. G. Keane.  
5 Oct., 1889.

410. How many teams carry the outgoing traffic to Cobar? About two. We have lost a great deal of the traffic lately as the main traffic to Cobar now goes through Coolabar. It is about 7 miles shorter from Nyngan to Cobar than from Coolabar to Cobar, but there is a dispute between the storekeepers and the Carriers Union. In dry seasons it is almost impossible to travel to Coolabar, because the tanks are the private property of the squatters, and they will not allow the carriers to use them.

411. Is the road which the teams travel from Cobar to Coolabar in a state of nature? Yes; there is no surveyed road. The teams get through that country fairly well. It is not such good country to travel through as it is from Nyngan to Cobar, and the carriers prefer to travel from Nyngan.

412. If the railway were made from Nyngan to Cobar would the drays be able to travel over the cross roads so as to feed the railway along its length? Yes. The most of the country along the line is better than the road to Coolabar.

413. What number of teams on an average go from Nyngan to Cobar, and come from Cobar to Nyngan during the week at present? About twenty-five teams. We have altogether about 200 teams here making a living from inward and outward loading. The fact of the Cobar mine having stopped lately makes it somewhat worse for the carriers.

414. Do those twenty-five teams come here from the west? Yes; from the direction of Nymagee and Cobar. I think they are making a fairly good living. The teams have from nine to twelve horses, very few less than nine. I think the largest teams earn from between £300 and £400 a year gross earnings; the others something less.

415. What is the rate per ton for carriage between Nyngan and Cobar? At present it is £3 15s.; that is low.

416. How high have you known it to be? From £12 to £14 per ton; I have known it to be £12 last year in the wet weather. Only very strong teams can carry goods in wet weather. Only a few of the carriers work energetically. When £12 a ton is charged they can only carry light loads, and they require to have extra horses.

417. What does the outward traffic generally consist of? General merchandise, rock salt, and so on during the wool season. During the dry seasons there is an immense quantity of forage going out.

418. When the wool season ceases is there a marked falling off in the traffic? Yes a great many carriers then turn their horses out and go away tank sinking, fencing, and to other work.

419. At present can two teams a week do all the work between here and Cobar for outward loading? Yes. The majority of the carriers bring in wool and go out to the stations empty.

420. Are there any selectors? Yes, that is where the extra carriers come from. When the wool season comes round the selectors use their horses for carrying wool.

421. If the railway were constructed would there be any difficulty for graziers and others in getting their produce carried to the line? None whatever; they could get to the line in the worst of weather.

422. Have you ever considered the question of extending the railway beyond Cobar? Yes that has always been my view of it. That is the only reason why I would advocate the railway. I think that the business which would be brought from Wilcannia and that district would enhance the profits of the railway very much. I am quite sure that a railway from Nyngan to Cobar alone would not pay.

423. From whom does the opposition to this railway come in Nyngan? Generally from a few people who hold property and who seem to fear that if the railway goes to Cobar it will damage Nyngan.

424. Do the carriers as a body object to the railway? Yes.

425. *Dr. Garran.*] What is the longest time you have ever known the traffic to be stopped between Nyngan and Cobar for horse teams? I do not know that it has ever been permanently stopped. The longest time that the traffic has been delayed has been a fortnight.

426. During periods like that would it have been possible for a team with half a load to get through? I think so.

427. We are told that sometimes supplies runs so short at Cobar that food is sold at famine prices;—do you know that to be a fact? I have known things to be sold at very high prices, but I attribute that more to the people in Cobar themselves than to the state of the roads. My experience during the last few years is that people in Cobar do not order enough stores.

428. Is that due to carelessness? It may be carelessness or some other reason. I do not know any reason why they should only have a fortnight's stock in hand.

429. If they kept a month's stock of necessaries at Cobar there would never need to be a famine? Yes.

430. If they waited until the roads dried up would they ever have to pay £12 a ton for the carriage? Sometimes for two or three months the road is in a bad state.

431. During three months of such weather what would be the average cartage? About £9 per ton or very nearly three times the usual rate.

432. What is the lowest rate you have ever known? 25s. per ton.

433. Could the carriers make a living at such a rate? No, it was a cut-throat business.

434. If a railway were made could those teams of waggons and horses compete with a railway? It would not pay them to do so. I do not think there need be any fear of competition.

435. If the Government treated this proposed railway as a branch line and tried to raise the rate 25 per cent. higher than those on the trunk line would the teamsters then have a chance of competing with the railway? They would never be able to compete with the railway. I know no instance where teamsters do compete with the railway.

436. How high could the Government raise the rates without provoking the competition of teamsters? They would have to go very much above the present rates. For instance, we can get goods carried from Dubbo to Nyngan, a distance of 100 miles, for about 10s. a ton, and we are paying £3 15 per ton to have goods carried by teams from here to Cobar.

437. *Mr. Copeland.*] How many of the 200 teams connected with the Association are working direct between here and Cobar? Between Nyngan, Cobar, and Nymagee, there are about 150 teams. The average number of horses to a team would be seven or eight. There are not more than twenty engaged between Coolabar and Cobar. The rate of cartage from Coolabar and Cobar is £3 per ton. There is a difference

Mr.  
J. G. Keane.  
5 Oct., 1889.

difference of 8s. or 8s. 6d. per ton in the trainage of goods from Nyngan to Coolabar. The carriers prefer travelling from Nyngan.

438. What number of tons come from Cobar to Nyngan per week? From 60 to 70 tons.

439. How many tons are sent from Nyngan to Cobar per week? About 15 tons at present.

440. Are 150 teams engaged all the year in taking that amount of loading backwards and forwards? Certainly not; the teams diminish very greatly after the wool season.

441. Is very much food required for those teams? In dry seasons there is, but not at present. The food that is used in dry seasons is obtained from Orange, Bathurst, and Sydney, and in dry seasons there is an immense traffic here in supplying that horse feed.

442. If a railway were constructed would that traffic cease? Yes, in dry seasons.

443. Is the feed consumed at Cobar taken out by those teams? Yes.

444. What is the cost of carriage to Nymagee from here? £3. Nymagee is 67 miles from here, and Cobar 80 miles.

445. *Mr. Hurley.*] Is it correct to state that in good weather three first-class teams could do all the trade between here and Cobar? Yes; no doubt that is the case.

446. How is it that you state that 150 teams using 1,200 horses are employed in carrying on this trade? The teams I have named are engaged in bringing in wool, and not in carrying on the ordinary traffic between here and Cobar.

447. Do you look upon £3 15s. per ton as a fair charge for cartage? It pays exceedingly well under certain circumstances.

448. *Mr. O'Sullivan.*] Are not some of the goods which are used at Cobar sent from Girilambone? Not to my knowledge—it must be a very light traffic, as there is no open road there.

449. Seeing that the traffic to Cobar is divided at present, is the ordinary traffic between Nyngan and Cobar at the present moment a fair criterion as to the ordinary trade between the two places? Certainly it is not. This is the worst season we have ever had. What I have said as to the traffic is based entirely on the season.

450. Is your Carriers Union organized as a Trade Union? We are organized under the Friendly Society's Act.

451. What dispute had the storekeepers with the Union carriers as to the rates of carriage? There was a dispute between the carriers and the forwarding agents.

452. What was the cause of the dispute? They loaded with non-union teams which carried goods for 30s. a ton. The carriers objected to that. They formed a union and that was the cause of the strike.

453. Did not some dispute occur which diverted the traffic to Coolabar? That was not caused by any dispute; it was caused by the rate of cartage during wet weather. The majority of our carriers were out in the interior, and we had to depend upon a very few carriers. The result was that they asked for higher rates. The agents gave them those rates, but the storekeepers objected to it, and diverted the trade to Coolabah. They made arrangements with private teams.

454. If the railway were made to Cobar would it be likely to secure all the traffic now going on between Coolabah, Girilambone, and Cobar? It would certainly secure all the traffic from Coolabah.

455. And also from Girilambone? The traffic is coming chiefly all this way.

456. You spoke of teams earning from £300 to £400 a year;—do the carriers keep horses and pay all expenses out of that sum? Yes; carrying in this district is a long way from being a profitable occupation.

457. Would it pay to run a train three times a week to Cobar if the line were made? I have no doubt it would pay. It would not pay at once to run direct to Cobar. One train a month would do for the traffic at present so far as all the stuff we have to send out is concerned.

458. *Dr. Garran.*] What is the distance from Coolabah to Cobar? 7 miles less than the distance from Nyngan to Cobar.

459. *Mr. Tonkin.*] When the wool season is over would three teams be sufficient to do all the work both ways between Nyngan and Cobar? Yes; if the copper mines are idle.

460. That would be 18 tons per week each way? Yes.

461. Yet you fancy it would pay to run a train three times a week to Cobar? Yes; taking the whole season into consideration. In dry weather it would be necessary to have a train every day to Cobar.

462. If there is a drought, or if the mines improve, do you think that a railway would pay? Yes.

463. By the construction of this railway you will not bring any new traffic to Nyngan? No; except by new settlement.

464. *Mr. Copeland.*] How many teams were at work when the mines were in full work? I think 150 teams were going backwards and forwards regularly then. Since the mines have been closed the loss to the teamsters has been very considerable.

465. Do you think if the copper mine were reopened and in full work it would again give employment to 150 teams? Yes. Each team would carry 5 tons.

466. Would they be likely to be fully loaded both ways? Yes; there were 700 or 800 people employed there when the mines were in full work.

467. Is there any chance of growing feed between here and Cobar? Yes; in good seasons we have most prolific crops.

468. Has irrigation been attempted at all? Not for growing crops. There is some slight irrigation going on for gardens and orchards. I have seen tremendous crops of hay in this district, some yielding 5 tons to the acre.

Mr. Richard Harris, storekeeper, Nyngan, sworn, and examined:—

Mr. R. Harris.  
5 Oct., 1889.

469. *Chairman.*] What is your occupation? Storekeeper.

470. *Mr. Hurley.*] How long have you been resident in the district? Since 1872. I have been engaged in mining, hawking, and storekeeping.

471. Do the storekeepers look upon the construction of the proposed Nyngan to Cobar line favourably or unfavourably. Some of them look upon it favourably and others unfavourably.

472. Is that from a selfish point of view? It is a certainty that the storekeepers would derive some benefit from the construction of the line.

473. Would that be a temporary benefit? Yes.

474. Would it be injurious to the town hereafter if the railway were constructed? I imagine it would be. *Mr. R. Harris.*
475. Do you think the railway would be a profitable investment? I do not think it would pay for a long time. It requires more population. *5 Oct., 1889.*
476. Do you think that the land is suitable for inducing population to settle? I do not think so.
477. Do you think that there is any likelihood of the district between here and Cobar giving work to a large population? I do not think so. The New Burra Burra Copper-mine has just been opened out.
478. Why do you think there will not be a population settled upon the country, along the line? The seasons are so dangerous here that I am afraid they would perish. The first two years that I lived in Girilambone, we had only 13 inches of rain in two years.
479. Do you think that if water were conserved, or if artesian wells were sunk, people would settle on the land between here and Cobar? There is no doubt that that would change the appearance of things considerably.
480. Do you think it would not be conducive to the benefit of the State to construct this railway line? No.
481. Are the selectors about this district in a progressive state or are they going back? In the neighbourhood of Nyngan I believe they are in a progressive state, but we have not many here.
482. Financially are they particularly healthy? Yes.
483. Does not that show a good prospect? Yes; but there is a difference between the land here and the land between here and Cobar.
484. How many selectors are there about Nyngan? I suppose that within a few miles of Nyngan there are fifteen or twenty. There is room for thousands here if there were plenty of water. However, two or three years might pass away before a man could get enough water to fill a tank.
485. Did not the first selectors here have difficulties to contend with? We have always had the River here.
486. Is there not room for increased population here? Yes, any amount. Those already settled on the banks of the river are in fair circumstances.
487. Are there any unemployed in this town? I do not think there are many.
488. Is the business done here healthy? I have heard nothing to the contrary so far as stores are concerned, but some of the public-houses seem to be changing hands.
489. Is there not sufficient inducement, considering the consumption of the district, for an agricultural class to settle here? I am afraid there is not for some time.
490. Why should you have to depend upon Bathurst and Orange for your grain and fodder? They have a better rainfall there.
491. Do you attribute it to a want of education on the part of the people with regard to agriculture? The people about here are like myself; they know nothing about agriculture.
492. Then may not the failure of agriculture be attributable to the want of knowledge on the part of people here? It may be, but I think it is attributable to the uncertainty of the rainfall. People do not like to take the risk.
493. *Chairman.*] Do I understand that you are not opposed to this railway from a selfish point of view? Yes. I have no interest whatever in the town except the stock I have got.
494. *Mr. Copeland.*] How many of the fifteen or twenty selectors in this neighbourhood are west of Nyngan on the Cobar road? There may be two or three, perhaps four.
495. What do the men in the immediate neighbourhood of Nyngan do? They have gardens, and they cultivate a little. They grow very small patches of wheat.
496. Is there flour in the district? There is none nearer than Dubbo.
497. Did you ever hear of wheat being sent from here to Dubbo? Not from Nyngan, but I believe it has been sent from along the Cobar road.
498. Do you think that any of the country between here and Cobar would be fit to take up for any other purpose than for sheep? I think agriculture would be very uncertain.
499. Are you in business in a large way? No, in a small way. I have no business connection with Cobar.
500. *Dr. Garran.*] Do you know the country well between Forbes and Mount Hope? Yes.
501. Is it level country? Yes; it is similar to the country between Nyngan and Dubbo.
502. Is it fairly watered? Yes, by the Lachlan.
503. Could you take a railway down the valley of the Lachlan with great ease? Yes.
504. Do you know the country from Forbes to Molong? I was through there once many years ago. I imagine it is pretty hilly.
505. *Mr. O'Sullivan.*] Which do you think would be the better route to take a line to Broken Hill; the route from Cowra through Forbes, Condobolin, and the valley of the Lachlan, or the route now proposed from Nyngan to Cobar? I should say that the route from Forbes is the better one.
506. Why? Because there is so much agricultural country about Forbes.
507. Is it watered well enough to be relied upon as agricultural country? I think so.
508. Is there very much water between the Lachlan and the Darling? No.
509. Then you could only depend upon the agricultural country as far as the Lachlan? There is a lot of agricultural country about Condobolin.

Mr. Albert Brownlow, storekeeper, Nyngan, sworn, and examined:—

510. *Chairman.*] What is your occupation? Storekeeper.
511. *Mr. Copeland.*] Have you any business connection with Cobar? I have a small business in Cobar.
512. Are you favourable or adverse to the construction of the proposed railway from Nyngan to Cobar? I have been very favourable to the railway, but at present I am slightly unfavourable to it.
513. Why have you changed your opinion? On account of the present state of Cobar. The mine has collapsed; but if it should revive I would still be in favour of the railway.
514. Would not the construction of the railway be likely to revive the mine? I am certain it would.
515. Are there not other copper-mines in the district which would be benefited by the construction of the line? Yes; I have heard very favourable reports of the New Burra Burra Mine.
516. Would not the construction of the railway give the people cheaper supplies and greater facilities for getting stores? Yes; that is a great object at present, especially in wet weather. There must either be a macadamized road or a railway made.

*Mr. A. Brownlow.*  
5 Oct., 1889.

Mr.  
A. Brownlow.  
5 Oct., 1889.

517. Do you think that the people of Cobar would be willing to pay a fair price for carriage by rail in comparison with what they are paying now for carriage by horse teams? In the past they were quite prepared to do so, but since the mine has been shut down I would not like to say what their opinions are.
518. Do you send much merchandise out to Cobar? I have a team constantly working between here and Cobar. During the busy time I had to employ other teams, but now I cannot find enough for my own team to do.
519. What is the average charge for cartage from here to Cobar? It varies very much. A few months ago, in wet weather, I had to pay £12 per ton. At present it is less than £4 per ton.
520. Would a railway making three trips a week do all the cartage that is necessary at present between here and Cobar? At present one train per week would do.
521. Have you any knowledge of the increase or decrease of the population of Nyngan? I cannot tell what the population is at present; but about eight or ten months ago I was one of three selected by a committee to ascertain how many people were in the vicinity of Nyngan. At that time there were 1,052.
522. *Dr. Garran.*] How often have the storekeepers at Cobar run short of supplies in consequence of the bad state of the roads? I have received no end of telegrams from a man in charge of my store at Cobar, mentioning certain goods which were exhausted, and which should be sent out at once. At the same time I have had those provision on the road, and they would probably take a fortnight before they reached Cobar, on account of the state of the road.
523. Is a fortnight the longest time you have had a team on the road? Yes; but I have known other teams to be twice that length of time on the road.
524. How often does this short supply occur? Whenever we have heavy rain.
525. Would 1 inch of rain make the road impassable? No, but 4 or 6 inches of rain would prevent teams from getting through.
526. Is it the custom to keep the stores short-supplied with goods, trusting to fill them up from Nyngan? Every storekeeper is not in a position to keep a large supply.
527. *Mr. O'Sullivan.*] What sustains Cobar during the time that the copper-mine is shut down? There is a certain amount of business done outside the town altogether. It is a very good pastoral district. That is all they have to depend upon with the exception of the gold-mines which are working.
528. How is it that you have not a larger population settled around Nyngan? I think it is progressing very favourably.
529. Is this place suitable for the growing of fruit? Yes; I do not suppose you could find a better district in New South Wales, provided we get anything like a favourable season.
530. Under these circumstances how is it that people have not gone in more for fruit-growing? We have scarcely had time yet. I think that oranges and grapes would grow to great advantage in this district.
531. Has the opportunity of growing fruit not been seized because of the apathy of the people? It requires a capitalist to go into the business extensively.
532. Do you get your supplies of fruit from Sydney now? Yes.
533. Have you sold much fruit here yourself? Yes; I have imported 15 tons of fruit here in one month from Rydal.
534. Might all that fruit have been grown in the district? Yes.
535. Do you think there is a very good opening here for that industry? I am quite sure of it.
536. Is there anything else that would induce the settlement of a large population here? There is no doubt that very good wheat and oats could be grown here. There is not the slightest doubt that if we had irrigation this would be a very prosperous part of the country.
537. Have you noticed many unemployed about this district? I have been quite sick of their calling in for something to eat; but during the last month I do not think I have seen one. At present, during the shearing season, any one willing to work can obtain employment. No doubt the unemployed will be here again, as they come annually. When they spend their cheques they cannot get work, and they must either starve or beg.
538. Is the financial position of this town healthy? It is not too healthy.
539. Is not that chiefly attributable to the fact that there are a greater number of people in business than there are customers? It is attributable to the past drought.
540. *Mr. Copeland.*] What sort of fruit thrives well here? Principally oranges and grapes. Various other kinds of fruit do remarkably well. Figs will also grow here.
541. Has any one ever attempted to preserve fruit, or to make raisins? I have heard of its being done, but not to a great extent.
542. Have grapes been grown on a large scale? No, it is merely an experiment.
543. Has the fruit industry been merely experimental so far? Yes; it takes some trees five or six years to grow to maturity.
544. Has ever wine been made here? It has been made on a small scale.
545. Have almonds been tried? Yes, they grow well. Pumpkins and melons grow without any cultivation. Potatoes grow here, but they do not seem to do as well as in other places.

HERMITAGE PLAINS, MONDAY, 7 OCTOBER, 1889.

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND Esq.  
JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.  
JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed railway from Nyngan to Cobar.

Mr. Henry Fisher Hall, hotelkeeper, Hermitage Plains, sworn, and examined:—

Mr.  
H. F. Hall.  
7 Oct., 1889.

546. *Chairman.*] What is your occupation? Hotelkeeper, farmer, poundkeeper, post-master, Hermitage Plains. I have lived here nearly eleven years. I took up a selection of 320 acres, and I had a conditional lease, all fenced, of three times that area.

547.

547. Does the route of the proposed railway pass near your property? Yes. There is a deviation of about 40 paces from the original survey near my property.

548. What does the traffic between Nyngan and Cobar generally consist of? Teams conveying wool and copper to Nyngan, and outloading containing supplies for Cobar. The traffic has not been very large lately, since the railway went to Bourke. Before that the traffic was tremendous. Now, however, a great deal of the traffic goes to Coolabar, and the Budgery wool now goes to Girilambone.

549. How much cultivated land have you? 30 acres under wheat, and a little oats and barley. Those crops are very successful. It is about eight years since I put in the first crop, and I was more or less successful every year until last winter, which was exceptional, owing to the want of rain. Oats, as a rule, are not so successful as wheat. I have had wheat 4 feet 6 inches and 5 feet high when the oats were not 18 inches high. I have had good crops here when the crops at Dubbo and Wellington have been a failure.

550. Is this district peculiarly suitable for the growth of wheat? Yes, we have ample rain here in the winter time with the exception of a few seasons—barley does well if sown early. The crop is growing from the time it is put in until the warm weather comes on, and it is then fit to cut.

551. Have you a ready market for this produce? Yes, as chaff but not as wheat. Mr. Kirkcaldie, in his report, said that there was not an acre of land under cultivation in the district between Nyngan and Cobar, yet at that very time I cut 3 acres of wheat which averaged  $27\frac{1}{2}$  bushels to the acre. I sent about 50 bushels to Wellington to have it ground, and I hold a certificate from the proprietors of the mill there to say that my wheat is of a very superior class, and that the land which produced it must be admirably fitted for wheat producing, as the wheat carried a thin husk, with a large amount of flour.

552. You produce to the Committee two special certificates of merit from the Cobar Pastoral and Agricultural Association for wheat grown by you, and for flour made from that wheat, in June, 1888? Yes. It was grown in 1887, and when I took it to Nyngan, the representative there of Wright, Heaton, & Co., offered me 4s. a bushel for it, when, at the same time, the market value of wheat was only 2s. 3d.

553. Could this class of wheat be grown generally in the district? Yes.

554. Is the soil easily tilled and prepared for the growth of wheat and barley? Yes. The soil is a rich chocolate soil, of good depth.

555. During the time you have been here have you been successful as a hotel-keeper and farmer? Yes, until within the last two or three years. As a farmer I have been successful right through. As a hotel-keeper for the past three years, owing to the general depression, I have done little more than feed the unemployed. Up to the last two or three years there were a good many people staying at my place, because improvements were being carried on, and work was plentiful.

556. What amount have you expended upon permanent improvements of the property? About £2,500. When I started I had a few hundred pounds. I am well satisfied with the prosperity I have enjoyed here, and the most of the property which I possess has been earned here.

557. Are there many other farmers near you? There is one within 12 miles of Nyngan—there is another between here and Girilambone. There is another selector who has a fruit garden only. There is a selector on the Nymagee road who selected lately.

558. Seeing that the soil is so good how is it that land is not more generally taken up? In the first place it takes a certain amount of money to conserve water. I have often tried to persuade carriers to take up land in this neighbourhood, but it is only latterly that they have seen the mistake they have made in not doing so. The wave of selection is gradually coming up in this direction. Eleven years ago I could go from Nyngan to Dubbo and from Nyngan to Parkes, and I could take up 640 acres anywhere, but now you could scarcely get a selection between Nyngan and Parkes as the land is nearly all taken up. I am certain that the reason why there is not more selection here is that we are so far away from settlement owing to the want of railway communication. There are at present great difficulties in getting goods and produce in this district from the present railway station. In wet weather the roads are impassable, and in dry weather the dust is almost as bad as the mud. To show the difficulty there is in getting wool and produce to market I may state that I have known a load of 7 tons of wool to have remained on the road nine or eleven weeks in consequence of wet weather setting in. There are many other instances of a similar character. From the amount of traffic that goes along this road and which now goes to Coolabar, I am sure that a railway from Nyngan to Cobar would be a financial success.

559. What is the present rate of carriage from here to Nyngan? £1 15s. per ton.

560. Do you think that if the railway were made the people in the district would immediately want the rate of railway carriage reduced? No, it is not the rate of carriage we look at so much as the certainty of getting our goods.

561. Is there much passenger traffic between Nyngan and Cobar? It has been sufficient to keep an opposition coach running for the last two or three years.

562. Who is the nearest neighbour you have engaged in grazing? A Mr. Lowe,  $6\frac{1}{2}$  miles away. He has a large station, I think he shorn 120,000 or 130,000 sheep this year. He sends his wool to Girilambone.

563. Did he lose many sheep during the late drought? No; last year he lost a few, but nothing considerable.

564. Were not the losses of this district very heavy during the drought of 1887-1888? No, they were very light. They only suffered from want of water, and there was plenty of feed in the shape of scrub.

565. *Mr. Copeland.*] What rent do you pay for your conditional lease? 2d. per acre. The land which is not under cultivation I use for grazing purposes—2 acres will feed a sheep if ringbarked and properly supplied with water in ordinary seasons.

566. What weight of fleece do you get? On an average  $6\frac{1}{2}$  lb. From some sheep I get 7 lb. and 11 lb. from others. Last year I sold my wool in the grease at  $8\frac{1}{2}$ d. per lb.

567. Would it not pay others to select this land for the purpose of grazing sheep? Certainly. I can keep more sheep in proportion on my holding, and of a better class than can be kept on the larger holdings. This country is more suitable for small holdings than large holdings.

568. Can you say what rent the squatters in this neighbourhood are paying? No, I do not think the squatter is in as good a position to pay rent as I am unless he puts more water on his run and subdivides his paddocks.

569. How many bushels of grain per acre do you estimate you can get? Twenty bushels at a very low average.

Mr.  
H. F. Hall.  
7 Oct., 1889.

- Mr. H. F. Hall.  
7 Oct., 1889.
570. Do you think that if the land were sown early in the year, so as to get the benefit of the winter rains, it would be a reasonably safe speculation to grow wheat here? Yes. I would recommend ploughing in March, and sowing before the first rains come.
571. Do you have any frost here? Yes, but it would not interfere with the growth.
572. If a railway were made here do you think there would be a probability of other persons growing wheat? Yes, it would be the means of opening up the country.
573. Why have you not grown more wheat yourself? Because the cost of carriage is so great. I can get imported wheat landed here cheaper than I can grow my own wheat and send it to Dubbo to have it ground. Pumpkins and melons thrive here. Grapes are a thorough success, but they require watering. Two Frenchmen have a selection near Nymagee, and they have about 2 acres of land under grape vines;—one year they made £200 by a sale of their grapes besides some wine. Mr. Lowe has a splendid vineyard and orchard in which he grows apricots, plums, and peaches. He has tons of grapes.
574. Have you or anyone else attempted wine-making or raisin-making? No. The caretaker at the Government tank has cultivated 10 acres of wheat and oats this year, and there is a splendid crop of 10 acres of wheat at Budgery, 7 miles from here. It does not require a large quantity of seed per acre to grow grain here. I use  $1\frac{1}{2}$  bushels to the acre. The ground is so strong that it does not require to be deeply ploughed.
575. Do you think that the proposed route is the best for a railway between Nyngan and Cobar? Certainly.
576. Do you ever have any travellers westward of Cobar coming this way? Not latterly, but they used to come.
577. *Mr. Tonkin.*] It does not pay you to grow a crop for wheat, but it pays you very well for chaff? Yes.
578. What is the average tonnage you get per acre? From 30 cwt. to 2 tons. I have obtained £10 a ton this year;—that is a good price.
579. Why do you not grow more chaff here? Because the cost of carriage eats away the profit.
580. Is there plenty of land available in this district which would grow very good crops? Yes.
581. *Mr. O'Sullivan.*] Does the proposed line between here and Cobar run on the leasehold area or the resumed area? At Budgery it runs through the resumed area. The next 10 miles block adjoining this place is all resumed area.
582. Do you know of any mineral country in this neighbourhood? Yes; 15 or 16 miles from here there is a reef which gave very good indications of gold. I sank 30 or 40 feet upon it, but I could not afford to sink any farther. On the side of the road about two miles from here gold has been found. All round the ridges there is more or less gold to be obtained on the surface, but not sufficient to pay.  $1\frac{1}{2}$  miles north of that spot which I have last mentioned a reef was found, which, according to assays, ran 2 oz. and some dwt. to the ton. Four gold and silver leases were taken up there. £400 has been spent in sinking two shafts, 60 feet each, 190 feet apart, and each driven 60 feet towards one another, without striking the reef.
583. *Mr. Hurley.*] What is the distance from here to Nyngan? 27 miles. The distance from here to Girilambone is from 21 to 22 miles. The country between those places is very much the same; but the country between here and Girilambone is not so level as between here and Nyngan. It is more favourable country for taking a railway between here and Nyngan than between here and Girilambone.
584. Will the construction of a railway give an increased value to your property? Yes.
585. If you were disposing of this property what would you ask per acre for your freehold, independent of the improvements? Some little time ago I offered to sell at £3,000. The improvements have cost me £2,500.
586. Would you be prepared to take 100 per cent. on what it has cost you in payments to the Crown independently of your improvements? No.
587. Can you say anything in relation of what you have read or heard with regard to the construction of this railway? The Government were most antagonistic to it and at the time Mr. Kirkcaldie came up here he reported upon the whole line from Nyngan to Cobar without seeing it. He reported that there was not a single acre of land under cultivation, while at the same time I had a magnificent crop of 20 acres. At the same time Dawson had a good crop, and there were numerous crops around Cobar. Mr. Harper came past at the same time and he tried to persuade me that there was not sufficient rain. I wanted him to visit my cultivation paddock but he would not do so. Those reports did us a great amount of injury. When the reporter of *The Daily Telegraph* visited this district I wanted him to go down to my paddock and see what this western country could produce, but he would not go. Soon afterwards he tried to damn this country.
588. What distance are you from Nymagee?  $42\frac{1}{2}$  miles in a direct line. The land is perfectly level until you get within a few miles of Nymagee.
589. Would this be the nearest point to Nymagee? It would be the nearest practicable point in the event of the railway being constructed.
590. If the railway were made, would you be prepared to pay twice the rates of carriage now charged between Dubbo and Bourke? I would indeed.
591. Do you think that the line is likely to be productive of benefit to the country? I certainly think so. We should think of the future generations who will derive a benefit from it.
592. *Chairman.*] What is the distance from Coolabar to Cobar? 73 miles, I think.
593. Are there any selections between Nyngan and Hermitage Plains? Only Dawson's, Lyon's, and my own.
594. *Mr. Hurley.*] With regard to the value of the land which you took up under the conditions of the Act of 1884, if you were disposing of that land now, do you think that you would be asking a higher price for it than it is worth, if you demanded £4 an acre? No. I believe that the land is worth more than £4 an acre.
595. Is the crop of wheat and barley which we have seen an average crop? Yes. The year before last I reckon I had over 2 tons of hay to the acre. Admitting that I had only 1 ton to the acre in previous years, the return would have paid the expense of clearing the land.
596. Were the people whom you have supplied with food who have been travelling up and down the road as unemployed, been people who would be likely to settle down upon the land as agriculturalists? No doubt many of them would be if they had a helping hand. At the time free-passes were given from Sydney we had a lot of men of the loafing class about the neighbourhood,

597. Would persons with a small capital find plenty of room here to make a living as agriculturalists? Yes. This country is admirably fitted for keeping pigs. The pigs run wild through the bush. I have 30 or 40 pigs here, and they live all through the dry weather, without getting much food.

Mr.  
H. F. Hall.  
7 Oct., 1889.

Mr. Francis Malarkey, lessee of the Muriel Government Tank, made an affirmation, and was examined:—

598. *Chairman.*] What position do you hold? I am lessee of the Muriel Government Tank, 40 miles from Nyngan, and 40 miles from Cobar. I have been here about six years, and I came here at first in the employ of Wright, Heaton, & Co. For three years and four months I have had a lease of this tank.

Mr. F.  
Malarkey.  
7 Oct., 1889.

599. During the year 1885 to what extent was this tank used? During the January, 1885, it was used by 64 head of cattle, 830 stock in teams—that is horses drawing the waggons. There were no sheep.

600. *Mr. Copeland.*] How many teams would those represent? There are 10 horses in a team, so there would have been 83 teams. There were also 496 mail horses for that month.

601. *Mr. Tonkin.*] Do those figures represent each time that a horse goes to drink? Yes. In February, 1885, there were 200 sheep, 900 stock in teams, 12 saddle horses, and 448 mail horses.

602. *Chairman.*] Now give us the returns for the winter months? In July, 1885, there were 25 head of cattle, 67 stock in teams, 5 saddle horses, and 96 mail horses. In September, 1885, there were 102 stock in teams and 112 mail horses.

603. During those months the stock were able to get water along the road? Yes.

604. Since then has there been an increase or a decrease? A decrease, which has been gradual, from 1885 up to the present time. In January, 1888, we had 464 horses, 170 head of cattle, 3,830 sheep, and no mail horses. February, 1888, 660 horses, 108 cattle, 4,000 sheep. July, 1888, 336 horses, 1,043 cattle, 620 mail horses.

605. Was it a very dry period in 1888? Yes. In January, 1889, there were 588 horses and 118 cattle; there were no sheep nor mail horses. February, 1889, 647 horses, 18 head of cattle, 196 mail horses. July, 1889, 85 horses, 96 cattle. August, 68 horses and 14 cattle. 12s. 6d. were all the fees I collected then, and I have to pay £55 a year rent.

606. Was the reason for this great falling off the plentiful supply of water all about you? Yes.

607. A great many teams pass here without calling at the tank at all;—can you tell us how many? No.

608. *Mr. Copeland.*] How many teams have you in your books for one year? My books show that approximately there were 577 teams of horses and 116 teams of bullocks, which watered at this tank during the year 1888. Those figures do not include a number of teams which passed the place without watering. Those teams were not always loaded. When they go out for wool, they go out empty.

609. On an average what would the horse teams and the bullock teams carry when loaded? About 5 tons for each horse team, a bullock team might carry a little more. In 1888 the greater number of the teams would be loaded, because they were carrying horse feed to Cobar. In 1888 they were bringing smelted copper and a few tons or cwts. of stone from the gold mines at Cobar.

610. The carrying capacity of all those horse and bullock teams, supposing they were all loaded, would be about 3,415 tons? Yes, that is including the traffic both ways.

611. *Chairman.*] Would this be all traffic that the railway would serve if a railway were constructed between Nyngan and Cobar? Yes.

612. *Mr. O'Sullivan.*] In addition to the teams which have passed your door, is there much stock driven from here to Nyngan for the purpose of moving them by rail? Not since the railway was opened to Bourke. In March, 1888, 11,588 sheep passed here.

613. Would that be a fair average? It is more than the average.

614. Are you prepared to give a rough estimate of the number of unloaded teams which passed here? Last season was a dry season, and there were very few unloaded teams.

615. Would we be near the mark in saying that one-fifth of the teams that watered here were empty? Only about 5 per cent. of the teams were empty.

Mr. William Budd, innkeeper, between Nyngan and Cobar, sworn, and examined:—

616. *Mr. Hurley.*] Are you the proprietor of Budd's Hotel, on the road between Nyngan and Cobar? Mr. W. Budd. Yes; I have been here about twelve years.

617. Do you hold some land here? Yes; I have a selection that I am converting into a freehold. I have 40 acres. I have the most of it under cultivation, to which the land is well adapted.

7 Oct., 1889.

618. Do you not think that a more suitable line for the railway could have been surveyed in this neighbourhood, instead of taking it so close to this ridge? The last survey was made to the north of the original survey, and it seems to avoid the hill.

619. Is the soil in this district the same as you are cultivating? Yes.

620. If your land were not improved, would you be willing to sell it for £4 an acre? No.

621. Is there much traffic on this road? The traffic has died off since the Cobar mine has been closed. Previous to that there was a great deal more traffic here than on any other road in the back country.

622. What do you pay for freight from here to Nyngan? About £3 or £3 5s. per ton. I have known the freight to be £20 per ton.

623. Would you be prepared to pay £1 a ton for goods brought by rail as against £2 15s per ton for goods conveyed by drays? Undoubtedly so.

624. Are there any other selectors within a radius of 10 miles from this place? Yes. There is a selection within 5 miles of this place, but it was only taken up last year. There is no cultivation carried on here except by a few squatters, who have a little cultivation.

625. To what do you attribute the fact that there are not other selectors here besides yourself? The great obstacle is the last Land Act, which debar a small selector from taking up any land within a reasonable distance of the main road.

626. Is there not also the inconvenience of not being able to get to market easily? Yes; the selector does not like to be off the main line of road, but there is no chance of getting land near the main road.

627. *Mr. Copeland.*] How is that? The land has been all secured by the squatters.

628. Does the leasehold area lie on both sides of the road? Yes; and where that is not the case, there is a leasehold area on one side of the road and travelling stock on the other side. That debar anyone from selecting on the road between here and Cobar. Then the western division begins about a mile or three quarters of a mile from here, so that there is no possibility of getting land within a reasonable distance of the main road.

£29.

- Mr. W. Budd. 629. *Mr. Hurley.*] Have you taken any part in testing this district for minerals? Yes; I have done a lot of prospecting at different times. There have been other parties doing the same, but the results have not been satisfactory. We have prospected principally for silver and gold. We have got very good indications of both. We could not carry on operations without assistance from capitalists. We are only poor men, and we went to the full extent of our means.
- 7 Oct., 1889. 630. Do you think that the land would be capable of supporting a population in comfort if there was a railway? Yes.
631. *Mr. Copeland.*] What kind of fruits and vegetables do you grow in the garden adjoining this house? Peaches, apricots, mulberries, and grapes. They all thrive—the grapes do remarkably well, and so do figs. We have to irrigate them in the very dry seasons. We grow splendid cabbages, turnips, onions, and cauliflowers. I have grown cabbages which weighed 24 lbs. I grow carrots. Celery does remarkably well. In dry seasons we have to water the vegetables, but we do not irrigate the vines.
632. How many acres have you in your cultivation paddock? 32 acres under crop. I have 10 acres of oats and 22 of wheat.
633. What yield do you get from the oats and wheat? I generally cut the oats and wheat for hay. I expect to get 2½ tons of hay to the acre this year. The height of the oats at present is 5 feet 6 inches.
634. What time were the cereals sown this year? Before the commencement of the rains—the first was sown in May.
635. Did you have any crop last year? No; it was a failure, owing to the drought.
636. From your experience during thirteen years, how often do you reckon you can get a crop? I think we ought to get three crops out of four.
637. Would it pay you to cultivate on those terms? Yes; I believe it would.
638. What price per ton do you expect to get for your hay? On an average, since I have been here, I have got £10 per ton—that would be a return of £20 an acre. I am now clearing another 10 acres of land which I have leased from a squatter. I intend to make up the area of my cultivation to 40 acres.
639. If a railway were constructed would you send your produce into Cobar by railway? Yes; that is my intention.
640. Would you send your produce eastward? Yes; I would send it wherever I could get the best market. They are paying £15 per ton for chaff in Cobar now.
641. *Chairman.*] Do you think that if there were improved communication it would induce settlement in this district? Yes; there are many people who would select land here if they had an opportunity of doing so—that is, if they could obtain land on the same conditions on which I obtained the 40 acres which I hold. If there were a railway settlers would have facilities for getting their goods to market.
642. *Mr. O'Sullivan.*] Are there no homestead leases in this neighbourhood? There are some within 20 miles of this place.

Mr. Hugh Sutherland, saw-mill proprietor, near Cobar, sworn, and examined:—

- Mr. H. Sutherland. 643. *Chairman.*] What is your occupation? Saw-mill proprietor. I have a mill within three miles of Budd's Hotel. I saw with a license. I cut cypress pine. I saw it into logs and boards for building purposes.
- 7 Oct., 1889. 644. Do you get a ready sale for your timber? Not during the last few years. There has not been very extensive building going on, so that the mill is not kept in full work all the year round.
645. Is this pine timber suitable for railway sleepers? It is the most durable timber in the country for house building, but it is not good for sleepers. It is impossible to drive spikes into it without splitting it.
646. Do you know any timber within easy reach of the projected railway line which would be suitable for sleepers? No, not of the dimensions and quality required by the Government.
647. Do you know of any ironbark near Nymagee which would be suitable for sleepers? I know there is a large quantity of ironbark which would be suitable for sleepers. That timber is within 40 miles of Cobar, and I think there is some even nearer than that to the line. The timber I speak of would be within 23 miles of this place.
648. Have you prospered or otherwise since you have had your saw-mill? I just kept my own. I have been engaged extensively in other matters, in which I have sometimes lost and sometimes won. I think it has been overlooked that if a railway were made there would be a large timber trade in connection with it. If there was a railway, instead of having my mill out in the bush I would have the mill in Cobar, and I would have the timber carried along the railway. There is good timber all along the surveyed line.
649. What demand would there be for the timber in Cobar? The railway would cause buildings to be erected.
650. Do you think that a railway would promote settlement along the line or near it? I am sure it would. In a few years all the land available would be taken up in homestead leases. People are now only beginning to find out the value of those leases. Several have been taken up lately near Cobar. Seven or eight have been taken up about 20 miles north of this place. I have heard several people express their intention of taking up such leases. I believe that the country around Cobar is superior to most of the land in the Colony for settlement.
651. Do you think that a man taking up a homestead lease in the western division could make a good living and prosper on it? Yes, I consider that a man could make £500 or £600 a-year on one of those homestead leases, and at the same time make provision against drought.
652. *Mr. Tonkin.*] If the railway were constructed would there be any probability of your being able to send sawn timber to market to the eastward of this place? Yes. If a railway were made I could cut a great deal of timber and get it easily to market. There would then be a great quantity of timber required for Cobar itself. I have been twenty-five years in this part of the country, and I know that one of the worst things that could ever happen to a town is to be always promised a railway which is never constructed. Such a state of things retards the progress of a district very much, because people who own property will not improve it until they see if a railway is really going to be made. That has been the case in Cobar, and if a railway were constructed there is no doubt great improvement would be made at once.
653. Do you think that the construction of a railway would induce other saw-mills to start work. I am confident of it. I believe that Nyngan, Wilcannia, and Broken Hill could be supplied with timber from this district.

COBAR,

COBAR, TUESDAY, 8 OCTOBER, 1889.

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND, Esq.,

JAMES EBENEZER TONKIN, Esq.,

EDMUND WILLIAM O'SULLIVAN, Esq.,

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

William Joseph Hogan, Esq., solicitor, Cobar, sworn, and examined:—

654. *Chairman.*] Are you Mayor of Cobar and also a solicitor practising here? Yes; I have been here about nine years. W. J. Hogan,  
Esq.  
8 Oct., 1889.
655. What is the population of Cobar at the present time? About 1,500. That is a considerable decrease as compared with former years. During the last three or four years the population has varied from 3,000 to 4,000 people.
656. When did the sudden falling off in the population occur? When the copper syndicate failed to carry out its contract with the Great Cobar copper-mine. When the mine ceased work there were 400 or 500 men employed there. Those men, with their wives and families, went away.
657. Seeing that the proposed Nyngan to Cobar railway is estimated to cost, in round numbers, £250,000, do you think that the return from the railway would pay interest on the expenditure as well as working expenses? If it were made to Cobar I do not think the railway would immediately pay interest on the money expended. Myself and others have often urged upon the Public Works Department the necessity of making a light line of railway from Nyngan to Cobar, which should be as inexpensive as possible, by doing away with fencing and other things. We were of opinion the construction of the railway would increase settlement, and that the line would pay in the near future. Then we thought the line would be regarded as necessary as one section of the railway to Broken Hill.
658. At a public meeting held in Cobar in 1887, it was estimated that the line would give a return of £18,000 per annum;—can you tell us how that estimate was arrived at? That estimate was afterwards cut down. Some wrong data had been given. The figures were checked by Mr. Kirkcaldie, and certain reductions were mutually agreed upon. I think that the figures which the people of Cobar would like to place before the Committee are the figures which were certified to by Mr. Kirkcaldie as correct.
659. Is the country in and about Cobar rich in minerals? Yes, very rich.
660. What other minerals are there besides copper? A great deal of capital has been spent in developing gold-mines in the immediate vicinity of Cobar. The Chesney-Cobar Gold-mining Co. is now in active operation. They have crushing machinery now at work. The Occidental gold-mine is also in operation, and there are the Great Cobar and several other gold-mines. Those mines have been recently started.
661. What is produced in the district? Wool is the great product here. The district is also a very good one for fattening sheep and cattle. Agriculture is carried on on a limited scale.
662. How is it that agriculture is limited, seeing that the soil is so very good? It is owing to the want of means to get to market. Cobar does not supply a sufficient market, and for want of railway communication we cannot compete with other places.
663. How many crops, over a series of years, can be relied upon in this district? Three out of four, I think.
664. What cereals are produced here? Wheat grows splendidly. It fills out well and comes to maturity.
665. Could you get three good crops of wheat out of four? Yes; wheat is almost a certain crop, except in a very bad season. Lucerne grows admirably; so do oats. I do not think much attention has been given to the growth of other cereals.
666. What is your opinion with regard to the following statement with regard to this district:—"It would be folly to talk of growing wheat where there was no certainty of securing a crop in more than one year out of three or four, and therefore, in estimating the chance of the line paying, this must be dismissed from the calculation"? I would say that that is an error, and that it is against the experience of the people in this district.
667. Do you think that the reason why people do not cultivate more land is because they cannot send their produce to market? Yes.
668. Have you seen any indications of a desire on the part of people to settle more largely in the district than they have up to the present? I know that many people would be inclined to settle here under the present Land Act if they had railway communication.
669. Do you think homestead leases would be taken up to a considerable extent? Yes; I believe that five or six years after the railway was made every acre of the resumed areas between here and Wilcannia would be taken up and settled upon.
670. Do you think that a railway would draw traffic towards Sydney which is now going in another direction? Yes.
671. Are the people of Cobar unanimously in favour of this railway? I think so. I know some business men who some little time ago were not in favour of the railway, but now they are all in favour of it.
672. What has become of Mr. F. B. Martin, who was a strong opponent of the railway? I do not know such a person. I do not think he was ever in business here. Cobar has suffered from time to time, owing to the high rates charged for the carriage of goods. We have paid £30 a ton for the carriage of goods from Nyngan to this place.
673. Do you think that the people would want a daily train, or would they be satisfied with less? I think they would regard a service of two or three times per week as ample. That would be sufficient to meet the wants of the district for some time. The train need not run faster than 15 or 20 miles an hour, and it might be run in the day-time. It would not be necessary to fence the line.
674. Can you give us the names of any persons in Cobar opposed to the railway? I do not know one individual who is opposed to it.
675. How long has Cobar been incorporated? About seven years.
676. What is the amount of rates per annum? Something over £400 or £500. That is expended on the streets. We also have a lighting rate.

- W. J. Hogan, Esq.  
8 Oct., 1889.
677. Are there any manufactures carried on in Cobar? No. I may say that when I came here nine years ago Cobar was a very small place indeed. None of the Government buildings which we have now were then erected, and since then the place has considerably increased in prosperity.
678. What is the amount of public money that has been spent on buildings in Cobar? About £25,000, including the reservoir built for the purpose of water supply.
679. Is there not a great quantity of agricultural produce brought here from Nyngan? Yes.
680. Why is that produce not grown here? That produce is brought here in time of drought. The people here who have gone in for any agriculture have not carried it on as their particular business. They have generally grown produce for their own use.
681. How long is it since crops have been grown? For the last five or six years.
682. Is there any noticeable increase in the area cultivated? I think there is a noticeable increase this year. Without counting the stations, there would be about 200 or 300 acres. There is a fair quantity of fruit, consisting, of oranges, apples, peaches, and lemons brought here from Sydney by rail. Several persons have formed orchards here, and I know one man who this year has planted 2 acres of fruit trees. Apricots, peaches, and grapes do very well here. I do not think any wine has been made in the district, with the exception of a little made on a small vineyard near Nymagee.
683. Can you hold out any hope of being able to export anything from Cobar except copper and wool if the railway be constructed? If a railway were carried further west towards Broken Hill I think there would be a certainty that we could successfully grow wheat and hay in this district for exportation to the west.
684. *Mr. Hurley.*] Were you one of a deputation which waited on the Premier in 1888 to make certain representations with regard to the proposed railway? Yes.
685. Do you remember a statement being made to the Premier (*vide Appendix*)? Yes; the Cobar people did not make that statement in a loose way. They made it after the figures had been carefully collected.
686. Did the deputation think they were justified in making the representation I have referred to, in view of the revival of the works of the Great Cobar Copper Company? Yes; the Company offered to make a private line.
687. Did you believe that that was an honest offer? Yes; it was refused by the Government. I believe it would have been carried out if the Government had given their sanction.
688. Do you think that private capital could be found to make the railway now, in the event of the Government refusing to build it? I would not like to say that, but I believe it is possible.
689. Do you think that settlement on large holdings, such as homestead leases, is likely to be productive of benefit in giving traffic to the proposed railway? Yes.
690. Would it not be better to settle a small agricultural population on the land? I should say that those who take up homestead leases on the resumed areas would not be debarred from carrying on agricultural as well as pastoral pursuits.
691. Have not people who have cultivated some of the land between Nyngan and Cobar done so very successfully? Yes; for instance, at Hall's place.
692. Has not great apathy been displayed by the people in this district in not entering upon the cultivation of the soil? I think cultivation would have been entered upon with more spirit if the railway had been made.
693. You have said that increased population would be settled by the construction of a railway;—where is that population likely to settle? On the resumed areas of the different runs of the district.
694. Would settlement on those resumed areas be likely to be productive of benefit to the persons who settle there? I think so. I think that is proved by the fact that the good-will of one of those homestead leases, without improvements, was sold for £5,000, and shortly afterwards it was sold again for £10,000.
695. Does not the further development of the Great Cobar Copper-mine depend altogether upon a rise in the price of copper? Yes; I have heard the mining manager say that with copper at £50 per ton, and with a railway, the mine would pay well.
696. Have you been down the Great Cobar-mine? Yes. I should say that the mine has got an inexhaustible supply of ore. It is not of a very high quality; but judging from what I saw myself, and from what I have heard from the miners underground, there is a good supply for several years to come.
697. Do you think that if a railway were made it would be the means of putting the mine into full work? I believe it would keep the mine in full work for many years to come.
698. What minerals have been found within a radius of 10 or 12 miles of Cobar? Very rich and large deposits of silver have been found. They are working a mine now at Mount Billygoe, 20 miles from here. Gold-mining seems to be developing into an important industry, and, of course, there is copper.
699. Is Mount Billygoe likely to pay dividends? They have found rich veins, and they are at present searching for the lode. They have paid no dividend. The shares have gone up considerably. The shares were originally £5 each, and they have sold as high as £400 since. I think the gold-mines in the vicinity of Cobar are likely to turn out well for the investors. They only require time and capital.
700. Is there a large quantity of goods brought to Cobar from Louth? No.
701. Do you think that if the railway were constructed to Wilcannia it would meet with competition from the river? I cannot say. I am informed that the country in places between here and Wilcannia is better than the country round Cobar.
702. If a railway were constructed to Cobar alone, do you think it would be a business mistake? No. At present I do not think it would pay; but if it were constructed as a light line, as advocated by the Cobar people, it would pay in the immediate future.
703. What do you mean by a light line? Something lighter than the main trunk line, on which the train would travel at the rate of 15 or 20 miles an hour.
704. Do you think that five goods trucks could be worked with a train three times a week? Yes.
705. That would be equal to 75 tons of goods per week? Yes; if the mines were in full swing. The Company have always led me to believe that if they could get a railway made to Cobar they would double or treble their former output of copper. They would put up more furnaces and would have a refinery at Lithgow or some other place.

706. *Mr. O'Sullivan.*] Are you aware that the railway line between Nyngan and Cobar runs through leasehold areas all the way, except across Budgery and a portion of Meryula? Yes; but the resumed areas are not far from the leasehold areas. W. J. Hogan,  
Esq.

707. Do you think that people are likely to settle on the resumed area some distance away from the line? I think so, judging from what I have seen in other places. When I came to Cobar first, the railway was not made to Nyngan and there were hundreds of thousands of acres of vacant land between Nyngan and Dubbo. Now I do not think you could get a decent farm between those two points, all the vacant land having been taken up by selectors. That is owing wholly to railway communication. 8 Oct., 1889.

708. Would it be a fair criterion of the normal state of Cobar to judge it by its present circumstances? Not at all. I have not seen Cobar so depressed during nine years as it is now.

709. *Mr. Tonkin.*] How far does the western trade gravitate in this direction? About 50 or 60 miles. It mostly goes to the river at present.

710. Do you think that if the railway were constructed the traffic would be brought this way instead of going by the river? I think it is likely that we would get some of the traffic. I do not think the railway would have the effect of directing more traffic towards the river. I think most of the people who are settled there are connected with Sydney, and if they had facilities for trading they would prefer to deal with Sydney rather than with Adelaide.

711. If the railway were constructed only to Cobar, would it attract any of the western traffic? There is a good stock route in this direction, and I believe we might have a considerable return from stock.

712. Would more wool come this way? We might get a little of it.

713. Is there any truth in the statement that the whole of the payable ore in the great Cobar Copper-mine is worked out, and that nothing is now left except 6 or 6½ per cent ore? I believe the statement is utterly unfounded.

714. Do you think that the construction of this railway would start the Great Cobar Copper-mine again if the price of copper did not raise to £50 per ton? I think copper would first have to rise in value.

715. *Mr. Copeland.*] You stated, in reply to Mr. Hurley, that a homestead lease in this district had been sold for £5,000, and that it had been shortly afterwards resold for £10,000? What I should have stated was that under the Act of 1884 two 10-mile blocks of 64,000 acres each were sold, and that the good will, without improvements, brought £5,000, and that it was sold afterwards for £10,000. It was not a homestead lease.

Thomas C. K. M'Kell, Esq., Police Magistrate, Cobar, sworn, and examined:—

716. *Chairman.*] What position do you occupy? Police Magistrate, Warden, and Acting Registrar of Births, Deaths, and Marriages. T. C. K.  
M'Kell, Esq.

717. *Mr. Copeland.*] Can you furnish the Committee with particulars as to the business done in this district in connection with your Department? Yes; I hand in the following returns:— 8 Oct., 1889.

MINES.						
		Applications.		Acreages.		
Mineral leases	1880	10	410	...	} Copper and iron.	
"	1881	6	320	...		
"	1884	4	120	...		
"	1886	1	80	...		} Lime.
"	1887	2	100	...		} Copper.
"	1887	8	280	...	} Copper and silver.	
"	1888	195	7,355½	...	} Silver and copper—	
"	1889	26	850	...	} principally silver.	
Gold	1880	5	90	...	.. Silver.	
"	1881	1	10	...		
"	1882	3	75	...		
"	1883	3	75	...		
"	1884	1	25	...		
"	1887	39	258	...		
"	1888	42	370½	...		
"	1889	19	131	...		

Sums received from all sources:—

1885, £2,396 13s. 5d.; 1886, £3,924 14s. 1d.; 1887, £4,434 8s. 7d.; 1888, £8,852 19s. 6d.; 1889, £6,657 8s. 11d.

	Mineral licenses.	Miner's rights.	Business licenses.
1885	15	92	6
1886	3	14	...
1887	13	139	1
1888	107	302	92
1889	33	160	12

Revenue received:—

1887, £488 10s.; 1888, £3,334 2s.; 1889, to September 30, £604 5s.—86 Leases accepted.

I may state that mining did not come into full operation in this district until October or November, 1887, when there was a rush for silver and gold mines. 880 oz. of gold were sent to Sydney last month from two claims.

718. Was that the first gold sent away? Yes.

719. What is the population of the town? About 1,500 or 2,000.

720. What are the figures as to the births, marriages, and deaths? There were 100 births in 1888, eighteen marriages, and forty-seven deaths. The population was larger that year than it is this year. This year, so far, there have been seventy-one births, nineteen marriages, and thirty-seven deaths.

721. Can you account for the fact that the average rate of births is maintained, although the population has decreased? I suppose it is owing to the husbands having left their wives and families behind, while they went to seek employment elsewhere.

- T. C. K. McKell, Esq.**  
8 Oct., 1889.
722. *Mr. O'Sullivan.*] Do you think that the large number of marriages this year, as compared with last year is an indication of the return of prosperity? Some people might not think so, but I do.
723. How many applications have been made for silver and mineral leases? All the leases since 1887 up to the present time have been for silver and gold, with the exception of about twelve.
724. Are any of the silver leases being worked? Yes.
725. Has any machinery been erected on them? Gold-mining machinery has been erected. The silver and gold leases are mixed, and are within a mile of the town.
726. What are the indications up to the present as to the success of silver-mining? Billygoe is the only place which seems to produce any silver.
727. Then we cannot regard silver-mining as one of the established resources of the district? No; a great many of the leases were taken up as silver leases, but they are really gold leases. I have always recommended them to be granted as gold. There is no machinery erected at Billygoe. They have been sinking there for some years. Some thousands of pounds have been spent there. It is worked by a Melbourne syndicate, which has been floated into a company of 5,000 shares. It was first of all a company with 100 shares of £5 each. Silver was obtained by assay at the rate of 600 or 700 oz. There was a rush for the shares, and £5 shares sold at £420 and £450 a piece.
728. Do you think that gold-mining is likely to be successful in this district? Yes.
729. *Mr. Tonkin.*] How many people are engaged in gold and silver mining in and about Cobar? About 100 or 150 people.
730. Does that include the Billygoe mine? No. I may mention that a splendid new copper-mine, called the Burra Burra, is now being opened, and it employs twenty men. During the last few months £4,000 or £5,000 has been spent on that mine.
731. Do you think the people engaged in gold and silver-mining are making a living? They are getting good wages.
732. Is the township of Cobar maintained by anything else except mining? There are squatters in the surrounding district.
733. Have there been times here when the road has been so bad that provisions have gone up to a very high price? Yes; we have been next door to starvation.
734. *Mr. Hurley.*] What is the number of public-houses in the town? Nine or ten.
735. What revenue is derived from all the licenses in the town? £270, and about £20 or £30 additional for transfers. In order to show the large amount of increased work caused by the rush of mining business, I may point out that in 1887 the revenue received in my office was £4,433 from all sources. In 1888 it went up to £8,952. During the portion of the present year which has expired up to date, £6,670 has been received.

Mr. Diggary A. Penhall, Mining Manager, Cobar, sworn, and examined:—

- Mr. D. A. Penhall.**  
Oct., 1889.
736. *Mr. Hurley.*] What are you? Mining Manager. I have been in this district about five years. I was supervising surface work on the Great Cobar Mine for the first three years that I was in the district. Previously I had been for three years in the Mount Hope mine in the same position. During the last two years I have been well acquainted with the whole of the gold-mines near Cobar.
737. Are you a practical miner? Yes; I have been engaged in the business all my life.
738. Can you speak as to the probable success of the Great Cobar Mine in the future? During the late rise in the price of copper the manager was enabled to do a great deal of exploring, which he did to the east of the main lode. They came across one shoot or bunch of copper which lasted about eighteen months. That was very rich ore.
739. Do you think that is likely to last? I think so. Such bunches are often thrown from the main lode. If this is only a bunch there can be no permanency in it; but I think it indicates the existence of a large lode. I believe other discoveries have been made, but this I am speaking of I saw myself several times. It extended from the surface downward and it is not worked out. It is from 4 to 15 feet wide. Some of it near the surface yields 45 to 50 per cent. of copper. It went down from 8 to 10 fathoms below the surface.
740. Knowing that this class of ore is in existence, do you think that at such a low price as £50 per ton the mine would give employment to a large number of men? Yes; probably 600 men would find employment.
741. Considering the number of men there would be required to cut firewood and do all the other kind of work, do you think that the Company would be in a position to employ 2,000 men? I think they would employ at least 700 or 800 men, but I hardly think that they would employ as many as 2,000 men if copper only brought £50 per ton.
742. What is your opinion as to the permanency of the gold-mines? I have never seen in all my experience any more permanent looking lodes than there are in this district. In this district we have a large lode running for 2½ miles, with a width varying from 1 foot to 120 feet. It is over 100 feet wide for some 9 or 10 chains in various places, and for 5 and 6 chains in other places—that is on the surface.
743. What mines have gone down any depth which are likely to prove dividend paying? At the north end of this large lode we have the Jubilee claim which is likely to be dividend paying. They have not yet had a crushing. 6 dwts. to the ton would pay a very nice dividend from that mine. The next is the Tunnel claim, where there is a large outcrop of auriferous matter. There are millions of tons there, and gold is visible from one end to the other. It is a little over 16 chains in length, and there are portions of it 130 feet wide. I have no doubt that will be dividend paying. The Chesney-Cobar mine has produced from crushings a little over 4 ozs. to the ton. The first crushing was done in small lots in Sydney. A crushing of 27 tons went a little over 2 ozs. to the ton. The gold is worth over £4 an ounce. The next claim where any crushing has been done is the Occidental. This claim is a 5-acre lease along the lode. On the surface the lode is from 100 to 120 feet in width, and the gold can be seen in the stone from one side to the other. There is no doubt this will be a dividend paying mine if it would only go 5 or 6 dwts. to the ton; but the crushings which have taken place of 300 or 400 tons have never gone less than 10 or 11 dwts. to the ton. Some crushings have gone 1½ oz. to the ton. The quality of the gold is equal to that of the Chesney-Cobar gold. There are about 100 men employed on the gold-mines in this district, and the rate of wages is from £2 15s. to £3 per week.
744. With copper at £50 a ton, could the great Cobar Copper-mine pay a dividend from 8 or 10 per cent. ore? Yes.

745. Then the ore you have spoken of is exceptionally rich? Yes; but this being carbonates, it is only a small proportion to the other ore in the mine which would be smelted with it.
746. With such rich ore in the mine, why cannot they work the mine advantageously now? Because they have to pay too much for firewood.
747. If the railway were constructed, do you think that mine could be set to work advantageously to the shareholders? Yes; even with copper at £50 per ton.
748. Would you be surprised if that mine gave employment to a population of 2,000 souls? No.
749. Do you know of the existence of porphyry in this district which is likely to be of commercial value? Yes; there is some 100 miles from here; also 45 or 50 miles from here, between the Nymagee mine and the proposed railway line. There is also porphyry in large quantities at Billygoe, within 20 miles from here.
750. Is there a large demand for fodder in this district? It is almost impossible for stock to live here without bringing fodder to the district in dry seasons.
751. Do you think that enough supplies for the horses could be raised in the district? Yes.
752. Why have not persons entered into that speculation? The people who selected land here generally selected the rising ground, which is stony, in the belief that there were valuable copper lodes in them. There are only one or two instances in which people selected low land which would grow corn, and then they selected for the purpose of keeping stock and not for cultivating it. There is no doubt that the land is suitable for agriculture.
753. Do you think that the railway would pay if constructed to Cobar? I do not think it would pay just now if constructed to Cobar only; but if it were constructed to Broken Hill it would be one of the best paying lines in the country places.
754. *Mr. Copeland.*] How long is it since gold was discovered in this vicinity? About sixteen years ago; but a great rush took place about two years ago.
755. During the whole of that time have only 800 or 850 ozs. been obtained? I think there must have been a great deal more than that obtained. There must have been 1,000 or 1,200 ozs. produced. I heard the evidence given by the Warden; but I am sure what I say is correct.
756. Do you not think that there has been a very small yield of gold as the result of working 2½ miles of auriferous country for the last two years? It would be if it were taken from 2½ miles of country; but, as a matter of fact, it has only been taken from about 2 chains in length. The stone taken from the Occidental mine was only about a chain or so in length. The Chesney claim was only worked about 100 feet in length, and they had such difficulty in getting in timber and getting to their good stone that they had to crush a lot of surface stuff to fill-in time and keep the battery going, and very little of their good stone has been put through the mill.
757. How is it that the men who were engaged in the Great Cobar mine when it stopped are not now employed in gold-mining? They were copper miners generally, and a copper miner would sooner travel 100 miles to work in a copper-mine than work in a gold-mine on the spot. Another reason is that there is not sufficient capital in the district to work this length of lode, nor have we been able to get in sufficient capital from outside to work the whole of the lode.
758. You have had visits from capitalists from various parts to inspect the mines;—how is it that they are not prepared to spend their capital in developing them? A great number of them were inclined to invest capital in the mines, but in my opinion they were asked too much for the mines then in existence. In many instances they were not fairly dealt with. The people who had the mines generally thought so much of them that they wanted all the money and all the mine. Those people were not able to work the mines themselves for want of capital.
759. How wide is the Jubilee Reef? From 5 to 15 feet—between two well defined walls. There has been no crushing from that mine that I know of.
760. What would it be likely to yield, taking it in bulk? At least ½ an oz. to the ton.
761. With better appliances might the field show better results? The saving appliances at the mill were not sufficient for the saving of gold or putting the stone through.
762. What was the assay of the tailings? From 3 dwts. to 16 dwts.
763. Where did you have experience in gold and quartz mining? Six years at Hill End. I had no gold-mining experience before that. I went there in 1870. I have been on many others since that time.
764. Which mines do you think are payable, judging from their indications? The Jubilee, the Chesney-Cobar, the Occidental, the Great Cobar, and one claim at the Peak.
765. Have you seen any indications of other gold deposits in the neighbourhood of Cobar? Yes; at Billygoe, where there is rich stone. There is gold and silver there. It is in quartz and ironstone.
766. How much gold or quartz has been obtained at the present time from Mount Billygoe during the recent working? About 500 or 600 ozs. of silver, and perhaps 30 ozs. of gold.
767. Have they proceeded to erect furnaces or gold-saving appliances of any kind there? No; the mine is not sufficiently opened out.
768. Do you think that this mine at Mount Billygoe has any connection with the lodes here? I think the lodes here would strike a little to the west of Billygoe.
769. Is there a reasonable chance of mineral deposits—gold, silver, or copper—being discovered all the way from here to Billygoe? Yes. I have found silver and gold for 4 or 5 miles north of Cobar towards Billygoe. I have found it by assaying. Samples have been sent to me, but the returns are not very high. They were taken, however, from the surface.
770. If the railway were constructed, would the companies take advantage of it for conveying their machinery? Yes, and also for supplies.
771. Do you know anything of the country south of Cobar? Yes; I know the Nymagee and Hartwood mines. I know that the shoots of ore there are going down with the same permanent appearance as they have near the surface. I went down the Nymagee mine to the 600 feet level, and I saw there a lode of solid ore 15 or 16 feet wide, and at that place it was not opened the same length as it had been on the levels above. I had been in the other levels previously, and the mine looked very much better last year than it did four or five years before. I think that the general percentage of ore in Nymagee is a little over 10 per cent. I think that Nymagee will give employment for a considerable period. If it had not another ton of copper ore in it, I believe it would be one of the best mines in the district, leaving out the Broken Hill Proprietary mine.

Mr.  
D. A. Penhall.  
8 Oct., 1889.

- Mr. D. A. Penhall.  
8 Oct., 1889.
772. Are you referring to the future? Yes; to what is in sight in the mine now. Nymagee is about 65 miles from here.
773. Has copper, gold, or silver been found between here and there? Gold has been found at Mount Bee, but it has not been proved whether or not it is payable. It is in quartz and ironstone. It has only lately been taken up. At Bebinda, between Nymagee and Hermitage Plains, a lode of copper and silver has been found. There are indications of very large mineral lodes of silver, gold, and copper.
774. Has the ground been opened up? No; the mines have not been opened to any large extent—perhaps 10 or 12 feet. Leases have been taken up.
775. Does that indicate that the discoverers place some value on it? Yes.
776. Is there anything to the west connected with Cobar? To the north-west we have a very large outcrop of iron. That is an indication of something.
777. Does it contain anything else besides iron? Only copper.
778. Is there any limestone in the vicinity? I do not know.
779. Is there any limestone in the district? Within 75 miles there is one of the largest outcrops of lime I have ever seen in my life. Between here and Nymagee, within 40 miles, there is plenty of limestone. That is about 25 miles from the proposed railway line. Near the Nymagee mine there is a lead lode—carbonate of lead—14 feet wide, and I know it to be over 500 feet in length, but not all of it the same width.
780. Is it correct that a crushing of 446 tons from the Occidental mine gave 300 oz. of gold? I understand that it yielded 400 oz. of gold.
781. Do you think that Fort Bourke Hill, where the gold is now being worked, is likely to yield more mineral treasure than the Great Cobar Mine Hill? Yes.
782. *Chairman.*] Is there not a mine called the C. S. A. mine in this district? That is where I stated there is a great outcrop of ironstone and copper. That is the claim of the Cornish, Scottish, and Australian Mining Co.
783. What is being done there now? Nothing is being done except sinking and driving to prospect for copper.
784. Is it at a stand-still now? I believe it is. It belongs to the Great Cobar copper-mine, of which it is a branch.
785. What about the North Cobar mine? It adjoins the Great Cobar mine. It has been idle all the time I have been here, and it was idle for some time previously.
786. How far are the Great Cobar Company's workings from the boundary of this mine? Some 400 or 500 feet.
787. *Mr. O'Sullivan.*] Where do the miners come from who are working on the gold-mines here? The most of them came from Victoria or the gold-fields of New South Wales. There are very few copper-miners working along the whole line of reefs.
788. What has become of the majority of the men who worked at the Great Cobar mine? They are scattered all over the Colony. Some have gone to Broken Hill; a great many to Queensland; and there are a great many among the Sydney unemployed.
789. Have they taken away their wives and families with them? A great number have taken away their wives and families with them, and a great many have also left their wives and families behind them. That may account for the large number of births in Cobar notwithstanding the decrease in the population.

Thomas C. K. M'Kell, Esq., Police Magistrate, Cobar, sworn, and further examined:—

- T. C. K. M'Kell, Esq.  
8 Oct., 1889.
790. *Chairman.*] Do you wish to make any additional statement? I have been acting as Land Agent for some time. When the Act of 1884 came into existence it prevented a great deal of land from being settled upon, as it was locked up from people who often came to me and wanted to take up holdings of 640 acres. If an Act had been passed, opening up the country within a radius of 10 or 12 miles of the town, many men would have taken up from 40 to 1,000 acres, and the district would have been thickly populated. This country will grow almost anything.

Mr. James Cotton, Inspector of Stock, Cobar, sworn, and examined:—

- Mr. J. Cotton.  
8 Oct., 1889.
791. *Chairman.*] What position do you hold? Inspector of Stock for the Cobar district. I have been in the district since 1880, and I was appointed to my present position in March, 1882.
792. Have you any returns of the stock in the district? Yes, for the last four years. Those returns apply to a district extending 50 miles to the west and about 70 miles to the east, 50 miles north, and about 65 miles south. According to these returns, in 1884 there were in the district 2,111 horses, 4,754 cattle, and 904,303 sheep. In 1885 there were 1,931 horses, 3,811 cattle, and 1,043,813 sheep. In 1886, 2,002 horses, 6,395 cattle, and 1,198,951 sheep. In 1887, 2,058 horses, 7,896 cattle, and 1,573,484 sheep. In 1888, 2,482 horses, 7,927 cattle, and 1,608,447 sheep.
793. These returns show an increase, between 1884 and 1888, of 704,144 sheep, 3,173 cattle, and 371 horses? Yes.
794. If a railway were constructed between Nyngan and Cobar, do you think it would be of great utility to the owners of this stock? Yes; it would enable the station-holders to get their supplies at very much less cost, and to get their wool away at a much lower rate of carriage. It would also enable them to save the lives of many thousands of stock in drought. They could get them away to other places where there would be more feed. I am certain that could be done to a very great extent. I know one station where 50,000 sheep died because they could not be got away.
795. In ordinary seasons, is this a very good district for grazing purposes? Yes. It is not particularly good in one way—it takes a large extent of country to feed stock; but the quality of the pasture is extremely good, and there is absolutely no disease here.
796. Do you think if there were better means of communication there would be many applications for homestead leases in this district? I feel persuaded there would be.
797. Do you think that a person taking up such a holding would do well on it? Yes, in places.
798. Is this a good country for the formation of tanks or dams? Yes, extremely good. I never saw a better

better holding country. The water question has been solved in this district. It only means a certain amount of expense in excavation. Mr. J. Cotton.

799. Do you know many people who have comparatively small holdings up here and who are keeping sheep profitably? As the Act was only passed in 1884 it would be premature to express an opinion. There are a great many people looking for small holdings who would follow the railway line. 8 Oct., 1889.

800. Have you any further returns which you wish to submit to the Committee? Yes, in this district fencing has been erected over a length of 3,750 miles, at a cost of from £32 to £45 per mile, making a total expenditure of £142,500. Then a large amount of excavation has also been done for tanks and dams, amounting to 6,122,280 cubic yards, at 1s. 3d. per yard. That would cost £382,642 10s. Lately my district has been extended on to the Darling frontage, and about a month ago I visited the Paroo district, and I had an opportunity of seeing some of the artesian bores there. The people there made many inquiries with respect to this proposed railway, as they are very anxious to avail themselves of it. They would cross to Tilpa, and possibly would connect with the railway at Barnito.

801. Even under present circumstances do you regard the Cobar district as a progressive district? Yes, the figures show that.

802. Do you think that a railway from Nyngan would improve its prospects? Yes, I have no doubt about that. I have done a little agriculture myself. I have a piece of land about 4 miles out on the Wilcannia Road, and I have had 5 acres of lucerne sown there during the last four years which has never been watered except by rain. It has very nearly kept me in horsefeed. The drought was not able to kill the lucerne.

803. Do you think that if the railway were constructed it would bring a large amount of traffic from the direction of Wilcannia, which would otherwise go by the river? Yes; there is great uncertainty with regard to the river traffic, and heavy insurance has to be paid.

804. *Mr. Copeland.*] How many acres would it take to feed a sheep in a season like this? One sheep to 4 acres would be perfectly safe. I do not think that acreage would be necessary this season; but I am calculating upon leaving some grass for next season.

805. What is the average carrying capabilities of the country? Four years ago I thought it was not safe as a general thing from year to year to have more than 1 sheep to 8 acres; since then I think the country has improved by stocking. I think the grass has improved as well as the scrub, and I would put the carrying capability of the country at 1 sheep to 6 acres.

806. Is it your experience that the country does improve by the depasturing of stock? Most decidedly.

807. Is the country fully stocked at present? No; I think it would safely carry one quarter more than it does now. Ringbarking and scrubbing doubles the carrying capability of the country.

808. Is it judicious in the general interests of the country to permit the wholesale ringing of pine trees for instance? I think that portions of the timber might be left here and there for building purposes, but, apart from those belts of timber, the sooner the rest of the country is ringed and scrubbed the better. It costs about 1s. an acre for ringing. Where timber is not very thick and the scrub not very bad you can get land scrubbed and ringed for 1s. 3d. per acre.

809. Is the pine scrub increasing very rapidly in this district? Yes, all to the south.

810. What are the edible scrubs? Mulga, emu bush, berrigan, and leopard wood. There are others, but they are hardly worth mentioning. No effort is made to propagate these edible bushes. In the western district they are dying out in parts because the rabbits have been ringing them. The edible herbage consists of cotton and salt bush and crow foot. Cotton and salt bush are not so plentiful as they used to be, but grass is taking their place.

811. What is the average rainfall in the district? The following are the records which I have kept for the last four years.:-

RAIN RECORD, AS SUPPLIED TO GOVERNMENT ASTRONOMER.		
1885—16·01 .....		47 rainy days during year.
1886—18·33 .....		48 rainy days during year.
1887—19·14 .....		66 rainy days during year.
1888— 9·08 .....		24 rainy days during year.
Mean rainfall, 4 years, 15·64 .....		46 rainy days during year.
January, 1889—·73 .....	May, 1889—3·00 .....	September, 1889—·26
February, 1889—1·35 .....	June, 1889—2·50 .....	To Oct. 9th, 1889—·81
March, 1889—·08 .....	July, 1889—·38 .....	.....
April, 1889—5·55 .....	August, 1889—1·58 .....	.....
		Total.....16·24

812. What yield do you get from your lucerne? About 2 tons per acre in the year. It is profitable to cultivate lucerne.

813. Is there much land in the district which would grow lucerne as well as yours? I think so, but settlement in the vicinity of Cobar is barred by the forest reserves and an enormous common of about 100,000 acres.

814. Would it be judicious to cancel the common and throw it open for settlement? I would cancel about two-thirds of it. I am sure many people would take up land to enter into cultivation.

815. Is the land on the common as suitable for agriculture as yours is? Yes.

816. Do you think that growing lucerne would be a profitable occupation? Yes; and there would be no difficulty in finding a market. It could be kept in the dry seasons.

817. Do you think the country is now fully watered? No; I think it will pay to again subdivide the country and make it into smaller paddocks, putting water into each paddock. It would then carry more stock.

818. How many acres do you think should be in a paddock? At present the country is divided into 16,000-acre paddocks. I think the paddocks should be 8,000 acres.

819. May we assume that if ringbarking is carried out the quantity of wool which would be carried by railway would be double what it is now? Yes.

820. *Mr. O'Sullivan.*] If a large portion of the common were thrown open for settlement, where are the settlers to come from? There are a good many about here now who would be only too glad to avail themselves of it.

- Mr. J. Cotton. 821. Do you think that sufficient fodder could be grown in this district if settlers took up the land to supply its wants in times of drought? Yes; and I believe it would be remunerative.
- 8 Oct., 1889. 822. Where would the squatters take their stock in dry seasons by the railway? They could take them from here to Orange, and from there on to the mountains. There is a tract of country from Orange right down to the Victorian border that is always available. I have been there myself in times of drought with 15,000 sheep. If a railway were constructed from Nyngan to Werris Creek, it would give another outlet for starving stock.
823. How far is the Paroo district from Cobar? It is about 120 miles from here to Tilpa, on the Darling, between Wilcannia and Bourke. From Tilpa it is 60 miles to Paroo. If the railway were taken to Wilcannia, it would serve the people in the Paroo district.
824. Have artesian bores been attempted in this district? No.
825. Do you think it is a place where artesian boring would succeed? I have not had sufficient experience, but from the character of the country which I saw at the Paroo, where the bores were put down, I am inclined to think that in the immediate neighbourhood of Cobar the country is not of a character where artesian water could be obtained. It is outside the cretaceous formation.
826. Will the line from Cobar to Wilcannia go through leasehold areas or resumed areas? It will go through a portion of both.
827. Which is the larger portion? I believe there is very little difference. It would probably pass through most of the leasehold portion.
828. Do you think homestead leases are likely to be taken up along the line of the railway on the resumed areas, even if they are some distance from the line? I think that is very probable.

Mr. Peter Andrews, butcher, Cobar, sworn, and examined:—

- Mr. P. Andrews. 829. *Chairman.*] What is your occupation? Butcher, at Cobar. I have a farm 3 miles outside of the town. It is a freehold, consisting of 640 acres and 320 acres. I have held it about eleven years. A portion of it is fenced. I have 37 acres cultivated, chiefly with lucerne. I have 21 acres under oats, and 17 acres under lucerne.
- 8 Oct., 1889. 830. What kind of crops have you got? I do not think the lucerne could be beaten on this side of the Blue Mountains. The crop of oats did not come up last year, but it came up this year. It is a very fair crop.
831. Do you irrigate that land? No.
832. Is your present crop a fair average crop? Yes.
833. What do you do with the lucerne? I sell it in Cobar. From my experience I think all the flats about here are suitable for agriculture. It costs about 30s. an acre for clearing land. I get about £4 a ton for the lucerne—that is the price at all times.
834. During the drought which occurred lately how did you get on with the lucerne? During that drought I cut it three times in eighteen months.
835. What labour do you employ on the farm? Just myself and four brothers.
836. How many tons to the acre could you get of this lucerne? I never weighed it, but I kept the Cobar Company going a long time with it. As it is now, I could take 4 tons per acre off it and sell it green.
837. What do the oats yield? Not more than 1 ton per acre. I grew a crop there three years ago which would yield 2 tons to the acre. 15 acres of it grew 7 feet high, and it was immensely thick.
838. Are there any others in the same locality carrying on farming business? Yes, there are three, besides several others who have a few acres, but they do not carry out agriculture to a large extent.
839. Are their crops generally good? It depends upon the season. If the season is not good they have no crop.
840. Is their land as good as yours? I do not think they are in such a good place as I am. I am on a flat place.
841. *Mr. Tonkin.*] Do you get £4 a ton for the lucerne in its green state? Yes.
842. Can you get a market for that now when there is plenty of grass? No. What I cut now I shall make hay of.
843. What price do you get for it as hay? £8 per ton.

Mr. Michael O'Neill, farmer and innkeeper, Cobar, sworn, and examined:—

- Mr. O'Neill. 844. *Chairman.*] What is your occupation? I am a licensed publican, but my choice occupation is that of farmer. I have a farm within half a mile of the town. It is 120 acres in extent, and I have had it for nine years. I have 30 acres under cultivation, and that is about all that is fit for cultivation. I have grown sorghum here over 10 feet high, and generally grow hay. I have grown nearly every kind of crop. I have lucerne and wheat at present and a little oats. I have got very good crops off the land, except last year. I got a fair crop last year, but not nearly what I expected. From 20 acres in 1887 I got nearly 40 tons of chaff, and I used some of it green for the stables. I had oats and lucerne sowed together. They do well.
- 8 Oct., 1889. 845. In dry seasons do you have a ready sale for your produce? Yes, I sold £100 worth last year. I got £7 or £8 a ton for it. I sold some of it green this year at £5 a ton. That was a return of £10 per acre for one cutting. Some of it was mowed three times within twelve months.
846. Have your operations as a farmer been successful? Yes, very, and I should cultivate more if land were available.
847. Is there plenty of land in the neighbourhood suitable for cultivation? Yes; a great deal of it is more suitable than mine. My land is too high. I made drains into the land I cultivate so that one inch of rain puts two inches on to it.
848. What did it cost you to clear this land? An average cost would be about £6 an acre, including first ploughing.

Charles M'Donnell Stuart, Esq., civil engineer, Department of Railways, sworn, and examined:—

- C. M'D. Stuart, Esq. 849. *Chairman.*] What is your occupation? I am a civil engineer, employed in the Railway Department of New South Wales. I am re-surveying the railway line from Nyngan to Cobar. I am camped about 50 miles from Nyngan. I have completed the survey 25 miles out near Hermitage Plains.
- 8 Oct., 1889.

- 850-1. What is the object of this resurvey? To pick up the old line, and to make deviations in order to cut out some of the worst gradients on the line.
852. Have you come across any heavy gradients? Not on the part I am surveying. It was not necessary to reduce a single gradient there. The highest gradient up to that point is 1 in 75. I am almost certain that I can get a ruling gradient of 1 in 75 in any place between Nyngan and Cobar. From my observations, and from the sections others have shown me, I have come to that conclusion.
853. What is the character of the country through which the line runs? There is not a heavy cutting on it.
854. Is the soil of a soft character? The cuttings are of a hard character but they are very shallow. The upper surface is hard gravel so far as the drill holes go, with a sort of shaly rock in the bottom.
855. As far as you have come is there good material for ballast for a railway? I think it is very fair material. It is quartz rock. There are little mounds on the Cobar side of the Hermitage Plains, the upper surface of which would be suitable for ballast, but I cannot tell what it is like below. It is mixed with quartz and a sort of bastard granite. I think that would do very fairly for ballast.
856. What kind of a line would this be to construct? An exceedingly easy line.
857. What would be about the lowest estimate of cost per mile? If 60lb. rails with square sleepers are used, I should say £3,000 per mile.
858. Do you think the box-timber along the line would be useful for sleepers? I do not think it is good enough, and the pine is very bad. I have heard that there is ironbark to be obtained on this side of Dubbo.
859. How long will it take to complete the resurvey? It will be finished before Christmas. Of course the deviations take a much longer time than picking up the old line.
860. Have you had any experience in ordinary road-making? Yes.
- 861-2. Have you examined the piece of road which has been made not far from Cobar? Yes.
863. What kind of stone is used there? It looks like sandstone.
864. *Mr. Copeland.*] What difficulty would there be in getting a grade of 1 in 100 on this line? The other surveyor told me that the surface rises generally in bad places 1 in 50—that is easily turned into 1 in 75, but to make it 1 in 100 would run you into 10 feet cuttings, and to make a deviation the curve would be as bad as the cutting. Muriel Tank is the place where you cannot get a better grade than 1 in 75, without going to extra expense which would more than counterbalance the difference in grade.
865. Is there no way of starting farther back and making a longer deviation, so as to avoid the sharp curve? No, the difficulty is in the shape of the hills.
866. What would be the difference in the hauling power of an engine working on a grade of 1 in 75 as compared with a grade of 1 in 100? It is a question I have not gone into exactly, but on a grade of 1 in 75 you could take twenty loaded trucks.
867. How many could you take on a grade of 1 on 100? Probably five trucks more.
868. Are you quite sure that you could not obtain a grade of 1 in 100 on one or two places where it is necessary? You could by putting in a small cutting, 10 feet deep, and probably half a mile long, running out to nothing at each end.
869. In how many places would that occur? Probably half a dozen. I cannot say for certain until the levels are taken.
870. As an engineer, do you not think it would pay to have those cuttings so as to have a ruling grade of 1 in 100? I think it is scarcely necessary, considering the traffic that is likely to go over the line.
871. Do you think there is any quantity of suitable ballast near Budd's Hotel? Yes.
872. In the line you have surveyed what is the shortest curve you have laid out? Forty chains, that is the junction of Nyngan.
873. Is there nothing less than that? No; the next curve is 180 chains.
874. *Mr. Hurley.*] Would the slag from the Great Cobar Mine be suitable for ballast? Yes.
875. Is there plenty of it? Yes; I should say there must be 15,000 cubic yards.
876. From your observation do you think that the first survey was made at haphazard? I do not think so.
877. Do you think care was exercised? Yes; I think the surveyors went in as direct a line as possible. At that time the ruling grade was considered to be 1 in 40.
878. Did they not go over the hill in front of Budd's? Yes.
879. Do you avoid that and obtain a grade of 1 in 75? Yes.
880. *Mr. O'Sullivan.*] You have stated that if you obtain a grade of 1 in 100 you would require 3 miles of cutting 10 feet deep? Yes; that is only an assumption to a certain extent.
881. What would be the approximate cost of the three miles of cutting? It would add, I should say, £10,000 to the cost of the line. It may take more than that.

Alexander Adams, Esq., Road Superintendent, Cobar, sworn, and further examined:—

882. *Chairman.*] You are a civil engineer and surveyor employed in the Public Works Department? Yes.
883. In what branch? Roads and Bridges, and I have charge of the construction of tanks. I have charge of what is called the Cobar district.
884. How long have you been engaged in the formation of roads in this Colony? Nearly eight years.
885. Was the piece of road which has been metalled about 10 miles from Cobar made under your superintendence? Yes.
886. What kind of stone has been used there? It is a mixture. It is partly quartz and ironstone, and partly schist. It is not very hard. Portion of it is soft, but the quartz and ironstone is hard.
887. How did you come to select that particular piece of road for metalling? It was one of the worst portions of the whole line of road in wet weather. Another reason was that the stone was quite close at hand, so that the work could be done at small expense. There was only a limited sum of money available for the purpose. It cost £600 per mile, or £900 altogether.
888. How long did the first mile take to construct? It extended over a considerable time. The contractors were very slow, and took from two to three months over it. I think four months elapsed from the time they started until the work was finished.

A. Adams,  
Esq.  
8 Oct., 1889.

- A. Adams, Esq.  
8 Oct., 1889.
889. How long will the road last? The ruts will require to be raked in again in a few months, until the road is perfectly consolidated.
890. What is the thickness of the metal? Six inches.
891. Are not the cart wheels going right through the metal already, and sinking very deep? They are cutting through the blinding on the top, they are not cutting through the metal yet.
892. If the road is not thoroughly attended to, will it not soon get out of repair again? Yes, if it is left for a long time without the ruts being raked in again.
893. Seeing that the metal is only blinded on the top if a dray or heavy team goes on to the side, will it not have the effect of forcing the stone out sideways? I do not think so; there is not sufficient inclination for that.
894. You sent in an estimate to the Department of what it would cost to make a road from Nyngan to Cobar right through. What was the amount of that estimate? £130,000. Since then I have estimated the cost again, and I have had a better opportunity of ascertaining whether or not metal could be obtained at certain places along the road. I have found that the metal could not be got at two places where at first I thought it could be. For a width of 20 feet I now estimate that the road would cost, £174,000.
895. Would that make a road of the same character as the portion we have just been speaking of? No; the road would be metalled heavier. There would be 9 inches of metal.
896. Has not this portion of the road which you have made a slope from end to end, and is it not, therefore, well drained? The ground is almost level, but there is a slight fall, sufficient to carry off the water.
897. In many other parts of the road between Nyngan and Cobar, would it not be much more difficult to make a road than at this particular part we have been speaking of? Yes; but I think a certain amount of fall could be obtained in most places.
898. If a road were made right through even with 9 inches of metal would it not have to be constantly looked after? Yes.
899. What would be the cost per annum of keeping a road of that kind in repair? £10,000.
900. *Mr. Tonkin.*] Have there been many heavy teams over that portion of the road which you have made? There have been teams carrying 8 or 9 tons and some even more.
901. Have they cut through that metal? No.
902. Do you not think that that is very good? There has not been a very great amount of traffic during that time.
903. The Chairman asked you why you did not blind the outside of the road. Did you ever see that done? Yes. I have seen one section done in that way at Bourke.
904. What is the blinding put on for? The metal is too sharp and cuts the horses feet. A little blinding makes it easier for the horses.
905. Did you get instructions from the Department as to whether or not you were to blind the road? I recommended that it should be done and it was approved of.
906. Is it not the wish of the road superintendent to keep all the traffic in the centre of the road? Yes.
907. Do you think that 6 inches of metal is enough for that road? No, I do not think that less than 9 inches should be put on.
908. How many Government tanks are there between Nyngan and Cobar? Three. The first is about 19 miles from Nyngan. Its cubic measurement is about 28,000 or 29,000 yards. The proposed railway line runs within a few hundred yards of it, so that the engines could water there. The second tank is Muriel Tank, 40 miles from Cobar. The line goes quite close to that. The excavation is about 12,000 yards. The water has been over the excavation about 6 feet. That tank will hold 6,075,000 gallons of water. The first tank will hold 5,645,000 gallons. The third tank is called Booroamugga. That is about the same area as the second tank. The railway line also goes near that tank.
909. Do those tanks now hold more than the average amount of water? They could not hold much more than they do at present.
910. Have those tanks ever been so low that they were not able to supply the water required for stock? Not since I have been in the district, and I have been here when there was a severe drought. I have very seldom seen the excavations since they were filled.
911. Are they silting up at all? Two of them may have silted up to a small extent, but the third one has not.

COBAR, WEDNESDAY, 9 OCTOBER, 1889.

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Edwin James, general merchant, sworn and examined:—

- Mr. E. James.  
9 Oct., 1889.
912. *Chairman.*] What is your occupation? General merchant—member of the firm of Barton and James. We do a very large business here. I am a Justice of the Peace. I have been in Cobar about seven years.
913. How many storekeepers are there in Cobar at present? About seven. The same number were here twelve months ago. There were not so many storekeepers here two years ago.
914. How do you get your goods from Sydney? Now almost entirely from Coolabah.
915. What freight do you pay by rail from Sydney to Coolabah? £9 6s. 8d. per ton for third-class goods. I think the other rates are about £6 13s. 10d. for second-class goods. The rate from Coolabah to Cobar for cartage vary very much. It varies from £3 10s. up to £10 which we have paid within the last six months. It depends upon the weather and the state of the roads. If the carriers can manage to work with the union we have to pay pretty stiffly. We also get goods from Nyngan, from Bourke, and from the river. We get the largest quantity of goods from Coolabah at present owing to the way in which we were treated during the wet weather. The main portion of our goods used to be brought from Nyngan. We had over 50 tons lying at Nyngan and the union tried to corner us for £10 per ton. I ordered the Department to truck

truck everything and send it on to Coolabah and I have not got 1s. worth more from Nyngan than I could help. Mr. E. James.

916. Which do you think is the best route to Cobar, Nyngan or Coolabah? The carters prefer the Coolabah road as is evidenced by their taking lower rates by that route. They prefer it first because it is shorter and they have nothing to pay for water there. The road from Coolabah is said to be 15 or 16 miles shorter than from Nyngan. 9 Oct., 1889.

917. What is the freight from Sydney to Cobar by way of Coolabah? 1½d. per lb. in fair weather and 2d. per lb. in wet weather—that is £13 10s. in fine weather, and £18 10s. per ton in wet weather.

918. What did it cost by way of Nyngan until you were stuck up by the carriers union? About the same.

919. You say you also bring some goods from Bourke? Yes, that is on account of the differential rates. Occasionally it cost us less to bring our goods by way of Bourke than if we took them off the railway at Nyngan. We can send a truck of third-class goods to Bourke for £29 12s. whereas if we unloaded them at Nyngan it would cost us £50.

920. How much per ton would goods cost you by way of Bourke? We get the goods *via* Bourke at a cost of £11 per ton at the outside.

921. What do the goods which you bring by way of the river cost you? About £5 10s. per ton.

922. What is the distance to the river from here? About 65 miles to Louth. Those goods come from Adelaide.

923. If carriage is so much cheaper by way of the river why do you not avail yourself more of it? Because the river is very uncertain. Barton Brothers had about £800 worth of stock on the river for about two years.

924. Can you tell us what you pay for carriage of goods over certain periods by all routes to Cobar? I can give the figures for fifteen months. Railway freight about £2,500, cartage about £2,320. That does not embrace large quantities of goods bought here such as fodder in dry seasons, that is brought from Nyngan by the carriers, and when we have been short we have purchased it.

925. Are there other business firms in Cobar in as large a way of business as you are? I think not. One or two may be within grip of us. There might be about two doing the same amount of business.

926. What value of goods have you disposed of in about sixteen months? About £35,000 worth.

927. Was that amount of business exceptionally high or low? It was exceptionally low, which is to be accounted for by the mine closing.

928. Do you regard Cobar as a sound place for doing business? I think so.

929. Have you any reason to be dissatisfied with your business here? No. The system is very largely a credit one.

930. What is the reason for the town very nearly running out of provisions on one occasion? The road from Nyngan to Cobar was impassable. I offered the mail-man £20 per ton to bring in a ton as he liked.

931. Was the road from Coolabar in as bad a condition? Yes; the Coolabar is quite as bad as the other road in wet weather.

932. Do you keep large stocks here? Our stock is about £12,000 or £15,000.

933. What were the chief commodities which you ran out of at this particular time? Sugar, oatmeal, and other general goods. We ran out of about four lines.

934. Did that happen more than once? The town was short of supplies before.

935. Was that owing to the storekeepers having too small stocks? No; we generally keep a good surplus on hand, but at that time the stations ran out also, and then they crowded in for their supplies. Such a thing could not be provided against except by keeping enormous stocks.

936. What is the state of business in Cobar at present as compared with what it was a year or two ago? It is unquestionably slack.

937. What are your views with regard to the proposed railway? It is utterly impossible for Cobar to hold its own, to look for any progress, or to compete against the river traffic unless railway facilities are given to us. Taking the road superintendent's estimate of £120,000 or £130,000 as the cost of making a road, it is plain that it would be cheaper to construct a railway.

938. If a railway were constructed, would you invariably bring your goods by rail in preference to the river, regardless of the difference in freight? If the river gave a market in preference to the train I should take the river, but the river is very precarious and all our relations are so bound up with Sydney that it would take a great deal to force the trade of this district to Adelaide or Melbourne.

939. Is Sydney the best market for this district? Unquestionably; and if there were a railway running here with a certainty of the delivery of goods, I do not think there would be any business done in either of the other colonies, notwithstanding the river traffic.

940. Do you think the place where it is proposed to put the railway station at Cobar would be suitable? Yes.

941. *Mr. Copeland.*] What is the nature of the dispute between you and the carriers' union? The union refused to load at that time under £12 per ton.

942. At what rates did you then get your goods brought from Coolabah? £8 per ton.

943. Do you deal in farm produce? Yes, very largely, but fortunately this year we have not required it.

944. What quantity have you been in the habit of bringing by rail? During the summer we were getting from 6 to 10 tons of chaff a fortnight, and about 100 bushels of oats, and perhaps 100 bushels of corn.

945. What have been the ruling prices? I have sold up to £18 per ton, and as low as £11 per ton. I do not think it has gone lower at any time. The average price is £13 10s. Oats are 5s. 3d. to 8s. per bushel of 40 lb.

946. Should the people in this district be able to produce all that is sold here? Yes. They could not grow maize here. There is a great deal of maize imported in dry seasons from the Clarence. It cannot be grown on the river here, because the rainfall is too small. The general selling price of maize is about 7s. per bushel. It has gone up to 10s. 6d. and 11s.

947. What does the cartage cost you from Louth? £3 10s. at present.

948. Do you not think it would pay the people to grow maize at Louth by irrigation and send it here? I do not think that, with the expense of irrigation, they would be able to compete against the Clarence districts. £3 10s. per ton for cartage from Louth is lower than usual.

949. Have you found any improvement in business on account of the recent gold discoveries here? Yes; a marked improvement.

**Mr. E. James,** 950. If it were not for the gold discoveries would not the town be in a much more depressed state than it is? I think so.

9 Oct., 1889. **Mr. O'Sullivan.**] Taking all the expenses attached to bringing goods from Adelaide by river, and adding to that the cost of insurance and cartage from Louth, would that make the cost of obtaining goods from Adelaide anything like the cost of obtaining goods from Sydney by way of Coolabah? It would not approach the cost of obtaining the goods from Sydney by one-half.

952. Being actuated by mercantile instincts would you prefer to pay high rates to obtain goods from Sydney rather than pay low rates to obtain goods from Adelaide? Certainly not if I could be sure of obtaining the goods quickly, but the river traffic is very uncertain, and you have to take all the risks connected with it. There are special bills of lading by the river.

953. Can you purchase your goods as cheaply in Adelaide as you can in Sydney? In certain lines better.

954. When the river is navigable and there is no great risk would you, like other people, go to the market where you could get the goods cheapest? Certainly.

955. Then there is a possibility of the river being a rival to the railway? I think the railway would then be a rival to the river. The railway would cut off a very large portion of the traffic which goes by the river now, and it would add greatly to the output of produce from the stations. A lot of the stations along the river this year have been getting their supplies by the river, and sending their wool down the river.

956. What was the price of some of the articles of which the supplies ran short? The price of sugar would not go above 6½d. per lb. I heard that it went up to 8d. per lb., but that certainly did not occur in our business. The price of oatmeal never went above 6d. a lb. to my knowledge.

957. Was there a general rise in the price of most articles? Yes; flour was very high. Flour was sold at £3 10s. per bag during the last six months.

958. Are you still at variance with the carriers' union? I am working without the union.

959. Are you utilizing the local carriers? Yes. I would like to add a remark or two as to the evidence tendered at Nyngan. If the Nyngan returns are intended as any criterion of the Cobar trade they would be utterly fallacious, inasmuch as in the first place Coolabah has done a very large traffic. Then, on account of the differential rates, large quantities of goods were sent to Bourke for Cobar, and those goods would not be included in the Nyngan returns. Then the fodder used here in very large quantities last season would not be included in the Nyngan returns as trade with Cobar, because Nyngan has been the depôt for purchasing from the agents, and the fodder sent to those agents would be taken simply as trainage to Nyngan. There have been hundreds of tons of fodder obtained during the past year.

Mr. Henry J. Cornish, innkeeper, Cobar, sworn and examined:—

Mr. **H. J. Cornish.** 960. *Chairman.*] What is your occupation? I am a publican, and I have been here these seventeen or eighteen years.

9 Oct., 1889. 961. Have you any other interest in the district? Yes; I am a large landed proprietor in what is called Cornish Town, which is named after me. I had 64 acres which I cut up into a township. I have 300 acres 5 miles from here, and I have several allotments in the town.

962. Are you farming any of this land? I did farm for a couple of seasons 10 acres in Cornish Town, growing lucerne and oats. The result was very good.

963. What is the nature of the country between Cobar and Coolabah? It is very much the same as the country between here and Nyngan.

964. What is the difference in the distance between Coolabah and Cobar and Nyngan and Cobar? About 20 miles.

965. If the railway went to Coolabah instead of to Nyngan, would that suit Nymagee? It would be a gross injustice to the Nymagee people and the people about Gilgunyah. It would be too close to Bourke, and too far away from the people to the south; because one of the largest mineral countries will be the Melrose district, and it would be a serious injustice to them to have the railway junction so far towards Bourke.

966. Do you approve of the site of the proposed railway station at Cobar? I would like to see the station there, if it was merely for my own purposes, but to suit the town and the district generally I think it would be better to place it on a rise to the north of the town—it would then have the advantage of the reservoir, and it would be accessible to all the roads from the surrounding districts. It will also be a benefit for travelling stock which always come from the Queensland border. Furthermore there would be swampy country in the neighbourhood of the station.

967. Has there been any public meeting here to consider the site of the station? The people of Cobar look upon the railway as something merely dangling before their eyes, and they have not considered the question of the station. They would be glad to get the railway under any circumstances.

968. **Mr. Copeland.**] Are you interested in any mining? Yes, very much. I have been so from the very first. I am a carpenter, but I have always dabbled in mining, always living on gold-fields, and occasionally working as a miner.

969. What mines are you particularly interested in? The first I took up was the C. S. A. mine which now belongs to the Great Cobar Company.

970. Are you interested in the New Burra Burra Mine? I am indirectly interested in it with a few friends. The C. S. A. mine is 7 miles to the north.

971. Has much copper been taken from it? Not a great deal, but what was taken was of excellent quality.

972. What did it yield? Some 60 per cent. and some 40 per cent., but it was a very narrow lode, about 18 inches on the surface. It went down 3 feet and then cut out. It consisted of carbonate ore, very clean. Our original Company sank a shaft 200 feet and drove 200 feet. The Cobar Company drove another shaft on an ironstone lode not far from it. They never got much ore; they got traces of ore and gossan. They suspended work at the mine when they suspended work on the big mine.

973. If the mine should be reopened, do you think it would be a payable lode? Yes; if a little capital were expended. It would help to smelt the large sulphate ore which they have here. They could bring it here very easily with a tramway.

974. Where did you smelt the ore previously? We sent it to Adelaide by steamer. The Cobar Company never

- never had much ore to smelt from there. I am interested in several gold-mines—the Cobar King adjoining the Jubilee, the Occidental, the Peak prospecting claim, and the Bee Mountain. At the Peak prospecting claim there is a shaft down 100 feet, and a drive has been put in some distance. The vein is improving at the bottom. There will be a crushing to-day, and I am quite satisfied that 10 dwt. per ton would yield a fortune; it is so easy to get. They are not veins here; they are great lodes. Where they have driven 20 odd feet they have not come to the wall.
975. Are you sending the whole of the stuff 20 feet wide to the mill? Yes; we are not dressing it at all.
976. How deep have you sunk? Something over 100 feet.
977. What have you done at the Occidental mine? In the old shaft, which I sank many years ago, it is 100 feet wide. We have driven a cross-cut 59 feet. I had crushings made in Melbourne of four loads of stone, taking them separately to see which ore had the most gold, and it ranged from 14 dwt. to 2 oz. 8 dwt. per ton. There were four bags of each; that was about 4 cwt. each. That was out of the cross-cut.
978. Was that a fair average sample of the whole 59 feet? Yes; I did that for my own guidance, as I was largely interested in the mine.
979. Are the gold deposits improving as they get deeper? They are improving very much. We have sunk another shaft west of that, and we have had crushings here.
980. Are there any other mineral deposits in this district? Yes; silver exists in the district.
981. Is there any particular place where a payable deposit exists? Some fifteen years ago, myself and John Collis prospected what is called Collis's Ranges, between Byrock and the Bourke Road.
982. Is that ground taken up now? I think a company called the Bald Hill Company have taken up some ground there, and they are sinking a shaft on it.
983. How far would the proposed railway from Nyngan to Cobar be of service to Billygoe? It would unquestionably be nearer for them to go to this railway, and it would be a much better road than to go to Coolabar.
984. *Mr. Hurley.*] Would an advanced value be given to the lands you own by the proposed railway? It would enhance the value of town allotments generally. The line as surveyed does not go through my land, but it will enhance the value of some of it.
985. What is your opinion with regard to the value of the Great Cobar mine? I think that no child now going to school will see the end of it.
986. Have you been down the shaft? Not for the last two years.
987. Do you think there is sufficient ore there of a profitable character to keep the mine going for the next twenty years? Yes.
988. What keeps the mine back? The low price of copper. If the railway were constructed the woodcutters could bring in wood at a cheaper price than the Company used to get it for with their own tramway.
989. Do you think that this will be a dividend-paying gold-field? I have always thought so.
990. Seeing that only one season out of four or five causes a failure of the crops in this district, how is it that people do not go in for cultivation? When the silo is brought into operation, I think the crows-foot and other good winter grasses will be reaped and turned into hay.
991. *Mr. Tonkin.*] How far is it from Nymagee to Melrose? About 55 miles.
992. Is that country auriferous? Yes; there are lodes in all directions. There are a great many copper and silver lodes.
993. Do you think that the proposed railway would tend to develop that part of the district? I am positive it would.
994. How far would Melrose be from the nearest point of the proposed railway? About 100 miles.
995. Is that portion of the country fit for settlement? Yes; I daresay. It is in the Central Division.
996. What is the extent of the commonage about Cobar? About 100,000 acres.
997. Do you think it would be beneficial to the township if that reserve were cancelled and the land thrown open for settlement in small areas? Yes; I think it would be taken up. I think it is a great mistake in the Land Act not to allow small areas within the population radius.
998. Would the making of the railway induce people to take up that land? Yes; carriers would locate their families around the immediate neighbourhood if they could get small areas.
999. Would a great deal of the land be fit for agriculture? Yes, in the valleys.
1000. Do you think the proposed railway would pay working expenses and interest on the capital invested? Yes, if the mine were in full swing.
1001. Do you think that if the line were carried on to Wilcannia and Broken Hill it would pay? Yes; it would open up a good market for produce.
1002. Do you think that you would take advantage of the line to carry your goods to the river? No; the river is so uncertain that if a man depended upon it he would be broken in less than five years.

*Mr. H. J. Cornish,*  
9 Oct., 1889.

Mr. Edwin James, general merchant, Cobar, sworn, and further examined:—

1003. *Chairman.*] Do you wish to correct your evidence with regard to the railway rates? Yes. I find that the railway rates from Sydney to Coolabar, for third-class goods, are correct as I gave them—that is, £9 6s. 7d. per ton. The rates for second-class goods are £6 13s. 10d. per ton; first-class goods, £5 7s. 6d. per ton; and for class B goods, £2 13s. 9d. The rate of insurance on the river is 5 per cent. from Adelaide to Louth. It varies according to the class of goods; but that is a fair average.

*Mr. E. James,*  
9 Oct., 1889.

Ernest Hamilton Simpson, Esq., Manager A.J.S. Bank, Cobar, sworn, and examined:—

1004. *Chairman.*] What is your occupation? Manager of the A.J.S. Bank, Cobar. I have been here about eighteen months.
1005. Can you give the Committee some figures with regard to the wages paid for mining? Yes. During the time I have been here, or during the last twelve months, the amount paid away in gold-mining amounts to about £13,704; that is through the Joint Stock Bank, and it has been paid for wages. In copper-mining, for the last six months about £18,500 has been paid.
1006. From the point of view of a bank manager, is the state of business good? Yes, fairly good
- 1007.

*E.H. Simpson,*  
Esq.  
9 Oct., 1889.

- E. H. Simpson, Esq., 1007. Has it improved or fallen off since you have been here? Up to the time of the closing of the Cobar mine business was decidedly improving. Since then of course there has been a slight falling off, but not so much as one would expect.
- 9 Oct., 1889. 1008. Is there very much credit given in the town? No; I think the town is in a fairly solvent condition, and it compares favourably with any other town in the Colony.
1009. Are bills generally met? Yes.
1010. Would you care to state whether the bank holds many mortgages over property in the district? Not more than is usual in the way of business in a place like this. The banking business will compare favourably with that of any other town of the same population. I have had experience in other country towns, and this town compares very favourably with them.
1011. You look upon the place as a progressive place? Yes.
1012. Have you noticed any marked improvement in consequence of the gold-mining? Yes; the town has improved decidedly since the reefs were discovered.

Mr. John George Lee, Public School Teacher, Cobar, sworn, and examined:—

- Mr. J. G. Lee, 1013. *Chairman.*] What position do you hold? Public School teacher. I have been in Cobar nine months.
- 9 Oct., 1889. 1014. How many children attend your school at the present time? One hundred and fifty-two. These are the first two weeks of the quarter, so that there is a smaller number than I would expect. I think the proper number would be about 186 children. Last quarter the average attendance was 115·9. There were 186 on the books at the end of last quarter.
1015. How many were attending school when you arrived here? On January 14 there were 103.
1016. Has not the population fallen off since you came here? Not the school population. A few of the residents have left the district.
1017. Did a large exodus take place before you came? Yes, as I have heard.
1018. Are there other schools here? The Convent school and one private school.
1019. Is the health of the children good or otherwise? It has been good during the last nine months. Looking over old returns I see that it was not good before then.
1020. *Mr. O'Sullivan.*] How many children were attending school during the prosperous times of Cobar? During last quarter the attendance was most numerous.
1021. How many were attending two years ago? One hundred and forty-eight.
1022. Do you think that 150 is a fair percentage of children for 1,500 people? I think there ought to be more children. The attendance at the other schools would account for the number of children not being in proportion to the population.

Shelley A. Fox, Esq., Manager of the Commercial Bank, Cobar, sworn, and examined:—

- S. A. Fox, Esq., 1023. *Chairman.*] What is your occupation? Manager of the Commercial Bank. I have been here five months.
- 9 Oct., 1889. 1024. Can you tell us how does the business of your bank compare at present with the business done a year, or two years, or three years ago? The position at the present is about the same as it was previously, from a banking point of view. About four years ago, when the copper-mine was in full swing, business appears to have been better than it is now.
1025. What is your chief business here? The business people in town principally do business with us. We have a mining business as well.
1026. Is business prospering in the mining industry? Within the last twelve months there has been a marked improvement in gold-mining. During the last eighteen months or two years I consider that there has been an outlay on gold-mining of at least £20,000.
1027. Have you sent any gold through your bank to Sydney? About 500 oz. during the five months that I have been here. It all came from the Chesney-Cobar mine.
1028. Do you do a large advancing business in the district? We do a fair share of it.
1029. Do you often have to enforce your securities? No; I consider the position of the district is sound. For the last eleven years I have been in country districts in banks—at Wentworth, Bega, Bombala, and Delegate.
1030. As compared with places like Bega, do you think that this is a sound business place? Yes.
- 1030½. Bega is a prosperous place? Yes.
1031. Are bills given to the bank generally met, even at the present time? Yes.

J. Hogan, Esq., solicitor, Cobar, sworn, and further examined:—

- J. Hogan, Esq., 1032. *Chairman.*] Do you wish to add to your evidence given yesterday? Yes. From inquiries made at the Convent School in Cobar, I have ascertained that for the year 1888, about 150 children were on the roll. For 1889, there were about 100. At a private school in town I think there are about thirty or forty at the present time. With regard to the capital value of land rated within the municipal boundaries, I have since referred to the books, and I find that the capital value for this year amounts to £9,854 13s. 6d. Striking a rate of 5 per cent. on the capital value would give about £492 18s., and the moiety we would be entitled to from the Government would be £246 9s., or a total of £739 7s. of rates for the year. The capital value of property for 1888 was £10,586, and the rates on that would be about £529 6s. The subsidy on that would be pound for pound, so that the receipts for 1888 would have been £1,000, supposing that the rates had been paid in full and the subsidy obtained. The value of property has decreased somewhat this year, owing to the depression.
1033. Is the Great Cobar mine included within the municipal boundaries? There are about 160 acres excluded. The mine has been exempted by proclamation, otherwise they would have opposed the incorporation of the town.
1034. What is the financial position of the municipality? We have a good credit; I think it borders on £400.
1035. Have you never borrowed? No; we have obtained temporary accommodation at the bank sometimes. We have never borrowed on debentures. The ratepayers pay up fairly well. The arrears for 1888 were inconsiderable.

1036. What is your opinion as to the proposed site for the railway station? I have not given the matter full consideration, but I think the site is suitable. The Government town surrounds it, and if the station were built there, no doubt a large revenue would be derived from the sale of land. I think it is as convenient for the town generally as any other place would be. Whilst the common is a great benefit to the towns people, and whilst I should not like to see it given back to any grazier in the district, I think it would be conducive to settlement if the common were cut up into small areas of from 40 acres up to 1,000 acres, and if some inducement were given to people to settle on it and cultivate it.

J. Hogan,  
Esq.  
9 Oct., 1889.

1037. *Mr. O'Sullivan.*] How is it that pipes have not been laid from the reservoir into the town? I should like to know myself. We have been urging the Government a long time to lay the pipes, so that we may get the advantage of the water. The fault lies entirely with the Government.

1038. *Mr. Hurley.*] Has the slag from the Great Cobar mine been used for the purpose of metalling your streets? Yes. I wish to add to my evidence that people are largely availing themselves of homestead leases in this district. The owners of Meryula Station have applied for permission to ringbark.

1039. *Mr. Copeland.*] Has the Minister given his consent? I do not think so. Mr. McPherson has also applied for permission.

1040. Do you think it would be desirable to allow all this timber to be destroyed? No, I am in favour of preserving the large pine timber.

1041. Should not the Municipal Council submit its views to the Minister on the subject, as it is the duty of the Municipal Council to preserve the supply of timber to the town? It is outside the municipal boundaries. The applications have only just been made, so that it was impossible for the Municipal Council to take any action. I have no doubt some action will be taken.

1042. When once the timber is ringbarked is it not absolutely destroyed? Yes, and it is very easy to kill pine timber.

Mr. Laurence Corbett, labourer, sworn, and examined:—

1043. *Mr. O'Sullivan.*] What is your occupation? I work at anything I can get to do.

1044. What is your opinion with regard to the Cobar common? I should like to see it cut up into small areas. In the event of a railway being made it would be more beneficial if cut up into small areas than if allowed to remain as a large grazing area.

1045. Would you take up a selection yourself? Very probably.

1046. Would you be prepared to work on such a selection? Yes. I think that from 40 acres to 200 acres ought to be the limit.

1047. Are there any more working men of your stamp who would be prepared to take up land? I think so.

1048. *Mr. Copeland.*] Have you had any farming experience? For eighteen years.

1049. Have you done any farming in this district? No; but I think it could be done.

1050. Do you think that the climate would be favourable, and that there are portions of the common that would be fit for cultivation? Yes.

Mr. L.  
Corbett.  
9 Oct., 1889.

Mr. Hopkin Lewis, auctioneer, Cobar, sworn, and examined:—

1051. *Chairman.*] What is your occupation? Auctioneer.

1052. *Mr. Copeland.*] Have you had any practical experience of mining? Yes; I have worked—mining for copper and gold. I have had twenty years experience.

1053. Are you connected with the New Burra Burra mine? Yes; I am a large shareholder. It is a proprietary mine.

1054. What work have you done on the mine? We have sunk one shaft about 90 feet and another about 20 feet.

1055. Are they both on the lode? Yes.

1056. Has it much underlay, or does it go down vertically? We have no defined walls. In the bottom of the downright shaft there appears to be a wall on the eastern side, but we are not certain about it. I should take it to be the foot wall. We have no cross cuttings, and I do not know the width. The width of the outcrop is from 5 to 6 feet, almost level with the surface. It is very level country.

1057. How wide have you proved it at the bottom of the shaft? In some places 5 feet wide, and in some places 7 feet wide. We have not done any tunnel driving.

1058. Have you had any copper smelted? We are smelting now—we have one furnace erected, and we have about 5 tons of metal there. The yield from the ore varies from 50 per cent. down to 4 or 5 per cent. Some will go 60 per cent. The average, with a little dressing, is about 15 per cent.

1059. In what formation is the lode? Porphyry on one side and granite on the other. The outcrop shows for scarcely any distance on the surface. The two shafts are not above 30 or 40 feet apart.

1060. Is there any other outcrop? No; it is a very large lode. The bearings are north-west by south-east.

1061. Is there any silver or gold in it? Yes, I have seen gold in it, and it assayed 6 ounces of silver. I should imagine there is a little percentage of lead. We have not had it assayed for gold.

1062. How many tons will the furnace put through per week? From 35 to 40 tons.

1063. Have you seen sufficient to convince you that at the present price of copper it is a payable lode? Yes.

1064. Have you any intention of erecting more furnaces? Yes. Unfortunately, it is a very small company, and we had to purchase the mine in the first place. We will open up the mine before we erect any more furnaces.

1065. If the mine should go ahead, and the railway be constructed, would you send your copper and get your supplies by the proposed railway? Yes; the nearest point from the mine to the railway is about 5 or 6 miles. We would strike the railway about 4 miles on the Nyngan side of Budd's hotel. The whole of our copper and stores would travel about 46 miles on the proposed line.

1066. Have you seen sufficient to warrant you in expending money on the mine? Yes; we have spent about £5,000 already. That includes the purchase of the mine. We have spent about £2,500 or £2,700 in developing the mine and erecting a furnace. We employ about twenty men. The land is held on a mineral lease. We have 120 acres, and pay 5s. per acre rent. There are applications for selections all round

Mr. H. Lewis.  
9 Oct., 1889.

- Mr. H. Lewis.** round us. It is in the central division, and the applicants have taken up conditional purchases. Several 40-acre selections were refused.
- 9 Oct., 1889. 1067. Is the land immediately abutting on your claim purchased land? It is taken up in selections. It was taken up about twelve months ago.
1068. That will not bar mining? No; all the minerals are reserved.
1069. There will be nothing to bar the lode being worked through those properties? Nothing at all.
1070. What wages are you paying your men? About £2 15s. a week for ordinary miners. Labourers get 7s. per day.
1071. What is your total wages sheet? About £220 per month.
1072. Do you think the mine will develop into a much larger concern than it is at present? Yes, it is bound to do so.
1073. *Mr. Hurley.*] Is the land between you and the proposed line of railway suitable for the construction of a branch line? Yes. The country is similar to what it is between Nyngan and Cobar.
1074. *Mr. Copeland.*] What class of ores have you in your mine? We have carbonates of various kinds, —oxide, grey ore. There is no sulphuret ore yet, as we are not sufficiently deep.
1075. *Mr. O'Sullivan.*] You say that £5,000 has been spent on the mine—has that money been supplied by Cobar people or outside speculators? There are only six Cobar people in it, and the money is supplied by them.

Mr. Thomas Duffy, storekeeper, Cobar, sworn, and examined:—

- Mr. T. Duffy.** 1076. *Chairman.*] What is your occupation? Storekeeper, at Cobar. I have resided here very nearly ten years.
- 9 Oct., 1889. 1077. Have you prospered in the district? Yes.
1078. Can you give us any information as to the freight collected between Nyngan and Cobar for the last two or three years? A great proportion of the forage and of class A goods is consigned to Nyngan, and purchased in the first place by Nyngan people; they are then resold to the Cobar people, to teamsters, and to stations in the back country. One-fourth of the goods in that class which are consigned to Nyngan are really used in the Cobar district, and ought to be credited to this district, and not to Nyngan. The consumption around Nyngan itself would be very small.
1079. By which way do you get your goods? The bulk of them come by way of Coolabah.
1080. What do you pay for railway carriage to Coolabah and Nyngan? The average would be about £70 a month. I have often paid £120 a month.
1081. What do you pay per ton from Coolabah to Cobar? Three years ago I commenced to get my goods from there. I then had a special contract to keep the teamsters continually loaded at £3 per ton. Afterwards I got a special contract at 35s. per ton. I got goods from Bourke when there was a disagreement with the carriers, but otherwise I never got anything from there. It is 98 measured miles to Bourke. Some goods come here from Byrock, but I never got any from there.
1082. Would it be better to construct a line from Coolabah to Cobar than Nyngan to Cobar? I think it would be better to construct the line from Nyngan to Cobar, because there would then be less haulage on the railway. I think there are 47 miles between Nyngan and Coolabah, and 65 to 70 miles from Coolabah to Cobar, while there would only be a distance of 80 miles direct from Nyngan to Cobar.
1083. If it were not for the dispute with the carriers would you still have brought your goods from Nyngan? Not regularly. I have had a good many small lines brought from Nyngan, but the bulk of my stores come from Coolabah. If it were not for the Carriers' Union I might have a great deal more brought from Nyngan.
1084. Have you any other interest in Cobar besides those of a storekeeper? Yes; I have invested a good deal of money in mining.
1085. Have you had sufficient confidence in the place to invest your savings in this locality? Yes.
1086. Do you know the country between Cobar and Coolabah? I travelled over it on one occasion. There are no Government tanks on that road—the land is very good. It is as level as between here and Nyngan—in fact, more level. There would be no engineering difficulties in making a railway. I believe that the distance is about 65 miles from Coolabah to Cobar, and the distance from Nyngan to Coolabah is about 47 miles. I think most storekeepers would prefer to get their goods by rail, at a little extra cost, rather than by the river, which is unreliable.
1087. *Mr. Hurley.*] Are there any conveniences for receiving goods at Coolabah? No.
1088. *Chairman.*] Would a line from Coolabah to Cobar suit the Nymagee traffic? Not so well as a line from Nyngan. I do not think it would be judicious to allow the common to go back into the hands of any grazier.
1089. Do you think it would be desirable to open the common to free selection? I would prefer to see a portion of it open for free selection.

Charles R. Ferguson, Esq., journalist, Cobar, sworn, and examined:—

- C. R. Ferguson, Esq.** 1090. *Chairman.*] What is your occupation? Journalist, at Cobar.
- 9 Oct., 1889. 1091. Do you produce a specimen of stone taken from a quarry which you hold? Yes. It is on Crown lands, about 8 miles from Cobar. It is freestone. There are two kinds of stone there. The stone on the surface is pretty hard, but underneath it is soft. I have a building in course of erection in which this stone is used, and it is suitable for building purposes. I have had a lot of masonry work done with it. There is an unlimited quantity of this stone. There are several other places where the stone can be obtained. I have some stone in a building which I am now erecting which I got less than 4 miles away. That is not in such large quantities as the stone I now exhibit, and it has not been opened out. The freestone quarry is west of Cobar, on the proposed line from Cobar to Wilcannia.
1092. Would it be suitable for railway ballast? Yes; there is an immense quantity of it. The outcrop is about half a mile long. The other stone, about 4 miles distant, is near the railway line, on the town common. It is about a quarter of a mile outside the population boundary. Stone has been used in the mine for masonry purposes, but I think mine is the only building in which the stone has been used. There is no trouble in quarrying this stone, and it would be suitable for kerbing and guttering.

1093. *Mr. Tonkin.*] What is the depth of each layer of this stone? From 4 to 12 inches; it comes out in 8 or 9 feet blocks. It is on Mr. Leslie's run, and I think it is on a leasehold area. It is about 2 miles from the Government tank. C. R. Ferguson, Esq.  
9 Oct., 1889.
1094. *Mr. Copeland.*] How many acres does the outcrop of stone cover? About 40 acres. It can be got at several places on the hill; it is all equally good.

Mr. Hopkin Lewis, auctioneer, Cobar, sworn, and further examined:—

1095. *Chairman.*] Do you know if there are any other valuable mineral deposits in the district which have not been mentioned? Yes; there is fire-clay. We have bricks made of it at the Burra mine, which the smelters say they never saw anything like, with the exception of English bricks. There is any quantity of that fire-clay within  $1\frac{1}{2}$  mile of the Burra mine,—that is about 4 miles from the proposed route of the railway. Mr. H. Lewis.  
9 Oct., 1889.
1096. Is there any limestone? Yes; but it is in a different direction. It is about 4 miles from there, and nearer to Cobar. It is about 26 miles from Cobar. There is a good deal of this limestone. Limestone can be got within 5 miles of this town, and there is limestone about 20 miles from the Nymagee track, and fire-clay also. The lime there is equal to anything in the Colony.
1097. Have you used those materials at all? Yes; we use them at the mine. The firebrick is the best brick there is in the Colony. We have used the fire-bricks in the furnace, and they stand remarkably well. The fire-clay is 12 or 15 feet below the surface, and we have sunk into it about 12 feet, but we have not cut through it. The deeper we get the better it is.
1098. *Mr. Copeland.*] Is there undoubtedly a large deposit? Yes; there would not be the slightest difficulty in obtaining all the bricks which might be required along the line of railway.
1099. Where does the deposit of limestone occur? It is on ridgy country,—on very low hills. It is patchy in places, and you cannot quarry it out; it runs along the surface in horizontal layers.
1100. Is there an outcrop in several places? Yes. We have only got it at one place at the Burra; we have just taken it off the surface.
1101. Do you find that it is good lime? It is very passable lime, but it is not the best of lime.
1102. Is this shell lime? Yes; it is to be found in places there. During the time I was mayor I may state that several applications were made to me to know if the common could be selected in small holdings. I am confident that if a portion of the common were resumed, there would be any amount of selections.

Mr. H. J. Holston, carrier and contractor, Cobar, sworn, and examined:—

1103. *Chairman.*] What is your occupation? Carrier and contractor. I carry principally between Cobar and the neighbourhood, and Coolabah. The distance between here and Coolabah is about 70 miles. I carry for Oakden and Brown of Lerida Station, Mr. Leslie of the Amphitheatre, and Mr. Smith of Mocalamba. I bring supplies back again from the town. Mr. H. J. Holston.  
9 Oct., 1889.
1104. Are you a member of the Carriers' Union? No.
1105. What do you get a ton from Coolabah to Cobar? The prices vary according to the roads and the weather. My contract price is £3 per ton from here—that is a constant price. I mostly get return loading. The rate was as high as £12 last winter. The lowest rate has been £2. £3 is my lowest rate.
1106. What is the character of the road between Coolabah and Cobar? It is a good road in fine weather, but it is a very bad road in wet weather. It is similar to the road between Nyngan and Cobar.
1107. Is there any water on the Coolabah Road? There is no public water, with the exception of one tank 13 miles out on the Bourke Road.
1108. Would the route from Coolabah to Cobar be a better one than from Nyngan to Cobar? As regards the cost of making a railway, I believe the Coolabah line will be the cheapest, on account of the shorter distance. The cost per mile will be about equal. 70 miles is the distance I travel, but the railway would come 7 or 8 miles shorter by cutting off an angle. The route to Coolabah would be out of the way altogether for the Nymagee people, and it would be no good to the New Burra Burra mine.
1109. What rate do you get from Nyngan to Cobar for cartage? It was only £2 4s., for copper teams were then very plentiful. I had made an arrangement with Mr. Barton in Cobar, and my return trip was to be at the rate of £3 10s. per ton.
1110. You apparently got a better rate for carriage between Coolabah and Cobar than between Nyngan and Cobar? That was only for copper. The copper price to Coolabah is much smaller still, it is only 32s. I was not referring to copper.
1111. *Mr. Copeland.*] Do you say that the Company gets its copper carried for 32s. per ton? Yes; they pay various prices to Nyngan. At the time I am speaking of they were paying £2 4s. a ton to Nyngan. They then had teams under contract. They would reduce the price on anybody wanting a load.
1112. Are there any rocks that would do for road metal between here and Cobar? Yes; but it is very patchy. In two or three places there are rocks which would do for road metal or ballast for a railway. The timber is very inferior, and like that on the Nyngan Road. There is no ironbark or red gum. There is no suitable timber for sleepers.
1113. Would a railway route from Coolabah be more convenient for the Billygoe mine than the route from Nyngan? Yes, much more convenient. There are no other mines opened out in that direction, with the exception of the Bald Hills mine. It would not benefit them a great deal, because they are close to Byrock. There is only one creek on the road and there is no water in it except after heavy rain.
1114. *Mr. Hurley.*] What is the character of the land between here and Coolabah? It is similar to the land between here and Nyngan. The majority of it is not open to selection. Patches of it would be fit for agriculture.
1115. *Mr. Tonkin.*] If a line were constructed from Coolabah to Cobar would it be of advantage to anybody on the southern side of the proposed line from Nyngan to Cobar? It would be of no use whatever.
1116. Are there any mines or any industries between here and Coolabah? There are nothing but stations.
1117. *Mr. O'Sullivan.*] Does the road to Coolabah go to a large extent through leased land? Yes. There is a public road through, but it is only a chain or so wide. The roads followed by the teamsters are generally through private or leased lands.

Mr.

Mr. Robert Jackson, manager, Chesney Cobar Gold-mining Company, Cobar, sworn, and examined:—

- Mr. 1118. *Chairman.*] Are you the manager of the Chesney Cobar Gold-mining Company? Yes.  
 R. Jackson. 1119. How long has the Company been formed? The first annual meeting was held on the 31st  
 August, 1889.  
 9 Oct., 1889. 1120. When did they commence operations? January, 1889. When I came here the shaft was 94 feet  
 deep. It was merely a shaft. People had been working here before the Company was formed. They  
 might have been at work two years before the Company began working.  
 1121. Do you hand in a statement showing the expenditure, and the men employed on the mine? Yes,  
 it is as follows:—

EXPENDITURE, 31st August, 1889.		£
Plant and Machinery .....		2,770
Tank and Drains .....		3,150
Wages .....		1,773
Mining Material .....		1,589
		£9,282
MEN EMPLOYED.		
Miners .....		24
Battery.....		11
Pump .....		2
Whipping and carting .....		4
Wood splitters and carters .....		8
		49

By the last Directors' report the erection of other thirty-five head of stamps is contemplated, besides the Huntingdon, at present in course of erection.

1122. At the present time are you erecting a Huntingdon mill? Yes, a five-foot Huntingdon mill. We have fifteen head of stampers at work now.  
 1123. Are you in constant work with this battery? Yes, we run all the week round, day and night, with three shifts. That has been going on ever since we started, at the latter end of April. We have four shafts down, but at present we are only working two. The deepest of the shafts we are working is between 120 feet and 130 feet. We are at present sinking two shafts. The other shaft which we are working is 90 feet deep. There are two separate bodies of stone—one is the western run of stone, and there is a very large body of it, that is No. 2 shaft, which is 90 feet deep. I am crushing some of that stone now.  
 1124. Is there more than one reef? Yes, I know of five reefs.  
 1125. Are they connected by these shafts? No, they are entirely separate. I have started a cross cut from the deepest shaft at a depth of 100 feet. I have a reef of solid quartz there, 4 feet thick. The eastern reef varies from 6 feet to 6 inches.  
 1126. What is the width of the other reef you are working? I cannot say. At present we have it 12 feet wide. I am crushing from that reef.  
 1127. Is that a continuous reef? It is as far as we can see. We are merely prospecting it.  
 1128. *Mr. Copeland.*] Have you driven along the eastern reef? Yes, 170 feet.  
 1129. Have you crushed everything between the walls? We have not found the wall of the western lode.  
 1130. Are you crushing all that you are working? Yes.  
 1131. Have you assayed the tailings from the battery? Yes. What I have assayed myself yielded, I reckon, 2½ dwt. or 3 dwt. I have had some tried by other gentlemen in the district, and they said they found strong traces of gold.  
 1132. Have you had any assayed by recognized assayers? Yes, in Melbourne; and it gave 2 dwt.—that was the loss in the tailings. The blanketings only gave me 4 dwt., which is not worth saving. We have little or no pyrites. There is nothing to hinder thorough amalgamation, and no burning is required.  
 1133. Have you weighed the quicksilver? My loss has been very light. I have lost about 50 or 60 lb. of silver since I started—that is a trifling loss for the quantity of stuff which has been put through.  
 1134. How far do you intend to sink the main shaft? It will depend upon the prospect. At present we have a very good prospect.  
 1135. When you have sunk a shaft will you put on more men? In all probability I will, if the prospects warrant it, and when we get more crushing power,  
 1136. You will not put up more crushing power until you prove the lode? If this large body continues as it is I think it will warrant the Company making a beginning. If they do not put up the whole thirty-five head I think they will put up other fifteen head.  
 1137. What area have you? 700 or 800 yards on the reef.  
 1138. Have you any water down below? None. The country is changing at present in the shaft. The best material we have had hitherto is a sort of quartzite, carrying very fine gold, but now we can see gold freely in the stuff broken down.  
 1139. Do you anticipate that the mine will turn out to be profitable? Yes; I would not have come here if I did not think it would pay.  
 1140. Do you think that the mine will last through many years? It ought to. It all depends upon the depth, and I have not the slightest doubt that it will go down.  
 1141. In that case will there be employment for a large number of people? Yes. Along the line they have found gold everywhere on the surface, and they consider it to be payable.  
 1142. That is not proven yet? No; but they have found excellent prospects four miles to the north and south, which, if proven and payable, ought to give full work to a great many thousand people.  
 1143. Do you anticipate that that will be continuously payable? No; but it will be found payable occasionally.  
 1144. Do you find the gold in shoots? I cannot tell, but so far as I know it is.  
 1145. Have you carried the gold for the whole of 170 feet? No; unfortunately we encountered a very large slide away to the south. In rising we struck the same thing, and also in going south.  
 1146. Did you get the reef on the other side of the slide? No; we have not found the reef yet. I have travelled over a bit of the country here. I have been away to the south-east, and I believe that is going to be a large field for minerals. I will not say for gold, but I have not the slightest doubt that there will be copper and silver found away to the south-east—between here and Mount Hope there are 50 or 60 miles of country that would be dotted over with mining townships if they had facilities for settlement and prospecting.

Mr.

Mr. Daniel R. Kenane, Post and Telegraph Master, Cobar, sworn, and examined.

1147. *Chairman.*] Are you postmaster at Cobar? Yes.

1148. Have you prepared a statement showing the business done at the Post Office here for the year 1888, and also up to the present time? Yes. The particulars given in that statement are correct to the best of my knowledge.

1149. It appears that the business has not fallen off in any way during the last six months? Yes. The following is the return :—

Mr.  
D. R. Kenane.  
9 Oct., 1889.

MONEY ORDER AND GOVERNMENT SAVINGS BANK BUSINESS FOR YEAR ENDING DEC., 1888.	
No. of Orders issued .....	2,195
No. of Savings Bank Deposits .....	541
No. of Orders paid .....	496
No. of Savings Bank Withdrawals .....	123

Total .....	£14,989 1 11

POST OFFICE.

	£ s. d.
Postal revenue for 1888 .....	1,134 13 0
Postal revenue for half-year ending 30th June, 1889 .....	604 7 3
Number of letters registered in 1888 .....	2,333
Number of letters registered for nine months ending 30th September, 1889 .....	2,063

MAILS.

To and from Nyngan and Cobar .....	Three times a week.
To and from Bourke and Cobar .....	Once a week.
To and from Nymagee and Cobar .....	Twice a week.
To and from Louth and Cobar .....	Once a week.
To and from Gilgunnia and Cobar .....	Once a week.
Private bags on Bourke-Cobar Road.—Yanda Creek, Coronga Downs, Tindarey, Wilgaroon, Curraweena, and loose mail for Mount Billagoe.	
Private bags on Nymagee-Cobar Road.—The Priory and Millera.	
Private bags on Cobar-Nyngan Road.—“Nairn” Burra Mine.	
Private bags on Louth-Cobar Road.—Buckwaroon, Pulpulla, Booroondara Downs, Wuttagoona.	
Private bags on Gilgunnia-Cobar Road.—Lerida, Bulgoo, Central Block C, Thule, Wirlong, Belford, Lachlan Downs.	
Back Country Mails towards Wilcannia (Cobar-Nekarboo line).—Springfield, Kaleno, Tiltargara, Nekarboo, Fulham Park, Kew, Paddington, Sandy Creek.	
Cobar-Barnato line.—Tambua, Gidgee, Innesowen, Tiltagoona, Mulga Downs, Bulla Bulla (two or three Government tanks on this road).	

TELEGRAPHS.

Revenue for 1888 .....	£914 10s. 11d.
Number of messages transmitted in 1888 .....	12,636

Returns for nine months ending 30th September, 1889 :—

Number of messages transmitted .....	8,674
Revenue .....	£597 8s. 1d.

1150. How long have you been here? About nine years.

1151. How does the business compare now with what it was some years ago? There was more business about four or five years ago, better than it is now.

## BULGOO, THURSDAY, 10 OCTOBER, 1889.

[The Sectional Committee met at "Doublegate's Hotel," Bulgoo Station, at 12 noon.]

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed railway from Nyngan to Cobar.

Mr. Alexander Fulton, manager of Bulgoo Station, sworn, and examined:—

Mr.  
A. Fulton.  
10 Oct., 1889.

1152. *Chairman.*] What is your occupation? Manager of the Bulgoo Station for the Bank of New South Wales. The homestead is 28 miles distant from Cobar. I have been here about six months. I was managing Springfield, the adjoining station, for about seven years.

1153. How do you get your goods to and from Sydney? By rail to Nyngan and thence by team. We suffer great inconvenience during wet weather. A short time ago it was almost a case of starvation with us. We could not get flour at any price last May. It takes about eight days on an average in very favourable weather to come from Nyngan here. In bad weather it is impossible to travel on the road.

1154. What is the longest time you have known goods to be on the road from here to Nyngan? Three months. Lately they were two months on the road. It is all right in fine weather.

1155. What is the average rate per ton for carriage? £6 from Nyngan to this place. A short time ago I paid £14 per ton.

1156. Do you always get your goods from and send them away, by Nyngan? Yes, unless I get stores from the Cobar storekeepers.

1157. If the railway were extended to Cobar what would be the advantage to you? It would be an advantage in the carrying of the wool downwards and in getting goods up here. It would also be a great convenience for travelling.

1158. Is not the road between here and Cobar quite as bad as the road between Cobar and Nyngan? No;—there are one or two bad places. We are now mending one place. Mr. Oakden and three or four of us are spending £30 or £40 in making a road across a cowl.

1159. Would the railway to Cobar be any advantage to you in removing stock in time of drought? Yes. We would be likely to avail ourselves of it for that purpose. We could not do so when there is drought all over the country like there was last year, but that is a very rare occurrence.

1160. Do you know the surveyed line for the proposed railway from Cobar to Wilcannia? Yes, I know it very well. It is a flat country all the way out to the Meadows—33 miles from Cobar, where there are a few little hills. There could not be an easier country for a railway.

1161. Is there any timber in the locality suitable for railway sleepers? There is only pine timber and fair box;—there is no iron-bark.

1162. Is there any stone along the line suitable for ballast? There is a great quantity of stone on the rises along the line. It is a flaky sort of stone, but it does very well for building.

1163. *Mr. O'Sullivan.*] Where do you get your stores from? *Via* Nyngan and Cobar. We get none from South Australia or Victoria by the river. We are about 123 miles from the river, and there is no road. We could get to Louth, which is only 100 miles away.

1164. Are there many other stations here held by the banks? Not many;—there is Wittagoona and Baden Park.

1165. Do many other stations like yours send their wool to Sydney and get their stores from there? Yes, the adjoining stations do.

1166. If the railway were taken from Cobar to Wilcannia would it be a great accommodation to all the stations along the route? Yes. It would not benefit us as much as it would benefit others, because the homestead would be 26 miles away from the railway.

1167. If a railway were constructed from Nyngan to Werris Creek, do you think that the station owners would avail themselves of that line to remove stock in time of drought to the mountain runs? Certainly they would. I went through three years drought the first time I came up here, and I would have done anything to get the sheep away. At present we have to stand by and see the sheep and cattle die.

1168. *Mr. Tonkin.*] Are there any minerals about this district? Yes, I think I am going to find a gold-mine in Bulgoo before very long. I know of gold having been found within 10 miles of here. There are no men working at mining about here at present.

1169. Will the construction of a railway to Wilcannia secure a traffic that now goes by the river? Certainly, there is Marsfield for instance. All their stock goes to Hay and Balranald. If we had a railway here they would use it—then there is Mount Murchison, which also sends its wool to Balranald.

1170. Supposing the river were half the cost of railway carriage, do you think that any of the stations would avail themselves of the Sydney market? I cannot say. Most of the people whose stations are along the river, have their wool sheds right on the river close to the steamers. It would be farther for them to carry their wool to the railway stations.

1171. Is the river navigable every season? Certainly not, it is very treacherous.

1172. When the river is not navigable would those people use the railway? Certainly. I have seen them myself bring wool from Nelyambo.

1173. *Mr. Copeland.*] How many acres have you on your run? 124,000 acres—62,000 in the leasehold, and 62,000 acres in the resumed areas. This year we have 25,000 sheep on the run. We lost a lot since last year. With lambs and everything we will have about 32,000 sheep on the the run. We have had a good lambing this year, about 50 per cent. This is an exceptionally bad year. Last year 52,000 sheep were shorn on the station.

1174. What rent are you paying? 1d. per acre for the leasehold, and ½d. per acre for the resumed area. The run will carry more than one sheep to 4 or 5 acres in good seasons, but in bad seasons it will not carry half that many. The average would be one sheep to every 5 acres. The average is about 400 bales per annum. This year I have 263 bales, averaging a little over 4 cwt. each.

1175. Is the difference between the number of sheep you had last year and the number you had this year on account of the number lost by drought? Yes.

1176.

1176. How many tons of wool have you to send away this year? About 50 tons. In a fair average season we would have 400 bales—that is about 80 tons.

1177. What do you pay for carriage between here and Nyngan? I believe Wright, Heaton, & Co. are paying about £4 2s. 6d. per ton, but our arrangement is to carry the wool right through to Sydney.

1178. Have you any cattle on the station? No.

1179. Do you consider the run is heavily stocked at present? No; it would carry another 10,000 sheep.

1180. Are you cultivating any land? Yes; 16 acres—some wheat, a little oats, and a small patch of lucerne. They are cultivated for hay. The yield is about 1 ton of hay per acre. Some years we get nothing, other years we get a splendid crop. This year we expect to get nearly 2 tons per acre. The wheat is now about 3 feet high, but it is somewhat late.

1181. What month did you sow in? In May, after the rain commenced.

1182. Do you think that you would have had a better crop if you had sown before the rain commenced? Yes, in April. The lucerne is flourishing. I am irrigating that from the tanks. It is now about 1 foot high, and it has only been sown since July.

1183. Are you satisfied that if reasonable precaution were taken to sow before the rain commenced that you could rely upon having a profitable crop? Yes.

1184. Out of the 164,000 acres which you hold, what proportion do you think could be utilised for cultivation if the land was cleared and sown before the rains commenced? Fully half of it.

1185. Would it not pay to cultivate in order to feed your sheep in case of drought, stacking the hay or making ensilage? I am afraid not. Although we have successful crops at times, the seasons here are bad as a rule.

1186. Do you anticipate that you will stock up the run? Yes, by the natural increase.

1187. Do you think that the grass or herbage has improved by the depasturing of stock? Yes; we have blue grass, Mitchell grass, crow-foot, and other natural grasses. There is no salt-bush here now. It has all gone since the sheep were put on. The pine scrub is rapidly increasing.

1188. Is that owing to the feeding of the sheep? Yes; I think the sheep press down the seeds of the pine. We have the emu bush, the mulga, the leopard wood, the rosebush; these are the most edible scrubs for sheep. The scrubs which are no value for sheep are yarran, sandal wood, budda, and the pine.

1189. Are the edible bushes increasing or decreasing? I think they are pretty stationery. The pine is the only thing which I notice is encroaching. There is no method that I know of for propagating those edible bushes.

1190. Have you any homestead lessees on the resumed area? None.

1191. Would much of the land on the resumed area be fit for homestead leases? I think so.

1192. Are there many yarran flats on the resumed area? Yes; but it is a good deal rougher than the Committee have seen—it is rather hilly.

1193. Is there as good land on the resumed area as on the leasehold area? Yes, in places.

1194. Do you think the country is sufficiently watered by tanks? We have five big tanks on the leasehold area, and two or three little ones. The leasehold area is divided into two paddocks. There are a couple of small horse paddocks.

1195. Would it not be more beneficial to divide it into smaller paddocks? Yes; the most profitable size would be 5 miles square with a good tank in the centre.

1196. If the bank consented, would you not have a considerable amount of work to do in excavating additional tanks? I would have one more tank to excavate, and I would have the fencing to do. I do not intend to do any ringbarking, but I intend to do some scrubbing if I am allowed.

1197. Would ringing and scrubbing materially improve the capabilities of the run? It would carry a quarter as many stock again if the pine were all rung. It would cost 8d. or 9d. an acre to scrub the land, and the same to ring it.

1198. In that case your yield of wool would increase 25 per cent? Yes; and that would give additional carriage to the railway.

1199. How many men do you employ on the whole run? Six. That is about the average number all the year round. I pay £1 to 25s. a week with rations to the men I employ. They are all Europeans except a Chinese cook. There are 25 horses on the run and 25 dairy cows.

Mr. Henry W. Davis, storekeeper and bookkeeper on Bulgoo Station, sworn and examined:—

1200. *Chairman.*] What is your occupation? Storekeeper and bookkeeper on Bulgoo Station for the last seven or eight years, with little intermission.

1201. Can you give us some information as to the rates of freight between Nyngan and Bulgoo? The station stores from Rowan & Co. cost, for carriage, £6 9s. per ton from Nyngan to Bulgoo. £3 is rather a high rate from Cobar to Bulgoo. We sometimes get it for £2, or sometimes 30s. from Cobar to Bulgoo. £8 may be put down as the rate of carriage from Nyngan to Bulgoo for this season. I have known it to be as low as from £5 to £6.

1202. How many teams a year are employed in bringing the station supplies from Nyngan to the Station? One dozen teams. The extreme loading would be 5 or 6 tons each team. The total quantity of goods would amount to about 50 tons during the year, at an average price of £5 or £6 per ton.

1203. Do you frequently employ your own teams to bring supplies in addition to those teams? Sometimes, but not frequently. There is generally a bullock team engaged. It goes into Cobar for goods. Sometimes we send wool down with our own teams and bring goods from Nyngan, but not often; 50 tons a year would cover the whole.

1204. Have you hawkers bringing you supplies of various kinds? Yes, six or seven last month. A great many come during the shearing time. We had fifty hands engaged this year, and the shearers generally buy from the hawkers.

Mr. Favel Salloway, publican, sworn, and examined:—

1205. *Chairman.*] What is your occupation? I am a publican. I have lived here for two years, but I have been in the district for ten years.

1206. *Mr. Hurley.*] Have you carried out any agriculture? Yes; this is the second year I have tried it.

1207. Do you consider that your crop is a satisfactory one? Yes.

Mr.  
A. Fulton.  
10 Oct., 1889.

Mr.  
H. W. Davis.  
10 Oct., 1889.

Mr.  
F. Salloway.  
1208. 10 Oct., 1889.

- Mr. F. Salloway.  
10 Oct., 1889.
1208. Have you any knowledge of boring for water? Yes, in mining. Since 1853 I was never off the gold-fields.
1209. Have you heard the opinion expressed, or have you formed the opinion yourself, as to this country being in a cretaceous formation? I do not say that that is the case here; but I believe we are very close to it, and that within 10 miles we could get water by boring.
1210. Have you had any evidence of it from personal observation? Yes; at Tiltagoona I saw a well where a man had sunk 90 feet. The water rose to 60 feet in the shaft. It is good soft fresh water, and the well is now being used.
1211. If that well had been bored deeper do you think it would come across an underground river? Yes. 30,000 sheep were watered there, and it has given a constant supply to many others. The country here is very similar.
1212. Would it give an enhanced value to your land if water were obtained here? Yes.
1213. Have you grown anything else besides what is now growing in your paddock? Yes; I have grown cabbages, melons, cauliflowers, peas, sufficient for ourselves and all who pass; and we have given bags of them away. The land we have cultivated is very prolific.
1214. Will the passage of the present Land Bill prevent settlement? I think so.
1215. Will the people within a radius of 10 miles gain an advantage by the construction of a railway to Wilcannia? Yes; it would be a great advantage.
1216. If you were selling out what value per acre, exclusive of improvements, would you place upon your land? I would want £5 an acre for it.
1217. Is there an abundance of land the same as yours within a radius of 15 miles of your holding? Yes; there are a great many more favourable spots.
1218. Where do you get your goods from? Sometimes from Sydney and sometimes from Cobar. I have got no goods by the river. I believe a contractor at Barnito got goods by the river.
1219. Would the railway obtain that kind of traffic? Yes.
1220. Is there any timber or ballast along the proposed railway line? There is plenty of box and plenty of ballast, consisting of loose slaty rock. There are indications of copper about here.
1221. Have you been through from here to Wilcannia? Yes; all the country is very nearly the same as it is here, and all very nearly the same value. It is better for agriculture the nearer you get to the river.
1222. *Chairman.*] Do you know where the line is surveyed from Cobar to Wilcannia? Yes.
1223. What is the nature of the country along there? From 10 miles out of Cobar to Barnito, which is 50 miles from Cobar, the country is stony and ridgy, and it cannot be avoided by the railway; but from Barnito all the way to Wilcannia it is all flat country like what it is in this locality.
1224. Is this crop you have in now the first crop that you have had? Yes.
1225. How many crops did you plant before that? Only one.
1226. Will this be a rich crop? It will not be an extraordinarily rich crop, but it will pay me.
1227. Is there any quantity of country in this locality suitable for growing wheat and oats? Yes; any amount far superior to mine.
1228. *Mr. O'Sullivan.*] Do you irrigate your land? No.
1229. Are they leasehold or resumed areas in this vicinity? Leasehold areas.

SANDY CREEK, THURSDAY 10 OCTOBER, 1889.

[The Sectional Committee met at the "Sandy Creek Hotel," at 8 p.m.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed railway from Nyngan to Cobar.

Mr. Edward W. Meredith, hotelkeeper, sworn, and examined:—

- Mr. E. W. Meredith.  
10 Oct., 1889.
1230. *Chairman.*] What is your occupation? Hotelkeeper.
1231. How far is it from here to Cobar? Forty-two miles.
1232. *Mr. O'Sullivan.*] How long have you lived in this district? Eleven years; I was formerly employed on Barnito Station.
1233. In what direction do the teams go from Barnito Station? They shear at Nelyambo and send the wool down the river.
1234. Which way do the teams generally go in this district? Most of the teams go from here to Cobar—no teams pass my door going towards the river. There is no main road from here to the river. The people about here obtain their goods through Cobar.
1235. When was your crop sown which you have adjoining the hotel? The last week in July.
1236. Is it in good condition? Yes, it is very good.
1237. Have any other good crops been obtained from that paddock? Yes; I believe three or four, about 2½ tons to the acre, were obtained in succession. It only failed once, and that was last year, on account of the drought.
1238. Do the crops fail entirely frequently in this district? Once in three or four years.
1239. *Chairman.*] Are you acquainted with any part of the surveyed line between Cobar and Wilcannia? Yes, with a portion that runs from Mulga Downs, which is about 45 miles from Cobar, to Barnito, which is about 60 miles from Cobar.
1240. What is the character of the country? Very flat and suitable for a railway. In parts it is well timbered with pine. There is a pretty fair quantity of box.
1241. Is there material suitable for ballast? Yes, in different places not far from the line.
1242. If a railway were constructed from Cobar to Wilcannia would people between this place and the railway line avail themselves of it? Most certainly.
1243. What stations do you know of that would be served by it? The Barnito, the Meadows, Springfield, Bulgoo, Mulga Downs, Inisowen, Tiltagoona, Bulla Bulla, Tiltagara, Pool Poola: these are all near the line.
- 1244.

1244. Are those all large grazing runs? Yes, fair sized runs—generally there is a large quantity of stock on them. A large quantity of wool would be sent away from those stations by the railway, and a large quantity of stores would be brought back.

Mr. E. W. Meredith.  
10 Oct., 1889.

1245. Have you heard any graziers in the district say that if a railway were constructed they would utilise it in sending away their stock in times of drought? No, but from what I know of the stations there is no doubt they would do so.

1246. *Mr. Copeland.*] Do you think there is much land in the neighbourhood fit to grow crops like your own? Yes, there is any amount of land like that in the district.

1247. What proportion of the land in the district would be fit for cultivation like yours? About one-third if it were cleared.

1248. Have you ever tried to grow grain allowing the wheat to ripen in the ear? No—it is always cut for hay.

1249. Would there be any market for hay in Wilcannia? There is always a market for hay and chaff in this district.

1250. If a railway were constructed right through would you be able to find a market in Wilcannia for any produce you could grow here? Yes.

1251. Do you know whether the goods which go up from the river go from Sydney to Hay and then come here? No; I think all the goods come from Adelaide, except a little. I think the wool also goes down to Adelaide.

1252. So that in the event of constructing the line through to Wilcannia we should simply be enabling the people to send their wool to Adelaide? No; they would send their wool to Sydney if a railway were made.

1253. Do you think they would send their wool to Sydney if they could send it by the river cheaper? There is no doubt that if a railway were constructed the squatters and graziers would send their wool to Sydney, and they would not send it out of the Colony.

Mr. John Cameron, manager of Marfield station, sworn, and examined:—

1254. *Chairman.*] What is your occupation? Manager of Marfield station, the property of Fartiere and Company. That station is about 40 miles south of the proposed railway to Wilcannia.

Mr. J. Cameron.  
10 Oct., 1889.

1255. What is your nearest point at present for sending wool and produce? This year we have sent it into Wilcannia on account of the river being up; that is a distance of about 60 miles. We usually send it to Hay. The distance by the river is shorter, and the freight a little cheaper, but very little, down to Port Victor, in South Australia.

1256. What number of sheep have you on your station? About 17,000, but we are bringing a lot of 24,000 on just now. I am now going to inspect 12,000 more, with a view to purchasing them. Our number of stock is low at present owing to the drought which killed our flocks right and left. We hung on to them to the very last. We kept them alive for fully twelve months on nothing else but the scrub, but then they had to go.

1257. What is the extent of Marfield station? About ten 10-mile blocks.

1258. Before the drought what number of sheep had you on the station? 86,000. The number actually lost was about 69,000; that was during the year 1888 and part of 1889.

1259. How are you off for water on the station? We are right enough; we have really good tanks all the way round. The sheep did not die for want of water but for want of feed.

1260. Have you made any efforts to grow produce for the sheep, or to save the pasture while it was good? Not so far.

1261. Is the run divided into small paddocks? We have a number of small paddocks for stud purposes, and so on; the ordinary paddocks are 5 and 6 miles square.

1262. What is the character of the bushes that sustain the stock in drought? Principally emu bush and mulga. We cut down a mixture of all sorts—hop bush, &c.

1263. Did they die because they ate up all those shrubs? There was not sufficient substance for them. They appeared to do well enough for a time, but I think after a certain time that sort of food tells upon them—they require a little grass with it.

1264. During that time would it have been practicable for you to have moved any part of the stock to other parts of the Colony? It would have been impossible; there was no feed anywhere.

1265. Supposing there had been a railway, within 40 miles of the station would it have been of any use for you to move the sheep? Yes; we would certainly have shifted them to wherever we could hear of feed—that is if there was no sale for them at the time. I had several letters from Mr. Fartiere asking me if I could not shift some of them, but it was an impossibility.

1266. If the railway were constructed would the wool and stock be sent by it in preference to the river route? Most certainly for 40 miles.

1267. What other runs are there within a reasonable distance of the proposed line of railway which would be served by it? Baden Park, which consists of about 3½ 10-mile blocks, and then there is Terawynia consisting of about eleven 10-mile blocks. There are about 30,000 sheep on the first named run and about 120,000 sheep were shorn on the second run this year. Then there is Mount Manara, consisting of about four 10-mile blocks—there are 21,000 sheep on that run at present. There is Kilfera run consisting of about thirteen 10-mile blocks, 80,000 sheep; then Nekarboo run, consisting of about three 10-mile blocks. They shored about 13,000 sheep after the drought, but they have been buying since. The area of a 10-mile block is 64,000 acres.

1268. With regard to the runs you have mentioned did they sustain great losses during the drought of 1888–1889? The majority of them did.

1269. Do you know what were the actual losses? I cannot say for certain, but I think they are about as follows. On Baden Park the losses were about 6,000. I do not think that Terawynia had any losses to speak of, as they had a shower of rain in the right time. The same happened with regard to Albemarle station. At Mount Manara the losses were about 9,000. Kilfera lost about 30,000. They started to shift some of the sheep during the drought towards Orange. They travelled them right through, but they did not succeed for want of pasture and water. On the Nekarboo station they lost about 13,000 or 14,000 sheep.

1270.

Mr.  
J. Cameron.  
10 Oct., 1889.

1270. If there had been a railway do you think the owners of those stations would have moved away their sheep during the drought? Yes, I have heard the owners say more than once that, if we had had out here the railways which are made about Sydney and Melbourne, they would have shifted away their stock, instead of allowing them to die on their hands.

1271. What does it cost your station per year for carriage, by teams, of your wool? From Marfield to Hay it cost £6 16s. 1d. per ton.

1272. What would it cost per ton to bring it to the nearest point on the projected railway line from Cobar to Wilcannia? At the outside it would be about 30s. We send away about 130 tons of wool from our station in a good season. This year we will be bringing in a great lot of goods for station purposes, because we are wire-netting our run. The ordinary average would be about 10 tons of goods per annum.

1273. Is any portion of your run suitable for agriculture? About half of it.

1274. Even in ordinary seasons? In good seasons.

1275. Have you many rabbits on your run? Yes, any number. The drought killed a lot, but they are now increasing very rapidly. I am working at them now with bi-sulphide of carbon, but it is very expensive and very slow. The bulk of the country is now undermined with rabbit burrows. They were very bad up to the time of the drought of 1888. I think they were gaining upon us. We had from eighty to 100 rabbiters on in 1888.

1276. *Mr. Copeland.*] Do you cultivate any land? Yes; there are about 31 acres in this year—19 acres of wheat and 12 acres of oats. I sowed in the beginning of May. It is a beautiful crop this year; it is now about 4 feet 6 inches high. We will cut it for hay, and I expect to get 1½ tons to 2 tons per acre. I think this country is better suited for wheat than for oats.

1277. Would it not pay to cultivate more land? Yes; I am sorry I have not put in more than 100 acres.

1278. Would it not pay to cultivate land so as to provide food for sheep in time of drought? Yes; especially for stud sheep. It is my intention to cut some natural grass this year.

1279. Have you tried ensilage? No; but I am thinking of going in for it. I think half of our run would be as suitable for cultivation as the portion I have cultivated.

1280. Have you any homestead leases on your run? No; the resumed area is the roughest part of the run.

1281. How many acres does it take to carry a sheep in average seasons? One sheep to 6 acres.

1282. Do you find the grazing capabilities of the land improved by depasturing sheep? Yes; when a lot of the low scrub and other stuff is taken off grass and other herbage comes up instead.

1283. In a few years will the land be capable of carrying more stock than at present? Yes; the sheep help to harden the country, so that the water runs into the tanks and the feed is also improved.

1284. Are you ring-barking any country? Not so far, and we have no intention of doing so. We scrub our horse paddocks.

1285. *Mr. Tonkin.*] Where do the stations you have mentioned send their wool? The Terawynia wool goes to Adelaide, the wool from Mount Manara, Baden Park, and Kilfera goes to Hay and thence to Sydney. Terawynia station belongs to Melbourne people.

1286. In the event of the railway being constructed from Cobar to Wilcannia do you think those stations instead of sending their wool by the river would send it by train to Sydney? If the railway were cheaper most decidedly they would send it by the railway.

1287. If the carriage was a little cheaper by the river than by railway, do you think they would send their wool to Adelaide instead of to Sydney? I think the railway would have the preference, because it is so much quicker.

1288. Will the stations you have mentioned be better served by the proposed line than by the Hay railway? Yes.

1289. Does any of the wool that goes to Hay go to Deniliquin and to Melbourne instead of to Sydney? Some of it goes to Melbourne, but the bulk of it goes to Sydney. If the proposed line were made probably the whole of it would go to Sydney.

1290. *Mr. Hurley.*] During the eleven years that you have been engaged on stations did you ever experience so bad a drought as that of 1888–89? No.

1291. Did you ever experience a season before that would cause you to send your sheep away from the district? Yes, once before. If a railway were in existence we would have had to use it twice to send away the sheep.

1292. *Mr. O'Sullivan.*] If a railway were in existence during the drought could you have brought up some fodder, and thus have saved the sheep? We could have helped them for a week or two, until we could have got them into the train. I daresay we could have fed some of our stud sheep, but it would not pay the station to feed all the sheep.

1293. If a railway were constructed from Nyngan to Wilcannia, and from Nyngan to Werris Creek, would the pastoralists avail themselves of it to remove sheep in times of drought? Yes, I think so.

1294. *Mr. Hurley.*] What number of hands have you employed on the station under your supervision? On an average we have about twenty men.

1295. What would be the average wages paid to those men? £1 a week and rations.

1296. So that for £50 a week that station is managed? Yes, at present.

1297. *Chairman.*] How far are you from Cobar by road at present? 149 miles.

1298. So that a railway to Cobar would be of no advantage to you at present? No. I do not think we would send our produce this way. It is a very rough track.

PADDINGTON, FRIDAY, 11 OCTOBER, 1889.

[The Sectional Committee met at "Belaraboon Hotel," Paddington Station, at 12 noon.]

Present:

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JAMES EBENEZER TONKIN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Michael Honan, publican, sworn, and examined:—

1299. *Chairman.*] What is your occupation? Publican; I keep the "Belaraboon Hotel."

1300. How many miles is this place from Cobar? About 72 miles.

1301. How do you get your goods here? Sometimes *via* Wilcannia from Adelaide, when the river is up; sometimes from Cobar. At present the cheapest route is from Adelaide by the river. However, that is not reliable, because sometimes there is no navigation for six months in the year. The surveyed line of railway from Cobar to Wilcannia is between 25 and 40 miles from this place.

1302. If that line were constructed as far as Cobar, would it be of any advantage to you? Yes; Sydney is the place where we all wish to get our goods from, because we are known to the merchants there, and we would rather deal with them.

1303. Would it be a greater convenience if the line were constructed to Wilcannia? Yes; I should deal direct with Sydney, and we would then be sure of getting what we wanted.

1304. Do many teams pass here? Yes; a great many. At present they come to the Paddington wool-scouring. After the wool is scoured it is taken to Hay and sent to Victoria or Adelaide.

1305. How far is Hay by road from this station? Close on 200 miles.

1306. Would the railway be of any advantage for getting scoured wool away? Yes; it would be quite close to the railway.

1307. Is this a central scouring place for the district? Yes; all the pastoralists wish to have the wool scoured, because it saves carriage and brings a better price at home.

1308. Is there much wool scoured at this establishment? Yes; they are getting wool at present from Fulham station, very close to the proposed railway line. They also get wool from Nekarboo station, 28 miles from here, and within about 14 or 16 miles of the proposed line. They are also getting it from Tiltagara station, 15 miles away. Then there is Mr. M'Pherson's station—Keewong.

1309. Is the carriage to Hay very expensive from here? £7 15s. per ton. It is a distance of 220 miles.

1310. Is this a good district for agricultural purposes? It is a very good country for agriculture, when there is anything like a fair average rainfall. It will grow anything with any country I have ever been in, and I have travelled in England, Ireland, and part of the Continent. I planted the crop which I have now growing a little over four months ago. We have had 9 or 10 inches of rain since then. The crop consists of wheat and oats. The oats are only an experiment, and I have sown 5 or 6 acres of them. It is a very satisfactory crop of oats. Some of them are now 5 feet 2 inches high. I expect about 43 cwt., to the acre of oats for hay.

1311. *Mr. Copeland.*] What is the height of the wheat crop? The average is 4 feet 9 inches. It is as good as you could find in New South Wales. I expect that will go fully 2 tons to the acre.

1312. How long have you been in this district? I have been in the district three years altogether.

1313. Do you think that your crop will be a fair average crop in a good season? I am perfectly certain of it.

1314. Is it difficult ground to work? No; the ground was lying fallow when I took it in hand—it had been partly cleared. I ploughed more than half of it and let it lie for a short time until the rain came; then I sowed it all myself. The area of the field is nearly 20 acres. It is not very laborious work to cultivate the land. The clearing is the principal part.

1315. Have you a good supply of water? I have a very good tank which was constructed before I came here. During the last drought it never went within 7 feet of the bottom—that is very exceptional in this district. The tank has been sunk deep so that evaporation is not so great as it would be if there was more superficial area.

1316. Is your land a fair sample of the country round for agricultural purposes? I fancy it is about the worst of it, because it is rather hilly.

1317. Are you unable to extend your present area? Yes. I do not know whether this is on the resumed or on the leasehold area. There are no homestead leases about here.

1318. Would you be glad to select an additional 600 acres if you could at £1 per acre? I would indeed.

1319. What do you expect to make out of the land you have cultivated;—how much per acre profit? Fully £15 per acre.

1320. Do you think, if this land were open for selection, there are other people who would enter upon cultivation? Yes; it only wants to be tried with a little capital.

1321. What would it cost per acre to clear your land? £20.

1322. *Mr. Hurley.*] If you were selling, what value would you place upon the land, apart from the improvements? £4 per acre.

1323. Is the land around you for a distance 10 miles equal to what you have got? Yes; provided it is cleared and worked.

1324. Is the market limited? We have a ready sale amongst the squatters without going to any market.

1325. Do you think that the western country has been faithfully represented or misrepresented when it was stated that it was of no use whatever? I believe it has been misrepresented. I have demonstrated that clearly here.

1326. Is there plenty of room in this district to give settlement to a large settled population? Yes; hundreds of thousands could be settled here.\*

1327. *Mr. O'Sullivan.*] Supposing you had had this crop here last year, and you had gathered it, what do you think you would have cleared? £1,500 or £2,000 on 20 acres alone.

1328. In what direction do most of the teams go that pass your door? Most of them to Wilcannia and Hay. Wilcannia is 120 miles distant and Hay 210 miles.

1329.

\* NOTE (on revision):—I meant "the whole western district" when I said hundreds of thousands could be settled there.

Mr.  
M. Honan.  
11 Oct., 1889.

Mr. Honan. 1329. If the railway came within 40 miles of your homestead, would it tap the trade that now goes to Wilcannia and Hay? I am certain it would. It would be cheaper. The teams from Wilcannia and Hay are not a certainty at present. We sometimes have to wait for two or three weeks.

11. Oct., 1889.

Charles R. M'Pherson, Esq., proprietor of Paddington Station, sworn, and examined:—

- C. R. M'Pherson, Esq. 1330. *Chairman.*] Are you part owner of Paddington Station? Yes; the whole run is called Paddington, and it consists of about eight and a half 10-mile blocks. At present there are 50,000 sheep on the station. At the beginning of last year I had 102,000 sheep on it. I lost about 30,000 during the drought, and I sold a great number—about 18,000.
1331. Where do you send your wool to market? This year it is all going to Hay—that is about 180 miles distant. If the river were navigable it would go to Melbourne. When the river is not navigable it goes to Sydney. In years like last year most of the wool would go to Cobar. The freight from here to Nyngan at present is about £5 10s. per ton. During the drought I paid as much as £12 per ton. At present the freight to Hay is £7 10s. per ton, and from Hay to Melbourne the freight £3 10s. per ton.
1332. At present, when the river is up, which is the cheaper mode of sending your wool to market? It is very nearly the same sending it by Nyngan to Sydney in good seasons. I do not believe that there is more than a shilling or two difference either way.
1333. Supposing a railway were built to Cobar, would that be any advantage to you for sending away your wool? Of course it would be.
1334. What quantity of wool did you send away during 1888? About 60 or 70 tons of scoured wool of our own.
1335. Did you scour for anybody last year? No; I had not any water to spare.
1336. Before the drought, what number of bales did you send to market? I had not lost any last year, and I sent away something like the same quantity as I did the year before. It was after shearing that we lost a great number of our sheep.
1337. If the railway were made to Cobar, would you avail yourself of that means of transit in preference to any other? Yes.
1338. What is the character of the country on the surveyed line of railway between Cobar and Barnito? It is all undulating scrubby country—the same as the country between Cobar and Sandy Creek. It is fairly level country for the construction of a railway. If the railway were made to Wilcannia it would be only 30 miles across to the railway from our shed.
1339. Do you grow any grain on your run? Yes; we grow some wheat for hay. We have 100 acres under crop at present. It will be a very fair crop this year. I expect to get about 1½ tons per acre.
1340. What is your opinion of this country as to its suitability for agriculture? Without irrigation I do not think it is fit for farming.
1341. Have you grown crops all the time you have been here? Yes; ever since 1880.
1342. What has been the average good crops during that time? If I count this season, I have had three good crops during all that time. There were only two years during that time that I had nothing to cut.
1343. In nine years you have had three first class crops? Yes.
1344. *Mr. Copeland.*] With the exception of two years, the other crops were ordinary crops? Yes; very patchy.
1345. *Chairman.*] Is there any other portion of the run suitable for growing crops of the same character? Yes.
1346. What extent of your run do you think is suitable for growing crops? I can hardly say. I think that the only place where you are likely to get a crop with safety is on a flat where you can get drainage from the high land—ground that gets soaked with rain.
1347. Is there not a large extent of this kind of country on this run? No.
1348. How many acres are there of that character of country? It would be hard to guess.
1349. Is the whole of your run fenced? No; there are about five and a half blocks fenced. About three blocks are not fenced nor improved.
1350. On an average, how many hands have you got employed on your run? About twenty hands all the year round; at shearing time far more. We have then, for about six weeks, sixty-six extra hands.
1351. If there had been any means of getting your stock away during the heavy drought, would you have availed yourself of it? Most certainly.
1352. Would a railway from Cobar have been of any use to you for that purpose? Yes; I could have got them to Cobar. I might have sent away 20,000 sheep. I should say that the same proportion would have been sent away by other graziers around here, and within 50 or 60 miles of the Cobar railway station.
1353. Have you suffered very much from the rabbits? Not so far, but they are getting very thick now. Before the drought there were a good many rabbits here; but I do not think they were ever thick enough to affect the feed. I think they are beginning to affect the feed now. We are growing wheat now for the purpose of poisoning the rabbits. We poisoned a lot last year, but when the drought came we could not afford the grain.
1354. *Mr. O'Sullivan.*] Where do you get your goods from? By rail to Hay. I usually get them from Sydney.
1355. *Mr. Copeland.*] Have you any homestead lessees on your run? No.
1356. Are the resumed area and the leasehold area about equal in quantity and quality? Yes.
1357. Do you think there is any likelihood of homestead leases being taken up on your run? No; I am not a bit afraid of it.
1358. Would you not be afraid of it if the railway were brought here? No.
1359. Would it not be possible for a homestead lessee to cultivate several hundreds or thousands of acres of land similar to what you have? They might in time; but there is so much country between us, further down, that I think it would be some years before we would be troubled with homestead lessees.
1360. Still there is land for them to take if they wanted it? Yes.
1361. What has been the rainfall for the last few years? The rainfall since 1878 has been as follows:—1878, 16·27; 1879, 18·55; 1880, 11·26; 1881, 11·98; 1882, 13·63; 1883, 11·25; 1884, 9·74; 1885, 17·73; 1886, 17·30; 1887, 28·35; 1888, 7·97; in 1889, up to date, there have been 18·39 inches.

NEKARBOO, SATURDAY, 12 OCTOBER, 1889.

[The Sectional Committee met at the "Thurmungya Hotel," Nekarboo station, at 8 a.m.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed railway from Nyngan to Cobar.

Mr. John Tomlinson, hotelkeeper, sworn, and examined:—

1362. *Chairman.*] Are you the proprietor of the "Thurmungya Hotel?" Yes.
1363. What is the distance from here to Cobar? About 96 miles.
1364. How long have you been here? Four months. I rent the premises I occupy and 80 acres of land, and I cultivate a paddock of 6 acres. I have a crop of wheat growing which I planted on the 5th June, which is very late, nevertheless it is doing very well, and on an average it is about 3 feet high. It is of very equal growth, and I reckon that it will yield 2 tons of hay per acre. I have also growing, cabbages, lettuce, carrots, parsnips, turnips, radishes, onions, rhubarb, beet, potatoes, cauliflower, peas, broad and French beans, pumpkins, cucumbers, and watermelons—they are all doing well. The soil is very easily worked. I am also growing peaches, apricots, apples, mulberries, quinces, figs, and grapes—everything is looking healthy. I think this soil is peculiarly suitable for grapes.
1365. Have you got an exceptionally good bit of land? No, it is all alike. All the flats are like this, and suitable for cultivation. In good seasons even the sandhills are as good as any other part.
1366. If there were better means of communication do you think more people would settle out here? Yes.
1367. Do you think that the people would avail themselves of the provisions of the Land Act with regard to homestead leases? Yes. I know I would. I have heard many say they would do the same.
1368. If there were smaller holdings than homestead leases provided for, would there be more settlement? Yes, because there are many men who cannot go in for homestead leases. It would require a great deal of money to take up 10,000 acres and fence it in.
1369. Is water conservation easy here by means of tanks or dams? Yes.
1370. Were you in the district during the drought of 1888-1889? Yes.
1371. Were the people who had built dams provided with water then? Yes; those who had good big tanks. Some of the squatters had very small tanks, and they did not last long enough. It is necessary to sink the dams deep in this country.
1372. *Mr. O'Sullivan.*] Which way do the teams go with wool? They generally go to Nyngan from here. I never knew any to go from here towards the river until this year. Mr. Moule, of Fulham station, sent his wool that way this year. I get my stores from Cobar, and I pay £8 per ton for cartage. If the railway were made from Cobar to Wilcannia it would not cost me one-fourth what it costs now to get my goods. I think the people about here would avail themselves of the railway if made.
1373. *Mr. Tonkin.*] How deep would you have to go into this red soil before you would get into a formation that would not hold water? You could not get into anything that would not hold water. The only risk would be that you would strike rock.
1374. Does the red soil go right on to the rock as a rule? Yes.
1375. What is the depth of this soil? Lots of these tanks are 12 feet deep, and it is all good soil right down to that depth; 12 feet is about the deepest.

Mr. J.  
Tomlinson.  
12 Oct., 1889.

Sydney Walker, Esq., part proprietor of Nekarboo station, made an affirmation, and was examined:—

1376. *Chairman.*] Are you part proprietor of Nekarboo station? Yes; it is distant from Cobar about 100 miles. The extent of our holding is four 10-mile blocks. We have on it at present 11,000 sheep, about forty horses, and thirty head of cattle. For the last three or four years since we stocked up and had the country improved; we have shorn about 30,000 grown sheep, and about 12,000 or 14,000 lambs. There would be about 40,000 or 43,000 sheep on the run at shearing time.
1377. What has been the cause of the falling off in the number of sheep? The drought of 1888-1889. We had about 30,000 grown sheep on the run when the drought set in, but when we mustered last April we could not muster more than 11,000 sheep, so that we lost 19,000 grown sheep, and also 80 per cent. of the lambs from 14,000 ewes.
1378. What efforts did you make to save your stock? We tried scrub-cutting, but not with very great success. Owing to the great season we had during the previous year we had a very large supply of dry grass. The country was looking wonderfully well. We consider that what sheep we did save were saved by the amount of old pasturage which was left, although it was very dry.
1379. How long have you held this station? Nine years.
1380. What has been your experience with regard to the growth of scrub during that period? It has increased. We have burnt off a good deal in patches, owing to the great amount of grass there was in 1887.
1381. Does the increasing growth of scrub spoil the pasture? Yes, very much.
1382. Why do you not seek to reduce it? On account of the expense that we have been put to in improving the country, and the uncertainty of our tenure hitherto. The improvements we have made consist of tanks, fencing, homestead, wool sheds, yards, and all the ordinary station improvements.
1383. Now that the land law has been amended, do you think you are likely to go in for improvements in the way of scrubbing and clearing? If we could see any hope of getting rid of the rabbits, I should say we would be hopeful enough to make improvements. I think the rabbits are the greatest difficulty we have ever seen out here and I have been in the western division within 100 miles from here for the last twenty-two years, and I have seen a great many droughts.
1384. Do you intend taking steps to reduce them? It is a question so beset with difficulty that we are waiting at present to see what can be done.

S. Walker,  
Esq.  
12 Oct., 1889.

- S. Walker, Esq.  
12 Oct., 1889.
1385. What is the carrying capacity of this country? It was put down by the appraiser who appraised it under the 1884 Act as 8 acres to a sheep. I think that is fair.
1386. What quantity of wool do you send away per annum? About 400 bales will be the average for the last five years. We send our wool nearly always to Nyngan, occasionally to Hay. These places are equi-distant. For the last two years £6 10s. has been the union rate of cartage to Nyngan.
1387. During drought or bad seasons what do you pay for cartage? We then pay fancy prices. It was as high as £12 10s. per ton last year. We had great difficulty in getting cartage, even at that high rate.
1388. Where do you get your supplies from? Principally from Sydney. We get some from Cobar.
1389. Would it be any advantage to you if a railway were constructed to Cobar? Yes, a very great advantage. The freight would be considerably reduced and it would always be a certainty. We could always get to Cobar. But the country between Cobar and Nyngan is not suitable to cattle which are used to this part of the country. They immediately fall off when they pass Cobar.
1390. Have you ever considered the question of getting stock away in an extreme drought if you had the means of doing so? Yes; but it is hopeless for us out here to do anything of that kind. If there was a railway to Cobar it would be a perfect God-send to us in that way.
1391. Do you think that during the heavy drought of 1888—1889 you could have got a number of your sheep away? Yes, we could have saved all the wethers.
1392. Do you know the surveyed line of railway from Cobar to Wilcannia? Yes; I know it from Cobar to Paupooloe Lake—that is about 100 miles from Cobar.
1393. What is the character of the country there? It is mulga country,—good useful grazing country. There are small rises and there would be no heavy cuttings. Here and there there is sandstone rock, but there are very easy grades and the character of the country is similar to the country traversed between Double Gates and Paddington. The nearest point from our station to the surveyed line is about 40 miles. There could be a direct road opened.
1394. Therefore that extension would be a still greater benefit to you than if the line were made only to Cobar? Yes.
1395. Have you any cultivation on your run? We grow a little wheat, about 13 acres for horse feed—the wheat grows well. We have not done well as a rule—the drought has been against us but this year we have a very good crop. As we cut it green we cannot tell what the yield will be. Every part of the run where there is not stone or rock would grow good crops if there was sufficient rainfall.
1396. Have you many tanks? There are six large tanks ranging from 4,000 yards to 15,000 yards. There are several smaller ones. It is all good holding ground. Until last year we never had one of them empty after they had once been filled.
1397. What rent are you paying? Half-penny per acre for the leasehold and something under that for the resumed area.
1398. Do you think that this country is suitable for homestead leases? A great deal of it would be suitable if there was access to market.
1399. Have you heard anyone express an opinion that they were likely to take up homestead leases? I have heard teamsters and others say so.
1400. Does much wool go from here to the river? Not so far as this. Between here and Cobar very little goes to Wilcannia.
1401. Speaking generally, do you think that a railway to Cobar, with a possible extension to Wilcannia would be a benefit to the district? It would undoubtedly be a great benefit to the district and it would promote settlement, thus increasing the revenue derivable for railway freight.
1402. Do you keep a rain gauge? Yes. In 1887 the rainfall was 25 inches, in 1884 a trifle over 4 inches—this year we have had 13 inches.
1403. *Mr. Copeland.*] Is your run fully stocked? No, it is only about one-quarter stocked. If fully stocked it would carry 40,000 sheep in its present state.
1404. Do you think it would improve the carrying capability of the country if it were scrubbed and the timber ringbarked? There is not the slightest doubt it could be improved very much. You could then put on one half the present stock in addition, if you could not double the stock. I believe that ringing and scrubbing has been done out here at about 1s. 6d. by Chinese gangs.
1405. Have you any intention to do any ringbarking and scrubbing? We have not made any application. We would like to do so if we saw things were hopeful.
1406. How many men do you employ? About three or four on an average all the year round—that is irrespective of shearing and lamb marking.
1407. *Mr. Hurley.*] Do you think that the blocks you hold are in a cretaceous formation? I think it is hardly probable that artesian water can be obtained here. Water has been got at a comparatively shallow depth.
1408. In excavating tanks what do you pay per yard? About an average of 1s.
1409. Have you ever tried ensilage? We made a little experiment but hardly enough to say whether it would succeed.
1410. If successful would it be a great benefit? Yes, for horses and cattle.
1411. *Mr. Tonkin.*] Do the runs to the west of you avail themselves much of the river for the carriage of wool and stores? North-west of us they do, but scarcely to the west.
1412. If a line were constructed from Cobar to Broken Hill do you think that those people would be induced to utilise the line instead of sending their wool and stores by the river? I think so because the river is very uncertain. Of course if the water carriage were certain nothing could compete with it, but it is so risky that although we are within 100 miles of Wilcannia we have never used the river.
1413. If this railway were constructed would you not have some inducement to stock your run heavier? Yes, we could remove stock if necessary.
1414. Where does the wool from the stations to the north-west of you go to? Generally speaking either to Nyngan or Hay. More goes to Nyngan than to Hay.
1415. *Mr. O'Sullivan.*] What is the reason for the pastoralists here sending their wool to Hay? I suppose it is the water carriage when they reach Hay.
1416. Do they place it on board steamers at Hay for Melbourne and Adelaide? Yes.
1417. In a dry season if a line were constructed from Nyngan to Wilcannia would it give you a cheap and speedy means of obtaining fodder? Yes, that would be amongst its other benefits; by that means we could maintain alive many thousands of sheep.
- 1418.

1418. If an extension of the railway were carried from Nyngan to Werris Creek would it be a great advantage to pastoralists here? Yes, a very great advantage.
1419. If the railway were carried to Wilcannia and Broken Hill would it give access to a good market for pastoralists for slaughtering purposes? Yes.
1420. Are the pastoralists out here generally satisfied with the recent land legislation? I think the new Land Act is regarded as favourable here. It gives fixity of tenure, which is a very great boon, and which has relieved us all out here.
1421. Are the pastoralists, therefore, likely to initiate improvements on a large scale? No doubt that would be the case if the rabbit difficulty could be disposed of, or if some hope could be given to us with regard to that difficulty.
1422. What is the best method of disposing with the rabbit difficulty? Wire netting is the only method that has proved at all successful, and that is not altogether a success. I should be very glad to have my run fenced if I had the money to do it.

S. Walker,  
Esq.

12 Oct., 1889.

Charles G. Moule, Esq., part proprietor of Fulham Park Station, sworn, and examined:—

1423. *Mr. O'Sullivan.*] What is the name of the station of which you are part owner? Fulham Park, it adjoins Nekarboo Station.
1424. Is the evidence which you are able to give similar to that given by Mr. Walker? It is almost exactly the same.
1425. What are the dimensions of your run? Three 10-mile blocks. I have 15,000 sheep on it, twenty-two horses, and no cattle. It is 115 miles distant from Cobar. The rainfall is about the same as it is on Mr. Walker's station.
1426. Where do you send your wool to? Hay, as a rule. This year I sent it to the river at Wilcannia. It is the first time I have done so for five years. From Wilcannia it will go to Melbourne. I do not get stores from Melbourne, but from Hay.
1427. Are there many other pastoralists around you who send their wool to Wilcannia? In a year like this the wool goes to Wilcannia, but generally it goes to Hay.
1428. If a railway were constructed through this district, would the pastoralists who now send their wool from your neighbourhood to Wilcannia and Hay, be induced to send their wool to Sydney? Undoubtedly they would.
1429. Would they be likely to allow the cheaper rates by river to weigh against a more speedy and certain access to the sea port? The wool would go the cheapest way.
1430. Is not time an element? You would have to balance that.
1431. Considering the river is very uncertain, and that the wool may be stuck up there for months, if not for years, would you take that risk for the sake of getting a lower rate instead of sending it by a speedy certain means to Sydney? No; it would go by train at once.
1432. Do your views represent the views of the pastoralists around you? Yes. I wish to say something with regard to the rabbits: After the rabbit subsidy was discontinued we started poisoning on our own account with very great success. I would have gone on with that if we had had any encouragement. When I sent in my claim I had the voucher returned to me—it was only for £10, but still it was discouraging. I had to be at the loss of that money, and I would not go on any farther. The men whom I had employed rabbiting had gone away, so that I could not follow up the matter, and a squatter's word would never be taken by those rabbit inspectors. We had to go and swear before a magistrate that certain work had been done, and if a rabbitier said anything against us we were defeated. The operation of the Rabbit Act was very unsatisfactory. We were forced to pay 6d. per scalp although we could get the work done for 4d. per scalp—the inspectors told us that unless we paid the men 6d. per scalp we would not be paid any subsidy. We could easily have got the work done at 2d. or 3d. per scalp at the same time.

C. G. Moule,  
Esq.

12 Oct., 1889.

KEW, SATURDAY, 12 OCTOBER, 1889.

[The Sectional Committee met at Kew Station at 8 p.m.]

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Keppel A. Turnour, Esq., owner of the Kew Station, sworn, and examined:—

1433. *Mr. Copeland.*] Are you the owner of the Kew station? Yes.
1434. What is the area of your run? 64,400 acres. It is all leasehold area. I have on it at present 10,500 grown sheep and 6,000 lambs. The latter has been the increase for this year.
1435. Did you lose any sheep during the drought last year? 1,500.
1436. What is the distance from here to Cobar? About 140 miles. We are 65 miles from Wilcannia. I believe we are about 30 miles from the proposed railway route.
1437. How much wool did you send away last year? About 18 tons. Last year I had less sheep than I ever had before, because I sold almost all my sheep in the face of the drought. Last year I sent away 89 bales of wool, but the year before I sent away 199 bales. The year before I had 15,000 sheep.
1438. Where did you send your wool? The clean wool went by the river for shipment at Port Victor, South Australia—The remainder I sent to be scoured on Priory Station.
1439. What do you pay for cartage to the river? £3 15s. per ton.
1440. How much from the river to Port Victor? 37s. per ton.
1441. Where do you get your stores from? Wherever we can get them cheapest—generally in Wilcannia.
1442. What do you pay for your stores coming back? I have paid all prices. The average price is between £3 and £4. It varies from £2 10s. up to £5 per ton.

K. A.  
Turnour, Esq.

12 Oct., 1889.

1443.

- K. A. Turnour, Esq.  
12 Oct., 1889.
1443. How many tons of supplies do you get to the station during the year? Last year I had 40 tons of wire netting. The year before that I had 15 tons of fencing wire—23 tons of wire netting came by Balranald and the rest I got by Nyngan.
1444. If the Railway were constructed by Nyngan to Wilcannia would you be likely to make use of it to send your wool to market and to get your stores? Yes, if I could get them cheaper by rail than by river.
1445. If the river were up would you make use of the railway to send your wool to Wilcannia? That would depend upon the cost.
1446. If the railway were built would you still continue to use the river under ordinary circumstances? If the river were navigable and it would carry my produce cheaper I would send it by river. On the other hand if the river were not navigable I would send it by the railway. Generally speaking there is no river and therefore the railway would be availed of.
1447. If the railway were constructed and a drought were imminent would you be likely to make use of the railway to get rid of your stock? Certainly. That would be a very great advantage and would make all the difference to the people out here. I believe it would go a great way towards insuring us against loss of stock by drought, and no doubt it would materially enhance the value of my holding.
1448. Do you anticipate that freezing works would be established if the railway were constructed? Yes. We should always be able to see far enough ahead by carrying a fair amount of stock to have a surplus of fat sheep which we could send in to be frozen, and thereby we would be able to relieve our runs in case of dry weather.
1449. Where would be the most suitable place for a freezing depôt? Wilcannia is our centre and I believe it would be a grand one.
1450. How many people do you employ generally to work your station during the year, exclusive of shearers? Three.
1451. In addition to that, have you had contractors putting up fences and so forth? Yes.
1452. What is the rate of pay? I pay £1 a week, and during shearing time 25s. a week; and if they stop with me a year I give them £5 bonus—they get rations.
1453. How many men have you shearing? Ten; I have not enumerated three house servants.
1454. Do you consider that your run is fully stocked at the present moment? No.
1455. Do you think that the run is improved to its utmost carrying capacity? Certainly not.
1456. Is it your intention to improve it further by ringbarking and scrubbing? Yes, that would fully treble its carrying capacity—that is by adding more water and making smaller paddocks. I would spend money in that direction on account of the new Act giving us a longer lease.
1457. If the appraisalment is satisfactory do you intend to improve? Yes.
1458. What is the edible herbage on your run? Salt and cotton-bush, and a variety of other herbs. There is coarse grass but very good grass. Crow-foot is good grass, but it only lasts during the winter months. We have mulga, rosewood, hopwood, puntu, a few wilga kurrajong and ballar trees. We have no pine scrub. To deal with the rabbits we have put up wire-netting. I spent thousands in killing rabbits, but I am afraid with very little effect, before I put up the netting.
1459. Has the netting been very beneficial? Certainly. I do not think it has had a fair trial. The netting was put up during the drought, and we have not suffered so much from the rabbits since the drought broke up. The rabbits all died out during the drought and they have never recovered. I believe the netting is efficacious—it enables me to deal with my own rabbits, instead of with other people's.
1460. What is the largest number of rabbits you have killed in any given time? 24,000 in one month.
1461. How many were killed altogether? 315,000 actually killed. The Government did not pay for all the scalps. This is the smallest station in the western division. At present, the rabbits are no trouble at all to me.
1462. We notice that a great many of the trees and bushes have been ringbarked and killed—is that the work of the rabbits? Yes.
1463. Has that very materially increased the quantity of grass? Yes; it has given it a much better sward, and I believe it has sweetened the country, but that has to be proved.
1464. As you keep a rain-gauge will you give us the record for the past few years? In 1887, 25.77 inches; in 1888, 4.29 inches; of that 1.24 inches fell from the 19th December to the end of that month. The heaviest fall in winter was .82 inches in May, when nothing would grow. The record up to date of this year is 16.10 inches. The drought really broke up at the beginning of April.
1465. Have you any purchased land on the run? Yes; 200 acres, of improvement purchases. The only cultivation I have is the garden. There is about one acre of lucerne which has grown well this season. I only put it in this year, and so far it seems to thrive.
- 1466-7. Have you much land that would be equally suited for cultivation? The land *per se* is suitable, but I cultivate this particular piece of land because of its vicinity to the water. All the land on the run is practically as good as that which I cultivate. The character of the soil here is a light loam with a good sub-soil.
1468. Leaving out the question of irrigation, have you a large amount of land as suitable for cultivation as the land on which your crop is now growing? Yes, I have only watered this crop once.
1469. What vegetables do you find thrive? Root crops, particularly turnips, parsnips, carrots, and beet. Potatoes seem to grow remarkably well, and also cabbage, lettuce, onions, and all kinds of vegetables and fruit trees—apricots and vines do the best, quinces do very well.
1470. Did you plough the land in which you sowed lucerne? Yes; not deep. I have never tried wheat or oats.
1471. How many horses and cattle have you on the run? 53 horses and 87 head of cattle, including calves. The horses and cattle thrive well except in drought.
1472. Have you cut any grass for ensilage? Yes, 35 tons. I have constructed two silos and a stack.
1473. Have you had any experience of it yet? No, but I believe it will be good. It has cost about 5s. or 6s. per ton to conserve it, and it will cost about 3s. to take it out of the pits and throw it to the sheep. I believe that we took off 1½ tons of grass per acre. We took it where the grass was best.
1474. Do you intend to cultivate more lucerne under favourable circumstances? Yes.
1475. What is the most effective mode of destroying the rabbits that are left on the run under present circumstances?

ci cumstances? Carbon; and in summer time, when it is dry, fencing off the tanks with wire netting, so that the rabbits can come down to the water but cannot get out. We then kill the rabbits inside the netting. When we administer the carbon we pump it down the burrows with a machine and set fire to it.

K. A.  
Turnour, Esq.  
12 Oct., 1889.

1476. Do you know anything about the nature of the country along the proposed railway line? I know the surveyed line from here into Wilcannia; it is all flat country. It is flatter country than the Committee has travelled over.

1477. *Mr. Hurlley.*] Have you a good many tanks on your run? Yes, they cost me all round 1s. per yard.

1478. Is the character of the country about here similar to the country between here and Wilcannia? Yes, it is perhaps better as you go to the river.

1479. If the country were more generally known would a more favourable opinion be formed with regard to it? Yes, if people could live out here cheaper than they can at present.

1480. Is there a large area suitable for people who wish to make homes for themselves? They could make a living under suitable circumstances. I refer to small graziers particularly. I do not say anything about agriculture, because I know nothing about it.

1481. Is there any metal along the line suitable for ballast? I think so;—there is a granite formation.

1482. Has there been any attempt at artesian boring in the district? No. I have heard people say that we would probably get artesian water here, but I do not think it has ever been tested.

1483. Do you believe that the railway would be a great benefit to persons living within 50 miles of it? Yes, and I also believe that it would open up the country. At the same time I do not think the railway would compete with the river if it were navigable. We will never have a population out here unless people are able to get away their stock, in order to avoid the terrible risk of the loss of stock.

1484. There is a proposition to construct a railway from Werris Creek to Nyngan, which would bring you into immediate contact with New England;—do you think that this district would send sheep in times of drought to those districts? That would depend upon the cost of transit.

1485. Do you think that the proposed railway to Wilcannia would tap any of the trade of the Paroo country? I think it would tap a portion of it.

1486. Where do you send your wool to when the river is not navigable? We store it at Wilcannia. The dirtiest of it is scoured, and sent to Sydney for shipment by way of Nyngan.

1487. Is Nyngan your natural place for the despatch of wool when the river is not navigable? For scoured wool it is, because it is scoured nearer Nyngan.

1488. How long is your wool stored before you can get it away to the sea port? About three or four months. Up to this year I have not had it stored for a great length of time.

1489. How often during the time you have been here has the river been navigable? This is the first time for three seasons.

1490. If the railway were constructed to Wilcannia, and there were anything like fair rates, would you be likely to take advantage of that railway to send your wool to Sydney? There is no doubt I would. If there were a railway, sooner than store wool at Wilcannia with the uncertainty of the river, there is no doubt people would avail themselves of the railway. On the other hand, if there were a good river, no one would think of using the railway.

1491. If the railway were taken over to Broken Hill do you think there would be a good market there for the sale of fat stock? I do not know, but the chances are that there would be. We would be in a better position to supply that market than others, assuming that there were some conveniences for putting live stock into trucks. Assuming that Broken Hill will increase, and be available for us, that line would open up a new trade altogether for us. I believe that at present Broken Hill absorbs all the local surplus stock.

1492. *Mr. Tonkin.*] Where do you send fat stock to now? To Melbourne or Sydney—I have sent them to both places. I send to Melbourne by Deniliquin. It costs about 2s. 8d. to send them to the Melbourne market, and 2s. 4d. to the Sydney market.

1493. If you had to drive the stock only 20 miles to the railway, would not that be much cheaper than sending them to Melbourne? Yes.

1494. When the river is navigable, what time does it take to deliver your wool at Port Victor? About six weeks.

1495. Are there always vessels there ready to take your wool? Yes.

1496. If the railway were constructed so that your wool could be delivered in Sydney in one week, would it not pay you better to pay a little extra freight, so that the wool might reach the London market quicker? I think so. Although, if an owner were independent of the banks altogether, he might prefer to wait a week or two longer for his money, and send the wool by the cheapest way.

1497. Independently of that, is it not an advantage to get your wool to the first sale? I do not think so. I do not think the opening sales are the highest.

1498. Would the construction of this railway tend to make Sydney a larger port for the export of wool than it is at present? I have not the slightest doubt about that. It would not only intercept a lot of river traffic, but also a lot of traffic that goes to Balranald and Hay, which invariably goes to Echuca.

1499. In sending your wool by the river have you to store your wool for three months as a rule? Yes. There is a question which is of great importance,—that is, the fitful nature of the river when there is only a fresh coming down and it will only last for a certain time, the owners of the boats take advantage of it and they say “We will not take your wool unless you can give so much freight.” It is only when there is a permanent river for a certain number of months that there is any competition, and you get your wool down cheap.

1500. Taking all these things into consideration, do you not think that if the railway were constructed that a very large percentage of the wool that now goes by the river would go by rail? Yes.

1501. Even if an extra rate were charged by the railway? Knowing how uncertain the river is, if the railway would take the wool at a relatively reasonable price, I do not think people would store their wool. But if there is a certain river for months to come, I do not think the railway would be in it.

1502. Is there any difference in the freight charged by the vessels which leave Sydney and Adelaide for London? I believe there is a difference in favor of Sydney, but I do not know.

1503. *Chairman.*] What has been your experience as regards the healthiness of this climate? It cannot be beaten.

## MURTEE, MONDAY, 14 OCTOBER, 1889.

[The Sectional Committee met at Murtee Run, at 1 p.m.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Henry Roach made the following statement:—

Mr.  
H. Roach.  
14 Oct., 1889.

1504. I have been a shepherd on this and other runs in the district for the last ten years. The seasons are the only drawback to the prosperity of the country. During the drought of 1888, 10,000 sheep were lost by starvation on Murtee run. On the adjoining run of Bellera the loss in the same year amounted to 55,000 sheep. Near my hut a good well has been sunk to a depth of 40 feet. There has always been about 6 feet of water in the well, which can be pumped out in about an hour and a half. If the well is allowed to rest for an hour or so afterwards the water regains its former level. The water is of excellent quality. In the 8-mile paddock on Murtee there are several lagoons which have never been dry since the drought of 1885. They did not even go dry in the drought of 1888. With proper conservation permanent water could be kept on the run. All the wool from the run is sent to Melbourne for shipment, and I believe the same is the case with most of the runs in this locality, as most of the owners are either Melbourne or Adelaide people. The wool is stored until the river rises and becomes navigable. In some cases the delay extends over a very long period. I do not think there would be much use for a railway here, as after the wool season is over there would be little or no freight. If the Darling were locked the freight could go to Bourke, and thence to Sydney. The owner of Murtee run has cut a stack of natural grass upon one or two occasions, but the horses did not seem to care for the feed. We have never cut the grass for the purpose of feeding sheep. I do not know of many places on the run where a well could be sunk with such good results as in the case before referred to.

## WILCANNIA, TUESDAY, 15 OCTOBER, 1889.

[The Sectional Committee met in the Court-house, Wilcannia, at 10 a.m.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Ormond C. MacDougall, Esq., Mayor of Wilcannia, sworn, and examined:—

O. C.  
MacDougall,  
Esq.  
15 Oct., 1889.

1505. *Chairman.*] What position do you occupy? I am Mayor of Wilcannia, and will have been two years in that office next February. I have been an alderman for three years. I have been a resident of the district for twenty-three years, but I have been away at intervals.

1506. What business do you carry on? Stock and station agent.

1507. How does the wool and the bulk of the other produce of the district go to port? It is taken by river when the river is open. At other times, since the Broken Hill railway has been made, it is conveyed to Broken Hill. When the river is open the goods always go by the river. On some of the stations they keep the wool rather than send it to Broken Hill.

1508. What is the freight from here down to the port by the river? To Morgan, the nearest railway station on the South Australian border, it is 25s. to 30s. per ton. This is exceptionally low, and the steamers are not paying expenses. I do not know what the railway freight is, but Morgan is about 100 miles from Adelaide.

1509. Is there very great inconvenience when the river is not navigable? Yes.

1510. How long has wool been kept here for want of transit? Something over two years—that was exceptional. I have known it to be frequently kept for twelve months. As much as can be stored is stored in the town, and the rest is stored on the station.

1511. Does not that cause great loss of interest to the grazier? Yes; and a certain amount of risk, too.

1512. If a railway were constructed from Nyngan here, do you think it would always be availed of for the transit of wool? It is impossible for me to say, but I have heard several of the station people say that they would always avail themselves of the railway, as there would be no re-shipping and re-loading, but it would be straight ahead work, and they would always be able to get away their wool, and save insurance.

1513. What is the population of Wilcannia at present? Between 1,000 and 1,200. The population has been at a stand-still for about three years. Prior to 1884 it was an increasing population.

1514. What is the reason of its remaining at a stand-still? On account of the Land Bill no improvements were going on on the stations.

1515. If the railway were made what would be the chief commodities which would be sent from here to Sydney? Wool would be the principal. Sheep would also be sent; probably, if irrigation were carried out, fruit would also be sent.

1516. In times of drought would live stock be sent by the railway? Yes, in very large numbers. It would be hard to say what number of sheep would have been saved during the last drought. The loss of stock here was then very great. One station, only 70 miles away, lost about 32,000 sheep out of 42,000.

1517. What do you think of the fitness of this district for agricultural purposes? With irrigation, it is suited for agriculture. The soil is good enough to grow anything.

1518. Where land has been watered does it bear out that statement? Yes.

1519. Has the district been tested for the growth of various fruits? Yes, they thrive very well. Grapes, oranges, peaches, lemons, and apricots do well. The soil is very good for the growth of lucerne. Wheat has only been grown for hay, and it has been very successful under irrigation.

1520.

O. C.  
MacDougall,  
Esq.  
15 Oct., 1889.

1520. Has irrigation been carried out very extensively? No.
1521. Has any successful attempt been made to carry out artesian boring? Not close to this place.
1522. How often has the river been closed to navigation during your residence here? That has been the rule, not the exception. The river has been sometimes up for three or four months, or six months. I have known it to be navigable for twelve months.
1523. In a season like this, when there is abundance of natural grass, has any of it been saved as ensilage with success? Yes. They have only gone in for ensilage this year. At Nettalie station they have 200 tons of ensilage.
1524. How do the people view the present Land Act? They think it is a great improvement on the last one. I think advantage will be taken of the present Act to make improvements.
1525. Do you think that homestead leases will be taken advantage of? I do not think there will be much settlement under those leases until there is better access to market. The want of a market is the great difficulty.
1526. Is there any probability of auriferous deposits being found within 50 miles of this place? There are prospects here. On the Mount Browne road, 100 miles away, there are favourable reports as to the prospects.
1527. Is the building stone which is used in this town obtained in large quantities here? Yes, there is any quantity of it 3 miles from the town.
1528. Is there any timber available for railway sleepers here? No; there are no ironbark forests. The largest timber are the gum trees grown on the river.
1529. Is there any ballast to be obtained between here and Broken Hill? Yes.
1530. Where do the people in this town generally get their stores from? From Melbourne, I think.
1531. Would not a great deal of that trade continue if you had a railway from Sydney? I do not think so. People would be able to get their goods at such short notice from Sydney that it would pay them better to get their goods there.
1532. *Mr. Tonkin.*] What price is paid for the carriage of goods from here to Broken Hill? I think the lowest price is about £9 per ton, and up to £20.
1533. Since the railway was opened at Broken Hill have the squatters stored their wool? Yes. That is on account of the high charge for cartage from here to Broken Hill.
1534. If this railway were constructed, do you think the squatters would utilise it to carry their wool to Broken Hill instead of to Sydney? The stations around here would certainly go to Sydney. Those nearer to Broken Hill might go there, although, even in that case, it would depend upon the rate of freight.
1535. Has much wool been sent this season from Broken Hill to here? No; but I believe some is going now, because some people are afraid that they cannot catch the river.
1536. How far west of this place does wool come to the river instead of going to Broken Hill? From Cuthawarra, 50 miles from here, to the river. I cannot speak about the others.
1537. Are the runs about here fully stocked? They are not half stocked at present, owing principally to the late drought.
1538. If the railway were constructed would it tend to increase the stocking of the runs, seeing that the squatters would be able to remove their stock in case of drought? Yes.
1539. Do you think the station owners about here could have reduced their losses by preserving food in abundant seasons by making hay or using silos? I do not think they could go in for ensilage or hay to a sufficient extent. A station with 200,000 or 300,000 sheep would require a great deal of ensilage.
1540. Would you be surprised to hear that there are plains between here and Cobar where there is more than one ton per acre of natural feed which could be made into hay? I think there are very few places where one ton to the acre could be obtained.
1541. *Mr. Copeland.*] What is the total value of rateable property in Wilcannia? The estimated capital value is £206,480;—it has decreased of late years. The total amount of rates collected comes to nearly £2,480. We get on fairly well in collecting the rates. The town is financially sound, and the corporation is sound also.
1542. Have you borrowed much? We have £8,000 for the Government water supply, which cost us £10,500.
1543. What is the acreage of the common? About 22,000 acres.
1544. Is there any demand for land about the town for the purposes of cultivation? No, on account of the population having decreased, and on account of all the work having been stopped. A good deal of traffic has gone to Broken Hill, but I think the principal cause of the depression is the Land Act of 1884.
1545. When wool is sent by the river, en route to Sydney, where does it leave the river? Probably at Goolwa.
1546. Is there any tallow or hides sent away from here in addition to the wool? Yes; the quantity of hides would not be a great deal. There is a lot of sheepskins in addition to the wool. I believe that a lot of rabbit skins and kangaroo skins have been sent away.
1547. Do you think any business would be done in freezing meat if a railway were made, and there were a freezing establishment at Wilcannia? Yes.
1548. Would it be any benefit to the town if the river were locked at various places? Yes, there is no doubt about it—it would benefit the whole district. Some few years ago an attempt was made to form a company for that purpose.
1549. Was it thought that the river could be maintained in a navigable state all the year with the aid of locks? Yes.
1550. In that case would not the river obtain the whole of the traffic? I suppose so.
1551. Would it not be useless to make a railway to Sydney, and to lock the river at the same time? I do not suppose that both would pay. I do not know what traffic would be obtained from Broken Hill—but I suppose there would be a good deal.
1552. Has there been any expression of opinion from the Municipal Council or ratepayers as to the construction of this railway? The expression of opinion was very much in favour of the railway. Statistics have been prepared at various times, and the people of Wilcannia are pretty well sick of asking for the railway.
1553. How many months out of the year is the river unnavigable? Sometimes we have no river for twelve months—sometimes for a longer period.

- O. C. MacDougall, Esq.  
15 Oct., 1889.
1554. In ordinary seasons how long does the river last? On an average, I do not think the river is open two months in the year—taking one year with another.
1555. Prior to the establishment of Broken Hill—when the river was not navigable—where were goods sent to and obtained from? Even previous to the construction of a railway to Broken Hill, goods were carted from Kooaringa, 100 miles from Adelaide.
1556. Is there any ore sent from Broken Hill to Wilcannia? No.
1557. *Mr. O'Sullivan.*] Is the river Darling entirely dependent on rain in the country through which it runs? Yes.
1558. In an average year is it navigable all the year round? No; it is not true, as stated by a correspondent in an Adelaide paper, that the river usually has three rises—one due to the tropical rains in the early part of January to April, the second from August to September, and the third about Christmas time. That is certainly not a correct statement of the condition of the Darling River in an average year.
1559. What outlying places trade with Wilcannia? Milparinka, Tibooburra, and Mount Browne; there is also a great deal of Paroo trade. I think that the railway would tap the trade of those outlying places.
1560. Is this an important point for the overland stock trade from Queensland? Yes, it is a regular centre. Nearly all the stock going to Victoria come here.
1561. Would any of that stock be diverted to Sydney by a railway? The principal stock that comes here is cattle. I do not suppose that many of these would go by railway. No doubt large numbers of sheep would go from here to Sydney by rail.
- 1561½. During drought would there be a considerable trade in fodder to this district? Yes.
1562. If the railway were taken on to Broken Hill would it serve to carry fat stock to the population there? I do not think so. I think there is enough fat stock in the neighbourhood of Broken Hill to supply the wants of the population there, as well as the prospective population. I think the greater part of the traffic would be all the other way—to Sydney.
1563. Where is the ore coming from which is now being shipped on the river here? I think that is a secret; I believe it comes from some place within 50 miles of Wilcannia.
1564. Have the tradesmen here to keep up a large supply of stores, for fear of the river falling? Yes, very large supplies, and they therefore lose interest on their money.
1565. If a railway were running to Sydney would not they be likely to use that railway instead of keeping large supplies on hand? Yes; I should think so.
1566. *Chairman.*] If the railway were constructed how many times a week do you think a train would serve the requirements of the district? About twice a week.
1567. *Mr. Tonkin.*] Suppose the river were navigable from here to Bourke by means of a lock, do you think Bourke would be utilised to send wool to Sydney? Yes; it might.
1568. How far is it to Bourke by the river from here? About 400 miles—220 miles by the road.
1569. Is there a good deal of wool produced between here and Bourke? Yes.
1570. Would not Bourke be then used as a centre? The people here would use it in preference to sending it to Broken Hill.

Michael John Darcy, Esq., Sub-Collector of Customs, Wilcannia, sworn, and examined:—

- M. J. Darcy, Esq.  
15 Oct., 1889.
1571. *Chairman.*] What office do you hold? Sub-collector of Customs, stationed at Wilcannia. I have been here a little over thirteen years.
1572. What is your system of collecting Customs? The only figures I can give you are the actual collections. The export and import values are not taken here. They are all taken at the Border station. The following is a statement of the Customs collections at Wilcannia for a series of years:—

	£	s.	d.
From 22nd August to 31st December, 1876 .....	1,978	14	4
For year ending 31st December, 1877 .....	5,604	10	6
"    "    "    1878 .....	16,074	7	7
"    "    "    1879 .....	11,815	0	11
"    "    "    1880 .....	11,275	18	8
"    "    "    1881 .....	13,394	13	2
"    "    "    1882 .....	16,390	14	2
"    "    "    1883 .....	13,846	13	11
"    "    "    1884 .....	14,282	1	0
"    "    "    1885 .....	11,311	10	6
"    "    "    1886 .....	13,283	0	5
"    "    "    1887 .....	21,378	19	2
"    "    "    1888 .....	10,535	12	9
March quarter, 1889 .....	1,337	0	3
June    "    "    .....	2,250	15	8
Sept.   "    "    .....	5,969	18	7

9,557 14 6

1573. I notice from this return that in 1887 the collections were very high? Yes; that was the largest amount ever collected here.
1574. What was the reason for that? The *ad valorem* duties had a great deal to do with that, and it was an open river all the year.
1575. What is the reason of the fluctuations in the collections from year to year? Principally the state of the river. When the river is not navigable, and supplies have been used up, people have to live upon what they can get. All improvements cease, and the trade is taken to other places. If it is a bad season they cannot export at all, and they only import what is necessary to keep them alive.
1576. What is the tendency of public opinion here with regard to the railway? It is that if we had a railway the people would take advantage of it on account of its certainty. Before the present rise, which took place in June, we had a dry river for nearly eighteen months. You could ride across the river in some places quite dry. Four or five years ago we had a long drought.
1577. When the river is in a good navigable state, what is the average time for getting goods from here to the nearest railway station? Nothing goes near the New South Wales railway; it either goes to Morgan, taking six or eight days to get there, while other steamers turn round at Wentworth and go up the

the Murray to Echuca. It takes a fortnight to get to Morgan if there are stoppages. It is about three to one to go to Bourke by river as compared with the road. There is not much sent up here by the river to Bourke. Hardly anything has been done to improve the river from here to Bourke.

1578. *Mr. O'Sullivan.*] How far up the river do the steamers go? As far as Walgett sometimes. A great deal of the trade that is stationed above Bourke would, of course, go by way of Bourke. Goods go up to Louth for some of the stations from here, but that is rare.

1579. From what distance do stations send their wool into Wilcannia from the eastward of this place? 70 or 80 miles. Mount Manara is about the farthest. They take their station stores from Wilcannia when they send their wool in here. The stores come from South Australia or Victoria.

1580. Do you think that this part of the country is financially a portion of Melbourne, geographically a portion of South Australia, and politically a portion of New South Wales? Yes; but lately one of the merchants has been importing largely from Sydney.

1581. What is the cost of carriage between here and Morgan? It depends on the state of the river—just now it is very cheap. If it is a low river the freights are raised. The railway freight from Morgan to Adelaide is about 25s. per ton.

1582. Is the railway to Bourke losing the amount of freight which is carried on the river here? Yes; it is a rare thing to see a boat pass here. Before the Bourke railway reached Byrock the steamers were laden for Bourke whenever there was a probability of their getting up there, but traffic has almost ceased between here and Bourke since the railway was made. I do not think much traffic comes here from Louth. I think for fully 100 miles from Bourke the trade is Sydney trade.

1583. Do you think that if a railway were made here it would cause the trade to be centralised more in Sydney than it is at present? Yes. Since the Silverton and Broken Hill district was opened it has taken a lot of trade away from this place. The following telegrams from Wentworth, which have been sent to me by the Customs' officer stationed there, show the amount of trade which passes up and down the Darling River. [*Vide Appendix.*]

Mr. James R. Holding, Post and Telegraph Master, sworn, and examined:—

1584. *Chairman.*] What office do you hold? Post and Telegraph Master. I have been in Wilcannia for two or three years.

1585. Have you any data as to the business done at the Post Office? I think 1888 is a fair average year. The revenue for that year was as follows:—The sale of stamps, £1,720; telegraph revenue, £1,325; money order and savings bank business, which includes revenue and public moneys, £16,350. The gross total, taking it approximately, is £19,425. The business here has been larger than that in previous years. Wilcannia is now feeling the depression which is general throughout the Colony, and I do not think that the business this year is equal to the business done last year. The sale of stamps extends only to my own postal district. I do not supply other offices except Milparinka, which is not included in the figures I have given.

1586. Was the year 1887 a prosperous year in your Department? Yes? I believe it was to a considerable extent. Although my residence in Wilcannia only extends over a short time, I have known the whole of this district from 1865. I have seen it in good and bad seasons. Previous to coming here I was seven years at Menindie—that was prior to the finding of silver in the Barrier Ranges.

1587. Is this a district which quickly revives in good seasons? Yes. It is very much depressed by drought, and it is proportionately raised by good seasons.

1588. What is the proportion of bad seasons to good seasons? It seems almost three bad to one of good seasons. The duration is very variable. There may be three years of indifferent seasons, and there may be one and a half to two years of good seasons. I think it would be safer to speak generally, and say it is very erratic. I have taken observations for Mr. Russell, and also for water conservation.

1589. What is the record of the rain gauge? It is as follows: Rainfall taken by J. R. Holding, Postmaster, Wilcannia\* :—

1873.....	11 inches 4 points.	1881.....	10 inches 82 points.
1874.....	11 " 22 "	1882.....	8 " 35 "
1875.....	11 " 47 "	1883.....	6 " 86 "
1876.....	5 " 65 "	1884.....	7 " 65 "
1877.....	12 " 20 "	1885.....	18 " 37 "
1878.....	12 " 22 "	1886.....	12 " 0 "
1879.....	14 " 30 "	1887.....	21 " 99 "
1880.....	10 " 80 "	1888.....	3 " 22 "
1889, to September 30th, 10 inches 60 points.			

1590. Are the deposits in the Savings Bank pretty regular? Considering that this is not a weekly wage part of the Colony I think they are fairly regular.

1591. Have the withdrawals been fewer lately than before? The withdrawals between the last twelve or fifteen months have been rather heavier than they were previously. I think the depression caused people to withdraw money not previously touched.

1592-3. Do you notice any revival now owing to the good season? Very slightly; the people have hardly recovered yet. It is considered that the cessation of improvements on the stations, and doing away with the rabbit business, has had a good deal to do with reducing the amount of money in the district.

1594. What do you think of this district for agricultural purposes? I think it is excellent. I have just come from a garden which has been in existence for the last twenty years, or more, at Wentworth. They grow magnificent oranges, lemons, sugar-cane, hops, and all the fruit which it is possible to grow, with the exception of a few fruits liable to damage by frost.

1595. What kind of grain do they grow there? At present, along the Darling, there are crops of wheat, barley, and oats. They have been grown almost entirely by rainfall. The average yield will be from 1½ to 2 tons per acre of hay. The soil has not been manured or irrigated.

1596. Is the fruit irrigated? Yes. Vegetables grow to an unlimited extent, but they require watering and constant attention. The fertility of the soil on the Darling is remarkable. It is very easy to clear and cultivate. The only difficulty in a good season like this is to keep down the natural herbage in gardens.

1597. *Mr. Hurley.*] From what you have observed elsewhere, do you think that cultivation could be carried on round Wilcannia by means of irrigation? Yes. 1598.

\* NOTE (on Revision) :—To 1887 the records are from Mr. Russell's book; for 1887, 1888, and 1889 they are my own.

- Mr. J. R. Holding.  
15 Oct., 1889.
1598. If people apply themselves to agriculture and gardening, would there be any need to import produce here? Most decidedly not.
1599. Why do the people show such apathy? There has been no encouragement given in any shape or form, by legislation or otherwise, for such a thing. Free selection seems to have given rise more to sheep-farming than to anything else.
1600. Has land monopoly shut out that class of persons? Yes, I think so.
1601. Is it not more likely that people have not been educated to those industries? Yes, probably that has been it more than anything else. I know many instances where intelligent men with a knowledge of the subject have done well by cultivating the land. I have been from Wilcannia to Wentworth, a distance of 600 miles by water, and I have seen cultivation at various places along the river, both gardens and cultivation paddocks. Along the river in places there is grass from 3 to 4 feet high in its natural state, and I have seen thistles and marsh-mallows 6 feet high.
1602. Have the German population applied themselves particularly to fruit-growing and gardening? No; they are more particularly Scotch and English—the Scotch first.
1603. *Mr. Copeland.*] What is the rainfall at Wentworth? I think it is very much the same as our own, an average of about 9 inches a year. The rainfall is in such small quantities that it does not do the good it would if we had the inches divided into regular falls.
1604. Do you think the people at Wentworth labour under as great difficulties in raising crops as you do here? No, we are at a great disadvantage, in having far less water to work upon. Irrigation is dependent on the river. Crops are being raised all along the river by the natural rainfall this year.
1605. If they produce crops there with 9 inches of rain, should you not be able to produce crops here? They do not do so. Nine inches of rain will not do. There is more irrigation done at Wentworth than at any township in the west, as far as I can see.
1606. Then they do depend upon irrigation, and not upon the natural-rainfall? Yes; they have to depend upon irrigation. Crops are only grown without irrigation in a good season like the present one.
1607. What number of failures of crops do they have there through want of rain? I should say that there is one good crop in three generally along the river from Wilcannia to Wentworth.
1608. Is that remunerative? They hardly look to it for remuneration; it is grown more as an extra.
1609. How is it that farther eastward—for instance about Cobar and even westward of that—they can get three good crops out of four by depending on the natural rainfall without irrigation? I do not know how that is, unless it is that our district is very much drier, and that the soil is less retentive of moisture.
1610. What number of letters have been posted here since last year? The approximate numbers for 1888 are as follows:—Newspapers, 47,361; packets, 6,396; letters, 122,859; total, 176,616. Those are the numbers posted here and sent away. I cannot state how many were received here.
1611. Is that an increase or decrease on the previous year? I think it is a decrease. Since Broken Hill has been opened it has diverted a large amount of traffic from this part of the district.
1612. In which direction do the mails come? My mail routes are Broken Hill, Booligal, Bourke, Menindie, Wanaaring, Milparinka. Sydney letters go and are received by Bourke.
1613. If a railway were constructed, would there be a considerable saving of time in the carrying of mails? I can hardly say. There ought to be. Our present average time is four days to Sydney and Melbourne, and rather less than three to Adelaide. The mileage of these routes is 1,080 approximately.
1614. *Mr. Tonkin.*] Do you believe it would be possible for a farmer to make a living here if he had a good piece of ground without irrigation? I am quite positive he could not without irrigation.
1615. Is there not a time when hay is at a very high price? Yes; but that is in a bad season when there is no rain, and the river is closed to navigation.
1616. What is the highest price? Chaff has been £35 to £40 a ton.
1617. Could a man, without irrigation, grow one good crop out of three? Yes.
1618. Would not that pay him remarkably well if he could get an average of £5 per ton for chaff? Yes; if it cost him nothing to grow the hay in a good season.
1619. If he could get £15 for it in a bad season, that would leave him an average for three years of £5 per ton;—would not that pay a man remarkably well? Yes; it would pay him, supposing the stuff did not deteriorate in the meantime. Here it is liable to deterioration.
1620. Are there any means of irrigation besides the river? Yes; the river does not affect the wells apparently.
1621. Then, a certain amount of irrigation for 20 or 30 acres on a farm could be carried on by that means? Yes; I have always been of that opinion, but irrigation by means of wells has not been fairly tried yet.
1622. Is any portion of the common fit for cultivation? Yes; I think the most of it is.
1623. Would it be a great advantage to the town if half of that common were resumed and thrown open to selection in areas of from 50 to 250 acres? It would be a great benefit to the district.
1624. If a railway were constructed to Broken Hill, would it be possible for the farmers to find a good market for their produce? Yes; but I do not think that they would require to go there for a market. There would be a better market towards the Queensland Border, where they cannot grow anything.
1625. If the river were locked, so as to make it navigable to Bourke, it would be an advantage? Yes; and it would be a great assistance to irrigation, ideas respecting which are getting very prevalent. The greater part of the land from here to Bourke could be applied to agriculture. Although in some things the bad seasons do affect the growth of vegetation, I have not found that they affect it to any great extent. During the last drought there was a crop sold to a station for horse feed, at £15 an acre, of wheat or oats. It was grown by irrigation, 5 miles from Wilcannia.
1626. Is lucerne grown on the banks of the river? At Murtee station, 7 miles from here, I believe there is a large crop of it. Just below Menindie, there are 8 or 9 acres of it growing there. They have a steam-plant there for pumping water. At another station they have a centrifugal pump, and people there were preparing to plant lucerne. The soil here is well adapted for lucerne growing, I believe.
1627. What mail routes have you from here to Sydney? *Via* Bourke, Booligal, and Broken Hill.
1628. Which is the most expeditious? *Via* Bourke in the ordinary seasons. It takes about three days and a fraction. The mail goes twice a week. The mail goes to Broken Hill twice a week, and to Melbourne, *via* Booligal, three times a week. I have a total of seventy-nine mails each week in and out. The Melbourne and Sydney mails are the heaviest, but I cannot say which is the largest.

Mr. Henry V. Jackson sworn and examined:—

1628½. *Chairman.*] What is your occupation? A commission agent, coach agent, and editor of the *Western Grazier*. I am agent for Cobb & Co., and Wright, Heaton, & Co.. I have been in the western district nine and a half years. I was living at Nyngan for six and a half years. I was at Nyngan about two and a half years ago when Mr. Simpson was surveying the Cobar line. At that time I was opposed to the railway to Cobar. A great number of people in Nyngan were likewise opposed to the railway to Cobar. We were of opinion that it would depreciate our property at Nyngan, for the reason that the railway would do away with the team traffic between Cobar and Nymagee and Nyngan. I think there are some people over there who are of the same opinion to-day. I notice that a statement was made before the Committee at Nyngan, that the traffic in coaches between Cobar and Nyngan had fallen so low that the coaches did not pay. The competition on that road has become so severe that the subsidies have become too low to pay. There are likewise other vehicles continually running between those places conveying passengers and parcels. The traffic must have been considerable to enable those men to compete as they have done. When I came to Wilcannia, two and a half years ago, the town was fairly busy. There was a good deal of traffic on most of the coach roads, especially from here to Broken Hill. I should reckon that the light traffic represented by passengers and parcels on all the coach lines in and out of Wilcannia at that time amounted to something very considerable per annum. It has fallen off since, but I do not think I am at liberty to mention any amount.

Mr. H. V.  
Jackson.  
15 Oct., 1889.

1629. What lines do you represent? Wilcannia to Bourke, Wilcannia to Mount Browne, and for some time I represented from Wilcannia to Hungerford. Other agents represent the lines from here to Wentworth, to Hay, and to Menindie.

1630. Which way do passengers from Sydney come here? Either from Bourke or from Hay. The traffic is pretty evenly divided between the two places.

1631. How many miles is it from here to Hay? 250 or 260 miles, and 230 miles from here to Bourke. We bring a considerable number of parcels by the coaches.

1632. If this proposed line were constructed, would the passengers by the Hay and Bourke coach routes be carried by that railway? Yes.

1633. Do you think that that passenger traffic would be an important item in the revenue returns of the railway? Yes; there would not only be the right through traffic, but also a great deal of in and out traffic between here and Cobar, and also between here and Broken Hill.

1634. Do Wright, Heaton & Co. do much forwarding business here? No, very little. Prior to the railway being opened to Broken Hill there was considerable traffic between here and Bourke in dry seasons; but the road is so much longer than the road between here and Broken Hill, and the cost of carriage is so much higher to Bourke, that the traffic has gone away altogether.

1635. What is the average freight per ton from here to Broken Hill? In a bad season it goes up to £20 a ton and more. I do not know what it is now, but it probably goes down as low as £4 per ton.

1636. Is there very much traffic between here and Broken Hill in merchandise? Not in a good season; there only is when the river is down. There is not much imported here from Adelaide; the bulk of the trade is done with Sydney or Melbourne.

1637. Is all the trade at Broken Hill with Adelaide? No; a considerable quantity is obtained from Sydney and Melbourne, but it is sent to Adelaide to be forwarded—that used to come at one time *via* Bourke.

1638. Do you think that the construction of the proposed line would open out the district, and that it would ultimately pay working expenses and interest on the outlay? In the first instance, I think the construction of the line should be a question of doing the greatest good to the greatest number. The railway will undoubtedly effect that object. Any opposition to the railway is probably a selfish opposition. The construction of a railway promotes settlement effectually.

1639. Do you think that it would induce this portion of the Colony to become more attached to New South Wales, instead of having Victorian proclivities? So far as that sentiment goes, I do not think there is such a large amount of antagonism to New South Wales amongst the people here as has been represented. It may be the case in a large centre like Broken Hill, where there is a large number of Victorians and South Australians; but among the general body of the people here, and the pastoralists, I do not think that feeling prevails.

1640. Is it your opinion that if this railway were constructed it would be an immense benefit, not only to the district, but to the Colony at large, and that it is a national undertaking? Yes; that is exactly the light in which I look at it. Although, for the first few years the receipts from the railway would not be as large as we would like, it must be remembered that there would be large increase of land revenue owing to increased settlement. I am perfectly satisfied that there would be an increase of settlement. We have proof of that in the case of the Bourke railway, where settlement has increased all along the line.

1641. Could the district be sufficiently served by locking the river up to Bourke, instead of making the railway? That would be a great boon to the district; but it would hardly do what you anticipate.

1642. If the locking were done in addition to making the railway, what would you think of the proposal? That would be still a greater boon. I would point out that in the traffic I have mentioned, the traffic by coach is a very small item; a great amount of traffic is done by teams, waggons, buggies. From this town alone a large trade is done with Mount Browne district and others. Mount Browne is a large mining district.

1643. Would the construction of a railway give an impetus to mining? Yes; there is no doubt it would.

1644. Would it be any advantage to this district to carry out the railway only so far as Cobar? I do not think so. To be of any use it would have to come to Wilcannia.

1645. *Mr. O'Sullivan.*] What are the opinions of the people here with regard to this proposal? Public opinion is generally very much in favor of the railway. Any opposition to it arises from other causes, not connected with the question of the line paying or not paying.

1646. Would this railway run through resumed or leasehold areas between here and Broken Hill? I cannot tell; but that would not make any difference. The resumed areas that would be open for settlement would not be so far distant from the railway line, as not to come within its scope, so far as getting to market is concerned.

1647. Do you think that some of the resumed areas, 20 or even 50 miles from the line, would be likely to be settled upon? Certainly, if the country is good enough.

1648.

- Mr. H. V. Jackson.  
15 Oct., 1889.
1648. Are you aware that the pastoralists in dividing their runs have chosen the better half for the leasehold area? Yes.
1649. From which city, Sydney, Melbourne, or Adelaide, do the commercial travellers come? I have seen more Sydney commercial travellers here than any others. I know that because I have been store-keeping myself.
1650. Is that an indication that trade would naturally gravitate towards Sydney? Certainly.
1651. Would this railway intercept the north-east Darling trade and take it to Sydney? Yes; it would take a great deal of it. It would not take some of the Paroo trade. There is a portion of the Paroo trade that lies at an angle nearer to Bourke than to Wilcannia. The railway would intercept a large amount of trade which now goes to Adelaide and Victoria. It would do a large amount of trade in the corner of this Colony where the Queensland and South Australian borders meet in the direction of Fort Grey.
1652. Do you think that hotel-keepers, storekeepers, and station managers would prefer safe and reliable communication with Sydney to the cheaper and precarious traffic by the river? I think so. It would pay them much better to pay a few shillings or pounds more to get goods from Sydney quickly, and so keep a small stock on hand, instead of having to lay in a stock of £25,000 worth, perhaps, in order to provide against a drought.
1653. What would be the effect of placing a river duty on the steamers coming up? We are opposed to that decidedly at present, because the river being so uncertain, and the Government not doing anything to make it navigable, it would be unfair now to place charges upon what is our only natural highway.
1654. How far does the influence of Wilcannia extend with regard to wool and stores? It extends a great distance across to the southern corner of Queensland. Some of the stores here load teams for places very distant from here.
1655. Is that trade likely to be secured by this railway? Yes; it would be increased.
1656. *Chairman.*] You have had a long experience of the Cobar and Nyngan district as well as this district. What has been your experience as to the prosperity of those who have come to those districts, especially as small holders or farmers? There are great differences in the quality of the men who settle on the land. During the six years I resided at Nyngan a number of selectors settled there, and most of them were able to get along very fairly. In two or three instances they did very well, especially when they went in for fruit growing. I knew two instances where fruit growing proved very successful.
1657. Notwithstanding the difficulty of access to market, do you think that good plodding men could get on very well? Yes. The difficulty here is that when you take up land the river is a very uncertain means of access to market, and a man who is only able to take up 100 acres probably has not sufficient capital to enable him to buy a plant to irrigate the land sufficiently.
1658. Do you regard Sydney as the best market for wool and other produce? Yes; it is cheaper than any other port.

Mr. George H. Doake sworn and examined:—

- Mr. G. H. Doake.  
15 Oct., 1889.
1659. *Mr. Copeland.*] What business do you carry on? A general business—general stores, and we are forwarding agents for our customers.
1660. Can you give us a general idea of the amount of goods forwarded at Wilcannia during the present and previous years? The inward tonnage to Wilcannia has been 9,600 tons on the river alone. The outward tonnage from Wilcannia has been 8,900 tons—that is since June of the present year up to the present date.
1661. Has that been the period during which the river has been navigable this year? Yes.
1662. Do these figures include wool and all other articles? Yes.
1663. Can you give the Committee any figures for previous years? I can for the years 1881 to 1883. The outward and inward tonnage of Wilcannia during those three years amounted in round numbers to 209,000 tons. The value of that tonnage was £3,606,000. During the years 1881, 1882, 1883 the imports from South Australia were 77,158 tons, of the value of £1,049,346. The imports from Victoria during the same period were 35,020 tons, of the value of £233,785. This was a total tonnage of 102,178 tons, of the value of £1,283,131. The exports during the same period were: South Australia, 74,497 tons, value £1,990,441; to Victoria, 32,467 tons, value £322,596.
1664. During that period was there any business connection with Sydney at all? Apparently very little, because it is not given in the returns. I have been doing some business with Sydney since I started here. I can scarcely say what proportion. I would like to do business with Sydney, because it is decidedly the best and cheapest market.
1665. If the railway were constructed from Nyngan to this place, do you think that business would go in the direction of Sydney more than it has done hitherto? Most unquestionably. Sydney offers every advantage.
1666. Is it your principal business to supply the surrounding squatters? Yes; and the district generally.
1667. How much agricultural produce comes here during the year? The quantity is very considerable, but I do not know how much. There is practically no fodder produced here. The chief fodder consumed here consists of chaff, oats, bran, and pollard. Some people use wheat. A great deal of that fodder comes from Victoria, and a large amount from South Australia also.
1668. What is the general through rate of freight? It varies from £4 10s. to £7 10s. per ton. In the case of measurement goods it has cost me as high as £10 per ton. That is from Melbourne, Adelaide, and Sydney.
1669. Do goods come through for about the same rate? Melbourne and Sydney cost a little more—about 12s. per ton in the case of bulk and heavy goods. With measurement goods it comes expensive. The dues at Adelaide are very heavy; they are worse than at Melbourne; and Melbourne is four times worse than at Sydney. I refer to harbour dues.
1670. If a railway were built do you think that you would get your goods from Sydney at a much lower rate? No, we would not expect a lower rate. When the railway Commissioners were here we gave them an average rate of about £6 per ton as being fairly satisfactory.
1671. Would you be satisfied to pay the same rate at present, provided you were sure of getting your goods

goods when you required them? Yes, it would be very much better, as it would save interest on the value of the stock. We have to keep double the stock which we would keep if we had communication with a sure market.

Mr.  
G. H. Donke.  
15 Oct., 1889.

1672. From which port do you get the cheapest freight—Sydney, Melbourne, or Adelaide—for wool to England and goods back from England? I should certainly say from Sydney, because the tonnage is much larger there, and the expenses of shipping there are less than at any other port.

1673. Do you think that if a railway were constructed there would be an increase in the population of the district by homestead leases being taken up? I think common experience proves that wherever railways are made, and facilities are given for communication, increased settlement always takes place. I do not think that can be doubted for a moment.

1674. Do you anticipate that Wilcannia would become restored to its former prosperity if the railway were built? Wilcannia could never recover the entire scope of her first business, which included country away into Queensland, a great deal of which is now supplied from Bourke. But so far as the vast country surrounding here is concerned, and the south-west of the Queensland country, there is no doubt the trade there is very large, and it must vastly increase, and there is no doubt that that business would still flow to Wilcannia. When the river is open we still send stores right into Queensland.

1675. If a railway were constructed here, do you think that the people generally who are situated like yourself, would utilise the railway, not from patriotism, but because it would be most convenient and most profitable to themselves? Certainly, and on no other grounds.

1676. If the river were locked at various points would it not be only in accordance with human nature for people to utilise the cheaper mode of carriage by river instead of using the railway? People would naturally take advantage of the lowest rates, but the scheme you refer to would involve the locking of the Murray as well as the river Darling.

1677. Suppose you had a railway at your door and you were a squatter, would you not prefer to send the wool by water instead of by rail? I do not think that the difference in the rates between the two modes of transit would be very great after you take into consideration the heavy charges for insurance on the river, and shipping, and transhipping. I think an answer to your question is furnished by the experience in connection with the Bourke railway. Bourke district is quite as open to the influence of the river as we are, but it is a rare thing to see a bale of wool coming down from there.

1678. If the river were locked from here to Bourke so as to give a depth of 7 or 9 feet of water, would not that answer all your purposes with regard to reaching the Sydney market? I do not think so. The freight from here to Bourke would be £2 or £3 per ton, and then the railway rates from Bourke to Sydney would be £6 15s. per ton, and that would shut us out altogether.

1679. During the drought what is the highest price you have known to be paid for fodder? Last year fodder was up to £40 per ton.

1680. Is it not strange that the people of the district have never tried ensilage in order to save fodder for a dry season? Yes, it is.

1681. Are they taking advantage of this good season for that purpose? I have heard of only one or two cases. There is no agriculture in the district. I am quite satisfied that the district is suitable for agriculture.

1682. Do you think there is an opening for an agricultural population to settle on the soil? So far as growing grain for green feed and for chaff is concerned we can grow it excellently; but what the character of the grain would be, if it were grown for export, I do not think has ever been tested. It would be a great advantage if grain were grown for fodder.

1683. Have you heard any opinions expressed in regard to the increase of the rabbits in this district? Their increase is self evident. When coming across the country from Broken Hill by Burke's cave, they were as thick as ever.

1684. Are there many unemployed about this town or district? I do not think so. There are always a few. The bulk of the unemployed are those who move from station to station. There is very little for the ordinary working man to do here just now. The bulk of them have gone to Broken Hill, and other places. They were driven away on account of the stagnant condition of the place.

1685. Is the country within 50 miles of this place suitable for fruit growing? I am sure that no better fruit can be grown anywhere than in the valley of the Darling. All the fruit consumed here is conveyed a considerable distance. When the river is open it is brought from Bourke and Adelaide.

1686. Is it not strange that people here do not supply themselves with fruit? I do not think so. Owing to the isolated character of the district there are very few people here who could say that they are settled.

1687. Looking at this proposed railway do you believe that as a national investment it would be remunerative? I believe it would. I do not think the railway when constructed will pay right away, because the country is recovering from such a condition of stagnation and impoverishment as would render it impossible to expect the railway to pay at first. There has been no money spent in this district for the last five years. The population has been gradually leaving the place, consequently the district is not anything like what it was four or five years ago.

1688. Do you think that this place is suited for building up any manufactures? If a railway were made I see no reason why this should not be a large centre for the export of dead meat. With refrigerating cars on the railway this should be one of the largest centres of that industry in N.S.W. There is no reason why this country should not compete with America or any other country in fruit growing and preserving.

1689. Have you everything here which is necessary to render a place prosperous with the exception of population? That is certainly the case. I believe that the railway would pay interest on the cost of construction if it were carried from Nyngan right on to Broken Hill. I believe that there will be a population of 50,000 at Broken Hill. Then there are the Albert Gold-fields. A number of discoveries have recently been made at Mount Browne, where there is every prospect of payable gold being found. There are no means of testing the minerals here because there is no chance of getting machinery at fair rates. Machinery is going up to Milparinka, but before it reaches there it will cost an enormous sum.

1690. *Mr. O'Sullivan.*] From telegrams received from Wentworth, I find that steamers have cleared for Wilcannia with 9,642 tons, and that steamers have left Wilcannia for Wentworth with 8,932 tons. Were those steamers loaded to their fullest capacity? Yes.

1691.

- Mr. 1691. May we take it that 9,642 tons of stores have come up here this year? Yes; I expect that is it.
- G. H. Doake. 1692. Would the freight going down be mainly wool? Yes.
- 15 Oct., 1889. 1693. Is it the practice of the steamers to do a little trading on their own account on the river? Yes.
1694. Does not that interfere with the business people of Wilcannia? I do not think it matters very much; I do not care about it. I do not think it is worthy of notice.
1695. You say that people here would buy in Sydney because it is the cheapest market;—taking the transit by water, which would be the cheapest market? I think we have an answer to that question in the case of Bourke. Bourke has the same river and the same markets open to it as we have. The cost of transit by water is just the same. A steamer will carry freight to Bourke for the same price as to Wilcannia, yet I do not think 100 tons of goods have gone to Bourke by the river during the present year.
1696. Is it the practice of owners of stations here to reside on them? Not as a rule. The bulk of them are in the hands of managers. I have no doubt that the construction of a railway would tend to increase settlement in the district, and would give a home character to it, which it cannot have in its present isolated condition.
1697. If you had a railway from Sydney to Wilcannia, would you be in a position to compete with Broken Hill for the trade of the Mount Browne district? Certainly. The sympathies of that district are more with Wilcannia than with Broken Hill.
1698. Are goods brought up to famine prices here often, owing to the river not being navigable? Yes. When the rates of freight become very high, prices must go up accordingly.
1699. What has been the price of sugar, wheat, and potatoes at those times? Those goods were costing us 2d. to 2½d. per lb. to get them forward here during the drought. That would cause famine prices to be charged for those goods. That put a charge of £20 per ton extra on sugar. Flour was sold as high as £35 per ton. At Milparinka I believe it was sold for £4 or £5 per bag. Very few potatoes came because they could not stand the carriage. They went up to about four times their ordinary price. Most other stores rose in price in the same way. If we had a railway such a thing would not occur.
1700. *Mr. Tonkin.*] What is about the average freight of wool from here to the nearest shipping port,—Adelaide or Melbourne? The rates vary very much according to the condition of the river. This season wool has been taken down f.o.b. to Port Victor for 50s. to 55s. per ton. At other times it costs about £4. The average cost would be £4 per ton. The freight varies from £4 10s. to £7 10s. You have to add to that river insurance amounting to 40s. or 50s. per cent. on the declared value of the wool, which increases the rate of tonnage by about 3 to 3½ per cent.
1701. If we take the amount of goods which go up and down the river, and charge £4 per ton as railway carriage, would not that make up almost sufficient to pay the required amount of £90,000 for interest and working expenses of the proposed railway? The amount of wool held over last year in this district was estimated at 27,000 bales, representing a value of £330,000 lying in sheds and other places round about there. There were 8,000 bales stored in Wilcannia alone.
1702. Has not this year been an exceptional year with regard to the quantity of wool going down the river? A large amount of wool went down to Broken Hill last year.
1703. Did not more than the ordinary yield of wool from the district go down this year? Yes; but on the other hand, the returns of wool from the stations this year are at least one-third less than they would be in a fair average year, because there has been a loss of about 1,000,000 sheep. Under these circumstances the amount of wool sent during the present year would not be very much above the average.
- 1703½. Then the figures which have been given show that if all the traffic went by the proposed railway, and if freight were charged at the low rate of £4 per ton, the traffic here alone would be sufficient to pay working expenses and interest on cost of construction? Yes.
1704. What would be the difference in the amount of stock which you would have to keep on hand if you had railway communication with Sydney, as compared with the amount of stock which you now have to keep on hand? Less than one-half.
1705. How far from here eastwards is wool carted into Wilcannia to go by the river? Between 80 and 90 miles. Beyond that it goes to Nyngan or Bourke.
1706. *Chairman.*] In what state is the river now? It is navigable. It is falling slightly, but there is a further rise behind it just now.
1707. What is the rate of freight of goods at the present time from ports up the river? The competition for wool backwards is so great that the boats now carry up goods for as low a price as £3 to £3 10s. per ton, but that is not the normal condition of things. The actual freight for wool down to port is about 30s., but that is unusually low. If the river went down rapidly the rate of freight would go up rapidly. The bulk of our boats are about 3 feet draft when they are loaded. When there is a deep river they load down deeper.
1708. If the river went down rapidly would the great bulk of this season's wool be left behind? I think it would go to Broken Hill on account of the ruling prices. I do not think it would be held over.
1709. You know that the railway freight to Bourke from Sydney is about £6 15s. per ton, and this place is 150 miles farther from Sydney than Bourke is? Yes.
1710. Would you as a storekeeper be willing to pay say £6 10s. per ton for railway freight? Not if I could get it lower.
1711. Then you would prefer to use the river? Yes; a man will prefer to have his goods carried by the cheapest route. But, notwithstanding that Bourke has all the advantages which we have, the people at Bourke find it to their advantage to pay £6 10s. or £6 15s. per ton to get their goods by rail rather than by the river. Therefore, it must be advantageous, or the river would be used as much as ever. The tonnage of our firm inwards for the three months ending October, 1889, is 350 tons. This is exclusive of station indents, which amount to considerably more—times are now bad, but in good times this tonnage would be more than double. If I had regular communication by railway I could do with about £8,000 less of permanent stock and capital.

Mark J. C. Tully, Esq., Inspector of Stock, sworn, and examined :—

1712. *Mr. Copeland.*] What position do you occupy? Inspector of Stock for the Wilcannia district, which extends about 150 miles northwards, about 70 miles westwards, and about 70 miles southwards. It takes in about 100 miles around Wilcannia. I have held this position for nearly five years. I know the whole district thoroughly, and I have lived in it twenty-three years. M. J. C. Tully,  
Esq.  
15 Oct., 1889.

1713. What extent of country carrying stock will be influenced by the proposed railway? There are about 30,000,000 acres of pastoral country which would be influenced by the railway. That is within about 200 miles northward of the railway—about 90 miles southward and about 60 miles to the south-westward. That is taking in the country from the Queensland border and north-west, and leaving out all that goes direct to Broken Hill and Silverton, or direct to Bourke. That would make an area of 30,000,000 acres.

1714. What stock does that area of country contain? At present there are rather over 3,000,000 sheep, between 17,000 and 20,000 head of cattle, and about 9,000 horses. The horses are mostly used for station purposes. There are only two or three stations on which they have from 1,000 to 3,000 head of cattle. The figures I have given include all the working cattle.

1715. Is the stock increasing or decreasing in the district generally? The stock had increased until about eighteen months ago, but there was a very considerable loss during 1888-1889. There must have been a direct loss of at least 1,000,000 sheep, and an indirect loss, through the want of an increase, of 750,000 or 1,000,000.

1716. If a railway had been in existence, would the squatters have made use of it to have saved some of that stock? Yes; hundreds of thousands would have been taken away.

1717. Was the stock increasing to a satisfactory extent before the drought? Yes; very much so.

1718. Has the carrying capacity of the country been increasing generally since the country has been stocked? Yes.

1719. Is it likely to increase if the squatters spend more money in improvements and in making smaller paddocks? Yes. I should say that during the next five years we should have at least one-third more stock than at present. I do not think that ringbarking would pay, because the carrying capacity of the country is so light. Looking forward to the long tenure which the squatters have now, there is no reason why the district should not ultimately carry double the number of stock which it carries now.

1720. If a freezing depôt were established here, would a large quantity of dead meat be probably sent away? Yes. Since the runs have been stocked I think the grasses are growing thicker. There is more grass, and less herbage. There is no pine scrub in this district.

1721. How are the rabbits in this district? I am an Inspector under the Rabbit Act. In the month of April I travelled about 600 miles through the district, and I do not think I saw six rabbits; but during the last three or four months I have seen them in thousands wherever I have gone—they have been increasing alarmingly. There is no doubt that they will again become a very serious pest. Nothing has been done recently to destroy them. Nothing has been done to utilise them. When they were most numerous some of the stations preserved the skins, but they scarcely paid for the trouble. I notice that some of the lessees are providing themselves now with wire netting to trap the rabbits at the tanks.

1722. Where does the bulk of the sheep go to market from this district? I find that there came on the road from Milparinka to Wilcannia last year 119,000 sheep. They came principally from the north-western part of the district. A great portion of them went to Melbourne.

1723. Supposing a railway had been opened, then do you think that stock would have been sent by rail to Sydney? Certainly. It would cost twice as much to send them by road as by rail in such a season when every drink of water had to be paid for. 97,000 sheep went from Wilcannia to Louth, and across from there to Cobar.

1724. Are the stock in a healthy state at present? Yes.

1725. Were the stock to which you have just referred fat stock going to market? No; only a very small portion of them.

1726. What were they travelled for? For feed; and they were sold on the stations to lighten the strain on the stations.

1727. From your experience of stock, do you think it would be possible for the squatters in a season like the present one, by means of ensilage, to preserve some of the grass so as to feed their stock in time of drought? They could do so to a limited extent, so as, perhaps, to sustain their working stock, but it would not do to feed sheep, as it would cost too much to collect it.

1728. In the country over which we have travelled, there are millions of acres which would yield this year 1 ton of hay to the acre.\* Would there be any more difficulty in this district in getting a large quantity of hay from the natural grass? The holdings are not so large in that part of the country.

1729. Are we to infer that the people have more country than they can manage economically? No; but the country is of such a poor nature that you must have a large quantity of it to carry any stock at all. A good season like this is exceptional. In my opinion it would not pay to keep the natural grass for feeding sheep.

1730. Would it pay to grow lucerne? Not to feed sheep upon it. It would pay in the same way as it would pay to preserve ensilage for working stock.

1731. In your opinion, will it not pay to spend money in improving the land by scrubbing and ringbarking it? I do not think it would pay to ring it. It might pay in some places to scrub certain portions, although I should not think so. I think that perhaps the scrub in this district is the most valuable growth.

1732. Then, in your opinion, we have nothing to look forward to but to allow the country to remain virtually a desert, as it is now? I believe the country will improve, but I do not believe that it will pay to go in for ringbarking. Smaller paddocks, and increasing the water supply, are about the extent of the improvements which I think will be advantageous.

1733. Are there many homestead leases in your district? There are only a few.

1734. Are the holders making a success of them generally? They have scarcely done so yet, as they have not had time. Four or five of the leases taken up have been thrown up again. I suppose the lessees considered they could not make them pay. Some of them were never stocked at all. Some carriers have taken up leases to put their stock on them, and they have fenced them in. I think only one or two have been taken up in a *bonâ fide* manner for pastoral purposes. I think that with economy a man with a family

NOTE (on revision) :—My answer to this was, "I do not believe it."

M. J. C. Tully, Esq., family who could do most of the labour within his own family, could make a comfortable living out of a homestead lease. To live out here with anything like comfort, a man would require to get a net return of £500 or £600 a year.

15 Oct., 1889.

1735. Do you think it would be possible under general circumstances for a man to take up 10,000 acres, and by stocking it and working it himself to make, say, a clear £300 a year on an average? I do not think so, because in bad seasons many of these lessees would be completely wiped out, and unless they had funds they could not make another start.

1736. If this railway were constructed to Wilcannia, do you think there would be many more leases taken up on the resumed areas? No doubt there would. In that way there would be a considerable amount of additional settlement by smaller men.

1737. *Mr. Tonkin.*] How much per ton could the natural grass be saved for? I cannot say positively.

1738. How do you know that it could not be saved? I know that bush hay was collected on Mount Murchison station a few years ago, and the manager told me that it cost him £3 per ton to collect that hay in a season similar to this. There was grass in abundance everywhere.

1739. If feed could have been supplied to the sheep for three months during the late drought, would that have saved them? Yes, it would have saved the bulk of them.

1740. How much hay would keep a sheep alive during that time? About 2 cwt. or 3 cwt. would keep each sheep.

1741. Then if you had hay that would cost £1 per ton, you could have saved six sheep for every ton of that hay? It would cost another £1 per ton to lay it out for the sheep to eat.

1742. Do you think it would not pay if it cost £2 per ton? I do not think so. I have not had anything to do with the feeding of sheep artificially.

1743. Would it surprise you to hear that in the country we have come through hay could be made out of the grass for 10s. per ton? There is very little in my district where you could make it for 10s. per ton. I dare say there is some clear open country where it could be cut down with a reaping machine.

1744. Would you be surprised to hear that it does not cost more than 10s. per ton to make hay in the Bathurst district? I would sooner make hay down there than here.

1745. Have you ever had anything to do with a farm? I was born on one of the largest farms in Scotland. It would cost more to make hay there than here, but I do not know the exact cost of making it there. Here it would take more ground to grow the hay than at home, and you could not cut right ahead here with a reaping machine. There are not 10 acres in any part of my district where you could mow straight ahead.

1746. *Mr. Hurley.*] Do you think that the pastoral holdings are very much depreciated in value through being over-run with rabbits? Yes.

1747. Has it ever come to your knowledge that squatters have been forced to pay 6d. per scalp for each rabbit destroyed, when they could easily have got them killed for 3d. and 4d., on account of an arrangement being entered into between the rabbiters and the inspectors? I know of no such arrangement, and I never heard of it. I believe that everyone did what they considered to be the very best in carrying out the Act. Time perhaps has proved that it was not the best course which was taken.

1748. Do you know that under the Act boys were receiving £5 a week, whereas they would not have received 30s. a week elsewhere? Yes.

1749. Was that fair to the State? No.

1750. *Chairman.*] Do you know the river from here to Bourke? Yes, I have travelled over it.

1751. If it is stated in an official document that the distance by river from Wilcannia to Bourke is 208 miles, is that correct? No.

1752. What is the distance by river? It is not less than 600 miles.

1753. Is the river very circuitous? It is very tortuous indeed. In some places you have to go 4 miles round a bend which you could cross in a distance of half a mile.

1754. Is it very shallow in places? At times you could find a mile of the river bed quite dry, over which you could walk.

1755. Are there many rocky bottoms? I only know of two from here to Bourke. I do not know the general character of the bed of the river.

1756. When the river is navigable how long does it take steamers and punts to go from Wilcannia to Bourke? About one week up stream. The steamers generally travel about 6 miles an hour; but there is a great difference in their speed.

1757. *Mr. O'Sullivan.*] From the way in which the rabbit pest is spreading in this neighbourhood do you think it is likely to retard settlement? Yes.

1758. Do you think that small settlement would be successful in this country? I do not think it would be successful under existing circumstances.

1759. If small holdings will not be successful by keeping down the rabbit pest, and by ringbarking, and by making dams, how is that work to be done by the large pastoral proprietors who are now here? I do not think any one has been able to answer that question, and I am afraid I cannot answer it.

1760. Is it only a matter of time when the large pastoralists will be eaten out by the rabbits? Some other means may be found of getting rid of the pest. For instance, fencing has not been much tried.

1761. Do you not think that smaller holders would have a better chance of success than large holders in dealing with such a pest? The small holder would have a very much better chance of coping with the rabbits.

1762. In your opinion what should be the area of a homestead lease here? I do not think that the area of 10,000 acres should be altered. If you give a man more than that you give him a run.

Hubert F. T. Bode, Esq., surveyor, Railway Department, sworn and examined:—

H. F. T.  
Bode, Esq.

15 Oct., 1889.

1763. *Chairman.*] What is your occupation? Surveyor in the Railway Department. I have been a cadet in the engineering branch, but I have never been employed in construction.

1764. Are you making a trial survey of the proposed railway from here to Broken Hill? Yes, of the first 77 miles from Wilcannia.

1765. What is the character of the country you have gone through? For the most part it is of a level nature, with only one range of hills to go through.

1766.

1766. What is the steepest grade throughout that distance? 1 in 100.
1767. Did you get any special instruction from the Department as to grades? Yes. We were told not to make anything steeper than 1 in 100 with 10-foot cuttings. If we wished to use anything steeper we had to apply for special authority, which was not necessary in this case.
1768. How far did you get from Wilcannia before you arrived at the ridge you have referred to? There is one about 4 miles from Wilcannia. It is only about 15 to 20 chains, and it will involve very little cutting. The next long gradient of 1 in 100 is about 40 miles from Wilcannia. There are about 50 chains of it. The ground there is of a gravelly nature. There are no other hills on the route. We skirt some hills about 65 miles from Wilcannia; that does not involve any divergence. The line is very straight; I think there are five curves altogether. They are of 100 chains radius each. It is very easy country in which to make a railway.
1769. What is the character of the soil which the line passes through? It is principally sand, and a sort of soil known as clay-pan soil—clay mixed with sand.
1770. Would it have to be ballasted? I presume so. There is plenty of ballast obtainable in the ranges, consisting of good hard stone. There is no timber at all suitable for sleepers.
1771. Will this be an easy and inexpensive line to construct? Yes.
1772. *Mr. Tonkin.*] Have you surveyed any other line in this Colony? Yes.
1773. Are not these exceptional instructions you have received, not to lay off a steeper grade than 1 in 100? That depends upon the nature of the country we have to go through. I have been told to get grades of 1 in 50 in some districts, but you might get grades of 1 in 100 in other districts without going into very much more expensive work.
1774. Have not exceptional instructions been given to you with regard to the grades on this particular line more than on any other line which you have been surveying? There has been only one other instance in which I have been told what grades to get. Within the last three or four years it was allowable to use grades of 1 in 40 in very rough country, but latterly I think the surveys have been carried through more easy country as a rule.

H. F. T.  
Bode, Esq.  
15 Oct., 1889.

WILCANNIA, WEDNESDAY, 16 OCTOBER, 1889.

[The Sectional Committee met in the Court-house, Wilcannia, at 10 a.m.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).	
HENRY COPELAND, Esq.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Walter T. Corney, merchant, Wilcannia, sworn and examined:—

1775. *Chairman.*] What is your occupation? Merchant, carrying on business at Wilcannia. I have been there almost eleven years.
1776. In your business what goods did you receive in the course of twelve months? In the year 1887, with a permanent river, we had 1,100 tons of inward freight, or perhaps a little more. That was all obtained by river.
1777. What wool did you send away in the year 1887? About 6,000 bales were sent away by my firm. In 1888 there was no wool shipped from here, owing to the excessive drought.
1778. How much has been sent away for 1889 up to date? 9,500 bales, and there are about 4,000 to come in. The greasy bales weigh 3 cwt. 3 qr. each, and the scoured 2½ cwt. each. There would be about 4,000 scoured bales out of the 13,000 bales.
1779. What was the destination of that wool? Principally Port Victor, South Australia, by the river. About 4,000 bales went by Echuca to Melbourne—none of it went to Bourke or Broken Hill.
1780. In the year 1887 what was the average rate of freight to Victoria and South Australia? It ranged from £3 up to £4 for greasy and scoured.
1781. What has been the average rate so far in 1889? From 30s. to 40s. from Wilcannia to Echuca and Morgan, and from 50s. to 60s. to Goolwa, f.o.b., that is to port.
1782. Why is it considerably cheaper this year than it was in 1887? Owing to the long river we have had, and the great quantity of supplies for shearing which came up on the first of the river. There was keen competition among the boats. I do not think the freights have paid any of the boats this year.
1783. We have heard that goods can be brought up as far as Bourke for about the same rate of freight as they can be brought to Wilcannia;—is that so? I have heard of one instance of a boat carrying freight up to Bourke for the same rate as to Wilcannia this year. I think they get a better price for carrying wool down from Bourke, and that induces them to go higher up the river.
1784. What is your opinion as to the construction of a railway from Nyngan to Wilcannia? It would open up a great extent of country, and it would secure a large portion of the tonnage that comes to this town. It takes about three weeks to get goods up the river, and often a month or five weeks. If a railway were made the storekeepers would not have to keep on hand one half or one quarter of their present stock. If the freights were anything like in proportion, the railway would certainly get the preference.
1785. Would it not be a great saving in many ways if wool could be put on the train at once and sent straight to the port of shipment? Certainly it would be a great saving. It would arrive in better condition; there would be a great saving of insurance and also in storage. We have had wool stored here for nine months—that has happened more than once. During the last drought we had about 2,500 bales stored, and our clients had a lot of wool stored in the country.
1786. Do you do the largest shipping trade in wool in Wilcannia? Not always. It varies some years. The other firms which are engaged in the same kind of business as ours, in shipping wool at Wilcannia, are Doake & Co., Ottoway, Donaldson, and Permewan, Wright, & Co. There is a large quantity shipped direct from the woolwash about 2 miles down the river. I daresay they send away 2,000 bales a year. We took over our business from another firm about six years ago.

Mr.  
W. T. Corney.  
16 Oct., 1889.

Mr.  
W. T. Corney.  
16 Oct., 1889.

1787. Has the business in wool decreased or increased during that period? It has been about the same on an average. We receive wool from about twenty graziers. They have all large holdings. The runs, hundreds of miles away, are not stocked so heavily as the frontage people.

1788. Which is the most distant station that sends wool to you? Tickalara station, about 250 or 260 miles away, near the border of Queensland. We have had wool from places farther away than that, but not this year. Some of the wool comes to us from the Paroo, but most of it comes from the north-west.

1789. How is that this wool from the north-west does not go to Bourke? I do not think there is such a direct road to Bourke as there is to this place. It is a better watered route here.

1790. What has been your experience as to the success or otherwise of homestead lessees? I do not think that any have made money out of the leases. Most of them are taken up just as homes by carriers and other people who are living in the district. Very few are trying to make a living out of them by stocking them. A great many of those who have taken up homestead leases have failed to carry them on for want of capital.

1791. If they had a small amount of capital do you think they could have done fairly well? In some places they could if they worked themselves and looked after things.

1792. Do you not think that from the character of the country industrious men would get on very well with small holdings? I think they would want 20,000 acres at least. Then they might make a fair living.

1793. Do you not think that around towns small holdings of from 150 to 200 acres would be availed of for gardens and agricultural purposes? Yes; with a river frontage I think they would. One or two have gone in for that line of business and they seem to make it pay very well.

1794. Are the five firms in the same line of business as yours doing as large a business in wool as your firm is? Year in and year out I think four of them do as large a business. That is, for an average of three or four years.

1795. *Mr. Copeland.*] Have you any public wharf accommodation here? We have only the bank of the river. Our firm has a private wharf. There is a wharf reserve but there is no Government wharf. About twelve months ago some money was voted for a wharf but there was a dispute with the contractor, and it was not gone on with. It would require far more than £1,500 to erect a wharf.

1796. If you had wharf accommodation would it enable you to get the goods and send them away cheaper than at present? Yes.

1797. Is the river fairly clear of snags? Yes. It has been snagged the whole way from Bourke to Wentworth. There is no snagging being done now. The river might be improved by further snagging.

1798. Have you formed any opinion as to locking the river and as to where it should be locked? Personally I should rather see it locked from here to Wentworth than from Bourke to here. I do not think it would reduce the freight, but it would make the river navigable for a longer period. I do not think it would be possible to make it navigable all the year round from here to Wentworth.

1799. Would it be worth while to spend a considerable sum to make the river navigable six months in the year? No; I am in favour of making the railway rather than locking the river. I believe that if a railway were constructed the people would use it to a great extent.

1800. Do you think that the stations in the vicinity are fully stocked? Judging from this year's wool I do not think that they are anything like stocked. Nearly every station is some hundreds of bales short; in some cases thousands of bales. The clip is considerably smaller than it was in 1887.

1801. *Mr. Hurley.*] It has been stated to us that under ordinary circumstances between 50,000 and 60,000 bales of wool go down the river every year;—do you think it is correct? It is quite within the mark.

1802. What freight have you to pay on all goods brought here by river, including all charges? From £4 10s. to £8, £9, and even £10 per ton. The average is about £6. The average for wool going down is £5 10s. per ton. If the railway were constructed and a charge were made of £5 per ton, while the boats charge £4 per ton, we would prefer to use the railway. There would be a saving on insurance and interest.

1803. What is the highest price paid for fodder by the public? £45 and £50 per ton. This year I think you can buy it for £6 and £6 10s. per ton.

1804. If the river were locked, so as to throw the water back to Bourke, do you think that sufficient feed could be grown in the district to supply the local demands? The soil is good enough. If the water were conserved for irrigation, agricultural settlement would be induced, but I do not think that the farmers could produce as cheaply as other farmers who have not to irrigate.

1805. If the river were locked and improved up to Bourke from Wilcannia, would not that serve the purposes of this district with regard to communication, without making a railway to your door? I do not think so if the rates at present charged to Bourke would be maintained. We would have to pay the extra freight from here to Bourke, which would be heavy if we had to pay lock dues.

1806. *Mr. Tonkin.*] What is the tonnage of the wool you sent away this year? Over 2,000. The average amount of wool sent down the river from Wilcannia would be about 5,000 tons. There are about 2,000 tons additional, which are shipped between here and Wentworth, which do not come to Wilcannia, but which would probably be sent by the railway if constructed. Then we may estimate that 3,000 tons of wool would be sent down from places above Wilcannia. There might be even more. The average freight paid for that wool with insurance would be £4 per ton, if not more.

1807. That gives an expenditure on freight for wool of £40,000 a year? Yes.

1808. Would the tonnage of goods brought up the river per annum be anything like the tonnage of the wool sent down? Yes; I think it would come to 7,000 or 8,000 tons.

1809. What would be the average freight paid upon that? The average freight to Wilcannia right through would be £6, or a total amount of £48,000 per annum.

1810. So that you have paid annually for freight alone on the river to and from here £88,000? Yes.

1811. Do you think that you have not made any mistake, and are you confident that there is that amount of trade inwards and outwards from this district? These are merely estimates. I think you would be quite within the mark if you said £80,000 per annum instead of £88,000.

1812. Which of the three ports, Adelaide, Melbourne, or Sydney, is the best to ship from for the whole market? I do not think there is a fraction of difference between the three.

1813. Is there any difference to the storekeepers and consumers in purchasing merchandise at any of these

these ports? In a great many lines Sydney is much lower than the other ports, but not in all. -I think taking it all round, the three cities are about equal in price—that is, buying in bond.

1814. In the event of the railway being constructed, would it be availed of in times of severe drought for the removal of starving stock? I believe it would to a great extent. During the last drought probably 500,000 sheep would have been sent away.

1815. Do you think that the new Land Bill will make things more lively in this district? I am sure of it. Things are improving already.

1816. Is that not likely to increase the amount of material which will be required, and, consequently, the traffic of the district? Yes; and it will increase the population in a great measure. I knew a station which, before the Land Bill was passed in 1884, used to employ upwards of 300 hands, but after that Land Bill was passed I do not think they had forty hands employed.

1817. *Mr. O'Sullivan.*] Does Wilcannia do much trade with the country between here and Broken Hill? Only for a distance of 50 miles out from Bourke.

1818. Does Wilcannia do a very large trade with Mount Browne, Tibooburra, and the country on the Queensland border? Yes; when the river is up we do a large trade there.

1819. Would it serve the interests of this district most to make a light line up to the Mount Browne country, or to continue the proposed line on to Broken Hill? I do not know that a line to Mount Browne would be of most benefit.

1820. If a railway is taken on to Broken Hill is it not likely that a great deal of trade will go on to South Australia instead of coming to Wilcannia? That would depend upon the rates. I think the Sydney railway ought to be able to compete with the other, because the private Tramway Company's rates are very high.

1821. Would it not be better for the interests of this country if you had a railway running to Mount Browne and the Queensland border, than to continue the line to Broken Hill? Yes; it would open up a great deal more country, and I believe it would pay better.

1822. Would it not be better to carry out that scheme and connect Broken Hill with Sydney by a railway, via Forbes, Condobolin, and Menindie? Yes; I think that would be the better way. However, the latter line would, to some extent, open up the same country as the line which would be carried from Nyngan to Wilcannia. I wish to correct a statement I made—that the river had been snagged between here and Bourke. I understand it has not been snagged.

Mr. Thomas F. Ottaway, auctioneer and forwarding agent, sworn, and examined:—

1823. *Mr. O'Sullivan.*] What is your occupation? Auctioneer and forwarding agent. I have had twelve years' experience.

1824. Do you approve of the evidence given by Mr. Corney, and endorse it? Yes, in the main. I think that men holding blocks of 10 miles square would make a very handsome living here—better than they would on large areas. I know one or two in the district who have apparently got on very well on such holdings, and they have made more improvements than the larger holders.

1825. Have homestead leases been successful? No. Carriers have taken up homestead leases—they run their cattle on them, but I do not think they make a living out of the leases. They are just about holding their own. The holder of a 64,000-acre block would fence in and improve his land, and would divide it into small paddocks, and he would make a large number of water improvements.

1826. Do you think that some of the pastoral lessees have over-reached themselves by taking up areas which are too large? No, I do not think that has been the case in the past, but I think that if a railway were made, a great many 10-mile blocks would be taken up.

1827. Is your recommendation in reference to 10-mile blocks contingent upon the making of the railway? Yes.

1828. In the past, if men had taken up 10-mile blocks, would they have been likely to suffer less loss than the large holders, seeing that they would have more water and less sheep? Yes.

1829. Do you agree with Mr. Corney's statement as to the quantity and value of the business done here? Yes, and therefore I think the railway would pay.

1830. Would you recommend that the river should be locked between Wilcannia and Bourke, for the purpose of assisting irrigation? Yes, and as low down as Menindie. That is contingent on the railway being made.

1831. Supposing another line were constructed *via* Forbes and Menindie, would you recommend locking the river down there then? It would serve two purposes then—irrigation, and taking the stuff to either line.

1832. If a railway were constructed to Wilcannia, would there still be a river trade above Wilcannia in bringing wool from the intervening stations? Yes.

1833. Would you prefer a line to Mount Browne to an extension of the line from here to Broken Hill? Yes, the line to Mount Browne would be more beneficial to this district.

1834. And to New South Wales generally? Yes, if made to the Queensland border. It would develop the mineral country there, and it would bring in wool that now goes to South Australia by Orcha.

1835. When the river is not navigable, is some of the trade carried on by means of camels between Broken Hill and Mount Browne? Yes. There is trade between those two places at all times.

1836. What is the population in the Mount Browne district? I have been out there. There is a good population there. There is a new place at Coonberry, and there are stations all round.

Mr. Frank Leng, Crown Lands Agent, sworn, and examined:—

1837. *Chairman.*] What office do you hold? Crown Lands Agent.

1838. *Mr. Copeland.*] Is there a large common round Wilcannia? Yes; I do not know its area. It is a permanent and temporary common.

1839. If portions of that common were open for selection would it be readily selected and made use of for cultivation? I think so, provided we had a railway.

1840. Irrespective of a railway if it were available, in small areas, would people take up the land and cultivate it? Yes, if portions from 5 acres, or even up to 30 acres, were available so that they might cultivate wheat, lucerne, and oats. I think the land is capable of producing anything by the aid of irrigation.

Mr.  
W. T. Corney.  
16 Oct., 1889.

Mr.  
T. F. Ottaway.  
16 Oct., 1889.

Mr. F. Leng.  
16 Oct., 1889.

- Mr. F. Leng. 1841. What quantity of land in this common has a frontage to the river? The common extends to the river bank on both sides.
- 16 Oct., 1889. 1842. Have you had any auction sales lately? No; the last one was held in August, 1887, at Wilcannia, being allotments in the township of Tibooburra. Land sold pretty well, but it did not bring a very high price. I have not had any town lots for sale situated in the township of Wilcannia.
1843. How many applications have you received for homestead leases? Fifty-three during the last four years. Twenty-five were non-accepted, withdrawn, and forfeited, leaving 28 homestead leases in existence. I think some of the lessees have stocked their land with sheep. I think the homestead lessees, especially in the Menindie district, are doing well.
1844. If a railway were made to Wilcannia, do you think it would lead to increased settlement by means of homestead leases? Yes, provided the river was locked and the land irrigated. I think that homestead lessees would irrigate their land.
1845. Would not that apply only to those on the river bank? Yes, or to a distance of 40 or 50 miles from the river bank.
1846. Is not most of the river frontage embraced in the leasehold areas of the pastoral holdings? No. There are large areas still available. There are resumed areas on the river frontage not yet applied for.
1847. Do you hold any other position under the Government? Yes; District Registrar of Births, Marriages, and Deaths.
1848. Is the population increasing to any extent? No; it is decreasing. In 1885 there were 90 births. In 1886 and 1887, there was a slight decrease in the number. During the present year the births are not maintaining the average. The population of Wilcannia appears to be on the decrease.
1849. Are the marriages falling off? Yes, very much so.
1850. Do you think that the new Land Bill will be beneficial to the pastoralists? I do not think it will be so beneficial to the pastoralists in the Western division as it will for those in the Central and Eastern divisions.
1851. Do you not think that the increased tenure given to the pastoralists in the Western division will induce them to expend more money on improvements? I am afraid in some cases it will not. I have not received applications for permission to ringbark since I took charge of this office, four years ago. Improvement purchases constitute the principal land business done here. They are situated at Broken Hill.
1852. Are you receiving any applications under that clause now? Yes; on the gold-fields. There have been on an average, thirty per week lately. Those at Broken Hill and the majority of them are situated at Broken Hill and its vicinity, and some at Silverton. I am the nearest Land Agent to Broken Hill. Mount Browne and Menindie are included in my district. The number of applications for improvement purchases has been increasing lately.
1853. Is that an indication that the population is increasing on the gold-fields? Yes, particularly in the Broken Hill district.
1854. What is the amount of land revenue you receive in this office? About £3,500 annually. The lessees' rent is forwarded direct to the Treasury. The revenue I have mentioned consists principally of payments by homestead lessees or for conditionally leased land, and the instalments and balances on conditional purchases.
1855. Do you hear any complaints from conditional purchasers that they are not allowed to increase their area to that maximum? Yes. Several applications have been made by persons desirous of taking up additional selections, but no special areas have been gazetted. The total number of improvement purchase applications received since I took charge is 1,336. These are situated on the various gold-fields. About 660 were refused or withdrawn, or they lapsed through non-payment of purchase money.
1856. *Chairman.*] Do you look upon the locking of the river not as an alternative work, but as one that should be carried out as well as the railway? Yes.
1857. If the river were locked, do you think it would send the water back for a distance of 40 or 50 miles in the creeks and ana-branches of the river? Yes.
1858. Do you think that that would increase settlement? Yes; it would induce people to take up homestead leases, and it would improve the value of all the land which it would command.

Mr. James M. Byrnes, sworn and examined:—

- Mr. J. M. Byrnes. 1859. *Chairman.*] What is your occupation? Butcher and dealer in stock.
- 16 Oct., 1889. 1860. *Mr. Copeland.*] How long have you been in this district? Since 1872.
1861. Has your occupation given you a practical knowledge of the growing capabilities of the country? Yes; I have only been in this line of business for three years. I was formerly in the employ of the Government in snagging rivers.
1862. Do you think that this country will carry more stock now than it used to in the early days of the district? Most decidedly it will. In the early days, away from the river, it was nearly useless. The squatters have improved it, principally by providing water.
1863. Leaving out the question of water supply, do you think that, acre for acre, the land is more capable of carrying stock now than when the squatters first commenced to depasture upon it? Yes. The pasturage is improving. The feeding of sheep over the ground improves the grass and herbs. I think that has been the experience all over New South Wales. The edible bushes have decreased of late, owing to the rabbits ringbarking them. They have destroyed useless bushes, but mostly the edible ones.
1864. Do you consider that the country is fully stocked? No, not nearly stocked. It was not stocked to its carrying capacity before 1888.
1865. If the railway were made, would it enable graziers to stock up to a fuller extent than at present, seeing that they would be able to get away their stock in case of drought? Yes; I feel confident of that. Thousands of stock would have been saved last year if there had been any getting away for them. In bad seasons the railway would carry off an immense number of stock, and in good seasons it would carry a large number of fat stock. My opinion is, that this place and Bourke will be the two principal freezing depôts in the Colony for Queensland stock.
1866. Do you think that this district is much better for sheep than for cattle? It is a matter of opinion. Those who occupy the land think that sheep are best, but I maintain that there are portions of this country where it would pay to have both sheep and cattle, even in the same paddock, because the cattle would break down a sufficient quantity of scrub to keep the sheep alive, and that would save the expense of

of scrub getters. You could not buy 200 head of fat cattle for thousands of pounds within a radius of 100 miles in this district unless they happened to be travelling. We can grow as good wool here as in most parts of the Colony in an average season.

Mr.  
J. M. Byrnes.  
16 Oct., 1889.

1867. Supposing a freezing depôt were established here, have you formed any idea as to the quantity of meat that would be sent away? No; we have never calculated on a railway for a certainty. It has been promised so often that we have given up the idea of ever getting it.

1868. Could the district send away as much as it could find a market for? Yes; all the Queensland cattle would come either to Bourke or to this place.

1869. Do you think that it is desirable to make an additional number of tanks on the travelling stock routes? Yes; the stock could not travel last year for want of water. If there was a tank every 9 or 10 miles it would be ample on the main stock routes.

1870. Have you had any experience of small holdings? I have had two selections—640 acres was the largest that I could take up.

1871. What use are you making of them? I use the one close to Wilcannia for running my stock.

1872. If the runs were smaller, do you think that the squatters could supervise them better than the large ones? Some of the runs are beyond the capacity of any one man to manage. Men holding single 10-mile blocks would be able to make the country carry far more stock than men holding ten 10-mile blocks. The small holders would have smaller paddocks, and more water. However, until we get railway communication, very few persons will take up 10,000 acre blocks. I feel confident that if we had a railway, more homestead leases would be applied for.

1873. If the railway were made would the people use it to a considerable extent, instead of sending their goods down the river? There is no doubt about that in my mind; the railway would be a certainty.

1874. Do you agree that the district is retrograding at present? Yes. I believe that a railway would restore the former prosperity of the district, in combination with a more suitable Land Law.

1875. Do you consider that the new Land Act is an improvement on the former one? Yes.

1876. *Mr. Tonkin.*] Are there many sheep fattened here? Yes. They are principally sent to Melbourne and Adelaide. The country is held by Victorians and South Australians, and they generally send the fat stock to their own countries.

1877. *Mr. O'Sullivan.*] What amount of money has been spent by the New South Wales Government in snagging and clearing the river? At least £40,000. Since 1872 I had charge of the whole of the Darling River. I was working for fourteen years on the Darling alone. We only worked when the river was low. When I left the river, three and a half years ago, a boat could not hit a snag between here and Wentworth; but I believe the floods have since put in an immense quantity of timber lower down. Continual snagging is necessary. Unless something is done to the lower river in a few years we shall be isolated. I refer to the river near Wentworth. It would cost £2,000 a year now to keep the river clear.

1878. In your opinion, would a line of railway to Broken Hill be more conducive to the welfare and prosperity of this district, than a line from here to Mount Browne? Most decidedly. The population there demand supplies. I do not think they would be more likely to be supplied from Adelaide if the railway were made, because the railway rates in South Australia are very high. Then they have to get all their coal and coke from this Colony. If a line were constructed to Broken Hill, *via* Menindie, a line would not be required to Wilcannia. A great deal of inferior country would have to be passed through from Condobolin to Menindie, and it will never be occupied by anything, except rabbits. A line to Broken Hill would be a more paying line than one to Mount Browne. So far as Wilcannia itself is concerned, a line to Mount Browne will pay us better.

1879. Is the rabbit pest increasing here? Yes. I think that wire netting the waterholes will be successful in keeping them down. I think that the squatters, now that they have security of tenure, will keep down the rabbits. I would like to say, with regard to the common around Wilcannia, that it was surveyed in small holdings; but not one of them was taken up. They are available at present.

1880. *Mr. Copeland.*] In what areas? From 20 to 50 acres.

Mr. Thomas Byrne, hotelkeeper, Wilcannia, sworn and examined:—

1881. *Mr. Tonkin.*] What is your occupation? I am a publican at Wilcannia, and I have been in the district about nineteen years. I have been a hotelkeeper here for ten and a half years. I deal in produce, chaff, oats, and bran, but principally chaff. I have had great difficulties sometimes in obtaining supplies and carriage. From October last year, until about May of the present year, the chaff which I landed here cost me £23 a ton for carriage alone from Adelaide. At present you can buy chaff landed here, at £7 10s. per ton.

Mr. T. Byrne.  
16 Oct., 1889.

When I had to pay the high price for carriage I have mentioned, the selling price of the chaff here was about £30 per ton. There is very little produce grown locally. The seasons as a rule are against growing produce here. One or two crops have been grown in this neighborhood, but nothing to speak of.

1882. Could they not be grown with irrigation? Yes, on the river only. There is no well water good enough to produce crops. I know two wells, within a radius of 2 miles from the town, on the common, and they are both salt, and unfit even for stock to use.

1883. Suppose the river between here and Bourke were locked, do you think that would throw the water back into parts of the country where it would be available for agriculture? It would, were the creeks run back; but as a rule they do not run far back.

1884. Is there not sufficient soil on the banks of the river to grow all the produce required in the district? Yes; there are thousands of acres which could be easily irrigated.

1885. Would the proposed railway make a difference in the cost of produce here? I am certain you will never settle any one on the land until you give them some outlet.

1886. Where do you get your supplies from? Principally from Adelaide, at present. It is the most regular market. When the river is up there are more boats plying to Adelaide than to Echuca and other ports.

1887. Do you look upon regularity as of more importance than the actual cost of the supplies? Yes; I would pay a little more for regularity.

1888. Have you to keep a larger stock at present than you would keep if you had regular communication? Yes; with a falling river, I lay in a supply for twelve months. I believe that is the general practice here.

1889. If a railway were constructed, would it be a great boon to the district? Certainly.

- M. T. Byrne. 1890. Do you agree with the evidence given by Mr. Corney and Mr. Ottaway as to the amount of tonnage that passes to and from this place? Yes; I think their statements are correct. Until there is proper means of communication, either by the railway or by the river, we cannot expect to have any settlement here by means of homestead leases.
- 16 Oct., 1889.
1891. Which would be the most beneficial to the district—to lock the river right down to Wentworth, or to have railway communication with Sydney? From a local point of view, I think the river would be the best; but a great deal would depend upon the rates.
1892. Do you think there is patriotism enough in the district to induce the people to pay a small percentage extra in the railway rates, rather than to use the river? There is no doubt about it. I would sooner pay a great deal more, and be able to keep only a monthly supply, instead of being compelled to keep a yearly supply. I believe a majority of the people would sooner have water communication than railway communication. Water carriage would be cheaper if we had it regularly.
1893. *Mr. O'Sullivan.*] What is the value of the stores you have to keep on hand, as a hotelkeeper, for fear that the river will not be navigable? £1,000. I daresay that is the case with every hotelkeeper here. There is a heavy loss of interest on the money invested.
1893. Which, in your opinion, would be the better line for New South Wales to construct—one *via* Wilcannia to Mount Browne, or one *via* Wilcannia to Broken Hill? I should say a line to Broken Hill. I daresay that the people of Wilcannia would benefit more by a line to Mount Browne. From a local standpoint, I endorse the opinion of other Wilcannia people.
1895. *Mr. Hurley.*] That is from a selfish point of view? Yes.
1896. *Chairman.*] Do you produce a bill of lading for certain goods from Adelaide to Broken Hill? Yes; the charge is £9 per ton.
1897. Do you also produce the waybill for the same lot of goods from Broken Hill to Wilcannia? Yes; the freight for that distance is £15 per ton. Therefore the freight for the whole distance came to about £24. That was in December, 1888.
1898. Do you produce a waybill from Morgan to Wilcannia, for June, 1889? Yes; that was on the opening of the river. The rate of freight there charged is £6 10s. per ton, including all charges paid.
1899. Do you produce a bill of lading, dated 10th October, 1889, for goods now on the way from Adelaide to Wilcannia, by the river? Yes; the rate is about £4 per ton, all charges covered. That is the through rate now.
1900. May the river now be said to be at its best? No; it is falling. From this time forward the freights will go up.
1901. There is no certainty after this as to when you may get your goods? Yes; it may cease altogether—in all probability it will.
1902. Do these figures show an average of £5 to £5 10s. per ton, including all charges, from Adelaide by the river? Yes.

M. J. C. Tully, Esq., Inspector of Stock, recalled, and further examined:—

- M. J. C. Tully, Esq., 1903. *Chairman.*] Can you give us any figures to show the amount of tonnage in wool which goes away from Wilcannia during any specified time? I have made a compilation from the number of sheep which I stated yesterday to be in the district, which is rather under than over the number. Taking it at 3,000,000 sheep, yielding  $6\frac{1}{2}$  lb. of wool each, it gives 19,500,000 lb. of wool, or 8,708 tons per annum. If we take into consideration a certain quantity of lambs' wool, sheep skins, hides, and tallow, we can safely calculate it at over 500 tons; so that we have a yield of 9,208 tons per annum. Therefore I think the evidence you have already received as to the tonnage down the river being 10,000 tons per annum, is as nearly correct as need be. I made my calculations before I heard any of the evidence given before the Committee. The wool I have given includes the wool from the wool-wash.
- 16 Oct., 1889.
1904. *Mr. Tonkin.*] Have you not over-estimated the weight of the fleeces, when you say that they average  $6\frac{1}{2}$  lb.? I do not think so. There is no washing, and comparatively little scouring, and the fleeces in this district are heavier than in any other district of the Colony. I have not included any portion of the country which would not make use of the railway. I have probably left out a large area on each side of the line between here and Cobar. I have only gone 40 miles over the river.
1905. *Mr. O'Sullivan.*] In your evidence you said that the distance between Wilcannia and Bourke was about 600 miles by the river; are you aware that the Merchants and Underwriters' Association of Melbourne, in a pamphlet published by them, have given an estimate of the distances between all the stations on the Darling, and that they state that the distance from Wilcannia to Bourke is only 321 miles? I was not aware of that. During the whole time I have been in the district it has been calculated that the distance by river was three times the distance by land, which is 208 miles. I therefore stated the distance at 600 miles, to the best of my knowledge and belief. The distance may have been measured recently.
1906. *Chairman.*] Do you wish to give any other information to the Committee? Yes; in 1886 there were 230,000 sheep and 20,000 cattle brought through Wilcannia to the southern markets; in 1887, 179,000 sheep and 20,000 cattle; in 1888, 230,000 sheep and 10,000 cattle. The reason why there were so few cattle last year was that the season was so bad that they could not travel. During this year I expect there will be 20,000 head of cattle.

Sydney M. Cummins, Esq., Road Superintendent, sworn and examined:—

- S. M. Cummins, Esq., 1907. *Mr. Hurley.*] What office do you fill? Road Superintendent for the district of Wilcannia. I have been in the service of the Government about eleven years, and have been in this district a little over eighteen months. My district on the south extends about 105 miles towards Hay, then half way to Cobar, up the Paroo to Wanaaring, across to Milparinka and the Queensland Border, including the road down from Milparinka to Wilcannia and Menindie.
- 16 Oct., 1889.
1908. What is the character of the road to Broken Hill? Open plains and scrub mainly. The greater part of the road is scrub. There is sandy soil through the scrub and firm ground in the open country. The Netalie Hills are composed of sandstone. Right through there is stone at various points. There might be one stretch of 20 miles without metal.

1909.

S. M.  
Cummins,  
Esq.

16 Oct., 1889.

1909. What is the annual amount you receive from the department for expenditure on the roads in this district? About £2,000 for roads. There are special water votes; and the principal work I have here is constructing tanks. The principal road work in this district consists of clearing, and there is very little other expenditure. I have about 700 miles of road under my supervision.

1910. What is the distance from here to Broken Hill? I think it is 140 miles.

1911. How much would it cost to make a 24-foot road from hereto Broken Hill, with metal 6 inches deep? It would cost £200,000 independent of maintenance, which would come to about £2,000 per annum. There is a great deal of hilly country at the far end.

1912. Is the route suitable for a railway as far as you can judge? I am a civil engineer, and I think there would be no difficulty in getting a railway through.

1913. What grades could be obtained? One in 40 is considered not too steep. There would be no occasion to have as steep a grade as that. There would be no difficulty in getting the easiest grades required for a railway.

1914. Some time ago did you make some borings for a bridge here? Yes; I bored about 18 feet and came into sandstone rock—that was in the bed of the river.

1915. Did you strike any other water? There was water about 14 or 15 feet that rose above the summer-level of the river, but that is only soakage water that could be found on any part of the Darling.

1916. What formation did you find there? Nothing very distinct until we came to the rock. After going through the soft mud found in the bed of the river we came to fairly stiff firm clay, and then sandstone, gravel, and pebbles. After that a little sand and sandstone rock.

1917. Is there any water on the road between here and Broken Hill? There is none except station supplies. Tenders have already been invited for two or three tanks on the road to Broken Hill.

1918. If the river were locked would it not also serve as a bridge? It might be so constructed, but I do not think it would be an advantage. I think a bridge would be less expensive if built separately. Money has been voted for a bridge.

1919. Would it not be wise to hold that vote in abeyance until it is decided whether or not the railway should be constructed so that the one bridge might serve both for the railway and ordinary traffic? Yes; it would be wise to construct a bridge for both purposes.

1920. How many bores did you put down, and at what distance apart? I put down two bores at about 45 feet apart. I got a good foundation of sandstone rock at 18 feet.

1921. *Mr. Tonkin.*] If a railway could be constructed at twice the cost that it would take to make a road between here and Broken Hill, do you think it would be advisable to construct a railway? It would be advisable to construct a railway in preference to a road.

1922. Is the road to Mount Browne under your care? Yes; it is rather a heavy sandy road. There are watering-places at distances of 15 to 25 miles. There is a great deal of traffic on the road. There are about 700 miners in the vicinity of Mount Browne, Tibooburra, and the different places where they are working. I am speaking of the whole district. There are a good many stations up there, as the whole country is occupied. Wool from the stations, and station supplies, constitute the chief traffic.

1923. Where do the population of Mount Browne get their supplies from? From Wilcannia when the river is open, and a great deal from Broken Hill when the river is closed. The road to Mount Browne could not be improved except at enormous cost. It is a track cleared 1 chain wide for about 140 miles. There is only a vote of £250 a year for the whole road, or about £1 per mile.

1924. *Mr. Copeland.*] Do you mean that there are 700 adult males on the Mount Browne gold-fields? I should say that there were 700 men in the district employed in mining, storekeeping, and in different ways. The total population would not be more than 1,000, as there are very few women there.

1925. Has not some deep sinking been discovered recently in that neighbourhood which promises remarkably well? Yes; about 240 feet. They are getting very payable alluvial gravel. They are also working a reef in the district and are crushing.

1926. If a considerable supply of mining machinery were required, in which way would it have to be taken to the gold-field? If possible it would be brought here by steamer, and then conveyed to Mount Browne by road.

1927. Is there water in the deep ground? Yes; plenty of water. They have to keep the pumps working.

1928. Are there many prospecting parties in the district? Yes, scattered over the whole of the country. A great many are getting gold, and doing very well indeed.

1929. Is there any supply of timber in the Mount Browne district for mining purposes? None that is any good. If a great deal of timber were required for mining purposes it would have to be obtained somewhere on the Murray and brought here by steamer. There would not be any timber in that country fit for railway sleepers.

1930. *Chairman.*] How many have you employed on the roads in your district at present? Fifteen or twenty men scattered about. There are about nine men on the Cobar road, and the rest are on the Mount Browne road. The men on the Cobar road are clearing between the 76-mile post and the 95-mile post.

1931. Do you see many small holders about your district, and are they doing well? I know two small holders, and they are both doing very well indeed, on small blocks.

1932. What improvements have they made? Fencing, tanks, and ordinary station buildings. They have not done much clearing, as it is fairly open salt-bush country. That is at Nagrunnera; it is comparatively free from rabbits. There is a settler about 6 miles from here named Ewan, who holds a small block, and who is doing very well by means of irrigation.

1933. What is the size of the public tanks which have been constructed? From 15,000 to 20,000 yards. They all kept water throughout the drought, with the exception of one on the Booligal road, which had silted up. I think that tanks of 15,000 or 20,000 yards are large enough. There are not enough tanks in my district at present. There is room for more on the new roads, and on the Mount Browne road. 15 miles is quite close enough for tanks. Sometimes 20 miles is near enough.

1934. What is the average cost per cubic yard for tank sinking? From 1s. to 1s. 2d.

John

John Booth, Esq., part owner of Cultower Station, sworn and examined:—

- J. Booth, Esq.  
16 Oct., 1889.
1935. *Chairman.*] Are you part owner of Cultower Station? Yes. The leasehold area consists of 204,000 acres, and the resumed area of 199,000 acres.
1936. What are you assessed at for the leasehold? Between £1,500 and £1,600 for the leasehold and resumed areas;—that is a little over 1d. per acre for the leasehold, and a little under 1d. for the resumed area.
1937. How many permanent hands do you employ on the station? About 20 on an average. When we start rabbiting work again it may be more like 100.
1938. What stock have you on the run now? Very few just now; under 40,000. We lost great numbers by the drought. The run in average seasons would carry more than that.
1939. What improvements have you made on the station? Tanks, wells, dams, fencing, buildings—no ringbarking nor rabbit-proof fencing. Nearly £30,000 has been spent on improvements within two or three years. That was expended during the first two or three years that we had possession until the Act of 1884 was passed, and we then stopped all improvements.
1940. Now that you have a better tenure, will you go on improving or expending money on the station? Yes, we will expend money as we find it will pay—that is on the leasehold. Of course we cannot touch the resumed area.
1941. How many cattle on your station? A few. We do not go in for breeding cattle to any extent. We keep about 100 horses merely for the working of the station.
1942. Have you been much troubled with rabbits? Yes, we are making preparations to destroy them. Under the Rabbit Act we were bound to kill at a certain rate, whether we liked it or not, and to pay a certain rate per scalp whether it was necessary or not. The money was thrown away. I do not know which is the best method of dealing with the rabbit scourge; we have to find that out. I have found poison the most successful; using poisoned grain and poison distributors.
1943. How many paddocks have you on your holding? Between 5 and 6 miles square paddocks. There are about 21 or 22 paddocks, or 28 or 29 including the small paddocks. The paddocks are 16,000 acres downward.
1944. Would it not be advantageous to subdivide the paddocks? It would be a great advantage to put more water on, but not to have smaller paddocks.
1945. Have you tried growing wheat, barley, and oats? I have seen it tried for several years and they got nothing. Unfortunately they were the dry seasons.
1946. Have you any planted this year? Yes, and it is doing very well, but we have plenty of grass without it. We have wheat and a little oats.
1947. Did you plough the land? No, we just threw in the seed and scarified it over, and it has come up splendidly.
1948. During the three bad years which were tried before, did you adopt the same system of planting? No, we ploughed it one year and left it. We have only a small patch under cultivation.
1949. Do you think that the natural grass could be converted into hay, and be used for feeding sheep, in dry seasons? It would feed them right enough, but it would not pay to do it. You cannot mow to any extent in this rough country; and as the sheep are worth very little it would not pay to spend much money in cutting the grass. The appearance of the grass is very deceptive at present, and where you might think you would get 1 ton of hay to the acre you would only get half a ton.
1950. Did you lose a large number of stock during the drought? Yes; the average loss was about one-half on all the stations in the district.
1951. Do you think it is better to stand by and do nothing with the country and run the risk in a bad season of losing half your stock rather than try to preserve the herbage and feed the stock during a bad season? If it costs 4s. to save 3s. it would not do to try and preserve the stock by preserving the herbage. It is just a matter of pounds, shillings, and pence. If we had a railway and could shift the stock, we might be able to save them in a drought, but if there was a drought all over the Colony, even a railway would not save them. It is the cheapest plan to let the sheep die at a time like that.
1952. If a railway were made through this district it would do some good even to the pastoralists? Yes; decidedly. It would enable us to bring feed to the district; it would be a fine thing, and a great saving.
1953. From your experience of the district for about eight years, would you like to leave the district if you had an opportunity of doing so, or would you be satisfied to go on here? I would be very glad to clear out at a very great loss.
1954. *Mr. Copeland.*] What percentage of lambs have you? I cannot say yet. Our sheep are lambing still, and we expect a very big percentage; I should think 90 per cent. at least.
1955. Would your run carry double the amount of stock you have at present? Yes; it would carry any amount of stock just now.
1956. Do you think it is sufficiently stocked at the present time for average seasons? No.
1957. Are the rabbits much reduced since the drought? Yes. They are reduced by two-thirds. There is no serious trouble from them at present, but they are increasing all over the place by hundreds of thousands. Kangaroos are in no way troublesome, but native dogs are.
1958. Do you think the country is better fitted for sheep than cattle? Cattle do well on the country, but it pays better to keep sheep.
1959. In the event of a railway being constructed would you make use of it to send your wool down? Yes, when the river was not running. We send our wool to Port Victor.
1960. Could we only expect to divert your wool to Sydney when the river was not navigable? Yes, unless the railway were cheaper.
1961. If the railway were cheaper would there be any business reason for not sending it to Sydney? Certainly not; we would send to the cheapest place.
1962. Have you any homestead lessees on your run? No.
1963. Have you any water except artificially conserved water on your run? Yes, a billabong runs out for some distance filling a lake.
1964. *Mr. O'Sullivan.*] If a railway were constructed through your run to Wilcannia would it give an increased value to your holding? Yes, by giving a certain means of carriage.
1965. Then may you be taken as an advocate for the railway? Yes.

1966. Will the improvement conditions of the new Land Bill be likely to induce you to remain here and work your run? No; nothing would induce me to remain in this country if I could get out of it.
1967. Has not the new Land Bill made your run more valuable? It ought to.
1968. Will not the new railway and the new Land Act increase the value of your holding 30 per cent? It remains to be seen whether that will be the case.

J. Booth,  
Esq.

16 Oct., 1889.

Mr. Edmond O'Donnell, stock and station agent, Wilcannia, sworn, and examined:—

1969. *Chairman.*] What is your occupation? Stock and station agent in Wilcannia. For a number of years I have been connected with station properties in the district. I have been a stock and station agent only for a few months. Before that I was a partner on a station on the Paroo for twelve years, and I was also carrying on business in Wilcannia as a butcher, dealer, and selector. The station consisted of nearly three 10-mile blocks.

Mr.  
E. O'Donnell.

16 Oct., 1889.

1970. Was the station a success financially? We did not lose on it altogether. I sold out last year in rather a bad time, but taking it during the twelve years it was not unsuccessful. We made money, but I do not think we made as much as we ought to have done. We paid £18,000 for it. We had £10,000 cash. We kept it for twelve years, and sold it for about £30,000. When we bought it there were 12,000 sheep and 30 head of cattle on it. We sold out about 32,000 or 33,000 sheep, and 800 cattle, and some horses.

1971. What income did you draw from the station during the time you held it? There were five of us in it. We only drew out sufficient for our livelihood and clothes, and an occasional run to town. Sometimes one of my brothers and sometimes two of them lived on the station. We were jointly interested in the butchering business in Wilcannia.

1972. If you had sold the station in a prosperous season could you not have got a higher price for it? No. We were trying to sell it for four or five years.

1973. What do you think are the prospects of a grazier having a station in this district of the same size as your own? It depends very much on the seasons. We got on very well at times, but a bad season would then come on and throw us back two or three years. One good season out of three bad seasons is about the average. We made a great deal of improvements on our run, in the shape of fencing and tanks. Bourke was our nearest place—120 miles away—and we were 200 miles away from here.

1974. Before the railway reached Bourke how did you get your wool to market? By road to Wilcannia or else to a point on the river about 50 miles above Wilcannia, and sometimes to Bourke. As soon as the railway reached Bourke we always availed ourselves of it. The railway enhanced the value of the wool by nearly £10 per ton. The last wool we sent away by river from Bourke cost us very little short of £20 per ton. It remained at Bourke for eight or nine months, because the river was low. Since the railway has been running to Bourke the carriage to Sydney, including teams and all charges, has only cost us £10. 5s. per ton for scoured wool—greasy would be a little less. Nearly all the other graziers in the district availed themselves of the railway.

Arthur W. R. Pratt, Esq., Clerk of Petty Sessions and Mining Registrar, sworn, and examined:—

1975. *Chairman.*] What position do you hold? Clerk of Petty Sessions, Mining Registrar, and Warden's Clerk for the Wilcannia portion of the Albert gold district.

A. W. R.  
Pratt, Esq.

1976. How long have you been here? Since November, 1885.

1977. Do you produce a statement showing the sheep and rabbit returns from 1887 up to date? Yes, they are as follows:—1887, sheep, £550 17s. 6d.; rabbits, £1,673 2s. 2d. 1888, sheep, £657 12s.; rabbits, £1,879 8s. 9d. 1889, sheep, £548 13s. 6d.; rabbits, £1,425 2s. 10d.

16 Oct., 1889.

1978. What do these figures represent? The subsidy paid under the Disease in Sheep Act and the Rabbit Nuisance Act—those figures are correct.

1979. Can you give us any information with regard to mining in the district? During the year 1887, the mining business transacted was very small, and the collections amounted to only £17 15s. For 1888, they were £112 5s. Up to date, for 1889, I think I have received £112.

1980. *Mr. Copeland.*] Where is the mining carried on for which that revenue has been received? Partly within 80 or 90 miles of Wilcannia, and partly extending from here right up to the Warden's district of Milparinka.

1981. What does the revenue consist of? Miners' rights, business licenses, mineral licenses, applications for gold and silver leases, and deposits for survey fees. It includes the first year's rent for gold and mineral leases.

1982. Are there any payable mines within the radius of your district? I think not.

1983. I presume the revenue is not likely to increase in future? I cannot say that it will decrease, because the district is now being more extensively prospected than before.

1984. *Mr. Hurley.*] What has been the total amount received by you from all sources for publicans' licenses and all other collections? They are as follows:—1884, £5,992 15s. 5d.; 1885, £2,646 15s. 9d.; 1886, £3,621 19s. 10d.; 1887, £3,605 8s. 8d.; 1888, £4,132 7s. 9d.

1985. How many public-houses are there in the district? About thirteen in Wilcannia.

Mr. Robert Ashworth, public school teacher, sworn, and examined:—

1986-7. *Chairman.*] What is your occupation? Public school teacher in Wilcannia. I have been here since the early part of August last.

1988. *Mr. Tonkin.*] How many children are there on the roll? 207 for the last quarter.

1989. Is that an increase or decrease as compared with previous years? The enrolment is about the same, but the average attendance is increasing. The population up to the present time has been rather a shifting one, the school records show that many of the names that appear on the book have only been there three months, and the children have then left the district. During the past year the names on the books have been for the most part stationary. There are no other schools in Wilcannia. I do not think there is any other school within many miles of Wilcannia.

Mr.  
R. Ashworth.

16 Oct., 1889.

Mr. J. R. Holding, post and telegraph master, sworn, and further examined:—

Mr. J.R. Holding. 1990. *Chairman.*] Do you wish to make a statement with reference to certain railway surveys now being made in Victoria? Yes. I desire to state that the Victorian Government are now having a survey made of a line of railway from their nearest railway station—that is Donald, or some other town about 100 miles from the Murray—tapping the Murray at Wentworth. The country to be passed through is principally mallee country, and if that railway line is made it would take possession of the Darling trade. The surveyors were camped opposite Wentworth a few weeks ago.

1991-2. Have you written out a statement as to the crops that can be produced in the Darling district? Yes.

1993. Are the statements contained in this paper reliable and correct? Yes. They proceed almost entirely from personal observation, and partly personal experience, extending over the last twenty years. The statement is as follows:—

*Re Mr. Hurley's question*,—that if a crop of hay be got once in three years, valued the first year at £5, and £15 three years later?—it was not clear in its object to me. I can only say, that to hold a crop for three years would be risky in many ways,—fire, deterioration, etc., and the possibility of a run of good seasons, a low forage market, and the chance of navigation being open and meeting the demand by foreign importations.

I wish to say most emphatically that no regular cultivation is possible on the Darling from the natural rainfall, but that by irrigation a sure, certain, and very often surprising result is obtained, not only in forage, but in fruits, vegetables, and many other branches of cultivation. That vines grow to perfection on the Darling, good wine made, preserved fruits, apricots, peaches, figs, nectarines, currants, and raisins (made by the sun's heat alone), jams, jellies, and preserves, etc., of an excellent quality produced, has been proved for years past; and, as well, that the citron tribe thrive and come to great perfection. The range of fruits is extensive, and allows of a large range of culture, while vines thrive everywhere along the river; and were encouragement given by legislation to irrigation, there is no doubt the Darling would become very valuable country. But the river water must be conserved to ensure an abundant supply of water, and when once cultivation is fairly set going, the famine prices and dearth of forage, potatoes, onions, fruit, vegetables, etc., will be a thing of the past. While there is no doubt that the value of the west will be immensely increased and made permanently productive of much that is requisite for the maintenance of population to a considerable extent, such would be greatly aided by a railway line to the nearest market. The Darling country is quite equal to and affords equal facilities to the much-lauded Mildura settlement, save that the Darling being smaller than the Murray, steps would be imperative to conserve the great body of highly valuable water that flows down it in flood time, leaving it in the other extreme in the summer months, when water is most needed.

Although dodder has appeared in lucerne, and rust in corn, the soil is too porous, as a rule, to cause any of the troubles arising from want of drainage. Oidium is prevalent in vines to some extent.

Any measure that will conserve water on our river will cause settlement, and contribute indirectly to the maintenance of a railway line worked economically. People throughout the west, especially on the rivers, are alive to the fact that water makes the country, and though, as Mr. Hurley justly says, people are very deficient in the knowledge essential to cultivation, it is pretty certain that want would soon be supplied. A school or board that could generally disseminate practical information on the methods of irrigation and cultivation would be of great value to the west, if not to the Colony generally.

As regards underground water supplies, when borings were made for the bridge foundations here, 10 feet from the bed of the river, or 20 feet from the surface of the water then in it, a stream of fresh water was struck, which rose 2 feet above the level of the water.

These remarks may be useful to gentlemen seeking information for the ultimate good of our Colony, and I tender them with all respect.

*BROKEN HILL, SATURDAY, 19 OCTOBER, 1889.*

[*The Sectional Committee met in the Council Chamber, Broken Hill.*]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. ANDREW GARRAN.  
HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.  
EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Zebina Lane, Esq., mining manager, sworn, and examined:—

Z. Lane, Esq. 1994. *Chairman.*] You are the manager of block 14 company, and you also occupy the position of Mayor of Broken Hill? Yes.

1995. How long have you been incorporated here? Since November of last year.

1996. What is the population of Broken Hill at the present time? About 15,000, but there has been no proper census taken, so far.

1997. Has it been a very rapidly progressive population? Yes.

1998. Can you tell us the extent to which the population has grown during the last two or three years? The only record we have is that about four years ago there were within the municipality from 150 to 200 people, and it has steadily increased since that time. The town and the population as it now stands is just a matter of about four years' growth.

1999. What is the Municipal revenue? I do not know the exact amount, but in round numbers and with the Government subsidy, it will be about £9,000, or £4,500 without the subsidy.

2000. Being a new municipality, you receive £ for £? Yes.

2001. Do you look upon the mining industry here as being thoroughly established, and likely to be of a permanent character? Yes, the mining part of it is only in its infancy. The deepest works we have on the main lode are only 300 feet.

2002. Have you any data or information which would enable us to judge as to what revenue could be derived from this locality if a railway were constructed through New South Wales territory? I have thought it would be better for you to examine all the mine managers. They are all willing to give evidence

evidence as to the tonnage inwards and outwards for the different mines. I can give you my tonnage for Z. Lane, Esq. the last three months, ending the 30th September :—

Despatched by Rail from Block 14 for three months, ending 30th September, 1889.

19 Oct., 1889.

	tons.	cwt.	qrs.
Bullion despatched .....	1,940	13	3
Ore despatched .....	1,108	4	0
Bags returned .....	21	2	0
Total despatched.....	3,069	19	3
Received by Rail.			
Coke .....	2,176	4	0
Flux .....	589	10	3
Timber.....	238	13	3
Machinery .....	50	12	2
Sundries .....	91	15	0
Total received.....	3,146	16	0
	6,216	15	3

2003. Was that an excessive or an average amount? That is just the work for three months, with only two smelters working. Now, with another smelter at work, the return for the next twelve months will be a third more.

2004. Where did that all go to and come from? Some of it was despatched to Adelaide, and some to Port Pirie. Of course the coke, timber, machinery, and sundries are from Adelaide and Port Pirie. Most of our material comes from Port Pirie; it is, in fact, our port. In addition to that, we use about 150 tons of firewood per week.

2005. And that is collected I suppose in the locality? Yes; in the district, but it is now fast dying out.

2006. The timber is fast being exhausted? Yes; we should have to fall back on coal. If we could get coal at about 30s. to 35s. per ton, we would use it exclusively in preference to wood.

2007. What does it cost you for firewood per ton? Thirteen shillings per ton dead weight. We use about 150 tons a week. As the stock decreases, the cost will naturally increase. The consumption will also increase as the mines become opened up, and we increase our reducing plant. The timber is our greatest item. During six months we have used 348,254 feet of sawn timber.

2008. That was for the purpose of supports and planking? Yes. Our future requirements for the next twelve months will be about 100,000 feet super. per month. The timber we use is mostly 10 inch x 10 inch, 10 inch x 4 inch, and 10 inch x 2 inch.

2009. Have you any evidence showing what you have paid in the way of freight? No; most of our stuff is paid for at Port Pirie, where it is despatched from. With regard to coke, I estimate that during the ensuing twelve months we should require 200 tons per week. Most of the coke that we are getting now is English coke.

2010. Of course all this is being conveyed by your local railway? Yes. One drawback to coal is that it costs us about 54s. per ton.

2011. What does your coke cost you? About 5 guineas per ton. The railway freights are about £1 18s. 9d. per ton. The coke is a very expensive item, and the coal is much more so, on account of the heavy carriage. Our coal is brought round from Newcastle to Port Pirie, and then there is £1 18s. 9d. per ton on it again to bring it here.

2012. Then, for the coke used at this mine, there is no nearer source of supply than Newcastle? We don't use any Newcastle coke.

2013. Where does the coke come from? It is nearly all English. We have tried some of the Newcastle coke, and it did not give satisfactory results. In fact we couldn't use it; it was so high in the percentage of ash.

2014. If you had the means of bringing coal here, would it be largely availed of? It would be used exclusively if we could get it cheaper.

2015. It would be used exclusively if you could get it? Yes; if we could get it at 30s. or 35s. a ton, I would use 100 tons per week myself. Then the other companies would use in proportion.

2016. Do you call this line from Broken Hill a railway or tramway? We call it a tramway, but it is a narrow-gauge railway. It is a lightly built line, and is ballasted with gravel.

2017. *Dr. Garran.*] Do you collect some of the lime in the neighbourhood for the purpose of fluxes? Yes, all of it.

2018. How far distant do you go afield for it? In some cases as far as 9 or 10 miles.

2019. Is the stock easily exhaustible? Being a deposit, it does not go down to any great depth. It will be worked out in time.

2020. Then you will have to go further afield? Yes.

2021. Do you know the routes between here and Wilcannia? Yes.

2022. Is there lime on that track? Yes.

2023. And if good deposits could be found there, there would be plenty of business in bringing lime in? Yes; some of our best deposits would come in on that line about 12 miles beyond Mount Gipps.

2024. Do you know the line between here and Menindie? I have never been beyond 20 miles out.

2025. Is there any lime upon that line? Yes, a little.

2026. But not so much as on the other? No.

2027. Do you bring in iron for the purpose of flux? Yes.

2028. What is the maximum distance from which you bring it? We are carting some of it 12 or 13 miles on the course of the proposed line.

2029. The line to Wilcannia? Yes.

2030. Is that a large deposit? Yes, it is a very large one.

2031. Is there any iron on the line to Menindie? Yes.

2032. Either route would serve you for the purpose of lime or iron? Yes.

2033. There is no material quantity of firewood on either line? No.

2034. You must depend upon lime and iron being brought if you are to do your smelting here? Yes.

2035. And you are rapidly exhausting all that is within easy reach? Yes; as our reducing works increase the consumption is greater.

2036.

- Z. Lane, Esq. 2036. And all your squared timber at present is brought from abroad? Yes; principally from Tasmania and New Zealand.
- 19 Oct., 1889. 2037. If you could get timber from the western slopes of the Blue Mountains here at an equal price, it would suit your purposes as well? It would be better. It is a better class of timber.
2038. If we could get you ironbark, box, or red gum, it would be better? Yes; that is preferable for our work if we could get it for a price. The present drawback is the distance we have to bring it by rail. We could bring pine cheaper, because the railway carriage is less upon pine.
2039. What is the distance from here to Port Adelaide? About 300 miles.
2040. And from here to Port Pirie? I can't say.
2041. The timber comes from Port Pirie I presume? Yes.
2042. Is that 150 miles? Yes; it is more than that—about 250 miles.
2043. At any rate, your timber has to come a long distance at present? Yes.
2044. And even then it has to be brought by water first, so that you have to pay both water and land carriage? Yes; and the duty is 1s. 6d. per 100 ft. super.
2045. Then there is quite a possibility that you may be supplied from the western slopes of the Blue Mountains as effectively as you are now? Yes; the timber would be more suitable for mining purposes than the kind we are using, and it would be cheaper.
2046. It would be more durable? Yes.
2047. Is there any object in having very durable timber in the mines? Certainly, if the mines are to last.
2048. How long would you expect the timber to stand good? Ten or twelve years. The pine we are putting in will not stand more than four or five years.
2049. Will you have to replace that pine? Yes, or fill it up.
2050. It is very dry underground is it not? Yes.
2051. Will that timber rot and dry? Yes; the heat and a certain amount of dampness in the atmosphere creates a sort of dry mouldy rot in the pine.
2052. In the Oregon pine? No, in the New Zealand more than in the other.
2053. Then you have had experience that the New Zealand pine is not a very durable one? Yes.
2054. And if you could get N. S. Wales wood at any slight increase of price it would be cheaper? Yes.
2055. All the fodder for horses used here has to be brought, I presume? Yes.
2056. Where does it come from? South Australia.
2057. But what is the nearest point? From about the Burra.
2058. That is nearly 100 miles, is it not? It is more than that—230 or 240 miles.
2059. Is there any reasonable probability of fodder being grown nearer than that on the present line? Not much nearer. You might get a little from around Tarowie, but the seasons are so uncertain.
2060. Can you give an estimate of the quantity of fodder in the shape of hay, bran, and chaff, at present brought up for horse feed? No.
2061. Are the cattle fed on Indian corn here? No.
2062. On oats? Yes; on oats, chaff, and bran.
2063. They are all imported? Yes.
2064. And they all make a journey of not less than 150 miles? Yes.
2065. So that for everything you use in the mines you have to pay carriage more or less? Yes.
2066. The district must always be a large importing one? Yes.
2067. You say that you are using coke, costing five guineas a ton;—how many tons of coal would be necessary to equal one ton of coke for your purposes? Coke varies a great deal. We should not use more than about 1 ton in 5 in coking, although the different coal varies very much. There is no data to go upon at all.
2068. You have not tested the different styles of coal? No.
2069. What coal have you used in smelting? We don't use coal in smelting, but we use Stockton coal on the boiler furnaces.
2070. You have not attempted to smelt with coal? No.
2071. Could not you smelt with coal? No; it must be coke.
2072. You have tried the Newcastle coke and it failed;—have you tried the Bulli or Illawarra fields? No.
2073. Have you tried the Lithgow material? No.
2074. You have no knowledge whether the coal on the western side of the Blue Mountains would answer your purpose? No.
2075. Then, at the present time, it is cheaper to import the coke from England? Yes.
2076. Am I to understand that the cost of coke landed here is 5 guineas? Yes.
2077. Seeing that the carriage is so heavy, have you estimated whether it is better to take the ore to the coast, or to bring the coke up to the ore? Yes; we have studied that out, and the only difficulty is the dual management, which has been tried, and has been found not to work. In handling the furnaces we have a variety of ore to deal with. If we can mix it we can always regulate the furnaces, but if the furnaces are 100 miles distant we cannot do it.
2078. But could not you send a proportionate quantity of all the different kinds of ore you want for the blend to Port Pirie? Yes; that is being done by the British Company now. They do not seem to smelt any cheaper than I do, or very little cheaper. Their labour perhaps is a little less in cost.
2079. So far as present experience has gone, it is as cheap to smelt at Port Pirie as here? Yes; there is not much to be said on either side. We get better results by smelting on the mine. We have one single management, and have all the varieties of ore and other material at hand.
2080. Then there is no distinct advantage in having the smelting done on the coast? No.
2081. And it may prove to be the ultimate experience that this is the cheapest place to do it? Yes; if we get facilities for bringing in our fluxes, and we get coal cheaper than it is now, and get firewood and our timber at a reasonable price—that is, at less than we now pay for it—we should be able to smelt here as cheaply, if not cheaper, than elsewhere.
2082. If we could deliver coal here you would be independent of firewood? Yes.
2083. Supposing a railway were made by way of Wilcannia or Menindie, and you could get New South Wales coal from Bulli, Wollongong, or Lithgow here, would it be practicable to send trains of coal from the coal-mines there to Broken Hill, and give a return cargo of ore, and have smelters at each end, and to do that

that profitably? The question of smelting of course would be to have a place where flux is handy and fuel and water. If there were smelters at the other end we could always return cargo, and on the other hand if the carriage on bullion was less, or the same as is now being sent *via* Port Pirie to Sydney, we could send all the trucks back loaded with bullion. Z. Lane, Esq.  
19 Oct., 1889.

2084. But you would not have the same bulk of bullion to send back as you would have coal coming here? Yes, we would have more tonnage of bullion than we would of coal coming in.

2085. It would be more compact? Yes.

2086. Then you could send a full load of bullion back in return for a full load of coal? Yes.

2087. If there were no difficulty in regard to water at the New South Wales end of the line, and no difficulty about firewood or coal, you would still have the same difficulty of dual management to deal with? Yes.

2088. But there would be some advantage in being in connection with the coal mine? Yes; the coke is the greatest item in smelting. If coke, limestone, and ironstone could be procured cheaply, it would be an advantage.

2089. The point is whether the western coal of New South Wales would make a coke to suit your purposes; if it would, there would be a good return for it? Yes.

2090. If it would not, the coal would be of no use to you except for the furnace? No.

2091. It would be of no use for smelting? No.

2092. Then upon that part of the problem rests the question, whether the western coal makes a good coke? Yes.

2093. Is the country between here and Port Pirie nearly all level? Yes; there are no heavy grades.

2094. What is the maximum load which could be hauled from here to Port Pirie? I could not tell you.

2095. How much coke per annum does each smelter consume? Each smelter would consume about 80 tons per week.

2096. Then every fresh smelter put up here would consume that amount? Yes.

2097. So that there would be a traffic for the railway of 80 tons for every fresh smelter put up? Yes.

2098. Looking to the future, what number of smelting furnaces do you think will be established five years from now? The number should be more than double what it is now.

2099. How many are there now? Twelve.

2100. And you think there should be twenty-four at least in five years time? Yes.

2101. And you think that would meet the probable demand? Yes, of course; some of the companies are smelting out of the Colony in South Australia.

2102. How many mines do you think are now established, and are certain to go on working in the district? There are fifteen on the main line itself.

2103. Proved mines certain to go on working? Yes.

2104. Are there any others off the main line which are proved mines? Yes, at least five others.

2105. That would be twenty certain mines altogether? Yes.

2106. Do you think they will last for twenty years? I could not say for twenty years. We can see five years ahead of us on the main line now.

2107. You would not like to guarantee beyond that period? No; what we have below us is not proved yet, although they consider they proved it yesterday and to-day with the bore.

2108. Have you had any opportunity of seeing whether the soil and climate are likely to promote the growth of fodder in the immediate neighbourhood? No; not unless the ground could be irrigated and the rainfall greatly changed. This has been an exceptional season. The soil itself is good enough.

2109. But taking the ordinary run of seasons, you don't think the district will ever provide its own fodder? No.

2110. *Mr. Copeland.*] How much land is there in your mine? 40 acres.

2111. How many shafts have you at work? Three.

2112. Are they all working? No; I am only hauling out of one. Of course we use the others. We do not take stuff through them, but we put timber down them and use them for air.

2113. How deep have you proved the lode? 300 ft. from the surface.

2114. Do you consider you have proved it all the length of the 40 acres? Yes.

2115. That is a quarter of a mile? Yes.

2116. Have you entered into any calculation as to what length of time it would take you to work the ore you know of down to that depth? What we have in sight would take about 10 years.

2117. Speaking roughly, how many men would that give employment to? I have 390 men on the sheet to-day, and I am about 100 short. We cannot get competent miners at all.

2118. In addition to that you employ a good many people indirectly? Yes.

2119. How many do you think? At least 120 more will be supplying us with flux and firewood.

2120. How many furnaces have you at work? Two, and a third one is in course of erection and will be finished in a few weeks.

2121. And will they do all the smelting you require? At the present they will.

2122. Can you say whether the ore is improving as you acquire depth? It is.

2123. Therefore you are justified in looking forward to a long future? Yes.

2124. I presume there is no indication of the lode giving out at the lowest level? No; it is getting larger.

2125. What width is the lode at the lowest level? The average of the lode on the 300-foot level is about 33 feet in width, and the average on the 200-foot level is only 12 feet.

2126. What is the greatest length you have opened out and driven on the course of the lode at any level? 1,320 feet.

2127. At which level? The 200-foot level.

2128. Is your ground a leasehold block? Yes.

2129. For which the Government are paid 5s. per acre per annum? Yes.

2130. Have you been here many years? About three and a half years.

2131. Can you say what length this formation extends along the line of the lode? The main lode itself has been proved for about 10 miles.

2132. That is proved at intervals? No; continuously; the blocks are all adjoining.

2133. Then, for 10 miles continuously, it has been proved to contain payable ore? No, not payable ore.

2134. Then, they have merely traced the lode? Yes.

- Z. Lane, Esq.** 2135. How far in a direction north of the Proprietary blocks have they proved payable ore? About five blocks. That is 100 chains, or  $1\frac{1}{4}$  miles.
- 19 Oct., 1889.** 2136. And how far in a southerly direction? About three blocks south; that is 60 chains.
2137. That would be 2 miles altogether, and then there would be the length of the Proprietary claims as well? Yes.
2138. What length is their claim? 60 chains, or  $\frac{3}{4}$  of a mile.
2139. Therefore for  $2\frac{3}{4}$  miles the lode has been proved, continuously, to be payable? Yes.
2140. *Mr. Hurley.*] You say wood costs 13s. per ton. What is a ton of wood equal to as against coal, or coal as against wood? We reckon 1 ton of coal is as good as 4 tons of this wood.
2141. What would wood give in measurement? It is all by dead weight.
2142. And it is very heavy wood? Yes. I never stacked any to measure it.
2143. Would it not pay you to pay a higher price to obtain coal permanently, instead of relying upon wood? I do not consume a great amount of wood, but the Proprietary people, who use much more, cannot get enough wood to supply them, and they are now burning coal almost exclusively.
2144. Therefore you could safely say you could pay 54s. a ton for your coal if you could obtain it? Well, we are compelled to pay it now, but we use wood in preference rather than alter the furnaces, but if we could get coal at 45s. a ton we would use it altogether.
2145. In what direction does the limestone lie from here? You can get it from almost every part of the country. The greater part of it is between here and Silverton. They are working that at present, because it is alongside the tramway.
2146. *Mr. Tonkin.*] What do you pay for the carriage of bullion from here to Port Adelaide? £2 9s.
2147. What do you pay for the timber per ton? A ton is about 420 feet, and it costs us about 25s. per 100 feet superficial.
2148. That would be about £5 a ton? Yes.
2149. What do you pay for the timber in the first instance? We pay 9s. 8d. for 100 feet delivered at Port Pirie in the ship's slings. It costs us 10s. wharfage, which has to be added, and 10s. in the trucks. Then the freight added makes it £5 a ton. That is 25s. 100 feet superficial.
2150. Would you give any more if it were hardwood timber,—ironbark, for instance? We would not give any more for it. We would prefer hardwood, however, at the same price. We take the cheapest timber we can get, and do the best we can with it.
2151. Presuming this railway were constructed, and the Government chose to deliver you coal at £2 5s. a ton, would you, as a sort of compensation, give all your back-loading, in the shape of bullion, to that railway line? When the bullion reaches Port Adelaide we are done with it; and although it is then taken by the Orient Company to Sydney, they take it at their own cost. We must take it to the nearest and cheapest port. It costs us £2 9s. now.
2152. What I want to know is this,—If this railway were constructed, and you were reaping a benefit from it by the charges you paid upon coal—say for instance you got the coal for £2 5s. instead of £2 14s., which you now pay—would you, under those circumstances, give all your back-loading, if it were taken at the same price, to that railway, instead of sending it to Adelaide? Yes, certainly, wherever we could save—if it were even a fractional part of a penny per ton—we would do so.
2153. But supposing you saved nothing in the return loading, would you then give the railway the benefit of the back-loading if it brought you coal at a lesser price than what you are paying now? Certainly, it would be to our interests to do so.
2154. We want to show, if possible, that this railway line, if constructed, will pay for its construction, and if there is a certain amount of return loading it will assist in paying the working expenses of the line. I suppose you have never used any of the Esk Bank coal, or the Lithgow coal? No.
2155. What do you use the coal for principally? Only for steaming purposes.
2156. How much do you use weekly? About 100 tons.
2157. Would that be about the average of the other mines which are working? No; the Proprietary Company would use 5, 6, or 7 times that amount.
2158. But there are other mines which would use much less? Yes.
2159. How many mines are there working which would require anything like this amount of coal? There are two or three others; but there are smaller mines which would take about 50 or 60 tons per week.
2160. You say the coke costs £5 per ton delivered here. Do you think that if the coke could be delivered at £3 or £3 10s. per ton it would be used instead of the £5 per ton coke? Certainly; the quality of the coke depends upon the percentage of ash per ton which it contains, and that is a matter which has never been looked to before, where they have been manufacturing coke in New South Wales. The colonial coke averages about 14 per cent. of ash, whereas the English coke runs to between 6 and 7 per cent. If you get a coke giving 14 per cent., as against a coke giving 7 per cent., you would want that coke 21s. per ton cheaper; or if it went 12 per cent. you would want it 15s. a ton cheaper.
2161. Do you know whether there are any other mines in this district which are likely to be benefited by the construction of a railway? Yes, all the mines.
2162. I mean independently of the silver mines,—are there any other mines here which would benefit much by the construction of this line? There are no other mines but silver lead mines in the district.
2163. Are there no copper mines here? No, not in the immediate vicinity. There is a little copper here and there, but not a large deposit.
2164. No tin-mines? Yes, there are tin-mines, but not in the immediate neighbourhood. They are about forty or fifty miles in a northerly direction.
2165. *Mr. O'Sullivan.*] Your  $3\frac{1}{2}$  years' experience of the district has enabled you to become pretty well acquainted with its mineral resources? Yes.
2166. Do you consider there are any mines outside Broken Hill with anything like promise of permanency about them? Yes.
2167. What mines within a fair radius of the town are likely to be permanent? There are the mines in the Day Dream district. The Day Dream Mine itself is one. That is about 18 miles west from here.
2168. Are there any mines around Silverton? Yes, several.
2169. Are there any to the south or eastward? Yes, there are some on the southern end. The Pinnacle Mine itself is about 10 miles in a south-westerly direction. That is the Pinnacle group, of half a dozen or more mines, which are going slowly on.

2170. Then a railway coming from Sydney, *via* Nyngan and Wilcannia, and stopping here, would be likely to serve them and receive the trade from those mines? Yes, it would. Z. Lane, Esq.  
19 Oct., 1889.
2171. You mentioned just now that Newcastle coke was not suitable for working in the silver-mines;—are you aware that it is used in some of the silver-mines in New South Wales? Yes; it is used where it can be used, with the difference in the percentage of ash. If the coke can be landed on the furnace floor so much per cent. cheaper for each percentage of ash above 7 per cent., then it can be used as cheaply as English coke.
2172. If you could get English coke at anything like the same price as Newcastle, would you prefer the English? Yes.
2173. Therefore we need not look for any large trade in coke by that railway? No. There is one thing in connection with coke in this country which I don't think they have ever studied, and that is in regard to properly washing it. They have never washed it properly. They could take all the impurities out of it by proper grinding and washing.
2174. From your position as Mayor can you tell us something about the trade of the town;—where does the live stock come from which you use here? Principally from Queensland. It is driven overland. The sheep come from the stations.
2175. Is it possible that the stations between here and Cobar could command that live stock trade? Yes.
2176. Having rapid access to it, perhaps they could better supply the market than those a distance away? Certainly.
2177. Would the same remark apply to the fodder trade? Yes; I think so.
2178. Most of the people resident in this town are South Australians, are they not? Yes, the majority of them.
2179. Judging from appearances, this seems to be a go-ahead centre of population? Yes.
2180. Do you consider it is likely to become very much larger in size? It is certain to increase for the next two or three years. It is impossible for it to go back. In fact, as we now stand we are 300 or 400 miners short on the field. Every mine that is working—my own, the Proprietary, and the British, and all the other mines which are trying to handle ore—are short all the time. I would take 100 miners on Monday morning and put them on to work, but I cannot get them.
2181. What rate of wages prevails here? Ten shillings a day of eight hours for miners, and 8s. 4d. for surface labourers.
2182. Where have you received most miners from? From South Australia, and from Sandhurst and Ballarat, in Victoria.
2183. Do many of the old copper-miners come? Yes.
2184. I presume a railway to Sydney would command the labour markets and mining centres when you required men? Yes; the majority of the men brought here lately have been engaged in Ballarat or Sandhurst, and we have to advance the railway fare to bring them here.
2185. Are the contracts you make in South Australia and Victoria binding here? We have to trust to the men.
2186. How many working miners do you think there are in this district—(say) on the mines of Broken Hill? Between 5,000 and 6,000.
2187. And you think there would be room for 2,000 more? There is room for another 1,000.
2188. Then, with the extension of mining, which you say will rapidly take place, there must be a greater demand for mining labour here? Yes; what is really keeping the place back at the present time is the labour.
2189. What is the value of your saleable property here? The assessed capital value is £656,636, and the annual value is £94,022.

Mr. Charles Chapple sworn, and examined:—

2190. *Mr. Copeland.*] What business are you connected with? I am a carrier and forwarding agent.
2191. Have you been long in the district? Yes; I came here in 1878 before the mines started. Mr.  
C. Chapple.  
19 Oct., 1889.
2192. In which direction do you transact most of your forwarding business? South Australia.
2193. Can you say how many tons of goods have passed through your hands through any given period—(say) during last year? I can give it to you for July, August, and September last. The imports of general goods, comprising groceries, drapery, ironmongery, and machinery, &c., amounted to 1,265 tons, 18 cwt. 1 qr., timber, 782 tons 10 cwt. That is here at Broken Hill. At Silverton and Cockburn the imports have been—general merchandise, 266 tons.
2194. Those alluded to at Cockburn have stayed there, I presume, and then come on to Broken Hill? It comes over the Border into New South Wales.
2195. But you are given two lists,—the first as coming to Broken Hill, and the other as coming only to Cockburn? Yes.
2196. Have you any quantity of goods sent away from here? Yes; the ore which passed through my hands during the same period amounted to 2,157 tons 3 cwt. 1 qr; general goods, 17 tons 14 cwt.; wool, 5 tons only; and from Silverton 316 tons of wool, and 756 tons of ore. On account of the season being such a good one, and the river being up, a great deal of wool which generally comes this way has gone down the river this year.
2197. All the goods you have alluded to have been sent to or obtained from Adelaide? Yes, most of them. A little comes round from Sydney and Port Pirie; but the most of it is from South Australia.
2198. And nothing has been sent down the river except wool? No.
2199. Can you say how many other forwarding agents there are? There are three others firms besides mine. Some of the mines forward their own goods direct, and they do not pass through our hands at all.
2200. Do the other three firms do an equal amount of business with yours, or more? I think I do more, although a great deal more wool has gone through the other firms than mine.
2201. I suppose the whole of these goods have been sent away, and others brought by tramway to the Border, and then by South Australian trains? Yes.
2202. As a person well acquainted with the district, do you think that if this railway was constructed to connect

- Mr. C. Chapple.  
19 Oct., 1839.
- connect Broken Hill with Sydney, many of these goods would be obtained from Sydney? I think so. I think if coal could be brought here at a reasonable price there would be a large traffic in coal alone. Then, no doubt, bullion would be sent away.
2203. I suppose you could not form any estimate of the tonnage which would be likely to be obtained from Sydney, or sent to Sydney? No; I could not.
2204. What freight do you pay for fodder from Adelaide? About £3 3s. a ton.
2205. That is for hay, oats, chaff, &c.? Yes.
2206. Do you think there would be any likelihood of business springing up in the direction of obtaining fodder from the eastward, instead of from South Australia, if this line were opened? I think so.
2207. Has there been any attempt at cultivating the ground here? Only on a very limited scale; the rainfall is not good enough.
2208. I suppose you do not know what is the actual rainfall for an average number of years? About 8 inches.
2209. And you think that is not sufficient to enable crops to be cultivated? If we got it at the right time, I daresay we could grow crops with 8 inches of rain; but probably we would get 4 or 5 inches at one fall, and then we are a long time without any.
- 2210-11. Can you say, with reference to the existing tram-line, whether any straighter or shorter line could be constructed between Broken Hill and Cockburn? Yes, *via* the Pinnacles; it is some 6 or 7 miles shorter.
2212. *Mr. O'Sullivan.*] How long have you resided in this district? Eleven years, within 30 or 40 miles of Broken Hill. I have been at Silverton or here ever since the field started.
2213. Can you say how many seasons are likely to be good in this neighbourhood (say) out of four? It is lucky if we get one out of four. I think I may say we get one really good season in seven, and perhaps two other seasons in seven are fairly good.
2214. I suppose during these dry seasons prices run very high in Broken Hill? Yes; they have been very high for a great many things—water especially.
2215. Can you give an idea of the cost of fodder, and also of some of the necessaries of life for mankind? Well, I paid £8 10s. a ton for fodder this last summer. I have paid £20 a ton, but that was a long time ago—before we had a railway, and when there was a difficulty in getting things.
2216. And during the dry seasons the prices of household commodities ranged very high? No, not much, perhaps a trifle higher, but not a great deal.
2217. A line running from here to the sea-board, and through highly favoured cultivated districts, would be the means of supplying you with fodder in dry seasons, and giving you command of a good market for the purchase of stores? Yes.
2218. And by that means it would be a great boon to the people of this district? Yes.
2219. You said to Mr. Copeland that you formerly took a large amount of wool down to South Australia, but that this year it went by the river;—how far out were you in the habit of getting that wool? From here to the Queensland Border, all around Mount Browne district, and close to Wilcannia.
2220. Within what radius? About 100 miles.
2221. And all that produce, when the river was low, went down to Adelaide? A great deal of it went down, and a great deal of it was stored and kept.
2222. But all the produce you and others were in the habit of sending went by river? Yes.
2223. Do you think a railway to this place would intercept that traffic? I think so.
2224. Is there much traffic now towards Mount Browne? Yes, a good deal.
2225. Do you know anything of the country in that direction? No; I have not been to Mount Browne. I know the country between this and Wilcannia, and around the district generally.
2226. How far do you think this mineral country extends (say), from Silverton northwards? I think there are minerals more or less all the way to Mount Browne.
2227. Then you say the whole of the Barrier Ranges are mineral? I think so.
2228. *Dr. Garran.*] Since this railway has been completed to Broken Hill, have you drawn the wool from a longer distance than you did before towards South Australia? Yes.
2229. It has been open whilst the river has been unnavigable? Yes.
2230. How near to the river have you gone to draw wool? Right to the banks.
2231. And have you sent return stores? Yes.
2232. Have you ever sent stores to Wilcannia from here? Yes.
2233. Or to Menindie? Yes.
2234. And the stations on the Darling River have been supplied from this railway? Yes.
2235. And you have brought back wool? Yes.
2236. And when the river is in flood, how far short do you stop? We go out then about 40 or 50 miles.
2237. What distance does that leave between there and the river? From here to Menindie, as the crow flies, is about 75 miles. All the wool in that direction goes down the river; but towards Wilcannia we go within 80 or 90 miles of the river.
2238. What is the distance between here and Wilcannia? 130 miles.
2239. You go about half way? Yes.
2240. Even when the river is in flood? Yes.
2241. Then the navigableness of the river does not reach more than about 20 miles from its banks if there is a railway on the other side to draw the wool? It depends on circumstances. Some of the wool comes down here which could go down the river, only it suits them better now to ship it from Port Pirie or Port Adelaide round to Sydney.
2242. Is the carriage inward to Broken Hill equal to the carriage outward? I think it is.
2243. Does the New South Wales railway to Bourke compete with the Mount Browne traffic you speak of? No.
2244. None of it goes to Bourke at present? No; I think not.
2245. How near to Bourke, on a north-westerly track, does the effect of this railway to Broken Hill tell? I can hardly tell you.
2246. Have you drawn any wool down from 80 miles west of Bourke? No; not so close as that. I daresay about 100 miles.
2247. If there was a railway from Sydney to Wilcannia, with a terminus at Wilcannia, it would compete with this railway which has its terminus at Broken Hill? Yes.
- 2248.

2248. And the stations midway would be balanced as to whether to send the wool to Port Adelaide or to Sydney? Yes.
2249. You take a belt of country 50 miles in breadth, inside our border, and drain it down to this direction (*pointing to the map*)? Yes; but in a northerly direction we go further out.
2250. The more northerly you go the more easterly you go? The more easterly we go the more we get to the river; but northerly we go out 200 miles.
2251. As you go northward does the effect of your railway go to the eastward also? Yes.
2252. Then you go east by north as you go up? Yes.
2253. Then to some extent you follow the trend of the Darling River? Yes.
2254. If you draw a line on the map, showing the traffic area, it will follow the line of the Darling River? Yes.
2255. A line drawn parallel with the Darling River, about 100 miles back, would be about the limit of your operations? Yes.
2256. *Mr. Tonkin.*] In the estimate you gave us of the goods traffic sent by you from here, did you include any bullion? None whatever.
2257. Then that is a much larger item in tonnage than the amount of goods you sent through? Yes; very much larger indeed. I pass the entries for it, but as I understand you are going to take evidence from the mine managers, I have not included it in my return.
2258. Then nothing you have mentioned as goods going through your hands has to do with what they receive at or send from the mines in the shape of bullion, coke, coal, or wood? No.
2259. *Mr. Hurley.*] Have you any knowledge of agriculture? Very little.
2260. Can you say what the character of the soil is within 50 miles of this place? I think it is excellent.
2261. Do you think irrigation would bring about a settlement of population which would provide sufficient fodder and wheat for this place? There is no doubt about it.
2262. You are of opinion if irrigation were provided, that the soil is sufficiently productive to grow all that is required for the district? I feel sure it would.
2263. In view of the present favourable season, have any silos for ensilage been built? A gentleman told me the other day he was going to try.
2264. But it has not been practised? No; not yet.

Mr.  
C. Chapple.  
19 Oct., 1889.

Francis Wickham, Esq., surveyor in the Railway Department, sworn, and examined:—

2265. *Chairman.*] What is your profession? A railway surveyor, in the New South Wales Railway Department. F. Wickham,  
Esq.  
19 Oct., 1889.
2266. Are you also an engineer? No; we are only called surveyors in the Department.
2267. Who is the gentleman who is making the survey with you? Mr. Hixson, also a surveyor.
2268. What survey have you been engaged upon? From Wilcannia to Broken Hill and Cockburn.
2269. Where did you commence your survey? At Broken Hill.
2270. How far did you get? 40 miles towards Wilcannia.
2271. Did you meet the other surveyor there? Yes.
2272. What is the character of the country you have surveyed? Undulating country for the most part, running into flat country as you get towards Wilcannia.
2273. And the soil? It is a red soil—very mineralized kind of country.
2274. Is it stony in parts? Yes; full of stones and ridgy.
2275. What is the ruling grade you are taking on this line? 1 in 100 is the grade we were instructed to obtain, and I think we should obtain grades very nearly approaching 1 in 100. We ought to get 1 in 70 grades as the steepest on the line.
2276. Will there be much difficulty in getting 1 in 100,—will there be many cuttings or divergencies? It would be better to use the 1 in 70 grade in places, than to make a deviation for the purpose of obtaining 1 in 100.
2277. For what reason? Because you would have to have very long deviations for 1 in 100.
2278. In many places? No; in very few.
2279. Would the cuttings be very deep to get this 1 in 100 grade? No.
2280. What stations did you pass through on your survey? Mount Gipps, Kinchega, Topar, and then to Mount Gipps again.
2281. What is the longest length of plain country in this survey? About 28 miles of level surface running.
2282. Almost a dead level? Yes; almost surface running for 28 miles out of 40.
2283. What is your opinion as to the formation of this line—would it want to be ballasted? I think so.
2284. You are quite sure it would from the character of the country? Yes; I should say decidedly it would have to be ballasted.
2285. In making your survey, did you come across material suitable for ballast? Yes; a large amount.
2286. Was it sandstone? No; it is the usual rock which occurs in this country. I could not give you the name of it, but it would make very suitable ballast.
2287. From your experience as a surveyor, would you say this is an easy line to construct? Yes.
2288. What about water along the line of railway? There are two very large creeks—one very large, and one rather large. Stephen's Creek is the one I mean.
2289. At what intervals? Stephen's Creek is at 12 miles from Broken Hill, and Yancowinna Creek is at 29 miles from Broken Hill.
2290. Did you make enquiries as to whether those creeks were always with water? Yes; they have not always water in them.
2291. Are there any Government tanks along the surveyed line? Yes, one at Stephen's Creek.
2292. Did you come across any timber suitable for sleepers? None whatever.
2293. *Mr. Hurley.*] What are the ruling curves? Sixteen chains radius will be the smallest curve.
2294. *Mr. O'Sullivan.*] Have you surveyed the line between here and the border? I am doing it at present.
2295. Is it level country so far as you have gone? It is a little rougher than towards Wilcannia.
2296. Between here and Topar two bridges will be required—over the Yancowinna and Stephen's Creeks? Yes.

- F. Wickham, Esq. 2297. Will they be of a costly nature? The Stephen's Creek bridge will be a long one of about 11 chains; the other will be about 3 chains in length. The Stephen's Creek bridge will be an expensive one, I think.
- 19 Oct., 1889. 2298. Will there be any costly works on the other side of Broken Hill? None.
2299. *Dr. Garran.*] You say you have about 12 miles of country of ridges? Yes.
2300. Are they long ridges? No, very short.
2301. If you laid the line out pretty well on the surface-ground in the first instance, it would be easy afterwards to cut the gradient down to 1 in 75 or 1 in 100? No; it would not.
2302. *Mr. Copeland.*] What is the total length of the line between here and Wilcannia? 115 miles.
2303. You say it will be necessary to make a number of deviations to obtain a grade of 1 in 100; can you say what length those ridges are, or those cuttings would be, to obtain a grade of 1 in 100 in the length that you have surveyed? To cut the grade down very much would about double the cutting, say, make an 8 or 10 chain cutting in length.
2304. In how many cases would it be necessary to make these cuttings, and what length would the total cuttings be, so as to obtain a grade of 1 in 100? It would be necessary to cut in about two places.
2305. What would the length of each of these two places be? By making 25 or 30 chains of a cutting you could obtain a grade of 1 in 100.
2306. And the grade of 1 in 100 would be the ruling grade between Broken Hill and Wilcannia? Yes.
2307. Can you say what depth the 25 to 30 chains cuttings would have to be? I should say not more than 25 feet in the highest point, and it would gradually work out at each end to nothing.
2308. What rock formation would the deepest part of these cuttings be in,—would it be hard rock? No; it would be the rock which the whole country is formed of.
2309. Is it sandstone rock? No; it is some micaceous schist rock.
2310. And the work would be done cheaply? Yes.
2311. And then you could obtain the grade of 1 in 100 all the way to Wilcannia, and beyond Wilcannia for some distance;—do you know the country on the other side? I surveyed the line from Wilcannia and Cobar.
2312. What are the grades between Wilcannia and Cobar? There were some 1 in 40 there.
2313. But those have been taken out, have they not? I do not know.
2314. Where were those grades? Half-way between Cobar and Wilcannia.
2315. Did you make those surveys yourself? Yes.
2316. Can you say what length those cuttings were? Not from recollection.
2317. How far did you survey from Wilcannia towards Cobar? The whole distance from Cobar towards Wilcannia.
2318. Going from Wilcannia towards Cobar where did the grades commence? At about 40 miles.
2319. Then between Wilcannia and 40 miles towards Cobar you have level country? Perfectly level.
2320. So that if you reduce the grades to 1 in 100 you would then have, for 40 miles beyond Wilcannia, level country the whole way? Yes.
2321. Do you think it will be possible, all the way between Wilcannia and Cobar, to get a grade of 1 in 100? Certainly.
2322. Without trouble? There would have to be some trouble. It would have to be a longer line.
2323. You would have to make deviations? Yes.
2324. To what extent do you think it would lengthen the line so as to reduce the grade all the way from Wilcannia to Cobar to 1 in 100. Have you examined the matter critically, with the object of ascertaining it? I think you could do it with, say, an 8 miles longer line.
2325. Then by making the line 8 miles longer, and by making these cuttings you speak of near Broken Hill, you would obtain a ruling grade of 1 in 100 between Broken Hill and Cobar? Yes.
2326. Do you think it would be necessary to extend the line 8 miles to get rid of these gradients of 1 in 40 between Wilcannia and Cobar? To the best of my knowledge, it would be necessary.
2327. Would it not be possible to make slight deviations, and to have shallow cuttings? No; you would require to alter the direction of the line entirely 8 miles.
2328. By altering the direction you would be able to avoid these cuttings altogether—by making some lengthened alterations without any sharp curves? Yes; I think we would be able to avoid the ridges altogether.
2329. If you adopted that course how much longer do you think the line would be between Wilcannia and Cobar? That is the course I had in view when I said it would make 8 miles longer.
2330. Then you would obtain a level line? Fairly level,—of 1 in 100.
2331. Do you know of any objection there would be, other than lengthening the line, to making this deviation? There will be no other objection.
2332. Do you know any advantages which would arise through making this deviation? None, beyond an easier grade.
2333. Would it be likely to serve any of the station people to any greater advantage? No, not at all.
2334. Would it take you any nearer the ballast or the timber? No.
2335. Would you avoid any creeks, bridges, culverts, or anything of that kind? No.
2336. So that there would be no compensating advantages to induce making this deviation, excepting to avoid the cuttings, and get a level line? None whatever.
2337. But you could avoid the cuttings? Yes, we could.
2338. You said that the deepest cuttings near to Broken Hill would be about 20 feet? About 20 or 25 feet in the deepest part.
2339. Can you say what length those cuttings would be? From 7 to 8 chains.
2340. How many tanks would you come across for water supply for the railway between Wilcannia and Cobar? There are three within 50 miles of Cobar, and from there you would meet no more.
2341. And the distance between Cobar and Wilcannia is how much? 156 miles.
2342. Then for 106 miles you would be without water from the Government tanks? Yes.
2343. Does the line go near any private tanks? Yes, a large number.
2344. Right on the track? Yes.
2345. If you were to make this deviation, so as to get a better grade, would that take you nearer the Government tanks? No.
2346. Would there still be private tanks on that route? Yes.
- 2347.

2347. Is there any timber for sleepers between Wilcannia and Cobar? No; there is very good pine for fencing. F. Wickham,  
Esq.
2348. Is there any ballast between Wilcannia and Cobar? Yes; large quantities.
2349. *Mr. O'Sullivan.*] Have you formed any estimate of the probable cost of the railway (say) from Cobar to Wilcannia, and Wilcannia to Broken Hill? No. 19 Oct., 1889.
2350. Give us an idea of what you think would be the cost of the line? It would be rather difficult for me to do so, and it would only be an approximate cost; I think about £3,000 a mile.
2351. You are aware that the cost of the line between Nyngan and Cobar is estimated at £2,500 per mile? Yes.
2352. With grades of 1 in 40? Yes.
2353. Is not the line between Cobar and Wilcannia likely to cost less than the line from Nyngan to Cobar? No; I should not think so.
2354. And are not the gradients you refer to surface gradients, which can be altered after the line is made between Cobar and Wilcannia? No; they are not surface gradients all the way.
2355. Can you remember where the grades of 1 in 40 were; are they in Paddington Station or Kintower Station? They are on Bulla Bulla Station.

Thomas Rhodes Firth, Esq., C.E., Department of the Engineer-in-Chief for Railways, sworn, and examined:—

2356. *Dr. Garran.*] What is your occupation? Civil Engineer in the Government service. T. R. Firth,  
Esq., C.E.
2357. Have you been District Engineer on any of our lines? Yes; several of them.
2358. For how many years? I have been in the Government service since March, 1863, with the exception of eighteen months. 19 Oct., 1889.
2359. You have recently been over the line from Nyngan to Cobar, inspecting the previous survey? Yes.
2360. With a view of seeing whether it would be wise to reduce the gradients? Yes.
2361. Looking at the fact that the traffic for a time, will be light, do you, as an engineer, think it would be best to accept the surface gradients for a time with the view of reducing them as the traffic increases? I think so; that is if the traffic is to be light. I do not think it is really worth while to make an expensive line until the traffic warrants the expense.
2362. These improvements between Nyngan and Cobar are all deviations? Yes.
2363. Are you of opinion that if we accepted the original survey, we should save money by leaving the lightening of the grade to a future time? Making these deviations will not cost very much more than if the original grade had been adhered to, because they have found a different line of country. Instead of keeping a straight line they have deviated, and made several curves, and therefore keep lower ground.
2364. Where you make a curve of that kind, would you alter the line as you approached the top of the grade, or would you keep a straight line and then make the curve? I would keep a straight line for a certain portion, and then run round the point of the spurs.
2365. You do not like your straight line very much to hit your spurs;—if you make the curve sharp it increases friction? Yes.
2366. And that diminishes the load to be carried? Yes.
2367. So that the curve diminishes the load as much as a grade does? Not to the same extent, but in a certain proportion—depending upon the sharpness of the curve and the length of the train.
2368. So that if, for the sake of a better grade, we make curves in the line from Nyngan to Cobar, we by that fact diminish the maximum of load to be carried? Yes.
2369. Taking the curves as you have them, and assuming the maximum load to be 200 tons, to what extent would the curve reduce the load? I could not tell you straight off. We are reducing the grades there now from 1 in 40 to 1 in 75.
2370. The introduction of the curve would not neutralise what you are doing? No, not entirely.
2371. It would only add a little more friction? Yes.
2372. A little more cost in keeping up the road? Yes; a little more wear on the rolling stock, and more extensive friction.
2373. So far as you have seen, you think it would be better to make these deviations now, rather than reduce the grade on the straight afterwards? Yes.
2374. And you have been over the line with the Committee from Cobar to Broken Hill? Yes; as near as we could get to it.
2375. And you have had practically a flying survey of the line;—do you think there are any intervening ridges or conditions which would make it undesirable to reduce the grade in the first instance? No; I think, from what I can see of the country, there would be no great difficulty in making the grades not steeper than 1 in 75.
2376. If you were left absolutely to your own judgment, and told to make the best practicable line for this Colony, would you give a ruling grade of 1 in 75? That would depend entirely on the amount of money I was likely to have voted, and the amount of traffic I could see was likely to run over the line.
2377. I ask the question with an eye to the prospective traffic? Then I think I would give a gradient of 1 in 75.
2378. You would not accept 1 in 40? No; I think I should make it 1 in 75. The extra expense would be very small, and it would not be worth while trying to save the money.
2379. If the grade were 1 in 75 it would not be worth while altering it afterwards? No; the traffic would have to be very heavy to justify its alteration.
2380. What loads do you think would it bring over a grade of 1 in 75? I should not like to say. It depends entirely on the kind of engines to be run.
2381. From what you have seen, there is no difficulty in making a line of 1 in 75 all the way from Nyngan to Broken Hill? I think not.
2382. *Mr. Copeland.*] Where you have a competitive line—as this western line must be—against the South Australian line, do you not think it is desirable to spend a reasonable amount of money in making cuttings, and so obtain an easy grade, so as to enable the New South Wales Government to carry at a low rate? Yes; I do think so, if this is to be a competitive line.
2383. Would you not take this to be a competitive line? Yes.

- T. R. Firth, Esq., C.E.  
19 Oct., 1889.
2384. Would it not be competitive, as against the South Australian railway on the one hand, and the Darling River on the other? Yes; of course it would.
2385. Must we not secure a large amount of trade so as to make the railway worth constructing, or to make it payable after it is constructed? Yes; we ought to do that.
2386. You are aware that our success in using this railway will all depend upon the competitive rates we can afford to run for? Yes.
2387. Therefore it is desirable we should be able to run on as level a grade as possible, and carry as big loads as possible? Yes; but at the same time, by making this easy line at an expensive cost, you must raise your rates so as to pay interest upon that cost.
2388. But where there are only a very few ridges to cut through, and then you have a large run upon level country, do you not think it is desirable to go to the expense of cutting through these ridges and then getting the benefit of all the level country intervening? Certainly, if it is only a small amount.
2389. From what you have seen in travelling from Nyngan to Broken Hill, do you not think that is the general character of the country? Yes.
2390. Speaking in general terms, it is a dead level or nearly so; at any rate it is country where you can get exceedingly easy grades, such as 1 in 100, and it is only in a very few places indeed where you will have to go to any expense in cutting so as to secure a continuous grade of 1 in 100? Yes; the additional expense per mile would be very small.
2391. Then we should be enabled to carry much larger loads and at a cheaper rate? Yes; the surveyor says it would lengthen the line between Wilcannia and Cobar 8 miles. Of course that becomes a serious item. Even supposing the earthworks are the same, there is the permanent way and fencing, the cost of which in this instance would be at the least £1,600 per mile. Again, all traffic running through would have to pay 8 miles of extra trainage, which would reduce the possibility of competing with the rivers or with the other Colony. A deviation of that kind I should think would really not be desirable. The cost, amounting to from £12,000 to £15,000, might perhaps be spent better in earthworks and in keeping to the other line.
2392. I presume you could not say what it would cost to make those cuttings? No.
2393. *Mr. O'Sullivan.*] Has the Department formed any estimate of the cost of the bridge over the Darling? There has been a rough estimate of the cost made. I think it is £56,000—between £50,000 and £60,000.
2394. Do you know if the line crosses the stream called the Tallywalka, about 30 miles from the Darling? I think it does.
2395. There would be no bridge required there? Not a very big one—a low timber bridge; not a very expensive one would do.
2396. *Mr. Hurley.*] You inspected some stone in Wilcannia? Yes.
2397. Would that be suitable for the construction of a bridge of piers over the Darling? I think cylinders would be more suitable.

*BROKEN HILL, MONDAY, 21 OCTOBER, 1889.*

[*The Sectional Committee met in the Council Chambers, Broken Hill.*]

Present:

THE HONORABLE WILLIAM JOSEPH TRICKETT, (CHAIRMAN.) The Hon. ANDREW GARRAN. HENRY COPELAND, Esq.		JAMES EBENEZER TONKIN, Esq. EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.		

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. John Bristowe, Accountant to the Broken Hill Proprietary Co., Broken Hill, sworn, and examined:—

- Mr. J. Bristowe.  
21 Oct., 1889.
2398. *Mr. Copeland.*] What position do you hold here? I am an accountant to the Broken Hill Proprietary Company, at Broken Hill.
2399. What is the area of ground belonging to the Company? We have three 40-acre blocks under mineral leases.
2400. For which you pay 5s. per acre per annum? I could not tell you how much. I believe the leases are arranged in Melbourne.
2401. The three 40-acre blocks, I suppose, give you  $\frac{3}{4}$ -mile along the lode? Yes.
2402. How many shafts have you at work on the lode? There are seven actually at work raising ore.
2403. Can you say for what length along the course of the lode you have proved the lode to exist? To the whole extent of the property; from one end to the other.
2404. Then you have proved the lode for  $\frac{3}{4}$ -mile? Yes.
2405. To contain payable ore? Yes.
2406. Can you say to what depth you have proved it—what is the greatest depth? At present it is about 316 feet.
2407. From the surface? Yes.
2408. Does it show indications of continuing in depth? Yes.
2409. Can you say what is the average width of the lode, approximately? About 170 feet. Its extreme width is 234 feet.
2410. But you think it will average about 170 feet? I could not say positively, but I think about that.
2411. Can you say whether it is widening as it gets deeper? No; I could not.
2412. Can you say whether it is improving in quality as it gets deeper? No.
2413. But at your greatest depth it continues to be payable? Yes.
2414. Do you know how many years' work you have in view at the present time? I have never heard an expression of opinion from the General Manager, and I have no idea myself.
2415. I suppose you are satisfied that there are many years work assured to the Company? Undoubtedly.
2416. But you could not say how many? No.
- 2416 $\frac{1}{2}$ . Can you say how much has been expended in machinery by the Company? Not from memory.

2417. Do you know the total amount of called-up capital expended? The paid-up capital to date is £34,000, of which £16,000 has been returned to shareholders. The total amount of dividends paid up to May 30th is £808,000.

Mr.  
J. Bristowe.  
21 Oct., 1889.

2418. Can you give any information relative to the quantity and value of goods brought to the mine, and of minerals and metals sent from the mine, say for the last twelve months? I have some figures which I have made up, but they have reference only to the quantity of bullion we despatch, and to the coke, timber, limestone, and sundries—such as ordinary stores and machinery and coal—we received.

2419. Perhaps you had better make a general statement in regard to the matter? During the months of July, August, and September last the Broken Hill Proprietary Company has despatched 7,347 tons of bullion. The Company has received 7,950 tons of coke; 3,810 tons of timber, equalling nearly 2,300,000 feet superficial; 12,053 tons of limestone; 474 tons of sundries—that is machinery and stores; and 3,011 tons of coal;—equalling 34,647 tons for the three months. The only export is bullion. The bullion produced up to May 30th was 39,708 tons, containing 9,756,977 ounces.

2420. Then the total amount of goods to and from the mines comes to 34,647 tons in that period? Yes.

2421. Can you say what you have paid for the carriage of those goods? I can give you individual rates. For bullion we pay 39s. 3d. per ton from the mine delivered at Port Pirie.

2422. Have you sent any ore? Very little. We have not sent any within the last year.

2423. What carriage do you pay for the different articles you import for the mine? For the coke and timber we pay 40s. 3d. per ton; for the limestone it averages from 3s. to 6s. per ton. It is only brought from short distances—from Silvertown and the limestone siding. The sundries average from 70s. to 130s. per ton on the South Australian railroads, and from 13s. 4d. to 22s. 7d. on the Silvertown tramway.

2424. Can you say what is the value of the bullion which was despatched during those three months? Approximately, it is about £54 a ton.

2425. The value of the bullion then would be about £396,000? Yes.

2426. That bullion is despatched to Port Pirie, and from thence to Sydney? Yes, I think so. The greater part of it goes that way.

2427. Does the Company dispose of it at Port Pirie? No, it is sent to England for sale.

2428. Then it really goes to Sydney for the convenience of the steamships? Yes, entirely.

2429. Is the coke you use imported from England? Chiefly;—the greater part of it comes from London.

2430. What other places do you get coke from? We have had quantities from Newcastle, New South Wales, and also some from New Zealand.

2431. How have you found the coke answer from New Zealand? It has not turned out very well; in fact, the colonial cokes do not compare with the British.

2432. Can you say what the British coke costs you to land at the mine? From £5 to £5 5s. a ton.

2433. Do you know what the Newcastle coke costs you, or the New Zealand? It costs about 10s. less per ton.

2434. Then the difference in quality does not make up for the lower price, I suppose? No.

2435. Is the Newcastle coke better than the New Zealand coke, or *vice versa*? I don't think there is much difference between them.

2436. Can you say how much coke is used in the year? We use 463 tons per week,—that is 24,000 tons a year.

2437. Can you say how much timber you used, say for last year? We have been using at the rate of about 400,000 feet per month.

2438. And how many feet are reckoned to a ton weight? About 500 feet superficial.

2439. That would amount, then, to about 9,600 tons a year? Yes, about that.

2440. Can you say whether the Company would use hardwood if they could get a supply of it? It would just be a matter of price, I think. Hardwood is quite suitable for our requirements.

2441. But considering the greater durability of hardwood, don't you think the Company would be prepared to pay a higher price for it, than for soft wood, for underground purposes? I don't think so.

2442. Is it not a matter of great consideration to have timber which will last 15 or 20 years, instead of 8 or 10 years? It may be, but I do not think the difference in cost would make it up. So far, the experience of our General Manager has been that Oregon timber is so much easier to handle, and to saw, and the cost of freight is so much lower, that he prefers it even at an equal price.

2443. Can you say whether there is a large quantity of lime available at the place where you now obtain it? I think there is a very large quantity indeed.

2444. What is the locality of the lime; is it near the railway line? Yes, very near one of the Silvertown Company's sidings, at a place called the Acacia Dam.

2445. How many miles from Broken Hill? About 10 miles, I think.

2446. And it is considered that that supply is sufficient for the future? From what I have heard it is practically inexhaustible.

2447. And the limestone is of a satisfactory quality? Yes.

2448. Do you not also require a large quantity of ironstone? Yes, but we have that upon our mine in large quantities.

2449. Have you sufficient to last you for many years? Yes.

2450. Then the only material you will require to bring to the mine would be coke, underground timber, and coal for your machinery? Yes.

2451. At the present time I suppose you are using firewood for steam purposes? No; we are using coal almost entirely.

2452. Where does it come from? Newcastle, New South Wales.

2453. Can you say what it costs per ton delivered at the mine? £2 7s. 1d.

2454. Do you know what is paid for the coal at the mine? We buy it at Port Pirie. It costs 21s. 5d. per ton at Port Pirie.

2455. Then the difference between the 21s. 5d and £2 7s. 1d. is the carriage? Yes.

2456. Do you know what Company's coal it is? No; I could not tell you that.

2457. But it is from Newcastle—not the western coal? No.

2458. Brought round by steamers from Newcastle to Port Pirie? Yes.

2459. What are the quantities which you are using? We are using about 700 tons a month

- Mr. J. Bristowe.  
21 Oct., 1889.
2460. In addition to that, I suppose you are using some quantity of firewood? Not a very large quantity.
2461. Can you say how much? From 80 to 100 tons per week.
2462. That would be about 350 tons a month? Yes, about that.
2463. Can you say what distance this firewood has to be brought to the mine? From about 10 to 12 miles. It has to be carted to the mine.
2464. Has the wood been used in the immediate vicinity of the mine, say within 6, 10, or 12 miles? Yes, it has all been brought in, I think.
2465. I suppose the wood is rapidly being used up, and is disappearing? Yes.
2466. And you would have to go a considerably greater distance off if you had to depend on the wood? Certainly.
2467. In which direction are you having the wood brought from—anywhere near the line of the proposed railway? I could not tell you.
2468. How many furnaces has the Company at work now? Ten.
2469. Does the Company purpose erecting more furnaces? I could not tell you.
2470. You do not know whether the consumption of coal will materially increase or not as time goes on? It will not increase very much.
2471. Are you erecting any additional winding or pumping engines? Yes, a few more.
2472. Then you will require an additional supply of coal for steam purposes alone? We may probably require sufficient coal to keep two more boilers going. That is all, so far as I know, at present, and they will probably take about 40 or 50 tons a week.
2473. Where do you obtain candles, powder, and fuse used in the mine? An Adelaide contractor supplies them.
2474. Do you know where the candles are manufactured? I believe they are imported from England.
2475. And the powder and fuse—I believe they are all brought from Adelaide? Yes; the powder, fuse, and dynamite are imported.
2476. How about the picks and shovels? We have the picks manufactured—not locally—in the Colonies, the shovels are imported.
2477. You have had a very large winding engine manufactured at Hudson Bros., Sydney, have you not? Yes; and there is also a counterpart of it being made for the British Broken Hill Company, and for Block 10 Company.
2478. Was merely the engine made there, and not the boilers? Only the engine.
2479. Do you know where the boilers were intended to be obtained from? They are already on the mine, and have been obtained from Adelaide some time back.
2480. How did you have the engine brought here from Sydney? By steamer to Port Pirie, and then by rail.
2481. Where do you obtain your water supply from for the furnaces, and for other purposes? We have reservoirs built upon our water lease, which at present supply us.
2482. And you have a sufficient supply? Yes, at present.
2483. Have you any water in the mine? Yes.
2484. Much? Yes.
2485. You are not likely to suffer then from want of water? Not so far as steam purposes are concerned.
2486. Can you say the total number of miners and smelters you have employed at the present time? We have 1,044 underground men, and 1,080 surface men—that is 2,120 men altogether.
2487. These are in regular employment? Yes.
2488. What wages do you pay them? They vary from 8s. 4d. a day for labourers, and from 10s. to 12s. a day for mechanics.
2489. And the miners? The miners are paid 10s. a day, and the underground labourers 8s. 4d. a day.
2490. What is the total pay-sheet for a fortnight or a month? For this last fortnight it is about £10,200—that is for labour alone.
2491. How many hours a shift do you work? Eight.
2492. I suppose you employ a considerable number of people indirectly, in addition? Yes.
2493. Does the number you have given now include the teams you have working? No; it only includes those immediately connected with the work on the mine.
2494. Does it include the horses and drays? Yes, they belong to the mine.
2495. How many horses have you employed? I think we have 45.
2496. Can you say where you get the fodder from? It comes from the Burra, between Adelaide and here.
2497. Can you say what distance it is from here? About 200 miles.
2498. What do you feed them on? Oats, bran, and chaff.
2499. You do not give them maize? No.
2500. Do you know what price you pay for the feed? Chaff is about £6 per ton; the bran is about from 1s. 7d. to 1s. 10d. per bushel; and the oats about 4s. 6d. per bushel.
2501. How much are you paying a month locally, in addition to what you pay for labour? We are paying from £800 to £900 a week for limestone, and from £60 to £70 a week for firewood.
2502. And the iron for fluxing is included in this item of wages? Yes.
2503. You are using no New South Wales timber? No.
2504. The timber you are using is partly imported from New Zealand, and partly Oregon pine? We are not importing any from New Zealand or Tasmania at present. It is entirely Oregon we are using, and it comes from Puget Sound.
2505. Then at present you are using no colonial timber? None, excepting a small quantity we may have on hand from large stocks.
2506. Are you likely to employ a larger number of men? I think so, under ground, as the mine is opened up.
2507. Have you all the men at the present time you could employ? Yes; we have no difficulty in obtaining whatever labour we require.
2508. If you wanted more miners you could obtain them at present? Yes, without difficulty.
2509. At the current rate of wages? Yes.
2510. Where are the picks you use made? They are made in Ballarat; a man named Hillman makes them.
2511. *Mr. O'Sullivan.*] How long has this mine been in operation? About three and a half years.
2512. Do you consider that it is now working up to its fullest capacity? No, I do not think so.

Mr. F. H. Clark, Accountant to the British Broken Hill Proprietary Co., Broken Hill, sworn and examined:—

2513-14. *Mr. O'Sullivan.*] What position do you hold? Accountant to the British Broken Hill Proprietary Co., Limited.

2515. Can you make a short statement, showing the position your mine now stands in, as to how much work you have done, and your prospects? We have four shafts in work now. The mine consists of two leases, one of 40 acres and the other of 60 acres. That gives a length of about five-eighths of a mile, and we have three shafts sunk on the 40-acre lease, which is called Block 15. Two of them are down to the second level. We open levels at every 100 feet. The main shaft is down to the fourth level, there being a total depth of 435 feet from the surface. At the first level the three shafts are connected one with another with drives, almost all of them through ore. At the second level the three shafts are also connected with drives, all through ore; and the ore at the second level is of a better grade than that at the first. In addition to that, we have stoped out a considerable quantity of ground at the second level, which has yielded a payable grade of ore. It is not anything like so rich as the Proprietary Co., but it is a payable grade, and we are still stoping it out and sending it to the smelters.

2516. What is the width of your lode? It is difficult to say. At the workings from No. 1 shaft we pass through 160 feet of a lode. At the No. 3 shaft we have it opened up at present to 130 feet wide, but we have not got to the walls on either side. At No. 2 shaft—that is the third shaft on Block 15—it is not so wide, but there we seem to be above the main body of the lode. The No. 2 shaft is set where the hill breaks off, and the lode seems to dip off too; so that we have no data upon which to say anything about its width. That is on the northern edge of Block 15. The fourth shaft I spoke about is situated at the northern end of Block 16. That has been sunk about 180 feet, and drives have been put in to a length of something like 600 feet towards the Junction mine on one side, and the North mine on the other. The shaft is sunk in the corner, and our drives are put in across the corner, but we have not found much ore there. We have found patches of ore there carrying a fair quantity of silver, say about 60 to 100 oz. It does not carry much lead. It has been very silicious, so that it has not been much more payable than that we are getting from No. 3. In addition, there are two small shafts sunk on Block 16—one just north of the boundary of block 15, and one a little further on. They have only been sunk about 120 to 150 feet deep. We have ore at the bottom, of both of them, but there has been very little prospecting work done there.

2517. How many year's work have you in sight? I cannot give you any definite idea.

2518. Can you say, approximately, from your experience as a miner, how long you think the mine will last with the ore in sight? I am not a practical miner, but I have seen what length of time it has taken to make the little hole we have, and I should think there is fully two or three years' work in the ore we have in sight at present. When I say in sight, I mean above the second level. We know we have ore reaching from the second to the first level, and reaching almost from the block 14 boundary to north of the No. 1 shaft, and I should think it would take that length of time to work out the ore.

2519. Can you state the average grade of the ore obtained from your mine? I am afraid I am not at liberty to mention that.

2520. Where are you smelting? Port Pirie.

2521. Can you state how many tons of ore you have sent there? I have not the total quantity with me; but we have despatched, during the last three months, 8,187 tons.

2522. Is that a fair average for the time that you have been working? That is a fair average of what we are sending down now.

2523. Can you state the amount of bullion which came from that? No; I have not the figures here.

2524. Do you ship your bullion straight to England? I believe we do; but that is a matter I have nothing to do with.

2525. How many men have you working in the mine? About 360.

2526. I presume you have room for a great many more? Yes.

2527. Have you any difficulty in obtaining miners? It is rather difficult to obtain really first-class men. We can almost always get people who call themselves miners, but it is not very often we can get really good men.

2528. Does your company contemplate erecting smelters here? I have not heard any mention of that.

2529. But you know that an agitation is on foot in Broken Hill with that object in view? I know there is an agitation with the object of getting smelters erected here for all mines that wish to work with them; but it is not at all likely we should shift the smelters we have up, and I do not know if the matter of putting fresh smelters up has been considered by the Directors. I suppose it will be considered in the future, because I am almost certain there is a much larger body of ore below the second level than we have opened up yet, and three smelters can hardly be sufficient to enable dividends to be paid. Therefore I think more smelters must follow; but where they will be put, I do not know.

2530. Do you use English coke? Yes.

2531. And Newcastle coal? Yes.

2532. Can you state whether any of the companies are using Newcastle coke, either here or at Port Pirie? I do not know.

2533. I presume you obtain most of your stores from Adelaide? Yes.

2534. What is the tonnage of stores you receive from Adelaide? About 100 tons a month of stores, and about 200 tons of timber per month.

2535. That would make about 36,000 tons a year? Yes.

2536. What do you pay for the carriage of this? We pay the usual rates, according to classes.

2537. *Chairman.*] Are you able to state, generally, whether you think this mine is likely to be a permanency? Yes; I consider it is likely to be a permanency.

2538. *Mr. Tonkin.*] If coal or coke could be delivered here at a great deal less rate than you are now paying, would it induce you to construct the furnaces here instead of taking the ore to Port Pirie? It certainly would be an inducement, and it would be a matter, I should think, to be considered by the Directors before they decided to erect any new smelters they intended to put up.

Mr.  
F. H. Clark.  
10 Oct., 1889.

Mr.

Mr. Andrew Stenhouse sworn and examined:—

- Mr. A. Stenhouse. 2539. *Dr. Garran.*] What is your occupation? I represent T. K. Stubbins, timber merchant; I manage his business.  
 2540. You do a large business in the importation of timber? Yes.  
 2541. Both for mining and for household buildings? Yes.  
 2542. What class of timber do you principally import? Oregon, Baltic timber, and stringybark from Tasmania. Of course we keep everything; but these are the principal lines.  
 2543. Do you bring it up from Adelaide or Port Pirie? Principally from Port Pirie.  
 2544. Does it come to Port Pirie in the original ships, or is it transhipped at Adelaide? The Baltic is all transhipped at Adelaide, and generally the Oregon; but the stringybark comes direct from Tasmania.  
 2545. What extra cost does that transhipment involve? About 7s. a ton from Port Adelaide to Port Pirie. Then, of course, there are the double wharfage dues, and double handling for ourselves as well. For instance, our carts have to carry it from the store-yard to the wharf; and then there is about 7s. a ton freight. Then we pay wharfage at Port Pirie again.  
 2546. But it pays you better to submit to the expense of the transhipment than to bring it by rail from Port Adelaide all the way? Yes.  
 2547. What are the charges on timber carried by the railway? They have a very peculiar tariff. The South Australian charge is by weight. Wherever I have been before it has always been by measurement.  
 2548. What is it per ton from Port Adelaide, and what is it per ton from Port Pirie? For timber used underground the railway gives a concession. That comes to 41s. a ton.  
 2549. From where? From Port Pirie to the station here. That is including the tramway.  
 2550. I want to know the price, delivered in Broken Hill? It would be about 50s. by Adelaide, and 41s. by Port Pirie.  
 2551. Now for the other timber, upon which there is no concession? [*The witness handed in the following particulars:—*]

Underground timber railway rates, 16 ft. and under—

From Port Pirie to Cockburn	... ..	31s. 3d.	} 41s.
„ Cockburn to Broken Hill	... ..	9s. 9d.	

Ordinary rates—includes deals, shelving (any lengths), T. and G. Oregon, and hardwood, 16 ft. and under—

From Port Pirie to Cockburn	... ..	52s. 0d.	} 64s. 8d.
„ Cockburn to Broken Hill	... ..	12s. 8d.	

From 17 ft. to 30 ft.

From Port Pirie to Cockburn	... ..	77s. 11d.	} 96s. 5d.
„ Cockburn to Broken Hill	... ..	18s. 6d.	

From 31 ft. to 50 ft.—

From Port Pirie to Cockburn	... ..	105s. 9d.	} 130s. 1d.
„ Cockburn to Broken Hill	... ..	24s. 4d.	

Over 50 ft., by special arrangement.

Galvanized iron in cases—

From Port Pirie to Cockburn	... ..	52s. 0d.	} 64s. 8d.
„ Cockburn to Broken Hill	... ..	12s. 8d.	

2552. What is the reason of the extra charge on the 17 to 30 feet timber? I could not tell you. I suppose they have to put it into two trucks, and to have an intermediate truck.

2553. They use three trucks for the extra length? Yes; they have to put in a check truck.

2554. And it is to cover the extra carriage that the extra charge is made? Yes.

2555. Do you find much demand for great lengths of timber? Yes; for poppet-heads and that sort of thing.

2556. Perhaps, for house building, you have no demand for the extra length? Yes; it often goes over 16 feet—between 25 feet and 30 feet—especially for the houses they erect over the concentrators. For these they want heavy long beams.

2557. Do you import much Queensland pine? None at all.

2558. What do you line the houses with? Baltic. I tried to bring in mining timber from New South Wales eighteen months ago. I knew Messrs. Goodlet and Smith, and talked the matter over with them when I was in Sydney, and I sent a small order for 4,000 or 5,000 feet of river pine, which was very much like Kauri, but I could not touch it at all.

2559. Do you mean that the people here did not take to it kindly? No; the price could not compete. They charged about 14s. for it at the mill, but by the time it got here it was double that price.

2560. Had that timber been re-handled in Sydney, or had it come direct from Richmond River? I could not say. I should think it would be re-handled, but I only had it round here on trial to see if it would suit the job, and to see if the price would have any show with the other timber.

2561. Was any fault found with the quality of the timber? No; it was very good timber, and answered the purpose.

2562. If we could get rid of the expense of the intermediate handling, and could bring it direct from the Richmond River to Port Pirie, would the price be suitable? I think so.

2563. You are acquainted, as a timber merchant, with the durability of different kinds of timber? Yes.

2564. We are told by one witness that the pine used tends to decay here in about five years;—do you know that to be so? I should think some of the New Zealand timber will give way in a few years. Of course, if it is kept always wet, as in some mines, it would last as long as any other timber; but in these mines it is not kept wet.

2565. We are told, on the other hand, that the soft Oregon pine is so much easier to handle, and it is preferred on that account to the harder and heavier New South Wales timber? That is so; but some of the mine managers prefer the hardwood on account of the durability. The manager of the big mine prefers the Oregon.

2566.

2566. Looking at the greater strength of the Australian hardwood, would not a much smaller scantling answer the purpose? They don't seem to be able to work it. Less than 10 inches would not give sufficient shoulder for the cap to bear on. That gives you a 3-inch shoulder on each side. 8 x 8 would only give a 2-inch shoulder.

Mr. A. Stenhouse.  
21 Oct., 1889.

2567. Then, however strong the timber may be, you must have a certain size of it? That is how it has been up to now.

2568. You do not think that the hardwood can cut out the soft wood for certain purposes? It does do it to a certain extent—from Tasmania. The expense is not a great deal more, because Oregon timber costs something like 11s. 6d. and 12s. to put it down, and the Tasmanian timber can be put down from 9s. 6d. to 10s. 6d.

2569. Do you think the hardwood could to any extent supersede the soft wood for house building? I do not think so.

2570. Then you think in this market the soft wood has the pull? Yes; especially for house building.

2571. And hardwood would have to be very much cheaper indeed, to cut it out? No, if it could be put down at the same price. It is dear now, but it is all on account of the method of charging the railway freights by weight. They will handle 600 feet or 700 feet of Oregon for the same price as they would handle from 350 to 400 feet of stringy-bark.

2572. The railway people find one kind is much heavier than the other? Yes, and they charge by weight.

2573. Would our rough timber, such as grows on the banks of the Darling and the Murray, do for firewood? I do not know what it is like, but I think a very ordinary kind of timber would answer the purpose.

2574. You do not deal in firewood? Yes, a little, but there is plenty of firewood brought by the bullock teams, and will be for a few years yet.

2575. Not for more than a few years? No, it is getting a long way off now.

2576. If the railway were made in three years time do you think by that time there would be a good demand for hard firewood? Yes, I think you would sell a lot of it—both for steam and household purposes.

2577. If there was a railway from here to Menindie, you think the timber growing on the beds of the rivers would find a good market? Yes.

2578. And that there would be a traffic for the railway in that kind of timber? Yes, a certain amount of traffic.

2579. What is the annual yearly consumption of timber here? I should think it will come up to 10,000,000 feet per annum.

2580. That includes both overground and underground timber? Yes, and every day it is increasing. Some of the mines have not begun to use square sets at all, and when they do they will multiply their consumption of timber by ten.

2581. Do you have anything to do with the importation of galvanized iron? Yes, we supply considerable quantities.

2582. Have you any idea what the annual import of it is? I could not say. It is not so much as it was. Most of the houses are now being built of stone and brick, and of course they don't require so much iron. When they were knocking up the small cottages there was a big consumption.

2583. Which is the most expensive—a stone or a galvanized iron house? A stone house.

2584. How much more? I should think it would be a great deal more—perhaps 15 to 20 per cent. more.

2585. And people are beginning to prefer stone houses? Yes, the field is giving a guarantee of its permanency, and the people want to build for a permanency. Of course, during the first rush, everybody was ready to clear out at a day's notice, and did not want to spend money on permanent buildings.

2586. The district lime is burnt for mortar? Yes, and good mortar too.

2587. Does the clay make good bricks? Yes, very fair bricks.

2588. So far as stonework and lime are concerned you have building material within easy reach? Yes.

2589. Is there any duty on galvanized iron here? Yes, £2 a ton.

2590. Anything dutiable in South Australia you can import in bond and bring through? Yes.

2591. And for anything that has paid a duty in Adelaide you can get a rebate? Yes.

2592. Can you get the whole of it back? It costs a few shillings to get it back.

2593. It is a little cheaper to get an unbroken parcel through than a broken one? Yes.

2594. *Mr. O'Sullivan.*] How long have you been here? Close on two years.

2595. What was the population when you came here? About 5,000 or 6,000.

2596. What is it now? 12,000 to 15,000.

2597. Is it likely to increase at the same rate for the next five or six years? I think it will increase to 30,000 at any rate.

2598. How long will it take to reach that? Perhaps in eighteen months or two years. I imagine so from the development of the mines.

2599. If the mining develops, and the estimate of a mining manager that twenty-four mines will be in full working order at no distant date, is correct, what do you think will be the population, say this day seven years? I should think it would double itself, even then. It all depends on how deep the mines go. They are only prospecting yet. Half of our mining timber goes to mines which are only prospecting, and they do not know whether there is anything to be had yet. As they strike the lode there will be ten men employed to one man employed now.

Mr. Thomas Coombe, timber merchant and ironmonger, sworn, and examined:—

2600. *Mr. Tonkin.*] What are you? Timber merchant and ironmonger.

2601. How long have you been here? Nearly four years.

2602. What is the quantity of timber which passes through your firm in three, six, or twelve months?

We confine ourselves entirely to the building trade. We do nothing in the mining trade. From 130 to 150 tons a month is about our quantity.

2603. That does not include ironware? Yes; it is altogether.

5 (a)—M

Mr. T. Coombe.  
21 Oct., 1889.

2604.

- Mr. T. Coombe.  
21 Oct., 1889.
2604. Where does it come from? From Adelaide and Port Pirie. We have had some from Sydney. We watch the markets, and where we can buy the cheapest we purchase. We keep in touch with the Melbourne, Sydney, and Adelaide markets.
2605. What is the comparison between the Sydney material and what you buy in Adelaide? It is very seldom we can buy in Sydney, because the freight and expenses kill it, and it is all imported timber. We never touch the colonial timber. It does not suit our trade. People will not buy it. Baltic timber is what we deal in chiefly.
2606. In importing building material you import window frame sashes? Yes, we get those from Sydney, because of the duty. We cannot get them from Adelaide, the duty is too heavy. We get them made here now almost as cheaply. We work in with our customers, and they make them for us. We prefer to pay a little more for goods made on the spot.
2607. Do you find any increase in your trade for timber for building purposes? Dating from twelve months ago, I find a large increase in trade, but it is not as large as it was two or three years ago, when the building boom was on.
2608. You account for that by the extraordinary influx of population? Yes, but when the population settled it became dull. Since then it has improved very much, and now it is very satisfactory.
2609. Is this progress steady? Yes, every month my books show an improvement in figures.
2610. And the class of buildings now being erected is of a more permanent nature? Yes, they are of a better description. I think there is as much timber used now as ever there was, but there are more to sell it. There is more competition than there was two and a half years ago. There were so few to sell it then, and that is the reason we were rushed. The quantity of timber that is used now is greater than ever it was.
2611. Have you any doubt as to the permanency of this place? I have not the slightest doubt. I think it will be a mine when we are all dead and gone, and our children after us. This discovery of ore at the Brisbane blocks at 1,700 feet deep proves that.
2612. Do you think there will be any possibility of the colonial timber competing with other timber, supposing there is a railway from Sydney here? No; not with me. I prefer Baltic timber. Nearly all our carpenters are from South Australia, and they are used to the Baltic timber. The colonial timber buckles and warps much more than the Baltic, and in the matter of price the Baltic timber can beat it. I get the Baltic timber direct to Port Pirie, and I stack it there, and get it as I require it.
2613. Is there any duty on timber in Adelaide? Yes, 2s. 6d. per load for rough timber, and 1s. 6d. per 100 feet superficial for boards.
2614. What do you call a load? 480 feet. The duty on timber in this Colony is three times as much as in South Australia. Then we get the drawback. We stack the timber, and when we import it we pass an entry, and get the duty back.
2615. That is for timber coming from Sydney? From anywhere. I don't believe in Sydney timber. We have had Baltic timber from Sydney when we could buy cheaper timber there. Two and a half years ago Sydney was glutted with Baltic and Oregon timber, and you could buy cheaper there than anywhere, but it has not been so since.
2616. Do you import your own iron? I have imported it, but I find I can buy it as I want it. I buy it in Adelaide and Port Pirie. Sometime ago I tried Sydney, and the expense of carriage from Sydney killed it.
2617. But the original cost would be less in Sydney than elsewhere? Yes, sometimes.
2618. Where were you before you came here? I am a South Australian.
2619. And of course your feelings are with that colony? Of course, all things being equal, I would rather deal with Adelaide, but there is no sentiment in business; I buy where I can buy the cheapest.
2620. Do you think the railway would be of any benefit to this place if constructed? Yes.
2621. Do you think there would be a probability of it paying interest on the capital, and also working expenses? It might not pay right off, but I should think it is a work the Government ought to undertake. There is an immense trade here, a portion of which they might have.
2622. *Dr. Garran.*] You have heard the evidence of Mr. Stenhouse? Yes.
2623. Do you corroborate that evidence? Yes, a good deal of it. With regard to the stone houses, my experience is not the same as his. My experience is that there are as many iron and wooden houses going up as ever there was, and the number of stone houses is very few? People do not seem to take to the stone houses—they say the iron houses cool down quicker, and they are put up so much more quickly. A man wants a house in three or four days here.
2624. Do you agree as to the difference in cost—the stone is only 25 per cent. dearer? There is not much difference, because stone, sand, and lime are easily obtained here. The only expensive thing is water.
2625. Is there any other point upon which you would like to modify Mr. Stenhouse's evidence? No. Of course his experience is in a different class of trade to mine.
2626. What is the cost of Baltic and Oregon timber. What is it sold at in the markets? We sell it by running feet. There is no regular system of selling it superficial. Every colony has its own system. Everything in Adelaide is sold at 9 x 3. In Sydney it is sold superficial.
2627. What is the price here upon your method of selling? We charge about 5d. a foot superficial here, when it is cut up and delivered in small sizes. We sell almost all small size timber here—3 x 2 and 2 x 1½.
2628. Is the Baltic as cheap as the Oregon? Yes. The South Australian Government carry all timber by weight, and the Baltic weighs much lighter than Oregon, and it is more generally used than Oregon.
2629. Do you find Oregon decays where exposed to the wet? No.
2630. It is as durable as the Baltic? I think so. I never heard any complaints of Oregon not being durable.
2631. This climate is not trying to it? No; not more than any other.
2632. You get a cargo once a year from the Baltic. What sized vessel do you get to Port Pirie? About 600 tons burden and 1,200 tons capacity. They come alongside the wharf.
2633. And you unload into trucks? Yes; but we stack it there, and it dries in the meantime, and we get it cheaper than if it was sent straight on.
2634. Do you pay the duty? Yes, and have it remitted to us. They will not allow it to be stacked on the wharf in bond.
2635. If you pay the duty they will give you house room for it? That is a matter we arrange with the wharf owners. We pay them rent—1d. a week per ton, or something like that. 2636.

2636-37. And it seasons there? Yes; there is a small rainfall there, and for stacked timber that is an advantage.

2638. It is a good dry climate? Yes.

2639. It would be a dryer climate up here? Yes, only we would have to pay the carriage, and we would be out of pocket. We get it up as we require it.

2640. If there were no duty on the timber in New South Wales, would that be any inducement to bring it up here at once? No; the carriage would be so heavy. We do not want to pay the carriage until we want to use the timber.

2641. *Mr. Hurley.*] What is the resisting power of the hardwood as against pine? Hardwood is much stronger.

2642. As to its durability and suitability for mining purposes, what percentage would you give hardwood as against soft? My trade does not lead me much into mining timber.

2643. Does hardwood last twenty years as against the other? I have no special knowledge in that direction. It would require special knowledge to answer a question of that kind.

2644. You have no knowledge of the durability of timber? Not in special cases, I don't know how long it would last underground. Various timbers have been tested, but I have not paid much attention. I do not think the colonial pine would last as long as any other timber. I believe the colonial pine would rot much quicker than any other timber.

2645. If you had a mine yourself, would you not prefer to put in timber which would last for twenty years, as against pine which would last for four or five years? Of course I should, but I should have to take the opinion of someone who knew. I am not competent to give an opinion. I do not know how the relative timbers last underground.

William John Hanna, Esq., Superintendent of Roads, sworn, and examined:—

2646. *Chairman.*] What are you? Superintendent of Roads for the Broken Hill district.

2647. What is the distance your district comprises in mileage, or by the names? To Wentworth on the south,—that is 240 miles; to Wilcannia on the east, that is about 120 miles by the direct line; to Cobham on the north,—that is 150 miles; and to the South Australian Border on the west.

2648. How many miles of road have you under your charge? About 550.

2649. What annual vote do you get to expend upon them? About £3,500.

2650. You know the road from here to Wilcannia? Yes.

2651. And you pretty well know the surveyed line of the proposed railway? Yes; it pretty nearly follows the surveyed road.

2652. You know the character of the country the line has to pass through? Yes, fairly well; I have only been over the recently surveyed road once.

2653. From your experience and knowledge as Road Superintendent, how much per mile would it cost to construct the road from here to Wilcannia? It would be a very expensive item. In fact, it would not be advisable to construct a metalled road in a district like this.

2654. Could you not give us any idea what it will cost to construct a metalled road per mile? About 12s. to 15s. per lineal yard. That would be about £1,300 or £1,400 a mile.

2655. What width of road would that be? Eighteen feet.

2656. You know the plain country—do you think it could be made for that cost across there? No, it would be nearly double that; but for half the road stone would be available within easy reach.

2657. But there are long lengths of plains? Yes; well it is almost impracticable to form a road, and it would not be desirable if it were.

2658. And the cost of maintenance would be enormous, even if the road were made? I think it would not be much used in wet weather, because teamsters prefer the natural surface to a macadamized road, as it is much easier for the bullock traffic.

2659. Which would it be the most desirable to construct, a road or a railway from Wilcannia to this place? I should certainly say a light line of railway in preference to a road.

2660. Do you not think it is a class of country which is well suited for the construction of a railway? It is a very easy country, all of it. There are one or two places where there would be a little cutting, but nothing of any consequence.

2661. In expending your Road Vote, how do you apply it? In clearing and cutting approaches to creeks, metalling small portions where necessary—such as across low swampy ground, the bed of a watercourse, or anything like that—but chiefly in clearing.

2662. How many men have you employed at the present time? About thirty, including contractors.

2663. Do you not find it a very difficult task to allot the work to these men in this large district, and on that long length of road? Well, a great deal of it does not require attending to; for instance, across the plain country, we can do nothing with that.

2664. That is beyond any management, or repair, or anything else? Yes; the only thing I do is to clear off salt bush on the road, in order to remove the lumps.

2665. Can you tell us whether there is sufficient stone procurable for ballast purposes for the construction of a railway between here and Wilcannia? Yes, ample.

2666. Is there any timber procurable which would be suitable for sleepers? I don't think so, excepting along the creek.

2667. What kind of timber is that? Gum. There is only a small quantity, not worth taking into consideration in the matter of constructing a railway.

2668. *Mr. Copeland.*] Do you know the road between Broken Hill and Menindie? Yes.

2669. What class of country is it? Level; very similar to the road between here and Wilcannia.

2670. Is it as level as between here and Wilcannia? It is slightly more undulating, but very little.

2671. Is there ballast upon the road between here and there, obtainable for a railway? Yes.

2672. Would a railway be as easily constructed between Menindie and Broken Hill, as between Wilcannia and Broken Hill? Yes; the country between the two places is very similar.

2673. Would there be any advantage in the way of timber for sleepers on the Menindie line? I don't think there would be much advantage; the distance from the river would not be much. There is any amount of gum on the Darling which would be available, and the haulage would be less.

2674.

Mr.  
T. Coombe,  
21 Oct., 1889.

W. J.  
Hanna, Esq.,  
21 Oct., 1889.

- W. J. Hanna, Esq.  
21 Oct., 1889.
2674. What are the lengths between here and Menindie, and between here and Wilcannia? From here to Menindie is about 73 miles by the present route, but I think it could be shortened to about 65, and to Wilcannia by the direct line is about 120 miles. Roughly, there is about 50 miles difference.
2675. Your district does not extend to the other side of the Darling? No.
2676. Is the soil similar on the Menindie route? Yes.
2677. Are there any creeks to cross? Stephen's Creek is the only one, and the creek near the Rockwell, about 9 miles out.
2678. Then you think, mile for mile, it would be as easy to construct a railway to Menindie as to Wilcannia? Yes; the country is very similar.
2679. *Mr. Hurley.*] You employ about thirty men? Yes.
2680. What is the average rate of wage? Maintenance men get 8s. to 9s. a day.
2681. The average is about £2 10s. a week? Yes.
2682. Thirty men would give you an expenditure of about £3,000 a year? Yes; that is for road works alone. Of course there are the water supply works in addition.
2683. *Mr. O'Sullivan.*] What population is there between here and Menindie? I do not suppose there will be more than fifty.
2684. How many stations does the road go through? Two—the Culca and No. 2, or Carr's. These are two stations of Kinchega. Strictly speaking, it is only one station.
2685. *Dr. Garran.*] Is the quality of the country between here and Menindie as good as that between here and Wilcannia? Very much the same.
2686. And whatever can be produced on the one line of route can be produced on the other? Yes.
2687. There is a scheme for which a Bill has been passed, for bringing water from Menindie to this place? Yes.
2688. If that were carried out, would it facilitate the construction of a railway along the same route? Yes; not to a great extent, but it would be a great assistance.
2689. It would give the contractors an assurance that they would have water along the line? Yes.
2690. How far north do you go? To Cobham.
2691. Is that a direct line from here to Milparinka? Yes; it is on that road.
2692. Have you travelled that road frequently? Yes.
2693. Is that a road upon which there have been mineral indications discovered? Yes; pretty nearly all the way.
2694. It is a mineral meridian? Yes.
2695. With the probability of further discoveries being made? Yes.
2696. Have any claims been taken up between here and your limit? Not continuously; but claims have been taken up from here to Nalta, about 35 miles south from Cobham.
2697. And from there to Milparinka;—are there still other claims? Not that I am aware of, excepting the gold claims of Koorringberry.
2698. Are there mineral indications between here and Wilcannia? I do not think anything has been discovered of any importance between the Barrier and Wilcannia.
2699. Has anything been discovered between here and Menindie? Not that I am aware of, beyond Rockwell.
2700. Anything between here and Wentworth? No, not beyond Rockwell. Menindie is on the Wentworth side.
2701. Upon a supposed line between here and Menindie, would there be supplies of lime and iron for flux for the mines? Not so much in the direction of Menindie, but I could not say positively.
2702. Would there be any between here and Wilcannia? Yes; out towards Mount Gipps, there are good deposits of ironstone. That is about 12 miles from here.
2703. What road metal is there close at hand for making roads? The ordinary rock is to be met with all over the range.
2704. Are there any dykes of trap? Yes.
2705. And that would do for ballasting? Yes.

---

Charles E. Hogg, Esq., Engineer-in-Charge of Water Supply between Wilcannia and Menindie, sworn, and examined:—

- C. E. Hogg, Esq.  
21 Oct., 1889.
2706. *Dr. Garran.*] What are you? Engineer-in-Charge of Water Supply.
2707. Which source? Nolan's, on the road between here and Menindie.
2708. How far from this place? Thirteen miles.
2709. What quantity of storage do you expect to have? Ten years supply.
2710. That is on a rainfall such as we have had during the present year? One or 2 inches of rain falling any time, will give us three years' supply. The catchment is very large.
2711. Is not the basement very shallow? No; about 35 ft. deep.
2712. Have you allowed for evaporation? Yes.
2713. And you think, when the work is once completed, the town is safe for three years? Yes.
2714. Either line of railway will cross this creek at some part, will it not? Of that I am not quite sure. The Menindie routes could cross it, but not necessarily. The Menindie line would not cross near our water supply.
2715. But it would cross the Stephen's Creek? Yes.
2716. And there is good water there? You would find it difficult to get water below our site. You would have to erect a dam for the Railway Department. The creek there is very flat and sandy.
2717. Do you not think a well in the creek would strike water? For a time there would be a fair supply, but not permanently.
2718. You might trust to a well there? Yes, for the amount you would require for the engines.
2719. Between here and Menindie are there watering places? I do not know.
2720. You do not know the road between Stephen's Creek and Wilcannia? Only 30 miles of it.
2721. Do you know the country north in this district? Yes, fairly well, within a reasonable distance.
2722. Is it a mineral meridian? Yes; it is always looked upon as being highly mineralized up to Mount Browne and beyond.

2723. From what you have seen of the mineral developments here, and from what you know of the country north, do you think it probable, at some future day, there will be a line of mines between here and Milparinka? Almost certain.
2724. Looking to the future development of the country and the furnishing of railway facilities, do you think it is probable that we should have to make a line of railway northwards from Mount Gipps to Milparinka? Yes.
2725. You look upon that as a coming certainty? Yes.
2726. Do you know anything of the country east of the Darling? Yes; I have travelled up the Darling. I know the country from Hay and through that way.
2727. If we had a railway either from Nyngan to Wilcannia and Mount Gipps, or a railway down the valley of the Lachlan, running from Condobolin to Mount Gipps, and then a line northwards through Milparinka, should not we have by that means a good connection with Sydney? Yes.
2728. As a railway engineer, and looking at the map, and knowing what you do of railway traffic, can you suggest any better plan for bringing this mineral meridian into connection with Sydney, than by a line between Broken Hill and Milparinka, and the best connection between Broken Hill and Sydney? No; a line to Milparinka would go through the whole belt north.
2729. Do you know anything of the Lachlan valley? Yes; I surveyed the railway line from Blayney to Cowra.
2730. Would there be any difficulty in starting from Cowra and keeping the valley of the Lachlan all the way to Euabalong? None; if you keep out of the floods.
2731. The north bank is easy for a railway? Yes.
2732. Would there be any difficulty in going on the northern side of the Willandra Billabong, as far as the Ivanhoe Station? None; there would be a little trouble in ballasting, but the grade is easy.
2733. If the Lachlan were dammed below the entrance to the Billabong, would that force the water along the Billabong? Yes.
2734. For how many miles? I could not say; that was all taken by the Water Conservation Department.
2735. Is it in their report? Yes.
2736. If a small canal were made from the Billabong, could the farmers use it for irrigation? Yes.
2737. Could not fodder be grown alongside by farmers? Yes.
2738. If there was a railway from that point to Menindie, would not the fodder-growing district be much nearer to this place than it is at the present moment? Yes.
2739. We have it that the fodder at present comes 150 to 250 miles? Yes; fully that.
2740. Then I understand we could have a fodder-growing district in New South Wales much nearer? Yes; if it is irrigated.
2741. You only want facilities for transit to be able to provide fodder at a point nearer to Broken Hill than it is provided at present? Yes.
2742. We could feed our stock with New South Wales-grown fodder? Yes, and more cheaply, and with greater certainty than we can at present. In dry seasons fodder is a fearful price.
2743. Do you know the Tallywarka Creek? No; I have crossed it.
2744. Do you think it could be carried further? I would not be surprised if you could not almost join it to the Willandra.
2745. Do you know whether there is any ridge? I think it is very level; but I could not tell you from any knowledge of my own.
2746. They could be brought pretty close together? Yes.
2747. With only a little dry bit between them? Yes.
2748. Could not fodder be grown on the Tallywarka? Yes.
2749. And on the banks of the Darling, too? Yes.
2750. Then we should have a naturally irrigated tract in New South Wales, closer to this great market for fodder than anything existing on the other side? Yes.
2751. Nothing is wanted but to provide transit? No.
2752. If we only had that, we could find room for a large number of farmers? Yes.
2753. We could settle a fodder-growing population in the midst of this large country? Yes.
2754. And with a mining market? Yes.
2755. If your idea is realised, that there will be a line of mines from here to Milparinka, the market for fodder will grow immensely in the near future? Yes.
2756. If this north-western portion of the Colony is to be settled by a mining community they will want a fodder-growing population in their rear? Yes.
2757. And such a community will furnish an almost unlimited market? Yes.
2758. And we have the the irrigable land within easy reach? Yes; it is much better soil about Ivanhoe than the Darling.
2759. If the preference were given to the Lachlan route, would you then think it a good plan to accommodate the Cobar district by running a line from Condobolin through Nymagee to Cobar? Of course it has great advantages; you don't have to face the western range. I think you would find it more convenient to go down from Nyngan to Cobar.
2760. Then you would avoid Nymagee? Yes; it is a tremendous distance.
2761. A line from Condobolin to Cobar would be nearly parallel with our existing line to Nyngan? Yes.
2762. And it is much better to run parallel lines through a country like this than at acute angles? Of course you lose that portion of the line which approaches the main line. You lose 15 or 20 miles.
2763. You get no new traffic? No.
2764. If you were asked to railway this district, would you not prefer to do it by running parallel lines through, than by running branches off at acute angles? I think, in a case like this, I would unquestionably come from Nyngan to Cobar.
2765. For what reason? On account of the coal deposits in the Blue Mountains.
2766. And it is a shorter journey? If you calculate from Blayney round the way you are suggesting, it is a longer distance.
2767. Would you not have to carry all your coal from Blayney up to the height of Orange or Huntley, and then down again? Yes.

C. E. Hogg,  
Esq.  
21 Oct., 1889.

- C. E. Hogg, Esq.  
21 Oct., 1889.
2768. Would you get the same height at Huntley as at Orange? No; from Blayney to Orange the grades are exceptionally good. The grades on the line I laid out from Blaney to Cowra have necessitated the putting in of 1 in 40 in order to get into the miserable town of Carcoar.
2769. If you had not to go into that town, would you have done it in 1 in 50? No; 1 in 60 is my grade.
2770. The whole line had to be spoilt to accomodate that little town? Yes.
2771. Mr. Whitton opposed that with all his might? Yes; he supported my report. I reported very strongly and continuously against it.
2772. And you are right in saying you could get from Blayney to Cowra with 1 in 60? Yes; I did it.
2773. Could you get back to that 1 in 50? Yes, certainly; we should leave this little place out and run down the Bellabula River.
2774. Has any other part of the line been spoilt? No.
2775. You could cut the ruling grade down within the fence? Yes.
2776. You did not alter your route? Yes, we did; 4 miles of it was spoilt. It was a stiffer grade than we need have made.
2777. You could cut the stiff grades down? Easily.
2778. Then it is within possibility we could make a line of 1 in 60 from Blayney to Cowra now? Yes.
2779. Leaving the deviation out and resuming the original line, it is possible, as a national policy, to restore the 1 in 60? Yes.
2780. Supposing the Lachlan Valley to be the route selected to come here, the gradients on the other part of the western line become a serious consideration? Yes.
2781. We must go up to Bathurst and a little further to Blayney, and that will be the highest point? Yes.
2782. And from Blayney you must descend by 1 in 60 to Cowra, and from there to Broken Hill you could get 1 in 75 and 1 in 100? Yes.
2783. Where is the nearest coal place upon that line? Lithgow.
2784. There are some stiff gradients betwcn Lithgow and Blayney? Not very. There are some coming down to Keilor, but that is all down-hill. There is a stiff grade from George's Plain to New-bridge.
2785. Could the line between Lithgow and Blayney be improved? I doubt it.
2786. Looking forward to a future coal trade, we have to make our line with easy gradients between Lithgow and Blayney? Yes.
2787. From that point we may go to the west without trouble? Yes; even with this 1 in 40 I speak about, the traffic will be down-hill.
2788. It would require some detailed examination to see what would be the best route—by Dubbo and Nyngan, or by Cowra and Nyngan? Yes; I could not speak straight off.
2789. You are certain that from Blayney to Cowra you could do it in 1 in 60, and from Cowra to Broken Hill in 1 in 75? Yes.
2790. And upon 1 in 75, with a fair sized engine, what load of coal could you haul? I do not know what class of engine they are using now.
2791. Have you considered the question of the rival routes to Broken Hill, and have you any preference, as an engineer, for the Nyngan or Lachlan route? No; the Lachlan route must have the drawback of having to keep a considerable distance from the river. I have seen the water 25 miles on each side of the river.
2792. How far back would you have to go? 30 miles.
2793. Is it easy to do that? It is; but you expect to get a great deal of traffic from the banks by farming.
2794. But you would not take the railway into a bog for the sake of traffic? No; you will have to get the railway and lose your traffic.
2795. Would a man growing produce on the Lachlan cart his traffic to the market rather than bring it to the railway? He could not cart, sometimes, a large waggon to the railway. It is a fearful bog-hole.
2796. But the local municipalities will make roads, I suppose, in time? Yes.
2797. You don't look upon that as condemning the Lachlan route? No.
2798. Its gradients would be easy? Yes.
2799. And it is fertile soil? Yes.
2800. And it is a district which must be railroaded sooner or later? Yes; if it is to be opened up.
2801. There is no question that we must make a railway to Condobolin? Yes.
- 2801½. And from Condobolin to Broken Hill would be as short as from Nyngan to Broken Hill? I think it would.
2802. *Mr. O'Sullivan.*] Have you formed any opinion as to the permanency of the mines? Yes.
2803. What is your opinion? I believe fifty years hence we should be finding new permanent mines, especially after the discovery which occurred here last Saturday. We find new and rich mines every day of the month.
2804. Have you any knowledge of the Darling trade? No.
2805. *Mr. Hurley.*] You have knowledge concerning the supply of iron at various mines? Yes; I am largely interested in the flux question.
2806. What is the quality of the material sold to the various mines? The iron we supply from our iron mountain is hematite iron.
2807. Is there any kidney ore in this district? I don't know of any.
2808. Any silicious? Yes; a great deal of it is silicious.
2809. You have an abundance of it? Yes; we have an abundance 2 miles from the proposed railway route.
2810. What is the largest output you could reckon upon for a series of years—say, for ten years? About 1,000 tons a week, I think.
2811. And then the mine would not be exhausted? No.
2812. So that the silver-mines can look upon a plentiful supply of flux, in the shape of iron ore, from that district for a considerable time to come? Yes.
2813. What is your output now? It is hardly anything, for the reason that the mine is in a state of transition, and having no railway it hardly pays to send it by carts. We are proposing to make a tramway of our own if the railway does not come.

2814. What is the price per ton? Delivered here, it is 22s. per ton. It costs 10s. a ton to deliver.
2815. *Chairman.*] With regard to these two lines of railway from Cowra to Broken Hill, and from Nyngan to Broken Hill—which is the longer line to be constructed? From Cowra to Broken Hill.
2816. Is it not much longer? Yes; a great deal longer.
2817. Have you examined the country between Nyngan, Cobar, Wilcannia, and Broken Hill, so as to be able to speak as to its agricultural nature? No.
2818. You are not aware that crops of every kind are grown there in great abundance? No; but I am sure it is a fact.
2819. With regard to this route through the Lachlan, have you examined right through to Broken Hill? No; as far as Ivanhoe.
2820. How far is that from Cowra? 300 miles. From Blayney to Cowra is 45 miles. It is 420 miles from Blayney to Broken Hill, *via* Cowra. One distance would be 550 miles from Blayney, *via* Nyngan, to Broken Hill, of which 200 miles are made; and the other line is 415 miles, of which 45 miles are made; so that you would have to construct, in one case, 370 miles, and in the other case about 350 miles.
2821. You referred to the country 25 miles from the Lachlan River as being of a swampy character? It is not swampy in the sense that reeds grow, but it gets fearfully wet from the floods.
2822. When you get beyond that 25 miles distance, what is the character of the country? The country then loses its richness to a certain extent, and becomes a little ridgy.
2823. Does it not become of a barren character? Yes, certainly; the other is alluvial.
2824. It is not of such a general good character between here and Cobar? No; I should say it is not.
2825. If this line were constructed we should lose sight entirely of the Wilcannia trade? Yes.
2826. If the Wilcannia trade is to be secured by railway it will be necessary that the line to Wilcannia should be made, even if the Lachlan line is made? Yes.

C. E. Hogg,  
Esq.  
21 Oct., 1889.

Mr. Joseph Nolan, prospector and contractor, Broken Hill, sworn, and examined:—

2827. *Mr. Tonkin.*] What are you? A prospector and contractor, Broken Hill.
2828. How long have you been in this district? Fifteen years.
2829. You have a good knowledge of the country all around? Yes; within a radius of 200 miles.
2830. What is the character of the country between here and Menindie? Good agricultural ground.
2831. Is there any agriculture carried on? No; only a small patch close to Menindie Lake.
2832. Is that carried on by irrigation? No; by natural rainfalls.
2833. Have you seen any crops there this year? I have grown crops, without irrigation, of about 3 tons per acre, about 10 miles from Ivanhoe.
2834. What have you grown? Wheat for fodder.
2835. How many years have you grown these crops? Two years in succession. I got 3 tons per acre about 11 years ago. This was at Clare, near Ivanhoe.
2836. Was there any other agriculture carried on there? Yes; by Mr. Crombie, at Tilton.
2837. What area did he have under cultivation? 20 acres.
2838. Was his crop equally as good as yours? Yes, better; he grew on a sand-hill.
2839. Has he continued to grow a crop there? He has not done so these ten years, but before that he did very successfully.
2840. How many crops have you known grown there by other parties in the district? Three or four, at Tilton.
2841. Each year following the other? Yes.
2842. And there has been no blank through want of rain? This was upon sand. The sand is of a damp nature on the Orlando Creek.
2843. If you chose a place for irrigation you would choose sand? The sandier the better.
2844. You have no doubt crops could be grown there without irrigation? No; I would like to see irrigation.
2845. But you have grown them without irrigation? Yes.
2846. What is the average number of crops you would have, say in five continuous years? Well, I have seen three years without a drop of rain at all at the Barrier.
2847. And then you would have no crops at all? No.
2848. Can you give an idea of the average number of crops you would have? I should think two years in five.
2849. Would there be any great difficulty in irrigating the land you speak of? No.
2850. How could it be irrigated? By a natural race—you could start from Euabalong to the Willandra Creek.
2851. Did you hear the questions asked by Dr. Garran about damming this Willandra Creek, and forcing the water back? No.
2852. Could that be done easily? It is not a good place to dam.
2853. Can you force the water back? It has been tried often for fifteen years.
2854. And has it been a failure, or a success? The station-holders did not expend sufficient money.
2855. Do you know the country between here and Wilcannia? I have been from Wilcannia to Mount Browne.
2856. Is that a similar country to that you have spoken of? No; quite different. From Wilcannia to Mount Browne is a mineral country.
2857. Do you know whether there is much mining in the district between here and Mount Browne? Scarcely any between here and Mount Browne, but there is plenty at Mount Browne.
2858. What is the population of Mount Browne? About 700.
2859. Is it a mining population? No. There are small stations all around for about 10 miles out. It has been a large station, which was cut up ten years ago.
2860. If a railway were constructed to Broken Hill, *via* Menindie, would that be of any benefit to the Mount Browne district? Yes; but not much.
2861. Not so much as *via* Wilcannia? From Bourke to Mount Browne is the most direct route. It is about 240 miles.
2862. How far is it from Wilcannia to Mount Browne? 180 miles.

Mr. J. Nolan.  
21 Oct., 1889.

- Mr. J. Nolan. 2863. Would that be the nearest point to Mount Browne, supposing the railway were constructed from Cobar to Wilcannia, and from Wilcannia to Broken Hill? Yes; Wilcannia would be the nearest point.
- 21 Oct., 1889. 2864. Is there any agricultural land between here and Wilcannia? Yes; for 40 miles,—all down the banks of the Darling.
2865. There would be no difficulty in growing crops there, providing it was irrigated? No; crops would grow anywhere in the Barrier if you irrigate.
2866. Do you know anything about the country beyond Ivanhoe? Yes; towards Booligal and New Orlando. I have travelled along the creek to Mossgeil.
2867. What class of country is that? All good agricultural country.
2868. A railway along that route would be of great benefit? Yes; better than the other.
2869. Do you know that the line could not run parallel to the river owing to the floods? Yes; but there are only patches of floods. It is not all flooded for miles back.
2870. *Mr. O'Sullivan.*] You were the discoverer of the water scheme at Stephen's Creek? I am the promoter at Stephen's Creek and the Darling. My idea was to bring the water first from Stephen's Creek, and then to go on to the Darling, and bring it in an open viaduct.
2871. If these schemes are carried out, will there be a constant supply of water? Yes, I am positive there is a supply for domestic purposes from Stephen's Creek for years.
2872. And the mining is not likely to be impaired during a dry season for want of water? No.
2873. You say you prospected within 200 miles of Broken Hill? Yes.
2874. Therefore you can form an opinion as to the mineral character of this region? Yes.
2875. What is that opinion? I think we have the best of it in Broken Hill.
2876. Do you think any of the country between here and Mount Browne has mineral wealth? Yes, for about 30 miles from the South Australian border, right up to Mount Browne.
2877. Is that a silver or a gold country? It is both. There is a piece of country on this side of Mount Browne which we have never been able to get into to prospect. It is marked on the map as a rainless track of country.
2878. Do you find indications of silver and gold the whole way? Yes.
2879. Has the country between here and Mount Browne—say for 20 miles outside Broken Hill, and Mount Browne—being anything like tested? Yes, very lightly; there are patches on the surface.
2880. Do you consider that a line to Mount Browne would lead to a large development of the mineral country? Not from here.
2881. Where from? From Bourke.
2882. But you are aware that at the present time the whole of the trade of Mount Browne goes to Wilcannia? Yes.
2883. Why does it go to Wilcannia instead of Bourke? Because the track is better watered.
2884. Is Bourke or Wilcannia the natural market for Mount Browne? Wilcannia.
2885. Do not all the stock from Queensland come down by Wilcannia? Yes.
2886. And all the goods required by the Mount Browne people, when the river is up, are sent by Wilcannia? Yes.
2887. If a line were constructed from here to Mount Browne, would not it be more likely to feed the Adelaide trade than the Sydney trade? Yes.
2888. A line taken from Wilcannia to Mount Browne would achieve the same object of developing the resources of the country, whilst it would keep the trade in New South Wales? Yes.
2889. Which of these routes would you prefer? The Menindie to Haw.
2890. Why do you say that, outside of the reasons you gave to Mr. Tonkin—outside of the agricultural reason. I understand you to favour this line, because it would run through good agricultural country? Yes.
2891. Have you any other reason for it? No, but there is a great quantity of timber past Menindie. Thousands and thousands of tons.
2892. What kind of country is it between Clare and Menindie? All level country; good agricultural ground.
2893. Anything like the Darling flats? About the same. In some places there are small patches of limestone.
2894. Which line do you think would serve the most stock,—the one *via* Nyngan, or Cowra and Menindie? I could not answer. The stock are beyond Paroo.
2895. *Dr. Garran.*] I understand you to say that from Condobolin to Menindie is good agricultural country? Yes, from Booligal to Menindie.
2896. Is it much inferior between Menindie and here? No, it is about the same until about 12 miles from Broken Hill. Then you come to the hills.
2897. But beyond that circuit—out of the mineral district—it is good agricultural country? Yes.
2898. I understand there is a large circle of mineral country around here with Broken Hill as a centre, and another with Mount Browne as a centre? Yes.
2899. But between these two centres is the country mineral? Yes, all the way from here to Mount Browne. There is a small patch about 20 miles, about which we know nothing.
2900. And that may be mineral too? Yes.
2901. You are certain that from here to Mount Browne there is a belt of country, 20 miles wide, more or less mineralised? Yes.
2902. And within that 20 miles there will be payable mines discovered? Yes; I believe I could find one or two 40 miles from here.
2903. There is every indication that there will be payable mines discovered? Yes.
2904. Between that belt and the Darling is there if much mineral country? Yes; it is somewhat similar, but I have only ridden through it. There are copper mines between Wilcannia and here, one was opened twenty years ago.
2905. Are there any copper mines between Wilcannia and Mount Browne? That is the district I am referring to.
2906. It is not exactly on the road to either place? No, in angle between the two.
2907. Do you know the road from here to Menindie? Yes.
2908. Is it easy country for a railway? It could not be better.

2909. Would there be any local traffic likely to spring up upon it? Limestone and ironstone would come this way. Mr. J. Noan.
2910. If we got 20 miles beyond here, could the people on the plains grow fodder between that 20 miles and Menindie? Yes, with irrigation. 21 Oct., 1889.
2911. Where would they get the water? From the Darling.
2912. Do you think water enough could be spared from the Darling to irrigate that distance? Yes; two or three times a year.
2913. You think water could be spared from the Darling for 50 miles back? Yes; in an open viaduct.
2914. And farms could be supplied from it? Yes.
2915. You are of opinion that from Menindie to within 20 miles of this place, we could locate farmers who could grow fodder to supply this place? Yes.
2916. You are sure there is a large mineral future before this north-west corner of New South Wales? Yes; for twenty or thirty years.
2917. You were speaking of the flooded land on the Lachlan; when it is not flooded it is rich land? Yes; it grows well in the summer.
2918. Do they grow tobacco there? I never heard of it, but I have been away ten years.
2919. Would the flood prevent that land from being farmed? No; because there are some little necks of land which could be drained off.
2920. If the railway were made 20 or 30 miles back from the river, would the bulk of the land between the railway and the river be occupied agricultural land? Yes.
2921. Have you been on the Willandra Billabong? Yes.
2922. Is the land fertile on either side? Yes.
2923. How far back from the Lachlan does the Willandra Billabong run? It goes down towards Menindie.
2924. How far back from the Lachlan does it run? One hundred and fifty miles.
2925. And if the Lachlan were dammed and the water forced along there, you could take water 150 miles towards Menindie? You could take it right to Euston.
2926. If the railway were within reasonable reach, you could have fodder-growing farmers all along the line to the Willandra Billabong? Yes.
2927. How near to Menindie would that bring you? Forty miles.
2928. Is the intervening 40 miles level? Yes; the natural fall of the country is about 3 feet to the mile.
2929. How far from the termination of the Billabong would it be to Tallywalka Creek? I cannot say; it is a succession of lakes down.
2930. What is the distance between the head of the Willandra and the head of the Tallywalka Creek? I do not know.
2931. At any rate you can bring the Willandra water within 50 miles of Menindie? No, not altogether.
2932. Do you mean to say, we could make a continuous canal between the Lachlan and the Darling? That is my idea.
2933. You have not surveyed it? No; but I have experience of these works.
2934. Have you cut races? Yes.
2935. You think that is an advisable thing, then? Yes.
2936. You could make a canal along the side of the railway? Yes.
2937. And have farms on both sides of the canal? Yes.
2938. So that we could have a canal running by the side of the railway, all the way from the Lachlan to within 30 miles of this place? Yes.

Mr. Francis Jolly, mining manager, sworn and examined:—

2939. *Chairman.*] You are the mining manager of the Junction Company? Yes. Mr. F. Jolly.
2940. *Mr. Hurley.*] What is the area of your property? Fifty-two acres. 21 Oct., 1889.
2941. What is the deepest level? Three hundred feet.
2942. What is the number of men employed? About fifty at present.
2943. What is the output of ore? About 150 tons a week.
2944. Is it treated on the mine? No; it is smelted at Dry Creek.
2945. How far is that from here? Two hundred and ninety-two miles.
2946. What quantity of coke do you use in a month? We are not using any more than is required for assaying purposes, which is a small quantity.
2947. How much limestone? We are not using any.
2948. How much coal? Perhaps 20 or 30 cwt. a month for the smith's shop.
2949. What about firewood? We are using about 60 tons a month.
2950. What about stores? About 60 tons a month also.
2951. What about the quantity of ore you send away from the mine? For the last three months, 1,500 tons. Our tonnage for the last three months, inward and outward, was 1,710 tons, including stores, firewood, and timber.
2952. Will you enumerate the articles? Timber, 90 tons; stores, &c., 60 tons; firewood, 60 tons; ore sent away, 1,500 tons; making a total of 1,710 tons. When the furnaces are completed at Port Adelaide, from 350 to 400 tons of ore will be despatched weekly.
2953. What kind of timber do you use in working the mine? Stringybark sawn timber.
2954. Do you prefer it to soft Oregon pine? I think it is better where the ground is likely to be heavy. It will stand a greater pressure, and is more durable.
2955. What about the cost of it? I think Oregon will be a little more expensive; but I do not suppose it would be much. The timber is more expensive in the first instance. There is not the same freight upon it. I do not suppose there would be a great difference in the expense of delivering Oregon or stringybark.
2956. What quantity of bullion have you sent away? We have sent none away, because our ore is smelted at Dry Creek.
2957. Can you tell us the quantity of bullion produced from the ore you send away? No; we sell the ore by assay, and I think the ore would average about 25 per cent.

- Mr. F. Jolly. 2958. But you look upon the payments made for the ore as sufficiently remunerative to term the mine a dividend-paying mine? I think so, in the future.
- 21 Oct., 1889. 2959. You look upon the mine as having a good future before it? I do.
2960. And likely to give employment to a large number of men? Yes.
2961. What is the rate of wages? £3 a week for miners.
2962. Have you any difficulty in getting men? No; not for some time past.
2963. Are you likely to put on a large number more? Yes; in two or three months from this.
2964. Looking at the different mines in the surrounding country, do you form a good opinion as to the field lasting? Certainly I do.
2965. Is it likely to give employment to a larger number than it has given employment to already? Yes; I believe in a few years hence there will be considerably more miners working than now.
2966. Have you any knowledge of the country within a radius of 50 miles? No; I have not been in the district more than fourteen months, and during that time my attention has been confined to this main line.
2967. Prior to coming here you were engaged in mining, I presume? Yes.
2968. In silver? No, not in silver. I have managed in this country both gold-mines and copper-mines.
2969. Supposing you had the mine in full work, what quantity of ore could you put out per week over two years? When the Company's furnaces are completed at Port Adelaide, from 350 to 400 tons of ore could be easily despatched per week. Then our firewood requirements would be 120 tons per month; mining timber, 80 tons per month; mining stores &c., 30 tons per month; and the ore despatched will be 1,600 tons per month; or a total inward and outward by rail of  $457\frac{1}{2}$  tons per week, or 1,830 tons per month.
2970. Do you consider that will go in and out over a considerable period of time? I could not say what length of time; but I know it will continue for a considerable length of time, and I think it will be increased. It is more likely to be increased than to be diminished.
2971. *Mr. Copeland.*] How many tons of ore do you say you would be likely to send away in the future, when you get the new furnaces up? Three hundred and fifty or 400 tons weekly. The ore will be treated in Adelaide when the Company's furnaces are completed, which will be this year.
2972. How many new furnaces? Two.
2973. Have you not paid dividends this year? No.
2974. How much capital have you expended? I am not in a position to answer that correctly. I know there have only been three calls made of 6d. per share.
2975. You have winding machinery? Yes.
2976. Are you working more than one shaft? We are working up the south shaft; but we are not doing a great deal there. The principal work is being confined to the main shaft.
2977. You have stated that you were using stringybark for driving timber;—where does it come from? To the best of my knowledge, from Tasmania. I buy it from the timber merchant here, but I know it comes through Port Pirie.
2978. You have not had enough experience of the field to know whether pine will stand as well as stringybark? I am satisfied it will not stand the same pressure, and there is not the same durability in it, even presuming you do not require the pressure.
2979. Would you consider, in vertical timbering, according to the principle adopted here, that Oregon pine would be much easier split than stringybark and hardwood? Of course soft timber is easier to work.
2980. But would not the pine be more likely to split from pressure? Certainly.
2981. On a downward pressure would it not be more likely to crush the timber than split it? Yes.
2982. And split timber would be more likely to stand than sawn timber? Yes; but I question if you could get it sufficiently truly split to put the timber in in the way it is done here.
2983. Do you use any round timber for props? Square timber has taken its place.
2984. Are you using sawn timber for slabs? Yes; there is nothing else here. There are no stringybark forests about here from which we could be supplied.
2985. Do you prefer using this hardwood to the softwood at the same price? That would depend upon the pressure of ground which is likely to come upon the timber. If it could be got as cheap, I think I should prefer the hardwood.
2986. Are you stoping? We are commencing now at the 300-foot level.
2987. What is the width of the lode? Forty feet.
2988. You know the system of stoping in the Proprietary mine? Yes.
2989. Do you consider it a safe method of timbering? Yes; I fail to see how it could be timbered more securely.
2990. Do you think it will be safe after the next level is stoped out? That depends in a great measure upon the nature of the country on either side—whether the walls are rotten or whether it is hard standing ground.
2991. What is your experience as to the side pressure from the hanging walls? Wherever I have been here, it is not heavy so far.
2992. From your general knowledge of the district, you look forward to a good future for the field? I do.
2993. Do you think the people would be inclined to do business with Sydney if the railway were open? I presume they would be prepared to do business with those who would do it the cheapest for them.
2994. *Mr. Tonkin.*] What is the reason your company has decided to treat their ore at Adelaide instead of here? It was considered some time ago that ore could be treated cheaper in Adelaide than on the field, inasmuch as flux could be procured cheaper. That was the idea the Directors had when they moved in the matter.
2995. Do you think that is the case? I am hardly in a position to say. If what Mr. Sylvester Brown, one of the principal Directors, says is correct—if the flux can be got at 9s. a ton—then I think it would be cheaper to smelt it there; but I do not know whether that can be done.
2996. Do you think, if there was a material reduction in the cost of coke delivered here, it would be better to treat the ore here? Of course, if there were a great reduction in the cost of coke delivered on the field it would make all the difference in the world. I think matters are pretty evenly balanced as to the cheapness of treating the ore on the fields or on the sea-board. I do not think there is a great margin either way; but certainly if coke could be brought here cheaper, of course the smelting could be done cheaper.

2997. Has it not lately been proved that flux could be got here cheaper than was anticipated some time ago? I have read a great deal about that in the papers. It is said it can be got cheaper than it could be some time ago. I do not know what they are paying now. Mr. F. Jolly.  
21 Oct., 1889.
2998. Is not the principal expense attached to everything connected with mining the cost of carriage? Yes.
2999. How much ore will a ton of coke smelt? I could not tell you.
3000. But you know there would be more than the weight in ore treated by the ton of coke? I think so.
3001. Then you would have to pay carriage upon a greater amount of ore than you would upon coke if you were smelting away? Yes.
3002. If you got the flux at nearly the same price it would be as cheap to do it here as send it away? Yes.
3003. Have you much water in your mine? Scarcely any. The new North Broken Hill are draining us. Their 300-foot level is 18 feet below ours, and consequently they are taking the water.

Mr. Francis James Odling, mining manager, sworn and examined:—

3004. *Mr. O'Sullivan.*] What are you? Mine manager to the Pinnacle Tribute Silver Mining Company. Mr.  
F. J. Odling.  
21 Oct., 1889.
3005. Will you make a short statement about the prospects of your mine? The Pinnacle Tribute is just starting concentrating machinery. This week we have started the first half of the machinery. I have returns, for the three months ending September, of the total amount of goods inwards and outwards. For July, August, and September, the total amount inwards is 85 tons, and the total amount outwards is 397 tons. I am also manager of the Pinnacle Consols Co., and the Tribute. For that period of time about 45 tons went outwards from the Pinnacle Consols.
3006. Where do you obtain your fuel? From the surrounding district.
3007. Can you give us the particulars in regard to that? The fuel for the three months ending September has been 479 cords of firewood. I hope before the close of the year to have the other half of our plant started, when, of course, these figures will rise immediately. I estimate that we shall probably require in the future 50 cords of firewood per week. I am taking a cord of wood to weigh  $2\frac{1}{2}$  tons, and that would make 125 tons.
3008. Do you desire to state anything further in regard to fuel or stores? The wood is getting very scarce. The teams have to go a long distance. The water is an important question to the Pinnacles. In dry seasons it becomes an important question as to what we should do for firewood, which has to be obtained by means of bullock teams. If we could get coal it would be a great thing for the Company.
3009. If the railway were constructed to Broken Hill, and would land you coal at £2 per ton from Lithgow, that would be a great accommodation to your mine? It would be an increase upon the price we pay at the present. I estimate one ton of coal to be equal to two cords of wood. We pay 18s. per cord, or 36s. for two cords; therefore, we should want one ton of coal for 36s.
3010. If coal could be landed at £1 17s. 6d. per ton, your mine would then become a consumer of coal. It would be a very great thing for the Company, and by that means you would be able to carry on your operations more successfully? Certainly.
3011. How many men have you employed? 150 men and boys.
3012. Is that the full strength? No, we shall be increasing as the mine develops. It is developing every day.
3013. Where do you have the smelting done? Our concentrates are sent to Port Adelaide.
3014. Is there any probability of that being done in Broken Hill? There can be no question with the facilities of a railway, and when flux and fuel could be obtained cheaply, it would be a great temptation to us to instantly start to reduce the ore.
3015. Are there any other mines around you? There is the Lady Bevis, and the Kincheega, Pinnacle North, Pinnacle South, and Pinnacle Junction.
3016. Are these mines working now? Not one.
3017. Are they likely to be opened if the railway is taken near them? I should think so, but I do not know much about that.
3018. *Mr. Tonkin.*] What do you pay for the carriage of your concentrates to Adelaide? 8s. from the mine to Broken Hill by teams, and from Broken Hill to Port Adelaide 25s. 6d. per ton—that is 33s. 6d. from the mine.
3019. If you had smelting machinery on the ground, would you require to concentrate? Yes, certainly.
3020. How do you manage for water when you are concentrating? We have sufficient water in the mine.
3021. And you think that a ton of coal will only produce as much power as two tons of wood,—have you tried coal in opposition to wood? No.
3022. Would you be surprised to hear from the evidence we have taken already from people who have had experience in the two articles, that 1 ton of coal will go further in producing steam than 3 tons of wood? I do not know, but I am glad to hear it.
3023. Under those circumstances it would be of much more benefit to you? So it would; We should be very glad indeed of the coal.
3024. In the event of your not being able to get coal under this extra price, have you an unlimited supply of wood? No, we are getting further afield; consequently, it will cost more.
3025. Then it is absolutely necessary you should have some means of getting fuel? Yes, in the near future.
3026. *Mr. Copeland.*] How far are you carrying wood now? The contractor says it is 7 miles.
3027. In what direction is your mine situated? To the south of the Broken Hill lode.
3028. Is it supposed to be on the same line of lode? No.
3029. What is the distance between the Pinnacle and the Proprietary blocks? It is estimated at about 10 miles.
3030. In what direction are you bringing firewood at the present time? Further south.
3031. What does your claim consist of,—have you leases? Yes it is leasehold.
3032. How much ground have you on the Pinnacle tribute? About eight 40-acre blocks, and there is one of 20.

- Mr. F. J. Odling.  
21 Oct., 1889.
3033. For what length on the line of the lode have you proved it? 250 feet in length.  
3034. And to what depth? We are sinking now shafts at 250 feet.  
3035. At what depth from the surface did you first strike the lode? We opened out at 100 feet, and put the cross cutting there.  
3036. What width was the lode at 100 feet? It averages about 17 feet.  
3037. And at the next level? At 200 feet it is about 17 feet. It bulges in places, and then widens again.  
3038. You consider the lode to average 17 feet in width? Yes.  
3039. And what distance longitudinally have you driven? About 250 feet.  
3040. That is all you have proven—250 feet in length and 17 feet in width? Yes.  
3041. What is the nature of your ore? Sulphide.  
3042. Can you say what the average grading is for silver? Of course the richer portions are hand-picked and bagged. They will go 40 per cent. of lead and 69 oz. of silver. The ore goes into the concentrator at 12 per cent. and 20 ounces of silver.  
3043. And you crush the poorer ore? Yes; and concentrate it.  
3044. What machinery have you for concentrating? We have a fine steam stamp of modern pattern.  
3045. What is the lowest grade ore you can work profitably? The machinery has only been running a short time, and I have not gone into the matter yet.  
3046. You have not paid any dividends? No.  
3047. What have you expended in capital in developing the mine? The nominal capital of the Company is £120,000. I cannot say what is the actual called-up capital. I am only the mining manager.  
3048. I suppose you have winding and pumping engines? Yes.  
3049. Do you find water troublesome at all? We should be very glad to be troubled with water. At present we have sufficient.  
3050. Is that your chief source of supply—the water from the shaft? Yes; for concentrating purposes solely.  
3051. Is the water drinkable from the shaft? No; it contains 3 per cent of solid residue—about twice the saltiness of the sea.  
3052. I suppose the same information you have supplied the Committee in reference to the Pinnacle Tribute will apply to the Pinnacle Consols, except as to the mining developments? Yes.  
3053. What have you done on the Pinnacle Consols? The shaft has been sunk 180 feet, and we have opened out one drive, and we are now cross-cutting to the lode. There has been little work done hitherto.  
3054. Does the Pinnacle Consols adjoin the Pinnacle Tribute? Yes; it is nearly at right angles.  
3055. Do they both contain a similar class of ore? Yes.  
3056. Have you taken much ore out of the Consols? Very little at present.  
3057. Have you proved the width of the lode? There are three lodes in the shaft, and we know the width of one, and that is 11 feet.  
3058. Do you consider each of those lodes to be payable? Undoubtedly.  
3059. And you anticipate being able to pay dividends in the future? Yes; in the very near future.  
3060. So that you look forward to a prosperous career for both mines? I certainly do.  
3061. What timber are you using down below? Very little. We use filling in. We use the small timber.  
3062. Are you using hard wood or soft wood? We use the largest of the firewood which comes in.  
3063. Have you any furnaces on the mine at all? There is one water jacket.  
3064. Have you any intention of erecting furnaces for yourself on the mine? I have no doubt it will be considered at an early date.  
3065. *Mr. Hurley.*] Had you any experience in silver-mining prior to taking the management of the mine here? No.  
3066. You can give no information as to the probable stability of the mine in comparison with mines elsewhere? No; it is a true fissure lode, and will probably go to greater depths than we should be able to follow.  
3067. Are you a geologist? No; I have a smattering of it.

---

Mr. Edwin Hornsby, ironmonger, Broken Hill, sworn, and examined :—

- Mr. E. Hornsby.  
21 Oct., 1889.
3068. *Chairman.*] What are you? Ironmonger, and manager for Walter Sully.  
3069. What business do you carry on? Hardware, general, and grocery,—in a large way of business.  
3070. Can you give any information as to your imports during a recent period? For the last six months—April to September—we have imported 352 tons of goods, upon which we have paid for carriage £1,049, or at the rate, in round numbers, of about £3 a ton.  
3071. Have you experienced any inconvenience in dealing with Sydney at any time during your business? Yes.  
3072. What has it been? The great difficulty I have experienced has been in the time it takes in sending orders here from Sydney, and the time it takes to receive the goods; nine or twelve months ago I was in Sydney, and I was very anxious at that time to cultivate a trade with Sydney people. At that time they almost ignored the Barrier trade. Mr. McNeil, of Briscoe, Drysdale & Co., and W. S. Friend, and others, said it was too far away, but since then I have ascertained, through their travellers calling more frequently, that they are anxious to pick up a trade. The difficulty has been in the time of transit. At that time, they had the steamer "Franklin" on, and they promised me they would run here once a week for alternate weeks, but that fell off altogether. Therefore, I had almost to abandon the Sydney trade.  
3073. If better means of intercourse were afforded would you prefer to do business with Sydney? Well, I should like to have the other market, it would be a larger market to choose from.  
3074. That would be a great advantage? It would. I have no doubt there are lines I could buy better in Sydney than anywhere, and I should like to take advantage of them if I could get them here in reasonable time.  
3075. In dealing with buggies tell us what you have to pay for them, and for their transit? A fortnight ago I had some buggies from Harris and Ackman. The total amount of the invoice was £64 for four buggies,

buggies, upon which I had to pay £45 10s. 2d. expenses. That is prohibitory. I could sell any number of them if I could get them here at £5 or £6, which I think is a reasonable freight; but when you are charged £11 for a £15 buggy, it simply stops the sale of it.

3076-7. We may take your experience to be like that of people generally in business in Broken Hill? Certainly; I don't see why I should be an exception from others.

3078. If better means of communication were afforded, you would, of course all things being equal, go to the market where you have the largest choice? Certainly, where I could reap the benefit.

3079. *Mr. O'Sullivan.*] By what route did these buggies come? By Port Adelaide and Port Pirie, and here by railway.

3080. You say, if you could obtain them at a reasonable figure from Sydney, you could do a large trade in them in this district? Undoubtedly.

3081. And that remark applies to many other lines? Yes; to merchandize generally.

3082. You spoke about the steamer Franklin,—where was she to run from? From Sydney to Port Pirie direct; and they could, I believe have cultivated a splendid trade; but perhaps there was pressure brought to bear somewhere, and she was taken off.

3083. Have you been here long? About two years.

3084. And you have seen a rapid increase of population? Yes.

3085. What is your opinion about the prospects of this place? My own trade is increasing very rapidly and successfully, and I infer from that that the future will be equal to the present, if not better.

3086. Do you see around you indications of permanency in the buildings or appearance of the town? Yes. I see that shanties are giving way to nice little cottages; cottages are giving way to better houses; and houses of a better class are giving way to—not mansions—but superior villa residences.

3087. Have you seen any marked alteration in the character of the hotels and stores within the last few years? Yes; they are all improving and advancing.

John Stubbs, Esq., Manager of the Bank of Australasia, at Broken Hill, sworn, and examined:—

3088. *Chairman.*] You are the manager of the Bank of Australasia, at Broken Hill? Yes.

3089. How long have you been here? I have been here permanently sixteen months, and have been connected with the Barrier two and a half years.

3090. What has been your experience as to banking business here during that time? I find it has been increasing almost continually. When I came here first, there was one bank and 4,000 or 5,000 people;—and there are now eight banks, and I do not think any one of them has any idea of closing at the present time. Some of them, of course, came late, after the boom, and their prospects were not so good as those before it; but I think there is bound to be a further increase of business.

3091. Does your bank get the bulk of the mining business? Yes; I think we have the bulk of the companies, and we do a large business in negotiating scrip drafts, and also advancing against scrip.

3092. Do you find that business of a stable character? Yes; I have every evidence of it.

3093. Are your transactions very large? Yes.

3094. Do the pay-sheets go through your bank? Yes; we have the pay-sheets of the mines. I think the Proprietary Mine pays about £8,000 a week or £16,000 a fortnight. Block 14 Company pays about £4,000 a fortnight. That is all I can remember at present. The other mines are in proportion.

3095. With regard to the advances you make, do you find the securities generally are of a good character—you do not have to foreclose? No; the advances are comparatively small as against freehold, and after they are made they are very quickly paid off.

3096. From a business point of view, and from your experience as a banker, do you consider Broken Hill is on a safe and permanent footing? Yes; I have no hesitation in saying so.

3097. And that it is likely to increase? I think so.

3098. What premises do you occupy—rented? Yes; we have a brick building leased. There are two years to run yet. It was built in the early days here.

3099. Do you contemplate building permanent offices? Yes; the difficulty at present is in getting a site. The building we have now was built for a bank and residence; but we find it too small to conduct the ordinary business in.

3100. You find, I suppose, the value of the property for building purposes goes up very much? Yes, wonderfully during the last few months.

3101. And are business accounts in a sound state? Yes; and business generally is on a sound footing.

3102. *Mr. O'Sullivan.*] Can you give us any idea of the unimproved value of property in Argent-street? I think the value in the main block was about £50 a foot a month ago; but it could not be bought for that now.

3103. Is there any probability that it will rise higher? Yes, every probability.

3104. *Mr. Hurley.*] What is the value of land in the cross streets? That does not bear such a high value, but it is bound to come. The town is a very long one, and I think it will increase in the width.

BROKEN HILL, TUESDAY, 22 OCTOBER, 1889.

[The Sectional Committee met in the Council Chamber, Broken Hill.]

Present:—

The HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. ANDREW GARRAN.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.

Mr. Charles Eley, Traffic Manager of the Silverton Tramway, sworn and examined:—

3105. *Chairman.*] What position do you occupy? Traffic Manager of the Silverton Tramway.

3106. And that is the tramway running from where? From Cockburn, on the South Australian Border, to Broken Hill—a distance of 36 miles.

Mr.  
E. Horsby.  
21 Oct., 1889.

J. Stubbs,  
Esq.  
21 Oct., 1889.

Mr. C. Eley.  
3107. 22 Oct., 1889.

- Mr. C. Eley. 3107. That tramway is the property of a company? Yes; called the Silverton Tramway Company.  
 3108. Where is the company managed? In Melbourne, by a local Board of Directors.  
 22 Oct., 1889. 3109. Can you tell us what the cost of the tramway was? I could not; I do not know it. I was not here when it was constructed.  
 3110. Is the rolling-stock the property of the company, or of the South Australian Government? The South Australian Government. We have some of our own.  
 3111. Carriages or trucks? We have two locomotives, twenty trucks, and two brake-vans.  
 3112. Any passenger carriages? No.  
 3113. So the bulk of the rolling-stock is the property of the South Australian Government? Yes.  
 3114. And worked by arrangement with the company? Exactly.  
 3115. How long has the tramway been constructed? About a year and ten months. We have been working the traffic about that time.  
 3116. The object of examining you, is to get, as far as we can, the amount of business done by the tramway since it started up to the present time;—have you got any figures that you can give us? No, I have not. The books are kept in Melbourne. You would get that from the Chairman of the Board of Directors.  
 3117. What information have you got here;—do you not keep any accounts? All the vouchers go to Melbourne, and the books are kept there.  
 3118. Have you not brought any documents with you which would give us any information on that head? No.  
 3119. Why not? I am not at liberty to disclose anything.  
 3120. But this is a Committee which has powers equal to those of a Supreme Court, and we can compel their production if there are any in your possession? It places me in rather a peculiar position. I am not allowed to disclose private information, so what can I do. I have no doubt, if you were to ask the Chairman of Directors, or the Secretary, you would get the information you require.  
 3121. Mr. O'Sullivan.] Can you show us one of the last balance-sheets? No.  
 3122. Dr. Garran.] Do you send the vouchers individually and singly;—do you make up any sheets? There are statements which go over.  
 3123. Chairman.] Have you no duplicates of those? I believe copies are kept.  
 3124. Have you those copies? I have not. Our accountant has, I expect.  
 3125. But you are the head officer here, are you not? Yes.  
 3126. Do you say you brought no documents at all here? I have brought the rate-list, the time-table, the Act, and all that kind of thing.  
 3127. You mean the tonnage-rates? Yes; the scheduled rates.  
 3128. Is that a printed sheet? Yes.  
 3129. You might hand one in? [Witness handed in list showing the goods classification, parcels and live stock rates, parcels regulations, and fare-table for the Silverton Tramway Company, on and after the 1st July, 1889.] (See Annexures).  
 3129½. Dr. Garran.] Are your passenger rates the same as those of the South Australian Government? No.  
 3130. Are they higher or lower? They are higher, I think.  
 3131. How much higher? I could not say; I have never compared them.  
 3132. Are your goods rates the same? They bear favourable comparison.  
 3133. They are not higher? Very slightly.  
 3134. Is your classification the same? Very nearly. The first, second, third, and fourth classification, is almost the same.  
 3135. Then it is principally in passenger rates that you exceed the amount of the South Australian tariff? Yes; I think so.  
 3136. You cannot say by how much? No; about three-fourths of our goods are at rates ranging from 2d. to 3d. a mile.  
 3137. Your receipts are more for goods than passengers? Yes.  
 3138. How many passenger trains do you dispatch each day? One, which we call a passenger train; two other goods trains carry passengers.  
 3139. How many goods trains do you dispatch daily? There are four trains running daily each way; one we consider a passenger train and the other goods.  
 3140. But they all carry goods? Yes.  
 3141. As a rule, do they go away fairly well laden? Fairly well. Sometimes they have to take empty trucks back.  
 3142. But on the whole, the trade balances itself well? No; the traffic inwards is greater than outwards.  
 3143. Your inward traffic is in general goods for the supply of the township? Yes, and the mines; the bulk is with the mines.  
 3144. More than for the township? Decidedly.  
 3145. How much more? I should say three-fourths will be with the mines.  
 3146. And one-fourth for the supply of the township's necessities? Yes.  
 3147. And what goes out is mainly the produce of the mines? Yes.  
 3148. Do you send any wool out? Yes, in the wool season.  
 3149. Wool is the only other export besides the mineral ore? Yes; but we have small lines of sheepskins and bones, &c.  
 3150. Do you dispatch much live stock? None, comparatively speaking.  
 3151. Do you get any cattle and sheep here for the supply of meat for the township? We did last season, when it was dry, but this season we got hardly any.  
 3152. The neighbouring stations supply the meat market? I think so; at least they must do so.  
 3153. How many trucks do you send outward on each day? It depends on the class of engine that hauls the train.  
 3154. How many classes of engines have you? Two.  
 3155. What is the full haulage for one of each sort? A full train is twenty vehicles; I am talking of goods.

3156. In the case of goods, then, that would be twenty trucks, including the brake and the water-tank? Eighteen trucks, a brake, and water-tank. Mr. C. Eley.
3157. How much will each truck carry? The carrying capacity of a truck is 6 tons. 22 Oct., 1889.
3158. Then six times eighteen would be a full load? Yes; but they are not loaded up to their limits.
3159. A full load will be 108 tons? Yes, if the trucks are loaded to their limits.
3160. What do you think is your average load out? I do not think it would exceed 4 tons per truck.
3161. That would be about 72 tons? Yes.
3162. Is that a paying load? Yes, provided the trains were all full; of course, they have to carry empty trucks very often.
3163. Do you think, taking day by day and week by week, you average 60 tons a train? Yes; we might do that. I think we would.
3164. And the bulk of what you send away is either mineral ore or bullion? Yes.
3165. And that is paid for at the rates on the sheet you have put in? Yes.
3166. You have no information as to the growth of last year's tonnage? No.
3167. Have you sent away 60 tons a train for 300 days;—that would be 72,000 tons in the year. Do you think you sent that away last year? No; I do not think we did.
- 3167½. How much do you think you did send away in the course of the year? I could not easily guess. A very large number of trains last year were sent away with empty trucks.
3168. Still, on the whole, you think you are right in saying your average load outwards is about 60 tons? No; not out. Taking it both ways it might average that.
3169. What, only 30 tons out and in? No.
3170. You mean averaging the two? Yes; the average outward tonnage would not be 60 tons. Taking it together, it might range between 50 and 60 each way.
3171. That is, taking each way, there would be 100 tons a day in and out? Yes.
3172. That would be 400 tons a day? Yes.
3173. It is not less than that? No.
3174. Is the trade pretty regular, or does it come in gushes? The inward traffic comes in gushes at times.
3175. What causes the irregularity? A ship arriving at Port Pirie, I presume; if they get a cargo of coke, it is generally rushed up at once. That is the only thing rushed up at once. It would also apply to coal and timber.
3176. But we are told timber is left there to season a good deal? Occasionally it is rushed up.
3177. Then your rushes depend upon the supply of import at Port Pirie? Exactly; when there is a large number of ships there we are busy.
3178. When the harbour is empty you are running light? Yes.
3179. And your greatest capacity per day is, as you say, four trains a day. You cannot do more with a single line than that? Yes; we could do more, but we do not do more. We occasionally run a special—but it is a rare thing.
3180. You could do 100 tons a day if you were pushed? Yes; I could run a much larger number of trains a day than we are running.
3181. What material do you bring the largest quantity of? Coke.
3182. What next to that? Coal and mining timber.
3183. Then coal, coke, and timber are the staples of your business? Yes.
3184. And going outwards, the staple is bullion and ore? I think you might say ore and bullion. We send more ore than bullion. Some of it goes to Germany, and some to England. It is shipped to various places. Some of it is smelted at the sea-board.
3185. What do you think was the export by the railway last Saturday;—if you cannot give us the average daily can you say the gross for the week? I could not give you that. I have not reckoned up lately.
3186. You sent the four trains away each day? Yes.
3187. Were they pretty fully loaded? They were not last week, because we were short of trucks.
3188. But had you the business if you had had the trucks? If we had had the trucks we might have done a larger business.
3189. You sent away fully 60 tons by each truck? Yes.
3190. That would be 240 tons in the day? Yes.
3191. Did you do as much inwards? Yes; I should think we did.
3192. Last week, then, you carried 480 tons daily? Yes.
3193. Perhaps more? Yes.
3194. Was that a particularly heavy week? No; it was about our average week.
3195. If there had been a glut the traffic would have been heavier, but there was no special glut at Port Pirie last week? No.
3196. There were no ships unloading coke or coal? No.
3197. Had you any coal or coke business last week? We had some.
3198. But there was no unloading to press you? No.
3199. Then it was rather a light week than otherwise? Yes.
3200. And all last week's business would be carried according to this rate-sheet? Exactly.
3201. *Mr. O'Sullivan.*] Can you state the amount of ore or bullion sent away by each mine? I think the Proprietary Company send away something like 700 tons of bullion a week, and I think the outside limit of Block 14 is about 200 tons. These are the only two mines which are smelting.
3202. And how much more is sent away? About forty trucks.
3203. At 5 tons each? Yes; perhaps 200 trucks in one week.
3204. I mean in one week? 200 trucks.
3205. That would be 1,000 tons? Yes.
3206. In one week then you have 700 tons of bullion from the Proprietary mine? I do not know that that is their regular output.
3207. But take it as an approximate estimate—in one week you have 700 tons of bullion from the Proprietary and 200 tons from Block 14? That is about their outside limit. If any smelters were shut down it would not be so much.
3208. Then you say you have 1,000 tons of ore from the other mines in a week, and you told Dr. Garran you

- Mr. C. Eley.* you were doing business to the extent of 480 tons a day? Yes; the trains average 60 tons, and there are four trains in and out.
- 22 Oct., 1889. 3209. I suppose if we calculate the weight per day, and take six days for each week, and fifty-two weeks for each year, we can arrive at the amount of business you are doing with the tramway? Yes, pretty nearly.
3210. *Mr. Tonkin.*] Do you bring in fluxes—any limestone or ironstone? Yes.
3211. Can you give any idea of the amount of limestone you bring in? We are bringing in very little just now. A large quantity of it comes in by teams.
3212. Does your line run through the limestone country? Yes; a lot of it is carted a distance of about 7 miles into Silvertown railway station, and some of it comes from a siding about 7 miles down the line.
3213. You could not give us an idea of the quantity you bring in? It may be 700 tons a week.
3214. Do you bring any ironstone? Very little, comparatively speaking.
3215. Can you give an idea of the quantity? It comes in so intermittently.
3216. Would it amount to 100 tons a week? I don't think it.
3217. What is the average amount of coal you bring in monthly or weekly? I could not tell you. It would only be a guess. The Proprietary mine is the only one which uses coal extensively.
3218. Does not Block 14 use it? None, comparatively speaking. They use firewood.
3219. Do you know whether there is much coal used for private consumption? Very little, except for blacksmith's purposes.
3220. Do you carry any firewood on your trains? No; when I say no, we have carried firewood; but I don't think we average a truck a month.
3221. Is there any firewood to be had round there? No; it is very difficult to get. It is getting more difficult every day.
3222. Then they will have to have some other sort of fuel—even for private consumption? There is no doubt about it. Even for private consumption they will have to have coal, or something else, in time.
3223. Do you find any perceptible increase in the amount of coal you carry monthly? No; because the Proprietary Company and the Gas Company are the only two companies which use coal to any great extent.
3224. Do you know the price paid for coal at Port Pirie? About 21s. a ton if you buy it in large quantities. You can buy it in 25-ton lots for 25s. per ton on board the trucks.
3225. Do you find any increase in the amount of your traffic—have the last three months shown an increase in returns on the previous year? Yes; I think trade is improving.
3226. In passengers as well as goods? Yes; I think in passengers as well as goods.
3227. *Mr. Hurley.*] Your Company, being a public Company, have you published a balance-sheet of expenditure and income? I could not say.
3228. Have you ever seen a sheet? Yes; I have seen a balance-sheet, which is generally given to shareholders.
3229. Can you tell us, from memory, what percentage upon the cost of construction is returned to the shareholders upon a half-year's or a year's working? No, I could not.
3230. Have you received instructions from the directors not to disclose to this Committee the return of your workings? No; I have received no direct instructions as to this Committee.
3231. Have you not a knowledge of the percentage paid upon the expenditure on railway construction? I do not really know the cost of construction.
3232. You do not know the dividend paid? I believe it ranges from 5 to 10 per cent. on the cost of construction; but I cannot positively say.
3233. If I were to tell you that your returns were equal to 15 per cent. on the cost of construction, could you say that it was otherwise? No; I could not.
3234. It may be so? Yes. The dividends are not declared here, but in Melbourne. I am not a shareholder.
3235. But you look upon the investment as a good paying investment for the shareholders who have their money in it? Yes; I think it is.
3236. Do you not look upon it as one of the best paying investments, as a railway, in the Colony? I do not know.
3237. Do you not know that you convey a larger quantity of goods per mile over and above any branch line in the colonies? I do not know. I should say we do not. I should say your traffic at Newcastle would be much larger than ours.
3238. If you had been desirous of affording information you could have produced a copy of your last printed balance-sheet? No; I could not. I have not got one in my possession.
3239. You have received information from the directors not to disclose certain things in connection with the working of the tramway? No; not direct information; but you know it is not the usual thing.
3240. But why this desire on your part to keep from us information which may be of advantage to us in regard to the trade done? I think I have given the information fairly well.
3241. But you cannot tell us the amount of dividend paid on the cost of construction? I have mentioned, in the first place, that our books are kept in Melbourne, and our head office is there.
3242. Then you do not know whether you are working at a loss or not? I reckon we are working at an advantage.
3243. *Dr. Garran.*] Are the balance-sheets printed? Yes.
3244. Are they reported in the newspapers? Yes, I believe they are.
3245. And they are a matter of public notoriety? Yes.
3246. *Chairman.*] What class of goods are coke, timber, and coal? Bullion and coke are carried 3d. a mile; ore, coal, and flux, for 35 miles, at 2d. per mile.
3247. *Mr. O'Sullivan.*] Taking the figures you have given us as the daily work done by the Company—about 480 tons a day,—and multiplying that by the working days of the year, it amounts to 149,760 tons per year. Would that be about the amount of work you do? I dare say it would.

Mr. W. W. Harper, mining manager, sworn, and examined:—

Mr. W. W.  
Harper.

22 Oct., 1889.

3248. *Mr. Hurley.*] You are underground manager to the Broken Hill Proprietary Company? Yes.
3249. Have you been long in that position? About sixteen months.
3250. Do you know the number of men under your guidance? About 1,040 in the underground workings.
3251. Have you had large experience in silver-mining? A good many years.
3252. In this country? Only about sixteen months in this country.
3253. And what other country? In America.
3254. Is your experience of a lengthened period there? Yes; almost a life time.
3255. From your knowledge of the mines in America, and from what you have seen in connection with this mine, can you give us any information as to the probable permanency of it? I should rather believe that the future of the Proprietary mine will be a very prosperous one.
3256. Are the indications such as to lead you to believe that there are many years' work in the mine? I should presume so.
3257. But it is not sufficiently explored yet to enable you to say as to the number of years? No.
3258. Are there any indications in the mine which you would take to be as against its permanency, as compared with your experience in America? Not any.
3259. You have not seen either foot or hanging-wall in the works which you have carried out? No; neither foot or hanging-wall.
3260. Have you what are called "horses" in the mine? Yes.
3261. Are those tending to a permanency or to the destruction of the lode? Not at all; they are a common occurrence all the world over.
3262. What is the grade of ore at the lowest level. Is it an improvement on the grade nearest the surface? There has not been sufficient work done to guarantee any expression of opinion on this point.
3263. There is every indication of the lode continuing at the lowest level as a permanency? Yes.
3264. What kind of timber do you generally use in America? The same as here.
3265. As to the durability of the timber, can you say anything in regard to colonial timber as against Oregon? Nothing material. I have not had sufficient experience to speak.
3266. Can you give any opinion as to one timber compared with another? I find that the stringy-bark has a tendency of drawing dampness, and causes rot in the course of time, but as a rule all timbers in mines serve any amount of time. There is no such thing as give out about them.
3267. Do you think it would be to the advantage of the mine if it could get timber which would last twenty years, as against Oregon pine which is only likely to last five years? Oregon pine only likely to last five years. I could not say as to the correctness of that.
3268. Can you say where the Oregon is used in preference to colonial hardwood? No, I could not.
3269. You are not in a position to give information as to whether it would be more to the interests of the Company to use hardwood in the future in lieu of the softer pine? No, I have never seen the hardwood used.
3270. Compared with the miners you have been accustomed to deal with in America, how do those you are engaged with here compare? Well, we have rather an inferior class of men, but we have good, bad, and indifferent.
3271. Could you put a larger number of men on if you were inclined to do so, over and above those who are working now? Not at present.
3272. But if you had lower levels, you could no doubt place 300 or 400 men more to work? If there were proper facilities for working those levels, without a doubt we could work a greater number of men.
3273. *Mr. Copeland.*] I understand that you have not been very many years in the Australian Colonies, and that you are somewhat of a recent arrival from the Californian States? I am.
3274. I am sure that the Committee will be very glad to elicit information from you as giving expression to the experience you have gained from the American States in connection with working silver ores. I am not going to ask you very many questions, but I want to elicit a few answers to questions in connection with the mine, with the view of showing the durability and the permanency of the mine. I think that is about the only direction which the Committee will require to inquire from you. We have had other evidence from the accountant, and therefore the only evidence I want to gather, so far as I am concerned, at any rate, is in the direction of the permanency of the lode. I wish to make this statement so that you will understand the drift of the inquiries I am likely to make. You are mining manager for which blocks? Blocks 11, 12, and 13.
3275. Do they comprise the whole of the Proprietary blocks? Yes.
3276. But I understand that Mr. Patton is the general manager of other blocks than those? Those are all that constitutes the Proprietary Company's mine.
3277. How long is it since you arrived in this Colony from America? On the 8th of June, a year ago.
3278. Did you occupy similar positions in American mines? Yes.
3279. That is so far as regards underground mining? Yes.
3280. One matter which I am very desirous of eliciting the truth on, and I want you to be particularly strict in regard to it, is the underlay of the lode in regard to the Proprietary? Well, I could not give anything at all.
3281. I am going to ask certain questions, and I want you to understand the drift of them. It is very desirable that the Government of this Colony, in which your mines are situated, should have some slight conception as to whether these mines are going to continue for five, ten, twenty, fifty, or a hundred years. We think it is very necessary that the Government, before committing the country to the expenditure of a railway, should have some decisive evidence as to the permanency of these lodes. There is no one who could give us any indication of the permanency of these lodes so well as yourself. Therefore the Committee has invited you here to give evidence, and we desire that you will give us evidence direct. What I want to know is this—the position of the first discovery of the lode. I take it for granted you are well acquainted with the whole line of the lode? Yes; that is in the Proprietary mine.
3282. I want you to state to the Committee the position where the lode was first discovered to be payable? So far as I can understand, it was right on the surface.
3283. About where and in what block? In several places,—in fact on the three blocks. The northern portion of block 11, and also block 12, and block 13.
3284. Will you state here in which parts of the mine did you find payable ore? In blocks 12 and 13. There was no work done in block 11 when I came here.

- Mr. W. W. Harper.  
22 Oct., 1889.
3285. At what depth in blocks 12 and 13 did you find payable ore? The principal working was down on the 216 feet level,—from that upwards to the surface.
3286. Did the one shaft serve the two blocks? No; we had five shafts.
3287. At what depth did you first commence to get silver bearing ores? We had it right from the surface to the present depth.
3288. In what block did you first commence to sink a shaft? I cannot say, except from hearsay. I was not here.
3289. Where was the first shaft sunk to a depth of 100 feet? I could not tell you in which block, excepting from what I have heard since I have been here.
3290. At what depth did the Company commence to get payable ore? I could not tell you that because I was not here.
3291. Do you know what the assays from the outcrop gave? No, not at that time.
3292. You do not know that there were a number of assays taken from the outcrop which gave little or no silver? I do not know what they did before I came here.
3293. What was the depth of the deepest shaft at the time of your arrival? The deepest working point was 316 feet.
3294. In which block? 13.
3295. Block 13 is two blocks north of block 11? Yes.
3296. You took possession of block 13? Yes, and 12.
3297. When did you take possession? When I arrived here on the 8th of June, 1888.
3298. You came here with all your experience as a miner from the Californian States? Yes.
3299. I am not going to ask an offensive question, but it is very desirable that we should know from whom we are receiving evidence. I should like to know what testimonials or certificates you can produce to show your previous career in the States? The merits of my work. I have no testimonials. The only reference I can give you is that I was under the firm of J. W. Mackey & Co. for seventeen years in a similar position.
3300. *Dr. Garran.*] Did Mr. Patton send for you to come here? Yes.
3301. *Mr. Copeland.*] What is your experience in other countries as a mining manager? I was right on the Comstock lode for twenty-three years.
3302. You were managing it? Mostly for all the time. As I have already stated I was in a similar position as I am now in for seventeen years under the firm of J. W. Mackey & Co.
3303. You were the underground manager, and had charge of the underground workings? Yes.
3304. One particular aspect of the question of mining I want to elicit your evidence upon, and that is in reference to the timbering of these open workings. You know that you are taking out a very large width of ore and you are leaving a channel open to a considerable width—150 to 200 feet—and by doing so the life of a number of miners is in danger unless you timber the ground in a satisfactory manner. Is that so? Yes.
3305. I want to ask you whether, in working the Comstock lode, you were in the habit of timbering the lode in the same manner as you are timbering it now in the Proprietary mine? Yes, precisely.
3306. You know that in ordinary mining, and under ordinary circumstances, it is not the practice to timber in that particular form? Not in small lodes.
3307. The ordinary form is to timber from the foot-wall to the hanging wall, at an angle? Yes.
3308. You are timbering vertically? Yes.
3309. Do you consider that a piece of sawn timber will bear the same amount of vertical pressure which a piece of split timber will bear? The vertical or down pressure has no tendency to weaken those timbers at all.
3310. It has no tendency to split the pine? No; it is a very rare circumstance.
3311. Have you ever found the surface giving way at all? No; of course there is more or less shrinkage.
3312. You have not found any crush? No.
3313. In your experience as mine manager of this mine, you have not found that a piece of sawn timber has a greater tendency to split—knowing that the grain of the timber is diagonal—than a piece of split timber? It might possibly have, but not in the way we use it. We do not see any action of that kind taking place.
3314. So far you have not noticed any action in that direction? No.
3315. Will you say whether you have ever noticed any vertical pressure on the mine in your underground workings? No; there is really no vertical pressure.
3316. You have a large number of miners employed, whose lives are valuable, and they are entirely under your charge. If you timber this ground in an impracticable manner, or one which does not carry out the scientific views you think you possess, the consequence will be another collapse? It is not a matter of thinking, it is a matter of experience.
3317. You are speaking from your previous experience in the Comstock lode? Yes.
3318. In that lode you timbered the ground in the same form as you are timbering this lode? Precisely.
3319. And you found that the vertical pressure did not split the pine timber—did you have pine timber? Yes.
3320. You are quite sure of that? Yes.
3321. Where did it come from? Oregon.
3322. And you had sawn pine timber, and it did not split? No.
3323. Did you have any crushes at all? No, not to amount to anything beyond the general line of working.
3324. What was the width of the lode? 327 ft.
3325. What was the angle of the underlay of your lode? To the east.
3326. At what angle? I could not exactly tell you about the angle.
3327. Did it underlay, say 45 degrees? Not quite that much.
3328. Was it very vertical? No; I suppose it may have had pretty nearly an angle of about 45 degrees; but I could not say exactly.
3329. I should like to know, for the benefit of the mining communities of this Colony, because your timbering is a lecture to me, and what I want to know is this: in the timbering of the Comstock lode how many years' experience did you have? Twenty-three.

Mr. W. W.  
Harper.

22 Oct., 1889.

3330. But was the Comstock lode open for twenty-three years? Yes, over thirty years.
3331. What age were you when you went in? I was only a stripling.
3332. Did you have any crushes—did the timber give way in the Comstock? No.
3333. What was the angle of underlay? I cannot tell you exactly; but somewhere in the neighbourhood of 45 degrees.
3334. Do you think the underlay of the Comstock lode is about the same as the underlay of this lode? No.
3335. Do you think it is more? Yes.
3336. It has a greater underlay than the underlay of this lode? Yes.
3337. In timbering the lode you timbered it on the vertical principle which you are timbering now? Precisely.
3338. Did you timber it with pine? Yes, with Oregon pine.
3339. You are timbering now with Oregon pine? Yes.
3340. Did you have any experience of the durability of that pine? Yes.
3341. How many years? We worked over a second working after the timbers had been in place twelve years, and we found them in a compressed state and very hard—in a state of petrification.
3342. You worked over this ground twelve years after? Yes.
3343. Was that in dry or wet ground? Dry ground.
3344. And in dry ground you found this pine to be in a satisfactory state? Yes, most decidedly so.
3345. It was not perished? No.
3346. It did not dry rot? No.
3347. It had not split from the vertical pressure? Most decidedly; it was crushed a little. It was in a compressed state. I can produce some if you are desirous of seeing it.
3348. Did you have any experience of the same timber in water? Yes.
3349. What is your experience of the same timber in water? I always found wherever it was exposed to a sufficient amount of water that the timber was in a better state even for years after than when put in place. It had a tendency to tighten the timbers.
3350. Do I understand that the part above the water maintained its solidity, and the lower part below the surface of the water also maintained its solidity? Yes.
3351. But just at the junction of the waters with the atmospheric air, it decayed;—is that so? Of course there are places where you can see any kind of timber decay which is exposed to a certain amount of water sufficient to cause dampness.
3352. What I want to know is the weak points of this particular timber—wherein does the weak point lie of timbering with pine instead of hardwood? I don't know of any.
3353. You believe, in a general way, that pine will timber the ground as satisfactorily as hardwood? Yes.
3354. And from your experience do you think this pine timber will last twenty years? I could not say that. All I expect is from what I have seen.
3355. Do you think it will last ten years? I am sure of it.
3356. But you are not sure it will last twenty years? No, I could not say how long it will last. I should say, from the way I have found things, that it will last any amount of time.
3357. What we want to know is whether hardwood would be more economical than soft wood for timbering purposes? I could not say, because we have not used it sufficiently.
3358. Taking into consideration all the expenses of fitting a set of timber before it goes down the lode, and then the fixing of it below, and the lathing and all the rest of it—do you think it is desirable to use soft timber which will decay in a few years, in preference to using hard timber, which will last double the number of years at double the price? I don't know if it will decay. I have never seen it. The experience I have had from the hardwood is very limited.
3359. But have you experience of the pine? Yes.
3360. Does the pine live under ground? Most decidedly.
3361. For how long? I cannot tell you.
3362. How long will it live before it gets the dry rot? I cannot say. I can only speak from what my experience has taught me. We have worked back upon it after the timber was in place twelve years, and we found it in a compressed state, as hard as it could be made.
3363. Was that above water or below? It was in the dry portion of the lode. By sinking the shafts we had drawn the water from the lode. It was below water or above water, just as you like to put it.
3364. But it had practically been above water the whole time? It was in a dry place.
3365. And you found it did not get the dry rot? No; to cut a long matter short, it may be to your interest to state that Virginia City is built right upon the big ore bodies, as taken out from the Virginia Californian Mines, and the largest hotel we have there is standing to the general satisfaction of everybody. That is upon the largest ore bodies which are being worked on the Comstock lode.
3366. Can you tell me the angle of underlay in that lode? Not more than I have already told you. It is somewhere about 45 degrees.
3367. Perhaps you are not aware that old towns have gone down in one night;—take for instance parts of Ballarat, which have been sunk down 7 or 8 feet. Large hospitals and breweries, and other buildings have gone down in one night? Yes. I have not had experience and could not answer any question in regard to hardwood being better than pine, because I have not had any experience with it.
3368. *Dr. Garran.*] Is the atmosphere in this mine as favourable to the preservation of timber as it was in the Comstock? I should presume so.
3369. How deep did you go in the Comstock? 3,300 feet.
3370. And you had the wood in the mullock, and stoped it out for the whole of that depth? Not the whole of it. We did not do much in stoping above the 1,100 feet level.
3371. What depth of mullock did you rest upon it? All we had to put in it. We used timber, in preference, where it was required.
3372. You did not fill in? No.
3373. Then the pressure was merely the pressure of the two walls? Yes, and we used timber wherever it was necessary in place of mullock.
3374. Then your timber did not have to resist the superincumbent pressure of the mullock, but only the side walls? Of course we had the general mullock from the mines.
3375. Generally, you are satisfied that your present system of working is safe? Decidedly.

- Mr. W. W. Harper.  
22 Oct., 1889.
3376. And you do not see any necessity for going in for harder timber? I do not really see any necessity for it; I think the timbers have given entire satisfaction where they have been used, but almost any timber will shrink.
3377. If the railway were made to bring hardwood from New South Wales there would be no great demand for it? I do not know. That is entirely out of my line of business.
3378. It is not your line of business to choose the timber? Certainly, but as long as the timber has got a grain, it is strong enough, because the general pressure on these timbers is not perpendicular.
3379. But still in this mine you are filling in with mullock largely? Yes.
3380. Then your timber has to bear the weight of it? Yes.
3381. So that you will have a more perpendicular weight to bear here than at the Comstock? Yes, each section is supposed to be a strength in itself. It is the side pressure we work for.
3382. But you have a different problem to solve here in timbering to what you had in the Comstock mine? Not much.
3383. More perpendicular pressure and less lateral pressure? It does not make any difference. We are calculated to use our judgment as to the effect of the pressures.
3384. You will not require to sink deeper than you have done at the present for many years to come? No.
3385. When will the time arrive when you will have to sink another 200 or 300 feet? I could not say.
3386. The ordinary course of working will not require you to probe this lode for any greater depth than at present? No.
3387. And you will not know the continuing depth of the lode until you sink again? No.
3388. That is left an open question? Yes.
3389. But so far as you can see there is no reason to doubt the permanency of depth? No.
3390. But it can only be absolutely proved by sinking? Yes.
3391. There is nothing in your present work compelling you to do that? No.
3392. One single exploring shaft would not involve any serious expense? Yes; it would all be expense.
3393. There is no intention of doing that at present? I could not say.
3394. It is not in any part of your recommendations? I am only the manager of the mine, and I do what I am told.
3395. All I wanted to get at was whether there was anything in immediate view to determine the durability and depth of the lode? I could not say.
3396. *Mr. O'Sullivan.*] You stated that the width of the Comstock lode was 327 feet? Yes.
3397. What was the depth? We worked it from 1,100 feet down to 2,200 feet, that is in payable ore.
3398. That lode, after being worked for thirty years, is still being worked vigorously? Yes.
3399. Is Virginia City a growing city? Not so much so now.
3400. But it lasted well for twenty years? Yes.
3401. And became a flourishing centre? Yes.
3402. What do you estimate the proprietary lode at? I do not know; I cannot say.
3403. Do you consider the lodes in this district in any way approaching in value and in size to that of the Comstock? We have never determined those matters here yet, so that I could not speak with any certainty.
3404. Do you care to give us some idea as to how long this lode and district will last? I could not say. If I were to express myself at all I should rather do so favourably. But all I know about is simply the Proprietary Mine, and I can merely speak from what I have seen there.
3405. We are thinking of spending over a million of money in this railway and in waterworks, and in other matters, and we should like to know whether we should be justified to do so from the nature of the field. We should like to know if you think this district will last as a mining district for some time? Decidedly I do, I think very favorably of the future of the Barrier Range, but then I am only one man.
3406. After your experience of similar country in Nevada and Virginia City, do you think you have a country here which will justify the construction of this railway and other public works? I could not say anything with regard to the railway, because that is entirely out of my line of business. All I can speak of concerning the Barrier Range is from the short time I have been here. My experience of it is very limited as I have not travelled much over it.
3407. *Mr. Tonkin.*] What character of ore was the Comstock? Silver and gold.
3408. Was it of the same character of ore as this? No.
3409. Was it sulphide ore? Yes.
3410. What is the deepest point you have penetrated to here in your workings? 385 feet.
3411. Did you get water at that level? Yes.
3412. Did that then turn to sulphide ore? We were not in the lode at all at that point.
3413. Have you indications at the lower levels of sulphide ore coming in? Yes.
3414. Did you have any quartz or carbonate ores in the Comstock? We had no carbonates; we had quartz.
3415. Then this actually is a richer lode than the Comstock? Judging from present appearances it is.
3416. That is as far as it has gone? Yes.
3417. Have you struck anything like any quantity of zinc blende in these workings? Nothing to speak of. Of course we have some zinc blende.
3418. But nothing sufficient to affect the character of the ore? No.
3419. Do you smelt all your ore here or send it away? All here.
3420. Have you any grades of ore in your mine which have been put on one side hardly rich enough to pay the smelting? No; but we have it in silicious forms.
3421. Are you taking every bit of ore from the mine and putting it into the furnaces? No; we are through the concentrator.
3422. Are you concentrating any of it? Yes. In the silicious form we have to treat it differently.
3423. Can you give any idea of the number of years work you have in sight—that is the number of years it is likely to last? No, I could not. We have not done sufficient work to warrant my speaking anything in regard to it.
3424. Have you found the quality of the ore as good at the bottom of the lower level as it was at the top? The bottom workings are equally as good as any other place.
3425. Then you have no doubt from all appearances that the lode is likely to continue? None at all.

Mr. Oswald Maddocks, Customs Officer, sworn, and examined:—

3426. *Chairman.*] What are you? Customs Officer.  
 3427. Stationed where? Willyama, or Broken Hill.  
 3428. The goods passing through your hands go to and from Broken Hill? Everything.  
 3429. Have you prepared any returns to show the value of goods inwards and outwards? The total revenue collected at Willyama for the year 1888 was £64,915 15s. 5d. No. All returns are prepared at Silverton. For the eight months ending August 31, 1888, the total receipts were £49,121 12s. 4d. For the eight months ending August 31, 1889, the total receipts were £42,340 17s. 1d. This is the actual revenue from dutiable goods, and a large amount of free goods was imported in addition.

Mr.  
O. Maddocks.  
22 Oct., 1889.

Mr. Simon M'Kenzie, storekeeper and merchant, Menindie, sworn, and examined:—

3430. *Dr. Garran.*] Where do you reside? Menindie.  
 3431. What occupation do you follow? Storekeeper and merchant.  
 3432. Have you just arrived from Menindie? I came in last night to give evidence before the Committee.  
 3433. What distance is it from Menindie here? It is under 70 miles.  
 3434. Have you ever considered the project of a railway from Menindie to this point? Yes; we have been agitating for it for years.  
 3435. Is there a Progress Committee in Menindie which has taken it in hand? Yes.  
 3436. Have you collected any evidence on the subject? Yes; general evidence; but a friend who is with me is prepared to give a good deal of evidence; perhaps, more than I could.  
 3437. What arguments were you prepared to use in favour of a railway from here to Menindie? The nature of the country. Good country now locked up would be opened for agriculture, and traffic would follow.  
 3438. Is it your opinion that the railway from here to Menindie would be a desirable work in itself,—irrespective of its continuation towards Sydney? I think so.  
 3439. Is any part of the country between here and Menindie fit for growing fodder? Yes; almost every acre, if it were irrigated.  
 3440. Where could you get water for irrigation? From the Darling River.  
 3441. Do you think the Darling River could spare enough to irrigate farming land? Yes. It could irrigate nearly the whole of the western district if the waters were saved.  
 3442. And where could you save the waters? There is a system of lakes on both sides of the river in which an immense quantity of water can be stored.  
 3443. Without deepening the lakes? Even now they would hold a great deal.  
 3444. Could they be deepened advantageously? Yes, very easily.  
 3445. Have you formed any definite conclusion as to the quantity they would store? No.  
 3446. Have you formed any conclusion as to the quantity of water each acre would require for irrigation? No.  
 3447. Then you only speak from a general impression? Yes.  
 3448. And the water would have to be conveyed along the line of route if the farms were irrigated? Yes; the water runs out for about 17 miles. It gravitates from the river for 17 miles, to Speculation Lake.  
 3449. And then the ground begins to rise? Not until 50 miles are passed.  
 3450. How far would water run freely from the Darling towards here without raising it? That I cannot say. It runs out about 17 miles.  
 3451. And upon that 17 miles is the soil good and fit for fodder growing? Yes.  
 3452. Will it grow hay? Yes.  
 3453. And you think if there was a railway from Menindie here you could settle a number of farmers at the back of Menindie, and supply this country with fodder? I am sure of it.  
 3454. Is the route pretty level? Yes; for almost 50 miles from the quartz reef it is almost a perfect level.  
 3455. Are there any mineral indications for the first 20 miles from here? Yes; and within 30 miles from Menindie.  
 3456. Is there any timber on the route? Yes; ordinary timber.  
 3457. Is there any limestone? Yes.  
 3458. Iron? I think there are indications of ironstone and quartz reef in the gorge.  
 3459. How far is that? About 55 miles.  
 3460. After you pass Stephen's Creek, is there any water between there and the lakes? No; except the soakage of the creek itself.  
 3461. And from Stephen's Creek to the lake itself—what is the distance? 35 or 36 miles.  
 3462. That is superficially a dry country? Yes.  
 3463. Have any wells been sunk on that line of route? Yes; by private enterprise.  
 3464. What depth have they found water at? I cannot say; but somewhere about 200 feet, I think.  
 3465. I understand you to say that for 12 miles from Menindie there is no difficulty in supplying water to agricultural farms? Not the slightest. There will be no great difficulty. Of course it will be an expense.  
 3466. From there to this point the soil is good, but water will have to be raised? Yes.  
 3467. Do you know anything of the country between Menindie and Ivanhoe? I do between Menindie and Hay.  
 3468. Is that as good as on this side of the Darling? Quite, in some places; and water could be easily conserved there too. The water runs out from the Darling in that direction 70 or 80 miles.  
 3469. There would be no difficulty in making a line of railway from Menindie to Hay? There is no engineering difficulty at all, as far as I know.  
 3470. Is there any difficulty between Menindie and Ivanhoe. I do not think so. It is all level country.  
 3471. Have you ever considered the question of a direct railway from Menindie to Sydney? Yes.  
 3472. By which route do the Menindie people prefer it? They were at one time agitating an extension of the Hay line.  
 3473. And are they still in favour of that? We will be quite content if the line went that way. The route would be shorter.

Mr.  
S. M'Kenzie.  
22 Oct., 1889.

- Mr. S. M'Kenzie.  
22 Oct., 1889.
3474. Shorter than what? Shorter than any other route proposed via Forbes and Condobolin, although good country exists there.
3475. You think that line would be shorter? Yes, I should think it could be made in about 260 or 280 miles.
3476. When you say shorter, you mean less mileage of railway? Yes.
3477. But not a shorter distance to Sydney? I think it would be a shorter distance to Sydney.
3478. But you have not calculated that out? No.
3479. Do you know the country for 20 miles back from the Darling on the east side of Menindie? Yes.
3480. Do you know the Tallywalka Creek? Yes.
3481. How far does it carry water back from the Darling? I think about 40 miles.
3482. A canal cut from the Darling would carry water 40 miles back? Yes.
3483. And you could have farms on each side? Yes, farms could be distributed very largely, the lakes will hold an immense quantity of water.
3484. Would there be any difficulty in supplying water from the Darling for farmers, for a distance of 40 miles back towards Ivanhoe? I don't think so. This Tallywalka Creek carries water for 80 or 90 miles.
3485. But not in a direct line eastward? No, but from where it enters from the river until where it flows out again is something like between 80 and 100 miles.
3486. How far direct back from the Darling could you carry water backwards for the use of farmers, and the open country? There would be no limit to the distance, I think.
3487. The country rises as you get away from the Darling? I don't think so.
3488. But you cannot speak on this subject with certainty? No.
3489. But the soil on this side of the Darling is good? Yes.
3490. But on both sides of the Darling for many miles back you could carry water, and irrigate lands which would grow fodder? Yes.
3491. And that fodder might find a good market here? Yes, it would find any amount of markets.
3492. And with a carriage of not more than 70 miles? Yes.
3493. We have it in evidence that the bulk of the fodder comes from the Burra, 200 miles? Yes.
3494. Do you think on the Darling, a shorter distance would give a supply of fodder to this market? I do.
3495. Apart from this market, would there be a market for fodder amongst the pastoral stations of the north? Yes.
3496. You think if we established a line of farmers to grow hay they would not want a market for their produce? I do not think they would.
3497. The squatters alone would buy a great deal? Yes.
3498. Irrespective of the mining market? Yes, they have to get all the supplies by the river. They grow very little.
3499. What were they charging for carrying hay up the river? It depends on the distances.
3500. How much a mile? On the whole course of the Darling, it is being carried to Bourke for 30s. a ton.
3501. And when the river navigable it would go for 30s. a ton? Yes.
3502. What would pay the farmers to grow it? That would depend on the return they got.
3503. The quantity you mean? Yes.
3504. You cannot form any idea? No.
3505. What would the total cost of hay be delivered at the squatters' homesteads on the river? I think hay could be grow there for £2 or £3 a ton.
3506. But would pay the squatters to give that price? They have to give whatever it is worth at the time it is required. I have know them to give £35 a ton.
3507. But if the supply was good? That would regulate the price. If there was a large supply it would be cheaper.
3508. *Chairman.*] What is the character of the country between Condobolin and Menindie? I have never been out as far as Condobolin, only to Hay.
3509. Away from the river what is the character of the country? It is very good soil, where a plough could be put at once with very little trouble.
3510. Is it as good as between here and Cobar and the Darling? It is better than most of that soil, but I have never travelled the country.
3511. Is not the country there likely to be flooded from the Lachlan? Yes, from the Lachlan and Murrumbidgee.
3512. For what distance from the river? That I cannot say; I never saw any of them in flood.
3513. Would many bridges be required if a railway were constructed along that route? Yes; three or four, I think. A bridge on the Murrumbidgee, one on the Lachlan, and there would be a creek or two, and a bridge on the Darling.
3514. Otherwise you think it a suitable country for constructing a railway? Yes; and it would open up a block of beautiful country. The flats on the Murrumbidgee are as good soil as any to be found in the country.
3515. Of course, if that line were constructed, the Wilcannia trade would be left in the cold altogether? There would be a chance of a connection, perhaps, if the trade of Wilcannia required it.
3516. *Mr. Hurley.*] Can you tell us whether you have practised any fruit-growing in the district where you are located? Yes; I know where fruit is grown.
3517. With success? With very great success, indeed.
3518. What character of fruit? Oranges, lemons, apricots, nectarines, pears, and peaches. Grapes grow beautifully in Menindie. I have seen some of the finest grapes there I ever saw in my life.
3519. Are people earning their living from fruit-growing? Yes; two or three Chinamen there have gardens and make money by it. They pay the Government a high price for their land. There is such a thing as £200 being made out of an acre of land.
3520. That is with irrigation? Yes.
3521. And there is an abundance of land of similar character? Yes; thousands and thousands of acres.

3522. Likely to give work to a large population in the event of a railway being constructed? Yes; if the railway were constructed there would be room for any amount of population.
3523. Have you grown any wheat there? I have not seen it grown, but I believe it would grow well.
3524. Has there been any ensilage practised there? Ensilage has been commenced. The manager of one station had a very luxuriant crop of herbage growing about the station. He had it all cut down and put into a silo, and it is going to be a success. Besides that, I know of another gentleman who grew 60 tons of beautiful natural grass, and made it into hay.
3525. This is merely an experiment? Yes.
3526. It may induce others to follow it if it is successful? Yes; but it gives every proof of what the country can do.
3527. What is the population of your district within 20 miles circumference? Between 400 and 500 people.
3528. Is the land dear immediately in the town? Allotments are pretty valuable.
3529. What should a half-acre allotment in a most prominent part of the town bring? I have known £100 refused for a half-acre allotment not long ago.
3530. Was that an ordinary block? Yes; it was a block with a blacksmith's shop on it.
3531. What about the unimproved value of land in the town? It would not be that value. Some allotments in the town are quite as valuable as that. The property I have got is on the river bank, and with buildings and all, I gave £1,500.
3532. Is the cost of living in Menindie much more expensive than here and Adelaide? No, I do not think so, except in a dry season. When the river is up the cost of living is much reduced.
3533. You rely upon the floods in order to drive the water into the Menindie lakes to convey it a certain distance towards this point? Yes.
3534. In the event of a very dry season what is the depth of water in that lake? I think the greatest depression would be 15 to 20 feet of water.
3535. At the driest season? I never saw it thoroughly full. The evaporation is very great, but I have seen that much in it.
3536. Would it not be necessary to lock the river at that point in order to ensure a constant supply? Yes.
3537. That would be necessary to force the water this way a certain distance? When the river rises to the level of the lakes the lakes fill themselves. It would be necessary to lock that water up.
3538. By locking the Darling? No, locks on the lake would save the water.
3539. By backing the water? Yes.

Mr.  
S. M'Kenzie.  
22 Oct., 1889.

Mr. Robert Scobie, saddler, Menindie, sworn and examined:—

3540. *Mr. O'Sullivan.*] You reside at Menindie? Yes.
3541. What is your position? A saddler.
3542. Have you any information to lay before the Committee as to the claims of Menindie to a railway? I believe I have.
3543. Will you place it before the Committee? I have made the Colony my home, and I desire to see her annex her own wealth and trade of the district. I have the Government plans of the lakes districts of Menindie to bear out the statements which I may make.
3544. Have you any figures regarding the progress of Menindie? In the last seven years the place has doubled itself in regard to private people putting up houses. The trade has fallen away, being annexed to South Australia.
3545. What is the character of the country around Menindie? It is good arable land. Before it gets rid of the effects of flood water another overtakes it. It is a grand soil for irrigation.
3546. Every time the river is up I presume the trade of the district goes to South Australia? Yes, at all times.
3547. Whether the river is up or not? Yes.
3548. How does it go when the river is not up? *Via* Broken Hill, since the railway came up here.
3549. What is your distance from Wilcannia? Ninety miles.
3550. What regular teams are there between here and Menindie in dry seasons? That depends when the dry seasons set in, or periods when the Darling is unnavigable. This last dry season all the wool from the district of Menindie was carried to Broken Hill.
3551. How many teams found occupation? We could not get sufficient teams. Some had to wait.
3552. Can you give an idea of the amount of tonnage taken up in that way by the teams? Not at present. I have known each of those stations, with ordinary fair seasons, to produce 2,000 bales of wool.
3553. And I suppose that wool would go to Broken Hill? Yes.
3554. And did the teams return pretty well loaded? These teams did not pass through Menindie, but took the nearest road to their own particular homestead.
3555. But they may be cited as belonging to the Menindie district? Yes.
3556. And they took back supplies to the stations? Yes.
3557. Did you hear the evidence given by Mr. McKenzie in regard to the population? Yes.
3558. Do you endorse it? I do.
3559. Do you endorse the statement about the water running back for 12 miles? On which side of the river.
3560. On the western side or Broken Hill side? Twelve miles! It is 80 miles.
3561. You are certain it runs back 80 miles? Yes.
3562. Can you name any particular point at which it starts? Bullabulky.
3563. What is the distance from Broken Hill to Menindie? Under 70 miles.
3564. If it ran back 70 or 80 miles, would it not inundate Broken Hill? I am talking about the Bullabulky lake.
3565. I want information in regard to the Broken Hill side. What distance does the water run back from the Darling on the Broken Hill side? At present about 17 miles, and it can be made to run further into Horse Lake, which is still further on the road, by a channel similar to that which joins the Speculation lake.

Mr. R. Scobie.  
22 Oct., 1889.

- Mr. R. Scobie. 3566. How much further would Horse lake be? Several miles further.
3567. How far does the water run back on the eastern side? Eighty miles.
- 22 Oct., 1889. 3568. Can you name a point at which it stops? Bullabulky lake.
3569. Do you mean it is 80 miles back from the river? It runs right back to the extreme end of the county. It covers the whole county.
3570. How often does that occur? Whenever there is a flood of sufficient height to send the water down the Tallywalka and Terryamyinnia Creeks.
3571. When the water is at its furthest point in time of flood, how far is that point from the end of the Willandra Billabong? I have never travelled the distance, and cannot supply the information.
3572. Therefore the banks of the Darling are pretty well irrigated at times? When the water rises 2 or 3 inches over its eastern bank, it will go back 8 miles of its own natural gravitation.
3573. And if the river were locked you could get irrigation more freely? Yes.
3574. What out-post do you trade with? I prefer to trade with Sydney.
3575. What outlying places do you trade with? Unfortunately, in my line of business, we deal with Adelaide and Melbourne.
3576. Where do the mails run to? To Wilcannia and to Broken Hill. Formerly we had one running between Menindie and Hay. Then we have one running to Wentworth.
3577. Can you give any idea of the tonnage of goods arriving at Menindie from Adelaide? No.
3578. How many steamers do you think call there a year? This last rise a good few have called.
3579. Is the river trade declining? It is.
3580. Do you think the Bourke railway has intercepted it? No.
3581. Has it intercepted a portion of the River Darling trade in the higher portions? Yes; it has taken it all.
3582. Do you think a railway to Menindie would intercept a large portion of it? Yes.
3583. In the event of a railway running there from Sydney by any route, do you think it is likely the trade of the intermediate district would go to Sydney? Yes; it would lead to the settlement of the land by people who would be, generally, colonists.
3584. Do you think the railway could compete with the water carriage when the river is up? That would depend upon what conditions the steamer came up the river. If the river was locked, so as to make it navigable all the year round, it would be a regular trade, and it would be a question of expense of sending the steamers up the river as against the railway. As the river is now, it is only navigable in good flood times.
3585. Would you recommend that the locking should be carried out if you want the railway? Gradually.
3586. Which would be most conducive to the interests of the River Darling district to lock the river or to run a railway from Menindie to Wilcannia? £5,000 has been expended in making earthworks, in filling the creeks leading to the Menindie lake, and the Government has already spent a third of £80,000 in snagging the river, and these works will require to be continued. Others moneys will have to be expended, and if this money was now spent at once in throwing one dam across the Darling at a point below Menindie and above the outlet of the Tallywalka Creek, the whole object could be secured, and the trade of that district would be annexed and settled.
3587. If the railway went from Wilcannia, would it not in a measure serve the whole of the Menindie district? It does not pass through the same kind of country. It is not so near or close, and would not answer so many beneficial ends.
3588. If we constructed a railway to Broken Hill, *via* Wilcannia, there would only be 100 miles to Menindie? Yes.
3589. Would not that be practically serving Menindie, and bringing it within a fair reach of the metropolis? Yes; but by starting out from Menindie, the railway would annex the whole food supply of Broken Hill. Butter, milk, eggs, poultry, and bacon—all these articles can be produced on the Darling.
3590. But are these articles existing now on the Darling. Do you stipulate on their coming into existence? No; every person carries on his industry in his own small way.
3591. Judging by the success of these experiments, you consider that a large dairying business might grow up around Menindie? I consider there would be a great scope for a dairy factory under the new style.
- 3591½. And that in addition to the agricultural qualities of the district, you might get a valuable aid to Broken Hill? Certainly.
3592. And a place from which the supplies for Broken Hill might be obtained? Yes.
3593. *Mr. Tonkin.*] What pastoral holding is Menindie on or adjacent to? Kinchega.
3594. Is that the only one? No; about 100,000 acres are taken up on the northern side of Menindie in selections and homesteads.
3595. How many homestead lessees have you? I can only recollect eight.
3596. Do you know whether the land around Menindie is in the resumed area, or leasehold area? The land on the northern side of Menindie is the resumed portion.
3597. And is that land the good land you are speaking of? Yes.
3598. Do you think with greater facilities of transit there would be more homestead leases there? Yes.
3599. And that resumed land is fit for homestead leases? Yes.
3600. What is the amount of tonnage going away from Menindie, or arriving there during the twelve months? As regards actual tonnage before this railway was completed, I do not know. I know there were thousands of tons of coke landed there at 10s. a ton on the river from Morgan. Goods, on the present flood, have been taken back and put along the ship's side at 42s. 6d. a ton.
3601. Would not 10s. a ton for the carriage of coke be much cheaper than the way they can get it here now by rail? There was a talk about coke coming up the Darling on the present rise, but freights were lowered on the South Australian railways £1, I am told.
3602. I understand from your answers that Menindie is going backwards in regard to commerce? Yes; after the development of the silver district, all the money earned in the district gravitated to Broken Hill.
3603. Could not Menindie find a market here for any produce grown there? The transit will not allow it.
3604. I am speaking of the produce of the district of Menindie? They have no roads nor market.
3605. Could not you find a ready market here for anything you could produce at Menindie? Yes, if we had a road.
3606. Is there any agriculture carried on at Menindie? Yes, privately, in a small way.

3607. What is that small way. An acre or two? Yes, about that; but there have been larger quantities.
3608. Have you any experience with regard to these crops? I have seen them.
3609. Have you noticed any particular crop in one paddock continuously year after year? No.
3610. Then it is only now and then they get a crop? The people using the country mostly depend upon nature, and they are quite content with the country in its natural condition. One good season in three would suit their purposes.
3611. Have you seen any fodder grown, year after year, in one particular part of Menindie? No.
3612. Has anybody tried it? I know of one man who recently died, who tried it, but I never saw the selection.
3613. Have you much butter and eggs and dairy produce there? Every person makes for themselves. If their country is large enough they keep their own cows.
3614. *Chairman.*] Do I understand the object of your coming here is to advocate the railway from Menindie to Broken Hill, or a route by way of the Lachlan and through the Lachlan valley? Yes; through the Lachlan valley to Sydney.
3615. Have you been along that country yourself? No; but I have made inquiries. There are agricultural areas at Hillston and Booligal, and selections have been taken up at Condobolin.
3616. I suppose all the country the railway would go through is taken up by selectors and squatters? Yes, by squatters mostly.
3617. And a branch from here to Menindie would be of little use to you? It would be useful; but it would be better to be a national railway at once. There is a large demand here for firewood, and we could supply unlimited quantities. With the locking of the Darling there would be an immense supply of fish which is now sold at 100 per cent. upon its original cost at the river.

Mr. R. Scobie.  
22 Oct., 1889.

Mr. W. M. Weatherall, Postmaster, Broken Hill, sworn and examined:—

3618. *Chairman.*] What are you? Postmaster at Broken Hill.
3619. How long have you been here? Since February, 1888.
3620. Have you any figures to show the business done at the post-office during the last three years? The postal revenue for 1888 was £5,121. The revenue for the nine months ending September 30th this year was £3,672.
3621. It will be more this year? No, it will be slightly less.
3622. Is the Money Order office business large? Yes; in fact, I think we do the largest money order and savings bank business of any post-office in the Colony.
3623. Have you any figures for 1887? Yes.

Mr. W. M.  
Weatherall.  
22 Oct., 1889.

(The witness put in the following return):—

The following statement shows the amount of business transacted at the Broken Hill Post-office from the 1st January, 1887, to 30th September, 1889:—

Year.	Number of Orders issued.	Number of Savings Bank Deposits.	Commission.	Money Orders issued.	Savings Bank Deposits.	Money Orders Paid.	Savings Bank Withdrawals.	Number of Money Orders paid.	Number of Savings Bank Withdrawals.
1887.	2,298	423	£.	£.	£.	£.	£.		
1888.	8,568	2,491	122	8,397	554	2,005	2,914	522	125
Increase on 1887.	6,270	2,063	466	31,046	20,247	11,132	11,101	2,491	637
To 30th Sept., 1889.	6,884	3,841	344	22,649	19,693	9,127	8,187	1,969	512
			371	22,224	23,842	16,189	15,614	2,640	869

Stamps sold during 1887.....	£1,427	Broken Hill Revenue for 1888 .....	£5,121
"    "    1888.....	£5,121	Bathurst    "    "    .....	4,141
"    "    to 30th September, 1889 .....	£3,672	Goulburn    "    "    .....	4,811
Letters posted during 1887.....	121,718	Newcastle    "    "    .....	8,461
"    "    1888.....	503,019	Wagga Wagga    "    "    .....	1,655
"    "    to 30th September, 1889 .....	343,359	West Maitland    "    "    .....	1,535

Mails despatched weekly 125 | Mails received weekly 125 | Total 250.

3624. The postal revenue from Broken Hill during 1886 was £230, during 1887 £1,427, and during 1888 £5,121, independent of money order and savings bank business.
3625. *Mr. Hurley.*] I suppose the withdrawals would be attributable to the fact of a large number of banks having been brought into the town? I do not think so. I think it is attributable to speculation in a small way amongst the miners. Most of the working classes deposit with us. Their amounts are small, being from £2 to £10.

Mr. Francis Whysall, telegraph master, Broken Hill, sworn and examined:—

3626. *Chairman.*] What are you? Telegraph master at Broken Hill.
3627. Have you brought any figures to show the business done in your Department? Yes.
3628. For what years? From the time the office was opened here on the 2nd of August, 1886, to the present time, October 21st, 1889.

Mr.  
F. Whysall.  
22 Oct., 1889.

Mr.  
F. Whysall.

22 Oct., 1889.

(Witness put in the following statement) :—

THE following statement shows the amount of business transacted at the Broken Hill Telegraph Office, from the 2nd August, when first established, to 21st October, 1889.

Year.	Messages transmitted.	Messages issued.	Revenue.
From 2nd August, 1886			£717 1 0
1887	33,291	35,346	£3,144 7 1
1888	104,846	117,233	£8,456 0 0
To 21st October, 1889	75,441	80,741	£6,192 14 9

The revenue collections at a few of the principal offices in New South Wales, during the year 1888, were as follows :—

Broken Hill.....	£8,456	Bathurst .....	£1,148
Newcastle .....	4,390	Armidale .....	1,111
Goulburn.....	1,817	Maitland .....	1,398

3629. Do you know what the rainfall has been? In May of last year we were provided with a rain gauge here, and from May to December the total rainfall was 1·77 inches, and from January 1, 1889, to October 21, the total rainfall was 15·95 inches.

3630. You have not the record for any previous years? No, there was no official record kept before 1887.

Richard M. Gibson, Esq., Mining Registrar and Warden's Clerk, sworn and examined :—

R. M. Gibson,  
Esq.

22 Oct., 1889.

3631. *Chairman.*] What are you? Mining Registrar and Warden's Clerk.

3632. Have you any information to show the business done in mining leases and mining rights? Yes; I can give you the total from September, 1887, when the office was opened, until September last. The total revenue from all sources collected from September of 1887 to September, 1889, is £9,362 2s. 6d., made up as follows :—£5,338 for 1888, and £2,446 for 1889; and the balance for 1887. During that period there were 7,492 business licenses issued, 1,974 miners' rights, and 556 mineral licenses. The applications for mineral leases have only been received since June, 1888, and are 125 for 50,000 acres. This is only part of the district, which has only been divided for twelve months, so that all the principal revenue for the leases has been taken in Silvertown before and since twelve months ago.

3633. The gross amount of business done then was during the first quarter of 1888? Yes; when there was a rush; and of course when the town was thrown open, the town was reserved for occupation under business and miners' rights, until September, 1887.

3634. Have you any data as to population? The sergeant of police could give you the population in January of this year. The population then was about 12,000 people. At that season of the year a large number of miners were away for their Christmas holidays, but population since then has increased considerably.

3635. To about what number? To about 15,000 or 16,000 people; certainly not less—more if anything. I know that nearly all the Crown lands—the Government surveyed lands—are taken up, and that comprises an area of nearly 2½ square miles round the town. The population is all the way round.

3636. Do you keep a record of births, deaths, and marriages? Yes. For the last quarter ending September 30, 1889, there were 111 births, 29 deaths, and 38 marriages. The total number of births, deaths, and marriages since the office was opened in the early part of 1887 is 686 deaths, 689 births, and 270 marriages.

3637. Then the death rate has been very high? Yes; last year it was very high, but this year it has been very low.

3638. That is owing, I suppose, to improved sanitary arrangements? Yes.

3639. And the better hospital accommodation? Yes; and of course always in the summer time, when fever is prevalent, the death rate increases. The last three months have been about the three best months of the year.

3640. What is the value of land? There have been sales of land in the main street, recently, at the rate of £18,000 an acre.

3641. Can you give us an idea of the amount of money the Government has received from land which has been alienated and sold by the Crown? The amount the Government has received from the alienated land sold in the town is £27,425.

Mr. Frank Ernest Randell, produce merchant, Broken Hill, sworn and examined :—

Mr.  
F. E. Randell.

22 Oct., 1889.

3642. *Chairman.*] What are you? Produce Merchant at Broken Hill and Silvertown.

3643. How long have you been in Broken Hill? Two years.

3644. What is the chief part of your business? Flour, bran, and chaff.

3645. Importing it for the use of the district generally? Yes.

3646. How much do you generally receive during a month? I have imported 4,500 tons of chaff in 2 years, 750 tons of bran, 820 tons of flour, and 150 tons of oats.

3647. And that has been imported for the use of the Broken Hill district generally? Yes.

3648. Do you retail it? Yes.

3649. How far do you send it from Broken Hill? Wilcannia is the greatest distance.

3650. You only send it there in very dry seasons? Yes.

3651. What would be the rate of freight from here to Wilcannia by team? From £15 down to £9 per ton.

3652. What would the produce be sold at per ton there? I have sold chaff at £25 a ton and flour at £30, delivered in Wilcannia.

3653. Is there not any produce for consumption and sale grown in the district? None whatever.

3654. Why is that? Well, this year, I feel sure if the crops have been put in, they would not have been able to grow, but nothing has been put in at all this year.

3655.

3655. Do you think with ordinary rainfall there would be any difficulty in growing anything? None whatever. We should have had good crops if any had been planted. During this past year we have had an instance of it on the Silverton tramway, where wheat has fallen out of the trucks, and crops have grown along the line, as good as any in South Australia. Mr.  
F. E. Randell.  
22 Oct., 1889.
3656. Without being planted at all? Yes; it has just fallen on the ground.
3657. You are able to form an idea of the character of the soil from here to Wilcannia? Yes.
3658. Don't you think with ordinary rainfall it would grow anything? I feel satisfied it would grow anything at all.
3659. Do you think if there was better means of communication between here and Wilcannia that would open the settlement? I do.
3660. If crops were grown towards Wilcannia, and there were means of conveyance here, it would suit you better to get your produce from there than Adelaide? Yes, it would be far cheaper.
3661. Are you acquainted with Silverton? I have an agency there.
3662. *Mr. O'Sullivan.*] From what distance do you obtain produce? From Jamestown, Crystal Brook, Petersburg, and Port Pirie.
3663. All these are in South Australia? Yes.
3664. Is there any other business of the same kind as yours? Yes.
3665. And do they all obtain produce in South Australia? Yes, it is all grown there.
3666. *Mr. Tonkin.*] How many other produce merchants are there in this district; say, in Broken Hill and Silverton together? Fully 20.
3667. Do you think they do as much business as you do—each of them? I do not think so.
3668. I see your total is 5,222 tons for the two years—that is 2,600 a year—what do you think would be a fair estimate of the business of the other 19 or 20 merchants? Drew & Co. do a larger business than I do, and the Milling Co. comes next, and I think I am about the third.
3669. Do you think if we estimated the whole of them at 2,000 tons each it would be too much? Yes.
3670. Would 1,500 tons be an average right through? I think so.
3671. Then twenty-one of you would import an average of 1,500 tons a year? Yes, fully that.
3672. What is about the average price you pay for chaff in South Australia, first cost? About £2 10s. to £3 per ton on the trucks. That is for straw and hay mixed.
3673. You don't import any maize? No; the only maize I get during the winter months is from Sydney, *via* Port Pirie.
3674. What price do you pay for your oats? About 3s. 6d. on trucks at Port Adelaide.
3675. Do they prefer oats to maize here? Yes.
3676. It is on account of the price, but they prefer it as feed? Yes; very little maize is used. They say it is too heating in the summer months here.
3677. Do you import any lucerne or hay? No.

*BROKEN HILL, WEDNESDAY, 23 OCTOBER, 1889.*

[*The Sectional Committee met in the Council Chamber, Broken Hill.*]

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. ANDREW GARRAN,  
HENRY COPELAND, Esq.,

JAMES EBENEZER TONKIN, Esq.,  
EDWARD WILLIAM O'SULLIVAN, Esq.,

JOHN HURLEY, Esq.

[The Sectional Committee further considered the proposed Railway from Nyngan to Cobar.]

Mr. James Logan, mining manager, sworn and examined:—

3678. *Chairman.*] What are you? Mining manager, Brisbane Blocks.
3679. What are your present operations? Chiefly confined to putting down a bore.
3680. In what place? Close on the boundary of the property of the Company.
3681. How is that property situated with regard to the Broken Hill Proprietary mine? It is composed of three blocks—two 20-acre blocks and one 40-acre block—immediately to the west of the Proprietary, bounding Block 14, and extending to the Proprietary.
3682. What depth is the bore down at the present time? Last night we were down 1,697 feet.
3683. How long were you getting to that depth? I am not positive as to the time we started operations, but it is somewhere about two years.
3684. And the work has not been continuous? Yes; it has been continuous, barring mishaps.
3685. Working day by day? Yes; and very often two shifts, working sixteen hour a day.
3686. Have you been in charge all the time? No; about nine months.
3687. What depth were they when you took charge? About 1,497 feet.
3688. Then you have gone about 200 feet? Yes.
3689. Up to the time of your taking charge, what were the results of the bore? The results have been nothing until lately—until the bore got down to a depth of 1,653 feet.
3690. At 1,653 feet you developed something? We developed silver.
3691. What character of ore? There was no core came up at all with the drill for 5 feet, where the first development took place.
3692. What came up? Grindings, or silt, pumped up by the water.
3693. Does that come up in a core shape? No; it was too soft to come up in a core.
3694. After you passed 1,653 feet, did the bore still bring up the same stuff? It continued on for about 5 feet, when no core came up at all on drawing the rods. I then had the material which came up the bore assayed by one assayer belonging to the Proprietary mine, and another belonging to the Junction mine, and the results from those assays were 176 ounces of silver per ton, and no lead at all.
3695. Between that depth and your present depth, what has been the development? I have been assaying the core which came up each time the rods were drawn until last night, and the results have been from 1 ounce to 4.
3696. Then there are signs of it right through? Yes.
3697. Are you still going deeper? Yes; we will continue for 2,000 feet, perhaps deeper. 3698.

Mr. J. Logan.  
23 Oct., 1889.

- Mr. J. Logan. 3698. What depth can you bore with the present plant? I am not quite certain; but Mr. Slec, of the Government Department has undertaken to go 2,000 feet with this plant.
- 23 Oct., 1889. 3699. Before the 1,653-foot level was reached, what was the character of the rock penetrated—was it bearing? It varied from gneiss, schists, and quartzite right through. There would be little veins of quartzite, perhaps 6 inches and a foot in depth, then it would go into schists, and then we should get gneiss.
3700. Is there a sectional plan of the bore all through? Yes.
3701. What length do the cores come up? Sometime in 8 or 9 feet pieces. I may mention that the core bar alone is 10 feet long, and it will come up the full length of that, provided it does not break, but very often it breaks into small pieces, such as a foot, 6 inches, and even less.
3702. But where you found this silver-bearing soft stuff—that would not come up in the shape of a core? No.
3703. How does that stuff resemble the silver-bearing stuff in the Broken Hill Proprietary? It does not resemble it at all. It would appear to me to be more of an oxidized material than anything else.
3704. What would you describe this as—a silver-bearing ore? I should say it was an oxidised material; but I am not sufficiently expert.
3705. What oxide would it be? Oxide of iron, I should say.
3706. You struck this oxidised material at 1,653 feet? Yes.
3707. And you have gone 44 feet since? Yes.
3708. Right through that 44 feet are there signs of silver? Yes, as far as we have gone yet. The schist core is averaging from 1 ounce to 4 ounces.
3709. Is there any sign of lead in that? None. A new development took place in the last assay from 97 feet There was a trace of gold also.
3710. *Dr. Garran.*] To whom does the plant belong? The drill plant belongs to the New South Wales Government.
3711. Is there anyone there representing the Government? Yes.
3712. Who? The engineer is in charge.
3713. He is responsible to the Government for the safety of the plant? Yes.
3714. You are obliged to employ him? Not at all; he is employed by the New South Wales Department.
3715. But does he work it, or merely look on? He works it.
3716. Then you are obliged to employ him as a worker? No, the Government are doing it themselves. The Company pays so much per foot.
3717. Then you are merely the Company's agent, looking on whilst the Government does the work? Yes.
3718. What does the Government charge you a foot? 30s.
3719. Can you do it at that rate with plant of your own? Yes.
3720. The Government is not making a large profit out of it? No.
3721. Are they making any profit? The engineer in charge says they are making some profit, but not much.
3722. Then you are not responsible for the safety of the plant in any way? Decidedly not.
3723. *Mr. Hurley.*] What inferences do you draw from what you have cut through recently? We anticipate that we may strike the main Broken Hill lode any day. These were our anticipations when we first started to bore.
3724. The inference to be drawn from what you have cut through is that you are in close proximity to that lode? Yes, everything tends to prove it by the core coming up at this great depth, and being silver-bearing.
3725. What gave rise to the wonderful price in the shares the other day? I cannot say.
3726. Was anything ever traced in regard to what was circulated about the mine being previously salted? Yes.
3727. From what source did it emanate? I can't say that it was properly traced, and who it emanated from; but it was so closely traced that one employé of the Government Department, working with the drill, was the cause of it.
3728. It was an action which grossly misled the public? Yes.
3729. But what has been recently obtained from the core can be relied upon by the public? Decidedly so. The core is there in charge of the engineer, and it can be tested by anyone at any time; and also the grindings, which were saved by the engineer, are in my possession at the present time.
3730. There is a Miners' Association in this town? Yes.
3731. Would it not be to the wellbeing of the mine, and be the means of gaining the confidence of the general public, if in cutting anything with your drill you were to call them together, in order to witness the operations and the lode you were passing through? I do not see that it would be of any benefit whatever.
3732. Would it not establish a confidence which does not now exist? It would be useless labour, because it would only excite public opinion. There would be no necessity to call the attention of the public to it until the Company was satisfied with it.
3733. I am speaking in the interests of the general public who are investors. Would it not establish a confidence with the public, if this Society were invited to inspect at the time of passing through it, any measure which you think likely to be indicative of being close to the main lode? The material is there for anyone who is sceptical, and there are also samples of all the core taken up, and which are sent down to the Department of Mines, in Sydney.
3734. But the ore obtained the other day which gave a rise to the price of shares. Is that open for inspection to the public at the present time? Decidedly so, if I get instructions from my directors what to do with it.
3735. Where are the directors? In Brisbane.
3736. Would it not be better to have their sanction to give all information possible, and publicity to what you are passing through, for the information of the public? It would be quite impossible for me or the engineer in charge to call the attention of the public to anything which we did not know about, until we had proved it by assays.
3737. But I mean immediately after the assays? Well, immediately after the assays it was published, and the press was notified of the fact.
3738. But the Miners' Association was not informed? I do not belong to that Association myself. It is public now, and the core is still there for examination by anyone who wishes to examine it.
3739. *Mr. O'Sullivan.*] What distance is the bore you put down from the line of lode in the Proprietary mine? I could not say for a certainty.
- 3740.

3740. Cannot you give the approximate distance? The bore is about 10 or 12 feet from the boundary between the Proprietary Company and our Company. Mr. J. Logan.
3741. How far do you think the outcrop is from the boundary of the Proprietary mine? I should say it would be 600 feet. 23 Oct., 1889.
3742. Then in point of fact your bore is distant 600 feet from the line of lode in the Proprietary mine? I should think so, but I have not measured.
3743. *Mr. Hurley.*] And you have no knowledge of the underlay of the lode? The underlay of the lode is in places decided, and in others it is not.
3744. *Chairman.*] You don't regard this ore, struck at 1,653 feet, as the lode? No.
3745. What would you call it? It is hard to say. It may possibly have been a cavity at one time or another, and through filtration from the main body of ore it got filled up.

SILVERTON, WEDNESDAY, 23 OCTOBER, 1889.

[The Sectional Committee met in the Council Chamber, Silvertton.]

Present:—

THE HONORABLE WILLIAM JOSEPH TRICKETT (CHAIRMAN).

The Hon. ANDREW GARRAN,  
HENRY COPELAND, Esq.,

JAMES EBENEZER TONKIN, Esq.,  
EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

[The Sectional Committee further considered the proposed railway from Nyngan to Cobar.]

Henry Browne, Esq., Mayor of Silvertton, sworn and examined:—

3746. *Dr. Garran.*] What is your position in this township? Merchant and Mayor of the municipality. H. Browne,  
Esq.
3747. Have you been long resident here? Five years. 23 Oct., 1889.
3748. Is this one of the earliest townships in the Barrier district? Yes, the earliest mining township.
3749. It owes its existence to mines? Altogether.
3750. And is now mainly dependent on mines? Yes.
3751. How many mines contribute to the support of Silvertton? It would be rather a difficult matter at the present time to state that, because it is hard to define the boundaries between the Broken Hill district and Silvertton, but I should imagine not less than 30 to 40 mines.
3752. I mean what mining localities do you supply, and from what mining localities do you receive contributions of ore or produce? We supply Thackaringa, the Pinnacles, the Day-dream, Purnamoota, and Euriowrie.
3753. These mines lie in different directions, do they not? Yes, they lie east, north, and south of this place.
3754. They are all on different lodes? Yes.
3755. So that from several points of the compass you have a trade concentrating in Silvertton? Precisely.
3756. Is that increasing or decreasing? It is increasing at the present time.
3757. To what is that due? To late developments.
3758. The development of these mines is proceeding? Exactly.
3759. And it is to be presumed therefore that the indications are promising? Very much so.
3760. Do you consider that there is a fair indication of a permanent mining industry in this locality? Most decidedly.
3761. What is the present population of the municipality of Silvertton? The population of the municipality proper is about 1,620; but with those districts upon which you are questioning me as to the output from mines, the population will be from 3,000 to 4,000.
3762. None of the mines are within the municipal boundary? Oh, yes.
3763. Which one? The Umberumberka, which is the oldest and deepest on the Barrier District.
3764. You only have one working mine within the municipal boundary at present? We have more; we have several mines within the municipal boundary, but not of very much moment at present, although their prospects are good.
3765. What is the rateable value of the property you assess? The assessed annual value of the property within the municipality itself is £12,847. The area is 49 square miles.
3766. The railway by which you are served belongs to a private Company? Yes; much to our regret.
3767. You are absolutely dependent upon them as to their charges? Yes; otherwise we should have to employ teams from the South Australian border.
3768. As a merchant, you trade therefore with the nearest capital? Yes.
3769. Principally with Adelaide? Yes; I likewise trade with Sydney.
3770. Does your trade with Sydney come round by Port Pirie? Partly by that, and partly by Port Adelaide.
3771. What description of trade do you carry on with Sydney in preference to Adelaide? Soft goods, groceries, wines, and spirits.
3772. What reason is there for giving a preference to Sydney in these articles? With regard to prices there is scarcely any difference, but as a citizen of New South Wales I prefer to keep my money within the Colony to which I belong.
3773. Then it is rather that reason than any particular strict business consideration? Yes.
3774. There is little difference in trading with one city and another in a mercantile sense? It is scarcely noticeable.
3775. What is the rate of taxation you impose here? The annual rates are £642 7s.
3776. Is that a one shilling rate? Yes, 1s. in the £; there is no special rate.
3777. Is the population increasing or decreasing? It is about stationary.
3778. How long has it been about 1,620 people? This was taken last year, the end of the municipal year.
3779. How many mines contribute to this township at the present moment in working, prospecting, or raising ore, and spending money? Within my own knowledge over twenty.
3780. Do you know the number of men employed upon those twenty mines? Not exactly; approximately,

- H. Browne,**  
**Esq.**  
23 Oct., 1889.
- I should imagine the Umberumberka employs 140 or 150 men, and the others average from four to twelve.
3781. Is there any smelting in the district? Not at present; but we are taking steps to erect a public smelter to meet the requirements of the small mines within the district.
3782. Is there any concentration of the ore carried on? Only at Thackaringa and the Umberumberka. The latter treat their own ore.
3783. Where is the crushed ore shipped to? Port Pirie and Port Adelaide.
3784. To be smelted there? Either to be smelted or sent to Europe.
3785. How are you situated with respect to limestone flux? We have almost inexhaustible quantities of flux in the form of ironstone and limestone.
3786. At what distance from Silverton? Limestone about 6 or 7 miles; there are large deposits of ironstone about 10 miles from here.
3787. Is that on the railway line? It is in proximity to the line.
3788. So that it has not to be brought all the way by dray? It is all delivered at the Silverton Station for transmission to Broken Hill.
3789. Supposing you had smelters here you are well off for flux? Yes; we could smelt cheaper here than any other part of the Barrier, owing to the large quantities of flux and the good supply of water.
3790. Is the limestone and the iron in pockets or in stratification? Simply in quarries. I may add that in the event of this portion of the country being connected with the western line by railway, the delivery of coke and coal at a lesser rate than we can now procure it would materially affect the interests of this district.
3791. Are you better off for smelting here than at Cockburn;—have you any advantage over Cockburn? We have the advantage of the flux and the advantage of being nearer the mines.
3792. *Mr. O'Sullivan.*] Supposing the railway were constructed from Nyngan to the Barrier, and the Government ran a train in the morning and another in the evening for the accommodation of Silverton, do you think it is likely that this town would become a sanatorium or dwelling-place for the well-to-do people of Broken Hill? Undoubtedly.
3793. And by that means it would create a large traffic? In my opinion it would.
3794. Have you a flux company here? Yes.
3795. Are they supplying the flux to Broken Hill? Yes; large quantities. Several hundred tons per week.
3796. *Mr. Hurley.*] I noticed a lot of kerbing and building stone in the town;—where do you procure that? It is procured locally.
3797. Adjacent to the township? Yes.
3798. How far? Within a range of 3 miles; there is any quantity of building stone here.
3799. You spoke about the permanency of the mine;—have you had any experience in past years in regard to silver or gold mining? Not much with silver, but a great deal with gold—about thirty years.
3800. But you have had no experience in silver mines? Only that which I have acquired here.
3801. Therefore you only speak theoretically in regard to the permanency of the mines in the district? Yes. Of course I have gained a certain amount of practice here. I question whether there are many men on the Barrier who knew much about silver before coming here.
3802. Do you know the depth of the best mines in this district? The Umberumberka, with a vertical depth of 560 feet.
3803. What is the width of the lode? It varies in width, but I believe the formation is from 20 to 40 feet—not of ore, of course.
3804. Does the ore vary much in percentage from the bottom compared with the top? I cannot say; but from information I have received the ore is very much better at the bottom.
3805. Are you a shareholder in any of the mines? Not in any of them in this district.
3806. *Mr. O'Sullivan.*] What is the reason you think the well-to-do people of Broken Hill would make this a sanatorium or temporary dwelling-place? Because this place has been singularly free from typhoid fever. We have a good supply of water, and being close to a large plain we invariably get the south-westerly winds from South Australia, and there is nothing to contaminate the atmosphere.
3807. In point of fact, Silverton is likely to become a fashionable suburb for Broken Hill? It is very likely that we should have all those who are residing there, and who can afford it, to come here to live. I know that when the question of the erection of the gaol came under the notice of the head of that Department, it was recommended very strongly that it should be erected here for the reason that it is much healthier.
3808. Is your water more permanent here than at Broken Hill? Yes; we are on the bank of a creek and we have a large Government tank 27 feet in depth.
3809. And on the whole you regard it as a much healthier place to live in than Broken Hill? It is generally admitted to be.
3810. *Chairman.*] I suppose it is generally admitted that the Silverton of to-day is not what it was a little time ago? No, we are very much more civilised than we were.
3811. I mean in regard to its prosperity? We cannot help admitting that Broken Hill has robbed us to a great extent. It is the extraordinary richness of the Broken Hill lode which has attracted a large number of the people from here. It is owing to that that the development has not gone on here as rapidly as it would have done.
3812. But there is a large number of mineral holdings about this district which are not being worked at the present time? Some, and some are only being partially worked.
3813. Why is there such stagnation if the district is so rich? It is because the laws of the present time do not reach those people who hold lands, and have them locked up and do not work them.
3814. I understand then that they are held by speculative holders who are hanging on with the object of making a good thing when the proper time occurs? A large number of them live outside the Supreme Court jurisdiction of this Colony. They live in other colonies. If those lands were open there are any number of people who would take up the leases and work them at once. That is within my own knowledge.
3815. Then you think it is the fault of the law and not of the district that many of these holdings are at present stagnant? Either the fault of the law, or the practice of the Department—possibly both.
3816. What are your views in regard to the agricultural capacities of this district? I do not think this will ever become an agricultural district, unless there is a proper system of water conservation. I could give

- give you proof of that by bringing some fine wheat which was grown where there happened to be water. The wheat is 4 feet 6 inches high. H. Browne, Esq.
3817. Is the growth of cereals carried on to any extent? No.
3818. Is the wheat you refer to grown near Silverton? Close to—in fact, there is a little crop of wheat in the town, down the street. That was owing to the recent good season. 23 Oct., 1889.
3819. Then this district resembles most of the country between here and Nyngan—with water you can grow these things? Yes, very much so; with water, cereals can be grown.
3820. If the railway line were to be constructed, there would be no difficulty in procuring ballast for it? No; we have plenty within our own borders. The whole of the ballast for this line could be obtained in a creek about 3 miles from Umberumberka, and 7 miles from Silverton. It has an inexhaustible supply.
3821. What about timber for railway purposes? There is none whatever. We shall have to depend very shortly upon coal. I understand the Railway Commissioners of New South Wales to say we could get coal cheaper from the western collieries of New South Wales, than at the South Australian sea-board, and that would assist us materially. Wood is a very expensive item here just now.
3822. Is there a large amount of tonnage sent from here towards Broken Hill or Adelaide? Yes, very large.
3823. What does the tonnage landed here or sent away principally consist of? Inwards it is generally merchandise, coke, coal, mining timber, and agricultural produce; outwards it is ore, bullion, wool, skin and hides. No articles of manufacture.
3824. Where does the hay and corn consumed at Silverton come from? From South Australia. There is none grown in the district excepting purely for personal consumption. A large quantity of natural grasses and herbage are being saved this year owing to the good season we have had. It is very abundant.
3825. Is that the first year it has been tried here? Yes.
3826. How are they doing it? In silos.
3827. But there has not been time to see whether it is a success? No, we have to wait the result.
3828. What kind of grasses are they storing in these silos? The wild grass, the spear grass, the wild geranium, the wild carrot, wild oats, and wild barley.
3829. Has the growth of artificial grass been tried in the district? I don't know, but I know flowers are grown here, likewise vegetables.
3830. What is your water supply for the town? From the Government tank and the creek.
3831. Has it to be carted, or is there a pipe service? At the present time it has to be carted, but the inhabitants have taken good care to have a large supply of rain water, and have gone to the expense of providing themselves with tanks, and of supplying themselves from the houses.
3832. Is the lay of the country surrounding this locality suitable for water conservation? In my opinion it is. There are many extensive flats in the ranges in which water could be conserved with embankments.
3833. Could it be conserved near the railway line? Yes; the water could be used for irrigating the lower lands.
3834. Has there been any boring for water? One bore has been put down, and the Government proposes to put another down.
3835. With what success? I cannot speak as to the success of the first bore. It was not put down very deep, but they are just letting a contract to put an artesian bore down on the edge of the plain, about 8 or 9 miles from here.
3836. Are there many wells in the district? Yes, several wells.
3837. What is the character of the water? Mostly salty. There are one or two fresh water wells,—one at Purnamoota, 25 miles from here, and another at a station, about 10 miles away.
3838. I suppose all the country round is taken up by mining leases and homestead leases? Yes.
3839. Are there many homestead leases taken up round the Silverton district? There are several.
3840. Are the holders prospering? Evidently so.
3841. Are they cultivating? Not within my knowledge.
3842. What have they done towards improving their holdings? Speaking of those adjoining the southern boundary of the municipality, they have fenced the land in, and made tanks. The land is used for dairying purposes.
3843. And those which are taken up are taken up evidently with the idea of permanent settlement? Yes, because they are not only supplying this town and the surroundings with milk, but they are likewise making butter. For the last few weeks the people have been supplied almost altogether with butter locally made—a thing unheard of prior to this season.
3844. Do you think these holders will be able to get a living upon these leases without any extraneous aid. We have been told in many instances that butchers and mail contractors use these things as auxiliaries to their business. Do you think these people are going to live entirely on their own homestead leases? Yes, those I speak of are doing so.
3845. Are they getting their own source of livelihood from them? Possibly they may be engaged in mining as well, but there can be no doubt, under favourable conditions, that there is not a better spot in Australia for settling down. Of course in extremely dry seasons these people suffer very much.
3846. Is the country round here good holding ground for tanks? Yes, in places on the flats. The Government tank upon this flat holds the water well.
3847. Mr. Hurley.] You made reference to the complaint prevalent in the district in regard to the large area of land locked up by leases, and you were speaking about the defectiveness of the Mining Act. Is it not chiefly attributable to the fact that the labour conditions of the Act are not enforced? That is what I refer to.
3848. Is it not the duty of people of the district to report to the Department that the operation of the Act is being over-ridden? Undoubtedly, if they feel aggrieved. I believe they have reported in a number of instances.
3849. At all events, if that were remedied and the labour conditions enforced, a larger area of country would be available for mining? Yes, and the people of this country would get the benefit instead of foreigners—meaning people of other colonies, who mainly hold the leasss.

Mr. Uriah Dudley, mining engineer, sworn, and examined :—

- Mr. U. Dudley.  
23 Oct., 1889.
3850. *Chairman.*] What are you? Mining engineer and manager of the Umberumberka Silver-lead Mining Co.
3851. *Mr Copeland.*] Have you been long in this district? About two years. I have only been about nine months at this mine.
3852. What area of ground have you in this mine? 140 acres,—two 40 acres blocks; and three 20 acres.
3853. Giving you about how long on the course of the lode? About 6,000 feet. It runs diagonally through the block. It is over a mile of lode.
3854. In how many places have you proved the existence of the lode? For 2,000 feet in one place, and 400 feet in a second place, at the other end of the ground.
3855. And for that 2,000 feet is the lode continuous? Yes, without a fault.
3856. What is the ore worth on the surface? It is worth as we despatch it about £20, £26, and £27 per ton for lead and silver.
3857. What percentage of lead does it contain? The last six months average runs to 31 per cent. of lead, and 113 ounces of silver.
3858. It is a sulphide ore? Yes, chiefly.
3859. How deep have you proved the lode? 530 feet.
3860. At that depth have you a level? I have just started one.
3861. And have you cut through the lode? We are still in the lode at that point, but we are not through it.
3862. How wide have you proved it? About 12 feet wide at that depth.
3863. Have you tested the quality of it for that distance? No, not in bulk.
3864. Have you formed any opinion as to the value of it? Yes.
3865. What do you estimate the ore to be worth? The ore at Umberumberka has to be picked considerably as it is very bunchy, and it shows the same characteristics at this level.
3866. What do you estimate the ore would average taking it right across the lode? I have not tried it out at that level, but an estimation would lead me to suppose it would give about 12 ounces of silver to the ton, and about 12 per cent. of lead.
3867. Do you think the whole 12 feet of lode would average that? It would where we have cut it. We are not quite through it yet.
3868. How much deeper is that than the level you were working at previously? 160 feet.
3869. Do you know by your underground operations whether the lode is continuous? Yes for 2,000 feet.
3870. But I mean in depth? Yes, the whole of that depth, 530 feet, as stated.
3871. I suppose the shaft is a vertical one so that you have not sunk on the lode? Yes.
3872. And you have every reason to believe the lode is continuous from the surface to the present depth? There is no doubt of it.
3873. And you anticipate many years work in the future? Yes.
3874. Do you consider the ore is payable? Yes, it is payable at the present depth reached.
3875. Do you anticipate being able to pay dividends out of it? I do, or I should not be there.
3876. What is your process of working. Do you concentrate the ore? The ore is first of all hand-picked, and what is left from the handpicking is put through a concentrating plant, and the concentrates together with the hand-picks are sent to South Australia for smelting.
3877. How many men do you give employment to at the present time? About 130.
3878. Is that a fair average of the number of men you employ? The last six months average was 120.
3879. What is the average pay sheet for a month? About £1,400 a month, that is including my accounts for labour and material.
3880. You use a considerable quantity of mining timber? Yes.
3881. What timber do you use? The mining timber is chiefly round timber.
3882. Cut in the district? No, the principal portion is cut in the district, but some comes from South Australia.
3883. What kind of timber is cut in the district? Mulga. Anything from 4 to 7 inches in diameter, and from 6 to 7 feet long.
3884. Are you of opinion that the round props are stronger than similar pieces of sawn timber would be? For the same area of wood they are decidedly much stronger.
3885. And do you think the Mulga wood have greater resisting power than the pine used at Broken Hill? Yes, three times.
3886. So that if the railway were constructed here, you would be desirous of using as much of the colonial timber as you could get at a reasonable price, in preference to using imported pine? I would not use the pine at all if I could get the hardwood.
3887. And you would not use sawn timber if you could get split or round? No, only in shaft work.
3888. Do you anticipate opening up more shafts and employing more labour? Yes, I have already started further developments.
3889. And you think in the course of a few months, or a year or two, you will be employing more men than at present? Yes.
3890. Is the prosperity of the mine sufficiently assured to warrant you in believing it will continue a payable mine for some years to come? Yes.
3891. What is the average rate of wages paid to the miners? They are all paid £3 a week for eight hour shifts.
3892. Where is the ore sent to? All to South Australia.
3893. And you have no crushing or concentrating machinery? Yes, we have crushing and concentrating machinery, but the dressed ore is sent to Adelaide to be smelted.
3894. Then you crush and concentrate the ore on the mine and send the concentrates to Adelaide? Yes.
3895. And the number of men you employ includes those engaged at the crushing works? It includes those engaged at the crushing works.
3896. Do you consider your mine an exceptionally good one; is it the best one, or are there other mines likely to be as large undertakings as this one? There are some likely to be much better, and to give employment to quite as much labour.
3897. Where do you get the mining stores from—candles and picks, steel for drills, and shovels? South Australia.  
3898.

Mr.  
W. Dudley.  
23 Oct., 1889.

3898. Are the candles manufactured in Adelaide? Some of them are, but I do not prefer them.
3899. You do not deal with Sydney in any way? No, not at present.
3900. I suppose the only connection you have with Sydney is in paying a rent of 5s. per acre per annum for the ground you occupy? That is all.
3901. I suppose the whole ground is held under a mineral lease? All but two blocks, which are freehold. Sometimes we pay the Government a little for water which we get from the tanks.
3902. The Government is constructing the water supply? Yes.
3903. You have a knowledge of the fact that it is proposed to build a railway here; can you say if the railway were constructed to Silverton whether it would be of any advantage to you in connection with the mine? Yes; it would be a decided advantage. We should be able to put up a smelter at the mine at once and smelt our own ore, in consequence of being able to get coal and coke and mining timber cheaper.
3904. Do you think you would get the coal and coke from the western district of New South Wales? Yes, if that coal will coke well; but I have no knowledge of that, but I presume it could be made to suit smelting.
3905. What distance have you to carry firewood at present? I get it from local supplies about 7 or 10 miles away, and also from South Australia. I have got some from as far down the line as Nacnara, over 100 miles. That is better firewood than the local supply.
3906. Do you anticipate that the local supply will disappear very rapidly? If all the mines round about were to go to work we should not have any timber here after about six months. We should consume every stick about the place within 10 or 12 miles.
3907. What do you pay for the wood? Eleven to twelve shillings per ton.
3908. Are you of opinion that coal would be cheaper for you to use than firewood? Yes; its extra heating quality will always commend it.
3909. You think it would be cheaper to use coal than wood, and you would have a safe supply which you are not likely to have of wood? That is true; I have experienced want of stock within the last six months. In the dry season here, teams are scarce, and we cannot get firewood when we want it.
3910. *Mr. O'Sullivan.*] You say you prefer hard and split timber to sawn and pine timber; what are your reasons for that? The round timber which is not cut across the grain is certainly stronger than if it were cut.
3911. Then you think it would be safer to work in mines with split and hard timber than to work the Oregon pine, which is sawn, and used in the Broken Hill Proprietary Mine? Yes, in all cases.
3912. If the mines generally adopted this split and hard timber it is probable a large trade in hardwoods might arise between here and New South Wales? Yes; there would be a large trade for the whole of this district.
3913. What is your opinion of the mining prospects of this district? I think the prospects are very good, seeing that silver-mining is practically a new industry in the colonies. It suffers from pioneering, the same as other industries; and many of the lodes which are only partially understood, and which have had very little work done upon them, have remained idle, owing to speculators outside wishing every day to get hold of another Broken Hill, which is the show mine of the world. I think the district warrants spending a great deal of money for prospecting, as the minerals go over such a large area, and lodes are known to exist for considerable distances.
3914. Do you think the mines which have stopped, or which have partially stopped working, are likely to resume operations if anyone else strikes a good lode? Yes, they are sure to.
3915. I suppose they are holding back for some encouragement? Yes.
3916. And should they work, this town is likely to become an important mining centre? Yes.
3917. *Mr. Hurley.*] Can you give us any information regarding the outward and inward tonnage of your mine? The outward tonnage during the last six months has been 675 tons; the inward tonnage, 2,558 tons.
3918. What does the inward tonnage comprise? Generally stores—mining stores, tools, coal, coke, horse fodder, and powder.
3919. What is the average rate per ton? The outward charge will be about 30s. a ton.
3920. And the outward and inward tonnage is likely to increase considerably in years to come? Yes; I am increasing it monthly.
3921. *Chairman.*] What are your views as to the adjoining mines in the district? At Thackaringa there is a large number working. They get their supplies principally from this place, and their out-puts of ore are published in the *Silver Age* weekly. I have seen the mines themselves once or twice. My opinion is that what the mine I am at present managing is turning out is only small compared with what the mines at Thackaringa are turning out. I am sure they are turning out more than what I have mentioned for Umberumberka.
3922. You think the character of the mining there is as good as yours and possibly better? I think the district compares favourably with this, and it may be better. I have not examined it at length so as to be able to give a definite opinion.
3923. Where does the ore from your mine go to? Port Adelaide, and it is all smelted there.
3924. Is it sent on to Sydney? The bullion is generally sent on to Sydney by the Port smelting works, to be taken home by the Orient steamers.
3925. That is a very round-about way of sending it? Yes.
3926. *Mr. Hurley.*] Have you had a large and varied experience in silver-mining? I had none before I came here, except in Queensland. Six or seven years ago I was managing two mines there.
3927. Does the character of the mines here lead you to believe they are of a permanent character? Yes.
3928. *Mr. O'Sullivan.*] You had in this district a mine called the Day-dream? Yes.
3929. Can you tell how much it has paid in dividends? I have no idea.
3930. Do you think it is likely to resume working on as large a scale as it was before? I have never seen the mine, and do not know the people connected with it.
3931. Can you say anything with regard to the Terrible Dick mine? I have seen it, but I have not seen the bottom of it.
3932. Can you give any idea of the probable prospects of that mine? I could not say anything definitely, but I think it is worth spending a lot more money upon. There was some good ore got there.
3933. Do you think this district has been thoroughly prospected? No, not up to the present time.
3934. Then there is a probability of other good finds being made? Yes.

Mr. Charles Ring, sworn, and examined :—

- Mr. C. Ring. 3935. *Mr. Hurley.*] What are you? An agent, secretary for the Silverton Flux Company, and contractor to one or two Companies.
- 23 Oct., 1889. 3936. What does the Flux Company represent? They supply limestone for Broken Hill Companies.
3937. Is it close to the railway line? We have claims all over the district—some at Thackerenga, some within 2 or 3 miles of Silverton, and some 8, and some 6 miles.
3938. Are they of a permanent character? Yes.
3939. How is the lime obtained? It is in alluvial beds.
3940. You cannot say as to the permanency of the area of land you have? Except where you can see the extent of the beds.
3941. But they may be exhausted in a few years? Yes; of course some of them will exhaust and others will go on.
3942. What is your output now—quarterly or monthly? Since last January we have sent to Broken Hill approximately about 10,000 tons.
3943. Could they take a greater supply from you if you were prepared to supply them? No; we are prepared to supply them with more than they can take. We are prepared to supply them with 1,000 tons a week.
3944. An increased development of the mines in the district would give increased demand for your material? Yes.
3945. Do you know much of agriculture? Yes, a little.
3946. Is the soil suitable for the growth of cereals in the district? Yes; with irrigation or rainfall.
3947. Have you practised it yourself? No.
3948. You believe the climate is suitable for agricultural if there were water. Give us an idea as to the price of land in the town. Has it risen or fallen in the last six months? It has been about the same during the last six months.
3949. What is the unimproved land in the town worth? It is very hard to state; the fact is if you want to buy land you have to pay a price for it, but if you have to sell it you have to sacrifice it to a great extent.
3950. The place does not seem to be progressing at the present time? It is about stationary.
3951. What is that attributable to? To the attraction of Broken Hill. Broken Hill has not only attracted the population, but kept capital away from the district.
3952. It has taken the life out of the speculation in this portion of the district? Not only of this portion of the district, but of the whole of the colonies. Of course they go for the greater thing and they pass by us.
3953. What you send away is sent by rail? Yes.
3954. What are the charges between here and Broken Hill? 4s. 6d. a ton from Silverton and 6s. from Thackerenga siding.
3955. What rate is that per mile per ton? I believe it is 14½ miles from the goods shed—about 4d. a mile.
3956. Have you to do your own loading and unloading? Yes.
3957. Do you look upon that freight charge as excessive? Yes.
3958. Have you any idea as to what dividend the Company pays upon the expenditure in connection with the construction of the railway? I could not say what it is, but I know it is something enormous. I believe they pay 20 per cent. on the nominal capital of the Company.
3959. Have you at any time endeavoured to have the freight reduced? Yes, and we succeeded to a certain extent. We were paying 5s. 6d. a ton. We asked for a reduction and they reduced it to 4s. 6d. That was about 2 months ago.
3960. *Mr. O'Sullivan.*] I presume your flux resources in this district are great enough to stand the strain if the discoveries around Broken Hill should increase? Yes.
3961. If mining is prosperous there, you are likely to have a still greater trade from Silverton? Yes.
3962. Does the Tramway Company treat you in a fair and generous way? As well as you could expect monopolists to do. We often get stuck up.
3963. Do you consider the fares fixed by the schedule of their Act as being too high? Certainly.
3964. Do they run the trains to accommodate your business? No; they do not accommodate us anything out of the ordinary way.
3965. How many trains run per day, say from here to Broken Hill? There are two passenger trains—one at 7 a.m., and the other in the afternoon, and the same number back.
3966. Do you think those are enough for the business of this district? No; there would be larger traffic if they ran trains more conveniently.
3967. *Chairman.*] What is the extent of your limestone beds? We have one about three-quarters of a mile long by one quarter of a mile broad. We are just taking the bed up. We don't take up the ground surrounding it, but we go to another bed; we get it as easily as we can. The beds are not necessarily adjoining one another. We have about 300 or 400 acres of ground. The lowest depth we have gone is 25 feet.
3968. Was there apparently more limestone? No; we estimate that as the bottom.
3969. What tenure have you of this property you get the limestone from? Twenty years lease from the Government.
3970. Do you pay as a lease, or royalty? We take it up in the same way as a mineral lease. We are prepared at the present time to enter into a contract for five years to supply 1,000 tons a week.
3971. *Mr. O'Sullivan.*] Has any attempt been made in the district to cultivate orchards or vineyards? Only in a small way. We have a few gardens down the creek here, and some fruit trees look very nice there at times.
3972. Do you think from the character of this country it would be a suitable place for the culture of the vine? Yes, especially in spots.

Mr. Francis Spence, station-master at Silverton, sworn, and examined :—

3973. *Chairman.*] What position do you occupy? Station master at Silverton.  
 3974. You are in the employ of the Silverton Tramway Company? Yes.  
 3975. How many trains are there a day inward and outward? Four each way.  
 3976. What times do they run? The train South leaves Broken Hill at 1:30, then at 6 o'clock in the morning, then at 11.20 a.m., and then there is a passenger train at 9 o'clock at night.  
 3977. Is the passenger train a goods train as well? It is a mixed train.  
 3978. Which is the largest business in the way of freight—inwards or outwards? Outwards from here.  
 3979. What does that chiefly consist of? Flux going to Broken Hill.  
 3980. With regard to the trade from Broken Hill, which is the larger freight, inward or outwards? I could not say.  
 3981. I thought you kept the records of the business here? No, I have nothing to do with Broken Hill.  
 3982. With regard to the outward freight, how many tons a day go on the tramway? About 70.  
 3983. That is a fair average from here to Broken Hill? Yes, that is about an approximate average.  
 3984. What is the inward tonnage per day? That would not go over 10 tons a day.  
 3985. I suppose that consists generally of supplies for the town and district? Yes, of general goods.  
 3986. And a considerable amount of fodder I expect? Not at present, but in dry seasons we have it. There is a lot of chaff.  
 3987. What is the freight per ton from here to Broken Hill? For flux, 4s. 6d.  
 3988. Is not there a considerable amount of fuel brought here for the use of the mine inwards? None whatever.  
 3989. Does any firewood come here by train? No, it is all carted from the locality.  
 3990. Have you any difficulty in keeping pace with the business, or could you supply more trains? No, we have no difficulty at present.  
 3991. Are the goods kept waiting here any length of time? No, there are trains on the time-table which do not run.  
 3992. Why not? Because they are not required.  
 3993. Can you tell us what amount of revenue you collect here in the shape of passenger fares and tonnage? About £250 a week, and that includes South Australian railway charges.  
 3994. You take at this office about £250 a week? Yes.  
 3995. For passenger fares and freight? Yes, say about £200.  
 3996. Is that a fair average of all the year round? Yes, at this station at present.  
 3997. You stated just now that there were more trains on the time-table than actually run. Can you reconcile that with the statement made by the last witness that you do not consult the convenience of the goods owners at all? No.  
 3998. Mr. Ring stated it would be much more convenient if more trains ran from here to Broken Hill? With the present trains we can compete with the traffic. There may be a delay of a few hours now and then with flux.  
 3999. That is the very trade he speaks of. Have you been asked by him to run trains more frequently? No, I have not.  
 4000. Do you know whether application has been made? No.  
 4001. Do you know what it cost to construct this line? No.  
 4002. I suppose you know they are losing money every day by running it? I could not tell you.  
 4003. *Mr. Hurley.*] The last dividend was 25 per cent., was it not? I could not say.  
 4004. Have you a balance-sheet? No.  
 4005. Have you ever seen one? No.  
 4006. Are you a shareholder? No.  
 4007. *Mr. O'Sullivan.*] Has your Company ever tried running an early train from Silverton to Broken Hill, and an evening one? There have been different times for trains.  
 4008. Do you think if the Company ran a train (say) at 7.30 a.m., in time to land business people at Broken Hill, and another in the evening about 5.30 or 6, to bring them back, it would lead to a number of residents of Broken Hill living here? From what I have been informed I should believe it would.  
 4009. If the Company put on a morning and evening train it would possibly induce a large passenger traffic? I think it would slightly; although I think it has gone too far for that now.  
 4010. What do you mean by gone too far? If there had been a passenger train at the start no doubt there would have been a large number of people travelling.  
 4011. Do you mean to say that Silverton has gone too far, or is it too late to think of doing this? I could not say about that; Silverton has not the same trade as it had.  
 4012. Do not you think it would lead to an improvement in the prospects of Silverton, if this became the suburban home for well-to-do people in Broken Hill? I believe it would.  
 4013. Do you consider it is too late to attempt to create this traffic? I could not give an opinion.  
 4014. Do you keep any record of the number of passengers between here and Broken Hill? Yes; an average of about 130 a week.  
 4015. How many from Broken Hill to Silverton? About half of that number.  
 4016. Can you give an idea of the numbers a year ago? It would be more then.  
 4017. What is the reason for the decline? I think the people have gone from Silverton to the Hill and have settled there.  
 4018. Has business increased in volume since you took office? No; it is less now than it was in goods, and I should think it is about the same in passenger traffic.  
 4019. You referred just now to a trade in chaff; where does that come from? South Australian stations—from Jamestown, Saddleworth, and Riverton.

Mr. John James Collier, iron-mine proprietor, sworn, and examined :—

4020. *Mr. Hurley.*] What are you? Proprietor of an iron mine.  
 4021. Have you been long in the district? Nearly five years.  
 4022. What you engaged in? At present I am sending iron flux to Block 14.  
 4023. What area of land do you hold? 80 acres, under a mineral lease.

Mr. F. Spence.  
 23 Oct., 1889.

Mr.  
 J. J. Collier.  
 23 Oct., 1889.

4024.

- Mr. J. J. Collier. 4024. What is your output? We have sent as much as 80 tons a week, but latterly the mine has been idle, and we are only starting again.
- 23 Oct., 1889. 4025. You could send more if the demand was greater? Yes. In the course of eighteen months or two years we will be sending 400 or 500 tons a month.
4026. What is the character of your ore? Iron flux.
4027. Is it kidney ore or hematite? I do not know any special name, but it is first-class flux.
4028. How do you find it—in beds? It is in the lode.
4029. So that there may be any quantity of it? You can trace it through an 80-acre block from one end to the other; and where we have opened it, it has opened from 1 foot to 10 feet.
4030. How many men have you employed? Eight; and we think of putting on a lot more.
4031. Have you had any experience in mining? Not a great deal in silver-mining.
4032. Have you been employed in agriculture at all? Yes, a little.
4033. Is the district suitable for agriculture? It would be in fair seasons.
4034. How do you send the ore to the market? From Silvertown, by the tram line.
4035. What do you pay? 4s. 6d. a ton.
4036. Do you look upon that as an excessive rate? I think it ought to be done cheaper.
4037. Have you paid any dividends in the mine? Yes; a few. We pay about £1 a week in general—there are only six of us in the mine, and we are only working on a small scale.
4038. But you look upon it as a dividend-paying concern, provided you had a sufficient market to take your flux to? Yes.
4039. *Mr. O'Sullivan.*] Are the supplies of ironstone large in this district? Yes; I have a big contract just now.
4040. I presume there is room for extension? Yes.
4041. You carry on business on a fairly large scale if the mines require it? Yes.
4042. Can you state whether the ore is rich? I never had any tried; but Mr. Lane told me it is the best flux there.
4043. Do you supply any other mine but Block 14? No.
4044. Where do the others get it from? They get it from their own mines.
4045. Which mine does the Mount Vulcan Ironstone Quarry supply? They were supplying Block 14 with some; but I believe they have knocked off.
4046. What other mines do they supply? I do not think they are supplying any other.
4047. Have you any knowledge of the surrounding hills? Yes.
4048. Is there any place where water can be stored on a large scale? Not on the hill, I think.
4049. Or on the general catchment? On the flats it is good open country.
4050. I suppose this district is not likely to run short of water if proper provision is made? No.
4051. *Chairman.*] Are there other iron deposits that you are aware of besides your own holding? I do not know of any.
4052. How much do you send to Block 14? We are only just starting now, and have not sent in much for the last four weeks on account of their stopping the smelters.

Mr. Archibald Henry Gibson, general forwarding agent, sworn, and examined:—

- Mr. A. H. Gibson. 4053. *Chairman.*] What are you? Agent for Charles Chapple, of Broken Hill and Silvertown.
- 23 Oct., 1889. 4054. What business do you carry on? General forwarding and agency business.
4055. Can you give any particulars as to the amount of business done here? I have made up all my returns, and I believe Mr. Chapple gave them to you in Broken Hill.
4056. No; he did not give us them separately? I have taken down the amount for Silvertown and Cockburn together, where we have a branch. I have made up the return for three months, ending 30th September. The ore which actually went through our hands was 756 tons, sent from Silvertown and Cockburn, and the wool was 316 tons. The imports we received were,—general merchandise 266 tons, and beside that there is a lot of local traffic which I have no note of, such as goods going to Broken Hill and Umberumberka, and from Thackaringa to Broken Hill, and so on.
4057. Would that be taken by train or teams? Brought to the train by teams.
4058. Have you any idea what that traffic would amount to? No.
4059. Where is that picked up then? A lot of ironstone is sent from Thackaringa for the Broken Hill smelters.
4060. Is there a station on the line? Yes; the Thackaringa siding. We sent a lot to Umberumberka by rail during the three months mentioned—about 60 or 70 tons.
4061. Can you tell us what you have paid the Tramway Company for carriage during that period? I have no note of it now.
4062. How are you served by this tramway—does it run conveniently or otherwise? I think it is convenient.
4063. It answers all the purposes you require of it with regard to time? Yes.
4064. What do you chiefly bring up from the South? Mostly stores, chaff, and flour. Of course this 266 tons is only what passed through our hands.
4065. Is there any other business of a like character to yours in Silvertown? One other.
4066. Do they do as large a trade as you? Perhaps their tonnage is as large. We do the largest business up country.
4067. *Mr. O'Sullivan.*] Where does the wool come from which you forward? From Mount Browne district, and the Queensland border.
4068. Anywhere else? From Balaclava Station.
4069. Where is that? About 50 or 60 miles from Cockburn. It is between here and the River Darling.
4070. Are there any other stations round there? No; we don't send from any other.
4071. How often do you get wool from the Mount Browne district? There is sometimes a difficulty in getting teams. Sometimes two years' wool will come in one year.
4072. Do you get wool from the Mount Browne district, and outlying stations, when the river is up? We have got it this year.
4073. Do your teams go straight from Silvertown, or do they belong to Broken Hill? A lot of teams are carrying between here and Mount Browne. It saves freight between Broken Hill and Silvertown.

4074. Do the teams start from Cockburn? No; they go up loaded from here and bring back wool.  
 4075. Do these teams make Broken Hill or Silverton their point of departure and return? Silverton.  
 4076. Then they look upon Silverton as their head-quarters? Yes.  
 4077. And they start from here with supplies to the stations and bring back the wool? Yes.  
 4078. Why do they come on to Silverton instead of stopping at Broken Hill? To save freight between Broken Hill.  
 4079. Could not they save more freight by going to Cockburn? Yes.  
 4080. Do they often go there? No; there is no up-country merchandise sent to Cockburn, because in dry seasons there is a scarcity of feed and water there.  
 4081. Did you get the wool towards the river this year? Yes.  
 4082. How many tons came? I have not the weight.  
 4083. I presume you had wool brought down before this mineral country was opened up? Yes; we have always had wool for the last three or four years.  
 4084. Where were Mr. Chapple's head-quarters before Silverton and Broken Hill were opened? Always at Silverton; but we have had branches as the line has been completed.  
 4085. Mr. Chapple has been long established in this district? Yes.  
 4086. He was here long before Silverton and Broken Hill were opened? Yes.  
 4087. Where did he operate from then? Mundy Mundy Station, I believe.  
 4088. Where did he operate from when he started as a forwarding agent? I think it was from Terowie.  
 4089. Can you state if Mr. Chapple first began to work as a forwarding agent in Silverton? His head office was here, I think.  
 4090. Before Silverton was established, where were his headquarters as a forwarding agent? He had no quarters then.  
 4091. Then all the trade he now does with Mount Browne and outlying stations in the carriage of wool and stores has arisen since Silverton has started? Yes; within the last four or five years.  
 4092. *Chairman.*] Before this tramway was started had you anything to do with the forwarding of goods from here to Cockburn? Yes; we had our forwarding office at Cockburn.  
 4093. How do the rates of freight compare now by tramway with what it cost before the tramway was started, when you were sending by teams? The teams used to cost us between 25s. and 30s. a ton to Silverton.  
 4094. And now? And now it is about 8s. or 10s.  
 4095. How long did it take to get the goods there by team? There was often delay in wet weather.

Mr.  
 A. H. Gibson.  
 23 Oct., 1889.

Richard Mooney, Esq., Sub-collector of Customs, sworn, and examined:—

4096. *Mr. O'Sullivan.*] What position do you occupy in Silverton? Sub-collector of Customs.  
 4097. Do you keep a record of all the goods which go through here to Broken Hill? I keep a record of the whole of the imports and exports arriving by train whether for here or Broken Hill.  
 4098. Can you lay before the Committee any statement with regard to the inward traffic? I can give you my statistical returns for the last year and this.  
 4099. Give us the total inward tonnage for 1888? The statistics are not made up in tons for all goods. Some of the information is given in packages, and the spirits are given in gallons, not in weight.  
 4100. Give us the general total;—the tonnage first and the total of the other? I can tell you the weights of the principal items.  
 4101. State the totals so far as you can give them? I can give you the total value for last year. The total value of the imports was £1,072,636 for 1888, for Silverton and Broken Hill.  
 4102. What was the value for 1889? Up to the 14th of October the value was £706,639.  
 4103. Does that show an increase upon last year? I think it will show a decrease upon the corresponding period.  
 4104. Can you give us the total tonnage? I think the total tonnage will be for this year about 2,500 tons inwards and outwards per week. That refers to all descriptions of goods, including coal, coke, and timber. That is about the average weight carried by the Tramway Company. Last year the goods inwards would be larger than this, but they will be greater outwards this year than last.  
 4105. Why should the quantity of goods be larger last year than this, seeing that there is now a larger population? The people have now all their houses built, which they had not last year. These are to a great extent articles of timber for building.  
 4106. Have you a record of the amount of outward tonnage? Yes; to the 14th of this month there were 26,094 tons of silver lead sent away, of the value of £1,208,944. Besides the bullion there were 29,386 tons of silver ore of the value of £202,544. There were 9 tons of tin ore, valued at £86; 106 tons of copper ore, valued at £1,081; 34 cwt. of gold quartz, valued at £17; 1,105 hides, valued at £722; and about 7 tons of tallow, valued at £92. In consequence of the river being navigable during the present wool season, a large quantity of wool, which would have come here, went down the river. Up to date there have been 10,740 bales of greasy wool gone down the line. In all there have been 14,233 bales of New South Wales wool sent away this year to date, besides 1,262 bales of Queensland wool. The value of the New South Wales wool was £139,383. Live stock does not travel by rail.  
 4107. The figures you have just given us of the outward trade are for nine months of the year 1889 only? They are up to the 14th of October, nine and a half months.  
 4108. Will you state how this trade compares with the outward trade done last year? It is considerably in excess of the full total of last year.  
 4109. In what respects? The increase has been in wool, silver lead, bullion, and silver ore.  
 4110. Have you noticed a cessation in the building material taken to Broken Hill? Yes; it has fallen off in quantity.  
 4111. Do you take that as an indication that the building requirements of Broken Hill are more than sufficient for the population? I think so, and are likely to remain so for some time.  
 4112. Are the live stock driven overland from Queensland? The cattle come principally from Queensland, and the sheep principally from New South Wales—generally from any part of the country west of the Darling.

R. Mooney,  
 Esq.  
 23 Oct., 1889.

- R. Mooney, Esq.  
23 Oct., 1889.
4113. How high do you think they come from—as far as Paroo? The greater number of them from west of the Paroo.
4114. Do they come from further north than Louth? Yes; from the Queensland border.
4115. Have you noticed any live stock coming up from the South Australian side to Silvertown, and Broken Hill? Yes; a considerable number of cattle come up from South Australia to Broken Hill.
4116. Fat stock for slaughter? Yes.
4117. Then as a matter of fact the South Australian people are supplying these markets with stock for slaughter? They supply a great portion.
4118. Where does the other stock come from? Queensland, principally.
4119. Do any of the surrounding stations supply a portion of the market? Yes, with sheep; but there are scarcely any cattle upon the country about here now.
4120. Do you think a line constructed from Cobar to Broken Hill would be likely to intercept that fat stock trade, and allow the graziers along that line of railway to supply the market? The market is a very limited one.
4121. But there are over 16,000 people there, are there not? They seem to think so, but I am rather doubtful of the number.
4122. At all events there is a considerable population? Yes.
4123. And it is likely to be further increased? It is the opinion of a good many that it will increase, but I think it will remain stationary for a long time.
4124. At any rate it is understood that there are over 16,000 persons there, and if that is so it affords a good local market for the consumption of fat stock? Yes.
4125. If the graziers living on the line of railway between Broken Hill and Cobar could reach the market in ten or twelve hours would they be likely to supply it? Yes; but I am of opinion that the cattle we got from Cobar would come originally from Queensland, and it would be just as short to drive them direct from Queensland to Broken Hill. They would have better country to go through.
4126. You are alluding to cattle only? Yes.
4127. Would not our graziers along the line be likely to get the sheep portion of the trade if they had a railway running to Broken Hill? No; I do not think so.
4128. Do you think if a man were to drive his stock 50 or 100 miles he could compete with a man living alongside the railway, who could run his sheep in fat, and without being deteriorated in value by being compelled to travel? No; but Broken Hill is in the midst of a large sheep run. There are enough sheep bred on the surrounding stations to keep Broken Hill going for the next hundred years.
4129. There are not many sheep fattened there? Oh, yes.
4130. If that is the case how comes it that Queensland is supplying a considerable number of stock? It is only supplying it with cattle.
4131. And are the South Australian graziers only sending cattle? Yes; any sheep coming here from South Australia are sheep returned after being removed for want of food, or stud sheep.
4132. What are the principal articles of import to Silvertown and Broken Hill, which come through your hands? Coal, coke, timber, drapery, wearing apparel, wines and spirits, beer, &c.
4133. Which is the largest item of import? Coke, as regards weight. There have been 25,000 tons of coke imported up to now, this year, and about 6,000 tons of coal.
4134. And what length of timber? 9,360,000 feet super., that is of every description of timber, rough and dressed.
4135. And all that passes over this railway line? Yes, we do not keep separate returns for Silvertown and Broken Hill. They are coupled together. We only keep separate returns so far as the revenue is concerned.
4136. Have you got the revenue received as regards Silvertown for this year or last year? The revenue at Silvertown last year was £18,506 upon all goods.
4137. What is your opinion in regard to the trade of this place. Has it increased lately or decreased? It has decreased as far as revenue is concerned, and also at Broken Hill. At Broken Hill the revenue decreased £5,268 on the nine months ending September 30th, 1889, as compared with the corresponding period of 1888, and the decrease here was still greater, being £7,000.
4138. Is the item of timber import an exceptionally large one or about the average? It is an exceptionally large one, I was quite astonished at it myself.
4139. Have you got the timber import for the year before? Yes, the total timber last year was almost as large, if not larger—9,693,942 feet. This year, of course, is only up to date.
4140. Can you give us the total revenue received for 1888 by you? The total for last year at Broken Hill was £64,915, and to the end of September this year, £47,442.

James Francis Williams, Esq., Warden's Clerk and Mining Registrar, Silvertown, sworn, and examined:—

- J. F. Williams, Esq.  
23 Oct., 1889.
4141. *Mr. Tonkin.*] What position do you hold? I am Warden's Clerk and Mining Registrar at Silvertown.
4142. Can you give us any figures in regard to the revenue received in your Department up to the end of 1888? Yes; I can give you the amount of revenue received from March, 1883, to September 30th, 1888, as £60,079 8s.
4143. What is that at the rate of per year? About £12,000 a year.
4144. In what manner was that money received? It was received by way of deposits for rent of mineral leases, survey fees, miners' rights, stamp duties, &c.
4145. Could you give us the revenue from September, 1888, to September, 1889? Yes, the total was £2,595 15s.
4146. Can you account for that tremendous falling off? Yes; there is not the same amount of speculation. There is not the same quantity of land taken up for mining purposes.
4147. Which is the principal part which has fallen off so materially—the applications for leases or miners' rights? In all respects—miners' rights, business licenses, and the mineral licenses—the applications are not so great as in former years.
4148. Have many of these leases have been allowed to lapse and taken up again? Yes; any lands which are supposed to be well situated are retaken up.

4149. Is that the principal portion of the application money you have received these twelve months—for forfeited leases re-applied for? Not altogether—in some cases for cancelled leases, and some for new land. J. F. Williams, Esq.  
23 Oct., 1889.
4150. In what particular year were the principal receipts, and the amount? In March, 1888, the amount taken was £7,001 10s.
4151. Was that for one month? Yes; in the February preceding, the amount was £4,372 5s., and in April £4,109 7s. 6d.
4152. That was nearly £16,000 in three months? Yes.
4153. That was, of course, during the great boom you had? Yes.
4154. Then you must have had, previous to the boom, some years which have been materially less than the receipts for this year? No; in October there was £1,950 taken. That was 50 per cent. under what was taken for the whole year. The receipts for this last year were £2,595. In October of 1887, they were £1,950; in November, £1,622; and in December, £1,059. This last year is by far the worst of any.
4155. Do you notice whether this year there has been a gradual decrease—that each month has been getting worse, or has it been a sudden collapse? No, the collapse has not been sudden. Each month has not been getting less. The average, perhaps, is between £250 and £300 a month.
4156. How many leases are there in this district in active work? I have taken the number of leases in actual force from the last *Gazette*, and there are 1,171 in the Silvertown district. That includes Broken Hill.
4157. Is Broken Hill included in the Silvertown district as the Warden's district? Until the last twelve months it was.
4158. But do you take in all Broken Hill? No; there are two districts.
4159. Can you give us the number of leases in active operation in this district, independent of Broken Hill? No, I have not got them separately. I have the lot together—1,171.
4160. I suppose a very large majority of these leases are at Broken Hill, and not here? No; the Silvertown district is a larger one than Broken Hill, and I think you may divide them equally.
4161. Can you give any idea of the number of claims in this district which you know to be in active work? No.
4162. Is there any possible way of getting that return? It could be got with a good deal of labour.
4163. Do you think there is a large number of lease applications lying dormant now which ought to be cancelled, or labour conditions insisted upon? Yes, I am sure there is.
4164. Do you not think there are more leases held in that manner—without the labour conditions being complied with—than there are leases in active work? Yes, I think the great majority are idle. I believe it is the rule of the Mines Department not to wish to cancel leases where they find there has been a great expenditure. They are lenient to the holders of these leases.
4165. But that must be detrimental to this district? Yes, it would be far better if the lessees were compelled to work.
4166. Can you say whether there are many of these leases—which are known to be payable leases—which are lying idle for the want of the fulfilment of the labour conditions? I hardly know what is payable and what is not.
4167. Do you have many complaints in regard to these labour conditions not being complied with? I have inquiries, perhaps, several times a day, as to whether such and such blocks are cancelled or void. People find there is no work being carried out upon them, and they come to the office to know whether the ground is held under lease or not, or whether it is cancelled.
4168. Has the Warden lately received many communications from the Minister to inspect those leases and see whether the labour conditions are being complied with? He receives some of them every week.
4169. And of course attends to that business? No doubt he gives it attention. He sends some one, if he does not go himself.
4170. In your opinion, is the mining industry in the Silvertown district in a flourishing state or not? No; I should say it was in a depressed state. It is of no use a single party of miners taking up land here. Unless they have a large capital they cannot work. Mining requires a large amount of capital to be invested before there can be any returns.
4171. That is the particular class of mining in this district? Yes; silver mining.
4172. And that accounts in a great measure for many of the labour conditions not being complied with. The ground is taken up by speculators, and if they cannot get the capital invested in the mines they stand idle? Yes.
4173. *Mr. O'Sullivan.*] You said a number of leases had been allowed to lapse and afterwards taken up? Yes.
4174. Were they taken up by the same persons or by fresh ones? Usually by fresh applicants.
4175. Does that suggest the idea that these lands have been merely used for speculative purposes? I cannot tell for what purposes they are taken up, I never inquired. If they make the application that is sufficient for me.
4176. If any applications are made, how long is it before the leases are issued? I have noticed the Mines Department recently has been very energetic. I have lately seen leases come up which have been applied for only five or six months ago. I have noticed other times when it has taken eighteen months, and two and three years.
4177. Has it been the practice for some persons to be able to have their application pending for eighteen months or two years, and during that period to pay no rent at all? When an application is made, and the first year's rent is paid, there is no rent due until after the lease is issued. If it is pending eighteen months or two years, there is no rent accruing.
4178. Then for that time they monopolise these lands, and hold them for speculative purposes without paying money to the Crown, and they avoid the labour conditions? They are not bound to go to work until they get the lease.
4179. But has that practice prevailed in this district? It does to a large extent.
4180. Then we cannot gauge the mining prospects of this district by the number of applications for mineral leases? I expect not.

John Saunders, Esq., Clerk of Petty Sessions, Silverton, sworn, and examined :—

- J. Saunders, Esq.  
23 Oct., 1889.
4190. *Chairman.*] You are Clerk of Petty Sessions at Silverton? Yes.  
4191. How long have you been here? Since August, 1884.  
4192. What is the record of fees received in your department? I can give them from 1883 to the 30th of last month.  
4193. Can you give us the return from all sources from 1883 to the present? The total is £6,019 9s. 10d.; from all sources. The last twelve months was £1,016. The average receipts are about that sum.  
4194. What do the fees consist of? Fines, hawkers' licenses, and publicans' transfers.  
4195. How many hotels are there in this place? In the Silverton district there must be about twenty.  
4196. How many are there in the town of Silverton? About eight.  
4197. What is your opinion as to the state of the district at the present time—as to its advancement or otherwise? At the present time it looks very healthy. I think the mines in and around Silverton at the present time look better than ever they did.  
4198. You base that statement on the fact that they are being worked systematically? Yes, some of the mines are. Why Silverton is so quiet and dull is on account of Broken Hill having all the attraction.

Mr. Henry Browne sworn, and further examined :—

- Mr. H. Browne.  
23 Oct., 1889.
4199. *Chairman.*] You are a merchant in a large way of business at Silverton? Yes.  
4200. And during the four years, ending March, 1889, you have paid away for goods passing through your hands between £60,000 and £70,000? Yes.\*  
4201. And there are other firms in Silverton doing business? Yes, equally as well.  
4202. How many? Four others, and their output will probably be as large as mine.  
4203. And that money has all gone out of the country? Yes, into another colony, to my regret.

\* NOTE (on revision) :—What I meant in reply to this question was that to March, 1890, with like average, the amount stated would go through, otherwise one-fourth must be deducted, and it would be £45,000 for the three years ending March, 1889.

## APPENDIX.

## PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## Railway from Nyngan to Cobar.

## SECTIONAL COMMITTEE.

## APPENDIX.

## A.

## COBAR, NYMAGEE, AND NYNGAN TRAFFIC.

Sir,

Railway Station, Nyngan, 15 October, 1889.

I have the honor to forward you copies of returns of Cobar, Nymagee, and Nyngan traffic, for the information of your Honorable Committee, as requested by the Sectional Committee, who visited Nyngan on Saturday the 5th October.

These are exact copies of returns made out for the information of the Railway Department at various times.

The Secretary, Parliamentary Standing Committee,  
Public Works Office, Sydney.

I have, &amp;c.,

ALBERT S. ROWLING.

RETURN of Tonnage of Goods inwards and outwards, and Revenue thereon, 1 January, 1887, to 19 March, 1888.

Tonnage—Inwards.	Revenue.	Tonnage Outwards.	Revenue.*
1887. 6,459	£ s. d. 19,052 0 0	7,491	£ s. d. 948 4 2
To 19 March, 1888. 1,525	4,782 4 6	951	13 18 0

\* Outwards Revenue is only what is paid at Nyngan station before despatch.

A COMPARATIVE RETURN showing number of passengers, tons of wool, total tonnage, and total revenue derived from Nyngan each month for the years 1887, 1888, and 1889.

## C.

## THE SHIPPING TRADE ON THE DARLING.

THE following facts bearing upon the above subject were obtained during the Sectional Committee's stay in Wilcannia:—

After the steamers leave Wentworth for a trip up the Darling many snags and rocks are met with. The navigation grows more difficult and dangerous after Wilcannia is passed, and the river takes a most tortuous course, its route in many places resembling the figure 8. Very dangerous rocks are situated at Kennedy, near Murtee, and at Mara Island. At low water the rocks are extremely dangerous nearly all the way between Wilcannia and Bourke. It takes 8 feet of water at Bourke to give 4 feet over the rocks at Curranyalpa, near Tilpa. The rocks are 4 miles long, and they are often spoken of as "Acre's Rocks." At Tooralee station there is another series of dangerous rocks. It is utterly impossible to pass the rocks at Curranyalpa or Tooralee when the river is low. It is at points like these that the steamers are detained when the river suddenly falls.

The following are the distances of the various points at which steamers touch on the Darling River. They were obtained from a reliable source, and may be depended upon as approximately correct. No official measurements of the Darling River appear to have been made:—

## RATE OF PROGRESS OF FLOOD-WATERS IN THE RIVER DARLING.

A pamphlet issued by the Merchant Shipping and Underwriters' Association (Limited) of Melbourne, says:—"The rate at which the flood waters come down the river is not generally known, and we therefore give the following to serve as an approximate guide for those who are desirous of obtaining information on this point:—A big rise took place in the head waters and sources of supply in the river Darling in June and July, 1886. The river first commenced to rise at Bourke on 6th June, and at Wilcannia on 17th of that month, the fresh reaching Wentworth during the night of 3rd July, twenty-eight days later on than its appearance at Bourke. The distance from Bourke to Wilcannia (by river) is 391 miles; from Wilcannia to Wentworth, 505 miles; or a total of 896 miles. During the first of these stages the water travelled at the rate of 35·54 miles per day, but for the latter portion it moves along at 31·56 miles per day only. The whole distance from Bourke to Wentworth (the junction with the Murray) was covered in twenty-eight days, at the rate of 32 miles a day, or 1 $\frac{1}{2}$  miles per hour. In summer time it would be necessary to add some five or six days to this, to allow for the greater absorption of the river bank, evaporation, &c."

## DISTANCE TO POINTS IN SOUTH AUSTRALIA.

The distance from Wentworth to Goolwa, where wool is transhipped for Port Victor, is 617 miles. From Wentworth to Morgan (N. W. Bend), where wool is sometimes placed on the railway to Adelaide, is 388 miles. Goolwa is 229 miles from Morgan.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RAILWAY FROM KIAMA TO NOWRA.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of constructing a line of railway from Kiama to Nowra," have, after due inquiry, resolved that it is expedient the railway should be constructed; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed railway is intended as an extension of the Illawarra railway, from its present terminus at Kiama, to Nowra, a distance of 22 miles and 46 chains, and it is put forward also as a portion of a line which ultimately may be carried on to Jervis Bay. The towns of Kiama, Gerringong, Berry, and Nowra will be directly served by the extension, and several outlying places will be within convenient reach of the railway. It is not proposed to take the line into the town of Nowra. The proposal is that it shall stop on the north bank of the Shoalhaven River, the reasons for this being the intention to ultimately carry the railway on to Jervis Bay, and the necessity in that event for crossing the river at the most convenient spot, and a desire to avoid any premature expenditure in constructing a bridge across the river. For half the distance the railway will run close to the coast, a circumstance unavoidable in consequence of very high land preventing the line from being taken further inland, and the steepest gradient will be 1 in 50. From the official description of the proposed railway, published as an appendix to the evidence, it will be observed that the line will be taken from its present terminus across Wright's Creek, and thence into Kiama by a tunnel 506 yards in length. Passing on from Kiama it will run along the western side of the South Coast Road, and then skirt the coast for  $1\frac{1}{2}$  mile, going in this distance through four tunnels, 429, 242, 407, and 440 yards in length, respectively. A number of small water-courses will be crossed on to Miller's Flat, and the line will then pass over the Main South Coast Road, and by the village of Gerringong at a distance of about 40 chains from the centre of the village, thence crossing the Nowra road, and passing in a south-westerly direction along the flats at the head of Crooked River. A spur of the Main Coast Range is crossed at a point about 3 miles from Gerringong, and the line will then proceed across a saddle of the Cooloongatta Range to the valleys of the Broughton and Broughton Mill Creeks, which creeks will be crossed by a series of timber openings, and thence across the Berry and Cooloongatta Road about 10 chains to the east of the township of Berry, and along the eastern side of the Main South Coast Road to Bomaderry Village, crossing the Bomaderry Creek, and passing on to the Shoalhaven River, the north bank of which is reached at a distance of 92 miles 45 chains from Sydney. A temporary deviation for station purposes is to be made from the main line close to the Shoalhaven River, and terminating at the Main Nowra Road, about 1 mile from the township of Nowra.

2. The estimated total cost of the railway is £381,390, or about £17,000 a mile. This estimate is less by £60,273 than the estimate of total cost laid before the Legislative Assembly when the railway was referred to the Committee, the difference being brought about by the carrying out of some deviations, and by a revision of the estimate of prices based upon the detailed information at hand since the

Description of  
the proposed  
railway.

Estimated  
cost of the  
proposed  
railway.

the line has been permanently staked, cross sections taken, and everything settled. The most expensive portion of the railway is the first five miles, particularly the portion that will take the line from its present terminus north of Kiama into that town. This first five miles will cost, according to the evidence of the Acting Engineer-in-Chief for Railways, half the total estimate, so that while for the whole distance—the 22 miles 46 chains—the cost per mile is about £17,000, or, as stated by the Acting Engineer-in-Chief, £16,895, the cost for the distance beyond the expensive five miles would be about £11,000 a mile. £121,000 is included in the estimated total cost for the construction of tunnels.

Views of the Railway Commissioners on the proposed line.

3. In accordance with the requirements of section 13 of the Public Works Act the Railway Commissioners have reported on the proposed railway, and they recommend that it should be constructed, their recommendation being based chiefly on the richness of the district and the great evidence seen by them in it of progress. Their calculations of annual cost and estimate of revenue are based on an estimate of the cost of construction amounting to £538,663. This is £97,000 more than the amount of the estimate put before the Assembly and referred to the Committee, the difference being represented by the omission from the Assembly estimate of the cost of a bridge over the Shoalhaven River, and the additional cost of a deviation for station purposes. Calculated upon the reduced estimate of total cost, the amounts set down as annual interest, and permanent-way maintenance, would be less than those shown in the report; but in either estimate the calculations represent, in a comparison between the charges and the estimated revenue, a considerable loss. This, the Commissioners appear to anticipate, will in time be met by the progress of the districts through which the railway will go.

Form of the Committee's inquiry.

4. The Committee took evidence in Sydney from the Under Secretary for Public Works, the Acting Engineer-in-Chief for Railways, the District Engineer specially engaged in connection with the route of the proposed railway, and the Goods Superintendent of the Railway Department, who had personally gone into the calculations of probable traffic from the line; and they then appointed a Sectional Committee to go through the districts concerned in the proposed railway, inspect the route, and take evidence from local witnesses. The result of the work of the Sectional Committee will be found in a report, with minutes of evidence and appendices, published with this Report of the Committee.

Principal points of the inquiry.

5. Many matters directly associated with, or incidental to, the inquiry have been kept in view by the Committee; but the principal points upon which they have considered it necessary to obtain information are the following:—

- (1.) The reasons urged in favour of the construction of the railway.
- (2.) Whether the route chosen is the best that could be obtained.
- (3.) Whether the estimates of cost have been carefully prepared.
- (4.) What are the prospects of revenue from the railway.

Reasons urged in favour of the railway.

6. Two prominent reasons are urged in support of the proposal to construct the railway. The first is, that the richness and importance of the district through which the line would pass justify its construction; the other is, that keeping the railway out of the town of Kiama is unjust to the population of that part of Illawarra, and injurious to the traffic of the railway. An examination of the report of the Sectional Committee will show that "the country through which the line will pass is highly fertile, and more densely and continuously settled than any other dairying and agricultural district" of similar extent in the colony; that a number of thriving localities will be accommodated by the railway; that there is ample room for the settlement of a large number of people on the areas of Crown land, which, in the Shoalhaven district, are still unalienated, and which may be made very profitable; that the existing farming and dairying industries are carried on extensively, and may be considerably enlarged; that the mining resources of the districts are such as to promise a considerable traffic on the railway; and that an existing fishing industry and a timber trade only require facilities for speedy conveyance to market to make them important and profitable. The Sectional Committee point out also the facts that the south coast district is a very favourite resort of tourists, and that the proposed railway will give access to picturesque and attractive scenery in the districts of Gerringong, Berry, and Shoalhaven; and they call attention to the importance of Jervis Bay as one of the most capacious and valuable harbours in Australia. Rich as the Illawarra district generally is, the richest portion of it lies along the route of the

the proposed railway. So far as the farmers or proprietors of the land have been able to do, they have availed themselves of the facilities offered them by the railway to the neighbourhood of Kiama; but south of Kiama, beyond a certain point, the residents find the railway too far away to be of service, and they are obliged either to secure a market for their produce in their midst, which is not as profitable as markets further afield, or to make for the nearest harbour on the coast and ship their produce to Sydney by steamer. The district immediately around Kiama is not likely to increase to any considerable extent in population, but, with sufficient inducement, it may advance materially in production, and further south, where there is a wider area available, both population and production will, with the facilities offered by the railway, probably increase very greatly. A striking fact in favour of the proposed railway is that the present railway has succeeded, not only in attracting a large traffic which appears to be steadily increasing, but it has decreased, if not altogether destroyed, both the passenger traffic and the traffic in produce which, previous to the construction of the railway, was carried on between Kiama and Sydney by steamer. The stoppage of the railway, at present outside, and to the north of Kiama, interferes with the railway traffic in produce as well as inconveniences residents in and around Kiama. Passengers have to travel a mile and a half between the present railway terminus and the town of Kiama, and while this distance is a serious inconvenience to railway travellers, it is also a great obstacle to farmers further south who may desire to send their produce to market by railway. Much of this produce—milk for instance—is of a perishable nature, and can be safely taken in vehicles by road only a certain distance. Beyond that distance its condition becomes affected, and it does not pay in that case to convey it. The extension of the line would obviate this, and also improve the facilities for passenger traffic.

7. The route of the proposed railway appears from the evidence and from the personal examination made by the Sectional Committee to be the best that could be chosen, except that the Sectional Committee are of opinion that the line should be taken into the town of Nowra. Special efforts seem to have been made, not only to secure a desirable route, but to make as many improvements as possible. As far back as 1883 the proposed railway was before Parliament, an amount being voted in that year for the line, and the project has therefore been under consideration for a period of six or seven years. In 1888 an engineer in the Department of the Engineer-in-Chief for Railways was sent into the district to improve the grades and reduce the earthworks, and some considerable alterations were made. All that is possible to be done in the way of improvement this engineer states he has done; neither time nor trouble has been spared, and he considers the line, as now proposed, to be by far the cheapest and the best that could be adopted. The line runs close to the coast, partly from necessity, and partly because that route is cheaper than one further inland, while it is just as convenient as any other to the general body of the population. It would be possible to avoid the expensive mile and a half into Kiama from the present terminus by going round, but it would have to be done by crossing an extensive and deep swamp, where a large amount of earthworks would be required, and by traversing other difficult country, the expense of doing which would be so great that the line would cost £81,000 more than that recommended. It would be possible also to take the line round by Jamberoo, which lies a few miles to the west of Kiama, but it would have to be done at great additional expense and with questionable advantage. Jamberoo, it is urged, will be best served by a branch line. The stoppage of the proposed railway outside Nowra is a circumstance not regarded with favour by the people of Nowra, and they have from time to time made strong representations on the subject. The explanation of the railway construction officers regarding the intention to terminate the line for the present on the north bank of the Shoalhaven River, and about a mile from Nowra, is that the contemplated terminus of the railway is Jervis Bay, and that it is not necessary in order to get to Jervis Bay for the line to go into Nowra. The Sectional Committee who visited the district consider the line should be taken to the town in order to secure the maximum amount of traffic, and that it is unadvisable to have any deviation from Bomaderry to Broughton Creek Road, in view of the great necessity to construct the bridge at as early a date as possible.

8. The estimates of cost in relation to the railway have been subjected to revision, and there does not appear to be any reason to doubt that as they now stand they have been carefully prepared. The engineer who specially examined the line for the purpose of making improvements, and who seems to have done his work skilfully

skilfully and well, does not think it possible to reduce the cost beyond the point already reached, and the Acting Engineer-in-Chief for Railways considers that after the first five miles, which will be unavoidably expensive, the line will be a comparatively cheap one. The estimates of cost are for a single line; the wisdom or otherwise of providing for a double line depends, the Acting Engineer-in-Chief points out, on what the traffic is likely to be in the future, and it is not expected that the traffic, though sufficiently satisfactory for a single line, will develop with the rapidity that would justify making immediate preparations for a double line.

Prospects of revenue from the railway.

9. One of the most important matters in connection with a proposed railway is that which relates to the question of revenue, and the Committee have endeavoured to ascertain, with as much completeness as possible, what the actual revenue from the proposed railway will probably be. It was made known to them at the commencement of their inquiry that the Railway Commissioners regarded the prospects of traffic on the line as sufficiently good to justify their approval of the proposal to construct the railway, and the Committee then proceeded to examine one of the principal traffic officers of the Department in order to ascertain the grounds upon which the Commissioners had arrived at their decision. That officer informed the Committee he had personally examined the calculations of traffic in regard to the line, and had gone over much of the route, and though any such calculations must, to a certain extent, be matters of assumption, there were sufficient grounds for believing the traffic would be good. The proposed line would improve the present trade by railway with Kiama and the district in its immediate vicinity, and the extension on to Nowra would, at any rate, pay working expenses. The traffic from Nowra itself was not likely to be remunerative, but "the districts surrounding it, and beyond it, would give a good traffic when won." The traffic on the present line to the neighbourhood of Kiama, he states, has steadily increased, and has stimulated the productiveness of the country which it serves; and the district through which the proposed extension will go "is a rich one, and should develop in the same way as other districts have done." This evidence was followed by the visit of the Sectional Committee to the districts concerned in the railway, and from their report and the evidence of witnesses examined by them it will be seen that the prospects of a profitable traffic are satisfactory. In the Sectional Committee's report attention is drawn to the remarkable circumstance that for the first year during which the railway to Kiama was in operation, the increase of revenue from the traffic on the line was at the rate of about £800 a month. The coaching traffic between the Shoalhaven district and Kiama at the present rates amounts to £400 a month, or nearly £5,000 a year. This traffic would assuredly pass to the railway if it were constructed, and the general tenor of the evidence taken by the Sectional Committee, confirmed by their report, is that while the passenger traffic on the railway would probably be large, the carriage of produce would be satisfactory, because the facilities for its rapid and cheap conveyance to market would not only attract the trade already available, but would stimulate production, and bring about a very large increase. Water carriage, doubtless, to more or less extent, will be always in competition with the railway; but so far as the results of constructing the railway to Kiama show, the railway line is largely preferred by both passengers and producers, and there is everything to indicate that it will be the same as the line is taken further southwards.

Resolution arrived at by the Committee.

10. The resolution passed by the Committee in relation to this proposed railway was arrived at on Tuesday, 18 March, 1890.

Mr. Humphery, moved—

"That in the opinion of the Committee, it is expedient the proposed railway from Kiama to Nowra, as referred to the Committee by the Legislative Assembly, be carried out."

The motion was seconded by Mr. O'Sullivan, and after discussion, passed on the following division:—

Ayes, 7.

Dr. Garran,  
Mr. Humphery,  
Mr. Trickett,  
Mr. Garrard,  
Mr. Dowel,  
Mr. O'Sullivan,  
Mr. Hurley.

Noes, 3.

Mr. Cox,  
Mr. Copeland,  
Mr. Tonkin.

J. P. ABBOTT,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 22 April, 1890.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## MINUTES OF EVIDENCE.

### RAILWAY FROM KIAMA TO NOWRA.

WEDNESDAY, 4 DECEMBER, 1889.

Present:—

The HONORABLE ANDREW GARRAN (TEMPORARY CHAIRMAN).	
The Hon. FREDERICK THOMAS HUMPHERY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JAMES EBENEZER TONKIN, Esq.	JOHN HURLEY, Esq.

The Committee proceeded to consider the proposed railway from Kiama to Nowra.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Temporary Chairman.*] Have you brought any preliminary statement? Yes, I have, sir.
2. Perhaps you will read it? The proposal before the Committee is for the extension of the railway from Kiama to Nowra, a distance according to the description of the line laid upon the Table of the House in August last, when Mr. Bruce Smith submitted the proposal, of 22 miles 67 chains. Since then, however, some minor deviations ordered by Mr. Whitton have been carried out, and the length has now been reduced to 22 miles 46 chains. A revised estimate has also been prepared amounting to £381,390, the estimate as given to the House, being £441,663. Mr. Deane, the Acting Engineer-in-Chief, will give full particulars regarding these matters. I now hand in a description of the line, together with the report of the Commissioners for Railways. It will be seen that the Commissioners' estimate of the cost is £538,663, the difference between that sum and the estimate of the line given to the House in August, viz., £441,663, being due to the omission of the cost of the bridge over the Shoalhaven River which was estimated by Mr. Palmer in 1886 at £100,000, and the addition of £3,000 for a deviation for station purposes, which make a total net deduction from the cost, as estimated by the Commissioners, of £97,000. I also hand in a pretty full *précis* of the case, which will probably supply all the details which may be required, and a plan, which the Committee will see is signed by the Chief Draftsman of the Lands Department, and which shows respectively the alienated, unalienated, and reserved lands in the district affected by the line, the figures being—alienated, 195,700 acres; unalienated, 115,100 acres; reserved, 73,100 acres. With regard to objections which have been raised, and the fears which have been expressed in connection with the proposal to stop for the present at the north bank of the river, I may, perhaps, be permitted to read extracts from the report of a deputation which waited upon Mr. Secretary Bruce Smith on the 29th August last. "There was," the Minister said, "a great mistake made by the people of the district on this subject (*i.e.*, the determination of the Government to terminate the line at the river). Like the inhabitants of many other towns, because a railway came their way they supposed its sole object was to reach them, and they grumbled, therefore, if it did not run right into the centre of the place. This idea had already cost the country many thousands of pounds. It was intended eventually to take this line on to Jervis Bay, and (as he showed them from a map of the route) the line would then cross the river at a point about three-quarters of a mile away from the now suggested temporary terminus, and it was only to afford them greater convenience that it was proposed to construct this three-quarters of a mile of temporary line away from the line proper, in order to bring it as near as possible to the town, without going to the immediate heavy expense of a bridge over the river. When the line was continued further this temporary line would be taken up, so they could see that the fears of another township springing up were quite groundless.
3. You mention here that there are 115,000 acres unalienated; is it understood that a large portion of that will be saleable if the line is made? I did not get information upon that. I thought you would rather get it direct from the Lands Department. The gentleman whose signature is there (Mr. Saunders) will be able to give you that information.
4. You would rather we should ask Mr. Deane questions on all the engineering points? Yes.
5. How long has this project been under the consideration of the Department? I think you will find it is stated in the *précis*.
6. It appears that in 1883 Parliament voted £804,000, and so, practically, this project has been six years under consideration? Something of that sort.
7. You see the money was, according to this, actually voted in 1883? Yes.
8. There has never been any second vote on the subject I suppose? No; I think not. That is the only vote of which I am aware.
9. Do you know whether the money was actually borrowed? I cannot say that. I merely say it was included in the loan estimate.

J. Barling,  
Esq.  
4 Dec., 1889.

- J. Barling, Esq.  
4 Dec., 1889.
10. This saving of £100,000 is only an apparent saving? Of course it is only an apparent saving.
  11. This temporary line that you make—is there any real necessity for that; could not the line on the road to the bridge serve as a place for a terminus? The reasons for taking that particular part will be given better by Mr. Deane, as there are engineering considerations in connection with that.
  12. And Mr. Deane could tell us all about the trial survey more inland? He will tell you all about the trial survey.
  13. The project, as now put before us, varies from these figures in the Commissioners' paper? Yes; in the particulars which I have described.
  14. But principally in the postponement of the bridge? That is the principal thing.
  15. In all other respects it remains the same substantially? Substantially the same.
  16. And is the Committee to understand that the department recommends this project? They recommend the project.
  17. Can you tell us with regard to the existing line from Sydney to Kiama—taking it in sections—how the parts of that line pay relatively; take it, for instance, between Sydney and George's River? That will come under the Commissioners for Railways. They have the traffic arrangements.
  18. You are not in a position to tell us that? It will come direct from them.
  19. Mr. Kirkcaldie will be prepared to give us that information? I suppose the secretary to the Commissioners, Mr. McLachlan, would, but I cannot answer positively on that point. It may be interesting to the Committee for me to state that from the annual report of the Commissioners, which has just been published, I see that the total cost of the railway from Sydney to Kiama, a length of 70 miles, was £1,725,451, or £24,649 per mile.
  20. It does not say the net profit? I have only just had this report, and therefore I am not in a position to be examined as to that. That comes under the Railway Commissioners.
  21. *Mr. O'Sullivan.*] Allowing for the reduction of £97,000 through not erecting the bridge, and the construction of this short line to the present Nowra bridge, I find the total working expenses would be £15,458 per annum, and the probable receipts £6,157? You are quoting I think from the Commissioners' report.
  22. That leaves a deficiency of £9,301 per annum? Yes.
  23. I understand the Department recommends the line even though that deficiency is known to exist? Undoubtedly.
  24. Can you give the Committee any reason why that line hugs the coast for a considerable distance and then branches off in a wide detour to Nowra? That is an engineering question that Mr. Deane will be able to answer.
  25. This is a portion of the ultimate line to Jervis Bay? Yes.
  26. *Mr. Tonkin.*] There is a difference still I cannot get at exactly;—a difference of £54,000? That is explained. The estimate has been reduced since the 30th August, when it was about £440,000, and Mr. Deane will give you all the particulars with regard to that.

Henry Deane, Esq., Acting Engineer-in-Chief for Railways, sworn, and examined:—

- H. Deane, Esq.  
4 Dec., 1889.
27. *Temporary Chairman.*] Would you tell us in the first place how this railway stands with respect to gradients from Kiama to Nowra? The steepest gradient is 1 in 50.
  28. I observe that for half its length it is what we might call a coast line? Yes.
  29. I suppose you are fenced in by the spurs coming close down to the coast? Yes; there is very high ground close to the coast. There is no help for it—you could not get further inland.
  30. Making a line like that close to the coast we can draw traffic only from the one side? Yes.
  31. And we are in close competition with the steamer traffic? Yes; that is between distant ports.
  32. In both the inter-coastal traffic and the traffic to Sydney we are in competition with steamers? Yes.
  33. So in both these respects we are making the line under the greatest possible disadvantages? Yes, in that respect.
  34. What I mean is that a line is more likely to pay if you can draw traffic from both sides? Certainly.
  35. In this case we draw it only from the one side? Yes.
  36. And we are in competition with cheap water carriage? Yes.
  37. But we have to look upon it, I suppose, not merely as a local line, but also as a through line to Jervis Bay? Yes.
  38. I suppose that is one of the considerations that guided the Department? Yes. The object was to reach Jervis Bay. This is a portion of that extension.
  39. We may say that Jervis Bay is for the present our objective? Yes.
  40. And we must take this route to get there? Yes.
  41. With regard to crossing the river, do you go to the head of navigation to go to Nowra? Yes—what is practically the head of navigation for coasting vessels.
  42. If you had to cross the river lower down would you have to have a swing-bridge? Yes; because steamers go right up to Nowra.
  43. Of course if Huskisson or Jervis Bay is the point you are looking at, a straighter line would be to cross the river nearer Numba—nearer the mouth of the river? There is a great bend in the line to get right to Nowra.
  44. Was the object of that to avoid crossing the river at a navigable point? Partly on that account and partly to serve Nowra.
  45. You could have gone across nearer the mouth of the river? That I cannot say, as I do not know what the foundations would be. As it is we have had some difficulty in finding a suitable place for crossing the river.
  46. Did you have the same difficulty there as you have had with the rivers nearer Sydney—very deep foundations? Yes. The line as it was first laid out, and as shown on the Parliamentary plan, was to cross the river a little below the road bridge, but when borings were taken to try the depth at which foundations could be reached, we had in one bore to go down 160 feet before getting to anything sound, consequently that crossing was abandoned, and other borings were not taken. A new line was sought about a quarter of a mile lower down the river, where there is a reef of rocks. We have got a fairly good crossing there.

H. Deane,  
Esq.  
4 Dec., 1889.

47. What depth have you to go to for your foundations? The greatest depth there is 85 feet.
48. What depth had the road bridge to go to get a foundation? I do not remember exactly; but there were very great difficulties. There was a settlement in some of the piers after the bridge was built.
49. You get a good crossing now? Yes, a very good crossing.
50. What I mean is, the department has not attempted to make a straighter line between Gerringong and Huskisson than it is now? No.
51. You think the difficulties of the bridge would be very considerable? Yes.
52. And the stoppage of navigation? Yes.
53. You think it is a wise thing to make this detour inland towards Nowra? Yes.
54. Have you any knowledge of the distance between Nowra and Huskisson, and of the country? No, I have not.
55. I see a rough line marked on this plan;—is that any guide? That is the line that has been surveyed and staked out.
56. How does that stand for difficulties? There is no difficulty.
57. If we reach Nowra we can go on to Huskisson without any difficulty? Oh, yes.
58. Do you think it is equally important that we should get to Jervis Bay as it is that we should get to Nowra? Jervis Bay is one of the finest harbours on the coast. The railway would tap a fine district, I believe, ingoing down there.
59. If we were to go to Nowra we would go for an established population, and an existing agricultural traffic? Yes.
60. If we go to Huskisson it would rather be for national purposes I presume? I think so.
61. There is no considerable traffic there at present, is there? The line would also have the effect of serving the country further down. The produce now comes by sea. The line would also have the effect of facilitating settlement.
62. Do you know anything of the country between Nowra and Huskisson? I have not been beyond Nowra.
63. Have you personally been over the route from Kiama to Nowra? Yes. That is to say not over every mile of it, but I have examined the country. I have been over the route generally.
64. What are your ruling gradients between Kiama and Sydney? Between Sydney and Clifton—that is Coalcliff—1 in 40, beyond that 1 in 50.
65. Could you try to get it down to 1 in 50? We got it down to that on the further length.
66. You could not avoid the 1 in 40 between Sydney and Wollongong without going to great expense? No.
67. You have to bring your coal up 1 in 40 from Wollongong? Yes.
68. Has there been any alternate line surveyed more inland than this coast line, from Kiama or Jamberoo? Not from Kiama, but from a point farther back—Albion Park.
69. Do you know anything of that line? I have not been over it, but I know you have to rise very considerably, and it is an expensive line too.
70. You go up and down, I suppose? Yes. There are grades of 1 in 40. Possibly they might be eliminated, but I do not think so. The summit level is 1,450 feet above the sea.
71. You have to rise after leaving the Illawarra Lake and then descend to Nowra? Yes, to Berry.
72. And then rise again? You rise after leaving Albion Park. Near Albion Park the line branches off and you rise ultimately to an altitude of 1,450 feet, and then you drop down again. You join the present route about Berry—Broughton Creek it used to be called.
73. Would that more inland route serve the coal mines where the coal crops up in the side of the mountain at the back of Kiama? I am not exactly aware where the coal crops out, but I have no doubt it would. It would be nearer than the present line, but a portion of the present line would have to be abandoned or worked as a branch. But I think the chief objection to that line would be its expensive character, its heavy grades and long tunnels, and the height you would have to rise, 1,450 feet—unnecessarily I might say.
74. You think all those engineering objections are conclusive against it? That is my opinion.
75. Then if these collieries, which at present are only prospective collieries, had to be developed, they would have to make separate branch lines down to the coast? Yes.
76. You do not see any other alternative? No.
77. That matter has been carefully considered by the Department, I presume—that alternative line? Yes, it has.
78. Carefully worked out? Yes.
79. Have you looked into it personally at all or taken the judgment of your subordinates? I cannot say I have looked into it very closely, because when I began to have anything to do with the surveys of any of the lines this line had already been adopted.
80. Can you tell us whether Mr. Whitton gave the preference to this coast line over the inland line? Yes.
81. He did consider that inland line? Yes.
82. And decided in favour of the coast line? Yes.
83. You know that? I am certain of that.
84. With regard to this short temporary line to Nowra, what is the engineering difficulty in the way of making the terminus on the main route? There is no engineering difficulty, but it would leave the station so far away from the town.
85. Then it is purely to accommodate the Nowra people? Yes.
86. Till you make the bridge? Yes.
87. Then you would take that line up? Yes. A good deal of the material will be utilized for the extension of the permanent line.
88. Will your terminus be close to the road bridge? Yes; I have a sketch plan here. The red line shows the present adopted line, the black line shows the line as originally laid out and where it had an impracticable crossing of the river. A branch is also shown by a red line going alongside Bomadery Creek and terminating at the main road.
89. What do you estimate will be the cost, first of making this additional branch line, and then of taking it up afterwards? The cost of making the branch line I have estimated at £3,500, and the materials

that

- H. Deane, Esq.  
Dec., 1889.
- that could be utilized would be worth about £1,500, so that the cost of the line itself, after making all deductions, would be £2,000.
90. Have you any land to buy? That does not include land, but from what I have heard I am inclined to believe that the land would be given, either for nothing or for a very nominal sum.
91. No arrangement has been made for the temporary use of that land? No arrangement has been made.
92. What is the length of that branch? 52 chains.
93. Considering that will all ultimately be a waste of money, do you think it is worth while to postpone the bridge, seeing that one object of making the line to Nowra is to go on to Jervis Bay? If it were certain that the line would be constructed in the near future I would recommend the bridge; but if it is to be deferred for a number of years I consider that the branch should be made.
94. But I understood you just now that one great inducement to put up with the loss which this line must for a time involve is that it is a national line to Jervis Bay? Yes.
95. The mere traffic to Nowra would of itself scarcely justify the outlay? I have not expressed any opinion about that. I believe that there will be a great deal of produce carried along this line, and that the section from Kiama to Nowra is in itself a very important section of the line.
96. Still a large part of its justification lies in the fact that it is two-thirds of the distance to Jervis Bay? Yes; it was the Government's intention to carry the line on to Jervis Bay, and of course this is only a portion of it.
97. That being the case is it worth while to spend any considerable sum of money on a merely temporary station? Not a considerable sum of money, but I would say that there would be a saving in making this temporary branch if the construction of the line to Jervis Bay is deferred for a few years. I have made a careful re-estimate of this line, and I find that the bridge over the Shoalhaven might be built at the present crossing for about £60,000.
98. Without reducing the substantial character of the bridge in any way? Without reducing the substantial character of the bridge; and the interest on that at  $3\frac{1}{2}$  per cent. would be £2,100 per annum, so that if the line were delayed for two years the interest on that sum would more than cover the cost of the branch even without deducting the value of the materials.
99. You do not think that you are under-estimating the outlay by saying this branch will only cost £2,000 to make and unmake? £3,500 less the value of the materials.
100. The total waste, so to speak, would not be more than £2,000? It need not be. We could do it for that.
101. If you made this station on the line of your railway on the northern side of the river, how much extra journey would you give the Nowra people? They would have to go another three-quarters of a mile.
102. Not more than that? No.
103. It is to save that three-quarters of a mile that you incur this extra expense? Yes.
104. The line is now staked out—do you think that on the whole that is the best line you could make between the two points? Yes.
105. And the gradients are as good as you could expect to have on so undulating a country? Yes.
106. And as good as you could expect to get on any further extension down the coast? Yes, I think they will be quite as good as that.
107. I mean that from what little you know of the coast you think it would be reasonable to take a grade of 1 in 50 for a south coast line? Yes. We might get flatter grades beyond Nowra, but I am not certain at present. I have been intending to have that line inspected, but there has been no time for it.
108. There have been no flying surveys between Huskisson and Ulladulla? I do not think so.
109. In any case whether the line were continued or not you must make for Jervis Bay? Yes.
110. And in laying out this line between Nowra and Jervis Bay have you tried to keep in view a possible extension? Yes. The line would naturally take the route that is at present laid out if it is extended beyond that.
111. Will the spurs there come down and push it as near the coast as it is? The object is to rather hug Jervis Bay.
112. Because, you see, south of Huskisson you have got St. George's basement almost ahead, and you have to go back again to the west? Yes.
113. Are there any serious engineering works on the line between Kiama and Nowra? There are five tunnels.
114. And a bridge over Broughton Creek? Yes. But the bridge over Broughton Creek is not a very expensive one.
115. You cannot avoid these tunnels I suppose? No, we cannot avoid them.
116. It is they that make the line so expensive on the whole? Yes.
117. What is the total cost of those five tunnels? £121,440. I mentioned just now that I had re-estimated the cost of this line. In the description that was made and submitted to Parliament and which was handed on to this Committee the estimated cost was put down at £441,663. When that was put down some minor deviations were in progress which Mr. Whitton had ordered, and they have now been completed. That estimate was also made in 1886, when prices were higher than they are at present. We had not the detailed information which we have now, now that the line has been permanently staked and cross-sections taken and everything settled. The new estimate of the cost of this line, including the branch, is £381,390 as compared with £441,663. That is to say that about £60,000 of the estimated cost can be knocked off.
118. Then including the bridge you could now go from Kiama to Nowra for £450,000 in round numbers? Yes.
119. Where are those five tunnels, are they near Kiama? They are near Kiama. The first is before you get into the town of Kiama, and is 506 yards in length. I have a printed description of this line showing the alteration of the estimate, and mentioning the course taken by the deviations, and I now hand it in.
120. Supposing the line went up towards Jamberoo, would that avoid these tunnels? No; you would have to go down and meet the line again.
121. What is the longest tunnel? The longest tunnel is the first—506 yards.
122. There is only one bridge, you say, to be constructed between Kiama and Nowra? There is the bridge over Broughton Creek. That is the most important structure.

H. Deane,  
Esq.  
4 Dec., 1889.

123. What would the bridges cost? £22,128.
124. Is it difficult country to construct a railway through independent of the bridges and the tunnels? For the first few miles it is decidedly rough.
125. Heavy cuttings? Yes.
126. Rock cuttings? Yes.
127. After it strikes away from the coast what class of country does it pass through between there and Nowra—good agricultural country? Yes, very good land.
128. Is it all sold, alienated land? Yes.
129. I see that the Commissioners recommend that the owners of land through which the railway is to pass should be asked to give their land free of cost; do you know whether if that has been done? No steps have been taken at present. Beyond Gerringong the country is nearly all in the hands of the trustees of the late Mr. Berry.
130. *Mr. Humphery.*] Where does the present Illawarra railway stop? It stops about a mile and a half from the town of Kiama.
131. You have included in the estimate for extending the line to Nowra, on the northern side of the river, the cost of taking it to Kiama? Yes.
132. Can you state what the cost of constructing a mile and a half in order to reach Kiama will be approximately? More than a mile and a half would be necessary. The town could be reached in a mile and a half, but you would have to go close on two and a half miles to include a length suitable for a station.
133. What would be the cost approximately of constructing that two miles? I have not made any estimate recently, but the old estimate that was made at the same time as the other estimate in 1886 was £94,185. I have not the slightest doubt that could be reduced.
134. So, as a matter of fact, the cost of giving the people of Kiama the accommodation they have been so long agitating for would be £100,000, and the cost of the extension beyond Kiama would be the difference between that sum and your estimate? Yes.
135. Can you state whether, notwithstanding the cost, the Illawarra line has been a success as a railway; has it been a successful line so far as the earnings are concerned? I cannot tell you anything about that.
136. Do you know anything about the existing bridge over the Shoalhaven River? I know a little about it. I have been over it.
137. By whom was it designed—do you remember? It was built by the Edgemoor Iron Company—an American firm.
138. Do you know whether that bridge was designed for the purpose of carrying a railway? I do not remember whether they had any intention of doing so. I am quite certain it would never carry a railway.
139. Was it not stated at the time that with additional piers it would carry a railway; was not that one reason for constructing the bridge? The bridge is not suitable for a railway. It is a link and pin bridge, the same as the Hawkesbury. You could not put any additional supports underneath the spans.
140. Not strengthen it sufficiently to carry a railway temporarily; would it not be safe to take a train travelling at a slow pace across it to Nowra? I would be very sorry to attempt to do it. I have stood on that bridge when a buggy was driven over at a rapid pace and I felt the vibration. I do not know what it would be if a train were driven over the bridge.
141. You do not remember the opening of the bridge? No.
142. I understand that then a severe test was applied which the bridge stood satisfactorily? Yes, for vehicle traffic, perhaps.
143. You are satisfied it would not carry a train? It is most unsuitable, and I would doubt very much whether the foundations of the piers would be sufficient.
144. It would be necessary to build a new bridge in order to take the railway to Nowra and Jervis Bay? Certainly.
145. Do you know the country between Bomadery and Kiama? Yes, I have been through the country.
146. Will the railway, if constructed as designed by you, serve the settled population of the district? Yes.
147. For the purpose, of course, of travelling and conveyance of produce? Yes, undoubtedly.
148. What will be the length of the tunnels after Kiama, going south? The second tunnel would be 429 yards.
149. Where does that commence? That commences just a little way out of the town of Kiama. All the four tunnels are just a little beyond the town.
150. There is only one tunnel between the present terminus and the town? Yes.
151. The other four are just beyond? Yes, within 3 miles of Kiama.
152. Then after that the country is comparatively easy is it? Yes, it becomes easy.
153. So the great expense of constructing the line would be in the immediate vicinity of Kiama? Yes. I should say that the easy country commences after leaving Gerringong, at  $76\frac{1}{2}$  miles. Beyond there the line is of an easy character.
154. Do you not think that you will be repeating the error—if you regard it as an error—that has occurred at Kiama, if you stop short at Nowra; do you not think that from the moment a railway is constructed there will be agitation for the purpose of getting the railway into Nowra, just in the same way that there has been constant agitation and difficulty with the Kiama people owing to the railway terminating  $1\frac{1}{2}$  mile from Kiama? I do not think there will be the same objection. The difference in distance would not be so great. Supposing we crossed the Shoalhaven and made a station on the Nowra side, it is still some little distance from the town. You could not get right into the centre of the town. The present proposed temporary terminus is only a mile from the centre of the town—not a mile from the town, but from its centre. The station would be between a quarter and half a mile from the centre of the town; so the difference in the distance which the people would have to travel would be a little over half a mile. In the case of Kiama it is a question of travelling fully a mile and a half.
155. Then on the south side of the bridge is there not a considerable district to be served by the railway? They would be served by this, except that they would have to go a little farther. In this case they would not have to go any farther to the railway than they do at present to get their produce down to the boats.

- H. Deane, Esq.  
Dec., 1889.
156. However you are of opinion that the saving that would be effected by leaving the terminus on the north side of the bridge would justify your not building that bridge at the present time? Yes; the cost of the deviation is only one year's interest on the cost of the bridge.
157. And you propose that the terminus should be at the present road bridge? Yes.
158. On the northern side of the river? Yes.
159. *Mr. O'Sullivan.*] What is the reason the line hugs the coast after leaving Kiama—it goes down to Bear Bluff instead of going straight to Gerringong? Because the country rises as you leave the coast.
160. I notice there is a road running between Kiama and Gerringong; would it be possible to have taken the line along that road; or along the line of the road? No, it would not be possible. The road rises to a considerable height, and it would not be a suitable position for it.
161. Then there was no alternative but to take it down to the coast, and afterwards on to Gerringong? No, there was no alternative. Having to start from the present terminus the line which has been laid out is the only line that would be a good one.
162. What is the reason for abandoning that line on which a trial survey was made from Albion Park to Nowra via Saddleback and Foxgrove? The steep grades, the costly works, and the summit level.
163. That would have been a far more costly work than the line now proposed? There would have been about 2 miles of tunnel. The gradients as they were laid out were 1 in 40. Possibly by winding—but I am not certain about that—they might have been reduced, but that would have added to the length of the line, and to the earthworks.
164. But have you not a considerable length of tunnels on the line proposed? Yes.
165. What is about the total length? 2,024 yards they amount up to altogether. That is a little over a mile—not a mile and a quarter.
166. To have taken it from Albion Park to Nowra would have necessitated a longer length of tunnels and more expensive work? Yes.
167. With a gradient of 1 in 40? Yes; and you would have to rise over 1,450 feet at the Saddleback. You would have to go up that height, and down again in either direction.
168. You said in your evidence to Dr. Garran that the line would only cross one creek, or at least that it would only require one bridge, and that would be over Broughton Creek? That is the most important.
- 168½. But do you not cross the Bomadery Creek near Nowra before reaching the river? No. We do not cross the Bomadery Creek. We keep on this side of it.
169. If the line stops where proposed at present you would not require to cross Bomadery Creek? No.
170. But if the line were taken on to Nowra and Jervis Bay you would have to cross Bomadery Creek and the Shoalhaven as well? Yes; but the bridge over the Bomadery Creek would not be of much account.
171. Do you think it is worth while to construct this short line, considering that the short line from the position where the bridge will be, to the temporary terminus, is only to be a temporary work? Yes, I do. I think it is desirable.
172. What is the distance? Fifty-two chains.
173. About three quarters of a mile? Yes.
174. Considering that they will have to take their goods from the station across the bridge into the town, is it worth the while of the State to construct a temporary line just to save three quarters of a mile haulage? I should point out, that if you had a station at Bomadery on the main line, you would have to spend a good deal of money in making roads, for the present road to Bomadery is a mere track, so the whole cost of the deviation would not be saved.
175. Then you think it wiser to take the line on to the proposed terminus for the accommodation of the people, and to save the expenditure on these roads which would be necessitated? Yes.
176. Where is Huskisson;—beyond Jervis Bay is it not, or a portion of Jervis Bay? It is shown on the map.
177. Huskisson is a township on Jervis Bay? I cannot tell you anything at all about it. I have not been there.
178. Is that the proposed terminus of the Jervis Bay line? I believe so.
179. You understand that is the proposed terminus of the Jervis Bay line? Yes.
180. You do not care to express an opinion as to the probable traffic on the line? No; I have not gone into that.
181. Do you know the distance between Nowra and Jervis Bay? I could get it for you. I have not a note of it here.\*
182. There appears to be no good crossing place between Nowra and the coast for a railway, judging by the plan submitted to the Committee? Yes.
183. I think from the plan submitted to the Committee that the department have chosen the best crossing-place for the railway on to Shoalhaven? Yes.
184. As near to the coast as possible, have they not? Yes.
185. So that detour between Gerringong and Nowra was absolutely essential? Yes. It not only serves Nowra, but it crosses the river at just about the head of navigation, and it is probably the most economical way of carrying the line too, on account of the cost of the bridge. The cost of a bridge lower down would be very much greater even if we were permitted to block the navigation.
186. *Mr. Tonkin.*] Do you know the country pretty well between Kiama and Nowra? Yes; along the route that the line takes.
187. Is there much population there? There is some settlement. There is Gerringong and Broughton Creek, or Berry as it is called now. There is considerable population at those two places.
188. Do you know whether the whole of it is private property—alienated country? I believe that it is very nearly all alienated.
189. How did you reduce the cost by £60,000, for there is a difference of about £60,000 between your estimate and what is before us at the present time—that is between £381,000 and £441,000; how was that alteration made—by any deviations made lately? It is partly due to deviations, and partly to more exact information, and partly to reduction in prices.
190. At what do you estimate the cost per mile? The cost per mile is £16,895.
191. Is that not a very high price for railway construction now? It is, but we cannot help it, for the first few miles of the line are very costly. If you could cut out the heavy works at the commencement—
- say

\* NOTE (on revision) :—The distance is about 16 miles.

- say 70 to 75 miles—if you could cut out the first 5 miles you would cut out a very large proportion of the expense indeed. Beyond there, it will be a comparatively cheap line.
192. That £16,800 odd per mile does not include this bridge, does it? No; that does not include the bridge, but it includes £121,000 for tunnels.
193. Have you any idea of what the first 5 miles cost per mile? No; but I believe an analysis would show that the first 5 miles cost as much as all the rest—cost half this estimate.
194. That would reduce the cost of the ordinary line beyond this very difficult engineering part to something like £8,000 a mile, would it not? About £11,000 a mile.
195. For the line with the exception of the first 5 miles? Yes.
196. *Mr. Hurley.*] Have the plans been so prepared that the tunnels and bridges will be constructed for a double line? No, for a single line.
197. Only for a single line? Yes, only for a single line.
198. Looking at the mistakes of the past, do you not think it would be advisable to make provision for tunnels, as you have done on the Newcastle line—to have sufficient width in your tunnels for a double line? It is a question that would depend on what the traffic is likely to be in the future.
199. Is it not generally admitted that there has been a mistake made on the western lines in the construction of tunnels for single lines? Yes.
200. Well, in order to avoid any mistake in the future, would it not be wise to make provision in the construction of tunnels upon either the southern or northern lines for a double line? I do not think I should recommend it in this case, because there would be very little difficulty in putting an extra tunnel alongside.
201. Have you had anything to do with the preparation of the plans for the construction of tunnels between Newcastle and Gosford? Yes.
202. It has been anticipated that the trade will be sufficient to warrant the construction of a double line? Yes.
203. Would not the same warrant arise in regard to the probability of trade on the southern coast line? It could not be expected to develop so rapidly.
204. Say within the next twenty-five years? Yes; I have no doubt that within the next twenty-five years double-line tunnels would be a necessity.
205. Looking at that fact—that double line tunnels would actually be a necessity twenty-five years hence for the accommodation of the public—would it not be wise now, when constructing the line, to enter at once upon the construction of double-line tunnels? I think not. I will explain why. The cost of the single-line tunnel is £120,000. The cost of the double-line tunnels would be £180,000. That would be £60,000 additional expense you would have to go to at the present amount.  $3\frac{1}{2}$  per cent. on that would be £2,100 a year extra interest that you would have to pay.
206. Have you had any experience in duplicating a tunnel after it has been once constructed? No; but I would not duplicate the tunnel, but make a fresh one alongside of it, or near it.
207. Well, looking at the probability of a fresh tunnel being an actual necessity within a period of twenty-five years, would it not be to the advantage of the general public and of the Treasury to have that tunnel constructed at once? Not if you have to wait for twenty-five years.
208. Looking at Kiama, and where the present line terminates, will not that  $1\frac{1}{2}$  mile of line from the present terminus into Kiama be one of the most costly structures in this country? Yes, it is costly.
209. Will not that be one of the most expensive structures that has been taken in hand in this country? It will be costly.
210. Has the proposal to construct that line from the present terminus into Kiama been brought about by public agitation? I cannot tell you that.
211. Cannot this be avoided by the construction of a line 4, 7, or 10 miles further north, and avoiding Kiama altogether, keeping north of Kiama. Would you not avoid the whole of this expense, by going across for instance so (pointing to the map)? No, you would not.
212. Have there been any trial surveys? You could not get across except across here (pointing to the map), and there, as I have pointed out, you would have to go round in this way more or less near Jamberoo, and across the Saddleback, and you would have 2 miles of tunnels, very heavy cuttings, and very heavy grades.
213. Supposing this line to Kiama were not in existence at all, and you were asked to construct a railway from a given point—say 10 or 15 miles north of Kiama—to Nowra, which way would you go? I should naturally look at this one first.
214. There have been no trial surveys? Yes; there has been a trial survey made across there.
215. Is it accessible country to get through? We have surveyed a line across there.
216. Would it shorten the distance? Yes.
217. Can you give us any idea of the number of miles you would save? I do not think I can. It would not be so much as appears on the map from the direction it takes, as there are many curves on it.
218. Has there been any estimate made of the cost of construction of that surveyed line, as against this? No; I cannot find any.
219. You cannot get us any estimate of the saving of cost in reaching Kiama by that route as against this route? No, I cannot.
220. *Mr. Dowel.*] Of what material do you propose to construct the bridges? On the present line they would be timber. The bridge over the Shoalhaven would have iron cylinders and wrought-iron or steel superstructure.
221. Upon what principle do you propose this iron bridge should be constructed? I have one or two sketches made for it, but I have not decided anything definitely at present.
222. Could this bridge be designed in such a manner that tenders could be called, the material could be prepared, and it could be constructed in this Colony? Yes.
223. It could be designed specially in the way I have indicated? Yes; I see no reason why the work should not be made in this Colony, if desired.
224. In this specification and design there will be no special sizes of iron that could not be procured here? Oh, no. Of course the plates, the angle-iron unions, and the T iron, and so on, would probably have to be imported.

H. Deane,  
Esq.  
4 Dec., 1889.

225. You are aware that in the construction of many railway bridges special sizes of iron have been specified which have not been able to be procured in the ordinary way, and that only certain persons have been able to get the specified iron—is that so or not? That I cannot say; but if I had the designing of this bridge I certainly would not adopt any but the ordinary sections of iron, unless I saw some special reason for the introduction of special sections.

226. You are in favour of simplifying this specification so that there shall be no difficulty attending the construction of the bridge in the Colony? Decidedly.

227. In setting out this railway, you are aware that it goes through a large quantity of private purchases? Yes.

228. Was there any possible way of avoiding its going through the Public School and grounds, the Court-house and yards, and the Bank belonging to the E. S. and A. C. Co. in Kiama? I had the alignment of the centre line there under consideration, and I tried to improve on that line.

229. Would it not be very undesirable to go through the Court-house, the Public Schools, and this Bank? I do not think it does; it goes through some of their premises.

230. The book of reference shows it takes them? It does not take the building. For instance, we go through the back premises of the Joint Stock Bank, but not through their building.

231. But this is the E. S. and A. C. Bank—not the Joint Stock Bank? I beg your pardon. Well, it is almost impossible to choose a different line. I tried to get it up here, but it is not desirable to run along the centre, otherwise you cut into both blocks facing both streets. I scarcely think we could alter it. If we can alter it, it will certainly be done.

232. Is it not unusual that a railway should be taken through the very heart of the town—through the main street? It is not a thing to be desired, but you cannot get it anywhere else. This is all rising ground here, and down here you get it too low. It has been proposed to take the line through here, and across there, and round there, but I think it most objectionable. There is a great wash of the sea coming up here, and you would have to build a breakwater or very strong sea-wall to resist the action of the waves.

233. In exploring this line in the first instance, every possible care was taken to go through as little town property as possible? Yes. In this case it appeared to me we had no choice. When I took my present office I was careful to look at these plans and examine them, and I sent a surveyor down to Kiama to see whether he could not get a better line than what was shown here, so as to avoid the property, and the conclusion I came to was that that line had better be retained in its present position.

234. Can you name any other town in the Colony where the railway goes through the town in the way it is laid out here? No. I think Kiama, as far as I can remember, is the only one where the conditions necessitate our going through that part of the town. I agree that it is very unusual; but in this case I do not see how it can be avoided.

235. *Temporary Chairman.*] I understand that the getting into and out of the town of Kiama will cost very nearly, if not quite, £100,000? That was in the estimate of 1886.

236. Even now pretty near that? I think that might be reduced to £80,000.

237. From where we are to the town of Gerringong is the most expensive part of the whole line? Yes.

238. Have you considered every conceivable plan to go round to the rear of Kiama so as to avoid this expense? Personally I have not done it at all. I took up this line as it had already been adopted.

239. You see there is the enormous expense of this portion of the line? Yes.

240. Utterly in disproportion to any traffic we are likely to get on it? Yes.

241. And therefore the immense importance of considering any alternative project? Yes.

242. Has there been any estimate of the expense of that inland line, so that we could compare it with the expense of this route? I think no estimate has been made.

243. Would it be very difficult to make a rough estimate? I will endeavour to get an estimate of it.

244. Of course we must have some tunnels on that line? Yes.

245. And some heavy earthworks, because we have to cut through ridges? Yes.

246. And could you give us an estimate of that inland line to compare with the cost of this line? Yes.

247. We should come out, I suppose, at some point near Broughton Creek? Yes, at Broughton Creek.

248. But beyond the present line? Yes.

249. It would be very desirable that we should have some estimate of the total cost of an inland line that would avoid the immense expense of this coast line, if you could give us that? I can furnish you with that next week.

250. We might have to start some point a mile or so back from Kiama? A good many miles. To make anything like a direct line, you would have to start from about Albion Park.

251. How far from Sydney is Albion Park? About 61 miles.

252. That would be about 8 miles before you get to Kiama? It is about a mile, I think, after passing the Macquarie rivulet, which is 60 miles from Sydney.

253. You think you would have to go off from there? To make a direct line.

254. It would be very important if you could give us, if only a rough estimate, of what it would cost to follow that route? I will look into it and give you an estimate early next week.

255. With regard to the bridge at the river, even when you have completed your line across the river, you will always want a platform on the north side of the river, will you not? Yes, just a platform. I should think a platform would be sufficient. It might be necessary to have a goods siding.

256. Would the work you must put up now be very much in excess of what would be permanently wanted for a station there? You mean apart from the permanent way?

257. I am looking at the possibility of getting rid of this temporary branch—suppose you stop at the north side for the present, and have as economical an arrangement as you can, you will always want some platform or station there? Yes. There has been as little as possible put down for station works.

258. You are not going to build everything very good on this little temporary branch line? No.

259. Are you going to build nothing more substantial than you would permanently want as a platform on the north side of the river? No, I think not.

260. Because if you make there at present what you will permanently want—that is a platform, sheds, and a siding—that will be all to the good; you would not want to shift it? No; but, as I pointed out, there would be some expense in making up the approach, which has not been estimated. If Bomadery were left as a terminus for a few years, it would be necessary to make a good road to it from the end of the bridge.

261. Would it be  $\frac{1}{2}$  a mile? About  $\frac{2}{3}$  of a mile.
262. Is it a bad soil for a road? Yes; it is all alluvial soil till you get right up to Bomadery.
263. What would be the expense of that road? It would cost about £600 I should think.
264. We are going to waste £2,000 over this work; would it not be better to spend £600 in making a good road at once, which would be wanted again afterwards? I am quite satisfied if the Nowra people are satisfied. This deviation was, of course, intended to suit the Nowra people.
265. Yes; but if we are to make a railway, and an expensive bridge to suit the Nowra people presently, it is not reasonable that they should want a very large expense for a merely temporary service, is it? No.
266. If we made a good road at £600 a mile, and one that would serve them always afterwards, do you not think that we would do what is fairly sufficient for the exigency? Now they have to be satisfied by going along a road, 25 miles in length, to the station. They ought to be satisfied if they had only a mile and a half to go.
267. Considering their present position, if we bring the railway within  $\frac{2}{3}$  of a mile of the township, and make a good road for that  $\frac{2}{3}$  of a mile, do not you think they would be pretty well served? They would be very much better served than now, and I am sure they would look upon it as a vast improvement. But then, if the line were carried out to the road close to the bridge, people would be able to walk out and in conveniently to the station; whereas, perhaps, if it were  $\frac{2}{3}$  of a mile further—
268. But we are spending nearly half a million of money to take the railway to this township, and do not you think we ought to save if we can? Yes; but it is not a very large extra expense, proportionately to the whole outlay.
269. But even if you have a platform there, after the bridge is made you will still want the road from that platform to the bridge, will you not? I do not know. I would not spend very much money on it then.
270. There is sure to be a demand for that road? Not from the town, I think.
271. Well, from the bridge leading to the platform? People going up as far as the bridge along the main road would go right into the town of Nowra. They would not come out at the Bomadery station. Bomadery station would serve the people more on the east of the line.

H. Deane,  
Esq.  
4 Dec., 1889.

THURSDAY, 5 DECEMBER, 1889.

Present:—

The HONORABLE JOHN LACKEY. (VICE-CHAIRMAN.)

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Railway from Kiama to Nowra.

John Wright, Esq., District Engineer, Department of Engineer-in-Chief for Railways, sworn, and examined:—

272. *Dr. Garran.*] You are in the Railway Department? Yes, I am District Engineer in the Railway Department. J. Wright, Esq.  
5 Dec., 1889.
273. What part of this work have you been engaged on? I was sent down in July, 1888, by Mr. Whitton, to improve the grades and to reduce the earthworks.
274. The line had been surveyed prior to you going down? It had.
275. You went to see if you could make improvements? Yes.
276. Have you made any substantial alterations? Yes, some considerable alterations.
277. You are of course aware that from the present terminus of the railway to Gerringong is to be part of the line? Yes.
278. And it will be very expensive? Yes.
279. You have given your best attention to reducing the cost of that part of the line? Yes, I devoted most of my attention to that. Of course that was the most difficult and costly part. Mr. Whitton was evidently dissatisfied with the survey and sent me down eighteen months ago to improve it if I possibly could.
280. Have you now done all that it is possible to do? Yes, I have done all that is possible to be done. The whole of the country has been cross-sectioned. In 3 miles I reduced the distance 30 chains, and the earthworks by about 20,000 yards. I straightened the line and cut out nearly the whole of a 12 chains curve. I have only left one 12 chains, and one 16 chains curve, whereas there were two curves of 16 chains, and I think seven curves of 12 chains. It was considered such a marked improvement that I had to go over several of the other lines. For instance I went over the line from Marrickville to Liverpool.
281. In so doing have you injured the grades at all? No. I have improved the grades. I have reduced them from 1 in 40 to 1 in 50.
282. And to the best of your judgment this is the best line between those two points? This is the best line, and by far the cheapest line. I have been over the whole of the other lines surveyed.
283. Have you been over the trial line from Albion Park? Yes.
284. Will you describe the engineering difficulties of that line? After leaving the Macquarie Rivulet the country is very hilly until you reach the Mount Terry Range. That is 7 miles north of the Minumurra.
285. What height had you to ascend to cross that range? About 400 feet, but I cannot be quite certain, as I made a flying survey.
286. Would that involve the cutting of a ridge? It would involve a tunnel with a grade of 1 in 40. With grades of 1 in 40 a 21 chains tunnel would be required, and with a grade of 1 in 50 a tunnel of 38 to 39 chains. Then you descend to another valley between the Mount Terry spur and the Jamberoo spur of the main coast range.
287. Then have you another tunnel? There is a long grade there about 1 mile in length of 1 in 40. It would be useless to attempt to get anything less than 1 in 40 to cross the Jamberoo Range into the valley of Jamberoo. There would be 144 chains of 1 in 40 with a tunnel about 43 chains in length.

J. Wright,  
Esq.  
5 Dec., 1889.

288. Would you have a difficult bridge over the Minumurra? No, it would be of easy construction. Between the Minumurra River and the Saddleback Range you get down into the flat of Jamberoo which is only 36 feet above high-water mark, and in order to ascend you have to keep winding round 3 or 4 miles through very bad country abounding in natural slips in the spurs of the mountains.
289. Then this range is 1,429 feet at the crossing at its lowest point in the Saddleback? Of course the lowest point is crossed nearest to the coast on the present survey.
290. Does the Saddleback run nearly to the coast? It runs to where the road is sketched on the map and then gradually descends to the coast.
291. If you went further to the east you would still have nearly as great a height to cross? A greater height. But we go to the point indicated on the map in consequence of the facilities afforded us by going up the creek. We creep up in a continuous grade of 1 in 40.
292. And you take the ridge at the saddle? Yes, at its narrowest point.
293. Descending from the Saddleback? To get through the Saddleback would necessitate a tunnel nearly 2 miles in length. Descending again from the Saddleback Range down to the valley of the Broughton Creek you have to go through a difficult and exceedingly rough country until you reach the Nowra Road. Then the country gets a little better.
294. From an engineering point of view it is undoubtedly a difficult line? Yes, and a very costly one.
295. And the gradients would have to be 1 in 40? Yes, unless you tunnel. In one point it will necessitate something like 3 miles of 1 in 40 ascending and descending on the Saddleback Range.
296. In your judgment there would be nothing to be gained by taking that line? The advocates of that line only claim for its construction that it is a little shorter.
297. Would you not come nearer the coal-fields in the mountain? Yes. But I would like to point out that this line which I have recently surveyed from Shoal Harbour to Jamberoo would serve the same purpose at a cost of about £30,000.
298. Have you examined a route to go about 2 or 3 miles at the back of Kiama, to come round and avoid this expensive line through the township;—is that a practicable country? It is a practicable country if you choose to go the expense, but it is a dearer line than the other by £126,000. Assuming all things being equal up to the crossing of the Minumurra River to Kiama, the line would cost £81,000 more than the line now constructed.
299. What is the cause of the difficulty? The first difficulty is the crossing of the Terragong swamp, in which there is 60 feet of mud, and we make an allowance there of 10 feet for subsidence. Therefore we require a great amount of earthworks. Then we have to skirt round the Terragong swamp, and there are heavy works only a few feet above high-water. Then we have to cross exceedingly difficult country right through to Kiama.
300. Are you obliged to come into Kiama. Cannot you keep to the west? It is too heavy.
301. Across a series of spurs? Yes. The Saddleback Range widens out into a series of undulating hills.
302. You must come round by the points of those spurs? That is much the cheapest way.
303. Although you admit the tremendous expense of the short distance from Kiama to Gerringong, you do not see your way to avoid it? Any other route would be more expensive. Every precaution has been taken, surveys have been made, and it has been cross-sectioned right down to the coast line.
304. If the railway were at present only as far as Albion Park you could not see any better route to get to Nowra than the one proposed? No. No better route could be found—it is impossible.
305. If we are to go from point to point we must take the coast line? Yes, for economy. It is a little longer, but still the extra cost which would be incurred in the other would render its construction prohibitory, taking its initial cost, and the cost of maintenance, it would be 100 per cent. dearer than this.
306. *Mr. Trickett.*] Would it not be better for the line to go to the west;—would it not serve the agricultural population better up there? Yes: it would if the cost of affording facilities would not be too great. But, as you are aware, it is very difficult to alter the direction of trade. People will go where they have been in the habit of going, and it is not considered an inconvenience. But to take the line through that way, even to get to Kiama, would cost £120,000, and to get to Broughton Creek by the most direct route would cost nearly half a million more. I can better describe it by saying that on the extreme western line there will be nearly 3 miles of tunnelling. There will be nearly 9 miles of ascending and descending grades of 1 in 40. On the line to Kiama from Albion Park there is one small grade of 1 in 50—that is the worst right through. There is a tunnel of 2 chains in length, and upon this line (pointing to the map) we have a series of tunnels five in number, amounting to 1 mile and 1 or 2 chains, which will be more cheaply constructed, as you are aware, than a continued series of tunnelling.
307. The people will be no better served for getting produce to market when the railway is constructed, than they are served now by steamer carriage;—they will have to bring it quite as far? They will have to bring it quite as far, but were any intermediate line constructed I do not think it would afford equitable facilities.
308. How do they get produce to market from the high country? Under any circumstances they have to come down to the level ground—that is from 30 to 40 feet above high-water mark—with pack horses. Presuming the railway went right through Jamberoo they would still have to come down there. The great bulk of the people live between the line and the coast. Put it in another way. Assuming that you adopt any one of those lines, a branch line would be necessary to Kiama, which is the largest centre of population, and Jamberoo could be served by an easily constructed line.
309. The branch line could be constructed to Jamberoo? Yes.
310. Would that be a difficult line to construct? No; very easy.
311. From your knowledge of the country you say that this line along the coast is the cheapest and most practicable, and would serve the most people? Undoubtedly. Any one who sees the country will arrive at the same conclusion.
312. *Mr. Hurley.*] Leaving the question of the construction of a railway to Nowra out of consideration, and looking at the proposal to run to Kiama;—do you think in the interests of trade and the Railway Department, it is necessary to construct a railway right into Kiama? I do not follow you.
313. The proposal is to take the line from a point to the north of Kiama? Yes.
314. Leaving Nowra out of the question, do you think it is necessary to construct this mile and a half of railway in the interests of trade and of the department? I do not think it will enhance the returns £10 in a year.
315. Therefore if that were the only extension required you would not advise the construction of the mile and a half from the present terminus to Kiama to be carried out? No. 316.

316. Have you any knowledge of the country between Nowra and the country west on to the Great Southern Line? Yes, I have been through there on several occasions. J. Wright,  
Esq.
317. Have you any idea of the distance? The distance from there to the nearest point on the Great Southern Line is about 40 miles, or 33 miles direct. 5 Dec., 1889.
318. The distance from the present terminus of the Southern line to Nowra is 22 miles? Yes.
319. And from Nowra to the nearest point on the Great Southern line will be 40 miles? About that.
320. And the country has not been explored? I was told to go over it, but it is so rough that I did not see my way to get up.
321. You do not think it is a favourable country for railway construction? No. Various mountains have to be mounted in such a short distance.
322. What kind of country is it up to Nowra;—is there abundance of timber? All the land as far as the range is splendid grazing and good agricultural land. Wherever crops are grown they appear to yield well. Of course there are small patches which are not of much value, but the whole of it is splendid country;—as good, I suppose, as any in Australia.
323. Is there abundance of timber for sleepers? Yes.
324. *Mr. Dowel.*] Do you think it is desirable to take the railway through the town if it is avoidable? It may not be desirable, but when we cannot obtain what is desirable we must take the attainable.
325. It is unavoidable? Yes; I don't see how you could avoid it.
326. Can you point to any town in New South Wales where the railway is taken through as it is done here? I do not know of one.
327. It is impossible to divert that line so as to take it away from the principal portion of the town already settled? I have tried for two or three months to get lines on one side or the other, and have failed to do so. We saw the difficulty, and it was proposed to take a line elsewhere; but that would necessitate an enormous cost, and we should still go through the main portion of the town.
328. You have done all that is possible to get the best line? It has been cross-sectioned in such a manner that we have secured the best possible line. We have spared neither time nor trouble in obtaining it.
329. You are sure no other route could be discovered? I do not know of any. The ranges rise very abruptly, and attain a height of 300 and 400 feet in 5 or 6 chains. They run up almost like the sides of cuttings.
330. This line goes through public schools, court-houses, and banks? That is the only possible route we could get.
331. And that after careful survey? Yes. It would be advantageous if you went down there to have it pointed out to you how impossible it is. It is one of those insulated cases in which no improvement can be made.
332. *Mr. Humphery.*] Have you examined the country between Shoalhaven River and Jervis Bay? Only slightly. We had a great deal of trouble with the railway crossing, and I started to go over the line to reduce the grades from 1 in 40, as low as I could get them, and I had to give it up in order to complete the survey of this line.
333. You cannot speak as to the physical features between the two points? I have not been as far as Jervis Bay, but as far as the Currenbeen River, a few miles from Jervis Bay.
334. Are there any difficulties between Currenbeen and Nowra? No; it is an easy line, but it is a barren country.
335. There would be no difficulties to encounter in the shape of elevations or depressions? No; there are no heavy works.
336. You do not think it possible to reduce the cost beyond the point you have already reached in the direction of this extension from the cemetery at Kiama to Shoalhaven? No. I do not see how it is possible. We have reduced the grades and the earthworks. In one portion I cut out 100,000 yards of earthworks, I do not see how it is possible to reduce it any further. The heaviest portion of the work is the first 3 miles, and after that it is simply side-cutting.
337. You said the extension of the line to Kiama would not, in your opinion, increase the returns more than £10? Not from the present terminus to Kiama only.
338. As far as Kiama is concerned, is not the railway being simply used at present for passenger traffic? No; a great deal of milk and butter is sent up from Kiama now.
339. Would not the conveyance of produce be largely increased if the line were extended? Not into Kiama; because it is only a mile from Kiama now.
340. But as far as Gerringong? Yes; if it were extended it must increase.
341. Do you know the country between Kiama and Shoalhaven River? Yes.
342. What is its character? Most of it is alluvial flats—from soil washed down from the sandstone and the basalt formation. It is very prolific.
343. Would it support a large population? It does so now. There is a large population upon it.
344. *Mr. Tonkin.*] Supposing you were going to survey a line direct to Nowra, without taking Kiama into consideration at all, would you go round by Kiama? Undoubtedly.
345. Then the fact of that town being where it is has not drawn you to it? No.
346. Is there any table-land through which the railway could run rather than go in through the spurs? No; the geological formation is against any table-land coming in between the coast range and the coast itself.
347. Of course there is no table-land between the coast range and the coast—but speaking of the coast range itself is there any table-land upon that? Yes.
348. Could not a railway be constructed there much better than by going through Kiama to Nowra? You would then go through the barrenest country possible, and would afford no facilities to the bulk of the population living lower down.
349. But are not the population living lower down near Kiama already served by the railway which is now within a mile of Kiama? Yes, up to Kiama they are served by railway.
350. As they are already served could not a line be constructed cheaper by going to the top of the coast range? No.
351. On the table-land? Yes, but it would lead from nowhere to nowhere.
352. Would not it lead you to Nowra? No. When you get on the top of the main range it would be impossible to get down. It is from 1,600 to 1,700 feet high, and it is only 4 miles to Nowra.

- J. Wright,  
Esq.  
5 Dec., 1889.
353. What is the distance from the foot of the coast range to where this line would be constructed along by Kiama? The distance varies. The trial survey,—Albion Park to Nowra, *via* Saddle Back,—is immediately under the coast range. The coast range skirts round by Broughton Village; it then falls suddenly back to the west until you pass Nowra.
354. You think that line which is now at the foot of the coast range directly will not be as easily a constructed line as the one we have now under consideration? No. From Mount Pleasant, 74 miles, to Nowra is quite easy.
355. *Mr. O'Sullivan.*] Who made the original survey from Kiama to Nowra? I think it was Mr. Wells.
356. Who made the trial survey from Albion Park to Nowra, *via* Saddle Back? Messrs. Hardie and Jamieson.
357. Do they recommend that line? No.
358. How long is it since you were ordered to improve the grades and cut down the earthworks and curves? I commenced that class of work in July of 1888.
359. *Vice-Chairman.*] You have been a long time in the railway service? A little over five years.
360. Not longer? Not in this Colony.
361. Having been instructed to examine the lines with the view of lessening the cost, you have given considerable attention to both routes? I may state that when I joined the Department Mr. Whitton instructed me to try and improve the grades of the line to Bolivia—that was on the Great Northern line, and there were grades of 1 in 40 crossing the Dividing Ranges, between the Severn and the Deepwater, and crossing the Bolivia Range. I spent six months trying to improve the grade. He also requested me to go over the Inverell line as soon as I had time. After I had completed working the north he sent me to the line to Nowra, and afterwards to the line Marrickville to Liverpool.
362. With regard to the line to Nowra you considered you found the easiest grades you could? Yes.
363. Do you pass the township of Nowra in the proposed line? Yes.
364. Do you cross the Shoalhaven River? No, it is not contemplated to do so just now. The terminus is to be on the north side of the river within a mile or less of the township.
365. Has it been considered by the Department whether the present bridge can be utilized for the purpose of railway communication at any time? Mr. Deane and I examined the present bridge, but arrived at the conclusion that it was not strong enough to carry a railway.
366. It is a large bridge? Yes.
367. Of iron cylinders? Yes. But it is of light construction, and the cylinders have not been sunk to the rock.
368. The bridge could not be strengthened in view of future railway communication? I do not think it could be strengthened. It is of the class of link and pin, and it would be very difficult to strengthen.
369. You are aware that the estimate of the Commissioners of the cost and probable receipts of the proposed line has been submitted to the Government and this Committee? I only know of our own estimates.
370. The Commissioners have made an estimate of the probable cost of the line and the probable receipts. The estimate does not include the cost of the land. The probable cost of the line according to their estimate is over £538,600. That would be something like between £22,000 and £23,000 a mile? Yes.
371. As an observant man, and as one who has given attention to things in general, do you think the country would be justified in going to an expenditure of £23,000 a mile for the purpose of constructing a railway from Kiama to Nowra? To do it straight off as a new venture might not be judicious, but as an extension of the present line I think the amended estimate might be incurred.
372. Supposing it were incurred, would you regard that as an extension to Kiama alone, or as a portion of a general extension to the southern limits of the Colony in that direction? As an extension to the southern limits of the Colony.
373. From that point of view do you think it a proper line to undertake? Undoubtedly.
374. Do you think the country would be justified in incurring the cost, considering it would have to pay extra for the land which would have to be resumed? Yes.
375. What is the value of land there? I do not think it would average more than £25 an acre.
376. About how much per mile would it add to the cost of the line? £700 or £800 a mile.
377. You have spoken about the land upon the ridge being barren—you mean immediately on the ridge in places I suppose? When you get on the top of the sandstone formation along the coast, right from Bulli to the south of Kangaroo Valley, there is a large drop in one place, extending to the Bundanoon, which is very poor country.
378. Otherwise, when you get a mile back, you get to rich basalt country? Yes; it is much better towards Moss Vale, Yarrawong, and Robertson.
379. That land is very rich? Yes. The Kangaroo Valley is the garden of New South Wales as far as agriculture is concerned. It is a prolific district.
380. You think, in view of an extension to the southern limits along the coast, this is a desirable line to construct? Yes.
381. And outside your professional opinion, you think the country would be justified in incurring the expenditure? Yes, I do indeed. It would be a benefit to the whole of the Colony.

WEDNESDAY, 18 DECEMBER, 1889.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARBAR, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Railway from Kiama to Nowra.

John Harper, Esq., Railway Goods Superintendent, sworn, and examined:—

382. *Dr. Garran.*] Have you personally gone into the calculations of traffic in regard to the line under the consideration of the Committee? Yes, as far as the information I have before me permitted me to do so.

J. Harper,  
Esq.

383. You have already had some experience of the traffic of this district since the line has been opened to Kiama? Yes. 18 Dec., 1889.

384. Has that traffic equalled the expectations of the Department? Yes.

385. Has it exceeded those expectations? I could not say what the expectations were. It certainly exceeded my expectations.

386. Is there a large quantity of the agricultural produce of the district carried by railway? Yes; of dairy produce.

387. Milk; Yes; milk, butter, live stock, eggs, and poultry.

388. Do you think the traffic of the district has increased since the railway was opened? I think the traffic of the district, generally, has increased, whether carried by sea or rail, owing to the establishment of more factories; and I think the railway has contributed towards the success of those factories.

389. Do you think those factories would have come into existence without a railway? I think so.

390. Then the greater part of your traffic has been taken from the steam-boats? A lot of circumstances have conducted to bringing about an increased traffic. These include the better price for butter, the ready means of storing and disposing of it, and a lot of other causes outside the transit question altogether. I think that the railway has played a very prominent part in promoting the success of the district.

391. You think the actual productiveness of the district has been increased? Yes, I am sure of it.

362. Have you to under-cut the steam-boat rates much in order to obtain traffic? We have never attempted to do so yet.

393. Are your rates higher or lower than those of the steam-boats? They are higher.

394. You have under-cut on the Newcastle line, have you not? No. We have not attempted to under-cut at all in the matter of goods traffic. Our rates are simply the ordinary goods mileage rates, excepting in regard to wool, in connection with which our rates are simply arbitrary. We charge more than our ordinary mileage rates between Newcastle and Sydney.

395. But you have under-cut in connection with the passenger traffic? I am not prepared to speak about that.

396. Have you under-cut on the passenger rates to Kiama? No. The fares are the ordinary southern line fares. Excursion tickets have been issued at times,—at holiday times, for instance.

397. And at the rates charged you have obtained a fair amount of passenger traffic? Yes.

398. Is it a paying amount? Yes.

399. Dividing the line to Kiama into sections, could you say, off hand, whether from Sydney to George's River the line is a paying one? I should say that from Sydney to Hurstville, which would include George's River, the line is a paying one. Of course we have no sectional returns for last year, and I am not prepared to say definitely whether it is a paying section or not.

400. But as a traffic manager you would be able to form a good opinion? Yes; I should imagine it is a paying section.

401. Does the section between George's River and the first coal-mine you come to pay? I could not say.

402. You have as yet very little settlement along the line? Comparatively none.

403. Have you brought any coal to Sydney by this line? Yes.

404. Where do you land it? At different places on the suburban lines, and at Sydney. We have had the contents of a number of trucks from the Metropolitan Coal Company's works delivered at the brick-works, and at Darling Harbour.

405. In Sydney you delivered at Darling Harbour? Yes.

406. Do you put the coal on board the ships there? No.

407. You deliver it for local consumption? Yes.

408. You have not as yet shipped any coal? No.

409. Is there any traffic between the Coal Company's mine and Coal Cliff? Yes, a very good traffic. Along there we have a comparatively large population, and we carry a large proportion of their supplies.

410. Was not that the most expensive portion of of the line? I cannot speak as to the cost.

411. Do you think that the traffic upon that section makes it pay? Taken as a section I should imagine that it does pay; but it is rather a difficult question to answer in the absence of sectional returns. I should imagine that, on the mileage, the traffic does pay.

412. You speak from what you see of the booking returns? Yes.

413. Is the line paying between Coal Cliff and Wollongong? Yes; between those places we are carrying a good paying traffic.

414. And with regard to Wollongong and Kiama? The traffic there is an increasing one. The grade is easy. Of course the traffic must be taken with the whole; but I should imagine that that section pays.

415. I ask these questions because I wish to get at the fact as to whether an extension to Shoalhaven would, in itself, be payable, if the cost of the line were moderate? I think we had something like

£13,000

- J. Harper, Esq.  
18 Dec., 1889.
- £13,000 worth of traffic from the section between Wollongong and Kiama, a distance of 22 miles, during the year ending June last. We had only a through road from Sydney for eight months of the year.
416. The traffic from a district of this kind is pretty well distributed throughout the year? Yes.
417. It is not like the wool traffic? No.
418. It goes on from January to December? Yes.
419. And that is the most profitable and convenient traffic? Yes.
420. Is the traffic inward to Sydney equal in value to the traffic outward from Sydney;—which is the better in value? From Sydney.
421. You carry stores? Yes, over the whole of the road. Coal, of course, is carried at a lower freight than most of the articles carried from Sydney. Butter is an article carried at about a medium rate of freight, whereas most of the goods carried on the various sections pay a comparatively high rate,—7d. a mile.
422. You are aware that the first 6 or 7 miles of this line were very expensive in construction? I should imagine so, but I do not know anything about the engineering features of the line.
423. Have you looked into the cost of the work of construction? No, I have not dealt with the matter.
424. I asked you just now whether the traffic would pay upon a moderate capital cost; but the capital cost of these few miles is great. Do you think the traffic from Shoalhaven would be sufficient to cover the cost of a particularly expensive piece of line? That is a question of paying interest on capital. I should imagine that the line would pay working expenses. Of course I am not prepared to say anything about the payment of interest on capital.
425. At Nowra you would obtain a fairly concentrated traffic? I think so.
426. And the traffic of Nowra would in itself be a remunerative one? Not alone.
427. But of the district of which it is the centre? The districts surrounding it, and beyond it, would give a good traffic when won.
428. Do you expect any additional coal traffic from the extension of the line through Kiama? I have never expected any. No doubt it may come.
429. You are looking solely to the agricultural passenger traffic? Yes.
430. And so far as your experience of the line as far as Kiama goes, you think it would be justifiable to extend it to Shoalhaven, under the impression that satisfactory results will follow? I think it would improve our trade with Kiama and the district beyond it. We suffer at the present time from being far away from Kiama.
431. Assuming that the line to Kiama is a fairly good line for the Department, do you think the extension to Nowra will be a log upon you, or a help to you? I should think it would help us. Of course it is a matter of assumption. We have good grounds for believing that the traffic will be a good one. The district is a rich one, and should develop in the same way as other districts have done.
432. You admit that your conclusion is speculative to a certain extent? Yes.
433. Do you know anything of the country between Nowra and Jervis Bay? No.
434. You have not carried your consideration of the country beyond Nowra? No.
435. On the whole you are prepared to say that the railway to Kiama has justified itself? I think so.
436. Looking at it from a departmental point of view? I think so, without any accurate knowledge as to the results.
437. The line from Sydney to Kiama has not been a mistake so far as the returns are concerned? I have no returns in my possession to show that; but when I find a line gradually increasing the value and volume of its traffic every year, I naturally conclude that it is a line which should have been constructed.
438. This line is steadily increasing in traffic? Yes; it is, and we think it has assisted the agricultural interests of the neighbourhood.
439. It has stimulated the productiveness of the country? Yes; I think so.
440. *Mr. Humphery.*] Was there formerly any milk business carried on between Sydney and the Kiama district? None that I know of.
441. Has there not been a large business since the line was opened? Yes; a very large business indeed.
442. Do you not know whether any saw-mills have recently been established along the line? I have not heard of any. There is a saw-mill on the other side of the Metropolitan Coal Company's premises at Lilyvale, but up to the present time we have had no traffic from it.
443. I think you said there were not many residents between the Metropolitan Coal Company's works and George's River? Yes.
444. Are there not a great number of miners employed at the Coal Company's works? I am speaking outside the mining population.
445. But is not the mining population permanently settled? Decidedly.
446. What is the extent of the mining population? I could not tell you. I was told when I was down there by Mr. Robertson, but I have forgotten the number. There is a large number of men employed in sinking the second shaft.
447. Is there an increasing population in the vicinity of the Coal Company's works? I should imagine so.
448. Is the line being duplicated between Waterfall and George's River? Yes.
449. When will the duplication be completed? I am sure I could not tell you.
450. How long is it since it was commenced? I could not tell you that definitely.
451. Has the increase in traffic justified the expenditure for duplication? I could not express an opinion upon that point, but I presume the Commissioners would not have commenced it otherwise.
452. I presume the Commissioners would not have recommended the duplication unless they thought it was necessary? No.
453. *Mr. Garrard.*] Have you ever been over the country between Kiama and Nowra? Yes.
454. Is there a larger area of country between Kiama and Nowra for agricultural products, than between Wollongong and Kiama? I have not been over all the country, but I should think so.
455. The mountains are further back from the coast and give a larger area? Yes.
456. In your opinion the country is as capable of as large a production as the country between Wollongong and Kiama? Yes.
457. Do you know whether much settlement has taken place at Gerringong or Coolangatta? There is a settlement at Gerringong and at Broughton's Creek. 458.

J. Harper,  
Esq.

18 Dec., 1889.

458. Is produce shipped from Gerringong now? Yes, by steamer.
459. Do you think the producers would probably use the railway? Yes, we hope to be able to give them inducements to send their produce by rail.
460. Have you been as far as Cambewarra? Only past it.
461. You went along the coast? No; along the road from Kiama to Nowra.
462. Did you come back the same way? Yes.
463. You know nothing then about the Cambewarra or the Kangaloon? No, excepting from a report which I furnished some time ago about the extension to Robertson.
464. *Mr. Hurley.*] Have you taken note of the quantity of goods conveyed by steamer to Kiama and Wollongong? Yes; although it has been a somewhat difficult thing to do. The steam-boat companies have been very conservative in regard to giving information, but we have had observations made.
465. You have obtained the rates of freight by boat? Yes.
466. Can you give us any idea as to the difference of rates of freight by boats, and the rates of freight by rail? The freights on the boats—which are now struggling for existence—are about half our rates in many articles, and slightly above ours in others.
467. Could you offer better inducements to those who import to use the rail instead of the boat? Yes, by giving quicker transit, and better carriage.
468. What do you mean by better carriage? By carrying goods quicker, and in vehicles better suited for the conveyance of produce.
469. The vehicles on the southern line at the present time are not suitable for the traffic? Yes, they are, but we may have better.
470. You could improve upon them? Yes.
471. Then in order to get the trade it is necessary you should have improved accommodation? Even with our present accommodation, I think, as far as the factories are concerned, we shall gather the traffic. The farmers, who continue to make their own butter, cling to the old method of conveyance. As a rule most of the factories on the south coast are forwarding their butter by rail, finding it, I presume, more suitable, although our rates are higher.
472. Are not the steamers competing with the railway for the traffic which goes to the two ports I have named? Yes.
473. Would it not be to the advantage of the Railway Department to give greater facilities to secure that trade? We are giving them an excellent service as far as Kiama. We give them a service equal to 25 miles an hour for the conveyance of their butter and milk. We give them conveyances which, so far as experiments have gone up to the present time, are equal in temperature to the refrigeratory cars of the milk company. That is as far as we are prepared to go at present.
474. Have complaints ever been made to you, by merchants of Kiama and Wollongong, to the effect that they are prevented from using the railways on account of the excessive rates charged? Yes.
475. Would it not be to the interest of the Department to run loaded trains down there even at a reduced rate, instead of running half-loaded trains? That introduces the question of differential rates, which I am not prepared to discuss.
476. Have you anticipated what trade is likely to accrue from the working of the Metropolitan Coal Company? We are anticipating it by arranging for the construction of 400 waggons to meet that and the other coal trade of the southern collieries.
477. Those waggons are being constructed principally for the purposes of the trade of the Metropolitan Coal Company? No; to meet the demand for the shipment of coal at Darling Harbour.
478. Coal from all parts? Yes; either from Lithgow or from the south coast.
479. Where are the trucks being constructed? I cannot tell.
480. Do you know whether they are being imported or not? I have not the slightest idea.
481. Can you give any information as to who recommended the construction of the duplicate line from the Metropolitan Company's works towards Sydney? No.
482. Had you anything to do with it? Nothing whatever.
483. *Mr. Copeland.*] I should like to know whether the Department has any scheme worked out as to where the terminus of this line is to be. What is to be the ultimate terminus of the line? If any terminus has been fixed upon the name has not been communicated to me.
484. You have nothing to do with construction? No.
485. Do you not know then whether Nowra is likely to be considered the terminus, or whether the intention is to take the line on to Eden? No.
486. Do you know what freight is paid, by train, for butter, cheese, bacon, and eggs,—say from Kiama? £1 5s. 8d. per ton, if forwarded in large quantities; and £1 11s. 7d. per ton if forwarded in small quantities. That is equal to about 1s. 3d. per cwt.
487. That will be less than half a farthing per lb.? Yes.
488. Can you say whether any difficulty is found in paying that freight? None, whatever, as far as I am aware of.
489. Does the same freight exist in regard to cheese, bacon, and ham? Yes; in regard to dairy produce generally.
490. One penny a lb. would make a considerable difference to the producers? Yes.
491. It would be no good attempting to charge them 1d. a lb. for the carriage of any dairy produce? No; I should think not.
492. If you attempted to charge that price you would lose all the traffic? Yes.
493. Do you think the Department has considered the question from a Departmental point of view? I do not think the Department has considered the question.
494. Then they have constructed a railway on the supposition that the producers will still be able to patronize them, and send their goods up at this low rate, but your opinion is that if 1d. per lb. is charged they would be unable to send the goods up by train? They would send them by boat.
495. Then, in that case, the railway would not pay? I should think not.
496. You gave evidence to the effect that dairy produce was increasing in quantity? Yes.
497. I presume you anticipate, when the line to Nowra is constructed, doing an increased trade? Yes.
498. And being able to compete with the steamers? Yes.
499. Do you know whether the Department has considered this aspect of the question:—That if they bring, as

J. Harper, Esq.  
18 Dec., 1889. I suppose they ultimately will, the line to Eden, there will then be steam-boat competition, and instead of charging £1 per ton by all the Illawarra boats, as is done now, the goods will be brought down from Eden to Sydney at 7s. 6d. per ton. I presume you are aware that the charge from Melbourne to Sydney is 10s. a ton? Yes.

500. *Mr. Tonkin.*] Is the freight on milk the same as on butter and cheese? No, it is a little less.

501. Do the freights pay the working expenses and interest on the construction of the line? It will if we get enough of it.

502. But does it pay with what you get now? Yes, aided by other sources of revenue.

503. Then this is not a differential rate for this particular kind of produce? No. It is a rate which has been in existence to my knowledge for the last ten years.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Railway from Kiama to Nowra.

APPENDIX.

A.

*Précis* of proceedings relating to the Railway, Kiama to Jervis Bay—Extension to Nowra.

IN 1883 Parliament voted £804,000 for this line.

20/4/86.—Mr. Secretary Lyne laid on the Table of the House plan, section, and book of reference of Part No. 1 of line, Kiama to Nowra.

27/7/86.—The same were approved by the Legislative Assembly.

11/8/86.—Dr. Mackellar laid the plan, section, and book of reference on the Table of the Legislative Council. The matter was referred by the Council to a Select Committee, and there is on the file an imperfect copy of the minutes of evidence taken by such Committee, but there is no appearance of any report having been made to the Council, and it is assumed that no report was sent in.

Prior to this the Illawarra line (of which the Kiama-Nowra line is an extension) was in course of construction, if not completed, up to a point about a mile this side of Kiama. There it stopped short, in consequence of a difficulty about a route for the line through the town of Kiama.

A route was at length decided upon, and this route it was—a length of 2 miles 37 chains, which was referred to the Select Committee. It was strongly objected to in the Council because it crossed some dozen streets either by bridges or by level crossings with gate-keepers, and because the necessary land resumptions would be very costly.

The action of the Legislative Council necessarily brought matters to a standstill, and much dissatisfaction was expressed by the persons interested at the delay.

1/4/87.—A deputation waited upon Mr. Secretary Sutherland (from Kiama and Nowra) to advocate the extension of the line into Kiama, and the further extension of it towards Nowra. They pointed out that until the line was brought into the town the Kiama goods would continue to be sent by sea, and that the extension towards the fertile Shoalhaven district was equally important; and they urged that immediate steps should be taken to secure the approval of the plans in order that the work might be carried out. The Minister informed the deputation they were in a difficulty. The plans for the extension to Kiama had been submitted to the Council and had been by them referred to a Select Committee which had not made a report when Parliament was dissolved. He was not certain what steps would have to be taken, but probably the Select Committee would have to be re-appointed. The matter was, therefore, at a deadlock. As regarded the further extension south, the plans had been submitted to the Assembly but had not been considered when the House dissolved, and the Government had already decided to make no railway proposals that session. Nothing, therefore, could be done at present, especially as the second proposal was dependent on the first. The newspaper report states that the Minister said in reference to the termination of the line outside Kiama that “the matter had been brought into a hole where it should not have been allowed to go,” and that “the line ought never to have been carried to the beach at all.”

5/7/87.—A public meeting was held at Kiama to protest against the erection of the station buildings at so great a distance from the town, and to advocate the immediate extension of the line into the town. A telegram was read from the Minister intimating that action had been suspended to allow of an expression of opinion on the subject. One of the speakers stated that plans were in the contractors' hands for the erection of a station to cost £4,000. It was further stated that if the station were located as proposed it would never be used, as produce would continue to be sent by sea. They were of opinion that the line was not made to benefit the district, but in the interests of the coal owners between Coalcliff and Sydney, and that Kiama had been used as a “cat's-paw.” They were sure the line would never pay until carried to Jervis Bay.

12/7/87.—Presumably as the outcome of this meeting a petition was presented to Mr. Secretary Sutherland, praying for the extension of the line into Kiama (1) because the place where it was proposed to place the station was—as it had been very appropriately termed—“a hole;” (2) because such “hole” was a mile outside the town, and a few yards above high-water mark on the beach, with the cemetery on one side and a lagoon on the other; and (3) was inaccessible to the people of Kiama, Jamberoo, and Gerringong.

15/7/87.—Mr. Whitton reported that all work in connection with the temporary station had, under the Minister's instructions, been stopped, but this would prevent the line being opened to Kiama.

14/9/87.—Mr. Fraser Martin addressed Mr. Secretary Sutherland, stating that he was constantly requested by leading residents of Shoalhaven to urge the Government not to overlook the extension from Kiama to Nowra. It was generally considered that tenders might be called simultaneously for the extension into Kiama, and for the longer section beyond. In any case the clashing of interests in regard to Kiama should be no bar to the construction of the longer and more important extension towards Nowra.

11/11/87.—A deputation waited upon Mr. Sutherland to urge the same points. They pointed out that, pending a settlement of the Kiama difficulty, there was no reason why the extension should not be commenced from the Nowra end. The Minister replied that he could add little to what he had previously said. This would be one of the first proposals the Government would deal with. The South Coast Railway could not be considered complete until it was carried to the Shoalhaven River, and until that was done the line would not pay; but they knew the difficulty, and there would be trouble yet in settling it. The Shoalhaven district was second to none in the colony, and it had not had fair play in the matter of public expenditure.

15/6/88.—A deputation from Shoalhaven waited upon the Colonial Secretary in reference to the extension, and handed in a number of statistics, but the only record of the transaction is a brief newspaper paragraph, and the statistics are not on the file. It would appear from a minute by the Engineer-in-Chief that the line Kiama to Nowra, at an estimated cost of £538,663, was included in the railway policy of this year (1888), and that the plan, section, and book of reference were approved by the Legislature, but not by the Council. There is no other record of the circumstance on the file.

\* Some statements make it 2 miles.

5/4/89.—A deputation waited upon the Colonial Secretary and the Minister for Works to again press that the railway might be brought into Kiama, as part of the intended line to Shoalhaven. Sir Henry Parkes expressed surprise that the terminus had been left so long outside Kiama, and thought the request to bring it into the town was only reasonable. The Minister for Works concurred. The Colonial Secretary further observed that the line had been sanctioned under the old system, and it might therefore be carried out without reference to the Works Committee. The Government would lose no time in considering the matter.

13/4/89.—A deputation to advocate the extension of the line to Nowra was received by the Minister for Works. The deputation argued that the extension would open up a very rich country, every yard of which was productive, and that it passed through level country which was thickly populated. The Minister informed the deputation that they had not advanced any fresh arguments, that he knew the country well and could not admit that it was thickly peopled. No doubt the country was fertile and deserved encouragement, but a large sum of money was involved, and he could not be bound by the action of his predecessors. He thought it a pity they had not come prepared with statistics, and an estimate of the probable traffic of the line, but the matter should nevertheless be carefully looked into. A note is appended to this report to the effect that it was stated that twelve coaches run weekly from Kiama to Nowra carrying an average of twelve passengers each.

9/5/89.—A telegram from the district appeared in the *Herald*, stating that great dissatisfaction was felt at the determination of the Government to treat the proposal as a new undertaking.

13/6/89.—A deputation waited upon Mr. Secretary Bruce Smith and submitted statistics of the population, cultivation, trade, &c., of the district through which the line would pass. The Minister informed the deputation that he was convinced of the fertility of the district, and it was at his request that it was one of the first visited by the Railway Commissioners to whom all the information in the office had been furnished, and to whom the new facts supplied by the deputation should also be sent. He was himself in favour of the line, and if he were backed up by the report of the Commissioners he would submit it to the Cabinet with a recommendation to refer it to the Works Committee. The deputation might go away assured of a favourable report from the Commissioners who took the most liberal view of any proposed line, looking to the return in the future rather than to present prospects, and they were, he knew, in favour of a port at Jervis Bay. The statistical paper presented by the deputation states the estimated population of Shoalhaven district at 11,250 souls; the population of Kiama not being given. Average rainfall 52 inches.

Shoalhaven possesses stock as under—	
Cattle.....	33,127
Horses.....	4,789
and turns out annually—	
Butter.....	1,891,267 lb.
Cheese.....	53,708 „
Hams and bacon.....	128,319 „
Area of land—	
Enclosed.....	223,753 acres
Unenclosed.....	35,227 „
Cultivated.....	66,446 „
Maize produced.....	144,297 bushels

There are still in the Electorate 400,000 acres of Crown Land unsold.

Kiama possesses stock as under—	
Cattle.....	17,225
Horses.....	2,435
and turns out annually—	
Butter.....	1,220,733 lb.
Cheese.....	.....
Bacon and hams.....	.....
Area of land—	
Enclosed.....	60,135 acres
Unenclosed.....	727 „
Cultivated.....	26,956 „
Freeholders in Shoalhaven.....	1,232
Do „ Kiama.....	542

There are on the file further statistical statements, but they either have no official authority or are of too old a date to be of any value, and as the returns of the Government Statistician are now available, it is considered expedient to ignore the former, and give the figures of the latter. The following table is accordingly compiled from the Statistical Register for the year 1888 :—

	Shoalhaven.	Kiama.
Population.....	5,814	6,172
Total area of land.....	1,022,080 acres.	134,400 acres.
Area cultivated.....	63,941 „	62,343 „
Number of holdings.....	1,063	608
Hands employed.....	1,921	1,559
Cultivated for grain.....	5,868 acres.	374 acres.
„ „ fodder.....	3,512 „	2,446 „
„ „ potatoes.....	308 „	85 „
Artificial grasses.....	53,890 „	59,411 „
Produce—		
Grain, various kinds.....	149,124 bushels.	12,421 bushels.
Potatoes.....	996 tons.	258 tons.
Hay and fodder—Quantity not stated, but undoubtedly very large.		

It is by no means easy to arrive, from the Statistician's tables, at the population of the districts which will be affected by the proposed railway, but he gives the number of electors for Shoalhaven as 2,500, and for Kiama as 1,649, and these figures, according to the usual modes of computation, would make the populations—Shoalhaven 12,500 to 15,000, and Kiama 8,245 to 9,894.

Some statistics of traffic to and from Kiama, northward, may be given here, and must be taken for what they are worth :—October, 1888, to May, 1889.—Goods forwarded, 1,147 tons, freight £1,379; goods received, 661 tons, freight, £339; live stock, 68 trucks, freight £172; passengers booked, 8,064, £3,058 (about half of these arrived by coach from places south of Kiama); southern proportion of butter dispatched from Kiama in same period, 1,029 kegs, freight, £59.

June, 1889.—The Railway Commissioners reported that a single line (Kiama to Nowra) was estimated to cost £538,663, that the annual charges would be :—

Interest on cost at 3½ per cent.....	£18,853
Maintenance—Permanent Way.....	3,250
Loco. Expenses.....	1,400
Traffic do.....	1,200
	£24,703
Estimated Revenue.....	6,157

Annual loss  
£18,546.

But the bridge (estimated to cost £100,000) across the Shoalhaven River, at Nowra, they considered should be postponed until it was decided to extend the line further south, the terminus for the present to be on the north side of the river, where the necessary station and approaches would cost £3,000, diminishing the capital expenditure by £97,000. If this plan

## APPENDIX.

plan were adopted the annual interest would be reduced to £15,458, and maintenance also would be less by £350; total saving, £3,745. The district was very rich, and exhibited symptoms of great progress. They would recommend that the extension be carried out, but the residents should combine to convey to the Government free of cost all land required. Annual loss reduced to £14,801.

1/8/89.—The House, on the motion of Mr. Secretary Bruce Smith, approved of the reference of the line for the consideration and report of the Public Works Committee.

7/8/89.—The honorary secretary of the Shoalhaven Railway Committee pointed out in a letter to the *Daily Telegraph* that under the recommendations of the Railway Commissioners the terminus would be 2 miles away from the town and on private land (the Berry Estate, of 90,000 acres), that Nowra had been laid out by Government, and now contained much valuable property distributed over 28 miles of streets. If (he asked) the terminus were to remain for many years on the Berry Estate, and speculators and syndicates made use of their opportunities, what would be the effect on Nowra, the Government town, with a river  $\frac{1}{2}$  a mile wide between it and the terminus? Is there not (he demanded) *any morality* in the transactions of the Crown? The people of Nowra had spent thousands on the faith of its being laid out and sold by the Government, and now the Commissioners were going in effect to run a private town against them. Was this repudiation—or worse?

7/8/89.—The same gentleman, writing to the *Herald* on the same date, and referring to the same matter, placed it in different phraseology in the same point of view. Was it (he asked) sound policy for the Lands Department to build up and the Railway Commissioners—another branch of the same Government—to pull down? The Crown had laid out and sold land for the purposes of a town, virtually proclaiming and establishing Nowra as the Government town of the district of Shoalhaven, and hundreds had spent their all upon their buildings and businesses. Did it not savour of repudiation to stop the railway 2 miles short of that town on private land? It was argued that the terminus was on Berry's land only temporarily, and, if so, the impolicy of spending £3,000 was obvious. But they all knew what land syndicates and ninety-nine years' leases could do where party politics were concerned. It seemed to him and to others that the honor of the Crown was concerned where such spoliation was contemplated. Would the saving of £3,000 or £4,000 for a few years justify such an immoral policy? This was an aggravated repetition of the policy of retaining the terminus at Redfern, or of stopping the railway 2 miles short of St. Leonards.

20/8/89.—Mr. P. H. Morton wrote to the Minister asking him to receive a deputation of persons interested in the matter who desired to represent that the extension as proposed and sent on to the Works Committee was not from Kiama to Nowra, but from Kiama to Bomaderry, a small settlement on the north side of the river, and on land owned by one person. The residents of Nowra who had built upon land bought from the Crown in the faith that no other town would be encouraged considered that a great and unjustifiable injury would be done to them if the terminus were placed on the opposite side of the river, and they hoped that the Minister, after hearing the arguments of the deputation, would see his way to refer the extension across the river for the consideration of the Works Committee.

29/8/89.—The Minister received the proposed deputation, who expressed a fear that the erection of the terminus at the place proposed would cause a private township to spring up there and do serious injury to Nowra. The Minister replied that the sole object of the railway was not to reach them, and that they had no right to grumble if the line did not run right into the centre of their town; views of this kind in the past had cost the country thousands of pounds. It was intended eventually to extend the line to Jervis Bay, and it would cross the river about  $\frac{2}{3}$  of a mile from the intended terminus. It was only for their convenience that it was proposed to make this  $\frac{2}{3}$  of a mile of temporary line, in order to bring the terminus as near to them as possible without incurring the immediate expense of a bridge. When the line was carried on this temporary line would be taken up, and their fears of another township springing up were therefore groundless.

Mr. P. H. Morton handed to the Minister a number of cuttings from newspapers (both local and metropolitan). In the mass of matter contained in these cuttings the key-note is the inexpediency of stopping short, even temporarily, on the north side of the Shoalhaven River, and the injury likely to result to Nowra if that measure be carried out.

5/9/87.—Mr. John Maclean, in a letter to the *Sydney Morning Herald*, stated that if the question of the location of the terminus had been remitted to the Public Works Committee—the law-appointed jury in such cases—there would not have been one word of complaint, but he feared that question was placed outside the scope of their inquiry. As regarded the heavy cost of the proposed bridge they already had a bridge which the Edgemoore Iron Company was prepared to guarantee would carry the heaviest trains, and which was wide enough for a double line of rails, and this had cost only £40,000, while the Minister's estimate was £100,000 for a bridge, just 120 per cent. in excess of this. 150 per cent.

17/9/89.—Mr. Morton, M.P., forwarded to the Minister a letter from the Dowling Progress Association, urging the extension of the line to Jervis Bay. C.A.B., 26/11/89.

## B.

## RAILWAY COMMISSIONERS' REPORT.

Office of the Railway Commissioners of New South Wales, Sydney, 17 June, 1889.

Proposed Branch line of Railway, Kiama to Nowra, 24 $\frac{1}{2}$  miles.

IN accordance with section 13 of the "Public Works Act, 1888," we beg to report as follows:—

*Cost of Construction—*

The Engineer-in-Chief estimates the cost of construction of a single line of railway, exclusive of land and compensation, at ..... £538,663

*Annual Cost—*

Interest on cost of construction, at 3 $\frac{1}{2}$ per cent. ....	18,853
Estimated cost of maintaining permanent-way, per annum .....	3,250
Locomotive expenses, per annum .....	1,400
Traffic expenses, per annum .....	1,200
	5,850

Total annual cost ..... £24,703

Traffic estimate of revenue ..... £6,157

Included in the estimate is a sum of £100,000 for a bridge over the Shoalhaven River at Nowra. We consider that this large expenditure should be postponed until it is decided to extend the line further south, the terminus for the present to be on the north side of the river. It is estimated that the necessary station and approaches can be constructed for about £3,000. If our recommendation in this respect is carried out it will reduce the annual interest to £15,458, and the permanent-way maintenance will also be reduced by £350. The cost of working the line would be £5,500 instead of £5,850—saving per annum, £3,745.

The district is a very rich one, and we see in it great evidence of progress. We would beg to recommend that the extension proposed be constructed.

We consider that the residents in this district should combine together to have the land necessary for the construction of the line conveyed to the Department free of cost.

The Seal of the Railway Commissioners of New South Wales was affixed hereto on the seventeenth day of June, in the presence of,—	W. V. READ.	}	E. M. G. EDDY, (L.S.)
			Chief Commissioner.
			W. M. FEHON, (L.S.)
			Commissioner.
			CHARLES OLIVER, (L.S.)
			Commissioner.

## C.

OFFICIAL DESCRIPTION OF THE PROPOSED RAILWAY  
Line from Kiama to North side of Shoalhaven River, near Nowra  
Length 22 miles 46 chains

Estimated cost from Permanent Survey (exclusive of land and compensation), £381,390, or, £16,895 per mile

THIS proposed extension of the South Coast Railway commences at the end of contract No 4 of the Illawarra Railway, at 69 miles 79 chains, near the Cemetery north of Kiama, thence across Wright's Creek, and, by a tunnel 506 yards in length, into Kiama, to the junction of Minumura and Collins Streets, thence in a south easterly direction to a point 150 links distant from Kiama Bay, crossing Shoalhaven and Tealong Streets, and passing between the Scotch Church and Municipal Chambers; thence passing between, and parallel to, Manning and Shoalhaven Streets, crossing Noorina and Barney Streets; thence along the western side of the South Coast Road, which it crosses at 71 miles 58 chains, thence in a southerly direction, skirting the coast for 1½ miles, in which distance there are four tunnels—the first commencing at 72 miles 32 chains, 429 yards in length, the second commencing at 72 miles 73 chains, 242 yards in length, the third commencing at 73 miles 59½ chains, 407 yards in length, and the fourth commencing 74 miles 14 chains, 440 yards in length—and crossing a number of small watercourses on to Miller's Flat, crossing the main South Coast Road at 75 miles 32 chains, passing by the village of Gerringong, at 76 miles 46 chains, and distant about 40 chains from the centre of the village, crossing the Nowra Road at 76 miles 62 chains, thence in a south westerly direction along the flats at the head of Crooked River, crossing a sput of the Main Coast Range at 79 miles 26 chains, thence across a saddle of the Cooloongatta Range, to the valleys of the Broughton and Broughton Mill Creeks, which creeks will be crossed by a series of timber openings from 83 miles 36 chains to 84 miles, thence crossing the Berry and Cooloongatta Road about 10 chains to the east of the township of Berry, thence on the eastern side of the Main South Coast Road, distant therefrom 10 to 30 chains, to the Bomaderry Village, crossing the Bomaderry Creek at 92 miles 25 chains, and on to the Shoalhaven River, the north bank of which is reached at 92 miles 45 chains

The temporary deviation for station purposes, 52 chains in length, leaves the main line at 92 miles 16 chains, and terminates at the Main Nowra Road, about 1 mile from the township of Nowra

The sum of £804,000 was voted for the construction of the line from Kiama to Jarvis Bay  
28 November, 1889.

SOUTH COAST COACH AND OTHER TRAFFIC.

Sir,

20 November, 1889.

The question of the extension of the railway from Kiama to Nowra will probably come before the Public Works Committee next week, and I am anxious, in view of this, to get some information as to the south coast coach and other traffic. We have information already in the office from interested sources showing this, but the Committee naturally like official authentication in matters of this kind, and I should therefore be obliged if you could kindly obtain from your officers in the district particulars of the number of coaches bringing passengers daily to the Kiama railway station, and the steamers. If some idea could also be given of the goods and other traffic it would be very valuable.

I do not know whether I am asking you too much, but the information, if obtained, will be appreciated by the Committee, because it would come from a disinterested and reliable source.

E. Fosbery, Esq., Inspector-General of Police.

I have, &c.,  
J. BURLING.

Will Mr. Ryeland obtain for me a careful report.—E.F., 21 11/89.

Police Station, Kiama, 28th November, 1889.

SERGEANT BRAYNE respectfully reports having made careful inquiry *re* attached memo. He finds there are three coaches running each way daily between Shoalhaven and Kiama Railway Station. The average number of passengers conveyed between them daily each way is 18; the number of persons travelling otherwise is about 5. Total, 23.

The number of coaches plying between Kiama and Kiama railway station are 7. The average number of passengers conveyed by them daily each way are about 32; persons travelling otherwise, about 6. Total, 38.

About 25 of this last-mentioned number would be visitors to the district; the remainder would be district people.

The average number of persons travelling by four steamers each week between Kiama and Sydney are about 3 each way.

The

The goods traffic, &c, between Kiama and Sydney at this time of the year are as follows (this is from Kiama only ; there are no goods, &c, coming from Shoalhaven District to the railway) —

## GOODS SENT EACH WEEK

Produce	By rail	By steamer
Butter	292 kegs	320 kegs
Bacon	3 cwt	3 tons
Cases of eggs	5	30
Cans of milk	84 10 gal	Nil
Miscellaneous produce, such as hides, tallow, bones	5 tons	10 tons
<i>Live Stock—</i>		
Horses	7 in six months	4 weekly
Milch cows	Nil	4 "
Calves	Nil	30 "
Pigs	Nil	35 "
Coops of poultry	Nil	6 "

155 head of cattle and 413 sheep have been sent by railway, in truck loads during the last six months  
The farmers here appear to prefer the steamer, as in sending small lots of produce, &c, it is far cheaper than the train

Most of the butter factories send their produce by railway, as they have larger quantities to send at one time  
Farmers with one keg of butter, a horse, a cow, fat calf, sheep or pig, will not send by rail while the freights are as they are

Produce	Freight by Rail	Freight by Steamer
	£ s d	£ s d
Butter, single keg	0 2 0	0 1 0
Butter, half ton	0 1 1 per keg	
Single case of eggs	0 2 0	0 1 0
Single horse	1 15 0	0 5 0
Truck of 7 horses, by rail	2 7 4	
Single milch cow	0 17 9	0 5 0
Truck of 9 cattle, by rail	2 7 4	
Single calf	0 5 11	0 2 6
Single pig	0 3 0	0 1 0

This will show why they prefer the steamer

There are about ten times the amount of goods coming from Sydney to Kiama by steamer than there is by rail  
During the past year the steamer freights have been reduced about 30 per cent, they appear to carefully watch the Railway Department's scale of charges Sugar is brought by steamer from Sydney for 10s per ton, while by rail it costs 29s 11d ; salt, 5s per ton, by rail, 12s 4d This will show why the steamers do all the trade, it is chiefly flour, fruit, and light bulky packages that come by train

The produce from the southern end of the Kiama district is shipped at Gerringong for Sydney. There are 80 kegs of butter, 25 cases of eggs, 1 ton of bacon, and about 1 ton of tallow, hides, bones, and miscellaneous produce, 48 calves, 6 pigs, and 3 coops of poultry each week

There are about 7 tons of goods brought to Gerringong from Sydney by steamer each week, but no passengers either way.

There are several vessels trading in blue metal, and there is some sent up by rail ; but the sergeant has not touched this trade, as he did not know whether it was necessary

C W MAYNE, Sergeant

James Ryeland, Esq,  
Superintendent of Police, Eastern District

Forwarded for the information of the Inspector General of Police —JAS RYELAND, Superintendent, 29/11/89  
Shoalhaven report not yet to hand Report now supplied, and forwarded —JAS RYELAND, Superintendent, 9/12/89

Police Station, Nowra 6 December, 1889

SERGEANT SYKES begs to report that the I S N Co's steamer the "Illawarra" runs bi weekly between Sydney, Kiama, and Shoalhaven conveying goods and passengers Mr Hays (of the Berry Estate) steamers, the "Meendery" and "Coomonderry," also run bi weekly between Shoalhaven, Kiama, and Sydney, the two latter steamers ship goods, produce, &c, at Nowra bridge wharf and Berry wharf The "Illawarra" being unable on account of her size to come up the river to Nowra, ships at Greenwell Point, but her consort the "Terara" a river steamer, collects all produce for a distance of 25 miles from the mouth of the Shoalhaven River upwards and tranships to the "Illawarra" A river steamer, the "Sunbaw," acts as a feeder to the "Coomonderry" and "Meendery" No goods whatever arrive in Shoalhaven via Kiama by rail, excepting of course small parcels conveyed by Thorburn's coaches All goods, produce, &c, excepting about 50 tons sent weekly from Kangaroo Valley via Moss Vale, arrives and is sent out by the steamers already mentioned Since the opening of the railway line to Kiama the passenger traffic by the steamers has almost diminished the I S N Co, having offered as an inducement to run passengers free by coach from Greenwell Point to Nowra (10 miles), had shortly afterwards to discontinue the practice The whole, or nearly so of the passenger traffic from Shoalhaven, goes via Kiama by Thorburn's coaches, that is of course since the railway opened to that place The passenger traffic by coach from Nowra to Kiama (fare 6s) is very considerable, Mr Thorburn employing no less than 28 coaches in the district for that purpose with carrying capacities from 22 to 8 passengers for each coach Speaking approximately, 20,000 passengers have been conveyed in this manner during the past twelve months Then people travelling by horseback and private conveyances for the past twelve months would be about 200, these figures, of course, would be doubled by the return journey During the past twelve months about 2,600 to 2,800 passengers have travelled (including both ways) to and from Kiama and Sydney by the steamers (fare, 15s single—Nowra to Sydney) The passenger traffic via Kiama is increasing steadily and there are a great number of people who do not travel in consequence of the discomforts attached to both coach and steamer who would readily avail themselves of the opportunity to travel by rail With regard to the cargo exported and imported into the Shoalhaven District by the steamers, the principal exports, of which great quantities are produced, are maize, bacon, butter, cheese, poultry, eggs, potatoes, oysters, and fish Owing to the reticence of the steamers' agents, &c, the sergeant has experienced great difficulty in obtaining as accurate information as he could have desired, but the weight of exports and imports conveyed by the steamers for the past twelve months would be about from 10,800 to 11,000 tons ; the various freight charges the sergeant has been unable to obtain, as also the number of live stock, but the sergeant knows that large numbers of pigs and calves principally, as also numbers of horses and cattle, are conveyed by the steamers to and from Sydney and Kiama Shoalhaven abounds in splendid timber ; eight saw mills are actively employed, and the greater part of the timber finds a market in Sydney, one small steamer and three small sailing vessels being engaged in the trade, but owing to the absence of owners, and other causes, the sergeant has been unable to ascertain the quantities conveyed Should the line be opened to Nowra the whole of the traffic from Kangaroo Valley which goes via Moss Vale would be diverted to Nowra

The

## APPENDIX

The passenger traffic between Nowra and Kiama by coach is regulated by the state of the road, which in wet weather is cut up badly consequently at that time passengers decrease in a great degree, and the figures quoted, therefore, represent the traffic in passengers at a time when the roads are in good order through a continuance of fine weather. In conclusion, the sergeant would state, with regard to the Shoalhaven district that the statistical returns of such being collected by the sergeant and the police under his charge, and furnished through the Inspector General of Police to the Government Statistician, are quite reliable, and if anything are underated than otherwise. The sergeant would also like to state from his knowledge of the district that in the event of the railway being opened to Nowra, the land, or a great portion of it, to the south side of that place would be opened up for the purposes of establishing a fruit industry, the soil being specially adapted for fruit and vines.

Jas Ryeland, Esq.,  
Superintendent of Police, Eastern District.

A A SYKES, Sergeant.

Engineer.

# PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

## SECTIONAL COMMITTEE.

### RAILWAY FROM KIAMA TO NOWRA.

#### REPORT.

YOUR Committee have to report that they have inspected the route of the proposed Railway from Kiama to the Shoalhaven River, visiting the towns of Kiama, Gerringong, Berry, and Nowra, which will be served by the line, and taking the evidence of upwards of fifty of the residents in those localities.

The country through which the line will pass is highly fertile, and more densely and continuously settled than any other dairying or agricultural district in the Colony of similar extent. The farms, which are very numerous, are not of large size, the prolific nature of the soil enabling the settlers to live comfortably on very limited areas. A few miles from Kiama, on the route of the proposed line, is the thriving township of Gerringong, and 11 miles distant is the larger town of Berry, which is rapidly growing in importance as a commercial centre, where the numerous farmers of the district transact their business, and find a market for their products. Amongst the thriving localities which will be accommodated by the railway are Kangaroo Valley, Cambewarra, Foxground, Broughton Vale, and Wood Hill, all of which places, with the exception of the Kangaroo Valley, are within a few miles of the route. On the south side of the Shoalhaven River, opposite to the terminus of the line, is the important town of Nowra, having substantial buildings, well-made streets, and a population of about 1,500. There are also in this part of the district the townships of Terara, Numba, Tomerong, Burrier, and Yalwal, the traffic in connection with which will be sufficient to largely augment the revenue from the proposed railway.

The arable land between Kiama and Nowra, owing to its exuberantly productive character, is eagerly sought after by persons desiring to settle, and the price ranges between £20 and £60 an acre. The soil consists of rich deposits on a basaltic formation, and between the steep hills, which are covered with a thick vegetation, are extensive alluvial valleys, affording ample pasture for the numerous herds of the dairy farmers. The hilly part of the district is the country between Kiama and Berry, the land between Berry and Nowra, which is of an undulating, but less rugged, character, being intersected by the Broughton Creek and the Shoalhaven River.

The farmers in the district may be divided into two classes, the freeholders and the leaseholders, the latter being chiefly on the extensive property in the Shoalhaven district known as the Berry Estate. This estate comprises 62,500 acres, of which about 50,000 acres are suitable for cultivation, 25,000 acres having been already leased for dairying and agricultural purposes. There are on the estate about 400 farmers, 100 other householders, and 150 cottages for servants and labourers, the total population on the property being estimated at not less than 5,500; and it is intended shortly to throw open another 25,000 acres, which it is expected will lead to a further settlement of some 400 more farmers, and a proportionate increase of inhabitants; so that there will probably soon be a population of over 8,000 on the Berry Estate alone.

In addition to the leaseholders on the Berry Estate, however, there is a numerous settlement on conditional purchases along the route of the proposed line, and the total population to be served by it cannot be less than 15,000, including Kiama, Gerringong, Berry, and Nowra. In the Shoalhaven District there is ample room for the settlement of a large number of people, considerable areas of Crown lands being unalienated, which, though not of the best quality, are nevertheless suitable for growing various kinds of fruit, including the orange, the vine, and the

olive, as well as for grazing purposes. It would be advisable to have them proclaimed special areas, as the committee are of opinion that a large revenue will accrue from their sale in the event of the railway being constructed. It may be mentioned, that while the value of the superior land is from £20 to £60 an acre, the rents in the Kiama District vary from 20s. to 40s. an acre per annum.

The staple products of the district between Kiama and Nowra are butter, milk, bacon, and maize. The milk industry has assumed enormous proportions since the railway was extended to Kiama, and your Committee are convinced that the continuation of the line to the Shoalhaven River would result in a still larger development of the industry all along the route beyond its present terminus. There are fifty butter-making factories and private separators in operation in the district, turning out very large quantities of butter; and the bacon-making industry is also extensively carried on, the proprietor of one factory—that at Berry—which is not the largest, as the Committee were informed—slaughtering about 3,000 pigs annually.

The cultivation of maize in the Shoalhaven District is considerable, the area under this crop last year being 5,547 acres. The area growing green food for cattle was 2,568 acres; hay, 1,054 acres; under permanent artificial grasses, 53,890 acres; making the total area under cultivation in the Shoalhaven District 63,941 acres. The number of horses in the Shoalhaven District is 4,789; sheep, 2,486; pigs, 9,736; ordinary cattle, 17,856; dairy cows, 15,271. The evidence shows that throughout the whole of the districts to be accommodated by the proposed railway there are more than 30,000 head of dairy cattle, besides the ordinary cattle, and a very large number of horses, pigs, and poultry.

To give some idea of the way in which traffic may be developed in the South Coast District, the Committee would draw attention to the great rapidity with which the railway returns at Kiama increased immediately on the completion of the connection between Waterfall and Clifton. During the six months preceding the completion of the railway connecting Kiama with the metropolis the total revenue of the Kiama Station amounted to £705 12s. The revenue at Kiama Station during the first six months after the completion of the line amounted to £4,347 8s. 10d., and for the following six months to £5,239 11s. 1d. Thus the opening of the Kiama Railway, which only taps the district to the south of Kiama, resulted in an increase of the revenue to nearly £10,000, or about £800 a month for the first year that the line was in operation.

The mining resources of the district are such as to promise a considerable augmentation of the traffic on the line in the future. At Yalwal, 20 miles from Nowra, through which town all the traffic from that place must pass, a gold-field is being developed, which seems likely to be of a permanent character. Large sums of money have already been spent in providing machinery for the Yalwal mines, which, it is believed, will soon be in a productive and flourishing state. Large amounts have been invested in the mines by speculators outside the Colony, and one of the Yalwal properties has recently been sold to Victorian capitalists for the sum of £20,000. The heavy traffic to and from this gold-field is carried by steamer, the passengers travelling by rail to Kiama, whence they have to proceed to the end of their journey by coach.

It may be here stated that the coaching traffic of Mr. Thorburn, of Nowra (whose evidence will be found on page 33), returns him £400 a month, or nearly £5,000 a year.

The fishing industry is being developed at St. George's Basin, Swan Lake, and Jervis Bay, the fish being conveyed to Sydney by steamer from Greenwell Point. The want of a railway for the transmission of this perishable product to the Sydney market is severely felt, and speedy transit would be an advantage to consumers in Sydney, as well as a great benefit to the men engaged in obtaining this valuable article of food from the prolific waters mentioned.

The timber trade is carried on to a limited extent only in the district, although there are still several large timber reserves. Along the whole route of the proposed railway there will be no difficulty in obtaining ample supplies of timber and ballast for the line, free of cost.

Evidence was given by several local residents in regard to the large coal deposits which are known to exist in the mountains, within a few miles of the route of the line, as well as near Jervis Bay. The coal is said to be of a superior quality, and it is anticipated that a considerable development of the coal mining industry will take place as soon as railway accommodation is provided.

Your

Your Committee desire to call attention to Jervis Bay, one of the most capacious and valuable harbours in Australia. Its importance as an admirable site for a seaport cannot be overestimated; it is undoubtedly destined in the future to become a port of call for coasting and ocean steamers, and the mails will probably be landed there for transmission overland to the metropolis. In the near future Jervis Bay is certain to become conspicuous in connection with the maritime commerce of the country, and must occupy an important position with regard to any general system of defence of the Colony. Any unalienated land in the Government township and in the surrounding district should be reserved until after the completion of the railway, in the event of its being determined to carry it to the Bay.

The South Coast district has already become a favorite place of resort with tourists. Without a railway to Nowra access to the magnificent scenery lying beyond the terminus of the existing line, in the districts of Gerringong, Berry, and Shoalhaven, is both difficult and expensive. But by providing railway accommodation we should bring these picturesque and attractive localities within such easy distance of Sydney as to render them a common pleasure resort to the citizens of the metropolis, thus increasing the railway revenue, and conferring a boon on those whose occupations only occasionally permit a visit to the country.

The evidence taken at the several centres of population indicates a degree of prosperity and comfort among the occupants of the land, which is not exceeded, if equalled, in any other district of the Colony. The Committee would draw special attention to the evidence of the various bank managers, in reference to the flourishing condition of the inhabitants of the district. Bad debts are almost unknown, whilst the fixed deposits have increased to a surprising extent. The leading banks are represented in several parts of the district; all are doing a large and increasing business, and most of them have erected or are erecting costly banking premises to meet the requirements of their operations.

Local Government obtains throughout the district between Kiama and Nowra, the municipalities of Kiama, Gerringong, Berry, Terara, Nowra, Numba, Broughton Vale, and Wood Hill, having been long in existence.

The Sectional Committee, after having carefully considered the evidence, inspected the country through which the line is to pass, and observed the fertility of the soil as well as the settlement in the district, recommend the construction of the proposed line of railway without delay, and its early extension to Jervis Bay.

Your Committee also urge the necessity for taking the line into the town of Nowra, in order to secure the maximum amount of traffic.

The speedy erection of a railway bridge would render unnecessary the proposed branch line from Bomadery to the existing bridge over the Shoalhaven River.

F. T. HUMPHERY,  
Chairman.

Office of the Parliamentary Standing Committee on Public Works,  
Sydney, 30th January 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

RAILWAY FROM KIAMA TO NOWRA.

KIAMA, SATURDAY, 25 JANUARY, 1890.

Present:—

The HONORABLE FREDERICK THOMAS HUMPHERY (CHAIRMAN).  
 EDWARD WILLIAM O'SULLIVAN, Esq. | JOHN HURLEY, Esq.  
 The Honorable ANDREW GARRAN was also present.

The Sectional Committee proceeded to consider the proposed Railway from Kiama to Nowra.

Charles William Craig, Esq., Mayor of Kiama, sworn, and examined:—

1. *Chairman.*] You are Mayor of the Borough of Kiama? Yes.
2. How long have you held that position? About twelve months.
3. Were you an alderman before? Yes, nearly six years.
4. How long have you been in the district? I was born here.
5. Have you looked at the plan of the proposed extension? I am conversant with the line; I have seen the surveys.
6. As far as you are aware, is there any objection to the route of the proposed extension? No particular objection, unless that, instead of going through the centre of the town, it might go nearer to the Church Point. The opinion is it should go by Church Point, so as to prevent cutting the town in two.
7. What is your own opinion,—would you rather see the Church Point route taken in preference to the one through the town, or is the objection to the town route simply a local one? Simply a local one.
8. Have you any objection to the proposed extension from the present terminus of the line to the Shoalhaven River? None whatever.
9. Would you like to make any remarks generally on the subject? I am pleased to see the matter in this stage of progress, and I trust that the evidence given will be favourably entertained, and that the report will result in the extension further south. At the present time the Kiama station is in a very inconvenient position, and it would be an advantage to have the line extended into town; but we have been given to understand that cannot be done now without going further south. We have no objection to going further south.
10. Do you believe it will benefit the railway returns if the extension further south is made? Yes, for at the present time only a small portion of the fertile district is tapped, and the further the railway goes south it will improve. Owing to the terminus being where it is at present a considerable amount of produce is lost to the railway, as it is forwarded by steamer. The district is a splendid one around Gerringong, Berry, and Nowra, and right down; and I believe the extension of the railway would also have the effect of tapping the coal-seams further south.
11. What is your opinion of the proposed site for the station at Kiama? I would like to see a more suitable site for the station. I have my own opinion as to where it should be, but I am not going to cavil about that. There is, of course, a difference of opinion on the subject, but we should like you to consider a more favourable site.
12. Is the Committee to understand that you are favourable to the proposed extension, and that you have no objection to the route? Yes, I have no objection whatever.
13. Can you give the Committee any information as to the progress of the district during the last five years? No, I cannot. That had better be left to Mr. Dymock and Mr. Campbell.
14. *Mr. O'Sullivan.*] What is the population of Kiama? I do not know, but Mr. James Somerville, Council Clerk, can give it.
15. This is a very old established town, is it not? Yes.
16. What are the industries of the town? There is the stone trade.
17. Have you any particular industries outside the town? Dairying, chiefly.
18. What outlying districts trade with Kiama? At the present time, Shellharbour, Jamberoo, and Gerringong. This line will go through Gerringong.
19. How much of the back country do you think this railway would tap? It would tap the whole, and for some 10 or perhaps 12 miles to the western mountain range.
20. Can you state the value of ratable property in the town? If I referred to the Council's books I could give it.
21. Can you furnish the Committee with information as to what amount of that property the railway would run through? Yes; the Council Clerk, James Somerville, is here, and can do so.
22. And any other information about the borough? Yes; Mr. Somerville is in a position to do so.

C. W. Craig,  
 Esq.,  
 25 Jan., 1890.

- C. W. Craig, Esq.  
25 Jan., 1890.
23. *Mr. Hawley.*] You are aware that the residents of the district have been agitating for a long time past for the extension of the line into the town of Kiama? Yes.
24. Can you say whether they have sufficient claims for the line to come further south and be extended into the town? I certainly think the people are entitled to it, even if the line did not go further south than Kiama.
25. Will it give increased railway returns? Yes; there is a considerable amount of produce sent by steamer now which would go by rail.
26. What is the difference in the charges by railway and steamer? I do not know.
27. Do you know by what route the goods consumed in this district are chiefly brought into it—are they brought by rail or steamer? There is a considerable amount brought by steamer, and by rail too.
28. Suppose you had the station on the Church Point, would not goods come by steamer all the same? I think not.
29. Do you not know that water carriage is cheaper than carriage by rail? I have heard that it is, but I think the Government would be able to compete with the steamers.
30. You are mayor of this town? Yes.
31. Do you know whether persons now prefer to send their stone to Sydney by steamer rather than by rail? That depends a good deal upon circumstances. Some of the companies working here have their own boats, and it is an advantage to them to send the stone by those boats at a reasonable cost.
32. At all events, the steamers are in competition with the railway? Certainly.
33. And, if the railway were brought into town, it would not prevent steamers from coming here? No. Whether it would then pay them or not to come here I do not know.
34. Have you any idea of the amount of income to the Railway Department from this source? No.
35. Can you give us any information as to any other sources of income from the district to the Railway Department—whether anything further would be derived if the line were extended? Yes; a large quantity of milk would be sent by rail which is not sent at the present time because the distance is too great to convey it from the dairies to the railway-station.
36. Have you any idea of the cost of the extension into the town of Kiama from the present terminus to Church Point? I think so, but I cannot say whether my idea is correct.
37. Do you think the people of the town are in such a position that they could pay a tax which would warrant the country incurring the cost of that extension? I do think so.
38. Are you aware of the amount of rates received from the ratepayers of the town? There is about £1,600 worth in the municipality.
39. At all events, you believe the people are in a position to give sufficient loading to the railway to warrant the construction of the line into the town, and to pay interest on the cost of construction? I do.
40. The cost of the construction to Church Point would be about £16,000, and the interest upon that about £640—do you think the people of the town would be able to contribute sufficient revenue to pay the interest on the cost? That I could hardly say, but going further south will be a considerable item; to construct it into town would be nothing without the further extension. No doubt the railway will have to go further south, and, after the difficulty of bringing it into the town has been got over, it will not be very difficult or costly to take it on to Nowra.
41. The source of income, I suppose, would be within a radius of about 20 miles? Yes.
42. And the revenue would be derivable from people sending their milk and other general produce, and also from cube metal? Yes; and I believe, taking the whole district, the line would pay handsomely if only milk and butter were sent; but, at no distant date, I believe we shall have a branch line constructed from Kiama to Jamberoo, where the coal-measures would be opened up.
43. Can you tell us what has been done towards developing the coal at Jamberoo? I know that a survey has been made, and the seams have been tapped, and found to be of excellent quality.
44. Are you interested in that? I am not.
45. Would the railway, if brought into the town of Kiama, increase the value of property? Yes, to a considerable extent.
46. What is the increase in the value of property since the railway terminus has been where it is? I cannot say.
47. Do you think that values would rise through compensation required if the line went through the town? It is hard to say what people would ask; but they cannot always get what they want.
48. Do you know the capabilities of the district between Kiama and Nowra? It is a splendid agricultural district for cultivation or for dairying.
49. And the district around Nowra is also good? Yes.
50. You believe a profitable trade would spring up if the proposed railway extension were carried out, and that the construction of the line to Nowra would be a good national investment? I believe it would be.
51. *Dr. Garran, through the Chairman.*] You have been here since you were a boy—you know every foot of land about Kiama? Yes.
52. Do you know of any possible route that could be taken for the proposed extension different from the present route? I cannot give an opinion, not being an engineer, but I should like the route not to go through the town.
53. If brought round to Church Point would there be less compensation required? It might take an odd house—a portion of it would simply go through Government land.
54. Do you think the district generally would benefit by what is known as the Saddleback route, in preference to the route by the coast? I think it would be an enormous cost, and it would simply go away from Kiama, and injure it.
55. Do you think it would be of any benefit to the people inland? I think the preferable route is within Kiama.
56. You said that if the line was extended a deal of the traffic which now went by steamer would go by rail;—do you really think so? Yes.
57. Are you anxious to see the steamers run off? I have no desire to see it.
58. Do you think it would be to the interests of the town of Kiama for them to be run off? I do not think so.
59. Are they making a living now? I believe they are. I have never heard anything to the contrary.

60. What proportion of the old trade do the steamers keep? I cannot say.
61. At any rate, the railway gets a good deal of the traffic? It does.
62. Has the railway stimulated the traffic of the district? Yes, it has.
63. Is there more produce in the district? I cannot say that the railway has caused the district to produce more.
64. *Chairman.*] Has it not created a milk trade between Kiama and Sydney? Yes, a considerable quantity now goes by train, much larger than by steamer.
65. Do you think the extension of the line would be the means of expanding the milk traffic between Sydney and Kiama? Yes, to a very large extent.
66. How many coaches leave Kiama with passengers daily for the south? I am not aware of the exact number, but it is considerable.
67. And passengers are carried right on to Nowra and further south by that means? Yes.
68. *Mr. O'Sullivan.*] Who is the agent for the steamers that trade here? Mr. Keon.
69. Have you a customs office here? I think so; there is a person in charge.

C. W. Craig,  
Esq.  
25 Jan., 1890.

Mr. James Somerville, Council Clerk, Kiama, sworn, and examined:—

70. *Chairman*] What is your occupation? I am Council Clerk for the borough of Kiama.
71. Have you resided long in this district? Twenty-two years.
72. How long have you been connected with the Municipal Council? During the whole of that time. I have been Council Clerk during the whole of that period.
73. Have you seen the plan of the proposed extension of the railway from the cemetery at Kiama to the Shoalhaven River? I have not, but I know the route. I have seen the ground marked out.
74. You have seen the staked line? Yes.
75. Are you favourable or unfavourable, from your knowledge, to the construction of the line as proposed? I am quite in favour of it.
76. Do you deem any deviation desirable? No.
77. Can you give the Committee any information as to the progress of the district during the past fifteen years? It has progressed very much during the last fifteen years. At present the population is between 7,000 and 8,000; fifteen years ago it was not half that number.
78. What has been the progress in the electorate of Kiama during the last fifteen years? It has increased about 100 per cent.
79. How long is it since the agitation for the railway first started? About fifteen years; since the construction to Illawarra was agitated for.
80. But since the present extension was agitated for? About five years.
81. What has been the progress of the district since then? About 30 per cent.
82. Has there been an increase in the price of ratable property in the borough? Yes.
83. Do you think that increase was due to the construction of the railway? Partly.
84. What are the other causes for the increase in the value of property in this district? There seem to have been a general desire to purchase property and settle in the district.
85. Do you know what area of land is in cultivation in the Kiama electorate? There are 23,000 acres under grass.
86. The Statistical Register gives the acreage under cultivation as 62,000, so that there would be 23,000 of that under grass? Yes.
87. Do you know how many dairy cattle there are in the district? About 17,000, and ordinary cattle about 9,000.
88. And horses? About 3,000.
89. Pigs? About 10,000.
90. Can you say how many factories have been established in the district during the last five years? Eight butter factories within the electorate.
91. Do you know if separators are used by any of the farmers, and how many? There are about ten or twelve farmers using separators at the present time.
92. Can you state the quantity of milk sent per day to the factories? About 20,000 gallons per day to the eight factories.
93. That would be an average of about 2,500 gallons per day to each? Yes, some send more and others less.
94. Do you know if the butter made by those factories is sent to the metropolis by rail, or by steamer? Some is sent by rail, and some by steamer. I think all made north of Kiama and within a convenient distance is sent by rail.
95. Can you say what the difference is between the freight by steamer and that by rail? I cannot say.
96. Are you aware that a great many deputations have from time to time waited upon the various Governments to urge the extension of the railway line from the present terminus to Shoalhaven? Yes.
97. Do you believe that if the line were extended further south there would be an increase in the traffic sufficient to cover the working expenses and the cost of construction? Yes. I look upon the present line as only touching the productive part of the district.
98. How far south must the extension be continued before reaching the boundary of the electorate of Kiama? About 12 miles.
99. And is the whole of that land used for dairying purposes? Yes.
100. Can you say how many tenant-holdings there are in the municipality of Kiama? About 600 or 700.
101. Do you know, or can you approximate the average extent of the present holdings? From 70 to 150 acres.
102. Would a very large portion of the people be served by the extension of the railway? Yes, very large.
103. Do you think the whole of the traffic between Kiama and the Shoalhaven River would go by the railway if extended to Nowra? I believe it would.
104. *Mr. Hurley.*] You said just now that there was a desire to settle in the district and purchase property. How can that be when people have gone elsewhere out of it—what do you mean? I mean there is a desire to settle in the district; but there is no land for them.
105. Are there no Crown Lands? No, not that a person could buy and settle on.
106. What is land worth here? It is worth about £50 per acre.

Mr.  
J. Somerville.  
25 Jan., 1890.

- Mr. J. Somerville. 107. What do tenants pay per acre? £1 12s. 6d. down to a pound per acre.
108. Then if a land tax were introduced that class of land would turn in a very good revenue? It would.
- 25 Jan., 1890. 109. What do the rates in the Kiama municipality amount to? About £1,500 per year, with a levy of 1s. in the pound.
110. Upon what basis would you make up the increased returns were the railway extended into town? Upon that of produce and passengers. At the present time there are large quantities of butter going to the London market from this district.
111. And are the returns favourable to a continuation of that industry? Very favourable.
112. Has the railway paid fair interest up to the present time? I believe it has.
113. Have you any idea of the cost of construction of the railway from Sydney to Kiama? No.
114. It cost £1,725,421—Looking at the extension of the railway into the town to the Church Point, do you think that that extension will lead to settlement and the development of new industries? I cannot say, but at the present time I believe there are three trains leaving Kiama daily which convey something like 350 tons of metal.
115. Has not the stone trade been almost an annihilation to you as a town? It has been unfortunate to the municipality.
116. Your Council has been somewhat unfortunate with it? It is not the tramway that has failed, but the stone trade.
117. Was it attributable to the decrease of the stone trade, or the action of the Council with the tramway? To the removal of the stone trade from Kiama to Bombo.
118. Do you know if there are any industries to the south of Kiama, and have you any knowledge of them? I know that in the mountains there are valuable coal seams.
119. Are you interested in any land through which this railway would pass? No.
120. You are not likely to personally benefit by the extension of the railway? No.
121. Mr. O'Sullivan.] Was there any milk trade between this district and Sydney before the railway opened? Very little.
122. Then the railway has developed this trade in milk and extended the butter industry? Yes.
123. Will they be still further extended by taking the railway further south? Very much so.
124. Is there any other industry in the district that has been benefited by the railway? Yes; there is the bacon industry.
125. Have you any timber trade in this district? Not much.
126. What are the crops mostly grown in the electorate? Maize and potatoes. Not much wheat or hay.
127. Is there a fair trade in these products? There would be, with increased facilities.
128. I suppose most of the land in the district is already occupied? Yes.
129. And being a dairying district, there is not likely to be much more cultivation? I think not.
130. Dr. Garran.] How far back from Kiama is the coal-bearing seam? About 7 miles.
131. The easiest way of making that accessible would be a branch line from Jamberoo? Yes.
132. About 7 miles in length? Yes.
133. You could not ship coal from Kiama? Yes, we could; we could put five or six vessels in the basin at one time. We have about the same capacity as at Wollongong.
134. What size vessels could you load at the Kiama wharf? Vessels of about 400 tons.
135. You could not do a large foreign trade? No.
136. If you wanted to do such a trade the vessels would have to go to Sydney or to Jervis Bay? Yes.
137. How far would it be from the mines to Sydney? About 60 miles.
138. And to Jervis Bay? About 25 or 30 miles.
139. Then other things being equal, Jervis Bay would have the preference? Yes.
140. And if it would pay to ship at Jervis Bay, this line, we are considering, would get all the traffic? Yes.
141. Apart from the coal traffic, in what other way do you consider the railway would add to the benefit of the place? In the settlement of population, and in developing the richness of the soil.
142. You say there is no land to be taken up, and except for residential settlers where would be the benefit? There would be country residences; there have been inquiries for land for that purpose, and I think there will be a large demand before long.
143. I understand you to say that the railway has not stimulated the production of the district? Not in the south.
144. Do you think the extension of the railway to Shoalhaven would stimulate further production? I believe it would.
145. There is more room there? There is a larger extent of good land in the Shoalhaven district than in this one.
146. The land would be more arable? Yes.
147. You think there is good reason for believing it would be made to produce more if the line was extended there? I do.
148. Do you know the proposed route of the extension? I do.
149. Do you know of any improvement that could be made in it? I do not.
150. Do you agree with the Mayor of Kiama that the extension should go by the Church Point route? I believe that that route would be impracticable. I am in favour of the present route as the best.
151. Chairman.] What was the quantity of butter sent from the district last year? There were about 2,500,000 lb. made in the district last year.

Mr. Stephen Major, storekeeper, sworn, and examined:—

- Mr. S. Major. 152. Mr. Hurley.] What is your name? Stephen Major.
- 25 Jan., 1890. 153. And what is your business or occupation? Storekeeper.
154. Have you been in the district many years? Nearly thirty.
155. Then you must know something of the resources of the district and its trade;—what proportion of trade does the railway get? I know that the railway is not getting anything like the goods trade in comparison to that of passengers. That is on account of the inconvenience experienced by people like myself in getting goods from the station, which at present is so awkwardly situated.
156. Is not the freight a considerable item at the present? Yes; but at the present rate of freights I think that if the railway was brought into town, the steamers would be stopped altogether.
157. What are the resources of the district? Chiefly dairying. 158.

158. Do you think there is sufficient trade to warrant the extension of the line? I do. The best land <sup>Mr. S. Major.</sup> has not yet been reached. 25 Jan., 1890.
159. Do you know anything of the exports? Yes; our exports in butter alone amount to £114,000 or £115,000 per year—that is exclusive of bacon, eggs, cheese, and poultry.
160. It is estimated that the cost of construction of the line into Kiama would be about £94,000;—do you think, from your knowledge, that there would be a sufficient increase in your imports to warrant the construction into Kiama? I think so. Our imports cannot be less than £160,000 a year.
161. Do you supply the outlying districts? We supply Gerringong, Jamberoo, and other places.
162. What is the circumference of the district you serve? A radius of about 12 or 13 miles.
163. Have you any idea of the number of people in the district? About 8,000 or 9,000.
164. Have you any experience as regards the mineral resources of the district? I have not, but I know there is any quantity of coal in it.
165. Would the line tap this? It would if it went further south, when it would run parallel with the range containing coal, and branch lines could be constructed to the mountain containing the coal measures or seams.
166. Have you any interest in the extension? No.
167. Do you believe it would be of national importance if the extension was made? I believe it would, and at the same time it would tap the mineral land.
168. Do you think it would increase the population of the district? No, except the mineral resources are developed, as it is sufficiently populated for dairy purposes, and the land being nearly all taken up, there is not much room for further increase of a farming population. The land is paying well as at present being used—that is for dairying purposes, and it could not grow hay and other things, like Victoria or Adelaide. If they did go in for growing these crops, mowing machines could not be used with advantage, on account of the hilly nature of the district.
169. You have to bring produce like that into your district from other places? Yes, we get it from Victoria and other places.
170. Is it not because the people have not been educated up to agriculture that they have to do that? No, it is because the people found dairying paid better.
171. Have you any idea of the dairying industry further south? I believe it is good.
172. Do you know what is the difference in the cost of carriage of goods of that description by rail and steamer? We used formerly to pay from 2s. 6d. per keg of butter by steamer, while now the charge for a box of butter per train is about 8d. or 9d.
173. Do you know of a detour having been made through Saddleback in connection with this railway, and do you know what was the reason for it? I believe it was caused by a prejudiced feeling. The Kiama route is a better one, and if it went to Jamberoo it must go further south.
174. Do you believe the blue-metal trade would develop by the extension? Yes, I believe it would. At the present time, I have been informed, one small contractor alone has paid away about £50 per week for sending out stone by rail to Sydney.
175. Then do you think the exports will increase if the line is extended? Undoubtedly.
176. *Mr. O'Sullivan.*] Are you aware that in some places people pay the storekeepers annually? I am not aware of it.
177. Is that the case here? No.
178. Have your customers money enough to pay their debts? Yes, the fixed population are right enough in that respect. It is only the floating population we have trouble with.
179. Have you any idea of what would be the leading industry after the extension? I believe the milk industry will be.
180. *Dr. Garran.*] To whom is the district indebted for its factories? I think the Fresh Food and Ice Company started them with the Pioneer Factory.
181. Do you think the milk trade pays? I understand from the manager that he can take all the milk he can get from the district, and I am going to erect cool chambers myself for it. The suppliers were getting 5d. per gallon for it. At that price it is the best paying industry in the colony.
182. And have the farmers near the train the benefit of that? Undoubtedly; but unless the demand grows in proportion to the increase then of course it will become less profitable to send it to Sydney. Milk at 5d. was a paying industry to anyone.
183. How long have you been in the district? Nearly thirty years.
184. Do you know if the land has deteriorated during that period? It had not deteriorated very much, for the reason that in good seasons, and when the grass was plentiful, it became a source of manure to the land when it decayed, and the cattle return to the land almost as much as they take from it in manure. Dairying on the land is not like growing potatoes or other crops, and has not such an exhausting effect upon the soil.
185. You just stated that the grass became a source of manure to the land;—do you know of any farm where the production of grass has deteriorated? I know splendid farms which during the number of years I stated have retained the excellent quality of their soils and grass-growing capabilities without any deterioration whatever.
186. *Dr. Garran.*] Do you cart your own goods? Yes.
187. What is the cost of cartage per ton to town from the railway? 2s. 6d., I believe.
188. What is the cartage rate? I do not know, but 1s. is charged for passengers from the train.
189. Then if the freight was 2s. less by rail it would be equal to that of the steamer? I do not exactly know the railway rate, but in some instances I think it would be less. I think the railway rate is about the same.
190. Would you prefer to get your goods by rail? Yes.
191. This extension into the town is to cost about £100,000, what would you expect to pay the Government per ton as freight? About 3s., I suppose.
192. Perhaps you would only have to pay 2d. where now you pay 3s.? I think that would be it.
193. Do you believe it would benefit the town, and that the Government would benefit by the extension? I believe the town would be benefited, but I cannot say what the exact amount of freight would be, and what proportion of that it would take to pay the interest on the outlay.
194. Do you think it will pay the Government to go on to Shoalhaven with the extension? Undoubtedly. Some persons in Kiama might not care about it going further south, but I believe in the extension. I fail

- Mr. S. Major. fail to see how it will injure Kiama as it will become a centre, and I believe the town will be more likely then to get the trade of Gerringong than now.
- 25 Jan., 1890. 195. Do you think it would be more difficult to extend it from here to Shoalhaven than from there to Ulladulla? I cannot say.
196. Looking at the extension into Kiama and to Jervis Bay, do you believe it is worth while to extend it; as a general taxpayer, would you vote for the extension to Kiama? I would say, "Extend it."
197. How is it that wheat will not grow here—is it on account of weevil? No, it is on account of the richness of the land.
198. How much more profitable is it to grow grass than hay? It is 100 per cent. more profitable.
199. Then your idea is to produce what you can, and purchase what you cannot produce? Exactly so. I am a thorough freetrader.
200. I am not asking you a political question. You were speaking about the blue-metal trade. Does the railway tap any of the quarries? Yes, it goes right through metal, and the Government has purchased one of the quarries.
201. Is there any cartage there? No, none at all.
202. Are there any other quarries? Yes, there are some in town, and on top of Mount Pleasant it is all blue metal. The railway would open up some splendid quarries there.
203. What is the cost of carriage by water and rail? By water it is 5s. for a few items, but 10s. for sugar and similar goods. The railway charges are very anomalous. In some cases 5s. 8d. per ton is charged, and in others as high as £1 per ton. I never could understand the absurdly anomalous charges of the Railway Department. Why flour should be carried for 5s. 8d. per ton, and nearly £2 charged for sugar, while the same amount of energy is expended in the haulage and handling of both.
204. Has the railway increased the price of goods? Yes, that for poultry, butter, and milk.
205. Has the railway in town had the effect of cutting down prices? It has increased competition considerably by bringing us into contact with the Sydney business houses. This I regard as one of the evil effects of concentration.
206. How do you account for the increase in prices? Under the old system it was very injurious to send butter by steamer to Sydney, and the I.S.N. Company used their monopoly very harshly while they had it.
207. Is it far better to send butter by train? Yes, far better.
208. Has the Government provided cool chambers for your butter? No, but I believe it will. I believe Mr. Dymock has been trying to induce the Commissioners to put on trucks. They promised to do so, and I believe there will be a margin of profit open to the department in that item.
209. *Chairman.*] What are the carrying capabilities of the district? It carries 1 cow to the acre, and at the present time there are about 23,000 acres under grass.
210. What is the average value of the land? Some parts £30, and others could not be purchased for £60 per acre.
211. What is the average rent? From 25s. to 30s. per acre.
212. Can you say whether the passenger traffic has increased since the opening of the railway? Yes; very materially—more than double.
213. Has the traffic between the southern portion and here increased;—that is from Shoalhaven? Yes. There are three coaches per day, which carry about 150 passengers to Nowra and other places south weekly.
214. Do more people travel by rail than by steamer? I believe the I.S.N. Company does not, on an average, take five passengers a week.
215. And do nearly all the goods come by boat? Nearly all.
216. Do you think if the extension were made that all the goods would come by rail? I believe they would.
217. And that the whole traffic would be taken from the steamer and diverted to the train? I believe the whole trade of the coast would go to the railway.
218. How many municipalities are there in the electoral district of Kiama? There is Shellharbour, Kiama, Gerringong, and Broughton Vale, and Kiama embraces a large area, taking in all Jamberoo.
219. Who are the aldermen in the Kiama Council representing Jamberoo Ward? Aldermen Cole, King, and Noble.
220. *Mr. O'Sullivan.*] How do the mails leave here, and for where? They go through Jamberoo to Moss Vale, and from Kiama to Albion Park, Gerringong, Broughton Village, and Nowra.
221. Do all those places trade with Kiama? Not much further south than Gerringong.
222. What is the average size of dairy farms in this district? We have 570 landholders, with an average of about 112 acres.
223. How many cows do you think a family of four could live on? Ten.
224. *Mr. Hurley.*] Do you know if there is a weed in the district known as *sida-retusa*? I do not know it by its botanical name, but I believe the weed does exist.
225. Does it destroy the quality of the soil? I do not think so. It might take certain qualities from it, but the cattle will eat it, and do so.
226. Have you heard any complaints about it destroying the land, and of persons leaving the place in search of better? There are a number gone to the Richmond River, but not from that cause.

Mr. John Thomas Cole, dairy farmer, sworn, and examined:—

- Mr. J. T. Cole. 227. *Mr. O'Sullivan.*] What is your name? John Thomas Cole.
228. What is your occupation? Dairy farmer.
229. What is the size of your holding? About 125 acres.
- 25 Jan., 1890. 230. I suppose you find dairying more profitable than cultivation? It depends upon the prices.
231. I suppose you know all the land about the district? Yes.
232. How long have you been here? Lived here since I was born.
233. You have a thorough knowledge of its resources then? Yes.
234. Can you rely upon the permanency of its resources? Yes, they are thoroughly established.
235. Is there room for any further settlement? Not what was understood by settlement. There might be room for production. By improved methods of agriculture the production might be increased very much—perhaps twofold.
236. What is the reason people are leaving this district and going further north? To get more scope. As a man's sons grow up they go to find holdings for themselves, and take what they can get. 237.

237. Then I take it that they are simply going to wider spheres to carry on the occupation of dairy-farming? Yes, they are.
238. It is not that the district has deteriorated then? No; they are simply turned out for want of land.
239. Can you give any idea of the changes made in the district since the railway came into it? The railway has paid very well since it was opened, and the further south it went the more it must increase. Of course the milk trade has become a very paying trade, and that must increase as the railway extends, as that article can only be carted some 4 or 5 miles with safety.
240. How is it that the men cart it such distances in Sydney as they do? I suppose that accounts for the quality of the milk they sell.
241. Are you in favour of the extension of the line? Yes.
242. Have you any personal interest in the extension? No; I am more interested in Jamberoo.
243. I presume the people of Jamberoo will be satisfied with a branch line? Undoubtedly.
244. Are you aware of the quality of the land about Gerringong and Nowra—and is it as good as in Kiama? Yes.
245. Then if the railway is taken on to Nowra we may look for the same improvement as has been made in the Kiama district? It is reasonable to expect it.
246. *Mr. Hurley.*] Do you know anything of the weed in question—*sida-retusa*? I suppose it is that known as pig-weed.
247. It is a weed originally introduced for the manufacture of paper. Can you keep it down? Yes; I consider it my duty and that of every farmer to keep it down.
248. Well, that means it is destructive? Undoubtedly.
249. Do I take it then that the people are not well aware of agricultural practices, and that that is the reason more of it is not done? More agriculture will only pay when there are increased facilities for sending it to market.
250. It has been said that the land was lying idle because of the indolence of the people of Kiama—is that a fact? It is not true; it is because dairying pays better. The chief agriculture here is in growing fodder for the cattle.
251. Do you export butter? No, not personally.
252. Are you in any way interested in this line going further south? I am not.
253. Do you believe it will lead to settlement, and be a good national investment? I do.
254. What class of people do you believe it will cause to settle on it—agriculturists, or do you think it would simply be a kind of sanatorium? I believe it would be a sanatorium.
255. *Chairman.*] You have been asked about the cultivation of the land; has it not been necessary to use artificial grasses? Certainly. Originally, Illawarra was a wheat-growing district, but it has been found more profitable to go into the dairying. Besides, rust was troublesome with the wheat, and it would not pay now to grow it or any other cereal crops.
256. What would be the average cost of clearing and laying down the grass? That would depend upon the quality of the land. If heavy brush land, it would not be less than from £7 to £10 per acre—perhaps more—according to the density of the brush.
257. If it was said by a previous witness, then, that there are about 60,000 acres under artificial grass, it would mean an expense of about half a million of money? About that.
258. You have taken a great interest in the working of the factories; have they been a success? Undoubtedly.
259. Have they been the means of stimulating the production of butter? Certainly.
260. In what way? It relieved the people from a lot of the home slush they were previously accustomed to, and gave them more time to look after their cattle. Besides, the factory system paid them better, and stimulated an increased production.
261. Is it giving a better price to your farmers? Undoubtedly it is. We could not in olden times always obtain the top price.
262. Then do you believe it pays better under the factory system of making butter? Certainly, and the very fact of our butter having obtained the highest price in the London market proves it.
263. Do you look upon the English market as likely to take the surplus portion of your supply? Yes.
264. Can you say at what price butter would pay when sold in the English market? I do not know the cost of shipping.
265. We will presume it to be 3d. per lb.—would 9d. pay? Nine-pence would barely leave a profit to the producer.
266. Do the factories pay a better price than you obtained by sending your butter to the metropolis? Yes; frequently in the flush seasons, under the old system, butter was as low as 3d.
267. Has the demand for milk since the opening of the railway been fully supplied? I cannot say.
268. Do you think if a larger quantity was sent there would be a demand for it? Yes.
269. Why? Because the Fresh Food and Ice Company were paying 5d. for it, while the factories were only paying 3d.
270. Do you think the extension would be injurious to the Kiama farmers? Quite the opposite.
271. Can you say what price would pay the farmer for sending his milk by rail—would 3d. per gallon pay? It would leave a profit.
272. Do you believe at less than 3d. it would pay? Yes, we had 2½d., but I believe the price has been 5½d. per gallon for the last two years.
273. Does that leave a margin of profit? Yes, very good.
274. Do the dairy-farmers in Jamberoo at present use the railway? There was the butter from the two factories sent by rail, but no milk whatever.
275. Have you examined the plan showing the proposed line from Kiama to Shoalhaven? No.
276. Are you familiar with it? Yes.
277. Can you say, as a resident of Jamberoo, that it is desirable that the line should be constructed as at present proposed? It is desirable, but I certainly think the line should have gone through Jamberoo at first.
278. Having regard to the extension from its present terminus to the south—are you quite favourable to the proposed route? Yes, quite so.
279. *Mr. O'Sullivan.*] Can you give the Committee any idea of the bacon and cheese industries in this district? There is very little cheese made, but the bacon industry is an important one in connection with the factories and private dairies. There are several large bacon factories in the district.

Mr.  
J. T. Cole.  
25 Jan., 1890.

- Mr. J. T. Cole.  
25 Jan., 1890.
280. What is their output? I cannot say.  
281. Is the industry progressive? It is an industry that keeps pace with the dairies, according to the quantity of milk supplied to the factories, and at home pigs are kept.  
282. You say that you do not think a distance further than 5 or 6 miles from the railway would serve the milk producers? Certainly not.  
283. How far is Jamberoo away? About 6 miles.  
284. Does not the Fresh Food and Ice Company draw milk from Bowral and Wingecarribee and surrounding district? I believe so, but I am not acquainted with the districts.  
285. Is the Fresh Food and Ice Company taking milk from this district? I believe it is taking all the milk it can get.  
286. According to a statement made by you this district of Kiama has been a sort of nursery to its young men—is that so? Yes.  
287. Wingecarribee has been populated from this district, has it not? Yes.  
288. You say that more scientific farming will develop the population? Well, not exactly that, but it would increase the production and value of the land.  
289. You think then that a higher class of farming would turn in more wealth? I do.  
290. And that it would stimulate it? I do.

Mr. Michael Nesbitt Hindmarsh, dairy-farmer, sworn, and examined:—

- Mr. M. N. Hindmarsh.  
25 Jan., 1890.
291. *Chairman.*] What is your occupation? Dairy-farmer and freeholder.  
292. How many years have you been a resident of the district? I was born in it—about fifty-seven years.  
293. You are the owner of property here, are you not? Yes, in Gerringong and Kiama.  
294. Shall you be personally affected by the railway? It passes through some of my land in Kiama.  
295. But not through any of your dairying property? No.  
296. Have you examined the proposed route, and are you in favour of it? Yes.  
297. Can you state the progress of the district during the last eight or ten years? It is more cleared, and more people have settled in it.  
298. There are a number of people leaving the district and going further north to settle;—what is the reason for that? To get land; but with the extension of the railway there will be a lot of land available in Gerringong and at Berry's Estate.  
299. As far as the railway has gone, has it passed through the best portion of the district or otherwise? It certainly has not.  
300. Will the extension serve a larger population? It will.  
301. Can you state the value of land during the last ten years? From £20 to £50 per acre.  
302. And what is the rent? From 25s. to 30s. per acre.  
303. Can you say whether any alteration in the route of the proposed extension would afford better facilities? I do not think it would be possible. The present is the best for the general public.  
304. Are you of opinion that the construction would pay interest on the outlay? I believe it would.  
305. Do you think there would be an increased settlement by the extension going further south? Undoubtedly.  
306. Is there a large quantity of Government land unalienated in the Shoalhaven district? Not much.  
307. It is said that there are 40,000 acres of Government land there? That is on the top of the mountain, between this and Robertson.  
308. What sort of land is it? More coal land than anything else.  
309. And would it be increased in value by the extension of the railway? Undoubtedly.

Henry Whittingham, Esq., bank manager, sworn, and examined:—

- H. Whittingham, Esq.  
25 Jan., 1890.
310. *Chairman.*] What is your occupation? Manager of the E.S. & A.C. Bank.  
311. How long have you held that position? For the last eleven years.  
312. Do you know of the position of the people? Generally, the commercial position of the people is sound. I give that as my opinion from a connection with the district for about thirty years, and I can bear testimony that the district is one of the most solvent and prosperous portions of the Colony.  
313. How many branch banks are there in Kiama? Four; one in Jamberoo, and two in Gerringong, making seven.  
314. Can you say if the farmers generally have deposits at interest to their credit? Yes, there are a large number of dairy-farmers with accounts in the banks at interest. All the intelligent and good managing freehold and tenant farmers have.  
315. As to the general body of farmers—are they in a good position? Yes. I have held my present position for eleven years, and have not lost a penny during that time.  
316. Then you think that the people are as a rule prosperous? Yes.  
317. Have you examined the line? I know it thoroughly.  
318. Is all the land good dairying land? Yes—no bad land until you get to the near bank of the Shoalhaven River.  
319. What is its value and rent per acre? The value is about £30, and the rent of the best land 30s.  
320. What is the general opinion of the proposed route? The general opinion is that it is a good one. There have never been any large organizations against the route. The people have always been favourable to the Government proposals.  
321. Will the line run through your bank? No; it will come pretty close to it, but will not interfere with the building.  
322. Do you think that the construction of the line into town would increase the trade? It will. Our trade in poultry and eggs is nothing to what it is on the continent of Europe.  
323. Has the construction of the line to the present terminus increased the value of property in Kiama? Yes; people are not inclined to sell. There is not much building going on, because people are in doubt as to where to build.  
324. Can you give us any idea of the value of land in the street where your bank is? About £20 per foot. One lot was sold some time previously to the advent of the railway at £12 or £14 per foot.

325. Looking at it as a commercial man, and one holding an important position, do you think the line would be a good national investment and a paying thing for the Colony? I do.
326. *Mr. O'Sullivan.*] From your evidence I take it that your people are very solvent? Yes.
327. Are mortgages unknown here? No. A man might buy a farm for £3,000, and be only able to pay £1,500. But there is no difficulty in obtaining advances.
328. With regard to the railway, can you say, as a business man, that it is likely to pay interest on the construction to Bomaderry? Yes; it would pay working expenses from the start, and in twelve months' time, more.

H.  
Whittingham,  
Esq.

25 Jan., 1890.

Samuel Smith Wells, Esq., surveyor and civil engineer, sworn, and examined:—

329. *Chairman.*] What is your occupation? Surveyor and civil engineer.
330. Do you live in the district? Yes; I have done so for the last two or three years. I was one of the surveyors who pegged the railway from here to Jervis Bay, and can only speak of that route.
331. *Dr. Garran.*] You are aware that some heavy and expensive work must be done for 4 or 5 miles to get out of Kiama? Yes.
332. Have you been right on to Jervis Bay? Yes, I worked from Nowra to the coast.
333. What was the country like there through which you passed.—Would it be equally easy to go to the south and make the line? No, you must go east to get the level country.
334. You are familiar with these surveys right through to Nowra—you do not know of any better route? No, I do not.
335. If we took the line to Jamberoo, would it be a saving in the price? It was not worth while taking it that route.
336. Do you know anything of the Jervis Bay route? Yes, it is all timber and scrub, but would be good for agricultural or dairy purposes. There is very little population at Jervis Bay.
337. Have you any knowledge of the coal measures? Yes.
338. Have you any interest in them? I take no interest in them.
339. Do you think the construction of the railway would be likely to lead to settlement? Yes.
340. *Mr. O'Sullivan.*] Is the land around Jervis Bay reserved? No.
341. Is it fit to settle on? Yes. There is a private town there—Huskisson—called South Huskisson and a Government township called North Huskisson.
342. Why has the land not been settled on? For this reason—you cannot get there.
343. I understand there is a splendid harbour at Jervis Bay? So there is.
344. Have you had considerable experience in the profession? Yes, in Wellington, New Zealand.
345. Is there great engineering difficulties there? Yes; the North Island is very rough.
346. Are there any difficulties on the present line to compare with those of New Zealand? No.
347. *Chairman.*] Can you say whether the construction of the railway from this district to Jervis Bay would be a profitable investment? It would.
348. And pay working expenses and the cost of construction? Yes.

S. S. Wells,  
Esq.

25 Jua., 1890.

Mr. Alexander Campbell, farmer and auctioneer, sworn, and examined:—

349. *Dr. Garran.*] What is your name? Alexander Campbell.
350. And your occupation? Farmer and general auctioneer.
351. How long have you been in the district? I was born in it.
352. Do you corroborate the evidence given by previous witnesses as to the value of the land? Well, yes; the profits of the land have increased, and for one farmer that leaves there are any amount of applications to fill the farm, and it usually happens that a higher price is obtained for it.
353. Is the population on the land leasehold or freehold? The majority is leasehold.
354. There is no advantage derived by the leaseholders of the land, is there? Some use it to the best advantage.
355. Does the tenant make his own improvements? Not always.
356. Do you think that the opening of the railway has quickened the industry of the district? Yes, through the starting of factories and the railway opening, farmers have more time to work upon their farms and raise higher values.
357. And you think the farmers have given that time to their farms? Yes.
358. Well they have not only got the time, but have found out how to use it to their advantage? Yes.
359. Do you agree with a previous witness that improved methods of agriculture and improved soil would increase the produce of the district? Yes; there is room for improved agriculture. Hitherto the farmer only studied growing fodder for his cattle; but by this means they have been able to get a good production, and under the factory system all the butter is extracted from their milk, while under the old system it was not.
360. Do you sell dairy cows? Yes.
361. What breed are the cattle here? They are what is known as the Illawarra breed, a cross between an Alderney and Shorthorn. They have been crossed until worked up to a high state of perfection, and I do not think they can be improved.
362. What are they worth? From £8 to £10 per head.
363. What is the grass in the district? Rye, couch, and clover.
364. Is there no native grass? Very little.
365. Do you find anything better than clover and rye-grass? No.
366. Have you noticed since the railway opened that a stimulus has been given to production? I believe it has; but the railway at present has only put the thin edge of the wedge in as it were in that direction. It has not reached the most productive parts.
367. You are aware, as a farmer, that butter has been going to the London market? Yes; we have been sending to the home market.
368. Is the butter sent from here as much appreciated as that sent from Victoria? Yes, we obtain a better price for our butter.
369. What do you attribute that to? To the fact that we are ahead of Victoria in the process of manufacture.
370. Will cows give good butter if fed on hay? No.

Mr.  
A. Campbell.

25 Jan., 1890.

- Mr. A. Campbell.  
25 Jan., 1890.
371. Do you think the succulent herbage of this district will give better butter than hay? Yes.
372. Having got a market for your produce in London, you expect to get rid of your surplus in that way;—you do not think the Richmond River will injure you? I do not think so, because the Richmond River butter would be inferior to ours in the summer months.
373. Then you do not think that the young men who went to that district from here will be able to injure you in that respect? No.
374. Do you believe the section to Nowra will pay? I believe it will pay better than any other portion, as there are various sources of revenue likely to be developed.
375. Then the line only runs to the edge of the rich district, and requires to go further? Yes.
376. Do you know anything of the district further south? I have travelled to Nowra, and been to Jervis Bay. The whole district is rich, and large blocks of the Berry Estate are lying idle which, I expect, will before long either be sold or leased, and make room for population.
377. The railway will be practicable to nearly all the settlers on that property—is that so? Yes.
378. Do you think the river will compete with the railway? I do not think so.
379. Do you think they will send their produce 10 miles to the railway? Yes.
380. How far will butter carry? Almost any distance, if carefully handled.
381. *Mr. O'Sullivan.*] I understood you to say your cattle were mostly one breed? It is hard to define the breed, but they are known as the Illawarra breed. They are a cross breed, and have been worked up to a high standard. Some of them give a very high yield of milk—as much as 7 and 8 gallons per day; but that is with a high pressure or special feeding.
382. What is a good average for a cow of an ordinary herd? About 3 gallons.
383. Do you mean to say that all the cows in the district could yield 12 quarts of milk per day, and that, if a man owned 100 of that breed of cows he would get 300 gallons of milk per day from them? Yes, I have known cows to make that average.
384. I presume you are acquainted with the Jervis Bay district—can you tell why it is not settled in? The land between the Bay and Nowra is not very well adapted for dairying, but more for growing crops and fruit—fruit grew excellently at Tomerong.
385. Is the land there reserved? There is a portion reserved for timber, but, when the railway goes there and the timber is cut down, it will be available for other purposes.
386. The coal measures—do you know anything of them; and are there any other minerals in that district; I believe it is the best of coal; and the gold mines are valuable. They are nearly west to Nowra, and paying. Coal is found all along the mountains for a very considerable distance. At Yalwal, where the gold is, the stone is there in a large quarry, and yields about 2 oz. to the ton.
387. Are there any other mines there? There are several there.
388. How many miners do you think there are engaged there at a time? I could not say.
389. Is the Shoalhaven district well adapted for agricultural purposes? Yes, the greater portion of it.
390. *Chairman.*] Have you examined the route? Yes, I have been all along it.
391. Are you of opinion that it is the best route that can be adopted for the extension? Yes; the eastern route as surveyed is the most advantageous. If the western route was taken, the people on the eastern side would stick to the water traffic; whereas, by the eastern route, all the western traffic would be secured, as people must go to the east to get export; and, if run to the west, probably all the traffic between that point and the last would be lost.
392. Do you know of any better route for bringing the line into the town of Kiama? I do not.

MONDAY, 27 JANUARY, 1889.

*The Sectional Committee met at the Court-house, Kiama, at 10 a.m.*

Present:—

THE HONORABLE FREDERICK THOMAS HUMPHERY (CHAIRMAN).

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Kiama to Nowra.

Mr. Hubert Keon, shipping agent, sworn, and examined:—

- Mr. H. Keon.  
27 Jan., 1890.
393. *Mr. Hurley.*] What are you? I am shipping agent for the Illawarra Steam Navigation Company.
394. How long have you been here? Seven years at Kiama.
395. Are you well conversant with the various products of the district? Yes.
396. Can you give us any idea as to the outward and inward freight receivable by your Company? I am only a paid servant of the Company, and I think that that information is their property. If I am compelled to answer, I suppose I must do so, but you could get that information from the head office in Sydney.
397. Then, you think there would be an objection on the part of the Company to making public their earnings or their outward and inward freight in connection with this port? I should think so.
398. You think it would be a breach of faith on your part to give such information? I think it would. I would not take upon myself that responsibility.
399. What is the freight charged between here and Sydney by your Company? I will hand in a list of our charges. They are starvation rates.
400. Are these your regular charges, or only for large consignments? These are the standard rates.
401. Since the opening of the railway have you made any material difference in your charges? Yes. You will see by the lists that we have reduced the fare, formerly 10s., to 5s. per ton. Our charge for maize, pollard, flour, bran, &c., is 5s. per ton—the railway charge is 7s. 2d.
402. And the passenger fares and the charges on other goods have been similarly reduced? Yes. The passenger rate is 7s. 6d., and 4s. 6d. steerage.
403. Are these the charges which have been in existence ever since you have been in the employment of the Company? No; 15s. 6d. was the cabin fare formerly, but we used to provide meals. We do not provide meals now. The passengers have to pay for them.

404. Then you look upon the railway as materially affecting the returns of the company? It has taken away all the passenger traffic. It is only lovers of the sea who travel by steamer now, or persons who are sending stock. Mr. H. Keon.  
27 Jan., 1890.
405. Do you give greater facilities now for the carriage of goods than you did formerly? No.
406. Do you take more care in regard to the carriage of butter? No; we have always tried to look after the interests of the company by attending to things as fairly as possible.
407. Have you any knowledge of the district generally outside the port? It is only a dairying district. There is no produce. We occasionally have a few bags of potatoes.
408. Do you carry stone? No, that is done by sailing boats. It would not pay to carry stone in the boats that we have.
409. Is your company likely to continue in opposition to the railway? Well, I am only an employé. I do not know. We have four boats a week running here, and I fancy it would not pay if the boats did not make trips to the south, and pay flying visits to Kiama.
410. Your company is an incorporated public company? Yes.
411. Could you give any idea of the amount of the last dividend? It was 10 per cent. I am not a shareholder. I did not take particular notice.
412. Have you seen a balance-sheet of the company's business? No. As far as I can make out they did earn that dividend. It was paid, and a small balance brought forward.
413. Is that attributable to adverse circumstances—loss in connection with the steamers? There is no passenger trade.
414. Looking at it from a capitalist's point of view, would you say that the carrying trade by water between here and Sydney would be a safe investment? By altering the class of boats it might be made to pay, but the trade would have to be worked very economically.
415. Water carriage is looked upon as cheaper than carriage by rail, is it not? It is about one-third less all round than railway carriage. There is at least a difference of £1 per ton in a great many articles. What we carry for 10s. costs 30s. by rail.
416. Therefore the company will always be able to compete with the trains if that is kept up? Yes; but if the railway authorities alter their tariff so as to crush private enterprise they will soon do it.
417. Do you pay any dock charges here? No, we have not paid any for some years. We pay the ordinary town rates.
418. Do you pay any harbour dues? No, they were knocked off by Mr. Watson.
419. Do you think your boats could stand a tax in the shape of harbour dues? Well, scarcely.
420. Has not this port been created for the benefit and advantage of shipowners? I suppose it was. The dock was supposed to be a fine one, and it was opened with great *eclat*.
421. Could you give us any idea of the amount of the traffic per week or month? I could not, because we charge by package. You can get the information from the head office.
422. Can you give us any idea as to the amount receivable per quarter from the passenger traffic? The fares are collected on board by the mate. I should say that it is nil compared with what it has been. There would not be an average of three.
423. As a servant of the company do you know whether the traffic is likely to be remunerative? I am not in a position to state.
424. Do you do any work on behalf of the Government? No.
425. You receive no allowance for anything that you do in connection with the shipping? No.
426. Is there anyone who represents the Government? There is the harbour master, who is also a pilot and light-keeper.
427. Can you give us any idea as to the most suitable place for a railway station at Kiama? I think that the best place would be the fig-tree, here, near the Council Chambers.
428. You think that that site would suit the people of Kiama and Jamberoo? I scarcely think that it would suit the people of Jamberoo. They want a line to themselves.
429. Why do you express that opinion? Everyone likes to have a railway at his own door. It is to save the land carriage.
430. Do you think it would be inconvenient for the people if the station were placed some distance to the south? If it was it might be out of the way. I think that the next best site is where the Chinaman's garden is.
431. Have you any property on the route of the proposed line? It skirts my property; the mark is on the fence.
432. Do you think that the construction of the line to the town will be an advantage to the people? It will be more or less convenient, but it will make no difference in the travelling, no more than the removal of the railway station from Redfern to Hyde Park would. It would not induce more people to travel from the country to the town. The station is in a convenient position where it is; we can get out to it for 6d.
433. Do you know anything about the route which embraces Jamberoo? No.
434. Have you taken any part in the controversies which have taken place as between Kiama and Jamberoo? No.
435. You do not know the reasons why the Jamberoo route has been advocated as against the Kiama route? A little jealousy as regards business. Jamberoo was to be the southern city.
436. Do you hold any decided opinion as to the suitability of one site or the other? They say that the Jamberoo mountains are full of coal which is going to be developed.
437. Do you know of any coal within a radius of 20 miles of this place? No.
438. *Mr. O'Sullivan.*] Your company is the Illawarra S.N. Co.? Yes.
439. Are they the only company regularly trading here? The only company. Other boats occasionally call in.
440. Your company did a lucrative trade here? Yes, a splendid trade.
441. I presume that the railway has reduced it? It has reduced our freights from 10s. to 5s. a ton in many cases. On all heavy goods we get nearly the same amount of freight as formerly. The railway has made a difference with regard to the carriage of goods through from Newcastle, Gundagai, and other towns. The freights come by rail right through to Kiama. Formerly they were shipped from Sydney.
442. You say that you get almost the same amount of traffic, but the receipts are lessened because the rates are reduced? Yes.

- Mr. H. Keon. 443. Do you carry many oysters? None from here.
- 27 Jan., 1890. 444. Do you carry any pigs or other live-stock? Not a great number. They principally bring pigs down from Sydney. The railway and the boats divide that traffic.
445. Do your steamers go to Shoalhaven? Yes, to Wollongong, Kiama, and Shoalhaven twice a week.
446. I suppose you get the larger proportion of your produce from the Shoalhaven district? I am not acquainted with that trade. We have opposition there. Two boats are running in connection with the Berry Estate.
447. How far down the coast do the steamers run? To Eden.
448. And touch at every port? Yes.
449. I suppose it would not pay to run steamers to Kiama alone? In my opinion, it would not.
450. And if the railway goes to Shoalhaven your company will still continue their trade down the coast? I should think so. I do not think it will materially affect them; the charges are so low now.
451. You cannot tell us the tonnage which your steamers carry to Kiama? I should not like to divulge that. The information can be got from Sydney.
452. *Chairman.*] I suppose the inhabitants of the district are very largely benefited by the reduction of the charges which has taken place since the opening of the railway? They get the benefit of it.
453. What was the freight on butter to Sydney before the opening of the railway? It was 1s. 6d. and 2s. a keg.
454. What is the present freight? It varies from 9d. to 1s. a keg.
455. Has there been any alteration of the freight as far as Shoalhaven? No.
456. Then the rates for both passengers and goods to Shoalhaven are the same as they were before the opening of the railway to Kiama? I think so; 22s. 6d. was the passenger rate then.
457. Would not the people of the district be benefited by a railway between the present terminus and Shoalhaven to the same extent that the people of Kiama have been benefited by the opening of the existing railway;—they would benefit in proportion by the reduction of freights, would they not? Yes; passengers—but there is a port at Gerringong, and the principal goods are put out there by some of the boats.
458. Assuming that the railway is to be constructed as far as Shoalhaven, would not the people there be benefited in the same proportion by the reduction of rates as they have been here? I should think so.
459. Steamers would have to reduce fares and freights? Yes; but it would be only those near the terminus that would be benefited, because when they have to carry goods any distance it does away with the benefit. Water carriage is cheaper than train carriage.
460. There has been a reduction in the steamer fares and freights since the opening of the railway to Kiama? Yes.
461. Do you not think the people would be benefited by the reduction in steamer freights? It would do away with coaches that carry passengers now; we get no passengers now.
462. The goods traffic is not served by coaches, is it? There are teamsters who carry the traffic.
463. I am speaking of steamer freights;—if a railway were made to Shoalhaven would there be a reduction in fares and freights to that place similar to the fares to Kiama? The company would certainly cut under the price; if necessary they would try for it.
464. What is the present passenger fare to Shoalhaven? 22s. 6d., I think, but the fares are always collected on board.
465. Was that the rate before the opening of the railway to Kiama? I think it was.
466. Then there has been no reduction in passenger fares to Shoalhaven and Ulladula? We had it published in the papers, I really cannot tell.
467. Did you say in answer to Mr. Hurley that the extension of the railway would not lead to any increase in the passenger or goods traffic? Yes, I do not see that it could as this is only a dairying district, and is fully stocked.
468. It has been stated in the evidence that the existing railway only taps the edge of a productive district, and that if it were extended to the Shoalhaven River it would serve a large population and the traffic would be very greatly increased, is that your opinion, or do you adhere to the opinion you have expressed? I adhere to my former opinion, you get all the passengers now that travel, and it would be very easy to calculate the mileage by train on to Shoalhaven.
469. Do you not think there would be a large quantity of milk sent to Sydney by the dairy farmers occupying land between Sydney and Shoalhaven? No, I think Sydney is particularly well supplied from the north of Kiama.
470. You do not think there would be any increase? They will send in milk if it pays better than butter.
471. Do you think that the butter between Kiama and the Shoalhaven River would still be sent by water if the railway was made? I think so. Water carriage is much cooler than railway carriage and it is equally convenient. It is a matter of economy.
472. Then it is your opinion that the extension of the railway would be of no benefit whatever to the people residing beyond Kiama? Yes, to travelling passengers it will do away with coaching and save time and expense.
473. Do you wish to make any further statement? I should think it would be fair to tax the districts through which the railway runs. There ought to be a tax towards the cost of the railway levied as a guarantee that the railway will pay working expenses and interest on the capital expended.
474. *Mr. Hurley.*] You think that if a land tax were levied when the railway is constructed that that would be a good thing? Tax the district that would be benefited by it.
475. Would you be benefited by the railway? I should be willing to pay my share.
476. *Chairman.*] Your opinion is that the railways of the Colony should be constructed out of the proceeds of a direct tax per head of the population benefited by them? A tax should be levied on the value of the land until the railways pay for themselves.
477. *Mr. O'Sullivan.*] You think they ought to pay it, because they are benefited by the railways? Yes, and the value of the land is increased by the railway.
478. Do you not think that your company ought to pay for the basin here which they use for nothing? It is made for the convenience of the public.
479. *Mr. Hurley.*] Did not the company reduce the rates and fares between Kiama and Sydney after the railway was opened? Yes, of course.

480. Have the rates been reduced to ports south of Kiama? No. There may be a reduction.  
 481. The company hold a practical monopoly, do they not? Other companies tried to compete with us, but they have caved in. I do not think our charges are exorbitant.  
 482. Will your charges be reduced if the railway is extended to Shoalhaven? Certainly; the company will try to keep the trade.

Mr. H. Keon.  
 27 Jan., 1890.

Andrew Nelson, Esq., Mayor of Gerringong, and dairy-farmer, sworn, and examined:—

483. *Mr. O'Sullivan.*] What are you? A dairy-farmer.  
 484. Where do you reside? At Gerringong.  
 485. How far distant is that from Kiama? I reside about 6½ miles from here.  
 486. Do you hold any public position? Yes; I am Mayor of Gerringong.  
 487. Have you been a long time in the district? About thirty-three years.  
 488. Do the people of Gerringong get their goods from Kiama? They do when the steamer does not call at Gerringong.  
 489. In fine weather they get their goods by the steamers? Yes.  
 490. Are the steamers always able to run there in fine weather? Yes.  
 491. And do the people of Gerringong send their produce to Sydney by steamer? Yes.  
 492. What does that produce consist of? Butter, bacon, eggs, potatoes, and maize.  
 493. Do you send any milk to Sydney? We have not done so yet.  
 494. Do you think that if the railway went by way of Gerringong it would take the trade that now goes by steamer? I think it would take all of it.  
 495. I presume it would also lead to the extension of the milk trade by enabling the people to send their milk to Sydney? Yes, I am sure it would.  
 496. Is there any land there open for settlement? Yes, and it will be settled if the railway goes there.  
 497. Will it go through any reserves or large properties? It will go through the property of the late Mr. Berry, between Gerringong and Nowra.  
 498. What is the name of that estate? The Coolangatta estate.  
 499. Are the people of Gerringong inclined to support the railway if it goes that way? I believe they are.  
 500. I presume that they would prefer a railway to the steamers? Yes.  
 501. And they would be likely to get their stores from Sydney by rail? Yes.  
 502. What is the population of Gerringong? I could hardly tell you.  
 503. Is it 600? Fully that. I should think there are 1,400 people in the municipal district.  
 504. Before you get to Berry, are there any other places? Yes, Broughton Village.  
 505. Where do your mails run to from Gerringong? One goes to Foxground, and another to Berry.  
 506. Do you not run a mail down to Greenwell Point? Not from Gerringong.  
 507. Are there no other populous places along the coast or in the back towards the mountains? No.  
 508. Those are the only places that the railway would be likely to serve? Yes.  
 509. Is there a good site for a station near Gerringong? A very good site, I believe.  
 510. Is the country pretty level between here and Shoalhaven? Yes; it is level all the way from Mount Pleasant.  
 511. Is there no trade done in timber down there? There would be if they had a railway line.  
 512. Is there no oyster-culture there? I think not.  
 513. Then if a railway went past Gerringong it would have to depend for its trade upon the dairy produce of the district? Yes, but coal-mines might be opened up.  
 514. How far from the coast? About 3 miles.  
 515. Are there any other minerals down there? No.  
 516. No diggings? None.  
 517. *Mr. Hurley.*] Are the farmers in your district freeholders or leaseholders? They are both.  
 518. Are leaseholders or freeholders occupying the larger area? On Mr. Berry's estate they are all leaseholders.  
 519. Can you give us any idea of the rent they pay? They pay different rents, I think.  
 520. Could you strike an average? I should think the average of that estate will be 15s. per acre.  
 521. You say the population of the district would be immensely benefited by the construction of a line of railway there? I believe it would.  
 522. They will take advantage of it to trade with Sydney, which they cannot always do now? Yes.  
 523. Can you give us any idea of the revenue of your municipality? Our rates are about £450 a year.  
 524. Has property increased in value there since the proposal to make a railway became talked about? I suppose it has. There has been none put up for auction lately.  
 525. *Chairman.*] Can you speak as to the character of the land along the line between Kiama and Shoalhaven? It is good agricultural land from Kiama to Nowra.  
 526. Is there a very large area of land occupied between Kiama and the Shoalhaven River? Yes; I have the figures. The area under cultivated grass is 62,343 acres. The number of stock—cattle, 27,308; horses, 2,554; pigs, 6,942.  
 527. Might the produce of the district be regarded as of a perishable character? Butter certainly is.  
 528. Would it not be a great advantage to have quick transit to Sydney? Yes.  
 529. Have you examined the route of the proposed extension? I have not been along the route, but I have seen which way it goes.  
 530. Could you say that the line if constructed as proposed would best serve the district between Kiama and Shoalhaven? Yes, I think it is about the best route.  
 531. Could you suggest any alteration that would be an improvement? No, except that the line might run closer to the Gerringong township.  
 532. Would it be more beneficial to the producers of the district if it did? I do not know that it would.  
 533. The agent of the Illawarra Steam Navigation Company expressed the opinion that the extension of the railway would not lead to any increase in the amount of traffic, or in the number of passengers;—do you support that opinion? No; my opinion is that it will increase the goods traffic.  
 534. Have you considered whether the railway would pay the interest on the cost of construction and the working expenses? If it pays at present, I think it will pay still better when it goes further south.

A. Nelson,  
 Esq.  
 27 Jan., 1890.

- A. Nelson, Esq.  
27 Jan., 1890.
535. Do you think it will be entering a better district? I do.  
536. Do you desire to make any further statements? No.  
537. You are favourable to the extension of the railway line? Yes; I think it would be a great benefit to the district.  
538. *Mr. Hurley.*] Can you give us any reason why agriculture has been practically abandoned for a considerable number of years in this district? Growing wheat was a failure in consequence of rust.  
539. Do you import large quantities of potatoes and grain? We do.  
540. Can you say why these products are not grown in a district where the soil is so good for agriculture? I do not know, except that dairying pays better than cultivation.  
541. But if you put the rent down at £2 an acre, would not agriculture pay better? I believe, with better means of transit, we should have more cultivation.  
542. Is it not a fact that your young men have not been brought up to agriculture, and that you have to import all the produce that you require for the cattle? We do not import all, but we import some.  
543. Are there any minerals in this district? I do not know, except that I have heard that there is coal in the mountains.  
544. Does the railway pass through any land owned by you? No; it runs near a piece of property of mine, but not through it.

Mr. John Alex. McLean, railway station-master, sworn, and examined :—

- Mr. J. A. McLean.  
27 Jan., 1890.
545. *Chairman.*] What is your occupation? Station Master at Kiama.  
546. How long have you been here? A year and eleven months.  
547. Then you came here in February, 1888? Yes.  
548. The railway to Kiama was open then? No; at that time only a section of it—from here to Clifton.  
549. How long is it since the line was opened right through from Sydney to Kiama? It was opened through from Sydney to Kiama on the 3rd October, 1888.  
550. Can you say whether there has been a great expansion of traffic by the railway since the line was opened right through to Sydney? Yes, there has been a very great increase in the traffic.  
551. Could you state what the traffic was between February, 1888, and October, when the through traffic commenced. I wish you to make a distinction between the traffic on the railway before and since? For the six months before the opening of the line the revenue amounted to £705 12s. from all sources. For the six months after the opening of the line through to Sydney the revenue from all sources amounted to £4,347 8s. 10d.  
552. And what is the amount for the last six months? £5,239 11s. 1d.  
553. Has there been an appreciable and continual increase? Yes, it is continually increasing; the last month was the best month we have experienced since the line was opened.  
554. Are you carrying much butter now? Yes, the produce of three factories in this district.  
555. Does the milk traffic vary a good deal.—could you state the quantity in gallons that goes from here? At present two vans go from here daily—one in the morning, and one in the evening.  
556. Can you state the quantity in gallons? No.  
557. Do you know the district between Kiama and Shoalhaven? Yes.  
558. Are you prepared to express an opinion, as to whether in the event of the railway being extended to Shoalhaven River, there will be a probable increase in the passenger traffic? I feel confident that there will be a substantial increase. I believe that at the port of Gerringong the railway will secure the whole of the traffic, because the boats are running very irregularly. In stormy weather the steamers very often cannot get in. The people are strongly in favour of a railway, and from inquiries which I have made, I feel sure that they will send the whole of their goods by the railway.  
559. Do you think that there will be such a return upon the cost of the line as to justify the Government in constructing it? I do.  
560. I ask you as station-master, speaking in your public capacity, if you think it justifiable, having regard to the cost, to carry out the proposed line? I do. I think it is desirable to extend the railway.  
561. *Mr. Hurley.*] You think that the returns will justify it? I do.  
562. Have you formed any opinion as to the most suitable site for a railway station at Kiama? My opinion is that the most suitable site is in front of Teralong-street, if there are no engineering difficulties.  
563. Do you think that that would meet all the requirements of the district? In the event of the railway being carried further, I think it would be a good central position as regards Jamberoo, and it would be near the stone quarries.  
564. *Mr. O'Sullivan.*] At the present time, does any produce from the Shoalhaven district come to your station? No.  
565. *Chairman.*] You think that the figures which you have given us may be regarded as accurate? Yes; they are taken from the books at the station.  
566. The actual revenue then for the past twelve months has amounted to about £10,000? Yes.

Samuel Smith Wells, Esq., surveyor and civil engineer, sworn, and further examined :—

- S. S. Wells, Esq.  
27 Jan., 1890.
567. *Mr. Hurley.*] You have paid attention to the question of the choice of a site for a railway-station at Kiama? Yes.  
568. Would you give us any idea as to the reason why you think the site you have selected is most suitable? According to the permanent line which I staked, the railway would cross the present road on a level, but after Mr. Wright came he thought that by putting an overhead bridge it could do away with the station where I proposed to put it, but I believed he could not carry out his intention; therefore, as the railway will have to cross on a level, I thought it could be put in front of Teralong-street, and I shall be able to point out why. Shoalhaven-street to the north of the church might be closed, and the traffic diverted along Collins-street; then I think there would be sufficient space from the mouth of the tunnel to the eastern side of Shoalhaven-street. This is a suggestion of mine.  
569. Would the site pointed out by you be of general public convenience and also on Crown land? Yes, and would intercept the traffic from Jamberoo. Thinking over the matter yesterday, I thought, were it possible to put a station there, it would be suitable to all parties concerned.  
570. You had formed an opinion that the most suitable place for a railway-station would be between Manning-street and Shoalhaven-street? Yes, originally.

571. Now you think the railway station should be near Shoalhaven-street and Collins-street? I was of that opinion, but after examining the place I have changed my mind. S. S. Wells, Esq.
572. You hold the opinion that if the station could have been there, the public convenience would have been served, and the site would have been a more central one? Yes; if we had sufficient space between Collins-street and Shoalhaven-street. 27 Jan., 1890.
573. Will you tell us where you now think would be the most suitable place for the construction of a railway station? What we term Chinaman's Garden.
574. Have you taken into consideration that there would have to be large goods-sheds? Yes; we should have to make an arrangement for the accommodation of future traffic, so that there would only be one expense.
575. Can you give us any opinion in regard to the route spoken of, by Jamberoo, as against that *via* Kiama to Nowra? I think I gave that the other day; since then I have seen a plan, and I think the Jamberoo line would be a most expensive one. It is altogether out of the question. There would have to be a tunnel,  $2\frac{1}{2}$  miles long, and a very steep gradient. It would be ridiculous to entertain the idea at all. I may add that Mr. Wright has made several diversions which will reduce the cost of the line considerably, and I do not think that the cost can be reduced any further, and I think that the line is now laid out in the best possible way.
576. You favour the Kiama route as against the Jamberoo route because it will be less costly? Yes, and it will meet all the requirements of the district.

Mr. Robert Miller, dairy-farmer, sworn, and examined:—

577. *Chairman.*] What is your occupation? Dairy-farmer. Mr. R. Miller.
578. Are you a landed proprietor? Yes. 27 Jan., 1890.
579. How long have you lived in the district? I have been here since 1838—fifty-one years.
580. Have you examined the route of the proposed extension? Only in a casual way. I know it by riding along the road.
581. Do you think it will be the best to serve the district through which it will pass? I do.
582. Do you desire to make any statement as to any alteration of the route? None whatever.
583. Are you perfectly satisfied with it? I should have been more satisfied if it had not gone through my property; but I believe it will in the public interest. I have heard the opinions of surveyors on the subject, and I believe that the route is the best they can get.
584. How many acres of your land will it take? It depends upon the width that it is from where it crosses the main road till it intersects the by-road behind my place.
585. Do you think it will necessitate the resumption of 5 acres of your land? Yes.
586. Will you inform the Sectional Committee what is your opinion as to the quality of the land and the area? I cannot give the area. The land, generally speaking, is of a very superior character.
587. What is the average rent? The average rent between here and Gerringong is 30s. per acre. On Mr. Berry's estate it has been lower up to the present time.
588. Do you think the extension of the railway will be the means of increasing to any appreciable extent the goods and passenger traffic? I believe it will take all the produce of the district, and I believe there will be a very large increase in the passenger traffic. The district possesses attractions of a kind which, I think, will increase the passenger traffic very much, and I am satisfied that all the produce of the Gerringong district will go by rail. I am connected with one of the butter factories, and when we cannot send the butter away by steamer we send it to Kiama to go by rail.
589. Do you believe that the revenue of the line will cover working expenses in a short time, and pay interest on cost of construction? I think so; more particularly as the passenger traffic will be increased to a very large extent.
590. Have you any knowledge of the figures as to the cost of construction? I have not.
591. On what do you base your opinion that the railway will be a profitable one? The fact that it goes through a very large producing district, and my belief that there will be a great increase in the passenger traffic. On account of the district becoming a holiday resort I believe that the passenger traffic will be very greatly increased.
592. *Mr O'Sullivan.*] How many factories have you in your district? There are three factories in this district.
593. Do you produce bacon? Yes; there are two large bacon factories at Gerringong.
594. Do you manufacture cheese? Very little.
595. Then this ocean competition is not likely to interfere with the railway? No; the ocean competition from Gerringong would cease entirely.
596. If the railway were taken via Jamberoo and the Saddle-back Mountain, would it tap the district of Gerringong? It would not if we had any harbour accommodation, because it would be difficult to get to the railway.
597. Do you send any milk to Sydney? Not at present. We are only wishing that we had a railway, so that we could send it.
598. It would be as easy then to send milk from Gerringong as it is to send it from Kiama now? Yes; there would only be a difference of a few miles.
599. You have been here fifty-one years? Yes.
600. Can you tell us why cultivation failed in the early days? It was discontinued because we could make more out of dairy-farming than from cultivation. The property of my late father was cultivated for many years to a large extent. 300 or 400 tons of produce, mostly potatoes, were sent from there every year, including quantities of grain. But my father found that dairy-farming paid better, and gave up agriculture altogether. I am satisfied that agriculture, as compared with dairy-farming, would be a loss.
601. What are the average profits of a dairy-farm per year? I cannot give the figures.
602. I suppose an acre would run a cow? Generally speaking, the land does not produce as it used to do.
603. What are the returns per year from a cow? I have not gone into that.
604. Do you know how many quarts of milk a cow would give? Yes.
605. Can you not calculate how much that would amount to per week or per year? I cannot.

- Mr. R. Miller. 606. In estimating the average profits do they take into consideration the time that a cow would be dry? Yes.
- 27 Jan., 1890. 607. I suppose a cow would give at least 5s. per week—that would amount to £13 per year—and I suppose it would cost about one-third of that to keep a cow? No.
608. Can we say that a cow would give a profit of £10 a year? I should think so.
609. And the average profits of cultivation are about £2 10s. per year? There has been very little cultivation here for years.
610. Had rust anything to do with the giving up of cultivation? I do not think so. It did affect the crops. If it were not for rust we might grow grain for our own consumption. We grow food for winter for cattle.
611. Would the estimate I have referred to for a cow be for milk or butter? For butter at the present time. I have no doubt that if the railway were extended the dairy-farmers would make more out of milk than they do out of butter.
612. Then it is more than likely that the milk of one cow would bring in £15 a year? Not that.
613. Would £12 a year be a fair average? Yes.

Mr. George Somerville, farmer, sworn, and examined:—

- Mr. G. Somerville.  
27 Jan., 1890.
614. *Chairman.*] You are a farmer? Yes.
615. How long have you been in the district? I have lived in the district about nineteen years, but I have known it for thirty years.
616. You desire to make a statement in reference to the subject of this inquiry? Yes. It has been stated here that the railway is not likely to benefit the lower end of the district, and that it will not increase the traffic. I think quite the contrary. It has been said that the freight of butter from Kiama before the advent of the railway was 1s. 6d. and 2s. a keg, but I always paid 2s. 6d. a keg before the railway was opened. The charge for the carriage by the steamer of the larger kegs, from 100 lb. to 120 lb. weight was 2s. 6d.; for kegs weighing 60 lb., 2s.; for kegs weighing 40 lb., 1s. 6d. I paid these rates for a long time. At present the charge for the larger kegs is 1s. They are all charged for at the same rate by water. I may mention that I should prefer to send my butter by rail, but I understand that there is a difficulty about getting the butter from the station in Sydney at an early hour. That is the reason why I do not send my butter by rail.
617. *Mr. Hurley.*] How far do you live out of Kiama? 3 miles.
618. Have you a large number of cattle? I have about 90 head on a farm of 100 acres.
619. Are you connected with any of the Companies? No.
620. Do you use your own separator? Yes.
621. Do you think that the extension of the railway will cause a larger population to settle in the district? I do.
622. If the Railway Commissioners were to afford facilities for the delivery of your butter earlier in Sydney, would you use the railway instead of sending your produce by the boats? Yes. I believe that butter will arrive in Sydney in a better condition when sent by rail than when sent by steamboat.
623. And you could send milk? I am rather too far away to send milk. I should prefer to send butter.
624. Do you make cheese? No.
625. Do you make bacon? Only for home consumption.
626. Do you grow maize? Only for fodder.
627. The land is more valuable for dairy-farming than for agriculture? Yes, I find it so.
628. Have you practised agriculture at all? Not to any extent.
629. Do you know the country leading to Nowra? I have only a general knowledge of it.
630. Are there any Government Reserves or any land locked up in the district? Not close to the route of the railway this side of Broughton Creek.
631. Do you know of any at the other side of Broughton Creek? I do not.
632. Do you know anything of the district of Jervis Bay? I do not.
633. Have you any knowledge of the mineral resources of the district? I am aware that there are extensive coal deposits.
634. Very far from the proposed line? 6 or 7 miles; in the Jamberoo Range.
635. Is the coal on Crown land or on private land? What I saw was owned by private persons, but it runs back into Crown land.
636. Will the proposed railway lead to the development of those coal measures? Yes.
637. What port would the coal owners seek? They would send the coal by rail from Kiama.
638. Is not the district practically closed against larger settlement on account of land being let to land monopolists? Near Kiama there are no farms to be got.
639. So that the country around here cannot carry a larger population? Only by subdivision. It would increase the population if some of the farms about Kiama were divided into building allotments.
640. What would be a fair average price for the land? I can hardly say. About the lower end of the district land will sell at from £30 to £50 an acre.
641. Do you lease any land yourself? No.
642. Nor let any? No.
643. Have you any idea as to the most suitable site for a railway station? Considering the public convenience irrespective of engineering difficulties I am in favour of what is called the "water reserve," a piece of vacant land on the road going towards Pike's Hill. I believe that that site would be suitable for all purposes; but I am told that there are some engineering difficulties in the way.
644. Do you belong to any dairy farmers' society? I do not.
645. Can you say whether those who carry on the same business as your own in the district are in a sound financial condition? I believe they are. As a rule people who are industrious can make a good living at it.
646. Has ensilage been tried here? It has been tried by Mr. Dymock.
647. Are there any silos in the district? No.
648. Do you believe that the construction of the proposed railway would be of great benefit to the district? I do.
649. And that it is likely to be a remunerative investment? Yes.
650. *Mr. O'Sullivan.*] Where is your farm? It is situated near Saddleback, to the south-west of the town, about 3 miles.
651. Would it pay you to send milk to Sydney? No, I prefer to make butter.

652. Are you aware that there is a greater profit made by the sale of milk than by the production of butter? There is some difference of opinion about that. I think that it pays me better to make butter than to sell milk, considering the distance of my farm from the station.
653. What is the size of your farm? 130 acres.
654. How many cows are there on it? About ninety head.
655. What do you estimate the profits per acre to be? I could hardly say without going into the matter. I should think that taking one season with another a good cow would bring in £8 to £12 a year.
656. That would be clear profit? No, the working expenses would have to come out of it.
657. Do you take into consideration the time when the cows are dry? Yes.
658. And you estimate that the average profit would be about £10 a cow? That would be with good keeping.
659. How much of your farm do you cultivate? Not any except to grow a few garden products and winter food for the cattle.
660. How much do you cultivate for that? About 10 acres.
661. Is that enough to keep the cattle in food? Yes.
662. *Mr. Hurley.*] You say that you live near Saddleback? Yes.
663. Would the route *via* Jamberoo suit you better than the line through Kiama? No, the line through Kiama will be the most beneficial to me.
664. You know something of the line surveyed *via* Jamberoo? Yes.
665. Which line would it be the more beneficial to adopt? The one through Kiama.
666. *Chairman.*] From what you know of the proposed line, do you think that a better route could be obtained? I do not think so.
667. You have no suggestion to make as to any alteration or deviation? No.

Mr. G.  
Somerville.  
27 Jan., 1890.

Mr. William Cocks, storekeeper, sworn, and examined:—

668. *Chairman.*] What is your business? I am a storekeeper.
669. Have you been long in the district? About seven years.
670. Do you know the district through which it is proposed to extend the railway? I know the district, but I have not seen the line.
671. What is your opinion of the proposed line? I think it will be of very great value. It will open up splendid country, and in due time it will bring in a good revenue.
672. Are you of opinion that the line ought to be constructed? I am of opinion that it ought to be constructed as quickly as possible.
673. Do you think that the return from the line will cover the interest on capital, and the cost of working? It may not for the first year or two, like all other lines. The Western line was a drawback for a time, but it is paying its way now.
674. Are you aware that the construction of the line will be very costly? It will be a costly affair, but it is a thing that will have to be done.
675. You are of opinion that the Government will be justified in incurring this expense? I am.
676. Could you say anything as to the difference to the residents of the district in regard to fares and freights which the opening of a line between Kiama to Sydney has made? The Steamship Company have of course reduced their rates to compete with the railway; but as far as I am concerned, as a storekeeper, even if the railway rates were only equal to the steamer rates, it would not pay me to cart goods from the railway unless the terminus were in the town.
677. Would all the goods that you get from Sydney be forwarded to you by rail, if the station were in the town? Yes; unless the rates of carriage by the steamers were reduced.
678. Do you know where the intended site for the station is? I heard that it was to be on Mr. Hindmarsh's property.
679. Do you think that that would be a convenient position for the townspeople? I think so.
680. Do you know of any better site for the station? I do not.
681. *Mr. O'Sullivan.*] How far out of the town does your trade as a storekeeper extend? As far as Gerringong. I go as far as Berry sometimes.
682. How far to the west? To Jamberoo.
683. *Mr. Hurley.*] Do you import any produce? Yes.
684. Where do you get it from? From Sydney.
685. Do you know why agriculture is not followed in the district? On account of smut I believe. The farmers find it cheaper to purchase the grain that they want and to keep cattle.
686. Do you know the difference between the present freight charges and those imposed before the railway was made to Kiama? There is a great difference—a reduction of 50 per cent. in some cases.
687. So that the inhabitants have been benefited very much by the railway? Yes.
688. And if the railway is brought into the town, the traffic will not be carried by the steam-boats? A great portion will not, unless a great reduction is made in the freights by the steamship company—it will be more convenient for us to get our goods by rail. We cannot depend on the steam-boats sometimes.

Mr. W. Cocks.  
27 Jan., 1890.

TUESDAY, 28 JANUARY, 1890.

The Sectional Committee met at the Court-house, Nowra, at 10 a.m.

Present:—

The HONORABLE FREDERICK THOMAS HUMPHERY (CHAIRMAN).

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Kiama to Nowra.

Edward Seccombe, Esq., Mayor of Nowra, sworn, and examined:—

689. *Chairman.*] What is your position? I am Mayor of the Municipal District of Nowra.
690. How long have you been there? Three years.
691. Were you an Alderman before that? Yes, for two years.
692. How long have you been a resident of the town? Six and a half years.

E. Seccombe,  
Esq.  
28 Jan., 1890.

E. Seccombe, 693. Before that where were you residing? At Ulladulla.

Esq. 694. Are you able to give information as to the progress of this district during the time you have been an Alderman, and the time that you have been Mayor? Yes; more particularly as regards my own municipality.

28 Jan., 1890.

695. Will you make a general statement in regard to the increase in the population, the expenditure on private buildings, the area of the land which you know to be subject to taxation, and the revenue it produces? I shall be in order, I presume, in glancing back to show the material progress that has been made within ten years.

696. Yes;—how many municipalities are there on this side of the river? Three this side of the river—Numba, Central Shoalhaven, and Nowra.

697. Are they within a radius of 5 miles of the proposed railway? The railway will be about 6 miles from the central points of Numba and Nowra.

698. Will those centres be within a radius of 5 miles of the termination of the proposed line? Just about 5 miles. In 1879 the municipality of Nowra struck their rate on a valuation of £40,000, and in 1888—ten years later—they struck their rate on a valuation of £100,000. A new assessment will be made within the next few weeks for the present year, and in consequence of the very material progress that has been made in building and street making, we fully anticipate that next year the valuation will be over £140,000. The annual value of rateable property, on which the rate was struck ten years ago, was £3,040, and the annual value for this year will be £14,000.

699. What was the amount of the revenue from the rates for 1879? That year we had a deal of assistance from the Government—the rate itself hardly reached £230.

700. What was the amount realized five years later? In 1884 it had only reached £250. At the present time it is very close to £500. The total voting strength within the municipality in 1879 was 227—that was the number on the rolls. At the present time there are 431 on the rolls. The returns in 1884 show the population of the town to be 1,009. The returns for the present time are not complete, but we estimate the population at 1,500—that shows an increase in the town of 100 souls per annum for five years. We estimate that we have in open and made roads  $26\frac{1}{2}$  miles, within a radius of 4 miles, costing over £20,000. Within the town boundaries we have at present 67 places of business, 3 manufactories, 183 private residences, and 30 residences that form parts of business establishments. We have 5 churches in the town, 4 hotels, and 3 banks. There is one bank in the Municipal District of Central Shoalhaven. We have 1 public school and 2 private schools. We have 3 wheelwrights' and smiths' establishments in the town of Nowra. The Municipal Council expended on permanent works in the municipality last year £1,139 Os. 11d.

701. Can you say how much has been expended by private individuals within the last five years—I mean exclusive of public buildings? We have had no public buildings erected in the district since my arrival here.

702. Within the last five years how much has been expended within the town of Nowra on buildings, exclusive of public buildings? In 1884 the estimated value of property was £50,000; last year, five years afterwards, it was £100,000, and evidently the value of property had increased during that period by £50,000.

703. Do you know the route of the proposed extension of the railway from Kiama to the Shoalhaven River? Yes, I have been over it several times.

704. Do you think that that route will best serve the people settled between those points? I should think so—it strikes all the centres of industry.

705. Have you any reason to believe that any alteration of the route would be beneficial to the district? Not within the electorate of Shoalhaven.

706. Do you know the estimated cost of the line? I have heard it stated.

707. Have you any reason to think that the construction of the railway will entail a loss on the country? I am not in a position to state that exactly. I should hardly think so, judging from the manifest progress and prosperity of the district. There are 11,000 people in the district who have to have every necessary brought to them, and everything that comes and goes must be carried by some means.

708. Do you think that if the railway were carried out within a reasonable time it would defray the interest on the cost of construction and pay the working expenses? We believe so.

709. Do you think that the traffic at present carried by steamers would be carried by the railway? To a very large extent it would be. Perishable goods are a general product of the district, and no doubt there would be many other perishable articles produced if the railway were made, so that the people could get their goods to market in a proper state. No doubt fruit and milk would be sent by the railway.

710. Have you any reason to believe that there would be an increase of population after the completion of the railway? Decidedly.

711. Is there scope for the increase of the settlement? There is immense scope—there are plenty of Crown lands, and the mining resources of the district have not yet been developed.

712. You cannot give us any idea of the passenger traffic between Sydney and Shoalhaven at present? I could not.

713. Generally you are favourable to the construction of the line as proposed? Decidedly.

714. *Mr. O'Sullivan.*] The figures you have given us apply only to the municipality of Nowra? Only to this municipality.

715. Near Nowra there are two other municipalities, are there not? Yes—Terrara and Numba.

716. Can you give us any idea of the population and the annual value of rateable property in those municipalities? No one is a great deal on private estate, and we could not get all the information.

717. Can you give approximately the number of persons resident at each place? I could not.

718. Are you well acquainted with the district surrounding Nowra? Yes, in all directions.

719. What industries are carried on here? Farming in all its branches. There is one tannery on this side of the district, and on the southern side timber-cutting, fishing, oyster-culture are carried on, from Jervis Bay up, and agriculture is carried on generally on the river bank, except where the land is used for dairy-farming.

720. What crops are cultivated? Corn principally.

721. Are there any orchards? Very few.

722. Should not this soil and climate be suitable for orchards? It is more suitable south of us—the soil is no doubt suitable to the production of grapes, apples, and wine.

723. With regard to mining, how far is the auriferous country from Nowra? Eighteen miles.
724. Further up the river? Nearly west from us—at Yalwal. That is the principal gold-field that we have here. It is up the river.
725. Is there any mining below Nowra? No.
726. Is Nowra a centre for the gold-miners? They have no through access northward except through Nowra.
727. What localities is Nowra the centre of? Tomerong and Nerriga, and the district between here and Braidwood. Nearly all the business in connection with those places is done through Nowra, and nearly all the water trade between us and the sea to Greenwell Point.
728. Is Tomerong near Jervis Bay? About 6 miles off.
729. Are there many people there? Yes.
730. What are they doing? Mostly farming, timber-cutting, and fishing.
731. Is Nowra a centre for Kangaroo Valley and Cambewarra? Yes.
732. If a railway were made the trade from those districts would come into Nowra? Yes; it comes there now.
733. Is this a district where much stock is raised? A great deal of stock is raised in the district.
734. Where do they find a market? At Kiama and towards Braidwood. A great deal of the young stock goes to Braidwood.
735. Whence does it go then? A great deal returns in the following spring—the farmers prefer their own stock for dairy purposes. One head out of every three returns.
736. Would the stock be likely to be sent to the metropolis if this railway were made? I could hardly say that. We have not sent much to the metropolis.
737. Is the fishing industry carried on largely in this neighbourhood? Very largely, but not exactly in Nowra. The produce passes through Nowra to Sydney.
738. How do they send fish to Sydney? By steamer.
739. Where do they carry on their fishing? Between here and Jervis Bay—14 miles.
740. If a railway were made to Nowra, would they make Nowra the centre, and despatch fish to the metropolis from here? Yes, very likely.
741. Therefore a railway would develop that industry? Yes.
742. Is there any timber trade here? Principally local. A few years ago there was a large timber industry at Jervis Bay—there is a large mill there now, but the ruling prices are against it.
743. What woods have you? Black butt and spotted gum.
744. Have you no cedar? None now.
745. Have you any timber reserves? Yes, to the south of us, for many miles—from Redhead nearly up to Shoalhaven.
746. How far south and west of Nowra would the trade come into Nowra, to be served by the railway? Fully 20 miles. Of course it would take nearly all the passenger trade from Milton. The passengers travel through to Kiama, a distance of 60 miles.
747. I suppose that the people who want to visit the metropolis drive from here to Kiama and take the railway there? They do.
748. How many coaches are running? Generally four, five, and six a day; there are usually three or four permanent ones.
749. Are they well patronised? Very extensively, indeed; they carry from nine up to fifteen and sixteen persons.
750. Did you say nearly 11,000 people had settled in this district? Yes.
751. And that they would be served by the railway? Yes.
752. *Mr. Hurley.* Have you any knowledge of the statistics that were furnished by the Works Department from the district—to show the capabilities of the district? I have never seen them.
753. Do you know who furnished them? I do not.
754. If I were to give you the items, could you verify them? I do not think I could.
755. You are not in a position to corroborate anything stated in them;—you have heard that the cost of the construction of the line will be £381,000? Yes.
756. You have facilities now for getting to market by water? Yes.
757. Of what benefit would a railway be, seeing that water carriage is so much cheaper than railway carriage? People will always take advantage of a regular and certain means of communication, and in most instances the goods can be carried to Sydney by rail in better condition than they would be in if carried by steamer. Nearly all the milk in the district is being sent to the butter factories, as it would require better means of transit to carry it to Sydney.
758. Have you ever heard complaints about the neglect of the Government in regard to public expenditure in this district? I have never heard any complaints in that respect, but we have sometimes agitated for assistance.
759. Have you not read in the press that the people think that they are badly dealt with in regard to the expenditure of public money in this district? I may have seen it, but I did not attach much importance to it.
760. Have you seen it stated that the Government have been somewhat negligent in regard to the construction of a railway from Kiama to Nowra? I have seen that in the press.
761. Do you think that any hardship will be done to the people of Nowra if a line is constructed to the township of Bomederry instead of to the Bomederry bridge; the people of Nowra are somewhat antagonistic, I believe, to the erection of a station at the township of Bomederry, and have been using some pressure to get it brought nearer to Nowra? Yes; there was some opposition to that. I do not know that the people brought so much pressure to bear; but the Commissioners thoroughly approve of the line being brought to the terminus already decided upon.
762. You will see by the map that it is proposed to extend the line across the river to Jervis Bay? Yes.
763. Having in view the extension of the line to Jervis Bay as a national investment, have you any objection to the station being placed in the Bomederry township? It would create a large amount of inconvenience to the people on the southern side of the river. It is a considerable distance, and it is rather an awkward situation to meet the requirements of the district.
764. Having in view the probable extension of the line from that point, do you think it advisable to extend

E. Seccombe,  
Esq.  
28 Jan., 1890.

E. Seccombe, Esq. extend a branch line from Bomederry township to the proposed terminus? I think the extension to Bomederry bridge is absolutely necessary to make the railway of any service to Nowra. Bomederry is out of the way for us.

28 Jan., 1890.

765. Do you think it in the public interest that the line should be carried to Jervis Bay and Bateman's Bay? I do.

766. Do you think it wise then to extend the branch line to Bomederry Bridge? We do not anticipate that there will be a further extension for some time, and the Government would be justified in meeting our requirements by that extension.

767. What would be the distance from the township of Bomederry to the bridge? About a mile.

768. Would the public suffer any great inconvenience if that branch line were not constructed, having in view the construction of the proposed line to Jervis Bay? If we had any guarantee that the line would cross the Shoalhaven River in a reasonable time the people of Nowra would be content that the terminus should be at Bomederry township, but not having such a guarantee, it is necessary that the line should be brought as far as the bridge.

769. Have you ever seen the water over that bridge? I have not.

770. Have you ever heard that it overflows that portion of the land on which it is proposed to build a station? Yes. I have heard that it has been over the bridge during flood-times.

771. What occurred in the past is likely to occur again, is it not? Yes.

772. Do you think it would be advisable to build a station on the site which is liable to floods? Hardly. I suppose the Government have made their calculations with regard to that. We look upon the site as a place subject to floods in wet seasons. Water lies there during many months of the year.

773. You think it would be advisable not to build a station at Bomederry, but to bring the terminus to the Bomederry bridge for the convenience of the people of Nowra? It is necessary to bring it nearer the town than it would be at Bomederry. Some express the opinion that the terminus should be near Mr. Berry's wharf—between Bomederry Creek and the river.

774. Has that opinion been expressed at any public meeting? Not at any public meeting.

775. Is it the opinion generally expressed in town? I have heard many express the opinion that if we had bad weather it would militate against the public convenience, if the terminus is made where it is proposed to be.

776. If it is the north side of the bridge it will be liable to floods? Yes.

777. Do you think it would be wise then for the Government to construct a terminus on the site which would be liable to floods? I can hardly say; we desire to get the terminus as near to the town as possible, and particularly on the main road.

778. Looking at the town of Bomederry, do you not think that that would be sufficiently close to Nowra for the convenience of the people? Not as a permanent thing.

779. Is it not a fact that the antagonism to the erection of a station at Bomederry is because of a large number of people having built at Nowra, and their being afraid that a competing town will arise at Bomederry? I have heard it said that a township might spring up there, but I do not think many believe it.

780. Then, supposing the station to be at Bomederry, the people here do not anticipate that it would injure their business? I do not think so. I have not heard many say so.

781. Therefore, if you were the engineer, and looking at the line apart from any interests in it, would you not put the terminus where there would be no danger of floods? I should certainly advocate going to the expense of the extension.

782. Have you any knowledge of the country between here and Jervis Bay? Yes.

783. Are there any difficulties of an engineering character in the way of an extension of the line to Jervis Bay? None whatever, I should think.

784. Do you think it would pay to take the line to Jervis Bay? I think it would, on the whole. The increased value which it would give to the Crown lands alone would be twice or three times as much as the cost of the line, and that increased value would take place immediately.

785. Therefore, looking at the probable opening up of the country beyond here, and the probability of that bridge being constructed within eight years, do you think it would be wise to leave out the branch line and have the terminus of the line at Bomederry township? I have not seen any conditions of that kind. If it is possible to make the terminus at the bridge, and if it will be required for eight years, I think the Government would be justified in making it there.

786. And leaving out the branch line? No; they should bring it to the Bomederry bridge. I do not believe that it would be damaged by floods.

787. How many years have you been in the district? About six and half years.

788. Have you noticed whether the people have given more attention to agriculture of late years than they did formerly? I do not know that they have. During the last few years the dairying industry has been more encouraged than agriculture. Dairy produce has been dear, and dry seasons have been a great deal against agriculture.

789. You said that there were three manufactories in the town;—do they employ a large number of hands? A fair number.

790. Would these three manufactories give employment to twenty-five people? I think altogether they would give employment to more.

791. Would the number exceed fifty? No.

792. Do the people of the district give attention to fruit-culture? They are doing so further south, about 18 miles from here, where the land is more suitable.

793. Has it not been successful in this district? There has been very little inducement to cultivate—there has been no market—no means of getting the produce away.

794. You do not know whether the land is suitable for fruit-growing? There are immense areas which are suitable for nothing else—particularly suitable for vineyards. Those areas are to the south of us, and are mostly Crown lands.

795. It is an industry that might be entered into with success? I know a gentleman who has been experimenting for eight or nine years with great success.

796. Do you know anything about the coal-measures in this district? There have been no satisfactory results yet. They are testing some ground south of Nowra with the diamond drill, in the hope of finding coal.

797. Is the testing being carried out by private enterprise, or by the assistance of Government? By private enterprise.

798. Can you give us any idea as to the extent of the export trade in fish? I could not.
799. You are aware that the extension of the railway into the Kiama district has given a wonderful impetus to the cheese, bacon, and butter industries? Yes, and to the milk business.
800. Do you think that if the railway is extended to Nowra it will give a similar impetus to those industries in this district? It would, most decidedly.
801. Have you any knowledge with regard to timber reserves? Nothing very definite. The reserves are nearly south of us, and they cover a very large area of land—the whole of the area from Canjola to Jervis Bay—nearly 20 miles.
802. You say that you expended £1,139 last year? Yes.
803. And that the Municipal revenue is about £500. Yes.
804. Are you building up a town on borrowed capital? We have no borrowed money.
805. Then how do you balance your accounts? The people contribute largely to make the main streets in addition to their rates, and the Government also grant assistance.
806. You have 26½ miles of roads open and made? Yes.
807. Have any of these roads been constructed with Government aid, or solely from local revenue? Only a portion of the South Coast Road was made with Government assistance.
808. You said that there were only four hotels in the town? Yes.
809. And you have a population of 1,500? Yes.
810. Is the local option vote taken here? Yes.
811. I suppose that is the reason why there are so few hotels? I do not think so. The four hotels that we have, have been built within the last five years in their present form; previously they were only roadside houses, with four or five rooms each.
812. Have the steamship companies trading here had a remunerative return from their investment? I should think so. They must have had. They offer to assist the Government in extending the wharfage accommodation.
813. Can you give any idea of the cost of carriage between here and Sydney? I could not, except on small parcels.
814. You have had no large consignments yourself? No.
815. Notwithstanding that you have had water communication with the metropolis, do you think that a railway would be preferable, and that it would be supported in opposition to any steam-boat company? Yes; because the railway is a more ready way of sending things to market.
816. Has land advanced in value in the town since the railway was talked of? It has, enormously. It has doubled the value of all property in the town within the last five years.
817. Can you give us any idea of the value of property per acre in the town? There have been three allotments of 9 acres each offered, and they went at from £1,600 to £1,800—about £200 an acre.
818. Would not that be an excessive price as compared with other land in the district? That land was bought by auction. There are no buildings on the property, and we regard it as being out of town.
819. What is the value of agricultural land here? You would not get it under £70 an acre.
820. Will you give us an idea of what you consider a fair value for Crown lands in the district in anticipation of the construction of the proposed railway? No. It would be difficult to do that, because we have hardly got the class of people who would purchase it and apply it to remunerative purposes.
821. Would the railway increase the value of the land? No doubt it would double the value of all Crown lands, as well as of private lands. In Jervis Bay land has been cut up and sold in subdivisions, realizing £6½ an acre, down to a very few shillings, and there are thousands of acres of Crown lands better situated than that.
822. *Chairman.*] Are you clearly of opinion that in the event of the railway not being brought across the river the station should be at Bomederry Bridge? I am.

Henry Gordon Morton, Esq., surveyor and land agent, sworn, and examined:—

823. *Mr. O'Sullivan.*] What is your position? Surveyor by profession, and now land agent and manager of the Shoalhaven estate, belonging to the family of the late Mr. Berry.
824. Can you tell the Committee the extent of that estate? The area is 62,587 acres of freehold land. It commences at the point at the Boat Harbour, Gerringong; goes due west to a point above Broughton Creek, township of Berry, a little to the west; then it proceeds south towards the Shoalhaven River, and is bounded by the river; then crosses into the county of St. Vincent—the county we are in now—and goes from a point on the Shoalhaven River to the Crookhaven Creek; then across the creek to the tidal waters of Jervis Bay; then down the bay to the sea, and back to the point of commencement at the Boat Harbour, Gerringong.
825. On that estate there are a number of tenants, are there not? Yes.
826. Can you tell us the number? There are 400 holding leases, one-eighth of which are householders.
827. On the estate also, there are several small townships, are there not? There are. There is one township at Greenwell Point—the township of Numba, a small hamlet at Bomederry, a part of the township of Gerringong, and the town of Berry.
828. What is the size of the tenants' holdings? They go from about 40 acres up to 250 acres.
829. What industry do they carry on? Agricultural pursuits principally, growing maize, oats, barley, and potatoes. The land fit for dairy purposes is used for that—producing milk, butter, cheese, and stock.
830. Have you much competition for the leases when they fall in? Yes, very great competition. When a holding has become vacant I have known as much as £500 to be given to the outgoing tenant for the residue of his lease, extending over five or six years.
831. Do all these tenants hold leases? They all hold leases or agreements for leases.
832. But are not a number merely tenants at will? Yes, a great number; but they are all under agreements.
833. Their holdings are safe? They are perfectly safe. The leases are not under seal, but the agreement stands in the place of a lease.
834. Then there is no danger of a number of them being turned out as they have been in Scotland by the Duke of Sutherland, for the purpose of converting the land to other uses? I do not think so. I think that the liberal laws of this Colony, and the beautiful climate we have, would not allow that to come into operation.

E. Secombe,  
Esq.  
28 Jan., 1890.

H. G. Morton,  
Esq.  
28 Jan., 1890.

- H. G. Morton, Esq.  
28 Jan., 1890.
835. I notice that the roads round that estate are very well made—have they been made by the Government or by the proprietor of the estate? Before Municipal institutions were established the roads were all made and fenced by the proprietors of the estate.
836. Have any of the buildings such as schools or show buildings been erected by the proprietors? Every building on the Shoalhaven estate is private property, all belonging to the owner of the estate, except a few that were put up lately under the Lands Resumption Act—some five or six public schools—and portions have been sold to private institutions such as the Commercial Bank and the E.S. and A.C. Bank.
837. Is the proprietor of that estate now running a line of steamers? Yes.
838. Over how long a period does your knowledge of this country extend? Since the year 1854.
839. When you first became connected with this district what was the population? It would be under 500. There were not twenty farmers in the Shoalhaven district when I came here. Every farm in the estate has been laid out by me or by my assistants.
840. Have you noticed the growth of the town of Nowra? Yes. I think that it was in 1862 that the Government sent down a surveyor, who was drowned in the river. At that time Nowra was nearly bush—there not being a single house.
841. It lay dormant for a number of years? It lay dormant for eighteen years, and you could have bought the allotments for a mere song.
842. What caused a sudden impetus to be given to it? The idea started many years ago of making the new bridge over the Shoalhaven River. The completion of the bridge altered the whole geography of the district. We used to get across the river by ferries, and in flood-time for days we could not get across at all. Once the bridge was made, a traffic came over it which gave the place a start.
843. What attraction brought the population? The good land, the liberal landlord.
844. I suppose you are well acquainted with the whole of the surrounding country? Yes.
845. Can you tell me what area of Crown land is available for settlement? I cannot.
846. What is your opinion about the construction of this short line from Bomederry town to the bridge—do you think the Government would be justified in making that line? No, it would be a waste of money.
847. Are you aware that the Kiama storekeepers complain very strongly about being compelled to send their produce some distance out of town to the railway, and that they frequently prefer to send their produce by sea to submitting to that inconvenience, and would not the same inconvenience arise here? Decidedly they would patronise the steamer in preference to hauling their goods to the other side of the river.
848. Would not a line to the Bomederry Bridge be preferred? No, I think the Government will have to build a bridge and continue the line to Jervis Bay—not so much for the population as for grand national purposes.
849. You object to the short extension to the Bomederry Bridge, because you think that a railway should be constructed to Jervis Bay at once? Yes.
850. If the line went to the bay do you think that the trade of the district would go by railway to Sydney or by Jervis Bay, and thence by ship to Sydney? If the fares were reasonable the trade would go direct to Sydney by railway.
851. Would not the people be likely to take advantage of the railway to ship their goods by Jervis Bay? I do not think so.
852. I suppose you are aware that the rates by water are usually much lower than the rates for land carriage? I understand so.
853. Would the construction of the line to Jervis Bay take to Jervis Bay a trade that would otherwise come to Nowra? No, the trade would go direct to Sydney from Nowra.
854. If the terminus of the line remains where it is for seven or eight years, is it not probable that Nowra will become the centre for all the trade from the coast side to be forwarded to Sydney? Nowra will always retain its importance because there is a trading population here which there is not at Bomederry.
855. If the terminus remains at the bridge would Nowra retain the trade of the coast district which has to go to Sydney? But you are not bringing the line to the bridge, you are a long way from the bridge, and before I could get to the terminus in flood-time I must go through 4 feet of water.
856. But the surveyor proposes to bring the line nearer to the bridge? Yes, to 400 or 500 yards from it, perhaps more.
857. Are you aware that the proposal is to construct the station on the bank of Bomederry Creek? I believe so.
858. Have those banks ever been flooded? Not to my recollection.
859. Then if they had not been flooded, how is it likely that water will impede the traffic there? Because there is a swamp between the terminus and the main road which people must travel through.
- [Mr. Wright, C.E., explained the proposed position of the railway station as follows:—The proposed terminus ends close to the Bomederry Creek bridge, and is above flood-level, but sloping to the northward, and is subject to floods, but it would be filled up to such an extent that both the station and the approaches to it will be above flood level.]
860. Having heard the explanation given by Mr. Wright do you think now that that gap between the bridge and the end of the station is likely to be flooded? Not if it is filled up above flood-level.
861. Would not that prevent the danger you anticipated? Decidedly it would.
862. Would it not be to the advantage of the people of Nowra to have that short extension constructed so that they might be saved a considerable distance? Yes, it would be to their advantage whilst the proposed new railway bridge is being built, and the extension of the railway to the deep waters of Jervis Bay is being effected. It would be an advantage to have the terminus as close to the town as possible.
863. Another point I desire your opinion upon is this, whether it would be to the advantage of the State to construct the proposed line to Jervis Bay? Yes.
864. If the line is brought on to Nowra no doubt there would be a very large trade with Sydney? Decidedly.
865. And it may be a very profitable work? Yes.
866. But if the line be taken to Jervis Bay, is there not a danger of producing steamship competition? If this is going to become an important mineral district that extension is necessary. Jervis Bay is the only place for large vessels. You cannot bring a large vessel into the Shoalhaven River—not a vessel drawing more than 8 feet of water. There is plenty of deep water in Jervis Bay, and if the country is to progress

- progress in accordance with what we have seen it do during the last twenty years, Jervis Bay must be an important place for coal for outgoing ocean steamers. Those steamers would take in coal at Jervis Bay and land passengers, who could travel by train after coming off their voyage.
867. You think the natural aspect of the matter should outweigh the fear of competition by the shipping? Decidedly. Every good general guards the outskirts of his camp, and why should not the Government pay attention to such an important place as Jervis Bay.
868. You think that Jervis Bay will be a great shipping-place? It must be; Nature ordained it to be so.
869. And you think that mails could be landed there more quickly by train? Just the same as at Holyhead, where the Irish mails are landed and forwarded to London.
870. You have no hesitation in pronouncing an opinion in favour of the extension of the railway to Jervis Bay? That work ought to be carried out immediately. Money ought to be no object in the completion of that line as a great national work.
871. Why has settlement been so limited at Jervis Bay? Because there are no roads to it; there are no wharves and no shipping.
872. If there is a good harbour there would be easy access to the shipping? Yes, but there is no population.
873. Why is there no population—is the soil inferior? It is not so good as at Nowra. It is freestone loam, good for growing fruit, but not for agriculture.
874. Are there any timber reserves? Yes; there is plenty of timber, blackbutt, blood wood, and ironbark.
875. At one time they carried on shipbuilding there, did they not? Yes.
876. Has it ceased? No; it is going on to a small extent still.
877. Is it the seat of a fishery? Yes, a very extensive fishery.
878. Do you know anything about the discovery of coal there? I have heard that there is plenty of coal, but it is at a great depth, and it is expensive to get.
879. *Mr. Hurley.*] Do you think that the railway by passing through the Berry estate will increase the value of it? Yes.
880. Do you think it will give an advance in the value of 25 per cent.? No; not so much as that. I do not think we should be in a position to increase our tenants' rent by 25 per cent., because of the railway.
881. Seeing the advantage of having a railway through the estate, do you think that the owners would give the land required for the construction of the line? I cannot answer that question. I have no knowledge of what their intentions may be.
882. You have never heard that they would give the land? No.
883. There is a quarry within a short distance of the east side of the bridge;—that quarry is close to the main road leading in from Broughton Creek;—is that the place that you say gets flooded? Yes.
884. So that in time of flood it would be impossible, unless the flood were bridged over, to reach the railway-station? The road would have to be raised 4 feet at least before you could get to the railway.
885. That is from the quarry? Yes.
886. You are of opinion that if the line of railway should be carried on by a bridge across the Shoalhaven River to Jervis Bay a branch line to the bridge would be a useless expenditure? Yes, after the railway had been completed to Jervis Bay.
887. That branch, after the completion of the line to Jervis Bay, would not be used at all? No; it would be an absolute loss, as the station would be at Nowra.
888. Do you know anything of the timber reserve between here and Jervis Bay? I know from Government plans that there are large timber reserves, but the timber has been taken off during the last twenty years by splitters and timber licensees.
889. Could you give any idea as to the advance that would take place in the value of the land in the event of a railway being constructed from here to Jervis Bay? I think it would increase the value of the land at the very least by 50 per cent. The selling price now is 25s. an acre, and I think it would increase up to 30s. or 35s. an acre.
890. Knowing the value of the land here, and the purpose to which it is applied, can you say that the people in this district put the land to the best possible use? At present they do.
891. Maize is not grown to a very great extent, is it? There is as much grown at present as there has been during the last ten years. Some 5,500 acres of maize are grown in the district. In some parts, where the land is very low, they are more inclined to grow grass and convert the land into dairy farms.
892. *Chairman.*] How many acres of land are occupied by the 400 tenants on the Berry's Estate? About 25,000 acres are now under lease.
893. And the difference between 25,000 and 62,000 acres is in the hands of the proprietors? Yes. Another 25,000 acres could be brought under cultivation, and this area is about to be let to 400 more tenants.
894. Is it the intention of the proprietors to lease that land? It is their intention to lease a great portion of it. I think about 3,000 souls may be settled on the lands now under grazing. There is no limit to population in this district; it goes on increasing whether the times are good or bad.
895. Is it the intention of the proprietors of the estate to throw open to settlement the land which has been reserved for timber? There are portions of the timber reserves which will not be thrown open, as the timber is more valuable than anything you can get for the land, but that area does not exceed 2,000 acres.

Mr. John Macarthur, general storekeeper, sworn, and examined:—

896. *Mr. Hurley.*] Have you been long in the district? Thirty-seven years.
897. Are you a landholder? Yes.
898. Do you hold a large area? Not a very large area.
899. What is your occupation? I am a general storekeeper.
900. Do you lease any of your land? Very little. It is nearly all built upon.
901. Could you tell us what you get per acre for it? I have no agricultural land at all. The only area that I lease is a farm near Curembene.
902. Where do you get your goods from? From Sydney principally.
903. Do you import direct? Yes, a good deal.

Mr.  
J. Macarthur.  
28 Jan., 1890.

- Mr. J. Macarthur.  
28 Jan., 1890.
904. Do you get any goods by steamer? Yes; we get everything by steamer.
905. What do you pay per ton? 10s.
906. Has that long been the charge? I think so.
907. They have not raised or lowered the freights? It was double that a great many years ago.
908. For some years the charge has been 10s. a ton? Yes.
909. Are you favourable to the construction of the proposed railway? I am.
910. Will it give you greater facilities for getting your goods? Yes.
911. Are you prepared to pay increased charges in order to get your goods by rail instead of by water? For a certain portion of the trade only.
912. What is that? Drapery and light goods—because the steamship company charge by measurement.
913. Do you think you could pay twice the amount that you pay to get your goods by water? We could for certain goods, not for flour, salt, and similar articles.
914. In going to Sydney, would you go by rail in preference to the water? Decidedly.
915. Have you any idea of the area of the reserves belonging to the Government beyond this town? I know they are large, but I do not know their extent.
916. Have you known of any inquiries being made in order to secure a certain portion of Crown lands here not now available? I heard of land down at George's Lake being very much inquired about.
917. If the lands were thrown open, would the Government have any difficulty in finding purchasers? None whatever.
918. So it would give facilities for increased population in the district? Yes, a very large increase.
919. I suppose the other storekeepers in the town are labouring under the same disabilities as yourself in regard to getting their goods to market? Just the same.
920. Do you know anything about the fruit-growing industry? The future of that industry will be very important, I am sure.
921. Why is that industry not entered upon at present? Owing to the difficulty of reaching the markets before the produce is spoilt.
922. Is there enough fruit grown for local consumption? It would not pay; the demand is not sufficiently great.
923. Are you interested in the butter factories? Not directly. I am indirectly interested.
924. Can you say whether the butter factories have given an impetus to dairying in the district? I think they have.
925. Do you think that the construction of the proposed railway would increase the trade very much? I am quite sure it would.
926. Have you any knowledge of the locality which has been described to Mr. Morton by the engineer as the place for a railway-station? I have.
927. Do you think that a station at that place would serve the general public better than a station at Bomederry? I agree with the remarks made by Mr. Morton. It would serve the purpose until the line was carried on to Jervis Bay.
928. Do you think that the extension of the railway to the north side of the Shoalhaven River towards Jervis Bay would be a good investment? I do.
929. Do you think that the traffic would be sufficient to pay the interest on the cost of the construction of the line between here and Kiama? Eventually it would. It might not for the first few years—perhaps not until the mineral wealth of the district was developed.
930. You think that the mineral resources of the district will bring large returns if the railway is made;—what minerals do you refer to? There is coal and lime in the district, and I have no doubt iron also.
931. Can you speak of your own knowledge with regard to the existence of coal? No; only from what I have heard and read.
932. Have you taken up any coal land yourself? I have not.
933. Have you been to Yalwal? I have.
934. Have you any interest in the mines there? I have not.
935. Are they progressing? I am told so.
936. Sufficiently to attract capital from other colonies? Yes; they are attracting capital to a very large extent.
937. And all the traffic goes through this place? Yes.
938. *Mr. O'Sullivan.*] How far does the trade of Nowra extend? I should say it extends about 25 miles in a southern direction.
939. What outlying places then does Nowra serve? There is a settlement between here and Tomcrong, and the trade extends as far as Burrier and Yalwal to the west.
940. Does it go to the north-west at all? Yes, to Cambewarra, and often as far as Bugong.
941. Do the residents of Nerriga come to Nowra? Yes.
942. I suppose they bring produce? Yes.
943. We can regard Nowra as the centre of a trading radius of 20 miles? Quite so.
944. Is there any bacon industry here? Yes. There is one very large establishment at Brundy—another at Pyree.
945. Any butter factories? Yes; a great number. One at Jenniandie, one at Worrigee, one at Cambewarra. There is a cheese factory also at Cambewarra.
946. Then these industries are showing signs of progress? They are all full of vitality.
947. Are there any other indications that industries of a similar character are likely to start? I think that the railway would encourage fruit-growing and fruit-preserving.
948. Was there not a canning industry at Jervis Bay at one time? No. I do not think much has been done in canning, because it is too far from a market.
949. I understood you to say that, if a railway were constructed, you would be certain to get your light goods by rail—but what about the heavy goods? It would not pay to get the heavy goods by rail if there is a great difference in the price.
950. Suppose a rise took place in flour, would it not be to your advantage to get it up speedily by rail, instead of having it sent by ships that might be weather-bound? They are never weather-bound on this coast. We can leave Sydney on Monday night and get here on Tuesday morning.
951. Can you always reckon on entering the haven? Certainly.
952. Do the steamers face the storms? It is very seldom that the storms are sufficient to prevent steamers from coming in. It is a very safe entrance.
- 953.

953. How long does it take to travel from Sydney to Nowra? Ten hours.
954. Including passage up the river? No; that would make it about twelve hours. You would come by rail in about six hours.
955. I suppose there would always be a certain amount of competition with the railways carried on by the shipping? I have no doubt of it.
- 956-7. Making due allowance for that competition, do you think that the railway would pay the working expenses, and the interest on the cost of its construction? I think so.
958. What would it cost you to send your goods over to the Bomederry site of the station from Nowra? About 2s. 6d. per ton.
959. Then that 2s. 6d. per ton would have to be added to the railway freight? Yes.
960. And the result would be, that the railway freight and cartage would make the charge so high that you would prefer to get your goods by water? Certainly.
961. Would it be to the interests of the community to extend the line from Bomederry to the bridge and save half the cost of cartage? That would depend on the length of time that would elapse before the line was continued to Jervis Bay.
962. Suppose we assume that seven years may elapse before the line would be extended to Jervis Bay ought we to incur an expenditure of £3,000 in carrying out that extension? I think so, most decidedly.
963. You are favourable to the construction of the extension? Yes.
964. *Chairman.*] You quite approve of the proposed extension to the bridge as a temporary expedient, pending the extension of the railway to Jervis Bay? Certainly.
965. Would there be a large and immediate goods and passenger traffic on the completion of the railway to Nowra? I think so.
966. Therefore it would not be necessary to wait for the making of the railway to create a traffic that would cover the working expenses? I do not think it would. I think that the traffic is awaiting the railway now, and that it would be increased materially day by day.
967. Have you examined the route of the line? I have not.
968. You have no suggestion to make as to any alteration or deviation? No.

Mr.  
J. Macarthur.  
28 Jan., 1890.

Frederick Huleat Galbraith, Esq., Clerk of Petty Sessions, &c., sworn, and examined:—

969. *Chairman.*] What position do you occupy? I am Crown lands agent, Clerk of Petty Sessions, and Warden's Clerk, and Mining Registrar.
970. How long have you occupied that position? Twelve months.
971. How long have you been in this district? Eight months. I was appointed on the 1st January, but I did not come till a few months afterwards.
972. Have you any knowledge of the Crown lands in the electorate? Yes.
973. Will you state how much unalienated land there is in the district? About 270,000 acres.
974. Where is it situated? Principally on the south side of the Shoalhaven River.
975. Give, approximately, the acreage and the position of the land? It is within this district.
976. What distance from Nowra? I think the district extends about 15 miles south of Nowra.
977. The whole of the land to which you have referred is within 15 miles of Nowra? Yes.
978. Is the whole of that available for settlement? Yes.
979. Is it suitable? I do not know.
980. Is any portion of it reserved? Yes, there are two large reserves. The whole parish of Jerriwanglo is reserved.
981. Comprising how many acres? I think about 22,000 acres.
982. For what purpose was it reserved? For timber.
983. What other large reserve is there? I should have to look at the map to refresh my memory before I could tell you. There are about 50,000 acres of land reserved.
984. And the rest is open for selection? Yes.
985. What area has been taken up by the selectors in the district? I could not say, but I could ascertain.

F. H.  
Galbraith,  
Esq.  
28 Jan., 1890.

John Maclean, Esq., journalist, sworn, and examined:—

986. *Mr. O'Sullivan.*] What are you? Journalist.
987. Have you any other business than that of journalist? No other fixed business.
988. I suppose that you have become well acquainted with Nowra and the surrounding districts? Yes.
989. I presume that you keenly watch the progress of the district? Yes.
990. Can you state what progress has been made here during the last ten years? The population has increased in that time from about 7,000 to 11,250, on the 30th March, 1889, according to the Statistical Register.
991. In what callings of life has this been apparent? In grazing and agriculture chiefly.
992. Can you state what description of agriculture is carried on here? The growing of maize, potatoes, and fruit in a small way, but chiefly the cultivation of rye grass for dairy purposes and the development of the natural grasses of the district.
993. Is the land in this district suitable for cereals? Cereals were largely grown here until 1867, but rust interfered, and since then the growth of cereals has not been successful. I refer now to wheat and the cultivation of oats for making hay. The rankness of the crop often induces rust, and the soil does not produce as good hay as poorer land would.
994. Has there been much grazing carried on here? There are 225,000 acres under occupation, chiefly for grazing purposes.
995. Sheep or cattle? Dairying and fattening—mostly for dairying.
996. You are Secretary of the Railway League? Yes.
997. Have you prepared any statistics? I have.
998. Will you read them? The number of holdings under 1 acre was 1,232. The area cultivated in grasses, &c., in the Shoalhaven district is 66,646 acres; the area enclosed in the Shoalhaven electorate is

J. Maclean,  
Esq.  
28 Jan., 1890.

J. Maclean, Esq.  
28 Jan., 1890.

223,573 acres; the area unenclosed; 35,227 acres; the total area of holdings in the Shoalhaven electorate being 258,799 acres. The Murrumbidgee is the only district in the Colony that beats this electorate for the area of land under cultivation, and for the number of holdings within the same area. The total number of freeholders in the Shoalhaven district is 1,232; the number of conditional purchase applications received in 1886 was 133—taking up an area of 12,930 acres. There was no selection in the two adjoining districts for that period, the land having all been taken up. I have also the statistics of the revenue of several municipalities in the district up to 1886. The estimated value of ratable property in Terrara is £110,000. The estimated value upon which the rate is struck is £2,238; the annual income from the rates, £224 16s. 1d. The estimated capital value of the ratable property of the municipality of Numba is £46,000, the rate being struck on a value of £4,497. I may add here that the valuers are usually tenants in that part of the country, and that we generally regard that estate as more valuable than the rates show it to be. The annual revenue from rates in the municipality of Numba is £220. The area of land in the Shoalhaven district is 625,000 acres—that is the land under occupation—the area of Crown lands still unalienated is estimated at 400,000 acres. This is land southward, but within the district of Shoalhaven.

999. How much of that is mountainous country? It is all undulating country.

1000. This is within the electorate? Within the electorate, and would, I estimate, make traffic for the line.

1001. Can you tell us what has been the increase in the number of electors in the electorate during the last five years? It has gone up some 800 during the last ten years.

1002. Have you any particulars with regard to mining? Yes. There are about fifty leases in existence at Yalwal—the areas varying from 3 to 12 acres.

1003. How much do you think is expended in wages weekly there? At the present time between £300 and £400 a month—the wages are paid monthly. There is one mine alone the expenditure in connection with which is over £200 a month.

1004. Have you any further data to give? The amount of gold won since 1882 has been about £75,000 worth. That quantity has been got chiefly from four leases.

1005. What are their names? The Homeward Bound, about £36,000; the Eclipse, £13,000; the Pioneer, £12,000; the Pinnacle, £16,000; and smaller sums from the Golden Crown, the Caledonian, and a number of new claims in process of development. There are four crushing batteries either erected or in course of erection, which I estimate to be worth £10,000.

1006. Have not some of these claims been taken over by Victorian syndicates lately? Yes, the Homeward Bound has been purchased by a Victorian syndicate.

1007. Are they giving indications of an intention to expend capital in the development of these mines? They have spent about £5,000 in the purchase of machinery which is now in course of erection. They purchased this property, and the capital value of it now is registered at £120,000. The shares are selling at 37s. 6d. and £2. I should like to say a word about the unalienated Crown lands within a radius of 15 miles of Nowra. I have been at the Baulkham Hills, Blacktown, Lane Cove, and other fruit growing centres, and judging from the geological character of the soil at those places, and comparing it with the unalienated lands at Shoalhaven, I say that if we had the same class of people here, and the same facilities that they have in those places, the land now unalienated would be worth on an average £5 an acre. Hudson Brothers have been purchasing blocks of Crown land, 20 miles west of Parramatta, at £12 an acre, and selling it at from £40 to £50 an acre, but there they have the advantage of railway accommodation. Here our bar-bound rivers and high freights are sending the fruit growers out of the district. There is a witness here who can tell you, from practical experiment, what the lands in this district will produce. I have had people visiting at my place from Lane Cove, who said:—"This is the outlet for our sons." There is nearly £1,000 worth of fruit consumed annually at Nowra, and it all comes from Sydney and California—apples are sold at Nowra from 1s. 6d. to 2s. 6d. per dozen. As regards the climate, I have kept a record here for the Government Astronomer, and taking the average of the main station, 20 miles south, the rainfall for twenty years has been 51 inches a year. Frosts are rare in this district, and we may be said to have no winter. The highest average in summer is 80 degrees in the shade, and in the winter it is a rare thing for the thermometer to go below 37°. I have only twice recorded the fall of the thermometer below 37° in twenty-five years. The Government Astronomer classes the climate of this place with that of Naples in his comparative geography. I conclude that, with the facilities the proposed railway would afford, all the unalienated land in the district would come into occupation, and that it ought all to be measured and sold as special areas. I would like to say a word about the proposed extension. I consider it a distinct mistake to stop on the north side of the river. Mr. O'Sullivan touched the point in examining Mr. Macarthur, when it was stated that 2s. 6d. should be added to the freights if the station is placed at the Bomederry township. Whether you carried a ton or a cwt., the charge would be increased by 2s. 6d. The steamers will be much nearer to Nowra, and I say it will be a decided mistake to make the terminus at Bomederry township.

1008. Are all the mountain lands good for grazing? All the mountain lands north of us are, and some west of us. All the mountain lands on the north of the river are occupied for grazing purposes.

1009. Who prepared the statistics which you have supplied? They were furnished by Mr. Coghlan, the Government Statistician, and aggregated by myself from numerous returns obtained by the courtesy of the member for the district and Mr. Fuller, M.P. for Kiama.

1010. Then you have taken steps to verify the figures? I have in many cases found them to be understated. The tenants are in a constant state of terror, lest their rent or taxes should be increased, so they are inclined to understate the facts.

1011. Of course you know that some Progress Committees have a tendency to give a roseate colour to their statements when they want a railway? I do not know that myself.

1012. You have taken every precaution to supply an accurate statement of the resources of the district? Yes; I wish to say something of the estimate of the cost of working the line, about £18,000. I have compared the Kiama electorate and its imports and exports with the Shoalhaven electorate. The receipts of the Kiama Station went up to something like £10,000 last year for passengers and goods. This should give something like £18,000 for the two places without calculating the increase sure to follow on the sale and occupation of the vacant lands. I forgot to mention that there are 8,000 acres of land taken up for coal-mining 7 miles south-west of Nowra, and the diamond drill is to be put into it. It is expected to cut this coal at a point within 8 miles of Jervis Bay.

1013. *Mr. Hurley.*] You made some reference to the question of the erection of the station on the other side of the river;—have you not at various times written to the *Sydney Morning Herald* and to the *Daily Telegraph*, in reference to the vexed question of the site for the station? I have.

J. Maclean,  
Esq.  
28 Jan., 1890.

1014. On one occasion you wrote on the subject as to whether the Crown had any morality in its transactions in connection with this matter? Yes; as regards the logical outcome of that particular transaction.

1015. Am I right in saying that you stated it to be a repetition of the policy of having the railway terminus at Redfern and stopping the railway 2 miles short of St. Leonards? Yes; and I think so.

1016. Can you say if the railway were brought across the river, how far the station would be from the places of business? I cannot say where it is to be.

1017. Do you know where the station would be if the bridge were constructed? Mr. Wright has just shown me the spot on a tracing in Court.

1018. What distance would that be from the centre of the town? It would be about 30 chains from the centre.

1019. What distance would the station be on the other side from the wharfs? It would be about 300 yards.

1020. And practically, you would have further to cart your goods on this side, than on the other? You said "from the wharfs," but they are nearly half a mile from the town. The proposed station, if constructed south of the river, would be within 30 chains of the population, and would have 28 chains of advantage over the wharfs in distance from Nowra.

1021. If the railway were on this side of the river would you not have to cart your goods 30 chains or more? Yes, but the point that was formerly shown by survey would be about 15 chains nearer the town.

1022. Looking at the proposal to in future extend the railway to Jervis Bay, do you still think that the railway ought at present to be brought nearer to the town? It would be a choice of evils to adopt either proposed terminus north of the river. We should afford the best possible facilities to the public.

1023. You have spoken strongly about this site on the other side of the river? Yes, on these grounds: that it looks to me like a breach of faith for the Crown to come here and sell land, put up Court-houses, and provide the essentials of civilization, then for another Department of the Government, ignoring what has been done, to put a railway station on private land away from the town to foster a private-estate town.

1024. Did the Government, in selling these lands, sell them with the condition that a railway should be constructed through them? They sold them as town lands and railways are important factors in the establishment of towns.

1025. Can you show that the Government have acted in a way that can lay them open to a charge of repudiation? I say there is an act of repudiation implied in making the railway terminus where it will offer temptations to land syndicates. Government towns have been ruined in this way.

1026. Is not the antagonism of the people here to the station being placed at the Bomederry township owing to the fear of another town being erected on private property at Bomederry? There is no antagonism.

1027. Have you not written to the press upholding this town as against Bomederry? Yes. It is an act of repudiation, after putting people on the land here and setting up one set of Government institutions in this town to use public money to erect the terminus of a railway so as to start a private-estate town elsewhere to the disadvantage of the Government town.

1028. Was the deviation of the line from Bomederry to the Bomederry bridge advocated by you in any way or thought of by you for years? Not in any way.

1029. Do you think it a wise thing for the Government to make that deviation at a cost of £3,000 or £4,000, seeing that they have in view the probable construction of a bridge and the extension of the railway to Jervis Bay? I regard it as a choice of evils, and I think it is the better of the two. The line ought to cross the river without a temporary terminus remaining there at all.

1030. You know that the proposed site of the terminus is liable to floods? I think the plan suggested by the engineer would get over that difficulty.

1031. *Chairman.*] Are you satisfied that if the railway [were constructed it would become a profitable line? I have no doubt of it.

1032. Are you favourable to the route as shown upon the plans? On the whole I think it is the least expensive route, and as far as its course in this electorate is concerned it is distinctly the best that could be adopted.

1033. You do not suggest any alteration? I do not. I have a map which illustrates the opinion of the Progress Committee on the subject. It shows that the line touches the sea at Coal Cliff, and as it progresses southerly the coast range recedes, leaving a wider area of arable land between it and the sea.

1034. *Mr. Hurley.*] Can you give me any idea as to the difference between the distance to the proposed railway on this side of the river and the distance of the proposed railway on the other side of the river;—you know where the station on either side is to be? Mr. Wright, the engineer, has pointed them out on the north and south sides. One is on the main avenue of traffic.

1035. What is the difference in the distance to the one and the other from the business centre of the town? There are 28 chains in favour of the one on this side of the river.

1036. Do you think the little inconvenience that you will suffer in the town through the difference in the distances would warrant the Government in constructing a bridge for that mile of railway at a cost of £70,000? I think the extra goods freights would meet the annual cost of the bridge.

1037. Therefore, you maintain that the Government are warranted in spending money in making that bridge and lessening the inconvenience that you would have by having a station on the north side of the river? I do not say so. I say that the bridge should be made as part of the line to Jervis Bay. In advocating the bridge I advocate it as part of the original plan of the promoters of the line to go to Jervis Bay, and I say that to stop short at this stage will be to lose a large amount of traffic, which will go to the steamers, whose wharves will be nearer the town.

1038. I put a question which you did not answer; I want to know whether the Government held out any inducement for the purchase of land on this side of the river that caused you to make the statement that the Lands Department had caused a town to be built up on this side of the river, and that the Railway Committee were endeavouring to undo what had been done, questioning the morality of the action of the Government? By building public buildings. Although they did not state it in the deeds of grant, they have stated it by implication, that this is a central site for a Government town; but another department of the same Government, from some cause, is trying to create another important avenue of traffic, and draw the traffic away from this place. They do, in fact, repudiate the intention previously formed.

1039.

J. Maclean,  
Esq.  
28 Jan., 1890.

1039. Can you tell me where the repudiation comes in in any form in connection with a railway and the selling of land by the Commissioner for Lands? It comes in this way: When the terminus of a line is made on freehold land, away from the Crown land which had been sold, and when it creates a traffic in another place, the effect of which will be to deteriorate the value of the land in the town. I can show what the effect has been. There was a meeting, presided over by the Mayor, in reference to this matter, at which a Committee was appointed to go to the Minister for Works, not to ask him to construct a line, but to submit the question to the Works Committee as to whether the line should come into Nowra or not.

1040. Do you maintain that the erection of a station at Bomederry will depreciate the value of the land at Nowra? It will distinctly do so. I have not the slightest hesitation in saying so.

1041. Upon what justification do you make that statement? From facts that have come to light since the thing was proposed. I could call several land-holders who have called at my office and said, "Do you think that it is now worth my while investing money?" and they have refused to invest their money in Nowra on account of the proposal to put the station at Bomederry.

1042. You can pay the interest on the cost of the construction on the proposed bridge into the town of Nowra seeing that you will have such a small distance to carry your goods, and that the freight charged will be so low? If they come over the present bridge. Another department has guaranteed that a railway can cross it.

1043. Do you know that it would carry a railway? I know that a load equal to the weight of a locomotive was sent over it, and the deflection was something like  $\frac{1}{8}$  of an inch in the longest span. I wish to point out that I do not say that any Government intentionally repudiated their obligations in regard to this town. I only say that that is the effect of the course which it is proposed to take.

1044. Have you not written to the *S. M. Herald* and the *Daily Telegraph* making charges of repudiation against the Government? Nothing of the kind. I said that in effect it was repudiation, but without that intention. I also wish to say that there was a distinct protest from the people of the town against the terminus being at Bomederry, and if the town were polled to-morrow only a few would say that it would injure the interests of Nowra if the railway came into it. Some think that they would be injured if the railway came into the town, and passed beyond it, and those people have always been in favour of its staying at the other side of the river.

1045. *Mr. O'Sullivan.*] How would this depreciation of property take place? Simply because if the terminus was there anyone coming from Sydney would naturally stay at an hotel near the railway instead of going to one a mile from it. If you could get all that was necessary there you would not come here, and this illustration applies to all the traffic coming at present from north of the river to Nowra.

1046. The difficulty then is the establishment of a rival town and the depreciation of the property in Nowra? It is the dread of the terminus staying there many years. The department have set up £100,000 barrier. Of course they are not asked to speak on oath, but we are prepared to prove everything on oath. The terminus may remain at Bomederry for twenty years.

1047. You said that if the bridge was constructed and the railway were brought into Nowra it would pay the interest on the cost of construction? What we may be charged for the extra distance.

1048. Do you mean the freight for the extra  $\frac{3}{4}$  of a mile, or do you mean that by bringing the railway into the town it would get a large amount of the traffic that goes by the shipping? That is what I mean. Mr. Wright's arrangement has improved the matter, but by having the terminus at Bomederry the rates would have been so prohibitory that the steamers would have had the best of the competition, except with regard to the passenger traffic.

1049. *Chairman.*] Then your evidence is that by the extension of the line as proposed by the engineer to Bomederry bridge the engineer has neutralised the injury that would have been done by putting the station at Bomederry township? Yes. If the line were brought into Nowra I do not say that Nowra traffic alone would pay the cost of the bridge, but the Crown lands which would be opened up for sale would pay it, and the extra traffic therefrom would help to pay it. The branch which it is proposed to make has largely neutralised the injury that might be done by having the line end at the other side of the river, but that was not decided upon until a deputation went to the Minister from a public meeting. It was after that that we ascertained that Mr. Wright had proposed to make a branch line which would largely neutralise the ill effects of having this station so far away from the town.

Mr. James Booth, farmer, sworn, and examined:—

Mr.  
J. Booth.  
28 Jan., 1890.

1050. *Mr. Hurley.*] What are you? A farmer.

1051. Have you been long in the district? I came in 1855.

1052. What is your profession? I have been a teacher by profession, but I retired from the Public Service two or three years ago.

1053. Since then what have you done? I have been farming.

1054. Have you gone in for fruit-growing? On a limited scale—merely to provide for my own family, there being no sale for fruit. I confine myself to 2 or 3 acres.

1055. Do you think the soil is adapted for fruit-growing? Eminently so.

1056. And if you had the means of getting your fruit to market would it be profitable? Yes.

1057. What do the farmers grow in this district? Maize, wheat, oats, barley, and other crops.

1058. How many bushels of wheat do you get per acre? From 15 to 20 bushels.

1059. How many bushels of maize? From 35 to 60 bushels an acre.

1060. Is there a large area of land suitable for maize in the district? Not so much for maize as for fruit. The country is undulating, similar to the Pennant Hills and Ryde; there is not much flat ground.

1061. Does the district suffer from drought? Not very much.

1062. Is there always plenty of feed for the stock? Yes.

1063. Have you ever to import feed? I have never imported feed.

1064. Have you had any experience in regard to ensilage? None.

1065. Have you done any exporting from this district? Occasionally, by water.

1066. What have you to pay for outward freight? About 6d. a bushel.

1067. What would you have to pay for the same freight by train? I do not know.

1068. Suppose you had to pay twice the amount, would you take advantage of the train as against the steamer? I do not think I should, but if I had railway accommodation I would give my whole attention to fruit-growing.

1069. Have you had experience in water conservation? No; it is not necessary on my property.
1070. Can you give us any idea as to the prospects of the district? With a market available, I think it would be one of the finest districts in the colony for fruit-growing, particularly for apples, pears, plums, and oranges. I have not seen a district equal to the Tomerong district for the production of oranges. I have never seen the slightest sign of blight on it.
1071. Have you any knowledge of the carrying capacity of the land? The fruit trees bear amazingly. I may mention that this year I picked nine gin-cases of plums from one tree, and they realized in Nowra 10s. a case.
1072. You have no doubt as to the success of fruit-growing in the district if proper facilities are afforded? None whatever.
1073. With regard to cattle? It would require 4 acres to each beast out our way all the year round.
1074. About Shoalhaven the carrying capacity would be about 1 acre to a cow? Yes.
1075. Therefore, you are living on inferior land? Yes.
1076. Have you formed any opinion as to whether a payable return would be obtained if a railway were made to this place? I have not given the matter much thought.
1077. Have you any knowledge of the mineral resources of the district? No.
1078. Is there any other local industry that you could give us information about? No. The land is very suitable for grazing purposes.
1079. *Mr. O'Sullivan.*] Where is your farm? At Wondandian, near Jervis Bay.
1080. How many miles from Nowra? About 20 miles, and 10 or 12 miles from Jervis Bay.
1081. Has any attempt been made to cultivate the vine in your district? Only in a few isolated cases.
1082. Do you recollect whether a canning factory ever existed at Jervis Bay? I do not remember it.
1083. Do you say that you can produce all English fruits side by side with the orange? We can produce pears, apples, peaches, nectarines, plums, and oranges; gooseberries, which require a colder climate, will not grow here.
1084. I understand that strawberries and raspberries have been cultivated in the district? Yes.
1085. Would the extension of the railway to Jervis Bay lead to the expansion of the fruit industry? Most decidedly.
1086. Is the whole of that 2,000-acre reserve down there fit for fruit-growing? I do not say the whole of it, but a large portion of it is.
1087. I presume that if the railway were made down there, and the reserve were thrown open for settlement, a large portion of it would be made into orchards? I think so.

Mr.  
J. Booth.  
28 Jan., 1890.

Mr. Charles Gordon, Assistant Inspector of Fisheries, sworn, and examined:—

1088. *Mr. O'Sullivan.*] What position do you hold? Assistant Inspector of Fisheries under the Fisheries Board.
1089. What district do you superintend? The Shoalhaven district.
1090. Is the fishing industry largely carried on on this coast? It is in winter when they can send the fish to Sydney, but not in summer-time.
1091. Which waters do the men fish in? Shoalhaven River, often Jervis Bay, and Sussex Inlet.
1092. What fish do they catch? Whiting, mullet, garfish, bream, and schnapper.
1093. How are those fish taken to the Sydney market? The fishermen have to put them on board the steamers at Shoalhaven.
1094. Is it a long journey? You can make the journey from the Lake Berry-werry to Nowra 14 miles, or you can make it 25 miles.
1095. Are the fish liable to injury whilst being carried in the casks? Yes.
1096. How many men are there engaged in fishing there in the best seasons? Last season a good many were engaged in catching schnapper in the bay; I think twenty-five or thirty men.
1097. How many are engaged on the fishing-grounds in this district? About fifty.
1098. Are the Sydney men the men who fish here? Some Sydney fishermen come down here in winter time.
1099. Then they carry on a regular trade in Sydney? Yes.
1100. Do you think that if a railway were brought to Nowra it would materially aid this industry? I certainly do.
1101. Is it likely that if a railway were taken down to Jervis Bay more men would enter upon the fishing pursuit? I think a good many more men would come down here in winter time. They should come down here in winter, and the Sydney water should be kept open in summer.
1102. Would it be possible to carry on this business more successfully if you had better communication? Yes, by the use of a cooling-chamber. I suppose that that is the idea in connection with the railway.
1103. How many tons of fish a year are sent out of this district? The fishing is only carried on for about three months, and about 5,000 baskets are sent away in that time.
1104. And how many baskets make a ton? The baskets weigh 70lb. or 80lb.—probably about thirty baskets to the ton on the average.
1105. Then 5,000 baskets at thirty per ton would mean about 160 tons a year? Yes; and all that is sent away during three or four months at the outside.
1106. And the trade could be very considerably increased? It could be.
1107. We might look to the fishing industry as an important factor in connection with the traffic of the railway? Yes.
1108. Is there any oyster-fishing about your way? Yes, there is a great deal of it; but this year the spat has settled in a good many other waters besides here, and they are reserving the oysters in this district.
1109. How many oyster leases have you under your jurisdiction? I think about 17,000 yards altogether.
1110. How many tons of oysters are sent from here? This year only 660 bags went away; last year there were about 1,200.
1111. I suppose the average yield would be about 1,000 bags a year? Yes.
1112. Do the oysters go by steamer? Yes.
1113. Where are they obtained? On the Shoalhaven River, Berry-werry and Jervis Bay, and Crook-haven,

Mr.  
C. Gordon.  
28 Jan., 1890.

- Mr. C. Gordon.  
28 Jan., 1890.
1114. Will the railway get the oysters if they are sent from places south of Shoalhaven? The oysters will keep better than fish.
1115. Do you think that the oyster trade will be diverted to the railway? I could not say for certain.
1116. Is there no oyster-culture round St. George's Basin and Jervis Bay? Yes.
1117. The railway would get that portion, would it not? Yes; I think so. It would improve that place.
1118. You think that the trade would be considerably affected by the freight on the railway? I think so.

Mr. Jacob Ellmoss, fisherman, sworn, and examined :—

- Mr. J. Ellmoss.  
28 Jan., 1890.
1119. *Mr. Hurley.*] What are you? A fisherman.
1120. Are you working on your own account? Yes.
1121. Have you been long in the trade? Yes.
1122. Had you any experience before you came to the country? Only a little.
1123. Have you had any experience in the fishing-trade in any other part of the country besides Shoalhaven? Yes; I have also been at Jervis Bay.
1124. Do you look upon Shoalhaven as a good place for your labour? Yes, if I can get the fish away.
1125. The difficulty that you have is to get your fish to market? Yes.
1126. If you had facilities for reaching the market, could you supply large quantities of fish? Yes.
1127. What kind? Whiting, bream, black-fish, and schnapper.
1128. Could you double your supply? Yes; I could treble it.
1129. So you think that the railway would lead to the further development of your industry? Certainly.
1130. Are you engaged in oyster-fishing? No.
1131. Do you employ many men? Generally three men.
1132. And there is an abundance of fish? Yes.
1133. Do you produce a return showing what fish you have sent away? Yes; during four months of the season ending May, 1888, I sent away 207 baskets from St. George's Basin.
1134. What would the average be? From 80 to 90 lb. per basket.
1135. How many baskets did you send away in June? 186 baskets; in July, 154 baskets; in August, 173 baskets. That was all for the season of 1888. In 1889 I sent away, during part of April, 68 baskets, and of these 60 baskets were spoiled on account of not getting to Sydney in time to be sold.
1136. Could you tell us how many fish you lost altogether through their not getting to market in time? In 1889 I sent away 585 baskets of fish, and out of that number 148 baskets were spoiled on account of delay in reaching the market.
1137. But if you had had railway communication that would not have happened? Certainly not.
1138. And the market would have been supplied? Yes. During part of that time I could not send any fish at all, the roads being too bad.
1139. Have you endeavoured to start an industry for drying and preserving fish? I have tried it, but could not make it pay.
1140. Was that in consequence of your want of knowledge? I do not think Sydney people care about salt or dried fish.
1141. You think the fish industry would be successful at Shoalhaven if you only had reliable communication with the metropolis? Yes. At present I send fish to the metropolis on two days in the week, but if we had a railway I would send it away on six days in the week.
1142. *Mr. O'Sullivan.*] Did you ever attempt to carry out well-boat fishing? Yes; but I have done nothing at that since I lost my brother at sea.
1143. How much do you think you have lost in one year through steamers not being able to catch the market? About £75 last year; the year before was not so bad.
1144. I suppose other fishermen are subject to similar losses? Yes.
1145. Do you belong to Sydney or the district? I come from St. George's Basin.
1146. Are there any other fishermen in that district? Yes; the greatest part of them are there.
1147. Where do you reside? At Sussex Inlet.
1148. Have you a garden there? I have a selection there.
1149. And do you cultivate it? Yes, a little.

Cyril Blacket, Esq., architect, sworn, and examined :—

- C. Blacket, Esq.  
28 Jan., 1890.
1150. *Chairman.*] What are you? An architect by profession. I have been speculating in land a little.
1151. Where do you reside? At St. George's Basin, on a selection.
1152. Of how many acres? 640 acres.
1153. How long have you been there? Five years.
1154. What portion have you cleared? I have about 350 acres more or less cleared.
1155. How many acres under cultivation? Not more than 20 acres; it is heavily-timbered land; it takes a long time to get the timber off.
1156. What are you engaged in? I took the land up to fell timber. What I mostly do is to rear cattle and horses.
1157. Did you hear the evidence of Mr. Booth? I did.
1158. Do you confirm his evidence as to the possibilities of the fruit industry? Yes. There is one thing which I could add to his statement. In one instance when oranges were selling in Sydney at 4d. per doz. I bought a man's crop down here at 1d. per doz.
1159. Do you think the extension of the railway to Jervis Bay would lead to a large increase in settlement? I am sure of it.
1160. What occupations could settlers follow? The fishing industry is a very good-paying occupation. It has grown up in the last few years, and is increasing rapidly. If there were better facilities for getting fish to Sydney it would increase more rapidly still. Very frequently they can't get their fish away, and they only work two days a week, and yet many of the men are in comfortable circumstances. They only fish four months in the year. The St. George's Basin teams with fish. I have known 7 tons of fish to go from one wharf to Sydney in a week.

1161. Do you wish to make any further statement? I should like to make a remark as to the extension of the railway to Jervis Bay. At present there is an immense area of Crown land reserved for various purposes with water frontages. Some are reserved as timber reserves, some for water, and others for other reasons. There are many reserves near Jervis Bay and it seems to me that if the railway were extended to Jervis Bay the value of these lands would be greatly increased. If the improved value of the land would not pay the whole cost of the construction of the railway it would at all events pay a very large portion of it. In making this statement I am not speaking at random. Some months ago a company with which I am connected bought land adjoining the Government township, Jervis Bay, at £4 10s. per acre, and afterwards sold it for £64 per acre. In the township of Huskisson the Government holds 47½ acres. A private individual, some years ago, bought some Government land at auction and he is now asking, with every probability of getting it, £300 per acre for it. If the railway passes within a reasonable distance of that 47½ acres at Huskisson it will probably realise £300 per acre.

C. Blackett,  
Esq.  
28 Jan., 1890.

1162. You are of opinion that the extension of the railway to Jervis Bay would largely increase the value of the unalienated Crown lands? Yes, I say so from practical experience.

1163. And the increased value of the land would contribute largely towards the cost of construction of the line? Yes.

1164. *Mr. O'Sullivan.*] How far is St. George's Basin from Jervis Bay? One part is about a mile and a half from Jervis Bay, but the wharf that we usually go to would be about 4 miles.

1165. Is the land round the Basin superior to that of Jervis Bay? For the most part the land close about the lake is good for agricultural purposes.

1166. Are there many settlers round there? Yes; during the last four or five years many have settled there, and with the exception of huge reserves, there is very little land left for selection. A good deal of the land has been taken up for summer residences under the non-residential clauses of the Land Act.

1167. Are those settlers round St. George's Basin improving and cultivating? Yes, very much. Within a 5 miles radius improvements must have been effected to the value of between £4,000 and £5,000.

1168. Therefore there is every evidence that it is a growing settlement? Yes.

1169. Do you frequent the shores of Jervis Bay? Yes.

1170. Is there any population at Huskisson? There are a few, but it is not such a thriving place as it was a little while ago. Ship-building is carried on there, but that industry has been suffering from depression. It received a check from which it has not recovered.

1171. What caused the check? It was the same thing that effected the whole world—iron ship-building came into fashion. There was once a fish canning establishment at Huskisson.

1172. Has it ceased operations? Yes. Some thirty years ago there was a good deal of wheat produced down there, but in consequence of the improved facilities given to the northern rivers in the shape of better steamers, and railway communication, the competition was carried on at a disadvantage to the southern districts, and the growers in that part of the colony were run out of the market. A good deal of the lands originally under wheat cultivation is now used for rearing young cattle.

1173. Is there much stock-raising done there? Yes. Young cattle are left there till they are two or three years old and then they are brought to Nowra and sold.

1174. Do you know any persons who hold coal-mining land down there? Yes. I think the whole of the bottom of Jervis Bay is leased for coal, and the other day an application was made for the whole of the bottom of St. George's Basin.

1175. What do you mean by the bottom? The right to go under water and get the coal.

1176. No coal-mining has been carried on at Jervis Bay has it? A good many bores have been put down but the coal has been, so far, at too great a depth to pay.

Frederick Huleat Galbraith, Esq., Clerk of Petty Sessions, &c., sworn, and further examined:—

1177. *Chairman.*] Do you produce a return showing the conditional purchases taken up in this district to the 31st December, 1884? Yes; the area is 64,541 acres.

1178. Those are complete returns? Yes. The area taken up under the Act of 1884, since the 1st of January, 1885, is 14,739 acres; mineral leases, from 1st January, 1885, 15,253 acres; gold leases, 418 acres.

1179. Can you say approximately the number of conditional purchases and the applications for mineral conditional purchases? That would be rather difficult to get at.

1180. Can you state, from personal knowledge, whether the large area you have just mentioned as having been taken up under conditional purchase is in the hands of few or a great many persons? It is in the hands of a great many.

1181. Can you locate them? The greater number of them are in the parishes of Cambewarra, Bugong, Nowra, and Broughton, and the rest are distributed through the other parishes. Many are in this parish (Nowra).

1182. Can you say whether they would be benefited by the construction of the proposed railway from Kiama to Shoalhaven? I should say that they would be.

1183. They would be afforded facilities for conveying their produce to market? Yes.

1184. Can you tell me what have been the returns of the Land Office in Nowra for the last ten years? No; but at the end of the year I made up a rough return for last year.

1185. Could you not state what the returns were from 1880? I daresay I can make it out.

1186. *Mr. O'Sullivan.*] What size holdings do the conditional purchasers apply for? As a rule, from 40 acres.

1187. Up to what area? 640 acres. There are a few 640-acre selections.

1188. Have you had many forfeited selections in this district? Not a great number.

1189. Do you hold the Land Court at Nowra? Yes.

1190. And is there anything like an approach at dummyism in the district? No; I have not heard of a dummy selection.

1191. The land is too good? Yes. It costs too much to improve it.

1192. You think that the selection that goes on is of a *bonâ fide* character? Yes. I have no doubt of that.

1193. Do the returns show that it is progressing? I do not think so.

1194. Then the rate of selection is not increasing? No.

1195. Does that arise from the fact that the land available is decreasing largely? Yes, and from want of rapid communication with the land now open to selection. The land is taken up principally on the north side of the line.

F. H.  
Galbraith,  
Esq.  
28 Jan., 1890.

Mr. Zacchias Bice, retired farmer, sworn, and examined:—

- Mr. Z. Bice. 1196. *Mr. Hurley.*] Have you been long in the district? About fifty-two years.  
 1197. What do you do? I am living on my means at present.  
 28-Jan., 1890. 1198. That you have accumulated in the district? Yes.  
 1199. From farming? From dairy farming.  
 1200. Do you believe that the same facility for acquiring a competency exists for other people who come into the district? I think so.  
 1201. You think that there is a living to be made by very many more if they have energy and a knowledge of their business? Yes; I think the district is capable of sustaining more than double its present population, and if the railway is made very likely the population will be doubled within the next five years, and the quantity of produce will be doubled within that time.  
 1202. Is there sufficient land to give employment to a large number of people? Yes.  
 1203. I think Mr. Morton stated that the number of farmers on the Berry estate might be doubled? Yes; and the same thing might take place throughout the district.  
 1204. Do you think that a railway would be likely to bring about that increased population? I think it is the only thing that would do it.  
 1205. Are the people favourable to the importation of fresh enterprise into this country? I think so. They wish to see the district progress.  
 1206. Have you any knowledge of the Crown lands in the district? Yes.  
 1207. Can you say what they are suitable for? I cannot say from actual experience; but I am given to understand that the whole of the land between here and Jervis Bay is most suitable for fruit-growing.  
 1208. Supposing the land were thrown open, do you think that there are people who are anxious to occupy it? Yes, perhaps at an increased price.  
 1209. What do you mean by an increased price? From 35s. to £2 an acre.  
 1210. What are they asking for the worst lands immediately around the town? Immediately round the town the land is of very great value.  
 1211. Are you acquainted with the land between here and Mr. De Mestre's place? That would bring from £10 to £20 an acre.  
 1212. Is it not similar land? Yes; as you go further away of course the land becomes of less value.  
 1213. I suppose you agree with what has been said by other witnesses as to the probable future of this place in the event of the proposed railway being made? I do.  
 1214. And the dairying and farming industry will benefit by such extension? Yes, to a very great extent.  
 1215. Do you do any trade with the steam-boats? I do not.  
 1216. How do you go to Sydney? By coach and train.  
 1217. Do you know anything about the timber reserves in the district? Yes.  
 1218. Is the timber suitable for all purposes? It is suitable for building purposes. A great deal of timber has been taken away, but there is a great deal left.  
 1219. Do you know anything about the proposed railway route *via* Jamberoo? I have only a general idea of the locality. I believe that that route would save 6 or 7 miles in the distance to Sydney, but it would be a very expensive line to make.  
 1220. At all events you are not prejudiced against the Kiama line in favour of that? No. I should have liked the line to have gone by Jamberoo, because that place is nearer to the metropolis.  
 1221. Have you done any fruit growing in your time? Yes; fruit grows very well in the district.  
 1222. All kinds? Peaches, nectarines, and apricots, but further south apples and plums grow better.  
 1223. Do you find that the agricultural population are decreasing—that young men are not being reared up to agriculture? No, it is not so.  
 1224. Do you think they will avail themselves of the model farms and agricultural college? Yes, they will have to do it.  
 1225. *Mr. O'Sullivan.*] You have been fifty-two years in the district? Yes.  
 1226. I suppose you have had a good chance to observe the progress made by the people of this district as well as the condition of the population? Yes.  
 1227. Has there been a general progress made by the people? Yes;—not so much in the first twenty years that I was here, but during the last twenty years there has been a uniform progress.  
 1228. What was done in the early days? Maize and potato growing. There was very little dairying then.  
 1229. Was the timber industry carried on? Yes; cedar was taken very largely from the district.  
 1230. I suppose that in those days you went up to Sydney by coasting vessels? Yes.  
 1231. When did the farmers turn their attention to dairying? About twenty years ago. It began at Wollongong and Kiama. The industry was in a better position then than it is at the present time; it did not extend so far south until twenty years ago.  
 1232. And they have made more progress and accumulated more wealth than they did before they resorted to dairy-farming? Yes, a great deal. The land is more suitable for grazing than for cultivation.  
 1233. Have you known old settlers in the district to go away for a time, and afterwards return? No; some of our best settlers went to the Richmond River twenty years ago and settled there, and they have done well.  
 1234. You have not noticed that any settlers who left the district afterwards returned? No.  
 1235. *Chairman.*] Do you know how many bushels of maize were sent from the district last year? I do not.  
 1236. Have you examined the route of the proposed railway extension? Yes.  
 1237. Are you satisfied that it is the best route to be obtained? I think it is the best that could have been selected.  
 1238. Have you any alterations to suggest? No, I have not.  
 1239. Would it be better for the southern side of the river to have the railway station close to Bomederry Bridge or at the Bomederry township? The best place would be between the creek and the river.  
 1240. At the site proposed by Mr. Wright? At the one on this side of the creek.  
 1241. Only two sites have been proposed—one at Bomederry, 50 chains from the bridge, and the other near the bridge—which of those do you think would be the best? The one at the bridge, of course.  
 1242. Would that be more convenient to the people of Nowra than the site at Bomederry? It would.

1243. Are you clearly of opinion that unless a railway-bridge is built across the river it will be better that that branch should be made as a temporary expedient? Yes. Mr. Z. Bice.  
 1244. Have you ever seen the water over that route leading from Bomederry? Yes, and you could not have walked across without the water going over your head. 28 Jan., 1890.

Mr. Robert Taylor Thorburn, livery-stable keeper, sworn, and examined:—

1245. *Chairman.*] What is your occupation? I keep livery stables and run mails.  
 1246. You have always resided in the district? I was born in the district.  
 1247. Do you conduct the coaching traffic between Shoalhaven and Kiama? I do.  
 1248. How many coaches do you run? Three up and three down every day except Sunday.  
 1249. Do you let out any vehicles for taking passengers from Shoalhaven to Kiama besides the ordinary coaching traffic? Yes; I keep three or four drivers driving special coaches between Kiama and Shoalhaven and other places. I have forty-two horses engaged in the regular Kiama work, and every day I am without spare horses.  
 1250-1. Have you any objection to state what the gross receipts are between Shoalhaven and Kiama? About £400 a month.  
 1252. Could you state what the coaching traffic was before the opening of the railway to Kiama between Kiama and all the places south of that town? I am prepared to say that there was not more than £20 a month for passenger traffic—that is not including commercial work.  
 1253. And you now receive £400 a month? That is for all the work. Of course the commercial work means carrying samples as well as passengers.  
 1254. *Mr. O'Sullivan.*] Do you run any branch lines? I run a branch line from here to Moss Vale, and a branch line from Berry to Kangaroo Valley.  
 1255. Have other people been running lines? There is one from here to Yalwal.  
 1256. Do you run to Milton? Yes, to Milton and Ulladulla  
 1257. Is there a branch towards Jervis Bay or St. George's Basin? No.  
 1258. Does Moss Vale branch serve Kangaroo Valley and Cambewarra? Yes.  
 1259. These are the only branch lines? Yes. Of course passengers come from where there are no branch lines. They come from Terrara, Numba, and other places, although no coaches are running to those places.

Mr. R. T.  
Thorburn.

28 Jan., 1890.

Mr. Jeremiah Green, retired storekeeper, sworn, and examined:—

1260. *Mr. Hurley.*] What are you? A retired storekeeper.  
 1261. You have sent a great deal of freight between here and Sydney? I have.  
 1262. What charge do you generally have to pay? From £100 to £150 a year.  
 1263. How much per ton? The Illawarra Company charge 10s., but where we felt the high charge most was on produce. Mr.  
J. Green.  
 1264. Did you suffer loss by having to send your produce to Sydney by steamer—did you run great risks? Yes, besides the deterioration of the produce. 28 Jan., 1890.  
 1265. Have any of the steamers by which your goods were carried ever been wrecked? I lost goods once by the wreck of a sailing vessel.  
 1266. I suppose other people in the town were losers, likewise? Yes.  
 1267. Do you have your goods insured? Not as a rule.  
 1268. I suppose you are in favour of the construction of the proposed railway? Yes; it would be a great advantage to the district.  
 1269. Do you think it would tend to develop agriculture here? Yes.  
 1270. You have heard about the fisheries and the oyster industries? Yes; I quite understand what has been said about that.  
 1271. Have you had experience in fruit-growing? Not in fruit-growing.  
 1272. Do you know the value of the land in the district? I know the value of the land in the town.  
 1273. Has the value of the land in the town increased since the proposed railway was spoken of? Very much.  
 1274. You have heard the evidence with regard to the station? Yes.  
 1275. Have you heard where the station would be situated? Yes.  
 1276. You are acquainted with the site at the Bomederry Bridge? I have seen both sites.  
 1277. Looking at those two sites, and the distance the storekeepers and others engaged in trade would have to travel, do you think the country would be justified in spending £70,000 in the construction of the proposed bridge to benefit the people of this district? I do not look upon it as an immediate benefit, but a prospective benefit, anticipating that the railway will have to go further south. The bridge will have to be built. I approve of the bridge site for the station.  
 1278. You know the distance between the Bomederry township and the site of the proposed station near the bridge? Yes.  
 1279. Do you think the public will suffer great inconvenience by having the station at Bomederry? It would entail great loss on the Nowra storekeepers, owing to the distance they would have to travel. The proposed branch would be a great convenience.  
 1280. So the construction of the railway to Bomederry Bridge would be a great advantage? Yes.  
 1281. And the construction of a station at Bomederry would be an inconvenience? It would be almost valueless to the people of Nowra, as the steamers would offer greater facilities.  
 1282. Therefore you would prefer to see no railway at all than for it to stop at Bomederry town, as proposed? No, I would not; but decidedly, if the railway cannot come to the south side of the river, bring it to the bridge.  
 1283. Is it not a fact that the people of this town are afraid of the probability of a new town springing into existence at Bomederry, if a station is made there? I can only speak for myself.  
 1284. Have you not heard them say that? I have heard that rumour, but I attach no importance to it.  
 1285. Has there not been correspondence in the press in which that argument was used? It was in the papers. 1286.

- Mr. J. Green. 1286. Does not the correspondence decry anything like the establishment of a railway-station at Bomederry proper? I think he is anxious to see the terminus at Nowra.
- 28 Jan., 1890. 1287. Have you any dread of another township springing up at the other side of the river? I have no such dread.
1288. Yet you believe that the erection of a station there, and the railway stopping short a mile and a half from your township, would be a serious injury? Yes. It would destroy the advantage of a railway to the district.
1289. Would people use the coaches as before? They would have to go in coaches to the station.
1290. You think that the line ought to be brought into the town? Decidedly.
1291. Have you any special knowledge of the country between here and Jervis Bay? Yes.
1292. What is the character of the country? It is very suitable for fruit-growing. When Mr. Angus Mackay, the lecturer on agriculture, was here he spoke very highly of it.
1293. Are you interested in property between here and Jervis Bay? No.
1294. Do you believe that, in the interests of the general public the line should be brought into Nowra? If possible.
1295. And you believe that it would be a remunerative speculation? I think so. It will tend very much to develope the country.
1296. Have you any knowledge of the minerals of the district? Only from report.
1297. Are you interested in Yalwal mines? No.
1298. Have you been to Yalwal? Yes.
1299. Can you say anything as to the probable permanency of the gold-field? My impression was that it would prove a very permanent field.
1300. *Mr. O'Sullivan.*] Would it be to the advantage of the Government, as well as of the people, to have this railway constructed to Bomederry Bridge? It would, in my opinion.
1301. Why? Because it will secure a larger traffic if it terminates at the bridge. If it terminated at the Bomederry township I think it would lose all the heavy traffic of the district and diminish the passenger traffic. According to my experience, the more convenient a station is, the more it encourages travelling. Strangers are attracted by the convenience of getting into town without having to use coaches.
1302. Do you think that one person would be deterred from going by railway if he had to choose between going to Bomederry and travelling by sea? Yes.
1303. Do you think they would rather go by sea than walk to Bomederry? I think they would.
1304. You think that charge of 2s. 6d. per ton for getting the goods from Bomederry into the town would turn the scale in favour of the sea trade? I think that the cartage and the distance would deter a great many from going by train, and they would go by steamer. If the station is at Bomederry Bridge it will get the traffic.
1305. The cost of bringing the traffic to it would be less, I suppose? Yes.
1306. The storekeepers would have a certain amount of haulage from the wharf to their stores? Yes; but not so much as they would have in going to the station at Bomederry.
1307. What is the charge per ton for hauling from the wharf? They generally do their own hauling.
1308. What is the cost? When I was in business I calculated upon having eight loads a day. But going over the Bomederry Bridge they could not carry more than four a day. To the Bomederry township the number would be considerably less than four loads a day.
1309. Then you think, as a business man, that it would be unwise to have the station at Bomederry, lest the charge of 2s. 6d. for cartage would drive the trade away from the railway? Yes, I am sure it would.
1310. Are you of opinion that the line should be extended to Jervis Bay immediately, and not stop at Nowra? I think that the country towards Jervis Bay requires railway development. If we had a railway to Nowra it would tend to develop the land between here and Jervis Bay.
1311. Are you in favour of the construction of a bridge, with a view to the extension of the line to Jervis Bay? I prefer a bridge across the river, but failing that, the station ought to be at Bomederry Bridge.
1312. Do you advocate the construction of a bridge over the river in order to afford the Nowra people better facilities? I am in favour of a bridge being constructed, with the view of ultimately opening up the country between here and Jervis Bay.

---

Mr. Frederick Skinner, public school teacher, sworn, and examined:—

- Mr. F. Skinner. 1313. *Mr. O'Sullivan.*] What are you? Public School teacher.
- 28 Jan., 1890. 1314. How long have you been in Nowra? Over three years.
1315. How many children had you under your care when you first arrived here? About 180.
1316. How many have you now? About 220.
1317. So there has been a pretty fair increase? Yes. In addition to that there are two other similar schools with an attendance of about thirty.
1318. Are there any other Public Schools near Nowra? Yes.
1319. Where? At Terrara, Pyree, Nowra Hill, Bomederry, and Warrigee.
1320. Which is the nearest of these? The Bomederry school, I think.
1321. Do you know anything about the attendance? Yes. At Pyree there are eighty, at Terrara fifty, at Warrigee I think about thirty, at Cambewarra about eighty, at Bomederry a little over twenty. I am giving the average number of children attending. The full number would be one third as many again.
1322. Those figures are not certain and definite? No; they are the lowest averages.
1323. Are there any private schools in Nowra? Yes, two small ones; one a Roman Catholic school.
1324. How many attend that? Less than twenty, I think, and the number at the other school will be about twenty.
1325. Are there any private boarding schools? No.
1326. Has the attendance of your school fluctuated? It has steadily increased, although those other schools have been opened.
1327. Then the population is steadily increasing? Yes.

---

John

John Maclean, Esq., journalist, sworn, and further examined:—

1328. *Mr. O'Sullivan.*] You indicated this morning that you had some returns from the post office? Yes, but not here. I have not got them for the last few years. J. Maclean,  
Esq.
1329. I understood that they came up to 1887? Yes. 28 Jan., 1890.
1330. Will you read them? Yes. I can give the number of telegrams sent, and the profits of each office. The total annual revenue from the post offices in the Shoalhaven district is £2,460—that is, from the sale of stamps and so forth. Total revenue from telegraphs, £739. I wish to add also to my evidence that the district of Kangaroo Valley sends its produce to the north. The imports and exports from Kangaroo Valley, where there are about 46 square miles of agricultural country, with three large dairy factories and the Osborne Estate, are all carried by steamer to and from Nowra, and if there was a station at Nowra or Berry the traffic would go by rail. I state this because it is said, in Mr. Seccombe's evidence, that we should only get the traffic from Cambewarra.
1331. Can you say how many bushels of maize were sent from the district last year? 144,000 bushels.
1332. How many pounds of butter? We could not get the statistics of that on account of the bulk of the butter going by steamer. It is sent in kegs which vary very much in size. About two-thirds of the butter goes to factories, and this year we shall get exact statements. There are about 17,000 dairy cattle in the district.
1333. *Mr. Hurley.*] The return shows that the annual production of butter is 1,891,267 lb.? Yes, that is given by Mr. Coghlan, but I do not know whether that does not include some of the factories on the borders between the two districts.
1334. The quantity of cheese produced is 58,708 lb.? Yes, I saw that in one of the returns sent to me.
1335. Hams and bacon, 123,319 lb.? At Berry they will have a better knowledge of that than we have here.

Edwin Charles Hewlett, Esq., bank manager, sworn, and examined:—

1336. *Chairman.*] What is your position? Manager of the E.S. and A.C. Bank. E. C. Hewlett,  
Esq.
1337. How long have you been in that position? Ever since the end of 1883. 28 Jan., 1890.
1338. Where were you before that? At Bulli.
1339. Have you been in any other part of the south coast between Kiama and Ulladulla? I have not.
1340. Your first acquaintance with the district was in 1882? No; I was here before that; went away for fourteen months, and returned.
1341. Can you say whether the business of the bank has been progressive since then? It has been.
1342. Has the annual total of the fixed deposits increased or diminished during that time? It has increased.
1343. Has the number of depositors increased or diminished? I believe it has increased.
1344. Can you speak as to the general prosperity of the district? Yes.
1345. Is the district generally prosperous? Yes.
1346. Are the traders financially sound? I think so.
1347. And are the settlers in good positions? Yes; the average settler's position is very good.
1348. And you regard the district as a prosperous district? I do.
1349. Can you make any comparison between this and any other district? Not in a financial way. I should say that Shoalhaven is equal in financial position to any of the south coast districts.
- 1350-1. Have you given any attention to the extension of the proposed railway? Not much.
1352. Do you believe the extension of the railway to Nowra will be the means of largely increasing the trade of the district and promoting settlement? I have not formed an opinion on that.
1353. *Mr. O'Sullivan.*] Would the statement which you have made in regard to your branch apply to the other branch? Generally speaking, it would.
1354. Do you know if any of the selections and farms are mortgaged to the storekeepers? I think very few, if any.
1355. I suppose there are a few mortgages in the district? Certainly. In the usual course of business there must be. I might say, as to the financial position of the people here, that I have never made a bad debt during the time that I have been in the district—over seven years.

Frederic Walter Flatt, bank manager, sworn, and examined:—

1356. *Chairman.*] What is your position? Manager of the Commercial Banking Company of Sydney, Nowra. F. W. Flatt,  
Esq.
1357. How long have you been in that position? Sixteen years last April. 28 Jan., 1890.
1358. Can you give us any information as to the state of the district during the time that you have been here? From a financial point of view I think it has increased at least 300 per cent.
1359. Has the total amount of fixed deposits been increasing? It is four times more than it was when I joined sixteen years ago, and at that time I was the only bank manager between Kiama and Milton, but now we have nine banks. There are three at Berry, three at Nowra, two at Gerringong, and one at Kangaroo Valley.
1360. Although there are now nine banks, the fixed deposits have increased fourfold? Yes.
1361. Have your fixed deposits increased during the last five years? Yes, they have increased at least one-third during the last five years.
1362. Can you say that there is an annual increase in fixed deposits? Yes.
1363. Can you speak as to the financial condition of the people in general? It is very sound.
1364. Have you been as fortunate as Mr. Hewlett;—can you say you have not made a bad debt? I cannot say that, but I have made only two bad debts in sixteen years.
1365. Do you remember when butter factories were first established in the district? Yes.
1366. Has that led to an increase in the prosperity of the people here? It has. They get larger returns, more prompt payment, and something like an idea of their income.
1367. Is there anything further that you desire to state? The financial position of the people generally is remarkably good. From what I can learn the Sydney merchants have no trouble, and are glad to do business down here. They are never asked for assistance to meet bills.
1368. *Mr. O'Sullivan.*] Have you been during the whole of that sixteen years in Nowra? No; I was in Terrara nine years. 1369.

- F. W. Flatt, Esq. 1369. And do your remarks apply to Terrara? The business there has decreased.  
 1370. I suppose Nowra flourished and Terrara declined? Yes.  
 28 Jan., 1890. 1371. Owing to what reason? I attribute it to the bridge being put across the river.  
 1372. Did the inundations have any material effect upon Terrara? They had a few years ago. The last flood was in 1873.

Mr. Frederick Skinner, public school teacher, sworn, and further examined:—

- Mr. F. Skinner. 1373. *Chairman.*] Have you got the Nowra school returns? Yes. The numbers are—1886, 272 pupils; in 1887, 283; in 1888, 309; in 1889, 324. To that last should be added the attendance at two similar schools which, I think, would bring the attendance up to 350. That would be an increase from 272 to 350 during the four years.  
 28 Jan., 1890. 1374. There has been an increase each year? Yes.

Frederick Huleat Galbraith, Esq., Clerk of Petty Sessions, &c., sworn, and further examined:—

- F. H. Galbraith, Esq. 1375. *Chairman.*] Will you now state what the revenue in the district has been from conditional purchases since 1880? In 1880 the revenue from conditional purchases in this district was £1,726 19s. 7d.; in 1881, £2,668 0s. 2d.; in 1882, £3,188 13s. 4d.; in 1883, £3,316 7s. 6d.; in 1884, £3,476 13s. 9d.; in 1885, £2,381 0s. 1d.; in 1886, £3,897 2s. 10d.; in 1887, £2,893 8s. 2d.; in 1888, £2,418 14s. 5d.; in 1889, £3,251 6s. 6d. That is the whole land revenue for those years.  
 28 Jan., 1890. 1376. These are exclusive of the returns of mineral conditional purchases? Yes; I do not think there are any mineral conditional purchases here. It does not include mining or auction sales or timber licenses.  
 1377. What was the amount of interest received last year? About £2,000 on about 400 selections.

WEDNESDAY, 29 JANUARY, 1890.

[*The Sectional Committee met at the School of Arts, Berry, at 10 a.m.*]

Present:—

The HONORABLE FREDERICK THOMAS HUMPHERY (CHAIRMAN).

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Railway from Kiama to Nowra.

Mr. John Stewart, auctioneer, sworn, and examined:—

- Mr. J. Stewart. 1378. *Chairman.*] What is your occupation? Auctioneer.  
 29 Jan., 1890. 1379. How many years have you resided in the district? About twenty-five years.  
 1380. How have you been engaged during that time? For a period of about ten years I was engaged in farming.  
 1381. As a freeholder or tenant? Tenant farmer.  
 1382. Can you speak as to the progress of the district during the last ten years? Yes.  
 1383. Can you say how many farmers there were in this part of the Shoalhaven district ten years ago? I cannot say how many there were then, but I can say how many there were about five years ago. My information relates to the north side of the Shoalhaven River, and westward into the Kangaroo Valley.  
 1384. The information you are now about to give the Committee will be concerning the district bounded by the north side of the Shoalhaven River, including the Kangaroo Valley, and extending northward to the boundary of the Kiama electorate? Yes. Five years ago there were, as nearly as possible, 450 farmers engaged in dairying within that boundary.  
 1385. About how many of those were tenant farmers and how many freeholders? About one-half, as nearly as I can judge.  
 1386. Were the holdings of the freehold farmers taken up as conditional purchases? The great bulk of them were, but some of them had been taken up before 1861, but they were comparatively few. The bulk of the land was occupied by persons who had taken it up under the Act of 1861.  
 1387. How many souls do you think that would represent? I would take it to represent about 4,000, including employees.  
 1388. When you say that 450 persons were settled on the soil, do you mean that the farming population was 450? There were 450 men who owned farms.  
 1389. You do not mean the people engaged in business in the towns? No; and that number does not include the wives and families.  
 1390. Could you say how many stock there were on the land five years ago? About 20,000 cattle and horses.  
 1391. Can you say what quantity of maize was grown in this district five years ago? I suppose about 150,000 bushels a year.  
 1392. Can you say what quantity of butter was produced? No; I could tell what quantity is produced now.  
 1393. Can you state the number of farms that were in occupation at that time? They have not increased much within the last five years, because most of the good land available for dairying purposes had been taken up, and the only improvement which has taken place between then and now is that more land has been placed under grass and made useful for dairying purposes.  
 1394. Can you state what number of acres of available land is held by the proprietors of the Berry estate? Roughly speaking, I think about 20,000 acres.  
 1395. About how many families could be maintained on that area? About 500.  
 1396. How many souls would that represent? I think about 3,000. In connection with that I would like to state that about a quarter of that 20,000 acres is available for maize-growing.  
 1397. About 5,000 acres out of 20,000 acres? Yes. The yield of maize is about 40 bushels to the acre. That would give 50,000 bags, or about 5,000 tons of maize to be exported every year.

1398.

1398. Can you speak as to the production of the past year;—how many lbs. of butter were sent away? I can give you a pretty accurate estimate of that by referring to the factories. The factories include two at Gerringong, one at Foxground, one at Berry, one at Jasper's Bush, two in the Kangaroo Valley, two at Cambewarra, and two at Shoalhaven. These, I believe, would be within the influence of the proposed railway.

Mr.  
J Stewart.  
29 Jan., 1890.

1399. Are you speaking of public factories? Yes.

1400. Are any private separators used? I suppose there are fifteen or twenty separators in addition to the factories. The approximate quantity of butter sent from the butter factory is 183 tons in twelve months, which I value at a little over £9,000. The approximate quantity from the other factories—eleven or twelve of them—would be 1,351,820 lb. of butter in a year.

1401. How many factories are there altogether? Eleven or twelve. There is a factory on the mountain belonging to Mr. Graham which I did not include. All the factories would send their butter by rail.

1402. What is your reason for saying that the butter would go by rail instead of by water? The Kiama people can get their produce cheaper by rail than by steamer.

1403. Would the rapid transit be an advantage? Yes.

1404. Is it probable that a milk trade would be opened up in the event of a railway being constructed? I think so.

1405. Is there at the present time any milk trade from here? No; the only means of transit is by steamer, and milk deteriorates very rapidly.

1406. Do the farmers send their milk to the factories at present? Yes. They are worked on the co-operative principle, the proceeds being shared at the end of the month.

1407. Can you say what has been the average price paid to the farmer? The price of milk is from 4½d. to 5d. a gallon, which, I suppose, would represent 1s. a lb. net profit for butter.

1408. Has any butter been shipped from this district direct to England. Yes. The company in Sydney has sent large quantities of butter home by the Orient Company's steamers within the last three or four months.

1409. Do they ship through their Sydney agents? They employ a company to send the butter.

1410. They do not employ people who ship to England? It is a kind of mutual arrangement. All the butter that has been sent to England from this district has gone through the South Coast Co-operative Company at Sydney.

1411. Has that company been established to afford facilities for disposing of the produce of this and the Camden district? Yes; it was established exclusively by the farmers of those districts to get the highest advantage from the sale of butter.

1412. Where do the principal shareholders live? On the coast here—from Shoalhaven to Wollongong. The directors are all south-coast men.

1413. Have you seen the plan showing the route of the proposed railway between Kiama and Shoalhaven? No, but I know the route.

1414. Do you think if the line be constructed as proposed it will serve the district? I think so. I do not think it could be improved upon.

1415. As far as convenience for travelling and giving people facilities to send away their goods are concerned, do you think there will be a large passenger and goods traffic on the line between Shoalhaven and Sydney? I think so. The population of the district is considerable at present, but by the opening up of more land on the Berry Estate, and the opening up of other land between Shoalhaven and Jervis Bay I am sure both the population and the traffic will increase.

1416. The cost of the railway will be £381,000. The working expenses will be £5,000 or £6,000 a year, and the interest on the cost of construction will be between £13,000 and £14,000 making an annual charge of £20,000—do you think that Parliament would be justified in authorizing the construction of that line in the expectation that the revenue from the traffic will, in a short time, defray the working expenses and pay a portion of the interest on the cost of its construction? I am confident that it will pay within a reasonable time as well as any line that has been opened. I understand that the line from Sydney to Kiama has come up to expectations and I am convinced that the revenue will be greatly increased if the line were extended to Shoalhaven which is a large and populous district.

1417. Do you think there would be a large goods and passenger traffic within the first year of the opening of the line? I do not know that it would be up to expectations in the first year. It takes some time to break off people's connection with the steamers. They might not be in a position to send their goods by train immediately—that would come within a reasonable time.

1418. Why would they not be in a position to select their own mode of transit? There might be temptations placed in their way by the owners of the steamers.

1419. In the shape of a reduction of freight? Yes.

1420. Is there any bacon sent away from here? Yes, both from Gerringong and here.

1421. Can you say what is the value of the bacon sent from here during the past twelve months? I could not.

1422. Is there a bacon factory here? Yes.

1423. How long has it been established? Some years, and within the last month it has been very much improved. All the appliances necessary for making a good article have been obtained.

1424. Can you say how many pigs were slaughtered last year at the factory? I could not.

1425. What is the passenger fare at present between Broughton Creek and Sydney? About 13s. or 14s.

1426. What is the passenger fare by steamer? I do not know at present—it used to be from 15s. to 17s. 6d.

1427. How much a ton do you pay for freight between Sydney and Broughton Creek? That I do not know.

1428. *Mr. O'Sullivan.*] Are there other lands unsettled in the district besides those on the Berry estate? Yes.

1429. Where does that land lie? Some is in the Kangaroo Valley, some at the western end of Cambewarra.

1430. Then the district is by no means settled up to its fullest capacity? At present there are very large areas of land on the south side of the river unoccupied.

1431. Do you think it likely that settlers to the eastward and southward round Broughton Creek will use the railway? I am certain they will.

- Mr. J. Stewart.  
29 Jan., 1890.
1432. Do you think they will use the railway when they have to cart to the railway from their farms—the steamers calling at the wharves alongside their farms? There are not many farmers who live on the river bank.
1433. I suppose there will always be a certain amount of competition on the part of the steamers? I suppose so. There is another matter I want to refer to—there is a great area of coal land within 4 miles of this place.
1434. *Mr. Hurley.*] Have you any knowledge of the mineral resources of the district? I have some knowledge of the coal.
1435. Do you produce a plan showing the locality referred to with regard to coal? Yes.
1436. Is it Crown land? It is at present, I believe.
1437. What distance from the proposed line of railway? About 4 miles from the probable site of the railway station.
1438. Does this coal run on the level from the mountain side? Yes. To get the coal it will be necessary to tunnel into the mountain. About 4,500 acres were taken up by Sir Henry Parkes and Mr. J. Sutherland.
1439. What is the size of the seam? Mr. Taylor, the Victorian geologist, Mr. Scott, Mr. James Wilson, and others went up to the coal-field, and they found the base of the seam 15 or 16 feet of unbroken coal of excellent quality.
1440. What did the analysis of that coal give? I can only give an opinion expressed by the geologist that it is good steam coal.
1441. Have they tried it in any quantity? I do not think that they did that.
1442. Do you know of the existence of coal from your own personal inspection? Yes.
1443. Do you own any land on the route of the proposed railway between Kiama and Nowra? None.
1444. Do you own any land between Nowra and Jervis Bay? No. I own some allotments in Nowra.
1445. Do you know of any statistics that were prepared in the district? I do.
1446. Had you anything to do in preparing them? I had not.
1447. Can you say that they were true? I honestly believe that they were.
1448. Have you any interest in the butter or bacon factories round here? Not the slightest; but being a business man I like to see the place prosper.
1449. Have you been accustomed to any special class of agriculture? The agriculture that is most successful here is the growing of maize.
1450. Does fruit grow here? Fruit is not grown here extensively, because there is no market for it. I have no doubt that the construction of a railway would lead to the development of a great fruit industry. We have splendid fruit lands.
1451. Are the charges for freight by steamer higher than the charges for freight by rail? Yes. Mr. Dymock and others have told me that they can send butter to Sydney by rail cheaper and more quickly than they can by steamer.
1452. You recognize the fact that the steamers will always compete with the railway? I suppose they will.
1453. And if farmers can get their produce carried cheaper by steamer than by rail they will send it by sea? As regards butter, I do not think they will.
1454. You said that 5,000 tons of maize were produced at a certain time? I said that it could be produced. What I mean is, that the land would produce about 5,000 tons of maize in addition to what is now growing.
1455. Does it not stand to common-sense that the farmers will adopt the cheaper means of transit? Yes.
1456. Then there is a probability of that 5,000 tons of maize going by water instead of by rail? It depends upon circumstances.
1457. Will not maize generally be sent by water instead of by rail? I should think it would if the water carriage were cheap.
1458. Do you know of any land belonging to the Crown—any reserves—within a distance of 5 or 10 miles of this place? Yes; in the Kangaroo Valley, to the westward of the township, there is a considerable amount of land. I cannot say how much available for dairy-farming.
1459. If it were thrown open for selection, would the people in the district be eager to buy it? I think they would.
1460. What price would be a fair one for it? About 25s. an acre.
1461. Do you look upon that land as being equal to the land immediately round this district? It is not quite so good.
1462. Is the carrying capacity of the land immediately around Berry equal to a cow to the acre? The level land would be.
1463. Would it take 2 acres of Crown land to carry a cow? About 3 acres.
1464. What is the value of the land around here? The best of it is worth £50 an acre.
1465. Yet, according to you, the Crown land is worth only about £2 an acre? You must consider the distance it is from the market.
1466. Would you rather give £50 an acre for land around here than £6 an acre in the place you have referred to? I would.
1467. Have you had any experience in regard to pig-curing? I know the process, but I have not been engaged in it.
1468. Can you give us any idea of the trade in fat cattle in the district? The district is not able to supply itself with butcher's meat. The chief supplies are got from Sydney and Braidwood. About 2,650 cattle are slaughtered between Gerringong and Tomerong annually, three-fourths of which and all the sheep have to be imported. If railway facilities were provided the bulk of the fat cattle would come from Sydney by rail.
1469. Do you believe that the construction of a railway would increase the population if the land were thrown open and greater facilities were given for the people? I am certain that it would.
1470. By 50 per cent.? Yes; in a reasonable time—say five or seven years.
1471. *Chairman.*] Could you say what the annual auction sales aggregate in the district? I suppose, between Shoalhaven and here and the Kangaroo Valley, the auctioneers put £60,000 or £70,000 a year through their hands.
1472. Principally in sales of stock? Yes; and lands.

1473. How much exclusive of the land? About £30,000. I am only giving a rough approximation.  
 1474. Do they make any bad debts? I cannot say that they do.  
 1475. What have your losses amounted to during the last five years in bad debts? About 1 per cent.  
 1476. *Mr. O'Sullivan.*] You several times referred to the Kangaroo Valley;—do you include the produce of that district with that of the Berry district? Yes.  
 1477. You are not, perhaps, aware that the Nowra people are doing the same? I am doing it for railway purposes.

Mr.  
 J. Stewart.  
 29 Jan., 1890.

Mr. Lewis M'Intyre, farmer and dairyman, sworn, and examined:—

1478. *Mr. Hurley.*] Have you been long in the district? Thirty-five years.  
 1479. What are you? A farmer, growing grain sometimes, and at other times dairying.  
 1480. Then you have followed the industry successfully for a great number of years? Yes.  
 1481. Are you still carrying it on? I am.  
 1482. Do you think there is any opening in this district for more of your class? I am sure that there is.  
 1483. What is the reason that they are not here? My reason for the statement that I have made is this: Out of the very large acreage we have here there is only a very small portion that is yet cleared and occupied. The land is all taken up, but not improved. There is really very little of the land, comparatively speaking, that is improved to such an extent that it would not hold any more population. There is a great deal of it in a state of nature. Gradually, no doubt, this land will come to yield produce when it is cleared. One-fourth or one-third part of it is not yet cleared.  
 1484. Are you a freeholder? I am.  
 1485. To what extent? About 400 acres.  
 1486. Did you take the land up under the Land Act? Yes.  
 1487. Is there any land of a similar character available within 10 miles of this place? Yes; there is a reserve of about 170 acres at Cambewarra Mountain, and there is another reserve of about 50 acres, which has been thrown open, but not yet taken up.  
 1488. That is not likely to give settlement to a large population, is it? No. I am speaking merely of the land almost adjacent to this place. There are considerable quantities not taken up besides that.  
 1489. Is there a large area of land near your own that was held by monopolists, and remains unimproved? There are 200 acres near me which have been taken up a considerable time, but which are only improved to a very small extent. There are considerable portions of the holdings left unimproved.  
 1490. Do you grow anything upon your land? Principally rye grass for cattle.  
 1491. I suppose you have met with a great deal of difficulty in reaching a market? Yes. The difficulties, however, are not now so great as they have been in the past. I had a great many difficulties to contend with in the early days.  
 1492. You had to depend on vessels or steamers? In the early days we had no regular steam communication—sometimes we had only a punt, at other times no communication at all. Now there are two steamers running twice every week, besides other droghers.  
 1493. Have you lost your produce by any crafts trading here? Not to any extent.  
 1494. Have your cattle been visited with any disease while you have been here? Yes, with the pleura.  
 1495. Was it very disastrous? Yes; it was very bad some years ago.  
 1496. Suppose such a thing were to occur again, would the farmers be able to make a livelihood by dairy-farming? They would probably inoculate their cattle, and be able to save them with a small amount of loss. They would be debarred from sending their produce to market for some time on account of the infectious nature of the disease. We do not consider it so serious a matter as we did when we did not know how to treat the disease.  
 1497. Do you look upon the advent of the railway as bringing great advantages to yourself and others? I think it would be a very great advantage.  
 1498. In what way? It would enable us to send our produce to market much quicker, and there would be a very large passenger traffic. There is another thing which, I think, must be well known to every one in the district, and it is that all our mountains contain rich seams of coal, and I have no doubt that if there were a railway from Kiama to Jervis Bay a large trade in coal would be carried on.  
 1499. Do you make that statement on hearsay? No; simply from what I have seen myself. I could point out rich seams of coal cropping out on the surface.  
 1500. If a coal company were formed here, would you be prepared to go into it? I should certainly be one of the shareholders.  
 1501. And if the freight charges on the railway were 25 per cent. in advance of what they are now, would you send your goods by rail or by steamer? I think that the railways are the proper means for the conveyance of coal.  
 1502. Do you think such a railway would be preferred to the steamers? I think it would, especially for dairy produce. Butter being a perishable article, the dairy-farmers would use the railway, even if the railway charges were higher than the charges by the steamer.  
 1503. Do you think the passenger traffic would be absolutely in the hands of the railway? Almost entirely.  
 1504. Have you any idea of the two routes between here and the Shoalhaven River—that by Jamberoo and that by Kiama? Yes. I have always held that the route through the Saddleback was a preferable one.  
 1505. Why? Because it would be a shorter route, and, in my opinion, it presents fewer difficulties than the other.  
 1506. You think the engineering difficulties would be less by that route? I think they would be less if a tunnel were cut through the Saddleback, and the line carried on through the Fox Ground.  
 1507. Do you speak from any professional knowledge? No; simply from my knowledge of both routes.  
 1508. You have heard the cost of the line stated;—do you think that the construction of the line would be beneficial as a national undertaking? I believe it would pay well. I believe it would pay as well as any railway in the country except those near the metropolis—that is on account of the fertility of the soil, the large extent of it, and the output of coal that is likely to take place when the line is open. I am certain that a large output of coal will take place here, and that the coal will be sent to Jervis Bay and Melbourne.  
 1509.

Mr.  
 L. M'Intyre.  
 29 Jan., 1890.

- Mr. L. McIntyre.  
29 Jan, 1890.
1509. How far is the outcrop of coal from the line of the proposed railway? From 3 to 4 miles.
1510. Have you any knowledge of the land in the district between Nowra and Jervis Bay? Yes. I believe it is well adapted for fruit growing, and I anticipate that it will be largely used for that purpose.
1511. Is it likely to provide homes for large populations? I think there will be a large population there, and fruit and wine growing will be largely carried on. A party of Germans have lately started fruit-growing there, and I have no doubt that others will follow their example. My impression is that the land between Nowra and Jervis Bay will yield a very large revenue.
1512. You admit that the railway will be of great advantage to the district? I do.
1513. Do you think that the people would stand a general land tax to defray the cost of the construction of the line? I cannot speak for others, but I shall be willing to pay it myself.
1514. *Mr. O'Sullivan.*] You prefer the Saddleback route? Yes.
1515. Are you aware that that route passes through very high country some distance from the coast? Yes.
1516. Do you think it likely that people along the coast would take their produce up the hills to the railway when they would have easy access to the steamer? I do not; but I think there could be a loop-line from the Fox Ground to carry the Gerringong produce.
1517. If that line were constructed would it not encourage competition by the shipping? I think that a line along the coast would encourage that more than a line on the Jamberoo route.
1518. Are not the Jamberoo people already within 5 miles of Kiama? I should say perhaps about 5 miles.
1519. Would they not be served by a branch line into Jamberoo? They might be.
1520. Are you aware that it would cost £183,000 more to construct the line through the Saddleback? If that is so, the present line would be the best. I was under the impression that the Jamberoo route would be shorter and cheaper than the Kiama route.
1521. What industries do the farmers carry on? Principally dairying and growing maize. It has been stated that we do not rear many cattle, but the reason of that is that the holdings are small, and it pays better to produce butter than to fatten cattle.
1522. What becomes of all the young bull calves? Some we keep. A good many we kill.
1523. Produce, when sent by sea, is liable to depreciation, is it not? Yes, if it is not well taken care of.
1524. Would not butter be likely to be depreciated in a sea voyage? It would go safer by rail.
1525. Would it not be in the interest of the farmer to have his maize carried by rail? I think it very likely that maize, not being a perishable article, the steamers would be largely used for carrying it.
1526. Is there likely to be any development of the Shoalhaven trade if the line is made? Yes, I think so. Milk pays even better than the butter that is made in the factories.
1527. Are we likely to have, in the Shoalhaven district, anything like the development of the milk trade that has taken place since the opening of the railway to Kiama? I think it is very likely that it would take place here.
1528. Do you not think that you are outside the range of the milk trade at Berry? I should think not, considering the short time that it would take to go from here to Kiama.
1529. You think there would be a large coal trade developed here? Yes.
1530. Why have no steps been taken to develop it? Because, with such facilities as we have for carrying the coal away, it would not pay. It would not pay to send it by the steamers.
1531. How far are the coal seams from the coast? Three or four miles.
1532. You seem to think that the coal will be sent down to Jervis Bay, and from there to Melbourne? Yes; and to other markets.
1533. Are you aware that there is coal land about Jervis Bay? Yes.
1534. Do you think it likely that the coal mines here could compete with those of Jervis Bay at that port? There may be greater difficulty in getting the coal at Jervis Bay. They may have to go to a great depth for the coal.
1535. The difference would be that they would work in a shaft there, and the coal miners here would work in an adit? Yes, but the fact that coal mining was carried on at Jervis Bay would not prevent it from being gone on with here.
1536. If the remainder of the Berry Estate is thrown open to settlement and the district is rendered accessible by railway, I suppose it would be no stretch of imagination to say that the population of the district would be increased by one half within ten years? I think it would not be too much to say that the population would be doubled.
1537. Is there room for the present population? Yes, and for more.
1538. Then why are so many young men going away from here to the north coast? Families have left this district and gone to the north coast because they were tenants here, and they desired to have land of their own. They were able to sell the goodwill of their farms for considerable sums, and to take up large areas of land on the north coast, and they have left this district to take up larger areas than they could get here; and further, they could get those lands for a few shillings an acre. It was men with large families who went to the north coast. Those men settled here on small holdings, but when their families increased, they found their farms too small, and being able to sell out at a high price, they realised a sum of money with which they took up land on the northern rivers. It is not because the district is not in a prosperous state, or because there is no land that those people left the southern district for the north.
1539. Do you think that a tenant farmer in this district with 100 acres of land under lease is as well off as a freeholder in a comparatively inferior district with the maximum area? The tenant farmer here is well off. Many of the tenant farmers are better off than those who are on their own land. The farmers on the Berry Estate are very prosperous.
1540. And that notwithstanding that they have to pay a yearly rent? Yes.
1541. And this class of settlers are likely to remain in the district? Some may leave, but most of them will remain.
1542. Then there is no danger of their going away for the mere sake of their getting a freehold? I do not think there is any danger of many of them going.
1543. *Chairman.*] How many years is it since you arrived in this district? Thirty-five years.
1544. Have you any objection to state whether, on your arrival, you were in possession of large or small means? My means were small.
1545. Were you a tenant farmer? Yes, I took a clearing lease.
1546. How many years were you a tenant farmer? For nearly thirty years. 1547.

1547. Have the means which you possess been the result of your industry in this district? Yes, the whole of my means.
1548. You are comfortably off now, I suppose? Pretty comfortable—well enough off now.
1549. Can you say that your experience has been the same as that of many others who have arrived in this district? Yes, of many of them who have come within my own observations, where they have been industrious.
1550. Notwithstanding all the vicissitudes of dairy farming, those who have been a long time in the district, who have commenced with small means and been industrious, are now comfortably off? Yes. Every one who has been industrious and looked after his business, is in comfortable circumstances.
1551. The community is a very prosperous one? Yes, I think that this is as prosperous a community as any that I have known.
1552. *Mr. Hurley.*] If you were disposing of your land, what would you take per acre for it? I am not disposed to part with my land, and if I was I should have to sell it under considerable disadvantages. There are no good roads to the land.
1553. What price per acre would you place on your land? I may state plainly that I would not take £20 an acre for it.

Mr.  
L. M'Intyre.  
29 Jan., 1890.

Alexander John Colley, Esq., bank manager, sworn, and examined:—

1554. *Chairman.*] What is your business? Manager of the E.S. and A.C. Bank.
1555. How long have you been in the district? I have been Manager of the Bank here for twelve years, and I have lived in the coast district all my life.
1556. Has your business grown during that time? Yes.
1557. Has it doubled? Yes; more than doubled.
1558. Will you tell us what progress has been made in your business up to the present time? I think that the business has increased nearly tenfold within the last twelve years.
1559. Has the increase been continuous, year by year? Not year by year. The increase has been most marked since the establishment of the South Coast and West Camden Co-operative Company; since then the increase has been very rapid.
1560. When was that? About six years ago.
1561. Have the fixed deposits been largely increased? Yes.
1562. Can you state what the increase has been in the last ten years? I think the deposits have about quadrupled.
1563. Have you built in the township? Yes.
1564. At what cost? Our premises and land cost £6,300.
1565. Have you made any bad debts? Not any.
1566. Can you speak as to the prosperity of the people in the district generally? Yes. Taking them as a whole I regard the people in this district as remarkably prosperous compared with those of other districts with which I have been acquainted.
1567. Have you examined the route of the proposed railway? Yes; as far as Bomederry.
1568. Can you suggest any alteration or deviation in the route? None whatever.
1569. You are favourable to the construction of the line as shown on the plan? Yes.
1570. Do you think it will lead to the expansion of the trade of Berry? There is no doubt that the trade of this district must expand in the natural course of events; but I have no doubt that the construction of the proposed railway will materially assist its development.
1571. Are you prepared to express any opinion having regard to the cost, as to whether the Government would be justified in constructing the proposed railway? I consider that they would be justified in so doing.
1572. Do you think that the revenue from the railway will be sufficient to cover the working expenses and to pay the interest on the cost of its construction? I certainly think so.
1573. Will that be within a reasonable time? I think there will be a very large return immediately.
1574. How many banks were there here when you first came? Only our own.
1575. How many are there now? Three.
1576. And, notwithstanding the establishment of two other banks, your business has increased tenfold? Yes. One of those banks only opened within the last six months.
1577. Are mortgages known here? Yes.
1578. I mean out of the ordinary run of business—mortgages caused by distress? Mortgages are very numerous here.
1579. Are they all pretty sound mortgages? Oh, Yes.
1580. Do you know the site for the station here? Yes.
1581. Is it satisfactory to the inhabitants? Quite so; I have heard no complaints.
1582. *Mr. Hurley.*] You are acquainted with the land between here and Nowra? Yes.
1583. If you were a member of a company that was asked to make this railway, considering the proposal to carry the line on to Jervis Bay, would you recommend the company to make a line from the Bomederry township to the Bomederry Bridge at a cost of £5,000, considering that that bridge will be useless when the extension to Jervis Bay is completed? No.

A. J. Colley,  
Esq.  
29 Jan., 1890.

Mr. John M'Kenzie, farmer, sworn, and examined:—

1584. *Mr. Hurley.*] What are you? A farmer.
1585. Have you been long in the district? Forty-eight years.
1586. You have watched the progress of the district during that time? I have.
1587. And it is of a progressive nature? Very much so.
1588. And is it likely to progress still further if facilities are given to reach the market? At the rate we are going at it cannot be otherwise.
1589. Do you hold any public position in the district? Yes; I am Mayor of Broughton Valley.
1590. What is the population of your municipal district? I could not tell exactly.
1591. Could you give the amount receivable as rates upon the property there? Yes; the amount is about £200 a year.

Mr.  
J. M'Kenzie.  
29 Jan., 1890.

- Mr. J. M'Kenzie.  
29 Jan., 1890.
1592. What does your town consist of? It is a rural district—there is no town.  
1593. What are the farmers engaged in? Rearing stock, and dairy farming—they also grow some maize.  
1594. Where is your market? At Sydney.  
1595. How do you reach the market? By steamer.  
1596. Do you suffer any inconvenience through the delay of the steamers? There is a deal of inconvenience with regard to live stock. We cannot send live stock by steamer, because if they become weatherbound considerable loss is caused.  
1597. Are you a freeholder or a tenant? I am both a freeholder and a tenant.  
1598. Do you know the district within a radius of 10 miles? I do.  
1599. Is there any Crown land here useful for dairy purposes? There are Crown lands that would do for fruit growing and wine growing.  
1600. Have you any fruit? Yes, plenty going to waste. We have no market for it.  
1601. If you could reach a market by rail, would you be prepared to put more land under cultivation? Yes, all kinds of fruit grow well in this district.  
1602. Has the result of your labours as a farmer been satisfactory? Yes.  
1603. You believe there is an opening here for a large number of people to settle? I do.  
1604. Does the proposed line of railway run through your land? No.  
1605. If you could have the benefit of railway communication would you be prepared to pay a tax on your land? I should.  
1606. Have you any knowledge of the land beyond Nowra? I had some years ago.  
1607. Do you believe it is suitable for population? It is more suitable than the land that is populated between Sydney and Wollongong.  
1608. As a resident farmer, would you utilise the railway if it were constructed? I should.  
1609. If you intended to dispose of your land how much per acre would you ask for it? I purchased at four guineas per acre from the Crown, and I could get nineteen guineas or twenty guineas per acre for it now.  
1610. Do you know of any reserves in your district that might be thrown open for settlement? No.  
1611. Have you any knowledge of the coal in the district? I have.  
1612. Can you say whether the coal measures are satisfactory? I know that there are seams in sight. In one place there are no less than six cropping out one above another. I have seen a sample of kerosene shale got in this district which was pronounced by Mr. Williams to be the best in the country.  
1613. Do you know where it is? I have an idea of the locality.  
1614. Is it within 4 miles of the railway? It is nearer than that.  
1615. Do you know of any other industry that is likely to come into existence if the railway is made? We can produce poultry, but if we send poultry by water they get injured. In Sydney there is always a demand for poultry.  
1616. During your residence of forty-eight years here have you ever known the district to suffer from droughts or depression? Yes. The year that I came here we had one of the most serious depressions that have ever occurred.  
1617. What caused it? Drought.  
1618. Has the district been so bad since? It has never been so bad since.  
1619. I suppose that when drought does occur it is not so bad here as it is in the interior of the country? No; we are supplied with streams of water from the mountains.  
1620. Are they always flowing? More or less—sometimes they get small, but they are always available.  
1621. In dry seasons you have very little grass? Yes. The cattle die, and we have to skin them.  
1622. Have the people here suffered much loss through these droughts? No; most of the people here now were not here during the drought of 1848; and in recent years we have not had serious droughts.  
1623. Do you grow fruit? Yes.  
1624. Do you cultivate the orange? Yes.  
1625. Do you cultivate the vine? Yes, and also the olive.  
1626. I presume that if a railway gave you the command of a market you could develop the fruit-growing industry? Most decidedly.  
1627. You appear to have local government well developed in this part of the country? Yes.  
1628. And the people are satisfied to tax themselves to make their roads? Yes.  
1629. The whole of the South Coast district seems to be under local government? Yes.  
1630. So that in addition to paying the ordinary taxes the farmers in this district are also paying for local government? Yes.  
1631. They show their faith in the district by contributing towards local improvements? Yes, that is evident. When I came here you could not drive, except a bullock dray and six bullocks through the district. There were no roads.  
1632. You say that the whole of the country is under local government? Yes.  
1633. *Chairman.*] Were you possessed of large or small means when you arrived in the district? I had no means.  
1634. Have many others been equally prosperous? Yes.  
1635. At present are there many settlers in Broughton Creek who are similarly prosperous? Yes. The farmers of this district are a very prosperous class.

Henry Laidley Lovegrove, Esq., bank manager, sworn, and examined:—

- H. L. Lovegrove, Esq.  
29 Jan., 1890.
1636. *Mr. O'Sullivan.*] What is your business? I am manager of the Commercial Bank here.  
1637. How long has your bank been established in this district? A little under five years.  
1638. How long have you been here? Three and a half years.  
1639. Is your business a progressive one? Yes.  
1640. Is it progressing at a rate that is satisfactory to the management? Yes, it has gone ahead with sufficient rapidity to encourage them to give £1,000 for a quarter of an acre of land on which to erect a new building.  
1641. What will that structure cost? £3,500, when it is completed.  
1642. Do you find the people here in a sound financial condition? Yes, in a very sound position.  
1643. Have you any bad debts? No.  
1644. Do you hear of any foreclosing of mortgages? No.

1645.

1645. Have the people of the district many deposits in your bank? Yes, a very fair amount.  
 1646. I suppose the bank deposits are a good barometer as to the state of affairs in the district? Yes.  
 1647. *Chairman.*] Have they been increasing? Yes, every year.  
 1648. Could you say what proportion of deposits you have now as compared with what you had when you came into the district three and a half years ago? The business was only started three and a half years ago, and the deposits at that time were very small.  
 1649. Say as compared with three years ago? My business has trebled within that time.  
 1650. *Mr. Hurley.*] Have you any knowledge of the line between here and Nowra? Yes, I have a fair idea as to where it will run.  
 1651. I want to ask you this question:—If you were manager of a company asked to construct a line of railway from Kiama to Jervis Bay and you got your line up to Bomederry—where it was likely to remain say for five years, would you recommend the expenditure of £4,000 or £5,000 in making a branch line to Bomederry Bridge for the convenience of the people of Nowra, seeing that that branch line would be practically useless after the railway had been carried across the river? I think it will be very necessary to have that branch line, if the terminus is to remain at Bomederry four or five years.  
 1652. Even if it would be practically useless after that? Yes, I certainly think it would be necessary.

H. L.  
Lovegrove,  
Esq.

29 Jan., 1890.

Mr. John Gray, dairy farmer, sworn, and examined:—

1653. *Mr. Hurley.*] Have you been long in the district? Yes, I came here as a boy.  
 1654. You were formerly Mayor of this town? Yes, two years ago.  
 1655. Could you tell us the annual expenditure in the municipality? Altogether it amounts to from £1,000 to £1,200.  
 1656. Are you a tenant farmer? Yes.  
 1657. A dairy farmer or an agricultural farmer? A dairy farmer.  
 1658. Where is your market? At Sydney.  
 1659. If a railway were constructed through this district would you send your goods by rail or by steam-boat? By railway—certainly.  
 1660. Even though the charges are higher than by steamer? Yes, quick transit for perishable articles would justify a higher rate.  
 1661. Do you consider agriculture and dairy farming to be a success in the district? Yes.  
 1662. And do you think there would be an increase in the population if the railway were made? Yes.  
 1663. Are you satisfied with your position as a dairy farmer? Yes.  
 1664. Can you say whether there are any Crown lands available which would be suitable for dairy farming and agriculture? Very little.  
 1665. Do you know the country beyond Nowra towards Jervis Bay? Yes.  
 1666. Can you say anything as to its suitability for agriculture? It is very suitable for fruit growing.  
 1667. Do you know anything about the timber of the country? Yes, there is some fine timber down that way—a good deal of it.  
 1668. *Mr. O'Sullivan.*] Can you tell the Committee anything about the growth of the bacon industry here? Yes, at present something like 7,800 pigs are slaughtered annually at the factory at Berry, but it is not the largest factory.  
 1669. How many factories are there in the district of Nowra? There is one in Gerringong, one at Jamberoo, one at Warrigee, and one at Pyree.  
 1670. You say they slaughtered 7,800 pigs in the factory at Berry, and that it is not the largest factory? No, the Gerringong factory is larger.  
 1671. Then I suppose more pigs are slaughtered at Gerringong? Yes.  
 1672. Are the other factories about the size of yours? They are not so large as this factory.  
 1673. Will there be an average of 25,000 pigs slaughtered annually? Not so many—probably 10,000 or 12,000.  
 1674. And that bacon trade would be likely to come to the railway? Yes.  
 1675. Do you manufacture cheese here? Very little.  
 1676. What is the reason that cheese is not produced in this district? There is a cheese factory just starting in Cambewarra, but not in the Berry district.  
 1677. Is that the only one on the coast as far as Shoalhaven? I think it is.  
 1678. Are you of opinion that the railway will develop a milk trade here? I think it would.  
 1679. You think this district is not too far off to supply the metropolis with fresh milk? No, it is not too far off.  
 1680. What is your opinion with regard to the competition of the shipping with the railway? I think the railway will take all the butter milk, and poultry and other perishable articles to the Sydney markets.  
 1681. Do you think that the shipping will continue to take away the bacon and maize? It would not take the bacon. Whether the shipping would take the maize would depend on the freight.  
 1682. Where is your farm? About  $\frac{2}{3}$  of a mile from here.  
 1683. Are the people of the town of Berry freeholders or tenants? All tenants except the banks.  
 1684. And they are willing to carry on business here as tenants and to pay rent? Yes.  
 1685. Are the farmers round Berry freeholders or tenants? They are all tenants within a radius of one mile and a half of Berry.  
 1686. And outside that radius do the freeholders begin? Yes; at Broughton Vale and so on.  
 1687. What area is sufficient to keep a wife and three children upon? It depends upon what the farmer does.  
 1688. Say in the dairying industry? A man with his wife and two children could not do much in that industry.  
 1689. What area would be required to keep a family of five in comfort while paying rent? From 50 to 100 acres.  
 1690. What is the general size of the holdings of the tenants in this district? Some farms comprise no more than 20 acres, others 150 acres, some up to 200 acres, and others up to 300 acres.  
 1691. If a railway were made through the district and it gave an impetus to the dairying industry, do you think it would cause young men to remain here, and divide the farms of their parents? I do not think

Mr. J. Gray.

29 Jan., 1890.

Mr. J. Gray. so. There is room for a great deal more population in the district, but the population increases so fast that it might overgrow itself, and people might have to leave in search of a more extensive field elsewhere.

29 Jan., 1890.

1692. *Chairman.*] Do you know the unoccupied portion of the Berry Estate? I do.  
 1693. Do you know how many acres of that land would be suitable for settlement? I could not say exactly, but there is such a large extent of it that there might be room for from 200 to 400 families.  
 1694. Then if the proprietors of the estate were to throw it open for settlement, and to grant leases of areas of from 50 acres to 150 acres, do you think the land would be readily taken up? Yes.  
 1695. And it could be profitably occupied? Yes.  
 1696. Is that land equal in its productive capabilities to the land already occupied around Berry? Not all of it, but some of it is.  
 1697. How much an acre do you consider that that land would be worth as rent? At present it is not worth a great deal, because it is not improved.  
 1698. How long have you been in the district? I came to the district in 1858.  
 1699. Have you been a tenant-farmer the whole of that time? No.  
 1700. Did you take up a farm here in an unimproved condition? No; my farm was improved when I took it.  
 1701. Have the results of your industry been satisfactory? Yes.  
 1702. Has the municipal revenue increased within the last five years? It has.

Henry Taylor Esq., Council Clerk, sworn, and examined.

H. Taylor,  
Esq.  
29 Jan., 1890.

1703. *Chairman.*] Are you Council Clerk in the town of Berry? Yes.  
 1704. How long have you been Council Clerk? Twenty-one years.  
 1705. Has there been a municipality here for twenty-one years? Yes.  
 1706. What has the growth of the municipality been during the past ten years? Very great. In the first year our revenue was only about £200; fifteen years ago it was about £320; ten years ago it was £400.  
 1707. What was it five years ago? There was not much increase then.  
 1708. What is the present revenue? Close upon £500 a year, and we get from the Government a subsidy of £50 a mile. We have 14 miles of road, and we get £700 a year from the Government.  
 1709. Can you say what proportion of revenue has been received from farms, and what proportion from business premises? There are very few business premises in town. The revenue from them will be £15 or £20 a year, and the balance is received from the farming population.  
 1710. Do you know what buildings have been erected in Berry by private enterprise during the last four or five years? All the shops have been erected by private individuals.  
 1711. Has there been a large expenditure in improvement during the last four or five years? Yes, very large.  
 1712. Is there an agricultural show-ground? Yes.  
 1713. Can you say what the expenditure on that has been? I cannot say. It must have been a large amount of money, as the land was all forest before it was cleared.  
 1714. Have any new hotels been built? Yes; one new one has been built, and additions have been made to the other.  
 1715. Can you tell what expenditure was incurred? It amounted to £4,000 or £5,000. One thing I may mention with regard to the maize not going by the railway—there is a lot of corn used in Wollongong, and instead of shipping it to Sydney to have it brought back to Wollongong the farmers will send it by rail.  
 1716. The produce of this district then would be marketable at and beyond Kiama? Yes; but it would be necessary to continue the railway to Shoalhaven.  
 1717. Do you think the produce would have to be sent to Sydney in order to be shipped to Melbourne? Yes

Philip Morton, Esq., M.P., sworn, and examined:—

P. Morton,  
Esq., M.P.  
29 Jan., 1890.

1718. *Chairman.*] You are a Member of the Legislative Assembly, representing the district of Shoalhaven? Yes.  
 1719. What is your position as regards the Berry estate? I am assistant manager.  
 1720. Can you say how many acres of land forming part of that estate are still held by the proprietors unlet to tenants? About 35,000 acres.  
 1721. Is it the intention of the proprietors to subdivide the land? Yes; they intend to throw part of it open as soon as they can get the survey completed. They have engaged special surveyors, and they intend to have the land under swamp drained, and to throw the bushy parts and the hilly land open to settlement.  
 1722. Is it intended to subdivide it into small farms? Into farms suitable for a man and his wife and family to settle on. There are applications from hundreds of people wanting to settle there, chiefly sons of present tenants, who wish to get farms in the district in which they have been reared, and the soil and climate of which they are acquainted with.  
 1723. Have you examined the route of the proposed railway extension? Yes, every bit of it.  
 1724. Can you say whether the line, as laid out by the engineer, will probably serve the residents of the district through which it will pass? I do not think it could be made to serve them better than it will if the line is carried out according to the last survey from Kiama to Shoalhaven.  
 1725. Have you any suggestion to make as to any alteration of the proposed line? None whatever.  
 1726. Do you believe there would be a large increase in the railway traffic on the opening of the line? Yes; I believe that it is only waiting for the railway, and that there will be an increase in every branch of traffic.  
 1727. Do you know that the cost of the construction of the line will be £381,000? Yes.  
 1728. Do you believe that the revenue from the line will pay the working expenses and defray the interest on the cost of construction? I do, judging from the great traffic that there is between here and Kiama, the traffic to Moss Vale, and the traffic by the steamers to Sydney. I am sure that all the passenger traffic will be carried by the railway to and from Sydney.

1729. Do you think that the Government would be justified in going to the expense of making this railway? I do.

1730. And that it will be a profitable line? Certainly.

1731. *Mr. O'Sullivan.*] What is the general condition of the tenants on the Berry estate;—are they solvent? They are all solvent, and though I have been in almost every other part of New South Wales, having been for many years connected with the Commercial Bank as a manager, I have never known a class of men so prosperous and having so much money as they have.

1732. They are able to pay their rents, and at the same time to make good profit on their occupation? They pay their rents, and a great many of them are able to save money and to take up land in other parts of the country.

1733. Have any of the tenants ever been turned out of their holdings for non-payment of rent? Very few; and those who were turned out were turned out for other reasons than the non-payment of rent. When a man went insolvent he had to be turned out, because the value of the lease had to be handed over to the official assignee. Tenants have had to be turned out through roguery, but never where they worked their farms have they been unable to pay the rent.

1734. Any industrious man on a fair area can make a living? Can make his rent and save money. We have had a proposal from gentlemen to take land for the flax-growing industry, and as soon as affairs are settled in connection with Mr. Berry's decease, the matter will be dealt with. The application has been made for inferior land on a reasonable lease to grow flax upon it. Those who wish to obtain leases for this purpose have visited the district, and think that the swampy lands will be very suitable.

1735. Have all the tenants the leases? No; not many of them.

1736. Are their holdings secure? They are.

1737. The tenants are not likely to be turned out? No. We rather encourage them to stop on.

P. Morton,  
Esq., M.P.

29 Jan., 1890

Mr. John Sheedy, post-office assistant, sworn, and examined:—

1738. *Mr. O'Sullivan.*] What are you? Assistant at the Berry post-office.

1739. Can you tell us how many mails per week leave this post-office? Eleven mails leave every day. We send away eleven and we receive eleven.

1740. To what places? Woodhill, Coolangatta, Kiama, Foxground, Gerringong, Kangaroo Valley, Broughton's Village, Nowra, Jasper's Brush, and Sydney. There are two mails daily to Sydney.

1741. Do you know the amount of receipts from telegrams at your office during the last year? I only know from reference to the Blue Book. The number of telegrams transmitted last year was 2,741.

1742. Do you know the amount received from the sale of postage stamps? I do not.

1743. Has the business of your office increased during the last three years? I have only been here six months; but I think it shows an increase since I have been here.

1744. Could you have a return made out showing the amount received for telegrams and for stamps during the last five years, and showing whether the business is increasing or not? Yes. The postal revenue is £427 for 1889, and £156 from telegrams.

1745. How many depositors have you in the savings bank? 274.

1746. Do you know the amount deposited? £968. The number of money orders issued during last year was 916, and the amount £2,253. The number of money orders paid was 226—the amount being £665. The number of letters posted was 51,891. We do not keep an account of the letters received.

Mr. J. Sheedy.

29 Jan., 1890.

Mr. John Boxsell, dairy-farmer, sworn, and examined:—

1747. *Mr. Hurley.*] What are you? Dairy-farmer.
